Description	<p>When configured to true, VPN IPv4 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers. The appropriate extended NH encoding capability must also be received from the remote peer before the route can be advertised with an IPv6 address instead of the IPv4 system address as the next hop.</p> <p>When configured to false, VPN IPv4 routes are advertised toward IPv6 transport peers with the system IPv4 address as the BGP next hop. If the route matches a BGP export policy entry that tries to change the next hop to an IPv6 address and an appropriate extended NH encoding capability was not received by the remote peer, the route is handled as though it was rejected by the policy entry.</p>
Default	false
Introduced	16.0.R1
Platforms	All

vpn-ipv6 *boolean*

Synopsis	Advertise VPN IPv6 route with IPv6 next-hop address
Context	configure router <i>string</i> bgp <i>group string</i> advertise-ipv6-next-hops vpn-ipv6 <i>boolean</i>
Tree	vpn-ipv6
Description	<p>When configured to true, VPN IPv6 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers.</p> <p>When configured to false, VPN IPv6 routes are advertised toward IPv6 transport peers with the system IPv4 address as the BGP next hop, encoded as an IPv4-mapped IPv6 address.</p>
Default	false
Introduced	16.0.R1
Platforms	All

aggregator-id-zero *boolean*

Synopsis	Set router ID in the BGP AGGREGATOR attribute to zero
Context	configure router <i>string</i> bgp <i>group string</i> aggregator-id-zero <i>boolean</i>
Tree	aggregator-id-zero
Introduced	16.0.R1
Platforms	All

aigp *boolean*

Synopsis	Add AIGP attribute to advertised routes
----------	---

Context	configure <i>router string</i> <i>bgp group string</i> <i>aigp boolean</i>
Tree	<i>aigp</i>
Description	When configured to true , this command enables Accumulated IGP (AIGP) path attribute support with one or more BGP peers. BGP path selection among routes with an associated AIGP metric is based on the end-to-end IGP metrics of the different BGP paths, even when these BGP paths span more than one AS and IGP instance. When configured to false , the AIGP attribute is removed from advertised routes, if present, and is ignored in received routes.
Default	false
Introduced	16.0.R1
Platforms	All

as-override *boolean*

Synopsis	Replace the peer ASN with the local ASN in AS Path
Context	configure <i>router string</i> <i>bgp group string</i> <i>as-override boolean</i>
Tree	<i>as-override</i>
Description	When configured to true , the advertising router's local AS replaces all occurrences of the peer AS in the AS_PATH attribute. This command should be used with caution, as it breaks BGP's loop detection mechanism. When configured to false , no AS override is performed.
Default	false
Introduced	19.7.R1
Platforms	All

asn-4-byte *boolean*

Synopsis	Advertise the use of 4-byte ASNs
Context	configure <i>router string</i> <i>bgp group string</i> <i>asn-4-byte boolean</i>
Tree	<i>asn-4-byte</i>
Description	When this command inherits a value of true , the use of 4-byte ASNs is supported. When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to true . When configured to false , this command disables the use of 4-byte ASNs.
Introduced	16.0.R1
Platforms	All

authentication-key *string*

Synopsis	BGP authentication key for peers in the group
Context	configure router <i>string</i> bgp group <i>string</i> authentication-key <i>string</i>
Tree	authentication-key
Description	This command configures the authentication key that must be configured on both peers. The stored format of the authentication key is based on the configure system security hash-control management-interface md-cli hash-algorithm setting.
String Length	1 to 370
Introduced	16.0.R1
Platforms	All

authentication-keychain *reference*

Synopsis	TCP authentication keychain for the session
Context	configure router <i>string</i> bgp group <i>string</i> authentication-keychain <i>reference</i>
Tree	authentication-keychain
Description	This command associates the keychain to be used to authenticate the BGP session. The keychain allows the rollover of authentication keys during the lifetime of a session.
Reference	configure system security keychains keychain <i>string</i>
Introduced	16.0.R3
Platforms	All

bfd-liveness *boolean*

Synopsis	Enable BFD
Context	configure router <i>string</i> bgp group <i>string</i> bfd-liveness <i>boolean</i>
Tree	bfd-liveness
Description	<p>When configured to true, BFD is enabled on a given protocol interface where the state of the protocol interface is tied to the state of the BFD session between the local node and the remote node.</p> <p>When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, BFD is removed from the associated protocol adjacency.</p>
Introduced	16.0.R1
Platforms	All

block-prefix-sid *boolean*

Synopsis	Block the prefix SID attribute
Context	configure <i>router string bgp group string</i> block-prefix-sid <i>boolean</i>
Tree	block-prefix-sid
Description	<p>When configured to true, all prefix SID attributes are removed from all routes exchanged between EBGP and IBGP peers covered by the scope of the command. Locally-imposed prefix SID attributes are also removed.</p> <p>When configured to false, all prefix SID attributes are propagated without restriction.</p> <p>A change of this configuration causes the affected BGP sessions to flap.</p>
Default	false
Introduced	19.10.R1
Platforms	All

capability-negotiation *boolean*

Synopsis	Enable capability negotiation
Context	configure <i>router string bgp group string</i> capability-negotiation <i>boolean</i>
Tree	capability-negotiation
Description	<p>When configured to true, this command enables the exchange of capabilities.</p> <p>When configured to false and the peering is flapped, new capabilities are not negotiated and strictly IPv4 exchanges are supported with the peer.</p>
Default	true
Introduced	16.0.R1
Platforms	All

client-reflect *boolean*

Synopsis	Allow cluster RR to advertise routes to its clients
Context	configure <i>router string bgp group string</i> client-reflect <i>boolean</i>
Tree	client-reflect
Description	<p>When unconfigured, this command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to true.</p> <p>When the command inherits a value of true, client reflection of routes is enabled.</p> <p>When configured to false, this command disables client reflection of routes.</p>
Introduced	16.0.R1

Platforms All

cluster

Synopsis Enter the **cluster** context
 Context **configure** *router string bgp group string cluster*
 Tree [cluster](#)
 Introduced 16.0.R1
 Platforms All

allow-local-fallback *boolean*

Synopsis Allow fallback to RR topology location
 Context **configure** *router string bgp group string cluster allow-local-fallback boolean*
 Tree [allow-local-fallback](#)
 Description When configured to **true**, this command allows the RR to advertise the best BGP path from its own topology location when there are no reachable routes from the client's ORR location. The ORR location must be specified before this command can be set to **true**.
 When configured to **false**, no route is advertised to the client.
 Default false
 Introduced 16.0.R1
 Platforms All

cluster-id *string*

Synopsis Route reflector cluster ID
 Context **configure** *router string bgp group string cluster cluster-id string*
 Tree [cluster-id](#)
 Introduced 16.0.R1
 Platforms All

orr-location *number*

Synopsis Optimal route reflection location for the cluster
 Context **configure** *router string bgp group string cluster orr-location number*
 Tree [orr-location](#)

Description	This command configures an ORR location ID. If a cluster ID is also specified, the clients in that cluster receive routes optimal for that specific location. With optimal route reflection, the best path advertised to a client takes location ID into account. If the tie-break for best path (or Add-Paths) comes down to next-hop IGP cost, the IGP costs are calculated relative to the specified location. In the SR OS implementation, the IGP costs from arbitrary ORR locations are calculated using OSPF, OSPFv3, IS-IS, or BGP-LS information in the TE DB.
Range	1 to 255
Introduced	16.0.R1
Platforms	All

connect-retry *number*

Synopsis	BGP connect retry timer value
Context	configure router <i>string</i> bgp group <i>string</i> connect-retry <i>number</i>
Tree	connect-retry
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

damp-peer-oscillations

Synopsis	Enable the damp-peer-oscillations context
Context	configure router <i>string</i> bgp group <i>string</i> damp-peer-oscillations
Tree	damp-peer-oscillations
Description	Commands in this context specify how long a BGP peer session remains in the idle state after an error causes the session to reset. In the idle state, BGP does not initiate or respond to attempts to establish a new session. Repeated errors that occur a short time after each session reset cause longer and longer hold times in the idle state. When unconfigured, command settings are inherited from the global-level configuration.
Introduced	16.0.R1
Platforms	All

error-interval *number*

Synopsis	Time after a reset that the session must be error-free
Context	configure router <i>string</i> bgp group <i>string</i> damp-peer-oscillations error-interval <i>number</i>

Tree	error-interval
Description	This command sets the interval of time after a reset, during which the session must be error-free in order to reset the penalty counter and return the idle hold time to the initial wait time.
Range	0 to 2048
Default	30
Introduced	16.0.R1
Platforms	All

idle-hold-time

Synopsis	Enter the idle-hold-time context
Context	configure router <i>string</i> bgp group <i>string</i> damp-peer-oscillations idle-hold-time
Tree	idle-hold-time
Introduced	16.0.R1
Platforms	All

initial-wait number

Synopsis	Time session remains in idle state after stabilization
Context	configure router <i>string</i> bgp group <i>string</i> damp-peer-oscillations idle-hold-time initial-wait number
Tree	initial-wait
Range	0 to 2048
Default	0
Introduced	16.0.R1
Platforms	All

max-wait number

Synopsis	Maximum session idle time after repeated instability
Context	configure router <i>string</i> bgp group <i>string</i> damp-peer-oscillations idle-hold-time max-wait number
Tree	max-wait
Range	1 to 2048
Default	60

Introduced	16.0.R1
Platforms	All

second-wait *number*

Synopsis	Time that doubles after each repeated session failure
Context	configure <i>router string</i> <i>bgp group string</i> <i>damp-peer-oscillations</i> <i>idle-hold-time</i> <i>second-wait number</i>
Tree	<i>second-wait</i>
Description	This command defines the hold time that doubles after each repeated session failure that occurs in a short span of time.
Range	1 to 2048
Default	5
Introduced	16.0.R1
Platforms	All

damping *boolean*

Synopsis	Use BGP route damping to reduce route flap
Context	configure <i>router string</i> <i>bgp group string</i> <i>damping boolean</i>
Tree	<i>damping</i>
Introduced	16.0.R1
Platforms	All

def-recv-evpn-encap *keyword*

Synopsis	Default EVPN encapsulation type
Context	configure <i>router string</i> <i>bgp group string</i> <i>def-recv-evpn-encap keyword</i>
Tree	<i>def-recv-evpn-encap</i>
Description	This command specifies the encapsulation type that BGP uses when an EVPN route is received without the Encapsulation Extended Community. When unconfigured, the setting for this command is inherited from the BGP global-level configuration.
Options	<i>mpls, vxlan</i>
Introduced	16.0.R1
Platforms	All

default-label-preference

dynamic-neighbor

Synopsis	Enter the dynamic-neighbor context
Context	configure router <i>string</i> bgp group <i>string</i> dynamic-neighbor
Tree	dynamic-neighbor
Description	Commands in this context configure dynamic BGP sessions for a peer group.
Introduced	16.0.R1
Platforms	All

interface [[interface-name](#)] *string*

Synopsis	Enter the interface list instance
Context	configure router <i>string</i> bgp group <i>string</i> dynamic-neighbor interface <i>string</i>
Tree	interface
Description	<p>Commands in this context configure an unnumbered base router network interface for dynamic neighbors.</p> <p>If this interface connects to a network with other BGP routers, sessions with the other routers can be set up automatically without explicitly configuring them as BGP neighbors. The interface must be IPv6 enabled, but because the interface is considered unnumbered, it does not require an IPv4 address or a global-unicast IPv6 address. The sessions are set up using IPv6 link-local addresses.</p> <p>The BGP unnumbered feature supports all address families that allow IPv6 link-local BGP next-hop addresses. This includes IPv4 with the use of RFC 8950 extensions.</p> <p>When an interface is added to the list of dynamic-neighbor interfaces, an outgoing connection attempt is initiated toward any directly connected router on the interface that announces itself using an ICMPv6 router advertisement message. The session attempt is unsuccessful if the peer type is not EBGp, the reported AS number of the peer does not match one of the allowed values, or the maximum session limit of the interface would be exceeded.</p>
Introduced	22.10.R1
Platforms	All

[\[interface-name\]](#) *string*

Synopsis	Name of the dynamic neighbor interface
Context	configure router <i>string</i> bgp group <i>string</i> dynamic-neighbor interface <i>string</i>

Tree	interface
String Length	1 to 32
Notes	This element is part of a list key.

allowed-peer-as *string*

Synopsis	Allowed peer AS value or range of acceptable values
Context	configure router <i>string</i> bgp group <i>string</i> dynamic-neighbor interface <i>string</i> allowed-peer-as <i>string</i>
Tree	allowed-peer-as
Description	This command specifies a singular allowed peer AS value or a range of acceptable values in the format <i>n1..n2</i> . All values greater than or equal to <i>n1</i> and less than or equal to <i>n2</i> are acceptable. For example, if the acceptable peer AS numbers are 65001 to 65005 (range) and 62100 (singular value), configure this command to use a value of [65001..65005 62100].
Max. Instances	32
Notes	This element is ordered by the user.
Introduced	22.10.R1
Platforms	All

max-sessions *number*

Synopsis	Maximum number of dynamic sessions allowed
Context	configure router <i>string</i> bgp group <i>string</i> dynamic-neighbor interface <i>string</i> max-sessions <i>number</i>
Tree	max-sessions
Description	This command specifies the maximum number of dynamic sessions that are allowed to be set up on the interface as a result of accepting sessions from link-local addresses or initiating sessions by receiving IPv6 router advertisements.
Range	1 to 255
Default	1
Introduced	22.10.R1
Platforms	All

match

Synopsis	Enter the match context
Context	configure router <i>string</i> bgp group <i>string</i> dynamic-neighbor match match
Tree	match
Description	Commands in this context configure match conditions for the dynamic neighbors.
Introduced	19.5.R1
Platforms	All

prefix [**ip-prefix**] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Enter the prefix list instance
Context	configure router <i>string</i> bgp group <i>string</i> dynamic-neighbor match prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	prefix
Introduced	19.5.R1
Platforms	All

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Dynamic peer prefix for the group
Context	configure router <i>string</i> bgp group <i>string</i> dynamic-neighbor match prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	prefix
Notes	This element is part of a list key.
Introduced	19.5.R1
Platforms	All

allowed-peer-as *string*

Synopsis	Allowed peer AS value or range of acceptable values
Context	configure router <i>string</i> bgp group <i>string</i> dynamic-neighbor match prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) allowed-peer-as <i>string</i>
Tree	allowed-peer-as
Description	This command specifies a singular allowed peer AS value or a range of acceptable values in the format <i>n1..n2</i> .

All values greater than or equal to $n1$ and less than or equal to $n2$ are acceptable. For example, if the acceptable peer AS numbers are 65001 to 65005 (range) and 62100 (singular value), configure this command to use a value of [65001..65005 62100].

Max. Instances	32
Notes	This element is ordered by the user.
Introduced	19.5.R1
Platforms	All

dynamic-neighbor-limit *number*

Synopsis	Maximum dynamic BGP sessions to accept from remote peer
Context	configure router <i>string</i> bgp group <i>string</i> dynamic-neighbor-limit <i>number</i>
Tree	dynamic-neighbor-limit
Description	This command configures the maximum number of dynamic BGP sessions that are accepted from remote peers associated with a specific peer group. If accepting a new dynamic session causes the group limit to be exceeded, the new session attempt is rejected and a Notification message is sent back to the remote peer. When unconfigured, the setting is inherited from the BGP global-level configuration.
Range	1 to 8192
Introduced	16.0.R1
Platforms	All

ebgp-default-reject-policy

Synopsis	Enable the ebgp-default-reject-policy context

 Introduced 21.7.R1
 Platforms All

admin-state *keyword*

Synopsis Administrative state of BGP egress engineering
 Context **configure** *router string bgp group string egress-engineering admin-state keyword*
 Tree [admin-state](#)
 Description This command administratively enables or disables egress engineering for the BGP. If enabled, peer node SIDs and peer adjacency SIDs are advertised in BGP-LS.
 Options enable, disable
 Default disable
 Introduced 21.7.R1
 Platforms All

egress-peer-engineering-label-unicast *boolean*

Synopsis Generate EPE label-unicast routes for group

Context	configure router <i>string</i> bgp group <i>string</i> egress-peer-engineering-label-unicast <i>boolean</i>
Tree	egress-peer-engineering-label-unicast
Description	When configured to true , BGP generates a label-unicast route for each /32 or /128 prefix that corresponds to the BGP group address in the scope of the command. These routes can be advertised to other routers to recursively resolve unlabeled BGP routes for AS external destinations. They support the Egress Peer Engineering (EPE) use case.
Default	false
Introduced	22.2.R1
Platforms	All

enforce-first-as *boolean*

Synopsis	Enforce the configured peer AS value in received routes
Context	configure router <i>string</i> bgp group <i>string</i> enforce-first-as <i>boolean</i>
Tree	enforce-first-as
Introduced	16.0.R1
Platforms	All

error-handling

Synopsis	Enter the error-handling context
Context	configure router <i>string</i> bgp group <i>string</i> error-handling
Tree	error-handling
Introduced	16.0.R1
Platforms	All

update-fault-tolerance *boolean*

Synopsis	Tolerate non-critical errors in UPDATE messages
Context	configure router <i>string</i> bgp group <i>string</i> error-handling update-fault-tolerance <i>boolean</i>
Tree	update-fault-tolerance
Description	When configured to true , non-critical errors are handled with treat-as-withdraw, attribute-discard, and other non-disruptive approaches that do not cause a session reset. Critical errors still trigger a session reset. When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to false .

When this command inherits a value of **false**, all errors trigger a session reset.

Introduced	16.0.R1
Platforms	All

export

Synopsis	Enable the export context
Context	configure router <i>string</i> bgp group <i>string</i> export
Tree	export
Description	<p>Commands in this context specify route policies that control the handling of outbound routes transmitted to certain peers. Route policies are configured in the configure policy-options context.</p> <p>When this context is unconfigured, the policy association for the group is inherited from the BGP global-level configuration.</p>
Introduced	16.0.R1
Platforms	All

policy (*policy-expr-string* | *string*)

Synopsis	BGP export policy name
Context	configure router <i>string</i> bgp group <i>string</i> export policy (<i>policy-expr-string</i> <i>string</i>)
Tree	policy
Description	<p>This command specifies route policies that control the handling of outbound routes transmitted to certain peers.</p> <p>Each object in this command is either a policy logical expression or the name of a single policy. The objects are evaluated in the specified order to determine the modifications of each route and the final action to accept or reject the route.</p> <p>Only one of the objects referenced by the command can be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT).</p> <p>Policy parameters must be enclosed by at-signs (@) and may be midstring; for example, "@variable@," "start@variable@end"," @variable@end", or"start@variable@".</p>
String Length	1 to 255
Max. Instances	15
Min. Instances	1
Notes	This element is ordered by the user.

Introduced	16.0.R1
Platforms	All

extended-nh-encoding

Synopsis	Enable the extended-nh-encoding context
Context	configure router <i>string</i> bgp group <i>string</i> extended-nh-encoding
Tree	extended-nh-encoding
Description	<p>Commands in this context specify the address families enabled to advertise the capability to receive label IPv4 routes, VPN IPv4 routes, or IPv6 next hops from peers. The peers should not send such routes unless notification has been received of this capability. If the router receives an enabled address family route from a peer to which it did not advertise the necessary capability, the UPDATE message will be considered malformed. This causes either a session reset or treat-as-withdraw behavior depending on the error handling settings.</p> <p>When the context is unconfigured, command settings are inherited from the higher level BGP configuration.</p>
Introduced	16.0.R1
Platforms	All

Synopsis	Advertise MP-BGP support for RT constraint routes
Context	configure <i>router</i> <i>string</i> <i>bgp group</i> <i>string</i> <i>family route-target</i> <i>boolean</i>
Tree	route-target
Default	false
Introduced	16.0.R1
Platforms	All

sr-policy-ipv4 *boolean*

Synopsis	Advertise MP-BGP support for the SR-policy-IPv4 family
Context	configure <i>router</i> <i>string</i> <i>bgp group</i> <i>string</i> <i>family sr-policy-ipv4</i> <i>boolean</i>
Tree	sr-policy-ipv4
Description	This command allows the router to advertise the capability for AFI1/SAFI73, which corresponds to BGP routes that encode a segment routing policy to an IPv4 destination.
Default	false
Introduced	16.0.R1
Platforms	All

sr-policy-ipv6 *boolean*

Synopsis	Advertise MP-BGP support for the SR-policy-IPv6 family
Context	configure <i>router</i> <i>string</i> <i>bgp group</i> <i>string</i> <i>family sr-policy-ipv6</i> <i>boolean</i>
Tree	sr-policy-ipv6

Description	This command allows the router to advertise the capability for AF12/SAFI73, which corresponds to BGP routes that encode a segment routing policy to an IPv6 destination.
Default	false
Introduced	19.10.R1
Platforms	All

vpn-ipv4 *boolean*

Synopsis	Advertise MP-BGP support for IPv4 VPN address family
Context	configure router <i>string</i> bgp group <i>string</i> family vpn-ipv4 <i>boolean</i>
Tree	vpn-ipv4
Default	false
Introduced	16.0.R1
Platforms	All

vpn-ipv6 *boolean*

Synopsis	Advertise MP-BGP support for IPv6 VPN address family

Introduced	16.0.R1
Platforms	All

fast-external-failover *boolean*

Synopsis	Drop external BGP session immediately when link fails
Context	configure router <i>string</i> bgp group <i>string</i> fast-external-failover <i>boolean</i>
Tree	fast-external-failover
Description	<p>When this command inherits a value of true, the router drops an external BGP session on a single-hop route immediately when the local interface goes down.</p> <p>When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to true.</p> <p>When configured to false, the BGP session remains up until the hold time expires.</p>
Introduced	16.0.R1
Platforms	All

graceful-restart

Synopsis	Enable the graceful-restart context
Context	configure <i>router string</i> <i>bgp group string</i> graceful-restart
Tree	graceful-restart
Description	<p>Commands in this context configure BGP graceful restart helper procedures for address families included in the GR capabilities of both peers.</p> <p>When the context is unconfigured, the command settings are inherited from the BGP global-level configuration.</p>
Introduced	16.0.R1
Platforms	All

gr-notification *boolean*

Synopsis	Perform graceful restart procedures after NOTIFICATION
Context	configure <i>router string</i> <i>bgp group string</i> graceful-restart gr-notification <i>boolean</i>
Tree	gr-notification
Description	<p>When configured to true, the Graceful Restart capability sent by the router indicates support for NOTIFICATION messages. If the peer also supports this capability, the session is restarted gracefully (while preserving forwarding) if either peer sends a NOTIFICATION message due to some type of event or error.</p> <p>When configured to false, NOTIFICATION messages are not supported.</p>
Default	false
Introduced	16.0.R1
Platforms	All

long-lived

Synopsis	Enable the long-lived context
Context	configure <i>router string</i> <i>bgp group string</i> graceful-restart long-lived
Tree	long-lived
Description	<p>Commands in this context configure the BGP Long-Lived Graceful-Restart (LLGR) procedures.</p> <p>LLGR, known informally as BGP persistence, is an extension of BGP GR that allows a session to stay down for a longer period of time. During this time, learned routes are marked and re-advertised as stale but they can continue to be used as routes of last resort.</p>

The LLGR handling of a session failure can be invoked immediately or it can be delayed until the end of the traditional GR restart window.

Introduced 16.0.R1
 Platforms All

advertise-stale-to-all-neighbors *boolean*

Tree	family
Options	ipv4, vpn-ipv4, ipv6, vpn-ipv6, l2-vpn, flow-ipv4, route-target, flow-ipv6, label-ipv4, label-ipv6, flow-vpn-ipv4, flow-vpn-ipv6
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

advertised-stale-time number

Synopsis	LLGR stale routes time for family override
Context	configure router <i>string</i> bgp group <i>string</i> graceful-restart long-lived family <i>keyword</i> advertised-stale-time <i>number</i>
Tree	advertised-stale-time
Description	This command configures the long-lived stale routes time that is advertised by the router in its LLGR capability. This command applies to all AFI/SAFI in the advertised LLGR capability with a family-specific override.
Range	0 to 16777215
Default	86400
Introduced	16.0.R1
Platforms	All

helper-override-stale-time number

Synopsis	Locally-configured stale routes override time
Context	configure router <i>string</i> bgp group <i>string</i> graceful-restart long-lived family <i>keyword</i> helper-override-stale-time <i>number</i>
Tree	helper-override-stale-time
Description	This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability. This is a family-specific override value.
Range	0 to 16777216
Default	16777216
Introduced	16.0.R1

Platforms All

forwarding-bits-set *keyword*

Synopsis BGP LLGR forwarding-bit behavior for address family

Context **configure** *router string* *bgp group string* *graceful-restart long-lived forwarding-bits-set keyword*

Tree [forwarding-bits-set](#)

Description This command determines the setting of the F bit in the GR and LLGR capabilities advertised by the router. When the F bit is set for an address family, it indicates that the advertising router is able to preserve forwarding state for the routes of that address family across the last restart. When the session is re-established after a restart and the F bit is not set, all stale routes from the peer are immediately removed for the corresponding address family.

This command allows the F bit to be set for all address families or only for non-forwarding address families (L2-VPN, route target, flow-IPv4, and flow-IPv6).

Options none, all, non-fwd

Default none

Introduced 16.0.R1

Platforms All

helper-override-restart-time *number*

Synopsis Locally-configured override for restart time

Context **configure** *router string* *bgp group string* *graceful-restart long-lived helper-override-restart-time number*

Tree [helper-override-restart-time](#)

Description This command overrides the restart time advertised by a peer (in its GR capability) with a locally-configured value. This override applies only to AFI/SAFI that were included in the GR capability of the peer. The restart-time is always zero for AFI/SAFI not included in the GR capability. This command is useful if the local router wants to force the LLGR phase to begin after a set time for all protected AFI/SAFI.

Range 0 to 4095

Introduced 16.0.R1

Platforms All

helper-override-stale-time *number*

Synopsis Locally-configured stale routes override time

Context	configure <i>router string</i> bgp group string <i>graceful-restart long-lived helper-override-stale-time number</i>
Tree	helper-override-stale-time
Description	This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability. This command applies to all AFI/SAFI in the advertised LLGR capability except for any AFI/SAFI with a family-specific override.
Range	0 to 16777215
Introduced	16.0.R1
Platforms	All

without-no-export *boolean*

Synopsis	Advertise LLGR stale routes to non-LLGR peers
Context	configure <i>router string</i> bgp group string <i>graceful-restart long-lived without-no-export boolean</i>
Tree	without-no-export
Description	When configured to true , LLGR stale routes can be advertised to any peer (EBGP or IBGP) that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0. When configured to false , LLGR stale routes are not advertised to any EBGP peer that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0 and a NO_EXPORT standard community is automatically added to the routes.
Default	false
Introduced	16.0.R1
Platforms	All

initial-send-delay-zero *boolean*

Synopsis	Send BGP updates as soon as the session comes up
Context	configure router <i>string</i> bgp group <i>string</i> initial-send-delay-zero <i>boolean</i>
Tree	initial-send-delay-zero
Description	<p>When configured to true, BGP updates are sent as soon as the session comes up.</p> <p>When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, BGP waits to send UPDATE messages for the minimum route advertisement time after a session is established.</p>
Introduced	16.0.R1
Platforms	All

keepalive *number*

Synopsis	Time after which the BGP KEEPALIVE message is sent
Context	configure router <i>string</i> bgp group <i>string</i> keepalive <i>number</i>
Tree	keepalive

Description	<p>This command configures the BGP keepalive timer value. A keepalive message is sent every time this timer expires.</p> <p>This value is generally one-third of the hold time interval configured in the hold-time seconds context. Although the implementation allows this keepalive value and the hold time interval to be independently set, under the following circumstances, the configured keepalive value is overridden by the hold time interval value:</p> <ul style="list-style-type: none"> • If the specified keepalive value is greater than the configured hold time, the specified keepalive value is ignored and the timer value is set to one third of the current hold time value. • If the specified hold time interval is less than the configured keepalive value, the keepalive value is reset to one third of the specified hold time interval. • If the hold time interval is set to zero, the configured keepalive value is ignored. This means that the connection with the peer is up permanently and no keepalive packets are sent to the peer. <p>When unconfigured, the command inherits the BGP global-level setting.</p>
Range	0 to 21845

Context	configure <i>router string</i> bgp group string monitor
Tree	monitor
Description	Commands in this context specify BMP-related configurations at the BGP group level. When this context is unconfigured, the command settings are inherited from the BGP global-level configuration.
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of BMP monitoring
Context	configure <i>router string</i> bgp group string monitor admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

all-stations *boolean*

Synopsis	Send BMP messages to all configured stations
Context	configure <i>router string</i> bgp group string monitor all-stations <i>boolean</i>
Tree	all-stations
Description	When configured to true , this command specifies that BMP messages are to be sent to all configured BMP monitoring stations.

When configured to **false**, the command is not used to indicate the stations which can receive BMP messages. The **station** command (at the same context level) identifies the BMP stations for which BMP messages are to be sent.

Default	false
Introduced	16.0.R1
Platforms	All

route-monitoring

Synopsis	Enter the route-monitoring context
Context	configure router <i>string</i> bgp <i>group</i> <i>string</i> monitor route-monitoring
Tree	route-monitoring
Introduced	16.0.R1
Platforms	All

post-policy *boolean*

Synopsis	Allow post-policy route-monitoring messages to be sent
Context	configure router <i>string</i> bgp <i>group</i> <i>string</i> monitor route-monitoring post-policy <i>boolean</i>
Tree	post-policy
Default	false
Introduced	16.0.R1
Platforms	All

pre-policy *boolean*

Synopsis	Allow pre-policy route-monitoring messages to be sent
Context	configure router <i>string</i> bgp <i>group</i> <i>string</i> monitor route-monitoring pre-policy <i>boolean</i>
Tree	pre-policy
Default	false
Introduced	16.0.R1
Platforms	All

station [[station-name](#)] *reference*

Synopsis	Add a list entry for station
----------	-------------------------------------

Context	configure router <i>string</i> bgp group <i>string</i> monitor station <i>reference</i>
Tree	station
Description	This command identifies a BMP monitoring station for which BMP messages are to be sent.
Max. Instances	8
Introduced	16.0.R1
Platforms	All

[station-name] *reference*

Synopsis	BMP monitoring station
Context	configure router <i>string</i> bgp group <i>string</i> monitor station <i>reference</i>
Tree	station
Reference	configure bmp station <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

multihop *number*

Synopsis	TTL in IP packet headers for EBGP peers multi-hops away
Context	configure router <i>string</i> bgp group <i>string</i> multihop <i>number</i>
Tree	multihop
Range	1 to 255
Introduced	16.0.R1
Platforms	All

multipath-eligible *boolean*

Synopsis	Allow routes from group peers in multipath eligibility
Context	configure router <i>string</i> bgp group <i>string</i> multipath-eligible <i>boolean</i>
Tree	multipath-eligible
Default	false
Introduced	19.5.R1

Platforms All

next-hop-self *boolean*

Synopsis Advertise routes with local address as next-hop address
 Context **configure** *router string bgp group string next-hop-self boolean*
 Tree [next-hop-self](#)
 Default false
 Introduced 16.0.R1
 Platforms All

next-hop-unchanged

Synopsis Enter the **next-hop-unchanged** context
 Context **configure** *router string bgp group string next-hop-unchanged*
 Tree [next-hop-unchanged](#)
 Description Commands in this context specify the IP address families that allow unchanged BGP next-hops when sending BGP routes to peers in the group.
 Introduced 16.0.R1
 Platforms All

evpn *boolean*

Synopsis Advertise EVPN routes with unchanged BGP next hop
 Context **configure** *router string bgp group string next-hop-unchanged evpn boolean*
 Tree [evpn](#)
 Default false
 Introduced 20.2.R1
 Platforms All

label-ipv4 *boolean*

Synopsis Advertise label-IPv4 routes with unchanged BGP next hop
 Context **configure** *router string bgp group string next-hop-unchanged label-ipv4 boolean*
 Tree [label-ipv4](#)

Default	false
Introduced	16.0.R1
Platforms	All

label-ipv6 *boolean*

Synopsis	Advertise label-IPv6 routes with unchanged BGP next hop
Context	configure router <i>string</i> bgp <i>group</i> <i>string</i> next-hop-unchanged label-ipv6 <i>boolean</i>
Tree	label-ipv6
Default	false
Introduced	16.0.R1
Platforms	All

vpn-ipv4 *boolean*

Synopsis	Advertise VPN IPv4 routes with unchanged BGP next hop
Context	configure router <i>string</i> bgp <i>group</i> <i>string</i> next-hop-unchanged vpn-ipv4 <i>boolean</i>
Tree	vpn-ipv4
Default	false
Introduced	20.2.R1
Platforms	All

vpn-ipv6 *boolean*

Synopsis	Advertise VPN IPv6 routes with unchanged BGP next hop
Context	configure router <i>string</i> bgp <i>group</i> <i>string</i> next-hop-unchanged vpn-ipv6 <i>boolean</i>
Tree	vpn-ipv6
Default	false
Introduced	20.2.R1
Platforms	All

origin-validation

Synopsis	Enter the origin-validation context
Context	configure router <i>string</i> bgp <i>group</i> <i>string</i> origin-validation

Tree	origin-validation
Introduced	16.0.R1
Platforms	All

ipv4 *boolean*

Synopsis	Enable support for unlabeled unicast IPv4 routes
Context	configure router <i>string</i> bgp group <i>string</i> origin-validation ipv4 <i>boolean</i>
Tree	ipv4
Default	false
Introduced	16.0.R1
Platforms	All

ipv6 *boolean*

Synopsis	Enable support for unlabeled unicast IPv6 routes
Context	configure router <i>string</i> bgp group <i>string</i> origin-validation ipv6 <i>boolean</i>
Tree	ipv6
Default	false
Introduced	16.0.R1
Platforms	All

label-ipv4 *boolean*

Synopsis	Enable support for labeled-unicast IPv4 routes
Context	configure router <i>string</i> bgp group <i>string</i> origin-validation label-ipv4 <i>boolean</i>
Tree	label-ipv4
Default	false
Introduced	16.0.R1
Platforms	All

label-ipv6 *boolean*

Synopsis	Enable support for labeled-unicast IPv6 routes
Context	configure router <i>string</i> bgp group <i>string</i> origin-validation label-ipv6 <i>boolean</i>

Tree	label-ipv6
Default	false
Introduced	16.0.R1
Platforms	All

outbound-route-filtering

Synopsis	Enable the outbound-route-filtering context
Context	configure router <i>string</i> bgp group <i>string</i> outbound-route-filtering
Tree	outbound-route-filtering
Description	Commands in this context configure the send and receive capabilities for Outbound Route Filtering (ORF). When this context is unconfigured, the group command settings are inherited from the BGP global-level configuration.
Introduced	16.0.R1
Platforms	All

extended-community

Synopsis	Enable the extended-community context
Context	configure router <i>string</i> bgp group <i>string</i> outbound-route-filtering extended-community
Tree	extended-community
Description	Commands in this context configure the ORF send and receive capabilities based on Extended Communities. When this context is unconfigured, the command settings are inherited from the global-level configuration.
Introduced	16.0.R1
Platforms	All

accept-orf *boolean*

Synopsis	Negotiate with peer to accept BGP ORF filters
Context	configure router <i>string</i> bgp group <i>string</i> outbound-route-filtering extended-community accept-orf <i>boolean</i>
Tree	accept-orf
Description	When configured to true , the receive capability in the BGP ORF is negotiated with a peer and ORF filters can be accepted from peers.

When unconfigured, the command inherits the value of the global-level setting (**true** or **false**). The command cannot be explicitly configured to **false**.

When this command inherits a value of **false**, the accept capability in the BGP ORF is removed and any existing ORF filters that are currently in place are cleared.

Introduced	16.0.R1
Platforms	All

send-orf

Synopsis	Enable the send-orf context
Context	configure <i>router string bgp group string outbound-route-filtering extended-community send-orf</i>
Tree	<i>send-orf</i>
Description	<p>Commands in this context allow BGP to negotiate the send capability in the ORF negotiation with a peer. The send capability also causes the router to send a community filter, prefix filter, or AS path filter configured as an inbound filter on the BGP session to its peer as an ORF Action ADD.</p> <p>When this context is unconfigured, the command settings are inherited from the BGP global-level configuration.</p>
Introduced	16.0.R1
Platforms	All

route-target [*community-name*] *string*

Synopsis	Add a list entry for route-target
Context	configure <i>router string bgp group string outbound-route-filtering extended-community send-orf route-target string</i>
Tree	<i>route-target</i>
Introduced	16.0.R1
Platforms	All

[*community-name*] *string*

Synopsis	Route target community name
Context	configure <i>router string bgp group string outbound-route-filtering extended-community send-orf route-target string</i>
Tree	<i>route-target</i>
String Length	1 to 32

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

passive *boolean*

Synopsis	Enable passive mode for BGP communication
Context	configure router <i>string</i> bgp group <i>string</i> passive <i>boolean</i>
Tree	passive
Default	false
Introduced	16.0.R1
Platforms	All

path-mtu-discovery *boolean*

Synopsis	Enable Path MTU Discovery
Context	configure router <i>string</i> bgp group <i>string</i> path-mtu-discovery <i>boolean</i>
Tree	path-mtu-discovery
Description	<p>When configured to true, Path MTU Discovery (PMTUD) is enabled for the associated TCP connections.</p> <p>When set to true, PMTUD is activated toward an IPv4 BGP neighbor and the Don't Fragment (DF) bit is set in the IP header of all IPv4 packets sent to the peer. If any device along the path toward the peer cannot forward the packet because the IP MTU of the interface is smaller than the IP packet size, this device drops the packet and sends an ICMP or ICMPv6 error message encoding the interface MTU. When the router receives the ICMP or ICMPv6 message, it lowers the TCP maximum segment size limit from the previous value so that the IP MTU constraint can be accommodated.</p> <p>When configured to false and there is no TCP MSS configuration that can be associated with a BGP neighbor (in either the BGP configuration or the first hop IP interface configuration), the router advertises a value of only 1024 bytes as the TCP MSS option value, limiting received TCP segments to that size.</p>
Introduced	16.0.R1
Platforms	All

peer-as *number*

Synopsis	Peer AS number
Context	configure router <i>string</i> bgp group <i>string</i> peer-as <i>number</i>

Tree	peer-as
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

peer-ip-tracking *boolean*

Synopsis	Enable BGP peer tracking
Context	configure router <i>string</i> bgp group <i>string</i> peer-ip-tracking <i>boolean</i>
Tree	peer-ip-tracking
Description	<p>When configured to true, this command enables BGP peer tracking.</p> <p>Peer tracking should be used with caution. Peer tracking can tear a session down even if the loss of connectivity turns out to be short-lived (for example, while the IGP protocol is re-converging). Next-hop tracking, which is always enabled, handles temporary connectivity issues more effectively.</p> <p>When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, peer tracking is disabled.</p>
Introduced	16.0.R1
Platforms	All

preference *number*

Synopsis	Route preference for routes learned from all peers
Context	configure router <i>string</i> bgp group <i>string</i> preference <i>number</i>
Tree	preference
Range	1 to 255
Introduced	16.0.R1
Platforms	All

prefix-limit [[family](#)] *keyword*

Synopsis	Enter the prefix-limit list instance
Context	configure router <i>string</i> bgp group <i>string</i> prefix-limit <i>keyword</i>
Tree	prefix-limit
Introduced	16.0.R1

Platforms All

[family] keyword

Synopsis Address family to which the limit applies

Context **configure** router string bgp group string prefix-limit keyword

Tree prefix-limit

Options ipv4, vpn-ipv4, ipv6, mcast-ipv4, vpn-ipv6, l2-vpn, mvpn-ipv4, mdt-safi, ms-pw, flow-ipv4, route-target, mcast-vpn-ipv4, mvpn-ipv6, flow-ipv6, evpn, mcast-ipv6, label-ipv4, label-ipv6, bgp-ls, mcast-vpn-ipv6, sr-policy-ipv4, sr-policy-ipv6, flow-vpn-ipv4, flow-vpn-ipv6

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms All

idle-timeout number

Synopsis Time BGP peering remains idle before reconnecting

Context **configure** router string bgp group string prefix-limit keyword idle-timeout number

Tree idle-timeout

Description This command configures the time in minutes before a BGP peer is automatically re-established after reaching the prefix limit.

When unconfigured, the BGP peer stays down until the operator performs a reset. This command and **log-only** cannot be configured simultaneously.

Range 1 to 1024

Introduced 16.0.R1

Platforms All

log-only boolean

Synopsis Send warning message at threshold instead of take-down

Context **configure** router string bgp group string prefix-limit keyword log-only boolean

Tree log-only

Description When configured to **true**, the router disables the BGP session from being taken down upon reaching the prefix limit. Instead, only a warning message is sent when the limit is reached. A warning message is also sent when the configured threshold percentage of the limit is reached.

This command and **idle-timeout** cannot be configured simultaneously.

When configured to **false**, the router generates a log event and takes the BGP session down upon reaching the prefix limit.

Default	false
Introduced	16.0.R1
Platforms	All

maximum *number*

Synopsis	Maximum number of routes to be learned from a peer
Context	configure <i>router string bgp group string prefix-limit keyword maximum number</i>
Tree	maximum
Description	This command configures the maximum number of BGP routes of the specified address family that can be received from a peer before administrative action is taken. When log-only is unconfigured, the BGP session is taken down whenever the limit of any family is exceeded even if the limits of the other family has not been exceeded.
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	16.0.R2
Platforms	All

post-import *boolean*

Synopsis	Apply limit only to routes accepted by import policies
Context	configure <i>router string bgp group string prefix-limit keyword post-import boolean</i>
Tree	post-import
Description	When configured to true , the system limits the number of routes that are accepted by import policies. Routes rejected by import policies are not counted against the configured limit. When configured to false , the system limits the number of routes to all routes received from the peer.
Default	false
Introduced	16.0.R1
Platforms	All

threshold *number*

Synopsis	Percentage threshold that triggers a warning message
----------	--

Context	configure <i>router string</i> <i>bgp group string</i> <i>prefix-limit keyword</i> <i>threshold number</i>
Tree	<i>threshold</i>
Range	1 to 100
Default	90
Introduced	16.0.R1
Platforms	All

Synopsis Use group for static peers
 Context **configure** *router string bgp group string static-group boolean*
 Tree [static-group](#)
 Default true
 Introduced 16.0.R1
 Platforms All

tcp-mss (*number | keyword*)

Synopsis TCP maximum segment size override
 Context **configure** *router string bgp group string tcp-mss (number | keyword)*
 Tree [tcp-mss](#)
 Description This command configures an override for the TCP maximum segment size to use with a specific peer or set of peers (depending on the scope of the command).
 The configured value controls two properties of the TCP connection as follows:
 TCP MSS option - The router advertises the TCP MSS option value in the TCP SYN packet it sends as part of the 3-way handshake. The advertised value may be lower than the configured value, depending on the IP MTU of the first hop IP interface. The peers must abide by this value when sending TCP segments to the local router.
 TCP maximum segment size - The actual transmitted size may be lower than the configured value, depending on the TCP MSS option value signaled by the peers, the effect of path MTU discovery, or other factors.
 Range 384 to 9746
 Options ip-stack
 Introduced 21.2.R1
 Platforms All

third-party-nexthop *boolean*

Synopsis Apply third-party next-hop processing to EBGp peers
 Context **configure** *router string bgp group string third-party-nexthop boolean*
 Tree [third-party-nexthop](#)

Description	<p>When configured to true, this command enables the router to send third-party next hop to EBGP peers in the same subnet as the source peer. The address family of the transport must match the address family of the route.</p> <p>When an IPv4 or IPv6 route is received from one EBGP peer and advertised to another EBGP peer in the same IP subnet, the BGP next hop is left unchanged.</p> <p>When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, third-party next-hop processing is disabled and the next hop carries the IP address of the interface used to establish the TCP connection to the peer.</p>
Introduced	16.0.R1
Platforms	All

ttl-security *number*

Synopsis	Minimum TTL value for an incoming BGP packet
Context	configure <i>router string</i> <i>bgp group string</i> <i>ttl-security number</i>
Tree	ttl-security
Description	This command configures the minimum TTL value that BGP accepts from an incoming packet. A packet with a TTL value less than the minimum configured TTL value is discarded.
Range	1 to 255
Introduced	16.0.R1
Platforms	All

type *keyword*

Context	configure <i>router string</i> <i>bgp group string</i> <i>type keyword</i>
Tree	type
Options	no-type, internal, external
Default	no-type
Introduced	16.0.R1
Platforms	All

vpn-apply-export *boolean*

Synopsis	Apply base-instance BGP export policies to VPN routes
----------	---

Context	configure router <i>string</i> bgp group <i>string</i> vpn-apply-export <i>boolean</i>
Tree	vpn-apply-export
Description	When configured to true , base-instance BGP export route policies are applied to VPN-IPv4/6, MVPN-IPv4/6, L2-VPN, MDT-SAFI, MCAST-VPN-IPv4, and EVPN routes. When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to false . When this command inherits a value of false , the export policies are not applied.
Introduced	16.0.R1
Platforms	All

vpn-apply-import *boolean*

Synopsis	Apply base-instance BGP import policies to VPN routes
Context	configure router <i>string</i> bgp group <i>string</i> vpn-apply-import <i>boolean</i>
Tree	vpn-apply-import
Description	When configured to true , base-instance BGP import route policies are applied to VPN-IPv4/6, MVPN-IPv4/6, L2-VPN, MDT-SAFI, MCAST-VPN-IPv4, and EVPN routes. When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to false . When this command inherits a value of false , the import policies are not applied.
Introduced	16.0.R1
Platforms	All

hold-time

Synopsis	Enter the hold-time context
Context	configure router <i>string</i> bgp hold-time
Tree	hold-time
Introduced	16.0.R1
Platforms	All

minimum-hold-time *number*

Synopsis	Minimum hold time between successive messages
Context	configure router <i>string</i> bgp hold-time minimum-hold-time <i>number</i>
Tree	minimum-hold-time

Description	This command specifies the minimum hold time that is accepted for the session. If a peer proposes a hold time lower than this value, the session attempt is rejected.
Range	0 3 to 65535
Default	0
Introduced	16.0.R1
Platforms	All

seconds *number*

Synopsis	Maximum time BGP waits between successive messages
Context	configure router <i>string</i> bgp hold-time seconds <i>number</i>
Tree	seconds
Description	<p>This command configures the maximum time BGP waits between successive messages (either keepalive or update) from its peer before closing the connection.</p> <p>Although the implementation allows setting the keepalive timer at the BGP global level times separately, the configured keepalive timer is overridden by this value under the following circumstances.</p> <ul style="list-style-type: none"> • If the specified hold time is less than the configured keepalive time, the operational keepalive time is set to a third of the hold-time; the configured keepalive time is not changed. • If the hold time is set to zero, the operational value of the keepalive time is set to zero; the configured keepalive time is not changed. The connection with the peer is up permanently and no keepalive packets are sent to the peer.
Range	0 3 to 65535
Default	90
Introduced	16.0.R1
Platforms	All

ibgp-multipath *boolean*

Synopsis	Enable IBGP multipath load balancing
Context	configure router <i>string</i> bgp ibgp-multipath <i>boolean</i>
Tree	ibgp-multipath
Description	<p>When configured to true, this command enables IBGP multipath load balancing when adding BGP routes to the route table if the route resolving the BGP next hop offers multiple next hops.</p> <p>When configured to false, this command disables IBGP multipath load balancing.</p>
Default	false

Introduced	16.0.R1
Platforms	All

import

Synopsis	Enable the import context
Context	configure router <i>string</i> bgp import
Tree	import
Description	<p>Commands in this context specify route policies that control the handling of inbound routes received from certain peers. Route policies are configured in the configure policy-options context.</p> <p>When no import policies are specified in this context, BGP routes are accepted by default.</p>
Introduced	16.0.R1
Platforms	All

policy (*policy-expr-string* | *string*)

Synopsis	BGP import policy name
Context	configure router <i>string</i> bgp import policy (<i>policy-expr-string</i> <i>string</i>)
Tree	policy
Description	<p>This command specifies a list of objects, where each object is either a policy logical expression or the name of a single policy. The objects are evaluated in the specified order to determine the modifications of each route and the final action to accept or reject the route.</p> <p>Only one of the objects referenced by this command is allowed to be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT).</p> <p>Policy parameters must be enclosed by at-signs (@) and may be midstring; for example, "@variable@," "start@variable@end"," @variable@end", or"start@variable@".</p>
String Length	1 to 255
Max. Instances	15
Min. Instances	1
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

initial-send-delay-zero *boolean*

Synopsis	Send BGP updates as soon as session comes up
Context	configure <i>router</i> <i>string</i> <i>bgp</i> <i>initial-send-delay-zero</i> <i>boolean</i>
Tree	<i>initial-send-delay-zero</i>
Default	false
Introduced	16.0.R1
Platforms	All

inter-as-vpn *boolean*

Synopsis	Allow advertisement of VPN routes across AS boundaries
Context	configure <i>router</i> <i>string</i> <i>bgp</i> <i>inter-as-vpn</i> <i>boolean</i>
Tree	<i>inter-as-vpn</i>
Description	When configured to true , VPNs can exchange routes across AS boundaries, providing model B connectivity. When configured to false , ASBRs are prevented from advertising VPN routes to peers in other ASs.
Default	false
Introduced	16.0.R1
Platforms	All

keepalive *number*

Synopsis	Time after which the BGP KEEPALIVE message is sent
Context	configure <i>router</i> <i>string</i> <i>bgp</i> <i>keepalive</i> <i>number</i>
Tree	<i>keepalive</i>
Range	0 to 21845
Default	30
Introduced	16.0.R1
Platforms	All

label-allocation

Synopsis	Enter the label-allocation context
Context	configure <i>router</i> <i>string</i> <i>bgp</i> <i>label-allocation</i>

Tree	label-allocation
Introduced	20.10.R1
Platforms	All

label-ipv6

Synopsis	Enter the label-ipv6 context
Context	configure router <i>string</i> bgp label-allocation label-ipv6
Tree	label-ipv6
Description	This command controls the label allocation behavior for labeled unicast IPv6 routes. The label options are explicit-null and normal .
Introduced	20.10.R1
Platforms	All

explicit-null *boolean*

Synopsis	Apply advertised label and associated programming rules
Context	configure router <i>string</i> bgp label-allocation label-ipv6 explicit-null <i>boolean</i>
Tree	explicit-null
Description	<p>When configured to true, this command uses the advertised label and associated programming rules on this instance of BGP. The following applies:</p> <ul style="list-style-type: none"> • The router is required to act as the BGP next-hop of a label-unicast IPv6 route that it is advertising. It sets the BGP label value to IPv6 explicit null (value 2), forcing a POP behavior for received packets. • The received label-unicast IPv6 routes never create tunnels in TTM that can be used to resolve other BGP routes (with an IPv6 next-hop). • A received label-unicast IPv6 route can be resolved by a label-ipv4 BGP tunnel that is transported over a stacked tunnel (SR-TE LSP or LDPoRSVP LSP). <p>When configured to false, advertised label IPv6 programming rules are not used. The following applies:</p> <ul style="list-style-type: none"> • When the router is required to act as the BGP next-hop of a label-unicast IPv6 route that it is advertising, it sets the BGP label value to a proper value in the dynamic label range and programs a POP or SWAP operation for that label, depending on the origin of the route and various import policy actions that could apply to the route. • Received label-unicast IPv6 routes that have a prefix length of 128 bits are automatically installed in TTM so that they can be used to resolve other (non-labeled-unicast) BGP routes (with an IPv6 next-hop). • A received label-unicast IPv6 route cannot be resolved by a label-ipv4 BGP tunnel that is transported over a stacked tunnel (SR-TE LSP or LDPoRSVP LSP).

- The label-ipv6 routes used for ECMP toward an IPv6 destination cannot be a mix of routes with regular label values and routes with special (IPv6 explicit null) label values.

Changes in the value of this leaf do not cause the BGP sessions of the base router to reset.

Default	true
Introduced	20.10.R1
Platforms	All

label-preference *number*

Synopsis	Route preference for routes from labeled-unicast peers
Context	configure <i>router string</i> bgp <i>label-preference number</i>
Tree	label-preference
Range	1 to 255
Default	170
Introduced	16.0.R1
Platforms	All

link-state-route-export *boolean*

Synopsis	Allow the export of the TED NLRI database
Context	configure <i>router string</i> bgp <i>link-state-route-export boolean</i>
Tree	link-state-route-export
Description	When configured to true , this command allows BGP to export link-state information to BGP neighbors. When configured to false , link-state information is not exported.
Default	false
Introduced	16.0.R1
Platforms	All

link-state-route-import *boolean*

Synopsis	Allow the import of the TED NLRI database
Context	configure <i>router string</i> bgp <i>link-state-route-import boolean</i>
Tree	link-state-route-import

Description	When configured to true , this command enables the import of link-state information into the BGP-LS address family for advertisement to other BGP neighbors. When configured to false , this command disables the import of link-state information.
Default	false
Introduced	16.0.R1
Platforms	All

local-as

Synopsis	Enter the local-as context
Context	configure router <i>string</i> bgp local-as
Tree	local-as
Introduced	16.0.R1
Platforms	All

as-number *number*

Synopsis	Local (or virtual) BGP AS number
Context	configure router <i>string</i> bgp local-as as-number <i>number</i>
Tree	as-number
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

prepend-global-as *boolean*

Synopsis	Prepend global AS when advertising routes to BGP peer
Context	configure router <i>string</i> bgp local-as prepend-global-as <i>boolean</i>
Tree	prepend-global-as
Description	When configured to true , the global ASN is added to the AS_PATH attribute in outbound routes sent to the peer. When configured to false , the global ASN is hidden in paths announced to the EBGP peer.
Default	true
Introduced	16.0.R1
Platforms	All

private *boolean*

Synopsis	Hide the local ASN in sent paths learned from peering
Context	configure <i>router</i> <i>string</i> <i>bgp local-as private boolean</i>
Tree	private
Description	When configured to true , the local ASN is hidden in paths learned from the peering. When configured to false , the local ASN is advertised to all peers, including those that can use the global ASN for establishing BGP peering sessions.
Default	false
Introduced	16.0.R1
Platforms	All

local-preference *number*

Synopsis	Default local preference if not in incoming routes
Context	configure <i>router</i> <i>string</i> <i>bgp local-preference number</i>
Tree	local-preference
Max. Range	0 to 4294967295
Default	100
Introduced	16.0.R1
Platforms	All

loop-detect *keyword*

Synopsis	Strategy for loop detection in the AS path
Context	configure <i>router</i> <i>string</i> <i>bgp loop-detect keyword</i>
Tree	loop-detect
Options	drop-peer, ignore-loop, off, discard-route
Default	ignore-loop
Introduced	16.0.R1
Platforms	All

loop-detect-threshold *number*

Synopsis	Threshold for the global ASN in a received AS path
----------	--

Context	configure <i>router string</i> bgp loop-detect-threshold <i>number</i>
Tree	loop-detect-threshold
Range	0 to 15
Default	0
Introduced	16.0.R6
Platforms	All

med-out (*number* | *keyword*)

Synopsis	Default MED attribute value to advertise to peers
Context	configure <i>router string</i> bgp med-out (<i>number</i> <i>keyword</i>)
Tree	med-out
Max. Range	0 to 4294967295
Options	igp-cost
Introduced	16.0.R1
Platforms	All

min-route-advertisement *number*

Synopsis	Minimum time before a prefix can be advertised to peer
Context	configure <i>router string</i> bgp min-route-advertisement <i>number</i>
Tree	min-route-advertisement
Range	1 to 255
Default	30
Introduced	16.0.R1
Platforms	All

monitor

Synopsis	Enable the monitor context
Context	configure <i>router string</i> bgp monitor
Tree	monitor
Description	Commands in this context specify BMP-related configurations. When this context is unconfigured, the sending of BMP messages to BMP monitoring stations is disabled.

Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of BMP monitoring
Context	configure router <i>string</i> bgp monitor admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

all-stations *boolean*

Synopsis	Send BMP messages to all configured stations
Context	configure router <i>string</i> bgp monitor all-stations <i>boolean</i>
Tree	all-stations
Description	<p>When configured to true, this command specifies that BMP messages are to be sent to all configured BMP monitoring stations.</p> <p>When configured to false, the command is not used to indicate the stations which can receive BMP messages. The station command (at the same context level) identifies the BMP stations for which BMP messages are to be sent.</p>
Default	false
Introduced	16.0.R1
Platforms	All

route-monitoring

Synopsis	Enter the route-monitoring context
Context	configure router <i>string</i> bgp monitor route-monitoring
Tree	route-monitoring
Introduced	16.0.R1
Platforms	All

post-policy *boolean*

Synopsis	Allow post-policy route-monitoring messages to be sent
Context	configure router <i>string</i> bgp monitor route-monitoring post-policy <i>boolean</i>
Tree	post-policy
Default	false
Introduced	16.0.R1
Platforms	All

pre-policy *boolean*

Synopsis	Allow pre-policy route-monitoring messages to be sent
Context	configure router <i>string</i> bgp monitor route-monitoring pre-policy <i>boolean</i>
Tree	pre-policy
Default	false
Introduced	16.0.R1
Platforms	All

station [[station-name](#)] *reference*

Synopsis	Add a list entry for station
Context	configure router <i>string</i> bgp monitor station <i>reference</i>
Tree	station
Description	This command identifies a BMP monitoring station for which BMP messages are to be sent.
Max. Instances	8
Introduced	16.0.R1
Platforms	All

[[station-name](#)] *reference*

Synopsis	BMP monitoring station
Context	configure router <i>string</i> bgp monitor station <i>reference</i>
Tree	station
Reference	configure bmp station <i>string</i>

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

mp-bgp-keep *boolean*

Synopsis	Keep rejected VPN-IP routes in RIB-IN
Context	configure <i>router string bgp mp-bgp-keep boolean</i>
Tree	mp-bgp-keep
Description	When configured to true , the RIB-IN retains all MP-BGP routes, including VPN routes rejected by import policies or not imported by any services. As a result, sending Route Refresh messages is not required when an import policy changes. When configured to false , these VPN routes are deleted from the RIB-IN.
Default	false
Introduced	16.0.R1
Platforms	All

multihop *number*

Synopsis	TTL in IP packet headers for EBGP peers multi-hops away
Context	configure <i>router string bgp multihop number</i>
Tree	multihop
Description	This command configures the Time to Live (TTL) value entered in the IP header of packets sent to an EBGP peer multiple hops away. This command applies only to EBGP.
Range	1 to 255
Introduced	16.0.R1
Platforms	All

multipath

Synopsis	Enter the multipath context
Context	configure <i>router string bgp multipath</i>
Tree	multipath
Introduced	16.0.R1
Platforms	All

ebgp number

Synopsis	Maximum multipaths per prefix for EBGp learned routes
Context	configure router <i>string</i> bgp multipath ebgp number
Tree	ebgp
Range	1 to 64
Introduced	16.0.R1
Platforms	All

family [family-type] keyword

Synopsis	Enter the family list instance
Context	configure router <i>string</i> bgp multipath family keyword
Tree	family
Introduced	19.5.R1
Platforms	All

[family-type] keyword

Synopsis	Address family for which multipath selection applies
Context	configure router <i>string</i> bgp multipath family keyword
Tree	family
Options	ipv4, ipv6, label-ipv4, label-ipv6
Notes	This element is part of a list key.
Introduced	19.5.R1
Platforms	All

ebgp number

Synopsis	Maximum multipaths when best path is EBGp learned route
Context	configure router <i>string</i> bgp multipath family keyword ebgp number
Tree	ebgp
Description	This command configures the maximum number of multipaths per prefix or NLRI when the best path is an EBGp learned route. The limit configured using this command overrides the limit configured in the max-paths command. If the best path is an EBGp learned route, and this command is set to 1, multipaths are disabled.

Range	1 to 64
Introduced	19.5.R1
Platforms	All

ibgp number

Synopsis	Maximum multipaths when best path is IBGP learned route
Context	configure router string bgp multipath family keyword ibgp number
Tree	ibgp
Description	This command configures the maximum number of multipaths per prefix or NLRI when the best path is an IBGP learned route. The limit configured using this command overrides the limit configured in the max-paths command. If the best path is an IBGP learned route and this command is set to 1, multipaths are disabled.
Range	1 to 64
Introduced	19.5.R1
Platforms	All

max-paths number

Synopsis	Maximum number of multipaths per prefix or NLRI
Context	configure router string bgp multipath family keyword max-paths number
Tree	max-paths
Description	<p>This command configures the maximum number of multipaths per prefix or NLRI for the IP family option specified using the family command.</p> <p>Consider the following when configuring this command:</p> <ul style="list-style-type: none"> • If the best path is an EBGP-learned route and the ebgp command is configured, the limit configured in the ebgp command overrides the limit configured in this command. • If the best path is an IBGP-learned route and the ibgp command is configured, the limit configured in the ibgp command overrides the limit configured in this command. • If the best path is an EBGP-learned route and the ebgp command is not configured, and this command is configured to 1, multipaths are disabled. • If the best path is an IBGP-learned route and the ibgp command is not configured, and this command is configured to 1, multipaths are disabled.
Range	1 to 64
Introduced	19.5.R1
Platforms	All

restrict *keyword*

Synopsis	AS path restriction for the non-best path
Context	configure router <i>string</i> bgp multipath family <i>keyword</i> restrict <i>keyword</i>
Tree	restrict
Options	same-as-path-length, same-neighbor-as, exact-as-path
Default	same-as-path-length
Introduced	19.5.R1
Platforms	All

unequal-cost *boolean*

Synopsis	Ignore differences in the next-hop cost for multipath
Context	configure router <i>string</i> bgp multipath family <i>keyword</i> unequal-cost <i>boolean</i>
Tree	unequal-cost
Description	When configured to true , BGP ignores differences in the next-hop cost when determining eligible multipaths.
Default	false
Introduced	19.5.R1
Platforms	All

ibgp *number*

Synopsis	Maximum multipaths per prefix for IBGP learned routes
Context	configure router <i>string</i> bgp multipath ibgp <i>number</i>
Tree	ibgp
Range	1 to 64
Introduced	16.0.R1
Platforms	All

max-paths *number*

Synopsis	Maximum multipaths per prefix
Context	configure router <i>string</i> bgp multipath max-paths <i>number</i>
Tree	max-paths

Range	1 to 64
Default	1
Introduced	16.0.R1
Platforms	All

restrict *keyword*

Synopsis	AS path restriction for the non-best path
Context	configure router <i>string</i> bgp multipath restrict <i>keyword</i>
Tree	restrict
Options	same-as-path-length, same-neighbor-as, exact-as-path
Default	same-as-path-length
Introduced	16.0.R1
Platforms	All

unequal-cost *boolean*

Synopsis	Ignore differences in the next-hop cost for multipath
Context	configure router <i>string</i> bgp multipath unequal-cost <i>boolean</i>
Tree	unequal-cost
Default	false
Introduced	19.5.R1
Platforms	All

mvpn-vrf-import-subtype-new *boolean*

Synopsis	Encode the IANA value of 0x010b in advertised routes
Context	configure router <i>string</i> bgp mvpn-vrf-import-subtype-new <i>boolean</i>
Tree	mvpn-vrf-import-subtype-new
Description	When configured to true , this command encodes the value of 0x010b for the type or subtype in advertised routes. When configured to false , BGP encodes the extended community type or subtype as 0x010a to preserve backwards compatibility.
Default	false
Introduced	16.0.R1

Platforms All

neighbor [[ip-address](#)] (*ipv4-address-with-zone | ipv6-address-with-zone*)

Synopsis Enter the **neighbor** list instance

Context **configure** [router](#) *string* [bgp neighbor](#) (*ipv4-address-with-zone | ipv6-address-with-zone*)

Tree [neighbor](#)

Introduced 16.0.R1

Platforms All

[ip-address] (*ipv4-address-with-zone | ipv6-address-with-zone*)

Synopsis IP address of the BGP peer router

Context **configure** [router](#) *string* [bgp neighbor](#) (*ipv4-address-with-zone | ipv6-address-with-zone*)

Tree [neighbor](#)

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms All

add-paths

Synopsis Enable the **add-paths** context

Context **configure** [router](#) *string* [bgp neighbor](#) (*ipv4-address-with-zone | ipv6-address-with-zone*)
[add-paths](#)

Tree [add-paths](#)

Description Commands in this context allow the add-paths node to be configured for the specified families for configuration of the BGP group or neighbor. The BGP add-paths capability allows the router to send or receive multiple paths per prefix to and from a peer.

When unconfigured, command settings are inherited from a higher level BGP configuration.

Introduced 16.0.R1

Platforms All

evpn

Synopsis Enter the **evpn** context

Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) add-paths evpn
Tree	evpn
Description	Commands in this context configure the add-paths capability for EVPN routes. By default, add-paths is not enabled for EVPN routes.
Introduced	21.10.R1
Platforms	All

receive *boolean*

Synopsis	Receive multiple EVPN paths per prefix from a peer
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) add-paths evpn receive <i>boolean</i>
Tree	receive
Default	false
Introduced	21.10.R1
Platforms	All

send (*number* | *keyword*)

Synopsis	Maximum paths per EVPN prefix to Add-Path peers
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) add-paths evpn send (<i>number</i> <i>keyword</i>)
Tree	send
Range	1 to 16
Options	multipaths
Introduced	21.10.R1
Platforms	All

ipv4

Synopsis	Enter the ipv4 context
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) add-paths ipv4
Tree	ipv4
Introduced	16.0.R1

Platforms All

receive *boolean*

Synopsis Receive multiple labeled-unicast routes per IPv4 prefix

Context **configure router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)
add-paths ipv4 receive *boolean*

Tree **receive**

Description When configured to **true**, the router can receive multiple unlabeled IPv4 unicast routes per prefix from a peer.
When configured to **false**, the ADD-PATH receive capability is not enabled.

Default false

Introduced 16.0.R1

Platforms All

send (*number* | *keyword*)

Synopsis Maximum paths per unlabeled IPv4 unicast prefix

Context **configure router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)
add-paths ipv4 send (*number* | *keyword*)

Tree **send**

Description This command configures the maximum number of paths per unlabeled IPv4 unicast prefix that are allowed to be advertised to ADD-PATH peers. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules.
When not configured, ADD-PATH send capability is not enabled for unlabeled IPv4 unicast routes.

Range 1 to 16

Options multipaths

Introduced 16.0.R1

Platforms All

ipv6

Synopsis Enter the **ipv6** context

Context **configure router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)
add-paths ipv6

Tree	ipv6
Introduced	16.0.R1
Platforms	All

receive boolean

Synopsis	Receive multiple routes per IPv6 prefix
Context	configure router string bgp neighbor (<i>ipv4-address-with-zone ipv6-address-with-zone</i>) add-paths ipv6 receive boolean
Tree	receive
Description	When configured to true , this command allows multiple unlabeled IPv6 unicast routes per prefix to be received from a peer. When configured to false , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	16.0.R1
Platforms	All

send (number | keyword)

Synopsis	Maximum paths per unlabeled IPv6 unicast prefix
Context	configure router string bgp neighbor (<i>ipv4-address-with-zone ipv6-address-with-zone</i>) add-paths ipv6 send (number keyword)
Tree	send
Description	This command configures the maximum number of paths per unlabeled IPv4 unicast prefix that are allowed to be advertised to ADD-PATH peers. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules. When not configured, ADD-PATH send capability is not enabled for unlabeled IPv4 unicast routes.
Range	1 to 16

receive *boolean*

Synopsis	Receive multiple multicast VPN routes per IPv4 prefix
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) add-paths mvpn-ipv4 receive <i>boolean</i>
Tree	receive
Description	When configured to true , this command allows multiple multicast VPN routes per IPv4 prefix to be received from a peer. When configured to false , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	16.0.R1
Platforms	All

send *number*

Synopsis	Maximum paths per multicast VPN IPv4 prefix
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) add-paths mvpn-ipv4 send <i>number</i>
Tree	send
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per multicast VPN IPv4 prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules. When not configured, ADD-PATH send capability is not enabled for multicast VPN IPv4 routes.
Range	1 to 16
Introduced	16.0.R1
Platforms	All

mvpn-ipv6

Synopsis	Enter the mvpn-ipv6 context
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) add-paths mvpn-ipv6
Tree	mvpn-ipv6
Introduced	16.0.R1
Platforms	All

receive *boolean*

Synopsis	Receive multiple multicast VPN routes per IPv6 prefix
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) add-paths mvpn-ipv6 receive <i>boolean</i>
Tree	receive
Description	When configured to true , this command allows multiple multicast VPN routes per IPv6 prefix to be received from a peer. When configured to false , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	16.0.R1
Platforms	All

send *number*

Synopsis	Maximum paths per multicast VPN IPv6 prefix
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) add-paths mvpn-ipv6 send <i>number</i>
Tree	send
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per multicast VPN IPv6 prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules. When not configured, ADD-PATH send capability is not enabled for multicast VPN IPv6 routes.
Range	1 to 16
Introduced	16.0.R1
Platforms	All

vpn-ipv4

Synopsis	Enter the vpn-ipv4 context
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) add-paths vpn-ipv4
Tree	vpn-ipv4
Introduced	16.0.R1
Platforms	All

receive boolean

Synopsis	Receive multiple routes per VPN-IPv4 prefix
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) add-paths vpn-ipv4 receive <i>boolean</i>
Tree	receive
Description	When configured to true , this command allows multiple VPN-IPv4 routes per prefix to be received from a peer. When configured to false , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	16.0.R1
Platforms	All

send (number | keyword)

Synopsis	Maximum paths per VPN-IPv4 prefix
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) add-paths vpn-ipv4 send (<i>number</i> <i>keyword</i>)
Tree	send
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per VPN-IPv4 prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules. When not configured, ADD-PATH send capability is not enabled for VPN-IPv4 routes.
Range	1 to 16
Options	multipaths
Introduced	16.0.R1
Platforms	All

vpn-ipv6

Synopsis	Enter the vpn-ipv6 context
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) add-paths vpn-ipv6
Tree	vpn-ipv6
Introduced	16.0.R1
Platforms	All

receive boolean

Synopsis	Receive multiple routes per VPN-IPv6 prefix
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) add-paths vpn-ipv6 receive <i>boolean</i>
Tree	receive
Description	When configured to true , this command allows multiple VPN-IPv6 routes per prefix to be received from a peer. When configured to false , the ADD-PATH receive capability is not enabled.
Default	false
Introduced	16.0.R1
Platforms	All

send (number | keyword)

Synopsis	Maximum paths per VPN-IPv6 prefix
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) add-paths vpn-ipv6 send (<i>number</i> <i>keyword</i>)
Tree	send
Description	This command configures the maximum number of paths that are allowed to be advertised to add-paths peers per VPN-IPv6 prefix. The actual number of advertised routes may be less depending on the next-hop diversity requirement, other configuration options, route policies, or route advertisement rules. When not configured, ADD-PATH send capability is not enabled for VPN-IPv6 routes.
Range	1 to 16
Options	multipaths
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the BGP neighbor
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

advertise-inactive *boolean*

Synopsis	Advertise an inactive BGP route to peers
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) advertise-inactive <i>boolean</i>
Tree	advertise-inactive
Description	<p>When configured to true, this command allows an inactive BGP route to be advertised, even though it is not the most preferred route. The effect of the command on advertised unlabeled, labeled, and multicast IPv4 and IPv6 routes depends on several factors.</p> <ul style="list-style-type: none"> • If the active route for the IP prefix is a BGP route, that route is advertised. • If the active route is a non-BGP route and there are valid inactive BGP routes to the same destination, the best valid inactive route is advertised unless the active non-BGP route is matched and accepted by an export policy applied to the session. • If the active route is a non-BGP route and there are no valid BGP routes to the same destination, no route is advertised unless the active non-BGP route is matched and accepted by an export policy applied to the session. <p>When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, the advertisement of inactive BGP routes to other BGP peers is disabled.</p>
Introduced	16.0.R1
Platforms	All

advertise-ipv6-next-hops

Synopsis	Enable the advertise-ipv6-next-hops context
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) advertise-ipv6-next-hops

Tree	advertise-ipv6-next-hops
Description	<p>Commands in this context allow specified IP family routes to be advertised to IPv6 transport peers with a true IPv6 address when originated or when a configured or automatic next-hop-self action is applied.</p> <p>When unconfigured, command settings are inherited from a higher level BGP configuration.</p>
Introduced	16.0.R1
Platforms	All

evpn boolean

Synopsis	Advertise EVPN route with IPv6 next-hop address
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) advertise-ipv6-next-hops evpn boolean
Tree	evpn
Description	<p>When configured to true, EVPN routes are advertised with IPv6 next-hop addresses to IPv6 transport peers.</p> <p>When configured to false, EVPN routes are advertised with IPv4 next-hop addresses to IPv6 transport peers.</p>
Default	false
Introduced	19.5.R1
Platforms	All

ipv4 boolean

Synopsis	Advertise IPv4 route with IPv6 next-hop address
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) advertise-ipv6-next-hops ipv4 boolean
Tree	ipv4
Description	<p>When configured to true, IPv4 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers. The appropriate extended NH encoding capability must also be received from the remote peer before the route can be advertised with an IPv6 address instead of the IPv4 system address as the next hop.</p> <p>When configured to false, IPv4 routes are advertised with IPv4 next-hop addresses to IPv6 transport peers. If the route matches a BGP export policy entry that tries to change the next hop to an IPv6 address and an appropriate extended NH encoding capability was not received by the remote peer, the route is handled as though it was rejected by the policy entry.</p>
Default	false

Introduced	19.5.R1
Platforms	All

label-ipv4 *boolean*

Synopsis	Advertise label IPv4 route with IPv6 next-hop address
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) advertise-ipv6-next-hops label-ipv4 <i>boolean</i>
Tree	label-ipv4
Description	<p>When configured to true, label IPv4 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers. The appropriate extended NH encoding capability must also be received from the remote peer before the route can be advertised with an IPv6 address instead of the IPv4 system address as the next hop.</p> <p>When configured to false, label IPv4 routes are advertised with the system IPv4 address as the next hop to IPv6 transport peers. If the route matches a BGP export policy entry that tries to change the next hop to an IPv6 address and an appropriate extended NH encoding capability was not received by the remote peer, the route is handled as though it was rejected by the policy entry.</p>
Default	false
Introduced	16.0.R1
Platforms	All

label-ipv6 *boolean*

Synopsis	Advertise label IPv6 route with IPv6 next-hop address
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) advertise-ipv6-next-hops label-ipv6 <i>boolean</i>
Tree	label-ipv6
Description	<p>When configured to true, label IPv6 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers.</p> <p>When configured to false, label IPv6 routes are advertised toward IPv6 transport peers with the system IPv4 address as the BGP next hop, encoded as an IPv4-mapped IPv6 address.</p>
Default	false
Introduced	16.0.R1
Platforms	All

vpn-ipv4 *boolean*

Synopsis	Advertise VPN IPv4 route with IPv6 next-hop address
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) advertise-ipv6-next-hops vpn-ipv4 <i>boolean</i>
Tree	vpn-ipv4
Description	When configured to true , VPN IPv4 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers. The appropriate extended NH encoding capability must also be received from the remote peer before the route can be advertised with an IPv6 address instead of the IPv4 system address as the next hop. When configured to false , VPN IPv4 routes are advertised toward IPv6 transport peers with the system IPv4 address as the BGP next hop. If the route matches a BGP export policy entry that tries to change the next hop to an IPv6 address and an appropriate extended NH encoding capability was not received by the remote peer, the route is handled as though it was rejected by the policy entry.
Default	false
Introduced	16.0.R1
Platforms	All

vpn-ipv6 *boolean*

Synopsis	Advertise VPN IPv6 route with IPv6 next-hop address
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) advertise-ipv6-next-hops vpn-ipv6 <i>boolean</i>
Tree	vpn-ipv6
Description	When configured to true , VPN IPv6 routes are advertised with IPv6 next-hop addresses to IPv6 transport peers. When configured to false , VPN IPv6 routes are advertised toward IPv6 transport peers with the system IPv4 address as the BGP next hop, encoded as an IPv4-mapped IPv6 address.
Default	false
Introduced	16.0.R1
Platforms	All

advertise-ldp-prefix *boolean*

Synopsis	Advertise active /32 LDP FEC prefixes to BGP peers
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) advertise-ldp-prefix <i>boolean</i>
Tree	advertise-ldp-prefix

Default	false
Introduced	16.0.R1
Platforms	All

aggregator-id-zero *boolean*

Synopsis	Set router ID in the BGP AGGREGATOR attribute to zero
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) aggregator-id-zero <i>boolean</i>
Tree	aggregator-id-zero
Introduced	16.0.R1
Platforms	All

aigp *boolean*

Synopsis	Add AIGP attribute to advertised routes
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) aigp <i>boolean</i>
Tree	aigp
Description	<p>When configured to true, this command enables Accumulated IGP (AIGP) path attribute support with one or more BGP peers. BGP path selection among routes with an associated AIGP metric is based on the end-to-end IGP metrics of the different BGP paths, even when these BGP paths span more than one AS and IGP instance.</p> <p>When unconfigured, the command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, the AIGP attribute is removed from advertised routes, if present, and is ignored in received routes.</p>
Introduced	16.0.R1
Platforms	All

as-override *boolean*

Synopsis	Replace the peer's ASN with the local ASN in AS Path
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) as-override <i>boolean</i>
Tree	as-override
Description	When configured to true , the advertising router's local AS replaces all occurrences of the peer AS in the AS_PATH attribute.

This command should be used with caution, as it breaks BGP's loop detection mechanism.

When unconfigured, the command inherits the value of the group-level setting (**true** or **false**). This command cannot be explicitly configured to **false**.

When configured to **false**, no AS override is performed.

Introduced 19.7.R1
Platforms All

asn-4-byte *boolean*

Synopsis Advertise the use of 4-byte ASNs
Context **configure** **router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **asn-4-byte** *boolean*
Tree [asn-4-byte](#)
Introduced 16.0.R1
Platforms All

authentication-key *string*

Synopsis BGP authentication key
Context **configure** **router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **authentication-key** *string*
Tree [authentication-key](#)
String Length 1 to 370
Introduced 16.0.R1
Platforms All

authentication-keychain *reference*

Synopsis TCP authentication keychain for the session
Context **configure** **router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **authentication-keychain** *reference*
Tree [authentication-keychain](#)
Description This command associates the keychain to be used to authenticate the BGP session. The keychain allows the rollover of authentication keys during the lifetime of a session.
Reference **configure** **system** **security** **keychains** **keychain** *string*
Introduced 16.0.R3

Platforms All

bfd-liveness *boolean*

Synopsis Enable BFD

Context **configure router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **bfd-liveness** *boolean*

Tree **bfd-liveness**

Description When configured to **true**, BFD is enabled on a given protocol interface where the state of the protocol interface is tied to the state of the BFD session between the local node and the remote node.

When unconfigured, the command inherits the value of the group-level setting (**true** or **false**). The command cannot be explicitly configured to **false**.

When this command inherits a value of **false**, BFD is removed from the associated protocol adjacency.

Introduced 16.0.R1

Platforms All

block-prefix-sid *boolean*

Synopsis Block the prefix SID attribute

Context **configure router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **block-prefix-sid** *boolean*

Tree **block-prefix-sid**

Description When configured to **true**, all prefix SID attributes are removed from all routes exchanged between EBGP and IBGP peers covered by the scope of the command. Locally-imposed prefix SID attributes are also removed.

When configured to **false**, all prefix SID attributes are propagated without restriction.

A change of this configuration causes the affected BGP sessions to flap.

Default false

Introduced 19.10.R1

Platforms All

capability-negotiation *boolean*

Synopsis Enable capability negotiation

Context **configure router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **capability-negotiation** *boolean*

Tree	capability-negotiation
Introduced	16.0.R1
Platforms	All

client-reflect *boolean*

Synopsis	Allow cluster RR to advertise routes to its clients
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) client-reflect <i>boolean</i>
Tree	client-reflect
Introduced	16.0.R1
Platforms	All

cluster

Synopsis	Enter the cluster context
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) cluster
Tree	cluster
Introduced	16.0.R1
Platforms	All

allow-local-fallback *boolean*

Synopsis	Allow fallback to RR topology
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) cluster allow-local-fallback <i>boolean</i>
Tree	allow-local-fallback
Description	When configured to true , this command allows the RR to advertise the best BGP path from its own topology location when there are no reachable routes from the client's ORR location. The ORR location must be specified before this command can be set to true . When configured to false , this command no route is advertised to the client.
Default	false
Introduced	16.0.R1
Platforms	All

cluster-id *string*

Synopsis	Route reflector cluster ID
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) cluster cluster-id <i>string</i>
Tree	cluster-id
Introduced	16.0.R1
Platforms	All

orr-location *number*

Synopsis	Optimal route reflection location for the cluster
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) cluster orr-location <i>number</i>
Tree	orr-location
Description	This command configures an ORR location ID. If a cluster ID is also specified, the clients in that cluster receive routes optimal for that specific location. With optimal route reflection, the best path advertised to a client takes location ID into account. If the tie-break for best path (or Add-Paths) comes down to next-hop IGP cost, the IGP costs will be calculated relative to the specified location. In the SR OS implementation, the IGP costs from arbitrary ORR locations are calculated using OSPF, OSPFv3, IS-IS, or BGP-LS information in the TE DB.
Range	1 to 255
Introduced	16.0.R1
Platforms	All

connect-retry *number*

Synopsis	BGP connect retry timer value
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) connect-retry <i>number</i>
Tree	connect-retry
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

damp-peer-oscillations

Synopsis	Enable the damp-peer-oscillations context
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) damp-peer-oscillations
Tree	damp-peer-oscillations
Introduced	16.0.R1
Platforms	All

error-interval *number*

Synopsis	Time after a reset that the session must be error-free
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) damp-peer-oscillations error-interval <i>number</i>
Tree	error-interval
Description	This command sets the interval of time after a reset, during which the session must be error-free in order to reset the penalty counter and return the idle hold time to the initial wait time.
Range	0 to 2048
Default	30
Introduced	16.0.R1
Platforms	All

idle-hold-time

Synopsis	Enter the idle-hold-time context
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) damp-peer-oscillations idle-hold-time
Tree	idle-hold-time
Introduced	16.0.R1
Platforms	All

initial-wait *number*

Synopsis	Time session remains in idle state after stabilization
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) damp-peer-oscillations idle-hold-time initial-wait <i>number</i>
Tree	initial-wait

Range	0 to 2048
Default	0
Introduced	16.0.R1
Platforms	All

max-wait *number*

Synopsis	Maximum session idle time after repeated instability
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) damp-peer-oscillations idle-hold-time max-wait <i>number</i>
Tree	max-wait
Range	1 to 2048
Default	60
Introduced	16.0.R1
Platforms	All

second-wait *number*

Synopsis	Time that doubles after each repeated session failure
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) damp-peer-oscillations idle-hold-time second-wait <i>number</i>
Tree	second-wait
Description	This command defines the hold time that doubles after each repeated session failure that occurs in a short span of time.
Range	1 to 2048
Default	5
Introduced	16.0.R1
Platforms	All

damping *boolean*

Synopsis	Use BGP route damping to reduce route flap
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) damping <i>boolean</i>
Tree	damping
Introduced	16.0.R1

Platforms All

def-recv-evpn-encap *keyword*

Synopsis Default EVPN encapsulation type

Context **configure** **router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **def-recv-evpn-encap** *keyword*

Tree **def-recv-evpn-encap**

Description This command specifies the encapsulation type that BGP uses when an EVPN route is received without the Encapsulation Extended Community.
When unconfigured, the setting for this command is inherited from the BGP group-level configuration.

Options mpls, vxlan

Introduced 16.0.R1

Platforms All

egress-engineering

Synopsis	Enable the egress-engineering context
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) egress-engineering
Tree	egress-engineering
Introduced	21.7.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of BGP egress engineering
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) egress-engineering admin-state <i>keyword</i>
Tree	admin-state
Description	This command administratively enables or disables egress engineering for the BGP. If enabled, peer node SIDs and peer adjacency SIDs are advertised in BGP-LS.

Options	enable, disable
Default	disable
Introduced	21.7.R1
Platforms	All

egress-peer-engineering-label-unicast *boolean*

Synopsis	Generate EPE label-unicast routes for neighbor
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) egress-peer-engineering-label-unicast <i>boolean</i>
Tree	egress-peer-engineering-label-unicast
Description	When configured to true , BGP generates a label-unicast route for the /32 or /128 prefix that corresponds to the BGP neighbor address. This route can be advertised to other routers to recursively resolve unlabeled BGP routes for AS external destinations. This supports the Egress Peer Engineering (EPE) use case.
Default	false
Introduced	22.2.R1
Platforms	All

enforce-first-as *boolean*

Synopsis	Enforce the configured peer AS value in received routes
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) enforce-first-as <i>boolean</i>
Tree	enforce-first-as
Description	<p>When configured to true for an EBGP session, all routes received from an EBGP peer are checked to ensure that the most recent ASN in the AS_PATH attribute of each route matches the configured AS of the session. If there is not a match, the session is reset (if the update-fault-tolerance command in the error-handling context is set to false) or the session is left up but the route is treated as withdrawn (if update-fault-tolerance is set to true).</p> <p>This command does not flap an established session because it applies only to routes received after the command is issued.</p> <p>When unconfigured, the command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, received routes are not checked for compliance with the rule.</p>
Introduced	16.0.R1
Platforms	All

error-handling

Synopsis	Enter the error-handling context
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) error-handling
Tree	error-handling
Introduced	16.0.R1
Platforms	All

update-fault-tolerance *boolean*

Synopsis	Tolerate non-critical errors in UPDATE messages
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) error-handling update-fault-tolerance <i>boolean</i>
Tree	update-fault-tolerance
Description	<p>When configured to true, non-critical errors are handled with treat-as-withdraw, attribute-discard, and other non-disruptive approaches that do not cause a session reset. Critical errors still trigger a session reset.</p> <p>When unconfigured, the command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, all errors trigger a session reset.</p>
Introduced	16.0.R1
Platforms	All

export

Synopsis	Enable the export context
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) export
Tree	export
Description	<p>Commands in this context specify route policies that control the handling of outbound routes transmitted to certain peers. Route policies are configured in the configure policy-options context.</p> <p>When this context is unconfigured, the policy association for the group is inherited from the BGP global-level configuration.</p>
Introduced	16.0.R1
Platforms	All

policy (*policy-expr-string* | *string*)

Synopsis	BGP export policy name
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) export policy (<i>policy-expr-string</i> <i>string</i>)
Tree	policy
Description	<p>This command specifies route policies that control the handling of outbound routes transmitted to certain peers.</p> <p>Each object in this command is either a policy logical expression or the name of a single policy. The objects are evaluated in the specified order to determine the modifications of each route and the final action to accept or reject the route.</p> <p>Only one of the objects referenced by the command can be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT).</p> <p>Policy parameters must be enclosed by at-signs (@) and may be midstring; for example, "@variable@", "start@variable@end", "@variable@end", or "start@variable@".</p>

extended-nh-encoding

Synopsis	Enable the extended-nh-encoding context
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) extended-nh-encoding
Tree	extended-nh-encoding
Description	<p>Commands in this context specify the address families enabled to advertise the capability to receive label IPv4 routes, VPN IPv4 routes, or IPv6 next hops from peers. The peers should not send such routes unless notification has been received of this capability. If the router receives an enabled address family route from a peer to which it did not advertise the necessary capability, the UPDATE message will be considered malformed. This causes either a session reset or treat-as-withdraw behavior depending on the error handling settings.</p> <p>When the context is unconfigured, command settings are inherited from the higher level BGP configuration.</p>

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

advertised-stale-time *number*

Synopsis	LLGR stale routes time for family override
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart long-lived family keyword advertised-stale-time number
Tree	advertised-stale-time
Description	This command configures the long-lived stale routes time that is advertised by the router in its LLGR capability. This command applies to all AFI/SAFI in the advertised LLGR capability with a family-specific override.
Range	0 to 16777215
Default	86400
Introduced	16.0.R1
Platforms	All

helper-override-stale-time *number*

Synopsis	Locally-configured stale routes override time
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart long-lived family <i>keyword</i> helper-override-stale-time <i>number</i>
Tree	helper-override-stale-time
Description	This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability. This is a family-specific override value.
Range	0 to 16777216
Default	16777216
Introduced	16.0.R1
Platforms	All

forwarding-bits-set *keyword*

Synopsis	BGP LLGR forwarding-bit behavior for address family
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart long-lived forwarding-bits-set <i>keyword</i>
Tree	forwarding-bits-set
Description	<p>This command determines the setting of the F bit in the GR and LLGR capabilities advertised by the router. When the F bit is set for an address family, it indicates that the advertising router is able to preserve forwarding state for the routes of that address family across the last restart. When the session is re-established after a restart and the F bit is not set, all stale routes from the peer are immediately removed for the corresponding address family.</p> <p>This command allows the F bit to be set for all address families or only for non-forwarding address families (L2-VPN, route target, flow-IPv4, and flow-IPv6).</p>
Options	none, all, non-fwd
Default	none
Introduced	16.0.R1
Platforms	All

helper-override-restart-time *number*

Synopsis	Locally-configured override for restart time
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart long-lived helper-override-restart-time <i>number</i>
Tree	helper-override-restart-time

Description	This command overrides the restart time advertised by a peer (in its GR capability) with a locally-configured value. This override applies only to AFI/SAFI that were included in the GR capability of the peer. The restart-time is always zero for AFI/SAFI not included in the GR capability. This command is useful if the local router wants to force the LLGR phase to begin after a set time for all protected AFI/SAFI.
Range	0 to 4095
Introduced	16.0.R1
Platforms	All

helper-override-stale-time *number*

Synopsis	Locally-configured stale routes override time
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart long-lived helper-override-stale-time <i>number</i>
Tree	helper-override-stale-time
Description	This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability. This command applies to all AFI/SAFI in the advertised LLGR capability except for any AFI/SAFI with a family-specific override.
Range	0 to 16777215
Introduced	16.0.R1
Platforms	All

without-no-export *boolean*

Synopsis	Advertise LLGR stale routes to non-LLGR peers
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart long-lived without-no-export <i>boolean</i>
Tree	without-no-export
Description	When configured to true , LLGR stale routes can be advertised to any peer (EBGP or IBGP) that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0. When configured to false , LLGR stale routes are not advertised to any EBGP peer that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0 and a NO_EXPORT standard community is automatically added to the routes.
Default	false

Introduced	16.0.R1
Platforms	All

restart-time *number*

Default	0
Introduced	16.0.R1
Platforms	All

seconds *number*

Synopsis	Maximum hold time between successive messages
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) hold-time seconds <i>number</i>
Tree	seconds
Description	<p>The BGP hold time specifies the maximum time BGP waits between successive messages (either keepalive or update) from its peer, before closing the connection.</p> <p>Even though the implementation allows setting the keepalive timer at the BGP neighbor level times separately, the configured keepalive timer is overridden by this value under the following circumstances:</p> <ul style="list-style-type: none"> • If the specified hold time is less than the configured keepalive time, then the operational keepalive time is set to a third of the hold-time; the configured keepalive time is not changed.

- If the hold time is set to zero, the operational value of the keepalive time is set to zero; the configured keepalive time is not changed. This means that the connection with the peer is up permanently and no keepalive packets are sent to the peer.

When unconfigured, the command setting is inherited from the BGP group-level configuration.

Range	0 3 to 65535
Introduced	16.0.R1
Platforms	All

import

Synopsis	Enable the import context
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) import
Tree	import
Description	Commands in this context specify route policies that control the handling of inbound routes received from certain peers. Route policies are configured in the configure policy-options context. When this context is unconfigured, the policy association is inherited from the BGP group-level configuration.
Introduced	16.0.R1
Platforms	All

policy (*policy-expr-string* | *string*)

Synopsis	Names of the BGP import policies
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) import policy (<i>policy-expr-string</i> <i>string</i>)
Tree	policy
Description	This command specifies route policies that control the handling of inbound routes received from certain peers. Each object in this command is either a policy logical expression or the name of a single policy. The objects are evaluated in the specified order to determine the modifications of each route and the final action to accept or reject the route. Only one of the objects referenced by the command can be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT). Policy parameters must be enclosed by at-signs (@) and may be midstring; for example, "@variable@," "start@variable@end"," @variable@end", or "start@variable@".

String Length	1 to 255
Max. Instances	15
Min. Instances	1
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

initial-send-delay-zero *boolean*

Synopsis	Send BGP updates as soon as the session comes up
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) initial-send-delay-zero <i>boolean</i>
Tree	initial-send-delay-zero
Description	When configured to true , BGP updates are sent as soon as the session comes up. When unconfigured, the command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to false . When this command inherits a value of false , BGP waits to send UPDATE messages for the minimum route advertisement time after a session is established.
Introduced	16.0.R1
Platforms	All

keepalive *number*

Synopsis	Time after which the BGP KEEPALIVE message is sent

prepend-global-as *boolean*

Synopsis	Prepend global ASN when advertising routes to BGP peer
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) local-as prepend-global-as <i>boolean</i>
Tree	prepend-global-as
Description	When configured to true , the global ASN is added to the AS_PATH attribute in outbound routes sent to the peer. When configured to false , the global ASN is not included in the AS_PATH attribute.
Default	true
Introduced	16.0.R1
Platforms	All

private *boolean*

Synopsis	Hide the local ASN in sent paths learned from peering
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) local-as private <i>boolean</i>
Tree	private
Description	When configured to true , the local AS number is only advertised to peers that use the local ASN for establishing BGP peering sessions. When configured to false , the local ASN is advertised to all peers, including those that can use the global ASN for establishing BGP peering sessions.
Default	false
Introduced	16.0.R1
Platforms	All

local-preference *number*

Synopsis	Default local preference if not in incoming routes
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) local-preference <i>number</i>

Tree	local-preference
Range	0 to 4294967295
Introduced	16.0.R1
Platforms	All

loop-detect *keyword*

Synopsis	Strategy for loop detection in the AS path
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) loop-detect <i>keyword</i>
Tree	loop-detect
Options	drop-peer, ignore-loop, off, discard-route
Introduced	16.0.R1
Platforms	All

loop-detect-threshold *number*

Synopsis	Threshold for the global ASN in a received AS path

Tree	loop-detect-threshold
Range	0 to 15
Introduced	16.0.R6
Platforms	All

med-out (*number* | *keyword*)

Synopsis	Default MED attribute value to advertise to peers
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) med-out (<i>number</i> <i>keyword</i>)
Tree	med-out
Max. Range	0 to 4294967295
Options	igp-cost
Introduced	16.0.R1
Platforms	All

min-route-advertisement *number*

Synopsis	Minimum interval between successive prefix updates
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) min-route-advertisement <i>number</i>
Tree	min-route-advertisement
Range	1 to 255
Introduced	16.0.R1
Platforms	All

monitor

Synopsis	Enable the monitor context
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) monitor
Tree	monitor
Description	Commands in this context specify BMP-related configurations at the BGP neighbor level. When this context is unconfigured, the command settings are inherited from the BGP group-level configuration.
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of BMP monitoring
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) monitor admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

all-stations *boolean*

Synopsis	Send BMP messages to all configured stations
----------	--

Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) monitor all-stations <i>boolean</i>
Tree	all-stations
Description	When configured to true , this command specifies that BMP messages are to be sent to all configured BMP monitoring stations. When configured to false , the command is not used to indicate the stations which can receive BMP messages. The station command (at the same context level) identifies the BMP stations for which BMP messages are to be sent.
Default	false
Introduced	16.0.R1
Platforms	All

route-monitoring

Synopsis	Enter the route-monitoring context
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) monitor route-monitoring
Tree	route-monitoring
Introduced	16.0.R1
Platforms	All

post-policy *boolean*

Synopsis	Allow post-policy route-monitoring messages to be sent
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) monitor route-monitoring post-policy <i>boolean</i>
Tree	post-policy
Default	false
Introduced	16.0.R1
Platforms	All

pre-policy *boolean*

Synopsis	Allow pre-policy route-monitoring messages to be sent
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) monitor route-monitoring pre-policy <i>boolean</i>
Tree	pre-policy

Default	false
Introduced	16.0.R1
Platforms	All

station [[station-name](#)] *reference*

Synopsis	Add a list entry for station
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) monitor station <i>reference</i>
Tree	station
Description	This command configures the set of BMP monitoring stations for which BMP messages are to be sent.
Max. Instances	8
Introduced	16.0.R1
Platforms	All

[station-name] *reference*

Synopsis	BMP monitoring station
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) monitor station <i>reference</i>
Tree	station
Reference	configure bmp station <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

multihop *number*

Synopsis	TTL in IP packet headers for EBGp peers multi-hops away
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) multihop <i>number</i>
Tree	multihop
Range	1 to 255
Introduced	16.0.R1

Platforms All

multipath-eligible *boolean*

Synopsis Allow routes from this peer in multipath eligibility

Context **configure router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **multipath-eligible** *boolean*

Tree **multipath-eligible**

Introduced 19.5.R1

Platforms All

next-hop-self *boolean*

Synopsis Advertise routes with local address as next-hop address

Context **configure router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **next-hop-self** *boolean*

Tree **next-hop-self**

Description When configured to **true**, this command configures BGP to advertise routes to members of a group using a local address of the BGP instance as the BGP next-hop address.

Note that this command is set without exception, regardless of the route source (EBGP or IBGP) or its family. When used with VPN-IPv4 and VPN-IPv6 routes, the **configure router bgp rr-vpn-forwarding** command should also be configured.

When unconfigured, the command inherits the value of the group-level setting (**true** or **false**). The command cannot be explicitly configured to **false**.

When this command inherits a value of **false**, protocol standard behavior is applied to determine whether to set **next-hop-self** in advertised routes.

Introduced 16.0.R1

Platforms All

next-hop-unchanged

Synopsis Enable the **next-hop-unchanged** context

Context **configure router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **next-hop-unchanged**

Tree **next-hop-unchanged**

Description Commands in this context specify the IP address families where the next hop remains unchanged when sending BGP routes to peers of the neighbor.

Introduced 16.0.R1

Platforms All

evpn *boolean*

Synopsis Advertise EVPN routes with unchanged BGP next hop

Context **configure** **router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)
next-hop-unchanged evpn *boolean*

Tree **evpn**

Default false

Introduced 20.2.R1

Platforms All

label-ipv4 *boolean*

Synopsis Advertise label-IPv4 routes with unchanged BGP next hop

Context **configure** **router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)
next-hop-unchanged label-ipv4 *boolean*

Tree **label-ipv4**

Default false

Introduced 16.0.R1

Platforms All

label-ipv6 *boolean*

Synopsis Advertise label-IPv6 routes with unchanged BGP next hop

Introduced	16.0.R1
Platforms	All

outbound-route-filtering

Synopsis	Enable the outbound-route-filtering context
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) outbound-route-filtering
Tree	outbound-route-filtering
Description	Commands in this context configure the send and receive capabilities for Outbound Route Filtering (ORF).

When this context is unconfigured, the command settings are inherited from the BGP group-level configuration.

Introduced 16.0.R1
Platforms All

extended-community

Synopsis Enable the **extended-community** context

Context **configure** *router string bgp neighbor (ipv4-address-with-zone | ipv6-address-with-zone) outbound-route-filtering extended-community*

Tree [extended-community](#)

Description Commands in this context configure the ORF send and receive capabilities based on Extended Communities.

When this context is unconfigured, the command settings are inherited from the group-level configuration.

Introduced 16.0.R1
Platforms All

accept-orf *boolean*

Synopsis Negotiate with peer to accept BGP ORF filters

Context **configure** *router string bgp neighbor (ipv4-address-with-zone | ipv6-address-with-zone) outbound-route-filtering extended-community accept-orf boolean*

Tree [accept-orf](#)

Description When configured to **true**, the receive capability in the BGP ORF is negotiated with a peer and ORF filters can be accepted from peers.

When unconfigured, the command inherits the value of the group-level setting (**true** or **false**). The command cannot be explicitly configured to **false**.

When this command inherits a value of **false**, the accept capability in the BGP ORF is removed and any existing ORF filters that are currently in place are cleared.

Introduced 16.0.R1
Platforms All

send-orf

Synopsis Enable the **send-orf** context

Context **configure** *router string bgp neighbor (ipv4-address-with-zone | ipv6-address-with-zone) outbound-route-filtering extended-community send-orf*

Tree	send-orf
Description	<p>Commands in this context allow BGP to negotiate the send capability in the ORF negotiation with a peer. The send capability also causes the router to send a community filter, prefix filter, or AS path filter configured as an inbound filter on the BGP session to its peer as an ORF Action ADD.</p> <p>When this context is unconfigured, the command settings are inherited from the BGP group-level configuration.</p>
Introduced	16.0.R1
Platforms	All

route-target [[community-name](#)] *string*

Synopsis	Add a list entry for route-target
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) outbound-route-filtering extended-community send-orf route-target <i>string</i>
Tree	route-target

String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

passive *boolean*

Synopsis	Use passive mode for BGP communication
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) passive <i>boolean</i>
Tree	passive
Introduced	16.0.R1

Platforms All

path-mtu-discovery *boolean*

Synopsis	Enable path MTU discovery
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) path-mtu-discovery <i>boolean</i>
Tree	path-mtu-discovery
Description	<p>When configured to true, Path MTU Discovery (PMTUD) is enabled for the associated TCP connections.</p> <p>When set to true, PMTUD is activated toward an IPv4 BGP neighbor and the Don't Fragment (DF) bit is set in the IP header of all IPv4 packets sent to the peer. If any device along the path toward the peer cannot forward the packet because the IP MTU of the interface is smaller than the IP packet size, this device drops the packet and sends an ICMP or ICMPv6 error message encoding the interface MTU. When the router receives the ICMP or ICMPv6 message, it lowers the TCP maximum segment size limit from the previous value so that the IP MTU constraint can be accommodated.</p> <p>When PMTUD is configured to false and there is no TCP MSS configuration that can be associated with a BGP neighbor (in either the BGP configuration or the first hop IP interface configuration), the router advertises a value of only 1024 bytes as the TCP MSS option value, limiting received TCP segments to that size.</p>
Introduced	16.0.R1
Platforms	All

peer-as *number*

Synopsis	Peer AS number
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) peer-as <i>number</i>
Tree	peer-as
Description	<p>This command configures the autonomous system number for the peer. The peer AS number must be configured for each configured peer.</p> <p>For EBGP peers, the peer AS number configured must be different from the autonomous system number configured for this router under the global level since the peer will be in a different autonomous system than this router.</p> <p>For IBGP peers, the peer AS number must be the same as the autonomous system number of this router configured under the global level.</p>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

peer-creation-type *keyword*

Synopsis	Peer creation type
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) peer-creation-type <i>keyword</i>
Tree	peer-creation-type
Options	static, dynamic, dynamic-if-remote, dynamic-if-local

Introduced	16.0.R1
Platforms	All

peer-ip-tracking *boolean*

Synopsis	Enable BGP peer tracking
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) peer-ip-tracking <i>boolean</i>
Tree	peer-ip-tracking
Description	<p>When configured to true, this command enables BGP peer tracking.</p> <p>Peer tracking should be used with caution. Peer tracking can tear a session down even if the loss of connectivity turns out to be short-lived (for example, while the IGP protocol is re-converging). Next-hop tracking, which is always enabled, handles temporary connectivity issues more effectively.</p> <p>When unconfigured, the command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, peer tracking is disabled.</p>
Introduced	16.0.R1
Platforms	All

preference *number*

Synopsis	Route preference for routes learned from all peers
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) preference <i>number</i>
Tree	preference
Description	This command configures the route preference for routes learned from the configured peers.

The lower the preference value, the higher the chance of the route being the active route. The router assigns BGP routes the highest default preference as compared to routes that are direct, static or learned via MPLS or OSPF.

When unconfigured, the command setting is inherited from the group-level configuration.

Range	1 to 255
Introduced	16.0.R1
Platforms	All

prefix-limit [*family*] *keyword*

Synopsis	Enter the prefix-limit list instance
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-limit <i>keyword</i>
Tree	prefix-limit
Introduced	16.0.R1
Platforms	All

[family] *keyword*

Synopsis	Address family to which the limit applies
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-limit <i>keyword</i>
Tree	prefix-limit
Options	ipv4, vpn-ipv4, ipv6, mcast-ipv4, vpn-ipv6, l2-vpn, mvpn-ipv4, mdt-safi, ms-pw, flow-ipv4, route-target, mcast-vpn-ipv4, mvpn-ipv6, flow-ipv6, evpn, mcast-ipv6, label-ipv4, label-ipv6, bgp-ls, mcast-vpn-ipv6, sr-policy-ipv4, sr-policy-ipv6, flow-vpn-ipv4, flow-vpn-ipv6
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

idle-timeout *number*

Synopsis	Time which BGP peering remains idle before reconnecting
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-limit <i>keyword</i> idle-timeout <i>number</i>
Tree	idle-timeout

Description	This command defines the idle time after an administrative take-down before BGP re-establishes a session and reconnects to a peer. When unconfigured, the command inherits the value from the group-level configuration.
Range	1 to 1024
Introduced	16.0.R1
Platforms	All

log-only *boolean*

Synopsis	Send warning message at threshold instead of take-down
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-limit <i>keyword</i> log-only <i>boolean</i>
Tree	log-only
Default	false
Introduced	16.0.R1
Platforms	All

maximum *number*

Synopsis	Maximum number of routes to be learned from a peer
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-limit <i>keyword</i> maximum <i>number</i>
Tree	maximum
Description	This command configures the maximum number of BGP routes than can be received from a peer before administrative action is taken.
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	16.0.R2
Platforms	All

post-import *boolean*

Synopsis	Apply limit only to routes accepted by import policies
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-limit <i>keyword</i> post-import <i>boolean</i>
Tree	post-import

Default	false
Introduced	16.0.R1
Platforms	All

threshold *number*

Synopsis	Percentage threshold that triggers a warning message
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-limit <i>keyword</i> threshold <i>number</i>
Tree	threshold
Range	1 to 100
Default	90
Introduced	16.0.R1
Platforms	All

remove-private

Synopsis	Enable the remove-private context
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) remove-private
Tree	remove-private
Introduced	16.0.R1
Platforms	All

limited *boolean*

Synopsis	Remove private ASNs up to first public ASN encountered
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) remove-private limited <i>boolean</i>
Tree	limited
Default	false
Introduced	16.0.R1
Platforms	All

replace *boolean*

Synopsis	Replace private ASN with global ASN before advertising
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) remove-private replace <i>boolean</i>
Tree	replace
Default	false
Introduced	19.10.R1
Platforms	All

skip-peer-as *boolean*

Synopsis	Keep private ASN if it is the same as the BGP peer ASN
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) remove-private skip-peer-as <i>boolean</i>
Tree	skip-peer-as
Default	false
Introduced	16.0.R1
Platforms	All

segment-routing-v6

Synopsis	Enable the segment-routing-v6 context
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) segment-routing-v6
Tree	segment-routing-v6
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

route-advertisement

Synopsis	Enable the route-advertisement context
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) segment-routing-v6 route-advertisement
Tree	route-advertisement
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

drop-routes-with-srv6-tlvs *boolean*

Synopsis	Drop BGP routes with SRv6 TLVs
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) segment-routing-v6 route-advertisement drop-routes-with-srv6-tlvs <i>boolean</i>
Tree	drop-routes-with-srv6-tlvs
Description	When configured to true , the router drops and does not advertise BGP routes (that belong to any address family) with SRv6 TLVs. When configured to false , the router advertises BGP routes with SRv6 TLVs.
Default	false
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

family [*family-type*] *keyword*

Synopsis	Enter the family list instance
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) segment-routing-v6 route-advertisement family <i>keyword</i>
Tree	family
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

[family-type] *keyword*

Synopsis	IP address type that SRv6 route attributes apply to
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) segment-routing-v6 route-advertisement family <i>keyword</i>
Tree	family
Options	ipv4, ipv6
Notes	This element is part of a list key.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

strip-srv6-tlvs *boolean*

Synopsis	Strip SRv6 TLVs from BGP routes advertised to peers
----------	---

Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) segment-routing-v6 route-advertisement family <i>keyword</i> strip-srv6-tlvs <i>boolean</i>
Tree	strip-srv6-tlvs
Description	When configured to true , BGP routes that belong to the address family specified using the family command are advertised to peers with SRv6 TLVs removed. Locally or remotely added SRv6 TLVs can be removed. When configured to false , SRv6 TLVs are not stripped from BGP routes advertised to peers.
Default	false
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

selective-label-ipv4-install *boolean*

Synopsis	Enable selective download for BGP label-ipv4 routes
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) selective-label-ipv4-install <i>boolean</i>
Tree	selective-label-ipv4-install
Introduced	19.10.R1
Platforms	All

send-communities

Synopsis	Enter the send-communities context
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) send-communities
Tree	send-communities
Introduced	16.0.R1
Platforms	All

extended *boolean*

Synopsis	Advertise the Extended Communities attribute to peers
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) send-communities extended <i>boolean</i>
Tree	extended
Description	When unconfigured, this command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to true .

When this command inherits a value of **true**, BGP extended communities are sent to peers in the Extended Communities attribute.

When configured to **false**, all extended communities are removed from all routes advertised to BGP peers.

Introduced	16.0.R1
Platforms	All

large *boolean*

Synopsis	Advertise the Large Communities attribute to peers
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) send-communities large <i>boolean</i>
Tree	large
Description	When unconfigured, this command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to true . When this command inherits a value of true , BGP large communities are sent to peers in the Large Communities attribute. When configured to false , all large communities are removed from all routes advertised to BGP peers.
Introduced	16.0.R1
Platforms	All

standard *boolean*

Synopsis	Advertise the Communities attribute to peers
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) send-communities standard <i>boolean</i>
Tree	standard
Description	When unconfigured, this command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to true . When this command inherits a value of true , BGP standard communities are sent to peers in the Communities attribute. When configured to false , all standard communities are removed from all routes advertised to BGP peers.
Introduced	16.0.R1
Platforms	All

send-default

Synopsis	Enable the send-default context
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) send-default
Tree	send-default
Introduced	19.7.R1

ipv6 *boolean*

Synopsis	Enable IPv6 family type
Context	configure router <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) send-default ipv6 <i>boolean</i>
Tree	ipv6
Default	false
Introduced	19.7.R1

Platforms All

split-horizon *boolean*

Synopsis Prevent routes being reflected back to best-route peer

Context **configure router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **split-horizon** *boolean*

Tree **split-horizon**

Description When configured to **true**, this command enables the use of split-horizon.

This command prevents routes from being reflected back to a peer that sends the best route. It applies to routes of all address families and to any type of sending peer; confed-EBGP, EBGP and IBGP.

Enabling the split-horizon functionality may have a detrimental impact on peer and route scaling and should only be used when absolutely necessary.

When unconfigured, the command inherits the value of the group-level setting (**true** or **false**). The command cannot be explicitly configured to **false**.

When this command inherits a value of **false**, the use of split-horizon is disabled.

Introduced 16.0.R1

Platforms All

tcp-mss (*number* | *keyword*)

Synopsis TCP maximum segment size override

Context **configure router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **tcp-mss** (*number* | *keyword*)

Tree **tcp-mss**

Description This command configures an override for the TCP maximum segment size to use with a specific peer or set of peers (depending on the scope of the command).

The configured value controls two properties of the TCP connection as follows:

TCP MSS option - The router advertises the TCP MSS option value in the TCP SYN packet it sends as part of the 3-way handshake. The advertised value may be lower than the configured value, depending on the IP MTU of the first hop IP interface. The peers must abide by this value when sending TCP segments to the local router.

TCP maximum segment size - The actual transmitted size may be lower than the configured value, depending on the TCP MSS option value signaled by the peers, the effect of path MTU discovery, or other factors.

Range 384 to 9746

Options ip-stack

Introduced 21.2.R1

Platforms All

third-party-nexthop *boolean*

Synopsis Apply third-party next-hop processing to EBGP peers

Context **configure** **router** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)
third-party-nexthop *boolean*

Description	When configured to true , base-instance BGP import route policies are applied to VPN-IPv4/6, MVPN-IPv4/6, L2-VPN, MDT-SAFI, MCAST-VPN-IPv4, and EVPN routes. When unconfigured, the command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to false . When this command inherits a value of false , the import policies are not applied.
Introduced	16.0.R1
Platforms	All

neighbor-trust

Synopsis	Enter the neighbor-trust context
Context	configure router <i>string</i> bgp neighbor-trust
Tree	neighbor-trust
Description	Commands in this context enable a label security feature at an inter-AS boundary for the specified IP families. This label security feature allows the configuration of a router, acting in a PE or in an ASBR role, to accept packets of VPN-IP or EVPN prefixes only from direct EBGP neighbors to which it advertised a service label.

The untrusted state identifies the participating interfaces. The router supports a maximum of 15 network interfaces that can participate in this feature.

At a high level, BGP tracks each direct EBGP neighbor over an untrusted interface and to which it sent a prefix label. For each of those prefixes, BGP programs a bit map in the ILM record that indicates, on a per-untrusted interface basis, whether the matching received packets must be forwarded or dropped.

Introduced 16.0.R4
Platforms All

vpn-ipv4 *boolean*

Synopsis Enable inter-AS label security for the VPN-IPv4 family
Context **configure** *router string* [bgp neighbor-trust vpn-ipv4 boolean](#)
Tree [vpn-ipv4](#)
Default false
Introduced 16.0.R4

allow-unresolved-leaking *boolean*

Synopsis	Allow unresolved BGP routes to be leaked to VPRN routes
Context	configure router <i>string</i> bgp next-hop-resolution allow-unresolved-leaking <i>boolean</i>
Tree	allow-unresolved-leaking
Description	When configured to true , this command instructs BGP in the base router instance to allow its routes to be leaked to other (VPRN) BGP instances even if the routes to be leaked do not have a BGP next-hop that can be resolved by the base instance. When configured to false , VPRN cannot import a route.
Default	false
Introduced	19.10.R1
Platforms	All

labeled-routes

Synopsis	Enter the labeled-routes context
Context	configure router <i>string</i> bgp next-hop-resolution labeled-routes
Tree	labeled-routes
Introduced	16.0.R1
Platforms	All

allow-static *boolean*

Synopsis	Allow static routes to resolve BGP next-hop
Context	configure router <i>string</i> bgp next-hop-resolution labeled-routes allow-static <i>boolean</i>
Tree	allow-static
Description	When configured to true , the BGP next-hop of label-IPv4, label-IPv6, VPN-IPv4, and VPN-IPv6 routes received from any EBGP or IBGP peer can be resolved using static routes, except for static default routes (0/0 and ::/0). A static route is less preferred than a local or interface route for resolving the BGP next-hop of labeled route but is more preferred than other IGP routes or tunnels. When configured to false , BGP next-hop resolution using static routes is not allowed. A label-IPv4 or label-IPv6 route can be resolved by a static blackhole route, even when this command is configured to false , but only if the static blackhole route is the longest prefix match (LPM) static route for the BGP next-hop address.
Default	false
Introduced	16.0.R1
Platforms	All

rr-use-route-table *boolean*

Synopsis	Use RTM to resolve BGP next-hop if TTM resolution fails
Context	configure <i>router string</i> bgp next-hop-resolution labeled-routes rr-use-route-table <i>boolean</i>
Tree	rr-use-route-table
Description	<p>When configured to true, this command enables BGP to perform a lookup of IGP routes in the route table to resolve the BGP next-hop of label-IPv4 and label-IPv6 routes. This is useful for a Route Reflector (RR) that does not participate in tunnel signaling protocols such as LDP and RSVP and therefore, does not have tunnels to resolve the BGP next-hops of label-unicast routes.</p> <p>Disable route table installation (via the route-table-install command) before setting this command to true; otherwise, forwarding of label routes resolved in this way will be incorrect.</p> <p>When configured to false, RTM next-hop resolution is not enabled.</p>
Default	false
Introduced	16.0.R1
Platforms	All

transport-tunnel

Synopsis	Enter the transport-tunnel context
Context	configure <i>router string</i> bgp next-hop-resolution labeled-routes transport-tunnel
Tree	transport-tunnel
Description	Commands in this context configure options for the next-hop resolution of BGP labeled routes (VPN-IP and labeled-unicast) using tunnels in TTM.
Introduced	16.0.R1
Platforms	All

Synopsis	Use OSPFv3 SR tunneling for next-hop resolution
Context	configure <i>router string</i> bgp next-hop-resolution labeled-routes transport-tunnel family keyword resolution-filter sr-ospf3 <i>boolean</i>
Tree	sr-ospf3
Description	<p>When configured to true, this command enables the selection of the IPv6 Segment Routing (SR) tunnel type programmed by an OSPFv3 instance in the TTMv6 for next-hop resolution of BGP routes and labeled routes.</p> <p>This command allows BGP to use the segment routing tunnel in the tunnel table submitted by the lowest preference OSPFv3 instance or, in case of a tie, the lowest numbered OSPFv3 instance.</p> <p>When configured to false, the SR tunnel type programmed by an OSPFv3 instance in the TTM for next-hop resolution is not enabled for selection.</p>
Default	false
Introduced	16.0.R6
Platforms	All

sr-policy *boolean*

Synopsis	Use SR policies for next-hop resolution
Context	configure <i>router string</i> bgp next-hop-resolution labeled-routes transport-tunnel family keyword resolution-filter sr-policy <i>boolean</i>
Tree	sr-policy

Description	<p>When configured to true, this command enables the use of segment routing policies to resolve the BGP next hop of certain BGP routes (depending on the context).</p> <p>The segment routing policies that are considered are statically configured in the local router or learned by BGP routes (AFI 1/SAFI 73). For a BGP route to be resolved by an SR policy, the highest numbered color extended community attached to BGP route must match the color of the SR policy. Next hop resolution of VPN-IP routes by SR policies is not supported.</p> <p>When configured to false, segment routing policies are not enabled for next-hop resolution.</p>
Default	false
Introduced	16.0.R1
Platforms	All

sr-te *boolean*

Synopsis	Use SR-TE tunneling for next-hop resolution
Context	configure <i>router string</i> bgp next-hop-resolution labeled-routes transport-tunnel family <i>keyword</i> resolution-filter sr-te <i>boolean</i>
Tree	sr-te
Description	<p>When configured to true, this command enables the selection of the Segment Routing (SR) tunnel type programmed by a traffic engineered (TE) instance in the TTM for next-hop resolution.</p> <p>In the case of multiple SR-TE tunnels with the same lowest metric, BGP selects the tunnel with the lowest tunnel ID.</p> <p>When configured to false, the SR tunnel type programmed by a TE instance in the TTM for next-hop resolution is not enabled for selection.</p>
Default	false
Introduced	16.0.R1
Platforms	All

udp *boolean*

Synopsis	Use MPLS over UDP tunneling for next-hop resolution
Context	configure <i>router string</i> bgp next-hop-resolution labeled-routes transport-tunnel family <i>keyword</i> resolution-filter udp <i>boolean</i>
Tree	udp
Default	false
Introduced	16.0.R1
Platforms	All

use-bgp-routes

Synopsis	Enter the use-bgp-routes context
Context	configure router <i>string</i> bgp next-hop-resolution labeled-routes use-bgp-routes
Tree	use-bgp-routes
Introduced	21.2.R1
Platforms	All

label-ipv6-explicit-null *boolean*

Synopsis	Use BGP routes to resolve address family routes
Context	configure router <i>string</i> bgp next-hop-resolution labeled-routes use-bgp-routes label-ipv6-explicit-null <i>boolean</i>
Tree	label-ipv6-explicit-null
Description	<p>When configured to true, a labeled IPv6 route with the explicit-null label can be resolved by other routes, and also by unlabeled IPv4 routes and unlabeled IPv6 routes that are resolved by static routes, interface routes, or tunnels. Up to four levels of recursive resolution are supported when the top route is a labeled IPv6 route with an explicit-null label. When disabled, a labeled IPv6 route cannot be resolved by other labeled IPv6 routes.</p> <p>A labeled IPv6 route with a regular label (not explicit-null) is never resolved by other labeled IPv6 routes.</p>
Default	false
Introduced	21.2.R1
Platforms	All

policy reference

Synopsis	Policy that filters routes for BGP next-hop resolution
Context	configure router <i>string</i> bgp next-hop-resolution policy <i>reference</i>
Tree	policy
Reference	configure policy-options policy-statement <i>string</i>
Introduced	16.0.R1
Platforms	All

shortcut-tunnel

Synopsis	Enter the shortcut-tunnel context
Context	configure router <i>string</i> bgp next-hop-resolution shortcut-tunnel
Tree	shortcut-tunnel
Description	Commands in this context configure the tunnel types that can be used to resolve unlabeled IPv4 and IPv6 BGP routes.
Introduced	16.0.R1
Platforms	All

family [*family-type*] *keyword*

Synopsis	Enter the family list instance
Context	configure router <i>string</i> bgp next-hop-resolution shortcut-tunnel family <i>keyword</i>
Tree	family
Introduced	16.0.R1
Platforms	All

[*family-type*] *keyword*

Synopsis	Address family type for shortcut tunnel selection
Context	configure router <i>string</i> bgp next-hop-resolution shortcut-tunnel family <i>keyword</i>
Tree	family
Options	ipv4, ipv6
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

allow-flex-algo-fallback *boolean*

Synopsis	Enable flexible algorithm fallback
Context	configure router <i>string</i> bgp next-hop-resolution shortcut-tunnel family <i>keyword</i> allow-flex-algo-fallback <i>boolean</i>
Tree	allow-flex-algo-fallback
Description	When configured to true , a BGP router with a Flex-Algorithm action configured (via the configure policy-options policy-statement entry action flex-algo command) can resolve to a tunnel with algorithm 0 if no target Flex-Algorithm tunnel is available.

When configured to **false**, the BGP router can resolve only to the intended Flex-Algorithm tunnel, which may cause traffic loss if no corresponding Flex-Algorithm tunnel is available.

Default	false
Introduced	20.10.R1
Platforms	All

disallow-igp *boolean*

Synopsis	Do not perform route table lookup to resolve BGP route
Context	configure router <i>string</i> bgp next-hop-resolution shortcut-tunnel family keyword disallow-igp <i>boolean</i>
Tree	disallow-igp
Description	When configured to true , no attempt is made to resolve the IPv4 or IPv6 BGP route using route table lookup if no resolving tunnel can be found in the tunnel table. When configured to false , route table lookup can be performed if no resolving tunnel is found in the tunnel table.
Default	false
Introduced	16.0.R1
Platforms	All

enforce-strict-tunnel-tagging *boolean*

Synopsis	Consider only LSPs with an admin-tag for next hop
Context	configure router <i>string</i> bgp next-hop-resolution shortcut-tunnel family keyword enforce-strict-tunnel-tagging <i>boolean</i>
Tree	enforce-strict-tunnel-tagging
Description	When configured to true , the system only considers LSPs marked with an administrative tag for next-hop resolution. Untagged LSPs are not considered. When configured to false , matching admin-tagged RSVP or SR-TE LSPs are used in preference to other LSP types, whether tagged or untagged. If no eligible RSVP or SR-TE LSP exists, the system falls back to using tagged LSPs that are not explicitly excluded by a route admin tag policy and untagged LSPs of other types.
Default	false
Introduced	16.0.R1
Platforms	All

resolution *keyword*

Synopsis	Resolution mode for binding BGP routes to tunnel types
Context	configure router <i>string</i> bgp next-hop-resolution shortcut-tunnel family <i>keyword</i> resolution <i>keyword</i>
Tree	resolution
Options	none, filter, any
Default	none
Introduced	16.0.R1
Platforms	All

resolution-filter

Synopsis	Enter the resolution-filter context
Context	configure router <i>string</i> bgp next-hop-resolution shortcut-tunnel family <i>keyword</i> resolution-filter
Tree	resolution-filter
Introduced	16.0.R1
Platforms	All

bgp *boolean*

Synopsis	Use BGP tunneling for next-hop resolution
Context	configure router <i>string</i> bgp next-hop-resolution shortcut-tunnel family <i>keyword</i> resolution-filter bgp <i>boolean</i>
Tree	bgp
Description	When configured to true , this command enables the selection of BGP tunneling for next-hop resolution and specifies the IPv4 tunnels created by receiving BGP label-unicast IPv4 routes for /32 IPv4 prefixes. When configured to false , BGP tunneling for next-hop resolution is not enabled.
Default	false
Introduced	16.0.R1
Platforms	All

ldp *boolean*

Synopsis	Use LDP tunneling for next-hop resolution
----------	---

Context	configure <i>router</i> <i>string</i> <i>bgp next-hop-resolution shortcut-tunnel family keyword resolution-filter ldp</i> <i>boolean</i>
Tree	<i>ldp</i>
Description	When configured to true , BGP selects the LDP FEC that is the longest prefix match to the BGP next-hop address. When configured to false , LDP tunneling for next-hop resolution is not enabled.
Default	false
Introduced	16.0.R1
Platforms	All

mpls-fwd-policy *boolean*

Synopsis	Use MPLS forwarding policy for next-hop resolution
Context	configure <i>router</i> <i>string</i> <i>bgp next-hop-resolution shortcut-tunnel family keyword resolution-filter mpls-fwd-policy</i> <i>boolean</i>
Tree	<i>mpls-fwd-policy</i>
Default	false
Introduced	16.0.R4
Platforms	All

rib-api *boolean*

Synopsis	Use RIB API gRPC service for next-hop resolution
Context	configure <i>router</i> <i>string</i> <i>bgp next-hop-resolution shortcut-tunnel family keyword resolution-filter rib-api</i> <i>boolean</i>
Tree	<i>rib-api</i>
Default	false
Introduced	16.0.R4
Platforms	All

rsvp *boolean*

Synopsis	Use RSVP tunneling for next-hop resolution
Context	configure <i>router</i> <i>string</i> <i>bgp next-hop-resolution shortcut-tunnel family keyword resolution-filter rsvp</i> <i>boolean</i>
Tree	<i>rsvp</i>

Description	<p>When configured to true, this command enables the selection of RSVP tunneling for next-hop resolution and specifies RSVP tunnels in a tunnel table to IPv4 destinations.</p> <p>This option allows BGP to use the best metric RSVP LSP to the address of the BGP next hop. This address can correspond to the system interface or to another loopback interface of the remote BGP router. In the case of multiple RSVP LSPs with the same lowest metric, BGP selects the LSP with the lowest tunnel ID.</p> <p>When configured to false, this command disables the selection of RSVP tunneling for next-hop resolution.</p>
Default	false
Introduced	16.0.R1
Platforms	All

sr-isis boolean

Synopsis	Use IS-IS SR tunneling for next-hop resolution
Context	configure <i>router string</i> bgp next-hop-resolution shortcut-tunnel family keyword resolution-filter sr-isis boolean
Tree	sr-isis
Description	<p>When configured to true, this command enables the selection of the Segment Routing (SR) tunnel type programmed by an IS-IS instance in the TTM for next-hop resolution of BGP routes and labeled routes.</p> <p>This command allows BGP to use the segment-routing tunnel in the tunnel table submitted by the lowest preference IS-IS instance or, in case of a tie, the lowest numbered IS-IS instance.</p> <p>When configured to false, the SR tunnel type programmed by an IS-IS instance in the TTM for next-hop resolution is not enabled for selection.</p>
Default	false
Introduced	16.0.R1
Platforms	All

sr-ospf boolean

Synopsis	Use OSPF SR tunneling for next-hop resolution
Context	configure <i>router string</i> bgp next-hop-resolution shortcut-tunnel family keyword resolution-filter sr-ospf boolean
Tree	sr-ospf
Description	<p>When configured to true, this command enables the selection of the Segment Routing (SR) tunnel type programmed by an OSPF instance in the TTM for next-hop resolution of BGP routes and labeled routes.</p>

This command allows BGP to use the segment routing tunnel in the tunnel table submitted by the lowest preference OSPF instance or, in case of a tie, the lowest numbered OSPF instance.

When configured to **false**, the SR tunnel type programmed by an OSPF instance in the TTM for next-hop resolution is not enabled for selection.

Default	false
Introduced	16.0.R1
Platforms	All

sr-ospf3 *boolean*

Synopsis	Use OSPFv3 SR tunneling for next-hop resolution
Context	configure <i>router string</i> bgp next-hop-resolution shortcut-tunnel family keyword resolution-filter sr-ospf3 boolean
Tree	sr-ospf3
Description	<p>When configured to true, this command enables the selection of the IPv6 Segment Routing (SR) tunnel type programmed by an OSPFv3 instance in the TTMv6 for next-hop resolution of BGP routes and labeled routes.</p> <p>This command allows BGP to use the segment routing tunnel in the tunnel table submitted by the lowest preference OSPFv3 instance or, in case of a tie, the lowest numbered OSPFv3 instance.</p> <p>When configured to false, the SR tunnel type programmed by an OSPFv3 instance in the TTM for next-hop resolution is not enabled for selection.</p>
Default	false
Introduced	16.0.R6
Platforms	All

sr-policy *boolean*

Synopsis	Use SR policies for next-hop resolution
Context	configure <i>router string</i> bgp next-hop-resolution shortcut-tunnel family keyword resolution-filter sr-policy boolean
Tree	sr-policy
Description	<p>When configured to true, this command enables the use of segment routing policies to resolve the BGP next hop of certain BGP routes (depending on the context).</p> <p>The segment routing policies that are considered are statically configured in the local router or learned by BGP routes (AFI 1/SAFI 73). For a BGP route to be resolved by an SR policy, the highest numbered color extended community attached to BGP route must match the color of the SR policy.</p>

When configured to **false**, segment routing policies are not enabled for next-hop resolution.

Default	false
Introduced	16.0.R1
Platforms	All

sr-te *boolean*

Synopsis	Use SR-TE tunneling for next-hop resolution
Context	configure router <i>string</i> bgp next-hop-resolution shortcut-tunnel family <i>keyword</i> resolution-filter sr-te <i>boolean</i>
Tree	sr-te
Description	When configured to true , this command enables the selection of the Segment Routing (SR) tunnel type programmed by a traffic engineered (TE) instance in the TTM for next-hop resolution. In the case of multiple SR-TE tunnels with the same lowest metric, BGP selects the tunnel with the lowest tunnel ID. When configured to false , the SR tunnel type programmed by a TE instance in the TTM for next-hop resolution is not enabled for selection.
Default	false
Introduced	16.0.R1
Platforms	All

use-bgp-routes *boolean*

Synopsis	Use BGP routes to resolve BGP next hops
Context	configure router <i>string</i> bgp next-hop-resolution use-bgp-routes <i>boolean</i>
Tree	use-bgp-routes
Description	This command enables the use of BGP routes to resolve BGP next hops. When this command is enabled, any unlabeled IPv4 or IPv6 BGP route received from a VPRN BGP peer becomes resolvable by up to four other BGP routes in order to resolve the route to a VPRN IP interface. A VPRN BGP route is not resolvable by another VPRN BGP route or by a BGP-VPN route. This command also allows unlabeled IPv4 or IPv6 BGP routes leaked from the GRT with unresolved next hops (in the GRT) to be resolvable by BGP-VPN routes (of the VPRN).
Default	false
Introduced	16.0.R1
Platforms	All

vpn-family-policy *reference*

Synopsis	Policy to filter routes for next-hop resolution
Context	configure router <i>string</i> bgp next-hop-resolution vpn-family-policy <i>reference</i>
Tree	vpn-family-policy
Reference	configure policy-options policy-statement <i>string</i>
Introduced	20.5.R1
Platforms	All

weighted-ecmp *boolean*

Synopsis	Use weighted ECMP for next-hop tunnel selection for 6PE
Context	configure router <i>string</i> bgp next-hop-resolution weighted-ecmp <i>boolean</i>
Tree	weighted-ecmp
Description	<p>When configured to true, this command enables weighted ECMP for next-hop tunnel selection for 6PE. When weighted ECMP is enabled, the RSVP-TE tunnel used to forward 6PE packets to the ECMP next hop that is chosen according to the outcome of the hash on the packet at the normalized load-balancing weight of the tunnel.</p> <p>When configured to false, weighted ECMP is disabled for next-hop tunnel selection for 6PE.</p>
Default	false
Introduced	16.0.R1
Platforms	All

optimal-route-reflection

Synopsis	Enter the optimal-route-reflection context
Context	configure router <i>string</i> bgp optimal-route-reflection
Tree	optimal-route-reflection
Introduced	16.0.R1
Platforms	All

location [[location-id](#)] *number*

Synopsis	Enter the location list instance
Context	configure router <i>string</i> bgp optimal-route-reflection location <i>number</i>

Tree	location
Description	<p>Commands in this context configure the location ID for the route reflector. A BGP neighbor can be associated with a location if it is a route-reflector client.</p> <p>Up to three IPv4 addresses and three IPv6 addresses can be specified per location.</p> <p>If the TE DB is unable find a node in its topology database that matches a primary address of the location, it tries to find a node matching a secondary address. If this attempt also fails, the TE DB tries to find a node matching a tertiary address.</p> <p>The IP addresses specified for a location should be topologically “close” to a set of clients that should all receive the same optimal path for that location.</p>
Introduced	16.0.R1
Platforms	All

[location-id] *number*

Synopsis	Optimal route reflection location ID
Context	configure router <i>string</i> bgp optimal-route-reflection location <i>number</i>
Tree	location
Range	1 to 255
Notes	This element is part of a list key.
Introduced	16.0.R1

Synopsis Maximum interval between consecutive SPF calculations

Context **configure** [router](#) *string* [bgp optimal-route-reflection](#) [spf-wait](#) [max-wait](#) *number*

Tree [max-wait](#)

Range 1 to 600

Default 60

Introduced 16.0.R1

Platforms All

second-wait *number*

Synopsis	Delay between first and second SPF calculation
Context	configure router <i>string</i> bgp optimal-route-reflection spf-wait second-wait <i>number</i>
Tree	second-wait
Range	1 to 300
Default	15
Introduced	16.0.R1
Platforms	All

outbound-route-filtering

Synopsis	Enable the outbound-route-filtering context
Context	configure router <i>string</i> bgp outbound-route-filtering
Tree	outbound-route-filtering
Description	Commands in this context configure the send and receive capabilities for Outbound Route Filtering (ORF). When unconfigured, the ORF capabilities are not enabled.
Introduced	16.0.R1
Platforms	All

extended-community

Synopsis	Enable the extended-community context
Context	configure router <i>string</i> bgp outbound-route-filtering extended-community
Tree	extended-community
Description	Commands in this context configure the ORF send and receive capabilities based on Extended Communities. When this context is unconfigured, the ORF capabilities for Extended Communities is not enabled.
Introduced	16.0.R1
Platforms	All

accept-orf *boolean*

Synopsis	Negotiate with peer to accept BGP ORF filters
----------	---

Context	configure <i>router string</i> bgp outbound-route-filtering extended-community accept-orf <i>boolean</i>
Tree	accept-orf
Description	When configured to true , the receive capability in the BGP ORF is negotiated with a peer and ORF filters can be accepted from peers. When configured to false , the accept capability in the BGP ORF is removed and any existing ORF filters that are currently in place are cleared.
Default	false
Introduced	16.0.R1
Platforms	All

send-orf

Synopsis	Enable the send-orf context
Context	configure <i>router string</i> bgp outbound-route-filtering extended-community send-orf
Tree	send-orf
Description	Commands in this context allow BGP to negotiate the send capability in the ORF negotiation with a peer. The send capability also causes the router to send a community filter, prefix filter, or AS path filter configured as an inbound filter on the BGP session to its peer as an ORF Action ADD. When this context is unconfigured, ORF send capability is not enabled.
Introduced	16.0.R1
Platforms	All

route-target [*community-name*] *string*

Synopsis	Add a list entry for route-target
Context	configure <i>router string</i> bgp outbound-route-filtering extended-community send-orf route-target <i>string</i>
Tree	route-target

String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

override-tunnel-elc *boolean*

Synopsis	Enable entropy label capability on BGP tunnels
Context	configure <i>router string</i> bgp override-tunnel-elc <i>boolean</i>
Tree	override-tunnel-elc
Description	<p>When configured to true, this command renders all far ends for BGP tunnels as entropy-label-capable, regardless of any received capability signaling. This ensures that the entropy label will be inserted on BGP tunnels in the absence of capability signaling support by the far end.</p> <p>This is a system-wide configuration, since efficient entropy label operation requires that all LSRs in a network support entropy labels. This command should be used with care, particularly in inter-AS use cases, as entropy label capability may differ between domains.</p> <p>When configured to false, this command disables all far ends for BGP tunnels as entropy-label-capable.</p>
Default	false
Introduced	16.0.R1
Platforms	All

path-mtu-discovery *boolean*

Synopsis	Enable Path MTU Discovery
Context	configure <i>router string</i> bgp path-mtu-discovery <i>boolean</i>
Tree	path-mtu-discovery
Description	<p>When configured to true, Path MTU Discovery (PMTUD) is activated toward an IPv4 BGP neighbor. The Don't Fragment (DF) bit is set in the IP header of all IPv4 packets sent to the peer. If any device along the path toward the peer cannot forward the packet because the IP MTU of the interface is smaller than the IP packet size, the device drops the packet and sends an ICMP or ICMPv6 error message encoding the interface MTU. When the router receives the ICMP or ICMPv6 message, it lowers the TCP maximum segment size limit from the previous value to accommodate the IP MTU constraint.</p>

When configured to **false**, PMTUD is disabled and there is no TCP MSS configuration to associate with a BGP neighbor (in either the BGP configuration or the first-hop IP interface configuration). The router advertises a TCP MSS option of only 1024 bytes, limiting the received TCP segments to that size.

Default	false
Introduced	16.0.R1
Platforms	All

peer-ip-tracking *boolean*

Synopsis	Enable BGP peer tracking
Context	configure router <i>string</i> bgp peer-ip-tracking <i>boolean</i>
Tree	peer-ip-tracking
Default	false
Introduced	16.0.R1
Platforms	All

peer-tracking-policy *reference*

Synopsis	Policy for BGP peer tracking on router instance
Context	configure router <i>string</i> bgp peer-tracking-policy <i>reference</i>
Tree	peer-tracking-policy
Description	<p>This command specifies the name of a policy statement to use with the BGP peer-tracking function on BGP sessions where peer tracking is enabled.</p> <p>When unconfigured, the default peer-tracking policy allows any type of route to match the neighbor IP address except aggregate routes and LDP shortcut routes.</p> <p>Peer tracking should be used with caution. The peer-tracking policy should only permit one of direct-interface or direct routes to be advertised to a BGP peer. Advertising both routes causes the best route to oscillate.</p>
Reference	configure policy-options policy-statement <i>string</i>
Introduced	16.0.R1
Platforms	All

preference *number*

Synopsis	Route preference for routes learned from all peers
Context	configure router <i>string</i> bgp preference <i>number</i>

Tree	preference
Description	This command configures the route preference for routes learned from the configured peers. The lower the preference value, the higher the chance of the route being the active route. The router assigns BGP routes the highest default preference as compared to routes that are direct, static or learned via MPLS or OSPF.
Range	1 to 255
Default	170
Introduced	16.0.R1
Platforms	All

purge-timer *number*

Synopsis	Maximum time before stale routes are purged
Context	configure router <i>string</i> bgp purge-timer <i>number</i>
Tree	purge-timer
Description	This command configures the maximum time before stale routes are purged. When a route refresh request is sent to a peer for VPN-IP routes received from that peer (in the RIB-IN), the routes are set to stale and the purge timer is started. If the routes are not updated (refreshed) before the purge timer expires, the routes are removed.
Range	1 to 60
Default	10
Introduced	16.0.R1
Platforms	All

rapid-update

Synopsis	Enter the rapid-update context
Context	configure router <i>string</i> bgp rapid-update
Tree	rapid-update
Description	Commands in this context specify the address families that are configured to support the rapid update functionality. The rapid update functionality overrides the remaining time on a peer's MRAI timer and immediately sends routes belonging the specified address families (and all other pending updates) to the peers receiving these routes.
Introduced	16.0.R1
Platforms	All

evpn boolean

Synopsis	Include EVPN address family routes

vpn-ipv6 *boolean*

Synopsis	Include VPN IPv6 address family routes
Context	configure router <i>string</i> bgp rapid-update vpn-ipv6 <i>boolean</i>
Tree	vpn-ipv6
Default	false
Introduced	16.0.R1
Platforms	All

rapid-withdrawal *boolean*

Synopsis	Send BGP withdrawal UPDATE messages immediately
Context	configure router <i>string</i> bgp rapid-withdrawal <i>boolean</i>
Tree	rapid-withdrawal
Description	When configured to true , UPDATE messages containing withdrawn NLRI are sent immediately to a peer without waiting for the MRAI timer to expire. UPDATE messages containing reachable NLRI continue to wait for the MRAI timer to expire, or for a rapid update trigger.

When configured to **false**, withdrawal processing continues with the normal behavior.

Default	false
Introduced	16.0.R1
Platforms	All

remove-private

Synopsis	Enable the remove-private context
Context	configure router <i>string</i> bgp remove-private
Tree	remove-private
Introduced	16.0.R1

Context	configure router <i>string</i> bgp rib-management ipv4 route-table-import
Tree	route-table-import
Introduced	16.0.R1
Platforms	All

policy-name *reference*

Synopsis	Name of policy that controls route importation into RIB
Context	configure router <i>string</i> bgp rib-management ipv4 route-table-import policy-name <i>reference</i>
Tree	policy-name
Description	This command specifies the name of a policy that controls the importation of active routes from the IP route table into one of the BGP RIBs. When this command is configured, routes dropped or rejected by the policy are not installed in the associated RIB. Rejected routes cannot be advertised to BGP peers associated with the RIB, but they can still be used to resolve BGP next hops of routes in that RIB. If the active route for a prefix is rejected by the policy, the best BGP route for that prefix in the BGP RIB can be advertised to peers as though it is used.

Aggregate routes are always imported into each RIB, independent of the specified policy.

Route modifications specified in the actions of the policy are ignored and have no effect on the imported routes.

When unconfigured, or if the command refers to an empty policy, all non-BGP routes from the IP route table are imported into the applicable RIB.

Reference	configure policy-options policy-statement <i>string</i>
Introduced	16.0.R1
Platforms	All

router-id *string*

Synopsis	Router ID for the BGP instance in the AS
Context	configure router <i>string</i> bgp router-id <i>string</i>
Tree	router-id
Description	<p>This command specifies the router ID to be used with the BGP instance.</p> <p>Changing the BGP router ID on an active BGP instance causes the BGP instance to restart with the new router ID.</p> <p>When an SR OS is configured with an IPv6-only BOF and no IPv4 system interface address, explicitly-defined IPv4 router IDs are required for BGP as there is no mechanism to derive the router ID from an IPv6 system interface address.</p>
Introduced	16.0.R1
Platforms	All

rr-vpn-forwarding *boolean*

Synopsis	Allow route reflector to forward VPN-IP routes
Context	configure router <i>string</i> bgp rr-vpn-forwarding <i>boolean</i>
Tree	rr-vpn-forwarding
Description	<p>When configured to true, the route reflector resolves VPN-IPv4 and VPN-IPv6 routes, sets itself as the next hop, and generates new labels for all the resolved routes.</p> <p>During this process, all received VPN-IP routes, regardless of route target, are imported into the dummy VRF, where the BGP next hops are resolved. The routes are resolved to next-hop-self, and BGP allocates new VPRN service-label values for the routes, which are then advertised to peers.</p> <p>The transport-tunnel command under the configure router bgp next-hop-resolution labeled-routes context determines what types of tunnels are eligible to resolve the next hops. If a received VPN-IP route from IBGP peer X is resolved and selected as the best path so that it can be re-advertised to an IBGP peer Y, and the BGP next-hop is modified toward peer Y (by using the next-hop-self command in Y's group or neighbor context or by using a next-hop action in an export policy applied to Y), BGP allocates a new VPRN service label value for the route, signals that new label value to Y, and programs the IOM to do the corresponding label swap operation. The supported combinations of X and Y are outlined below:</p> <ul style="list-style-type: none"> • from X (client) to Y (client)

- from X (client) to Y (non-client)
- from X (non-client) to Y (client)

When configured to **false**, the routes are re-advertised without signaling new VPRN labels, even if the BGP next hop is changed.

Nokia recommends setting this command to **false** for scaling and convergence reasons.

Default	false
Introduced	16.0.R1
Platforms	All

segment-routing

Synopsis	Enter the segment-routing context
Context	configure router <i>string</i> bgp segment-routing
Tree	segment-routing
Description	Commands in this context configure options related to BGP segment routing (including prefix SID support).

Synopsis	SRv6 locator name
Context	configure router <i>string</i> bgp segment-routing-v6 <i>family</i> <i>keyword</i> add-srv6-tlvs locator-name <i>reference</i>
Tree	locator-name
Reference	configure router <i>string</i> segment-routing segment-routing-v6 base-routing-instance locator <i>reference</i>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

micro-segment-locator-name *reference*

Synopsis	Micro-segment SRv6 locator name
Context	configure router <i>string</i> bgp segment-routing-v6 <i>family</i> <i>keyword</i> add-srv6-tlvs micro-segment-locator-name <i>reference</i>
Tree	micro-segment-locator-name
Description	This command adds a prefix SID attribute containing an SRv6 TLV to routes that belong to the family and that are redistributed from another protocol to BGP. This command also adds a prefix SID attribute with SRv6 TLV to BGP routes that are received from other peers without the SRv6 TLV and that are propagated to other peers with next-hop-self applied.
Reference	configure router <i>string</i> segment-routing segment-routing-v6 base-routing-instance micro-segment-locator <i>reference</i>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

ignore-received-srv6-tlvs *boolean*

Synopsis	Ignore SRv6 TLVs for received routes
Context	configure router <i>string</i> bgp segment-routing-v6 <i>family</i> <i>keyword</i> ignore-received-srv6-tlvs <i>boolean</i>
Tree	ignore-received-srv6-tlvs

Description	<p>When configured to true, if a route of the family is received with a prefix SID attribute carrying an SRv6 TLV, the SRv6 TLV is ignored and the route resolution is based on the BGP next-hop only.</p> <p>When configured to false, if a route of the family is received with a prefix SID attribute carrying an SRv6 TLV, the SRv6 TLV is processed. Such a route is resolved only if its BGP next-hop is reachable and the locator prefix is reachable. The datapath programming and IGP cost to reach the next-hop (used by the BGP decision process) is based on the route to the locator prefix.</p>
Default	true
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

resolution *keyword*

Synopsis	Resolution options for routes
Context	configure router <i>string</i> bgp segment-routing-v6 family <i>keyword</i> resolution <i>keyword</i>
Tree	resolution
Options	route-table, tunnel-table, fallback-tunnel-to-route-table
Default	route-table
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

source-address *string*

Synopsis	Source address used in SRv6 packet
Context	configure router <i>string</i> bgp segment-routing-v6 source-address <i>string</i>
Tree	source-address
Description	<p>When configured, this command specifies the source IPv6 address used in the SA field of the outer IPv6 header of the SRv6 encapsulated packet.</p> <p>When not configured, the source IPv6 address is inherited from the configuration of the global default address in the router "base" segment-routing segment-routing-v6 source-address context.</p> <p>A source IPv6 address must be configured in this context or in the base router context. The system does not check if the address entered is a valid local address.</p>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

selective-label-ip *keyword*

Synopsis	Label IP routes installed for local use on NHS router
Context	configure <i>router string</i> bgp <i>selective-label-ip keyword</i>
Tree	selective-label-ip
Description	<p>This command enables selective installation of labeled unicast routes for resolution by local services and IP shortcuts on a labeled unicast Next-hop=self router.</p> <p>This command is supported for labeled unicast for both IPv4 and IPv6 routes.</p> <p>The no-install option installs labeled IP routes that are required by services. This option conserves labeled route table space in addition to RTM table space on BGP-LU next-hop-self route reflectors. The route-table-install-only option ensures that the labeled unicast routes are installed in the RTM in full. When no-install is specified, the download of labeled unicast routes for NHLFE resolution by services continues.</p>
Options	no-install, route-table-install-only
Introduced	22.10.R1
Platforms	All

selective-label-ip-prioritization *boolean*

Synopsis	Enable BGP selective prioritization for labeled routes
Context	configure <i>router string</i> bgp <i>selective-label-ip-prioritization boolean</i>
Tree	selective-label-ip-prioritization
Description	<p>When this command is set to true, every labeled IPv4 and IPv6 route that is received and potentially usable by a local service is automatically prioritized for fast control plane reconvergence. When the reachability of a BGP next-hop changes, the labeled IPv4 and IPv6 routes are updated into the route table first, along with other routes manually tagged as high priority by import policies. A /32 or /128 labeled unicast route (and associated BGP-LU tunnel) is determined to be potentially usable by a local service if one of the following conditions applies:</p> <ul style="list-style-type: none"> the route matches the far-end address of a user-provisioned SDP of a Layer 2 service and the SDP is configured to use BGP tunnels as transport the route matches the BGP next-hop address of a BGP-EVPN or IP VPN route, and this VPN route is either imported into a local service or readvertised by the router acting as a next-hop-self route reflector or a model-B ASBR <p>When this command is set to false, selective-label IP prioritization for BGP is not used.</p>
Default	false
Introduced	21.10.R1
Platforms	All

selective-label-ipv4-install *boolean*

Synopsis	Enable selective download for BGP label-ipv4 routes
Context	configure <i>router</i> <i>string</i> <i>bgp</i> <i>selective-label-ipv4-install</i> <i>boolean</i>
Tree	selective-label-ipv4-install
Default	false
Introduced	19.10.R1

split-horizon *boolean*

Synopsis	Prevent routes being reflected back to best-route peer
Context	configure router <i>string</i> bgp split-horizon <i>boolean</i>
Tree	split-horizon
Description	<p>When configured to true, this command enables the use of split-horizon.</p> <p>This command prevents routes from being reflected back to a peer that sends the best route. It applies to routes of all address families and to any type of sending peer; confed-EBGP, EBGP and IBGP.</p> <p>Enabling the split-horizon functionality may have a detrimental impact on peer and route scaling and should only be used when absolutely necessary.</p> <p>When configured to false, the use of split-horizon is disabled.</p>
Default	false
Introduced	16.0.R1
Platforms	All

sr-policy-import *boolean*

Synopsis	Import all segment routing policies into the BGP RIB
Context	configure router <i>string</i> bgp sr-policy-import <i>boolean</i>
Tree	sr-policy-import
Description	<p>When configured to true, statically-configured non-local segment routing policies from the segment routing database are imported into the BGP RIB so that they can be advertised as originated routes toward BGP peers supporting segment routing policies (sr-policy-ipv4 IP family type).</p> <p>When configured to false, the SR policies are not imported into the BGP RIB.</p>
Default	false
Introduced	16.0.R1

Platforms All

subconfed-vpn-forwarding *boolean*

Synopsis Allow subconfed route resolution, next hop and labels

Context **configure** *router string* **bgp subconfed-vpn-forwarding** *boolean*

Tree [subconfed-vpn-forwarding](#)

Description When this is set to **true**, the base router BGP instance retains all received VPN-IPv4 and VPN-IPv6 routes, including those with route targets not matching any VRF import policy of any locally configured VPRN. In addition, when the base router BGP is configured to apply a **next-hop-self** command to a peer of any type (EBGP, IBGP, or confed-EBGP), VPN-IPv4 and VPN-IPv6 routes are advertised to the peer with a new BGP label, next hop, and label-swap forwarding entry. These behaviors described above are applied when the **enable-inter-as-vpn** or **enable-rr-vpn-forwarding** commands are enabled in the **configure router bgp context**, in the same BGP instance. This applies regardless of whether the base router has a confederation configuration.

When this command is set to **false**, subconfederation VPN forwarding is not used.

Default false

Introduced 21.10.R1

Platforms All

tcp-mss *number*

Synopsis TCP maximum segment size override

Context **configure** *router string* **bgp tcp-mss** *number*

Tree [tcp-mss](#)

Description This command configures an override for the TCP maximum segment size to use with a specific peer or set of peers (depending on the scope of the command).

The configured value controls two properties of the TCP connection as follows:

TCP MSS option - The router advertises the TCP MSS option value in the TCP SYN packet it sends as part of the 3-way handshake. The advertised value may be lower than the configured value, depending on the IP MTU of the first hop IP interface. The peers must abide by this value when sending TCP segments to the local router.

TCP maximum segment size - The actual transmitted size may be lower than the configured value, depending on the TCP MSS option value signaled by the peers, the effect of path MTU discovery, or other factors.

Range 384 to 9746

Introduced 21.2.R1

Synopsis Maximum time that DHCP server can extend client's lease

Context **configure** *router string dhcp-server dhcpv4 string failover maximum-client-lead-time number*

Tree [maximum-client-lead-time](#)

Description	This command configures the maximum client lead time (MCLT), which is the maximum time that a DHCP server can extend the client's lease time beyond the lease time currently known by the DHCP partner node. In dual-homed environments, the initial lease time for all DHCP clients is restricted to the MCLT by default. Consecutive DHCP renewals can extend the lease time beyond the MCLT.
Range	600 to 86399
Units	seconds
Default	600
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

partner-down-delay *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Delay to prevent lease duplication during link failure
Context	configure <i>router string dhcp-server dhcpv4 string failover partner-down-delay number</i>
Tree	partner-down-delay
Description	This command configures the interval before a failed intercommunication link transitions from the COMM-INT state to the PARTNER-DOWN state. This delay prevents IP lease duplication during link failure by not allowing new IP addresses to be assigned from the remote IP address range. This timer is intended to provide the operator with enough time to remedy the failed situation and avoid duplication of IP addresses and prefixes during the failure.
Range	0 to 86399
Units	seconds
Default	86399
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

peer [[address](#)] *reference*

Synopsis	Enter the peer list instance
Context	configure <i>router string dhcp-server dhcpv4 string failover peer reference</i>
Tree	peer
Description	Commands in this context define the peer-related parameters for DHCP failover.

DHCP leases can be synchronized at the level of the DHCP server or pool. The pair of synchronizing servers or pools is identified by a tag. The synchronization information is carried over the Multi-Chassis Synchronization (MCS) link between the two peers. The MCS link is a logical IP or MPLS link.

MCS runs over TCP port 45067, using either data traffic or keepalives to detect failure on the communication link between the two nodes. In the absence of any MCS data traffic for more than 0.5 seconds, MCS sends its own keepalive to the peer. If a reply is not received within 3 seconds, MCS declares its operational state as down and the DB sync state as out-of-sync. MCS consequently notifies its clients, including the DHCP server. It can take up to 3 seconds before the DHCP client realizes that the inter-chassis link has failed.

The link failure does not necessarily imply the same failed state for the access links. It is possible, although unlikely, that both access links are operational while the inter-chassis communication link is broken. In this case, the two redundant nodes can become isolated from each other in the network. For this reason, it is important that the MCS link be highly redundant.

Max. Instances	1
Introduced	16.0.R1

Tree	startup-wait-time
Description	This command configures a delay that avoids transient issues during the initialization process. During startup wait time, each failover peer waits after the initialization process before assuming the active role for the prefix designated as local or remote.
Range	60 to 3600
Units	seconds

Default	120
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-lease-time *number*

Synopsis	Maximum lease time
Context	configure router <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> max-lease-time <i>number</i>
Tree	max-lease-time
Range	10 to 315446399
Units	seconds
Default	864000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

min-lease-time *number*

Synopsis	Minimum lease time
Context	configure router <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> min-lease-time <i>number</i>
Tree	min-lease-time
Range	10 to 315446399
Units	seconds
Default	600
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

minimum-free

Synopsis	Enter the minimum-free context
Context	configure router <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> minimum-free
Tree	minimum-free
Description	Commands in this context specify the minimum number of free addresses in this pool.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

absolute number

Synopsis	Minimum number of free addresses in this pool or subnet
Context	configure <i>router string dhcp-server dhcpv4 string pool string minimum-free absolute number</i>
Tree	absolute
Range	0 to 255
Default	1
Notes	The following elements are part of a choice: absolute or percent .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

event-when-depleted boolean

Synopsis	Generate notification when addresses are depleted
Context	configure <i>router string dhcp-server dhcpv4 string pool string minimum-free event-when-depleted boolean</i>
Tree	event-when-depleted
Description	When configured to true , a system-generated event is generated when all available addresses in the pool or subnet of a local DHCP server are depleted. When configured to false , no action is taken when all available addresses in the pool or subnet of a local DHCP server are depleted.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

percent number

Synopsis	Minimum free addresses as a percentage
Context	configure <i>router string dhcp-server dhcpv4 string pool string minimum-free percent number</i>
Tree	percent
Range	0 to 100
Default	1
Notes	The following elements are part of a choice: absolute or percent .
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

nak-non-matching-subnet *boolean*

Synopsis Send NAK if no match for request address pool range

Context **configure** *router string dhcp-server dhcpv4 string pool string nak-non-matching-subnet boolean*

Tree [nak-non-matching-subnet](#)

Description When configured to **true**, a NAK response when the local DHCPv4 server receives a DHCP request with option 50 (the client is trying to request a previously allocated message). If the address-allocation algorithm uses a pool that does not contain the requested address, the system returns the DHCP NAK.

When configured to **false** or unconfigured, the system drops the DHCP packet.

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

offer-time *number*

Synopsis Time interval during which a DHCP offer remains valid

Context **configure** *router string dhcp-server dhcpv4 string pool string offer-time number*

Tree [offer-time](#)

Range 10 to 600

Units seconds

Default 60

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

options

Synopsis Enter the **options** context

Context **configure** *router string dhcp-server dhcpv4 string pool string options*

Tree [options](#)

Description Commands in this context define DHCPv4 pool options.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

option [*number*] (*number* | *keyword*)

Synopsis	Enter the option list instance
Context	configure <i>router string dhcp-server dhcpv4 string pool string options option</i> (<i>number</i> <i>keyword</i>)
Tree	option
Description	This command configures DHCP options at the pool level. The pool options can be overruled by the value of the same option in the local user database.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[number] (*number* | *keyword*)

Synopsis	DHCP option to send identification strings to client
Context	configure <i>router string dhcp-server dhcpv4 string pool string options option</i> (<i>number</i> <i>keyword</i>)
Tree	option
Range	1 to 254
Options	subnet-mask, default-router, dns-server, domain-name, netbios-name-server, netbios-node-type, lease-time, lease-renew-time, lease-rebind-time
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ascii-string *string*

Synopsis	DHCP option specified as an ASCII string
Context	configure <i>router string dhcp-server dhcpv4 string pool string options option</i> (<i>number</i> <i>keyword</i>) ascii-string <i>string</i>
Tree	ascii-string
String Length	1 to 127
Notes	The following elements are part of a mandatory choice: ascii-string , duration , empty , hex-string , ipv4-address , or netbios-node-type .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

duration *number*

Synopsis	DHCP option specified as time duration
Context	configure <i>router string dhcp-server dhcpv4 string pool string options option (number keyword) duration number</i>
Tree	<i>duration</i>
Range	10 to 315446399
Units	seconds
Notes	The following elements are part of a mandatory choice: ascii-string , duration , empty , hex-string , ipv4-address , or netbios-node-type .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

empty

Synopsis	Remove DHCP option from configuration
Context	configure <i>router string dhcp-server dhcpv4 string pool string options option (number keyword) empty</i>
Tree	<i>empty</i>
Notes	The following elements are part of a mandatory choice: ascii-string , duration , empty , hex-string , ipv4-address , or netbios-node-type .
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hex-string *string*

Synopsis	DHCP option specified as hexadecimal string
Context	configure <i>router string dhcp-server dhcpv4 string pool string options option (number keyword) hex-string string</i>
Tree	<i>hex-string</i>
String Length	1 to 256
Notes	The following elements are part of a mandatory choice: ascii-string , duration , empty , hex-string , ipv4-address , or netbios-node-type .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv4-address *string*

Synopsis	DHCP option specified as a list of IPv4 addresses
Context	configure router <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> options option (<i>number</i> <i>keyword</i>) ipv4-address <i>string</i>
Tree	ipv4-address
Max. Instances	4
Notes	The following elements are part of a mandatory choice: ascii-string , duration , empty , hex-string , ipv4-address , or netbios-node-type . This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

netbios-node-type *keyword*

Synopsis	DHCP option specified as a NetBIOS node type
Context	configure router <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> options option (<i>number</i> <i>keyword</i>) netbios-node-type <i>keyword</i>
Tree	netbios-node-type
Options	b-node, p-node, m-node, h-node
Notes	The following elements are part of a mandatory choice: ascii-string , duration , empty , hex-string , ipv4-address , or netbios-node-type .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

subnet [[ipv4-prefix](#)] *string*

Synopsis	Enter the subnet list instance
Context	configure router <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> subnet <i>string</i>
Tree	subnet
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[[ipv4-prefix](#)] *string*

Synopsis	IPv4 prefix for the subnet
----------	----------------------------

Context	configure router <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> subnet <i>string</i>
Tree	subnet
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

address-range [**start**] *string* **end** *string*

Synopsis	Enter the address-range list instance
Context	configure router <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> subnet <i>string</i> address-range <i>string</i> end <i>string</i>
Tree	address-range
Description	This command configures the range of IP addresses to be served from the pool subnet. The range includes all the IP addresses between the specified start and end addresses, other than specifically excluded addresses. The start and end addresses must be unique within the subnet.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[start] *string*

Synopsis	Lower bound of the IP address range
Context	configure router <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> subnet <i>string</i> address-range <i>string</i> end <i>string</i>
Tree	address-range
Description	This command specifies the start of a range of IP addresses that are excluded from the pool of IP addresses in this subnet.
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

end *string*

Synopsis	Upper bound of the IP address range
Context	configure router <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> subnet <i>string</i> address-range <i>string</i> end <i>string</i>
Tree	address-range

Description	This command specifies the end of a range of IP addresses that are excluded from the pool of IP addresses in this subnet.
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

failover-control-type *keyword*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Failover control type for this range
Context	configure router <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> subnet <i>string</i> address-range <i>string</i> end <i>string</i> failover-control-type <i>keyword</i>
Tree	failover-control-type
Options	local, remote, access-driven
Default	local
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

drain *boolean*

Synopsis	Prevent new lease assignment from this subnet
Context	configure router <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> subnet <i>string</i> drain <i>boolean</i>
Tree	drain
Description	When configured to true , new leases cannot be assigned and existing leases are kept up until they are released. When configured to false , the subnet is active and new leases can be assigned.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

exclude-addresses [*start*] *string* **end** *string*

Synopsis	Add a list entry for exclude-addresses
----------	---

Context	configure <i>router</i> <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> subnet <i>string</i> exclude-addresses <i>string</i> end <i>string</i>
Tree	exclude-addresses
Description	This command configures an IP address to be excluded from the pool of IP addresses in the subnet.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[start] *string*

Synopsis	Lower bound of the IP address range
Context	configure <i>router</i> <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> subnet <i>string</i> exclude-addresses <i>string</i> end <i>string</i>
Tree	exclude-addresses
Description	This command specifies the start of a range of IP addresses that are excluded from the pool of IP addresses in this subnet.
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

end *string*

Synopsis	Upper bound of the IP address range
Context	configure <i>router</i> <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> subnet <i>string</i> exclude-addresses <i>string</i> end <i>string</i>
Tree	exclude-addresses
Description	This command specifies the end of a range of IP addresses that are excluded from the pool of IP addresses in this subnet.
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

maximum-declined *number*

Synopsis	Maximum number of declined addresses allowed
Context	configure <i>router</i> <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> subnet <i>string</i> maximum-declined <i>number</i>

Tree	maximum-declined
Max. Range	0 to 4294967295
Default	64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

minimum-free

Synopsis	Enter the minimum-free context
Context	configure router <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> subnet <i>string</i> minimum-free
Tree	minimum-free
Description	Commands in this context specify the minimum number of free addresses in this pool.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

absolute *number*

Synopsis	Minimum number of free addresses in this pool or subnet
Context	configure router <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> subnet <i>string</i> minimum-free absolute <i>number</i>
Tree	absolute
Range	0 to 255
Default	1
Notes	The following elements are part of a choice: absolute or percent .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

event-when-depleted *boolean*

Synopsis	Generate notification when addresses are depleted
Context	configure router <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> subnet <i>string</i> minimum-free event-when-depleted <i>boolean</i>
Tree	event-when-depleted
Description	When configured to true , a system-generated event is generated when all available addresses in the pool or subnet of a local DHCP server are depleted.

When configured to **false**, no action is taken when all available addresses in the pool or subnet of a local DHCP server are depleted.

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

percent *number*

Synopsis	Minimum free addresses as a percentage
Context	configure <i>router string dhcp-server dhcpv4 string pool string subnet string minimum-free percent number</i>
Tree	<i>percent</i>
Range	0 to 100
Default	1
Notes	The following elements are part of a choice: absolute or percent .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

options

Synopsis	Enter the options context
Context	configure <i>router string dhcp-server dhcpv4 string pool string subnet string options</i>
Tree	<i>options</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

option [*number*] (*number* | *keyword*)

Synopsis	Enter the option list instance
Context	configure <i>router string dhcp-server dhcpv4 string pool string subnet string options option (number keyword)</i>
Tree	<i>option</i>
Description	This command configures DHCP options at the pool subnet level. The options can be overruled by the value of the same option in the local user database.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[number] (*number* | *keyword*)

Synopsis	DHCP option to send identification strings to client
Context	configure router <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> subnet <i>string</i> options option (<i>number</i> <i>keyword</i>)
Tree	option
Range	1 to 254
Options	subnet-mask, default-router, dns-server, domain-name, netbios-name-server, netbios-node-type, lease-time, lease-renew-time, lease-rebind-time
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ascii-string *string*

Synopsis	DHCP option specified as an ASCII string
Context	configure router <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> subnet <i>string</i> options option (<i>number</i> <i>keyword</i>) ascii-string <i>string</i>
Tree	ascii-string
String Length	1 to 127
Notes	The following elements are part of a mandatory choice: ascii-string , duration , empty , hex-string , ipv4-address , or netbios-node-type .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

duration *number*

Synopsis	DHCP option specified as time
Context	configure router <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> subnet <i>string</i> options option (<i>number</i> <i>keyword</i>) duration <i>number</i>
Tree	duration
Range	10 to 315446399
Units	seconds
Notes	The following elements are part of a mandatory choice: ascii-string , duration , empty , hex-string , ipv4-address , or netbios-node-type .
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

empty

Synopsis Empty DHCP option

Context **configure** **router** *string* **dhcp-server** **dhcpv4** *string* **pool** *string* **subnet** *string* **options** **option** (*number* | *keyword*) **empty**

Tree **empty**

Notes The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.

Introduced 16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hex-string *string*

Synopsis DHCP option specified as hexadecimal string

Context **configure** **router** *string* **dhcp-server** **dhcpv4** *string* **pool** *string* **subnet** *string* **options** **option** (*number* | *keyword*) **hex-string** *string*

Tree **hex-string**

String Length 1 to 256

Notes The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv4-address *string*

Synopsis DHCP option specified as a list of IPv4 addresses

Context **configure** **router** *string* **dhcp-server** **dhcpv4** *string* **pool** *string* **subnet** *string* **options** **option** (*number* | *keyword*) **ipv4-address** *string*

Tree **ipv4-address**

Max.
Instances 4

Notes The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.

This element is ordered by the user.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

netbios-node-type *keyword*

Synopsis DHCP option specified as a NetBIOS node type

Context **configure** *router string dhcp-server dhcpv4 string pool string subnet string options option (number | keyword) netbios-node-type keyword*

Tree [netbios-node-type](#)

Options b-node, p-node, m-node, h-node

Notes The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pool-selection

Synopsis Enter the **pool-selection** context

Context **configure** *router string dhcp-server dhcpv4 string pool-selection*

Tree [pool-selection](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

use-gi-address

Synopsis Enable the **use-gi-address** context

Context **configure** *router string dhcp-server dhcpv4 string pool-selection use-gi-address*

Tree [use-gi-address](#)

Description Commands in this context configure gateway interface (GI) address matching. When configured, the pool can be used for address matching even if a subnet is not found. If the local user database name is not used, addresses are provided only by GI. If a user must be blocked from getting an address, the server maps to a local user database and configures the user with no address.

A pool can include multiple subnets. Since the GI is shared by multiple subnets in a subscriber interface, the pool can provide IP addresses from any of the subnets included when the GI is matched to one of its subnets. This allows a pool to be created that represents a sub-net.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

scope *keyword*

Synopsis	GI address-matching scope
Context	configure router string dhcp-server dhcpv4 string pool-selection use-gi-address scope keyword
Tree	scope
Options	subnet, pool
Default	subnet
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

use-pool-from-client

Synopsis	Enable the use-pool-from-client context
Context	configure router string dhcp-server dhcpv4 string pool-selection use-pool-from-client
Tree	use-pool-from-client
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

delimiter *string*

Synopsis	Delimiter to combine primary and secondary pool names
Context	configure router string dhcp-server dhcpv4 string pool-selection use-pool-from-client delimiter string
Tree	delimiter
Description	This command configures a single ASCII character that separates the pool names in DHCP vendor-specific option 82, which identifies the address pool to be used for this client.
String Length	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

user-db *reference*

Synopsis	Local user database for authentication
Context	configure router string dhcp-server dhcpv4 string user-db reference

Tree	user-db
Reference	configure subscriber-mgmt local-user-db <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

user-identification *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	User identification method for the DHCP server
Context	configure router <i>string</i> dhcp-server dhcpv4 <i>string</i> user-identification <i>keyword</i>
Tree	user-identification
Options	mac-circuit-id, duid, interface-id, interface-id-link-local, client-id, mac, circuit-id, remote-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcpv6 [[name](#)] *string*

Synopsis	Enter the dhcpv6 list instance
Context	configure router <i>string</i> dhcp-server dhcpv6 <i>string</i>
Tree	dhcpv6
Description	Commands in this context configure DHCPv6 parameters.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[name] *string*

Synopsis	DHCP server name
Context	configure router <i>string</i> dhcp-server dhcpv6 <i>string</i>
Tree	dhcpv6
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

empty

Synopsis	Empty DHCP option
Context	configure router <i>string</i> dhcp-server dhcpv6 <i>string</i> defaults options option (<i>number</i> <i>keyword</i>) empty
Tree	empty

Notes	The following elements are part of a mandatory choice: ascii-string , domain-string , duration , empty , hex-string , or ipv6-address .
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hex-string *string*

Synopsis	DHCP option specified as hexadecimal string
Context	configure router <i>string</i> dhcp-server dhcpv6 <i>string</i> defaults options option (<i>number</i> <i>keyword</i>) hex-string <i>string</i>
Tree	hex-string
String Length	1 to 256
Notes	The following elements are part of a mandatory choice: ascii-string , domain-string , duration , empty , hex-string , or ipv6-address .
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv6-address *string*

Synopsis	DHCP option specified as a list of IPv6 addresses
Context	configure router <i>string</i> dhcp-server dhcpv6 <i>string</i> defaults options option (<i>number</i> <i>keyword</i>) ipv6-address <i>string</i>
Tree	ipv6-address
Max. Instances	4
Notes	The following elements are part of a mandatory choice: ascii-string , domain-string , duration , empty , hex-string , or ipv6-address . This element is ordered by the user.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preferred-lifetime *number*

Synopsis	Time this lease remains preferred
Context	configure router <i>string</i> dhcp-server dhcpv6 <i>string</i> defaults preferred-lifetime <i>number</i>
Tree	preferred-lifetime

Description	<p>This command configures the preferred lifetime of the IPv6 lease address or prefix. When the preferred lifetime expires, any derived addresses are deprecated. The preferred lifetime must be less than or equal to the valid lifetime.</p> <p>Each address or prefix assigned to the client has associated preferred and valid lifetimes specified by the address assignment authority (such as the DHCP server, RADIUS, or ESM). To request an extension of the lifetimes assigned to an address, the client sends a renew message to the addressing authority. The authority sends a reply message to the client with the new lifetimes, allowing the client to continue to use the address/prefix without interruption. The lifetimes are transmitted from the addressing authority to the client in the identity association (IA) option at the top level of the message (not the address or prefix level).</p>
Range	300 to 315446399
Units	seconds
Default	3600
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rebind-time *number*

Synopsis	Rebind time for the lease
Context	configure router <i>string</i> dhcp-server dhcpv6 <i>string</i> defaults rebind-time <i>number</i>
Tree	rebind-time
Description	<p>This command configures the rebind time, known as T2, at which the client contacts the addressing authority to extend the lifetimes of its leases.</p> <p>The IP addressing authority (such as the DHCP server, RADIUS, or ESM) controls the time for extending lifetimes on assigned addresses/prefixes through the T1 and T2 parameters assigned to an identity association (IA). At renew time, T1, the client initiates a renew or reply message exchange to extend the lifetimes of any addresses in the IA. The client includes an IA option with all addresses or prefixes currently assigned to the IA in its renew message.</p> <p>Recommended values for T1 and T2 are 0.5 and 0.8 times the shortest preferred lifetime of the addresses or prefixes in the IA that the addressing authority is willing to extend, respectively. The configured rebind timer value should always be less than or equal to the rebind timer. The T1 and T2 values are carried in the IPV6 address option in the IA.</p>
Range	0 to 1209600
Units	seconds
Default	2880
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

renew-time *number*

Synopsis	Renew time for the lease
Context	configure router <i>string</i> dhcp-server dhcpv6 <i>string</i> defaults renew-time <i>number</i>
Tree	renew-time
Description	<p>This command configures the renew time, known as T1, at which the client makes a transition to the lease-renewal state.</p> <p>The IP addressing authority (such as the DHCP server, RADIUS, or ESM) controls the time for extending lifetimes on assigned addresses/prefixes through the T1 and T2 parameters assigned to an identity association (IA). At renew time, T1, the client initiates a renew/reply message exchange to extend the lifetimes of any addresses in the IA. The client includes an IA option with all addresses/prefixes currently assigned to the IA in its renew message.</p> <p>Recommended values for T1 and T2 are 0.5 and 0.8 times the shortest preferred lifetime of the addresses or prefixes in the IA that the addressing authority is willing to extend, respectively. The configured renew timer value should always be shorter than or equal to the rebind timer. The T1 and T2 values are carried in the IPV6 address option in the IA.</p>
Range	0 to 604800
Units	seconds
Default	1800
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

valid-lifetime *number*

Synopsis	Time for the lease to remain valid
Context	configure router <i>string</i> dhcp-server dhcpv6 <i>string</i> defaults valid-lifetime <i>number</i>
Tree	valid-lifetime
Description	<p>This command configures a valid lifetime for a DHCPv6 lease address or prefix. The valid lifetime is the length of time an address and prefix remains in the valid state. The valid lifetime must be greater than or equal to the preferred lifetime. When the valid lifetime expires, the address and prefix becomes invalid and must not be used in communications. RFC 2461 recommends a default value of 30 days.</p> <p>Each address and prefix assigned to the client has associated preferred and valid lifetimes specified by the address assignment authority (such as the DHCP server, RADIUS, or ESM). To request an extension of the lifetimes assigned to an address, the client sends a renew message to the addressing authority. The authority sends a reply message to the client with the new lifetimes, allowing the client to continue to use the address and prefix without interruption. The lifetimes are transmitted from the</p>

addressing authority to the client in the identity association (IA) option at the top level of the message (not the address or prefix level).

Range	300 to 315446399
Units	seconds
Default	86400
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description

failover

Synopsis	Enter the failover context
Context	configure router <i>string</i> dhcp-server dhcpv6 <i>string</i> failover
Tree	failover
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the failover mechanism
Context	configure router <i>string</i> dhcp-server dhcpv6 <i>string</i> failover admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ignore-mclt-on-takeover *boolean*

Synopsis	Ignore maximum client lead during takeover from partner
Context	configure <i>router</i> <i>string</i> <i>dhcp-server</i> <i>dhcpv6</i> <i>string</i> <i>failover</i> ignore-mclt-on-takeover <i>boolean</i>
Tree	ignore-mclt-on-takeover
Description	<p>When configured to true, the remote IP address range can be taken over immediately when the intercommunication link enters the PARTNER-DOWN state, without having to wait for the MCLT to expire.</p> <p>When configured to false, the DHCP lease time for new clients is restricted to the MCLT during a failure. For existing clients, the lease time is gradually reduced over time to the MCLT by consecutive DHCP renewals.</p>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

maximum-client-lead-time *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum time that DHCP server can extend client's lease
Context	configure <i>router</i> <i>string</i> <i>dhcp-server</i> <i>dhcpv6</i> <i>string</i> <i>failover</i> maximum-client-lead-time <i>number</i>
Tree	maximum-client-lead-time
Description	This command configures the maximum client lead time (MCLT), which is the maximum time that a DHCP server can extend the client's lease time beyond the lease time currently known by the DHCP partner node. In dual-homed environments, the initial lease time for all DHCP clients is restricted to the MCLT by default. Consecutive DHCP renewals can extend the lease time beyond the MCLT.
Range	600 to 86399
Units	seconds
Default	600
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

partner-down-delay *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Delay to prevent lease duplication during link failure
Context	configure <i>router string dhcp-server dhcpv6 string failover partner-down-delay number</i>
Tree	partner-down-delay
Description	This command configures the interval before a failed intercommunication link transitions from the COMM-INT state to the PARTNER-DOWN state. This delay prevents IP lease duplication during link failure by not allowing new IP addresses to be assigned from the remote IP address range. This timer is intended to provide the operator with enough time to remedy the failed situation and avoid duplication of IP addresses and prefixes during the failure.
Range	0 to 86399
Units	seconds
Default	86399
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Reference	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sync-tag *string*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tag that identifies synchronizing server or pool pairs
Context	configure router <i>string</i> dhcp-server dhcpv6 <i>string</i> failover peer <i>reference</i> sync-tag <i>string</i>
Tree	sync-tag
String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

startup-wait-time *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time between initialization and assuming active role
Context	configure router <i>string</i> dhcp-server dhcpv6 <i>string</i> failover startup-wait-time <i>number</i>
Tree	startup-wait-time
Description	This command configures a delay that avoids transient issues during the initialization process. During startup wait time, each failover peer waits after the initialization process before assuming the active role for the prefix designated as local or remote.
Range	60 to 3600
Units	seconds
Default	120
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ignore-rapid-commit *boolean*

Synopsis	Ignore Rapid Commit option
Context	configure router <i>string</i> dhcp-server dhcpv6 <i>string</i> ignore-rapid-commit <i>boolean</i>
Tree	ignore-rapid-commit
Description	When configured to true , the server ignores the Rapid Commit option sent by the client and uses the regular message exchange.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interface-id-mapping *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Map hosts within interface-to-prefix combinations
Context	configure router <i>string</i> dhcp-server dhcpv6 <i>string</i> interface-id-mapping <i>boolean</i>
Tree	interface-id-mapping
Description	When configured to true , this command specifies an interface-mapping method that uses a combination of unique /64 prefixes and interface IDs. A /64 prefix is allocated to each interface ID, and all clients with the same interface ID are assigned an address from the prefix. This method is used for bridging clients in the same local loop and SAP, so that sharing the prefix allows communication to stay local. For SLAAC-based assignment, downstream neighbor discovery is automatically enabled to resolve the assigned address.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lease-hold

Synopsis	Enter the lease-hold context
Context	configure router <i>string</i> dhcp-server dhcpv6 <i>string</i> lease-hold
Tree	lease-hold
Introduced	16.0.R1

partner-down-delay *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Delay to prevent lease duplication during link failure
Context	configure <i>router string dhcp-server dhcpv6 string pool string failover partner-down-delay number</i>
Tree	partner-down-delay
Description	This command configures the interval before a failed intercommunication link transitions from the COMM-INT state to the PARTNER-DOWN state. This delay prevents IP lease duplication during link failure by not allowing new IP addresses to be assigned from the remote IP address range. This timer is intended to provide the operator with enough time to remedy the failed situation and avoid duplication of IP addresses and prefixes during the failure.
Range	0 to 86399
Units	seconds
Default	86399
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

peer [[address](#)] *reference*

Synopsis	Enter the peer list instance
----------	-------------------------------------

Context	configure router <i>string</i> dhcp-server dhcpv6 <i>string</i> pool <i>string</i> failover peer <i>reference</i>
Tree	peer
Max. Instances	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[address] *reference*

Synopsis	IP address of the failover peer
Context	configure router <i>string</i> dhcp-server dhcpv6 <i>string</i> pool <i>string</i> failover peer <i>reference</i>
Tree	peer
Reference	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sync-tag *string*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tag that identifies synchronizing server or pool pairs
Context	configure router <i>string</i> dhcp-server dhcpv6 <i>string</i> pool <i>string</i> failover peer <i>reference</i> sync-tag <i>string</i>
Tree	sync-tag
String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

startup-wait-time *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time between initialization and assuming active role
Context	configure router <i>string</i> dhcp-server dhcpv6 <i>string</i> pool <i>string</i> failover startup-wait-time <i>number</i>
Tree	startup-wait-time
Description	This command configures a delay that avoids transient issues during the initialization process. During startup wait time, each failover peer waits after the initialization process before assuming the active role for the prefix designated as local or remote.
Range	60 to 3600
Units	seconds
Default	120
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

options

preferred-lifetime *number*

Synopsis	Time this lease remains preferred
Context	configure router <i>string</i> dhcp-server dhcpv6 <i>string</i> pool <i>string</i> prefix <i>string</i> preferred-lifetime <i>number</i>
Tree	preferred-lifetime
Description	This command configures the preferred lifetime of the IPv6 lease address or prefix. When the preferred lifetime expires, any derived addresses are deprecated. The preferred lifetime must be less than or equal to the valid lifetime. Each address or prefix assigned to the client has associated preferred and valid lifetimes specified by the address assignment authority (such as the DHCP server, RADIUS, or ESM). To request an extension of the lifetimes assigned to an address, the client sends a renew message to the addressing authority. The authority sends a reply message to the client with the new lifetimes, allowing the client to continue to use the address/prefix without interruption. The lifetimes are transmitted from the addressing authority to the client in the identity association (IA) option at the top level of the message (not the address or prefix level).
Range	300 to 315446399
Units	seconds
Default	3600
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

prefix-length-threshold [[prefix-length](#)] *number*

rebind-time *number*

Synopsis	Rebind time for the lease
Context	configure router <i>string</i> dhcp-server dhcpv6 <i>string</i> pool <i>string</i> prefix <i>string</i> rebind-time <i>number</i>
Tree	rebind-time
Description	<p>This command configures the rebind time, known as T2, at which the client contacts the addressing authority to extend the lifetimes of its leases.</p> <p>The IP addressing authority (such as the DHCP server, RADIUS, or ESM) controls the time for extending lifetimes on assigned addresses/prefixes through the T1 and T2 parameters assigned to an identity association (IA). At renew time, T1, the client initiates a renew or reply message exchange to extend the lifetimes of any addresses in the IA. The client includes an IA option with all addresses or prefixes currently assigned to the IA in its renew message.</p> <p>Recommended values for T1 and T2 are 0.5 and 0.8 times the shortest preferred lifetime of the addresses or prefixes in the IA that the addressing authority is willing to extend, respectively. The configured rebind timer value should always be less than or equal to the rebind timer. The T1 and T2 values are carried in the IPV6 address option in the IA.</p>
Range	0 to 1209600
Units	seconds
Default	2880
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

renew-time *number*

Synopsis	Renew time for the lease
Context	configure <i>router string dhcp-server dhcpv6 string pool string prefix string renew-time number</i>
Tree	<i>renew-time</i>
Description	<p>This command configures the renew time, known as T1, at which the client makes a transition to the lease-renewal state.</p> <p>The IP addressing authority (such as the DHCP server, RADIUS, or ESM) controls the time for extending lifetimes on assigned addresses/prefixes through the T1 and T2 parameters assigned to an identity association (IA). At renew time, T1, the client initiates a renew/reply message exchange to extend the lifetimes of any addresses in the IA. The client includes an IA option with all addresses/prefixes currently assigned to the IA in its renew message.</p> <p>Recommended values for T1 and T2 are 0.5 and 0.8 times the shortest preferred lifetime of the addresses or prefixes in the IA that the addressing authority is willing to extend, respectively. The configured renew timer value should always be shorter than or equal to the rebind timer. The T1 and T2 values are carried in the IPV6 address option in the IA.</p>
Range	0 to 604800
Units	seconds
Default	1800
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

valid-lifetime *number*

Synopsis	Time for the lease to remain valid
Context	configure <i>router string dhcp-server dhcpv6 string pool string prefix string valid-lifetime number</i>
Tree	<i>valid-lifetime</i>
Description	<p>This command configures a valid lifetime for a DHCPv6 lease address or prefix. The valid lifetime is the length of time an address and prefix remains in the valid state. The valid lifetime must be greater than or equal to the preferred lifetime. When the valid lifetime expires, the address and prefix becomes invalid and must not be used in communications. RFC 2461 recommends a default value of 30 days.</p> <p>Each address and prefix assigned to the client has associated preferred and valid lifetimes specified by the address assignment authority (such as the DHCP server, RADIUS, or ESM). To request an extension of the lifetimes assigned to an address, the client sends a renew message to the addressing authority. The authority sends a reply message to the client with the new lifetimes, allowing the client to continue to use the address and prefix without interruption. The lifetimes are transmitted from the</p>

addressing authority to the client in the identity association (IA) option at the top level of the message (not the address or prefix level).

Tree	server-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

duid-enterprise

Synopsis	Enter the duid-enterprise context
Context	configure <i>router string dhcp-server dhcpv6 string server-id</i> duid-enterprise
Tree	duid-enterprise
Notes	The following elements are part of a choice: duid-enterprise or duid-link-local .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ascii-string *string*

Synopsis	DUID enterprise server ID specified as an ASCII string
Context	configure <i>router string dhcp-server dhcpv6 string server-id</i> duid-enterprise ascii-string <i>string</i>
Tree	ascii-string
String Length	1 to 58
Notes	The following elements are part of a choice: ascii-string or hex-string .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hex-string *string*

Synopsis	DUID enterprise server ID specified as a hex string
Context	configure <i>router string dhcp-server dhcpv6 string server-id</i> duid-enterprise hex-string <i>string</i>
Tree	hex-string
String Length	1 to 118
Notes	The following elements are part of a choice: ascii-string or hex-string .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

duid-link-local

Synopsis	Derive DUID server ID from a system link-layer address
Context	configure <i>router string dhcp-server dhcpv6 string server-id</i> duid-link-local

Tree	duid-link-local
Notes	The following elements are part of a choice: duid-enterprise or duid-link-local .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

user-identification *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	User identification method for the DHCP server
Context	configure router <i>string</i> dhcp-server dhcpv6 <i>string</i> user-identification <i>keyword</i>
Tree	user-identification
Options	mac-circuit-id, duid, interface-id, interface-id-link-local, client-id, mac, circuit-id, remote-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dns

Synopsis	Enter the dns context
Context	configure router <i>string</i> dns
Tree	dns
Introduced	20.2.R1
Platforms	All

redirect-vprn

Synopsis	Enter the redirect-vprn context
Context	configure router <i>string</i> dns redirect-vprn
Tree	redirect-vprn
Description	Commands in this context configure DNS resolution of all packets through the VPRN DNS server. The VPRN DNS server must be configured before using the commands in this context. If the VPRN DNS server is not configured, all packet resolution fails.
Introduced	20.2.R1

Platforms All

service [[service-name](#)] *reference*

Platforms All

ecmp *number*

Synopsis Maximum equal-cost routes for routing table instance

Context **configure** [router](#) *string* [ecmp](#) *number*

Tree	ecmp
Description	<p>This command configures ECMP and defines the number of routes for path sharing. ECMP can be used only for routes learned with the same preference and the same protocol.</p> <p>If available ECMP routes at the best preference exceed the maximum ECMP routes allowed, the system selects the route using the following criteria:</p> <ol style="list-style-type: none"> 1. The system selects the lowest next hop router ID. 2. If the next hop goes to the same neighbor, the system selects the next hop with the lowest interface index.
Range	1 to 64
Default	1
Introduced	16.0.R1
Platforms	All

entropy-label *boolean*

Synopsis	Use entropy label
Context	configure router <i>string</i> entropy-label <i>boolean</i>
Tree	entropy-label
Description	<p>When configured to true, this command enables the use of entropy labels.</p> <p>The entropy label and indicator (EL/ELI) are inserted on relevant packets. Applicable packets are those for which at least one LSP in the stack at the far end has advertised the entropy-label capability. These LSPs are in LDP or RSVP tunnels used by an IGP or BGP shortcut. If the tunnel is of type RSVP, the entropy-label capability must also be enabled under the configure router mpls or configure router mpls lsp context.</p> <p>This command also results in other traffic that is forwarded over an LDP or RSVP LSP for which this router is the LER, and for which there is no explicit service endpoint on this router, to have the EL/ELI enabled, subject to the LSP far-end advertising entropy-label-capability. An example of such traffic includes packets arriving on a stitched LDP LSP forwarded over an RSVP LSP.</p> <p>The entropy label and the hash label features are mutually exclusive. The entropy label cannot be configured on a spoke SDP or service where the hash label feature has already been configured.</p> <p>When configured to false, the use of entropy labels is disabled.</p>
Default	false
Introduced	16.0.R1
Platforms	All

fib-priority *keyword*

Synopsis	FIB priority for VPRN BGP routes
Context	configure <i>router string fib-priority keyword</i>
Tree	fib-priority

wlan-gw-group reference**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	WLAN GW group used for NAT
Context	configure router string firewall domain string wlan-gw-group reference
Tree	wlan-gw-group
Reference	configure isa wlan-gw-group number

Notes	The following elements are part of a mandatory choice: nat-group or wlan-gw-group .
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

flowspec

Synopsis	Enter the flowspec context
Context	configure router <i>string</i> flowspec
Tree	flowspec
Introduced	16.0.R1
Platforms	All

filter-cam-type *keyword*

Synopsis	Filter policy type for FlowSpec embedding
Context	configure router <i>string</i> flowspec filter-cam-type <i>keyword</i>
Tree	filter-cam-type
Description	This command specifies the filter type that is required to embed FlowSpec entries. The filter type defines the match criteria that are available in the filter policy.
Options	normal, packet-length
Default	normal
Introduced	20.7.R1
Platforms	All

ip-filter-max-size *number*

Synopsis	Maximum number of flowspec rule entries in IPv4 filter
Context	configure router <i>string</i> flowspec ip-filter-max-size <i>number</i>
Tree	ip-filter-max-size
Description	<p>This command configures the maximum number of IPv4 flowspec routes, or rules, that can be entered in the auto-created embedded filter, fSpec-X. Flowspec filter entries embedded in a filter policy in this routing instance will use filter entries from the range between the embedding offset and (offset + ip-filter-max-size – 1).</p> <p>The sum of the maximum-size value and the highest offset in any IPv4 filter that embeds IPv4 flowspec rules from this routing instance (excluding filters that embed at offset 262143) must not exceed 262143.</p>

The maximum size can be adjusted up or down at any time. If the current number of IPv4 flowspec rules is greater than the new maximum, the extra rules are removed immediately but retained in the BGP RIB. If the limit is increased, new rules are programmed only as they are received in new BGP updates.

Range	0 to 262143
Default	512
Introduced	16.0.R1
Platforms	All

ipv6-filter-max-size *number*

Synopsis	Maximum number of flowspec rule entries in IPv6 filter
Context	configure <i>router string</i> flowspec ipv6-filter-max-size <i>number</i>
Tree	ipv6-filter-max-size
Description	<p>This command configures the maximum number of IPv6 flowspec routes or rules that can be embedded into an ingress IPv6 filter policy for a specified routing instance. Flowspec filter entries embedded in a filter policy in this routing instance will use filter entries from the range between the embedding offset and (offset + ip-filter-max-size – 1).</p> <p>The sum of the maximum-size value and the highest offset in any IPv6 filter that embeds IPv6 flowspec rules from this routing instance (excluding filters that embed at offset 262143) must not exceed 262143.</p> <p>The maximum size can be adjusted up or down at any time. If the current number of IPv6 flowspec rules is greater than the new maximum, the extra rules are removed immediately but retained in the BGP RIB. If the limit is increased, new rules are programmed only as they are received in new BGP updates.</p>
Range	0 to 262143

Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

import-policy *reference*

Synopsis	Import policy that filters IGMP packets
Context	configure router <i>string</i> igmp forwarding-group-interface forwarding-service <i>string</i> group-interface-name <i>reference</i> import-policy <i>reference</i>
Tree	import-policy
Description	<p>This command configures the IGMP import policy, or filter, for an interface subscriber or a group interface. An IGMP filter is also known as a black or white list, and it is defined as a router policy option.</p> <p>When redirection is applied, only the import policy from the subscriber is in effect. The import policy under the group interface is applicable only for IGMP states received directly on the SAP (AN in IGMP proxy mode).</p>
Reference	configure policy-options policy-statement <i>string</i>
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

maximum-number-group-sources *number*

Synopsis	Maximum number of group sources for this interface
Context	configure router <i>string</i> igmp forwarding-group-interface forwarding-service <i>string</i> group-interface-name <i>reference</i> maximum-number-group-sources <i>number</i>
Tree	maximum-number-group-sources
Description	This command configures the maximum number of group sources for which IGMP or MLD can have local receiver information based on received IGMP or MLD reports on this interface. When this configuration is changed dynamically to a lower value than the currently accepted number of group sources, the group sources that are already accepted are not deleted. Only new group sources are not allowed.
Range	1 to 32000
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

maximum-number-groups *number*

Synopsis	Maximum number of groups for this interface
Context	configure router <i>string</i> igmp forwarding-group-interface forwarding-service <i>string</i> group-interface-name <i>reference</i> maximum-number-groups <i>number</i>
Tree	maximum-number-groups
Range	1 to 16000
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

maximum-number-sources *number*

Synopsis	Maximum number of sources that are allowed per group
Context	configure router <i>string</i> igmp forwarding-group-interface forwarding-service <i>string</i> group-interface-name <i>reference</i> maximum-number-sources <i>number</i>
Tree	maximum-number-sources
Range	1 to 1000
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mcac

Synopsis	Enter the mcac context
Context	configure router <i>string</i> igmp forwarding-group-interface forwarding-service <i>string</i> group-interface-name <i>reference</i> mcac

Synopsis Use LAG port weight in calculating MCAC constraints

Context **configure** *router* *string* *igmp* *interface* *string* *mcac* *mc-constraints* *use-lag-port-weight* *boolean*

Tree [use-lag-port-weight](#)

Description When configured to **true**, port weight is used when determining available bandwidth per level when LAG ports go down or come up. This command is required for proper operation on mixed port-speed LAGs and can also be used for unmixed port-speed LAGs.

Default false

Introduced 16.0.R1

Platforms All

policy *reference*

Synopsis Multicast CAC policy name

Context **configure** *router* *string* *igmp* *interface* *string* *mcac* *policy* *reference*

Tree [policy](#)

Description This command configures the name of the global channel bandwidth definition policy that is used for (H)MCAC and HQoS adjustment.

Within the scope of HQoS adjustment, the channel definition policy under the group interface is used if redirection is unconfigured. In this case, the HQoS adjustment can be applied to IPoE subscribers in per-SAP replication mode.

If redirection is configured, the channel bandwidth definition policy applied under the Layer 3 redirected interface is in effect.

Hierarchical MCAC (HMCAC) is supported on two levels simultaneously:

- subscriber level and redirected interface when redirection is configured
- subscriber level and group-interface level when redirection is unconfigured

In HMCAC, the subscriber is checked against its bandwidth limits first, then against the bandwidth limits of the redirected or group interface. If redirection is configured but the policy is referenced only under the group interface, no admission control is executed (HMCAC or MCAC).

Reference	configure mcac policy <i>string</i>
Introduced	16.0.R1
Platforms	All

query-interval *number*

Synopsis	Time between two consecutive host-query messages
Context	configure router <i>string igmp interface string query-interval number</i>

Tree	static
Description	Commands in this context configure the testing of multicast forwarding on an interface without a receiver host.
Introduced	16.0.R1
Platforms	All

group [group-address] string

Synopsis	Enter the group list instance
Context	configure router <i>string</i> igmp interface <i>string</i> static group <i>string</i>
Tree	group
Description	Commands in this context configure a static multicast group as either a starg (*,G), or one or more SSM (S,G) records. IGMP static group memberships are used to test multicast forwarding without a receiver host. When a static IGMP group is configured, data is forwarded to an interface without receiving membership reports from host members.

When the group entries are configured on point-to-point links that connect routers to a rendezvous point (RP), the static IGMP group entries do not generate join messages toward the RP.

Introduced 16.0.R1

Platforms All

md-admin-name *reference*

Synopsis	Maintenance Domain (MD) name
Context	configure <i>router string interface string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number</i>
Tree	<i>mep</i>
Reference	configure <i>eth-cfm domain string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ma-admin-name *reference*

Synopsis	Maintenance Association (MA) name
Context	configure router <i>string</i> interface <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i>
Tree	mep
Reference	configure eth-cfm domain <i>string</i> association <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mep-id *number*

Synopsis	Maintenance Endpoint (MEP) ID
Context	configure router <i>string</i> interface <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i>
Tree	mep
Range	1 to 8191
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the MEP
Context	configure router <i>string</i> interface <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

alarm-notification

Synopsis	Enter the alarm-notification context
----------	---

Context	configure router <i>string</i> interface <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> alarm-notification
Tree	alarm-notification
Description	Commands in this context configure the Fault Notification Generator (FNG) time values to raise an alarm or reset the CCM defect alarm. Use these timers for network management processes. The timers are not tied into delaying the notification to the fault management system on the network element and do not affect fault propagation mechanisms.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fng-alarm-time *number*

Synopsis	Time that must expire before an FNG alarm is raised
Context	configure router <i>string</i> interface <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> alarm-notification fng-alarm-time <i>number</i>
Tree	fng-alarm-time
Range	250 500 1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fng-reset-time *number*

Synopsis	Time that must expire before an FNG alarm is reset
Context	configure router <i>string</i> interface <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> alarm-notification fng-reset-time <i>number</i>
Tree	fng-reset-time
Range	250 500 1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm *boolean*

Synopsis	Generate CCM messages
----------	-----------------------

Context	configure <i>router string interface string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm boolean</i>
Tree	ccm
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm-ltm-priority *number*

Synopsis	Priority of CCM and LTM messages transmitted by the MEP
Context	configure <i>router string interface string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm-ltm-priority number</i>
Tree	ccm-ltm-priority
Range	0 to 7
Default	7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm-padding-size *number*

Synopsis	Number of octets of padding to insert in CCM packets
Context	configure <i>router string interface string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm-padding-size number</i>
Tree	ccm-padding-size
Description	<p>This command sets the byte size of the optional Data TLV to be included in the ETH-CC PDU.</p> <p>This command increases the size of the ETH-CC PDU by the configured value. The base size of the ETH-CC PDU, including the Interface Status TLV and Port Status TLV, is 83 bytes not including the Layer 2 encapsulation. CCM padding is not supported when the CCM interval (configured through configure eth-cfm domain association ccm-interval) is less than 1 second.</p>
Range	3 to 1500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm-tlv-ignore *keyword*

Synopsis	TLV to ignore on reception
----------	----------------------------

Context	configure <i>router string interface string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm-tlv-ignore keyword</i>
Tree	ccm-tlv-ignore
Description	This command configures the receiving MEP to ignore the specified TLVs in the CCM PDU. The ignored TLVs are reported as absent and have no impact on the MEP state machine. When unconfigured, the MEP processes all the recognized TLVs.
Options	interface-status, port-status
Max. Instances	2
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

collect-lmm-fc-stats

Synopsis	Enter the collect-lmm-fc-stats context
Context	configure <i>router string interface string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number collect-lmm-fc-stats</i>
Tree	collect-lmm-fc-stats
Description	Commands in this context configure per forwarding class (FC) LMM information collection. The commands fc-in-profile and fc in this context are mutually exclusive. The commands apply to either profile-aware or profile-unaware FCs respectively. This command and the collect-lmm-stats command are mutually exclusive when there is entity resource contention.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fc keyword

Synopsis	Forwarding class name for profile-unaware counter
Context	configure <i>router string interface string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number collect-lmm-fc-stats fc keyword</i>
Tree	fc
Description	This command configures individual counters for the specified FCs without regard for profile. The system includes all countable packets that match a configured FC, regardless of profile, in this counter.

An FC specified as part of this command and for this specific context cannot be specified as a profile-aware FC using the **fc-in-profile** command under the **collect-lmm-fc-stats** context.

When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.

Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

fc-in-profile *keyword*

Synopsis	Forwarding class name for profile-aware counter
Context	configure router <i>string</i> interface <i>string</i> eth-cfm mep md-admin-name reference ma-admin-name reference mep-id <i>number</i> collect-lmm-fc-stats fc-in-profile <i>keyword</i>
Tree	fc-in-profile
Description	This command configures individual counters for the specified FCs with regard to profile. The system includes all countable packets that match a configured FC and that are deemed to be in-profile in this counter. An FC specified as part of this command and for this specific context cannot be specified as a profile-unaware FC using the fc command under the collect-lmm-fc-stats context. When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

collect-lmm-stats *boolean*

Synopsis	Collect statistics for loss measurement message tests
Context	configure router <i>string</i> interface <i>string</i> eth-cfm mep md-admin-name reference ma-admin-name reference mep-id <i>number</i> collect-lmm-stats <i>boolean</i>
Tree	collect-lmm-stats
Description	When configured to true , the router instantiates the statistical counter to transmit and receive packets for the LAG facility MEP bindings.

The **show eth-cfm collect-lmm-stats** command displays entities that have been enabled to collect transit and receive counters.

When configured to **false**, the router does not instantiate the counter and the LMM PDU associated with the MEP does not populate the counters in the packet.

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

description *string*

Synopsis	Text description
Context	configure router <i>string</i> interface <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-test

Synopsis	Enable the eth-test context
Context	configure router <i>string</i> interface <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test
Tree	eth-test
Description	Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the oam eth-cfm eth-test command.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

bit-error-threshold *number*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	configure router <i>string</i> interface <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test bit-error-threshold <i>number</i>
Tree	bit-error-threshold
Range	0 to 11840

Units	bit errors
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

test-pattern

Synopsis	Enter the test-pattern context
Context	configure router <i>string</i> interface <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test test-pattern
Tree	test-pattern
Description	Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

crc-tlv *boolean*

Synopsis	Generate a CRC checksum
Context	configure router <i>string</i> interface <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test test-pattern crc-tlv <i>boolean</i>
Tree	crc-tlv
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

pattern *keyword*

Synopsis	Test pattern for Ethernet Test frames
Context	configure router <i>string</i> interface <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test test-pattern pattern <i>keyword</i>
Tree	pattern
Description	This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.
Options	all-zeros, all-ones
Default	all-zeros

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

facility-fault *boolean*

Synopsis	Allow the facility MEP to generate a network action
Context	configure router <i>string</i> interface <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> facility-fault <i>boolean</i>
Tree	facility-fault
Description	When configured to true , the system facility MEP responds to a fault with a network-actionable function instead of just reporting the defect condition. When configured to false , the system monitors transmissions and reports fault conditions.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

grace

Synopsis	Enter the grace context
Context	configure router <i>string</i> interface <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> grace
Tree	grace
Description	Commands in this context configure the Nokia ETH-CFM Grace function and the ITU-T Y.1731 Ethernet Expected Default (ETH-ED) function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-ed

Synopsis	Enter the eth-ed context
Context	configure router <i>string</i> interface <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> grace eth-ed
Tree	eth-ed
Description	Commands in this context configure the ITU-T Y.1731 ETH-ED function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

max-rx-defect-window *number*

Synopsis	Maximum received ETH-ED expected defect window duration
Context	configure router <i>string</i> interface <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> grace eth-ed max-rx-defect-window <i>number</i>
Tree	max-rx-defect-window
Range	1 to 86400
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

priority *number*

Synopsis	Transmission priority for ETH-ED PDUs
Context	configure router <i>string</i> interface <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> grace eth-ed priority <i>number</i>
Tree	priority
Range	0 to 7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rx-eth-ed *boolean*

Synopsis	Receive and process ETH-ED ITU-T Y.1731 PDUs on the MEP
Context	configure router <i>string</i> interface <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> grace eth-ed rx-eth-ed <i>boolean</i>
Tree	rx-eth-ed
Description	This command enables the reception and processing of the ITU-T Y.1731 ETH-ED PDU on the MEP.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tx-eth-ed *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
----------	-----------------------------------

Context	configure <i>router string interface string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed tx-eth-ed boolean</i>
Tree	tx-eth-ed
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-vsm-grace

Synopsis	Enter the eth-vsm-grace context
Context	configure <i>router string interface string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace</i>
Tree	eth-vsm-grace
Description	Commands in this context configure the Nokia ETH-CFM Grace function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rx-eth-vsm-grace *boolean*

Synopsis	Receive and process Nokia ETH-CFM Grace PDU on the MEP
Context	configure <i>router string interface string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace rx-eth-vsm-grace boolean</i>
Tree	rx-eth-vsm-grace
Description	When configured to true , the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect. When configured to false , the router disables the Nokia Grace function.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tx-eth-vsm-grace *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	configure <i>router string interface string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace tx-eth-vsm-grace boolean</i>
Tree	tx-eth-vsm-grace

Description	<p>When configured to true, the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.</p> <p>The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.</p> <p>The operator must configure the configure system eth-cfm grace command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).</p> <p>When configured to false, the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.</p>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

lbm-svc-act-responder *boolean*

Synopsis	Process service activation streams in ETH-CFM LBM
Context	configure <i>router string interface string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number lbm-svc-act-responder boolean</i>
Tree	lbm-svc-act-responder
Description	<p>When configured to true, the router enables the MEP to process service activation streams encapsulated in ETH-CFM LBM frames that are directed to it.</p> <p>When configured to false, this command reverts to MEP LBM standard processing.</p> <p>There is interaction between this command and the tools perform service id loopback eth command. Nokia recommends that either the lbm-svc act-responder or the tools perform service id loopback eth command be used within a service. If both commands must be configured, and the target reflection point is the MAC Swap Loopback function, the inbound stream of data must not include ETH-CFM traffic that is equal to or lower than the domain level of any configured MEP that would otherwise extract and process the ETH-CFM message.</p> <p>See "Promiscuous ETH-LBM mode of operation" in the <i>7450 ESS, 7750 SR, 7950 XRS, and VSR Services Overview Guide</i> for more information.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

low-priority-defect *keyword*

Synopsis	Lowest priority defect for fault alarm generation
Context	configure <i>router string interface string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number low-priority-defect keyword</i>

Tree	low-priority-defect
Description	This command specifies the lowest priority defect that generates a fault alarm and also configures the fault state of the MEP that causes a network reaction.
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Default	mac-rem-err-xcon
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mac-address *string*

Synopsis	MAC address of the MEP
Context	configure router <i>string</i> interface <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> mac-address <i>string</i>
Tree	mac-address
Description	This command specifies the MAC address of the MEP. When unconfigured, the MAC address of the port (if the MEP is on a SAP) or the MAC address of a bridge (if the MEP is on a spoke) is used.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

one-way-delay-threshold *number*

Synopsis	Threshold time limit for the one-way delay test
Context	configure router <i>string</i> interface <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> one-way-delay-threshold <i>number</i>
Tree	one-way-delay-threshold
Range	0 to 600
Units	seconds
Default	3
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

flavor *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Network interface flavor
Context	configure <i>router string interface string flavor keyword</i>
Tree	<i>flavor</i>
Options	regular, control-tunnel, pdn, unnumbered-mpls-tp, gmpls-loopback
Default	regular
Introduced	16.0.R1
Platforms	All

gre-termination *boolean*

Synopsis	Terminate GRE packets on primary subnet of interface
Context	configure <i>router string interface string gre-termination boolean</i>
Tree	<i>gre-termination</i>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

hold-time

Synopsis	Enter the hold-time context
Context	configure <i>router string interface string hold-time</i>
Tree	<i>hold-time</i>
Description	Commands in this context configure the interface-level up and down hold timers for the associated IP interface.
Introduced	16.0.R1
Platforms	All

ipv4

Synopsis	Enter the ipv4 context
Context	configure <i>router string interface string hold-time ipv4</i>

Tree	ipv4
Description	Commands in this context configure the interface-level IPv4 hold timers for the associated IP interface.
Introduced	16.0.R1
Platforms	All

down

Synopsis	Enter the down context
Context	configure router <i>string</i> interface <i>string</i> hold-time ipv4 down
Tree	down
Description	Commands in this context configure the down hold timer, which specifies the delay before activating the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface up, unless an operator configures the init-only command.
Introduced	16.0.R1
Platforms	All

init-only *boolean*

Synopsis	Apply delay only at interface configuration or reboot
Context	configure router <i>string</i> interface <i>string</i> hold-time ipv4 down init-only <i>boolean</i>
Tree	init-only
Description	This command applies a delay only when the IP interface is first configured or after a system reboot.
Default	false
Introduced	16.0.R1
Platforms	All

seconds *number*

Synopsis	Down hold time for the IP interface
Context	configure router <i>string</i> interface <i>string</i> hold-time ipv4 down seconds <i>number</i>
Tree	seconds
Range	1 to 1200
Units	seconds

Introduced	16.0.R1
Platforms	All

up

Synopsis	Enter the up context
Context	configure <i>router string interface string hold-time ipv4 up</i>
Tree	<i>up</i>
Description	Commands in this context configure the up hold timer, which specifies the delay before deactivation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface down.
Introduced	16.0.R1
Platforms	All

seconds *number*

Synopsis	Up hold time for the IP interface
Context	configure <i>router string interface string hold-time ipv4 up seconds number</i>
Tree	<i>seconds</i>
Range	1 to 1200
Units	seconds
Introduced	16.0.R1
Platforms	All

ipv6

Synopsis	Enter the ipv6 context
Context	configure <i>router string interface string hold-time ipv6</i>
Tree	<i>ipv6</i>
Description	Commands in this context configure the interface-level IPv6 hold timers for the associated IP interface.
Introduced	16.0.R1
Platforms	All

down

Synopsis	Enter the down context
Context	configure <i>router string interface string hold-time ipv6 down</i>
Tree	<i>down</i>
Description	Commands in this context configure the down hold timer, which specifies the delay before activation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface up, unless an operator configures the init-only command.
Introduced	16.0.R1
Platforms	All

init-only *boolean*

Synopsis	Apply delay only at interface configuration or reboot
Context	configure <i>router string interface string hold-time ipv6 down init-only boolean</i>
Tree	<i>init-only</i>
Description	When configured to true , the system applies a delay only when the IP interface is first configured or after a system reboot.
Default	false
Introduced	16.0.R1
Platforms	All

seconds *number*

Synopsis	Down hold time for the IP interface
Context	configure <i>router string interface string hold-time ipv6 down seconds number</i>
Tree	<i>seconds</i>
Range	1 to 1200
Units	seconds
Introduced	16.0.R1
Platforms	All

up

Synopsis	Enter the up context
Context	configure <i>router string interface string hold-time ipv6 up</i>

Tree	up
Description	Commands in this context configure the up hold timer, which specifies the delay before deactivation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface down.
Introduced	16.0.R1
Platforms	All

seconds *number*

Synopsis	Up hold time for the IP interface
Context	configure router <i>string</i> interface <i>string</i> hold-time ipv6 up seconds <i>number</i>
Tree	seconds
Range	1 to 1200
Units	seconds

delay

Synopsis Enter the **delay** context
 Context **configure** *router string* *interface string* *if-attribute* *delay*
 Tree [delay](#)
 Introduced 20.7.R1
 Platforms All

delay-selection *keyword*

Synopsis Delay source advertised by IGP for the interface
 Context **configure** *router string* *interface string* *if-attribute* *delay* *delay-selection* *keyword*
 Tree [delay-selection](#)
 Options static, dynamic, static-preferred, dynamic-preferred
 Default static-preferred
 Introduced 21.7.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

dynamic

Synopsis Enter the **dynamic** context
 Context **configure** *router string* *interface string* *if-attribute* *delay* *dynamic*
 Tree [dynamic](#)
 Description Commands in this context configure dynamic link delay measurement options for the interface.
 Introduced 21.7.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

measurement-template *reference*

Synopsis Link delay measurement template for the interface
 Context **configure** *router string* *interface string* *if-attribute* *delay* *dynamic* *measurement-template* *reference*
 Tree [measurement-template](#)

Reference	configure test-oam link-measurement measurement-template <i>string</i>
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

twamp-light

Synopsis	Enter the twamp-light context
Context	configure router <i>string</i> interface <i>string</i> if-attribute delay dynamic twamp-light
Tree	twamp-light
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ipv4

Synopsis	Enter the ipv4 context
Context	configure router <i>string</i> interface <i>string</i> if-attribute delay dynamic twamp-light ipv4
Tree	ipv4
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of IPv4 TWAMP Light packets
Context	configure router <i>string</i> interface <i>string</i> if-attribute delay dynamic twamp-light ipv4 admin-state <i>keyword</i>
Tree	admin-state
Description	This command specifies the administrative state of the IPv4 encapsulated TWAMP Light measurement packets.
Options	enable, disable
Default	disable
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

destination *string*

Synopsis	TWAMP Light measurement packet destination IPv4 address
----------	---

Context	configure router <i>string</i> interface <i>string</i> if-attribute delay dynamic twamp-light ipv4 destination <i>string</i>
Tree	destination
Description	This command specifies the unicast destination address to be associated with the IPv4 TWAMP Light measurement packet.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

source *string*

Synopsis	TWAMP Light measurement packets source IPv4 address
Context	configure router <i>string</i> interface <i>string</i> if-attribute delay dynamic twamp-light ipv4 source <i>string</i>
Tree	source
Description	This command specifies the unicast source address to be associated with the IPv4 TWAMP Light measurement packet.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ipv6

Synopsis	Enter the ipv6 context
Context	configure router <i>string</i> interface <i>string</i> if-attribute delay dynamic twamp-light ipv6
Tree	ipv6
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of IPv6 TWAMP Light packets
Context	configure router <i>string</i> interface <i>string</i> if-attribute delay dynamic twamp-light ipv6 admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	21.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

destination string

Synopsis TWAMP Light measurement packet destination IPv6 address

Context **configure router string interface string if-attribute delay dynamic twamp-light ipv6 destination string**

Tree **destination**

Description This command specifies the unicast destination address to be associated with the IPv6 TWAMP Light measurement packet. Globally routable and Link Local addressing is supported.

Introduced 21.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

source string

Synopsis TWAMP Light measurement packets source IPv6 address

Context **configure router string interface string if-attribute delay dynamic twamp-light ipv6 source string**

Tree **source**

Description This command specifies the unicast source address to be associated with the IPv6 TWAMP Light measurement packet. Globally routable and Link Local addressing is supported.

Introduced 21.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

static number

Synopsis Unidirectional link delay static information

Context **configure router string interface string if-attribute delay static number**

Tree **static**

Description This command configures the unidirectional link delay. By default there is no configured delay, and the link delay metric TLV is pruned in the IGP.

Range 1 to 16777214

Units microseconds

Introduced 20.7.R1

Platforms All

srlg-group [*name*] *reference*

Synopsis	Add a list entry for srlg-group
Context	configure <i>router string interface string if-attribute srlg-group reference</i>
Tree	<i>srlg-group</i>
Description	<p>Commands in this context add a list entry for a Shared Risk Link Group (SRLG) that can be associated with an IP or MPLS interface to tag IP or MPLS interfaces that share a specific outcome with the same identifier. For example, an SRLG group identifier could represent all links that use separate fibers but are carried in the same fiber conduit.</p> <p>The name and identifier of each SRLG group must be configured locally on each router before the user configures the SRLG membership of an interface. A maximum of 1024 SRLGs can be configured per system. The user can apply SRLGs to an IES, VPRN, network IP, or MPLS interface. A maximum of 64 SRLGs can be applied to an interface.</p> <p>See "Shared Risk Link Groups" in the <i>7450 ESS, 7750 SR, 7950 XRS, and VSR MPLS Guide</i> for more information about SRLGs.</p>
Introduced	16.0.R1
Platforms	All

[name] *reference*

Synopsis	SRLG name
Context	configure <i>router string interface string if-attribute srlg-group reference</i>
Tree	<i>srlg-group</i>
Reference	configure <i>routing-options if-attribute srlg-group string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

ingress

Synopsis	Enter the ingress context
Context	configure <i>router string interface string ingress</i>
Tree	<i>ingress</i>
Description	Commands in this context configure ingress network filter policies for the IP interface. If an ingress filter is not defined, the system performs no filtering.
Introduced	16.0.R1
Platforms	All

destination-class-lookup *boolean*

Synopsis	Enable BGP destination class lookup
Context	configure <i>router string interface string ingress destination-class-lookup boolean</i>
Tree	destination-class-lookup
Description	When configured to true , the router performs a destination class lookup. This command is supported on FP3-based cards and later and is used in combination with the destination-class match criterion for an IP filter policy to filter egress traffic based on BGP destination classes. When configured to false , destination class lookup is not enabled.
Default	false
Introduced	20.7.R1
Platforms	All

filter

Synopsis	Enter the filter context
Context	configure <i>router string interface string ingress filter</i>
Tree	filter
Description	Commands in this context associate an IP filter policy with an IP interface. Filter policies control packet forwarding and dropping based on IP match criteria.
Introduced	16.0.R1
Platforms	All

ip reference

Synopsis	IPv4 filter policy name
Context	configure <i>router string interface string ingress filter ip reference</i>
Tree	ip
Reference	configure filter ip-filter string
Introduced	16.0.R1
Platforms	All

ipv6 reference

Synopsis	IPv6 filter policy name
----------	-------------------------

Context	configure <i>router string interface string ingress filter ipv6 reference</i>
Tree	ipv6
Reference	configure filter ipv6-filter <i>string</i>
Introduced	16.0.R1
Platforms	All

policy-accounting *reference*

Synopsis	Policy accounting template applied to the interface
Context	configure <i>router string interface string ingress policy-accounting reference</i>
Tree	policy-accounting
Reference	configure routing-options policy-accounting policy-acct-template <i>string</i>
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

ingress-stats *boolean*

Synopsis	Collect ingress statistics
Context	configure <i>router string interface string ingress-stats boolean</i>
Tree	ingress-stats
Description	<p>When configured to true, the router configures the collection of IPv4 and IPv6 offered packets and octets. This only applies to IP statistics, not to uRPF statistics.</p> <p>Octet statistics for IPv4 and IPv6 bytes at IP interfaces include the Layer 2 frame overhead.</p> <p>When configured to false, the router does not collect the statistics.</p>
Default	false
Introduced	16.0.R1
Platforms	All

ip-mtu *number*

Synopsis	Interface IP MTU
Context	configure <i>router string interface string ip-mtu number</i>
Tree	ip-mtu
Description	This command configures the IP maximum transmit unit (packet) for the associated router IP interface.

The operational IP MTU used for the interface is based on the configured IP MTU and the port MTU of the port bound to this interface; that is, the operational MTU is set to the lesser of the values configured by this command and the port MTU value less the Ethernet header size.

If the interface supports IPv6 packets, this command must be set to at least 1280, in accordance with RFC 2460 *Internet Protocol, Version 6 (IPv6) Specification*.

Range	512 to 9786
Units	bytes
Introduced	16.0.R1
Platforms	All

ip-tunnel

Synopsis	Enter the ip-tunnel context
Context	configure router <i>string</i> interface <i>string</i> ip-tunnel
Tree	ip-tunnel
Description	Commands in this context configure the IP or GRE tunnel on a control-channel loopback interface. The local-end tunnel IP address is configured using the interface primary IP address.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

remote-ip *string*

Synopsis	IP address of the remote end of the IP tunnel
Context	configure router <i>string</i> interface <i>string</i> ip-tunnel remote-ip <i>string</i>
Tree	remote-ip
Description	This command configures the destination address of the outer IP header in the IP or GRE encapsulation.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ipsec

Synopsis	Enable the ipsec context
Context	configure router <i>string</i> interface <i>string</i> ipsec
Tree	ipsec

Description	Commands in this context configure an IPsec secured interface.
Introduced	22.7.R1
Platforms	VSR

admin-state *keyword*

Synopsis	Administrative state of IPsec secured interface
Context	configure router <i>string</i> interface <i>string</i> ipsec admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	22.7.R1
Platforms	VSR

ip-exception *reference*

Synopsis	IP exception filter
Context	configure router <i>string</i> interface <i>string</i> ipsec ip-exception <i>reference</i>
Tree	ip-exception
Description	This command configures the IP exception filter for the secured interface. All ingress traffic matching the specified filter bypasses IPsec processing.
Reference	configure filter ip-exception <i>string</i>
Introduced	22.7.R1
Platforms	VSR

ipsec-tunnel [*name*] *string*

Synopsis	Enter the ipsec-tunnel list instance
Context	configure router <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i>
Tree	ipsec-tunnel
Description	Commands in this context configure IPsec tunnels used to secure traffic forwarded over the interface.
Introduced	22.7.R1
Platforms	VSR

[name] *string*

Synopsis	IPsec tunnel name
Context	configure <i>router string interface string ipsec ipsec-tunnel string</i>
Tree	<i>ipsec-tunnel</i>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	VSR

admin-state *keyword*

Synopsis	Administrative state of the IPsec tunnel
Context	configure <i>router string interface string ipsec ipsec-tunnel string admin-state keyword</i>
Tree	<i>admin-state</i>
Options	enable, disable
Default	disable
Introduced	22.7.R1
Platforms	VSR

bfd**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the bfd context
Context	configure <i>router string interface string ipsec ipsec-tunnel string bfd</i>
Tree	<i>bfd</i>
Introduced	22.7.R1
Platforms	VSR

bfd-designate *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Designate IPsec tunnel to carry BFD traffic
Context	configure <i>router string interface string ipsec ipsec-tunnel string bfd bfd-designate boolean</i>
Tree	bfd-designate
Default	false
Introduced	22.7.R1
Platforms	VSR

bfd-liveness**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the bfd-liveness context
Context	configure <i>router string interface string ipsec ipsec-tunnel string bfd bfd-liveness</i>
Tree	bfd-liveness
Description	<p>Commands in this context configure a BFD session to provide a heart-beat mechanism for a specified IPsec tunnel. There can be only one BFD session assigned to any given IPsec tunnel, but there can be multiple IPsec tunnels using the same BFD session.</p> <p>BFD controls the state of the association tunnel. If the BFD session goes down, the system brings down the associated non-designated IPsec tunnel.</p>
Introduced	22.7.R1
Platforms	VSR

dest-ip *string***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Destination address used for the BFD session
Context	configure <i>router string interface string ipsec ipsec-tunnel string bfd bfd-liveness dest-ip string</i>

Tree	dest-ip
Notes	This element is mandatory.
Introduced	22.7.R1
Platforms	VSR

interface *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Name of the interface used by the BFD session
Context	configure router <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> bfd bfd-liveness interface <i>string</i>
Tree	interface
String Length	1 to 32
Notes	This element is mandatory.
Introduced	22.7.R1
Platforms	VSR

service-name *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative service name
Context	configure router <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> bfd bfd-liveness service-name <i>string</i>
Tree	service-name
Description	This command configures the name of the service where BFD traffic is forwarded to.
String Length	1 to 64
Notes	This element is mandatory.
Introduced	22.7.R1
Platforms	VSR

clear-df-bit *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Reset the DF bit to 0 in all payload IP packets
Context	configure <i>router string interface string ipsec ipsec-tunnel string clear-df-bit boolean</i>
Tree	clear-df-bit
Description	When configured to true , the DF bit is set to 0 in all payload IP packets associated with the IPsec tunnel, before any potential fragmentation occurs.
Default	false
Introduced	22.7.R1
Platforms	VSR

copy-traffic-class-upon-decapsulation *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable traffic class copy upon decapsulation
Context	configure <i>router string interface string ipsec ipsec-tunnel string copy-traffic-class-upon-decapsulation boolean</i>
Tree	copy-traffic-class-upon-decapsulation
Description	When configured to true , the system copies the traffic class from the outer tunnel IP packet header to the payload IP packet header in the decapsulating direction (public to private).
Default	false
Introduced	22.7.R1
Platforms	VSR

description *string*

Synopsis	Text description
Context	configure <i>router string interface string ipsec ipsec-tunnel string description string</i>
Tree	description
String Length	1 to 80

Introduced 22.7.R1
 Platforms VSR

encapsulated-ip-mtu *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Maximum size of the encapsulated tunnel packet

Context **configure** *router string interface string ipsec ipsec-tunnel string encapsulated-ip-mtu number*

Tree [encapsulated-ip-mtu](#)

Description This command specifies the maximum size of the encapsulated tunnel packet to the IPsec tunnel, the IP tunnel, or the dynamic tunnels terminated on the IPsec Gateway. If the encapsulated IPv4 or IPv6 tunnel packet exceeds this value, the system fragments the packet.

Range 512 to 9000

Units bytes

Introduced 22.7.R1

Platforms VSR

icmp-generation

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enter the **icmp-generation** context

Context **configure** *router string interface string ipsec ipsec-tunnel string icmp-generation*

Tree [icmp-generation](#)

Description Commands in this context configure settings for ICMPv4 message generation.

Introduced 22.7.R1

Platforms VSR

frag-required

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the frag-required context
Context	configure <i>router string interface string ipsec ipsec-tunnel string icmp-generation frag-required</i>
Tree	<i>frag-required</i>
Description	Commands in this context configure the attributes for sending generated ICMP Destination Unreachable "fragmentation needed and DF set" messages (type 3, code 4) back to the source, if the received size of the IPv4 packet on the private side exceeds the private MTU size.
Introduced	22.7.R1
Platforms	VSR

admin-state *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of sending ICMP messages
Context	configure <i>router string interface string ipsec ipsec-tunnel string icmp-generation frag-required admin-state keyword</i>
Tree	<i>admin-state</i>
Description	This command configures the administrative state of sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) messages to the source if the received size of the IPv4 packet on the private side exceeds the private MTU size.
Options	enable, disable
Default	enable
Introduced	22.7.R1
Platforms	VSR

interval *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Interval for sending ICMP messages
Context	configure router <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> icmp-generation frag-required interval <i>number</i>
Tree	interval
Description	This command configures the interval for sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4).
Range	1 to 60
Units	seconds
Default	10
Introduced	22.7.R1
Platforms	VSR

message-count *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of ICMP messages that can be sent
Context	configure router <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> icmp-generation frag-required message-count <i>number</i>
Tree	message-count
Description	This command configures the maximum number of ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) that can be sent during the configured interval.
Range	10 to 1000
Default	100
Introduced	22.7.R1
Platforms	VSR

icmp6-generation

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the icmp6-generation context
Context	configure router <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> icmp6-generation
Tree	icmp6-generation
Description	Commands in this context configure settings for ICMPv6 message generation.
Introduced	22.7.R1
Platforms	VSR

packet-too-big

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the packet-too-big context
Context	configure router <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> icmp6-generation packet-too-big
Tree	packet-too-big
Description	Commands in this context configure the parameters to send ICMPv6 PTB (Packet Too Big) messages on the private side. The system sends PTB messages if a received IPv6 packet on the private side is greater than 1280 bytes and it exceeds the private MTU of the tunnel. The private MTU for the tunnel is configured via the configure router interface ipsec ipsec-tunnel ip-mtu command for the interface.
Introduced	22.7.R1
Platforms	VSR

admin-state *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of Packet Too Big message sends

spi *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	SPI of inbound and outbound packets
Context	configure router <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> key-exchange manual keys <i>number</i> direction keyword spi <i>number</i>
Tree	spi

Description	This command specifies the Security Parameter Index (SPI) used to look up the instruction to verify and decrypt the incoming IPsec packets when the direction is inbound. When the direction is outbound, the SPI is used in the encoding of the outgoing packets. The remote node can use the SPI to look up the instruction to verify and decrypt the packet.
Range	256 to 16383
Notes	This element is mandatory.
Introduced	22.7.R1
Platforms	VSR

local-gateway-address-override (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local IPsec tunnel endpoint address
Context	configure <i>router string interface string ipsec ipsec-tunnel string local-gateway-address-override (ipv4-address-no-zone ipv6-address-no-zone)</i>
Tree	local-gateway-address-override
Description	This command configures the local IPsec tunnel endpoint address. This overrides the default endpoint address, which is the interface address.
Introduced	22.7.R1
Platforms	VSR

max-history-key-records

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the max-history-key-records context
Context	configure <i>router string interface string ipsec ipsec-tunnel string max-history-key-records</i>
Tree	max-history-key-records
Description	Commands in this context configure the settings for recording historical IPsec keys.
Introduced	22.7.R1
Platforms	VSR

esp number

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of recent records
Context	configure router string interface string ipsec ipsec-tunnel string max-history-key-records esp number
Tree	esp
Range	1 to 48
Introduced	22.7.R1
Platforms	VSR

ike number

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of historical IKE key records
Context	configure router string interface string ipsec ipsec-tunnel string max-history-key-records ike number
Tree	ike
Range	1 to 3
Introduced	22.7.R1
Platforms	VSR

pmtu-discovery-aging number

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Aging out time of the learned path MTU
Context	configure router string interface string ipsec ipsec-tunnel string pmtu-discovery-aging number
Tree	pmtu-discovery-aging

Description	This command configures the temporary public and private MTU expiration time. The temporary MTU is used for MTU propagation.
Range	900 to 3600
Units	seconds
Default	900
Introduced	22.7.R1
Platforms	VSR

private-sap *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Private SAP ID
Context	configure <i>router string interface string ipsec ipsec-tunnel string private-sap number</i>
Tree	<i>private-sap</i>
Range	0 to 4094
Notes	This element is mandatory.
Introduced	22.7.R1
Platforms	VSR

private-service *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Private service name
Context	configure <i>router string interface string ipsec ipsec-tunnel string private-service string</i>

Tree	private-service
Description	This command configures the private service name. If unconfigured, the private service is the service where the secured interface resides.
String Length	1 to 64
Introduced	22.7.R1
Platforms	VSR

private-tcp-mss-adjust *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	TCP maximum segment size (MSS) adjustment
Context	configure router <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> private-tcp-mss-adjust <i>number</i>
Tree	private-tcp-mss-adjust
Description	This command specifies the TCP MSS to adjust for the tunnel on the private side. When configured, the system may use the value to update the MSS option in the received TCP SYN packet on the private side.
Range	512 to 9000
Units	bytes
Introduced	22.7.R1
Platforms	VSR

propagate-pmtu-v4 *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable propagation of the path MTU to IPv4 hosts
Context	configure router <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> propagate-pmtu-v4 <i>boolean</i>
Tree	propagate-pmtu-v4
Description	When configured to true , the system propagates the path MTU learned from the public side to the private side (IPv4 hosts).
Default	true

Introduced 22.7.R1
 Platforms VSR

propagate-pmtu-v6 *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enable propagation of the path MTU to IPv6 hosts

Context **configure** *router string interface string ipsec ipsec-tunnel string propagate-pmtu-v6 boolean*

Tree [propagate-pmtu-v6](#)

Description When configured to **true**, the system propagates the path MTU learned from the public side to the private side (IPv6 hosts).

Default true

Introduced 22.7.R1

Platforms VSR

public-tcp-mss-adjust (*number | keyword*)

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis TCP maximum segment size (MSS) on the public network

Context **configure** *router string interface string ipsec ipsec-tunnel string public-tcp-mss-adjust (number | keyword)*

Tree [public-tcp-mss-adjust](#)

Description This command configures the MSS for the TCP traffic in an IPsec tunnel that is sent from the public network to the private network. The system may use this value to adjust or insert the MSS option in the TCP SYN packet.

Range 512 to 9000

Units bytes

Options auto

Introduced 22.7.R1

Platforms VSR

remote-gateway-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Remote IPsec tunnel endpoint address
Context	configure router <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> remote-gateway-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	remote-gateway-address
Introduced	22.7.R1
Platforms	VSR

replay-window number**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Anti-replay window size
Context	configure router <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> replay-window <i>number</i>
Tree	replay-window
Description	This command specifies the size of an IPsec anti-replay window. If unconfigured, IPsec anti-replay is disabled.
Range	32 64 128 256 512
Units	packets
Introduced	22.7.R1
Platforms	VSR

security-policy**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the security-policy context
Context	configure router <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> security-policy
Tree	security-policy

Description	Commands in this context specify a security policy used by the tunnel.
Introduced	22.7.R1
Platforms	VSR

id number**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Security policy ID for use by the tunnel
Context	configure router <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> security-policy <i>id number</i>
Tree	id
Max. Range	0 to 4294967295
Introduced	22.7.R1
Platforms	VSR

strict-match boolean**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable strict match of the security policy entry
Context	configure router <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> security-policy strict-match <i>boolean</i>
Tree	strict-match
Description	<p>When configured to true, this command enables strict match of the security policy entry.</p> <p>When a CREATE_CHILD exchange request is received for a static IPsec tunnel, and this request is not a rekey request, ISA matches the received TSi and TSr with the configured security policy. This can be a match only when a received TS (in TSi or TSr) address range matches exactly with the subnet in a security policy entry.</p> <p>If there is no match, the setup fails, and TS_UNACCEPTABLE is sent.</p> <p>If there is a match, but there is an existing CHILD_SA for the matched security policy, the setup fails, and NO_PROPOSAL_CHOSEN is sent.</p> <p>If there is a match, and there is not a CHILD_SA for the matched entry, the subnet is sent in the matched security policy entry as TSi and TSr, and the CHILD_SA is created.</p>
Default	false

Introduced 22.7.R1
 Platforms VSR

ipv6-exception *reference*

Synopsis IPv6 filter exception used to bypass encryption
 Context **configure** *router string interface string ipsec ipv6-exception reference*
 Tree [ipv6-exception](#)
 Description This command specifies the IPv6 filter exception for an IPsec-secured IPv6 interface. When an IPv6 filter exception is added, clear text packets that match the exception criteria in the IPv6 filter exception can ingress the interface, even when IPsec is enabled on the interface.
 Reference **configure** *filter ipv6-exception string*
 Introduced 22.7.R1
 Platforms VSR

public-sap *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Public SAP ID
 Context **configure** *router string interface string ipsec public-sap number*
 Tree [public-sap](#)
 Range 0 to 4094
 Notes This element is mandatory.
 Introduced 22.7.R1
 Platforms VSR

tunnel-group *reference*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Tunnel group ID

Context	configure <i>router string interface string ipsec tunnel-group reference</i>
Tree	tunnel-group
Reference	configure <i>isa tunnel-group number</i>
Notes	This element is mandatory.
Introduced	22.7.R1
Platforms	VSR

ipv4

Synopsis	Enter the ipv4 context
Context	configure <i>router string interface string ipv4</i>
Tree	ipv4
Introduced	16.0.R1
Platforms	All

allow-directed-broadcasts *boolean*

Synopsis	Forward directed broadcasts
Context	configure <i>router string interface string ipv4 allow-directed-broadcasts boolean</i>
Tree	allow-directed-broadcasts
Description	<p>When configured to true, the router forwards packets received on a local router interface to the subnet broadcast address of another IP interface.</p> <p>When configured to false, this router does not allow directed broadcasts and the packets are discarded.</p> <p>Allowing directed broadcasts is a well-known mechanism used for denial-of-service attacks.</p>
Default	false
Introduced	16.0.R1
Platforms	All

bfd

Synopsis	Enter the bfd context
Context	configure <i>router string interface string ipv4 bfd</i>
Tree	bfd

Description	Commands in this context configure the Bidirectional Forwarding Detection (BFD) settings for the associated IP interface.
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of BFD sessions
Context	configure router <i>string</i> interface <i>string</i> ipv4 bfd admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

echo-receive *number*

Synopsis	Minimum echo interval over this interface
Context	configure router <i>string</i> interface <i>string</i> ipv4 bfd echo-receive <i>number</i>
Tree	echo-receive
Range	100 to 100000
Units	milliseconds
Introduced	16.0.R1
Platforms	All

multiplier *number*

Synopsis	Number of consecutive BFD messages missed from the peer
Context	configure router <i>string</i> interface <i>string</i> ipv4 bfd multiplier <i>number</i>
Tree	multiplier
Description	This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments.
Range	1 to 20
Default	3
Introduced	16.0.R1

Platforms All

receive number

Synopsis BFD receive interval over this interface

Context **configure router string interface string ipv4 bfd receive number**

Tree [receive](#)

Description This command specifies the receive interval for the BFD session.
On the 7750 SR, this command can only be configured to a value less than 100 when the **type** command is configured to **cpm-np**.

Range 10 to 100000

Units milliseconds

Default 100

Introduced 16.0.R1

Platforms All

transmit-interval number

Synopsis BFD transmit interval over this interface

Context **configure router string interface string ipv4 bfd transmit-interval number**

Tree [transmit-interval](#)

Description This command configures the transmit intervals.
On the 7750 SR, this command can only be configured to a value less than 100 when the **type** command is configured to **cpm-np**.

Range 10 to 100000

Units milliseconds

Default 100

Introduced 16.0.R1

Platforms All

type keyword

Synopsis Local termination point for the BFD session

Context **configure router string interface string ipv4 bfd type keyword**

Tree [type](#)

Description	This command sets the local termination point for the BFD session to allow for fast timers down to 10 ms granularity. The options to specify where the BFD session runs are: <ul style="list-style-type: none"> • auto (default) – the system chooses and uses the line card CPU only for single-hop BFD sessions with timer intervals equal to or greater than 100ms. All others are placed on the cpm-np. • cpm-np – BFD session runs on the FP complex associated with the CPM. This is either the FP on the CPM or the one elected on smaller systems. • fp – BFD session runs on the line card CPU. This option can only be used for single-hop BFD sessions with timers equal to or greater than 100ms.
Options	cpm-np, auto, fp
Default	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

gi-address *string*

Synopsis GI address for the DHCP relay

Context **configure** [router](#) *string* [interface](#) *string* [ipv4](#) [dhcp](#) [gi-address](#) *string*

Tree [gi-address](#)

Description This command configures the GI address to distinguish between the different subscriber interfaces (and potentially group interfaces) defined when the router functions as a DHCP relay.

By default, the GI address used in the relayed DHCP packet is the primary IP address of a normal IES interface. Specifying the GI address allows the user to choose a secondary address. For group interfaces, a GI address must be specified under the group interface DHCP context or subscriber interface DHCP context for DHCP to function.

Introduced 16.0.R1

Platforms All

option-82

Synopsis Enter the **option-82** context

Context **configure** [router](#) *string* [interface](#) *string* [ipv4](#) [dhcp](#) [option-82](#)

Tree [option-82](#)

Description Commands in this context configure the processing required when the router receives a DHCP request that already has an Option 82 field in the packet.

Introduced 16.0.R1

Platforms All

action *keyword*

Synopsis Action to take with received DHCP Option 82

Context **configure** [router](#) *string* [interface](#) *string* [ipv4](#) [dhcp](#) [option-82](#) [action](#) *keyword*

Context **configure** [router](#) *string* [interface](#) *string* [ipv4](#) [dhcp](#) [option-82](#) [circuit-id](#) [ifindex](#)
Tree [ifindex](#)

Notes	The following elements are part of a choice: ascii-tuple , if-name , ifindex , none , port-id , or vlan-ascii-tuple .
Introduced	16.0.R1
Platforms	All

none

Synopsis	Do not include the circuit ID
Context	configure router <i>string</i> interface <i>string</i> ipv4 dhcp option-82 circuit-id none
Tree	none
Notes	The following elements are part of a choice: ascii-tuple , if-name , ifindex , none , port-id , or vlan-ascii-tuple .
Introduced	16.0.R1
Platforms	All

port-id

Synopsis	Use the port ID for the circuit ID
Context	configure router <i>string</i> interface <i>string</i> ipv4 dhcp option-82 circuit-id port-id
Tree	port-id
Notes	The following elements are part of a choice: ascii-tuple , if-name , ifindex , none , port-id , or vlan-ascii-tuple .
Introduced	16.0.R1
Platforms	All

vlan-ascii-tuple

Synopsis	Include the VLAN ID and dot1p bits in the ASCII tuple
Context	configure router <i>string</i> interface <i>string</i> ipv4 dhcp option-82 circuit-id vlan-ascii-tuple
Tree	vlan-ascii-tuple
Description	When configured, the router includes the VLAN ID and dot1p bits with the ASCII-tuple information. This only occurs on dot1q and QinQ-encapsulated ports. When the Option 82 bits are stripped, dot1p bits are copied to the Ethernet header of the outgoing packet. When unconfigured, the router leaves the circuit ID sub-option of the DHCP packet empty.
Notes	The following elements are part of a choice: ascii-tuple , if-name , ifindex , none , port-id , or vlan-ascii-tuple .

Introduced	16.0.R1
Platforms	All

remote-id

Synopsis	Enter the remote-id context
Context	configure router <i>string</i> interface <i>string</i> ipv4 dhcp option-82 remote-id
Tree	remote-id
Description	Commands in this context configure the remote IP sub-option of the DHCP packet with the identity of the remote host end (typically the DHCP client).
Introduced	16.0.R1
Platforms	All

ascii-string *string*

Synopsis	User-defined ASCII string for the remote ID
Context	configure router <i>string</i> interface <i>string</i> ipv4 dhcp option-82 remote-id ascii-string <i>string</i>

Tree	port-id
Default	false
Introduced	16.0.R1
Platforms	All

service-id *boolean*

Synopsis	Send the service ID in the Vendor Specific Option
Context	configure router string interface string ipv4 dhcp option-82 vendor-specific-option service-id <i>boolean</i>
Tree	service-id
Default	false
Introduced	16.0.R1
Platforms	All

string *string*

Synopsis	User-defined ASCII string for the VSO
Context	configure router string interface string ipv4 dhcp option-82 vendor-specific-option string <i>string</i>
Tree	string
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

system-id *boolean*

Synopsis	Send the system ID in the VSO
Context	configure router string interface string ipv4 dhcp option-82 vendor-specific-option system-id <i>boolean</i>
Tree	system-id

Default	false
Introduced	16.0.R1
Platforms	All

python-policy *reference*

Synopsis	Python policy name
Context	configure router <i>string</i> interface <i>string</i> ipv4 dhcp python-policy <i>reference</i>
Tree	python-policy
Description	This command associates a Python policy name with the interface.
Reference	configure python python-policy <i>string</i>
Introduced	16.0.R1
Platforms	All

relay-plain-bootp *boolean*

Synopsis	Relay plain BOOTP messages
Context	configure router <i>string</i> interface <i>string</i> ipv4 dhcp relay-plain-bootp <i>boolean</i>
Tree	relay-plain-bootp
Description	When configured to true , the system relays plain BOOTP messages. When configured to false , the system considers the plain BOOTP packets as malformed DHCP packets; therefore, the system does not relay the messages.
Default	false
Introduced	16.0.R1
Platforms	All

release-include-gi-address *boolean*

Synopsis	Include gateway IP address in DHCP Release messages
Context	configure router <i>string</i> interface <i>string</i> ipv4 dhcp release-include-gi-address <i>boolean</i>
Tree	release-include-gi-address
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

server string

Synopsis	IP addresses for DHCP server requests
Context	configure router <i>string</i> interface <i>string</i> ipv4 dhcp server <i>string</i>
Tree	server
Description	This command configures a list of servers that this interface forwards requests to. The operator can enter the list of servers as either IP addresses or fully qualified domain names. The operator must specify at least one server specified for DHCP relay to work. If there are multiple servers, the system forwards the request to all the servers in the list.
Max. Instances	8
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

src-ip-addr keyword

Synopsis	Type of source address to use for DHCP relay
Context	configure router <i>string</i> interface <i>string</i> ipv4 dhcp src-ip-addr <i>keyword</i>
Tree	src-ip-addr
Options	auto, gi-address
Default	auto
Introduced	16.0.R1
Platforms	All

trusted boolean

Synopsis	Relay untrusted packets
Context	configure router <i>string</i> interface <i>string</i> ipv4 dhcp trusted <i>boolean</i>
Tree	trusted
Description	When configured to true , the router enables the trusted mode on the interface. When enabled, the relay agent changes the existing GI address (of the request) to the ingress interface, and forwards the request. A DHCP request that contains a GI address of 0.0.0.0 and an Option 82 field in the packet is discarded unless it arrives on a trusted circuit.

This behavior only applies if the Relay Agent Information Option action is to keep the existing information. When the Option 82 field is replaced by the relay agent, the original Option 82 information is lost, and there is no reason to enable the trusted option.

Default	false
Introduced	16.0.R1
Platforms	All

icmp

Synopsis	Enter the icmp context
Context	configure router <i>string</i> interface <i>string</i> ipv4 icmp
Tree	icmp
Description	Commands in this context configure Internet Control Message Protocol (ICMP) parameters on a network IP interface.
Introduced	16.0.R1
Platforms	All

mask-reply *boolean*

Synopsis	Allow responses to ICMP mask requests on the interface
Context	configure router <i>string</i> interface <i>string</i> ipv4 icmp mask-reply <i>boolean</i>
Tree	mask-reply
Default	true
Introduced	16.0.R1
Platforms	All

param-problem

Synopsis	Enter the param-problem context
Context	configure router <i>string</i> interface <i>string</i> ipv4 icmp param-problem
Tree	param-problem
Description	Commands in this context specify the settings for ICMP Parameter Problem messages generated by the interface.
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of sent Parameter Problem messages
Context	configure router <i>string</i> interface <i>string</i> ipv4 icmp param-problem admin-state <i>keyword</i>
Tree	admin-state

neighbor-discovery

Synopsis	Enter the neighbor-discovery context
Context	configure router <i>string</i> interface <i>string</i> ipv4 neighbor-discovery
Tree	neighbor-discovery
Introduced	16.0.R1
Platforms	All

learn-unsolicited *boolean*

Synopsis	Learn new entries from any received NA message
Context	configure router <i>string</i> interface <i>string</i> ipv4 neighbor-discovery learn-unsolicited <i>boolean</i>
Tree	learn-unsolicited
Description	<p>When configured to true, the router can learn neighbor entries from received unsolicited Neighbor Advertisement (NA) messages, with or without the solicited (S) flag set. The command can be enabled for global addresses, link-local addresses, or for both.</p> <p>When configured to false, the router follows standard behavior for learning neighbor entries.</p> <ul style="list-style-type: none"> • If an unsolicited NA (regardless of the S flag) is received from a neighbor that is not yet in the Neighbor Discovery (ND) cache, the NA is ignored. • If an NS, RS, RA, or Redirect message with a Link Layer Address (MAC) is received from a neighbor that is not yet in the ND cache, a new neighbor entry is created in the cache to store the received Link Layer MAC. The neighbor is put in the STALE state.
Default	false
Introduced	16.0.R1
Platforms	All

limit

Synopsis	Enter the limit context
Context	configure router <i>string</i> interface <i>string</i> ipv4 neighbor-discovery limit
Tree	limit
Description	<p>Commands in this context configure the maximum number of dynamic neighbor entries that can be learned on the interface</p> <p>When the number of entries reaches the threshold (the configured percentage) of this limit, the system sends an SNMP trap.</p>

When the limit is exceeded, the system learns no new entries until an entry expires and traffic to these destinations is dropped. Already learned entries are refreshed.

Introduced 16.0.R1
 Platforms All

log-only *boolean*

Synopsis Generate log entries only if limit is reached
 Context **configure** *router string interface string ipv4 neighbor-discovery limit log-only boolean*
 Tree [log-only](#)
 Default false
 Introduced 16.0.R1
 Platforms All

max-entries *number*

Synopsis Maximum number of entries learned on an IP interface

 Tree [threshold](#)
 Range 1 to 100
 Units percent
 Default 90
 Introduced 16.0.R1
 Platforms All

local-proxy-arp *boolean*

Synopsis	Enable local proxy ARP on interface
Context	configure router <i>string</i> interface <i>string</i> ipv4 neighbor-discovery local-proxy-arp <i>boolean</i>
Tree	local-proxy-arp
Description	When configured to true , the router enables local proxy ARP on the interface. When configured to false , the router does not respond to ARP requests for addresses on the same subnet.
Introduced	16.0.R1
Platforms	All

proactive-refresh *boolean*

Synopsis	Send a single refresh message before entry timeout
Context	configure router <i>string</i> interface <i>string</i> ipv4 neighbor-discovery proactive-refresh <i>boolean</i>
Tree	proactive-refresh
Description	When configured to true , the router always sends a refresh message 30 seconds before the timeout of the entry (a single refresh message with no retries). When configured to false , the router marks an entry as stale 30 seconds before age-out, and the router only sends an ARP request to refresh the entry if the IOM receives traffic that uses it. Then, the IOM asks the ARP application to send a refresh message. With ARP proactive refresh enabled, the ARP module sends a refresh message regardless of the IOM receiving traffic.
Default	false
Introduced	16.0.R1
Platforms	All

proxy-arp-policy *reference*

Synopsis	Proxy ARP policy name
Context	configure router <i>string</i> interface <i>string</i> ipv4 neighbor-discovery proxy-arp-policy <i>reference</i>

Synopsis	ARP retry interval
Context	configure router <i>string</i> interface <i>string</i> ipv4 neighbor-discovery retry-timer <i>number</i>
Tree	retry-timer
Range	1 to 300
Units	deciseconds
Default	50
Introduced	16.0.R1
Platforms	All

static-neighbor [[ipv4-address](#)] *string*

Synopsis	Enter the static-neighbor list instance
Context	configure router <i>string</i> interface <i>string</i> ipv4 neighbor-discovery static-neighbor <i>string</i>
Tree	static-neighbor
Description	Commands in this context configure a static ARP entry that associates an IP address with a MAC address for the core router instance.
Introduced	16.0.R1
Platforms	All

[ipv4-address] string

Synopsis	IPv4 address that corresponds to the physical address
Context	configure router <i>string</i> interface <i>string</i> ipv4 neighbor-discovery static-neighbor <i>string</i>
Tree	static-neighbor
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

mac-address string

Synopsis	MAC address for the static neighbor
Context	configure router <i>string</i> interface <i>string</i> ipv4 neighbor-discovery static-neighbor <i>string</i> mac-address <i>string</i>
Tree	mac-address
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

static-neighbor-unnumbered

Synopsis	Enable the static-neighbor-unnumbered context
Context	configure router <i>string</i> interface <i>string</i> ipv4 neighbor-discovery static-neighbor-unnumbered
Tree	static-neighbor-unnumbered
Description	Commands in this context configure the static ARP MAC for an unnumbered interface. This entry overrides the dynamic ARP entry on the unnumbered interface.
Introduced	16.0.R1
Platforms	All

mac-address string**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	MAC address for the static neighbor
----------	-------------------------------------

Context	configure <i>router string interface string ipv4 neighbor-discovery static-neighbor-unnumbered mac-address string</i>
Tree	mac-address
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

timeout *number*

Synopsis	Timeout for an ARP entry learned on the interface
Context	configure <i>router string interface string ipv4 neighbor-discovery timeout number</i>
Tree	timeout
Description	This command configures the minimum time an ARP entry learned on the IP interface is stored in the ARP table. ARP entries are automatically refreshed when an ARP request or gratuitous ARP is seen by an IP host. Otherwise, the ARP entry is aged from the ARP table.
Range	0 to 65535
Units	seconds
Default	14400
Introduced	16.0.R1
Platforms	All

primary

Synopsis	Enable the primary context
Context	configure <i>router string interface string ipv4 primary</i>
Tree	primary
Introduced	16.0.R1
Platforms	All

address *string*

Synopsis	Primary IPv4 address assigned to the interface
Context	configure <i>router string interface string ipv4 primary address string</i>
Tree	address
Notes	This element is mandatory.

Introduced	16.0.R1
Platforms	All

broadcast *keyword*

Synopsis	Broadcast address format
Context	configure router <i>string</i> interface <i>string</i> ipv4 primary broadcast <i>keyword</i>
Tree	broadcast
Description	This command overrides the default broadcast address that the IP interface uses when sourcing IP broadcasts. This command does not affect the type of broadcasts the IP interface can receive. The IP interface can receive either the local broadcast or the valid subnet broadcast address sent by a host.
Options	all-ones, host-ones
Default	host-ones
Introduced	16.0.R1
Platforms	All

gre-termination *boolean*

Synopsis	Enable GRE termination
Context	configure router <i>string</i> interface <i>string</i> ipv4 primary gre-termination <i>boolean</i>
Tree	gre-termination
Description	When configured to true , the router terminates MPLS-over-GRE and IP-over-GRE packets for destination IP addresses from a user-defined subnet. The user defines a subnet for the termination of GRE packets by executing this command on a numbered network IP interface or a loopback interface.
Default	false
Introduced	19.10.R1
Platforms	VSR

prefix-length *number*

Synopsis	IPv4 address prefix length
Context	configure router <i>string</i> interface <i>string</i> ipv4 primary prefix-length <i>number</i>
Tree	prefix-length
Range	0 to 32

Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

track-srrp *number*

Synopsis	SRRP instance whose state is tracked on this IP address
Context	configure router <i>string</i> interface <i>string</i> ipv4 primary track-srrp <i>number</i>
Tree	track-srrp
Range	1 to 4294967295
Introduced	16.0.R1

urpf-check

Synopsis	Enable the urpf-check context
Context	configure <i>router string interface string ipv4 urpf-check</i>
Tree	urpf-check
Introduced	16.0.R1
Platforms	All

ignore-default *boolean*

Synopsis	Ignore default routes when performing a uRPF check
Context	configure <i>router string interface string ipv4 urpf-check ignore-default boolean</i>
Tree	ignore-default
Description	When configured to true , the router ignores default routes while performing a uRPF check to determine the validity of incoming packets. When configured to false , default routes are considered eligible.
Default	false
Introduced	16.0.R1
Platforms	All

mode *keyword*

Synopsis	Unicast RPF check mode
Context	configure <i>router string interface string ipv4 urpf-check mode keyword</i>
Tree	mode
Options	strict, loose, strict-no-ecmp
Default	strict
Introduced	16.0.R1
Platforms	All

vrrp [[virtual-router-id](#)] *number*

Synopsis	Enter the vrrp list instance
Context	configure <i>router string interface string ipv4 vrrp number</i>
Tree	vrrp
Description	Commands in this context configure a VRRP virtual router instance. A virtual router is defined by its Virtual Router Identifier (VRID) and a set of IP addresses.
Introduced	16.0.R1
Platforms	All

[virtual-router-id] *number*

Synopsis	Virtual Router Identifier (VRID) for the IP interface
Context	configure <i>router string interface string ipv4 vrrp number</i>

Tree	vrrp
Range	1 to 255
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of VRRP
Context	configure router <i>string</i> interface <i>string</i> ipv4 vrrp <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Description	<p>The command determines the administrative state of non-owner virtual router instances. Non-owner virtual router instances can be administratively disabled. This allows the termination of VRRP participation in the virtual router and stops all routing and other access capabilities with regards to the virtual router IP addresses. Disabling the virtual router instance provides a mechanism to maintain the virtual routers without causing false backup or master state changes.</p> <p>When disabled, no VRRP advertisement messages are generated and all received VRRP advertisement messages are silently discarded with no processing.</p> <p>Whenever the administrative or operational state of a virtual router instance transitions, a log message is generated.</p> <p>An owner virtual router context does not use this command. To administratively disable an owner virtual router instance, use the admin-state command within the parent IP interface node which administratively disables the IP interface.</p>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

authentication-key *string*

Synopsis	Password for simple text authentication
Context	configure router <i>string</i> interface <i>string</i> ipv4 vrrp <i>number</i> authentication-key <i>string</i>
Tree	authentication-key
Description	This command optionally assigns a simple text password authentication key to generate master VRRP advertisement messages and validate received VRRP advertisement messages.

If this command is re-executed with a different password key defined, the new key immediately replaces the old key. This command may be executed at any time.

String Length 1 to 38

Introduced 16.0.R1

Platforms All

backup string

Synopsis Virtual router IP addresses for the interface

Context **configure** router string interface string ipv4 vrrp number backup string

Tree backup

Description This command associates virtual router IP addresses with those of the parental IP interface.

This command has two different functions based on whether it is being executed on an owner or non-owner virtual router instance.

Non-owner virtual router instances create a routable IP interface address that is operationally dependent on the virtual router instance mode (master or backup).

This command, when executed on an owner virtual router instance, does not create a routable IP interface address; it simply defines the existing IP addresses of the parental IP interface that are advertised by the virtual router instance.

For owner virtual router instances, this command defines the IP addresses that are advertised within VRRP advertisement messages. This communicates the IP addresses that the master is advertising to backup virtual routers receiving the messages. The specified *unicast-ipv4-address* must be equal to one of the existing IP addresses in the parental IP interface (primary or secondary) or this command fails.

See "Owner and non-owner VRRP" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR Router Configuration Guide* for more information about owner and non-owner virtual router instances.

Max. Instances 16

Introduced 16.0.R1

Platforms All

bfd-liveness

Synopsis Enable the **bfd-liveness** context

Context **configure** router string interface string ipv4 vrrp number bfd-liveness

Tree bfd-liveness

Description Commands in this context assign a Bidirectional Forwarding Detection (BFD) session to a specific VRRP or SRRP instance. This BFD session provides a heartbeat

mechanism that speeds up the transition of the standby VRRP router to an active state. If the associated BFD session fails, the VRRP routers immediately send a VRRP advertisement message. In addition, the standby VRRP routers transition to a master state to speed up convergence.

The VRRP election process takes place based on the advertisement messages sent by all VRRP routers.

Only one BFD session can be assigned to any VRRP or SRRP instance, but multiple SRRP or VRRP sessions can use the same BFD session.

Introduced 16.0.R1
Platforms All

dest-ip string

WARNING:

Context	configure <i>router string interface string ipv4 vrrp number mac string</i>
Tree	<i>mac</i>
Description	<p>This command sets an explicit MAC address for the virtual router instance that overrides the VRRP default derived from the VRID.</p> <p>Changing the default MAC address is useful when an existing HSRP or other non-VRRP default MAC is in use by the IP hosts that use the virtual router IP address. Many hosts do not monitor unessential ARPs and continue to use the cached non-VRRP MAC address after the virtual router becomes master of the host's gateway address.</p> <p>Additionally, this command sets the MAC address used in ARP responses when the virtual router instance is master. Routing of IP packets with <i>unicast-mac-address</i> as the destination MAC is also enabled. The MAC must be the same for all virtual routers participating as a virtual router or indeterminate connectivity by the attached IP hosts</p>

results. All VRRP advertisement messages are transmitted with *unicast-mac-address* as the source MAC.

An operator can execute this command at any time and it takes effect immediately. When the virtual router MAC on a master virtual router instance changes, a gratuitous ARP is immediately sent with a VRRP advertisement message. If the virtual router instance is disabled or operating as a backup, the gratuitous ARP and VRRP advertisement messages are not sent.

Introduced	16.0.R1
Platforms	All

master-int-inherit *boolean*

Synopsis	Allow master instance to dictate the master down timer
Context	configure <i>router string interface string ipv4 vrrp number master-int-inherit boolean</i>
Tree	master-int-inherit
Description	<p>When configured to true, the virtual router instance inherits the advertisement interval timer of the master VRRP router, which backup routers use to calculate the master down timer.</p> <p>When configured to false, the locally configured message interval must match the master's VRRP advertisement message advertisement interval field value or the message is discarded.</p>
Introduced	16.0.R1
Platforms	All

message-interval *number*

Synopsis	Interval for sending VRRP advertisement messages
Context	configure <i>router string interface string ipv4 vrrp number message-interval number</i>
Tree	message-interval
Description	<p>This command configures the administrative advertisement message timer used by the master virtual router instance to send VRRP advertisement messages. The backup master down timer is derived from the value configured using this command.</p> <p>The usage of this command varies for non-owner virtual router instances, depending on the state of the virtual router (master or backup) and the state of the master-int-inherit command:</p> <ul style="list-style-type: none"> • When a non-owner is operating as master for the virtual router, the system uses the configured value of this command as the operational advertisement timer, similar to an owner virtual router instance. The master-int-inherit command has no effect when operating as master. • When a non-owner is in the backup state with master-int-inherit disabled, the system uses the configured value of this command to match the incoming

advertisement interval field of the VRRP advertisement message. If the locally configured message interval does not match the advertisement interval field, the system discards the VRRP advertisement.

- When a non-owner is in the backup state with **master-int-inherit** enabled, the configured value of this command is ignored. The master down timer is indirectly derived from the advertisement interval field value of the incoming VRRP advertisement message.

Range	1 to 2559
Units	deciseconds
Default	10
Introduced	16.0.R1
Platforms	All

monitor-oper-group *reference*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VRRP instance to follow a specified operational group
Context	configure router <i>string</i> interface <i>string</i> ipv4 vrrp <i>number</i> monitor-oper-group <i>reference</i>
Tree	monitor-oper-group
Description	This command configures VRRP to associate with an operational group. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router, the operational group is up and the operational group is down for all other VRRP states.
Reference	configure service oper-group <i>string</i>
Introduced	22.2.R1
Platforms	All

ntp-reply *boolean*

Synopsis	Allow processing of NTP requests
Context	configure router <i>string</i> interface <i>string</i> ipv4 vrrp <i>number</i> ntp-reply <i>boolean</i>
Tree	ntp-reply
Description	When configured to true , the router redirects NTP requests to the VRRP virtual IP address. This behavior only applies to the router acting as the master VRRP router. When configured to false , the router does not process NTP requests.

Default	false
Introduced	20.2.R1
Platforms	All

oper-group *reference*

Synopsis	Operational group name associated with the VRRP
Context	configure router <i>string</i> interface <i>string</i> ipv4 vrrp <i>number</i> oper-group <i>reference</i>
Tree	oper-group
Description	This command configures an operational group to associate with the VRRP. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router (MR), the operational group is up. The operational group is down for all other VRRP states.
Reference	configure service oper-group <i>string</i>
Introduced	16.0.R1
Platforms	All

owner *boolean*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Designate the virtual router instance as owner
Context	configure router <i>string</i> interface <i>string</i> ipv4 vrrp <i>number</i> owner <i>boolean</i>
Tree	owner
Description	When configured to true , the router designates this virtual router instance as the owner of the virtual router IP addresses. Therefore, this virtual router becomes responsible for forwarding packets sent to the virtual router IP addresses. The owner also assumes the role of master virtual router. When configured to false , this virtual router instance is designated as a non-owner.
Default	false
Introduced	16.0.R1
Platforms	All

passive *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Suppress the processing of VRRP advertisement messages
Context	configure <i>router string interface string ipv4 vrrp number</i> passive <i>boolean</i>
Tree	passive
Description	<p>When configured to true, the router identifies this virtual router instance as passive; and therefore the owner of the virtual router IP addresses. A passive virtual router instance does not transmit or receive VRRP advertisement messages and is always in either the master state (if the interface is operationally up) or the init state (if the interface is operationally down).</p> <p>When configured to false, this virtual router instance is not identified as passive, meaning that it transmits and receives VRRP advertisement messages.</p>
Default	false
Introduced	16.0.R1
Platforms	All

ping-reply *boolean*

Synopsis	Allow non-owner master to reply to ICMP echo requests
Context	configure <i>router string interface string ipv4 vrrp number</i> ping-reply <i>boolean</i>
Tree	ping-reply
Description	<p>When configured to true, the router allows the non-owner master to reply to ICMP echo requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the ping request. Ping must not have been disabled at the management security level (either on the parental IP interface or on the Ping source host address).</p> <p>When configured to false, ICMP echo requests sent to non-owner master virtual IP addresses are silently discarded.</p> <p>Non-owner backup virtual routers never respond to ICMP echo requests, regardless of the configuration of this command.</p>
Default	false
Introduced	16.0.R1
Platforms	All

policy *reference*

Synopsis	VRRP priority control policy
----------	------------------------------

Context	configure router <i>string</i> interface <i>string</i> ipv4 vrrp <i>number</i> policy <i>reference</i>
Tree	policy
Description	<p>This command configures a VRRP priority control policy to associate with the virtual router instance.</p> <p>VRRP priority control policies can override or adjust the base priority value of the virtual router instance, depending on events or conditions within the chassis.</p> <p>An operator can associate a policy with more than one virtual router instance. The priority events within the policy either override or diminish the base priority set with the priority command. As priority events clear in the policy, the in-use priority can eventually be restored to the base priority value.</p> <p>For non-owner virtual router instances, if this command is not executed, the base priority is used as the in-use priority.</p>
Reference	configure vrrp policy <i>number</i>
Introduced	16.0.R1
Platforms	All

preempt *boolean*

Synopsis	Allow the VRRP to override an existing non-owner master
Context	configure router <i>string</i> interface <i>string</i> ipv4 vrrp <i>number</i> preempt <i>boolean</i>
Tree	preempt
Description	<p>When configured to true, this virtual router instance overrides any non-owner master with an in-use message priority value less than the in-use priority value of this virtual router.</p> <p>When configured to false, this virtual router only becomes master if the master down timer expires before a VRRP advertisement message is received from another virtual router.</p>
Default	true
Introduced	16.0.R1
Platforms	All

priority *number*

Synopsis	Base priority for the VRRP
Context	configure router <i>string</i> interface <i>string</i> ipv4 vrrp <i>number</i> priority <i>number</i>
Tree	priority
Description	This command configures the base router priority for the virtual router instance, which defines the selection order of the virtual router in the master election process.

The in-use priority is derived from the base priority. However, the in-use priority is modified by optional VRRP priority control policies. An operator can use VRRP priority control policies to either override or adjust the base priority value depending on events or conditions within the chassis.

Range	1 to 255
Introduced	16.0.R1
Platforms	All

ssh-reply *boolean*

Synopsis	Allow the non-owner master to reply to SSH requests
Context	configure <i>router string interface string ipv4 vrrp number ssh-reply boolean</i>
Tree	ssh-reply
Description	<p>When configured to true, the router allows the non-owner master to reply to SSH requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the SSH request. SSH cannot be disabled at the management security level (either on the parental IP interface or on the SSH source host address).</p> <p>When configure to false, SSH requests to non-owner master virtual IP addresses are silently discarded.</p>
Default	false
Introduced	16.0.R1
Platforms	All

standby-forwarding *boolean*

Synopsis	Allow standby router to forward traffic
Context	configure <i>router string interface string ipv4 vrrp number standby-forwarding boolean</i>
Tree	standby-forwarding
Description	<p>When configured to true, the standby router forwards all traffic.</p> <p>When configured to false, the standby router cannot forward traffic sent to the MAC address of the virtual router. However, the standby router still forwards traffic sent to its own MAC address.</p>
Default	false
Introduced	16.0.R1
Platforms	All

telnet-reply *boolean*

Synopsis	Allow non-owner master to reply to Telnet requests
Context	configure <i>router string interface string ipv4 vrrp number telnet-reply boolean</i>
Tree	telnet-reply
Description	<p>When configured to true, the router allows the non-owner master to reply to Telnet requests directed at the IP addresses of the virtual router instance. Any routed interface can receive Telnet requests. Telnet cannot be disabled at the management security level (either on the parental IP interface or on the Telnet source host address).</p> <p>When configured to false, the router silently discards Telnet requests sent to non-owner master virtual IP addresses.</p>
Default	false
Introduced	16.0.R1
Platforms	All

traceroute-reply *boolean*

Synopsis	Allow non-owner master to reply to traceroute requests
Context	configure <i>router string interface string ipv4 vrrp number traceroute-reply boolean</i>
Tree	traceroute-reply
Description	<p>When configured to true, the router allows a non-owner master to reply to traceroute requests directed to the IP addresses of the virtual router instance.</p> <p>When configured to false, the router silently discards traceroute requests sent to non-owner master virtual IP addresses.</p> <p>Traceroute must not have been disabled at the management security level (either on the parental IP interface or the source host address).</p>
Default	false
Introduced	16.0.R1

Tree	<i>address</i>
Introduced	16.0.R1
Platforms	All

[ipv6-address] *string*

Synopsis	IPv6 address assigned to the interface
Context	configure <i>router string interface string ipv6 address string</i>
Tree	<i>address</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

duplicate-address-detection *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Enable Duplicate Address Detection
Context	configure <i>router string interface string ipv6 address string duplicate-address-detection boolean</i>
Tree	<i>duplicate-address-detection</i>
Description	When configured to true , the router enables Duplicate Address Detection (DAD). When configured to false , the router disables DAD and sets the address to preferred, even if there is a duplicated address.
Default	true
Introduced	16.0.R1
Platforms	All

eui-64 *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Form IPv6 address from prefix and 64-bit interface ID
Context	configure <i>router string interface string ipv6 address string eui-64 boolean</i>
Tree	eui-64
Description	When configured to true , the router forms a complete IPv6 address from the supplied prefix and 64-bit interface identifier. The 64-bit interface identifier is derived from the MAC address on Ethernet interfaces. For interfaces without a MAC address, for example POS interfaces, use the base MAC address of the chassis.
Default	false
Introduced	16.0.R1
Platforms	All

prefix-length *number*

Synopsis	IPv6 address prefix length
Context	configure <i>router string interface string ipv6 address string prefix-length number</i>
Tree	prefix-length
Range	4 to 128
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

primary-preference *number*

Synopsis	Index assigned to the IPv6 address of the interface
Context	configure <i>router string interface string ipv6 address string primary-preference number</i>
Tree	primary-preference
Description	This command assigns a primary preference index to an IPv6 address of the interface to enforce the order in which the address is used by control plane protocols and applications that require a fixed address of the interface, such as LDP and Segment Routing. In cases where a fixed address is required when originating packets from the interface, the IPv6 address with the lowest primary preference index is selected. If the selected address is removed, the next IPv6 address with the next lowest primary preference index is selected.

If this index is not specified for the IPv6 address, the system assigns the next available index value to the address. The address index space is unique across all addresses of a given interface.

echo-receive *number*

Synopsis	Minimum echo interval over this interface
Context	configure router <i>string</i> interface <i>string</i> ipv6 bfd echo-receive <i>number</i>
Tree	echo-receive
Range	100 to 100000
Units	milliseconds
Introduced	16.0.R1
Platforms	All

multiplier *number*

Synopsis	Number of consecutive BFD messages missed from the peer
Context	configure router <i>string</i> interface <i>string</i> ipv6 bfd multiplier <i>number</i>
Tree	multiplier
Description	This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments.
Range	1 to 20
Default	3
Introduced	16.0.R1
Platforms	All

receive *number*

Synopsis	BFD receive interval over this interface
Context	configure router <i>string</i> interface <i>string</i> ipv6 bfd receive <i>number</i>
Tree	receive
Description	This command specifies the receive interval for the BFD session. On the 7750 SR, this command can only be configured to a value less than 100 when the type command is configured to cpm-np .
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	16.0.R1
Platforms	All

transmit-interval *number*

Synopsis	BFD transmit interval over this interface
Context	configure router <i>string</i> interface <i>string</i> ipv6 bfd transmit-interval <i>number</i>
Tree	transmit-interval
Description	This command configures the transmit intervals. On the 7750 SR, this command can only be configured to a value less than 100 when the type command is configured to cpm-np .
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	16.0.R1
Platforms	All

type *keyword*

Synopsis	Local termination point for the BFD session
Context	configure router <i>string</i> interface <i>string</i> ipv6 bfd type <i>keyword</i>
Tree	type
Description	This command sets the local termination point for the BFD session to allow for fast timers down to 10 ms granularity. The options to specify where the BFD session runs are: <ul style="list-style-type: none"> • auto (default) – the system chooses and uses the line card CPU only for single-hop BFD sessions with timer intervals equal to or greater than 100ms. All others are placed on the cpm-np. • cpm-np – BFD session runs on the FP complex associated with the CPM. This is either the FP on the CPM or the one elected on smaller systems. • fp – BFD session runs on the line card CPU. This option can only be used for single-hop BFD sessions with timers equal to or greater than 100ms.
Options	cpm-np, auto, fp
Default	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

duplicate-address-detection *boolean*

Synopsis	Enable Duplicate Address Detection
----------	------------------------------------

Context	configure <i>router string interface string ipv6 duplicate-address-detection</i> <i>boolean</i>
Tree	duplicate-address-detection
Description	<p>When configured to true, the router enables Duplicate Address Detection (DAD) on the interface.</p> <p>When configured to false, the router disables DAD on a per-interface basis. This prevents the router from performing a DAD check on the interface. All IPv6 addresses on an interface with DAD disabled, immediately enter a preferred state, without checking for uniqueness on the interface. This is useful for interfaces that enter a looped state during troubleshooting and are operationally disabled when the loop is detected, requiring manual intervention to clear the DAD violation.</p>
Default	true
Introduced	16.0.R1
Platforms	All

forward-ipv4-packets *boolean*

Synopsis	Forward unencapsulated IPv4 packets
Context	configure <i>router string interface string ipv6 forward-ipv4-packets</i> <i>boolean</i>
Tree	forward-ipv4-packets
Description	<p>When configured to true, the router can use an IPv6-only interface, with no configured IPv4 addresses, to forward IPv4 packets that originate or terminate locally.</p> <p>The interface reports that its IPv4 operational state is up if its IPv6 operational state is up. Not all protocols observe the interface as up from an IPv4 perspective. This command mostly supports BGP routing use cases; see RFC 5549 for details.</p> <p>When configured to false, the router prevents IPv4 packets from being forwarded if there are no configured IPv4 subnets.</p>
Default	false
Introduced	19.5.R1
Platforms	All

Context	configure router string interface string ipv6 link-local-address duplicate-address-detection boolean
Tree	duplicate-address-detection
Description	When configured to true , the router enables Duplicate Address Detection (DAD) on the interface. When configured to false , the router disables DAD and sets the address to preferred, even if there is a duplicated address.
Default	true
Introduced	16.0.R1
Platforms	All

local-dhcp-server reference

Synopsis	DHCP server for the interface
Context	configure router string interface string ipv6 local-dhcp-server reference
Tree	local-dhcp-server
Description	This command instantiates a local DHCP server. A local DHCP server can serve multiple interfaces but is limited to the routing context in which it was created.
Reference	configure router string dhcp-server dhcpv6 string
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

neighbor-discovery

Synopsis	Enter the neighbor-discovery context
----------	---

Context	configure router <i>string</i> interface <i>string</i> ipv6 neighbor-discovery
Tree	neighbor-discovery
Introduced	16.0.R1
Platforms	All

learn-unsolicited *keyword*

Synopsis	Type of entries learned from unsolicited NA messages
Context	configure router <i>string</i> interface <i>string</i> ipv6 neighbor-discovery learn-unsolicited <i>keyword</i>
Tree	learn-unsolicited
Description	This command enables the ability to learn neighbor entries out of received unsolicited Neighbor Advertisement (NA) messages, with or without the solicited flag set. When unconfigured, the router follows standard RFC 4861 behavior for learning of neighbor entries. The neighbor is put in the stale state. This is the standard RFC behavior.
Options	global, link-local, both
Introduced	16.0.R1
Platforms	All

limit

Synopsis	Enter the limit context
Context	configure router <i>string</i> interface <i>string</i> ipv6 neighbor-discovery limit
Tree	limit
Description	Commands in this context configure the maximum amount of dynamic IPv6 neighbor entries that can be learned on an IP interface. When the number of dynamic neighbor entries reaches the configured percentage of this limit the system sends an SNMP trap. When the limit is exceeded, no new entries are learned until an entry expires and traffic to these destinations is dropped. Entries that have already been learned are refreshed.
Introduced	16.0.R1
Platforms	All

log-only *boolean*

Synopsis	Generate log entries when limit is reached
----------	--

Context	configure router <i>string</i> interface <i>string</i> ipv6 neighbor-discovery limit log-only <i>boolean</i>
Tree	log-only
Description	When configured to true , the router sends the warning message at the specified threshold percentage or upon exceeding the specified limit. Entries that exceed the limit are learned. When configured to false , the router does not send the warning message.
Default	false
Introduced	16.0.R1
Platforms	All

max-entries *number*

Synopsis	Maximum number of entries learned on an IP interface
Context	configure router <i>string</i> interface <i>string</i> ipv6 neighbor-discovery limit max-entries <i>number</i>
Tree	max-entries
Description	This command configures the maximum number of entries that can be learned on an IP interface. When unconfigured, no maximum limit is imposed.
Range	0 to 102400
Introduced	16.0.R1
Platforms	All

threshold *number*

Synopsis	Threshold percentage that triggers a warning message
Context	configure router <i>string</i> interface <i>string</i> ipv6 neighbor-discovery limit threshold <i>number</i>
Tree	threshold

local-proxy-nd *boolean*

Synopsis	Enable local proxy neighbor discovery on the interface
----------	--

Context	configure router <i>string</i> interface <i>string</i> ipv6 neighbor-discovery local-proxy-nd <i>boolean</i>
Tree	local-proxy-nd
Description	<p>When configured to true, the router enables local proxy neighbor discovery on the interface and replies to neighbor solicitation requests when both the hosts are on the same subnet. In this case, ICMP redirects are disabled.</p> <p>When configured to false, the router disables local proxy neighbor discovery on the interface and does not reply to neighbor solicitation requests if both the hosts are on the same subnet.</p>
Default	false
Introduced	16.0.R1
Platforms	All

proactive-refresh *keyword*

Synopsis	Proactive refresh of neighbor entries
Context	configure router <i>string</i> interface <i>string</i> ipv6 neighbor-discovery proactive-refresh <i>keyword</i>
Tree	proactive-refresh
Description	This command enables a proactive refresh of the neighbor entries. After the stale timer expires, the router sends an NUD message to the host (regardless of the existence of traffic to the IP address on the IOM), so the entry can be refreshed or removed.
Options	global, link-local, both
Introduced	16.0.R1
Platforms	All

proxy-nd-policy *reference*

Synopsis	Proxy Neighbor Discovery policy name for the interface
Context	configure router <i>string</i> interface <i>string</i> ipv6 neighbor-discovery proxy-nd-policy <i>reference</i>

Introduced	16.0.R1
Platforms	All

vrrp [**virtual-router-id**] *number*

Synopsis	Enter the vrrp list instance
Context	configure router <i>string</i> interface <i>string</i> ipv6 vrrp <i>number</i>
Tree	vrrp
Description	Commands in this context configure a VRRP virtual router instance. A virtual router is defined by its virtual router identifier (VRID) and a set of IP addresses.
Max. Instances	4
Introduced	16.0.R1
Platforms	All

[virtual-router-id] *number*

Synopsis	Virtual Router Identifier (VRID) for the IP interface
Context	configure router <i>string</i> interface <i>string</i> ipv6 vrrp <i>number</i>
Tree	vrrp
Range	1 to 255
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of VRRP
Context	configure router <i>string</i> interface <i>string</i> ipv6 vrrp <i>number</i> admin-state <i>keyword</i>

Tree	admin-state
Description	<p>The command determines the administrative state of non-owner virtual router instances.</p> <p>Non-owner virtual router instances can be administratively disabled. This allows the termination of VRRP participation in the virtual router and stops all routing and other access capabilities with regards to the virtual router IP addresses. Disabling the virtual router instance provides a mechanism to maintain the virtual routers without causing false backup or master state changes.</p> <p>When disabled, no VRRP advertisement messages are generated and all received VRRP advertisement messages are silently discarded with no processing.</p> <p>Whenever the administrative or operational state of a virtual router instance transitions, a log message is generated.</p> <p>An owner virtual router context does not use this command. To administratively disable an owner virtual router instance, use the admin-state command within the parent IP interface node which administratively disables the IP interface.</p>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

backup string

Synopsis	Virtual router IP addresses for the interface
Context	configure router string interface string ipv6 vrrp number backup string
Tree	backup
Description	<p>This command associates router IPv6 virtual router IP addresses with those of the parental IP interface.</p> <p>This command has two different functions based on whether it is being executed on an owner or non-owner virtual router instance.</p> <p>Non-owner virtual router instance create a routable IP interface address that is operationally dependent on the virtual router instance mode (master or backup). This command, when executed on an owner virtual router instance, does not create a routable IP interface address; it simply defines the existing IP addresses of the parental IP interface that are advertised by the virtual router instance.</p> <p>For owner virtual router instances, this command defines the IP addresses that are advertised within VRRP advertisement messages. This communicates the IP addresses that the master is representing to backup virtual routers receiving the messages. The specified IPv6 address must be equal to one of the existing parental IP addresses in the parental IP interface (primary or secondary) or this command fails.</p> <p>See "Owner and non-owner VRRP" in the <i>7450 ESS, 7750 SR, 7950 XRS, and VSR Router Configuration Guide</i> for more information about owner and non-owner virtual router instances.</p>

Max. Instances	4
Introduced	16.0.R1
Platforms	All

bfd-liveness

Synopsis	Enable the bfd-liveness context
Context	configure router <i>string</i> interface <i>string</i> ipv6 vrrp number bfd-liveness
Tree	bfd-liveness
Description	<p>Commands in this context assign a bidirectional forwarding detect (BFD) session to a specific VRRP or SRRP instance. This BFD session provides a heartbeat mechanism for use in speeding up the transition of the standby VRRP router to an active state. If the associated BFD session fails, the VRRP routers immediately send a VRRP Advertisement message. In addition, the standby VRRP routers transition to a Master state to speed convergence.</p> <p>The normal VRRP election process takes place based on the Advertisement messages sent by all VRRP routers.</p> <p>There can be only one BFD session assigned to any specific VRRP or SRRP instance, but there can be multiple SRRP or VRRP sessions using the same BFD session.</p>
Introduced	16.0.R1
Platforms	All

dest-ip (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Units	seconds
Introduced	16.0.R1
Platforms	All

mac string

Synopsis	Virtual MAC address to use in ARP responses
Context	configure <i>router string interface string ipv6 vrrp number mac string</i>
Tree	mac
Description	<p>This command sets an explicit MAC address for the virtual router instance that overrides the VRRP default derived from the VRID.</p> <p>Changing the default MAC address is useful when an existing HSRP or other non-VRRP default MAC is in use by the IP hosts that use the virtual router IP address. Many hosts do not monitor unessential ARPs and continue to use the cached non-VRRP MAC address after the virtual router becomes master of the host's gateway address.</p> <p>Additionally, this command sets the MAC address used in ARP responses when the virtual router instance is master. Routing of IP packets with <i>unicast-mac-address</i> as the destination MAC is also enabled. The MAC must be the same for all virtual routers participating as a virtual router or indeterminate connectivity by the attached IP hosts results. All VRRP advertisement messages are transmitted with <i>unicast-mac-address</i> as the source MAC.</p> <p>An operator can execute this command at any time and it takes effect immediately. When the virtual router MAC on a master virtual router instance changes, a gratuitous ARP is immediately sent with a VRRP advertisement message. If the virtual router instance is disabled or operating as a backup, the gratuitous ARP and VRRP advertisement messages are not sent.</p>
Introduced	16.0.R1
Platforms	All

master-int-inherit boolean

Synopsis	Allow master instance to dictate the master down timer
Context	configure <i>router string interface string ipv6 vrrp number master-int-inherit boolean</i>
Tree	master-int-inherit
Description	<p>When configured to true, the virtual router instance inherits the advertisement interval timer of the master VRRP router, which backup routers use to calculate the master down timer.</p> <p>When configured to false, the locally configured message interval must match the master's VRRP advertisement message advertisement interval field value or the message is discarded.</p>
Introduced	16.0.R1
Platforms	All

message-interval *number*

Synopsis	Interval for sending VRRP advertisement messages
Context	configure router <i>string</i> interface <i>string</i> ipv6 vrrp <i>number</i> message-interval <i>number</i>
Tree	message-interval
Description	<p>This command configures the administrative advertisement message timer used by the master virtual router instance to send VRRP advertisement messages. The backup master down timer is derived from the value configured using this command.</p> <p>The use of this command varies for non-owner virtual router instances, depending on the state of the virtual router (master or backup) and the state of the master-int-inherit command:</p> <ul style="list-style-type: none"> • When a non-owner is operating as master for the virtual router, the system uses the configured value of this command as the operational advertisement timer, similar to an owner virtual router instance. The master-int-inherit command has no effect when operating as the master. • When a non-owner is in the backup state with master-int-inherit disabled, the system uses the configured value of this command to match the incoming advertisement interval field of the VRRP advertisement message. If the locally configured message interval does not match the advertisement interval field, the system discards the VRRP advertisement. • When a non-owner is in the backup state with master-int-inherit enabled, the configured value of this command is ignored. The master down timer is indirectly derived from the advertisement interval field value of the incoming VRRP advertisement message.
Range	10 to 4095
Units	centiseconds
Default	100
Introduced	16.0.R1
Platforms	All

monitor-oper-group *reference***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VRRP instance to follow a specified operational group
Context	configure router <i>string</i> interface <i>string</i> ipv6 vrrp <i>number</i> monitor-oper-group <i>reference</i>
Tree	monitor-oper-group
Description	This command configures VRRP to associate with an operational group. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master

router, the operational group is up and the operational group is down for all other VRRP states.

Reference	configure service oper-group <i>string</i>
Introduced	22.2.R1
Platforms	All

ntp-reply *boolean*

Synopsis	Allow processing of NTP requests
Context	configure router <i>string interface string ipv6 vrrp number ntp-reply</i> <i>boolean</i>
Tree	ntp-reply
Description	When configured to true , the router redirects NTP requests to the VRRP virtual IP address. This behavior only applies to the router acting as the master VRRP router. When configured to false , the router does not process NTP requests.
Default	false
Introduced	20.2.R1
Platforms	All

oper-group *reference*

Synopsis	Operational group name associated with the VRRP
Context	configure router <i>string interface string ipv6 vrrp number oper-group</i> <i>reference</i>
Tree	oper-group
Description	This command configures an operational group to associate with the VRRP. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router (MR), the operational group is up. The operational group is down for all other VRRP states.
Reference	configure service oper-group <i>string</i>
Introduced	16.0.R1
Platforms	All

owner boolean**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Designate the virtual router instance as owner
Context	configure router <i>string</i> interface <i>string</i> ipv6 vrrp number owner <i>boolean</i>
Tree	owner
Description	When configured to true , the router designates this virtual router instance as the owner of the virtual router IP addresses. Therefore, this virtual router becomes responsible for forwarding packets sent to the virtual router IP addresses. The owner also assumes the role of master virtual router. When configured to false , this virtual router instance is designated as a non-owner.
Default	false
Introduced	16.0.R1
Platforms	All

passive boolean**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Suppress the processing of VRRP advertisement messages
Context	configure router <i>string</i> interface <i>string</i> ipv6 vrrp number passive <i>boolean</i>
Tree	passive
Description	When configured to true , the router identifies this virtual router instance as passive; and therefore the owner of the virtual router IP addresses. A passive virtual router instance does not transmit or receive VRRP advertisement messages and is always in either the master state (if the interface is operationally up) or the init state (if the interface is operationally down). When configured to false , this virtual router instance is not identified as passive, meaning that it transmits and receives VRRP advertisement messages.
Default	false
Introduced	16.0.R1
Platforms	All

ping-reply *boolean*

Synopsis	Allow non-owner master to reply to ICMP echo requests
Context	configure <i>router string interface string ipv6 vrrp number ping-reply boolean</i>
Tree	ping-reply
Description	<p>When configured to true, the router allows the non-owner master to reply to ICMP echo requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the ping request. Ping must not have been disabled at the management security level (either on the parental IP interface or on the Ping source host address).</p> <p>When configured to false, ICMP echo requests sent to non-owner master virtual IP addresses are silently discarded.</p> <p>Non-owner backup virtual routers never respond to ICMP echo requests, regardless of the configuration of this command.</p>
Default	false
Introduced	16.0.R1
Platforms	All

policy *reference*

Synopsis	VRRP priority control policy
Context	configure <i>router string interface string ipv6 vrrp number policy reference</i>
Tree	policy
Description	<p>This command configures a VRRP priority control policy to associate with the virtual router instance.</p> <p>VRRP priority control policies can override or adjust the base priority value of the virtual router instance, depending on events or conditions within the chassis.</p> <p>An operator can associate a policy with more than one virtual router instance. The priority events within the policy either override or diminish the base priority set with the priority command. As priority events clear in the policy, the in-use priority can eventually be restored to the base priority value.</p> <p>For non-owner virtual router instances, if this command is not executed, the base priority is used as the in-use priority.</p>
Reference	configure <i>vrrp policy number</i>
Introduced	16.0.R1
Platforms	All

preempt *boolean*

Synopsis	Allow the VRRP to override an existing non-owner master
----------	---

Context	configure router <i>string</i> interface <i>string</i> ipv6 vrrp <i>number</i> preempt <i>boolean</i>
Tree	preempt
Description	When configured to true , this virtual router instance overrides any non-owner master with an in-use message priority value less than the in-use priority value of this virtual router. When configured to false , this virtual router only becomes master if the master down timer expires before a VRRP advertisement message is received from another virtual router.
Default	true
Introduced	16.0.R1
Platforms	All

priority *number*

Synopsis	Base priority for the VRRP
Context	configure router <i>string</i> interface <i>string</i> ipv6 vrrp <i>number</i> priority <i>number</i>
Tree	priority
Description	This command configures the base router priority for the virtual router instance, which defines the selection order of the virtual router in the master election process. The in-use priority is derived from the base priority. However, the in-use priority is modified by optional VRRP priority control policies. An operator can use VRRP priority control policies to either override or adjust the base priority value depending on events or conditions within the chassis.
Range	1 to 255
Introduced	16.0.R1
Platforms	All

standby-forwarding *boolean*

Synopsis	Allow standby router to forward traffic
Context	configure router <i>string</i> interface <i>string</i> ipv6 vrrp <i>number</i> standby-forwarding <i>boolean</i>
Tree	standby-forwarding
Description	When configured to true , the standby router forwards all traffic. When configured to false , the standby router cannot forward traffic sent to the MAC address of the virtual router. However, the standby router still forwards traffic sent to its own MAC address.
Default	false
Introduced	16.0.R1

Platforms All

telnet-reply *boolean*

Synopsis Allow non-owner master to reply to Telnet requests

Context **configure** *router string interface string ipv6 vrrp number telnet-reply boolean*

Tree [telnet-reply](#)

Description When configured to **true**, the router allows the non-owner master to reply to Telnet requests directed at the IP addresses of the virtual router instance. Any routed interface can receive Telnet requests. Telnet cannot be disabled at the management security level (either on the parental IP interface or on the Telnet source host address).

When configured to **false**, the router silently discards Telnet requests sent to non-owner master virtual IP addresses.

Default false

Introduced 16.0.R1

Platforms All

traceroute-reply *boolean*

Synopsis Allow non-owner master to reply to traceroute requests

Context **configure** *router string interface string ipv6 vrrp number traceroute-reply boolean*

Tree [traceroute-reply](#)

Description When configured to **true**, the router allows a non-owner master to reply to traceroute requests directed to the IP addresses of the virtual router instance.

When configured to **false**, the router silently discards traceroute requests sent to non-owner master virtual IP addresses.

Traceroute must not have been disabled at the management security level (either on the parental IP interface or the source host address).

Default false

Introduced 16.0.R1

Platforms All

lag

Synopsis Enter the **lag** context

Context **configure** *router string interface string lag*

Tree [lag](#)

Introduced	16.0.R1
Platforms	All

link-map-profile *number*

Synopsis	LAG link map profile for a SAP or network interface
Context	configure <i>router string interface string lag link-map-profile number</i>
Tree	link-map-profile
Description	<p>This command assigns a preconfigured LAG link map profile to a SAP or network interface configured on a LAG or a PW port that exists on a LAG. After an operator assigns a LAG link map profile, the system rehashes the SAP or network interface egress traffic over the LAG as required by the new configuration.</p> <p>If the LAG link map profile for a SAP or network interface is deleted, the system reverts back to per-flow hashing.</p>
Range	1 to 64
Introduced	16.0.R1
Platforms	All

per-link-hash

ldp-sync-timer

Synopsis	Enter the ldp-sync-timer context
Context	configure router <i>string</i> interface <i>string</i> ldp-sync-timer
Tree	ldp-sync-timer
Description	This command enables the synchronization of an IGP and LDP and enters the context to set associated parameters.
Introduced	16.0.R1
Platforms	All

end-of-lib *boolean*

Synopsis	Terminate LDP synchronization timer
Context	configure router <i>string</i> interface <i>string</i> ldp-sync-timer end-of-lib <i>boolean</i>
Tree	end-of-lib
Description	This command configures the system to terminate the LDP synchronization timer early for a specific session to an LDP peer, if the IGP interface receives LDP End-of-LIB Typed Wildcard FEC messages for every FEC type negotiated.
Default	false
Introduced	16.0.R1
Platforms	All

seconds *number*

Synopsis	Time interval for the LDP synchronization timer
Context	configure router <i>string</i> interface <i>string</i> ldp-sync-timer seconds <i>number</i>
Tree	seconds

Range	1 to 1800
Introduced	16.0.R1
Platforms	All

load-balancing

Synopsis	Enter the load-balancing context
Context	configure router <i>string</i> interface <i>string</i> load-balancing
Tree	load-balancing
Description	Commands in this context configure interface per-flow load-balancing options that apply to traffic that enters this interface and that egresses over a LAG or ECMP. This is a per-interface setting. Load-balancing options enabled on the interface level overwrite options that can also be enabled on the system level.
Introduced	16.0.R1
Platforms	All

flow-label-load-balancing *boolean*

Synopsis	Enable flow label load balancing
Context	configure router <i>string</i> interface <i>string</i> load-balancing flow-label-load-balancing <i>boolean</i>
Tree	flow-label-load-balancing
Description	When configured to true , the router enables load balancing in ECMP and LAG based on the output of a hash performed on the triplet (SA, DA, flow label) in the header of an IPv6 packet received on an IES, VPRN, R-VPLS, CSC, or network interface. When configured to false , the router disables load balancing in ECMP and LAG.
Default	false
Introduced	21.5.R1
Platforms	All

ip-load-balancing *keyword*

Synopsis	IP load-balancing algorithm
Context	configure router <i>string</i> interface <i>string</i> load-balancing ip-load-balancing <i>keyword</i>
Tree	ip-load-balancing
Description	This command specifies whether to include the source address, destination address, or both in LAG or ECMP hash on IP interfaces. Additionally, when the I4-load-balancing

command is enabled, this command also includes the source or destination port in the hash inputs.

Options	both, destination, source, inner-ip
Default	both
Introduced	16.0.R3
Platforms	All

lsr-load-balancing *keyword*

Synopsis	LSR load-balancing algorithm
Context	configure <i>router</i> <i>string</i> <i>interface</i> <i>string</i> <i>load-balancing</i> <i>lsr-load-balancing</i> <i>keyword</i>
Tree	lsr-load-balancing
Description	This command specifies whether the IP header is used in the LAG and ECMP LSR hashing algorithm. This is the per-interface setting.
Options	lbl-only, lbl-ip, ip-only, eth-encap-ip, lbl-ip-l4-teid
Introduced	16.0.R1
Platforms	All

spi-load-balancing *boolean*

Synopsis	Enable SPI use in hashing
Context	configure <i>router</i> <i>string</i> <i>interface</i> <i>string</i> <i>load-balancing</i> <i>spi-load-balancing</i> <i>boolean</i>
Tree	spi-load-balancing
Description	When configured to true , the router uses the Security Parameter Index (SPI) in hashing for ESP and AH encrypted IPv4 and IPv6 traffic. This is a per-interface setting.
Default	false
Introduced	16.0.R1
Platforms	All

teid-load-balancing *boolean*

Synopsis	Enable use of TEID in hashing
Context	configure <i>router</i> <i>string</i> <i>interface</i> <i>string</i> <i>load-balancing</i> <i>teid-load-balancing</i> <i>boolean</i>
Tree	teid-load-balancing
Default	false
Introduced	16.0.R1

Platforms All

loopback

Synopsis Use interface as a loopback interface

Context **configure** *router string interface string loopback*

Tree [loopback](#)

Description When configured, this interface is used as a loopback interface. This command and the **vas-if-type** command are mutually exclusive.

Notes The following elements are part of a choice: **loopback** or **port**.

Introduced 16.0.R1

Platforms All

mac string

Synopsis MAC address of the interface

Context **configure** *router string interface string mac string*

Tree [mac](#)

Description This command assigns a specific MAC address to an IP interface. Only one MAC address can be assigned to an IP interface. When multiple **mac** commands are entered, the last command overwrites the previous command.

Introduced 16.0.R1

Platforms All

mac-accounting boolean

Synopsis Enable MAC accounting functionality

Context **configure** *router string interface string mac-accounting boolean*

Tree [mac-accounting](#)

Description When configured to **true**, the router enables MAC accounting functionality.

Default false

Introduced 16.0.R1

Platforms All

network-domains

Synopsis	Enter the network-domains context
Context	configure <i>router string interface string network-domains</i>
Tree	network-domains
Introduced	16.0.R4
Platforms	All

network-domain [[domain-name](#)] *reference*

Synopsis	Add a list entry for network-domain
Context	configure <i>router string interface string network-domains network-domain reference</i>
Tree	network-domain
Description	<p>Commands in this context assign an interface to a network domain. The router then takes the network domain into account during SAP ingress queue allocation for VPLS SAP.</p> <p>The network domain association can only be done in the base routing context. An operator can associate a network domain with an interface without a physical port being specified, but the configuration has no effect until a corresponding port, or LAG, is defined.</p> <p>Single interfaces can be associated with multiple network domains.</p>
Max. Instances	5
Introduced	16.0.R4
Platforms	All

[[domain-name](#)] *reference*

Synopsis	Network domain name
Context	configure <i>router string interface string network-domains network-domain reference</i>
Tree	network-domain
Reference	configure <i>router string network-domains network-domain string</i>
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

port (*port-and-encap* | *keyword*)

Synopsis	Port to bind to this interface
Context	configure router <i>string</i> interface <i>string</i> port (<i>port-and-encap</i> <i>keyword</i>)
Tree	port
Description	This command creates an association between a logical IP interface and a physical port. An operator can also associate an interface with the system (loopback address).
String Length	1 to 45
Options	system
Notes	The following elements are part of a choice: loopback or port .
Introduced	16.0.R1
Platforms	All

ptp-hw-assist

Synopsis	Enter the ptp-hw-assist context
Context	configure router <i>string</i> interface <i>string</i> ptp-hw-assist
Tree	ptp-hw-assist
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the PTP time stamping assist
Context	configure router <i>string</i> interface <i>string</i> ptp-hw-assist admin-state <i>keyword</i>
Tree	admin-state
Description	This command controls the administrative state of port-based time stamping assist of PTP packets at the physical interface. This capability is supported on specific hardware. The command may be blocked if not all hardware has the required level of support. Only one interface per physical port can have ptp-hw-assist enabled. This feature cannot be enabled if the physical port supporting the interface is configured as a PTP port.
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

qos

Synopsis	Enter the qos context
Context	configure <i>router string interface string qos</i>
Tree	qos
Description	Commands in this context associate a network QoS policy with a network IP interface. Only one network QoS policy can be associated with an IP interface at one time. Attempts to associate a second QoS policy return an error.
Introduced	16.0.R1
Platforms	All

egress-instance *number*

Synopsis	Port egress queue group instance for this interface
Context	configure <i>router string interface string qos egress-instance number</i>
Tree	egress-instance
Description	This command specifies which instance to associate with this specific network IP interface since multiple instances of the same egress queue-group can be applied to the same port.
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

egress-port-redirect-group *reference*

Synopsis	QoS queue group name
Context	configure <i>router string interface string qos egress-port-redirect-group reference</i>
Tree	egress-port-redirect-group
Description	This command configures the egress queue group used for all egress forwarding-class redirections specified within the network QoS policy ID. The specified queue group name must exist as an egress queue group applied to the egress context of the port associated with the IP interface.
Reference	configure qos queue-group-templates egress queue-group string
Introduced	16.0.R1
Platforms	All

ingress-fp-redirect-group *reference*

Synopsis	Forwarding plane queue group policy for the interface
Context	configure router <i>string</i> interface <i>string</i> qos ingress-fp-redirect-group <i>reference</i>
Tree	ingress-fp-redirect-group
Description	This command configures the ingress queue-group used for all ingress forwarding-class redirections specified within the network QoS policy ID. The specified queue group name must exist as an ingress queue group applied to the ingress context of the forwarding plane associated with the IP interface.
Reference	configure qos queue-group-templates ingress queue-group <i>string</i>
Introduced	16.0.R1
Platforms	All

ingress-instance *number*

Synopsis	Forwarding plane ingress queue group for this interface
Context	configure router <i>string</i> interface <i>string</i> qos ingress-instance <i>number</i>
Tree	ingress-instance
Description	This command configures which instance to associate with this specific network IP interface. An operator can apply multiple instances of the same ingress queue group to the same forwarding plane.
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

network-policy *reference*

Synopsis	Network policy name associated with a network interface
Context	configure router <i>string</i> interface <i>string</i> qos network-policy <i>reference</i>
Tree	network-policy
Description	This command associates an existing network policy name with the IP interface.
Reference	configure qos network <i>string</i>
Introduced	16.0.R1
Platforms	All

strip-label *boolean*

Synopsis	Strip all MPLS labels before PBR processing
Context	configure <i>router string interface string strip-label boolean</i>
Tree	strip-label
Description	<p>When configured to true, the router forces packets to be stripped of all (maximum 5) MPLS labels before the packets are handed over for possible filter (PBR) processing.</p> <p>This command is supported on:</p> <ul style="list-style-type: none"> • optical ports for the 7750 SR and 7450 ESS • IOM3 XP cards for the 7750 SR and 7450 ESS • null/dot1q encaps • network ports • IPv4 • IPv6
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tos-marking-state *keyword*

Synopsis	TOS marking state
Context	configure <i>router string interface string tos-marking-state keyword</i>
Tree	tos-marking-state
Description	<p>This command configures the ToS marking state.</p> <p>This command is used to alter the default trusted state to a non-trusted state. When configured to trusted or default, the ToS field is not remarked by egress network IP interfaces unless the egress network IP interface has the remark-trusted state set, in which case the egress network interface treats all VPRN and network IP interfaces as untrusted.</p> <p>When configured to untrusted, all egress network IP interfaces remark IP packets received on the network interface according to the egress marking definitions on each network interface.</p>
Options	trusted, untrusted
Default	trusted
Introduced	16.0.R1
Platforms	All

untrusted

Synopsis	Enable the untrusted context
Context	configure <i>router string interface string untrusted</i>
Tree	<i>untrusted</i>
Description	<p>Commands in this context configure the untrusted state for a network IP interface.</p> <p>The untrusted state identifies the participating interfaces in the label security feature for prefixes of a VPN family at an inter-AS boundary. The router supports a maximum of 15 network interfaces that can participate in this feature.</p> <p>The user normally applies this command to an inter-AS interface. PIP keeps track of the untrusted status of each interface.</p>
Introduced	16.0.R4
Platforms	All

default-forwarding *keyword*

Synopsis	Default action for selective ILM
Context	configure <i>router string interface string untrusted default-forwarding keyword</i>
Tree	<i>default-forwarding</i>
Description	<p>This command specifies the default forwarding behavior of labeled packets received on this interface.</p> <p>This command sets the default behavior for an untrusted interface in the datapath and for all ILMs. When enabling the label security for VPN IPv4 or VPN IPv6 prefixes, BGP programs the data path to provide an exception to the normal way of forwarding away from the default for those VPRN ILMs.</p> <p>When the default behavior is to forward packets, the router checks labeled packets in the normal way against the table of programmed ILMs to decide if packets are dropped or forwarded in a GRT, a VRF, or a L2 service context.</p> <p>When the specified behavior is to drop packets, all labeled packets received on the interface are automatically dropped.</p>
Options	forward, drop
Default	forward
Introduced	16.0.R4
Platforms	All

urpf-selected-vprns *boolean*

Synopsis	Enable uRPF checking of incoming traffic on interface
Context	configure <i>router string interface string urpf-selected-vprns boolean</i>

Tree	urpf-selected-vprns
Description	<p>When configured to true, the router performs uRPF checks of incoming traffic on the network interface for the following:</p> <ul style="list-style-type: none"> • Packets associated with the global routing table (base router) context • Packets associated with VPRNs that have enabled the uRPF check using the configure service vprn network ingress urpf-check command <p>When configured to false, the router performs uRPF checks for all ingress traffic on the network interface (associated with the base router and all VPRNs) based on the IPv4 and IPv6 urpf-check command configuration options of the network interface.</p>
Default	false
Introduced	16.0.R1
Platforms	All

vas-if-type keyword

Synopsis	VAS interface type
Context	configure router <i>string</i> interface <i>string</i> vas-if-type <i>keyword</i>
Tree	vas-if-type
Description	This command configures the type of a Value Added Service (VAS) facing interface. This command and loopback command
Options	to-from-access, to-from-network, to-from-both
Introduced	16.0.R1
Platforms	All

ipsec

Synopsis	Enter the ipsec context
Context	configure router <i>string</i> ipsec
Tree	ipsec
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

multi-chassis-shunt-interface [*name*] *string*

Synopsis	Enter the multi-chassis-shunt-interface list instance
Context	configure router <i>string</i> ipsec multi-chassis-shunt-interface <i>string</i>
Tree	multi-chassis-shunt-interface

Description	This command configures the multi-chassis shunting interface name for the peer.
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[name] *string*

Synopsis	Multi-chassis shunt interface name
Context	configure router <i>string</i> ipsec multi-chassis-shunt-interface <i>string</i>
Tree	multi-chassis-shunt-interface
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

next-hop

Synopsis	Enter the next-hop context
Context	configure router <i>string</i> ipsec multi-chassis-shunt-interface <i>string</i> next-hop
Tree	next-hop
Description	Commands in this context configure the next hop for shunting over the interface.
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Next hop address for the shunting interface
Context	configure router <i>string</i> ipsec multi-chassis-shunt-interface <i>string</i> next-hop address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	address
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

multi-chassis-shunting-profile [**name**] *string*

Synopsis	Enter the multi-chassis-shunting-profile list instance
----------	---

Context	configure router <i>string</i> ipsec multi-chassis-shunting-profile <i>string</i>
Tree	multi-chassis-shunting-profile
Max. Instances	64
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[name] *string*

Synopsis	Multi-chassis shunting profile name
Context	configure router <i>string</i> ipsec multi-chassis-shunting-profile <i>string</i>
Tree	multi-chassis-shunting-profile
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

peer [[ip-address](#)] *reference*

Synopsis	Enter the peer list instance
Context	configure router <i>string</i> ipsec multi-chassis-shunting-profile <i>string</i> peer <i>reference</i>
Tree	peer
Max. Instances	3
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[ip-address] *reference*

Synopsis	Peer address
Context	configure router <i>string</i> ipsec multi-chassis-shunting-profile <i>string</i> peer <i>reference</i>
Tree	peer
Reference	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Notes	This element is part of a list key.
Introduced	22.5.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

multi-chassis-shunt-interface *reference*

Synopsis Multi-chassis shunt interface

Context **configure** *router* *string* *ipsec* *multi-chassis-shunting-profile* *string* *peer* *reference* *multi-chassis-shunt-interface* *reference*

Tree [multi-chassis-shunt-interface](#)

Description This command configures the shunting interface name for the peer.

Reference **configure** *router* *string* *ipsec* *multi-chassis-shunt-interface* *string*

Introduced 22.5.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

security-policy [*id*] *number*

Synopsis	Enter the ipv6-te-router-id context
Context	configure router string ipv6-te-router-id
Tree	ipv6-te-router-id
Introduced	19.10.R1
Platforms	All

interface *reference*

Synopsis	Network IP interface name to obtain IP address
Context	configure router string ipv6-te-router-id interface reference
Tree	interface
Description	This command specifies the interface name from which to obtain the IP address to use as the IPv6 TE Router ID. This router ID uniquely identifies the router to other routers as IPv6 TE capable in an IGP TE domain. IS-IS advertises this information using the IPv6 TE Router ID TLV.
Reference	configure router string interface string
Introduced	19.10.R1
Platforms	All

isa-service-chaining

Synopsis	Enable the isa-service-chaining context
Context	configure router string isa-service-chaining
Tree	isa-service-chaining
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat-group [*id*] *number*

Synopsis	Add a list entry for nat-group
----------	---------------------------------------

Context	configure <i>router string isa-service-chaining nat-group number</i>
Tree	nat-group
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[id] number

Synopsis	ISA NAT group/ISA WLAN GW group ID for the EVPN pools
Context	configure <i>router string isa-service-chaining nat-group number</i>
Tree	nat-group
Max. Range	0 to 4294967295
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

vxlan-vtep-range

Synopsis	Enable the vxlan-vtep-range context
Context	configure <i>router string isa-service-chaining vxlan-vtep-range</i>
Tree	vxlan-vtep-range
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end (ipv4-address-no-zone | ipv6-address-no-zone)

Synopsis	End address of the VXLAN VTEP range
Context	configure <i>router string isa-service-chaining vxlan-vtep-range end (ipv4-address-no-zone ipv6-address-no-zone)</i>
Tree	end
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

start (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Start address of the VXLAN VTEP range
Context	configure router <i>string</i> isa-service-chaining vxlan-vtep-range start (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	start
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

isis [**isis-instance**] *number*

Synopsis	Enter the isis list instance
Context	configure router <i>string</i> isis <i>number</i>
Tree	isis
Introduced	16.0.R1
Platforms	All

[isis-instance] *number*

Synopsis	Instance ID for the IS-IS instance
Context	configure router <i>string</i> isis <i>number</i>
Tree	isis
Range	0 to 127
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the IS-IS instance
Context	configure router <i>string</i> isis <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1

Platforms All

advertise-passive-only *boolean*

Synopsis Advertise prefixes that belong to passive interfaces
 Context **configure** *router string isis number advertise-passive-only boolean*
 Tree [advertise-passive-only](#)
 Default false
 Introduced 16.0.R1
 Platforms All

advertise-router-capability *keyword*

Synopsis Router capabilities advertisement to neighbors
 Context **configure** *router string isis number advertise-router-capability keyword*
 Tree [advertise-router-capability](#)
 Options area, as
 Introduced 16.0.R1
 Platforms All

advertise-tunnel-link *boolean*

Synopsis Allow use of forwarding adjacency
 Context **configure** *router string isis number advertise-tunnel-link boolean*
 Tree [advertise-tunnel-link](#)
 Default false
 Introduced 16.0.R1
 Platforms All

all-l1isis *string*

Synopsis Destination MAC address for all L1 IS-IS routers
 Context **configure** *router string isis number all-l1isis string*
 Tree [all-l1isis](#)
 Default 01:80:C2:00:00:14

Introduced 16.0.R1
Platforms All

all-l2isis *string*

Synopsis Destination MAC address for all L2 IS-IS routers
Context **configure** **router** *string* **isis** *number* **all-l2isis** *string*
Tree **all-l2isis**
Default 01:80:C2:00:00:15
Introduced 16.0.R1
Platforms All

area-address *string*

Synopsis Area address portion of the NSAP address
Context **configure** **router** *string* **isis** *number* **area-address** *string*
Tree **area-address**
String Length 2 to 38
Max. Instances 3
Introduced 16.0.R1
Platforms All

authentication-check *boolean*

Synopsis Perform authentication check to reject mismatch PDUs
Context **configure** **router** *string* **isis** *number* **authentication-check** *boolean*
Tree **authentication-check**
Default true
Introduced 16.0.R1
Platforms All

authentication-key *string*

Synopsis Authentication key to verify PDUs sent from neighbors
Context **configure** **router** *string* **isis** *number* **authentication-key** *string*

Tree	authentication-key
String Length	1 to 366
Introduced	16.0.R1
Platforms	All

authentication-keychain *reference*

Synopsis	Keychain used to sign and authenticate
Context	configure router <i>string</i> isis <i>number</i> authentication-keychain <i>reference</i>
Tree	authentication-keychain
Reference	configure system security keychains keychain <i>string</i>
Introduced	16.0.R3
Platforms	All

authentication-type *keyword*

Synopsis	Authentication type
Context	configure router <i>string</i> isis <i>number</i> authentication-type <i>keyword</i>
Tree	authentication-type
Options	password, message-digest
Introduced	16.0.R1
Platforms	All

csnp-authentication *boolean*

Synopsis	Authenticate individual IS-IS packets of the CSNP type
Context	configure router <i>string</i> isis <i>number</i> csnp-authentication <i>boolean</i>
Tree	csnp-authentication
Default	true
Introduced	16.0.R1
Platforms	All

database-export

Synopsis	Enable the database-export context
----------	---

Context	configure router string isis number database-export
Tree	database-export
Introduced	16.0.R1
Platforms	All

bgp-ls-identifier

Synopsis	Enable the bgp-ls-identifier context
Context	configure router string isis number database-export bgp-ls-identifier
Tree	bgp-ls-identifier
Introduced	16.0.R1
Platforms	All

value number

Synopsis	BGP-LS identifier sent in the BGP-LS NLRI
Context	configure router string isis number database-export bgp-ls-identifier value number
Tree	value
Max. Range	0 to 4294967295
Default	0
Introduced	16.0.R1
Platforms	All

igp-identifier number

Synopsis	Unique ID of the IGP instance in the BGP-LS NLRI
Context	configure router string isis number database-export igp-identifier number
Tree	igp-identifier
Max. Range	0 to 18446744073709551615
Introduced	16.0.R1
Platforms	All

default-route-tag number

Synopsis	Route tag for the default route
----------	---------------------------------

Context	configure router string isis number default-route-tag number
Tree	default-route-tag
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

entropy-label

Synopsis	Enter the entropy-label context
Context	configure router string isis number entropy-label
Tree	entropy-label
Introduced	16.0.R1
Platforms	All

override-tunnel-elc *boolean*

Synopsis	Enable override of received ELC advertisements
Context	configure router string isis number entropy-label override-tunnel-elc boolean
Tree	override-tunnel-elc
Default	false
Introduced	16.0.R1
Platforms	All

export-limit

Synopsis	Enable the export-limit context
Context	configure router string isis number export-limit
Tree	export-limit
Introduced	16.0.R1
Platforms	All

log-percent *number*

Synopsis	Export limit before warning and SNMP notification sent
Context	configure router string isis number export-limit log-percent number

Tree	log-percent
Range	1 to 100
Introduced	16.0.R1
Platforms	All

number *number*

Synopsis	Maximum routes or prefixes exported from route table
Context	configure router <i>string</i> isis <i>number</i> export-limit <i>number</i> <i>number</i>
Tree	number
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

export-policy *reference*

Synopsis	Export policies that determine exported routes
Context	configure router <i>string</i> isis <i>number</i> export-policy <i>reference</i>
Tree	export-policy
Description	<p>This command configures export routing policies for the routes exported from the routing table to IS-IS.</p> <p>If the export policy is undefined, the system does not export non IS-IS routes from the routing table manager to IS-IS.</p> <p>If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.</p> <p>If the aggregate command is also configured in the configure router context, the aggregation is applied before the export policy is applied.</p> <p>Routing policies are created in the configure router policy-options context.</p>
Reference	configure policy-options policy-statement <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

flexible-algorithms

Synopsis	Enter the flexible-algorithms context
Context	configure router <i>string</i> isis <i>number</i> flexible-algorithms
Tree	flexible-algorithms
Description	Commands in this context configure IS-IS parameters for flexible algorithm participation.
Introduced	20.7.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of flexible algorithm support
Context	configure router <i>string</i> isis <i>number</i> flexible-algorithms admin-state <i>keyword</i>
Tree	admin-state
Description	This command specifies the administrative state of the support of flexible algorithm IGP LSDB extensions.
Options	enable, disable
Default	disable
Introduced	20.7.R1
Platforms	All

flex-algo [**flex-algo-id**] *number*

Synopsis	Enter the flex-algo list instance
Context	configure router <i>string</i> isis <i>number</i> flexible-algorithms flex-algo <i>number</i>
Tree	flex-algo
Description	Commands in this context configure an IS-IS flexible algorithm. When flexible algorithm is configured in an IS-IS instance, the IS-IS instance is configured for all levels (Level 1 and Level 2).
Max. Instances	7
Introduced	20.7.R1
Platforms	All

[flex-algo-id] number

Synopsis	Flexible algorithm ID
Context	configure router <i>string</i> <i>isis</i> <i>number</i> <i>flexible-algorithms</i> <i>flex-algo</i> <i>number</i>
Tree	flex-algo
Range	128 to 255
Notes	This element is part of a list key.
Introduced	20.7.R1
Platforms	All

advertise reference

Synopsis	Flexible Algorithm Definition advertisement
Context	configure router <i>string</i> <i>isis</i> <i>number</i> <i>flexible-algorithms</i> <i>flex-algo</i> <i>number</i> <i>advertise</i> <i>reference</i>
Tree	advertise
Description	This command enables the advertisement of a locally configured Flexible Algorithm Definition (FAD). The winning FAD that a router uses must be consistent with the winning FAD on all other routers, which avoids routing loops and traffic blackholing. The winning FAD is selected using a tiebreaker algorithm that first selects the highest advertised FAD priority followed by the highest system ID.
Reference	configure <i>routing-options</i> <i>flexible-algorithm-definitions</i> <i>flex-algo</i> <i>string</i>
Introduced	20.7.R1
Platforms	All

loopfree-alternate

Synopsis	Enable the loopfree-alternate context
Context	configure router <i>string</i> <i>isis</i> <i>number</i> <i>flexible-algorithms</i> <i>flex-algo</i> <i>number</i> <i>loopfree-alternate</i>
Tree	loopfree-alternate
Introduced	20.7.R1
Platforms	All

micro-loop-avoidance

Synopsis	Enable the micro-loop-avoidance context
----------	--

Context	configure <i>router string isis number flexible-algorithms flex-algo number micro-loop-avoidance</i>
Tree	micro-loop-avoidance
Introduced	21.7.R1
Platforms	All

participate *boolean*

Synopsis	Allow participation in the Flexible Algorithm
Context	configure <i>router string isis number flexible-algorithms flex-algo number participate boolean</i>
Tree	participate
Description	When configured to true , the router advertises the capability to participate in a flexible algorithm within the IS-IS Router Capability TLV. A router only advertises participation when the winning FAD can be supported, which includes segment routing support. When configured to false , flexible algorithm participation is not enabled.
Default	false
Introduced	20.7.R1
Platforms	All

graceful-restart

Synopsis	Enable the graceful-restart context
Context	configure <i>router string isis number graceful-restart</i>
Tree	graceful-restart
Introduced	16.0.R1
Platforms	All

helper-mode *boolean*

Synopsis	Enable the Graceful Restart helper for IS-IS
Context	configure <i>router string isis number graceful-restart helper-mode boolean</i>
Tree	helper-mode
Default	true
Introduced	16.0.R1
Platforms	All

hello-authentication *boolean*

Synopsis	Authenticate Hello type IS-IS protocol packets
Context	configure router <i>string isis number</i> hello-authentication <i>boolean</i>
Tree	hello-authentication
Default	true
Introduced	16.0.R1
Platforms	All

hello-padding *keyword*

Synopsis	IS-IS Hello message padding
Context	configure router <i>string isis number</i> hello-padding <i>keyword</i>
Tree	hello-padding
Options	adaptive, loose, strict, none
Introduced	16.0.R1
Platforms	All

ignore-attached-bit *boolean*

Synopsis	Ignore attached bit on received Layer 1 LSPs
Context	configure router <i>string isis number</i> ignore-attached-bit <i>boolean</i>
Tree	ignore-attached-bit
Default	false
Introduced	16.0.R1
Platforms	All

ignore-lsp-errors *boolean*

Synopsis	Ignore LSP packets with errors
Context	configure router <i>string isis number</i> ignore-lsp-errors <i>boolean</i>
Tree	ignore-lsp-errors
Default	false
Introduced	16.0.R1
Platforms	All

ignore-narrow-metric *boolean*

Synopsis	Ignore links with narrow metrics
Context	configure <i>router string isis number</i> ignore-narrow-metric <i>boolean</i>
Tree	ignore-narrow-metric
Default	false
Introduced	16.0.R1
Platforms	All

igp-shortcut

Synopsis	Enter the igp-shortcut context
Context	configure <i>router string isis number</i> igp-shortcut
Tree	igp-shortcut
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of RSVP-TE or SR-TE shortcut
Context	configure <i>router string isis number igp-shortcut</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

Context	configure router string isis number interface string ipv6-adjacency-sid label number
Tree	label
Range	1 to 1048575
Introduced	16.0.R1

Platforms All

ipv6-multicast *boolean*

Synopsis Enable IPv6 multicast routing for the interface

Context **configure** [router](#) *string* [isis](#) *number* [interface](#) *string* [ipv6-multicast](#) *boolean*

Tree [ipv6-multicast](#)

Default true

Introduced 16.0.R1

Platforms All

ipv6-node-sid

Synopsis Enable the **ipv6-node-sid** context

Context **configure** [router](#) *string* [isis](#) *number* [interface](#) *string* [ipv6-node-sid](#)

Tree [ipv6-node-sid](#)

Introduced 16.0.R1

Platforms All

clear-n-flag *boolean*

Synopsis Clear the node-sid flag (N-flag)

Context **configure** [router](#) *string* [isis](#) *number* [interface](#) *string* [ipv6-node-sid](#) [clear-n-flag](#) *boolean*

Tree [clear-n-flag](#)

Default false

Introduced 16.0.R1

Platforms All

index *number*

Synopsis Node SID index for this interface

Context **configure** [router](#) *string* [isis](#) *number* [interface](#) *string* [ipv6-node-sid](#) [index](#) *number*

Tree [index](#)

Range 0 to 4294967295

Notes The following elements are part of a choice: **index** or **label**.

Introduced	16.0.R1
Platforms	All

label *number*

Synopsis	Label value for the node SID
Context	configure router <i>string isis number interface string ipv6-node-sid label number</i>
Tree	label
Range	1 to 4294967295
Notes	The following elements are part of a choice: index or label .
Introduced	16.0.R1
Platforms	All

ipv6-unicast *boolean*

Synopsis	Enable IPv6 unicast routing for the interface
Context	configure router <i>string isis number interface string ipv6-unicast boolean</i>
Tree	ipv6-unicast
Default	true
Introduced	16.0.R1
Platforms	All

level [[level-number](#)] *keyword*

Synopsis	Enter the level list instance
Context	configure router <i>string isis number interface string level keyword</i>
Tree	level
Max. Instances	2
Introduced	16.0.R1
Platforms	All

[level-number] *keyword*

Synopsis	ISIS protocol level number
----------	----------------------------

Context	configure router <i>string</i> isis <i>number</i> interface <i>string</i> level <i>keyword</i>
Tree	level
Options	1, 2
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

hello-authentication-key *string*

Synopsis	Authentication key for Hello PDUs
Context	configure router <i>string</i> isis <i>number</i> interface <i>string</i> level <i>keyword</i> hello-authentication-key <i>string</i>
Tree	hello-authentication-key
Description	This command configures the authentication key (password) for Hello PDUs. Both the Hello authentication key and the Hello authentication type on a segment must match. If both IS-IS and Hello authentication are configured, Hello messages are validated using Hello authentication. If only IS-IS authentication is configured, it is used to authenticate all IS-IS (including Hello) protocol PDUs.
String Length	1 to 366
Introduced	16.0.R1
Platforms	All

hello-authentication-keychain *reference*

Synopsis	Authentication keychain to use for the session
Context	configure router <i>string</i> isis <i>number</i> interface <i>string</i> level <i>keyword</i> hello-authentication-keychain <i>reference</i>
Tree	hello-authentication-keychain
Reference	configure system security keychains keychain <i>string</i>
Introduced	16.0.R3
Platforms	All

hello-authentication-type *keyword*

Synopsis	Hello authentication enabled on the context
Context	configure router <i>string</i> isis <i>number</i> interface <i>string</i> level <i>keyword</i> hello-authentication-type <i>keyword</i>

Tree	hello-authentication-type
Description	This command enables Hello authentication at the level context. Both the Hello authentication key and the Hello authentication type on a segment must match. The Hello authentication-key statement must also be included.
Options	password, message-digest
Introduced	16.0.R1
Platforms	All

hello-interval *number*

Synopsis	Interval between Hello messages sent on this level
Context	configure router <i>string</i> isis <i>number</i> interface <i>string</i> level <i>keyword</i> hello-interval <i>number</i>
Tree	hello-interval
Range	1 to 20000
Units	seconds
Default	9
Introduced	16.0.R1
Platforms	All

hello-multiplier *number*

Synopsis	Hello messages missed from neighbor before router declares adjacency down
Context	configure router <i>string</i> isis <i>number</i> interface <i>string</i> level <i>keyword</i> hello-multiplier <i>number</i>
Tree	hello-multiplier
Range	2 to 100
Default	3
Introduced	16.0.R1
Platforms	All

hello-padding *keyword*

Synopsis	Padding on IS-IS Hello packets
Context	configure router <i>string</i> isis <i>number</i> interface <i>string</i> level <i>keyword</i> hello-padding <i>keyword</i>
Tree	hello-padding
Options	adaptive, loose, strict, none

Introduced 16.0.R1
Platforms All

ipv4-multicast-metric *number*

Synopsis IS-IS interface metric applied for IPv4 multicast
Context **configure** **router** *string* **isis** *number* **interface** *string* **level** *keyword* **ipv4-multicast-metric** *number*
Tree [ipv4-multicast-metric](#)
Range 1 to 16777215
Introduced 16.0.R1
Platforms All

ipv6-multicast-metric *number*

Synopsis IS-IS interface metric applied for IPv6 multicast
Context **configure** **router** *string* **isis** *number* **interface** *string* **level** *keyword* **ipv6-multicast-metric** *number*
Tree [ipv6-multicast-metric](#)
Range 1 to 16777215
Introduced 16.0.R1
Platforms All

ipv6-unicast-metric *number*

Synopsis IS-IS interface metric applied for IPv6 unicast
Context **configure** **router** *string* **isis** *number* **interface** *string* **level** *keyword* **ipv6-unicast-metric** *number*
Tree [ipv6-unicast-metric](#)
Range 1 to 16777215
Introduced 16.0.R1
Platforms All

metric *number*

Synopsis IS-IS interface metric applied for IPv4 unicast

Context	configure router <i>string</i> isis <i>number</i> interface <i>string</i> level <i>keyword</i> metric <i>number</i>
Tree	metric
Range	1 to 16777215
Introduced	16.0.R1
Platforms	All

passive *boolean*

Synopsis	Passive interface
Context	configure router <i>string</i> isis <i>number</i> interface <i>string</i> level <i>keyword</i> passive <i>boolean</i>
Tree	passive
Default	false
Introduced	16.0.R1
Platforms	All

priority *number*

Synopsis	Router to become the designated router on a multi-access network
Context	configure router <i>string</i> isis <i>number</i> interface <i>string</i> level <i>keyword</i> priority <i>number</i>
Tree	priority
Range	0 to 127
Default	64
Introduced	16.0.R1
Platforms	All

sd-offset *number*

Synopsis	Value of the signal degrade offset
Context	configure router <i>string</i> isis <i>number</i> interface <i>string</i> level <i>keyword</i> sd-offset <i>number</i>
Tree	sd-offset
Range	1 to 16777215
Introduced	16.0.R1
Platforms	All

sf-offset *number*

Synopsis	Value of the signal fail offset
Context	configure router <i>string</i> isis <i>number</i> interface <i>string</i> level <i>keyword</i> sf-offset <i>number</i>
Tree	sf-offset
Range	1 to 16777215
Introduced	16.0.R1
Platforms	All

level-capability *keyword*

Synopsis	IS-IS levels for this interface
Context	configure router <i>string</i> isis <i>number</i> interface <i>string</i> level-capability <i>keyword</i>
Tree	level-capability
Options	1, 2, 1/2
Default	1/2
Introduced	16.0.R1
Platforms	All

load-balancing-weight *number*

Synopsis	Load balancing weight
Context	configure router <i>string</i> isis <i>number</i> interface <i>string</i> load-balancing-weight <i>number</i>
Tree	load-balancing-weight
Max. Range	0 to 4294967295
Introduced	16.0.R1
Platforms	All

loopfree-alternate

Synopsis	Enter the loopfree-alternate context
Context	configure router <i>string</i> isis <i>number</i> interface <i>string</i> loopfree-alternate
Tree	loopfree-alternate
Introduced	16.0.R3
Platforms	All

exclude *boolean*

Synopsis	Enable/disable Loopfree Alternative at interface level.
Context	configure router <i>string</i> isis <i>number</i> interface <i>string</i> loopfree-alternate exclude <i>boolean</i>
Tree	exclude
Default	false
Introduced	16.0.R3
Platforms	All

policy-map

Synopsis	Enable the policy-map context
Context	configure router <i>string</i> isis <i>number</i> interface <i>string</i> loopfree-alternate policy-map
Tree	policy-map
Introduced	16.0.R3
Platforms	All

route-nh-template *reference*

Synopsis	Route next hop policy template name
Context	configure router <i>string</i> isis <i>number</i> interface <i>string</i> loopfree-alternate policy-map route-nh-template <i>reference</i>
Tree	route-nh-template
Reference	configure routing-options route-next-hop-policy <i>template</i> <i>string</i>
Notes	This element is mandatory.
Introduced	16.0.R3
Platforms	All

lsp-pacing-interval *number*

Synopsis	Interval for sending LSPs from interface
Context	configure router <i>string</i> isis <i>number</i> interface <i>string</i> lsp-pacing-interval <i>number</i>
Tree	lsp-pacing-interval
Range	0 to 65535
Units	milliseconds

Default	100
Introduced	16.0.R1
Platforms	All

mesh-group

Synopsis	Enable the mesh-group context
Context	configure router <i>string</i> isis <i>number</i> interface <i>string</i> mesh-group
Tree	mesh-group
Introduced	16.0.R1
Platforms	All

blocked

Synopsis	Prevent the interface from flooding LSPs
Context	configure router <i>string</i> isis <i>number</i> interface <i>string</i> mesh-group blocked
Tree	blocked
Notes	The following elements are part of a choice: blocked or value .
Introduced	16.0.R1
Platforms	All

value *number*

Synopsis	Mesh group for the interface
Context	configure router <i>string</i> isis <i>number</i> interface <i>string</i> mesh-group value <i>number</i>
Tree	value
Range	1 to 2000000000
Notes	The following elements are part of a choice: blocked or value .
Introduced	16.0.R1
Platforms	All

passive *boolean*

Synopsis	Passive interface
Context	configure router <i>string</i> isis <i>number</i> interface <i>string</i> passive <i>boolean</i>

Tree	passive
Default	false
Introduced	16.0.R1
Platforms	All

retransmit-interval *number*

Synopsis	Minimum time between LSP PDU retransmissions on point-to-point interface
Context	configure router <i>string</i> isis <i>number</i> interface <i>string</i> retransmit-interval <i>number</i>
Tree	retransmit-interval
Range	1 to 65535
Units	seconds
Default	5
Introduced	16.0.R1
Platforms	All

sid-protection *boolean*

Synopsis	Allow adjacency SID protection by LFA and remote LFA
Context	configure router <i>string</i> isis <i>number</i> interface <i>string</i> sid-protection <i>boolean</i>
Tree	sid-protection
Default	true
Introduced	16.0.R1
Platforms	All

tag *number*

Synopsis	Route tag for IP address of interface
Context	configure router <i>string</i> isis <i>number</i> interface <i>string</i> tag <i>number</i>
Tree	tag
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

ipv4-multicast-routing *keyword*

Synopsis	IS-IS topology for IPv4 multicast routing
Context	configure router <i>string</i> isis <i>number</i> ipv4-multicast-routing <i>keyword</i>
Tree	ipv4-multicast-routing
Options	false, native, mt
Default	native
Introduced	16.0.R1
Platforms	All

ipv4-routing *boolean*

Synopsis	Support IPv4 routing for IS-IS instance
Context	configure router <i>string</i> isis <i>number</i> ipv4-routing <i>boolean</i>
Tree	ipv4-routing
Default	true
Introduced	16.0.R1
Platforms	All

ipv6-multicast-routing *keyword*

Synopsis	Topology to populate the IPv6 multicast RTM
Context	configure router <i>string</i> isis <i>number</i> ipv6-multicast-routing <i>keyword</i>
Tree	ipv6-multicast-routing
Options	false, native, mt
Introduced	16.0.R1
Platforms	All

ipv6-routing *keyword*

Synopsis	Routing topology for IPv6
Context	configure router <i>string</i> isis <i>number</i> ipv6-routing <i>keyword</i>
Tree	ipv6-routing
Options	false, native, mt
Default	false
Introduced	16.0.R1

Platforms All

ldp-over-rsvp *boolean*

Synopsis Allow LDP over RSVP processing
Context **configure** *router string isis number ldp-over-rsvp boolean*
Tree [ldp-over-rsvp](#)
Default false
Introduced 16.0.R1
Platforms All

ldp-sync *boolean*

Synopsis Use IGP-LDP synchronization feature on all interfaces participating in IS-IS routing protocol
Context **configure** *router string isis number ldp-sync boolean*
Tree [ldp-sync](#)
Default true
Introduced 16.0.R1
Platforms All

level [[level-number](#)] *keyword*

Synopsis Enter the **level** list instance
Context **configure** *router string isis number level keyword*
Tree [level](#)
Max. Instances 2
Introduced 16.0.R1
Platforms All

[level-number] *keyword*

Synopsis ISIS protocol level number
Context **configure** *router string isis number level keyword*
Tree [level](#)

Options	1, 2
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

advertise-router-capability *boolean*

Synopsis	Allow router advertisement capabilities
Context	configure router <i>string</i> <i>isis</i> <i>number</i> <i>level</i> <i>keyword</i> advertise-router-capability <i>boolean</i>
Tree	advertise-router-capability
Default	true
Introduced	16.0.R1
Platforms	All

authentication-key *string*

Synopsis	Authentication key to verify PDUs sent on the interface
Context	configure router <i>string</i> <i>isis</i> <i>number</i> <i>level</i> <i>keyword</i> authentication-key <i>string</i>
Tree	authentication-key
Description	This command sets the authentication key used to verify PDUs sent by neighboring routers on the interface. Neighboring routers use passwords to authenticate PDUs sent from an interface. For authentication to work, both the authentication key and the authentication type on a segment must match. The authentication-type command must also be included.
String Length	1 to 366
Introduced	16.0.R1
Platforms	All

authentication-keychain *reference*

Synopsis	Keychain used to sign and authenticate
Context	configure router <i>string</i> <i>isis</i> <i>number</i> <i>level</i> <i>keyword</i> authentication-keychain <i>reference</i>
Tree	authentication-keychain
Reference	configure system security keychains keychain <i>string</i>
Introduced	16.0.R3
Platforms	All

authentication-type *keyword*

Synopsis	Authentication type to be used
Context	configure router <i>string</i> <i>isis</i> <i>number</i> <i>level</i> <i>keyword</i> authentication-type <i>keyword</i>
Tree	authentication-type
Options	password, message-digest
Introduced	16.0.R1
Platforms	All

bier

Synopsis	Enter the bier context
Context	configure router <i>string</i> <i>isis</i> <i>number</i> <i>level</i> <i>keyword</i> bier
Tree	bier
Introduced	16.0.R4
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of BIER
Context	configure router <i>string</i> <i>isis</i> <i>number</i> <i>level</i> <i>keyword</i> bier admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R4
Platforms	All

template *reference*

Synopsis	BIER template name
Context	configure router <i>string</i> <i>isis</i> <i>number</i> <i>level</i> <i>keyword</i> bier template <i>reference</i>
Tree	template
Reference	configure router <i>string</i> bier template <i>string</i>
Introduced	16.0.R4
Platforms	All

csnp-authentication *boolean*

Synopsis	Enable authentication of CSNP IS-IS protocol packets
Context	configure router <i>string isis number level</i> keyword csnp-authentication <i>boolean</i>
Tree	csnp-authentication
Default	true
Introduced	16.0.R1
Platforms	All

database-export-exclude *boolean*

Synopsis	Exclude IGP link-state information of a specific IS-IS level from being exported into extended TE-DB
Context	configure router <i>string isis number level</i> keyword database-export-exclude <i>boolean</i>
Tree	database-export-exclude
Default	false
Introduced	16.0.R1
Platforms	All

default-ipv4-multicast-metric *number*

Synopsis	Default metric for IPv4 unicast
Context	configure router <i>string isis number level</i> keyword default-ipv4-multicast-metric <i>number</i>
Tree	default-ipv4-multicast-metric
Range	1 to 16777215
Default	10
Introduced	16.0.R1
Platforms	All

default-ipv6-multicast-metric *number*

Synopsis	Default metric for IPv6 unicast
Context	configure router <i>string isis number level</i> keyword default-ipv6-multicast-metric <i>number</i>
Tree	default-ipv6-multicast-metric
Range	1 to 16777215

Default	10
Introduced	16.0.R1
Platforms	All

default-ipv6-unicast-metric *number*

Synopsis	Default metric for IPv6 unicast
Context	configure router <i>string</i> isis <i>number</i> level <i>keyword</i> default-ipv6-unicast-metric <i>number</i>
Tree	default-ipv6-unicast-metric
Range	1 to 16777215
Default	10
Introduced	16.0.R1
Platforms	All

default-metric *number*

Synopsis	Default metric
Context	configure router <i>string</i> isis <i>number</i> level <i>keyword</i> default-metric <i>number</i>
Tree	default-metric
Range	1 to 16777215
Default	10
Introduced	16.0.R1
Platforms	All

external-preference *number*

Synopsis	External route preference for IS-IS level
Context	configure router <i>string</i> isis <i>number</i> level <i>keyword</i> external-preference <i>number</i>
Tree	external-preference
Range	1 to 255
Introduced	16.0.R1
Platforms	All

hello-authentication *boolean*

Synopsis	Authenticate Hello type IS-IS protocol packets
Context	configure router <i>string</i> isis <i>number</i> level <i>keyword</i> hello-authentication <i>boolean</i>
Tree	hello-authentication
Default	true
Introduced	16.0.R1
Platforms	All

hello-padding *keyword*

Synopsis	Padding on IS-IS Hello packets
Context	configure router <i>string</i> isis <i>number</i> level <i>keyword</i> hello-padding <i>keyword</i>
Tree	hello-padding
Options	adaptive, loose, strict, none
Introduced	16.0.R1
Platforms	All

loopfree-alternate-exclude *boolean*

Synopsis	Exclude interface participating in specific IS-IS level in SPF LFA computation
Context	configure router <i>string</i> isis <i>number</i> level <i>keyword</i> loopfree-alternate-exclude <i>boolean</i>
Tree	loopfree-alternate-exclude
Default	false
Introduced	16.0.R1
Platforms	All

lsp-mtu-size *number***WARNING:**

Modifying this element requires the **admin-state** of the parent element to be toggled manually for the new value to take effect.

Synopsis	LSP MTU size
Context	configure router <i>string</i> isis <i>number</i> level <i>keyword</i> lsp-mtu-size <i>number</i>
Tree	lsp-mtu-size
Range	490 to 9778

Units	bytes
Default	1492
Introduced	16.0.R1
Platforms	All

preference *number*

Synopsis	External route preference at level
Context	configure router <i>string</i> isis <i>number</i> level <i>keyword</i> preference <i>number</i>
Tree	preference
Range	1 to 255
Introduced	16.0.R1
Platforms	All

psnp-authentication *boolean*

Synopsis	Enable authentication on PSNP IS-IS protocol packets
Context	configure router <i>string</i> isis <i>number</i> level <i>keyword</i> psnp-authentication <i>boolean</i>
Tree	psnp-authentication
Default	true
Introduced	16.0.R1
Platforms	All

wide-metrics-only *boolean*

Synopsis	Use wide metrics advertisements in the LSPs
Context	configure router <i>string</i> isis <i>number</i> level <i>keyword</i> wide-metrics-only <i>boolean</i>
Tree	wide-metrics-only
Default	false
Introduced	16.0.R1
Platforms	All

level-capability *keyword*

Synopsis	Routing level for instance
----------	----------------------------

Context	configure <i>router string isis number level-capability keyword</i>
Tree	<i>level-capability</i>
Options	1, 2, 1/2
Default	1/2
Introduced	16.0.R1
Platforms	All

link-group [*link-group-name*] *string*

Synopsis	Enter the link-group list instance
Context	configure <i>router string isis number link-group string</i>
Tree	<i>link-group</i>
Introduced	16.0.R1
Platforms	All

[link-group-name] *string*

Synopsis	Link group name for the IS-IS protocol
Context	configure <i>router string isis number link-group string</i>
Tree	<i>link-group</i>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

description *string*

Synopsis	Text description
Context	configure <i>router string isis number link-group string description string</i>
Tree	<i>description</i>
String Length	1 to 255
Introduced	16.0.R1

oper-members *number*

Synopsis	Minimum number of operational links
Context	configure router <i>string</i> isis <i>number</i> link-group <i>string</i> level <i>keyword</i> oper-members <i>number</i>
Tree	oper-members
Range	1 to 8
Introduced	16.0.R1
Platforms	All

revert-members *number*

Synopsis	Minimum number of operational links to return link group to normal state and remove offsets
Context	configure router <i>string</i> isis <i>number</i> link-group <i>string</i> level <i>keyword</i> revert-members <i>number</i>
Tree	revert-members
Range	1 to 8
Introduced	16.0.R1
Platforms	All

loopfree-alternate

Synopsis	Enable the loopfree-alternate context
Context	configure router <i>string</i> isis <i>number</i> loopfree-alternate
Tree	loopfree-alternate
Introduced	16.0.R1
Platforms	All

augment-route-table *boolean*

Synopsis	Attach remote LFA information to RTM entries
Context	configure router string isis number loopfree-alternate augment-route-table <i>boolean</i>
Tree	augment-route-table
Description	When configured to true , this command enables IS-IS to attach remote LFA-specific information to RTM entries for use by protocols such as LDP. When configured to false , rLFA-specific information is not added to RTM entries.
Default	false
Introduced	19.10.R1
Platforms	All

exclude

Synopsis	Enter the exclude context
Context	configure router string isis number loopfree-alternate exclude
Tree	exclude
Introduced	16.0.R3
Platforms	All

prefix-policy *reference*

Synopsis	Policy to exclude prefixes from LFA SPF calculation
Context	configure router string isis number loopfree-alternate exclude prefix-policy <i>reference</i>
Tree	prefix-policy
Description	This command specifies the name of the policy for the prefixes to exclude from the LFA SPF calculation. An excluded prefix is not included in LFA calculation regardless of its priority. The prefix tag is, however, used in the main SPF.
Reference	configure policy-options policy-statement <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R3
Platforms	All

multi-homed-prefix

Synopsis	Enable the multi-homed-prefix context
Context	configure <i>router string isis number loopfree-alternate multi-homed-prefix</i>
Tree	multi-homed-prefix
Description	<p>Commands in this context enable multihomed prefix LFA for IS-IS routes (IP FRR), SR-ISIS tunnels, and SRv6-ISIS tunnels.</p> <p>This feature uses the multihomed prefix model described in RFC 8518 to compute a backup IP next hop using an alternate ABR or ASBR for external prefixes and to an alternate router owner for local anycast prefixes.</p> <p>This feature further enhances the multihomed prefix backup path calculation beyond RFC 8518 with the addition of repair tunnels that make use of a PQ node or a P-Q set to reach the alternate exit ABR or ASBR of external prefixes or the alternate owner router of intra-area anycast prefixes.</p> <p>The computed IP next hop-based backup path is added to IS-IS routes of external /32 prefixes or /128 prefixes and intra-area /32 or /128 anycast prefixes in the RTM if the prefix is not protected by the base LFA or if the user set leaf preference command option is configured to all. The user must enable the configure routing-options ip-fast-reroute command to have these backup paths programmed into the FIB in the datapath.</p> <p>The computed IP next hop or repair tunnel-based backup path is also programmed for:</p> <ul style="list-style-type: none"> • SR-ISIS node SID tunnels of external /32 IPv4 prefixes and /128 IPv6 prefixes, and node SID tunnels of intra-area /32 IPv4 anycast prefixes and /128 anycast IPv6 prefixes, in both algorithm 0 and flexible-algorithms • SRv6-ISIS locator routes and tunnels of external prefixes and of intra-area anycast prefixes of any size, in both algorithm 0 and flexible algorithm numbers. <p>As a result, an SR-TE LSP, an SR-MPLS policy, or an SRv6 policy which uses an SR-ISIS SID or an SRv6-ISIS SID of those same prefixes in its configured or computed SID list benefits from the multihomed prefix LFA protection.</p> <p>Once the IP next-hop based multihomed prefix LFA is enabled, the extensions to compute an SR-TE repair tunnel for the multihomed prefix LFA in the case of SR-ISIS and SRv6-ISIS are automatically enabled if the user also enabled TI-LFA or Remote LFA. The computation reuses the SID list of the primary path or of the TI-LFA or Remote LFA backup path of the alternate ABR or ASBR or alternate owner router.</p>
Introduced	22.7.R1
Platforms	All

preference *keyword*

Synopsis	Multihomed prefix LFA backup path preference
Context	configure <i>router string isis number loopfree-alternate multi-homed-prefix preference keyword</i>

adj-sid-hold (*number* | *keyword*)

Synopsis	Adjacency SID hold time
Context	configure <i>router string isis number segment-routing adj-sid-hold (number keyword)</i>
Tree	<i>adj-sid-hold</i>
Description	This command configures a timer to hold the ILM or LTN of an adjacency SID following a failure of the adjacency.

When an adjacency to a neighbor fails, the following procedure is followed for both an LFA protected and the LFA unprotected SID of this adjacency in SR-MPLS. An adjacency can have both types of SIDs assigned by configuration. An LFA protected adjacency SID is eligible for LFA protection, however, the following procedure applies even if an LFA backup is not programmed at the time of the failure. An LFA unprotected adjacency SID is not eligible for LFA protection.

- IGP withdraws the advertisement of the link TLV as well as its adjacency SID sub-TLV.
- The adjacency SID hold timer starts.
- The LTN and ILM records of the adjacency are kept in the datapath for as long as the adjacency SID hold time is running. This allows packets to flow over the LFA backup path, when the adjacency is protected, and allows the ingress LER or PCE time to compute a new path of the SR-TE LSP after IGP converges.

- If the adjacency is restored while the adjacency SID hold timer is running, the timer is aborted, and the adjacency SID remains programmed in the datapath with the retained SID values. However, the backup NHLFE may change if a new LFA SPF runs while the adjacency SID hold timer running. An update to the backup NHLFE is performed immediately following the LFA SPF. In all cases, the adjacency keeps its assigned SID label value.
- If the adjacency SID hold timer expires before the adjacency is restored, the SID is deprogrammed from the datapath and the label returned into the common pool where it was drawn from. Users of the adjacency (for example, SR policy and SR-TE LSP) are also informed. When the adjacency is subsequently restored, it gets assigned its allocated static-label value or a new dynamic-label value.
- A new PG-ID is assigned each time an adjacency comes back up. This PG-ID is used by the ILM and LTN of the adjacency SID and of all downstream node SIDs that resolve to a next hop over this adjacency.

Range	1 to 300
Units	seconds
Options	none
Default	15
Introduced	16.0.R1
Platforms	All

adjacency-set [*id*] *number*

Context	configure <i>router string isis number segment-routing maximum-sid-depth override-bmi number</i>
Tree	<i>override-bmi</i>
Description	<p>This command overrides the announced MSD node Base MPLS Imposition (BMI) value. The MSD-BMI value announced by a router can be used by recipients to understand the number of MPLS labels that can be imposed inclusive of all service, transport, or special labels.</p> <p>When unconfigured, the router announces the maximum supported BMI of the node assuming the most simple services and Layer 2 encapsulation.</p>
Range	0 to 12

Introduced	20.2.R1
Platforms	All

override-erld *number*

Synopsis	Value to override the announced node MSD-ERLD value
Context	configure router <i>string</i> isis <i>number</i> segment-routing maximum-sid-depth override-erld <i>number</i>
Tree	override-erld
Description	This command configures the override Entropy Readable Label Depth (ERLD) Maximum Sid Depth (MSD) value. Information about the capability of each intermediate LSR of reading the maximum label stack depth is used by ingress LSRs to perform EL-based load balancing. When unconfigured, the router announces the node maximum supported ERLD assuming the most simple Layer 2 encapsulation.
Range	0 to 15
Introduced	20.2.R1
Platforms	All

micro-loop-avoidance

Synopsis	Enable the micro-loop-avoidance context
Context	configure router <i>string</i> isis <i>number</i> segment-routing micro-loop-avoidance
Tree	micro-loop-avoidance
Introduced	19.10.R1

tunnel-table-pref *number*

Synopsis	Preference of SR tunnels created by the IGP instance
Context	configure <i>router string isis number segment-routing tunnel-table-pref number</i>
Tree	tunnel-table-pref
Description	This command configures the TTM preference of SR tunnels created by the IGP instance. This is used in the case of BGP shortcuts, VPRN auto-bind, or BGP transport tunnel when the new tunnel binding commands are configured to the any value which parses the TTM for tunnels in the protocol preference order. The user can choose to either go with the global TTM preference or list explicitly the tunnel types they want to use. When they list the tunnel types explicitly, the TTM preference is still used to select one type over the other. In both cases, a fallback to the next preferred tunnel type is performed if the selected one fails. Also, a reversion to a more preferred tunnel type is performed as soon as one is available.

The segment routing module adds to TTM a SR tunnel entry for each resolved remote node SID prefix and programs the data path with the corresponding LTN with the push operation pointing to the primary and LFA backup NHLFEs.

The default preference for SR tunnels in the TTM is set lower than LDP tunnels but higher than BGP tunnels to allow controlled migration of customers without disrupting their current deployment when they enable segment routing. The following is the setting of the default preference of the various tunnel types. This includes the preference of SR tunnels based on shortest path (referred to as **SR-ISIS** and **SR-OSPF**).

The global default TTM preference for the tunnel types is as follows:

- ROUTE_PREF_RSVP 7
- ROUTE_PREF_SR_TE 8
- ROUTE_PREF_LDP 9
- ROUTE_PREF_OSPF_TTM 10
- ROUTE_PREF_ISIS_TTM 11
- ROUTE_PREF_BGP_TTM 12
- ROUTE_PREF_GRE 255

The default value for SR-ISIS or SR-OSPF is the same regardless if one or more IS-ISIS or OSPF instances programmed a tunnel for the same prefix. The selection of a SR tunnel in this case will be based on lowest IGP instance-id.

It is recommended to not set two or more tunnel types to the same preference value. In such a situation, the tunnel table prefers the tunnel type which was first introduced in SR OS implementation historically.

Range	1 to 255
Default	11
Introduced	16.0.R1
Platforms	All

segment-routing-v6

Synopsis	Enter the segment-routing-v6 context
Context	configure <i>router string isis number</i> segment-routing-v6
Tree	segment-routing-v6
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

adj-sid-hold (*number* | *keyword*)

Synopsis	Adjacency SID hold time
Context	configure <i>router string isis number</i> segment-routing-v6 adj-sid-hold (<i>number</i> <i>keyword</i>)
Tree	adj-sid-hold
Description	This command specifies the length of time the system holds the SRv6 adjacency route and tunnel entries programmed in datapath while the adjacency is down.

When an adjacency to a neighbor fails, the following procedure is followed for both an LFA protected and the LFA unprotected SID of this adjacency in SR-MPLS. An adjacency can have both types of SIDs assigned by configuration. An LFA protected adjacency SID is eligible for LFA protection, however, the following procedure applies even if an LFA backup is not programmed at the time of the failure. An LFA unprotected adjacency SID is not eligible for LFA protection.

- IGP withdraws the advertisement of the link TLV as well as its SRv6 End.X SID sub-TLV
- The adjacency SID hold timer starts.
- The route table, FIB, and tunnel table entries are kept for as long as the adjacency SID hold timer is running. This allows packets to flow over the LFA backup path, if the adjacency is protected, and allows the ingress LER or PCE time to compute a new path of a SRv6 policy after IGP converges.
- If the adjacency is restored while the adjacency SID hold timer is running, the timer is aborted, and the adjacency SID remains programmed in the datapath with the retained SID values. However, the backup NHLFE may change when a new LFA SPF is run while the adjacency SID hold timer is running. An update to the backup NHLFE is performed immediately following the LFA SPF. In all cases, the adjacency keeps its assigned SID value.
- If the adjacency SID hold timer expires before the adjacency is restored, the SID is deprogrammed from the datapath and the SID value returned into the locator subnet where it was drawn from. Users of the adjacency (for example, SRv6 policy) are also informed. When the adjacency is subsequently restored, it gets assigned its allocated static SID value or a new dynamic SID value.
- A new PG-ID is assigned each time an adjacency comes back up. This PG-ID is used by tunnel of the local adjacency SID and of all remote locator routes that resolve to a next hop over this adjacency.

Each IS-IS instance runs a single timer per adjacency that IPv4 SR-MPLS, IPv6 SR-MPLS, and SRv6 adjacency SIDs share. When you enable both SR-MPLS (**configure router isis segment-routing**) and SRv6 (**configure router isis segment-routing-v6**) in the IS-IS instance, the system programs the higher of the two timer values for all SIDs on the adjacency.

Range	1 to 300
Units	seconds
Options	none
Default	15
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

avp-hiding *keyword*

Synopsis	Attribute of the Value Pair (AVP) hiding algorithm
Context	configure router <i>string</i> l2tp avp-hiding <i>keyword</i>
Tree	avp-hiding
Options	sensitive, always
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

challenge *boolean*

Synopsis	Use challenge-response authentication
Context	configure router <i>string</i> l2tp challenge <i>boolean</i>
Tree	challenge
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

destruct-timeout *number*

Synopsis	Destruction timeout
Context	configure router <i>string</i> l2tp destruct-timeout <i>number</i>
Tree	destruct-timeout
Range	60 to 86400
Units	seconds
Default	60
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ethernet-tunnel

Synopsis	Enter the ethernet-tunnel context
Context	configure router <i>string</i> l2tp ethernet-tunnel
Tree	ethernet-tunnel
Introduced	16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

reconnect-timeout (*number* | *keyword*)

Synopsis Timeout for a session setup retry

Context **configure** **router** *string* **l2tp ethernet-tunnel reconnect-timeout** (*number* | *keyword*)

Tree **reconnect-timeout**

Range 10 to 3600

Units seconds

Options infinite

Default infinite

Introduced 16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

exclude-avps

Synopsis Enter the **exclude-avps** context

Context **configure** **router** *string* **l2tp exclude-avps**

Tree **exclude-avps**

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

calling-number *boolean*

Synopsis Calling Number AVP to exclude

Context **configure** **router** *string* **l2tp exclude-avps calling-number** *boolean*

Tree **calling-number**

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

initial-rx-lcp-conf-req *boolean*

Synopsis Exclude the Initial Received LCP CONFREQ AVP

Context **configure** **router** *string* **l2tp exclude-avps initial-rx-lcp-conf-req** *boolean*

Tree	initial-rx-lcp-conf-req
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

failover

Synopsis	Enter the failover context
Context	configure router <i>string</i> l2tp failover
Tree	failover
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

recovery-max-session-lifetime *number*

Synopsis	Subset of sessions that this system attempts to synchronize in the Session State Synchronization phase
Context	configure router <i>string</i> l2tp failover recovery-max-session-lifetime <i>number</i>
Tree	recovery-max-session-lifetime
Range	2 to 4294967295
Units	centiseconds
Default	2
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

recovery-method *keyword*

Synopsis	Recovery method of the sequence numbers after failover
Context	configure router <i>string</i> l2tp failover recovery-method <i>keyword</i>
Tree	recovery-method
Options	mcs, recovery-tunnel
Default	mcs
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

recovery-time *number*

Synopsis	Time requested from the L2TP peer before assuming failover as failed
Context	configure router <i>string</i> l2tp failover recovery-time <i>number</i>
Tree	recovery-time
Range	0 to 900
Units	seconds
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

track-srrp [*id*] *reference*

Synopsis	Enter the track-srrp list instance
Context	configure router <i>string</i> l2tp failover track-srrp <i>reference</i>
Tree	track-srrp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[id] *reference*

Synopsis	SRRP instance ID for multi-chassis redundancy failover
Context	configure router <i>string</i> l2tp failover track-srrp <i>reference</i>
Tree	track-srrp
Reference	configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) sync track-srrp <i>number</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

peer *reference*

Synopsis	Multi-chassis peer address
Context	configure router <i>string</i> l2tp failover track-srrp <i>reference</i> peer <i>reference</i>
Tree	peer

Reference	configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone)
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sync-tag *string*

Synopsis	Synchronization tag on the multi-chassis peer
Context	configure router <i>string</i> l2tp failover track-srrp <i>reference</i> sync-tag <i>string</i>
Tree	sync-tag
String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

group [[tunnel-group-name](#)] *string*

Synopsis	Enter the group list instance
Context	configure router <i>string</i> l2tp group <i>string</i>
Tree	group
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[[tunnel-group-name](#)] *string*

Synopsis	Tunnel group name
Context	configure router <i>string</i> l2tp group <i>string</i>
Tree	group
String Length	1 to 63
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the L2TP tunnel group
Context	configure router <i>string</i> l2tp group <i>string</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

avp-hiding *keyword*

Synopsis	The AVP hiding algorithm
Context	configure router <i>string</i> l2tp group <i>string</i> avp-hiding <i>keyword</i>
Tree	avp-hiding
Options	never, sensitive, always
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

challenge *keyword*

Synopsis	Enable use of challenge-response authentication
Context	configure router <i>string</i> l2tp group <i>string</i> challenge <i>keyword</i>
Tree	challenge
Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure router <i>string</i> l2tp group <i>string</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

destruct-timeout *number*

Synopsis	Destruction timeout
Context	configure router <i>string</i> l2tp group <i>string</i> destruct-timeout <i>number</i>
Tree	destruct-timeout
Range	60 to 86400
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ethernet-tunnel

Synopsis	Enter the ethernet-tunnel context
Context	configure router <i>string</i> l2tp group <i>string</i> ethernet-tunnel
Tree	ethernet-tunnel
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

reconnect-timeout (*number* | *keyword*)

Synopsis	Timeout for a session setup retry at group level
Context	configure router <i>string</i> l2tp group <i>string</i> ethernet-tunnel reconnect-timeout (<i>number</i> <i>keyword</i>)
Tree	reconnect-timeout
Range	10 to 3600
Units	seconds
Options	infinite
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

failover

Synopsis	Enter the failover context
Context	configure router <i>string</i> l2tp group <i>string</i> failover
Tree	failover

Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

recovery-method *keyword*

Synopsis Recovery method of the sequence numbers after failover
Context **configure** **router** *string* **l2tp** **group** *string* **failover** **recovery-method** *keyword*
Tree [recovery-method](#)
Options mcs, recovery-tunnel
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

recovery-time *number*

Synopsis Time requested from the L2TP peer before assuming failover as failed
Context **configure** **router** *string* **l2tp** **group** *string* **failover** **recovery-time** *number*
Tree [recovery-time](#)
Range 0 to 900
Units seconds
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hello-interval (*number* | *keyword*)

Synopsis Hello interval
Context **configure** **router** *string* **l2tp** **group** *string* **hello-interval** (*number* | *keyword*)
Tree [hello-interval](#)
Range 10 to 3600
Units seconds
Options infinite
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

idle-timeout (*number* | *keyword*)

Synopsis	Idle timeout
Context	configure router <i>string</i> I2tp <i>group</i> <i>string</i> idle-timeout (<i>number</i> <i>keyword</i>)
Tree	idle-timeout
Range	0 to 3600
Units	seconds
Options	infinite
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

I2tpv3

Synopsis	Enter the I2tpv3 context
Context	configure router <i>string</i> I2tp <i>group</i> <i>string</i> I2tpv3
Tree	I2tpv3
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

cookie-length (*number* | *keyword*)

Synopsis	Cookie field length
Context	configure router <i>string</i> I2tp <i>group</i> <i>string</i> I2tpv3 cookie-length (<i>number</i> <i>keyword</i>)
Tree	cookie-length
Range	4 8
Options	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

digest-type *keyword*

Synopsis	Hashing algorithm that calculates the message digest
Context	configure router <i>string</i> I2tp <i>group</i> <i>string</i> I2tpv3 digest-type <i>keyword</i>
Tree	digest-type
Options	none, md5, sha1
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

nonce-length *number*

Synopsis Length for the local L2TPv3 nonce (random number)
 Context **configure** *router* *string* *l2tp* *group* *string* *l2tpv3* *nonce-length* *number*
 Tree [nonce-length](#)
 Range 0 | 16 to 64
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

password *string*

Synopsis L2TPv3 password
 Context **configure** *router* *string* *l2tp* *group* *string* *l2tpv3* *password* *string*
 Tree [password](#)
 String Length 1 to 115
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

private-tcp-mss-adjust (*number* | *keyword*)

Synopsis TCP maximum segment size (MSS) on private network
 Context **configure** *router* *string* *l2tp* *group* *string* *l2tpv3* *private-tcp-mss-adjust* (*number* | *keyword*)
 Tree [private-tcp-mss-adjust](#)
 Range 512 to 9000
 Units octets
 Options disable
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

public-tcp-mss-adjust (*number* | *keyword*)

Synopsis TCP Maximum Segment Size (MSS) on public network

Context	configure <i>router</i> <i>string</i> <i>l2tp</i> <i>group</i> <i>string</i> <i>l2tpv3</i> <i>public-tcp-mss-adjust</i> (<i>number</i> <i>keyword</i>)
Tree	public-tcp-mss-adjust
Range	512 to 9000
Units	octets
Options	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pw-cap-list

Synopsis	Enter the pw-cap-list context
Context	configure <i>router</i> <i>string</i> <i>l2tp</i> <i>group</i> <i>string</i> <i>l2tpv3</i> <i>pw-cap-list</i>
Tree	pw-cap-list
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ethernet *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Advertise Ethernet pseudowire type
Context	configure <i>router</i> <i>string</i> <i>l2tp</i> <i>group</i> <i>string</i> <i>l2tpv3</i> <i>pw-cap-list</i> <i>ethernet</i> <i>boolean</i>
Tree	ethernet
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ethernet-vlan *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Advertise Ethernet VLAN pseudowire type
----------	---

Context	configure router <i>string</i> l2tp group <i>string</i> l2tpv3 pw-cap-list ethernet-vlan <i>boolean</i>
Tree	ethernet-vlan
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rem-router-id *string*

Synopsis	Filter on remote router ID
Context	configure router <i>string</i> l2tp group <i>string</i> l2tpv3 rem-router-id <i>string</i>
Tree	rem-router-id
Default	0.0.0.0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

track-password-change *boolean*

Synopsis	Enable tracking of password changes
Context	configure router <i>string</i> l2tp group <i>string</i> l2tpv3 track-password-change <i>boolean</i>
Tree	track-password-change
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lac

Synopsis	Enter the lac context
Context	configure router <i>string</i> l2tp group <i>string</i> lac
Tree	lac
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

df-bit *keyword*

Synopsis	DF (do not fragment) bit in data traffic transmitted as LAC
----------	---

Context	configure <i>router string l2tp group string lac df-bit keyword</i>
Tree	df-bit
Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Ins

Synopsis	Enter the Ins context
Context	configure <i>router string l2tp group string Ins</i>
Tree	Ins
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Ins-group *reference*

Synopsis	ISA LNS group
Context	configure <i>router string l2tp group string Ins Ins-group reference</i>
Tree	Ins-group
Reference	configure <i>isa Ins-group number</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

load-balance-method *keyword*

Synopsis	New sessions for L2TP ISA MDA
Context	configure <i>router string l2tp group string Ins load-balance-method keyword</i>
Tree	load-balance-method
Options	per-session, per-tunnel
Default	per-session
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mlppp

Synopsis	Enter the mlppp context
Context	configure router <i>string</i> l2tp group <i>string</i> lns mlppp
Tree	mlppp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

admin-state *keyword*

Synopsis	Administrative state of MLPPP in the L2TP tunnel group
Context	configure router <i>string</i> l2tp group <i>string</i> lns mlppp admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

endpoint

Synopsis	Enter the endpoint context
Context	configure router <i>string</i> l2tp group <i>string</i> lns mlppp endpoint
Tree	endpoint
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

ip (*ipv4-address* | *keyword*)

Synopsis	Endpoint ID as an IP address
Context	configure router <i>string</i> l2tp group <i>string</i> lns mlppp endpoint ip (<i>ipv4-address</i> <i>keyword</i>)
Tree	ip
Options	system
Notes	The following elements are part of a choice: ip or mac .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

mac (*mac-address* | *keyword*)

Synopsis	Endpoint ID as a MAC address
Context	configure router <i>string</i> l2tp group <i>string</i> lns mlppp endpoint mac (<i>mac-address</i> <i>keyword</i>)
Tree	mac
Options	system
Notes	The following elements are part of a choice: ip or mac .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

interleave *boolean*

Synopsis	Enable link fragmentation and interleaving
Context	configure router <i>string</i> l2tp group <i>string</i> lns mlppp interleave <i>boolean</i>
Tree	interleave
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

max-fragment-delay (*number* | *keyword*)

Synopsis	Maximum fragment delay caused by transmission on a link
Context	configure router <i>string</i> l2tp group <i>string</i> lns mlppp max-fragment-delay (<i>number</i> <i>keyword</i>)
Tree	max-fragment-delay
Range	5 to 1000
Units	milliseconds
Options	no-fragmentation
Default	no-fragmentation
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

max-links *number*

Synopsis	Maximum MLPPP links
----------	---------------------

Context	configure <i>router string l2tp group string lns mlppp max-links number</i>
Tree	max-links
Range	1 to 8
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

reassemble-timeout *number*

Synopsis	Reassembly timeout
Context	configure <i>router string l2tp group string lns mlppp reassemble-timeout number</i>
Tree	reassemble-timeout
Range	100 1000
Units	milliseconds
Default	1000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

short-sequence-numbers *boolean*

Synopsis	Request a peer to send short sequence numbers
Context	configure <i>router string l2tp group string lns mlppp short-sequence-numbers boolean</i>
Tree	short-sequence-numbers
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

ppp

Synopsis	Enter the ppp context
Context	configure <i>router string l2tp group string lns ppp</i>
Tree	ppp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

authentication keyword

Synopsis	PPP authentication protocol to negotiate
Context	configure router <i>string</i> <i>l2tp group string</i> <i>lns ppp authentication keyword</i>
Tree	authentication
Options	pap, chap, pref-chap, pref-pap
Default	pref-chap
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

authentication-policy string

Synopsis	Authentication policy when a DHCP message is received
Context	configure router <i>string</i> <i>l2tp group string</i> <i>lns ppp authentication-policy string</i>
Tree	authentication-policy
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

chap-challenge-length

Synopsis	Enter the chap-challenge-length context
Context	configure router <i>string</i> <i>l2tp group string</i> <i>lns ppp chap-challenge-length</i>
Tree	chap-challenge-length
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end number

Synopsis	Upper bound of the PPP CHAP challenge length
Context	configure router <i>string</i> <i>l2tp group string</i> <i>lns ppp chap-challenge-length end number</i>
Tree	end
Range	8 to 64
Units	octets
Default	64

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

start number

Synopsis	Lower bound of the PPP CHAP challenge length
Context	configure router string l2tp group string ins ppp chap-challenge-length start number
Tree	start
Range	8 to 64
Units	octets
Default	32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-group-interface

Synopsis	Enter the default-group-interface context
Context	configure router string l2tp group string ins ppp default-group-interface
Tree	default-group-interface
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

interface string

Synopsis	Group interface
Context	configure router string l2tp group string ins ppp default-group-interface interface string
Tree	interface
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

service-name string

Synopsis	Administrative service name
Context	configure router string l2tp group string ins ppp default-group-interface service-name string

Tree	service-name
String Length	1 to 64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipcp-subnet-negotiation *boolean*

Synopsis	Allow IPCP subnet negotiation for PPPoE hosts
Context	configure router <i>string</i> l2tp <i>group</i> <i>string</i> lns ppp ipcp-subnet-negotiation <i>boolean</i>
Tree	ipcp-subnet-negotiation
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

keepalive

Synopsis	Enter the keepalive context
Context	configure router <i>string</i> l2tp <i>group</i> <i>string</i> lns ppp keepalive
Tree	keepalive
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

interval *number*

Synopsis	PPP keepalive interval
Context	configure router <i>string</i> l2tp <i>group</i> <i>string</i> lns ppp keepalive <i>interval</i> <i>number</i>
Tree	interval
Range	10 to 300
Units	seconds
Default	30
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

multiplier number

Synopsis	PPP keepalive multiplier
Context	configure <i>router string l2tp group string lns ppp keepalive multiplier number</i>
Tree	multiplier
Range	1 to 5
Default	3
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

lcp-force-ack-accm boolean

Synopsis	Force acknowledgement of the LCP Asynchronous Control Character Map (ACCM) option
Context	configure <i>router string l2tp group string lns ppp lcp-force-ack-accm boolean</i>
Tree	lcp-force-ack-accm
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

lcp-ignore-magic-numbers boolean

Synopsis	Check magic number in echo request and reply messages
Context	configure <i>router string l2tp group string lns ppp lcp-ignore-magic-numbers boolean</i>
Tree	lcp-ignore-magic-numbers
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mtu number

Synopsis	Maximum PPP MTU size
Context	configure <i>router string l2tp group string lns ppp mtu number</i>
Tree	mtu
Range	512 to 9212
Units	octets

Default	1500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

proxy-authentication *boolean*

Synopsis	Use authentication AVPs that are received from LAC
Context	configure router <i>string</i> l2tp group <i>string</i> lns ppp proxy-authentication <i>boolean</i>
Tree	proxy-authentication
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

proxy-lcp *boolean*

Synopsis	Proxy LCP AVPs that are received from LAC
Context	configure router <i>string</i> l2tp group <i>string</i> lns ppp proxy-lcp <i>boolean</i>
Tree	proxy-lcp
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

reject-disabled-ncp *boolean*

Synopsis	Force LCP Protocol Reject for IPv6CP Configure Request
Context	configure router <i>string</i> l2tp group <i>string</i> lns ppp reject-disabled-ncp <i>boolean</i>
Tree	reject-disabled-ncp
Default	false
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

user-db *string*

Synopsis	Local user database for PPP PAP and CHAP authentication
Context	configure router <i>string</i> l2tp group <i>string</i> lns ppp user-db <i>string</i>

Tree	user-db
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

local-address *string*

Synopsis	Local address
Context	configure router <i>string</i> l2tp group <i>string</i> local-address <i>string</i>
Tree	local-address
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

local-name *string*

Synopsis	Local host name used to distinguish tunnels
Context	configure router <i>string</i> l2tp group <i>string</i> local-name <i>string</i>
Tree	local-name
String Length	1 to 64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-retries-estab *number*

Synopsis	Maximum retries for established tunnels
Context	configure router <i>string</i> l2tp group <i>string</i> max-retries-estab <i>number</i>
Tree	max-retries-estab
Range	2 to 7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-retries-not-estab *number*

Synopsis	Maximum retries for unestablished tunnels
Context	configure router <i>string</i> l2tp group <i>string</i> max-retries-not-estab <i>number</i>

Tree	max-retries-not-estab
Range	2 to 7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

password *string*

Synopsis	Password between L2TP LAC and LNS
Context	configure router string l2tp group string password string
Tree	password
String Length	1 to 115
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

protocol *keyword*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Protocol version
Context	configure router string l2tp group string protocol keyword
Tree	protocol
Options	v2, v3, v3draft
Default	v2
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

radius-accounting-policy *reference*

Synopsis	RADIUS accounting policy
Context	configure router string l2tp group string radius-accounting-policy reference
Tree	radius-accounting-policy
Reference	configure aaa radius l2tp-accounting-policy string
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

receive-window-size *number*

Synopsis	L2TP receive window size
Context	configure router <i>string</i> l2tp group <i>string</i> receive-window-size <i>number</i>
Tree	receive-window-size
Range	4 to 1024
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

session-assign-method *keyword*

Synopsis	Session assignment method
Context	configure router <i>string</i> l2tp group <i>string</i> session-assign-method <i>keyword</i>
Tree	session-assign-method
Options	existing-first, weighted, weighted-random
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

session-limit (*number* | *keyword*)

Synopsis	Session limit
Context	configure router <i>string</i> l2tp group <i>string</i> session-limit (<i>number</i> <i>keyword</i>)
Tree	session-limit
Range	1 to 250000
Options	unlimited
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

tunnel [**tunnel-name**] *string*

Synopsis	Enter the tunnel list instance
Context	configure router <i>string</i> l2tp group <i>string</i> tunnel <i>string</i>
Tree	tunnel
Max. Instances	31

Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[tunnel-name] *string*

Synopsis Tunnel name
 Context **configure** [router](#) *string* [l2tp](#) [group](#) *string* [tunnel](#) *string*
 Tree [tunnel](#)
 String Length 1 to 32
 Notes This element is part of a list key.
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis Administrative state of the L2TP tunnel
 Context **configure** [router](#) *string* [l2tp](#) [group](#) *string* [tunnel](#) *string* **admin-state** *keyword*
 Tree [admin-state](#)
 Options enable, disable
 Default disable
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

auto-establish *boolean*

Synopsis Allow the tunnel to be automatically set up by the system
 Context **configure** [router](#) *string* [l2tp](#) [group](#) *string* [tunnel](#) *string* **auto-establish** *boolean*
 Tree [auto-establish](#)
 Default false
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

avp-hiding *keyword*

Synopsis The AVP hiding algorithm

Context	configure <i>router string l2tp group string tunnel string avp-hiding keyword</i>
Tree	avp-hiding
Options	never, sensitive, always
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

challenge *keyword*

Synopsis	Enable use of challenge-response authentication
Context	configure <i>router string l2tp group string tunnel string challenge keyword</i>
Tree	challenge
Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure <i>router string l2tp group string tunnel string description string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

destruct-timeout *number*

Synopsis	Destruction timeout
Context	configure <i>router string l2tp group string tunnel string destruct-timeout number</i>
Tree	destruct-timeout
Range	60 to 86400
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

failover

Synopsis	Enter the failover context
Context	configure <i>router string l2tp group string tunnel string failover</i>
Tree	<i>failover</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

recovery-method *keyword*

Synopsis	Recovery method of the sequence numbers after failover
Context	configure <i>router string l2tp group string tunnel string failover recovery-method keyword</i>
Tree	<i>recovery-method</i>
Options	mcs, recovery-tunnel
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

recovery-time *number*

Synopsis	Time requested from the L2TP peer before assuming failover as failed
Context	configure <i>router string l2tp group string tunnel string failover recovery-time number</i>
Tree	<i>recovery-time</i>
Range	0 to 900
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hello-interval (*number* | *keyword*)

Synopsis	Hello interval
Context	configure <i>router string l2tp group string tunnel string hello-interval (number keyword)</i>
Tree	<i>hello-interval</i>
Range	10 to 3600
Units	seconds
Options	infinite
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

idle-timeout (*number* | *keyword*)

Synopsis Idle timeout

Context **configure** *router string l2tp group string tunnel string idle-timeout (number | keyword)*

Tree [idle-timeout](#)

Range 0 to 3600

Units seconds

Options infinite

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

l2tpv3

Synopsis Enter the **l2tpv3** context

Context **configure** *router string l2tp group string tunnel string l2tpv3*

Tree [l2tpv3](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

private-tcp-mss-adjust (*number* | *keyword*)

Synopsis TCP maximum segment size (MSS) on private network

Context **configure** *router string l2tp group string tunnel string l2tpv3 private-tcp-mss-adjust (number | keyword)*

Tree [private-tcp-mss-adjust](#)

Range 512 to 9000

Units octets

Options disable

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

public-tcp-mss-adjust (*number* | *keyword*)

Synopsis TCP maximum segment size (MSS) on public network

Context	configure <i>router string l2tp group string tunnel string l2tpv3 public-tcp-mss-adjust (number keyword)</i>
Tree	public-tcp-mss-adjust
Range	512 to 9000
Units	octets
Options	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lac

Synopsis	Enter the lac context
Context	configure <i>router string l2tp group string tunnel string lac</i>
Tree	lac
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

df-bit keyword

Synopsis	DF (do not fragment) bit in data traffic transmitted as LAC
Context	configure <i>router string l2tp group string tunnel string lac df-bit keyword</i>
Tree	df-bit
Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Ins

Synopsis	Enter the Ins context
Context	configure <i>router string l2tp group string tunnel string Ins</i>
Tree	Ins
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Ins-group *reference*

Synopsis	ISA LNS group
Context	configure router <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns ins-group <i>reference</i>
Tree	ins-group
Reference	configure isa ins-group <i>number</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

load-balance-method *keyword*

Synopsis	New sessions for L2TP ISA MDA
Context	configure router <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns load-balance-method <i>keyword</i>
Tree	load-balance-method
Options	per-session, per-tunnel
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mlppp

Synopsis	Enter the mlppp context
Context	configure router <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns mlppp
Tree	mlppp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

admin-state *keyword*

Synopsis	Administrative state of MLPPP in the L2TP tunnel
Context	configure router <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns mlppp admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

endpoint

Synopsis	Enter the endpoint context
Context	configure router <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns mlppp endpoint
Tree	endpoint
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

ip (*ipv4-address* | *keyword*)

Synopsis	Endpoint ID as an IP address
Context	configure router <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns mlppp endpoint ip (<i>ipv4-address</i> <i>keyword</i>)
Tree	ip
Options	system
Notes	The following elements are part of a choice: ip or mac .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

mac (*mac-address* | *keyword*)

Synopsis	Endpoint ID as a MAC address
Context	configure router <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns mlppp endpoint mac (<i>mac-address</i> <i>keyword</i>)
Tree	mac
Options	system
Notes	The following elements are part of a choice: ip or mac .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

interleave *keyword*

Synopsis	Use of Link fragmentation and interleaving
Context	configure router <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns mlppp interleave <i>keyword</i>
Tree	interleave
Options	false, true

Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

max-fragment-delay *number*

Synopsis Maximum fragment delay caused by transmission on a link
 Context **configure** *router string l2tp group string tunnel string lns mlppp max-fragment-delay number*
 Tree [max-fragment-delay](#)
 Range 5 to 1000
 Units milliseconds
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

max-links *number*

Synopsis Maximum MLPPP links
 Context **configure** *router string l2tp group string tunnel string lns mlppp max-links number*
 Tree [max-links](#)
 Range 1 to 8
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

reassemble-timeout *number*

Synopsis Reassembly timeout
 Context **configure** *router string l2tp group string tunnel string lns mlppp reassemble-timeout number*
 Tree [reassemble-timeout](#)
 Range 100 | 1000
 Units milliseconds
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

short-sequence-numbers *keyword*

Synopsis	Request a peer to send short sequence numbers
Context	configure router <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns mlppp short-sequence-numbers <i>keyword</i>
Tree	short-sequence-numbers
Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

ppp

Synopsis	Enter the ppp context
Context	configure router <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns ppp
Tree	ppp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

authentication *keyword*

Synopsis	PPP authentication protocol to negotiate
Context	configure router <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns ppp authentication <i>keyword</i>
Tree	authentication
Options	pap, chap, pref-chap, pref-pap
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

authentication-policy *string*

Synopsis	Authentication policy when a DHCP message is received
Context	configure router <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns ppp authentication-policy <i>string</i>
Tree	authentication-policy
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

chap-challenge-length

Synopsis	Enter the chap-challenge-length context
Context	configure router <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> ins ppp chap-challenge-length
Tree	chap-challenge-length
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end number

Synopsis	Upper bound of the PPP CHAP challenge length
Context	configure router <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> ins ppp chap-challenge-length end <i>number</i>
Tree	end
Range	8 to 64
Units	octets
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

start number

Synopsis	Lower bound of the PPP CHAP challenge length
Context	configure router <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> ins ppp chap-challenge-length start <i>number</i>
Tree	start
Range	8 to 64
Units	octets
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-group-interface

Synopsis	Enter the default-group-interface context
Context	configure router <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> ins ppp default-group-interface
Tree	default-group-interface
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

interface *string*

Synopsis Group interface

Context **configure** [router](#) *string* [l2tp](#) [group](#) *string* [tunnel](#) *string* [lns](#) [ppp](#) [default-group-interface](#) [interface](#) *string*

Tree [interface](#)

String Length 1 to 32

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

service-name *string*

Synopsis Administrative service name

Context **configure** [router](#) *string* [l2tp](#) [group](#) *string* [tunnel](#) *string* [lns](#) [ppp](#) [default-group-interface](#) [service-name](#) *string*

Tree [service-name](#)

String Length 1 to 64

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipcp-subnet-negotiation *keyword*

Synopsis Use of IPCP subnet negotiation for PPPoE hosts

Context **configure** [router](#) *string* [l2tp](#) [group](#) *string* [tunnel](#) *string* [lns](#) [ppp](#) [ipcp-subnet-negotiation](#) *keyword*

Tree [ipcp-subnet-negotiation](#)

Options false, true

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

keepalive

Synopsis Enter the **keepalive** context

Context **configure** [router](#) *string* [l2tp](#) [group](#) *string* [tunnel](#) *string* [lns](#) [ppp](#) [keepalive](#)

Tree	keepalive
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

interval *number*

Synopsis	PPP keepalive interval
Context	configure router <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> ins ppp keepalive interval <i>number</i>
Tree	interval
Range	10 to 300
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

multiplier *number*

Synopsis	PPP keepalive multiplier
Context	configure router <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> ins ppp keepalive multiplier <i>number</i>
Tree	multiplier
Range	1 to 5
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

lcp-force-ack-accm *keyword*

Synopsis	Forced acknowledgement of the LCP Asynchronous Control Character Map (ACCM) option
Context	configure router <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> ins ppp lcp-force-ack-accm <i>keyword</i>
Tree	lcp-force-ack-accm
Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

lcp-ignore-magic-numbers *keyword*

Synopsis	Magic-Number field in LCP Echo-Request and LCP Echo-Reply messages that are checked
Context	configure router <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns ppp lcp-ignore-magic-numbers <i>keyword</i>
Tree	lcp-ignore-magic-numbers
Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mtu *number*

Synopsis	Maximum PPP MTU size
Context	configure router <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns ppp mtu <i>number</i>
Tree	mtu
Range	512 to 9212
Units	octets
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

proxy-authentication *keyword*

Synopsis	Authentication AVPs that are received from LAC
Context	configure router <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns ppp proxy-authentication <i>keyword</i>
Tree	proxy-authentication
Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

proxy-lcp *keyword*

Synopsis	Use the Proxy LCP AVPs that are received from the LAC
Context	configure router <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns ppp proxy-lcp <i>keyword</i>
Tree	proxy-lcp
Options	false, true

Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

reject-disabled-ncp *keyword*

Synopsis Force LCP Project Reject for IPv6CP Configure Request
 Context **configure** [router](#) *string* [l2tp](#) [group](#) *string* [tunnel](#) *string* [ins](#) [ppp](#) **reject-disabled-ncp** *keyword*
 Tree [reject-disabled-ncp](#)
 Options false, true
 Introduced 16.0.R6
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

user-db *string*

Synopsis Local user database for PPP PAP and CHAP authentication
 Context **configure** [router](#) *string* [l2tp](#) [group](#) *string* [tunnel](#) *string* [ins](#) [ppp](#) **user-db** *string*
 Tree [user-db](#)
 String Length 1 to 32
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

local-address *string*

Synopsis Local address
 Context **configure** [router](#) *string* [l2tp](#) [group](#) *string* [tunnel](#) *string* **local-address** *string*
 Tree [local-address](#)
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

local-name *string*

Synopsis Local host name used to distinguish tunnels
 Context **configure** [router](#) *string* [l2tp](#) [group](#) *string* [tunnel](#) *string* **local-name** *string*
 Tree [local-name](#)
 String Length 1 to 64

Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-retries-estab *number*

Synopsis Maximum retries for established tunnels
 Context **configure** *router string l2tp group string tunnel string max-retries-estab number*
 Tree [max-retries-estab](#)
 Range 2 to 7
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-retries-not-estab *number*

Synopsis Maximum retries for unestablished tunnels
 Context **configure** *router string l2tp group string tunnel string max-retries-not-estab number*
 Tree [max-retries-not-estab](#)
 Range 2 to 7
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

password *string*

Synopsis Password between L2TP LAC and LNS
 Context **configure** *router string l2tp group string tunnel string password string*
 Tree [password](#)
 String Length 1 to 115
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

peer *string*

Synopsis Peer address
 Context **configure** *router string l2tp group string tunnel string peer string*
 Tree [peer](#)

Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preference *number*

Synopsis Tunnel preference number with its group
 Context **configure** *router* *string* *l2tp* *group* *string* *tunnel* *string* *preference* *number*
 Tree [preference](#)
 Range 0 to 16777215
 Default 50
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

radius-accounting-policy *reference*

Synopsis RADIUS accounting policy
 Context **configure** *router* *string* *l2tp* *group* *string* *tunnel* *string* *radius-accounting-policy* *reference*
 Tree [radius-accounting-policy](#)
 Reference **configure** *aaa* *radius* *l2tp-accounting-policy* *string*
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

receive-window-size *number*

Synopsis L2TP receive window size
 Context **configure** *router* *string* *l2tp* *group* *string* *tunnel* *string* *receive-window-size* *number*
 Tree [receive-window-size](#)
 Range 4 to 1024
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

remote-name *string*

Synopsis Remote tunnel host name
 Context **configure** *router* *string* *l2tp* *group* *string* *tunnel* *string* *remote-name* *string*

Tree	remote-name
String Length	1 to 64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

session-limit (*number* | *keyword*)

Synopsis	L2TP session limit for each tunnel of this router
Context	configure router <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> session-limit (<i>number</i> <i>keyword</i>)
Tree	session-limit
Range	1 to 65534
Options	unlimited
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

group-session-limit *number*

Synopsis	L2TP session limit for each group of this router
Context	configure router <i>string</i> l2tp group-session-limit <i>number</i>
Tree	group-session-limit
Range	1 to 250000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hello-interval (*number* | *keyword*)

Synopsis	Hello interval
Context	configure router <i>string</i> l2tp hello-interval (<i>number</i> <i>keyword</i>)
Tree	hello-interval
Range	10 to 3600
Units	seconds
Options	infinite
Default	300
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

idle-timeout (*number* | *keyword*)

Synopsis	Idle timeout
Context	configure router <i>string</i> l2tp idle-timeout (<i>number</i> <i>keyword</i>)
Tree	idle-timeout
Range	0 to 3600
Units	seconds
Options	infinite
Default	infinite
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ignore-avps

Synopsis	Enter the ignore-avps context
Context	configure router <i>string</i> l2tp ignore-avps
Tree	ignore-avps
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sequencing-required *boolean*

Synopsis	Ignore Sequencing Required AVP
Context	configure router <i>string</i> l2tp ignore-avps sequencing-required <i>boolean</i>
Tree	sequencing-required
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

l2tpv3

Synopsis	Enter the l2tpv3 context
Context	configure router <i>string</i> l2tp l2tpv3
Tree	l2tpv3
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

cookie-length *number*

Synopsis Cookie field length
Context **configure** **router** *string* **l2tp** **l2tpv3** **cookie-length** *number*
Tree [cookie-length](#)
Range 4 | 8
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

digest-type *keyword*

Synopsis Hashing algorithm that calculates the message digest
Context **configure** **router** *string* **l2tp** **l2tpv3** **digest-type** *keyword*
Tree [digest-type](#)
Options md5, sha1
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

nonce-length *number*

Synopsis Length of the local L2TPv3 nonce (random number)
Context **configure** **router** *string* **l2tp** **l2tpv3** **nonce-length** *number*
Tree [nonce-length](#)
Range 0 | 16 to 64
Default 0
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

password *string*

Synopsis L2TPv3 password
Context **configure** **router** *string* **l2tp** **l2tpv3** **password** *string*
Tree [password](#)

String Length	1 to 115
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

private-tcp-mss-adjust *number*

Synopsis	TCP maximum segment size (MSS) on private network
Context	configure router <i>string</i> I2tp I2tpv3 private-tcp-mss-adjust <i>number</i>
Tree	private-tcp-mss-adjust
Range	512 to 9000
Units	octets
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

public-tcp-mss-adjust *number*

Synopsis	TCP maximum segment size (MSS) on public network
Context	configure router <i>string</i> I2tp I2tpv3 public-tcp-mss-adjust <i>number</i>
Tree	public-tcp-mss-adjust
Range	512 to 9000
Units	octets
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

transport-type

Synopsis	Enter the transport-type context
Context	configure router <i>string</i> I2tp I2tpv3 transport-type
Tree	transport-type
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ip *boolean*

Synopsis	Use IP as the transport type for the L2TPv3 tunnel
----------	--

Context	configure <i>router</i> <i>string</i> <i>l2tp l2tpv3</i> <i>transport-type</i> <i>ip</i> <i>boolean</i>
Tree	<i>ip</i>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lac

Synopsis	Enter the lac context
Context	configure <i>router</i> <i>string</i> <i>l2tp lac</i>
Tree	<i>lac</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

calling-number-format *string*

Synopsis	Calling Number AVP for L2TP control messages
Context	configure <i>router</i> <i>string</i> <i>l2tp lac</i> <i>calling-number-format</i> <i>string</i>
Tree	<i>calling-number-format</i>
String Length	1 to 255
Default	%S %s
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

cisco-nas-port

Synopsis	Enter the cisco-nas-port context
Context	configure <i>router</i> <i>string</i> <i>l2tp lac</i> <i>cisco-nas-port</i>
Tree	<i>cisco-nas-port</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ethernet *string*

Synopsis	L2TP Cisco NAS port AVP with binary patterns for Ethernet
----------	---

Context **configure** *router string l2tp lac cisco-nas-port ethernet string*
 Tree [ethernet](#)
 String Length 1 to 255
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

df-bit *boolean*

Synopsis Send all L2TP packets with DF bit set to 1
 Context **configure** *router string l2tp lac df-bit boolean*
 Tree [df-bit](#)
 Default true
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

local-address *string*

Synopsis Local address
 Context **configure** *router string l2tp local-address string*
 Tree [local-address](#)
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

local-name *string*

Synopsis Local host name
 Context **configure** *router string l2tp local-name string*
 Tree [local-name](#)
 String Length 1 to 64
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-retries-estab *number*

Synopsis Maximum retries for established tunnels

Context	configure router string l2tp max-retries-estab number
Tree	max-retries-estab
Range	2 to 7
Default	5
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-retries-not-estab number

Synopsis	Maximum retries for unestablished tunnels
Context	configure router string l2tp max-retries-not-estab number
Tree	max-retries-not-estab
Range	2 to 7
Default	5
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

next-attempt keyword

Synopsis	Tunnel that is selected when previous session setup failed
Context	configure router string l2tp next-attempt keyword
Tree	next-attempt
Options	same-preference-level, next-preference-level
Default	next-preference-level
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

password string

Synopsis	L2TP password
Context	configure router string l2tp password string
Tree	password
String Length	1 to 115
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

peer-address-change-policy *keyword*

Synopsis	Reaction for L2TP response from a different address
Context	configure router <i>string</i> l2tp peer-address-change-policy <i>keyword</i>
Tree	peer-address-change-policy
Options	accept, ignore, reject
Default	reject
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

radius-accounting-policy *reference*

Synopsis	RADIUS accounting policy
Context	configure router <i>string</i> l2tp radius-accounting-policy <i>reference</i>
Tree	radius-accounting-policy
Reference	configure aaa radius l2tp-accounting-policy <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

receive-window-size *number*

Synopsis	L2TP receive window size
Context	configure router <i>string</i> l2tp receive-window-size <i>number</i>
Tree	receive-window-size
Range	4 to 1024
Default	64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

replace-result-code

Synopsis	Enter the replace-result-code context
Context	configure router <i>string</i> l2tp replace-result-code
Tree	replace-result-code
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

cdn-invalid-dst *boolean*

Synopsis Replace result code with general error code
Context **configure** **router** *string* **l2tp** **replace-result-code** **cdn-invalid-dst** *boolean*
Tree [cdn-invalid-dst](#)
Default false
Introduced 16.0.R4
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

cdn-permanent-no-facilities *boolean*

Synopsis Replace result code with general error
Context **configure** **router** *string* **l2tp** **replace-result-code** **cdn-permanent-no-facilities** *boolean*
Tree [cdn-permanent-no-facilities](#)
Default false
Introduced 16.0.R4
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

cdn-temporary-no-facilities *boolean*

Synopsis Replace result code with general error
Context **configure** **router** *string* **l2tp** **replace-result-code** **cdn-temporary-no-facilities** *boolean*
Tree [cdn-temporary-no-facilities](#)
Default false
Introduced 16.0.R4
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rtm-debounce-time (*number* | *keyword*)

Synopsis Debounce timer that declares L2TP action for route table management events
Context **configure** **router** *string* **l2tp** **rtm-debounce-time** (*number* | *keyword*)
Tree [rtm-debounce-time](#)
Range 0 to 5000

Units	milliseconds
Options	infinite
Default	infinite
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

session-assign-method *keyword*

Synopsis	Session assignment method
Context	configure router <i>string</i> l2tp session-assign-method <i>keyword</i>
Tree	session-assign-method
Options	existing-first, weighted, weighted-random
Default	existing-first
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

session-limit *number*

Synopsis	L2TP session limit of this router
Context	configure router <i>string</i> l2tp session-limit <i>number</i>
Tree	session-limit
Range	1 to 250000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

tunnel-selection-blacklist

Synopsis	Enter the tunnel-selection-blacklist context
Context	configure router <i>string</i> l2tp tunnel-selection-blacklist
Tree	tunnel-selection-blacklist
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

add-tunnel-on

Synopsis	Enter the add-tunnel-on context
Context	configure router <i>string</i> l2tp tunnel-selection-blacklist add-tunnel-on
Tree	add-tunnel-on
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

address-change-timeout *boolean*

Synopsis	Enable a timed-out tunnel to be forced to the denylist
Context	configure router <i>string</i> l2tp tunnel-selection-blacklist add-tunnel-on address-change-timeout <i>boolean</i>
Tree	address-change-timeout
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

cdn-err-code *boolean*

Synopsis	Add to deny if CDN is received with code: General error
Context	configure router <i>string</i> l2tp tunnel-selection-blacklist add-tunnel-on cdn-err-code <i>boolean</i>
Tree	cdn-err-code
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

cdn-invalid-dst *boolean*

Synopsis	Force tunnel to the denylist in case of Result Codes 6
Context	configure router <i>string</i> l2tp tunnel-selection-blacklist add-tunnel-on cdn-invalid-dst <i>boolean</i>
Tree	cdn-invalid-dst
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

cdn-permanent-no-facilities *boolean*

Synopsis	Force tunnel to the denylist in case of Result Codes 5
Context	configure router <i>string</i> l2tp tunnel-selection-blacklist add-tunnel-on cdn-permanent-no-facilities <i>boolean</i>
Tree	cdn-permanent-no-facilities
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

cdn-temporary-no-facilities *boolean*

Synopsis	Force tunnel to the denylist in case of Result Codes 4
Context	configure router <i>string</i> l2tp tunnel-selection-blacklist add-tunnel-on cdn-temporary-no-facilities <i>boolean</i>
Tree	cdn-temporary-no-facilities
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

stop-ccn-err-code *boolean*

Synopsis	Add to denylist if received with general error code
Context	configure router <i>string</i> l2tp tunnel-selection-blacklist add-tunnel-on stop-ccn-err-code <i>boolean</i>
Tree	stop-ccn-err-code
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

stop-ccn-other *boolean*

Synopsis	Add to denylist if StopCCN received with general error
Context	configure router <i>string</i> l2tp tunnel-selection-blacklist add-tunnel-on stop-ccn-other <i>boolean</i>
Tree	stop-ccn-other

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

tx-cdn-not-established-in-time *boolean*

Synopsis	Add to denylist if CDN transmitted with result code
Context	configure router <i>string</i> I2tp tunnel-selection-blacklist add-tunnel-on tx-cdn-not-established-in-time <i>boolean</i>
Tree	tx-cdn-not-established-in-time
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-list-length (*number* | *keyword*)

Synopsis	Number of tunnels or peers in the denylist
Context	configure router <i>string</i> I2tp tunnel-selection-blacklist max-list-length (<i>number</i> <i>keyword</i>)
Tree	max-list-length
Range	1 to 65535
Options	infinite
Default	infinite
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-time *number*

Synopsis	Time that a tunnel or peer can remain in the denylist
Context	configure router <i>string</i> I2tp tunnel-selection-blacklist max-time <i>number</i>
Tree	max-time
Range	1 to 60
Units	minutes
Default	5
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

timeout-action *keyword*

Synopsis	Action when a tunnel or peer exceeds time in denylist
Context	configure <i>router string l2tp tunnel-selection-blacklist timeout-action keyword</i>
Tree	timeout-action
Options	remove-from-blacklist, try-one-session
Default	remove-from-blacklist
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

tunnel-session-limit *number*

Synopsis	L2TP session limit for each tunnel of this router
Context	configure <i>router string l2tp tunnel-session-limit number</i>
Tree	tunnel-session-limit
Range	1 to 65534
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ldp

Synopsis	Enable the ldp context
Context	configure <i>router string ldp</i>
Tree	ldp
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of LDP
Context	configure <i>router string ldp admin-state keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R1

Platforms All

aggregate-prefix-match

Synopsis Enable the **aggregate-prefix-match** context
 Context **configure** [router](#) *string* [ldp](#) [aggregate-prefix-match](#)
 Tree [aggregate-prefix-match](#)
 Introduced 16.0.R1
 Platforms All

admin-state *keyword*

Synopsis Administrative state of the LDP aggregate prefix match
 Context **configure** [router](#) *string* [ldp](#) [aggregate-prefix-match](#) [admin-state](#) *keyword*
 Tree [admin-state](#)
 Options enable, disable
 Default disable
 Introduced 16.0.R1
 Platforms All

prefix-exclude *reference*

Synopsis Import policies to filter LDP label bindings received from LDP peers
 Context **configure** [router](#) *string* [ldp](#) [aggregate-prefix-match](#) [prefix-exclude](#) *reference*
 Tree [prefix-exclude](#)
 Reference **configure** [policy-options](#) [policy-statement](#) *string*
 Max. Instances 5
 Notes This element is ordered by the user.
 Introduced 16.0.R1
 Platforms All

class-forwarding *keyword*

Synopsis Forwarding mode for LDP over RSVP

Context	configure <i>router</i> <i>string</i> <i>ldp class-forwarding</i> <i>keyword</i>
Tree	class-forwarding
Options	lsr, ler, lsr-and-ler
Introduced	16.0.R1
Platforms	All

consider-system-ip-in-gep *boolean*

Synopsis	Apply global export policy for system IP FEC creation
Context	configure <i>router</i> <i>string</i> <i>ldp consider-system-ip-in-gep</i> <i>boolean</i>
Tree	consider-system-ip-in-gep
Default	false
Introduced	16.0.R1
Platforms	All

egress-statistics

Synopsis	Enter the egress-statistics context
Context	configure <i>router</i> <i>string</i> <i>ldp egress-statistics</i>
Tree	egress-statistics
Introduced	16.0.R1
Platforms	All

fec-prefix [*ip-prefix*] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Enter the fec-prefix list instance
Context	configure <i>router</i> <i>string</i> <i>ldp egress-statistics fec-prefix</i> (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	fec-prefix
Introduced	16.0.R1
Platforms	All

[*ip-prefix*] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	IP prefix
Context	configure <i>router</i> <i>string</i> <i>ldp egress-statistics fec-prefix</i> (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)

Tree	fec-prefix
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

accounting-policy *reference*

Synopsis	Accounting policy ID
Context	configure router <i>string</i> ldp egress-statistics fec-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) accounting-policy <i>reference</i>
Tree	accounting-policy
Reference	configure log accounting-policy <i>number</i>
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the LDP egress statistics
Context	configure router <i>string</i> ldp egress-statistics fec-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

collect-stats *boolean*

Synopsis	Collect statistics
Context	configure router <i>string</i> ldp egress-statistics fec-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) collect-stats <i>boolean</i>
Tree	collect-stats
Default	false
Introduced	16.0.R1
Platforms	All

entropy-label-capability *boolean*

Synopsis	Enable entropy label capability on the LDP instance
Context	configure router <i>string</i> ldp entropy-label-capability <i>boolean</i>
Tree	entropy-label-capability
Default	false
Introduced	16.0.R1
Platforms	All

export-policy *reference*

Synopsis	Export policies to determine routes exported to LDP
Context	configure router <i>string</i> ldp export-policy <i>reference</i>
Tree	export-policy
Reference	configure policy-options policy-statement <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

export-tunnel-table *reference*

Synopsis	Tunnel table export policies to export tunneled routes
Context	configure router <i>string</i> ldp export-tunnel-table <i>reference</i>
Tree	export-tunnel-table
Reference	configure policy-options policy-statement <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

fast-reroute

Synopsis	Enable the fast-reroute context
Context	configure router string ldp fast-reroute
Tree	fast-reroute
Introduced	16.0.R1
Platforms	All

backup-sr-tunnel boolean

Synopsis	Use SR tunnel as a remote LFA backup tunnel next-hop by an LDP FEC
Context	configure router string ldp fast-reroute backup-sr-tunnel boolean
Tree	backup-sr-tunnel
Default	false
Introduced	16.0.R1
Platforms	All

fec-originate [fec-prefix] (ipv4-prefix | ipv6-prefix)

Synopsis	Enter the fec-originate list instance
Context	configure router string ldp fec-originate (ipv4-prefix ipv6-prefix)
Tree	fec-originate
Introduced	16.0.R1
Platforms	All

[fec-prefix] (ipv4-prefix | ipv6-prefix)

Synopsis	Static FEC IP prefix
Context	configure router string ldp fec-originate (ipv4-prefix ipv6-prefix)
Tree	fec-originate
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

advertised-label *number*

Synopsis	Label that is advertised to upstream peer
Context	configure router <i>string</i> ldp fec-originate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) advertised-label <i>number</i>
Tree	advertised-label
Range	32 to 1048575
Introduced	16.0.R1
Platforms	All

interface *string*

Synopsis	Interface name for this static FEC prefix
Context	configure router <i>string</i> ldp fec-originate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) interface <i>string</i>
Tree	interface
String Length	0 to 32
Notes	The following elements are part of a choice: (interface , next-hop , and swap-label) or pop .
Introduced	16.0.R1
Platforms	All

next-hop (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the next hop
Context	configure router <i>string</i> ldp fec-originate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) next-hop (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	next-hop
Notes	The following elements are part of a choice: (interface , next-hop , and swap-label) or pop .
Introduced	16.0.R1
Platforms	All

pop *boolean*

Synopsis	Pop the label and transmit without the label
Context	configure router <i>string</i> ldp fec-originate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) pop <i>boolean</i>
Tree	pop

Notes	The following elements are part of a choice: (interface , next-hop , and swap-label) or pop .
Introduced	16.0.R1
Platforms	All

swap-label *number*

Synopsis	Value mapped to egress label associated with next-hop entry that LSR uses to swap incoming label
Context	configure router <i>string</i> ldp fec-originate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) swap-label <i>number</i>
Tree	swap-label
Range	6 to 1048575
Notes	The following elements are part of a choice: (interface , next-hop , and swap-label) or pop .
Introduced	16.0.R1
Platforms	All

generate-basic-fec-only *boolean*

Synopsis	Enable mLDP to generate a basic FEC
Context	configure router <i>string</i> ldp generate-basic-fec-only <i>boolean</i>
Tree	generate-basic-fec-only
Default	false
Introduced	16.0.R1
Platforms	All

graceful-restart

Synopsis	Enter the graceful-restart context
Context	configure router <i>string</i> ldp graceful-restart
Tree	graceful-restart
Introduced	16.0.R1
Platforms	All

helper-mode *boolean*

Synopsis	Enable graceful restart helper
Context	configure router <i>string</i> ldp graceful-restart helper-mode <i>boolean</i>
Tree	helper-mode
Default	false
Introduced	16.0.R1
Platforms	All

maximum-recovery-time *number*

Synopsis	Value for the local maximum recovery time
Context	configure router <i>string</i> ldp graceful-restart maximum-recovery-time <i>number</i>
Tree	maximum-recovery-time
Range	15 to 1800
Units	seconds
Default	120
Introduced	16.0.R1
Platforms	All

neighbor-liveness-time *number*

Synopsis	Value for the neighbor liveness timer
Context	configure router <i>string</i> ldp graceful-restart neighbor-liveness-time <i>number</i>
Tree	neighbor-liveness-time
Range	5 to 300
Units	seconds
Default	120
Introduced	16.0.R1
Platforms	All

implicit-null-label *boolean*

Synopsis	Signal the implicit null label value for all LDP FECs for which the node is the egress LER
Context	configure router <i>string</i> ldp implicit-null-label <i>boolean</i>
Tree	implicit-null-label

Default	false
Introduced	16.0.R1
Platforms	All

import-mcast-policy *reference*

Synopsis	Import policy for mLDP FECs arriving on the node
Context	configure router <i>string</i> ldp import-mcast-policy <i>reference</i>
Tree	import-mcast-policy
Reference	configure policy-options policy-statement <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	19.5.R1
Platforms	All

import-pmsi-routes

Synopsis	Enter the import-pmsi-routes context
Context	configure router <i>string</i> ldp import-pmsi-routes
Tree	import-pmsi-routes
Introduced	19.5.R1
Platforms	All

mvpn *boolean*

Synopsis	Import BGP MVPN inter-AS routes
Context	configure router <i>string</i> ldp import-pmsi-routes mvpn <i>boolean</i>
Tree	mvpn
Default	false
Introduced	19.5.R1
Platforms	All

mvpn-no-export-community *boolean*

Synopsis	Import BGP MVPN intra-AS routes
Context	configure router <i>string</i> ldp import-pmsi-routes mvpn-no-export-community <i>boolean</i>
Tree	mvpn-no-export-community
Default	false
Introduced	19.5.R1
Platforms	All

import-policy *reference*

Synopsis	Import policies to filter LDP label bindings received from LDP peers
Context	configure router <i>string</i> ldp import-policy <i>reference</i>
Tree	import-policy
Reference	configure policy-options policy-statement <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

import-tunnel-table *reference*

Synopsis	Tunnel table import policies for non-host prefixes
Context	configure router <i>string</i> ldp import-tunnel-table <i>reference</i>
Tree	import-tunnel-table
Reference	configure policy-options policy-statement <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

interface-parameters

Synopsis	Enter the interface-parameters context
----------	---

Context	configure router <i>string</i> ldp interface-parameters
Tree	interface-parameters
Introduced	16.0.R1
Platforms	All

interface [\[ip-int-name\]](#) *reference*

Synopsis	Enter the interface list instance
Context	configure router <i>string</i> ldp interface-parameters interface <i>reference</i>
Tree	interface
Introduced	16.0.R1
Platforms	All

[ip-int-name] *reference*

Synopsis	Interface name
Context	configure router <i>string</i> ldp interface-parameters interface <i>reference</i>
Tree	interface
Reference	configure router <i>string</i> interface <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the LDP interface
Context	configure router <i>string</i> ldp interface-parameters interface <i>reference</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

bfd-liveness

Synopsis	Enter the bfd-liveness context
Context	configure router <i>string</i> ldp interface-parameters interface <i>reference</i> bfd-liveness
Tree	bfd-liveness
Introduced	16.0.R1
Platforms	All

ipv4 *boolean*

Synopsis	Allow BFD tracking of IPv4 LDP Session for interface
Context	configure router <i>string</i> ldp interface-parameters interface <i>reference</i> bfd-liveness ipv4 <i>boolean</i>
Tree	ipv4
Default	false
Introduced	16.0.R1
Platforms	All

ipv6 *boolean*

Synopsis	Allow BFD tracking of IPv6 LDP session for interface
Context	configure router <i>string</i> ldp interface-parameters interface <i>reference</i> bfd-liveness ipv6 <i>boolean</i>
Tree	ipv6
Default	false
Introduced	16.0.R1
Platforms	All

ipv4

Synopsis	Enable the ipv4 context
Context	configure router <i>string</i> ldp interface-parameters interface <i>reference</i> ipv4
Tree	ipv4
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the LDP interface
Context	configure router <i>string</i> ldp interface-parameters interface <i>reference</i> ipv4 admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

fec-type-capability

Synopsis	Enter the fec-type-capability context
Context	configure router <i>string</i> ldp interface-parameters interface <i>reference</i> ipv4 fec-type-capability
Tree	fec-type-capability
Introduced	16.0.R1
Platforms	All

p2mp-ipv4 *boolean*

Synopsis	Enable IPv4 P2MP FEC capability
Context	configure router <i>string</i> ldp interface-parameters interface <i>reference</i> ipv4 fec-type-capability p2mp-ipv4 <i>boolean</i>
Tree	p2mp-ipv4
Default	true
Introduced	16.0.R1
Platforms	All

p2mp-ipv6 *boolean*

Synopsis	Enable IPv6 P2MP FEC capability
Context	configure router <i>string</i> ldp interface-parameters interface <i>reference</i> ipv4 fec-type-capability p2mp-ipv6 <i>boolean</i>
Tree	p2mp-ipv6
Default	true

Introduced 16.0.R1
 Platforms All

prefix-ipv4 *boolean*

Synopsis Enable IPv4 prefix FEC capability
 Context **configure** [router](#) [string](#) [ldp](#) [interface-parameters](#) [interface](#) [reference](#) [ipv4](#) [fec-type-capability](#) [prefix-ipv4](#) *boolean*
 Tree [prefix-ipv4](#)
 Default true
 Introduced 16.0.R1
 Platforms All

prefix-ipv6 *boolean*

Synopsis Enable IPv6 prefix FEC capability
 Context **configure** [router](#) [string](#) [ldp](#) [interface-parameters](#) [interface](#) [reference](#) [ipv4](#) [fec-type-capability](#) [prefix-ipv6](#) *boolean*
 Tree [prefix-ipv6](#)
 Default true
 Introduced 16.0.R1
 Platforms All

hello

Synopsis Enable the **hello** context
 Context **configure** [router](#) [string](#) [ldp](#) [interface-parameters](#) [interface](#) [reference](#) [ipv4](#) [hello](#)
 Tree [hello](#)
 Introduced 16.0.R1
 Platforms All

factor *number*

Synopsis Factor value for Hello
 Context **configure** [router](#) [string](#) [ldp](#) [interface-parameters](#) [interface](#) [reference](#) [ipv4](#) [hello](#) [factor](#) *number*

Tree	factor
Range	1 to 255
Introduced	16.0.R1
Platforms	All

timeout *number*

Synopsis	Timeout value for Hello
Context	configure router string ldp interface-parameters interface reference ipv4 hello timeout number
Tree	timeout
Range	3 to 65535
Units	seconds
Introduced	16.0.R1
Platforms	All

keepalive

Synopsis	Enable the keepalive context
Context	configure router string ldp interface-parameters interface reference ipv4 keepalive
Tree	keepalive
Introduced	16.0.R1
Platforms	All

factor *number*

Synopsis	Factor value for keepalive
Context	configure router string ldp interface-parameters interface reference ipv4 keepalive factor number
Tree	factor
Range	1 to 255
Introduced	16.0.R1
Platforms	All

timeout *number*

Synopsis	Time that LDP waits before tearing down session
Context	configure router <i>string</i> ldp interface-parameters interface reference ipv4 keepalive timeout <i>number</i>
Tree	timeout
Range	3 to 65535
Units	seconds
Introduced	16.0.R1
Platforms	All

local-lsr-id

Synopsis	Enter the local-lsr-id context
Context	configure router <i>string</i> ldp interface-parameters interface reference ipv4 local-lsr-id
Tree	local-lsr-id
Introduced	16.0.R1
Platforms	All

interface-name *reference*

Synopsis	Name of network IP interface from which to obtain IP address to use as LSR-ID of LDP LSP
Context	configure router <i>string</i> ldp interface-parameters interface reference ipv4 local-lsr-id interface-name <i>reference</i>
Tree	interface-name
Reference	configure router <i>string</i> interface <i>string</i>
Introduced	16.0.R1
Platforms	All

transport-address *keyword*

Synopsis	Transport address to set up the LDP TCP sessions
Context	configure router <i>string</i> ldp interface-parameters interface reference ipv4 transport-address <i>keyword</i>
Tree	transport-address
Options	interface, system

Introduced	16.0.R1
Platforms	All

ipv6

Synopsis	Enable the ipv6 context
Context	configure router <i>string</i> ldp interface-parameters interface <i>reference</i> ipv6
Tree	ipv6
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the LDP interface
Context	configure router <i>string</i> ldp interface-parameters interface <i>reference</i> ipv6 admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

fec-type-capability

Synopsis	Enter the fec-type-capability context
Context	configure router <i>string</i> ldp interface-parameters interface <i>reference</i> ipv6 fec-type-capability
Tree	fec-type-capability
Introduced	16.0.R1
Platforms	All

p2mp-ipv4 *boolean*

Synopsis	Enable IPv4 P2MP FEC capability
Context	configure router <i>string</i> ldp interface-parameters interface <i>reference</i> ipv6 fec-type-capability p2mp-ipv4 <i>boolean</i>

Tree	p2mp-ipv4
Default	true
Introduced	16.0.R1
Platforms	All

p2mp-ipv6 *boolean*

Synopsis	Enable IPv6 P2MP FEC capability
Context	configure router string ldp interface-parameters interface reference ipv6 fec-type-capability p2mp-ipv6 <i>boolean</i>
Tree	p2mp-ipv6
Default	true
Introduced	16.0.R1
Platforms	All

prefix-ipv4 *boolean*

Synopsis	Enable IPv4 prefix FEC capability
Context	configure router string ldp interface-parameters interface reference ipv6 fec-type-capability prefix-ipv4 <i>boolean</i>
Tree	prefix-ipv4
Default	true
Introduced	16.0.R1
Platforms	All

prefix-ipv6 *boolean*

Synopsis	Enable IPv6 prefix FEC capability
Context	configure router string ldp interface-parameters interface reference ipv6 fec-type-capability prefix-ipv6 <i>boolean</i>
Tree	prefix-ipv6
Default	true
Introduced	16.0.R1
Platforms	All

hello

Synopsis	Enable the hello context
Context	configure router string ldp interface-parameters interface reference ipv6 hello
Tree	hello
Introduced	16.0.R1
Platforms	All

factor *number*

Synopsis	Factor value for Hello
Context	configure router string ldp interface-parameters interface reference ipv6 hello factor number
Tree	factor
Range	1 to 255
Introduced	16.0.R1
Platforms	All

timeout *number*

Synopsis	Timeout value for Hello
Context	configure router string ldp interface-parameters interface reference ipv6 hello timeout number
Tree	timeout
Range	3 to 65535
Units	seconds
Introduced	16.0.R1
Platforms	All

keepalive

Synopsis	Enable the keepalive context
Context	configure router string ldp interface-parameters interface reference ipv6 keepalive
Tree	keepalive
Introduced	16.0.R1
Platforms	All

factor number

Synopsis	Factor value for keepalive
Context	configure router <i>string</i> ldp interface-parameters interface <i>reference</i> ipv6 keepalive <i>factor number</i>
Tree	factor
Range	1 to 255
Introduced	16.0.R1
Platforms	All

timeout number

Synopsis	Time that LDP waits before tearing down session
Context	configure router <i>string</i> ldp interface-parameters interface <i>reference</i> ipv6 keepalive <i>timeout number</i>
Tree	timeout
Range	3 to 65535
Units	seconds
Introduced	16.0.R1
Platforms	All

local-lsr-id

Synopsis	Enter the local-lsr-id context
Context	configure router <i>string</i> ldp interface-parameters interface <i>reference</i> ipv6 local-lsr-id
Tree	local-lsr-id
Introduced	16.0.R1
Platforms	All

format-32bit boolean

Synopsis	Use IPv4 address of local LSR-ID interface as LSR-ID of the LDP LSR
Context	configure router <i>string</i> ldp interface-parameters interface <i>reference</i> ipv6 local-lsr-id <i>format-32bit boolean</i>
Tree	format-32bit
Default	false

Introduced 16.0.R1
 Platforms All

interface-name *reference*

Synopsis Name of network IP interface from which to obtain IP address to use as LSR-ID of LDP LSP

Context **configure** **router** *string* **ldp** **interface-parameters** **interface** *reference* **ipv6** **local-lsr-id** **interface-name** *reference*

Tree **interface-name**

Reference **configure** **router** *string* **interface** *string*

Introduced 16.0.R1
 Platforms All

transport-address *keyword*

Synopsis Transport address to set up the LDP TCP sessions

Context **configure** **router** *string* **ldp** **interface-parameters** **interface** *reference* **ipv6** **transport-address** *keyword*

Tree **transport-address**

Options interface, system

Introduced 16.0.R1
 Platforms All

load-balancing-weight *number*

Synopsis Load balancing weight for the LDP interface

Context **configure** **router** *string* **ldp** **interface-parameters** **interface** *reference* **load-balancing-weight** *number*

Tree **load-balancing-weight**

Max. Range 0 to 4294967295

Introduced 20.2.R1
 Platforms All

ipv4

Synopsis	Enter the ipv4 context
Context	configure router <i>string</i> ldp interface-parameters ipv4
Tree	ipv4
Introduced	16.0.R1
Platforms	All

hello

Synopsis	Enter the hello context
Context	configure router <i>string</i> ldp interface-parameters ipv4 hello
Tree	hello
Introduced	16.0.R1
Platforms	All

factor *number*

Synopsis	Value for the Hello factor
Context	configure router <i>string</i> ldp interface-parameters ipv4 hello factor <i>number</i>
Tree	factor
Range	1 to 255
Default	3
Introduced	16.0.R1
Platforms	All

timeout *number*

Synopsis	Timeout value for Hello
Context	configure router <i>string</i> ldp interface-parameters ipv4 hello timeout <i>number</i>
Tree	timeout
Range	3 to 65535
Units	seconds
Default	15
Introduced	16.0.R1
Platforms	All

keepalive

Synopsis	Enter the keepalive context
Context	configure <i>router string ldp interface-parameters ipv4 keepalive</i>
Tree	keepalive
Introduced	16.0.R1
Platforms	All

factor *number*

Synopsis	Value for the keep-alive factor
Context	configure <i>router string ldp interface-parameters ipv4 keepalive factor number</i>
Tree	factor
Range	1 to 255
Default	3
Introduced	16.0.R1
Platforms	All

timeout *number*

Synopsis	Timeout value for keepalive
Context	configure <i>router string ldp interface-parameters ipv4 keepalive timeout number</i>
Tree	timeout
Range	3 to 65535
Units	seconds
Default	30
Introduced	16.0.R1
Platforms	All

transport-address *keyword*

Synopsis	Transport address to set up the LDP TCP sessions
Context	configure <i>router string ldp interface-parameters ipv4 transport-address keyword</i>
Tree	transport-address
Options	interface, system

Default	system
Introduced	16.0.R1
Platforms	All

ipv6

Synopsis	Enter the ipv6 context
Context	configure router string ldp interface-parameters ipv6
Tree	ipv6
Introduced	16.0.R1
Platforms	All

hello

Synopsis	Enter the hello context
Context	configure router string ldp interface-parameters ipv6 hello
Tree	hello
Introduced	16.0.R1
Platforms	All

factor *number*

Synopsis	Value for the Hello factor
Context	configure router string ldp interface-parameters ipv6 hello factor <i>number</i>
Tree	factor
Range	1 to 255
Default	3
Introduced	16.0.R1
Platforms	All

timeout *number*

Synopsis	Timeout value for Hello
Context	configure router string ldp interface-parameters ipv6 hello timeout <i>number</i>
Tree	timeout

Range	3 to 65535
Units	seconds
Default	15
Introduced	16.0.R1
Platforms	All

keepalive

Synopsis	Enter the keepalive context
Context	configure router <i>string</i> ldp interface-parameters ipv6 keepalive
Tree	keepalive
Introduced	16.0.R1
Platforms	All

factor *number*

Synopsis	Value for the keep-alive factor
Context	configure router <i>string</i> ldp interface-parameters ipv6 keepalive factor <i>number</i>
Tree	factor
Range	1 to 255
Default	3
Introduced	16.0.R1
Platforms	All

timeout *number*

Synopsis	Timeout value for keepalive
Context	configure router <i>string</i> ldp interface-parameters ipv6 keepalive timeout <i>number</i>
Tree	timeout
Range	3 to 65535
Units	seconds
Default	30
Introduced	16.0.R1
Platforms	All

transport-address *keyword*

Synopsis	Transport address to set up the LDP TCP sessions
Context	configure <i>router string ldp interface-parameters ipv6 transport-address keyword</i>
Tree	transport-address
Options	interface, system
Default	system
Introduced	16.0.R1
Platforms	All

label-withdrawal-delay *number*

Synopsis	Time interval during which LDP delays for the withdrawal of FEC-label binding
Context	configure <i>router string ldp label-withdrawal-delay number</i>
Tree	label-withdrawal-delay
Range	3 to 120
Units	seconds
Introduced	16.0.R1
Platforms	All

ldp-shortcut

Synopsis	Enter the ldp-shortcut context
Context	configure <i>router string ldp ldp-shortcut</i>
Tree	ldp-shortcut
Introduced	16.0.R1
Platforms	All

ipv4 *boolean*

Synopsis	Forward IPv4 packets by using LDP shortcuts
Context	configure <i>router string ldp ldp-shortcut ipv4 boolean</i>
Tree	ipv4
Default	false
Introduced	16.0.R1

Platforms All

ipv6 *boolean*

Synopsis Forward IPv6 packets by using LDP shortcuts
 Context **configure** *router* *string* *ldp* *ldp-shortcut* *ipv6* *boolean*
 Tree [ipv6](#)
 Default false
 Introduced 16.0.R1
 Platforms All

legacy-ipv4-lsr-interop *boolean*

Synopsis Allow interoperability with legacy IPv4 LSR implementations
 Context **configure** *router* *string* *ldp* *legacy-ipv4-lsr-interop* *boolean*
 Tree [legacy-ipv4-lsr-interop](#)
 Default false
 Introduced 16.0.R1
 Platforms All

lsp-bfd [[prefix-list](#)] *reference*

Synopsis Enter the **lsp-bfd** list instance
 Context **configure** *router* *string* *ldp* *lsp-bfd* *reference*
 Tree [lsp-bfd](#)
 Max. Instances 16
 Introduced 16.0.R1
 Platforms All

[[prefix-list](#)] *reference*

Synopsis Name of a router policy options prefix list
 Context **configure** *router* *string* *ldp* *lsp-bfd* *reference*
 Tree [lsp-bfd](#)

Reference	configure policy-options prefix-list <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

bfd-liveness *boolean*

Synopsis	Enable BFD on LDP LSPs with FECs that match the prefix list
Context	configure router <i>string</i> ldp lsp-bfd <i>reference</i> bfd-liveness <i>boolean</i>
Tree	bfd-liveness
Default	false
Introduced	16.0.R1
Platforms	All

bfd-template *reference*

Synopsis	BFD template to apply to BFD sessions associated with the prefix list
Context	configure router <i>string</i> ldp lsp-bfd <i>reference</i> bfd-template <i>reference</i>
Tree	bfd-template
Reference	configure bfd bfd-template <i>string</i>
Introduced	16.0.R1
Platforms	All

failure-action *keyword*

Synopsis	Reaction to BFD session failure for the prefix list
Context	configure router <i>string</i> ldp lsp-bfd <i>reference</i> failure-action <i>keyword</i>
Tree	failure-action
Options	down
Introduced	16.0.R1
Platforms	All

lsp-ping-interval (*number* | *keyword*)

Synopsis	LSP ping transmit interval for periodic verification
----------	--

Context	configure router <i>string ldp lsp-bfd reference lsp-ping-interval (number keyword)</i>
Tree	lsp-ping-interval
Range	60 to 300
Units	seconds
Options	none
Default	60
Introduced	16.0.R1
Platforms	All

priority *number*

Synopsis	Prefix list to control the search order
Context	configure router <i>string ldp lsp-bfd reference priority number</i>
Tree	priority
Range	1 to 99
Default	1
Introduced	16.0.R1
Platforms	All

source-address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Source address in LSP ping packets and BFD control packets associated with prefix list
Context	configure router <i>string ldp lsp-bfd reference source-address (ipv4-address-no-zone ipv6-address-no-zone)</i>
Tree	source-address
Introduced	16.0.R1
Platforms	All

max-ecmp-routes *number*

Synopsis	Maximum ECMP value for LDP
Context	configure router <i>string ldp max-ecmp-routes number</i>
Tree	max-ecmp-routes
Description	This command sets the maximum number of ECMP routes that LDP may use to resolve the next hop for a FEC as permitted by the RTM or TTM.

The system-wide maximum number of ECMP routes is set by the **configure router ecmp** command; therefore, the operational maximum number used by LDP is set to the lesser of the values configured by this command and the **configure router ecmp** command.

Range	1 to 64
Default	32
Introduced	19.10.R1
Platforms	All

mcast-upstream-asbr-frr *boolean*

Synopsis	Enable ASBR MoFRR to allow local leaf to perform MoFRR for multiple ASBRs
Context	configure router <i>string</i> ldp mcast-upstream-asbr-frr <i>boolean</i>
Tree	mcast-upstream-asbr-frr
Default	false
Introduced	16.0.R1
Platforms	All

mcast-upstream-frr *boolean*

Synopsis	Use fast upstream switchover for mLDP FECs
Context	configure router <i>string</i> ldp mcast-upstream-frr <i>boolean</i>
Tree	mcast-upstream-frr
Default	false
Introduced	16.0.R1
Platforms	All

mp-mbb-time *number*

Synopsis	MP MBB time
Context	configure router <i>string</i> ldp mp-mbb-time <i>number</i>
Tree	mp-mbb-time
Range	0 to 10
Units	seconds
Default	3
Introduced	16.0.R1

Platforms All

prefer-mcast-tunnel-in-tunnel *boolean*

Synopsis Use T-LDP session to the peer for FEC resolution

Context **configure** *router string ldp prefer-mcast-tunnel-in-tunnel boolean*

Tree [prefer-mcast-tunnel-in-tunnel](#)

Default true

Introduced 21.2.R1

Platforms All

prefer-protocol-stitching *boolean*

Synopsis Stitch LDP ILM to SR NHLFE even if LDP NHLFE exists

Context **configure** *router string ldp prefer-protocol-stitching boolean*

Tree [prefer-protocol-stitching](#)

Description When configured to **true**, an LDP ILM stitches to an SR NHLFE, even if an LDP NHLFE exists.
When configured to **false**, the stitching preference of an LDP ILM is to an LDP NHLFE.

Default false

Introduced 21.7.R1

Platforms All

prefer-tunnel-in-tunnel *boolean*

Synopsis Preference tunnel-in-tunnel over a simple LDP tunnel

Context **configure** *router string ldp prefer-tunnel-in-tunnel boolean*

Tree [prefer-tunnel-in-tunnel](#)

Default true

Introduced 16.0.R1

Platforms All

resolve-root-using *keyword*

Synopsis Resolution route table for multicast FECs

Context	configure <i>router</i> <i>string</i> <i>ldp</i> <i>resolve-root-using</i> <i>keyword</i>
Tree	resolve-root-using
Options	ucast-rtm, mcast-rtm
Default	ucast-rtm
Introduced	16.0.R1
Platforms	All

session-parameters

Synopsis	Enter the session-parameters context

export-prefixes *reference*

Synopsis	Export policies to determine which FEC prefixes are redistributed to LDP and TLDP peers
Context	configure router <i>string</i> ldp session-parameters peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) export-prefixes <i>reference</i>
Tree	export-prefixes
Reference	configure policy-options policy-statement <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

fec-limit

Synopsis	Enter the fec-limit context
Context	configure router <i>string</i> ldp session-parameters peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) fec-limit
Tree	fec-limit

Introduced	16.0.R1
Platforms	All

limit *number*

Synopsis	Maximum number of FECs to be accepted from this peer LSR
Context	configure router <i>string</i> ldp session-parameters peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) fec-limit limit <i>number</i>
Tree	limit
Range	0 1 to 4294967295
Default	0
Introduced	16.0.R1
Platforms	All

log-only *boolean*

Synopsis	Trap and syslog message to generate when reaching the threshold and limit
Context	configure router <i>string</i> ldp session-parameters peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) fec-limit log-only <i>boolean</i>
Tree	log-only
Default	false
Introduced	16.0.R1
Platforms	All

threshold *number*

Synopsis	Threshold that generates trap and warning when reached
Context	configure router <i>string</i> ldp session-parameters peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) fec-limit threshold <i>number</i>
Tree	threshold
Range	1 to 100
Default	90
Introduced	16.0.R1
Platforms	All

fec-type-capability

Synopsis	Enter the fec-type-capability context
Context	configure router <i>string</i> ldp session-parameters peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) fec-type-capability
Tree	fec-type-capability
Introduced	16.0.R1
Platforms	All

p2mp *boolean*

Synopsis	Enable P2MP FEC capability for the session
Context	configure router <i>string</i> ldp session-parameters peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) fec-type-capability p2mp <i>boolean</i>
Tree	p2mp
Default	true
Introduced	16.0.R1
Platforms	All

prefix-ipv4 *boolean*

Synopsis	Enable IPv4 prefix FEC capability for the session
Context	configure router <i>string</i> ldp session-parameters peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) fec-type-capability prefix-ipv4 <i>boolean</i>
Tree	prefix-ipv4
Default	true
Introduced	16.0.R1
Platforms	All

prefix-ipv6 *boolean*

Synopsis	Enable IPv6 prefix FEC capability
Context	configure router <i>string</i> ldp session-parameters peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) fec-type-capability prefix-ipv6 <i>boolean</i>
Tree	prefix-ipv6
Default	true
Introduced	16.0.R1

Platforms All

fec129-cisco-interop *boolean*

Synopsis Allow translation between non-compliant FEC 129 formats of Cisco

Context **configure** **router** *string* **ldp session-parameters peer** (*ipv4-address-no-zone | ipv6-address-no-zone*) **fec129-cisco-interop** *boolean*

tcp-session-parameters

Synopsis	Enter the tcp-session-parameters context
Context	configure router <i>string</i> ldp tcp-session-parameters
Tree	tcp-session-parameters
Introduced	16.0.R1
Platforms	All

authentication-key *string*

Synopsis	Authentication key between LDP peers
Context	configure router <i>string</i> ldp tcp-session-parameters authentication-key <i>string</i>
Tree	authentication-key
Description	This command specifies the authentication key used to establish a session between LDP peers.

Authentication uses the MD-5 message-based digest. The peer address used in authentication must be the TCP session transport address. If one or more transport addresses used in the Hello adjacencies to the same peer LSR are different from the LSR ID value, the user must add each transport address to the authentication key configuration as a separate peer. As a result, when the TCP connection is bootstrapped by a specific Hello adjacency, the authentication can operate over that TCP connection by using its specific transport address.

The per-peer authentication configuration takes precedence over global authentication configuration, and authentication keychain configuration takes precedence over authentication key configuration.

String Length	1 to 370
Introduced	21.2.R1
Platforms	All

authentication-keychain *reference*

Synopsis	Authentication keychain to use for the TCP session
Context	configure router <i>string</i> ldp tcp-session-parameters authentication-keychain <i>reference</i>
Tree	authentication-keychain
Description	This command configures the authentication keychain to use for the TCP session. The per-peer authentication configuration takes precedence over the global authentication configuration.
Reference	configure system security keychains keychain <i>string</i>
Introduced	21.2.R1

Introduced	16.0.R1
Platforms	All

tunnel-table-pref *number*

Synopsis	Tunnel table preference value for address FECs
Context	configure <i>router string ldp tunnel-table-pref number</i>
Tree	tunnel-table-pref
Description	<p>This command configures the tunnel table preference for an LDP tunnel type.</p> <p>The tunnel table preference applies to next-hop resolution of BGP routes for: EVPN, IPv4, IPv6, VPN-IPv4, VPN-IPv6, label-IPv4, and label-IPV6 in the tunnel table.</p> <p>This feature does not apply to a VPRN, VPLS, or VLL service with explicit binding to an SDP that enabled the mixed-lsp-mode option. The service manager controls and fixes the tunnel preference in such an SDP. The tunnel table preference configuration does not modify the SDP behavior, nor the services that bind to it.</p> <p>It is recommended to not set two or more tunnel types to the same preference value. In such a situation, the tunnel table prefers the tunnel type which was first introduced in SR OS implementation historically.</p>
Range	1 to 255
Default	9
Introduced	21.10.R1
Platforms	All

weighted-ecmp *boolean*

Synopsis	Allow weighted ECMP load-balancing
Context	configure <i>router string ldp weighted-ecmp boolean</i>
Tree	weighted-ecmp
Description	<p>When configured to true, the system allows weighted ECMP on LDP using RSVP LSPs or SR-TE LSPs. LDP labeled packets are sprayed across the RSVP or SR-TE LSP ECMP set in proportion to the configured load-balancing weight of LSPs.</p> <p>When configured to false, the system removes weighted ECMP load-balancing.</p>
Default	false
Introduced	16.0.R1

policy *reference*

Synopsis	Multicast CAC policy name
Context	configure router <i>string</i> mld forwarding-group-interface forwarding-service <i>string</i> group-interface-name <i>reference</i> mcac policy <i>reference</i>
Tree	policy
Description	<p>This command configures the name of the global channel bandwidth definition policy that is used for (H)MCAC and HQoS adjustment.</p> <p>Within the scope of HQoS adjustment, the channel definition policy under the group interface is used if redirection is unconfigured. In this case, the HQoS adjustment can be applied to IPE subscribers in per-SAP replication mode.</p>

If redirection is configured, the channel bandwidth definition policy applied under the Layer 3 redirected interface is in effect.

Hierarchical MCAC (HMCAC) is supported on two levels simultaneously:

- subscriber level and redirected interface when redirection is configured
- subscriber level and group-interface level when redirection is unconfigured

In HMCAC, the subscriber is checked against its bandwidth limits first, then against the bandwidth limits of the redirected or group interface. If redirection is configured but the policy is referenced only under the group interface, no admission control is executed (HMCAC or MCAC).

Reference	configure mcac policy <i>string</i>
Introduced	21.7.R1

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state keyword

Synopsis	Administrative state of the MLD interface
Context	configure router <i>string</i> mld group-interface <i>reference</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

import-policy reference

Synopsis	Import policy to filter MLD packets
Context	configure router <i>string</i> mld group-interface <i>reference</i> import-policy <i>reference</i>
Tree	import-policy
Reference	configure policy-options policy-statement <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

maximum-number-group-sources number

Synopsis	Maximum number of group sources for this interface
Context	configure router <i>string</i> mld group-interface <i>reference</i> maximum-number-group-sources <i>number</i>
Tree	maximum-number-group-sources

Description	This command configures the maximum number of group sources for which IGMP or MLD can have local receiver information based on received IGMP or MLD reports on this interface. When this configuration is changed dynamically to a lower value than the currently accepted number of group sources, the group sources that are already accepted are not deleted. Only new group sources are not allowed.
Range	1 to 32000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

maximum-number-groups *number*

Synopsis	Maximum number of groups for this interface
Context	configure <i>router string mld group-interface reference</i> maximum-number-groups <i>number</i>
Tree	maximum-number-groups
Range	1 to 16000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

maximum-number-sources *number*

Synopsis	Maximum number of sources that are allowed per group
Context	configure <i>router string mld group-interface reference</i> maximum-number-sources <i>number</i>
Tree	maximum-number-sources
Range	1 to 1000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mcac

Synopsis	Enter the mcac context
Context	configure <i>router string mld group-interface reference</i> mcac
Tree	mcac
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

bandwidth

Synopsis	Enter the bandwidth context
Context	configure router <i>string</i> mld group-interface reference mcac bandwidth
Tree	bandwidth
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mandatory (*number* | *keyword*)

Synopsis	Pre-reserved bandwidth for all mandatory channels
Context	configure router <i>string</i> mld group-interface reference mcac bandwidth mandatory (<i>number</i> <i>keyword</i>)
Tree	mandatory
Range	0 to 2147483647
Options	unlimited
Default	unlimited
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

total (*number* | *keyword*)

Synopsis	Maximum allowed bandwidth
Context	configure router <i>string</i> mld group-interface reference mcac bandwidth total (<i>number</i> <i>keyword</i>)
Tree	total
Range	0 to 2147483647
Options	unlimited
Default	unlimited
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interface-policy *reference*

Synopsis	Name of multicast CAC interface policy
Context	configure router <i>string</i> mld group-interface reference mcac interface-policy <i>reference</i>

Tree	interface-policy
Reference	configure mcac interface-policy <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

policy reference

Synopsis	Multicast CAC policy name
Context	configure router <i>string</i> mld group-interface <i>reference mcac policy reference</i>
Tree	policy
Description	<p>This command configures the name of the global channel bandwidth definition policy that is used for (H)MCAC and HQoS adjustment.</p> <p>Within the scope of HQoS adjustment, the channel definition policy under the group interface is used if redirection is unconfigured. In this case, the HQoS adjustment can be applied to IPoE subscribers in per-SAP replication mode.</p> <p>If redirection is configured, the channel bandwidth definition policy applied under the Layer 3 redirected interface is in effect.</p> <p>Hierarchical MCAC (HMCAC) is supported on two levels simultaneously:</p> <ul style="list-style-type: none"> • subscriber level and redirected interface when redirection is configured • subscriber level and group-interface level when redirection is unconfigured <p>In HMCAC, the subscriber is checked against its bandwidth limits first, then against the bandwidth limits of the redirected or group interface. If redirection is configured but the policy is referenced only under the group interface, no admission control is executed (HMCAC or MCAC).</p>
Reference	configure mcac policy <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

query-interval number

Synopsis	Time between two consecutive host-query messages
Context	configure router <i>string</i> mld group-interface <i>reference query-interval number</i>
Tree	query-interval
Range	2 to 1024
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

query-last-member-interval *number*

Synopsis	Time between group-specific query messages
Context	configure router <i>string</i> mld group-interface <i>reference</i> query-last-member-interval <i>number</i>
Tree	query-last-member-interval
Range	1 to 1023
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

query-response-interval *number*

Synopsis	Time to wait for a response to the host-query messages
Context	configure router <i>string</i> mld group-interface <i>reference</i> query-response-interval <i>number</i>
Tree	query-response-interval
Range	1 to 1023
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

query-source-address *string*

Synopsis	Source address for MLD queries
Context	configure router <i>string</i> mld group-interface <i>reference</i> query-source-address <i>string</i>
Tree	query-source-address
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

router-alert-check *boolean*

Synopsis	Enable router alert checking for IGMP or MLD messages
Context	configure router <i>string</i> mld group-interface <i>reference</i> router-alert-check <i>boolean</i>
Tree	router-alert-check
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sub-hosts-only *boolean*

Synopsis	Allow MLD traffic from known hosts only
Context	configure router <i>string</i> mld group-interface <i>reference</i> sub-hosts-only <i>boolean</i>
Tree	sub-hosts-only
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

subnet-check *boolean*

Synopsis	Enable subnet checking
Context	configure router <i>string</i> mld group-interface <i>reference</i> subnet-check <i>boolean</i>
Tree	subnet-check
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

version *keyword*

Synopsis	MLD protocol version
Context	configure router <i>string</i> mld group-interface <i>reference</i> version <i>keyword</i>
Tree	version
Options	1, 2
Default	2
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interface [*ip-interface-name*] *string*

Default	false
Notes	The following elements are part of a choice: one-hop or policy .
Introduced	16.0.R1
Platforms	All

policy reference

Synopsis	Peer prefix policy name
Context	configure router <i>string</i> mpls auto-lsp <i>reference</i> policy <i>reference</i>
Tree	policy
Reference	configure policy-options policy-statement <i>string</i>
Max. Instances	5
Notes	The following elements are part of a choice: one-hop or policy . This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

aux-stats

Synopsis	Enable the aux-stats context
Context	configure router <i>string</i> mpls aux-stats
Tree	aux-stats
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-s, 7950 XRS, VSR

sr boolean

Synopsis	Traffic type count in MPLS statistics table
Context	configure router <i>string</i> mpls aux-stats sr <i>boolean</i>
Tree	sr
Description	This command configures the type of traffic to count in the auxiliary MPLS statistics table. It refers to any type of segment routing traffic (SR-OSPF, SR-ISIS, SR-TE, and so on).
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-s, 7950 XRS, VSR

bypass-resignal-timer number

Synopsis	Resignal timer for bypass
Context	configure router <i>string</i> mpls bypass-resignal-timer <i>number</i>
Tree	bypass-resignal-timer
Range	1 to 10080
Units	minutes
Introduced	16.0.R1
Platforms	All

class-forwarding-policy [policy-name] string

Synopsis	Enter the class-forwarding-policy list instance
Context	configure router <i>string</i> mpls class-forwarding-policy <i>string</i>
Tree	class-forwarding-policy
Max. Instances	15

Introduced 16.0.R1
 Platforms All

[policy-name] *string*

Synopsis Name of class forwarding policy
 Context **configure** **router** *string* **mpls class-forwarding-policy** *string*
 Tree **class-forwarding-policy**
 String Length 1 to 32
 Notes This element is part of a list key.
 Introduced 16.0.R1
 Platforms All

default-set *number*

Synopsis Default forwarding set ID
 Context **configure** **router** *string* **mpls class-forwarding-policy** *string* **default-set** *number*
 Tree **default-set**
 Range 1 to 6
 Default 1
 Introduced 16.0.R1
 Platforms All

fc [**fc-name**] *keyword*

Synopsis Enter the **fc** list instance
 Context **configure** **router** *string* **mpls class-forwarding-policy** *string* **fc** *keyword*
 Tree **fc**
 Introduced 16.0.R1
 Platforms All

[fc-name] *keyword*

Synopsis Forwarding class name for LSP
 Context **configure** **router** *string* **mpls class-forwarding-policy** *string* **fc** *keyword*

Tree	fc
Options	be, l2, af, l1, h2, ef, h1, nc
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

forwarding-set *number*

Synopsis	Forwarding set ID for forwarding classes
Context	configure router <i>string</i> mpls class-forwarding-policy <i>string</i> fc <i>keyword</i> forwarding-set <i>number</i>
Tree	forwarding-set
Range	1 to 6
Default	1
Introduced	16.0.R1
Platforms	All

cspf-on-loose-hop *boolean*

Synopsis	Calculate CSPF until next loose hop on LSR
Context	configure router <i>string</i> mpls cspf-on-loose-hop <i>boolean</i>
Tree	cspf-on-loose-hop
Default	false
Introduced	16.0.R1
Platforms	All

dynamic-bypass *boolean*

Synopsis	Create dynamic bypass LSPs in FRR
Context	configure router <i>string</i> mpls dynamic-bypass <i>boolean</i>
Tree	dynamic-bypass
Default	true
Introduced	16.0.R1
Platforms	All

entropy-label

Synopsis	Enter the entropy-label context
Context	configure router <i>string</i> mpls entropy-label
Tree	entropy-label
Introduced	16.0.R1
Platforms	All

rsvp-te *boolean*

Synopsis	Apply entropy labels to RSVP-TE LSPs
Context	configure router <i>string</i> mpls entropy-label rsvp-te <i>boolean</i>
Tree	rsvp-te
Introduced	16.0.R1
Platforms	All

sr-te *boolean*

Synopsis	Apply entropy labels to SR-TE LSPs
Context	configure router <i>string</i> mpls entropy-label sr-te <i>boolean</i>
Tree	sr-te
Introduced	16.0.R1
Platforms	All

exponential-backoff-retry *boolean*

Synopsis	Use exponential back-off timer when retrying an LSP
Context	configure router <i>string</i> mpls exponential-backoff-retry <i>boolean</i>
Tree	exponential-backoff-retry
Default	false
Introduced	16.0.R1
Platforms	All

forwarding-policies

Synopsis	Enable the forwarding-policies context
----------	---

Context	configure router <i>string</i> mpls forwarding-policies
Tree	forwarding-policies
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of MPLS forwarding policies
Context	configure router <i>string</i> mpls forwarding-policies admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

forwarding-policy [[policy-name](#)] *string*

Synopsis	Enter the forwarding-policy list instance
Context	configure router <i>string</i> mpls forwarding-policies forwarding-policy <i>string</i>
Tree	forwarding-policy
Max. Instances	65536
Introduced	16.0.R1
Platforms	All

[policy-name] *string*

Synopsis	Forwarding policy name
Context	configure router <i>string</i> mpls forwarding-policies forwarding-policy <i>string</i>
Tree	forwarding-policy
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the MPLS forwarding policy
Context	configure router <i>string</i> mpls forwarding-policies forwarding-policy <i>string</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

binding-label *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Binding label
Context	configure router <i>string</i> mpls forwarding-policies forwarding-policy <i>string</i> binding-label <i>number</i>
Tree	binding-label
Range	32 to 1048575
Introduced	16.0.R1
Platforms	All

egress-statistics

Synopsis	Enable the egress-statistics context
Context	configure router <i>string</i> mpls forwarding-policies forwarding-policy <i>string</i> egress-statistics
Tree	egress-statistics
Introduced	19.7.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of egress or ingress statistics
----------	--

Context	configure router <i>string</i> mpls forwarding-policies forwarding-policy <i>string</i> egress-statistics admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	19.7.R1
Platforms	All

endpoint (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Configure endpoint address.
Context	configure router <i>string</i> mpls forwarding-policies forwarding-policy <i>string</i> endpoint (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	endpoint
Introduced	16.0.R4
Platforms	All

ingress-statistics

Synopsis	Enable the ingress-statistics context
Context	configure router <i>string</i> mpls forwarding-policies forwarding-policy <i>string</i> ingress-statistics
Tree	ingress-statistics
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of egress or ingress statistics
Context	configure router <i>string</i> mpls forwarding-policies forwarding-policy <i>string</i> ingress-statistics admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable

Default	disable
Introduced	16.0.R1
Platforms	All

metric *number*

Synopsis	Metric of an MPLS forwarding policy
Context	configure router <i>string</i> mpls forwarding-policies forwarding-policy <i>string</i> metric <i>number</i>
Tree	metric
Range	1 to 16777215
Introduced	16.0.R4
Platforms	All

next-hop-group [*index*] *number*

Synopsis	Enter the next-hop-group list instance
Context	configure router <i>string</i> mpls forwarding-policies forwarding-policy <i>string</i> next-hop-group <i>number</i>
Tree	next-hop-group
Max. Instances	32
Introduced	16.0.R1
Platforms	All

[index] *number*

Synopsis	Index for next hop group
Context	configure router <i>string</i> mpls forwarding-policies forwarding-policy <i>string</i> next-hop-group <i>number</i>
Tree	next-hop-group
Range	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of NHG in MPLS forwarding policy
Context	configure router <i>string</i> mpls forwarding-policies forwarding-policy <i>string</i> next-hop-group <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

backup-next-hop

Synopsis	Enable the backup-next-hop context
Context	configure router <i>string</i> mpls forwarding-policies forwarding-policy <i>string</i> next-hop-group <i>number</i> backup-next-hop
Tree	backup-next-hop
Introduced	16.0.R1
Platforms	All

next-hop (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Next hop address
Context	configure router <i>string</i> mpls forwarding-policies forwarding-policy <i>string</i> next-hop-group <i>number</i> backup-next-hop next-hop (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	next-hop
Introduced	16.0.R1
Platforms	All

pushed-labels [*index*] *number*

Synopsis	Enter the pushed-labels list instance
Context	configure router <i>string</i> mpls forwarding-policies forwarding-policy <i>string</i> next-hop-group <i>number</i> backup-next-hop pushed-labels <i>number</i>
Tree	pushed-labels
Max. Instances	10

Introduced	16.0.R4
Platforms	All

[index] number

Synopsis	Index for push label
Context	configure router <i>string</i> mpls forwarding-policies forwarding-policy <i>string</i> next-hop-group <i>number</i> backup-next-hop pushed-labels <i>number</i>
Tree	pushed-labels
Range	1 to 10
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

label number

Synopsis	Label value
Context	configure router <i>string</i> mpls forwarding-policies forwarding-policy <i>string</i> next-hop-group <i>number</i> backup-next-hop pushed-labels <i>number</i> label <i>number</i>
Tree	label
Range	1 to 1048575
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

load-balancing-weight number

Synopsis	Load balancing weight of an NHG entry
Context	configure router <i>string</i> mpls forwarding-policies forwarding-policy <i>string</i> next-hop-group <i>number</i> load-balancing-weight <i>number</i>
Tree	load-balancing-weight
Range	1 to 4294967295
Introduced	16.0.R4
Platforms	All

primary-next-hop

Synopsis	Enable the primary-next-hop context
Context	configure <i>router string mpls forwarding-policies forwarding-policy string next-hop-group number primary-next-hop</i>
Tree	primary-next-hop
Introduced	16.0.R1
Platforms	All

next-hop (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Next hop address
Context	configure <i>router string mpls forwarding-policies forwarding-policy string next-hop-group number primary-next-hop next-hop (ipv4-address-no-zone ipv6-address-no-zone)</i>
Tree	next-hop
Introduced	16.0.R1
Platforms	All

pushed-labels [[index](#)] *number*

Synopsis	Enter the pushed-labels list instance

Synopsis	Match the incoming MPLS label
Context	configure router <i>string</i> mpls interface <i>reference</i> label-map <i>number</i>
Tree	label-map
Range	32 to 1048575
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the label map
Context	configure router <i>string</i> mpls interface <i>reference</i> label-map <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

pop**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Pop (remove) the incoming label and forward packet based on service header
Context	configure router string mpls interface reference label-map number pop
Tree	pop
Notes	The following elements are part of a choice: pop or swap .
Introduced	16.0.R1
Platforms	All

swap**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the swap context
Context	configure router string mpls interface reference label-map number swap
Tree	swap
Notes	The following elements are part of a choice: pop or swap .
Introduced	16.0.R1
Platforms	All

next-hop string**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IP address for the next hop
Context	configure router string mpls interface reference label-map number swap next-hop string
Tree	next-hop
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

out-label (*number* | *keyword*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Push specific label onto the top of the outgoing packet's label stack
Context	configure router <i>string</i> mpls interface <i>reference</i> label-map <i>number</i> swap out-label (<i>number</i> <i>keyword</i>)
Tree	out-label
Range	16 to 1048575
Options	implicit-null-label
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

srlg-group [[name](#)] *reference*

Synopsis	Add a list entry for srlg-group
Context	configure router <i>string</i> mpls interface <i>reference</i> srlg-group <i>reference</i>
Tree	srlg-group
Max. Instances	64
Introduced	16.0.R1
Platforms	All

[name] *reference*

Synopsis	Shared Risk Link Group (SRLG) name
Context	configure router <i>string</i> mpls interface <i>reference</i> srlg-group <i>reference</i>
Tree	srlg-group
Reference	configure routing-options <i>if-attribute</i> srlg-group <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

te-metric *number*

Synopsis	TE metric for the interface
Context	configure router <i>string</i> mpls interface <i>reference</i> te-metric <i>number</i>
Tree	te-metric
Range	1 to 16777215
Introduced	16.0.R1
Platforms	All

least-fill-min-thd *number*

Synopsis	Percentage of the least fill minimum threshold value
Context	configure router <i>string</i> mpls least-fill-min-thd <i>number</i>
Tree	least-fill-min-thd
Range	0 to 100
Units	percent
Default	5
Introduced	16.0.R1
Platforms	All

least-fill-reoptim-thd *number*

Synopsis	Percentage of the least fill reoptimization threshold value
Context	configure router <i>string</i> mpls least-fill-reoptim-thd <i>number</i>
Tree	least-fill-reoptim-thd
Range	0 to 100
Units	percent
Default	10
Introduced	16.0.R1
Platforms	All

logger-event-bundling *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Merge and bundle MPLS traps
Context	configure <i>router</i> <i>string</i> <i>mpls</i> <i>logger-event-bundling</i> <i>boolean</i>
Tree	logger-event-bundling
Default	false
Introduced	16.0.R1
Platforms	All

lsp [*lsp-name*] *string*

Synopsis	Enter the lsp list instance
Context	configure <i>router</i> <i>string</i> <i>mpls</i> <i>lsp</i> <i>string</i>
Tree	lsp
Introduced	16.0.R1
Platforms	All

[lsp-name] *string*

Synopsis	Labeled Switch path name
Context	configure <i>router</i> <i>string</i> <i>mpls</i> <i>lsp</i> <i>string</i>
Tree	lsp
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

adaptive *boolean*

Synopsis	Enable make-before-break functionality
Context	configure <i>router</i> <i>string</i> <i>mpls</i> <i>lsp</i> <i>string</i> <i>adaptive</i> <i>boolean</i>
Tree	adaptive
Default	true

Introduced 16.0.R1
 Platforms All

admin-state *keyword*

Synopsis Administrative state of the LSP
 Context **configure** [router](#) *string* [mpls lsp](#) *string* **admin-state** *keyword*
 Tree [admin-state](#)
 Options enable, disable
 Default disable
 Introduced 16.0.R1
 Platforms All

admin-tag [[name](#)] *reference*

Synopsis Add a list entry for **admin-tag**
 Context **configure** [router](#) *string* [mpls lsp](#) *string* **admin-tag** *reference*
 Tree [admin-tag](#)
 Max. Instances 4
 Introduced 16.0.R1

[[name](#)] *reference*

Synopsis Name of the admin tags
 Context **configure** [router](#) *string* [mpls lsp](#) *string* **admin-tag** *reference*
 Tree [admin-tag](#)
 Reference **configure** [routing-options](#) [admin-tags](#) **admin-tag** *string*
 Notes This element is part of a list key.
 Introduced 16.0.R1
 Platforms All

adspec *boolean*

Synopsis	Include ADSPEC object in RSVP messages
Context	configure router <i>string</i> mpls lsp <i>string</i> adspec <i>boolean</i>
Tree	adspec
Default	false
Introduced	16.0.R1
Platforms	All

auto-bandwidth

Synopsis	Enable the auto-bandwidth context
Context	configure router <i>string</i> mpls lsp <i>string</i> auto-bandwidth
Tree	auto-bandwidth
Introduced	16.0.R1
Platforms	All

adjust-down

Synopsis	Enter the adjust-down context
Context	configure router <i>string</i> mpls lsp <i>string</i> auto-bandwidth adjust-down
Tree	adjust-down
Introduced	16.0.R1
Platforms	All

bw *number*

Synopsis	Minimum difference in absolute bandwidth
Context	configure router <i>string</i> mpls lsp <i>string</i> auto-bandwidth adjust-down bw <i>number</i>
Tree	bw
Range	0 to 6400000
Units	megabps
Default	0
Introduced	16.0.R1
Platforms	All

percent *number*

Synopsis	Minimum difference in percent
Context	configure <i>router string mpls lsp string auto-bandwidth adjust-down percent number</i>
Tree	percent
Range	0 to 100
Units	percent
Default	5
Introduced	16.0.R1
Platforms	All

adjust-up

Synopsis	Enter the adjust-up context
Context	configure <i>router string mpls lsp string auto-bandwidth adjust-up</i>
Tree	adjust-up
Introduced	16.0.R1
Platforms	All

bw *number*

Synopsis	Minimum difference in absolute bandwidth
Context	configure <i>router string mpls lsp string auto-bandwidth adjust-up bw number</i>
Tree	bw
Range	0 to 6400000
Units	megabps
Default	0
Introduced	16.0.R1
Platforms	All

percent *number*

Synopsis	Minimum difference in percent
Context	configure <i>router string mpls lsp string auto-bandwidth adjust-up percent number</i>
Tree	percent

Range	0 to 100
Units	percent
Default	5
Introduced	16.0.R1
Platforms	All

fc [**fc-name**] *keyword*

Synopsis	Enter the fc list instance
Context	configure router <i>string</i> mpls lsp <i>string</i> auto-bandwidth fc <i>keyword</i>
Tree	fc
Max. Instances	8
Introduced	16.0.R1
Platforms	All

[fc-name] *keyword*

Synopsis	Forwarding class name for LSP
Context	configure router <i>string</i> mpls lsp <i>string</i> auto-bandwidth fc <i>keyword</i>
Tree	fc
Options	be, l2, af, l1, h2, ef, h1, nc
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

sampling-weight *number*

Synopsis	Forwarding class weight for LSP
Context	configure router <i>string</i> mpls lsp <i>string</i> auto-bandwidth fc <i>keyword</i> sampling-weight <i>number</i>
Tree	sampling-weight
Range	0 to 100
Units	percent
Default	100

Introduced	16.0.R1
Platforms	All

max-bandwidth *number*

Synopsis	Maximum bandwidth of auto-bandwidth to request for LSP
Context	configure router <i>string</i> mpls lsp <i>string</i> auto-bandwidth max-bandwidth <i>number</i>
Tree	max-bandwidth
Range	0 to 6400000
Units	megabps
Default	100000
Introduced	16.0.R1
Platforms	All

min-bandwidth *number*

Synopsis	Minimum bandwidth of auto-bandwidth to request for the LSP
Context	configure router <i>string</i> mpls lsp <i>string</i> auto-bandwidth min-bandwidth <i>number</i>
Tree	min-bandwidth
Range	0 to 6400000
Units	megabps
Default	0
Introduced	16.0.R1
Platforms	All

monitor-bandwidth *boolean*

Synopsis	Collect and display auto-bandwidth measurements for the LSP
Context	configure router <i>string</i> mpls lsp <i>string</i> auto-bandwidth monitor-bandwidth <i>boolean</i>
Tree	monitor-bandwidth
Default	false
Introduced	16.0.R1
Platforms	All

multipliers

Synopsis	Enter the multipliers context
Context	configure router <i>string</i> mpls lsp <i>string</i> auto-bandwidth multipliers
Tree	multipliers
Introduced	16.0.R1
Platforms	All

adjust-multiplier *number*

Synopsis	Number of collection intervals in the adjust interval
Context	configure router <i>string</i> mpls lsp <i>string</i> auto-bandwidth multipliers adjust-multiplier <i>number</i>
Tree	adjust-multiplier
Range	1 to 16383
Introduced	16.0.R1
Platforms	All

sample-multiplier *number*

Synopsis	Multiplier for collection intervals in a sample interval
Context	configure router <i>string</i> mpls lsp <i>string</i> auto-bandwidth multipliers sample-multiplier <i>number</i>
Tree	sample-multiplier
Range	1 to 511
Introduced	16.0.R1
Platforms	All

overflow-limit

Synopsis	Enable the overflow-limit context
Context	configure router <i>string</i> mpls lsp <i>string</i> auto-bandwidth overflow-limit
Tree	overflow-limit
Introduced	16.0.R1
Platforms	All

bw number

Synopsis	Minimum difference in absolute bandwidth
Context	configure router <i>string</i> mpls lsp <i>string</i> auto-bandwidth overflow-limit bw <i>number</i>
Tree	bw
Range	1 to 6400000
Units	megabps
Introduced	16.0.R1
Platforms	All

number number

Synopsis	Number of overflow samples to trigger an overflow auto-bandwidth adjustment attempt
Context	configure router <i>string</i> mpls lsp <i>string</i> auto-bandwidth overflow-limit number <i>number</i>
Tree	number
Range	1 to 10
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

threshold number

Synopsis	Minimum difference in percent between the LSP bandwidth and the sampled data rate
Context	configure router <i>string</i> mpls lsp <i>string</i> auto-bandwidth overflow-limit threshold <i>number</i>
Tree	threshold
Range	0 to 100
Units	percent
Default	0
Introduced	16.0.R1
Platforms	All

underflow-limit

Synopsis	Enable the underflow-limit context
Context	configure router <i>string</i> mpls lsp <i>string</i> auto-bandwidth underflow-limit
Tree	underflow-limit

Introduced	16.0.R1
Platforms	All

bw number

Synopsis	Minimum difference in absolute bandwidth
Context	configure <i>router string mpls lsp string auto-bandwidth underflow-limit bw number</i>
Tree	bw
Range	1 to 6400000
Units	megabps
Introduced	16.0.R1
Platforms	All

number number

Synopsis	Number of overflow samples to trigger an overflow auto-bandwidth adjustment attempt
Context	configure <i>router string mpls lsp string auto-bandwidth underflow-limit number number</i>
Tree	number
Range	1 to 10
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

threshold number

Synopsis	Minimum difference in percent between the LSP bandwidth and the sampled data rate
Context	configure <i>router string mpls lsp string auto-bandwidth underflow-limit threshold number</i>
Tree	threshold
Range	0 to 100
Units	percent
Default	0
Introduced	16.0.R1
Platforms	All

use-last-adj-bw

Synopsis	Enable the use-last-adj-bw context
Context	configure router <i>string</i> mpls lsp <i>string</i> auto-bandwidth use-last-adj-bw
Tree	use-last-adj-bw
Introduced	16.0.R5
Platforms	All

secondary-retry-limit (*number* | *keyword*)

Synopsis	Maximum number of retry limits for secondary paths
Context	configure router <i>string</i> mpls lsp <i>string</i> auto-bandwidth use-last-adj-bw secondary-retry-limit (<i>number</i> <i>keyword</i>)
Tree	secondary-retry-limit
Description	This command configures the maximum number of retry attempts for secondary paths. After each successful attempt, the counter is reset to zero.
Range	1 to 10000
Options	infinite
Default	5
Introduced	16.0.R5
Platforms	All

bfd

Synopsis	Enter the bfd context
Context	configure router <i>string</i> mpls lsp <i>string</i> bfd
Tree	bfd
Description	Commands in this context configure BFD on RSVP LSPs or Seamless BFD on SR-TE LSPs.
Introduced	16.0.R1
Platforms	All

bfd-liveness *boolean*

Synopsis	Enable BFD on the RSVP LSP or S-BFD on the SR-TE LSP
Context	configure router <i>string</i> mpls lsp <i>string</i> bfd bfd-liveness <i>boolean</i>
Tree	bfd-liveness

Default	false
Introduced	16.0.R1
Platforms	All

bfd-template *reference*

Synopsis	BFD template to be used by LSP BFD sessions
Context	configure router <i>string</i> mpls lsp <i>string</i> bfd bfd-template <i>reference</i>
Tree	bfd-template
Reference	configure bfd bfd-template <i>string</i>
Introduced	16.0.R1
Platforms	All

failure-action *keyword*

Synopsis	Action when LSP BFD fails on the RSVP SR-TE LSP
Context	configure router <i>string</i> mpls lsp <i>string</i> bfd failure-action <i>keyword</i>
Tree	failure-action
Description	The command specifies the action when LSP BFD fails on an RSVP, SR-TE, or LDP LSP. Regardless of the failure action specified, when the BFD session goes down on the LSP, the system generates an SNMP trap.
Options	none, down, failover, failover-or-down
Default	none
Introduced	16.0.R1
Platforms	All

lsp-ping-interval (*number* | *keyword*)

Synopsis	Interval for periodic LSP ping for BFD bootstrapping
Context	configure router <i>string</i> mpls lsp <i>string</i> bfd lsp-ping-interval (<i>number</i> <i>keyword</i>)
Tree	lsp-ping-interval
Range	60 to 300
Units	seconds
Options	none

Default	60
Introduced	16.0.R1
Platforms	All

return-path-label *number*

Synopsis	S-BFD return-path label
Context	configure router <i>string</i> mpls lsp <i>string</i> bfd return-path-label <i>number</i>
Tree	return-path-label
Description	<p>This command configures the S-BFD session to echo mode and adds an additional MPLS label to the bottom of the label stack for the S-BFD packet.</p> <p>The command applies to the initiator of the S-BFD sessions. The return-path label may be a binding SID for an SR policy or other MPLS path configured on the reflector router. Instead of being routed through the IGP path, the S-BFD packet returns to the initiator through this MPLS return path.</p> <p>If the command is deleted, S-BFD returns to asynchronous mode and no return-path label is pushed by the initiator node. Any S-BFD packets for this LSP or path that the reflector receives are routed through the IGP path.</p>
Range	32 to 1048512
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

wait-for-up-timer *number*

Synopsis	Time to wait for BFD to become operationally available
Context	configure router <i>string</i> mpls lsp <i>string</i> bfd wait-for-up-timer <i>number</i>
Tree	wait-for-up-timer
Description	<p>This command configures the time to wait for BFD to become operationally up. The timer is applicable to SR-TE LSPs, including auto LSPs and PCE-initiated LSPs, as well as RSVP-TE LSPs.</p> <p>For SR-TE LSPs, the timer takes effect when BFD is first enabled on a path or when BFD transitions from up to down. Upon expiration, if BFD is not up, the path is torn down, removed from the TTM and the IOM, and the system starts the retry timer.</p> <p>For RSVP-TE LSPs, the timer controls the following:</p> <ul style="list-style-type: none"> • a path undergoing MBB when BFD is up • the initial administrative state of the LSP • the retry signaling of non-standby secondary paths
Range	1 to 60

Units	seconds
Default	4
Introduced	19.7.R1
Platforms	All

bgp-shortcut *boolean*

Synopsis	Include LSP for BGP routes
Context	configure router <i>string</i> mpls lsp <i>string</i> bgp-shortcut <i>boolean</i>
Tree	bgp-shortcut
Introduced	16.0.R1
Platforms	All

bgp-transport-tunnel *boolean*

Synopsis	Include LSP as transport LSP for labeled BGP routes
Context	configure router <i>string</i> mpls lsp <i>string</i> bgp-transport-tunnel <i>boolean</i>
Tree	bgp-transport-tunnel
Introduced	16.0.R1
Platforms	All

binding-sid *number*

Synopsis	Binding SID for the LSP
Context	configure router <i>string</i> mpls lsp <i>string</i> binding-sid <i>number</i>
Tree	binding-sid
Description	This command binds a label to the LSP. The label value must belong to the reserved label block that is configured with the configure router mpls lsp-bsid-block command.
Range	32 to 1048575
Introduced	22.10.R1
Platforms	All

class-forwarding

Synopsis	Enable the class-forwarding context
----------	--

Context	configure router <i>string</i> mpls lsp <i>string</i> class-forwarding
Tree	class-forwarding
Introduced	16.0.R1
Platforms	All

forwarding-set

Synopsis	Enter the forwarding-set context
Context	configure router <i>string</i> mpls lsp <i>string</i> class-forwarding forwarding-set
Tree	forwarding-set
Notes	The following elements are part of a choice: (default-lsp and fc) or forwarding-set .
Introduced	16.0.R1
Platforms	All

policy reference

Synopsis	Name for the class based forwarding policy for LSP instances
Context	configure router <i>string</i> mpls lsp <i>string</i> class-forwarding forwarding-set policy <i>reference</i>
Tree	policy
Reference	configure router <i>string</i> mpls class-forwarding-policy <i>string</i>
Introduced	16.0.R1
Platforms	All

set number

Synopsis	Forwarding set ID
Context	configure router <i>string</i> mpls lsp <i>string</i> class-forwarding forwarding-set set <i>number</i>
Tree	set
Range	1 to 6
Introduced	16.0.R1
Platforms	All

class-type number

Synopsis	Class type for an LSP
----------	-----------------------

Context	configure <i>router</i> <i>string</i> <i>mpls lsp</i> <i>string</i> <i>class-type</i> <i>number</i>
Tree	class-type
Range	0 to 7
Default	0
Introduced	16.0.R1
Platforms	All

egress-statistics

Synopsis	Enable the egress-statistics context
Context	configure <i>router</i> <i>string</i> <i>mpls lsp</i> <i>string</i> egress-statistics
Tree	egress-statistics
Introduced	16.0.R1
Platforms	All

accounting-policy *reference*

Synopsis	Accounting policy ID
Context	configure <i>router</i> <i>string</i> <i>mpls lsp</i> <i>string</i> egress-statistics accounting-policy <i>reference</i>
Tree	accounting-policy
Reference	configure <i>log</i> accounting-policy <i>number</i>
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of statistics for the LSP
Context	configure <i>router</i> <i>string</i> <i>mpls lsp</i> <i>string</i> egress-statistics admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

collect-stats *boolean*

Synopsis	Collect LSP statistics
Context	configure router <i>string</i> mpls lsp <i>string</i> egress-statistics collect-stats <i>boolean</i>
Tree	collect-stats
Description	<p>When configured to true, this command enables LSP statistics collection. When you apply accounting policies, the forwarding engine collects data in the appropriate records and by default the CPU obtains and writes the results to the designated billing file.</p> <p>When configured to false, the forwarding engine still accumulates statistics. However, the CPU does not write them to the billing file. If you subsequently re-enable this command, the counters written to the billing file include all the traffic collected while the command was disabled.</p>
Default	false
Introduced	16.0.R1
Platforms	All

stat-mode *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Statistics collection mode
Context	configure router <i>string</i> mpls lsp <i>string</i> egress-statistics stat-mode <i>keyword</i>
Tree	stat-mode
Options	per-fc, aggregate
Introduced	21.10.R1
Platforms	All

entropy-label *keyword*

Synopsis	Entropy label
Context	configure router <i>string</i> mpls lsp <i>string</i> entropy-label <i>keyword</i>
Tree	entropy-label
Options	false, true
Introduced	16.0.R1
Platforms	All

exclude-admin-group *reference*

Synopsis	Name of admin group excluded when LSP is set up
Context	configure router <i>string</i> mpls lsp <i>string</i> exclude-admin-group <i>reference</i>
Tree	exclude-admin-group
Reference	configure routing-options if-attribute admin-group <i>string</i>
Max. Instances	32
Introduced	16.0.R1
Platforms	All

exclude-node (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Exclude Routers object to be included in the bypass path message
Context	configure router <i>string</i> mpls lsp <i>string</i> exclude-node (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	exclude-node
Introduced	16.0.R1
Platforms	All

fallback-path-computation-method *keyword*

Synopsis	Fallback path computation method
Context	configure router <i>string</i> mpls lsp <i>string</i> fallback-path-computation-method <i>keyword</i>
Tree	fallback-path-computation-method
Description	This command specifies the fallback path computation method used if all configured PCEs are down or are signaling overload and the redelegation timer has expired. This method is used regardless of whether the LSP is PCE-controlled and PCE-computed, or only PCE-computed.
Options	none, local-cspf
Introduced	21.2.R1
Platforms	All

fast-reroute

Synopsis	Enable the fast-reroute context
----------	--

Context	configure router <i>string</i> mpls lsp <i>string</i> fast-reroute
Tree	fast-reroute
Introduced	16.0.R1

Tree	least-fill
Default	false
Introduced	16.0.R1
Platforms	All

load-balancing-weight *number*

Synopsis	Load balancing weight for an MPLS LSP
Context	configure router <i>string</i> mpls lsp <i>string</i> load-balancing-weight <i>number</i>
Tree	load-balancing-weight
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

local-sr-protection *keyword*

Synopsis	Local SR protection preference for LSP path computation
Context	configure router <i>string</i> mpls lsp <i>string</i> local-sr-protection <i>keyword</i>
Tree	local-sr-protection
Options	none, preferred, mandatory
Default	preferred
Introduced	19.7.R1
Platforms	All

lsp-self-ping *keyword*

Synopsis	LSP Self Ping activation status on the RSVP-TE LSP
Context	configure router <i>string</i> mpls lsp <i>string</i> lsp-self-ping <i>keyword</i>
Tree	lsp-self-ping
Description	When configured, the system uses this setting for the LSP regardless of the value configured under configure router mpls lsp-self-ping rsvp-te . When unconfigured, the command inherits the value configured under configure router mpls lsp-self-ping rsvp-te .
Options	false, true
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

main-ct-retry-limit *number*

Synopsis	Maximum number of retries before reverting to backup CT
Context	configure router <i>string</i> mpls lsp <i>string</i> main-ct-retry-limit <i>number</i>

Tree	main-ct-retry-limit
Range	1 to 10000
Introduced	16.0.R1
Platforms	All

max-sr-labels

Synopsis	Enter the max-sr-labels context
Context	configure router <i>string</i> mpls lsp <i>string</i> max-sr-labels
Tree	max-sr-labels
Introduced	16.0.R1
Platforms	All

additional-frr-labels *number*

Synopsis	Value for the maximum additional overhead labels
Context	configure router <i>string</i> mpls lsp <i>string</i> max-sr-labels additional-frr-labels <i>number</i>
Tree	additional-frr-labels
Range	0 to 4
Default	1
Introduced	16.0.R1
Platforms	All

label-stack-size *number*

Synopsis	Maximum label stack size
Context	configure router <i>string</i> mpls lsp <i>string</i> max-sr-labels label-stack-size <i>number</i>
Tree	label-stack-size
Description	This command configures the maximum label stack size of the primary path of the SR-TE LSP.
Range	1 to 11
Introduced	16.0.R1
Platforms	All

metric number

Synopsis	LSP metric that forces to a constant value
Context	configure router <i>string</i> mpls lsp <i>string</i> metric number
Tree	metric
Range	0 to 16777215
Introduced	16.0.R1
Platforms	All

metric-type keyword

Synopsis	Metric type used for LSP path computation
Context	configure router <i>string</i> mpls lsp <i>string</i> metric-type keyword
Tree	metric-type
Options	igp, te
Default	igp
Introduced	19.7.R1
Platforms	All

override-tunnel-elc boolean

Synopsis	Override any received entropy label capability
Context	configure router <i>string</i> mpls lsp <i>string</i> override-tunnel-elc boolean
Tree	override-tunnel-elc
Description	When configured to true , this command allows the system to override any received entropy label capability advertisement. When configured to false , this command disables the override.
Default	false
Introduced	21.10.R1
Platforms	All

p2mp-id number

Synopsis	Unique identifier as Point-to-Multipoint (P2MP) identifier
Context	configure router <i>string</i> mpls lsp <i>string</i> p2mp-id number
Tree	p2mp-id

Range	1 to 65535
Introduced	16.0.R1
Platforms	All

path-computation-method *keyword*

Synopsis	Path computation method
Context	configure router <i>string</i> mpls lsp <i>string</i> path-computation-method <i>keyword</i>
Tree	path-computation-method
Description	This command configures the path computation method of an RSVP-TE or SR-TE LSP. If this command is not configured to one of the supported options, the default path computation method is used depending on the type of LSP; the hop-to-label translation is used for the SR-TE LSP template and the IGP-based path is used for the RSVP-TE-LSP.
Options	local-cspf, pce
Introduced	19.7.R1
Platforms	All

path-profile [[profile-id](#)] *number*

Synopsis	Enter the path-profile list instance
Context	configure router <i>string</i> mpls lsp <i>string</i> path-profile <i>number</i>
Tree	path-profile
Description	Commands in this context configure the attributes of the PCE path profile.
Max. Instances	5
Introduced	16.0.R1
Platforms	All

[profile-id] *number*

Synopsis	Profile ID for the specified LSP
Context	configure router <i>string</i> mpls lsp <i>string</i> path-profile <i>number</i>
Tree	path-profile
Range	1 to 4294967295
Notes	This element is part of a list key.

Introduced	16.0.R1
Platforms	All

path-group *number*

Synopsis	Path-group ID for the specified LSP
Context	configure router <i>string</i> mpls lsp <i>string</i> path-profile <i>number</i> path-group <i>number</i>
Tree	path-group
Max. Range	0 to 4294967295
Default	0
Introduced	16.0.R1
Platforms	All

pce-associations

Synopsis	Enter the pce-associations context
Context	configure router <i>string</i> mpls lsp <i>string</i> pce-associations
Tree	pce-associations
Description	Commands in this context configure the LSP binding with one or more PCEP associations.
Introduced	22.5.R1
Platforms	All

diversity [[diversity-name](#)] *reference*

Synopsis	Add a list entry for diversity
Context	configure router <i>string</i> mpls lsp <i>string</i> pce-associations diversity <i>reference</i>
Tree	diversity
Description	Commands in this context bind the LSP to a named diversity association. The diversity association must exist under the PCC.
Max. Instances	5
Introduced	22.5.R1
Platforms	All

[diversity-name] reference

Synopsis	Name of the PCE association configured under the PCC
Context	configure router <i>string</i> mpls lsp <i>string</i> pce-associations diversity <i>reference</i>
Tree	diversity
Reference	configure router <i>string</i> pcep pcc pce-associations diversity <i>string</i>
Notes	This element is part of a list key.
Introduced	22.5.R1
Platforms	All

policy [policy-name] reference

Synopsis	Add a list entry for policy
Context	configure router <i>string</i> mpls lsp <i>string</i> pce-associations policy <i>reference</i>
Tree	policy
Description	Commands in this context bind the LSP to a named policy association. The policy association name must exist under the PCC.
Max. Instances	5
Introduced	22.5.R1
Platforms	All

[policy-name] reference

Synopsis	Name of the PCE association configured under the PCC
Context	configure router <i>string</i> mpls lsp <i>string</i> pce-associations policy <i>reference</i>
Tree	policy
Reference	configure router <i>string</i> pcep pcc pce-associations policy <i>string</i>
Notes	This element is part of a list key.
Introduced	22.5.R1
Platforms	All

pce-control boolean

Synopsis	Enable PCE controlled LSP mode of operation
Context	configure router <i>string</i> mpls lsp <i>string</i> pce-control <i>boolean</i>

Tree	pce-control
Description	<p>When configured to true, this command enables a PCE-controlled mode of operation for the LSP. In this mode, the router delegates full control of the LSP to the PCE (PCE controlled). The PCE acts in stateful-active mode for this LSP and is able to reroute the path following a failure or to re-optimize the path and update the router without a request from the router.</p> <p>When configured to false, the PCE-controlled mode of operation for the LSP has no effect.</p>
Default	false
Introduced	16.0.R1
Platforms	All

pce-report *keyword*

Synopsis	Global configuration of reporting to PCE to override
Context	configure router <i>string</i> mpls lsp <i>string</i> pce-report <i>keyword</i>
Tree	pce-report
Options	false, true
Introduced	16.0.R1
Platforms	All

primary [[path-name](#)] *reference*

Synopsis	Enter the primary list instance
Context	configure router <i>string</i> mpls lsp <i>string</i> primary <i>reference</i>
Tree	primary
Max. Instances	1
Introduced	16.0.R1
Platforms	All

Tree	bfd-template
Reference	configure bfd bfd-template <i>string</i>
Introduced	16.0.R1
Platforms	All

lsp-ping-interval (*number* | *keyword*)

Synopsis	Interval for periodic LSP ping for BFD bootstrapping
Context	configure router <i>string</i> mpls lsp <i>string</i> primary <i>reference</i> bfd lsp-ping-interval (<i>number</i> <i>keyword</i>)
Tree	lsp-ping-interval
Range	60 to 300
Units	seconds
Options	none
Default	60
Introduced	16.0.R1
Platforms	All

return-path-label *number*

Synopsis	S-BFD return-path label
Context	configure router <i>string</i> mpls lsp <i>string</i> primary <i>reference</i> bfd return-path-label <i>number</i>
Tree	return-path-label
Description	<p>This command configures the S-BFD session to echo mode and adds an additional MPLS label to the bottom of the label stack for the S-BFD packet.</p> <p>The command applies to the initiator of the S-BFD sessions. The return-path label may be a binding SID for an SR policy or other MPLS path configured on the reflector router. Instead of being routed through the IGP path, the S-BFD packet returns to the initiator through this MPLS return path.</p> <p>If the command is deleted, S-BFD returns to asynchronous mode and no return-path label is pushed by the initiator node. Any S-BFD packets for this LSP or path that the reflector receives are routed through the IGP path.</p>
Range	32 to 1048512
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

wait-for-up-timer *number*

Synopsis	Time to wait for BFD to become operationally available
Context	configure router <i>string</i> mpls lsp <i>string</i> primary <i>reference</i> bfd wait-for-up-timer <i>number</i>
Tree	wait-for-up-timer

Description	<p>This command configures the time to wait for BFD to become operationally up. The timer is applicable to SR-TE LSPs, including auto LSPs and PCE-initiated LSPs, as well RSVP-TE LSPs.</p> <p>For SR-TE LSPs, the timer takes effect when BFD is first enabled on a path or when BFD transitions from up to down. Upon expiration, if BFD is not up, the path is torn down, removed from the TTM and the IOM, and the system starts the retry timer.</p> <p>For RSVP-TE LSPs, the timer controls the following:</p> <ul style="list-style-type: none"> • a path undergoing MBB when BFD is up • the initial administrative state of the LSP • the retry signaling of non-standby secondary paths
Range	1 to 60
Units	seconds
Default	4
Introduced	19.7.R1
Platforms	All

wait-for-up-timer *number*

Synopsis	Time to wait for BFD to become operationally available
Context	configure router <i>string</i> mpls lsp <i>string</i> secondary <i>reference</i> bfd wait-for-up-timer <i>number</i>
Tree	wait-for-up-timer
Description	<p>This command configures the time to wait for BFD to become operationally up. The timer is applicable to SR-TE LSPs, including auto LSPs and PCE-initiated LSPs, as well as RSVP-TE LSPs.</p> <p>For SR-TE LSPs, the timer takes effect when BFD is first enabled on a path or when BFD transitions from up to down. Upon expiration, if BFD is not up, the path is torn down, removed from the TTM and the IOM, and the system starts the retry timer.</p> <p>For RSVP-TE LSPs, the timer controls the following:</p> <ul style="list-style-type: none"> • a path undergoing MBB when BFD is up • the initial administrative state of the LSP • the retry signaling of non-standby secondary paths
Range	1 to 60
Units	seconds
Default	4
Introduced	19.7.R1
Platforms	All

Introduced	16.0.R1
Platforms	All

lsp-self-ping

Synopsis	Enter the lsp-self-ping context
Context	configure router <i>string</i> mpls lsp-self-ping
Tree	lsp-self-ping
Description	<p>Commands in this context configure LSP Self Ping parameters.</p> <p>LSP Self Ping checks that the datapath of an RSVP LSP has been programmed by all LSRs along its path before switching the traffic to it. If enabled, LSP Self Ping packets are sent periodically at a configurable interval following the receipt of the RESV message for an RSVP LSP path following an MBB or other event where the active path changes while the previous active path stayed up. The router will not switch traffic to the new path until an LSP Self Ping reply is received from the far-end LER.</p> <p>When configured under the MPLS context, LSP Self Ping is enabled for all RSVP LSPs, unless it is explicitly disabled for a given LSP.</p>
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

interval number

Synopsis	MPLS periodic LSP Self Ping interval
Context	configure router string mpls lsp-self-ping interval number
Tree	interval
Description	This command configures the interval at which LSP Self Ping packets are periodically sent on a candidate path of an RSVP LSP. This value is used for all LSPs that have LSP Self Ping enabled.
Range	1 to 10
Units	seconds
Default	1
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rsvp-te boolean

Synopsis	Activate LSP Self Ping on RSVP-TE LSPs
Context	configure router string mpls lsp-self-ping rsvp-te boolean
Tree	rsvp-te
Description	When configured to true , this command enables LSP Self Ping on all RSVP-TE LSPs, unless an individual LSP has this explicitly disabled under the configure router mpls lsp-self-ping command or in the LSP template. When configured to false , this command disables LSP Self Ping on all RSVP-TE LSPs.
Default	false
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

timeout number

Synopsis	MPLS LSP Self Ping timeout
Context	configure router string mpls lsp-self-ping timeout number
Tree	timeout
Description	This command configures a timeout value for the LSP Self Ping timer. The LSP Self Ping timer starts when the RESV message is received for an LSP. The system periodically sends LSP Self Ping packets until the timer expires or the first LSP Self Ping reply is received, whichever comes first. If the timer expires before an LSP Self Ping packet is received, the configured timeout action is performed.

Range	3 to 3600
Units	seconds
Default	300
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

timeout-action *keyword*

Synopsis	Action taken when LSP Self Ping timer expires
Context	configure router <i>string</i> mpls lsp-self-ping timeout-action <i>keyword</i>

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time to wait for BFD to become operationally available
Context	configure router <i>string</i> mpls lsp-template <i>string</i> bfd wait-for-up-timer <i>number</i>
Tree	wait-for-up-timer

Description	<p>This command configures the time to wait for BFD to become operationally up. The timer is applicable to SR-TE LSPs, including auto LSPs and PCE-initiated LSPs, as well RSVP-TE LSPs.</p> <p>For SR-TE LSPs, the timer takes effect when BFD is first enabled on a path or when BFD transitions from up to down. Upon expiration, if BFD is not up, the path is torn down, removed from the TTM and the IOM, and the system starts the retry timer.</p> <p>For RSVP-TE LSPs, the timer controls the following:</p> <ul style="list-style-type: none"> • a path undergoing MBB when BFD is up • the initial administrative state of the LSP • the retry signaling of non-standby secondary paths
Range	1 to 60
Units	seconds
Default	4
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

bgp-shortcut *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable/disable use of RSVP LSP for IPv4 BGP routes.
Context	configure <i>router string mpls lsp-template string bgp-shortcut boolean</i>
Tree	bgp-shortcut
Introduced	16.0.R1
Platforms	All

bgp-transport-tunnel *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Allow use of RSVP-TE LSP as transport for tunnel routes
Context	configure <i>router string mpls lsp-template string bgp-transport-tunnel boolean</i>
Tree	bgp-transport-tunnel
Default	true

Introduced	16.0.R1
Platforms	All

binding-sid *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Request to allocate and bind a label
Context	configure <i>router</i> <i>string</i> <i>mpls lsp-template</i> <i>string</i> binding-sid <i>boolean</i>
Tree	binding-sid
Description	When configured to true , the system allocates and binds a label to any LSP that is created using the template. When configured to false , this command removes the configuration but this does not affect LSPs that were already created using the template.
Default	false
Introduced	22.10.R1
Platforms	All

class-forwarding

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the class-forwarding context
Context	configure <i>router</i> <i>string</i> <i>mpls lsp-template</i> <i>string</i> class-forwarding
Tree	class-forwarding
Introduced	16.0.R1
Platforms	All

forwarding-set

WARNING:

collect-stats *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Collect LSP statistics
Context	configure router <i>string</i> mpls lsp-template <i>string</i> egress-statistics collect-stats <i>boolean</i>
Tree	collect-stats
Description	<p>When configured to true, this command enables LSP statistics collection. When you apply accounting policies, the forwarding engine collects data in the appropriate records and by default the CPU obtains and writes the results to the designated billing file.</p> <p>When configured to false, the forwarding engine still accumulates statistics. However, the CPU does not write them to the billing file. If you subsequently re-enable this command, the counters written to the billing file include all the traffic collected while the command was disabled.</p>
Default	false
Introduced	16.0.R1
Platforms	All

stat-mode *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Statistics collection mode
Context	configure <i>router string mpls lsp-template string egress-statistics stat-mode keyword</i>
Tree	stat-mode
Options	per-fc, aggregate
Introduced	21.10.R1
Platforms	All

entropy-label *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Entropy label for an LSP template

Introduced	16.0.R1
Platforms	All

resignal-on-igp-overload *boolean*

Synopsis	Resignal all RSVP-TE LSPs upon IGP overload
Context	configure <i>router string mpls resignal-on-igp-overload boolean</i>
Tree	resignal-on-igp-overload
Description	<p>When configured to true, the receipt of the IS-IS overload bit in the TE-DB triggers the immediate resignaling of all RSVP-TE LSPs. MPLS forces the expiry of the resignal timer and the TE-DB computes a new CSPF for each RSVP-TE LSP active path. The re-optimization causes the immediate transition of RSVP-TE LSP paths away from the IS-IS node in overload using the MBB operation.</p> <p>This command cannot be configured to true when the retry-on-igp-overload command is configured to true.</p> <p>When configured to false, the default behavior is maintained where MBB re-optimization occurs only when a timer-based resignal is performed or a manual resignal is executed.</p>
Default	false
Introduced	20.10.R1
Platforms	All

resignal-timer *number*

Synopsis	Resignal timer for RSVP LSPs
Context	configure <i>router string mpls resignal-timer number</i>
Tree	resignal-timer

Introduced	16.0.R1
Platforms	All

sr-te-resignal

Synopsis	Enter the sr-te-resignal context
Context	configure <i>router string mpls sr-te-resignal</i>
Tree	sr-te-resignal
Introduced	19.10.R1
Platforms	All

resignal-on-igp-event *boolean*

Synopsis	Re-optimize SR-TE LSPs upon IGP link events
Context	configure <i>router</i> <i>string</i> <i>mpls sr-te-resignal</i> <i>resignal-on-igp-event</i> <i>boolean</i>
Tree	resignal-on-igp-event
Description	When configured to true , the system signals the re-optimization of all SR-TE LSPs when one or more IGP link down events are received in the TE-DB. The triggered behavior is identical to the timer-based or resignal behavior or the manual-based resignal behavior used with a delay option. MPLS forces the expiry of the resignal timer and all active paths of all SR-TE LSPs are re-evaluated. When configured to false , re-optimization is not triggered by IGP events.
Default	false
Introduced	19.10.R1
Platforms	All

resignal-timer *number*

Synopsis	Resignal timer for SR-TE LSPs
Context	configure <i>router</i> <i>string</i> <i>mpls sr-te-resignal</i> <i>resignal-timer</i> <i>number</i>
Tree	resignal-timer
Description	This command configures the time the system waits before signaling the re-optimization of all SR-TE LSPs.
Range	30 to 10080
Units	minutes
Introduced	19.10.R1
Platforms	All

srlg-database

strict-ero-nhop-direct-resolution boolean

Synopsis	Resolves RSVP-TE LSP ERO to local and host routes only
Context	configure router string mpls strict-ero-nhop-direct-resolution boolean
Tree	strict-ero-nhop-direct-resolution
Description	When configured to true , the router enables the strict Explicit Route Object (ERO) next-hop direct resolution. The feature restricts the routes used to resolve the next hop of an ERO address to local and host routes. This command avoids using a next hop over a parallel link when a half link is up in the routing table.

This command applies to an ERO when all of the following conditions are met:

- the ERO next hop is an IPv4 address
- the ERO object is a strict hop
- the IPv4 address matches the primary subnet of a local numbered interface

If no such route exists, RSVP rejects the PATH message with ErrCode = Routing Error (24) and SubErrCode = Bad Strict Node (2).

When configured to **false**, the router disables the strict ERO next-hop direct resolution.

Default	false
Introduced	22.5.R1
Platforms	All

tunnel-table-pref

Synopsis	Enter the tunnel-table-pref context
Context	configure <i>router string mpls tunnel-table-pref</i>
Tree	tunnel-table-pref
Description	Commands in this context configure the tunnel table preference for RSVP-TE LSP and SR-TE LSP tunnel types.
Introduced	21.10.R1
Platforms	All

rsvp-te number

Synopsis	RSVP-TE tunnel table preference
Context	configure <i>router string mpls tunnel-table-pref rsvp-te number</i>
Tree	rsvp-te
Description	<p>This command configures the tunnel table preference for RSVP-TE LSP tunnel type.</p> <p>The tunnel table preference applies to next-hop resolution of BGP routes for: EVPN, IPv4, IPv6, VPN-IPv4, VPN-IPv6, label-IPv4, and label-IPV6 in the tunnel table.</p> <p>This feature does not apply to a VPRN, VPLS, or VLL service with explicit binding to an SDP that enabled the mixed-lsp-mode option. The service manager controls and fixes the tunnel preference in such an SDP. The tunnel table preference configuration does not modify the SDP behavior, nor the services that bind to it.</p> <p>Nokia recommends that tunnel types have unique preference values. In a situation where two or more tunnel types are set to the same preference value, the tunnel table prefers the tunnel type which was first introduced in SR OS implementation historically.</p>
Range	1 to 255
Default	7

Introduced	21.10.R1
Platforms	All

sr-te number

Synopsis	SR-TE tunnel table preference
Context	configure router <i>string</i> mpls tunnel-table-pref sr-te number

[address] string

Synopsis	Dual Stack Lite IPv6 address
Context	configure router string nat inside large-scale dual-stack-lite endpoint string
Tree	endpoint
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-fragmentation keyword

Synopsis	Fragmentation control of the AFTR originated downstream IPv6 traffic
Context	configure router string nat inside large-scale dual-stack-lite endpoint string ip-fragmentation keyword
Tree	ip-fragmentation
Options	fragment-ipv6, fragment-ipv6-unless-ipv4-df-set
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

min-first-fragment-size-rx number

Synopsis	Minimum MTU size for upstream packets
Context	configure router string nat inside large-scale dual-stack-lite endpoint string min-first-fragment-size-rx number
Tree	min-first-fragment-size-rx
Description	This command configures the minimum MTU size for the first fragment in the upstream direction. This command can be used to enable processing of first IPv6 fragments smaller than 1280 bytes. RFC 8200 recommends the minimum MTU in IPv6 be 1280 bytes which allows fragmentation only for packets that are larger than 1280 bytes. If a first fragment is smaller than 1280 bytes, DS-lite implementation in the SR OS, by default, drops the first fragment.

Range	512 to 1280
Default	1280
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

reassemble *boolean*

Synopsis	Reassembly of IPv6 payload datagrams
Context	configure router string nat inside large-scale dual-stack-lite endpoint string reassemble <i>boolean</i>
Tree	reassemble
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tunnel-mtu *number*

Synopsis	DS-Lite tunnel MTU for this address
Context	configure router string nat inside large-scale dual-stack-lite endpoint string tunnel-mtu <i>number</i>
Tree	tunnel-mtu
Description	This command configures the Dual Stack Lite (DS-Lite) tunnel MTU for this address.
Range	464 to 9212
Default	1500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

max-subscriber-limit *number*

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Largest value for all subscriber limits in each deterministic pool
Context	configure router string nat inside large-scale dual-stack-lite max-subscriber-limit <i>number</i>
Tree	max-subscriber-limit

Range	1 2 4 8 16 32 64 128 256 512 1024 2048 4096 8192 16384 32768

nat-import *reference*

Synopsis	Import BGP-VPN routes in NAT inside routing context
Context	configure router <i>string</i> nat inside large-scale nat44 nat-import <i>reference</i>
Tree	nat-import
Description	This command references an import policy to determine the routes that should be installed in the routing table as NAT routes, which are used to steer traffic to NAT. A dynamic route obtained by BGP-VPN can be imported into an inside (private side) routing context in NAT environment. This route is associated with a NAT policy that

maps traffic destined into a NAT pool and outside routing context. If the NAT policy is not explicitly configured in the import route-policy, the imported NAT route is, by default, associated with the default NAT policy defined in the NAT inside routing context.

All BGP-VPN routes that are destined to be imported into NAT inside routing context must be configured with action-type accept in the route policy.

Reference	configure policy-options policy-statement <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat64

Context **configure** [router](#) *string* [nat](#) [outside](#) [filters](#) [upstream](#) [ipv6](#) *reference*
Tree [ipv6](#)
Reference **configure** [filter](#) [ipv6-filter](#) *string*

Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

mtu number

Synopsis	MTU for downstream traffic
Context	configure router string nat outside mtu number
Tree	mtu
Range	512 to 9000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

pool [name] string

Synopsis	Enter the pool list instance
Context	configure router string nat outside pool string
Tree	pool
Max. Instances	4096
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[name] string

Synopsis	NAT pool name
Context	configure router string nat outside pool string
Tree	pool
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

address-range [start] string end string

Synopsis	Enter the address-range list instance
----------	--

Context	configure <i>router string nat outside pool string address-range string end string</i>
Tree	<i>address-range</i>
Max. Instances	4096
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[start] *string*

Synopsis	Lower bound of the NAT address range
Context	configure <i>router string nat outside pool string address-range string end string</i>
Tree	<i>address-range</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end *string*

Synopsis	Upper bound of the NAT address range
Context	configure <i>router string nat outside pool string address-range string end string</i>
Tree	<i>address-range</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure <i>router string nat outside pool string address-range string end string description string</i>
Tree	<i>description</i>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

drain *boolean*

Synopsis	Start or stop draining this NAT address range
Context	configure router <i>string</i> nat outside pool <i>string</i> address-range <i>string</i> end <i>string</i> drain <i>boolean</i>
Tree	drain
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the outside routing NAT pool
Context	configure router <i>string</i> nat outside pool <i>string</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

applications

Synopsis	Enter the applications context
Context	configure router <i>string</i> nat outside pool <i>string</i> applications
Tree	applications
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

agnostic *boolean***WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	NAT pool to create in the outside routing context
----------	---

Context	configure <i>router string nat outside pool string applications agnostic boolean</i>
Tree	agnostic
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure <i>router string nat outside pool string description string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

icmp-echo-reply *boolean*

Synopsis	Allow NAT pool IP addresses to respond to ICMP PINGs
Context	configure <i>router string nat outside pool string icmp-echo-reply boolean</i>
Tree	icmp-echo-reply
Description	<p>This command allows IP addresses in the NAT pool to respond to ICMP Echo requests (PINGs). The configuration can be toggled while the pool is in use.</p> <p>In L2-aware NAT when port-block-extensions is disabled, the reply from an outside IP address is generated only when this IP address has at least one host (binding) behind it.</p> <p>In L2-aware NAT when port-block-extensions is enabled, the reply from an outside IP address is generated regardless if a binding is present.</p> <p>In LSN, the reply from an outside IP address is generated regardless if a binding is present.</p>
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

l2-aware

Synopsis	Enter the l2-aware context
Context	configure <i>router string nat outside pool string l2-aware</i>

Tree	l2-aware
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-host

Synopsis	Enable the default-host context
Context	configure router <i>string</i> nat outside pool <i>string</i> l2-aware default-host
Tree	default-host
Description	<p>Commands in this context configure the default DMZ host options. A default DMZ host is a node on the inside to which all unknown traffic is redirected by changing the destination IPv4 address in the traffic header. During this operation, the checksums in the Layer 3 and Layer 4 header (UDP and TCP) are recalculated.</p> <p>Unknown traffic in NAT represent all unmatched traffic arriving from the outside (where there is no pinhole or a matching flow record created by traffic initiated from the inside). The purpose of the default DMZ host is to capture and analyze the unknown traffic as part of threat analysis.</p> <p>The rate of redirected unknown traffic can be restricted by configuration.</p>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

inside-router-instance *string*

Synopsis	Router instance of the DMZ
Context	configure router <i>string</i> nat outside pool <i>string</i> l2-aware default-host inside-router-instance <i>string</i>
Tree	inside-router-instance
Description	This command configures the router instance on the inside where the default DMZ host resides.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-address *string*

Synopsis	IP address of the default DMZ host
Context	configure router <i>string</i> nat outside pool <i>string</i> l2-aware default-host ip-address <i>string</i>
Tree	ip-address

Description	This command configures the IP address of the default DMZ host. Redirection to the default DMZ host is achieved by replacing the destination IP address in the traffic header in the unknown traffic initiated from the outside with the one of the default DMZ host.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rate-limit *number*

Synopsis	Rate limit for unknown traffic sent to default DMZ host
Context	configure router <i>string</i> nat outside pool <i>string</i> l2-aware default-host rate-limit <i>number</i>
Tree	rate-limit
Description	This command configures the rate limit of the unknown traffic sent to the default DMZ host. Unknown traffic sent to the default DMZ host is rate limited by a configurable value expressed in mbps. The rate limit is configurable per NAT pool per ISA, vISA, or ESA-VM.
Range	1 to 10000
Default	10
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

external-assignment *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	External IP address for Layer-2-aware
Context	configure router <i>string</i> nat outside pool <i>string</i> l2-aware external-assignment <i>boolean</i>
Tree	external-assignment
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-block-extension

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the port-block-extension context
Context	configure router string nat outside pool string l2-aware port-block-extension
Tree	port-block-extension
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ports *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Number of ports per dynamic port-block
Context	configure router string nat outside pool string l2-aware port-block-extension ports <i>number</i>
Tree	ports
Range	10 to 5000
Notes	This element is mandatory.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

subscriber

Synopsis	Enter the subscriber context
Context	configure router string nat outside pool string l2-aware port-block-extension subscriber
Tree	subscriber
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

watermarks

Synopsis	Enable the watermarks context
Context	configure router <i>string</i> nat outside pool <i>string</i> l2-aware port-block-extension subscriber watermarks
Tree	watermarks
Description	This command configures watermarks for NAT resources.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

high number

Synopsis	High watermark percentage
Context	configure router <i>string</i> nat outside pool <i>string</i> l2-aware port-block-extension subscriber watermarks high <i>number</i>
Tree	high
Description	This command configures the high threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

low number

Synopsis	Low watermark percentage
Context	configure router <i>string</i> nat outside pool <i>string</i> l2-aware port-block-extension subscriber watermarks low <i>number</i>
Tree	low
Description	This command configures the low threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	22.2.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

subscriber-limit *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Number of L2-Aware NAT subscribers per outside address
Context	configure router string nat outside pool string l2-aware port-block-extension subscriber-limit <i>number</i>
Tree	subscriber-limit
Description	<p>When port-block extensions for the L2-Aware subscribers are enabled, the port space for an outside IP address is divided into the following:</p> <ul style="list-style-type: none"> • well-known port (this is a fixed and permanently allocated block of ports for all NAT types) • static port-forwarding range (if enabled by configuration) • port range allocated for initial port blocks of each L2-Aware subscriber • port range allocated for extended port blocks for the remainder after the three previous port ranges <p>The number of L2-Aware NAT subscribers per an outside IP address multiplied by the size of the initial port-block size determines the size of the port range reserved for initial port-blocks of each subscriber.</p> <p>The lower boundary of the extended port range is determined by adding the upper boundary of the configured port forwarding range and the size of the port range allocated for initial port blocks.</p>
Range	2 to 2000
Notes	This element is mandatory.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

watermarks

Synopsis	Enable the watermarks context
Context	configure router string nat outside pool string l2-aware port-block-extension watermarks
Tree	watermarks
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

high number

Synopsis	High watermark percentage
Context	configure router <i>string</i> nat outside pool <i>string</i> l2-aware port-block-extension watermarks high <i>number</i>
Tree	high
Description	This command configures the high threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

low number

Synopsis	Low watermark percentage
Context	configure router <i>string</i> nat outside pool <i>string</i> l2-aware port-block-extension watermarks low <i>number</i>
Tree	low
Description	This command configures the low threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

large-scale

Synopsis	Enter the large-scale context
Context	configure router <i>string</i> nat outside pool <i>string</i> large-scale
Tree	large-scale
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-host

Synopsis	Enable the default-host context
Context	configure router <i>string</i> nat outside pool <i>string</i> large-scale default-host
Tree	default-host
Description	<p>Commands in this context configure the default DMZ host options. A default DMZ host is a node on the inside to which all unknown traffic is redirected by changing the destination IPv4 address in the traffic header. During this operation, the checksums in the Layer 3 and Layer 4 header (UDP and TCP) are recalculated.</p> <p>Unknown traffic in NAT represent all unmatched traffic arriving from the outside (where there is no pinhole or a matching flow record created by traffic initiated from the inside). The purpose of the default DMZ host is to capture and analyze the unknown traffic as part of threat analysis.</p> <p>The rate of redirected unknown traffic can be restricted by configuration.</p>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

inside-router-instance *string*

Synopsis	Router instance of the DMZ
Context	configure router <i>string</i> nat outside pool <i>string</i> large-scale default-host inside-router-instance <i>string</i>
Tree	inside-router-instance
Description	This command configures the router instance on the inside where the default DMZ host resides.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-address *string*

Synopsis	IP address of the default DMZ host
Context	configure router <i>string</i> nat outside pool <i>string</i> large-scale default-host ip-address <i>string</i>
Tree	ip-address
Description	This command configures the IP address of the default DMZ host. Redirection to the default DMZ host is achieved by replacing the destination IP address in the traffic header in the unknown traffic initiated from the outside with the one of the default DMZ host.
Introduced	22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rate-limit *number*

Synopsis Rate limit for unknown traffic sent to default DMZ host

Context **configure** [router](#) *string* [nat](#) [outside](#) [pool](#) *string* [large-scale](#) [default-host](#) **rate-limit** *number*

Tree [rate-limit](#)

Description This command configures the rate limit of the unknown traffic sent to the default DMZ host.

Unknown traffic sent to the default DMZ host is rate limited by a configurable value expressed in mbps. The rate limit is configurable per NAT pool per ISA, vISA, or ESA-VM.

Range 1 to 10000

Default 10

Introduced 22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

deterministic

Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

watermarks

Synopsis	Enable the watermarks context
Context	configure router <i>string</i> nat outside pool <i>string</i> large-scale deterministic watermarks
Tree	watermarks
Description	<p>Commands in this context monitor extended (dynamic) port-block utilization per outside IP in a NAT pool in deterministic LSN.</p> <p>High and low thresholds are configured in percentages of total available extended port-blocks per outside IP in a pool. Both values represent extended port-block utilization or occupancy per outside IP in a pool.</p> <p>For the system to generate those events, the NAT event-id 2045 must be enabled through configuration in the log event-control.</p>
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

high number

Synopsis	High watermark percentage
Context	configure router <i>string</i> nat outside pool <i>string</i> large-scale deterministic watermarks high number
Tree	high
Description	This command configures the high threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

low number

Synopsis	Low watermark percentage
----------	--------------------------

Context	configure router string nat outside pool string large-scale deterministic watermarks low number
Tree	low
Description	This command configures the low threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

redundancy

Synopsis	Enter the redundancy context
Context	configure router string nat outside pool string large-scale redundancy
Tree	redundancy
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state keyword

Synopsis	Administrative state of NAT pool redundancy
Context	configure router string nat outside pool string large-scale redundancy admin-state keyword
Tree	admin-state
Options	enable, disable
Default	disable
Notes	The following elements are part of a choice: (admin-state , export-route , and monitor-route) or follow .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

export-route string

Synopsis	Route to export to the peer
----------	-----------------------------

Context	configure router <i>string</i> nat outside pool <i>string</i> large-scale redundancy export-route <i>string</i>

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dynamic-block-reservation *boolean*

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis Reserve dynamic block for subscriber

Context **configure** *router* *string* *nat* *outside* *pool* *string* *port-forwarding* *dynamic-block-reservation* *boolean*

Tree [dynamic-block-reservation](#)

Description When configured to **true**, the system reserves dynamic port block when the first port forward for the subscriber is created. The dynamic port block allocation is logged only if

the block is being used and mappings are created. Dynamic port block reservation due to the port forward creation but without any dynamic mapping, is not logged.

The reserved port block is released only when the last mapping in the block expires and there are no port forwards associated with the subscriber. The de-allocation log (syslog or RADIUS) is generated when the dynamic port block is completely released.

Dynamic port block reservations can be enabled only if the configured maximum number of subscribers per outside IP addresses are less than or equal to the maximum number of configured port blocks per outside IP address.

When configured to **false**, dynamic port blocks are not reserved when the first port forward for the subscriber is created.

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

range-end *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	End of the wildcard range for port forwards
Context	configure <i>router string nat outside pool string port-forwarding range-end number</i>
Tree	range-end
Description	<p>This command configures the upper boundary of the wildcard port range dedicated to port forwarding in a NAT pool, whereas the range-start command configures the lower boundary (the starting port) of the wildcard port range dedicated to port forwarding in a NAT pool.</p> <p>If unconfigured, the range-end implicit value is set to 1023, that represents the end of the well-known port range that is always enabled.</p> <p>Port forwards are supported only in pools in NAPT mode. Pools in 1:1 mode do not support port-forwards.</p>
Range	0 1023 to 65535
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

range-start *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Start of the wildcard range for port forwards
Context	configure <i>router string nat outside pool string port-forwarding range-start number</i>
Tree	range-start
Description	<p>This command configures the lower boundary (the starting port) of the wildcard port range dedicated to port forwarding in a NAT pool, whereas the range-end command configures the upper boundary of the wildcard port range dedicated to port forwarding in a NAT pool.</p> <p>Port 0 is always excluded from the port forwarding range.</p> <p>Port forwards are supported only in pools in Network Address and Port Translation (NAPT) mode. Pools in 1:1 mode do not support configured port forwards.</p>
Range	0 1 1025 to 65535
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-reservation

Synopsis	Enter the port-reservation context
Context	configure <i>router string nat outside pool string port-reservation</i>
Tree	port-reservation
Introduced	16.0.R1

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Port block size for NAT subscribers
Context	configure <i>router string nat outside pool string port-reservation port-blocks number</i>

Tree	port-blocks
Description	In CGN, this command specifies the number of port-blocks per outside IP address in the NAT pool. The available ports per outside IP address (the end port minus the upper bound value of the static port-forwarding range) are divided into the number of port blocks specified in this command. This implicitly determines the size of each port block. For L2-aware NAT, this command can be configured only if the port block extensions (extended port blocks) are disabled. You must disable the I2-aware port-block-extension hierarchy in the NAT pool.
Range	1 to 64512
Notes	The following elements are part of a choice: port-blocks or ports .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ports *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Size of the port block for NAT subscribers
Context	configure router <i>string</i> nat outside pool <i>string</i> port-reservation ports <i>number</i>
Tree	ports
Description	For carrier-grade NAT (CGN), this command specifies the size of port blocks for NAT subscribers in the NAT pool. For L2-aware NAT, this command specifies the size of the initial port-block of a subscriber in the pool. Additional port blocks (extended port blocks) for the L2-aware subscriber must be explicitly enabled under the I2-aware port-block-extension hierarchy in the NAT pool. This command does not affect the size of extended port blocks.
Range	1 to 64512
Notes	The following elements are part of a choice: port-blocks or ports .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

type keyword**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	NAT pool type
Context	configure router string nat outside pool string type keyword
Tree	type
Options	large-scale, l2-aware, wlan-gw-anchor
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

watermarks

Synopsis	Enable the watermarks context
Context	configure router string nat outside pool string watermarks
Tree	watermarks
Description	This command configures watermarks for NAT resources.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

high number

Synopsis	High watermark percentage
Context	configure router string nat outside pool string watermarks high number
Tree	high
Description	This command configures the high threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

low number

Synopsis Low watermark percentage

Context **configure** *router string nat outside pool string watermarks low number*

Tree [low](#)

Description This command configures the low threshold value as a percentage of the total port-block space in a NAT pool.

Range 0 to 100

Units percent

Notes This element is mandatory.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

interface [*interface-name*] *string*

Synopsis	Enter the interface list instance
Context	configure router <i>string ospf number area string interface string</i>
Tree	<i>interface</i>
Description	Commands in this context configure the attributes of the OSPF area interface. Unless they are explicitly configured, interfaces are not activated by default in any interior gateway protocol such as OSPF.
Introduced	16.0.R1
Platforms	All

[interface-name] *string*

Synopsis	Router interface name
Context	configure router <i>string ospf number area string interface string</i>
Tree	<i>interface</i>
Description	This command specifies the IP interface name. Interface names must be unique within the group of defined IP interfaces for configure router interface and configure services interface commands. An interface name cannot be in the form of an IP address. Interface names can be a string composed of printable, 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. If the IP interface name does not exist or does not have an IP address configured, an error message is returned. If the IP interface exists in a different area it is moved to this area.
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

adjacency-set [*id*] *reference*

Synopsis	Add a list entry for adjacency-set

interface-type *keyword*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Interface type
Context	configure router <i>string</i> ospf <i>number</i> area <i>string</i> interface <i>string</i> interface-type <i>keyword</i>
Tree	interface-type
Description	This command specifies the interface type. broadcast - Broadcast network To significantly improve adjacency forming and network convergence, configure a network as point-to-point if only two routers are connected, even if the network is a broadcast media such as Ethernet. non-broadcast - Non-broadcast network point-to-point - Point-to-point link Set the interface type of an Ethernet link to point-to-point to avoid having to carry the broadcast adjacency maintenance overhead if the Ethernet link provided is used as a point-to-point. Set the interface type of an Ethernet link to point-to-point to avoid having to carry the broadcast adjacency maintenance overhead if the Ethernet link provided is used as a point-to-point. secondary - Multiple secondary adjacencies allowed A secondary interface allows multiple secondary adjacencies, in addition to the primary adjacency, to be established over a single IP interface. This interface type can also be applied to the system interface and to loopback interfaces to allow them to participate in multiple areas, although no adjacencies are formed over these types of interfaces.
Options	broadcast, non-broadcast, point-to-point, secondary
Introduced	16.0.R1
Platforms	All

load-balancing-weight *number*

Synopsis	Load balancing weight for an OSPF interface
Context	configure router <i>string</i> ospf <i>number</i> area <i>string</i> interface <i>string</i> load-balancing-weight <i>number</i>

 Notes This element is part of a list key.
 Introduced 16.0.R1
 Platforms All

node-sid

Synopsis Enable the **node-sid** context
 Context **configure** *router string ospf number area string interface string node-sid*
 Tree *node-sid*
 Description Commands in this context configure a node SID index or label value for the prefix representing the primary address of a network interface of type system or loopback. A separate SID value can be configured for each IPv4 and IPv6 primary address of the interface. The secondary address of an IPv4 interface cannot be assigned a node SID index and does not inherit the SID of the primary IPv4 address.

In OSPFv2 and OSPFv3, the node SID is configured in the primary area but is inherited in any other area in which the interface is added as secondary.

This command fails if the network interface is not a loopback type or if the interface is defined in an IES or VPRN context. Assigning the same SID index or label value to the same interface in two different IGP instances is not allowed within the same node.

The value of the label or index SID is taken from the range configured for this IGP instance. When using the global mode of operation, the segment routing module checks that the same index or label value is not assigned to more than one loopback interface address. When using the per-instance mode of operation, this check is not required because the index and, therefore, the label ranges of IGP instances are not allowed to overlap.

The **clear-n-flag** option allows the user to clear the N-flag (node-sid flag) in an OSPF or OSPF3 prefix SID sub-TLV originated for the prefix of a loopback interface on the system. By default, the prefix SID sub-TLV for the prefix of a loopback interface is tagged as a node SID; that is, it belongs to this node only. However, to configure and advertise an anycast SID using the same loopback interface prefix on multiple nodes, the user must clear the N-flag to assure interoperability with third-party implementations. This may perform a strict check on the receive end and drop duplicate prefix SID sub-TLVs when the N-flag is set.

The SR OS implementation is relaxed on the receive end and accepts duplicate prefix SIDs with the N-flag set or clear. SR OS resolves to the closest owner, or owners if ECMP, of the prefix SID cost-wise.

Introduced 16.0.R1

Platforms All

clear-n-flag *boolean*

Synopsis Clear the N-flag in an OSPF prefix

Context **configure** *router string ospf number area string interface string node-sid clear-n-flag boolean*

Tree [clear-n-flag](#)

Description When configured to **true**, this command allows the user to clear the N-flag in an OSPF prefix SID sub-TLV originated for the prefix of a loopback interface on the system.

When configured to **false**, the N-flag in an OSPF prefix SID sub-TLV originated for the prefix of a loopback interface on the system is not cleared.

When the user wants to configure and advertise an anycast SID using the same loopback interface prefix on multiple nodes, the user must clear the N-flag to assure interoperability with third-party implementations. This may perform a strict check on the receive end and drop duplicate prefix SID sub-TLVs when the N-flag is set.

Default false

Introduced 16.0.R1

Platforms All

index *number*

multi-homed-prefix

Synopsis	Enable the multi-homed-prefix context
Context	configure router <i>string</i> ospf <i>number</i> loopfree-alternate multi-homed-prefix
Tree	multi-homed-prefix

Description	<p>Commands in this context configure a multihomed prefix LFA for both RTM routes (IP FRR) and SR-OSPF tunnels. SR-OSPF tunnels enable multihomed prefix extension in both algorithm 0 and flexible-algorithm numbers.</p> <p>This feature makes use of the multihomed prefix model described in RFC 8518 to compute a backup IP next hop using an alternate ABR or ASBR for external prefixes and to an alternate router owner for local anycast prefixes.</p> <p>This feature further enhances the multihomed prefix backup path calculation beyond RFC 8518 with the addition of repair tunnels that make use of a PQ node or a P-Q set to reach the alternate exit ABR or ASBR of external prefixes or the alternate owner router of local anycast prefixes.</p> <p>The computed IP next-hop based backup path is added to OSPF routes of external /32 prefixes (OSPFv2 routes types 3, 4, 5, and 7) and local /32 anycast prefixes in the RTM if the prefix is not protected by base LFA or if the user set leaf preference value to all. The user must enable the ip-fast-reroute leaf to have these backup paths programmed into the FIB in datapath.</p> <p>The computed IP next hop or repair tunnel based backup path is also programmed for SR-OSPF node SID tunnels of external /32 prefixes and to /32 prefixes in same area as the computing node S and which are advertised by multiple routers (anycast prefix) in both algorithm 0 and flexible-algorithm numbers.</p>

max-sr-frr-labels *number*

Synopsis Maximum number of labels the TI-LFA backup path can use

Context **configure** *router string ospf number loopfree-alternate ti-lfa max-sr-frr-labels number*

Tree [max-sr-frr-labels](#)

Description This command configures the maximum number of labels allowed in the segment list of the TI-LFA repair tunnel. A higher value results in better coverage by TI-LFA at the expense of increased packet encapsulation overhead. The TI-LFA algorithm uses this value to limit the search for the Q-node from the P-node on the post-convergence path.

Range 0 to 3

Default 2

Introduced 16.0.R1

adj-sid-hold (*number* | *keyword*)

Synopsis	Adjacency SID hold time
Context	configure router <i>string</i> ospf <i>number</i> segment-routing adj-sid-hold (<i>number</i> <i>keyword</i>)
Tree	adj-sid-hold

Description This command configures a timer to hold the ILM or LTN of an adjacency SID following a failure of the adjacency.

When an adjacency to a neighbor fails, the following procedure is followed for both an LFA protected and the LFA unprotected SID of this adjacency in SR-MPLS. An adjacency can have both types of SIDs assigned by configuration. An LFA protected adjacency SID is eligible for LFA protection, however, the following procedure applies even if an LFA backup is not programmed at the time of the failure. An LFA unprotected adjacency SID is not eligible for LFA protection.

- IGP withdraws the advertisement of the link TLV as well as its adjacency SID sub-TLV.
- The adjacency SID hold timer starts.
- The LTN and ILM records of the adjacency are kept in the datapath for as long as the adjacency SID hold time is running. This allows packets to flow over the LFA backup path, when the adjacency is protected, and allows the ingress LER or PCE time to compute a new path of the SR-TE LSP after IGP converges.
- If the adjacency is restored while the adjacency SID hold timer is running, the timer is aborted, and the adjacency SID remains programmed in the datapath with the retained SID values. However, the backup NHLFE may change if a new LFA SPF runs while the adjacency SID hold timer running. An update to the backup NHLFE is performed immediately following the LFA SPF. In all cases, the adjacency keeps its assigned SID label value.
- If the adjacency SID hold timer expires before the adjacency is restored, the SID is deprogrammed from the datapath and the label returned into the common pool where it was drawn from. Users of the adjacency (for example, SR policy and SR-TE LSP) are also informed. When the adjacency is subsequently restored, it gets assigned its allocated static-label value or a new dynamic-label value.
- A new PG-ID is assigned each time an adjacency comes back up. This PG-ID is used by the ILM and LTN of the adjacency SID and of all downstream node SIDs that resolve to a next hop over this adjacency.

tunnel-table-pref number

Synopsis	Preference of SR tunnels created by the IGP instance
Context	configure router string ospf number segment-routing tunnel-table-pref number
Tree	tunnel-table-pref
Description	This command configures the TTM preference of shortest path SR tunnels created by the IGP instance. This is used for BGP shortcuts, VPRN auto-bind, or BGP transport tunnel when the tunnel binding commands are configured to the any value, which parses the TTM for tunnels in the protocol preference order. The user can choose to either accept the global TTM preference or explicitly list the tunnel types they want to use. If the user lists the tunnel type explicitly, the TTM preference is still used to select one type over the other. In both cases, a fallback to the next preferred tunnel type is performed if the selected type fails. A reversion to a more preferred tunnel type is performed as soon as one is available.

The segment routing module adds to the TTM an SR tunnel entry for each resolved remote node SID prefix and programs the data path having the corresponding LTN with the push operation pointing to the primary and LFA backup NHLFEs.

The default preference for shortest path SR tunnels in the TTM is set lower than LDP tunnels but higher than BGP tunnels to allow controlled migration of customers without disrupting their current deployment when they enable segment routing. The following is the value of the default preference for the various tunnel types. This includes the preference of SR tunnels based on shortest path (referred to as SR-ISIS and SR-OSPF).

Note: The preference of an SR-TE LSP is not configurable and is the second most preferred tunnel type after RSVP-TE. The preference is the same whether if the SR-TE LSP was resolved in IS-IS or OSPF.

The global default TTM preference for the tunnel types is as follows:

- ROUTE_PREF_RSVP 7
- ROUTE_PREF_SR_TE 8
- ROUTE_PREF_LDP 9
- ROUTE_PREF_OSPF_TTM 10
- ROUTE_PREF_ISIS_TTM 11
- ROUTE_PREF_BGP_TTM 12
- ROUTE_PREF_GRE 255

The default value for SR-ISIS or SR-OSPF is the same regardless if one or more IS-IS or OSPF instances programmed a tunnel for the same prefix. The selection of a SR tunnel in this case will be based on the lowest IGP instance ID. Similarly, IPv6 SR-ISIS and SR-OSPF3 tunnels are programmed into TTMv6 with the same default preference value as IPv4 SR-ISIS and IPv4 SR-OSPF respectively.

Nokia recommends not to set two or more tunnel types to the same preference value. In such a situation, the tunnel table prefers the tunnel type which was first introduced in SR OS implementation historically.

timers

Synopsis	Enter the timers context
Context	configure <i>router string ospf number timers</i>
Tree	timers
Introduced	16.0.R1
Platforms	All

incremental-spf-wait *number*

Synopsis	Delay time before an incremental SPF calculation starts
Context	configure router <i>string</i> ospf <i>number</i> timers incremental-spf-wait <i>number</i>
Tree	incremental-spf-wait
Range	0 to 1000
Units	milliseconds
Default	1000
Introduced	16.0.R1
Platforms	All

lsa-accumulate *number*

Synopsis	Delay to gather LSAs before advertising to neighbors
Context	configure router <i>string</i> ospf <i>number</i> timers lsa-accumulate <i>number</i>
Tree	lsa-accumulate
Range	0 to 1000
Units	milliseconds
Default	1000
Introduced	16.0.R1
Platforms	All

lsa-arrival *number*

Synopsis	Min delay between receipt of same LSAs from neighbors
Context	configure router <i>string</i> ospf <i>number</i> timers lsa-arrival <i>number</i>
Tree	lsa-arrival
Range	0 to 600000
Units	milliseconds
Default	1000
Introduced	16.0.R1
Platforms	All

lsa-generate

Synopsis	Enter the lsa-generate context
Context	configure router <i>string ospf number timers</i> lsa-generate
Tree	lsa-generate
Introduced	16.0.R1
Platforms	All

lsa-initial-wait *number*

Synopsis	First wait period between OSPF LSA generation
Context	configure router <i>string ospf number timers</i> lsa-generate lsa-initial-wait <i>number</i>
Tree	lsa-initial-wait
Range	10 to 600000
Units	milliseconds
Default	5000
Introduced	16.0.R1
Platforms	All

lsa-second-wait *number*

Synopsis	Hold time between the first and second LSA generation
Context	configure router <i>string ospf number timers</i> lsa-generate lsa-second-wait <i>number</i>
Tree	lsa-second-wait
Range	10 to 600000
Units	milliseconds
Default	5000
Introduced	16.0.R1
Platforms	All

max-lsa-wait *number*

Synopsis	Max time between two LSAs being generated
Context	configure router <i>string ospf number timers</i> lsa-generate max-lsa-wait <i>number</i>
Tree	max-lsa-wait
Range	10 to 600000

Units	milliseconds
Default	5000
Introduced	16.0.R1
Platforms	All

redistribute-delay *number*

Synopsis	Hold down timer for external routes into OSPF
Context	configure router <i>string</i> ospf <i>number</i> timers redistribute-delay <i>number</i>
Tree	redistribute-delay
Range	0 to 1000
Units	milliseconds
Default	1000
Introduced	16.0.R1
Platforms	All

spf-wait

Synopsis	Enter the spf-wait context
Context	configure router <i>string</i> ospf <i>number</i> timers spf-wait
Tree	spf-wait
Introduced	16.0.R1
Platforms	All

spf-initial-wait *number*

Synopsis	Initial SPF calculation delay after a topology change
Context	configure router <i>string</i> ospf <i>number</i> timers spf-wait spf-initial-wait <i>number</i>
Tree	spf-initial-wait
Range	10 to 100000
Units	milliseconds
Default	1000
Introduced	16.0.R1
Platforms	All

spf-max-wait *number*

Synopsis	Max interval between two consecutive SPF calculations
Context	configure <i>router string ospf number timers spf-wait spf-max-wait number</i>
Tree	spf-max-wait
Range	10 to 120000
Units	milliseconds
Default	10000
Introduced	16.0.R1
Platforms	All

spf-second-wait *number*

Synopsis	Hold time between the first and second SPF calculation
Context	configure <i>router string ospf number timers spf-wait spf-second-wait number</i>
Tree	spf-second-wait
Range	10 to 100000
Units	milliseconds
Default	1000
Introduced	16.0.R1
Platforms	All

traffic-engineering *boolean*

Synopsis	Calculate traffic engineering route
Context	configure <i>router string ospf number traffic-engineering boolean</i>
Tree	traffic-engineering
Default	false
Introduced	16.0.R1
Platforms	All

traffic-engineering-options

Synopsis	Enter the traffic-engineering-options context
Context	configure <i>router string ospf number traffic-engineering-options</i>

Tree	traffic-engineering-options
Introduced	20.7.R1
Platforms	All

advertise-delay *boolean*

Synopsis	Enable the advertisement of link delay for TE
Context	configure router <i>string</i> ospf <i>number</i> traffic-engineering-options advertise-delay <i>boolean</i>
Tree	advertise-delay
Description	<p>When configured to true, the router advertises link delay in the IGP LSDB within the OSPF-TE TLV attribute or when the Application-Specific Link Attribute (ASLA) is enabled within SR-TE ASLA.</p> <p>When the router is configured under the configure router ospf traffic-engineering-options sr-te application-specific-link-attributes command to generate SR-TE ASLA attributes, link delay is advertised as a legacy RFC 3630 TLV when RSVP-TE is enabled and as an ASLA RFC 8920 TLV for SR-TE when MPLS is enabled for an interface.</p> <p>SR OS accepts and handles both legacy RSVP-TE TLVs and ASLAs for the RSVP application. However, SR OS only advertises RFC 3630 legacy RSVP-TE TLVs (as recommended by RFC 8920) to avoid compatibility issues.</p> <p>When configured to false, the router disables link delay advertisement.</p>
Default	false
Introduced	22.10.R1
Platforms	All

sr-te *keyword*

Synopsis	Advertisement of link attributes for SR-TE
Context	configure router <i>string</i> ospf <i>number</i> traffic-engineering-options sr-te <i>keyword</i>
Tree	sr-te
Description	This command specifies the advertisement of TE attributes of each link on a per-application basis for RSVP-TE and SR-TE applications.
Options	false, legacy, application-specific-link-attributes
Default	false
Introduced	20.7.R1
Platforms	All

unicast-import *boolean*

Synopsis	Submit routes into the unicast Route Table Manager
Context	configure router <i>string ospf number unicast-import boolean</i>
Tree	unicast-import
Default	true
Introduced	16.0.R1
Platforms	All

ospf3 [[ospf-instance](#)] *number*

Synopsis	Enter the ospf3 list instance
Context	configure router <i>string ospf3 number</i>
Tree	ospf3
Max. Instances	32
Introduced	16.0.R1
Platforms	All

[ospf-instance] *number*

Synopsis	Value for the integrated OSPF instance
Context	configure router <i>string ospf3 number</i>
Tree	ospf3
Range	0 to 31 64 to 95
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the OSPF instance
Context	configure router <i>string ospf3 number admin-state keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable

Introduced	16.0.R1
Platforms	All

advertise-router-capability *keyword*

Synopsis	Allow router advertisement capabilities
Context	configure <i>router string ospf3 number advertise-router-capability keyword</i>
Tree	advertise-router-capability
Options	false, link, area, as
Default	false
Introduced	16.0.R1
Platforms	All

area [*area-id*] *string*

Synopsis	Enter the area list instance
Context	configure <i>router string ospf3 number area string</i>
Tree	area
Introduced	16.0.R1
Platforms	All

[*area-id*] *string*

Synopsis	Area-ID attribute
Context	configure <i>router string ospf3 number area string</i>
Tree	area
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

advertise-router-capability *boolean*

Synopsis	Allow router advertisement capabilities
Context	configure <i>router string ospf3 number area string advertise-router-capability boolean</i>
Tree	advertise-router-capability

Default	true
Introduced	16.0.R1
Platforms	All

area-range [[ip-prefix-mask](#)] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Enter the area-range list instance
Context	configure router <i>string</i> ospf3 <i>number</i> area <i>string</i> area-range (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	area-range
Introduced	16.0.R1
Platforms	All

[ip-prefix-mask] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Address ranges to create on an ABR for route summarization or suppression
Context	configure router <i>string</i> ospf3 <i>number</i> area <i>string</i> area-range (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	area-range
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

advertise *boolean*

Synopsis	Advertise summarized range of addresses to other areas
Context	configure router <i>string</i> ospf3 <i>number</i> area <i>string</i> area-range (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) advertise <i>boolean</i>
Tree	advertise
Default	true
Introduced	16.0.R1
Platforms	All

blackhole-aggregate *boolean*

Synopsis	Install a low priority blackhole route to avoid loops
Context	configure router <i>string</i> ospf3 <i>number</i> area <i>string</i> blackhole-aggregate <i>boolean</i>

Tree	blackhole-aggregate
Default	true
Introduced	16.0.R1
Platforms	All

database-export-exclude *boolean*

Synopsis	Exclude IGP link-state OSPF area info into TE-DB
Context	configure router <i>string</i> ospf3 <i>number</i> area <i>string</i> database-export-exclude <i>boolean</i>
Tree	database-export-exclude
Default	false
Introduced	16.0.R4
Platforms	All

export-policy *reference*

Synopsis	Type 3 Summary-LSA/OSPFv3 inter-area-prefix-LSA route
Context	configure router <i>string</i> ospf3 <i>number</i> area <i>string</i> export-policy <i>reference</i>
Tree	export-policy
Reference	configure policy-options policy-statement <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

extended-lsa *keyword*

Synopsis	Extended LSA format in an OSPFv3 area
Context	configure router <i>string</i> ospf3 <i>number</i> area <i>string</i> extended-lsa <i>keyword</i>
Tree	extended-lsa
Options	only
Introduced	16.0.R1
Platforms	All

import-policy *reference*

Synopsis	Route imported as Summary Type 3/Inter-Area-Prefix-LSA
Context	configure router <i>string ospf3 number area string import-policy reference</i>
Tree	import-policy
Reference	configure policy-options policy-statement <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

interface [[interface-name](#)] *string*

Synopsis	Enter the interface list instance
Context	configure router <i>string ospf3 number area string interface string</i>
Tree	interface
Introduced	16.0.R1
Platforms	All

[interface-name] *string*

Synopsis	Router interface name
Context	configure router <i>string ospf3 number area string interface string</i>
Tree	interface
Description	<p>This command specifies the IP interface name. Interface names must be unique within the group of defined IP interfaces for configure router interface and configure service ies interface commands. An interface name cannot be in the form of an IP address. Interface names can be a string composed of printable, 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.</p> <p>If the IP interface name does not exist or does not have an IP address configured, an error message is returned.</p> <p>If the IP interface exists in a different area it is moved to this area.</p>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1

Platforms All

admin-state *keyword*

Range	1 to 65535
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	All

interface-type *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Interface type
Context	configure router <i>string</i> ospf3 <i>number</i> area <i>string</i> interface <i>string</i> interface-type <i>keyword</i>
Tree	interface-type
Description	This command specifies the interface type. broadcast - Broadcast network To significantly improve adjacency forming and network convergence, configure a network as point-to-point if only two routers are connected, even if the network is a broadcast media such as Ethernet. non-broadcast - Non-broadcast network point-to-point - Point-to-point link

Set the interface type of an Ethernet link to **point-to-point** to avoid having to carry the broadcast adjacency maintenance overhead if the Ethernet link provided is used as a point-to-point. Set the interface type of an Ethernet link to **point-to-point** to avoid having to carry the broadcast adjacency maintenance overhead if the Ethernet link provided is used as a point-to-point.

secondary - Multiple secondary adjacencies allowed

A **secondary** interface allows multiple secondary adjacencies, in addition to the primary adjacency, to be established over a single IP interface. This interface type can also be applied to the system interface and to loopback interfaces to allow them to participate in multiple areas, although no adjacencies are formed over these types of interfaces.

Options	broadcast, non-broadcast, point-to-point, secondary
Introduced	16.0.R1
Platforms	All

load-balancing-weight *number*

Synopsis	Load balancing weight for an OSPF3 interface
Context	configure router <i>string</i> ospf3 <i>number</i> area <i>string</i> interface <i>string</i> load-balancing-weight <i>number</i>

Tree	neighbor
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

node-sid

Synopsis	Enable the node-sid context
Context	configure <i>router string ospf3 number area string interface string node-sid</i>
Tree	<i>node-sid</i>
Description	<p>Commands in this context configure a node SID index or label value for the prefix representing the primary address of a network interface of type system or loopback. A separate SID value can be configured for each IPv4 and IPv6 primary address of the interface. The secondary address of an IPv4 interface cannot be assigned a node SID index and does not inherit the SID of the primary IPv4 address.</p> <p>In OSPFv2 and OSPFv3, the node SID is configured in the primary area but is inherited in any other area in which the interface is added as secondary.</p> <p>This command fails if the network interface is not a loopback type or if the interface is defined in an IES or VPRN context. Assigning the same SID index or label value to the same interface in two different IGP instances is not allowed within the same node.</p> <p>The value of the label or index SID is taken from the range configured for this IGP instance. When using the global mode of operation, the segment routing module checks that the same index or label value is not assigned to more than one loopback interface address. When using the per-instance mode of operation, this check is not required because the index and, therefore, the label ranges of IGP instances are not allowed to overlap.</p> <p>The clear-n-flag option allows the user to clear the N-flag (node-sid flag) in an OSPF or OSPF3 prefix SID sub-TLV originated for the prefix of a loopback interface on the system. By default, the prefix SID sub-TLV for the prefix of a loopback interface is tagged as a node SID; that is, it belongs to this node only. However, to configure and advertise an anycast SID using the same loopback interface prefix on multiple nodes, the user must clear the N-flag to assure interoperability with third-party implementations. This may perform a strict check on the receive end and drop duplicate prefix SID sub-TLVs when the N-flag is set.</p> <p>The SR OS implementation is relaxed on the receive end and accepts duplicate prefix SIDs with the N-flag set or clear. SR OS resolves to the closest owner, or owners if ECMP, of the prefix SID cost-wise.</p>
Introduced	16.0.R4
Platforms	All

clear-n-flag *boolean*

Synopsis	Clear the N-flag in an OSPF3 prefix
Context	configure <i>router string ospf3 number area string interface string node-sid clear-n-flag boolean</i>
Tree	<i>clear-n-flag</i>

Description	<p>When configured to true, this command allows the user to clear the N-flag in an OSPF3 prefix SID sub-TLV originated for the prefix of a loopback interface on the system.</p> <p>When configured to false, the N-flag in an OSPF3 prefix SID sub-TLV originated for the prefix of a loopback interface on the system is not cleared.</p> <p>When the user wants to configure and advertise an anycast SID using the same loopback interface prefix on multiple nodes, the user must clear the N-flag to assure interoperability with third-party implementations. This may perform a strict check on the receive end and drop duplicate prefix SID sub-TLVs when the N-flag is set.</p>
Default	false
Introduced	16.0.R5
Platforms	All

index number

Synopsis	Node SID index for this interface

Introduced	16.0.R4
Platforms	All

igp-identifier *number*

Synopsis	IGP instance in the BGP-LS NLRI
Context	configure router string ospf3 number database-export igp-identifier <i>number</i>
Tree	igp-identifier
Description	This command identifies the IGP instance in the BGP-LS NLRI when a router has interfaces participating in multiple IGP instances. The concept of an instance ID specified for OSPF is local subnet significant (RFC 6549). An IGP identifier value can be configured to be unique within a given IGP domain when the router sends the IGP link state information using BGP-LS.

Max. Range	0 to 18446744073709551615
Introduced	16.0.R4
Platforms	All

export-limit

Synopsis	Enable the export-limit context

adj-sid-hold (*number* | *keyword*)

Synopsis Adjacency SID hold time

Context **configure** [router](#) *string* [ospf3](#) *number* [segment-routing](#) [adj-sid-hold](#) (*number* | *keyword*)

Tree [adj-sid-hold](#)

Description This command configures a timer to hold the ILM or LTN of an adjacency SID following a failure of the adjacency.

When an adjacency to a neighbor fails, the following procedure is followed for both an LFA protected and the LFA unprotected SID of this adjacency in SR-MPLS. An adjacency can have both types of SIDs assigned by configuration. An LFA protected adjacency SID is eligible for LFA protection, however, the following procedure applies even if an LFA backup is not programmed at the time of the failure. An LFA unprotected adjacency SID is not eligible for LFA protection.

- IGP withdraws the advertisement of the link TLV as well as its adjacency SID sub-TLV.
- The adjacency SID hold timer starts.

- The LTN and ILM records of the adjacency are kept in the datapath for as long as the adjacency SID hold time is running. This allows packets to flow over the LFA backup path, when the adjacency is protected, and allows the ingress LER or PCE time to compute a new path of the SR-TE LSP after IGP converges.
- If the adjacency is restored while the adjacency SID hold timer is running, the timer is aborted, and the adjacency SID remains programmed in the datapath with the retained SID values. However, the backup NHLFE may change if a new LFA SPF runs while the adjacency SID hold timer running. An update to the backup NHLFE is performed immediately following the LFA SPF. In all cases, the adjacency keeps its assigned SID label value.
- If the adjacency SID hold timer expires before the adjacency is restored, the SID is deprogrammed from the datapath and the label returned into the common pool where it was drawn from. Users of the adjacency (for example, SR policy and SR-TE LSP) are also informed. When the adjacency is subsequently restored, it gets assigned its allocated static-label value or a new dynamic-label value.
- A new PG-ID is assigned each time an adjacency comes back up. This PG-ID is used by the ILM and LTN of the adjacency SID and of all downstream node SIDs that resolve to a next hop over this adjacency.

tunnel-table-pref *number*

Synopsis	Preference of SR tunnels created by the IGP instance
Context	configure router <i>string</i> ospf3 <i>number</i> segment-routing tunnel-table-pref <i>number</i>
Tree	tunnel-table-pref

Description This command configures the TTM preference of shortest path SR tunnels created by the IGP instance. This is used for BGP shortcuts, VPRN auto-bind, or BGP transport tunnel when the tunnel binding commands are configured to the **any** value, which parses the TTM for tunnels in the protocol preference order. The user can choose to either accept the global TTM preference or explicitly list the tunnel types they want to use. If the user lists the tunnel type explicitly, the TTM preference is still used to select one type over the other. In both cases, a fallback to the next preferred tunnel type is performed if the selected type fails. A reversion to a more preferred tunnel type is performed as soon as one is available.

The segment routing module adds to the TTM an SR tunnel entry for each resolved remote node SID prefix and programs the data path having the corresponding LTN with the push operation pointing to the primary and LFA backup NHLFEs.

The default preference for shortest path SR tunnels in the TTM is set lower than LDP tunnels but higher than BGP tunnels to allow controlled migration of customers without disrupting their current deployment when they enable segment routing. The following is the value of the default preference for the various tunnel types. This includes the preference of SR tunnels based on shortest path (referred to as SR-ISIS and SR-OSPF).

Note: The preference of an SR-TE LSP is not configurable and is the second most preferred tunnel type after RSVP-TE. The preference is the same whether if the SR-TE LSP was resolved in IS-IS or OSPF.

The global default TTM preference for the tunnel types is as follows:

- ROUTE_PREF_RSVP 7
- ROUTE_PREF_SR_TE 8
- ROUTE_PREF_LDP 9
- ROUTE_PREF_OSPF_TTM 10
- ROUTE_PREF_ISIS_TTM 11
- ROUTE_PREF_BGP_TTM 12
- ROUTE_PREF_GRE 255

The default value for SR-ISIS or SR-OSPF is the same regardless if one or more IS-IS or OSPF instances programmed a tunnel for the same prefix. The selection of a SR tunnel in this case will be based on the lowest IGP instance ID. Similarly, IPv6 SR-ISIS and SR-OSPF3 tunnels are programmed into TTMv6 with the same default preference value as IPv4 SR-ISIS and IPv4 SR-OSPF respectively.

Nokia recommends not to set two or more tunnel types to the same preference value. In such a situation, the tunnel table prefers the tunnel type which was first introduced in SR OS implementation historically.

Tree *association-id*

Description This command configures the diversity association ID. The user must specify an association ID.

Range 0 to 65535

Default 0

Introduced 22.5.R1

Platforms All

association-source (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source IP address of the diversity association
Context	configure router <i>string</i> pcep pcc pce-associations diversity <i>string</i> association-source (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	association-source
Introduced	22.5.R1
Platforms	All

disjointness-reference *boolean*

Synopsis	Configure P-flag in the disjointness configuration TLV
Context	configure router <i>string</i> pcep pcc pce-associations diversity <i>string</i> disjointness-reference <i>boolean</i>
Tree	disjointness-reference
Description	When configured to true , the router sets the P-flag in the disjointness configuration TLV. When the P-flag is set, it indicates that this LSP path is the reference path for the disjoint set of paths. The PCE must first compute the path of this LSP and then apply the requested disjointness type to compute the path of all other paths in the same diversity association ID. When configured to false , the router does not set the P-flag in the disjointness configuration TLV.
Default	false
Introduced	22.5.R1
Platforms	All

disjointness-type *keyword*

Synopsis	Disjointness type for the association group
Context	configure router <i>string</i> pcep pcc pce-associations diversity <i>string</i> disjointness-type <i>keyword</i>

server [*name*] *string*

Synopsis Enter the **server** list instance
 Context **configure** *router string pcp server string*

Tree	server
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[name] *string*

Synopsis	PCP server name
Context	configure router <i>string</i> pcp server <i>string</i>
Tree	server
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the PCP server
Context	configure router <i>string</i> pcp server <i>string</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure router <i>string</i> pcp server <i>string</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dual-stack-lite-address *string*

Synopsis	Inside Dual Stack Lite AFTR address
Context	configure router <i>string</i> pcp server <i>string</i> dual-stack-lite-address <i>string</i>
Tree	dual-stack-lite-address
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

fwd-inside-router *string*

Synopsis	PCP forwarding inside virtual router instance
Context	configure router <i>string</i> pcp server <i>string</i> fwd-inside-router <i>string</i>
Tree	fwd-inside-router
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

interface [**name**] *reference*

Synopsis	Add a list entry for interface
Context	configure router <i>string</i> pcp server <i>string</i> interface <i>reference</i>
Tree	interface
Max. Instances	32
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[name] *reference*

Synopsis	Interface name
Context	configure router <i>string</i> pcp server <i>string</i> interface <i>reference</i>
Tree	interface
Reference	configure router <i>string</i> interface <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

policy reference

Synopsis	PCP server policy
Context	configure <i>router string</i> pcp server string <i>policy reference</i>
Tree	policy
Reference	configure service nat pcp-server-policy <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

pim

Synopsis	Enable the pim context
Context	configure <i>router string</i> pim
Tree	pim
Introduced	16.0.R1
Platforms	All

admin-state keyword

Synopsis	Administrative state of PIM
Context	configure <i>router string</i> pim admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	16.0.R1

bier-signaling-type

Synopsis Enter the **bier-signaling-type** context
Context **configure** [router](#) *string* [pim](#) *interface* *string* [bier-signaling-type](#)
Tree [bier-signaling-type](#)
Introduced 19.10.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ipv4 boolean

Synopsis	Enable PIM IPv4 signaling through a BIER domain
Context	configure router <i>string</i> pim interface <i>string</i> bier-signaling-type ipv4 <i>boolean</i>
Tree	ipv4
Default	false
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ipv6 boolean

Synopsis	Enable PIM IPv6 signaling through a BIER domain
Context	configure router <i>string</i> pim interface <i>string</i> bier-signaling-type ipv6 <i>boolean</i>
Tree	ipv6
Default	false
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

bsm-check-rtr-alert boolean

Synopsis	Check router alert option in bootstrap messages received
Context	configure router <i>string</i> pim interface <i>string</i> bsm-check-rtr-alert <i>boolean</i>
Tree	bsm-check-rtr-alert
Default	false
Introduced	16.0.R1
Platforms	All

hello-interval number

Synopsis	Frequency at which PIM Hello messages are sent over this interface
Context	configure router <i>string</i> pim interface <i>string</i> hello-interval <i>number</i>
Tree	hello-interval
Range	0 to 255
Default	30
Introduced	16.0.R1

Platforms All

hello-multiplier *number*

Synopsis Multiplier to determine the hold time for PIM neighbor
Context **configure** *router string pim interface string hello-multiplier number*
Tree [hello-multiplier](#)
Range 20 to 100
Default 35
Introduced 16.0.R1
Platforms All

improved-assert *boolean*

Synopsis Allow improved assert processing on interface
Context **configure** *router string pim interface string improved-assert boolean*
Tree [improved-assert](#)
Default true
Introduced 16.0.R1
Platforms All

instant-prune-echo *boolean*

Synopsis Allow PIM to send an instant prune echo when router starts the prune pending timer for PIM interface
Context **configure** *router string pim interface string instant-prune-echo boolean*
Tree [instant-prune-echo](#)
Default false
Introduced 16.0.R1
Platforms All

ipv4

Synopsis Enter the **ipv4** context
Context **configure** *router string pim interface string ipv4*
Tree [ipv4](#)

Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

level [*level-id*] *number*

Synopsis	Enter the level list instance
Context	configure <i>router string pim interface string mcac mc-constraints level number</i>
Tree	<i>level</i>
Introduced	16.0.R1
Platforms	All

[level-id] *number*

Synopsis	Bandwidth level ID for an MCAC constraint
Context	configure <i>router string pim interface string mcac mc-constraints level number</i>
Tree	<i>level</i>
Range	1 to 8
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

bandwidth *number*

Synopsis	Bandwidth available for this level
Context	configure <i>router string pim interface string mcac mc-constraints level number bandwidth number</i>
Tree	<i>bandwidth</i>
Range	0 to 2147483647
Units	kilobps
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

number-down [*number-lag-port-down*] *number*

Synopsis	Enter the number-down list instance
Context	configure <i>router string pim interface string mcac mc-constraints number-down number</i>
Tree	<i>number-down</i>

Introduced	16.0.R1
Platforms	All

[number-lag-port-down] *number*

Synopsis	Number of ports that are down in this LAG link
Context	configure router <i>string</i> pim interface <i>string</i> mcac mc-constraints number-down <i>number</i>
Tree	number-down
Range	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

level *number*

Synopsis	Level ID to associate with number of down LAG ports
Context	configure router <i>string</i> pim interface <i>string</i> mcac mc-constraints number-down <i>number</i> level <i>number</i>
Tree	level
Description	This command specifies the bandwidth for a given level. Level 1 has the highest priority and level 8 has the lowest priority.
Range	1 to 8
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

use-lag-port-weight *boolean*

Synopsis	Use LAG port weight in calculating MCAC constraints
Context	configure router <i>string</i> pim interface <i>string</i> mcac mc-constraints use-lag-port-weight <i>boolean</i>
Tree	use-lag-port-weight
Description	When configured to true , port weight is used when determining available bandwidth per level when LAG ports go down or come up. This command is required for proper operation on mixed port-speed LAGs and can also be used for unmixed port-speed LAGs.

Default	false
Introduced	16.0.R1
Platforms	All

policy reference

Synopsis	Multicast CAC policy name
Context	configure router <i>string</i> pim interface <i>string</i> mcac policy <i>reference</i>
Tree	policy
Description	<p>This command configures the name of the global channel bandwidth definition policy that is used for (H)MCAC and HQoS adjustment.</p> <p>Within the scope of HQoS adjustment, the channel definition policy under the group interface is used if redirection is unconfigured. In this case, the HQoS adjustment can be applied to IPoE subscribers in per-SAP replication mode.</p> <p>If redirection is configured, the channel bandwidth definition policy applied under the Layer 3 redirected interface is in effect.</p> <p>Hierarchical MCAC (HMCAC) is supported on two levels simultaneously:</p> <ul style="list-style-type: none"> • subscriber level and redirected interface when redirection is configured • subscriber level and group-interface level when redirection is unconfigured <p>In HMCAC, the subscriber is checked against its bandwidth limits first, then against the bandwidth limits of the redirected or group interface. If redirection is configured but the policy is referenced only under the group interface, no admission control is executed (HMCAC or MCAC).</p>
Reference	configure mcac policy <i>string</i>
Introduced	16.0.R1
Platforms	All

multicast-senders *keyword*

Synopsis	Subnet matching for the incoming data packets
Context	configure router <i>string</i> pim interface <i>string</i> multicast-senders <i>keyword</i>
Tree	multicast-senders
Options	auto, always, never
Default	auto
Introduced	16.0.R1
Platforms	All

p2mp-ldp-tree-join

Synopsis	Enter the p2mp-ldp-tree-join context
Context	configure <i>router string pim interface string</i> p2mp-ldp-tree-join
Tree	p2mp-ldp-tree-join
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ipv4 *boolean*

Synopsis	Allow dynamic mLDP in-band signaling for IPv4 PIM joins
Context	configure <i>router string pim interface string</i> p2mp-ldp-tree-join ipv4 <i>boolean</i>
Tree	ipv4
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ipv6 *boolean*

Synopsis	Allow dynamic mLDP in-band signaling for IPv6 PIM joins
Context	configure <i>router string pim interface string</i> p2mp-ldp-tree-join ipv6 <i>boolean</i>
Tree	ipv6
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

priority *number*

Synopsis	DR election priority for this interface
Context	configure <i>router string pim interface string</i> priority <i>number</i>
Tree	priority
Range	1 to 4294967295
Default	1
Introduced	16.0.R1

mdt-spt *boolean*

Synopsis	Use SPT switchover for default MDT
Context	configure router <i>string</i> pim mdt-spt <i>boolean</i>
Tree	mdt-spt
Default	false
Introduced	16.0.R1
Platforms	All

non-dr-attract-traffic *boolean*

Synopsis	Attract traffic when the router is not the designated one
----------	---

Context	configure router <i>string</i> pim non-dr-attract-traffic <i>boolean</i>
Tree	non-dr-attract-traffic
Default	false
Introduced	16.0.R1
Platforms	All

pim-ssm-scaling *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable PIM-SSM scaling
Context	configure router <i>string</i> pim pim-ssm-scaling <i>boolean</i>
Tree	pim-ssm-scaling
Description	<p>When configured to true, this command enables an increase of PIM SSM (S,G) scaling to a maximum of 256000 per system. The total maximum multicast capacity is, however, constrained by the lowest-performance FP.</p> <p>When the maximum link capacity from the fabric to the lowest-performance FP is reached, the link to that FP is overloaded, resulting in packet loss for all FPs. This capacity constraint is independent of whether the lowest-performance FP has a receiver on it or not. If the multicast management chassis per-plane total capacity is configured to an explicit value larger than that supported by the lowest-performance FP, then IMPM believes that there is more plane capacity available than there actually is and the result is (S,G) packet loss instead of blackholing. By setting the multicast management chassis per-plane total capacity to dynamic, the system automatically sets the switch fabric multicast plane capacity to the minimum value supported by the fabric and all line cards in the system.</p> <p>When PIM SSM scaling is enabled, the following multicast features are disabled:• DM• MoFRR• JP policy• SSM groups• InBand features (BIER and MLDP)• Extranet• ASM</p> <p>When configured to false, there is no increase of PIM SSM (S,G) scaling.</p>
Default	false
Introduced	19.7.R1

Context	configure <i>router string radius proxy string cache track-accounting stop</i> <i>boolean</i>
Tree	stop
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

track-authentication

Synopsis	Enter the track-authentication context
Context	configure <i>router string radius proxy string cache track-authentication</i>
Tree	track-authentication
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

accept *boolean*

Synopsis	Track Access-Accept message for mobility
Context	configure <i>router string radius proxy string cache track-authentication accept</i> <i>boolean</i>
Tree	accept
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

track-delete-hold-time *number*

Synopsis	Delete hold time
----------	------------------

Context	configure <i>router string radius proxy string cache track-delete-hold-time number</i>
Tree	track-delete-hold-time
Range	0 to 6000
Units	seconds
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

defaults

Synopsis	Enter the defaults context
Context	configure <i>router string radius proxy string defaults</i>
Tree	defaults
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

accounting-server-policy *string*

Synopsis	Default accounting RADIUS server policy
Context	configure <i>router string radius proxy string defaults accounting-server-policy string</i>
Tree	accounting-server-policy
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

authentication-server-policy *string*

Synopsis	Default authentication RADIUS server policy
Context	configure <i>router string radius proxy string defaults authentication-server-policy string</i>
Tree	authentication-server-policy
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure router <i>string</i> radius proxy <i>string</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interface [[interface-name](#)] *string*

Synopsis	Add a list entry for interface
Context	configure router <i>string</i> radius proxy <i>string</i> interface <i>string</i>
Tree	interface
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[interface-name] *string*

Synopsis	IP interface name
Context	configure router <i>string</i> radius proxy <i>string</i> interface <i>string</i>
Tree	interface
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

load-balance-key

Synopsis	Enter the load-balance-key context
Context	configure router <i>string</i> radius proxy <i>string</i> load-balance-key
Tree	load-balance-key
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

attribute-1

Synopsis	Enter the attribute-1 context
Context	configure router <i>string</i> radius proxy <i>string</i> load-balance-key attribute-1
Tree	attribute-1
Notes	The following elements are part of a choice: (attribute-1 , attribute-2 , attribute-3 , attribute-4 , and attribute-5) or source-ip-udp .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

type number

Synopsis	Attribute type to cache for this RADIUS Proxy server
Context	configure router <i>string</i> radius proxy <i>string</i> load-balance-key attribute-1 type <i>number</i>
Tree	type
Range	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

vendor (number | keyword)

Synopsis	Vendor-Id attribute
Context	configure router <i>string</i> radius proxy <i>string</i> load-balance-key attribute-1 vendor (<i>number</i> <i>keyword</i>)
Tree	vendor
Range	1 to 16777215
Options	nokia
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

attribute-2

Synopsis	Enter the attribute-2 context
Context	configure router <i>string</i> radius proxy <i>string</i> load-balance-key attribute-2
Tree	attribute-2
Notes	The following elements are part of a choice: (attribute-1 , attribute-2 , attribute-3 , attribute-4 , and attribute-5) or source-ip-udp .

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

type number

Synopsis	Attribute type to cache for this RADIUS Proxy server
Context	configure router <i>string</i> radius proxy <i>string</i> load-balance-key attribute-2 <i>type</i> <i>number</i>
Tree	type
Range	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

vendor (number | keyword)

Synopsis	Vendor-Id attribute
Context	configure router <i>string</i> radius proxy <i>string</i> load-balance-key attribute-2 <i>vendor</i> (<i>number</i> <i>keyword</i>)
Tree	vendor
Range	1 to 16777215
Options	nokia
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

attribute-3

Synopsis	Enter the attribute-3 context
Context	configure router <i>string</i> radius proxy <i>string</i> load-balance-key attribute-3
Tree	attribute-3
Notes	The following elements are part of a choice: (attribute-1 , attribute-2 , attribute-3 , attribute-4 , and attribute-5) or source-ip-udp .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

type number

Synopsis	Attribute type to cache for this RADIUS Proxy server
----------	--

Context	configure <i>router string radius proxy string load-balance-key attribute-3 type number</i>
Tree	<i>type</i>
Range	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

vendor (*number | keyword*)

Synopsis	Vendor-Id attribute
Context	configure <i>router string radius proxy string load-balance-key attribute-3 vendor (number keyword)</i>
Tree	<i>vendor</i>
Range	1 to 16777215
Options	nokia
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

attribute-4

Synopsis	Enter the attribute-4 context
Context	configure <i>router string radius proxy string load-balance-key attribute-4</i>
Tree	<i>attribute-4</i>
Notes	The following elements are part of a choice: (attribute-1 , attribute-2 , attribute-3 , attribute-4 , and attribute-5) or source-ip-udp .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

type *number*

Synopsis	Attribute type to cache for this RADIUS Proxy server
Context	configure <i>router string radius proxy string load-balance-key attribute-4 type number</i>
Tree	<i>type</i>
Range	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

vendor (*number* | *keyword*)

Synopsis	Vendor-Id attribute
Context	configure router <i>string</i> radius proxy <i>string</i> load-balance-key attribute-4 vendor (<i>number</i> <i>keyword</i>)
Tree	vendor
Range	1 to 16777215
Options	nokia
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

attribute-5

Synopsis	Enter the attribute-5 context
Context	configure router <i>string</i> radius proxy <i>string</i> load-balance-key attribute-5
Tree	attribute-5
Notes	The following elements are part of a choice: (attribute-1 , attribute-2 , attribute-3 , attribute-4 , and attribute-5) or source-ip-udp .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

type *number*

Synopsis	Attribute type to cache for this RADIUS Proxy server
Context	configure router <i>string</i> radius proxy <i>string</i> load-balance-key attribute-5 type <i>number</i>
Tree	type
Range	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

vendor (*number* | *keyword*)

Synopsis	Vendor-Id attribute
Context	configure router <i>string</i> radius proxy <i>string</i> load-balance-key attribute-5 vendor (<i>number</i> <i>keyword</i>)
Tree	vendor

Range	1 to 16777215
Options	nokia
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

source-ip-udp

Synopsis	Key to consist of the source IP address and source UDP port of the RADIUS message
Context	configure router <i>string</i> radius proxy <i>string</i> load-balance-key source-ip-udp
Tree	source-ip-udp
Notes	The following elements are part of a choice: (attribute-1 , attribute-2 , attribute-3 , attribute-4 , and attribute-5) or source-ip-udp .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

purpose *keyword*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Purpose of the RADIUS proxy
Context	configure router <i>string</i> radius proxy <i>string</i> purpose <i>keyword</i>
Tree	purpose
Options	accounting, authentication, accounting-authentication
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

python-policy *reference*

Synopsis	Python policy
Context	configure router <i>string</i> radius proxy <i>string</i> python-policy <i>reference</i>
Tree	python-policy
Reference	configure python python-policy <i>string</i>
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

secret string

Synopsis Format of the secret key to access the RADIUS proxy server

Context **configure** *router string radius proxy string secret string*

Tree [secret](#)

String Length 1 to 115

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

send-accounting-response boolean

Synopsis Allow RADIUS proxy server to respond to Accounting-Response messages

Context **configure** *router string radius proxy string send-accounting-response boolean*

Tree [send-accounting-response](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

wlan-gw

Synopsis Enter the **wlan-gw** context

Context **configure** *router string radius proxy string wlan-gw*

Tree [wlan-gw](#)

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

address string

Synopsis IPv4 address of the distributed RADIUS proxy server

Context **configure** *router string radius proxy string wlan-gw address string*

Tree [address](#)

Description This command configures the IPv4 address of the distributed RADIUS proxy server for use by the access points.

Introduced 16.0.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv6-address *string*

Synopsis IPv6 address of the distributed RADIUS proxy server
 Context **configure** *router string radius proxy string wlan-gw ipv6-address string*
 Tree [ipv6-address](#)
 Description This command configures the IPv6 address of the distributed RADIUS proxy server for use by the access points.
 Introduced 16.0.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

wlan-gw-group *reference*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis ISA WLAN gateway group
 Context **configure** *router string radius proxy string wlan-gw-group reference*
 Tree [wlan-gw-group](#)
 Reference **configure** *isa wlan-gw-group number*
 Introduced 16.0.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

server [*name*] *string*

Synopsis Enter the **server** list instance
 Context **configure** *router string radius server string*
 Tree [server](#)
 Max. Instances 64
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[name] *string*

Synopsis	External RADIUS server name
Context	configure router <i>string</i> radius server <i>string</i>
Tree	server
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

accept-coa *boolean*

Synopsis	Process Change of Authorization (CoA) messages
Context	configure router <i>string</i> radius server <i>string</i> accept-coa <i>boolean</i>
Tree	accept-coa
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

acct-port *number*

Synopsis	UDP port number of the RADIUS for accounting events
Context	configure router <i>string</i> radius server <i>string</i> acct-port <i>number</i>
Tree	acct-port
Range	1 to 65535
Default	1813
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the RADIUS server
Context	configure router <i>string</i> radius server <i>string</i> address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	address
Notes	This element is mandatory.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

auth-port *number*

Synopsis	UDP port number of the RADIUS to be used as match criteria
Context	configure router <i>string</i> radius server <i>string</i> auth-port <i>number</i>
Tree	auth-port
Range	1 to 65535
Default	1812
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis	Text description
Context	configure router <i>string</i> radius server <i>string</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pending-requests-limit *number*

Synopsis	Limit of the number for pending RADIUS requests
Context	configure router <i>string</i> radius server <i>string</i> pending-requests-limit <i>number</i>
Tree	pending-requests-limit
Range	1 to 4096
Default	4096
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

python-policy *reference*

Synopsis	Python script policy to modify CoA messages
----------	---

Context	configure <i>router string radius server string python-policy reference</i>
Tree	python-policy
Reference	configure python python-policy <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

secret *string*

Synopsis	Secret key associated with this RADIUS server
Context	configure <i>router string radius server string secret string</i>
Tree	secret
String Length	1 to 115
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

reassemble

Synopsis	Enable the reassemble context
Context	configure <i>router string reassemble</i>
Tree	reassemble
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat-group *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	NAT group (including WLAN Gateway group) that executes the reassemble
Context	configure <i>router string reassemble nat-group number</i>
Tree	nat-group
Max. Range	0 to 4294967295
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

to-base-network *boolean*

Synopsis Allow reassembled traffic sent to network interface
Context **configure** *router string reassembly to-base-network boolean*
Tree [to-base-network](#)
Default false
Introduced 19.10.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rib-api

Synopsis Enter the **rib-api** context
Context **configure** *router string rib-api*
Tree [rib-api](#)
Introduced 16.0.R4
Platforms All

mpls

Synopsis Enter the **mpls** context
Context **configure** *router string rib-api mpls*
Tree [mpls](#)
Introduced 16.0.R4
Platforms All

admin-state *keyword*

Synopsis Administrative state of MPLS for RIB-API gRPC service
Context **configure** *router string rib-api mpls admin-state keyword*
Tree [admin-state](#)
Options enable, disable
Default disable
Introduced 16.0.R4

Platforms All

label-name *reference*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Configure reserved label block.

Context **configure** [router](#) *string* [rib-api](#) [mpls](#) [label-name](#) *reference*

Tree [label-name](#)

Synopsis Administrative state of the RIP instance

Context **configure** [router](#) *string* [rip](#) [admin-state](#) *keyword*

Tree [admin-state](#)

Options enable, disable

Default enable

Introduced 16.0.R4

Platforms All

authentication-key *string*

Synopsis Authentication password passed between RIP neighbors

Context	configure <i>router</i> <i>string</i> <i>rip</i> <i>authentication-key</i> <i>string</i>
Tree	authentication-key
Description	<p>This command sets the authentication password to be passed between RIP neighbors. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.</p> <p>The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.</p> <p>When unconfigured, this command removes the authentication password from the configuration and disables authentication.</p>
String Length	1 to 51
Introduced	16.0.R4
Platforms	All

authentication-type *keyword*

Synopsis	Authentication type used between RIP neighbors
Context	configure <i>router</i> <i>string</i> <i>rip</i> <i>authentication-type</i> <i>keyword</i>
Tree	authentication-type
Description	<p>This command sets the type of authentication to be used between RIP neighbors.</p> <p>The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.</p> <p>When unconfigured, this command removes the authentication type from the configuration and effectively disables authentication.</p>
Options	none, password, md5, md20
Default	none
Introduced	16.0.R4
Platforms	All

bfd-liveness *boolean*

Synopsis	Enable BFD to control the state of protocol adjacency
Context	configure <i>router</i> <i>string</i> <i>rip</i> <i>bfd-liveness</i> <i>boolean</i>
Tree	bfd-liveness
Description	<p>When configured to true, this command enables BFD to control the state of the associated protocol adjacency.</p> <p>When configured to false, this command removes BFD from the associated protocol adjacency.</p>

Default	false
Introduced	16.0.R4
Platforms	All

check-zero *boolean*

Synopsis	Enable checking of mandatory zero fields
Context	configure router <i>string</i> rip check-zero <i>boolean</i>
Tree	check-zero
Description	When configured to true , this command enables checking of the mandatory zero fields in the RIPv1 and RIPv2 specifications and rejecting non-compliant RIP messages. When configured to false , this command disables the check and allows the receipt of RIP messages even if the mandatory zero fields are non-zero.
Default	false
Introduced	16.0.R4
Platforms	All

description *string*

Synopsis	Text description
Context	configure router <i>string</i> rip description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R4
Platforms	All

export-limit

Synopsis	Enable the export-limit context
Context	configure router <i>string</i> rip export-limit
Tree	export-limit
Introduced	16.0.R4
Platforms	All

log-percent *number*

Synopsis	Export limit before warning and SNMP notification sent
Context	configure router <i>string</i> rip export-limit log-percent <i>number</i>
Tree	log-percent
Range	1 to 100
Introduced	16.0.R4
Platforms	All

number *number*

Synopsis	Maximum routes or prefixes exported from route table
Context	configure router <i>string</i> rip export-limit number <i>number</i>
Tree	number
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

export-policy *reference*

Synopsis	Policies to determine exported routes
Context	configure router <i>string</i> rip export-policy <i>reference</i>
Tree	export-policy
Reference	configure policy-options policy-statement <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R4
Platforms	All

group [*group-name*] *string*

Synopsis	Enter the group list instance
Context	configure router <i>string</i> rip group <i>string</i>
Tree	group

Introduced 16.0.R4
 Platforms All

[group-name] *string*

Synopsis RIP group name
 Context **configure** *router string rip group string*
 Tree *group*
 String Length 1 to 32
 Notes This element is part of a list key.
 Introduced 16.0.R4
 Platforms All

admin-state *keyword*

Synopsis Administrative state of RIP neighbor interface group
 Context **configure** *router string rip group string admin-state keyword*
 Tree *admin-state*
 Options enable, disable
 Default enable
 Introduced 16.0.R4
 Platforms All

authentication-key *string*

Synopsis Authentication password passed between RIP neighbors
 Context **configure** *router string rip group string authentication-key string*
 Tree *authentication-key*
 Description This command sets the authentication password to be passed between RIP neighbors. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.
 The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.
 When unconfigured, the authentication password is removed from the configuration and authentication is disabled.
 String Length 1 to 51

Introduced	16.0.R4
Platforms	All

authentication-type *keyword*

Synopsis	Authentication type
Context	configure router <i>string</i> rip group <i>string</i> authentication-type <i>keyword</i>
Tree	authentication-type
Description	This command configures the type of authentication to be used. The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed. When unconfigured, this command removes the authentication type from the configuration and effectively disables authentication.
Options	none, password, md5, md20
Introduced	16.0.R4
Platforms	All

bfd-liveness *boolean*

Synopsis	Enable BFD to control the state of protocol adjacency
Context	configure router <i>string</i> rip group <i>string</i> bfd-liveness <i>boolean</i>
Tree	bfd-liveness
Description	When configured to true , this command enables BFD to control the state of the associated protocol adjacency. When configured to false , this command removes BFD from the associated protocol adjacency.
Introduced	16.0.R4
Platforms	All

check-zero *boolean*

Synopsis	Enable checking of mandatory zero fields
Context	configure router <i>string</i> rip group <i>string</i> check-zero <i>boolean</i>
Tree	check-zero
Description	When configured to true , this command enables checking of the mandatory zero fields in the RIPv1 and RIPv2 specifications and rejecting non-compliant RIP messages.

When configured to **false**, this command disables the check and allows the receipt of RIP messages even if the mandatory zero fields are non-zero.

Introduced	16.0.R4
Platforms	All

description *string*

Synopsis	Text description
Context	configure router <i>string</i> rip group <i>string</i> description <i>string</i>

export-policy *reference*

Synopsis	Policies used to rule which routes are exported to RIP
Context	configure router <i>string</i> rip group <i>string</i> export-policy <i>reference</i>
Tree	export-policy
Description	This command specifies the export route policies used to determine which routes are exported to RIP. If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.
Reference	configure policy-options policy-statement <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R4
Platforms	All

import-policy *reference*

Synopsis	Policies to decide routes accepted from RIP neighbors
Context	configure router <i>string</i> rip group <i>string</i> import-policy <i>reference</i>
Tree	import-policy
Description	This command configures import route policies to determine which routes are accepted from RIP neighbors.

If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.

Reference	configure policy-options policy-statement <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R4

Introduced	16.0.R4
Platforms	All

authentication-key *string*

Synopsis	Authentication password passed between RIP neighbors
Context	configure router <i>string</i> rip group <i>string</i> neighbor <i>string</i> authentication-key <i>string</i>
Tree	authentication-key
Description	This command sets the authentication password to be passed between RIP neighbors. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.

The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.

When unconfigured, this command removes the authentication password from the configuration and disables authentication.

String Length 1 to 51

Introduced 16.0.R4

Platforms All

authentication-type *keyword*

Synopsis Authentication type

Context **configure** *router string rip group string neighbor string authentication-type keyword*

Tree [authentication-type](#)

Description This command configures the type of authentication to be used.

The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.

When unconfigured, this command removes the authentication type from the configuration and effectively disables authentication.

Options none, password, md5, md20

Introduced 16.0.R4

Platforms All

bfd-liveness *boolean*

Synopsis Enable BFD to control the state of protocol adjacency

Context **configure** *router string rip group string neighbor string bfd-liveness boolean*

Tree [bfd-liveness](#)

Description When configured to **true**, this command enables BFD to control the state of the associated protocol adjacency.

When configured to **false**, this command removes BFD from the associated protocol adjacency.

Introduced 16.0.R4

Platforms All

check-zero *boolean*

Synopsis Enable checking of mandatory zero fields

Context	configure router <i>string</i> rip group <i>string</i> neighbor <i>string</i> check-zero <i>boolean</i>
Tree	check-zero
Description	When configured to true , this command enables checking of the mandatory zero fields in the RIPv1 and RIPv2 specifications and rejecting non-compliant RIP messages. When configured to false , this command disables the check and allows the receipt of RIP messages even if the mandatory zero fields are non-zero.

Options	none, ripng
Introduced	16.0.R4
Platforms	All

split-horizon *boolean*

Synopsis	Enable split horizon and poison reverse
Context	configure <i>router string ripng group string split-horizon boolean</i>
Tree	split-horizon
Description	<p>When configured to true, this command enables the use of split horizon with poison reverse. Split-horizon with poison reverse means that routes learned from a neighbor through a given interface are advertised in updates out of the same interface but with a metric of 16 (infinity).</p> <p>When configured to false, this command enables split horizon without poison reverse. This allows the routes to be re-advertised on interfaces other than the interface that learned the route, with the advertised metric equaling an increment of the metric-in value.</p>
Introduced	16.0.R4
Platforms	All

timers

Synopsis	Enable the timers context
Context	configure <i>router string ripng group string timers</i>
Tree	timers

authentication-over-bypass *boolean*

Synopsis	Enable MD5 authentication over bypass LSP of PLR and MP
Context	configure router <i>string</i> rsvp authentication-over-bypass <i>boolean</i>

Tree	authentication-over-bypass
Description	<p>When configured to true, this command configures the MD5 authentication over the bypass LSP of all Point of Local Repairs (PLRs) and Merge Points (MPs) on the router. Only enable this command when the TE interfaces in the RSVP-TE network use the same MD5 authentication parameters.</p> <p>When a Point of Local Repair (PLR) activates a bypass LSP towards a Merge Point (MP), by default, the INTEGRITY object corresponding to the bypass LSP interface is not added to a transmitted RSVP message except for packets of routed RSVP messages (Resv, Srefresh, and ACK), and only when the packet is intended for a bypass LSP endpoint (PLR or MP) that is a directly connected neighbor.</p> <p>When this command is enabled, the INTEGRITY object of the interface corresponding to the bypass LSP is added to a transmitted RSVP message regardless of whether the bypass LSP endpoint (PLR or MP) is a directly connected RSVP neighbor. The INTEGRITY object is included with the following RSVP messages: Path, PathTear, PathErr, Resv, ResvTear, ResvErr, Srefresh, and ACK.</p> <p>In all cases, an RSVP message received from a PLR or a MP (sender address in the SenderTemplate or FilterSpec is different from an Extended Tunnel Id in a Session Object), and which includes the INTEGRITY object is authenticated against the bypass LSP interface. An RSVP message received from a PLR or MP without the INTEGRITY object is also accepted.</p> <p>When configured to false, the router disables MD5 authentication over bypass LSP of the PLRs and MPs.</p>
Default	false
Introduced	22.10.R1
Platforms	All

authentication-key string

Synopsis	Authentication or hash key string
Context	configure router string rsvp interface reference authentication-key string
Tree	authentication-key

Description This command configures the authentication key for use between RSVP neighbors to authenticate RSVP messages. Authentication uses the MD5 message-based digest.

When enabled on an RSVP interface, authentication of RSVP messages operates in both directions of the interface. A router maintains a security association using one authentication key for each interface to an RSVP neighbor.

An RSVP neighbor transmits an authenticating digest of the RSVP message that is computed using the shared authentication key and a keyed-hash algorithm. The message digest is included in an INTEGRITY object, which also contains a flags field, a key identifier field, and a sequence number field. An RSVP neighbor uses the key together with the authentication algorithm to process received RSVP messages. The RSVP MD5 authentication complies to the procedures for RSVP message generation in RFC 2747, *RSVP Cryptographic Authentication*.

The MD5 implementation does not support the authentication challenge procedures in RFC 2747.

segment-routing

Synopsis	Enter the segment-routing context
Context	configure router <i>string</i> segment-routing
Tree	segment-routing
Introduced	16.0.R1
Platforms	All

maintenance-policy [*policy-name*] *string*

Synopsis	Enter the maintenance-policy list instance
Context	configure router <i>string</i> segment-routing maintenance-policy <i>string</i>
Tree	maintenance-policy

Description	Commands in this context configure a named maintenance policy that can be applied to SR policy candidate paths that are either statically configured or imported via BGP.
Introduced	20.10.R1
Platforms	All

[policy-name] *string*

Synopsis	Maintenance policy name
Context	configure router <i>string</i> segment-routing maintenance-policy <i>string</i>
Tree	maintenance-policy
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the maintenance policy
Context	configure router <i>string</i> segment-routing maintenance-policy <i>string</i> admin-state <i>keyword</i>
Tree	admin-state
Description	This command sets the administrative state of the maintenance policy. A maintenance policy must be administratively disabled to change any of the parameters. When a maintenance template is administratively disabled, all applicable candidate paths are removed from the data path.
Options	enable, disable
Default	disable
Introduced	20.10.R1
Platforms	All

bfd-liveness *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable seamless BFD for segment lists of candidate path
----------	---

Context	configure <i>router string segment-routing maintenance-policy string bfd-liveness boolean</i>
Tree	bfd-liveness
Description	When configured to true , this command enables seamless BFD on every segment list of an SR policy candidate path to which the maintenance policy is applied. The BFD template configures the parameters for the BFD session. When configured to false , seamless BFD is disabled.
Default	false
Introduced	20.10.R1
Platforms	All

bfd-template *reference*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	BFD template to be used by seamless BFD
Context	configure <i>router string segment-routing maintenance-policy string bfd-template reference</i>
Tree	bfd-template
Description	This command references a named BFD template to be used by seamless BFD. A BFD template must exist on the system before being referenced from a maintenance policy. The template specifies parameters that are used by the BFD session, such as the minimum transmit and receive control packet timer intervals.
Reference	configure bfd bfd-template <i>string</i>
Introduced	20.10.R1
Platforms	All

hold-down-timer *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Hold down timer for SR policy candidate paths
Context	configure <i>router string segment-routing maintenance-policy string hold-down-timer number</i>
Tree	hold-down-timer

Description	<p>This command configures the hold down timer for the maintenance policy. The purpose of the timer is to prevent bouncing of the SR policy path state if S-BFD sessions associated with the segment lists flap, causing the threshold to be repeatedly crossed in a short period of time.</p> <p>The timer is started when the number of up S-BFD sessions drops below the threshold. The SR policy path is not considered to be up again until the hold down timer has expired and the number of up S-BFD sessions reaches or exceeds the threshold and the internal hold timer is not running.</p> <p>If the revert timer is also configured, the revert timer is not started until after the number of up S-BFD sessions equals or exceeds the threshold and the hold down timer for the primary candidate path has expired.</p>
Range	0 to 5000
Units	deciseconds
Default	0
Introduced	20.10.R1
Platforms	All

mode *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Protection mode for SR policy candidate paths
Context	configure router <i>string</i> segment-routing maintenance-policy <i>string</i> mode <i>keyword</i>
Tree	mode
Description	This command specifies the data path programming and protection mechanism for SR policy candidate paths to which the maintenance policy is applied.
Options	none, ecmp-protected, linear
Default	none
Introduced	20.10.R1
Platforms	All

return-path-label *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	S-BFD return-path label
Context	configure <i>router</i> <i>string</i> <i>segment-routing</i> <i>maintenance-policy</i> <i>string</i> <i>return-path-label</i> <i>number</i>
Tree	<i>return-path-label</i>
Description	<p>This command configures the S-BFD session to echo mode and adds an additional MPLS label to the bottom of the label stack for the S-BFD packet.</p> <p>The command applies to the initiator of the S-BFD sessions. The return-path label may be a binding SID for an SR policy or other MPLS path configured on the reflector router. Instead of being routed through the IGP path, the S-BFD packet returns to the initiator through this MPLS return path.</p> <p>If the command is deleted, S-BFD returns to asynchronous mode and no return-path label is pushed by the initiator node. Any S-BFD packets for this LSP or path that the reflector receives are routed through the IGP path.</p>
Range	32 to 1048512
Introduced	22.10.R1
Platforms	All

revert-timer *number*

Synopsis	Revert timer for SR policy candidate paths
Context	configure <i>router</i> <i>string</i> <i>segment-routing</i> <i>maintenance-policy</i> <i>string</i> <i>revert-timer</i> <i>number</i>
Tree	<i>revert-timer</i>
Description	<p>This command configures the revert timer for SR Policy candidate paths.</p> <p>The revert timer is started when the primary path recovers (the number of S-BFD sessions that are up equals or exceeds the threshold value and the hold down timer has expired). When the timer expires, the system reverts to the primary path.</p>
Range	0 to 4320
Units	minutes
Default	0
Introduced	20.10.R1
Platforms	All

threshold *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Minimum number of up S-BFD sessions for up path status
Context	configure <i>router string</i> segment-routing maintenance-policy string threshold number
Tree	threshold
Description	This command configures the minimum number of S-BFD sessions that must be up for the SR policy candidate path to be considered up. If the number of up sessions is below this threshold value, the policy candidate path is marked as BFD degraded by the system. This command is only valid in the ecmp-protected mode.
Range	1 to 32
Default	1
Introduced	20.10.R1
Platforms	All

segment-routing-v6

Synopsis	Enable the segment-routing-v6 context
Context	configure <i>router string</i> segment-routing segment-routing-v6
Tree	segment-routing-v6
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

base-routing-instance

Synopsis	Enter the base-routing-instance context
Context	configure <i>router string</i> segment-routing segment-routing-v6 base-routing-instance
Tree	base-routing-instance
Description	Commands in this context configure SRv6 SID functions for End, End.X, and service SIDs for IPv4 and IPv6 prefixes in the base routing instance.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

locator [[locator-name](#)] *reference*

Synopsis	Enter the locator list instance
Context	configure <i>router string</i> segment-routing segment-routing-v6 base-routing-instance locator reference

Tree	locator
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

[locator-name] *reference*

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

end-x-auto-allocate [*srh-mode*] *keyword* *protection* *keyword*

Synopsis Add a list entry for **end-x-auto-allocate**

Context **configure** *router* *string* *segment-routing* *segment-routing-v6* *base-routing-instance* *locator* *reference* *function* **end-x-auto-allocate** *keyword* *protection* *keyword*

Tree [end-x-auto-allocate](#)

Description This command adds a list entry for the automatic allocation of the End.X SID function for all adjacencies over all network interfaces on the router (P2P and broadcast interfaces).
A list entry is a combination of the protection type and the SRH mode. Any combinations in addition to the maximum supported by this command must be allocated statically under each P2P interface (**end.x** configuration).
When no list entries are configured, no End.X function values are automatically allocated by default for a locator.

Max. Instances 2

Introduced 21.5.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

[srh-mode] *keyword*

Context	configure <i>router</i> string segment-routing segment-routing-v6 base-routing-instance micro-segment-locator <i>reference</i> function ua-auto-allocate <i>keyword</i> protection <i>keyword</i>
Tree	ua-auto-allocate
Description	Commands in this context define a list entry for the automatic allocation of the uA micro-SID function for all adjacencies over all network interfaces on the router (P2P and broadcast interfaces).
Max. Instances	2
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

[srh-mode] keyword

Synopsis	Segment Routing Header (SRH) mode
Context	configure router <i>string</i> segment-routing segment-routing-v6 base-routing-instance micro-segment-locator <i>reference</i> function ua-auto-allocate <i>keyword</i> protection <i>keyword</i>
Tree	ua-auto-allocate
Description	This command specifies the popping mode for the automatically allocated SID.
Options	psp, usp
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

protection keyword

Synopsis	Adjacency protection for automatic SID function
Context	configure router <i>string</i> segment-routing segment-routing-v6 base-routing-instance micro-segment-locator <i>reference</i> function ua-auto-allocate <i>keyword</i> protection <i>keyword</i>
Tree	ua-auto-allocate
Description	This command specifies the adjacency protection for the automatically allocated SID function.
Options	unprotected, protected
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

udt4

Synopsis	Enable the udt4 context
Context	configure router <i>string</i> segment-routing segment-routing-v6 base-routing-instance micro-segment-locator <i>reference</i> function udt4
Tree	udt4
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

value number

Synopsis	SRv6 function value
Context	configure <i>router</i> <i>string</i> segment-routing segment-routing-v6 base-routing-instance micro-segment-locator <i>reference</i> <i>function</i> udt4 <i>value</i> <i>number</i>
Tree	value
Range	1 to 1048575
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

udt46

Synopsis	Enable the udt46 context
Context	configure <i>router</i> <i>string</i> segment-routing segment-routing-v6 base-routing-instance micro-segment-locator <i>reference</i> <i>function</i> udt46
Tree	udt46
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

value number

Synopsis	SRv6 function value
Context	configure <i>router</i> <i>string</i> segment-routing segment-routing-v6 base-routing-instance micro-segment-locator <i>reference</i> <i>function</i> udt46 <i>value</i> <i>number</i>
Tree	value
Range	1 to 1048575
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

udt6

Synopsis	Enable the udt6 context
Context	configure <i>router</i> <i>string</i> segment-routing segment-routing-v6 base-routing-instance micro-segment-locator <i>reference</i> <i>function</i> udt6
Tree	udt6
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

value *number*

Synopsis	SRv6 function value
Context	configure router <i>string</i> segment-routing segment-routing-v6 base-routing-instance micro-segment-locator <i>reference</i> function udt6 <i>value</i> <i>number</i>
Tree	value
Range	1 to 1048575
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

locator [[locator-name](#)] *string*

Synopsis	Enter the locator list instance
Context	configure router <i>string</i> segment-routing segment-routing-v6 locator <i>string</i>
Tree	locator
Max. Instances	16
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

[locator-name] *string*

Synopsis	SRv6 locator name
Context	configure router <i>string</i> segment-routing segment-routing-v6 locator <i>string</i>
Tree	locator
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

admin-state *keyword*

Synopsis	Administrative state of the locator
Context	configure router <i>string</i> segment-routing segment-routing-v6 locator <i>string</i> admin-state <i>keyword</i>
Tree	admin-state

Options	enable, disable
Default	disable
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

algorithm *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IGP flexible algorithm ID
Context	configure <i>router string segment-routing segment-routing-v6 locator string algorithm number</i>
Tree	algorithm
Description	This command configures an IGP flexible algorithm for a locator. A locator can only be part of one algorithm but it can be used in multiple IGP instances.
Range	128 to 255
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

block-length *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	SRv6 locator block address length
Context	configure <i>router string segment-routing segment-routing-v6 locator string block-length number</i>
Tree	block-length
Range	0 to 96
Default	0
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

function-length *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Function length
Context	configure <i>router string segment-routing segment-routing-v6 locator string function-length number</i>
Tree	<i>function-length</i>
Description	This command configures the size of the function length. The sum of the function length and the locator prefix length must not exceed 128 bits. Operators can configure the locator level label-block command before they configure a function length of 16. If the function length is configured as 16, the locator level label-block must be configured rather than the static-function level label-block . The validation occurs when committed.
Range	16 20 to 96
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

label-block *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Reserved label block name for service termination
Context	configure <i>router string segment-routing segment-routing-v6 locator string label-block reference</i>
Tree	<i>label-block</i>
Reference	configure <i>router string mpls-labels reserved-label-block string</i>
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

prefix

Synopsis	Enter the prefix context
Context	configure <i>router string segment-routing segment-routing-v6 locator string prefix</i>
Tree	<i>prefix</i>
Introduced	21.5.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

ip-prefix *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	SRv6 locator prefix
Context	configure router string segment-routing segment-routing-v6 locator string prefix ip-prefix string
Tree	ip-prefix
Description	This command configures the IPv6 prefix for the locator. For regular SRv6, the locator prefix length range is the sum of the length of the block field and the length of the node ID field. For micro-segment SRv6, the locator prefix length must be equal to the micro-SID block length.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

static-function

Synopsis	Enter the static-function context
Context	configure router string segment-routing segment-routing-v6 locator string static-function
Tree	static-function
Description	Commands in this context configure the attributes of the function field range reserved for static End.d, End.X, and service SID assignment.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

label-block *reference*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Label block for the service SIDs of the SRv6 locator
Context	configure router string segment-routing segment-routing-v6 locator string static-function label-block reference

Tree	label-block
Reference	configure router <i>string</i> mpls-labels reserved-label-block <i>string</i>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

max-entries *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of static SID functions
Context	configure router <i>string</i> segment-routing segment-routing-v6 locator <i>string</i> static-function max-entries <i>number</i>
Tree	max-entries
Description	This command configures the maximum number of values that are reserved from the function field to assign to static SID functions.
Range	1 to 1048575
Default	1
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

termination-fpe *reference*

Synopsis	List of the SRv6 termination FPE
Context	configure router <i>string</i> segment-routing segment-routing-v6 locator <i>string</i> termination-fpe <i>reference</i>
Tree	termination-fpe
Description	This command associates the Forwarding Path Extension (FPE) with the locator for terminating SRv6 in local services. Multiple locators can share the same FPE or each locator can use a different FPE. The FPE can be the same or different from the origination FPE.
Reference	configure fwd-path-ext fpe <i>number</i>
Max. Instances	1
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

micro-segment

Synopsis	Enable the micro-segment context
Context	configure <i>router</i> <i>string</i> segment-routing segment-routing-v6 micro-segment
Tree	micro-segment
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

block [[block-name](#)] *string*

Synopsis	Enter the block list instance
Context	configure <i>router</i> <i>string</i> segment-routing segment-routing-v6 micro-segment block <i>string</i>
Tree	block
Max. Instances	16
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

[block-name] *string*

Synopsis	Micro-SID block name
Context	configure <i>router</i> <i>string</i> segment-routing segment-routing-v6 micro-segment block <i>string</i>
Tree	block
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

admin-state *keyword*

Synopsis	Administrative state of micro-SID block
Context	configure <i>router</i> <i>string</i> segment-routing segment-routing-v6 micro-segment block <i>string</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable

Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

label-block *reference*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Reserved label block
Context	configure router <i>string</i> segment-routing segment-routing-v6 micro-segment block <i>string</i> label-block <i>reference</i>
Tree	label-block
Description	This command associates a pre-configured reserved label block with the micro-SID block.
Reference	configure router <i>string</i> mpls-labels reserved-label-block <i>string</i>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

prefix

Synopsis	Enter the prefix context
Context	configure router <i>string</i> segment-routing segment-routing-v6 micro-segment block <i>string</i> prefix
Tree	prefix
Description	Commands in this context configure the IPv6 prefix for an SRv6 micro-segment locator.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

ip-prefix *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	SRv6 locator prefix
Context	configure router <i>string</i> segment-routing segment-routing-v6 micro-segment block <i>string</i> prefix ip-prefix <i>string</i>

Tree	ip-prefix
Description	This command configures the IPv6 prefix for the locator. For regular SRv6, the locator prefix length range is the sum of the length of the block field and the length of the node ID field. For micro-segment SRv6, the locator prefix length must be equal to the micro-SID block length.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

static-function

Synopsis	Enter the static-function context
Context	configure router <i>string</i> segment-routing segment-routing-v6 micro-segment block <i>string</i> static-function
Tree	static-function
Description	Commands in this context configure the function field parameters of a static uA or service micro-SID assignment.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

max-entries *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of static SID functions
Context	configure router <i>string</i> segment-routing segment-routing-v6 micro-segment block <i>string</i> static-function max-entries <i>number</i>
Tree	max-entries
Description	This command configures the maximum number of values that are reserved from the function field to assign to static SID functions.
Range	1 to 1048575
Default	1
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

termination-fpe *reference*

Synopsis	FPE ID for SRv6 termination
Context	configure router <i>string</i> segment-routing segment-routing-v6 micro-segment block <i>string</i> termination-fpe <i>reference</i>
Tree	termination-fpe
Description	This command associates the FPE ID with the locator for SRv6 termination in local services.
Reference	configure fwd-path-ext fpe <i>number</i>
Max. Instances	1
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

block-length *number*

Synopsis	Micro-SID block length
Context	configure router <i>string</i> segment-routing segment-routing-v6 micro-segment block-length <i>number</i>
Tree	block-length
Range	8 16 24 32 40 48 56 64
Default	32
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

global-sid-entries *number*

Synopsis	Maximum number of micro-segment locators network wide
Context	configure router <i>string</i> segment-routing segment-routing-v6 micro-segment global-sid-entries <i>number</i>
Tree	global-sid-entries
Description	This command defines the maximum number of unique micro-segment locators that can be configured network wide. The value is expressed in multiples of 1024 and must be the same on every platform network wide.
Range	4 to 60
Default	16
Introduced	22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

sid-length *number*

Synopsis Micro-SID length

Context **configure** *router string segment-routing segment-routing-v6 micro-segment sid-length number*

Tree [sid-length](#)

Description This command configures the length of the micro-SIDs.

Range 16

Default 16

Introduced 22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

micro-segment-locator [[locator-name](#)] *string*

Synopsis Enter the **micro-segment-locator** list instance

Context **configure** *router string segment-routing segment-routing-v6 micro-segment-locator string*

Tree [micro-segment-locator](#)

Max. Instances 16

Introduced 22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

[locator-name] *string*

Synopsis SRv6 locator name

Context **configure** *router string segment-routing segment-routing-v6 micro-segment-locator string*

Tree [micro-segment-locator](#)

String Length 1 to 64

Notes This element is part of a list key.

Introduced 22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

admin-state *keyword*

Synopsis	Administrative state of the locator
Context	configure router <i>string</i> segment-routing segment-routing-v6 micro-segment-locator <i>string</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

algorithm *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IGP flexible algorithm ID
Context	configure router <i>string</i> segment-routing segment-routing-v6 micro-segment-locator <i>string</i> algorithm <i>number</i>
Tree	algorithm
Description	This command configures an IGP flexible algorithm for a locator. A locator can only be part of one algorithm but it can be used in multiple IGP instances.
Range	128 to 255
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

block *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Pre-defined micro-SID block
Context	configure router <i>string</i> segment-routing segment-routing-v6 micro-segment-locator <i>string</i> block <i>reference</i>
Tree	block

Description	This command associates a pre-defined micro-SID block with the micro-segment SRv6 locator.
Reference	configure router <i>string</i> segment-routing segment-routing-v6 micro-segment block <i>string</i>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

un

Synopsis	Enter the un context
Context	configure router <i>string</i> segment-routing segment-routing-v6 micro-segment-locator <i>string</i> un
Tree	un
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

srh-mode *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Segment Routing Header (SRH) mode
Context	configure router <i>string</i> segment-routing segment-routing-v6 micro-segment-locator <i>string</i> un srh-mode <i>keyword</i>
Tree	srh-mode
Description	This command configures the popping mode for the SID.
Options	psp, usp
Default	psp
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

value *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	SRv6 function value
Context	configure <i>router string</i> segment-routing segment-routing-v6 micro-segment-locator <i>string un value number</i>
Tree	value
Range	1 to 1048575
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

origination-fpe *reference*

Synopsis	List of the SRv6 origination FPEs
Context	configure <i>router string</i> segment-routing segment-routing-v6 origination-fpe <i>reference</i>
Tree	origination-fpe
Description	This command configures the origination Forwarding Path Extension (FPE) for SRv6 tunnels on local services. The origination FPE must be different from any of the SRv6 termination FPEs.
Reference	configure fwd-path-ext fpe <i>number</i>
Max. Instances	1
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

source-address *string*

Synopsis	Source address used in the SRv6 packet
Context	configure <i>router string</i> segment-routing segment-routing-v6 source-address <i>string</i>
Tree	source-address
Description	<p>This command specifies the global default source IPv6 address used in the SA field of the outerIPv6 header of the SRv6 encapsulated packet.</p> <p>The value is inherited in the BGP and services contexts (for example, configure router "base" bgp segment-routing-v6 source-address and configure service vprn bgp-ipvprn segment-routing-v6 source-address), but is overwritten by the value configured in those contexts.</p> <p>A source IPv6 address must be configured in the global context or in the BGP or services context.</p> <p>The system does not check if the entered address is a valid local address.</p>
Introduced	21.5.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

sr-mpls

Synopsis Enter the **sr-mpls** context

Synopsis Enter the **static-policy** list instance
 Context **configure** [router](#) *string* [segment-routing](#) [sr-policies](#) [static-policy](#) *string*
 Tree [static-policy](#)
 Max. Instances 8192
 Introduced 16.0.R1
 Platforms All

[name] *string*

Synopsis	Name for the segment routing static policy
Context	configure router <i>string</i> segment-routing sr-policies static-policy <i>string</i>
Tree	static-policy
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of segment routing static policy
Context	configure router <i>string</i> segment-routing sr-policies static-policy <i>string</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

binding-sid *number*

Synopsis	Segment ID that opaquely represents an SR policy to upstream routers
Context	configure router <i>string</i> segment-routing sr-policies static-policy <i>string</i> binding-sid <i>number</i>
Tree	binding-sid
Range	32 to 1048575
Introduced	16.0.R1
Platforms	All

color number**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Traffic flows to be steered by this policy
Context	configure router <i>string</i> segment-routing sr-policies static-policy <i>string</i> color <i>number</i>
Tree	color
Range	0 to 4294967295
Introduced	16.0.R1
Platforms	All

distinguisher number**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Unique value for a policy
Context	configure router <i>string</i> segment-routing sr-policies static-policy <i>string</i> distinguisher <i>number</i>
Tree	distinguisher
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

endpoint (*ipv4-address-no-zone* | *ipv6-address-no-zone*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Destination of the source-routed path
Context	configure router <i>string</i> segment-routing sr-policies static-policy <i>string</i> endpoint (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	endpoint
Introduced	16.0.R1
Platforms	All

head-end (*ipv4-address-no-zone | ipv6-address-no-zone | keyword*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Head end address for this static policy
Context	configure router <i>string</i> segment-routing sr-policies static-policy <i>string</i> head-end (<i>ipv4-address-no-zone ipv6-address-no-zone keyword</i>)
Tree	head-end
Options	local
Introduced	16.0.R1
Platforms	All

maintenance-policy *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Policy name
Context	configure router <i>string</i> segment-routing sr-policies static-policy <i>string</i> maintenance-policy <i>reference</i>
Tree	maintenance-policy
Reference	configure router <i>string</i> segment-routing maintenance-policy <i>string</i>
Introduced	20.10.R1
Platforms	All

preference *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Preference value of this static policy
Context	configure router <i>string</i> segment-routing sr-policies static-policy <i>string</i> preference <i>number</i>
Tree	preference

Max. Range	0 to 4294967295
Default	100
Introduced	16.0.R1
Platforms	All

segment-list [[seg-list-index](#)] *number*

Synopsis	Enter the segment-list list instance
Context	configure router <i>string</i> segment-routing sr-policies static-policy <i>string</i> segment-list <i>number</i>
Tree	segment-list
Max. Instances	32
Introduced	16.0.R1
Platforms	All

[seg-list-index] *number*

Synopsis	Index for identifying a particular segment list
Context	configure router <i>string</i> segment-routing sr-policies static-policy <i>string</i> segment-list <i>number</i>
Tree	segment-list
Range	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of segment list for static policy
Context	configure router <i>string</i> segment-routing sr-policies static-policy <i>string</i> segment-list <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1

Platforms All

segment [[segment-index](#)] *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the segment list instance
Context	configure router <i>string</i> segment-routing sr-policies static-policy <i>string</i> segment-list <i>number</i> segment <i>number</i>
Tree	segment
Max. Instances	11
Introduced	16.0.R1
Platforms	All

[segment-index] *number*

Synopsis	Index for identifying a particular segment list
Context	configure router <i>string</i> segment-routing sr-policies static-policy <i>string</i> segment-list <i>number</i> segment <i>number</i>
Tree	segment
Range	1 to 11
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

mpls-label *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Value for the MPLS label
Context	configure router <i>string</i> segment-routing sr-policies static-policy <i>string</i> segment-list <i>number</i> segment <i>number</i> mpls-label <i>number</i>
Tree	mpls-label

Range	0 to 1048575
Introduced	16.0.R1
Platforms	All

srv6-sid *string***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Segment ID for segment routing IPv6
Context	configure router <i>string</i> segment-routing sr-policies static-policy <i>string</i> segment-list <i>number</i> segment <i>number</i> srv6-sid <i>string</i>
Tree	srv6-sid
Description	This command defines the 128-bit SRv6 SID for the segment.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

weight *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Weight of this segment list
Context	configure router <i>string</i> segment-routing sr-policies static-policy <i>string</i> segment-list <i>number</i> weight <i>number</i>
Tree	weight
Max. Range	0 to 4294967295
Default	1
Introduced	16.0.R1
Platforms	All

segment-routing-v6

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the segment-routing-v6 context
Context	configure <i>router string</i> segment-routing <i>sr-policies static-policy string</i> segment-routing-v6
Tree	segment-routing-v6
Description	Commands in this context configure a static SRv6 policy.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

binding-sid [[index](#)] *number*

Synopsis	Enter the binding-sid list instance
Context	configure <i>router string</i> segment-routing <i>sr-policies static-policy string</i> segment-routing-v6 binding-sid <i>number</i>
Tree	binding-sid
Max. Instances	1
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

[\[index\]](#) *number*

Synopsis	Binding SID index
Context	configure <i>router string</i> segment-routing <i>sr-policies static-policy string</i> segment-routing-v6 binding-sid <i>number</i>
Tree	binding-sid
Range	1
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

ip-address string

Synopsis	Remote SRv6 binding SID
Context	configure router string segment-routing sr-policies static-policy string segment-routing-v6 binding-sid number ip-address string
Tree	ip-address
Description	This command configures an SRv6 binding SID for a remote SRv6 policy. The command cannot be used with a local head end location (configure router segment-routing sr-policies static-policy head-end local). This command and the configure router segment-routing sr-policies static-policy segment-routing-v6 binding-sid locator command for a local SRv6 policy are mutually exclusive. The format of the binding SID is a 128-bit IPv6 address.
Notes	The following elements are part of a choice: ip-address or locator .
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

locator

Synopsis	Enable the locator context
Context	configure router string segment-routing sr-policies static-policy string segment-routing-v6 binding-sid number locator
Tree	locator
Description	Commands in this context configure a binding SID locator for a local SRv6 policy. This command and the configure router segment-routing sr-policies static-policy segment-routing-v6 binding-sid ip-address command for a non-local SRv6 policy are mutually exclusive.
Notes	The following elements are part of a choice: ip-address or locator .
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

function keyword

Synopsis	Local SRv6 binding SID locator function
Context	configure router string segment-routing sr-policies static-policy string segment-routing-v6 binding-sid number locator function keyword
Tree	function
Description	This command configures an SRv6 binding SID function for a static SRv6 policy with a local head end location (configure router segment-routing sr-policies static-policy head-end local).

Options	end-b6-encaps-red
Notes	This element is mandatory.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

function-value *number*

Synopsis	Local SRv6 binding SID locator function value
Context	configure router <i>string</i> segment-routing sr-policies static-policy <i>string</i> segment-routing-v6 binding-sid <i>number</i> locator function-value <i>number</i>
Tree	function-value
Description	This command configures the function value for a static SRv6 policy with a local head end location (configure router segment-routing sr-policies static-policy head-end local). If a function value is configured, the router checks whether this function value is available for the named locator. If no function value is configured, the router dynamically allocates a value.
Range	1 to 1048575
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

locator-name *reference*

Synopsis	Local SRv6 binding SID locator name
Context	configure router <i>string</i> segment-routing sr-policies static-policy <i>string</i> segment-routing-v6 binding-sid <i>number</i> locator locator-name <i>reference</i>
Tree	locator-name
Description	This command configures an SRv6 binding SID locator for a static SRv6 policy with a local head end location (configure router segment-routing sr-policies static-policy head-end local). A corresponding locator must exist in the configure router segment-routing segment-routing-v6 context.
Reference	configure router <i>string</i> segment-routing segment-routing-v6 locator <i>string</i>
Notes	This element is mandatory.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

type *keyword*

Synopsis	Static policy type
Context	configure router <i>string</i> segment-routing sr-policies static-policy <i>string</i> type <i>keyword</i>
Tree	type
Description	This command configures the type of static policy. Only commands relevant to the type of the static policy can be executed. The type of the static policy can only be changed to a new type if there is no configuration present for the old type, or if all configuration for the old type is deleted.
Options	sr-mpls, srv6
Default	sr-mpls
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

selective-fib *boolean*

Synopsis	Enable selective FIB
Context	configure router <i>string</i> selective-fib <i>boolean</i>
Tree	selective-fib
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

sfm-overload

Synopsis	Enable the sfm-overload context
Context	configure router <i>string</i> sfm-overload
Tree	sfm-overload
Introduced	16.0.R2
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s, 7750 SR-14s, 7950 XRS, VSR

holdoff-time *number*

Synopsis	Delay in detecting SFM failures and setting overload
Context	configure router <i>string</i> sfm-overload holdoff-time <i>number</i>
Tree	holdoff-time

Range	1 to 600
Units	seconds
Introduced	16.0.R2
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s, 7750 SR-14s, 7950 XRS, VSR

sgt-qos

Synopsis	Enter the sgt-qos context
Context	configure router <i>string</i> sgt-qos
Tree	sgt-qos
Introduced	16.0.R1
Platforms	All

dot1p

Synopsis	Enter the dot1p context
Context	configure router <i>string</i> sgt-qos dot1p
Tree	dot1p
Introduced	16.0.R1
Platforms	All

application [[dot1p-app-name](#)] *keyword*

Synopsis	Enter the application list instance
Context	configure router <i>string</i> sgt-qos dot1p application <i>keyword</i>
Tree	application
Introduced	16.0.R1
Platforms	All

[\[dot1p-app-name\]](#) *keyword*

Synopsis	Dot1p application ID that generates control traffic
Context	configure router <i>string</i> sgt-qos dot1p application <i>keyword</i>
Tree	application
Options	arp, isis, pppoe

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

dot1p (*keyword | number*)

Synopsis	Dot1p value to the traffic generated by this application
Context	configure router <i>string sgt-qos dot1p application keyword dot1p</i> (<i>keyword number</i>)
Tree	dot1p
Range	0 to 7
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1
Platforms	All

dscp

Synopsis	Enter the dscp context
Context	configure router <i>string sgt-qos dscp</i>
Tree	dscp
Introduced	16.0.R1
Platforms	All

application [[dscp-app-name](#)] *keyword*

Synopsis	Enter the application list instance
Context	configure router <i>string sgt-qos dscp application keyword</i>
Tree	application
Introduced	16.0.R1
Platforms	All

[dscp-app-name] *keyword*

Synopsis	DSCP application identifier on the NOKIA SR OS router that generates control traffic over IP
Context	configure router <i>string sgt-qos dscp application keyword</i>

Tree	application
Options	bgp, cflowd, dhcp, dns, ftp, icmp, igmp, l2tp, ldp, mld, msdp, ndis, ntp, ospf, pim, radius, rip, rsvp, snmp, snmp-notification, srrp, ssh, syslog, tacplus, telnet, tftp, traceroute, vrrp, ptp, igmp-reporter, gtp, sflow, diameter, pcep, call-trace, bmp, grpc, mtrace2, http, mpls-udp-return, pfc, ibcp
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

dscp (*keyword* | *number*)

Synopsis	DSCP value to the traffic generated by this application
Context	configure router <i>string</i> sgt-qos dscp application <i>keyword</i> dscp (<i>keyword</i> <i>number</i>)
Tree	dscp
Range	0 to 63
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1
Platforms	All

dscp-map [[dscp-name](#)] *keyword*

Synopsis	Enter the dscp-map list instance
Context	configure router <i>string</i> sgt-qos dscp dscp-map <i>keyword</i>
Tree	dscp-map
Introduced	16.0.R2
Platforms	All

[dscp-name] *keyword*

Synopsis	DSCP name mapped to forwarding class
Context	configure router <i>string</i> sgt-qos dscp dscp-map <i>keyword</i>
Tree	dscp-map
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31,

cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63

Notes	This element is part of a list key.
Introduced	16.0.R2
Platforms	All

fc keyword

Synopsis	Value for the forwarding class for this mapping
Context	configure router <i>string</i> sgt-qos dscp dscp-map <i>keyword</i> fc <i>keyword</i>
Tree	fc
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R2
Platforms	All

static-routes

Synopsis	Enter the static-routes context
Context	configure router <i>string</i> static-routes
Tree	static-routes
Introduced	16.0.R1
Platforms	All

hold-down

Synopsis	Enable the hold-down context
Context	configure router <i>string</i> static-routes hold-down
Tree	hold-down
Introduced	16.0.R1
Platforms	All

initial number

Synopsis	Value for the initial hold down time
Context	configure router <i>string</i> static-routes hold-down <i>initial number</i>

Tree	initial
Range	1 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

max-value *number*

Synopsis	Maximum value of the hold down time
Context	configure router <i>string</i> static-routes hold-down max-value <i>number</i>
Tree	max-value
Range	1 to 65535
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

multiplier *number*

Synopsis	Value by which the previous hold-down time is multiplied to calculate the new one
Context	configure router <i>string</i> static-routes hold-down multiplier <i>number</i>
Tree	multiplier
Range	1 to 10
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

route [[ip-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*) [route-type](#) *keyword*

Synopsis	Enter the route list instance
Context	configure router <i>string</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i>
Tree	route
Introduced	16.0.R1
Platforms	All

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	IP prefix and prefix length for the static routes
Context	configure router <i>string</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i>
Tree	route
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

route-type *keyword*

Synopsis	Static route type for unicast or multicast RPF
Context	configure router <i>string</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i>
Tree	route
Options	unicast, multicast
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

backup-tag *number*

Synopsis	Static route backup tag
Context	configure router <i>string</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> backup-tag <i>number</i>
Tree	backup-tag
Description	<p>This command associates a 4-byte backup route tag with the static route when the backup next-hop functionality is activated. The tag value is used in route policies to control distribution of the static route into other protocols when the backup next-hop function is activated for the associated static route.</p> <p>The tag specified at this level of the static route causes the tag values that are configured under the next-hop, black-hole, and indirect contexts of the static route to be ignored.</p>
Range	1 to 4294967295
Introduced	21.2.R1
Platforms	All

blackhole

Synopsis	Enable the blackhole context
Context	configure router <i>string</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> blackhole
Tree	blackhole
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the static route operation
Context	configure router <i>string</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> blackhole admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Introduced	16.0.R1
Platforms	All

community *string*

Synopsis	Community ID associated with the static route
Context	configure router <i>string</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> blackhole community <i>string</i>
Tree	community
String Length	1 to 72
Introduced	16.0.R1

Synopsis Enter the **indirect** list instance

Context **configure router string static-routes route** (*ipv4-prefix | ipv6-prefix*) **route-type keyword indirect** (*ipv4-address-no-zone | ipv6-address-no-zone*)

Tree **indirect**

Introduced 16.0.R1

Platforms All

[ip-address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Next-hop IP address used to reach the destination
Context	configure router <i>string</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> indirect (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	indirect
Description	This command specifies the next-hop IP address used to reach the destination. The specified IP address can be either on the network side or the access side and is typically at least one hop away from the node.
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the static route operation
Context	configure router <i>string</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> indirect (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Introduced	16.0.R1
Platforms	All

community *string*

Synopsis	Community ID associated with the static route
Context	configure router <i>string</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> indirect (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) community <i>string</i>
Tree	community
String Length	1 to 72
Introduced	16.0.R1
Platforms	All

cpe-check [**address**] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the cpe-check list instance
----------	--

Context	configure router <i>string</i> static-routes route (<i>ipv4-prefix ipv6-prefix</i>) route-type <i>keyword</i> indirect (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) cpe-check (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	cpe-check
Description	<p>When configured, this command enables the Customer Premises Equipment (CPE) check feature and specifies the IP address of the target CPE device.</p> <p>This option initiates a background ICMP ping test to the configured target IP address. The IP address can either be an IPv4 address for IPv4 static routes or an IPv6 address for IPv6 static routes. To avoid possible circular references, the target IP address cannot exist in the same subnet as the static route subnet. This command is mutually exclusive with BFD support on a specific static route.</p> <p>Note: A node that is sourcing CPE-check packets waits an additional full interval before taking action, which gives the CPE time to respond. For example, with a drop-count of 3 and an interval of 1s, three CPE-check packets are sent out and the node waits for the duration of another interval before acting on the loss. Failure declaration may take extra time depending on the load, interval, and other factors. In line with multitasking, multi-priority operating principles of the node, and the relative priority of cpe-ping, the node paces these minor events.</p>
Max. Instances	1
Introduced	16.0.R1
Platforms	All

[address] (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	IP address of the target CPE device
Context	configure router <i>string</i> static-routes route (<i>ipv4-prefix ipv6-prefix</i>) route-type <i>keyword</i> indirect (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) cpe-check (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)

tag number

Synopsis	Static route tag
Context	configure router <i>string</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> ipsec-tunnel <i>string</i> tag <i>number</i>
Tree	tag
Range	1 to 4294967295
Introduced	22.7.R1
Platforms	VSR

next-hop [**ip-address**] (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

Synopsis	Enter the next-hop list instance
Context	configure router <i>string</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>)
Tree	next-hop
Introduced	16.0.R1
Platforms	All

[ip-address] (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

Synopsis	IP address of the directly-connected next hop
Context	configure router <i>string</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>)
Tree	next-hop
Description	This command specifies the IP address of the directly-connected next hop. The IP address can either be on the network side or the access side on the node. The address

must be associated with a network directly connected to a network configured on the node.

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the static route operation
Context	configure router <i>string</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Introduced	16.0.R1
Platforms	All

backup-next-hop

Synopsis	Enter the backup-next-hop context
Context	configure router <i>string</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) backup-next-hop
Tree	backup-next-hop
Description	Commands in this context configure static route entry fast failover.
Introduced	21.2.R1
Platforms	All

address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Backup next-hop IP address
Context	configure router <i>string</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) backup-next-hop address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	address
Description	This command specifies the backup IP forwarding address that is used for static route Fast ReRoute (FRR). The configured address, if reachable, acts as pre-installed backup forwarding information that can be used when the primary IP next-hop suddenly fails. The configured backup next-hop IP address can be directly or indirectly connected (using an IGP or tunnel) to the node. The backup next-hop forwarding information or the

Next-hop Label Forwarding Entry (NHLFE) tunnel forwarding information from the IP Routing Table Manager (RTM) is used to preconfigure an IP fast-reroute backup path.

One backup next-hop address can protect a single primary static route entry next-hop address without ECMP and it is only activated when the primary next-hop has no active ECMP.

The configured IP address can be either on the network or the access side.

Introduced	21.2.R1
Platforms	All

bfd-liveness *boolean*

Synopsis	Use Bidirectional Forwarding Detection on this static route
Context	configure router <i>string</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) bfd-liveness <i>boolean</i>
Tree	bfd-liveness
Default	false
Introduced	16.0.R1
Platforms	All

community *string*

Synopsis	Community ID associated with the static route
Context	configure router <i>string</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) community <i>string</i>
Tree	community
String Length	1 to 72
Introduced	16.0.R1
Platforms	All

cpe-check [*address*] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the cpe-check list instance
Context	configure router <i>string</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) cpe-check (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	cpe-check
Description	When configured, this command enables the Customer Premises Equipment (CPE) check feature and specifies the IP address of the target CPE device.

This option initiates a background ICMP ping test to the configured target IP address. The IP address can either be an IPv4 address for IPv4 static routes or an IPv6 address for IPv6 static routes. To avoid possible circular references, the target IP address cannot exist in the same subnet as the static route subnet. This command is mutually exclusive with BFD support on a specific static route.

Note: A node that is sourcing CPE-check packets waits an additional full interval before taking action, which gives the CPE time to respond. For example, with a drop-count of 3 and an interval of 1s, three CPE-check packets are sent out and the node waits for the duration of another interval before acting on the loss. Failure declaration may take extra time depending on the load, interval, and other factors. In line with multitasking, multi-priority operating principles of the node, and the relative priority of **cpe-ping**, the node paces these minor events.

Max. Instances	1
Introduced	16.0.R1
Platforms	All

[address] (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	IP address of the target CPE device
Context	configure router string static-routes route (<i>ipv4-prefix ipv6-prefix</i>) route-type keyword next-hop (<i>ipv4-address-with-zone ipv6-address-with-zone</i>) cpe-check (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)

type *keyword*

Synopsis Processing behavior type for the reflector

Context **configure router string twamp-light reflector type keyword**

Tree [type](#)

Description	<p>This command configures the processing behavior of the TWAMP Light reflector. When the value is twamp-light the reflector does not check the received PDU as a traditional base TWAMP Light packet without TLV processing. When the value is stamp, the reflector attempts to find and process supported STAMP TLVs that follow the base STAMP packet.</p> <p>In mixed environments where different types of Session-Senders may be targeting a common TWAMP Light reflector, set the value to stamp. When the reflector is operating in stamp mode, the primary parsing is based on STAMP, checking and processing known TLVs, or determining if the arriving PDU is a TWAMP Light PDU. A Session-Sender launching a TWAMP Light-based packet must use all zeros padding pattern when the pad size is non zero.</p>
Options	stamp, twamp-light
Default	twamp-light

Synopsis	Administrative state of Home LAN Extension
Context	configure router <i>string</i> vrgw lanext admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

vxlan-port *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	UDP port to be used by local or remote VXLAN VTEP
Context	configure router <i>string</i> vrgw lanext vxlan-port <i>number</i>
Tree	vxlan-port
Range	4789 8472
Default	4789
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

vxlan-vtep-range

Synopsis	Enter the vxlan-vtep-range context
Context	configure router <i>string</i> vrgw lanext vxlan-vtep-range
Tree	vxlan-vtep-range

Introduced 16.0.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Upper bound of the VXLAN VTEP range
 Context **configure** **router** *string* **vrgw** **lanext** **vxlan-vtep-range** **end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
 Tree **end**
 Introduced 16.0.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

start (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Lower bound of the VXLAN VTEP range
 Context **configure** **router** *string* **vrgw** **lanext** **vxlan-vtep-range** **start** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
 Tree **start**
 Introduced 16.0.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

wlan-gw-group *reference*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	WLAN-GW group used for Home LAN Extension
Context	configure router <i>string</i> vrgw lanext wlan-gw-group <i>reference</i>
Tree	wlan-gw-group
Reference	configure isa wlan-gw-group <i>number</i>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

weighted-ecmp *keyword*

Synopsis	Weighted load-balancing capability for ECMP routes
Context	configure router <i>string</i> weighted-ecmp <i>keyword</i>
Tree	weighted-ecmp
Options	false, true, strict
Default	false
Introduced	16.0.R1
Platforms	All

wlan-gw

Synopsis	Enable the wlan-gw context
Context	configure router <i>string</i> wlan-gw
Tree	wlan-gw
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

distributed-subscriber-mgmt

Synopsis	Enter the distributed-subscriber-mgmt context
Context	configure router <i>string</i> wlan-gw distributed-subscriber-mgmt
Tree	distributed-subscriber-mgmt
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipv6-tcp-mss-adjust *number*

Synopsis	TCP-MSS adjustment value in upstream direction for DSM
Context	configure router <i>string</i> wlan-gw distributed-subscriber-mgmt ipv6-tcp-mss-adjust <i>number</i>
Tree	ipv6-tcp-mss-adjust
Range	160 to 10240
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

mobility-triggered-accounting

Synopsis	Enter the mobility-triggered-accounting context
Context	configure router <i>string</i> wlan-gw mobility-triggered-accounting
Tree	mobility-triggered-accounting
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of mobility triggered accounting
Context	configure router <i>string</i> wlan-gw mobility-triggered-accounting admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

hold-down *number*

Synopsis	Hold additional mobility-triggered update until this timer expires
Context	configure router <i>string</i> wlan-gw mobility-triggered-accounting hold-down <i>number</i>
Tree	hold-down
Range	60 to 86400
Units	seconds
Introduced	16.0.R4

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

include-counters *boolean*

Synopsis Include counters in interim updates
 Context **configure** *router string wlan-gw mobility-triggered-accounting include-counters boolean*
 Tree [include-counters](#)
 Default false
 Introduced 16.0.R4
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

xconnect

Synopsis Enter the **xconnect** context
 Context **configure** *router string wlan-gw xconnect*
 Tree [xconnect](#)
 Introduced 16.0.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis Administrative state of the WLAN-GW cross-connect
 Context **configure** *router string wlan-gw xconnect admin-state keyword*
 Tree [admin-state](#)
 Options enable, disable
 Default disable
 Introduced 16.0.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

tunnel-source-ip *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis IPv6 address and prefix for the tunnel source

Context	configure <i>router</i> <i>string</i> <i>wlan-gw</i> <i>xconnect</i> <i>tunnel-source-ip</i> <i>string</i>
Tree	tunnel-source-ip
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

wlan-gw-group *reference*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	ISA WLAN-GW Group
Context	configure <i>router</i> <i>string</i> <i>wlan-gw</i> <i>xconnect</i> <i>wlan-gw-group</i> <i>reference</i>
Tree	wlan-gw-group
Reference	configure <i>isa</i> <i>wlan-gw-group</i> <i>number</i>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

wpp

Synopsis	Enable the wpp context
Context	configure <i>router</i> <i>string</i> <i>wpp</i>
Tree	wpp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of WPP
Context	configure <i>router</i> <i>string</i> <i>wpp</i> <i>admin-state</i> <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

portal [*name*] *string*

Synopsis	Enter the portal list instance
Context	configure router <i>string</i> wpp portal <i>string</i>
Tree	portal
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[name] *string*

Synopsis	Web portal name
Context	configure router <i>string</i> wpp portal <i>string</i>
Tree	portal
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ack-auth-retry-count *number*

Synopsis	Number of retransmissions of an ACK_OUT message
Context	configure router <i>string</i> wpp portal <i>string</i> ack-auth-retry-count <i>number</i>
Tree	ack-auth-retry-count
Range	0 to 5
Default	5
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	WPP portal address
----------	--------------------

Context	configure router <i>string</i> wpp portal <i>string</i> address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	address
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis	Administrative state of the WPP portal server
Context	configure router <i>string</i> wpp portal <i>string</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ntf-logout-retry-count *number*

Synopsis	Number of retransmissions of an NTF_LOGOUT message
Context	configure router <i>string</i> wpp portal <i>string</i> ntf-logout-retry-count <i>number</i>
Tree	ntf-logout-retry-count
Range	0 to 5
Default	5
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

port-format *keyword*

Synopsis	Format of the port in the ACK_INO message
Context	configure router <i>string</i> wpp portal <i>string</i> port-format <i>keyword</i>
Tree	port-format
Options	standard, vendor-specific
Default	standard
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

retry-interval *number*

Synopsis Time between two consecutive retransmissions

Context **configure** *router string wpp portal string retry-interval number*

Tree [retry-interval](#)

Range 10 to 2000

Units milliseconds

Default 2000

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

secret *string*

Synopsis Message authentication between portal and BRAS by applying the secret used by WPPv2

Context **configure** *router string wpp portal string secret string*

Tree [secret](#)

String Length 1 to 115

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

version *number*

Synopsis Protocol version to be expected by the WPP portal

Context **configure** *router string wpp portal string version number*

Tree [version](#)

Range 1 | 2

Default 1

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Synopsis Administrative tag value

Context	configure routing-options admin-tags route-admin-tag-policy <i>string</i> exclude reference
Tree	exclude
Reference	configure routing-options admin-tags admin-tag <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

include [[tag](#)] [reference](#)

Synopsis	Add a list entry for include
Context	configure routing-options admin-tags route-admin-tag-policy <i>string</i> include reference
Tree	include
Max. Instances	8
Introduced	16.0.R1
Platforms	All

[tag] [reference](#)

Synopsis	Administrative tag value
Context	configure routing-options admin-tags route-admin-tag-policy <i>string</i> include reference
Tree	include
Reference	configure routing-options admin-tags admin-tag <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

flexible-algorithm-definitions

Synopsis	Enter the flexible-algorithm-definitions context
Context	configure routing-options flexible-algorithm-definitions
Tree	flexible-algorithm-definitions
Description	Commands in this context enable locally-configured algorithm definitions and configure administrative groups.
Introduced	20.7.R1

Platforms All

flex-algo [[flex-algo-name](#)] *string*

Synopsis Enter the **flex-algo** list instance

Context **configure** [routing-options](#) [flexible-algorithm-definitions](#) [flex-algo](#) *string*

Tree [flex-algo](#)

Description Commands in this context configure the definition context for a Flexible Algorithm Definition (FAD).

Max. Instances 256

Introduced 20.7.R1

Platforms All

[flex-algo-name] *string*

Synopsis Flexible Algorithm Definition (FAD) name

Context **configure** [routing-options](#) [flexible-algorithm-definitions](#) [flex-algo](#) *string*

Tree [flex-algo](#)

Description This command specifies the name of the flexible algorithm definition that is used as a reference anchor for the configuration.

String Length 1 to 32

Notes This element is part of a list key.

Introduced 20.7.R1

Platforms All

admin-state *keyword*

Synopsis Administrative state of the FAD

Context **configure** [routing-options](#) [flexible-algorithm-definitions](#) [flex-algo](#) *string* **admin-state** *keyword*

Tree [admin-state](#)

Options enable, disable

Default disable

Introduced 20.7.R1

Platforms All

description *string*

Synopsis	Text description
Context	configure routing-options flexible-algorithm-definitions flex-algo <i>string</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	20.7.R1
Platforms	All

exclude**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the exclude context
Context	configure routing-options flexible-algorithm-definitions flex-algo <i>string</i> exclude
Tree	exclude
Description	<p>Commands in this context define administrative groups that are used to exclude links from the Flexible Algorithm topology graph.</p> <p>Administrative groups, also known as link colors, are attributes associated with a link. The exclude rule that is part of the FAD specifies that links with the named administrative groups set are to be excluded from the topology graph.</p>
Introduced	20.7.R1
Platforms	All

admin-group [[group-name](#)] *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Add a list entry for admin-group
Context	configure routing-options flexible-algorithm-definitions flex-algo <i>string</i> exclude admin-group <i>reference</i>
Tree	admin-group
Introduced	20.7.R1
Platforms	All

[group-name] *reference*

Synopsis	Administrative group name
Context	configure routing-options flexible-algorithm-definitions flex-algo <i>string</i> exclude admin-group <i>reference</i>
Tree	admin-group
Reference	configure routing-options if-attribute admin-group <i>string</i>
Notes	This element is part of a list key.
Introduced	20.7.R1
Platforms	All

flags-tlv *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Advertise the FAD Flags TLV
Context	configure routing-options flexible-algorithm-definitions flex-algo <i>string</i> flags-tlv <i>boolean</i>
Tree	flags-tlv
Description	<p>When configured to true, the router advertises the FAD Flags TLV within the FAD. The M-flag within the TLV is set to 1, specifying the use of a Flex-Algorithm specific prefix metric. A router receiving the TLV modifies the constrained SPF (cSPF) based on the M-flag status.</p> <p>When configured to false, the FAD Flags TLV is not included with the FAD advertisement.</p>
Default	true
Introduced	20.10.R1
Platforms	All

include-all**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the include-all context
Context	configure routing-options flexible-algorithm-definitions flex-algo <i>string</i> include-all

Tree	include-all
Description	<p>Commands in this context define administrative groups that are used to include links from the Flexible Algorithm topology graph.</p> <p>Administrative groups, also known as link colors, are attributes associated with a link. The include-all rule that is part of the FAD specifies that all named administrative groups must be present in a link to be included in the topology graph.</p>
Introduced	20.7.R1
Platforms	All

admin-group [[group-name](#)] *reference*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Add a list entry for admin-group
Context	configure routing-options flexible-algorithm-definitions flex-algo <i>string</i> include-all admin-group <i>reference</i>
Tree	admin-group
Introduced	20.7.R1
Platforms	All

[group-name] *reference*

Synopsis	Administrative group name
Context	configure routing-options flexible-algorithm-definitions flex-algo <i>string</i> include-all admin-group <i>reference</i>
Tree	admin-group
Reference	configure routing-options if-attribute admin-group <i>string</i>
Notes	This element is part of a list key.
Introduced	20.7.R1
Platforms	All

include-any

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the include-any context
Context	configure routing-options flexible-algorithm-definitions flex-algo <i>string</i> include-any
Tree	include-any
Description	<p>Commands in this context define administrative groups that are used to include links from the Flexible Algorithm topology graph.</p> <p>Administrative groups, also known as link colors, are attributes associated with a link. The include-all rule that is part of the FAD specifies that any link with the named administrative groups is included in the topology graph.</p>
Introduced	20.7.R1
Platforms	All

admin-group [[group-name](#)] *reference*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Add a list entry for admin-group
Context	configure routing-options flexible-algorithm-definitions flex-algo <i>string</i> include-any admin-group <i>reference</i>
Tree	admin-group
Introduced	20.7.R1
Platforms	All

[[group-name](#)] *reference*

Reference	configure routing-options if-attribute admin-group <i>string</i>
Notes	This element is part of a list key.
Introduced	20.7.R1

Platforms All

metric-type *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	FAD metric type
Context	configure routing-options flexible-algorithm-definitions flex-algo <i>string</i> metric-type <i>keyword</i>
Tree	metric-type
Options	igp, delay, te-metric
Default	igp
Introduced	20.7.R1
Platforms	All

priority *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	FAD priority
Context	configure routing-options flexible-algorithm-definitions flex-algo <i>string</i> priority <i>number</i>
Tree	priority
Description	This command configures the priority of the FAD. The priority is used as a tie-breaker when the router has received multiple FADs for the same flexible algorithm.
Range	0 to 255
Default	100
Introduced	20.7.R1
Platforms	All

if-attribute

Synopsis	Enter the if-attribute context
Context	configure routing-options if-attribute

Tree	if-attribute
Introduced	16.0.R1
Platforms	All

admin-group [[group-name](#)] *string*

Synopsis	Enter the admin-group list instance
Context	configure routing-options if-attribute admin-group <i>string</i>
Tree	admin-group
Max. Instances	255
Introduced	16.0.R1
Platforms	All

[group-name] *string*

Synopsis	Interface group name
Context	configure routing-options if-attribute admin-group <i>string</i>
Tree	admin-group
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

value *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Integer value associated with the group
Context	configure routing-options if-attribute admin-group <i>string</i> value <i>number</i>
Tree	value
Range	0 to 255
Notes	This element is mandatory.
Introduced	16.0.R1

Platforms All

srlg-group [*name*] *string*

Synopsis Enter the **srlg-group** list instance
 Context **configure** [routing-options](#) [if-attribute srlg-group](#) *string*
 Tree [srlg-group](#)
 Max. Instances 1024
 Introduced 16.0.R1
 Platforms All

[name] *string*

Synopsis SRLG name
 Context **configure** [routing-options](#) [if-attribute srlg-group](#) *string*
 Tree [srlg-group](#)
 String Length 1 to 32
 Notes This element is part of a list key.
 Introduced 16.0.R1
 Platforms All

penalty-weight *number*

Synopsis Integer value of the penalty weight assigned to SRLG
 Context **configure** [routing-options](#) [if-attribute srlg-group](#) *string* [penalty-weight](#) *number*
 Tree [penalty-weight](#)
 Description This command specifies the penalty weight associated with a SRLG. The higher the penalty weight, the less desirable it is to use the link with a given SRLG.
 Range 0 to 65535
 Default 0
 Introduced 16.0.R1
 Platforms All

value *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Integer value associated with the SRLG
Context	configure routing-options if-attribute srlg-group <i>string</i> value <i>number</i>
Tree	value
Range	0 to 4294967295
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

ip-fast-reroute *boolean*

Synopsis	Enable IP fast reroute capability
Context	configure routing-options ip-fast-reroute <i>boolean</i>
Tree	ip-fast-reroute
Default	false
Introduced	16.0.R1
Platforms	All

policy-accounting

Synopsis	Enter the policy-accounting context
Context	configure routing-options policy-accounting
Tree	policy-accounting
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

policy-acct-template [[name](#)] *string*

Synopsis	Enter the policy-acct-template list instance
Context	configure routing-options policy-accounting policy-acct-template <i>string</i>
Tree	policy-acct-template

Max. Instances	1024
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

[name] *string*

Synopsis	Policy accounting template name
Context	configure routing-options policy-accounting policy-acct-template <i>string</i>
Tree	policy-acct-template
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

destination-class [[index](#)] *number*

Synopsis	Enter the destination-class list instance
Context	configure routing-options policy-accounting policy-acct-template <i>string</i> destination-class <i>number</i>
Tree	destination-class
Max. Instances	255
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

[index] *number*

Synopsis	Destination class index
Context	configure routing-options policy-accounting policy-acct-template <i>string</i> destination-class <i>number</i>
Tree	destination-class
Range	1 to 255
Notes	This element is part of a list key.
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

policer reference

Synopsis	Policer ID
Context	configure routing-options policy-accounting policy-acct-template <i>string</i> destination-class <i>number</i> policer <i>reference</i>
Tree	policer
Reference	configure routing-options policy-accounting policy-acct-template <i>string</i> policer <i>number</i>
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

policer [policer-id] number

Synopsis	Enter the policer list instance
Context	configure routing-options policy-accounting policy-acct-template <i>string</i> policer <i>number</i>
Tree	policer
Description	Commands in this context configure the policer definition for the instance. Policing by action of a policy accounting template is only supported by cards and systems that are FP4 and later.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

[policer-id] number

Synopsis	Policer ID
Context	configure routing-options policy-accounting policy-acct-template <i>string</i> policer <i>number</i>
Tree	policer
Range	1 to 63
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

max-burst-size (number | keyword)

Synopsis	Exceed threshold to drop packets from PIR leaky bucket
Context	configure routing-options policy-accounting policy-acct-template <i>string</i> policer <i>number</i> max-burst-size (<i>number</i> <i>keyword</i>)

Tree	max-burst-size
Description	This command specifies the maximum burst size for the policer. When this value is exceeded, packets are considered violating and are dropped.
Range	0 to 16777216
Units	bytes
Options	auto
Default	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

peak-rate (*number* | *keyword*)

Synopsis	Peak rate of the policy accounting policer
Context	configure routing-options policy-accounting policy-acct-template <i>string</i> policer <i>number</i> peak-rate (<i>number</i> <i>keyword</i>)
Tree	peak-rate
Description	This command configures the peak rate of the policy accounting policer, which is the fill or drain rate of the bucket.
Range	1 to 6400000000
Options	max
Default	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

source-class [[index](#)] *number*

Synopsis	Add a list entry for source-class
Context	configure routing-options policy-accounting policy-acct-template <i>string</i> source-class <i>number</i>
Tree	source-class
Max. Instances	255
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

[index] number

Synopsis	Source-class index
Context	configure routing-options policy-accounting policy-acct-template <i>string</i> source-class <i>number</i>
Tree	source-class
Range	1 to 255
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

route-next-hop-policy

Synopsis	Enter the route-next-hop-policy context
Context	configure routing-options route-next-hop-policy
Tree	route-next-hop-policy
Introduced	16.0.R1
Platforms	All

template [template-name] string

Synopsis	Enter the template list instance
Context	configure routing-options route-next-hop-policy template <i>string</i>
Tree	template
Introduced	16.0.R1
Platforms	All

[template-name] string

Synopsis	Template name
Context	configure routing-options route-next-hop-policy template <i>string</i>
Tree	template
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

description *string*

Synopsis	Text description
Context	configure routing-options route-next-hop-policy template <i>string</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

exclude-group [[group-name](#)] *reference*

Synopsis	Add a list entry for exclude-group
Context	configure routing-options route-next-hop-policy template <i>string</i> exclude-group <i>reference</i>
Tree	exclude-group
Max. Instances	32
Introduced	16.0.R1
Platforms	All

[group-name] *reference*

Synopsis	Administrative group name
Context	configure routing-options route-next-hop-policy template <i>string</i> exclude-group <i>reference</i>
Tree	exclude-group
Description	This command specifies the name of the administrative group. If the same group name is part of both include and exclude statements, the exclude statement wins. In other words, the exclude statement can be viewed as having an implicit preference value of 0.
Reference	configure routing-options if-attribute admin-group <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

include-group [[group-name](#)] *reference*

Synopsis	Enter the include-group list instance
----------	--

Context	configure routing-options route-next-hop-policy template <i>string</i> include-group <i>reference</i>
Tree	include-group
Max. Instances	32
Introduced	16.0.R1
Platforms	All

[group-name] *reference*

Synopsis	Administrative group name
Context	configure routing-options route-next-hop-policy template <i>string</i> include-group <i>reference</i>
Tree	include-group
Description	This command specifies the name of the administrative group. If the same group name is part of both include and exclude statements, the exclude statement wins. In other words, the exclude statement can be viewed as having an implicit preference value of 0.
Reference	configure routing-options if-attribute admin-group <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

preference *number*

Synopsis	Preference number for configured admin-group.
Context	configure routing-options route-next-hop-policy template <i>string</i> include-group <i>reference</i> preference <i>number</i>
Tree	preference
Range	1 to 255
Default	255
Introduced	16.0.R1
Platforms	All

nh-type *keyword*

Synopsis	Preferred next hop
Context	configure routing-options route-next-hop-policy template <i>string</i> nh-type <i>keyword</i>

Tree	nh-type
Options	ip, tunnel
Default	ip
Introduced	16.0.R1
Platforms	All

protection-type *keyword*

Synopsis	Protection type used
Context	configure routing-options route-next-hop-policy template <i>string</i> protection-type <i>keyword</i>
Tree	protection-type
Options	link, node
Default	node
Introduced	16.0.R1
Platforms	All

srlg *boolean*

Synopsis	Select next hops from the SRLG
Context	configure routing-options route-next-hop-policy template <i>string</i> srlg <i>boolean</i>
Tree	srlg
Default	false
Introduced	16.0.R1
Platforms	All

3.41.1 saa command descriptions

saa

Synopsis	Enter the saa context
Context	configure saa
Tree	saa
Description	Commands in this context configure the Service Assurance Agent (SAA) tests.
Introduced	16.0.R4
Platforms	All

owner [**owner-name**] *string test string*

Synopsis	Enter the owner list instance
Context	configure saa owner string test string
Tree	owner
Introduced	16.0.R4
Platforms	All

[owner-name] *string*

Synopsis	Optional owner name of the SAA operation
Context	configure saa owner string test string
Tree	owner
Description	This command configures the owner associated with the SAA operation.
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

test string

Synopsis	SAA test name
Context	configure saa owner string test string

Tree	owner
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

accounting-policy *reference*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Accounting policy associated with the SAA test
Context	configure saa owner string test string accounting-policy reference
Tree	accounting-policy
Reference	configure log accounting-policy number
Introduced	16.0.R4
Platforms	All

admin-state *keyword*

Synopsis	Administrative state of the SAA test
Context	configure saa owner string test string admin-state keyword
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R4
Platforms	All

continuous *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Execute the SAA tests as continuous
----------	-------------------------------------

Context	configure <i>saa owner string test string continuous boolean</i>
Tree	<i>continuous</i>
Description	<p>When configured to true, the SAA test execution is continuous, that is, it cannot be started or stopped with the oam saa test start or stop commands.</p> <p>The SAA test types supported by this command include the following:</p> <ul style="list-style-type: none"> • cpe-ping • dns • eth-cfm-loopback • eth-cfm-two-way-delay • eth-cfm-two-way-slm • icmp-ping (not applicable to rapid type) • lsp-ping • mac-ping • sdp-ping • vccv-ping • vprn-ping
Default	false
Introduced	16.0.R4
Platforms	All

description *string*

Synopsis	Text description
Context	configure <i>saa owner string test string description string</i>
Tree	<i>description</i>
String Length	1 to 80
Introduced	16.0.R4
Platforms	All

jitter-event [*direction*] *keyword threshold-type keyword*

Synopsis	Enter the jitter-event list instance
Context	configure <i>saa owner string test string jitter-event keyword threshold-type keyword</i>
Tree	<i>jitter-event</i>

Description	Commands in this context configure the jitter event thresholds used to evaluate the jitter event value at the termination of an SAA test probe. The system generates SAA threshold events as required.
Introduced	16.0.R4
Platforms	All

[**direction**] *keyword*

Synopsis	Direction for OAM ping responses for OAM ping test run
Context	configure saa owner <i>string</i> test <i>string</i> jitter-event <i>keyword</i> threshold-type <i>keyword</i>
Tree	jitter-event
Options	inbound, outbound, round-trip
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

threshold-type *keyword*

Synopsis	Threshold type
Context	configure saa owner <i>string</i> test <i>string</i> jitter-event <i>keyword</i> threshold-type <i>keyword</i>
Tree	jitter-event
Options	rising, falling
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

threshold *number*

Synopsis	Threshold jitter value
Context	configure saa owner <i>string</i> test <i>string</i> jitter-event <i>keyword</i> threshold-type <i>keyword</i> threshold <i>number</i>
Tree	threshold
Description	This command specifies the threshold jitter value. The system generates an SAA threshold event when the jitter value of the test run crosses the threshold value.
Range	0 to 2147483647
Units	microseconds

Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

latency-event [*direction*] *keyword* **threshold-type** *keyword*

Synopsis	Enter the latency-event list instance
Context	configure <i>saa owner string test string latency-event keyword threshold-type keyword</i>
Tree	latency-event
Description	Commands in this context configure the latency event thresholds used to evaluate the latency event value at the termination of an SAA test probe. The system generates SAA threshold events as required.
Introduced	16.0.R4
Platforms	All

[direction] *keyword*

Synopsis	Direction for OAM ping responses for OAM ping test run
Context	configure <i>saa owner string test string latency-event keyword threshold-type keyword</i>
Tree	latency-event
Options	inbound, outbound, round-trip
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

threshold-type *keyword*

Synopsis	Threshold type
Context	configure <i>saa owner string test string latency-event keyword threshold-type keyword</i>
Tree	latency-event
Options	rising, falling
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

threshold *number*

Synopsis	Threshold latency value
Context	configure <i>saa owner string test string latency-event keyword threshold-type keyword threshold number</i>
Tree	threshold
Description	This command specifies the threshold latency value. The system generates an SAA threshold event when the latency value of the test run crosses the threshold value.
Range	0 to 2147483647
Units	microseconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

loss-event [*direction*] *keyword threshold-type keyword*

Synopsis	Enter the loss-event list instance
Context	configure <i>saa owner string test string loss-event keyword threshold-type keyword</i>
Tree	loss-event
Description	Commands in this context configure the loss event thresholds used to evaluate the loss event value at the termination of an SAA test probe. The system generates SAA threshold events as required.
Introduced	16.0.R4
Platforms	All

[direction] *keyword*

Synopsis	Direction for OAM ping responses for OAM ping test run
Context	configure <i>saa owner string test string loss-event keyword threshold-type keyword</i>
Tree	loss-event
Options	inbound, outbound, round-trip
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

threshold-type *keyword*

Synopsis	Threshold type
Context	configure <i>saa owner string test string loss-event keyword threshold-type keyword</i>
Tree	loss-event
Options	rising, falling
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

threshold *number*

Synopsis	Threshold loss event value
Context	configure <i>saa owner string test string loss-event keyword threshold-type keyword threshold number</i>
Tree	threshold
Description	This command specifies the threshold loss value. The system generates an SAA threshold event when the loss value of the test run crosses the threshold value.
Range	0 to 2147483647
Units	packets
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

probe-history *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	History probe behavior
Context	configure <i>saa owner string test string probe-history keyword</i>
Tree	probe-history
Options	keep, drop, auto
Default	auto
Introduced	16.0.R4
Platforms	All

type

Synopsis	Enter the type context
Context	configure <i>saa owner string test string type</i>
Tree	<i>type</i>
Introduced	16.0.R4
Platforms	All

dns

Synopsis	Enable the dns context
Context	configure <i>saa owner string test string type dns</i>
Tree	<i>dns</i>
Notes	The following elements are part of a choice: dns , icmp-ping , or lsp-ping .
Introduced	22.10.R1
Platforms	All

count *number*

Synopsis	Number of messages to send in a sample window
Context	configure <i>saa owner string test string type dns count number</i>
Tree	<i>count</i>
Description	This command specifies the number of messages to send. Each message request must either time out or receive a reply before the next message request is sent.
Range	1 to 100
Units	packets
Default	1
Introduced	22.10.R1
Platforms	All

interval *number*

Synopsis	Minimum time before the next message request is sent
Context	configure <i>saa owner string test string type dns interval number</i>
Tree	<i>interval</i>

Range	1 to 10
Units	seconds
Default	1
Introduced	22.10.R1
Platforms	All

name-server (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the DNS name server used for the test
Context	configure <i>saa owner string test string type dns name-server</i> (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	name-server
Notes	This element is mandatory.
Introduced	22.10.R1
Platforms	All

record-type *keyword*

Synopsis	Record type
Context	configure <i>saa owner string test string type dns record-type keyword</i>
Tree	record-type
Options	ipv4-a-record, ipv6-aaaa-record
Default	ipv4-a-record
Introduced	22.10.R1
Platforms	All

router-instance *string*

Synopsis	Router name or VPRN service name
Context	configure <i>saa owner string test string type dns router-instance string</i>
Tree	router-instance
Default	_Base_and_management
Introduced	22.10.R1
Platforms	All

source-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address on the local system
Context	configure <i>saa owner string test string type dns source-address</i> (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	source-address
Description	This command configures the IP address on the local system. If unconfigured, the router uses a system selected local IP address.
Introduced	22.10.R1
Platforms	All

target-address *string*

Synopsis	DNS name to be resolved to an IP address
Context	configure <i>saa owner string test string type dns target-address string</i>
Tree	target-address
String Length	1 to 255
Notes	This element is mandatory.
Introduced	22.10.R1
Platforms	All

timeout *number*

Synopsis	Maximum time to wait for a reply message
Context	configure <i>saa owner string test string type dns timeout number</i>
Tree	timeout
Description	This command specifies the maximum time the router waits for a message response after sending the message request. When the timeout expires, the requesting router assumes the message response is not received. Any response received after the request times out is silently discarded.
Range	1 to 120
Units	seconds
Default	5
Introduced	22.10.R1
Platforms	All

trap-generation

Synopsis	Enter the trap-generation context
Context	configure <i>saa owner string test string type dns trap-generation</i>
Tree	trap-generation
Introduced	22.10.R1
Platforms	All

probe-fail *boolean*

Synopsis	Enable the generation of probe fail notifications
Context	configure <i>saa owner string test string type dns trap-generation probe-fail boolean</i>
Tree	probe-fail
Description	When configured to true , the system generates an SNMP trap if the consecutive probe failure threshold is reached during the execution of the SAA ping test. This command is not applicable to SAA traceroute tests.
Default	false
Introduced	22.10.R1
Platforms	All

probe-fail-threshold *number*

Synopsis	Consecutive probe failure count
Context	configure <i>saa owner string test string type dns trap-generation probe-fail-threshold number</i>
Tree	probe-fail-threshold
Description	This command configures the number of consecutive ping probe failures required to generate a trap. This command has no effect if the probe-fail command is set to false . This command is not applicable to SAA traceroute tests.
Range	0 to 15
Default	1
Introduced	22.10.R1
Platforms	All

test-complete *boolean*

Synopsis	Enable generation of test complete notifications
Context	configure <i>saa owner string test string type dns trap-generation test-complete boolean</i>
Tree	test-complete
Default	false
Introduced	22.10.R1
Platforms	All

test-fail *boolean*

Synopsis	Enable the generation of test fail notifications
Context	configure <i>saa owner string test string type dns trap-generation test-fail boolean</i>
Tree	test-fail
Description	When configured to true , the system generates a trap if a test fails. In the case of a ping test, the test is considered to have failed (for trap generation) if the number of failed probes is at least the value of the test-fail-threshold setting.
Default	false
Introduced	22.10.R1
Platforms	All

test-fail-threshold *number*

Synopsis	Total probe failures for trap generation
Context	configure <i>saa owner string test string type dns trap-generation test-fail-threshold number</i>
Tree	test-fail-threshold
Description	This command configures the number of consecutive test failures required to generate a trap. This command has no effect when test-fail is set to false . This command is not applicable to SAA traceroute tests.
Range	0 to 15
Default	1
Introduced	22.10.R1
Platforms	All

icmp-ping

Synopsis	Enable the icmp-ping context
Context	configure <i>saa owner string test string type icmp-ping</i>
Tree	icmp-ping
Description	Commands in this context configure an ICMP ping test.
Notes	The following elements are part of a choice: dns , icmp-ping , or lsp-ping .
Introduced	16.0.R4
Platforms	All

bypass-routing *boolean*

Synopsis	Bypass routing table for directly connected interfaces
Context	configure <i>saa owner string test string type icmp-ping bypass-routing boolean</i>
Tree	bypass-routing
Default	false
Notes	The following elements are part of a choice: bypass-routing , interface , or next-hop-address .
Introduced	16.0.R4
Platforms	All

count *number*

Synopsis	ICMP Echo Request packets to send in a sample window
Context	configure <i>saa owner string test string type icmp-ping count number</i>
Tree	count
Range	1 to 100000
Units	packets
Default	5
Introduced	16.0.R4
Platforms	All

destination-address (*ipv4-address-no-zone | ipv6-address-no-zone | string-not-all-spaces*)

Synopsis	Destination IP address or DNS name to send ping request
----------	---

Context	configure <i>saa owner string test string type icmp-ping destination-address</i> (<i>ipv4-address-no-zone ipv6-address-no-zone string-not-all-spaces</i>)
Tree	destination-address
String Length	1 to 128
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

do-not-fragment *boolean*

Synopsis	Prevent fragmentation of the ICMP Echo Request packet
Context	configure <i>saa owner string test string type icmp-ping do-not-fragment boolean</i>
Tree	do-not-fragment
Default	false
Introduced	16.0.R4
Platforms	All

interface *string*

Synopsis	Interface name
Context	configure <i>saa owner string test string type icmp-ping interface string</i>
Tree	interface
String Length	1 to 32
Notes	The following elements are part of a choice: bypass-routing , interface , or next-hop-address .
Introduced	16.0.R4
Platforms	All

interval (*number | decimal-number*)

Synopsis	Minimum time to expire before message request is sent
Context	configure <i>saa owner string test string type icmp-ping interval</i> (<i>number decimal-number</i>)
Tree	interval
Range	1 to 10000
Units	seconds

Default	1
Introduced	16.0.R4
Platforms	All

next-hop-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Next-hop IP address to reach destination
Context	configure <i>saa owner string test string type icmp-ping next-hop-address</i> (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	next-hop-address
Notes	The following elements are part of a choice: bypass-routing , interface , or next-hop-address .
Introduced	16.0.R4
Platforms	All

pattern (*keyword* | *number*)

Synopsis	Pattern to fill the data portion in a ping packet
Context	configure <i>saa owner string test string type icmp-ping pattern</i> (<i>keyword</i> <i>number</i>)
Tree	pattern
Range	0 to 65535
Options	sequential
Default	sequential
Introduced	16.0.R4
Platforms	All

qos

Synopsis	Enter the qos context
Context	configure <i>saa owner string test string type icmp-ping qos</i>
Tree	qos
Introduced	16.0.R4
Platforms	All

fc keyword

Synopsis	Forwarding class
Context	configure <i>saa owner string test string type icmp-ping qos fc keyword</i>
Tree	fc
Options	be, l2, af, l1, h2, ef, h1, nc
Default	nc
Introduced	16.0.R4
Platforms	All

tos number

Synopsis	Type of service
Context	configure <i>saa owner string test string type icmp-ping qos tos number</i>
Tree	tos
Range	0 to 255
Default	0
Introduced	16.0.R4
Platforms	All

router-instance string

Synopsis	Router name or VPRN service name
Context	configure <i>saa owner string test string type icmp-ping router-instance string</i>
Tree	router-instance
Default	Base
Introduced	16.0.R4
Platforms	All

size number

Synopsis	Packet padding size
Context	configure <i>saa owner string test string type icmp-ping size number</i>
Tree	size
Description	This command configures the number of bytes in the combined ICMP Header (8 bytes) and ICMP Payload (variable size) of the ICMP Echo Request packets.

Range	0 to 16384
Units	bytes
Default	56
Introduced	16.0.R4
Platforms	All

source-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source IP address
Context	configure <i>saa owner string test string type icmp-ping source-address</i> (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	source-address
Description	This command configures the source IP address to be loaded into the IP header of the ICMP Echo Request packet. If unconfigured, the router uses a system-selected local address.
Introduced	16.0.R4
Platforms	All

timeout *number*

Synopsis	Time router waits for a reply after sending last probe
Context	configure <i>saa owner string test string type icmp-ping timeout number</i>
Tree	timeout
Range	1 to 10
Units	seconds
Default	5
Introduced	16.0.R4
Platforms	All

trap-generation

Synopsis	Enter the trap-generation context
Context	configure <i>saa owner string test string type icmp-ping trap-generation</i>
Tree	trap-generation
Introduced	22.10.R1

Platforms All

probe-fail *boolean*

Synopsis Enable the generation of probe fail notifications

Context **configure** *saa owner string test string type icmp-ping trap-generation probe-fail boolean*

Tree [probe-fail](#)

Description When configured to **true**, the system generates an SNMP trap if the consecutive probe failure threshold is reached during the execution of the SAA ping test.
This command is not applicable to SAA traceroute tests.

Default false

Introduced 22.10.R1

Platforms All

probe-fail-threshold *number*

Synopsis Consecutive probe failure count

Context **configure** *saa owner string test string type icmp-ping trap-generation probe-fail-threshold number*

Tree [probe-fail-threshold](#)

Description This command configures the number of consecutive ping probe failures required to generate a trap.
This command has no effect if the **probe-fail** command is set to **false**.
This command is not applicable to SAA traceroute tests.

Range 0 to 15

Default 1

Introduced 22.10.R1

Platforms All

test-complete *boolean*

Synopsis Enable generation of test complete notifications

Context **configure** *saa owner string test string type icmp-ping trap-generation test-complete boolean*

Tree [test-complete](#)

Default false

Introduced	22.10.R1
Platforms	All

test-fail *boolean*

Synopsis	Enable the generation of test fail notifications
Context	configure <i>saa owner string test string type icmp-ping trap-generation test-fail boolean</i>
Tree	test-fail
Description	When configured to true , the system generates a trap if a test fails. In the case of a ping test, the test is considered to have failed (for trap generation) if the number of failed probes is at least the value of the test-fail-threshold setting.
Default	false
Introduced	22.10.R1
Platforms	All

test-fail-threshold *number*

Synopsis	Total probe failures for trap generation
Context	configure <i>saa owner string test string type icmp-ping trap-generation test-fail-threshold number</i>
Tree	test-fail-threshold
Description	This command configures the number of consecutive test failures required to generate a trap. This command has no effect when test-fail is set to false . This command is not applicable to SAA traceroute tests.
Range	0 to 15
Default	1
Introduced	22.10.R1
Platforms	All

tll *number*

Synopsis	Time to live in the IP header
Context	configure <i>saa owner string test string type icmp-ping tll number</i>
Tree	tll
Range	1 to 128

Default	64
Introduced	16.0.R4
Platforms	All

lsp-ping

Synopsis	Enable the lsp-ping context
Context	configure saa owner string test string type lsp-ping
Tree	lsp-ping
Description	Commands in this context configure the command options to perform in-band LSP connectivity tests. LSP ping uses the protocol and data structures defined in RFC 8029, <i>Detecting Multiprotocol Label Switched (MPLS) Data-Plane Failures</i> .
Notes	The following elements are part of a choice: dns , icmp-ping , or lsp-ping .
Introduced	22.10.R1
Platforms	All

interval number

Synopsis	Minimum time before the next lsp-ping request is sent
Context	configure saa owner string test string type lsp-ping interval number
Tree	interval
Range	1 to 10
Units	seconds
Default	1
Introduced	22.10.R1
Platforms	All

qos

Synopsis	Enter the qos context
Context	configure saa owner string test string type lsp-ping qos
Tree	qos
Introduced	22.10.R1
Platforms	All

fc keyword

Synopsis	Forwarding class
Context	configure saa owner string test string type lsp-ping qos fc keyword
Tree	fc
Options	be, l2, af, l1, h2, ef, h1, nc
Default	be
Introduced	22.10.R1
Platforms	All

profile keyword

Synopsis	Profile
Context	configure saa owner string test string type lsp-ping qos profile keyword
Tree	profile
Options	in, out
Default	out
Introduced	22.10.R1
Platforms	All

send-count number

Synopsis	Number of request packets to send in a sample window
Context	configure saa owner string test string type lsp-ping send-count number
Tree	send-count
Range	1 to 100
Units	packets
Default	1
Introduced	22.10.R1
Platforms	All

size number

Synopsis	Packet pad size
Context	configure saa owner string test string type lsp-ping size number

Tree	size
Range	1 to 9786
Units	bytes
Default	1
Introduced	22.10.R1
Platforms	All

source-ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source IP address
Context	configure saa owner string test string type lsp-ping source-ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	source-ip-address
Introduced	22.10.R1
Platforms	All

sub-type

Synopsis	Enter the sub-type context
Context	configure saa owner string test string type lsp-ping sub-type
Tree	sub-type
Introduced	22.10.R1
Platforms	All

bgp-label

Synopsis	Enable the bgp-label context
Context	configure saa owner string test string type lsp-ping sub-type bgp-label
Tree	bgp-label
Notes	The following elements are part of a choice: bgp-label , ldp , rsvp-te , sr-isis , sr-ospf , sr-ospf3 , sr-policy , or sr-te .
Introduced	22.10.R1
Platforms	All

path-destination

Synopsis	Enter the path-destination context
Context	configure saa owner <i>string test string type</i> lsp-ping sub-type bgp-label path-destination
Tree	path-destination
Introduced	22.10.R1
Platforms	All

interface *string*

Synopsis	Egress router interface used with the path destination
Context	configure saa owner <i>string test string type</i> lsp-ping sub-type bgp-label path-destination interface string
Tree	interface
String Length	1 to 32
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	22.10.R1
Platforms	All

ip-address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	IP address of the path destination
Context	configure saa owner <i>string test string type</i> lsp-ping sub-type bgp-label path-destination ip-address (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	ip-address
Introduced	22.10.R1
Platforms	All

next-hop (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Egress IP next hop address used with path destination
Context	configure saa owner <i>string test string type</i> lsp-ping sub-type bgp-label path-destination next-hop (<i>ipv4-address-no-zone ipv6-address-no-zone</i>)
Tree	next-hop
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	22.10.R1

Platforms All

prefix (*ipv4-prefix* | *ipv6-prefix*)

Synopsis Destination IP prefix for the test

Context **configure** *saa owner string test string type lsp-ping sub-type bgp-label prefix* (*ipv4-prefix* | *ipv6-prefix*)

Tree [prefix](#)

Notes This element is mandatory.

Introduced 22.10.R1

Platforms All

ldp

Synopsis Enable the **ldp** context

Context **configure** *saa owner string test string type lsp-ping sub-type ldp*

Tree [ldp](#)

Notes The following elements are part of a choice: **bgp-label**, **ldp**, **rsvp-te**, **sr-isis**, **sr-ospf**, **sr-ospf3**, **sr-policy**, or **sr-te**.

Introduced 22.10.R1

Platforms All

path-destination

Synopsis Enter the **path-destination** context

Context **configure** *saa owner string test string type lsp-ping sub-type ldp path-destination*

Tree [path-destination](#)

Introduced 22.10.R1

Platforms All

interface *string*

Synopsis Egress router interface used with the path destination

Context **configure** *saa owner string test string type lsp-ping sub-type ldp path-destination interface string*

Tree [interface](#)

String Length	1 to 32
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	22.10.R1
Platforms	All

ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the path destination
Context	configure saa owner <i>string</i> test <i>string</i> type lsp-ping sub-type ldp path-destination ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	ip-address
Introduced	22.10.R1
Platforms	All

next-hop (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Egress IP next hop address used with path destination
Context	configure saa owner <i>string</i> test <i>string</i> type lsp-ping sub-type ldp path-destination next-hop (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	next-hop
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	22.10.R1
Platforms	All

prefix (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Destination IP prefix for the test
Context	configure saa owner <i>string</i> test <i>string</i> type lsp-ping sub-type ldp prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	prefix
Notes	This element is mandatory.
Introduced	22.10.R1
Platforms	All

rsvp-te

Synopsis	Enable the rsvp-te context
Context	configure <i>saa owner string test string type lsp-ping sub-type rsvp-te</i>
Tree	rsvp-te
Notes	The following elements are part of a choice: bgp-label , ldp , rsvp-te , sr-isis , sr-ospf , sr-ospf3 , sr-policy , or sr-te .
Introduced	22.10.R1
Platforms	All

lsp-name string

Synopsis	Name of the LSP to be tested
Context	configure <i>saa owner string test string type lsp-ping sub-type rsvp-te lsp-name string</i>
Tree	lsp-name
String Length	1 to 64
Notes	This element is mandatory.
Introduced	22.10.R1
Platforms	All

path string

Synopsis	Name of the MPLS path to be tested
Context	configure <i>saa owner string test string type lsp-ping sub-type rsvp-te path string</i>
Tree	path
String Length	1 to 64
Introduced	22.10.R1
Platforms	All

sr-isis

Synopsis	Enable the sr-isis context
Context	configure <i>saa owner string test string type lsp-ping sub-type sr-isis</i>
Tree	sr-isis
Notes	The following elements are part of a choice: bgp-label , ldp , rsvp-te , sr-isis , sr-ospf , sr-ospf3 , sr-policy , or sr-te .

Introduced	22.10.R1
Platforms	All

igp-instance *number*

Synopsis	IGP instance for the SR IS-IS test
Context	configure saa owner <i>string test string type lsp-ping sub-type sr-isis igp-instance number</i>
Tree	igp-instance
Range	0 to 127
Default	0
Introduced	22.10.R1
Platforms	All

path-destination

Synopsis	Enter the path-destination context
Context	configure saa owner <i>string test string type lsp-ping sub-type sr-isis path-destination</i>
Tree	path-destination
Introduced	22.10.R1
Platforms	All

interface *string*

Synopsis	Egress router interface used with the path destination
Context	configure saa owner <i>string test string type lsp-ping sub-type sr-isis path-destination interface string</i>
Tree	interface
String Length	1 to 32
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	22.10.R1
Platforms	All

ip-address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	IP address of the path destination
----------	------------------------------------

Context	configure <i>saa owner string test string type lsp-ping sub-type sr-isis path-destination ip-address (ipv4-address-no-zone ipv6-address-no-zone)</i>
Tree	ip-address
Introduced	22.10.R1
Platforms	All

next-hop (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Egress IP next hop address used with path destination
Context	configure <i>saa owner string test string type lsp-ping sub-type sr-isis path-destination next-hop (ipv4-address-no-zone ipv6-address-no-zone)</i>
Tree	next-hop
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	22.10.R1
Platforms	All

prefix (*ipv4-prefix | ipv6-prefix*)

Synopsis	Destination IP prefix for the test
Context	configure <i>saa owner string test string type lsp-ping sub-type sr-isis prefix (ipv4-prefix ipv6-prefix)</i>
Tree	prefix
Notes	This element is mandatory.
Introduced	22.10.R1
Platforms	All

sr-ospf

Synopsis	Enable the sr-ospf context
Context	configure <i>saa owner string test string type lsp-ping sub-type sr-ospf</i>
Tree	sr-ospf
Notes	The following elements are part of a choice: bgp-label , ldp , rsvp-te , sr-isis , sr-ospf , sr-ospf3 , sr-policy , or sr-te .
Introduced	22.10.R1
Platforms	All

igp-instance *number*

Synopsis	IGP instance for the SR OSPF test
Context	configure <i>saa owner string test string type lsp-ping sub-type sr-ospf igp-instance number</i>
Tree	igp-instance
Range	0 to 31
Default	0
Introduced	22.10.R1
Platforms	All

path-destination

Synopsis	Enter the path-destination context
Context	configure <i>saa owner string test string type lsp-ping sub-type sr-ospf path-destination</i>
Tree	path-destination
Introduced	22.10.R1
Platforms	All

interface *string*

Synopsis	Egress router interface used with the path destination
Context	configure <i>saa owner string test string type lsp-ping sub-type sr-ospf path-destination interface string</i>
Tree	interface
String Length	1 to 32
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	22.10.R1
Platforms	All

ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the path destination
Context	configure <i>saa owner string test string type lsp-ping sub-type sr-ospf path-destination ip-address (ipv4-address-no-zone ipv6-address-no-zone)</i>
Tree	ip-address

Introduced 22.10.R1
 Platforms All

next-hop (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis Egress IP next hop address used with path destination
 Context **configure** *saa owner string test string type lsp-ping sub-type sr-ospf path-destination next-hop (ipv4-address-no-zone | ipv6-address-no-zone)*
 Tree [next-hop](#)
 Notes The following elements are part of a choice: **interface** or **next-hop**.
 Introduced 22.10.R1
 Platforms All

prefix (*ipv4-prefix* | *ipv6-prefix*)

Synopsis Destination IP prefix for the test
 Context **configure** *saa owner string test string type lsp-ping sub-type sr-ospf prefix (ipv4-prefix | ipv6-prefix)*
 Tree [prefix](#)
 Notes This element is mandatory.
 Introduced 22.10.R1
 Platforms All

sr-ospf3

Synopsis Enable the **sr-ospf3** context
 Context **configure** *saa owner string test string type lsp-ping sub-type sr-ospf3*
 Tree [sr-ospf3](#)
 Notes The following elements are part of a choice: **bgp-label**, **ldp**, **rsvp-te**, **sr-isis**, **sr-ospf**, **sr-ospf3**, **sr-policy**, or **sr-te**.
 Introduced 22.10.R1
 Platforms All

igp-instance *number*

Synopsis IGP instance for the SR OSPFv3 test

Context	configure <i>saa owner string test string type lsp-ping sub-type sr-ospf3 igp-instance number</i>
Tree	igp-instance
Range	0 to 31 64 to 95
Default	0
Introduced	22.10.R1
Platforms	All

path-destination

Synopsis	Enter the path-destination context
Context	configure <i>saa owner string test string type lsp-ping sub-type sr-ospf3 path-destination</i>
Tree	path-destination
Introduced	22.10.R1
Platforms	All

interface *string*

Synopsis	Egress router interface used with the path destination
Context	configure <i>saa owner string test string type lsp-ping sub-type sr-ospf3 path-destination interface string</i>
Tree	interface
String Length	1 to 32
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	22.10.R1
Platforms	All

ip-address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	IP address of the path destination
Context	configure <i>saa owner string test string type lsp-ping sub-type sr-ospf3 path-destination ip-address (ipv4-address-no-zone ipv6-address-no-zone)</i>
Tree	ip-address
Introduced	22.10.R1
Platforms	All

next-hop (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Egress IP next hop address used with path destination
Context	configure <i>saa owner string test string type lsp-ping sub-type sr-ospf3 path-destination next-hop</i> (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	next-hop
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	22.10.R1
Platforms	All

prefix (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Destination IP prefix for the test
Context	configure <i>saa owner string test string type lsp-ping sub-type sr-ospf3 prefix</i> (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	prefix
Notes	This element is mandatory.
Introduced	22.10.R1
Platforms	All

sr-policy

Synopsis	Enable the sr-policy context
Context	configure <i>saa owner string test string type lsp-ping sub-type sr-policy</i>
Tree	sr-policy
Notes	The following elements are part of a choice: bgp-label , ldp , rsvp-te , sr-isis , sr-ospf , sr-ospf3 , sr-policy , or sr-te .
Introduced	22.10.R1
Platforms	All

color number

Synopsis	Segment Routing color for the test
Context	configure <i>saa owner string test string type lsp-ping sub-type sr-policy color number</i>
Tree	color
Range	0 to 4294967295

Notes	This element is mandatory.
Introduced	22.10.R1
Platforms	All

endpoint (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Segment Routing endpoint for the test
Context	configure <i>saa owner string test string type lsp-ping sub-type sr-policy endpoint</i> (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>)
Tree	endpoint
Notes	This element is mandatory.
Introduced	22.10.R1
Platforms	All

path-destination

Synopsis	Enter the path-destination context
Context	configure <i>saa owner string test string type lsp-ping sub-type sr-policy path-destination</i>
Tree	path-destination
Introduced	22.10.R1
Platforms	All

interface *string*

Synopsis	Egress router interface used with the path destination
Context	configure <i>saa owner string test string type lsp-ping sub-type sr-policy path-destination interface string</i>
Tree	interface
String Length	1 to 32
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	22.10.R1
Platforms	All

ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the path destination
----------	------------------------------------

Context	configure <i>saa owner string test string type lsp-ping sub-type sr-policy path-destination ip-address (ipv4-address-no-zone ipv6-address-no-zone)</i>
Tree	ip-address
Introduced	22.10.R1
Platforms	All

next-hop (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Egress IP next hop address used with path destination
Context	configure <i>saa owner string test string type lsp-ping sub-type sr-policy path-destination next-hop (ipv4-address-no-zone ipv6-address-no-zone)</i>
Tree	next-hop
Notes	The following elements are part of a choice: interface or next-hop .
Introduced	22.10.R1
Platforms	All

segment-list *number*

Synopsis	Segment Routing segment list for the test
Context	configure <i>saa owner string test string type lsp-ping sub-type sr-policy segment-list number</i>
Tree	segment-list
Range	1 to 32
Introduced	22.10.R1
Platforms	All

sr-te

Synopsis	Enable the sr-te context
Context	configure <i>saa owner string test string type lsp-ping sub-type sr-te</i>
Tree	sr-te
Notes	The following elements are part of a choice: bgp-label , ldp , rsvp-te , sr-isis , sr-ospf , sr-ospf3 , sr-policy , or sr-te .
Introduced	22.10.R1
Platforms	All

lsp-name *string*

Synopsis	Name of the LSP to be tested
Context	configure <i>saa owner string test string type lsp-ping sub-type sr-te lsp-name string</i>
Tree	<i>lsp-name</i>
String Length	1 to 64
Notes	This element is mandatory.
Introduced	22.10.R1
Platforms	All

path *string*

Synopsis	Name of the MPLS path to be tested
Context	configure <i>saa owner string test string type lsp-ping sub-type sr-te path string</i>
Tree	<i>path</i>
String Length	1 to 64
Introduced	22.10.R1
Platforms	All

path-destination

Synopsis	Enter the path-destination context
Context	configure <i>saa owner string test string type lsp-ping sub-type sr-te path-destination</i>
Tree	<i>path-destination</i>
Introduced	22.10.R1
Platforms	All

interface *string*

Synopsis	Egress router interface used with the path destination
Context	configure <i>saa owner string test string type lsp-ping sub-type sr-te path-destination interface string</i>
Tree	<i>interface</i>
String Length	1 to 32
Notes	The following elements are part of a choice: interface or next-hop .

Introduced 22.10.R1
 Platforms All

ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis IP address of the path destination
 Context **configure** *saa owner string test string type lsp-ping sub-type sr-te path-destination ip-address* (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
 Tree [ip-address](#)
 Introduced 22.10.R1
 Platforms All

next-hop (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis Egress IP next hop address used with path destination
 Context **configure** *saa owner string test string type lsp-ping sub-type sr-te path-destination next-hop* (*ipv4-address-no-zone* | *ipv6-address-no-zone*)
 Tree [next-hop](#)
 Notes The following elements are part of a choice: **interface** or **next-hop**.
 Introduced 22.10.R1
 Platforms All

timeout *number*

Synopsis Time router waits for a reply to an echo request
 Context **configure** *saa owner string test string type lsp-ping timeout number*
 Tree [timeout](#)
 Range 1 to 10
 Units seconds
 Default 5
 Introduced 22.10.R1
 Platforms All

trap-generation

Synopsis Enter the **trap-generation** context

Context	configure <i>saa owner string test string type lsp-ping trap-generation</i>
Tree	<i>trap-generation</i>
Introduced	22.10.R1
Platforms	All

probe-fail *boolean*

Synopsis	Enable the generation of probe fail notifications
Context	configure <i>saa owner string test string type lsp-ping trap-generation probe-fail boolean</i>
Tree	<i>probe-fail</i>
Description	When configured to true , the system generates an SNMP trap if the consecutive probe failure threshold is reached during the execution of the SAA ping test. This command is not applicable to SAA traceroute tests.
Default	false
Introduced	22.10.R1
Platforms	All

probe-fail-threshold *number*

Synopsis	Consecutive probe failure count
Context	configure <i>saa owner string test string type lsp-ping trap-generation probe-fail-threshold number</i>
Tree	<i>probe-fail-threshold</i>
Description	This command configures the number of consecutive ping probe failures required to generate a trap. This command has no effect if the probe-fail command is set to false . This command is not applicable to SAA traceroute tests.
Range	0 to 15
Default	1
Introduced	22.10.R1
Platforms	All

test-complete *boolean*

Synopsis	Enable generation of test complete notifications
----------	--

Context	configure <i>saa owner string test string type lsp-ping trap-generation test-complete boolean</i>
Tree	test-complete
Default	false
Introduced	22.10.R1
Platforms	All

test-fail *boolean*

Synopsis	Enable the generation of test fail notifications
Context	configure <i>saa owner string test string type lsp-ping trap-generation test-fail boolean</i>
Tree	test-fail
Description	When configured to true , the system generates a trap if a test fails. In the case of a ping test, the test is considered to have failed (for trap generation) if the number of failed probes is at least the value of the test-fail-threshold setting.
Default	false
Introduced	22.10.R1
Platforms	All

test-fail-threshold *number*

Synopsis	Total probe failures for trap generation
Context	configure <i>saa owner string test string type lsp-ping trap-generation test-fail-threshold number</i>
Tree	test-fail-threshold
Description	This command configures the number of consecutive test failures required to generate a trap. This command has no effect when test-fail is set to false . This command is not applicable to SAA traceroute tests.
Range	0 to 15
Default	1
Introduced	22.10.R1
Platforms	All

ttl number

Synopsis	TTL value for the echo request MPLS label
Context	configure <i>saa owner string test string type lsp-ping ttl number</i>
Tree	<i>ttl</i>
Range	1 to 255
Default	255
Introduced	22.10.R1
Platforms	All

```

3.42.1 satellite command descriptions

satellite

Synopsis	Enter the satellite context
Context	configure satellite
Tree	satellite
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ethernet-satellite [[satellite-id](#)] *number*

Synopsis	Enter the ethernet-satellite list instance
Context	configure satellite ethernet-satellite <i>number</i>
Tree	ethernet-satellite
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[\[satellite-id\]](#) *number*

Synopsis	The unique index identifying this satellite
Context	configure satellite ethernet-satellite <i>number</i>
Tree	ethernet-satellite
Range	1 to 20
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the satellite
Context	configure satellite ethernet-satellite <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable

Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

client-down-delay *number*

Synopsis	Delay between uplink as unavailable and disabling ports
Context	configure satellite ethernet-satellite <i>number</i> client-down-delay <i>number</i>
Tree	client-down-delay
Range	0 to 1800
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

console-access *keyword*

Synopsis	Satellite console interface access
Context	configure satellite ethernet-satellite <i>number</i> console-access <i>keyword</i>
Tree	console-access
Options	enable, disable
Default	disable
Introduced	20.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

description *string*

Synopsis	Text description
Context	configure satellite ethernet-satellite <i>number</i> description <i>string</i>
Tree	description
String Length	1 to 80
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

dynamic-uplink *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Enable dynamic uplink resilience for Ethernet satellite
Context	configure satellite ethernet-satellite <i>number</i> dynamic-uplink <i>boolean</i>
Tree	dynamic-uplink
Default	false
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

feature *keyword*

Synopsis	Functionality to enable
Context	configure satellite ethernet-satellite <i>number</i> feature <i>keyword</i>
Tree	feature
Options	local-forward, ptp-tc
Max. Instances	2
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

mac-address *string*

Synopsis	MAC address for the satellite chassis
Context	configure satellite ethernet-satellite <i>number</i> mac-address <i>string</i>
Tree	mac-address
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

port-map [[client-port-id](#)] *reference*

Synopsis	Enter the port-map list instance
Context	configure satellite ethernet-satellite <i>number</i> port-map <i>reference</i>
Tree	port-map

Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[client-port-id] *reference*

Synopsis	Satellite client port associated with the port mapping
Context	configure satellite ethernet-satellite <i>number</i> port-map <i>reference</i>
Tree	port-map
Reference	configure port <i>string</i>
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

primary *reference*

Synopsis	Primary satellite uplink for the associate client port
Context	configure satellite ethernet-satellite <i>number</i> port-map <i>reference</i> primary <i>reference</i>
Tree	primary
Reference	configure port <i>string</i>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

secondary *reference*

Synopsis	Secondary satellite uplink for associate client port
Context	configure satellite ethernet-satellite <i>number</i> port-map <i>reference</i> secondary <i>reference</i>
Tree	secondary
Reference	configure port <i>string</i>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

port-template *string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Port template name
Context	configure satellite ethernet-satellite <i>number</i> port-template <i>string</i>
Tree	port-template
String Length	1 to 32
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ptp-tc *boolean*

Synopsis	Enable the 1EEE 1588 transparent clock function
Context	configure satellite ethernet-satellite <i>number</i> ptp-tc <i>boolean</i>
Tree	ptp-tc
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

sat-type *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Type of satellite variant for the associated chassis
Context	configure satellite ethernet-satellite <i>number</i> sat-type <i>keyword</i>
Tree	sat-type
Options	es48-1gb-sfp, es24-1gb-sfp, es48-1gb-tx, es24-1gb-tx, es64-10gb-sfpp+4-100gb-cfp4, es24-sass-1gb-sfp, es48-sass-1gb-sfp, es24-sasmxp-1gb-sfp, es64-10gb-sfpp+4-100gb-qsfp28, es24-sfpp+8-sfp28+2-qsfp28, es32-qsfp28+4-qsfpdd, es6-qsfpdd+48-sfp56
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

software-repository *reference*

Synopsis	Software repository bound to the associated satellite
Context	configure satellite ethernet-satellite <i>number</i> software-repository <i>reference</i>
Tree	software-repository
Reference	configure system software-repository <i>string</i>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

sync-e *boolean*

Synopsis	Enable the synchronous Ethernet operation
Context	configure satellite ethernet-satellite <i>number</i> sync-e <i>boolean</i>
Tree	sync-e
Description	<p>When configured to true, this command enables the Ethernet satellite for synchronous Ethernet operation so that the transmit timing of the satellite access ports use the frequency of the central clock of the host router.</p> <p>To enable this functionality, both host ports on the router that connect to the U1 and U2 ports of the satellite must be synchronous Ethernet-capable ports.</p> <p>When configured to false, the command disables the Ethernet satellite for synchronous Ethernet operation.</p>
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

uplink-distribution *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Forwarding complex type for uplink distribution
Context	configure satellite ethernet-satellite <i>number</i> uplink-distribution <i>keyword</i>
Tree	uplink-distribution
Description	<p>This command specifies the forwarding complex used for the satellite uplink association to the ports.</p> <p>With single-complex, all uplinks for the associated satellite must be connected to ports using a single forwarding complex.</p>

With **dual-complex**, all uplinks for the associated satellite must be connected to ports using a double forwarding complex. This option optimizes the resources across the two complexes.

Options	single-complex, dual-complex
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

file-transfer

Synopsis	Enter the file-transfer context
Context	configure satellite file-transfer
Tree	file-transfer
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ftp boolean

Synopsis	Use FTP between host and satellite
Context	configure satellite file-transfer ftp boolean
Tree	ftp
Description	When configured to true , the file transfer FTP is used between 7750 SR or 7950 XRS host and the 7210 SAS Ethernet satellite.
Default	true
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

scp boolean

Synopsis	Use FTP between host and satellite
Context	configure satellite file-transfer scp boolean
Tree	scp
Description	When configured to true , the file transfer SCP protocol is used between 7750 SR or 7950 XRS host and the 7210 SAS Ethernet satellite. When configured to false , the file transfer FTP protocol is used between 7750 SR or 7950 XRS host and the 7210 SAS Ethernet satellite.
Default	false

Introduced 20.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

port-template [[template-name](#)] *string*

Synopsis Enter the **port-template** list instance
 Context **configure satellite port-template** *string*
 Tree [port-template](#)
 Introduced 19.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[template-name] *string*

Synopsis Associated port template name
 Context **configure satellite port-template** *string*
 Tree [port-template](#)
 String Length 1 to 32
 Notes This element is part of a list key.
 Introduced 19.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis Administrative state of the port template
 Context **configure satellite port-template** *string admin-state* *keyword*
 Tree [admin-state](#)
 Options enable, disable
 Default disable
 Introduced 19.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

description *string*

Synopsis Text description
 Context **configure satellite port-template** *string description* *string*

Tree	description
String Length	1 to 80
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

port [[sat-phys-port-id](#)] *string*

Synopsis	Enter the port list instance
Context	configure satellite port-template <i>string</i> port <i>string</i>
Tree	port
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[sat-phys-port-id] *string*

Synopsis	Satellite physical port ID
Context	configure satellite port-template <i>string</i> port <i>string</i>
Tree	port
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

role *keyword*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Satellite port role
Context	configure satellite port-template <i>string</i> port <i>string</i> role <i>keyword</i>
Tree	role
Options	none, uplink, client
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

uplink reference

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Uplink association used for associated satellite port
Context	configure satellite port-template <i>string</i> port <i>string</i> uplink reference
Tree	uplink
Reference	configure satellite port-template <i>string</i> port <i>string</i>
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

sat-type keyword

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Satellite type for use with the port template
Context	configure satellite port-template <i>string</i> sat-type <i>keyword</i>
Tree	sat-type
Options	es48-1gb-sfp, es24-1gb-sfp, es48-1gb-tx, es24-1gb-tx, es64-10gb-sfpp+4-100gb-cfp4, es24-sass-1gb-sfp, es48-sass-1gb-sfp, es24-sasmxp-1gb-sfp, es64-10gb-sfpp+4-100gb-qsfp28, es24-sfpp+8-sfp28+2-qsfp28, es32-qsfp28+4-qsfpdd, es6-qsfpdd+48-sfp56
Notes	This element is mandatory.
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

port-topology [[local-port-id](#)] reference

Synopsis	Enter the port-topology list instance
Context	configure satellite port-topology <i>reference</i>
Tree	port-topology

Introduced 19.7.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[local-port-id] *reference*

Synopsis Local port identifier
Context **configure** [satellite port-topology reference](#)
Tree [port-topology](#)
Reference **configure** [port string](#)
Notes This element is part of a list key.
Introduced 19.7.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

far-end-port-id *reference*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Far end port identifier.
Context **configure** [satellite port-topology reference](#) [far-end-port-id reference](#)

3.43.1 service command descriptions

service

Synopsis	Enter the service context
Context	configure service
Tree	service
Introduced	16.0.R1
Platforms	All

cpipe [[service-name](#)] *string*

Synopsis	Enter the cpipe list instance
Context	configure service cpipe string
Tree	cpipe
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[service-name] *string*

Synopsis	Administrative service name
Context	configure service cpipe string
Tree	cpipe
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the service
Context	configure service cpipe string admin-state keyword
Tree	admin-state
Options	enable, disable
Default	disable

Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

customer *reference*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Service customer ID
Context	configure <i>service cpipe string customer reference</i>
Tree	<i>customer</i>
Reference	configure <i>service customer string</i>
Notes	This element is mandatory.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

description *string*

Synopsis	Text description
Context	configure <i>service cpipe string description string</i>
Tree	<i>description</i>
String Length	1 to 80
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

endpoint [*name*] *string*

Synopsis	Enter the endpoint list instance
Context	configure <i>service cpipe string endpoint string</i>
Tree	<i>endpoint</i>
Max. Instances	2
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[name] *string*

Synopsis	Service endpoint name
Context	configure <i>service cpipe string endpoint string</i>
Tree	<i>endpoint</i>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

description *string*

Synopsis	Text description
Context	configure <i>service cpipe string endpoint string description string</i>
Tree	<i>description</i>
String Length	1 to 80
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

hold-time-active *number*

Synopsis	Time before entering standby when MC-LAG SAP goes down
Context	configure <i>service cpipe string endpoint string hold-time-active number</i>
Tree	<i>hold-time-active</i>
Range	1 to 60
Units	deciseconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

revert-time (*number* | *keyword*)

Synopsis	Time to wait before reverting to primary spoke SDP
Context	configure <i>service cpipe string endpoint string revert-time (number keyword)</i>
Tree	<i>revert-time</i>
Range	1 to 600

Units	seconds
Options	never, immediate
Default	immediate
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

sap [**sap-id**] *string*

Synopsis	Enter the sap list instance
Context	configure service cpipe string sap string
Tree	sap
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[sap-id] *string*

Synopsis	SAP ID
Context	configure service cpipe string sap string
Tree	sap
String Length	1 to 45
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

accounting-policy *reference*

Synopsis	Accounting policy
Context	configure service cpipe string sap string accounting-policy reference
Tree	accounting-policy
Reference	configure log accounting-policy number
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

admin-state *keyword*

Synopsis	Administrative state of the SAP
Context	configure service cpipe <i>string</i> sap <i>string</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	enable
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

cem

Synopsis	Enter the cem context
Context	configure service cpipe <i>string</i> sap <i>string</i> cem
Tree	cem
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

packet

Synopsis	Enter the packet context
Context	configure service cpipe <i>string</i> sap <i>string</i> cem packet
Tree	packet
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

jitter-buffer *number*

Synopsis	Jitter buffer size
Context	configure service cpipe <i>string</i> sap <i>string</i> cem packet jitter-buffer <i>number</i>
Tree	jitter-buffer
Range	1 to 250
Units	milliseconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

payload-size *number*

Synopsis	Size of payload packets transmitted to PSN by CEM SAP
Context	configure service cpipe <i>string</i> sap <i>string</i> cem packet payload-size <i>number</i>
Tree	payload-size
Range	16 to 2048
Units	bytes
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

report-alarm

Synopsis	Enter the report-alarm context
Context	configure service cpipe <i>string</i> sap <i>string</i> cem report-alarm
Tree	report-alarm
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

buffer-overflow *boolean*

Synopsis	Report alarm for buffer overrun
Context	configure service cpipe <i>string</i> sap <i>string</i> cem report-alarm buffer-overflow <i>boolean</i>
Tree	buffer-overflow
Default	true
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

buffer-underrun *boolean*

Synopsis	Report alarm for buffer underrun
Context	configure service cpipe <i>string</i> sap <i>string</i> cem report-alarm buffer-underrun <i>boolean</i>
Tree	buffer-underrun
Default	true
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

malformed-packets *boolean*

Synopsis	Report alarm for malformed packets
Context	configure service cpipe string sap string cem report-alarm malformed-packets <i>boolean</i>
Tree	malformed-packets
Default	true
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

packet-loss *boolean*

Synopsis	Report remote peer is currently in packet loss status
Context	configure service cpipe string sap string cem report-alarm packet-loss <i>boolean</i>
Tree	packet-loss
Default	true
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

remote-fault *boolean*

Synopsis	Report remote TDM interface is currently not in service
Context	configure service cpipe string sap string cem report-alarm remote-fault <i>boolean</i>
Tree	remote-fault
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

remote-packet-loss *boolean*

Synopsis	Report remote peer is currently in packet loss status
Context	configure service cpipe string sap string cem report-alarm remote-packet-loss <i>boolean</i>
Tree	remote-packet-loss
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

remote-rdi *boolean*

Synopsis	Report remote TDM interface is currently in RDI status
Context	configure service cpipe string sap string cem report-alarm remote-rdi <i>boolean</i>
Tree	remote-rdi
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

stray-packets *boolean*

Synopsis	Report alarm for stray packets
Context	configure service cpipe string sap string cem report-alarm stray-packets <i>boolean</i>
Tree	stray-packets
Default	true
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rtp-header *boolean*

Synopsis	Use RTP header for transmitted packets to the PSN
Context	configure service cpipe string sap string cem rtp-header <i>boolean</i>
Tree	rtp-header
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

collect-stats *boolean*

Synopsis	Collect accounting statistics
Context	configure service cpipe string sap string collect-stats <i>boolean</i>
Tree	collect-stats
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

description *string*

Synopsis	Text description
Context	configure service cpipe <i>string</i> sap <i>string</i> description <i>string</i>
Tree	description
String Length	1 to 160
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

dist-cpu-protection *reference*

Synopsis	Distributed CPU protection policy for SAP
Context	configure service cpipe <i>string</i> sap <i>string</i> dist-cpu-protection <i>reference</i>
Tree	dist-cpu-protection
Reference	configure system security dist-cpu-protection <i>policy</i> <i>string</i>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

egress

Synopsis	Enter the egress context
Context	configure service cpipe <i>string</i> sap <i>string</i> egress
Tree	egress
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

agg-rate

Synopsis	Enter the agg-rate context
Context	configure service cpipe <i>string</i> sap <i>string</i> egress agg-rate
Tree	agg-rate
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

adaptation-rule *keyword*

Synopsis	Adaptation rule to compute the operational PIR value when an aggregate shaper is used
Context	configure service cpipe <i>string</i> sap <i>string</i> egress agg-rate adaptation-rule <i>keyword</i>
Tree	adaptation-rule
Options	max, min, closest
Default	closest
Introduced	22.10.R1
Platforms	7750 SR-1, 7750 SR-s

burst-limit (*number* | *keyword*)

Synopsis	Shaping burst size when an aggregate shaper is used
Context	configure service cpipe <i>string</i> sap <i>string</i> egress agg-rate burst-limit (<i>number</i> <i>keyword</i>)
Tree	burst-limit
Range	1 to 14000000
Units	bytes
Options	auto
Default	auto
Introduced	22.10.R1
Platforms	7750 SR-1, 7750 SR-s

limit-unused-bandwidth *boolean*

Synopsis	Enable aggregate rate overrun protection
Context	configure service cpipe <i>string</i> sap <i>string</i> egress agg-rate limit-unused-bandwidth <i>boolean</i>
Tree	limit-unused-bandwidth
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rate *number*

Synopsis	Enforced aggregate rate for all queues
Context	configure service cpipe <i>string</i> sap <i>string</i> egress agg-rate rate <i>number</i>

Tree	rate
Range	1 to 6400000000
Units	kilobps
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

qos

Synopsis	Enter the qos context
Context	configure service cpipe <i>string</i> sap <i>string</i> egress qos
Tree	qos
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

policer-control-policy

Synopsis	Enter the policer-control-policy context
Context	configure service cpipe <i>string</i> sap <i>string</i> egress qos policer-control-policy
Tree	policer-control-policy
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

overrides

Synopsis	Enable the overrides context
Context	configure service cpipe <i>string</i> sap <i>string</i> egress qos policer-control-policy overrides
Tree	overrides
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

root

Synopsis	Enter the root context
Context	configure service cpipe <i>string</i> sap <i>string</i> egress qos policer-control-policy overrides root
Tree	root

Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

max-rate (*number* | *keyword*)

Synopsis	Maximum frame-based bandwidth limit
Context	configure service cpipe <i>string</i> sap <i>string</i> egress qos policer-control-policy overrides root max-rate (<i>number</i> <i>keyword</i>)
Tree	max-rate
Range	1 to 6400000000
Options	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

priority-mbs-thresholds

Synopsis	Enter the priority-mbs-thresholds context
Context	configure service cpipe <i>string</i> sap <i>string</i> egress qos policer-control-policy overrides root priority-mbs-thresholds
Tree	priority-mbs-thresholds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

min-thresh-separation (*number* | *keyword*)

Synopsis	Minimum amount of separation buffer space
Context	configure service cpipe <i>string</i> sap <i>string</i> egress qos policer-control-policy overrides root priority-mbs-thresholds min-thresh-separation (<i>number</i> <i>keyword</i>)
Tree	min-thresh-separation
Range	0 to 16777216
Units	bytes
Options	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

priority [*priority-level*] *number*

Synopsis	Enter the priority list instance
Context	configure service cpipe <i>string</i> sap <i>string</i> egress qos policer-control-policy overrides root priority-mbs-thresholds priority <i>number</i>
Tree	priority
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

[priority-level] *number*

Synopsis	Priority level
Context	configure service cpipe <i>string</i> sap <i>string</i> egress qos policer-control-policy overrides root priority-mbs-thresholds priority <i>number</i>
Tree	priority
Range	1 to 8
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

mbs-contribution (*number* | *keyword*)

Synopsis	Minimum amount of cumulative buffer space allowed
Context	configure service cpipe <i>string</i> sap <i>string</i> egress qos policer-control-policy overrides root priority-mbs-thresholds priority <i>number</i> mbs-contribution (<i>number</i> <i>keyword</i>)
Tree	mbs-contribution
Range	0 to 16777216
Units	bytes
Options	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

policy-name *reference*

Synopsis	Policer control policy name
Context	configure service cpipe <i>string</i> sap <i>string</i> egress qos policer-control-policy policy-name <i>reference</i>

Tree	policy-name
Reference	configure qos policer-control-policy <i>string</i>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

sap-egress

Synopsis	Enter the sap-egress context
Context	configure service cpipe <i>string</i> sap <i>string</i> egress qos sap-egress
Tree	sap-egress
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

overrides

Synopsis	Enter the overrides context
Context	configure service cpipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides
Tree	overrides
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

policer [[policer-id](#)] *reference*

Synopsis	Enter the policer list instance
Context	configure service cpipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer <i>reference</i>
Tree	policer
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

[[policer-id](#)] *reference*

Synopsis	Policer unique ID
Context	configure service cpipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer <i>reference</i>
Tree	policer

Reference	configure qos sap-egress <i>string</i> policer <i>number</i>
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

cbs (*number* | *keyword*)

Synopsis	CBS
Context	configure service cpipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer <i>reference</i> cbs (<i>number</i> <i>keyword</i>)
Tree	cbs
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

mbs (*number* | *keyword*)

Synopsis	MBS
Context	configure service cpipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer <i>reference</i> mbs (<i>number</i> <i>keyword</i>)
Tree	mbs
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

packet-byte-offset *number*

Synopsis	Packet size modification for policing information
Context	configure service cpipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer <i>reference</i> packet-byte-offset <i>number</i>
Tree	packet-byte-offset
Range	-64 to 31

Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

percent-rate

Synopsis	Enter the percent-rate context
Context	configure service cpipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer <i>reference</i> percent-rate
Tree	percent-rate
Notes	The following elements are part of a choice: percent-rate or rate .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

cir decimal-number

Synopsis	CIR percent rate
Context	configure service cpipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer <i>reference</i> percent-rate cir <i>decimal-number</i>
Tree	cir
Range	0.00 to 100.00
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

pir decimal-number

Synopsis	PIR percent rate
Context	configure service cpipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer <i>reference</i> percent-rate pir <i>decimal-number</i>
Tree	pir
Range	0.01 to 100.00
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

rate
