| Synopsis | Enter the pw-status context |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> pw-status |
| Tree | pw-status |
| Introduced | 16.0.R1 |
| Platforms | All |

signaling *boolean*

| | |
|------------|--|
| Synopsis | Enable the use of pseudowire status signaling |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> pw-status signaling <i>boolean</i> |
| Tree | signaling |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

spb

| | |
|------------|---|
| Synopsis | Enable the spb context |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> spb |
| Tree | spb |
| Introduced | 21.10.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|----------|--|
| Synopsis | Admin state |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> spb admin-state <i>keyword</i> |
| Tree | admin-state |

| | |
|------------|-----------------|
| Options | enable, disable |
| Default | disable |
| Introduced | 21.10.R1 |
| Platforms | All |

level [*id*] *number*

| | |
|------------|--|
| Synopsis | Enter the level list instance |
| Context | configure service vpls string spoke-sdp string spb level number |
| Tree | level |
| Introduced | 21.10.R1 |
| Platforms | All |

[id] *number*

| | |
|------------|--|
| Synopsis | Level identifier |
| Context | configure service vpls string spoke-sdp string spb level number |
| Tree | level |
| Range | 1 |
| Notes | This element is part of a list key. |
| Introduced | 21.10.R1 |
| Platforms | All |

hello-interval *number*

| | |
|------------|--|
| Synopsis | Hello interval |
| Context | configure service vpls string spoke-sdp string spb level number hello-interval number |
| Tree | hello-interval |
| Range | 1 to 20000 |
| Units | seconds |
| Default | 9 |
| Introduced | 21.10.R1 |
| Platforms | All |

hello-multiplier *number*

| | |
|------------|---|
| Synopsis | Hello multiplier |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> spb level <i>number</i> hello-multiplier <i>number</i> |
| Tree | hello-multiplier |
| Range | 2 to 100 |
| Default | 3 |
| Introduced | 21.10.R1 |
| Platforms | All |

metric *number*

| | |
|------------|---|
| Synopsis | Metric |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> spb level <i>number</i> metric <i>number</i> |
| Tree | metric |
| Range | 0 to 16777215 |
| Default | 0 |
| Introduced | 21.10.R1 |
| Platforms | All |

lsp-pacing-interval *number*

| | |
|------------|--|
| Synopsis | Lsp pacing interval |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> spb lsp-pacing-interval <i>number</i> |
| Tree | lsp-pacing-interval |
| Range | 0 to 65535 |
| Units | milliseconds |
| Default | 100 |
| Introduced | 21.10.R1 |
| Platforms | All |

retransmit-interval *number*

| | |
|----------|--|
| Synopsis | Retransmit interval |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> spb retransmit-interval <i>number</i> |
| Tree | retransmit-interval |

| | |
|------------|------------|
| Range | 1 to 65535 |
| Units | seconds |
| Default | 5 |
| Introduced | 21.10.R1 |
| Platforms | All |

split-horizon-group *reference*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Name of the split horizon group where the spoke SDP bind belongs to |
| Context | configure service vpls string spoke-sdp string split-horizon-group reference |
| Tree | split-horizon-group |
| Reference | configure service vpls string split-horizon-group string |
| Introduced | 16.0.R1 |
| Platforms | All |

static-isid

| | |
|------------|---|
| Synopsis | Enter the static-isid context |
| Context | configure service vpls string spoke-sdp string static-isid |
| Tree | static-isid |
| Introduced | 19.10.R1 |
| Platforms | All |

range [[range-id](#)] *number*

| | |
|------------|--|
| Synopsis | Enter the range list instance |
| Context | configure service vpls string spoke-sdp string static-isid range number |
| Tree | range |
| Introduced | 19.10.R1 |
| Platforms | All |

[range-id] number

| | |
|------------|---|
| Synopsis | Range ID for static ISID |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> static-isid range <i>number</i> |
| Tree | range |
| Range | 1 to 8191 |
| Notes | This element is part of a list key. |
| Introduced | 19.10.R1 |
| Platforms | All |

end number

| | |
|------------|---|
| Synopsis | Upper bound of the ISID range |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> static-isid range <i>number</i> end <i>number</i> |
| Tree | end |
| Range | 1 to 16777215 |
| Introduced | 19.10.R1 |
| Platforms | All |

start number

| | |
|------------|---|
| Synopsis | Lower bound of the ISID range |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> static-isid range <i>number</i> start <i>number</i> |
| Tree | start |
| Range | 1 to 16777215 |
| Introduced | 19.10.R1 |
| Platforms | All |

stp

| | |
|------------|---|
| Synopsis | Enter the stp context |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> stp |
| Tree | stp |
| Introduced | 16.0.R4 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of STP |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> stp admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Introduced | 16.0.R4 |
| Platforms | All |

auto-edge *boolean*

| | |
|------------|---|
| Synopsis | Enable automatic detection of edge port characteristics |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> stp auto-edge <i>boolean</i> |
| Tree | auto-edge |
| Default | true |
| Introduced | 16.0.R4 |
| Platforms | All |

edge-port *boolean*

| | |
|------------|---|
| Synopsis | Designate SAP or SDP as an edge port |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> stp edge-port <i>boolean</i> |
| Tree | edge-port |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | All |

link-type *keyword*

| | |
|------------|---|
| Synopsis | Configure STP link-type |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> stp link-type <i>keyword</i> |
| Tree | link-type |
| Options | pt-pt, shared |
| Default | pt-pt |
| Introduced | 16.0.R4 |

Platforms All

path-cost *number*

Synopsis Configure path-cost
 Context **configure** [service](#) [vpls](#) *string* [spoke-sdp](#) *string* [stp](#) [path-cost](#) *number*
 Tree [path-cost](#)
 Range 1 to 200000000
 Default 10
 Introduced 16.0.R4
 Platforms All

port-num *number*

Synopsis Virtual port number
 Context **configure** [service](#) [vpls](#) *string* [spoke-sdp](#) *string* [stp](#) [port-num](#) *number*
 Tree [port-num](#)
 Range 1 to 2047
 Introduced 16.0.R4
 Platforms All

priority *number*

Synopsis Configure STP priority
 Context **configure** [service](#) [vpls](#) *string* [spoke-sdp](#) *string* [stp](#) [priority](#) *number*
 Tree [priority](#)
 Range 0 to 255
 Default 128
 Introduced 16.0.R4
 Platforms All

root-guard *boolean*

Synopsis Enable/disable STP root-guard
 Context **configure** [service](#) [vpls](#) *string* [spoke-sdp](#) *string* [stp](#) [root-guard](#) *boolean*

| | |
|------------|----------------------------|
| Tree | root-guard |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | All |

transit-policy

| | |
|------------|--|
| Synopsis | Enable the transit-policy context |
| Context | configure service vpls string spoke-sdp string transit-policy |
| Tree | transit-policy |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

prefix *reference*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | IP prefix policy ID |
| Context | configure service vpls string spoke-sdp string transit-policy prefix reference |
| Tree | prefix |
| Reference | configure application-assurance group number partition number transit-prefix-policy number |
| Notes | This element is mandatory. |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

vc-type *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|----------|---|
| Synopsis | Type of virtual circuit (VC) associated with the SDP binding; VPLS not supported |
| Context | configure service vpls string spoke-sdp string vc-type keyword |
| Tree | vc-type |

| | |
|------------|-------------|
| Options | ether, vlan |
| Default | ether |
| Introduced | 16.0.R1 |
| Platforms | All |

vlan-vc-tag *number*

| | |
|------------|--|
| Synopsis | SDP bind VC tag |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> vlan-vc-tag <i>number</i> |
| Tree | vlan-vc-tag |
| Range | 0 to 4094 |
| Introduced | 16.0.R1 |
| Platforms | All |

stp

| | |
|------------|--|
| Synopsis | Enter the stp context |
| Context | configure service vpls <i>string</i> stp |
| Tree | stp |
| Introduced | 16.0.R4 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of STP |
| Context | configure service vpls <i>string</i> stp admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R4 |
| Platforms | All |

forward-delay *number*

| | |
|----------|-------------------------|
| Synopsis | Configure forward-delay |
|----------|-------------------------|

| | |
|------------|---|
| Context | configure service vpls string stp forward-delay number |
| Tree | forward-delay |
| Range | 4 to 30 |
| Default | 15 |
| Introduced | 16.0.R4 |
| Platforms | All |

hello-time number

| | |
|------------|--|
| Synopsis | Configure hello-time |
| Context | configure service vpls string stp hello-time number |
| Tree | hello-time |
| Range | 1 to 10 |
| Default | 2 |
| Introduced | 16.0.R4 |
| Platforms | All |

hold-count number

| | |
|------------|--|
| Synopsis | Configure BPDU transmit hold count |
| Context | configure service vpls string stp hold-count number |
| Tree | hold-count |
| Range | 1 to 20 |
| Default | 6 |
| Introduced | 16.0.R4 |
| Platforms | All |

maximum-age number

| | |
|------------|---|
| Synopsis | Configure maximum STP information age |
| Context | configure service vpls string stp maximum-age number |
| Tree | maximum-age |
| Range | 6 to 40 |
| Default | 20 |
| Introduced | 16.0.R4 |

Platforms All

mode *keyword*

Synopsis Configure protocol version
 Context **configure service vpls string stp mode keyword**
 Tree **mode**
 Options rstp, comp-dot1w, dot1w, mstp, pmstp
 Default rstp
 Introduced 16.0.R4
 Platforms All

mst-instance [**mst-inst-number**] *number*

Synopsis Enter the **mst-instance** list instance
 Context **configure service vpls string stp mst-instance number**
 Tree **mst-instance**
 Introduced 19.10.R1
 Platforms All

[mst-inst-number] *number*

Synopsis Multiple Spanning Tree Instance number
 Context **configure service vpls string stp mst-instance number**
 Tree **mst-instance**
 Range 1 to 4094
 Notes This element is part of a list key.
 Introduced 19.10.R1
 Platforms All

mst-priority *number*

Synopsis Priority of multiple spanning tree instance
 Context **configure service vpls string stp mst-instance number mst-priority number**
 Tree **mst-priority**

| | |
|------------|--|
| Range | 0 4096 8192 12288 16384 20480 24576 28672 32768 36864 40960 45056
 49152 53248 57344 61440 |
| Default | 32768 |
| Introduced | 19.10.R1 |
| Platforms | All |

vlan-range [*range*] *string*

| | |
|------------|--|
| Synopsis | Add a list entry for vlan-range |
| Context | configure service vpls <i>string</i> stp mst-instance <i>number</i> vlan-range <i>string</i> |
| Tree | vlan-range |
| Introduced | 19.10.R1 |
| Platforms | All |

[range] *string*

| | |
|------------|--|
| Synopsis | Range of VLANs associated with the M-VPLS SAP |
| Context | configure service vpls <i>string</i> stp mst-instance <i>number</i> vlan-range <i>string</i> |
| Tree | vlan-range |
| Notes | This element is part of a list key. |
| Introduced | 19.10.R1 |
| Platforms | All |

mst-maximum-hops *number*

| | |
|------------|--|
| Synopsis | Maximum number of hops in an MSTP region |
| Context | configure service vpls <i>string</i> stp mst-maximum-hops <i>number</i> |
| Tree | mst-maximum-hops |
| Range | 1 to 40 |
| Default | 20 |
| Introduced | 19.10.R1 |
| Platforms | All |

mst-name *string*

| | |
|---------------|---|
| Synopsis | MST region name |
| Context | configure service vpls <i>string</i> stp mst-name <i>string</i> |
| Tree | mst-name |
| String Length | 1 to 32 |
| Introduced | 19.10.R1 |
| Platforms | All |

mst-revision *number*

| | |
|------------|---|
| Synopsis | MST configuration revision |
| Context | configure service vpls <i>string</i> stp mst-revision <i>number</i> |
| Tree | mst-revision |
| Range | 0 to 65535 |
| Introduced | 19.10.R1 |
| Platforms | All |

priority *number*

| | |
|------------|---|
| Synopsis | STP bridge priority |
| Context | configure service vpls <i>string</i> stp priority <i>number</i> |
| Tree | priority |
| Range | 0 to 65535 |
| Default | 32768 |
| Introduced | 16.0.R4 |
| Platforms | All |

temp-flooding *number*

| | |
|------------|--|
| Synopsis | Temporary flooding |
| Context | configure service vpls <i>string</i> temp-flooding <i>number</i> |
| Tree | temp-flooding |
| Range | 3 to 600 |
| Units | seconds |
| Introduced | 16.0.R1 |

Platforms All

vpn-id *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis VPN identifier for the service
 Context **configure service vpls string vpn-id number**
 Tree [vpn-id](#)
 Range 1 to 2147483647
 Introduced 16.0.R1
 Platforms All

vxlan

Synopsis Enter the **vxlan** context
 Context **configure service vpls string vxlan**
 Tree [vxlan](#)
 Introduced 16.0.R1
 Platforms All

instance [[vxlan-instance](#)] *number*

Synopsis Enter the **instance** list instance
 Context **configure service vpls string vxlan instance number**
 Tree [instance](#)
 Introduced 16.0.R1
 Platforms All

[vxlan-instance] *number*

Synopsis VXLAN instance
 Context **configure service vpls string vxlan instance number**
 Tree [instance](#)

| | |
|------------|-------------------------------------|
| Range | 1 to 2 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

assisted-replication

| | |
|------------|---|
| Synopsis | Enter the assisted-replication context |
| Context | configure service vpls string vxlan instance number assisted-replication |
| Tree | assisted-replication |
| Introduced | 16.0.R1 |
| Platforms | All |

leaf

| | |
|------------|--|
| Synopsis | Enable the leaf context |
| Context | configure service vpls string vxlan instance number assisted-replication leaf |
| Tree | leaf |
| Notes | The following elements are part of a choice: leaf or replicator . |
| Introduced | 16.0.R1 |
| Platforms | All |

acttime *number*

| | |
|------------|---|
| Synopsis | Time for the leaf to wait before sending traffic to a new replicator |
| Context | configure service vpls string vxlan instance number assisted-replication leaf acttime number |
| Tree | acttime |
| Range | 1 to 255 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

replicator

| | |
|------------|---|
| Synopsis | AR role as replicator |
| Context | configure service vpls <i>string vxlan instance number assisted-replication replicator</i> |
| Tree | replicator |
| Notes | The following elements are part of a choice: leaf or replicator . |
| Introduced | 16.0.R1 |
| Platforms | All |

egress-vtep [**ip-address**] (*ipv4-address-no-zone | ipv6-address-no-zone*)

| | |
|------------|---|
| Synopsis | Add a list entry for egress-vtep |
| Context | configure service vpls <i>string vxlan instance number egress-vtep (ipv4-address-no-zone ipv6-address-no-zone)</i> |
| Tree | egress-vtep |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

[ip-address] (*ipv4-address-no-zone | ipv6-address-no-zone*)

| | |
|------------|---|
| Synopsis | VTEP IP address used when originating VXLAN packets |
| Context | configure service vpls <i>string vxlan instance number egress-vtep (ipv4-address-no-zone ipv6-address-no-zone)</i> |
| Tree | egress-vtep |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

fdb

| | |
|------------|---|
| Synopsis | Enter the fdb context |
| Context | configure service vpls <i>string vxlan instance number fdb</i> |
| Tree | fdb |
| Introduced | 16.0.R1 |
| Platforms | All |

discard-unknown-source *boolean*

| | |
|------------|---|
| Synopsis | Discard frames with unknown source |
| Context | configure service vpls <i>string</i> vxlan <i>instance</i> <i>number</i> fdb discard-unknown-source <i>boolean</i> |
| Tree | discard-unknown-source |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

mac-learning

| | |
|------------|--|
| Synopsis | Enter the mac-learning context |
| Context | configure service vpls <i>string</i> vxlan <i>instance</i> <i>number</i> fdb mac-learning |
| Tree | mac-learning |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

aging *boolean*

| | |
|------------|---|
| Synopsis | Enable/disable aging of MAC addresses |
| Context | configure service vpls <i>string</i> vxlan <i>instance</i> <i>number</i> fdb mac-learning aging <i>boolean</i> |
| Tree | aging |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

learning *boolean*

| | |
|------------|--|
| Synopsis | Enable learning of new MAC addresses |
| Context | configure service vpls <i>string</i> vxlan <i>instance</i> <i>number</i> fdb mac-learning learning <i>boolean</i> |
| Tree | learning |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

maximum-mac-addresses *number*

| | |
|------------|---|
| Synopsis | Maximum number of MAC entries in the FDB from this vxlan instance |
| Context | configure service vpls string vxlan instance number fdb maximum-mac-addresses number |
| Tree | maximum-mac-addresses |
| Range | 1 to 511999 |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

protected-src-mac-violation-action *keyword*

| | |
|------------|---|
| Synopsis | Action when a relearn request for a protected MAC is received |
| Context | configure service vpls string vxlan instance number fdb protected-src-mac-violation-action keyword |
| Tree | protected-src-mac-violation-action |
| Options | discard |
| Introduced | 16.0.R1 |
| Platforms | All |

igmp-snooping

| | |
|------------|--|
| Synopsis | Enter the igmp-snooping context |
| Context | configure service vpls string vxlan instance number igmp-snooping |
| Tree | igmp-snooping |
| Introduced | 16.0.R5 |
| Platforms | All |

mrouter-port *boolean*

| | |
|------------|---|
| Synopsis | Enable VXLAN binds as multicast router ports |
| Context | configure service vpls string vxlan instance number igmp-snooping mrouter-port boolean |
| Tree | mrouter-port |
| Default | false |
| Introduced | 16.0.R5 |
| Platforms | All |

mld-snooping

| | |
|------------|---|
| Synopsis | Enter the mld-snooping context |
| Context | configure service vpls string vxlan instance number mld-snooping |
| Tree | mld-snooping |
| Introduced | 16.0.R5 |
| Platforms | All |

mrouter-port *boolean*

| | |
|------------|--|
| Synopsis | Enable VXLAN binds as multicast router ports |
| Context | configure service vpls string vxlan instance number mld-snooping mrouter-port boolean |
| Tree | mrouter-port |
| Default | false |
| Introduced | 16.0.R5 |
| Platforms | All |

network

| | |
|------------|--|
| Synopsis | Enter the network context |
| Context | configure service vpls string vxlan instance number network |
| Tree | network |
| Introduced | 16.0.R1 |
| Platforms | All |

ingress

| | |
|------------|--|
| Synopsis | Enter the ingress context |
| Context | configure service vpls string vxlan instance number network ingress |
| Tree | ingress |
| Introduced | 16.0.R1 |
| Platforms | All |

qos

| | |
|------------|--|
| Synopsis | Enter the qos context |
| Context | configure service vpls <i>string</i> vxlan instance <i>number</i> network ingress qos |
| Tree | qos |
| Introduced | 16.0.R1 |
| Platforms | All |

network

| | |
|------------|--|
| Synopsis | Enter the network context |
| Context | configure service vpls <i>string</i> vxlan instance <i>number</i> network ingress qos network |
| Tree | network |
| Introduced | 16.0.R1 |
| Platforms | All |

fp-redirect-group

| | |
|------------|--|
| Synopsis | Enter the fp-redirect-group context |
| Context | configure service vpls <i>string</i> vxlan instance <i>number</i> network ingress qos network fp-redirect-group |
| Tree | fp-redirect-group |
| Introduced | 16.0.R1 |
| Platforms | All |

group-name *reference*

| | |
|------------|---|
| Synopsis | Name of the forwarding plane queue group template |
| Context | configure service vpls <i>string</i> vxlan instance <i>number</i> network ingress qos network fp-redirect-group <i>group-name</i> <i>reference</i> |
| Tree | group-name |
| Reference | configure qos queue-group-templates ingress queue-group <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

instance number

| | |
|------------|--|
| Synopsis | Instance of the forwarding-plane ingress Queue Group for this SDP binding |
| Context | configure service vpls string vxlan instance number network ingress qos network fp-redirect-group instance number |
| Tree | instance |
| Range | 1 to 65535 |
| Introduced | 16.0.R1 |
| Platforms | All |

policy-name reference

| | |
|------------|--|
| Synopsis | Ingress network policy name applied to this SDP binding |
| Context | configure service vpls string vxlan instance number network ingress qos network policy-name reference |
| Tree | policy-name |
| Reference | configure qos network string |
| Introduced | 16.0.R1 |
| Platforms | All |

rx-discard-on-ndf keyword

| | |
|------------|--|
| Synopsis | Received multicast traffic type discarded on NDF |
| Context | configure service vpls string vxlan instance number rx-discard-on-ndf keyword |
| Tree | rx-discard-on-ndf |
| Options | bm, bum, none |
| Default | bm |
| Introduced | 16.0.R4 |
| Platforms | All |

source-vtep-security boolean

| | |
|----------|---|
| Synopsis | Enable/disable source vtep security |
| Context | configure service vpls string vxlan instance number source-vtep-security boolean |
| Tree | source-vtep-security |
| Default | false |

| | |
|------------|--|
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

vni number**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |

| | |
|------------|--|
| Synopsis | Enable the radius context |
| Context | configure service vprn string aaa remote-servers radius |
| Tree | radius |
| Introduced | 16.0.R4 |
| Platforms | All |

access-algorithm *keyword*

| | |
|------------|---|
| Synopsis | Algorithm used to access the set of RADIUS servers |
| Context | configure service vprn string aaa remote-servers radius access-algorithm keyword |
| Tree | access-algorithm |
| Options | direct, round-robin |
| Default | direct |
| Introduced | 16.0.R4 |
| Platforms | All |

accounting *boolean*

| | |
|------------|---|
| Synopsis | Enable RADIUS command accounting |
| Context | configure service vprn <i>string</i> aaa remote-servers radius accounting <i>boolean</i> |
| Tree | accounting |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | All |

accounting-port *number*

| | |
|------------|---|
| Synopsis | Port number on RADIUS server for accounting requests |
| Context | configure service vprn <i>string</i> aaa remote-servers radius accounting-port <i>number</i> |
| Tree | accounting-port |
| Range | 1 to 65535 |
| Default | 1813 |
| Introduced | 16.0.R4 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of the authentication server |
| Context | configure service vprn <i>string</i> aaa remote-servers radius admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | enable |
| Introduced | 16.0.R4 |
| Platforms | All |

authorization *boolean*

| | |
|------------|--|
| Synopsis | Enable RADIUS authorization |
| Context | configure service vprn <i>string</i> aaa remote-servers radius authorization <i>boolean</i> |
| Tree | authorization |
| Default | false |
| Introduced | 16.0.R4 |

Platforms All

interactive-authentication *boolean*

Synopsis Enable RADIUS interactive authentication

Context **configure service vprn string aaa remote-servers radius interactive-authentication boolean**

Tree [interactive-authentication](#)

Default false

Introduced 16.0.R4

Platforms All

port *number*

Synopsis UDP port number on which to contact RADIUS server

Context **configure service vprn string aaa remote-servers radius port number**

Tree [port](#)

Range 1 to 65535

Default 1812

Introduced 16.0.R4

Platforms All

server [[index](#)] *number*

Synopsis Enter the **server** list instance

Context **configure service vprn string aaa remote-servers radius server number**

Tree [server](#)

Max. Instances 5

Introduced 16.0.R4

Platforms All

[index] *number*

Synopsis RADIUS server ID

Context **configure service vprn string aaa remote-servers radius server number**

| | |
|------------|-------------------------------------|
| Tree | server |
| Range | 1 to 5 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R4 |
| Platforms | All |

address (*ipv4-address-no-zone | ipv6-address-no-zone*)

| | |
|------------|--|
| Synopsis | IP address of the RADIUS server |
| Context | configure service vprn <i>string</i> aaa remote-servers radius server number address (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) |
| Tree | address |
| Notes | This element is mandatory. |
| Introduced | 16.0.R4 |
| Platforms | All |

authenticator *keyword*

| | |
|-------------|--|
| Synopsis | Authenticator hash algorithm for the RADIUS server |
| Context | configure service vprn <i>string</i> aaa remote-servers radius server number authenticator keyword |
| Tree | authenticator |
| Description | This command specifies the hash algorithm used to authenticate RADIUS Access-Request, Access-Accept, Access-Reject, Access-Challenge, Accounting-Request, and Accounting-Response packets. |
| Options | md5, sm3 |
| Default | md5 |
| Introduced | 22.10.R1 |
| Platforms | All |

secret *string*

| | |
|---------------|---|
| Synopsis | Secret key to access the RADIUS server |
| Context | configure service vprn <i>string</i> aaa remote-servers radius server number secret string |
| Tree | secret |
| String Length | 1 to 115 |

| | |
|------------|---------|
| Introduced | 16.0.R4 |
| Platforms | All |

tls-client-profile *reference*

| | |
|-------------|---|
| Synopsis | TLS client profile for the RADIUS server |
| Context | configure service vprn <i>string</i> aaa remote-servers radius server <i>number</i> tls-client-profile reference |
| Tree | tls-client-profile |
| Description | This command specifies the TLS client profile used to encrypt RADIUS communication. When configured, RADIUS messages are sent using TLS. |
| Reference | configure system security tls client-tls-profile <i>string</i> |
| Introduced | 21.10.R1 |
| Platforms | All |

server-retry *number*

| | |
|------------|--|
| Synopsis | Number of attempts to retry contacting RADIUS server |
| Context | configure service vprn <i>string</i> aaa remote-servers radius server-retry <i>number</i> |
| Tree | server-retry |
| Range | 1 to 10 |
| Default | 3 |
| Introduced | 16.0.R4 |
| Platforms | All |

server-timeout *number*

| | |
|------------|--|
| Synopsis | Time to wait for a response from the RADIUS server |
| Context | configure service vprn <i>string</i> aaa remote-servers radius server-timeout <i>number</i> |
| Tree | server-timeout |
| Range | 1 to 90 |
| Units | seconds |
| Default | 3 |
| Introduced | 16.0.R4 |
| Platforms | All |

use-default-template *boolean*

| | |
|------------|--|
| Synopsis | Apply the RADIUS default user template to RADIUS user |
| Context | configure service vprn <i>string</i> aaa remote-servers radius use-default-template <i>boolean</i> |
| Tree | use-default-template |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | All |

tacplus

| | |
|------------|---|
| Synopsis | Enable the tacplus context |
| Context | configure service vprn <i>string</i> aaa remote-servers tacplus |
| Tree | tacplus |
| Introduced | 16.0.R4 |
| Platforms | All |

accounting

| | |
|------------|--|
| Synopsis | Enable the accounting context |
| Context | configure service vprn <i>string</i> aaa remote-servers tacplus accounting |
| Tree | accounting |
| Introduced | 16.0.R4 |
| Platforms | All |

record-type *keyword*

| | |
|------------|---|
| Synopsis | Type of accounting record packet sent to TACACS+ server |
| Context | configure service vprn <i>string</i> aaa remote-servers tacplus accounting record-type <i>keyword</i> |
| Tree | record-type |
| Options | start-stop, stop-only |
| Default | stop-only |
| Introduced | 16.0.R4 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of the TACACS+ protocol |
| Context | configure service vprn string aaa remote-servers tacplus admin-state keyword |
| Tree | admin-state |
| Options | enable, disable |
| Default | enable |
| Introduced | 16.0.R4 |
| Platforms | All |

authorization

| | |
|------------|---|
| Synopsis | Enable the authorization context |
| Context | configure service vprn string aaa remote-servers tacplus authorization |
| Tree | authorization |
| Introduced | 16.0.R4 |
| Platforms | All |

request-format

| | |
|-------------|--|
| Synopsis | Enter the request-format context |
| Context | configure service vprn string aaa remote-servers tacplus authorization request-format |
| Tree | request-format |
| Description | Commands in this context configure access operations that are sent to the TACACS+ server during authorization. |
| Introduced | 21.10.R3 |
| Platforms | All |

access-operation-cmd *keyword*

| | |
|-------------|---|
| Synopsis | Access operations sent in authorization requests |
| Context | configure service vprn string aaa remote-servers tacplus authorization request-format access-operation-cmd keyword |
| Tree | access-operation-cmd |
| Description | This command sends an operation argument in authorization requests. |

In model-driven interfaces, this command configures the system to send the operation in the `cmd` argument, and the path in the `cmd-args` argument, in TACACS+ authorization requests. This command does not apply to authorization requests in classic interfaces.

| | |
|----------------|----------|
| Options | delete |
| Max. Instances | 1 |
| Introduced | 21.10.R3 |
| Platforms | All |

use-priv-lvl *boolean*

| | |
|-------------|---|
| Synopsis | Allow privilege level mapping |
| Context | configure service vprn <i>string</i> aaa remote-servers tacplus authorization use-priv-lvl <i>boolean</i> |
| Tree | use-priv-lvl |
| Description | <p>When configured to true, this command automatically performs a single authorization request to the TACACS+ server for <code>cmd*</code> (all commands) immediately after login, and then uses the local profile associated (via the priv-lvl-map) with the <code>priv-lvl</code> returned by the TACACS+ server for all subsequent authorization (except enable-admin). After the initial authorization for <code>cmd*</code>, no further authorization requests are sent to the TACACS+ server (except enable-admin).</p> <p>When configured to false, each command is sent to the TACACS+ server for authorization (this is true regardless of whether the tacplus use-default-template setting is enabled).</p> |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | All |

interactive-authentication *boolean*

| | |
|------------|--|
| Synopsis | Allows TACACS+ interactive authentication |
| Context | configure service vprn <i>string</i> aaa remote-servers tacplus interactive-authentication <i>boolean</i> |
| Tree | interactive-authentication |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | All |

priv-lvl-map

| | |
|------------|--|
| Synopsis | Enter the priv-lvl-map context |
| Context | configure service vprn string aaa remote-servers tacplus priv-lvl-map |
| Tree | priv-lvl-map |
| Introduced | 16.0.R4 |
| Platforms | All |

priv-lvl [level] number

| | |
|------------|--|
| Synopsis | Enter the priv-lvl list instance |
| Context | configure service vprn string aaa remote-servers tacplus priv-lvl-map priv-lvl number |
| Tree | priv-lvl |
| Introduced | 16.0.R4 |
| Platforms | All |

[level] number

| | |
|------------|--|
| Synopsis | Privilege level for the mapping |
| Context | configure service vprn string aaa remote-servers tacplus priv-lvl-map priv-lvl number |
| Tree | priv-lvl |
| Range | 0 to 15 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R4 |
| Platforms | All |

user-profile-name reference

| | |
|------------|--|
| Synopsis | User profile for the mapping |
| Context | configure service vprn string aaa remote-servers tacplus priv-lvl-map priv-lvl number user-profile-name reference |

| Synopsis | Time to wait for a response from the TACACS+ server |
| Context | configure service vpn <i>string</i> aaa remote-servers tacplus server-timeout <i>number</i> |
| Tree | server-timeout |
| Range | 1 to 90 |
| Units | seconds |
| Default | 3 |
| Introduced | 16.0.R4 |
| Platforms | All |

use-default-template *boolean*

| | |
|------------|---|
| Synopsis | Apply TACACS+ default user-template to TACACS+ user |
| Context | configure service vpn <i>string</i> aaa remote-servers tacplus use-default-template <i>boolean</i> |
| Tree | use-default-template |
| Default | true |
| Introduced | 16.0.R4 |
| Platforms | All |

aarp-interface [[interface-name](#)] *string*

| | |
|------------|---|
| Synopsis | Enter the aarp-interface list instance |
| Context | configure service vprn <i>string aarp-interface string</i> |
| Tree | aarp-interface |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

[interface-name] *string*

| | |
|---------------|---|
| Synopsis | Interface name |
| Context | configure service vprn <i>string aarp-interface string</i> |
| Tree | aarp-interface |
| String Length | 1 to 32 |
| Notes | This element is part of a list key. |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of the interface |
| Context | configure service vprn <i>string aarp-interface string admin-state keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | enable |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

description *string*

| | |
|---------------|--|
| Synopsis | Text description |
| Context | configure service vprn <i>string aarp-interface string description string</i> |
| Tree | description |
| String Length | 1 to 255 |
| Introduced | 21.10.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-mtu *number*

Synopsis IP MTU applied to outgoing packets

Context **configure** *service vprn string aarp-interface string ip-mtu number*

Tree [ip-mtu](#)

Description This command configures the IP maximum transmission unit (MTU) for the associated router IP interface.

Range 512 to 9786

Units bytes

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

spoke-sdp [[sdp-bind-id](#)] *string*

Synopsis Enter the **spoke-sdp** list instance

Context **configure** *service vprn string aarp-interface string spoke-sdp string*

Tree [spoke-sdp](#)

Max. Instances 1

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[sdp-bind-id] *string*

Synopsis SDP binding ID

Context **configure** *service vprn string aarp-interface string spoke-sdp string*

Tree [spoke-sdp](#)

String Length 3 to 16

Notes This element is part of a list key.

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aarp

| | |
|------------|---|
| Synopsis | Enable the aarp context |
| Context | configure service vprn <i>string</i> aarp-interface <i>string</i> spoke-sdp <i>string</i> aarp |
| Tree | aarp |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

id reference

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | AARP instance ID |

| Tree | admin-state |
| Options | enable, disable |
| Default | enable |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

description *string*

| | |
|---------------|--|
| Synopsis | Text description |
| Context | configure service vpn <i>string</i> aarp-interface <i>string</i> spoke-sdp <i>string</i> description <i>string</i> |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

egress

| | |
|------------|---|
| Synopsis | Enter the egress context |
| Context | configure service vpn <i>string</i> aarp-interface <i>string</i> spoke-sdp <i>string</i> egress |
| Tree | egress |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

filter

| | |
|------------|--|
| Synopsis | Enter the filter context |
| Context | configure service vpn <i>string</i> aarp-interface <i>string</i> spoke-sdp <i>string</i> egress filter |
| Tree | filter |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

ip reference

| | |
|------------|---|
| Synopsis | IP filter identifier |
| Context | configure service vprn <i>string aarp-interface string spoke-sdp string egress filter ip reference</i> |
| Tree | ip |
| Reference | configure filter ip-filter <i>string</i> |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

vc-label number

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Static MPLS VC label to send packets to far-end device |
| Context | configure service vprn <i>string aarp-interface string spoke-sdp string egress vc-label number</i> |
| Tree | vc-label |
| Range | 16 to 1048575 |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

ingress

| | |
|------------|--|
| Synopsis | Enter the ingress context |
| Context | configure service vprn <i>string aarp-interface string spoke-sdp string ingress</i> |
| Tree | ingress |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

filter

| | |
|----------|---|
| Synopsis | Enter the filter context |
| Context | configure service vprn <i>string aarp-interface string spoke-sdp string ingress filter</i> |
| Tree | filter |

| | |
|------------|--|
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

ip *reference*

| | |
|------------|---|
| Synopsis | IP filter ID |
| Context | configure service vprn <i>string</i> aarp-interface <i>string</i> spoke-sdp <i>string</i> ingress filter ip <i>reference</i> |
| Tree | ip |
| Reference | configure filter ip-filter <i>string</i> |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

vc-label *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | VC ingress value that indicates a specific connection |
| Context | configure service vprn <i>string</i> aarp-interface <i>string</i> spoke-sdp <i>string</i> ingress vc-label <i>number</i> |
| Tree | vc-label |
| Range | 1 to 1048575 |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of the service |
| Context | configure service vprn <i>string</i> admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | All |

aggregates

| | |
|------------|---|
| Synopsis | Enter the aggregates context |
| Context | configure service vprn string aggregates |
| Tree | aggregates |
| Introduced | 16.0.R1 |
| Platforms | All |

aggregate [[ip-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

| | |
|------------|---|
| Synopsis | Enter the aggregate list instance |
| Context | configure service vprn string aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) |
| Tree | aggregate |
| Introduced | 16.0.R1 |
| Platforms | All |

[[ip-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

| | |
|------------|---|
| Synopsis | Destination IP address prefix of the aggregate route |
| Context | configure service vprn string aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) |
| Tree | aggregate |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

aggregator

| | |
|------------|---|
| Synopsis | Enter the aggregator context |
| Context | configure service vprn string aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) aggregator |
| Tree | aggregator |
| Introduced | 16.0.R1 |
| Platforms | All |

address string

| | |
|------------|---|
| Synopsis | Aggregator IP address |
| Context | configure service vprn string aggregates aggregate (ipv4-prefix ipv6-prefix) aggregator address string |
| Tree | address |
| Introduced | 16.0.R1 |
| Platforms | All |

as-number number

| | |
|------------|---|
| Synopsis | Aggregator AS number |
| Context | configure service vprn string aggregates aggregate (ipv4-prefix ipv6-prefix) aggregator as-number number |
| Tree | as-number |
| Range | 1 to 4294967295 |
| Introduced | 16.0.R1 |
| Platforms | All |

as-set boolean

| | |
|-------------|--|
| Synopsis | Use AS_SET path segment type for the aggregate route |
| Context | configure service vprn string aggregates aggregate (ipv4-prefix ipv6-prefix) as-set boolean |
| Tree | as-set |
| Description | <p>When configured to true, the AS_PATH attribute of the aggregate contains an AS_SET containing all AS numbers from the contributing routes. This can increase the amount of churn due to best-path changes.</p> <p>When configured to false, the AS_PATH attribute contains no AS_SET and will be originated by the ESR.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

blackhole

| | |
|----------|---|
| Synopsis | Enable the blackhole context |
| Context | configure service vprn string aggregates aggregate (ipv4-prefix ipv6-prefix) blackhole |

| | |
|------------|--|
| Tree | blackhole |
| Notes | The following elements are part of a choice: blackhole or indirect . |
| Introduced | 16.0.R1 |
| Platforms | All |

generate-icmp *boolean*

| | |
|-------------|---|
| Synopsis | Send ICMP unreachable messages for aggregate routes |
| Context | configure service vprn <i>string</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) blackhole generate-icmp <i>boolean</i> |
| Tree | generate-icmp |
| Description | When configured to true , ICMP unreachable messages are sent when packets match an aggregate route in the FIB with a black-hole next-hop.
When configured to false , ICMP unreachable messages are not generated. |
| Default | false |
| Introduced | 16.0.R2 |
| Platforms | All |

community *string*

| | |
|----------------|--|
| Synopsis | Community name that is added to the aggregate route |
| Context | configure service vprn <i>string</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) community <i>string</i> |
| Tree | community |
| Description | This command associates a BGP community with the aggregate route. The community name can be matched in route policies and is automatically added to BGP routes exported from the aggregate route. |
| String Length | 1 to 72 |
| Max. Instances | 12 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | All |

description *string*

| | |
|----------|------------------|
| Synopsis | Text description |
|----------|------------------|

| | |
|---------------|--|
| Context | configure service vprn string aggregates aggregate (<i>ipv4-prefix ipv6-prefix</i>) description string |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R1 |
| Platforms | All |

discard-component-communities *boolean*

| | |
|------------|---|
| Synopsis | Advertise aggregate with aggregate route community set |
| Context | configure service vprn string aggregates aggregate (<i>ipv4-prefix ipv6-prefix</i>) discard-component-communities boolean |
| Tree | discard-component-communities |
| Default | false |
| Introduced | 19.7.R1 |
| Platforms | All |

indirect (*ipv4-address-no-zone | ipv6-address-no-zone*)

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Address of the indirect next hop |
| Context | configure service vprn string aggregates aggregate (<i>ipv4-prefix ipv6-prefix</i>) indirect (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) |
| Tree | indirect |
| Description | This command programs aggregate routes into the forwarding table with an indirect next hop. If a packet matches the aggregate route but not a contributing route, it is forwarded toward the indirect next hop rather than being discarded. |
| Notes | The following elements are part of a choice: blackhole or indirect . |
| Introduced | 16.0.R1 |
| Platforms | All |

local-preference *number*

| | |
|----------|--|
| Synopsis | Local preference used when aggregate route is exported |
|----------|--|

| | |
|-------------|--|
| Context | configure service vprn string aggregates aggregate (<i>ipv4-prefix ipv6-prefix</i>) local-preference number |
| Tree | local-preference |
| Description | This command configures the local preference value to use when the aggregate route is exported rather than using any of the local preference values assigned for any of the contributing routes. |
| Range | 0 to 4294967295 |
| Introduced | 16.0.R1 |
| Platforms | All |

policy reference

| | |
|-------------|---|
| Synopsis | Policy name for the aggregated route |
| Context | configure service vprn string aggregates aggregate (<i>ipv4-prefix ipv6-prefix</i>) policy reference |
| Tree | policy |
| Description | <p>This command associates an aggregate route with a policy reference. The aggregated route is activated only when there is at least one eligible active route in the sub-trees below it that is accepted by the policy evaluation. There is no evaluation into any sub-tree that starts with another active aggregate route. Eligible routes exclude host routes and LDP shortcut routes.</p> <p>If an aggregate route has no policy, or the reference is to an empty policy, this configuration is treated as equivalent to a policy with one rule that accepts all routes.</p> |
| Reference | configure policy-options policy-statement string |
| Introduced | 20.10.R1 |
| Platforms | All |

summary-only boolean

| | |
|-------------|---|
| Synopsis | Advertise the aggregate route only |
| Context | configure service vprn string aggregates aggregate (<i>ipv4-prefix ipv6-prefix</i>) summary-only boolean |
| Tree | summary-only |
| Description | <p>When configured to true, the router suppresses the advertisement of more specific component routes for the aggregate.</p> <p>When configured to false, the router advertises both the aggregate route and its contributing routes.</p> |
| Default | false |

| | |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms | All |

tunnel-group *number*

| | |
|-------------|---|
| Synopsis | Tunnel group from which to associate the MC IPsec state |
| Context | configure service vpn <i>string</i> aggregates aggregate (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) tunnel-group <i>number</i> |
| Tree | tunnel-group |
| Description | This command adds the MC-IPsec state of the specific tunnel-group to the aggregate route. |
| Range | 1 to 64 |
| Introduced | 20.7.R1 |
| Platforms | All |

allow-export-bgp-vpn *boolean*

| | |
|------------|--|
| Synopsis | Include BGP-VPN routes for export |
| Context | configure service vpn <i>string</i> allow-export-bgp-vpn <i>boolean</i> |
| Tree | allow-export-bgp-vpn |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

autonomous-system *number*

| | |
|-------------|--|
| Synopsis | AS number advertised to peers for this router |
| Context | configure service vpn <i>string</i> autonomous-system <i>number</i> |
| Tree | autonomous-system |
| Description | This command configures the autonomous system (AS) number for the router. This value must be set before BGP can be activated.

If the AS number is changed on a router with an active BGP instance, the new AS number is not used until the BGP instance is restarted. |
| Range | 1 to 4294967295 |
| Introduced | 16.0.R1 |
| Platforms | All |

bgp

| | |
|------------|--|
| Synopsis | Enable the bgp context |
| Context | configure service vprn string bgp |
| Tree | bgp |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of the BGP instance |
| Context | configure service vprn string bgp admin-state keyword |
| Tree | admin-state |
| Options | enable, disable |
| Default | enable |
| Introduced | 16.0.R1 |
| Platforms | All |

advertise-inactive *boolean*

| | |
|-------------|---|
| Synopsis | Advertise inactive BGP routes to peers |
| Context | configure service vprn string bgp advertise-inactive boolean |
| Tree | advertise-inactive |
| Description | When configured to true , this command allows any inactive BGP route to be advertised, even though it is not the used route.

When configured to false , the advertisement of inactive BGP routes to other BGP peers is disabled. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

advertise-ipv6-next-hops

| | |
|----------|---|
| Synopsis | Enter the advertise-ipv6-next-hops context |
| Context | configure service vprn string bgp advertise-ipv6-next-hops |
| Tree | advertise-ipv6-next-hops |

| | |
|------------|---------|
| Introduced | 19.5.R1 |
| Platforms | All |

ipv4 *boolean*

| | |
|------------|--|
| Synopsis | Enable IPv4 routes to be advertised |
| Context | configure service vprn <i>string</i> bgp advertise-ipv6-next-hops ipv4 <i>boolean</i> |
| Tree | ipv4 |
| Default | false |
| Introduced | 19.5.R1 |
| Platforms | All |

aggregator-id-zero *boolean*

| | |
|-------------|---|
| Synopsis | Set router ID in the BGP AGGREGATOR attribute to 0 |
| Context | configure service vprn <i>string</i> bgp aggregator-id-zero <i>boolean</i> |
| Tree | aggregator-id-zero |
| Description | <p>When configured to true, the router ID in the BGP AGGREGATOR path attribute is set to 0 when BGP aggregates routes. This prevents different routers within an AS from creating aggregate routes for the same prefix with different path attributes.</p> <p>When configured to false, the AS number and router ID are added to the AGGREGATOR path attribute.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

asn-4-byte *boolean*

| | |
|------------|---|
| Synopsis | Advertise support for 4-byte ASNs |
| Context | configure service vprn <i>string</i> bgp asn-4-byte <i>boolean</i> |
| Tree | asn-4-byte |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

authentication-key *string*

| | |
|---------------|--|
| Synopsis | BGP authentication key for all peers |
| Context | configure service vprn string bgp authentication-key string |
| Tree | authentication-key |
| Description | This command configures the authentication key used to protect all sessions. The stored format of the authentication key is based on the configure system security hash-control management-interface md-cli hash-algorithm setting. |
| String Length | 1 to 370 |
| Introduced | 16.0.R1 |
| Platforms | All |

authentication-keychain *reference*

| | |
|-------------|--|
| Synopsis | TCP authentication keychain for the session |
| Context | configure service vprn string bgp authentication-keychain reference |
| Tree | authentication-keychain |
| Description | This command associates the keychain to be used to authenticate the BGP session. The keychain allows the rollover of authentication keys during the lifetime of a session. |
| Reference | configure system security keychains keychain string |
| Introduced | 16.0.R3 |
| Platforms | All |

backup-path

| | |
|-------------|--|
| Synopsis | Enter the backup-path context |
| Context | configure service vprn string bgp backup-path |
| Tree | backup-path |
| Description | <p>Commands in this context enable the use of a backup path for specified BGP-learned prefixes belonging to the base router. Multiple paths must be received for a prefix in order to take advantage of this feature. When a prefix has a backup path and its primary paths fail, the affected traffic is rapidly diverted to the backup path without waiting for control plane re-convergence to occur. When many prefixes share the same primary paths and in some cases, the same backup path, the time to divert failover traffic to the backup path is independent of the number of prefixes.</p> <p>By default, IPv4 and IPv6 prefixes do not have a backup path installed in the IOM.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv4 *boolean*

| | |
|------------|---|
| Synopsis | Enable support for unlabeled unicast IPv4 routes |
| Context | configure service vprn <i>string</i> bgp backup-path ipv4 <i>boolean</i> |
| Tree | ipv4 |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv6 *boolean*

| | |
|------------|---|
| Synopsis | Enable support for unlabeled unicast IPv6 routes |
| Context | configure service vprn <i>string</i> bgp backup-path ipv6 <i>boolean</i> |
| Tree | ipv6 |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

label-ipv4 *boolean*

| | |
|------------|---|
| Synopsis | Enable support for labeled-unicast IPv4 routes |
| Context | configure service vprn <i>string</i> bgp backup-path label-ipv4 <i>boolean</i> |
| Tree | label-ipv4 |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

label-ipv6 *boolean*

| | |
|------------|---|
| Synopsis | Enable support for labeled unicast IPv6 routes |
| Context | configure service vprn <i>string</i> bgp backup-path label-ipv6 <i>boolean</i> |
| Tree | label-ipv6 |
| Default | false |
| Introduced | 22.2.R1 |
| Platforms | All |

best-path-selection

| | |
|------------|--|
| Synopsis | Enter the best-path-selection context |
| Context | configure service vprn string bgp best-path-selection |
| Tree | best-path-selection |
| Introduced | 16.0.R1 |
| Platforms | All |

always-compare-med

| | |
|-------------|--|
| Synopsis | Enter the always-compare-med context |
| Context | configure service vprn string bgp best-path-selection always-compare-med |
| Tree | always-compare-med |
| Description | Commands in this context determine how the BGP decision process is affected by the MED path attribute. |
| Introduced | 16.0.R1 |
| Platforms | All |

med-value *keyword*

| | |
|------------|---|
| Synopsis | Action for a missing MED attribute |
| Context | configure service vprn string bgp best-path-selection always-compare-med med-value keyword |
| Tree | med-value |
| Options | off, missing-med-zero, missing-med-infinity, on |
| Default | off |
| Introduced | 16.0.R1 |
| Platforms | All |

strict-as *boolean*

| | |
|----------|---|
| Synopsis | Compare MED only for routes from same neighbor AS |
| Context | configure service vprn string bgp best-path-selection always-compare-med strict-as boolean |
| Tree | strict-as |

| | |
|-------------|---|
| Description | When configured to true , the route selection process can compare the MED path attribute between routes only if they come from the same neighbor AS.
When configured to false , the route selection process can compare the MED path attribute between routes even if they come from different neighbor ASs. |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

as-path-ignore

| | |
|-------------|--|
| Synopsis | Enter the as-path-ignore context |
| Context | configure service vprn string bgp best-path-selection as-path-ignore |
| Tree | as-path-ignore |
| Description | Commands in this context determine whether the AS path length is considered in the selection process for routes of the specified address families. |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv4 boolean

| | |
|------------|--|
| Synopsis | Ignore AS path length for unlabeled unicast IPv4 routes |
| Context | configure service vprn string bgp best-path-selection as-path-ignore ipv4 boolean |
| Tree | ipv4 |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv6 boolean

| | |
|------------|--|
| Synopsis | Ignore AS path length for unlabeled unicast IPv6 routes |
| Context | configure service vprn string bgp best-path-selection as-path-ignore ipv6 boolean |
| Tree | ipv6 |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

label-ipv4 *boolean*

| | |
|------------|--|
| Synopsis | Ignore AS path length for labeled-unicast IPv4 routes |
| Context | configure service vprn <i>string</i> bgp best-path-selection as-path-ignore label-ipv4 <i>boolean</i> |

d-path-length-ignore *boolean*

| | |
|-------------|--|
| Synopsis | Enable D-PATH length ignore |
| Context | configure service vprn <i>string</i> bgp best-path-selection d-path-length-ignore <i>boolean</i> |
| Tree | d-path-length-ignore |
| Description | When configured to true , this command, enables the router to ignore the D-PATH domain segment length during best-path selection. |

At the base router level (or VPRN BGP level for PE-CE routers), this command allows BGP to ignore the D-PATH domain segment length for best-path selection purposes. BGP ignores the D-PATH length when comparing two VPN routes or two IFL routes within the same RD. However, these VPN/IFL routes are processed in the main-BGP instance.

At the VPRN router level, this command allows the VPRN RTM to ignore the D-PATH domain segment length for best-path selection purposes (for routes in VPRN). The user can control whether the RTM considers the D-PATH length when comparing two VPN routes with different RDs.

Best-path selection for EVPN-IFF routes against other owners (for example, EVPN-IFL or IPVPN) still relies on RTM preference. When EVPN-IFF RTM preference matches the RTM preference of another BGP owner, the existing RTM selection applies and D-PATH is not considered, irrespective of the **d-path-length-ignore** configuration.

When configured to **false**, this command disables the ability to ignore the D-PATH domain segment length.

| | |
|------------|----------|
| Default | false |
| Introduced | 21.10.R1 |
| Platforms | All |

deterministic-med *boolean*

| | |
|-------------|---|
| Synopsis | Group paths based on AS before MED attribute comparison |
| Context | configure service vprn string bgp best-path-selection deterministic-med boolean |
| Tree | deterministic-med |
| Description | When configured to true , BGP groups paths from the same AS that are equal up to the MED attribute comparison and then compares the best path from each group to select the overall best path. This process ensures that the best-path selection process is deterministic in all cases.

When configured to false , paths are not grouped and the overall best-path selection can depend on the order of route arrival. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

ebgp-ibgp-equal

| | |
|----------|--|
| Synopsis | Enter the ebgp-ibgp-equal context |
| Context | configure service vprn string bgp best-path-selection ebgp-ibgp-equal |
| Tree | ebgp-ibgp-equal |

| | |
|-------------|--|
| Description | <p>Commands in this context allow BGP to ignore the difference between EBGP and IBGP routes in selecting the best path and eligible multipaths (if multipath and ECMP are enabled) for the specified address families. The result is a form of EIBGP load-balancing in a multipath scenario. This behavior can be applied selectively to certain address families.</p> <p>By default, the BGP decision process prefers an EBGP learned route over an IBGP learned route.</p> |
| Introduced | 16.0.R1 |

damping *boolean*

Synopsis Use BGP route damping to reduce route flap

Context **configure** *service vprn string bgp damping boolean*

Tree *damping*

Description When configured to **true**, this command enables route damping to reduce the number of update messages sent between BGP peers and reduce the load on peers without affecting the route convergence time for stable routes.

Route damping is controlled by profiles set in route policies. If no profile is specified in the route policy, the default damping profile is used with the following parameters:

- Half-life: 15 minutes
- Max-suppress: 60 minutes
- Suppress-threshold: 3000
- Reuse-threshold: 750

When configured to **false**, BGP route damping for learned routes is disabled.

domain-id *string*

| | |
|----------|---|
| Synopsis | Domain ID of received BGP route before readvertisement |
| Context | configure service vprn <i>string</i> bgp domain-id <i>string</i> |
| Tree | domain-id |

Description This command specifies the domain ID. The domain ID identifies the network from which the BGP route was received before the RTM advertises it to a different neighbor. The domain ID is part of a domain, represented as domain-id:isf_safi_type in the D-PATH attribute, as described in *draft-ietf-bess-evpn-ipvpn-interworking*. Gateway routers modify the D-PATH attribute. A gateway is a PE where a VPRN is instantiated. The VPRN in this case advertises or receives routes from multiple BGP owners (for example, EVPN-IFL and BGP-IPVPN) or multiple instances of the same owner (for example, VPRN with two BGP-IPVPN instances).

Gateways use the D-PATH attribute to detect loops (for received routes where the D-PATH contains a local domain ID) and to make BGP best-path selection decisions based on the D-PATH length (shorter D-PATH is preferred).

In the following example, suppose a gateway receives prefix P in an EVPN-IFL instance with the following D-PATH from neighbor N:

```
Seg Len=1 / 65000:1:128
```

If the router imports the route in VPRN-1, BGP-EVPN SRv6 instance with domain 65000:2, it readvertises it to its BGP-IPVPN MPLS instance as follows:

```
Seg Len=2 / 65000:2:70 / 65000:1:128
```

That is, the gateway prepends the local domain ID and family to the D-PATH before readvertising the route into a different instance.

| Tree | gr-notification |
| Description | When configured to true , the Graceful Restart capability sent by the router indicates support for NOTIFICATION messages. If the peer also supports this capability, the session is restarted gracefully (while preserving forwarding) if either peer sends a NOTIFICATION message due to some type of event or error.

When configured to false , NOTIFICATION messages are not supported. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

forwarding-bits-set *keyword*

| | |
|-------------|---|
| Synopsis | BGP LLGR forwarding-bit behavior for address family |
| Context | configure service vprn <i>string</i> bgp graceful-restart long-lived forwarding-bits-set <i>keyword</i> |
| Tree | forwarding-bits-set |
| Description | <p>This command determines the setting of the F bit in the GR and LLGR capabilities advertised by the router. When the F bit is set for an address family, it indicates that the advertising router is able to preserve forwarding state for the routes of that address family across the last restart. When the session is re-established after a restart and the F bit is not set, all stale routes from the peer are immediately removed for the corresponding address family.</p> <p>This command allows the F bit to be set for all address families or only for non-forwarding address families (L2-VPN, route target, flow-IPv4, and flow-IPv6).</p> |
| Options | none, all, non-fw |

| | |
|------------|---------|
| Default | none |
| Introduced | 16.0.R1 |
| Platforms | All |

helper-override-restart-time *number*

| | |
|-------------|---|
| Synopsis | Locally-configured override for restart time |
| Context | configure service vprn <i>string</i> bgp graceful-restart long-lived helper-override-restart-time <i>number</i> |
| Tree | helper-override-restart-time |
| Description | This command overrides the restart time advertised by a peer (in its GR capability) with a locally-configured value. This override applies only to AFI/SAFI that were included in the GR capability of the peer. The restart-time is always zero for AFI/SAFI not included in the GR capability. This command is useful if the local router wants to force the LLGR phase to begin after a set time for all protected AFI/SAFI. |
| Range | 0 to 4095 |
| Introduced | 16.0.R1 |
| Platforms | All |

helper-override-stale-time *number*

| | |
|-------------|---|
| Synopsis | Locally-configured stale routes override time |
| Context | configure service vprn <i>string</i> bgp graceful-restart long-lived helper-override-stale-time <i>number</i> |
| Tree | helper-override-stale-time |
| Description | This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability.

This command applies to all AFI/SAFI in the advertised LLGR capability except for any AFI/SAFI with a family-specific override. |
| Range | 0 to 16777215 |
| Introduced | 16.0.R1 |
| Platforms | All |

without-no-export *boolean*

| | |
|----------|--|
| Synopsis | Advertise LLGR stale routes to non-LLGR peers |
| Context | configure service vprn <i>string</i> bgp graceful-restart long-lived without-no-export <i>boolean</i> |

| | |
|-------------|---|
| Tree | without-no-export |
| Description | <p>When configured to true, LLGR stale routes can be advertised to any peer (EBGP or IBGP) that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0.</p> <p>When configured to false, LLGR stale routes are not advertised to any EBGP peer that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0 and a NO_EXPORT standard community is automatically added to the routes.</p> |

| Default | enable |
| Introduced | 16.0.R1 |
| Platforms | All |

advertise-inactive boolean

| | |
|-------------|---|
| Synopsis | Advertise an inactive BGP route to peers |
| Context | configure service vprn string bgp group string advertise-inactive boolean |
| Tree | advertise-inactive |
| Description | <p>When configured to true, this command allows an inactive BGP route to be advertised, even though it is not the most preferred route. The effect of the command on advertised unlabeled, labeled, and multicast IPv4 and IPv6 routes depends on several factors.</p> <ul style="list-style-type: none"> • If the active route for the IP prefix is a BGP route, that route is advertised. |

- If the active route is a non-BGP route and there are valid inactive BGP routes to the same destination, the best valid inactive route is advertised unless the active non-BGP route is matched and accepted by an export policy applied to the session.
- If the active route is a non-BGP route and there are no valid BGP routes to the same destination, no route is advertised unless the active non-BGP route is matched and accepted by an export policy applied to the session.

When unconfigured, the command inherits the value of the global-level setting (**true** or **false**). The command cannot be explicitly configured to **false**.

When this command inherits a value of **false**, the advertisement of inactive BGP routes to other BGP peers is disabled.

| | |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms | All |

advertise-ipv6-next-hops

| | |
|------------|--|
| Synopsis | Enable the advertise-ipv6-next-hops context |

| | |
|------------|--|
| Synopsis | Set router ID in the BGP AGGREGATOR attribute to zero |
| Context | configure service vprn string bgp group string aggregator-id-zero boolean |
| Tree | aggregator-id-zero |
| Introduced | 16.0.R1 |
| Platforms | All |

as-override *boolean*

| | |
|-------------|--|
| Synopsis | Replace the peer's ASN with the local ASN in AS Path |
| Context | configure <i>service vpn string bgp group string as-override boolean</i> |
| Tree | <i>as-override</i> |
| Description | When configured to true , the advertising router's local AS replaces all occurrences of the peer AS in the AS_PATH attribute.

This command should be used with caution, as it breaks BGP's loop detection mechanism.

When configured to false , no AS override is performed. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

asn-4-byte *boolean*

| | |
|-------------|--|
| Synopsis | Advertise the use of 4-byte ASNs |
| Context | configure <i>service vpn string bgp group string asn-4-byte boolean</i> |
| Tree | <i>asn-4-byte</i> |
| Description | When this command inherits a value of true , the use of 4-byte ASNs is supported.

When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to true .

When configured to false , this command disables the use of 4-byte ASNs. |
| Introduced | 16.0.R1 |
| Platforms | All |

authentication-key *string*

| | |
|---------------|---|
| Synopsis | BGP authentication key for peers in the group |
| Context | configure <i>service vpn string bgp group string authentication-key string</i> |
| Tree | <i>authentication-key</i> |
| Description | This command configures the authentication key that must be configured on both peers. The stored format of the authentication key is based on the configure system security hash-control management-interface md-cli hash-algorithm setting. |
| String Length | 1 to 370 |
| Introduced | 16.0.R1 |

Platforms All

authentication-keychain *reference*

Synopsis TCP authentication keychain for the session

Context **configure** [service vprn](#) *string* [bgp group](#) *string* [authentication-keychain](#) *reference*

Tree [authentication-keychain](#)

Description This command associates the keychain to be used to authenticate the BGP session. The keychain allows the rollover of authentication keys during the lifetime of a session.

Reference **configure** [system security keychains keychain](#) *string*

Introduced 16.0.R3

Platforms All

bfd-liveness *boolean*

Synopsis Enable BFD

Context **configure** [service vprn](#) *string* [bgp group](#) *string* [bfd-liveness](#) *boolean*

Tree [bfd-liveness](#)

Description When configured to **true**, BFD is enabled on a given protocol interface where the state of the protocol interface is tied to the state of the BFD session between the local node and the remote node.

When unconfigured, the command inherits the value of the global-level setting (**true** or **false**). The command cannot be explicitly configured to **false**.

When this command inherits a value of **false**, BFD is removed from the associated protocol adjacency.

Introduced 16.0.R1

Platforms All

capability-negotiation *boolean*

Synopsis Enable capability negotiation

Context **configure** [service vprn](#) *string* [bgp group](#) *string* [capability-negotiation](#) *boolean*

Tree [capability-negotiation](#)

Description When configured to **true**, this command enables the exchange of capabilities.

When configured to **false** and the peering is flapped, new capabilities are not negotiated and strictly IPv4 exchanges are supported with the peer.

Default true

Introduced 16.0.R1
 Platforms All

client-reflect *boolean*

Synopsis Allow cluster RR to advertise routes to its clients
 Context **configure** [service vprn](#) *string* [bgp group](#) *string* **client-reflect** *boolean*
 Tree [client-reflect](#)
 Description When unconfigured, this command inherits the value of the global-level setting (**true** or **false**). The command cannot be explicitly configured to **true**.
 When the command inherits a value of **true**, client reflection of routes is enabled.
 When configured to **false**, this command disables client reflection of routes.

interface [[interface-name](#)] *reference*

| | |
|-------------|--|
| Synopsis | Enter the interface list instance |
| Context | configure service vprn string bgp group string dynamic-neighbor interface reference |
| Tree | interface |
| Description | <p>Commands in this context configure an unnumbered VPRN access IP interface for dynamic neighbors.</p> <p>If this interface connects to a network with other BGP routers, sessions with the other routers can be set up automatically without explicitly configuring them as BGP neighbors. The interface must be IPv6 enabled, but because the interface is considered unnumbered, it does not require an IPv4 address or a global-unicast IPv6 address. The sessions are set up using IPv6 link-local addresses.</p> <p>The BGP unnumbered feature supports all address families that allow IPv6 link-local BGP next-hop addresses. This includes IPv4 with the use of RFC 8950 extensions.</p> <p>When an interface is added to the list of dynamic-neighbor interfaces, an outgoing connection attempt is initiated toward any directly connected router on the interface that announces itself using an ICMPv6 router advertisement message. The session attempt is unsuccessful if the peer type is not EBGp, the reported AS number of the peer does not match one of the allowed values, or the maximum session limit of the interface would be exceeded.</p> |
| Introduced | 22.10.R1 |
| Platforms | All |

| Synopsis | Locally-configured stale routes override time |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> graceful-restart long-lived family <i>keyword</i> helper-override-stale-time <i>number</i> |
| Tree | helper-override-stale-time |
| Description | This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability. This is a family-specific override value. |
| Range | 0 to 16777216 |
| Default | 16777216 |
| Introduced | 16.0.R1 |
| Platforms | All |

forwarding-bits-set *keyword*

| | |
|----------|---|
| Synopsis | BGP LLGR forwarding-bit behavior for address family |
|----------|---|

| | |
|-------------|---|
| Context | configure service vpn <i>string</i> bgp group <i>string</i> graceful-restart long-lived forwarding-bits-set <i>keyword</i> |
| Tree | forwarding-bits-set |
| Description | <p>This command determines the setting of the F bit in the GR and LLGR capabilities advertised by the router. When the F bit is set for an address family, it indicates that the advertising router is able to preserve forwarding state for the routes of that address family across the last restart. When the session is re-established after a restart and the F bit is not set, all stale routes from the peer are immediately removed for the corresponding address family.</p> <p>This command allows the F bit to be set for all address families or only for non-forwarding address families (L2-VPN, route target, flow-IPv4, and flow-IPv6).</p> |
| Options | none, all, non-fwd |
| Default | none |
| Introduced | 16.0.R1 |
| Platforms | All |

helper-override-restart-time *number*

| | |
|-------------|--|
| Synopsis | Locally-configured override for restart time |
| Context | configure service vpn <i>string</i> bgp group <i>string</i> graceful-restart long-lived helper-override-restart-time <i>number</i> |
| Tree | helper-override-restart-time |
| Description | <p>This command overrides the restart time advertised by a peer (in its GR capability) with a locally-configured value. This override applies only to AFI/SAFI that were included in the GR capability of the peer. The restart-time is always zero for AFI/SAFI not included in the GR capability. This command is useful if the local router wants to force the LLGR phase to begin after a set time for all protected AFI/SAFI.</p> |
| Range | 0 to 4095 |
| Introduced | 16.0.R1 |
| Platforms | All |

helper-override-stale-time *number*

| | |
|-------------|---|
| Synopsis | Locally-configured stale routes override time |
| Context | configure service vpn <i>string</i> bgp group <i>string</i> graceful-restart long-lived helper-override-stale-time <i>number</i> |
| Tree | helper-override-stale-time |
| Description | <p>This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability.</p> |

This command applies to all AFI/SAFI in the advertised LLGR capability except for any AFI/SAFI with a family-specific override.

| | |
|------------|---------------|
| Range | 0 to 16777215 |
| Introduced | 16.0.R1 |
| Platforms | All |

without-no-export *boolean*

| | |
|-------------|---|
| Synopsis | Advertise LLGR stale routes to non-LLGR peers |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> graceful-restart long-lived without-no-export <i>boolean</i> |
| Tree | without-no-export |
| Description | <p>When configured to true, LLGR stale routes can be advertised to any peer (EBGP or IBGP) that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0.</p> <p>When configured to false, LLGR stale routes are not advertised to any EBGP peer that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0 and a NO_EXPORT standard community is automatically added to the routes.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

restart-time *number*

| | |
|------------|---|
| Synopsis | Restart time advertised by GR capability |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> graceful-restart restart-time <i>number</i> |

| Platforms | All |

minimum-hold-time *number*

| | |
|-------------|---|
| Synopsis | Minimum hold time between successive messages |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> hold-time minimum-hold-time <i>number</i> |
| Tree | minimum-hold-time |
| Description | This command specifies the minimum hold time that is accepted for the session. If a peer proposes a hold time lower than this value, the session attempt is rejected.
When unconfigured, the command value is inherited from the BGP global-level setting. |
| Range | 0 3 to 65536 |
| Default | 0 |
| Introduced | 16.0.R1 |
| Platforms | All |

seconds *number*

| | |
|-------------|--|
| Synopsis | Maximum time BGP waits between successive messages |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> hold-time seconds <i>number</i> |
| Tree | seconds |
| Description | This command configures the maximum time BGP waits between successive messages (either keepalive or update) from its peer before closing the connection. |

Although the implementation allows setting the keepalive timer at the BGP group level times separately, the configured keepalive timer is overridden by this value under the following circumstances.

- If the specified hold time is less than the configured keepalive time, the operational keepalive time is set to a third of the hold-time; the configured keepalive time is not changed.
- If the hold time is set to zero, the operational value of the keepalive time is set to zero; the configured keepalive time is not changed. The connection with the peer is up permanently and no keepalive packets are sent to the peer.

When unconfigured, the command setting is inherited from the BGP global-level configuration.

|-------------|---|
| Synopsis | Send BGP updates as soon as the session comes up |
| Context | configure <i>service vprn string</i> <i>bgp group string</i> initial-send-delay-zero <i>boolean</i> |
| Tree | initial-send-delay-zero |
| Description | <p>When configured to true, BGP updates are sent as soon as the session comes up.</p> <p>When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, BGP waits to send UPDATE messages for the minimum route advertisement time after a session is established.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

keepalive *number*

| | |
|-------------|--|
| Synopsis | Time after which the BGP KEEPALIVE message is sent |
| Context | configure <i>service vprn string</i> <i>bgp group string</i> keepalive <i>number</i> |
| Tree | keepalive |
| Description | <p>This command configures the BGP keepalive timer value. A keepalive message is sent every time this timer expires.</p> <p>This value is generally one-third of the hold time interval configured in the hold-time seconds context. Although the implementation allows this keepalive value and the hold time interval to be independently set, under the following circumstances, the configured keepalive value is overridden by the hold time interval value:</p> <ul style="list-style-type: none"> • If the specified keepalive value is greater than the configured hold time, the specified keepalive value is ignored and the timer value is set to one third of the current hold time value. • If the specified hold time interval is less than the configured keepalive value, the keepalive value is reset to one third of the specified hold time interval. • If the hold time interval is set to zero, the configured keepalive value is ignored. This means that the connection with the peer is up permanently and no keepalive packets are sent to the peer. <p>When unconfigured, the command inherits the BGP global-level setting.</p> |

| Tree | private |
| Description | When configured to true , the local AS number is only advertised to peers that use the local ASN for establishing BGP peering sessions.
When configured to false , the local ASN is advertised to all peers, including those that can use the global ASN for establishing BGP peering sessions. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

local-preference *number*

| | |
|------------|--|
| Synopsis | Default local preference if not in incoming routes |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> local-preference <i>number</i> |
| Tree | local-preference |
| Range | 0 to 4294967295 |
| Introduced | 16.0.R1 |
| Platforms | All |

loop-detect *keyword*

| | |
|------------|--|
| Synopsis | Strategy for loop detection in the AS path |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> loop-detect <i>keyword</i> |
| Tree | loop-detect |
| Options | drop-peer, ignore-loop, off, discard-route |
| Introduced | 16.0.R1 |
| Platforms | All |

loop-detect-threshold *number*

| | |
|------------|---|
| Synopsis | Threshold for the global ASN in a received AS path |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> loop-detect-threshold <i>number</i> |
| Tree | loop-detect-threshold |
| Range | 0 to 15 |
| Introduced | 16.0.R6 |

Platforms All

med-out (*number* | *keyword*)

Synopsis Default MED attribute value to advertise to peers
 Context **configure** [service vprn](#) *string* [bgp group](#) *string* **med-out** (*number* | *keyword*)
 Tree [med-out](#)
 Max. Range 0 to 4294967295
 Options igp-cost
 Introduced 16.0.R1
 Platforms All

min-route-advertisement *number*

Synopsis Minimum time before a prefix can be advertised to peer
 Context **configure** [service vprn](#) *string* [bgp group](#) *string* **min-route-advertisement** *number*
 Tree [min-route-advertisement](#)
 Range 1 to 255
 Introduced 16.0.R1

label-ipv4 *boolean*

Synopsis Enable support for labeled-unicast IPv4 routes
Context **configure** [service vprn](#) *string* [bgp group](#) *string* [origin-validation](#) [label-ipv4](#) *boolean*
Tree [label-ipv4](#)
Default false
Introduced 19.7.R1
Platforms All

passive *boolean*

Synopsis Enable passive mode for BGP communication
Context **configure** [service vprn](#) *string* [bgp group](#) *string* [passive](#) *boolean*
Tree [passive](#)
Default false
Introduced 16.0.R1
Platforms All

path-mtu-discovery *boolean*

Synopsis Enable Path MTU Discovery
Context **configure** [service vprn](#) *string* [bgp group](#) *string* [path-mtu-discovery](#) *boolean*
Tree [path-mtu-discovery](#)

| | |
|-------------|--|
| Description | <p>When configured to true, Path MTU Discovery (PMTUD) is enabled for the associated TCP connections.</p> <p>When set to true, PMTUD is activated toward an IPv4 BGP neighbor and the Don't Fragment (DF) bit is set in the IP header of all IPv4 packets sent to the peer. If any device along the path toward the peer cannot forward the packet because the IP MTU of the interface is smaller than the IP packet size, this device drops the packet and sends an ICMP or ICMPv6 error message encoding the interface MTU. When the router receives the ICMP or ICMPv6 message, it lowers the TCP maximum segment size limit from the previous value so that the IP MTU constraint can be accommodated.</p> <p>When configured to false and there is no TCP MSS configuration that can be associated with a BGP neighbor (in either the BGP configuration or the first hop IP interface configuration), the router advertises a value of only 1024 bytes as the TCP MSS option value, limiting received TCP segments to that size.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

peer-as *number*

| | |
|------------|---|
| Synopsis | Peer AS number |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> peer-as <i>number</i> |
| Tree | peer-as |
| Range | 1 to 4294967295 |
| Introduced | 16.0.R1 |
| Platforms | All |

peer-ip-tracking *boolean*

| | |
|-------------|--|
| Synopsis | Enable BGP peer tracking |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> peer-ip-tracking <i>boolean</i> |
| Tree | peer-ip-tracking |
| Description | <p>When configured to true, this command enables BGP peer tracking.</p> <p>Peer tracking should be used with caution. Peer tracking can tear a session down even if the loss of connectivity turns out to be short-lived (for example, while the IGP protocol is re-converging). Next-hop tracking, which is always enabled, handles temporary connectivity issues more effectively.</p> <p>When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, peer tracking is disabled.</p> |
| Introduced | 16.0.R1 |

Platforms All

preference *number*

Synopsis Route preference for routes learned from all peers

Context **configure** [service vprn](#) *string* [bgp group](#) *string* [preference](#) *number*

Tree [preference](#)

Range 1 to 255

Introduced 16.0.R1

prefix-limit [[family](#)] *keyword*

Synopsis Enter the **prefix-limit** list instance

Context **configure** [service vprn](#) *string* [bgp group](#) *string* [prefix-limit](#) *keyword*

Tree [prefix-limit](#)

Introduced 16.0.R1

Platforms All

[family] *keyword*

Synopsis Address family to which the limit applies

Context **configure** [service vprn](#) *string* [bgp group](#) *string* [prefix-limit](#) *keyword*

Tree [prefix-limit](#)

Options ipv4, ipv6, mcast-ipv4, flow-ipv4, flow-ipv6, mcast-ipv6, label-ipv4

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms All

idle-timeout *number*

Synopsis Time BGP peering remains idle before reconnecting

Context **configure** [service vprn](#) *string* [bgp group](#) *string* [prefix-limit](#) *keyword* [idle-timeout](#) *number*

Tree [idle-timeout](#)

Description This command configures the time in minutes before a BGP peer is automatically re-established after reaching the prefix limit.

When unconfigured, the BGP peer stays down until the operator performs a reset. This command and **log-only** cannot be configured simultaneously.

| | |
|------------|-----------|
| Range | 1 to 1024 |
| Introduced | 16.0.R1 |
| Platforms | All |

log-only *boolean*

| | |
|-------------|---|
| Synopsis | Send warning message at threshold instead of take-down |
| Context | configure <i>service vprn string</i> <i>bgp group string</i> <i>prefix-limit keyword</i> log-only <i>boolean</i> |
| Tree | log-only |
| Description | <p>When configured to true, the router disables the BGP session from being taken down upon reaching the prefix limit. Instead, only a warning message is sent when the limit is reached. A warning message is also sent when the configured threshold percentage of the limit is reached.</p> <p>This command and idle-timeout cannot be configured simultaneously.</p> <p>When configured to false, the router generates a log event and takes the BGP session down upon reaching the prefix limit.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

maximum *number*

| | |
|-------------|---|
| Synopsis | Maximum number of routes to be learned from a peer |
| Context | configure <i>service vprn string</i> <i>bgp group string</i> <i>prefix-limit keyword</i> maximum <i>number</i> |
| Tree | maximum |
| Description | <p>This command configures the maximum number of BGP routes of the specified address family that can be received from a peer before administrative action is taken.</p> <p>When log-only is unconfigured, the BGP session is taken down whenever the limit of any family is exceeded even if the limits of the other family has not been exceeded.</p> |
| Range | 1 to 4294967295 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R2 |
| Platforms | All |

post-import *boolean*

| | |
|-------------|--|
| Synopsis | Apply limit only to routes accepted by import policies |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> prefix-limit <i>keyword</i> post-import <i>boolean</i> |
| Tree | post-import |
| Description | When configured to true , the system limits the number of routes that are accepted by import policies. Routes rejected by import policies are not counted against the configured limit.

When configured to false , the system limits the number of routes to all routes received from the peer. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

threshold *number*

| | |
|------------|---|
| Synopsis | Percentage threshold that triggers a warning message |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> prefix-limit <i>keyword</i> threshold <i>number</i> |
| Tree | threshold |
| Range | 1 to 100 |
| Default | 90 |
| Introduced | 16.0.R1 |
| Platforms | All |

remove-private

| | |
|------------|--|
| Synopsis | Enable the remove-private context |

| Reference | configure policy-options policy-statement <i>string</i> |
| Introduced | 19.7.R1 |
| Platforms | All |

ipv4 *boolean*

| | |
|------------|--|
| Synopsis | Generate and advertise an IPv4 default route (0/0) |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> send-default ipv4 <i>boolean</i> |
| Tree | ipv4 |
| Default | false |
| Introduced | 19.7.R1 |
| Platforms | All |

ipv6 *boolean*

| | |
|------------|--|
| Synopsis | Generate and advertise an IPv6 default route (::/0) |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> send-default ipv6 <i>boolean</i> |
| Tree | ipv6 |
| Default | false |
| Introduced | 19.7.R1 |
| Platforms | All |

split-horizon *boolean*

| | |
|-------------|---|
| Synopsis | Prevent routes being reflected back to best-route peer |
| Context | configure <i>service vprn string</i> <i>bgp group string</i> split-horizon <i>boolean</i> |
| Tree | split-horizon |
| Description | <p>When configured to true, this command enables the use of split-horizon.</p> <p>This command prevents routes from being reflected back to a peer that sends the best route. It applies to routes of all address families and to any type of sending peer; confed-EBGP, EBGP and IBGP.</p> <p>Enabling the split-horizon functionality may have a detrimental impact on peer and route scaling and should only be used when absolutely necessary.</p> <p>When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, the use of split-horizon is disabled.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

static-group *boolean*

| | |
|------------|--|
| Synopsis | Use group for static peers |
| Context | configure <i>service vprn string</i> <i>bgp group string</i> static-group <i>boolean</i> |
| Tree | static-group |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

tcp-mss (*number* | *keyword*)

| | |
|-------------|--|
| Synopsis | TCP maximum segment size override |
| Context | configure <i>service vprn string</i> <i>bgp group string</i> tcp-mss (<i>number</i> <i>keyword</i>) |
| Tree | tcp-mss |
| Description | <p>This command configures an override for the TCP maximum segment size to use with a specific peer or set of peers (depending on the scope of the command).</p> <p>The configured value controls two properties of the TCP connection as follows:</p> <p>TCP MSS option - The router advertises the TCP MSS option value in the TCP SYN packet it sends as part of the 3-way handshake. The advertised value may be lower than the configured value, depending on the IP MTU of the first hop IP interface. The peers must abide by this value when sending TCP segments to the local router.</p> |

TCP maximum segment size - The actual transmitted size may be lower than the configured value, depending on the TCP MSS option value signaled by the peers, the effect of path MTU discovery, or other factors.

| | |
|------------|-------------|
| Range | 384 to 9746 |
| Options | ip-stack |
| Introduced | 21.2.R1 |
| Platforms | All |

third-party-nexthop *boolean*

| | |
|-------------|---|
| Synopsis | Apply third-party next-hop processing to EBGp peers |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> third-party-nexthop <i>boolean</i> |
| Tree | third-party-nexthop |
| Description | <p>When configured to true, this command enables the router to send third-party next hop to EBGp peers in the same subnet as the source peer. The address family of the transport must match the address family of the route.</p> <p>When an IPv4 or IPv6 route is received from one EBGp peer and advertised to another EBGp peer in the same IP subnet, the BGP next hop is left unchanged.</p> <p>When unconfigured, the command inherits the value of the global-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, third-party next-hop processing is disabled and the next hop carries the IP address of the interface used to establish the TCP connection to the peer.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

ttl-security *number*

| | |
|-------------|--|
| Synopsis | Minimum TTL value for an incoming BGP packet |
| Context | configure service vprn <i>string</i> bgp group <i>string</i> ttl-security <i>number</i> |
| Tree | ttl-security |
| Description | This command configures the minimum TTL value that BGP accepts from an incoming packet. A packet with a TTL value less than the minimum configured TTL value is discarded. |
| Range | 1 to 255 |
| Introduced | 16.0.R1 |
| Platforms | All |

type keyword

| | |
|------------|--|
| Synopsis | BGP peer type |
| Context | configure service vprn string bgp group string type keyword |
| Tree | type |
| Options | no-type, internal, external |
| Default | no-type |
| Introduced | 16.0.R1 |
| Platforms | All |

hold-time

| | |
|------------|--|
| Synopsis | Enter the hold-time context |
| Context | configure service vprn string bgp hold-time |
| Tree | hold-time |
| Introduced | 16.0.R1 |
| Platforms | All |

minimum-hold-time number

| | |
|-------------|---|
| Synopsis | Minimum hold time between successive messages |
| Context | configure service vprn string bgp hold-time minimum-hold-time number |
| Tree | minimum-hold-time |
| Description | This command specifies the minimum hold time that is accepted for the session. If a peer proposes a hold time lower than this value, the session attempt is rejected. |
| Range | 0 3 to 65535 |
| Default | 0 |
| Introduced | 16.0.R1 |
| Platforms | All |

seconds number

| | |
|----------|---|
| Synopsis | Maximum time BGP waits between successive messages |
| Context | configure service vprn string bgp hold-time seconds number |
| Tree | seconds |

| | |
|-------------|---|
| Description | <p>This command configures the maximum time BGP waits between successive messages (either keepalive or update) from its peer before closing the connection.</p> <p>Although the implementation allows setting the keepalive timer at the BGP global level times separately, the configured keepalive timer is overridden by this value under the following circumstances.</p> <ul style="list-style-type: none"> • If the specified hold time is less than the configured keepalive time, the operational keepalive time is set to a third of the hold-time; the configured keepalive time is not changed. • If the hold time is set to zero, the operational value of the keepalive time is set to zero; the configured keepalive time is not changed. The connection with the peer is up permanently and no keepalive packets are sent to the peer. |
| Range | 0 3 to 65535 |
| Default | 90 |
| Introduced | 16.0.R1 |
| Platforms | All |

ibgp-multipath *boolean*

| | |
|-------------|---|
| Synopsis | Enable IBGP multipath load balancing |
| Context | configure service vprn <i>string</i> bgp ibgp-multipath <i>boolean</i> |
| Tree | ibgp-multipath |
| Description | <p>When configured to true, this command enables IBGP multipath load balancing when adding BGP routes to the route table if the route resolving the BGP next hop offers multiple next hops.</p> <p>When configured to false, this command disables IBGP multipath load balancing.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

| | |
|-------------|---|
| Synopsis | Prepend global AS when advertising routes to BGP peer |
| Context | configure service vprn string bgp local-as prepend-global-as boolean |
| Tree | prepend-global-as |
| Description | When configured to true , the global ASN is added to the AS_PATH attribute in outbound routes sent to the peer.
When configured to false , the global ASN is hidden in paths announced to the EBGp peer. |
| Default | true |
| Introduced | 16.0.R1 |

Platforms All

private *boolean*

Synopsis Hide the local ASN in sent paths learned from peering

Context **configure service vprn** *string* **bgp local-as private** *boolean*

Tree [private](#)

Description When configured to **true**, the local ASN is hidden in paths learned from the peering.
When configured to **false**, the local ASN is advertised to all peers, including those that can use the global ASN for establishing BGP peering sessions.

Default false

Introduced 16.0.R1

Platforms All

local-preference *number*

Synopsis Default local preference if not in incoming routes

ebgp number

| | |
|-------------|--|
| Synopsis | Maximum multipaths when best path is EBGp learned route |
| Context | configure service vprn string bgp multipath family keyword ebgp number |
| Tree | ebgp |
| Description | This command configures the maximum number of multipaths per prefix or NLRI when the best path is an EBGp learned route. The limit configured using this command overrides the limit configured in the max-paths command. If the best path is an EBGp learned route, and this command is set to 1, multipaths are disabled. |
| Range | 1 to 64 |
| Introduced | 19.5.R1 |
| Platforms | All |

ibgp number

| | |
|----------|---|
| Synopsis | Maximum multipaths when best path is IBGP learned route |
|----------|---|

| | |
|-------------|---|
| Context | configure service vprn string bgp multipath family keyword ibgp number |
| Tree | ibgp |
| Description | This command configures the maximum number of multipaths per prefix or NLRI when the best path is an IBGP learned route. The limit configured using this command overrides the limit configured in the max-paths command. If the best path is an IBGP learned route and this command is set to 1, multipaths are disabled. |
| Range | 1 to 64 |
| Introduced | 19.5.R1 |
| Platforms | All |

max-paths number

| | |
|-------------|---|
| Synopsis | Maximum number of multipaths per prefix or NLRI |
| Context | configure service vprn string bgp multipath family keyword max-paths number |
| Tree | max-paths |
| Description | This command configures the maximum number of multipaths per prefix or NLRI for the IP family option specified using the family command.
Consider the following when configuring this command: <ul style="list-style-type: none"> • If the best path is an EBGP-learned route and the ebgp command is configured, the limit configured in the ebgp command overrides the limit configured in this command. • If the best path is an IBGP-learned route and the ibgp command is configured, the limit configured in the ibgp command overrides the limit configured in this command. • If the best path is an EBGP-learned route and the ebgp command is not configured, and this command is configured to 1, multipaths are disabled. • If the best path is an IBGP-learned route and the ibgp command is not configured, and this command is configured to 1, multipaths are disabled. |
| Range | 1 to 64 |
| Introduced | 19.5.R1 |
| Platforms | All |

Options enable, disable

Default enable

Introduced 16.0.R1

Platforms All

advertise-inactive *boolean*

Synopsis Advertise an inactive BGP route to peers

Context **configure service vprn** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **advertise-inactive** *boolean*

Tree [advertise-inactive](#)

Description When configured to **true**, this command allows an inactive BGP route to be advertised, even though it is not the most preferred route. The effect of the command on advertised unlabeled, labeled, and multicast IPv4 and IPv6 routes depends on several factors.

- If the active route for the IP prefix is a BGP route, that route is advertised.
- If the active route is a non-BGP route and there are valid inactive BGP routes to the same destination, the best valid inactive route is advertised unless the active non-BGP route is matched and accepted by an export policy applied to the session.
- If the active route is a non-BGP route and there are no valid BGP routes to the same destination, no route is advertised unless the active non-BGP route is matched and accepted by an export policy applied to the session.

When unconfigured, the command inherits the value of the global-level setting (**true** or **false**). The command cannot be explicitly configured to **false**.

When this command inherits a value of **false**, the advertisement of inactive BGP routes to other BGP peers is disabled.

Introduced 16.0.R1

Platforms All

advertise-ipv6-next-hops

| | |
|------------|---|
| Synopsis | Enable the advertise-ipv6-next-hops context |

| | |
|------------|--|
| Synopsis | Set router ID in the BGP AGGREGATOR attribute to zero |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) aggregator-id-zero <i>boolean</i> |
| Tree | aggregator-id-zero |
| Introduced | 16.0.R1 |
| Platforms | All |

as-override *boolean*

| | |
|-------------|--|
| Synopsis | Replace the peer ASN with the local ASN in AS Path |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) as-override <i>boolean</i> |
| Tree | as-override |
| Description | When configured to true , the advertising router's local AS replaces all occurrences of the peer AS in the AS_PATH attribute.

This command should be used with caution, as it breaks BGP's loop detection mechanism. |

When unconfigured, the command inherits the value of the group-level setting (**true** or **false**). This command cannot be explicitly configured to **false**.

When the command inherits a value of **false**, no AS override is performed.

advertised-stale-time *number*

Synopsis LLGR stale routes time for family override

Context **configure** **service** **vprn** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **graceful-restart long-lived family** *keyword* **advertised-stale-time** *number*

Tree [advertised-stale-time](#)

Description This command configures the long-lived stale routes time that is advertised by the router in its LLGR capability.
This command applies to all AFI/SAFI in the advertised LLGR capability with a family-specific override.

Range 0 to 16777215

Default 86400

Introduced 16.0.R1

Platforms All

helper-override-stale-time *number*

Synopsis Locally-configured stale routes override time

Context **configure** **service** **vprn** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **graceful-restart long-lived family** *keyword* **helper-override-stale-time** *number*

Tree [helper-override-stale-time](#)

Description This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability. This is a family-specific override value.

Range 0 to 16777216

Default 16777216

Introduced 16.0.R1

Platforms All

forwarding-bits-set *keyword*

Synopsis BGP LLGR forwarding-bit behavior for address family

Context **configure** **service** **vprn** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **graceful-restart long-lived forwarding-bits-set** *keyword*

Tree [forwarding-bits-set](#)

| | |
|-------------|---|
| Description | <p>This command determines the setting of the F bit in the GR and LLGR capabilities advertised by the router. When the F bit is set for an address family, it indicates that the advertising router is able to preserve forwarding state for the routes of that address family across the last restart. When the session is re-established after a restart and the F bit is not set, all stale routes from the peer are immediately removed for the corresponding address family.</p> <p>This command allows the F bit to be set for all address families or only for non-forwarding address families (L2-VPN, route target, flow-IPv4, and flow-IPv6).</p> |
| Options | none, all, non-fwd |
| Default | none |
| Introduced | 16.0.R1 |
| Platforms | All |

helper-override-restart-time *number*

| | |
|-------------|--|
| Synopsis | Locally-configured override for restart time |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart long-lived helper-override-restart-time <i>number</i> |
| Tree | helper-override-restart-time |
| Description | <p>This command overrides the restart time advertised by a peer (in its GR capability) with a locally-configured value. This override applies only to AFI/SAFI that were included in the GR capability of the peer. The restart-time is always zero for AFI/SAFI not included in the GR capability. This command is useful if the local router wants to force the LLGR phase to begin after a set time for all protected AFI/SAFI.</p> |
| Range | 0 to 4095 |
| Introduced | 16.0.R1 |
| Platforms | All |

helper-override-stale-time *number*

| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) link-bandwidth send-to-ebgp ipv4 boolean |
| Tree | ipv4 |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | All |

ipv6 boolean

| | |
|------------|--|
| Synopsis | Support Link Bandwidth EC in IPv6 routes |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) link-bandwidth send-to-ebgp ipv6 boolean |
| Tree | ipv6 |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | All |

label-ipv4 boolean

| | |
|------------|--|
| Synopsis | Support Link Bandwidth EC in label-IPv4 routes |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) link-bandwidth send-to-ebgp label-ipv4 boolean |
| Tree | label-ipv4 |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | All |

local-address (*ipv4-address-no-zone* | *ipv6-address-no-zone* | *interface-name*)

| | |
|---------------|--|
| Synopsis | Local IP address used when communicating with BGP peers |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) local-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i> <i>interface-name</i>) |
| Tree | local-address |
| String Length | 1 to 32 |

| | |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms | All |

local-as

| | |
|------------|--|
| Synopsis | Enter the local-as context |
| Context | configure service vprn string bgp neighbor (ipv4-address-with-zone ipv6-address-with-zone) local-as |
| Tree | local-as |
| Introduced | 16.0.R1 |
| Platforms | All |

as-number *number*

| | |
|------------|---|
| Synopsis | Local (or virtual) BGP AS number |
| Context | configure service vprn string bgp neighbor (ipv4-address-with-zone ipv6-address-with-zone) local-as as-number number |
| Tree | as-number |
| Range | 1 to 4294967295 |
| Introduced | 16.0.R1 |
| Platforms | All |

prepend-global-as *boolean*

| | |
|-------------|--|
| Synopsis | Prepend global ASN when advertising routes to BGP peer |
| Context | configure service vprn string bgp neighbor (ipv4-address-with-zone ipv6-address-with-zone) local-as prepend-global-as boolean |
| Tree | prepend-global-as |
| Description | When configured to true , the global ASN is added to the AS_PATH attribute in outbound routes sent to the peer.
When configured to false , the global ASN is not included in the AS_PATH attribute. |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

private *boolean*

| | |
|-------------|--|
| Synopsis | Hide the local ASN in sent paths learned from peering |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) local-as private <i>boolean</i> |
| Tree | private |
| Description | When configured to true , the local AS number is only advertised to peers that use the local ASN for establishing BGP peering sessions.

When configured to false , the local ASN is advertised to all peers, including those that can use the global ASN for establishing BGP peering sessions. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

local-preference *number*

| | |
|------------|---|
| Synopsis | Default local preference if not in incoming routes |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) local-preference <i>number</i> |
| Tree | local-preference |
| Range | 0 to 4294967295 |
| Introduced | 16.0.R1 |
| Platforms | All |

loop-detect *keyword*

| | |
|------------|---|
| Synopsis | Strategy for loop detection in the AS path |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) loop-detect <i>keyword</i> |
| Tree | loop-detect |
| Options | drop-peer, ignore-loop, off, discard-route |
| Introduced | 16.0.R1 |
| Platforms | All |

loop-detect-threshold *number*

| | |
|----------|--|
| Synopsis | Threshold for the global ASN in a received AS path |
|----------|--|

| | |
|------------|--|
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) loop-detect-threshold <i>number</i> |
| Tree | loop-detect-threshold |
| Range | 0 to 15 |
| Introduced | 16.0.R6 |
| Platforms | All |

med-out (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | Default MED attribute value to advertise to peers |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) med-out (<i>number</i> <i>keyword</i>) |
| Tree | med-out |
| Max. Range | 0 to 4294967295 |
| Options | igp-cost |
| Introduced | 16.0.R1 |
| Platforms | All |

min-route-advertisement *number*

| | |
|------------|--|
| Synopsis | Minimum interval between successive prefix updates |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) min-route-advertisement <i>number</i> |
| Tree | min-route-advertisement |
| Range | 1 to 255 |
| Introduced | 16.0.R1 |
| Platforms | All |

monitor

| | |
|------------|--|
| Synopsis | Enable the monitor context |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) monitor |
| Tree | monitor |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of BMP monitoring |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) monitor admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | All |

all-stations *boolean*

| | |
|-------------|---|
| Synopsis | Send BMP messages to all configured stations |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) monitor all-stations <i>boolean</i> |
| Tree | all-stations |
| Description | When configured to true , this command specifies that BMP messages are to be sent to all configured BMP monitoring stations.

When configured to false , the command is not used to indicate the stations which can receive BMP messages. The station command (at the same context level) identifies the BMP stations for which BMP messages are to be sent. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

route-monitoring

| | |
|------------|---|
| Synopsis | Enter the route-monitoring context |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) monitor route-monitoring |
| Tree | route-monitoring |
| Introduced | 16.0.R1 |
| Platforms | All |

post-policy *boolean*

| | |
|------------|--|
| Synopsis | Allow post-policy route-monitoring messages to be sent |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) monitor route-monitoring post-policy <i>boolean</i> |
| Tree | post-policy |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

pre-policy *boolean*

| | |
|------------|---|
| Synopsis | Allow pre-policy route-monitoring messages to be sent |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) monitor route-monitoring pre-policy <i>boolean</i> |
| Tree | pre-policy |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

station [[station-name](#)] *reference*

| | |
|----------------|---|
| Synopsis | Add a list entry for station |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) monitor station <i>reference</i> |
| Tree | station |
| Max. Instances | 8 |
| Introduced | 16.0.R1 |
| Platforms | All |

[station-name] *reference*

| | |
|----------|---|
| Synopsis | BMP monitoring station |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) monitor station <i>reference</i> |
| Tree | station |

| | |
|------------|---|
| Reference | configure bmp station string |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

multihop *number*

| | |
|------------|--|
| Synopsis | TTL in IP packet headers for EBGPeers multi-hops away |
| Context | configure service vpn string bgp neighbor (ipv4-address-with-zone ipv6-address-with-zone) multihop <i>number</i> |
| Tree | multihop |
| Range | 1 to 255 |
| Introduced | 16.0.R1 |
| Platforms | All |

multipath-eligible *boolean*

| | |
|------------|---|
| Synopsis | Allow routes from this peer in multipath eligibility |
| Context | configure service vpn string bgp neighbor (ipv4-address-with-zone ipv6-address-with-zone) multipath-eligible <i>boolean</i> |
| Tree | multipath-eligible |
| Introduced | 19.5.R1 |
| Platforms | All |

next-hop-self *boolean*

| | |
|-------------|--|
| Synopsis | Advertise routes with local address as next-hop address |
| Context | configure service vpn string bgp neighbor (ipv4-address-with-zone ipv6-address-with-zone) next-hop-self <i>boolean</i> |
| Tree | next-hop-self |
| Description | <p>When configured to true, this command configures BGP to advertise routes to members of a group using a local address of the BGP instance as the BGP next-hop address.</p> <p>Note that this command is set without exception, regardless of the route source (EBGP or IBGP) or its family. When used with VPN-IPv4 and VPN-IPv6 routes, the configure router bgp rr-vpn-forwarding command should also be configured.</p> <p>When unconfigured, the command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to false.</p> |

When this command inherits a value of **false**, protocol standard behavior is applied to determine whether to set **next-hop-self** in advertised routes.

Introduced 16.0.R1
 Platforms All

origin-validation

Synopsis Enable the **origin-validation** context
 Context **configure service vprn string bgp neighbor (ipv4-address-with-zone | ipv6-address-with-zone) origin-validation**
 Tree [origin-validation](#)
 Introduced 19.7.R1
 Platforms All

ipv4 boolean

Synopsis Enable/disable family type ipv4.
 Context **configure service vprn string bgp neighbor (ipv4-address-with-zone | ipv6-address-with-zone) origin-validation ipv4 boolean**
 Tree [ipv4](#)
 Default false
 Introduced 19.7.R1
 Platforms All

ipv6 boolean

Synopsis Enable support for unlabeled unicast IPv6 routes
 Context **configure service vprn string bgp neighbor (ipv4-address-with-zone | ipv6-address-with-zone) origin-validation ipv6 boolean**
 Tree [ipv6](#)
 Default false
 Introduced 19.7.R1
 Platforms All

label-ipv4 boolean

Synopsis Enable support for labeled-unicast IPv4 routes

| | |
|------------|--|
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) origin-validation label-ipv4 <i>boolean</i> |
| Tree | label-ipv4 |
| Default | false |
| Introduced | 19.7.R1 |
| Platforms | All |

passive *boolean*

| | |
|------------|---|
| Synopsis | Use passive mode for BGP communication |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) passive <i>boolean</i> |
| Tree | passive |
| Introduced | 16.0.R1 |
| Platforms | All |

path-mtu-discovery *boolean*

| | |
|-------------|---|
| Synopsis | Enable path MTU discovery |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) path-mtu-discovery <i>boolean</i> |
| Tree | path-mtu-discovery |
| Description | <p>When configured to true, Path MTU Discovery (PMTUD) is enabled for the associated TCP connections.</p> <p>When set to true, PMTUD is activated toward an IPv4 BGP neighbor and the Don't Fragment (DF) bit is set in the IP header of all IPv4 packets sent to the peer. If any device along the path toward the peer cannot forward the packet because the IP MTU of the interface is smaller than the IP packet size, this device drops the packet and sends an ICMP or ICMPv6 error message encoding the interface MTU. When the router receives the ICMP or ICMPv6 message, it lowers the TCP maximum segment size limit from the previous value so that the IP MTU constraint can be accommodated.</p> <p>When PMTUD is configured to false and there is no TCP MSS configuration that can be associated with a BGP neighbor (in either the BGP configuration or the first hop IP interface configuration), the router advertises a value of only 1024 bytes as the TCP MSS option value, limiting received TCP segments to that size.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

peer-as *number*

| | |
|-------------|---|
| Synopsis | Peer AS number |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) peer-as <i>number</i> |
| Tree | peer-as |
| Description | <p>This command configures the autonomous system number for the peer. The peer AS number must be configured for each configured peer.</p> <p>For EBGP peers, the peer AS number configured must be different from the autonomous system number configured for this router under the global level since the peer will be in a different autonomous system than this router.</p> <p>For IBGP peers, the peer AS number must be the same as the autonomous system number of this router configured under the global level.</p> |
| Range | 1 to 4294967295 |
| Introduced | 16.0.R1 |
| Platforms | All |

peer-creation-type *keyword*

| | |
|------------|---|
| Synopsis | Peer creation type |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) peer-creation-type <i>keyword</i> |
| Tree | peer-creation-type |
| Options | static, dynamic, dynamic-if-remote, dynamic-if-local |
| Default | static |
| Introduced | 16.0.R1 |
| Platforms | All |

peer-ip-tracking *boolean*

| | |
|-------------|---|
| Synopsis | Enable BGP peer tracking |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) peer-ip-tracking <i>boolean</i> |
| Tree | peer-ip-tracking |
| Description | <p>When configured to true, this command enables BGP peer tracking.</p> <p>Peer tracking should be used with caution. Peer tracking can tear a session down even if the loss of connectivity turns out to be short-lived (for example, while the IGP protocol is re-converging). Next-hop tracking, which is always enabled, handles temporary connectivity issues more effectively.</p> |

When unconfigured, the command inherits the value of the group-level setting (**true** or **false**). The command cannot be explicitly configured to **false**.

When this command inherits a value of **false**, peer tracking is disabled.

| | |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms | All |

preference number

| | |
|-------------|---|
| Synopsis | Route preference for routes learned from all peers |
| Context | configure service vprn string bgp neighbor (<i>ipv4-address-with-zone ipv6-address-with-zone</i>) preference number |
| Tree | preference |
| Description | This command configures the route preference for routes learned from the configured peers.

The lower the preference value, the higher the chance of the route being the active route. The router assigns BGP routes the highest default preference as compared to routes that are direct, static or learned via MPLS or OSPF.

When unconfigured, the command setting is inherited from the group-level configuration. |
| Range | 1 to 255 |
| Introduced | 16.0.R1 |
| Platforms | All |

prefix-limit [family] keyword

| | |
|------------|--|
| Synopsis | Enter the prefix-limit list instance |
| Context | configure service vprn string bgp neighbor (<i>ipv4-address-with-zone ipv6-address-with-zone</i>) prefix-limit keyword |

| Introduced | 16.0.R1 |
| Platforms | All |

[family] keyword

| | |
|----------|--|
| Synopsis | Address family to which the limit applies |
| Context | configure service vprn string bgp neighbor (<i>ipv4-address-with-zone ipv6-address-with-zone</i>) prefix-limit keyword |
| Tree | prefix-limit |

| | |
|------------|--|
| Options | ipv4, ipv6, mcast-ipv4, flow-ipv4, flow-ipv6, mcast-ipv6, label-ipv4 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

idle-timeout *number*

| | |
|-------------|---|
| Synopsis | Time which BGP peering remains idle before reconnecting |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-limit <i>keyword</i> idle-timeout <i>number</i> |
| Tree | idle-timeout |
| Description | This command defines the idle time after an administrative take-down before BGP re-establishes a session and reconnects to a peer.

When unconfigured, the command inherits the value from the group-level configuration. |
| Range | 1 to 1024 |
| Introduced | 16.0.R1 |
| Platforms | All |

log-only *boolean*

| | |
|------------|---|
| Synopsis | Send warning message at threshold instead of take-down |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-limit <i>keyword</i> log-only <i>boolean</i> |
| Tree | log-only |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

maximum *number*

| | |
|-------------|---|
| Synopsis | Maximum number of routes to be learned from a peer |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-limit <i>keyword</i> maximum <i>number</i> |
| Tree | maximum |
| Description | This command configures the maximum number of BGP routes than can be received from a peer before administrative action is taken. |

| | |
|------------|----------------------------|
| Range | 1 to 4294967295 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R2 |
| Platforms | All |

post-import *boolean*

| | |
|------------|--|
| Synopsis | Apply limit only to routes accepted by import policies |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-limit <i>keyword</i> post-import <i>boolean</i> |
| Tree | post-import |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

threshold *number*

| | |
|------------|---|
| Synopsis | Percentage threshold that triggers a warning message |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) prefix-limit <i>keyword</i> threshold <i>number</i> |
| Tree | threshold |
| Range | 1 to 100 |
| Default | 90 |
| Introduced | 16.0.R1 |
| Platforms | All |

remove-private

| | |
|------------|---|
| Synopsis | Enable the remove-private context |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) remove-private |
| Tree | remove-private |
| Introduced | 16.0.R1 |
| Platforms | All |

limited *boolean*

| | |
|------------|---|
| Synopsis | Remove private ASNs up to first public ASN encountered |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) remove-private limited <i>boolean</i> |
| Tree | limited |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

replace *boolean*

| | |
|------------|---|
| Synopsis | Replace private ASN with global ASN before advertising |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) remove-private replace <i>boolean</i> |
| Tree | replace |
| Default | false |
| Introduced | 19.10.R1 |
| Platforms | All |

skip-peer-as *boolean*

| | |
|------------|--|
| Synopsis | Keep private ASN if it is the same as the BGP peer ASN |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) remove-private skip-peer-as <i>boolean</i> |
| Tree | skip-peer-as |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

send-communities

| | |
|------------|--|
| Synopsis | Enter the send-communities context |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) send-communities |
| Tree | send-communities |
| Introduced | 16.0.R1 |

Platforms All

extended *boolean*

Synopsis Advertise the Extended Communities attribute to peers

Context **configure service vprn** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **send-communities extended** *boolean*

Tree **extended**

Description When unconfigured, this command inherits the value of the group-level setting (**true** or **false**). The command cannot be explicitly configured to **true**.

When this command inherits a value of **true**, BGP extended communities are sent to peers in the Extended Communities attribute.

When configured to **false**, all extended communities are removed from all routes advertised to BGP peers.

Introduced 16.0.R1

Platforms All

large *boolean*

Synopsis Advertise the Large Communities attribute to peers

Context **configure service vprn** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **send-communities large** *boolean*

Tree **large**

Description When unconfigured, this command inherits the value of the group-level setting (**true** or **false**). The command cannot be explicitly configured to **true**.

When this command inherits a value of **true**, BGP large communities are sent to peers in the Large Communities attribute.

When configured to **false**, all large communities are removed from all routes advertised to BGP peers.

Introduced 16.0.R1

Platforms All

standard *boolean*

Synopsis Advertise the Communities attribute to peers

Context **configure service vprn** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **send-communities standard** *boolean*

Tree **standard**

| | |
|-------------|--|
| Description | <p>When unconfigured, this command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to true.</p> <p>When this command inherits a value of true, BGP standard communities are sent to peers in the Communities attribute.</p> <p>When configured to false, all standard communities are removed from all routes advertised to BGP peers.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

send-default

| | |
|------------|--|
| Synopsis | Enable the send-default context |
| Context | configure service vprn string bgp neighbor (ipv4-address-with-zone ipv6-address-with-zone) send-default |

| Introduced | 19.7.R1 |
| Platforms | All |

ipv4 *boolean*

| | |
|------------|--|
| Synopsis | Enable IPv4 family type |
| Context | configure service vprn string bgp neighbor (ipv4-address-with-zone ipv6-address-with-zone) send-default ipv4 <i>boolean</i> |
| Tree | ipv4 |
| Default | false |
| Introduced | 19.7.R1 |
| Platforms | All |

ipv6 *boolean*

| | |
|------------|--|
| Synopsis | Enable IPv6 family type |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) send-default ipv6 <i>boolean</i> |
| Tree | ipv6 |
| Default | false |
| Introduced | 19.7.R1 |
| Platforms | All |

split-horizon *boolean*

| | |
|-------------|--|
| Synopsis | Prevent routes being reflected back to best-route peer |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) split-horizon <i>boolean</i> |
| Tree | split-horizon |
| Description | <p>When configured to true, this command enables the use of split-horizon.</p> <p>This command prevents routes from being reflected back to a peer that sends the best route. It applies to routes of all address families and to any type of sending peer; confed-EBGP, EBGP and IBGP.</p> <p>Enabling the split-horizon functionality may have a detrimental impact on peer and route scaling and should only be used when absolutely necessary.</p> <p>When unconfigured, the command inherits the value of the group-level setting (true or false). The command cannot be explicitly configured to false.</p> <p>When this command inherits a value of false, the use of split-horizon is disabled.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

tcp-mss (*number* | *keyword*)

| | |
|-------------|--|
| Synopsis | TCP maximum segment size override |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) tcp-mss (<i>number</i> <i>keyword</i>) |
| Tree | tcp-mss |
| Description | <p>This command configures an override for the TCP maximum segment size to use with a specific peer or set of peers (depending on the scope of the command).</p> <p>The configured value controls two properties of the TCP connection as follows:</p> |

TCP MSS option - The router advertises the TCP MSS option value in the TCP SYN packet it sends as part of the 3-way handshake. The advertised value may be lower than the configured value, depending on the IP MTU of the first hop IP interface. The peers must abide by this value when sending TCP segments to the local router.

TCP maximum segment size - The actual transmitted size may be lower than the configured value, depending on the TCP MSS option value signaled by the peers, the effect of path MTU discovery, or other factors.

| | |
|------------|-------------|
| Range | 384 to 9746 |
| Options | ip-stack |
| Introduced | 21.2.R1 |
| Platforms | All |

third-party-nexthop *boolean*

| | |
|------------|--|
| Synopsis | Apply third-party next-hop processing to EBGp peers |
| Context | configure service vprn <i>string</i> bgp neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) third-party-nexthop <i>boolean</i> |
| Tree | third-party-nexthop |

use-bgp-routes *boolean*

| | |
|-------------|--|
| Synopsis | Use BGP routes to resolve BGP next hops |
| Context | configure service vprn <i>string</i> bgp next-hop-resolution use-bgp-routes <i>boolean</i> |
| Tree | use-bgp-routes |
| Description | <p>When configured to true, BGP routes resolve BGP next hops. When this command is enabled, any unlabeled IPv4 or IPv6 BGP route received from a VPRN BGP peer becomes resolvable by up to four other BGP routes in order to resolve the route to a VPRN IP interface. A VPRN BGP route is not resolvable by another VPRN BGP route or by a BGP-VPN route.</p> <p>This command also allows unlabeled IPv4 or IPv6 BGP routes leaked from the GRT with unresolved next hops (in the GRT) to be resolvable by BGP-VPN routes (of the VPRN).</p> <p>When configured to false, BGP next hops are not resolved.</p> |

| | |
|------------|----------|
| Default | false |
| Introduced | 19.10.R1 |
| Platforms | All |

path-mtu-discovery *boolean*

| | |
|-------------|--|
| Synopsis | Enable Path MTU Discovery |
| Context | configure service vprn <i>string</i> bgp path-mtu-discovery <i>boolean</i> |
| Tree | path-mtu-discovery |
| Description | <p>When configured to true, Path MTU Discovery (PMTUD) is activated toward an IPv4 BGP neighbor. The Don't Fragment (DF) bit is set in the IP header of all IPv4 packets sent to the peer. If any device along the path toward the peer cannot forward the packet because the IP MTU of the interface is smaller than the IP packet size, the device drops the packet and sends an ICMP or ICMPv6 error message encoding the interface MTU. When the router receives the ICMP or ICMPv6 message, it lowers the TCP maximum segment size limit from the previous value to accommodate the IP MTU constraint.</p> <p>When configured to false, PMTUD is disabled and there is no TCP MSS configuration to associate with a BGP neighbor (in either the BGP configuration or the first-hop IP interface configuration). The router advertises a TCP MSS option of only 1024 bytes, limiting the received TCP segments to that size.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

peer-ip-tracking *boolean*

| | |
|------------|---|
| Synopsis | Enable BGP peer tracking |
| Context | configure service vprn <i>string</i> bgp peer-ip-tracking <i>boolean</i> |
| Tree | peer-ip-tracking |
| Default | false |

| Platforms | All |

peer-tracking-policy *reference*

| | |
|----------|---|
| Synopsis | Policy for BGP peer tracking on router instance |
| Context | configure service vprn <i>string</i> bgp peer-tracking-policy <i>reference</i> |
| Tree | peer-tracking-policy |

| | |
|-------------|--|
| Description | <p>This command specifies the name of a policy statement to use with the BGP peer-tracking function on BGP sessions where peer tracking is enabled.</p> <p>When unconfigured, the default peer-tracking policy allows any type of route to match the neighbor IP address except aggregate routes and LDP shortcut routes.</p> <p>Peer tracking should be used with caution. The peer-tracking policy should only permit one of direct-interface or direct routes to be advertised to a BGP peer. Advertising both routes causes the best route to oscillate.</p> |
| Reference | configure policy-options policy-statement <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

preference *number*

| | |
|-------------|---|
| Synopsis | Route preference for routes learned from all peers |
| Context | configure service vprn <i>string</i> bgp preference <i>number</i> |
| Tree | preference |
| Description | <p>This command configures the route preference for routes learned from the configured peers.</p> <p>The lower the preference value, the higher the chance of the route being the active route. The router assigns BGP routes the highest default preference as compared to routes that are direct, static or learned via MPLS or OSPF.</p> |
| Range | 1 to 255 |
| Default | 170 |
| Introduced | 16.0.R1 |
| Platforms | All |

rapid-withdrawal *boolean*

| | |
|-------------|---|
| Synopsis | Send BGP withdrawal UPDATE messages immediately |
| Context | configure service vprn <i>string</i> bgp rapid-withdrawal <i>boolean</i> |
| Tree | rapid-withdrawal |
| Description | <p>When configured to true, UPDATE messages containing withdrawn NLRI are sent immediately to a peer without waiting for the MRAI timer to expire. UPDATE messages containing reachable NLRI continue to wait for the MRAI timer to expire, or for a rapid update trigger.</p> <p>When configured to false, withdrawal processing continues with the normal behavior.</p> |
| Default | false |
| Introduced | 16.0.R1 |

| Default | false |
| Introduced | 19.7.R1 |
| Platforms | All |

split-horizon *boolean*

| | |
|-------------|--|
| Synopsis | Prevent routes being reflected back to best-route peer |
| Context | configure service vprn <i>string</i> bgp split-horizon <i>boolean</i> |
| Tree | split-horizon |
| Description | When configured to true , this command enables the use of split-horizon.

This command prevents routes from being reflected back to a peer that sends the best route. It applies to routes of all address families and to any type of sending peer; confed-EBGP, EBGP and IBGP. |

Enabling the split-horizon functionality may have a detrimental impact on peer and route scaling and should only be used when absolutely necessary.

When configured to **false**, the use of split-horizon is disabled.

| | |
|------------|---------|
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

tcp-mss *number*

| | |
|-------------|---|
| Synopsis | TCP maximum segment size override |
| Context | configure service vprn <i>string</i> bgp tcp-mss <i>number</i> |
| Tree | tcp-mss |
| Description | <p>This command configures an override for the TCP maximum segment size to use with a specific peer or set of peers (depending on the scope of the command).</p> <p>The configured value controls two properties of the TCP connection as follows:</p> <p>TCP MSS option - The router advertises the TCP MSS option value in the TCP SYN packet it sends as part of the 3-way handshake. The advertised value may be lower than the configured value, depending on the IP MTU of the first hop IP interface. The peers must abide by this value when sending TCP segments to the local router.</p> <p>TCP maximum segment size - The actual transmitted size may be lower than the configured value, depending on the TCP MSS option value signaled by the peers, the effect of path MTU discovery, or other factors.</p> |
| Range | 384 to 9746 |
| Introduced | 21.2.R1 |
| Platforms | All |

third-party-nexthop *boolean*

| | |
|-------------|---|
| Synopsis | Apply third-party next-hop processing to EBGp peers |
| Context | configure service vprn <i>string</i> bgp third-party-nexthop <i>boolean</i> |
| Tree | third-party-nexthop |
| Description | <p>When configured to true, this command enables the router to send third-party next hop to EBGp peers in the same subnet as the source peer. The address family of the transport must match the address family of the route.</p> <p>When an IPv4 or IPv6 route is received from one EBGp peer and advertised to another EBGp peer in the same IP subnet, the BGP next hop is left unchanged.</p> <p>When configured to false, third-party next-hop processing is disabled and the next hop carries the IP address of the interface used to establish the TCP connection to the peer.</p> |

| | |
|------------|---------|
| Default | false |

mpls-fwd-policy boolean |
| Tree | mpls-fwd-policy |
| Description | When configured to true , BGP uses the MPLS forwarding policy to determine the address of the BGP next hop.

When configured to false , the MPLS forwarding policy is not used for next-hop resolution. |
| Default | false |

| | |
|------------|----------|
| Introduced | 20.10.R1 |
| Platforms | All |

rib-api *boolean*

| | |
|-------------|---|
| Synopsis | Use RIB API gRPC service for next-hop resolution |
| Context | configure service vprn <i>string</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter rib-api <i>boolean</i> |
| Tree | rib-api |
| Description | When configured to true , BGP uses tunnels programmed using the RIB API gRPC service to resolve the next hops of routes imported into the EVPN service.
When configured to false , the RIB API service tunnels are not used for next-hop resolution. |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | All |

rsvp *boolean*

| | |
|-------------|---|
| Synopsis | Use RSVP tunneling for next-hop resolution |
| Context | configure service vprn <i>string</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter rsvp <i>boolean</i> |
| Tree | rsvp |
| Description | When configured to true , BGP searches the best metric RSVP LSP to determine the address of the BGP next hop. This address can correspond to the system interface or to another loopback interface used by the BGP instance on the remote node. The LSP metric is provided by MPLS in the tunnel table. In the case of multiple RSVP LSPs with the same lowest metric, BGP selects the LSP with the lowest tunnel ID.
When configured to false , the RSVP LSP is not used for next-hop resolution. |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | All |

sr-isis *boolean*

| | |
|----------|--|
| Synopsis | Use IS-IS SR tunneling for next-hop resolution |
| Context | configure service vprn <i>string</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter sr-isis <i>boolean</i> |

| | |
|-------------|--|
| Tree | sr-isis |
| Description | <p>When configured to true, BGP uses an IS-IS tunnel type to determine the address of the BGP next hop.</p> <p>The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered IS-IS instance.</p> <p>When configured to false, IS-IS tunneling is not used for next-hop resolution.</p> |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | All |

sr-ospf boolean

| | |
|-------------|---|
| Synopsis | Use OSPF SR tunneling for next-hop resolution |
| Context | configure service vprn string bgp-evpn mpls number auto-bind-tunnel resolution-filter sr-ospf boolean |
| Tree | sr-ospf |
| Description | <p>When configured to true, BGP uses an OSPF tunnel type to determine the address of the BGP next hop.</p> <p>The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered OPSF instance.</p> <p>When configured to false, OSPF tunneling is not used for next-hop resolution.</p> |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | All |

sr-ospf3 boolean

| | |
|-------------|--|
| Synopsis | Use OSPFv3 SR tunneling for next-hop resolution |
| Context | configure service vprn string bgp-evpn mpls number auto-bind-tunnel resolution-filter sr-ospf3 boolean |
| Tree | sr-ospf3 |
| Description | <p>When configured to true, BGP uses an OSPF3 tunnel type to determine the address of the BGP next hop.</p> <p>The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered OPSF3 instance.</p> <p>When configured to false, OSPF3 tunneling is not used for next-hop resolution.</p> |
| Default | false |

| | |
|------------|----------|
| Introduced | 20.10.R1 |
| Platforms | All |

sr-policy *boolean*

| | |
|-------------|---|
| Synopsis | Use SR policies for next-hop resolution |
| Context | configure service vprn string bgp-evpn mpls number auto-bind-tunnel resolution-filter sr-policy <i>boolean</i> |
| Tree | sr-policy |
| Description | <p>When configured to true, this command instructs BGP to use an SR policy to determine the address of the BGP next hop. The SR policy search criteria includes a non-null endpoint and color value that matches the BGP next hop and color extended community value, respectively, of the EVPN route.</p> <p>When configured to false, SR policies are not used for next-hop resolution.</p> |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | All |

sr-te *boolean*

| | |
|-------------|---|
| Synopsis | Use SR-TE tunneling for next-hop resolution |
| Context | configure service vprn string bgp-evpn mpls number auto-bind-tunnel resolution-filter sr-te <i>boolean</i> |
| Tree | sr-te |
| Description | <p>When configured to true, BGP uses an SR-TE tunnel type to determine the address of the BGP next hop.</p> <p>The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered tunnel ID.</p> <p>When configured to false, SR-TE tunneling is not used for next-hop resolution.</p> |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | All |

udp *boolean*

| | |
|----------|---|
| Synopsis | Use MPLS over UDP tunneling for next-hop resolution |
| Context | configure service vprn string bgp-evpn mpls number auto-bind-tunnel resolution-filter udp <i>boolean</i> |

| | |
|-------------|--|
| Tree | udp |
| Description | When configured to true , BGP uses an MPLS over UDP tunnel type to determine the address of the BGP next hop.
When configured to false , MPLS over UDP tunneling is not used for next-hop resolution. |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | All |

default-route-tag *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Default route tag |
| Context | configure service vpn <i>string</i> bgp-evpn mpls <i>number</i> default-route-tag <i>string</i> |
| Tree | default-route-tag |
| Description | This command configures a route tag that is used when sending a route to the BGP application (for the corresponding service and BGP instance). If the corresponding BGP instance is enabled, the command cannot be changed.

When used for BGP EVPN contexts, only one route tag can be passed to BGP for matching on export policies. In case of a conflict with other route tags pushed by EVPN, the default route tag has the least priority.

The following are examples of the conflict priority handling: <ul style="list-style-type: none"> • If a service is configured with both default-route-tag <i>X</i> and proxy-arp evpn-route-tag <i>Y</i>, the EVPN uses route tag <i>Y</i> when sending EVPN proxy-arp routes to the BGP RIB for advertisement. • If a given IP-prefix route is tagged in the route-table with tag <i>A</i> and the R-VPLS, in which the route is advertised, uses <i>B</i> as the default-route-tag, then EVPN keeps tag <i>A</i> when sending the route to the BGP RIB. The default-route-tag configuration is only supported on EVPN and IP-VPN service routes. The route tag for ES and AD per-ES routes is always zero. |
| Introduced | 20.10.R1 |
| Platforms | All |

domain-id string**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Domain ID of received BGP route before readvertisement |
| Context | configure service vprn string bgp-evpn mpls number domain-id string |
| Tree | domain-id |
| Description | <p>This command specifies the domain ID. The domain ID identifies the network from which the BGP route was received before the RTM advertises it to a different neighbor. The domain ID is part of a domain, represented as domain-id:isf_safi_type in the D-PATH attribute, as described in <i>draft-ietf-bess-evpn-ipvpn-interworking</i>. Gateway routers modify the D-PATH attribute. A gateway is a PE where a VPRN is instantiated. The VPRN in this case advertises or receives routes from multiple BGP owners (for example, EVPN-IFL and BGP-IPVPN) or multiple instances of the same owner (for example, VPRN with two BGP-IPVPN instances).</p> <p>Gateways use the D-PATH attribute to detect loops (for received routes where the D-PATH contains a local domain ID) and to make BGP best-path selection decisions based on the D-PATH length (shorter D-PATH is preferred).</p> <p>In the following example, suppose a gateway receives prefix P in an EVPN-IFL instance with the following D-PATH from neighbor N:</p> <pre>Seg Len=1 / 65000:1:128</pre> <p>If the router imports the route in VPRN-1, BGP-EVPN SRv6 instance with domain 65000:2, it readvertises it to its BGP-IPVPN MPLS instance as follows:</p> <pre>Seg Len=2 / 65000:2:70 / 65000:1:128</pre> <p>That is, the gateway prepends the local domain ID and family to the D-PATH before readvertising the route into a different instance.</p> |

dynamic-egress-label-limit boolean

| | |
|-------------|---|
| Synopsis | Enables dynamic egress label limit |
| Context | configure service vprn string bgp-evpn mpls number dynamic-egress-label-limit boolean |
| Tree | dynamic-egress-label-limit |
| Description | <p>When configured to true, this command relaxes the egress MPLS label limit check when resolving BGP next hops in the tunnel table.</p> <p>For VPRN services, the OAM label is never computed and, therefore, one more egress label is allowed.</p> |

For EVPN (Epipe and VPLS) services, the system only computes the control word and ESI label if they are used. For the control word, the system reduces the egress label limit by one label if the control word is configured in the service. When configured, the ESI label is not counted for Epipes or VPLS services without an ES.

When configured to **false** this command, for EVPN, Epipe, and VPLS services, always accounts for the ESI label and control word.

| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

domain-id string

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Domain ID of received BGP route before readvertisement |
| Context | configure service vpn string bgp-evpn segment-routing-v6 number domain-id string |
| Tree | domain-id |
| Description | <p>This command specifies the domain ID. The domain ID identifies the network from which the BGP route was received before the RTM advertises it to a different neighbor. The domain ID is part of a domain, represented as domain-id:isf_safi_type in the D-PATH attribute, as described in <i>draft-ietf-bess-evpn-ipvpn-interworking</i>. Gateway routers modify the D-PATH attribute. A gateway is a PE where a VPRN is instantiated. The VPRN in this case advertises or receives routes from multiple BGP owners (for example, EVPN-IFL and BGP-IPVPN) or multiple instances of the same owner (for example, VPRN with two BGP-IPVPN instances).</p> <p>Gateways use the D-PATH attribute to detect loops (for received routes where the D-PATH contains a local domain ID) and to make BGP best-path selection decisions based on the D-PATH length (shorter D-PATH is preferred).</p> <p>In the following example, suppose a gateway receives prefix P in an EVPN-IFL instance with the following D-PATH from neighbor N:</p> <p>Seg Len=1 / 65000:1:128</p> |

If the router imports the route in VPRN-1, BGP-EVPN SRv6 instance with domain 65000:2, it readvertises it to its BGP-IPVPN MPLS instance as follows:

Seg Len=2 / 65000:2:70 / 65000:1:128

That is, the gateway prepends the local domain ID and family to the D-PATH before readvertising the route into a different instance.

admin-state *keyword*

Synopsis Administrative state of BGP-IPVPN MPLS
Context **configure service vprn string bgp-ipvpn mpls admin-state keyword**
Tree [admin-state](#)
Options enable, disable
Default disable
Introduced 21.2.R1
Platforms All

auto-bind-tunnel

Synopsis Enter the **auto-bind-tunnel** context
Context **configure service vprn string bgp-ipvpn mpls auto-bind-tunnel**
Tree [auto-bind-tunnel](#)
Description Commands in this context configure the automatic binding parameters of a BGP-IPVPN service using tunnels to MP-BGP peers.

| | |
|------------|---------|
| Introduced | 21.2.R1 |
| Platforms | All |

allow-flex-algo-fallback *boolean*

| | |
|-------------|--|
| Synopsis | Enable flexible algorithm fallback |
| Context | configure service vprn <i>string</i> bgp-ipvpn mpls auto-bind-tunnel allow-flex-algo-fallback <i>boolean</i> |
| Tree | allow-flex-algo-fallback |
| Description | When configured to true , a BGP router with a Flex-Algorithm action configured (via the configure policy-options policy-statement entry action flex-algo command) can resolve to a tunnel with algorithm 0 if no target Flex-Algorithm tunnel is available.

When configured to false , the BGP router can resolve only to the intended Flex-Algorithm tunnel, which may cause traffic loss if no corresponding Flex-Algorithm tunnel is available. |
| Default | false |
| Introduced | 21.2.R1 |
| Platforms | All |

ecmp *number*

| | |
|-------------|---|
| Synopsis | Maximum ECMP routes allowed |
| Context | configure service vprn <i>string</i> bgp-ipvpn mpls auto-bind-tunnel ecmp <i>number</i> |
| Tree | ecmp |
| Description | This command configures the maximum number of tunnels that can be used as ECMP next hops for the VPRN. This value overrides the ECMP value configured at the configure service vprn context level. |
| Range | 1 to 32 |
| Default | 1 |
| Introduced | 21.2.R1 |
| Platforms | All |

enforce-strict-tunnel-tagging *boolean*

| | |
|----------|--|
| Synopsis | Allow enforcement of strict tunnel tagging |
| Context | configure service vprn <i>string</i> bgp-ipvpn mpls auto-bind-tunnel enforce-strict-tunnel-tagging <i>boolean</i> |

| | |
|-------------|---|
| Tree | enforce-strict-tunnel-tagging |
| Description | When configured to true , the system must only consider LSPs marked with an administrative tag for next-hop resolution.

When configured to false , tagged RSVP and SR-TE LSPs are considered first. The system then uses untagged LSPs of other types. |
| Default | false |
| Introduced | 21.2.R1 |
| Platforms | All |

resolution *keyword*

| | |
|------------|--|
| Synopsis | Resolution method for tunnel selection |
| Context | configure service vpn <i>string</i> bgp-ipvpn mpls auto-bind-tunnel resolution <i>keyword</i> |
| Tree | resolution |
| Options | none, filter, any |
| Default | none |
| Introduced | 21.2.R1 |
| Platforms | All |

resolution-filter

| | |
|-------------|---|
| Synopsis | Enter the resolution-filter context |
| Context | configure service vpn <i>string</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter |
| Tree | resolution-filter |
| Description | Commands in this context configure the subset of tunnel types that can be used in the resolution of BGP-IPVPN routes within the automatic binding of the BGP-IPVPN MPLS service to tunnels to MP-BGP peers. |
| Introduced | 21.2.R1 |
| Platforms | All |

bgp *boolean*

| | |
|----------|---|
| Synopsis | Use BGP tunneling for next-hop resolution |
| Context | configure service vpn <i>string</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter bgp <i>boolean</i> |
| Tree | bgp |

| | |
|-------------|---|
| Description | When configured to true , BGP searches the BGP LSP for the address of the BGP next hop.
When configured to false , BGP tunneling is not used and inter-area or inter-as prefixes are not resolved. |
| Default | true |
| Introduced | 21.2.R1 |
| Platforms | All |

gre boolean

| | |
|-------------|---|
| Synopsis | Use GRE tunneling for next-hop resolution |
| Context | configure service vpn string bgp-ipvpn mpls auto-bind-tunnel resolution-filter gre boolean |
| Tree | gre |
| Description | When configured to true , this command enables setting the tunnel type for the auto bind tunnel. |
| Default | false |
| Introduced | 21.2.R1 |
| Platforms | All |

ldp boolean

| | |
|-------------|--|
| Synopsis | Use LDP tunneling for next-hop resolution |
| Context | configure service vpn string bgp-ipvpn mpls auto-bind-tunnel resolution-filter ldp boolean |
| Tree | ldp |
| Description | When configured to true , BGP searches for an LDP LSP with a FEC prefix corresponding to the address of the BGP next hop.
When configured to false , LDP tunneling is not used for next-hop resolution. |
| Default | false |
| Introduced | 21.2.R1 |
| Platforms | All |

mpls-fwd-policy boolean

| | |
|----------|--|
| Synopsis | Use MPLS forwarding policy for next-hop resolution |
|----------|--|

| | |
|-------------|---|
| Context | configure service vprn <i>string</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter mpls-fwd-policy <i>boolean</i> |
| Tree | mpls-fwd-policy |
| Description | When configured to true , BGP uses the MPLS forwarding policy to determine the address of the BGP next hop.
When configured to false , the MPLS forwarding policy is not used for next-hop resolution. |
| Default | false |
| Introduced | 21.2.R1 |
| Platforms | All |

rib-api *boolean*

| | |
|-------------|---|
| Synopsis | Use RIB API gRPC service for next-hop resolution |
| Context | configure service vprn <i>string</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter rib-api <i>boolean</i> |
| Tree | rib-api |
| Description | When configured to true , BGP uses tunnels programmed using the RIB API gRPC service to resolve the next hops of routes imported into the EVPN service.
When configured to false , the RIB API service tunnels are not used for next-hop resolution. |
| Default | false |
| Introduced | 21.2.R1 |
| Platforms | All |

rsvp *boolean*

| | |
|-------------|---|
| Synopsis | Use RSVP tunneling for next-hop resolution |
| Context | configure service vprn <i>string</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter rsvp <i>boolean</i> |
| Tree | rsvp |
| Description | When configured to true , BGP searches the best metric RSVP LSP to determine the address of the BGP next hop. This address can correspond to the system interface or to another loopback interface used by the BGP instance on the remote node. The LSP metric is provided by MPLS in the tunnel table. In the case of multiple RSVP LSPs with the same lowest metric, BGP selects the LSP with the lowest tunnel ID.
When configured to false , the RSVP LSP is not used for next-hop resolution. |
| Default | false |

| | |
|------------|---------|
| Introduced | 21.2.R1 |
| Platforms | All |

sr-isis boolean

| | |
|-------------|--|
| Synopsis | Use IS-IS SR tunneling for next-hop resolution |
| Context | configure service vprn <i>string</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter sr-isis boolean |
| Tree | sr-isis |
| Description | <p>When configured to true, BGP uses an IS-IS tunnel type to determine the address of the BGP next hop.</p> <p>The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered IS-IS instance.</p> <p>When configured to false, IS-IS tunneling is not used for next-hop resolution.</p> |
| Default | false |
| Introduced | 21.2.R1 |
| Platforms | All |

sr-ospf boolean

| | |
|-------------|---|
| Synopsis | Use OSPF SR tunneling for next-hop resolution |
| Context | configure service vprn <i>string</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter sr-ospf boolean |
| Tree | sr-ospf |
| Description | <p>When configured to true, BGP uses an OSPF tunnel type to determine the address of the BGP next hop.</p> <p>The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered OSPF instance.</p> <p>When configured to false, OSPF tunneling is not used for next-hop resolution.</p> |
| Default | false |
| Introduced | 21.2.R1 |
| Platforms | All |

sr-ospf3 boolean

| | |
|----------|---|
| Synopsis | Use OSPFv3 SR tunneling for next-hop resolution |
|----------|---|

| | |
|-------------|---|
| Context | configure service vpn <i>string</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter sr-ospf3 boolean |
| Tree | sr-ospf3 |
| Description | <p>When configured to true, BGP uses an OSPFv3 tunnel type to determine the address of the BGP next hop.</p> <p>The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered OSPFv3 instance.</p> <p>When configured to false, OSPFv3 tunneling is not used for next-hop resolution.</p> |
| Default | false |
| Introduced | 21.2.R1 |
| Platforms | All |

sr-policy *boolean*

| | |
|-------------|--|
| Synopsis | Use SR policies for next-hop resolution |
| Context | configure service vpn <i>string</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter sr-policy boolean |
| Tree | sr-policy |
| Description | <p>When configured to true, SR policies are used to determine the address of the BGP next hop.</p> <p>The SR policy search criteria includes a non-null endpoint and color value that matches the BGP next hop and color extended community value, respectively, of the EVPN route.</p> <p>When configured to false, SR policies are not used for next-hop resolution.</p> |
| Default | false |
| Introduced | 21.2.R1 |
| Platforms | All |

sr-te *boolean*

| | |
|-------------|---|
| Synopsis | Use SR-TE tunneling for next-hop resolution |
| Context | configure service vpn <i>string</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter sr-te boolean |
| Tree | sr-te |
| Description | <p>When configured to true, BGP uses an SR-TE tunnel type to determine the address of the BGP next hop.</p> <p>The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered tunnel ID.</p> <p>When configured to false, SR-TE tunneling is not used for next-hop resolution.</p> |

| | |
|------------|---------|
| Default | false |
| Introduced | 21.2.R1 |
| Platforms | All |

udp *boolean*

| | |
|-------------|--|
| Synopsis | Use MPLS over UDP tunneling for next-hop resolution |
| Context | configure service vprn <i>string</i> bgp-ipvpn mpls auto-bind-tunnel resolution-filter udp boolean |
| Tree | udp |
| Description | When configured to true , BGP uses an MPLS over UDP tunnel type to determine the address of the BGP next hop.
When configured to false , MPLS over UDP tunneling is not used for next-hop resolution. |
| Default | false |
| Introduced | 21.2.R1 |
| Platforms | All |

weighted-ecmp *boolean*

| | |
|-------------|--|
| Synopsis | Allow weighted load-balancing |
| Context | configure service vprn <i>string</i> bgp-ipvpn mpls auto-bind-tunnel weighted-ecmp boolean |
| Tree | weighted-ecmp |
| Description | When configured to true , this command enables weighted ECMP for packets using tunnels that a VPRN automatically binds to. Packets are sprayed across LSPs in the ECMP according to the outcome of the hash algorithm and the configured load balancing weight of each LSP.
When configured to false , this command disables weighted ECMP for next-hop tunnel selection. |
| Default | false |
| Introduced | 21.2.R1 |
| Platforms | All |

domain-id *string*

| | |
|----------|---|
| Synopsis | Domain ID of received BGP route before readvertisement |
| Context | configure service vprn <i>string</i> bgp-ipvpn mpls domain-id string |
| Tree | domain-id |

| | |
|-------------|---|
| Description | <p>This command specifies the domain ID. The domain ID identifies the network from which the BGP route was received before the RTM advertises it to a different neighbor. The domain ID is part of a domain, represented as <code>domain-id:isf_safi_type</code> in the D-PATH attribute, as described in <i>draft-ietf-bess-evpn-ipvpn-interworking</i>. Gateway routers modify the D-PATH attribute. A gateway is a PE where a VPRN is instantiated. The VPRN in this case advertises or receives routes from multiple BGP owners (for example, EVPN-IFL and BGP-IPVPN) or multiple instances of the same owner (for example, VPRN with two BGP-IPVPN instances).</p> <p>Gateways use the D-PATH attribute to detect loops (for received routes where the D-PATH contains a local domain ID) and to make BGP best-path selection decisions based on the D-PATH length (shorter D-PATH is preferred).</p> <p>In the following example, suppose a gateway receives prefix P in an EVPN-IFL instance with the following D-PATH from neighbor N:</p> <pre>Seg Len=1 / 65000:1:128</pre> <p>If the router imports the route in VPRN-1, BGP-EVPN SRv6 instance with domain 65000:2, it readvertises it to its BGP-IPVPN MPLS instance as follows:</p> <pre>Seg Len=2 / 65000:2:70 / 65000:1:128</pre> <p>That is, the gateway prepends the local domain ID and family to the D-PATH before readvertising the route into a different instance.</p> |
| Introduced | 21.10.R1 |
| Platforms | All |

dynamic-egress-label-limit *boolean*

| | |
|-------------|---|
| Synopsis | Enables dynamic egress label limit |
| Context | configure <i>service vprn string</i> bgp-ipvpn mpls dynamic-egress-label-limit <i>boolean</i> |
| Tree | dynamic-egress-label-limit |
| Description | <p>When configured to true, this command relaxes the egress MPLS label limit check when resolving BGP next hops in the tunnel table.</p> <p>For VPRN services, the OAM label is never computed and, therefore, one more egress label is allowed.</p> <p>For EVPN (Epipe and VPLS) services, the system only computes the control word and ESI label if they are used. For the control word, the system reduces the egress label limit by one label if the control word is configured in the service. When configured, the ESI label is not counted for Epipes or VPLS services without an ES.</p> <p>When configured to false this command, for EVPN, Epipe, and VPLS services, always accounts for the ESI label and control word.</p> |
| Default | false |
| Introduced | 22.2.R1 |
| Platforms | All |

route-distinguisher (*string* | *keyword*)

| | |
|-------------|--|
| Synopsis | Route distinguisher |
| Context | configure service vpn <i>string</i> bgp-ipvpn mpls route-distinguisher (<i>string</i> <i>keyword</i>) |
| Tree | route-distinguisher |
| Description | This command specifies a unique route distinguisher (RD) to be associated with each routing instance to identify which VPN the route belongs to. |
| Options | auto-rd |
| Introduced | 21.2.R1 |
| Platforms | All |

vrf-export

| | |
|------------|---|
| Synopsis | Enable the vrf-export context |
| Context | configure service vpn <i>string</i> bgp-ipvpn mpls vrf-export |
| Tree | vrf-export |
| Introduced | 21.2.R1 |
| Platforms | All |

policy (*policy-expr-string* | *string*)

| | |
|---------------|--|
| Synopsis | Policy name |
| Context | configure service vpn <i>string</i> bgp-ipvpn mpls vrf-export policy (<i>policy-expr-string</i> <i>string</i>) |
| Tree | policy |
| Description | <p>This command configures VRF route policies that control routes between local VRFs and other VRFs on the same or remote PE routers (using MP-BGP).</p> <p>Each referenced object is either a policy logical expression or the name of a single policy.</p> <p>Only one referenced object can be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT). The objects are evaluated in the specified order to determine whether to accept or reject the route.</p> <p>Only the first policy can have the maximum length and the rest can be up to 64 characters.</p> <p>Aggregate routes are not advertised using MP-BGP protocols to the other MP-BGP peers.</p> |
| String Length | 1 to 255 |

default-route-tag *string***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Default route tag |
| Context | configure service vpn <i>string</i> bgp-ipvpn segment-routing-v6 <i>number</i> default-route-tag <i>string</i> |
| Tree | default-route-tag |
| Description | <p>This command configures a route tag that is used when sending a route to the BGP application (for the corresponding service and BGP instance). If the corresponding BGP instance is enabled, the command cannot be changed.</p> <p>When used for BGP EVPN contexts, only one route tag can be passed to BGP for matching on export policies. In case of a conflict with other route tags pushed by EVPN, the default route tag has the least priority.</p> <p>The following are examples of the conflict priority handling:</p> <ul style="list-style-type: none"> • If a service is configured with both default-route-tag <i>X</i> and proxy-arp evpn-route-tag <i>Y</i>, the EVPN uses route tag <i>Y</i> when sending EVPN proxy-arp routes to the BGP RIB for advertisement. • If a given IP-prefix route is tagged in the route-table with tag <i>A</i> and the R-VPLS, in which the route is advertised, uses <i>B</i> as the default-route-tag, then EVPN keeps tag <i>A</i> when sending the route to the BGP RIB. <p>The default-route-tag configuration is only supported on EVPN and IP-VPN service routes. The route tag for ES and AD per-ES routes is always zero.</p> |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

domain-id string**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Domain ID of received BGP route before readvertisement |
| Context | configure service vprn string bgp-ipvpn segment-routing-v6 number domain-id string |
| Tree | domain-id |
| Description | <p>This command specifies the domain ID. The domain ID identifies the network from which the BGP route was received before the RTM advertises it to a different neighbor. The domain ID is part of a domain, represented as domain-id:isf_safi_type in the D-PATH attribute, as described in <i>draft-ietf-bess-evpn-ipvpn-interworking</i>. Gateway routers modify the D-PATH attribute. A gateway is a PE where a VPRN is instantiated. The VPRN in this case advertises or receives routes from multiple BGP owners (for example, EVPN-IFL and BGP-IPVPN) or multiple instances of the same owner (for example, VPRN with two BGP-IPVPN instances).</p> <p>Gateways use the D-PATH attribute to detect loops (for received routes where the D-PATH contains a local domain ID) and to make BGP best-path selection decisions based on the D-PATH length (shorter D-PATH is preferred).</p> <p>In the following example, suppose a gateway receives prefix P in an EVPN-IFL instance with the following D-PATH from neighbor N:</p> <p>Seg Len=1 / 65000:1:128</p> <p>If the router imports the route in VPRN-1, BGP-EVPN SRv6 instance with domain 65000:2, it readvertises it to its BGP-IPVPN MPLS instance as follows:</p> <p>Seg Len=2 / 65000:2:70 / 65000:1:128</p> <p>That is, the gateway prepends the local domain ID and family to the D-PATH before readvertising the route into a different instance.</p> |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

resolution keyword

| | |
|------------|---|
| Synopsis | Resolution options for routes |
| Context | configure service vprn string bgp-ipvpn segment-routing-v6 number resolution keyword |
| Tree | resolution |
| Options | route-table, tunnel-table, fallback-tunnel-to-route-table |
| Default | route-table |
| Introduced | 22.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

route-distinguisher (*string* | *keyword*)

| | |
|-------------|---|
| Synopsis | Route distinguisher |
| Context | configure service vpn <i>string</i> bgp-ipvpn segment-routing-v6 <i>number</i> route-distinguisher (<i>string</i> <i>keyword</i>) |
| Tree | route-distinguisher |
| Description | This command specifies a unique route distinguisher (RD) to be associated with each routing instance to identify the VPN to which the route belongs.

Alternatively, the system can automatically generate an RD based on the BGP automatic RD range configured at the configure service system level. |
| Options | auto-rd |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

source-address *string***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Source IPv6 address |
| Context | configure service vpn <i>string</i> bgp-ipvpn segment-routing-v6 <i>number</i> source-address <i>string</i> |
| Tree | source-address |
| Description | When configured, this command specifies the source IPv6 address used in the SA field of the outer IPv6 header of the SRv6 encapsulated packet.

When not configured, the source IPv6 address is inherited from the configuration of the global default address in the router "base" segment-routing segment-routing-v6 source-address context.

A source IPv6 address must be configured in this context or in the base router context.

The system does not check if the address entered is a valid local address. |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

| Context | configure service vprn <i>string</i> dhcp-server dhcpv4 <i>string</i> failover startup-wait-time <i>number</i> |
| Tree | startup-wait-time |
| Description | This command configures a delay that avoids transient issues during the initialization process. During startup wait time, each failover peer waits after the initialization process before assuming the active role for the prefix designated as local or remote. |
| Range | 60 to 3600 |
| Units | seconds |
| Default | 120 |

| | |
|------------|---|
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

force-renews *boolean*

| | |
|-------------|---|
| Synopsis | Send FORCERENEW messages to force renewals of leases |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv4 <i>string</i> force-renews <i>boolean</i> |
| Tree | force-renews |
| Description | When configured to true , FORCERENEW messages are enabled for DHCP. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

lease-hold

| | |
|------------|--|
| Synopsis | Enter the lease-hold context |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv4 <i>string</i> lease-hold |
| Tree | lease-hold |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

additional-scenarios

| | |
|-------------|---|
| Synopsis | Enter the additional-scenarios context |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv4 <i>string</i> lease-hold additional-scenarios |
| Tree | additional-scenarios |
| Description | Commands in this context configure additional types of leases or triggers that cause the system to hold up leases. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

internal-lease-ipsec *boolean*

| | |
|----------|---|
| Synopsis | Apply the lease hold timer to local IPsec clients |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv4 <i>string</i> lease-hold additional-scenarios internal-lease-ipsec <i>boolean</i> |

| | |
|------------|---|
| Tree | internal-lease-ipsec |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

solicited-release *boolean*

| | |
|-------------|---|
| Synopsis | Apply lease hold timer for solicited releases |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv4 <i>string</i> lease-hold additional-scenarios solicited-release <i>boolean</i> |
| Tree | solicited-release |
| Description | This command enables the server to hold up a lease even for a solicited release, for example, when the server receives a normal DHCP release message. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

time *number*

| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ignore-mclt-on-takeover *boolean*

Synopsis Ignore maximum client lead during takeover from partner

Context **configure service vprn** *string* **dhcp-server dhcpv4** *string* **pool** *string* **failover ignore-mclt-on-takeover** *boolean*

Tree [ignore-mclt-on-takeover](#)

Description When configured to **true**, the remote IP address range can be taken over immediately when the intercommunication link enters the PARTNER-DOWN state, without having to wait for the MCLT to expire.

When configured to **false**, the DHCP lease time for new clients is restricted to the MCLT during a failure. For existing clients, the lease time is gradually reduced over time to the MCLT by consecutive DHCP renewals.

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

maximum-client-lead-time *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Maximum time that DHCP server can extend client's lease

Context **configure service vprn** *string* **dhcp-server dhcpv4** *string* **pool** *string* **failover maximum-client-lead-time** *number*

Tree [maximum-client-lead-time](#)

Description This command configures the maximum client lead time (MCLT), which is the maximum time that a DHCP server can extend the client's lease time beyond the lease time currently known by the DHCP partner node. In dual-homed environments, the initial lease time for all DHCP clients is restricted to the MCLT by default. Consecutive DHCP renewals can extend the lease time beyond the MCLT.

Range 600 to 86399

Units seconds

Default 600

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

partner-down-delay *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Delay to prevent lease duplication during link failure |
| Context | configure <i>service vprn string dhcp-server dhcpv4 string pool string failover partner-down-delay number</i> |
| Tree | partner-down-delay |
| Description | This command configures the interval before a failed intercommunication link transitions from the COMM-INT state to the PARTNER-DOWN state. This delay prevents IP lease duplication during link failure by not allowing new IP addresses to be assigned from the remote IP address range. This timer is intended to provide the operator with enough time to remedy the failed situation and avoid duplication of IP addresses and prefixes during the failure. |
| Range | 0 to 86399 |
| Units | seconds |
| Default | 86399 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

peer [[address](#)] *reference*

| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

end *string*

| | |
|-------------|--|
| Synopsis | Upper bound of the IP address range |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> subnet <i>string</i> exclude-addresses <i>string</i> end <i>string</i> |
| Tree | exclude-addresses |
| Description | This command specifies the end of a range of IP addresses that are excluded from the pool of IP addresses in this subnet. |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

maximum-declined *number*

| | |
|------------|--|
| Synopsis | Maximum number of declined addresses allowed |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> subnet <i>string</i> maximum-declined <i>number</i> |
| Tree | maximum-declined |
| Max. Range | 0 to 4294967295 |
| Default | 64 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

minimum-free

| | |
|-------------|---|
| Synopsis | Enter the minimum-free context |
| Context | configure service vprn string dhcp-server dhcpv4 string pool string subnet string minimum-free |
| Tree | minimum-free |
| Description | Commands in this context specify the minimum number of free addresses in this pool. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

absolute number

| | |
|------------|---|
| Synopsis | Minimum number of free addresses in this pool or subnet |
| Context | configure service vprn string dhcp-server dhcpv4 string pool string subnet string minimum-free absolute number |
| Tree | absolute |
| Range | 0 to 255 |
| Default | 1 |
| Notes | The following elements are part of a choice: absolute or percent . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

event-when-depleted boolean

| | |
|-------------|--|
| Synopsis | Generate notification when addresses are depleted |
| Context | configure service vprn string dhcp-server dhcpv4 string pool string subnet string minimum-free event-when-depleted boolean |
| Tree | event-when-depleted |
| Description | When configured to true , a system-generated event is generated when all available addresses in the pool or subnet of a local DHCP server are depleted.

When configured to false , no action is taken when all available addresses in the pool or subnet of a local DHCP server are depleted. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

percent *number*

| | |
|------------|---|
| Synopsis | Minimum free addresses as a percentage |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> subnet <i>string</i> minimum-free percent <i>number</i> |
| Tree | percent |
| Range | 0 to 100 |
| Default | 1 |
| Notes | The following elements are part of a choice: absolute or percent . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

options

| | |
|------------|--|
| Synopsis | Enter the options context |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> subnet <i>string</i> options |
| Tree | options |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

option [[number](#)] (*number* | *keyword*)

| | |

| Synopsis | Empty DHCP option |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> subnet <i>string</i> options option (<i>number</i> <i>keyword</i>) empty |
| Tree | empty |

| | |
|------------|---|
| Notes | The following elements are part of a mandatory choice: ascii-string , duration , empty , hex-string , ipv4-address , or netbios-node-type . |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

hex-string *string*

| | |
|---------------|--|
| Synopsis | DHCP option specified as hexadecimal string |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> subnet <i>string</i> options <i>option</i> (<i>number</i> <i>keyword</i>) hex-string <i>string</i> |
| Tree | hex-string |
| String Length | 1 to 256 |
| Notes | The following elements are part of a mandatory choice: ascii-string , duration , empty , hex-string , ipv4-address , or netbios-node-type . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipv4-address *string*

| | |
|----------------|--|
| Synopsis | DHCP option as a list of IPv4 addresses |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> subnet <i>string</i> options <i>option</i> (<i>number</i> <i>keyword</i>) ipv4-address <i>string</i> |
| Tree | ipv4-address |
| Max. Instances | 4 |
| Notes | The following elements are part of a mandatory choice: ascii-string , duration , empty , hex-string , ipv4-address , or netbios-node-type .
This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

netbios-node-type *keyword*

| | |
|----------|--|
| Synopsis | DHCP option as NetBIOS node type |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv4 <i>string</i> pool <i>string</i> subnet <i>string</i> options <i>option</i> (<i>number</i> <i>keyword</i>) netbios-node-type <i>keyword</i> |
| Tree | netbios-node-type |

| | |
|------------|---|
| Options | b-node, p-node, m-node, h-node |
| Notes | The following elements are part of a mandatory choice: ascii-string , duration , empty , hex-string , ipv4-address , or netbios-node-type . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

pool-selection

| | |
|------------|--|
| Synopsis | Enter the pool-selection context |
| Context | configure service vpn string dhcp-server dhcpv4 string pool-selection |
| Tree | pool-selection |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

use-gi-address

| | |
|-------------|--|
| Synopsis | Enable the use-gi-address context |
| Context | configure service vpn string dhcp-server dhcpv4 string pool-selection use-gi-address |
| Tree | use-gi-address |
| Description | <p>Commands in this context configure gateway interface (GI) address matching. When configured, the pool can be used for address matching even if a subnet is not found. If the local user database name is not used, addresses are provided only by GI. If a user must be blocked from getting an address, the server maps to a local user database and configures the user with no address.</p> <p>A pool can include multiple subnets. Since the GI is shared by multiple subnets in a subscriber interface, the pool can provide IP addresses from any of the subnets included when the GI is matched to one of its subnets. This allows a pool to be created that represents a sub-net.</p> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

scope keyword

| | |

preferred-lifetime *number*

| | |
|-------------|--|
| Synopsis | Time this lease remains preferred |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv6 <i>string</i> defaults preferred-lifetime <i>number</i> |
| Tree | preferred-lifetime |
| Description | This command configures the preferred lifetime of the IPv6 lease address or prefix. When the preferred lifetime expires, any derived addresses are deprecated. The preferred lifetime must be less than or equal to the valid lifetime.

Each address or prefix assigned to the client has associated preferred and valid lifetimes specified by the address assignment authority (such as the DHCP server, RADIUS, or ESM). To request an extension of the lifetimes assigned to an address, the client sends a renew message to the addressing authority. The authority sends a reply message to the client with the new lifetimes, allowing the client to continue to use the address/prefix without interruption. The lifetimes are transmitted from the addressing authority to the client in the identity association (IA) option at the top level of the message (not the address or prefix level). |
| Range | 300 to 315446399 |
| Units | seconds |
| Default | 3600 |

| | |
|------------|---|
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

rebind-time *number*

| | |
|-------------|--|
| Synopsis | Rebind time for the lease |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv6 <i>string</i> defaults rebind-time <i>number</i> |
| Tree | rebind-time |
| Description | <p>This command configures the rebind time, known as T2, at which the client contacts the addressing authority to extend the lifetimes of its leases.</p> <p>The IP addressing authority (such as the DHCP server, RADIUS, or ESM) controls the time for extending lifetimes on assigned addresses/prefixes through the T1 and T2 parameters assigned to an identity association (IA). At renew time, T1, the client initiates a renew or reply message exchange to extend the lifetimes of any addresses in the IA. The client includes an IA option with all addresses or prefixes currently assigned to the IA in its renew message.</p> <p>Recommended values for T1 and T2 are 0.5 and 0.8 times the shortest preferred lifetime of the addresses or prefixes in the IA that the addressing authority is willing to extend, respectively. The configured rebind timer value should always be less than or equal to the rebind timer. The T1 and T2 values are carried in the IPV6 address option in the IA.</p> |
| Range | 0 to 1209600 |
| Units | seconds |
| Default | 2880 |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

renew-time *number*

| | |
|-------------|--|
| Synopsis | Renew time for the lease |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv6 <i>string</i> defaults renew-time <i>number</i> |
| Tree | renew-time |
| Description | <p>This command configures the renew time, known as T1, at which the client makes a transition to the lease-renewal state.</p> <p>The IP addressing authority (such as the DHCP server, RADIUS, or ESM) controls the time for extending lifetimes on assigned addresses/prefixes through the T1 and T2 parameters assigned to an identity association (IA). At renew time, T1, the client initiates a renew/reply message exchange to extend the lifetimes of any addresses in the IA. The client includes an IA option with all addresses/prefixes currently assigned to the IA in its renew message.</p> |

Recommended values for T1 and T2 are 0.5 and 0.8 times the shortest preferred lifetime of the addresses or prefixes in the IA that the addressing authority is willing to extend, respectively. The configured renew timer value should always be shorter than or equal to the rebind timer. The T1 and T2 values are carried in the IPV6 address option in the IA.

| | |

| Synopsis | Ignore maximum client lead during takeover from partner |
| Context | configure service vprn string dhcp-server dhcpv6 string failover ignore-mclt-on-takeover boolean |
| Tree | ignore-mclt-on-takeover |
| Description | <p>When configured to true, the remote IP address range can be taken over immediately when the intercommunication link enters the PARTNER-DOWN state, without having to wait for the MCLT to expire.</p> <p>When configured to false, the DHCP lease time for new clients is restricted to the MCLT during a failure. For existing clients, the lease time is gradually reduced over time to the MCLT by consecutive DHCP renewals.</p> |
| Default | false |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

maximum-client-lead-time *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Maximum time that DHCP server can extend client's lease |
| Context | configure service vprn string dhcp-server dhcpv6 string failover maximum-client-lead-time number |
| Tree | maximum-client-lead-time |
| Description | This command configures the maximum client lead time (MCLT), which is the maximum time that a DHCP server can extend the client's lease time beyond the lease time currently known by the DHCP partner node. In dual-homed environments, the initial lease time for all DHCP clients is restricted to the MCLT by default. Consecutive DHCP renewals can extend the lease time beyond the MCLT. |
| Range | 600 to 86399 |
| Units | seconds |
| Default | 600 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

partner-down-delay *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Delay to prevent lease duplication during link failure |
| Context | configure service vprn string dhcp-server dhcpv6 string failover partner-down-delay number |
| Tree | partner-down-delay |
| Description | This command configures the interval before a failed intercommunication link transitions from the COMM-INT state to the PARTNER-DOWN state. This delay prevents IP lease duplication during link failure by not allowing new IP addresses to be assigned from the remote IP address range. This timer is intended to provide the operator with enough time to remedy the failed situation and avoid duplication of IP addresses and prefixes during the failure. |
| Range | 0 to 86399 |

| | |
|------------|---|
| Units | seconds |
| Default | 86399 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

peer [[address](#)] *reference*

| String Length | 1 to 32 |

| | |
|------------|---|
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

startup-wait-time *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Time between initialization and assuming active role |
| Context | configure service vprn string dhcp-server dhcpv6 string failover startup-wait-time number |
| Tree | startup-wait-time |
| Description | This command configures a delay that avoids transient issues during the initialization process. During startup wait time, each failover peer waits after the initialization process before assuming the active role for the prefix designated as local or remote. |
| Range | 60 to 3600 |
| Units | seconds |
| Default | 120 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ignore-rapid-commit *boolean*

| | |
|-------------|---|
| Synopsis | Ignore Rapid Commit option |
| Context | configure service vprn string dhcp-server dhcpv6 string ignore-rapid-commit boolean |
| Tree | ignore-rapid-commit |
| Description | When configured to true , the server ignores the Rapid Commit option sent by the client and uses the regular message exchange. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

interface-id-mapping *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Map hosts within interface-to-prefix combinations |
| Context | configure service vpn <i>string dhcp-server dhcpv6 string interface-id-mapping boolean</i> |
| Tree | interface-id-mapping |
| Description | When configured to true , this command specifies an interface-mapping method that uses a combination of unique /64 prefixes and interface IDs. A /64 prefix is allocated to each interface ID, and all clients with the same interface ID are assigned an address from the prefix. This method is used for bridging clients in the same local loop and SAP, so that sharing the prefix allows communication to stay local. For SLAAC-based assignment, downstream neighbor discovery is automatically enabled to resolve the assigned address. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

preferred-lifetime number

| | |
|----------|-----------------------------------|
| Synopsis | Time this lease remains preferred |
|----------|-----------------------------------|

| | |
|-------------|---|
| Context | configure service vprn <i>string</i> dhcp-server dhcpv6 <i>string</i> pool <i>string</i> prefix <i>string</i> preferred-lifetime <i>number</i> |
| Tree | preferred-lifetime |
| Description | <p>This command configures the preferred lifetime of the IPv6 lease address or prefix. When the preferred lifetime expires, any derived addresses are deprecated. The preferred lifetime must be less than or equal to the valid lifetime.</p> <p>Each address or prefix assigned to the client has associated preferred and valid lifetimes specified by the address assignment authority (such as the DHCP server, RADIUS, or ESM). To request an extension of the lifetimes assigned to an address, the client sends a renew message to the addressing authority. The authority sends a reply message to the client with the new lifetimes, allowing the client to continue to use the address/prefix without interruption. The lifetimes are transmitted from the addressing authority to the client in the identity association (IA) option at the top level of the message (not the address or prefix level).</p> |
| Range | 300 to 315446399 |
| Units | seconds |
| Default | 3600 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

prefix-length-threshold [**prefix-length**] *number*

rebind-time *number*

| | |
|-------------|--|
| Synopsis | Rebind time for the lease |
| Context | configure service vprn <i>string</i> dhcp-server dhcpv6 <i>string</i> pool <i>string</i> prefix <i>string</i> rebind-time <i>number</i> |
| Tree | rebind-time |
| Description | <p>This command configures the rebind time, known as T2, at which the client contacts the addressing authority to extend the lifetimes of its leases.</p> <p>The IP addressing authority (such as the DHCP server, RADIUS, or ESM) controls the time for extending lifetimes on assigned addresses/prefixes through the T1 and T2 parameters assigned to an identity association (IA). At renew time, T1, the client initiates a renew or reply message exchange to extend the lifetimes of any addresses in the IA. The client includes an IA option with all addresses or prefixes currently assigned to the IA in its renew message.</p> <p>Recommended values for T1 and T2 are 0.5 and 0.8 times the shortest preferred lifetime of the addresses or prefixes in the IA that the addressing authority is willing to extend, respectively. The configured rebind timer value should always be less than or equal to the rebind timer. The T1 and T2 values are carried in the IPV6 address option in the IA.</p> |
| Range | 0 to 1209600 |
| Units | seconds |
| Default | 2880 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

renew-time *number*

ecmp *number*

| | |
|----------|---|
| Synopsis | Maximum equal-cost routes for routing table instance |
| Context | configure service vprn <i>string</i> ecmp <i>number</i> |

| | |
|-------------|--|
| Tree | ecmp |
| Description | <p>This command configures ECMP and defines the number of routes for path sharing. ECMP can be used only for routes learned with the same preference and the same protocol.</p> <p>If available ECMP routes at the best preference exceed the maximum ECMP routes allowed, the system selects the route using the following criteria:</p> <ol style="list-style-type: none"> 1. The system selects the lowest next hop router ID. 2. If the next hop goes to the same neighbor, the system selects the next hop with the lowest interface index. |
| Range | 1 to 64 |
| Default | 1 |
| Introduced | 16.0.R1 |
| Platforms | All |

ecmp-unequal-cost *boolean*

| | |
|------------|--|
| Synopsis | Enable ECMP unequal cost capability |
| Context | configure service vprn <i>string</i> ecmp-unequal-cost <i>boolean</i> |
| Tree | ecmp-unequal-cost |
| Default | false |
| Introduced | 19.7.R1 |
| Platforms | All |

entropy-label *boolean*

| | |
|-------------|--|
| Synopsis | Use entropy label |
| Context | configure service vprn <i>string</i> entropy-label <i>boolean</i> |
| Tree | entropy-label |
| Description | <p>When configured to true, this command enables the use of entropy labels.</p> <p>The entropy label and indicator (EL/ELI) are inserted on relevant packets. Applicable packets are those for which at least one LSP in the stack at the far end has advertised the entropy-label capability. These LSPs are in LDP or RSVP tunnels used by an IGP or BGP shortcut. If the tunnel is of type RSVP, the entropy-label capability must also be enabled under the configure router mpls or configure router mpls lsp context.</p> <p>This command also results in other traffic that is forwarded over an LDP or RSVP LSP for which this router is the LER, and for which there is no explicit service endpoint on this router, to have the EL/ELI enabled, subject to the LSP far-end advertising entropy-label-capability. An example of such traffic includes packets arriving on a stitched LDP LSP forwarded over an RSVP LSP.</p> |

The entropy label and the hash label features are mutually exclusive. The entropy label cannot be configured on a spoke SDP or service where the hash label feature has already been configured.

When configured to **false**, the use of entropy labels is disabled.

| | |
|------------|---------|
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

eth-cfm

| | |
|------------|--|
| Synopsis | Enter the eth-cfm context |
| Context | configure <i>service vprn string eth-cfm</i> |
| Tree | <i>eth-cfm</i> |
| Introduced | 19.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

export-inactive-bgp *boolean*

| | |
|-------------|---|
| Synopsis | Export preferred BGP route even if inactive |
| Context | configure <i>service vprn string export-inactive-bgp boolean</i> |
| Tree | <i>export-inactive-bgp</i> |
| Description | <p>When configured to true, the preferred BGP route learned by a VPRN is exported as the VPN-IP route even if it is inactive in the route table because a preferred BGP VPRN route from another PE is present. This overrides the default state in which the VPRN cannot export an inactive BGP route. For the BGP route to be exported, the VRF export policy must accept it. This command applies to both MPLS VPN and SRv6 VPN routes. In SRv6 VPN routes the advertised instruction is an End.DT, while in MPLS VPN routes the advertised label is a per-next-hop label. This “best-external” type of route advertisement is useful in active/standby multi-homing scenarios because it ensures that all PEs know about the backup path provided by the standby PE.</p> <p>When configured to false, the preferred BGP route is not exported if it is inactive.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

fib-priority *keyword*

filter-cam-type *keyword*

Synopsis Filter policy type for FlowSpec embedding

Context **configure** [service](#) [vprn](#) *string* [flowspec](#) [filter-cam-type](#) *keyword*

Tree [filter-cam-type](#)

Description This command specifies the filter type that is required to embed FlowSpec entries. The filter type defines the match criteria that are available in the filter policy.

Options normal, packet-length

Default normal

Introduced 20.7.R1

Platforms All

ip-filter-max-size *number*

Synopsis Maximum number of flowspec rule entries in IPv4 filter

Context **configure** [service](#) [vprn](#) *string* [flowspec](#) [ip-filter-max-size](#) *number*

Tree [ip-filter-max-size](#)

Description This command configures the maximum number of IPv4 flowspec routes, or rules, that can be entered in the auto-created embedded filter, fSpec-X. Flowspec filter entries embedded in a filter policy in this routing instance will use filter entries from the range between the embedding offset and (offset + ip-filter-max-size – 1).

The sum of the maximum-size value and the highest offset in any IPv4 filter that embeds IPv4 flowspec rules from this routing instance (excluding filters that embed at offset 262143) must not exceed 262143.

The maximum size can be adjusted up or down at any time. If the current number of IPv4 flowspec rules is greater than the new maximum, the extra rules are removed immediately but retained in the BGP RIB. If the limit is increased, new rules are programmed only as they are received in new BGP updates.

Range 0 to 262143

Default 512

Introduced 16.0.R1

Platforms All

ipv6-filter-max-size *number*

Synopsis Maximum number of flowspec rule entries in IPv6 filter

| | |

| Synopsis | Multicast CAC policy name |
| Context | configure service vpn <i>string</i> igmp forwarding-group-interface forwarding-service <i>string</i> group-interface-name <i>reference</i> mcac policy <i>reference</i> |
| Tree | policy |
| Description | This command configures the name of the global channel bandwidth definition policy that is used for (H)MCAC and HQoS adjustment. |

Within the scope of HQoS adjustment, the channel definition policy under the group interface is used if redirection is unconfigured. In this case, the HQoS adjustment can be applied to IPoE subscribers in per-SAP replication mode.

If redirection is configured, the channel bandwidth definition policy applied under the Layer 3 redirected interface is in effect.

Hierarchical MCAC (HMCAC) is supported on two levels simultaneously:

- subscriber level and redirected interface when redirection is configured
- subscriber level and group-interface level when redirection is unconfigured

In HMCAC, the subscriber is checked against its bandwidth limits first, then against the bandwidth limits of the redirected or group interface. If redirection is configured but the policy is referenced only under the group interface, no admission control is executed (HMCAC or MCAC).

import-policy *reference*

Synopsis Import policy that filters IGMP packets

Context **configure** [service vpn](#) *string* [igmp interface](#) *string* **import-policy** *reference*

Tree [import-policy](#)

Description This command configures the IGMP import policy, or filter, for an interface subscriber or a group interface. An IGMP filter is also known as a black or white list, and it is defined as a router policy option.

When redirection is applied, only the import policy from the subscriber is in effect. The import policy under the group interface is applicable only for IGMP states received directly on the SAP (AN in IGMP proxy mode).

Reference **configure** [policy-options policy-statement](#) *string*

Introduced 16.0.R1

dynamic-tunnel-redundant-nexthop string

| | |
|-------------|--|
| Synopsis | Redundant next-hop address for the dynamic IPsec tunnel |
| Context | configure service vprn string interface string dynamic-tunnel-redundant-nexthop string |
| Tree | dynamic-tunnel-redundant-nexthop |
| Description | This command specifies the redundant next-hop address on a public or private IPsec interface (with public or private tunnel SAP) for a dynamic IPsec tunnel. The next-hop address is used by a standby node to shunt traffic to a master if it receives the address. The next-hop address is resolved in the routing table of a corresponding service. |

| | |
|------------|---|
| Notes | The following elements are part of a choice: multi-chassis-shunting-profile or (dynamic-tunnel-redundant-nexthop and static-tunnel-redundant-nexthop). |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

hold-time

| | |

| Synopsis | Enable the dynamic context |
| Context | configure service vprn string interface string ipsec ipsec-tunnel string key-exchange dynamic |
| Tree | dynamic |
| Notes | The following elements are part of a choice: dynamic or manual . |
| Introduced | 22.7.R1 |
| Platforms | VSR |

auto-establish *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Attempt to establish a phase 1 exchange automatically |
| Context | configure service vprn string interface string ipsec ipsec-tunnel string key-exchange dynamic auto-establish <i>boolean</i> |
| Tree | auto-establish |
| Default | false |
| Introduced | 22.7.R1 |
| Platforms | VSR |

cert

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Enter the cert context |
| Context | configure service vprn string interface string ipsec ipsec-tunnel string key-exchange dynamic cert |
| Tree | cert |
| Description | Commands in this context configure the attributes of the dynamic keying certificate. |
| Introduced | 22.7.R1 |
| Platforms | VSR |

cert-profile *reference*

| | |
|------------|--|
| Synopsis | Certificate profile name |
| Context | configure service vprn string interface string ipsec ipsec-tunnel string key-exchange dynamic cert cert-profile reference |
| Tree | cert-profile |
| Reference | configure ipsec cert-profile string |
| Introduced | 22.7.R1 |
| Platforms | VSR |

status-verify

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Enter the status-verify context |
| Context | configure service vprn string interface string ipsec ipsec-tunnel string key-exchange dynamic cert status-verify |
| Tree | status-verify |
| Description | Commands in this context configure attributes of Certificate Status Verification (CSV). |
| Introduced | 22.7.R1 |
| Platforms | VSR |

default-result *keyword*

| | |
|-------------|---|
| Synopsis | Default result for Certificate Status Verification |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> key-exchange dynamic cert status-verify default-result <i>keyword</i> |
| Tree | default-result |
| Description | This command specifies the default certificate revocation status result to use when all configured CSV methods fail to return a result. |
| Options | revoked, good |
| Default | revoked |
| Introduced | 22.7.R1 |
| Platforms | VSR |

primary *keyword*

| | |
|-------------|--|
| Synopsis | Primary method of CSV to verify the revocation status |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> key-exchange dynamic cert status-verify primary <i>keyword</i> |
| Tree | primary |
| Description | This command configures the primary method of Certificate Status Verification (CSV) that is used to verify the revocation status of the certificate of the peer. |
| Options | crl, ocsf |
| Default | crl |
| Introduced | 22.7.R1 |
| Platforms | VSR |

secondary *keyword*

| | |
|-------------|--|
| Synopsis | Secondary method used to verify certificate revocation |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipsec ipsec-tunnel <i>string</i> key-exchange dynamic cert status-verify secondary <i>keyword</i> |
| Tree | secondary |
| Description | This command specifies the secondary method of Certificate Status Verification (CSV) that is used to verify the revocation status of the peer certificate. |
| Options | none, crl, ocsf |
| Default | none |

Introduced 22.7.R1
 Platforms VSR

| Platforms | All |

allow-directed-broadcasts *boolean*

| | |
|------------|--|
| Synopsis | Forward directed broadcasts |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 allow-directed-broadcasts <i>boolean</i> |
| Tree | allow-directed-broadcasts |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

bfd

| | |
|------------|---|
| Synopsis | Enter the bfd context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 bfd |
| Tree | bfd |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of BFD sessions |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 bfd admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | All |

echo-receive *number*

| | |
|------------|---|
| Synopsis | Minimum echo interval over this interface |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 bfd echo-receive <i>number</i> |
| Tree | echo-receive |
| Range | 100 to 100000 |
| Units | milliseconds |
| Introduced | 16.0.R1 |

Platforms All

multiplier *number*

Synopsis Number of consecutive BFD messages missed from the peer

Context **configure** [service vprn](#) *string* [interface](#) *string* [ipv4 bfd multiplier](#) *number*

Tree [multiplier](#)

Description This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments.

Range 1 to 20

Default 3

Introduced 16.0.R1

Platforms All

receive *number*

Synopsis BFD receive interval over this interface

Context **configure** [service vprn](#) *string* [interface](#) *string* [ipv4 bfd receive](#) *number*

Tree [receive](#)

Description This command specifies the receive interval for the BFD session.
On the 7750 SR, this command can only be configured to a value less than 100 when the **type** command is configured to **cpm-np**.

Range 10 to 100000

Units milliseconds

Default 100

Introduced 16.0.R1

Platforms All

transmit-interval *number*

Synopsis BFD transmit interval over this interface

Context **configure** [service vprn](#) *string* [interface](#) *string* [ipv4 bfd transmit-interval](#) *number*

Tree [transmit-interval](#)

Description This command configures the transmit intervals.

On the 7750 SR, this command can only be configured to a value less than 100 when the **type** command is configured to **cpm-np**.

| | |
|------------|--------------|
| Range | 10 to 100000 |
| Units | milliseconds |
| Default | 100 |
| Introduced | 16.0.R1 |
| Platforms | All |

type keyword

| | |
|-------------|---|
| Synopsis | Local termination point for the BFD session |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 bfd type <i>keyword</i> |
| Tree | type |
| Description | This command sets the local termination point for the BFD session to allow for fast timers down to 10 ms granularity.
The options to specify where the BFD session runs are: <ul style="list-style-type: none"> • auto (default) – the system chooses and uses the line card CPU only for single-hop BFD sessions with timer intervals equal to or greater than 100ms. All others are placed on the cpm-np. • cpm-np – BFD session runs on the FP complex associated with the CPM. This is either the FP on the CPM or the one elected on smaller systems. • fp – BFD session runs on the line card CPU. This option can only be used for single-hop BFD sessions with timers equal to or greater than 100ms. |
| Options | cpm-np, auto, fp |
| Default | auto |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

dhcp

| | |
|------------|--|
| Synopsis | Enter the dhcp context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp |
| Tree | dhcp |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of DHCP |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

description *string*

| | |
|---------------|---|
| Synopsis | Text description |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp description <i>string</i> |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R1 |
| Platforms | All |

gi-address *string*

| | |
|-------------|---|
| Synopsis | GI address for the DHCP relay |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp gi-address <i>string</i> |
| Tree | gi-address |
| Description | <p>This command configures the GI address to distinguish between the different subscriber interfaces (and potentially group interfaces) defined when the router functions as a DHCP relay.</p> <p>By default, the GI address used in the relayed DHCP packet is the primary IP address of a normal IES interface. Specifying the GI address allows the user to choose a secondary address. For group interfaces, a GI address must be specified under the group interface DHCP context or subscriber interface DHCP context for DHCP to function.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

lease-populate

| | |
|----------|--|
| Synopsis | Enter the lease-populate context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp lease-populate |

| | |
|------------|--------------------------------|
| Tree | lease-populate |
| Introduced | 16.0.R1 |
| Platforms | All |

max-leases *number*

| | |
|------------|---|
| Synopsis | Maximum number of DHCPv4 leases allowed |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp lease-populate max-leases <i>number</i> |
| Tree | max-leases |
| Range | 0 to 511999 |
| Introduced | 16.0.R1 |
| Platforms | All |

option-82

| | |
|-------------|---|
| Synopsis | Enter the option-82 context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp option-82 |
| Tree | option-82 |
| Description | Commands in this context configure the processing required when the router receives a DHCP request that already has an Option 82 field in the packet. |
| Introduced | 16.0.R1 |
| Platforms | All |

action *keyword*

| | |
|------------|---|
| Synopsis | Action to take with received DHCP Option 82 |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp option-82 action <i>keyword</i> |
| Tree | action |
| Options | replace, drop, keep |
| Default | keep |
| Introduced | 16.0.R1 |
| Platforms | All |

circuit-id

| | |
|------------|--|
| Synopsis | Enter the circuit-id context |
| Context | configure service vprn string interface string ipv4 dhcp option-82 circuit-id |
| Tree | circuit-id |
| Introduced | 16.0.R1 |
| Platforms | All |

ascii-tuple

| | |
|------------|---|
| Synopsis | Use the ASCII-encoded tuple for the circuit ID |
| Context | configure service vprn string interface string ipv4 dhcp option-82 circuit-id ascii-tuple |
| Tree | ascii-tuple |
| Notes | The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple . |
| Introduced | 16.0.R1 |
| Platforms | All |

ifindex

| | |
|------------|---|
| Synopsis | Use the interface index for the circuit ID |
| Context | configure service vprn string interface string ipv4 dhcp option-82 circuit-id ifindex |
| Tree | ifindex |
| Notes | The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple . |
| Introduced | 16.0.R1 |
| Platforms | All |

none

| | |
|------------|---|
| Synopsis | Do not include the circuit ID |
| Context | configure service vprn string interface string ipv4 dhcp option-82 circuit-id none |
| Tree | none |
| Notes | The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple . |
| Introduced | 16.0.R1 |

Platforms All

sap-id

Synopsis Use the SAP ID

Context **configure** [service vprn string](#) [interface string](#) [ipv4 dhcp option-82 circuit-id](#) [sap-id](#)

Tree [sap-id](#)

Notes The following elements are part of a choice: **ascii-tuple**, **ifindex**, **none**, **sap-id**, or **vlan-ascii-tuple**.

Introduced 16.0.R1

Platforms All

vlan-ascii-tuple

Synopsis Include the VLAN ID and dot1p bits in the ASCII tuple

Context **configure** [service vprn string](#) [interface string](#) [ipv4 dhcp option-82 circuit-id](#) [vlan-ascii-tuple](#)

Tree [vlan-ascii-tuple](#)

Description When configured, the router includes the VLAN ID and dot1p bits with the ASCII-tuple information. This only occurs on dot1q and QinQ-encapsulated ports. When the Option 82 bits are stripped, dot1p bits are copied to the Ethernet header of the outgoing packet.
When unconfigured, the router leaves the circuit ID sub-option of the DHCP packet empty.

Notes The following elements are part of a choice: **ascii-tuple**, **ifindex**, **none**, **sap-id**, or **vlan-ascii-tuple**.

Introduced 16.0.R1

Platforms All

remote-id

Synopsis Enter the **remote-id** context

Context **configure** [service vprn string](#) [interface string](#) [ipv4 dhcp option-82](#) [remote-id](#)

Tree [remote-id](#)

Description Commands in this context configure the remote IP sub-option of the DHCP packet with the identity of the remote host end (typically the DHCP client).

Introduced 16.0.R1

Platforms All

ascii-string *string*

| | |
|---------------|--|
| Synopsis | User-defined ASCII string for the remote ID |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp option-82 remote-id ascii-string <i>string</i> |
| Tree | ascii-string |
| String Length | 1 to 32 |
| Notes | The following elements are part of a choice: ascii-string , mac , or none . |
| Introduced | 16.0.R1 |
| Platforms | All |

mac

| | |
|------------|---|
| Synopsis | Use the MAC address for the remote ID |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp option-82 remote-id mac |
| Tree | mac |
| Notes | The following elements are part of a choice: ascii-string , mac , or none . |
| Introduced | 16.0.R1 |
| Platforms | All |

none

| | |
|------------|--|
| Synopsis | Do not include the remote ID |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp option-82 remote-id none |
| Tree | none |
| Notes | The following elements are part of a choice: ascii-string , mac , or none . |
| Introduced | 16.0.R1 |
| Platforms | All |

vendor-specific-option

| | |
|----------|--|
| Synopsis | Enter the vendor-specific-option context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp option-82 vendor-specific-option |
| Tree | vendor-specific-option |

| | |
|-------------|---|
| Description | Commands in this context configure the Nokia Vendor-Specific Option (VSO) of the DHCP packet. |
| Introduced | 16.0.R1 |
| Platforms | All |

client-mac-address *boolean*

| | |
|------------|--|
| Synopsis | Send the MAC address in the VSO |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp option-82 vendor-specific-option client-mac-address <i>boolean</i> |
| Tree | client-mac-address |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

pool-name *boolean*

| | |
|------------|---|
| Synopsis | Send the pool name in the VSO |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp option-82 vendor-specific-option pool-name <i>boolean</i> |
| Tree | pool-name |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

sap-id *boolean*

| | |
|------------|--|
| Synopsis | Send SAP ID in the sub-option of the DHCP relay packet |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp option-82 vendor-specific-option sap-id <i>boolean</i> |
| Tree | sap-id |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

service-id *boolean*

| | |
|------------|---|
| Synopsis | Send the service ID in the Vendor Specific Option |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp option-82 vendor-specific-option service-id <i>boolean</i> |
| Tree | service-id |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

string *string*

| | |
|---------------|--|
| Synopsis | User-defined ASCII string for the VSO |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp option-82 vendor-specific-option string <i>string</i> |
| Tree | string |
| String Length | 1 to 32 |
| Introduced | 16.0.R1 |
| Platforms | All |

system-id *boolean*

| | |
|------------|--|
| Synopsis | Send the system ID in the VSO |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp option-82 vendor-specific-option system-id <i>boolean</i> |
| Tree | system-id |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

proxy-server

| | |
|------------|---|
| Synopsis | Enter the proxy-server context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp proxy-server |
| Tree | proxy-server |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of the DHCP proxy server |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp proxy-server admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | All |

emulated-server *string*

| | |
|-------------|---|
| Synopsis | IP address used as the DHCP server address for the SAP |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp proxy-server emulated-server <i>string</i> |
| Tree | emulated-server |
| Description | This command configures the IP address which will be used as the DHCP server address in the context of the SAP. Typically, the configured address should be in the context of the subnet represented by the service. |
| Introduced | 16.0.R1 |
| Platforms | All |

lease-time

| | |
|------------|--|
| Synopsis | Enter the lease-time context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp proxy-server lease-time |
| Tree | lease-time |
| Introduced | 16.0.R1 |
| Platforms | All |

radius-override *boolean*

| | |
|----------|--|
| Synopsis | Use lease time information provided by RADIUS server |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp proxy-server lease-time radius-override <i>boolean</i> |
| Tree | radius-override |

| | |
|------------|---------|
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

value *number*

| | |
|------------|---|
| Synopsis | DHCP lease time |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp proxy-server lease-time <i>value number</i> |
| Tree | value |
| Range | 300 to 315446399 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

python-policy *reference*

| | |
|------------|--|
| Synopsis | Python policy |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp python-policy <i>reference</i> |
| Tree | python-policy |
| Reference | configure python python-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

relay-plain-bootp *boolean*

| | |
|------------|--|
| Synopsis | Enable relaying of plain BOOTP packets |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp relay-plain-bootp <i>boolean</i> |
| Tree | relay-plain-bootp |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

relay-proxy

| | |
|------------|---|
| Synopsis | Enable the relay-proxy context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp relay-proxy |
| Tree | relay-proxy |
| Introduced | 16.0.R1 |
| Platforms | All |

release-update-src-ip *boolean*

| | |
|------------|--|
| Synopsis | Update the source IP address of a DHCP RELEASE message |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp relay-proxy release-update-src-ip <i>boolean</i> |
| Tree | release-update-src-ip |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

siaddr-override *string*

| | |
|------------|---|
| Synopsis | DHCP server IP address for address hiding function |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp relay-proxy siaddr-override <i>string</i> |
| Tree | siaddr-override |
| Introduced | 16.0.R1 |
| Platforms | All |

release-include-gi-address *boolean*

| | |
|------------|---|
| Synopsis | Include gateway IP address in DHCP Release messages |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp release-include-gi-address <i>boolean</i> |
| Tree | release-include-gi-address |
| Default | false |
| Introduced | 21.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

server string

| | |
|----------------|--|
| Synopsis | IP addresses for DHCP server requests |
| Context | configure service vprn string interface string ipv4 dhcp server string |
| Tree | server |
| Description | This command configures a list of servers that this interface forwards requests to.

The operator can enter the list of servers as either IP addresses or fully qualified domain names. The operator must specify at least one server specified for DHCP relay to work. If there are multiple servers, the system forwards the request to all the servers in the list. |
| Max. Instances | 8 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | All |

src-ip-addr keyword

| | |
|------------|---|
| Synopsis | Type of source address to use for DHCP relay |
| Context | configure service vprn string interface string ipv4 dhcp src-ip-addr keyword |
| Tree | src-ip-addr |
| Options | auto, gi-address |
| Default | auto |
| Introduced | 16.0.R1 |
| Platforms | All |

trusted boolean

| | |
|-------------|---|
| Synopsis | Relay untrusted packets |
| Context | configure service vprn string interface string ipv4 dhcp trusted boolean |
| Tree | trusted |
| Description | When configured to true , the router enables the trusted mode on the interface. When enabled, the relay agent changes the existing GI address (of the request) to the ingress interface, and forwards the request.

A DHCP request that contains a GI address of 0.0.0.0 and an Option 82 field in the packet is discarded unless it arrives on a trusted circuit. |

This behavior only applies if the Relay Agent Information Option action is to keep the existing information. When the Option 82 field is replaced by the relay agent, the original Option 82 information is lost, and there is no reason to enable the trusted option.

| | |
|------------|---------|
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

use-arp *boolean*

| | |
|------------|---|
| Synopsis | Use ARP to determine the destination hardware address |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 dhcp use-arp <i>boolean</i> |
| Tree | use-arp |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

icmp

| | |
|------------|--|
| Synopsis | Enter the icmp context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 icmp |
| Tree | icmp |
| Introduced | 16.0.R1 |
| Platforms | All |

mask-reply *boolean*

| | |
|------------|--|
| Synopsis | Allow responses to ICMP mask requests on the interface |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 icmp mask-reply <i>boolean</i> |
| Tree | mask-reply |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

param-problem

| | |
|----------|--|
| Synopsis | Enter the param-problem context |
|----------|--|

| | |
|-------------|---|
| Context | configure service vprn string interface string ipv4 icmp param-problem |
| Tree | param-problem |
| Description | Commands in this context specify the settings for ICMP Parameter Problem messages generated by the interface. |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of sent Parameter Problem messages |
| Context | configure service vprn string interface string ipv4 icmp param-problem admin-state keyword |
| Tree | admin-state |
| Options | enable, disable |
| Default | enable |
| Introduced | 16.0.R1 |
| Platforms | All |

number *number*

| | |
|------------|---|
| Synopsis | Maximum number of Parameter Problem messages to send |
| Context | configure service vprn string interface string ipv4 icmp param-problem number number |
| Tree | number |
| Range | 10 to 1000 |
| Default | 100 |
| Introduced | 16.0.R1 |
| Platforms | All |

seconds *number*

| | |

admin-state *keyword*

| | |
|-------------|--|
| Synopsis | Administrative state of VRRP |
| Context | configure <i>service vprn string interface string ipv4 vrrp number admin-state keyword</i> |
| Tree | admin-state |
| Description | <p>The command determines the administrative state of non-owner virtual router instances.</p> <p>Non-owner virtual router instances can be administratively disabled. This allows the termination of VRRP participation in the virtual router and stops all routing and other access capabilities with regards to the virtual router IP addresses. Disabling the virtual router instance provides a mechanism to maintain the virtual routers without causing false backup or master state changes.</p> <p>When disabled, no VRRP advertisement messages are generated and all received VRRP advertisement messages are silently discarded with no processing.</p> <p>Whenever the administrative or operational state of a virtual router instance transitions, a log message is generated.</p> <p>An owner virtual router context does not use this command. To administratively disable an owner virtual router instance, use the admin-state command within the parent IP interface node which administratively disables the IP interface.</p> |
| Options | enable, disable |

| | |
|------------|---------|
| Default | enable |
| Introduced | 16.0.R1 |
| Platforms | All |

authentication-key *string*

| | |
|---------------|--|
| Synopsis | Password for simple text authentication |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 vrrp <i>number</i> authentication-key <i>string</i> |
| Tree | authentication-key |
| Description | This command optionally assigns a simple text password authentication key to generate master VRRP advertisement messages and validate received VRRP advertisement messages.

If this command is re-executed with a different password key defined, the new key immediately replaces the old key. This command may be executed at any time. |
| String Length | 1 to 38 |
| Introduced | 16.0.R1 |
| Platforms | All |

backup *string*

| | |
|-------------|---|
| Synopsis | Virtual router IP addresses for the interface |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 vrrp <i>number</i> backup <i>string</i> |
| Tree | backup |
| Description | This command associates virtual router IP addresses with those of the parental IP interface.

This command has two different functions based on whether it is being executed on an owner or non-owner virtual router instance.

Non-owner virtual router instances create a routable IP interface address that is operationally dependent on the virtual router instance mode (master or backup). This command, when executed on an owner virtual router instance, does not create a routable IP interface address; it simply defines the existing IP addresses of the parental IP interface that are advertised by the virtual router instance.

For owner virtual router instances, this command defines the IP addresses that are advertised within VRRP advertisement messages. This communicates the IP addresses that the master is advertising to backup virtual routers receiving the messages. The specified <i>unicast-ipv4-address</i> must be equal to one of the existing IP addresses in the parental IP interface (primary or secondary) or this command fails.

See "Owner and non-owner VRRP" in the <i>7450 ESS, 7750 SR, 7950 XRS, and VSR Router Configuration Guide</i> for more information about owner and non-owner virtual router instances. |

mac *string*

| | |
|-------------|---|
| Synopsis | Virtual MAC address to use in ARP responses |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 vrrp <i>number</i> mac <i>string</i> |
| Tree | mac |
| Description | This command sets an explicit MAC address for the virtual router instance that overrides the VRRP default derived from the VRID.

Changing the default MAC address is useful when an existing HSRP or other non-VRRP default MAC is in use by the IP hosts that use the virtual router IP address. Many |

hosts do not monitor unessential ARPs and continue to use the cached non-VRRP MAC address after the virtual router becomes master of the host's gateway address.

Additionally, this command sets the MAC address used in ARP responses when the virtual router instance is master. Routing of IP packets with *unicast-mac-address* as the destination MAC is also enabled. The MAC must be the same for all virtual routers participating as a virtual router or indeterminate connectivity by the attached IP hosts results. All VRRP advertisement messages are transmitted with *unicast-mac-address* as the source MAC.

An operator can execute this command at any time and it takes effect immediately. When the virtual router MAC on a master virtual router instance changes, a gratuitous ARP is immediately sent with a VRRP advertisement message. If the virtual router instance is disabled or operating as a backup, the gratuitous ARP and VRRP advertisement messages are not sent.

| | |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms | All |

master-int-inherit *boolean*

| | |
|-------------|---|
| Synopsis | Allow master instance to dictate the master down timer |
| Context | configure <i>service vprn string interface string ipv4 vrrp number master-int-inherit boolean</i> |
| Tree | master-int-inherit |
| Description | <p>When configured to true, the virtual router instance inherits the advertisement interval timer of the master VRRP router, which backup routers use to calculate the master down timer.</p> <p>When configured to false, the locally configured message interval must match the master's VRRP advertisement message advertisement interval field value or the message is discarded.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

message-interval *number*

| | |
|-------------|--|
| Synopsis | Interval for sending VRRP advertisement messages |
| Context | configure <i>service vprn string interface string ipv4 vrrp number message-interval number</i> |
| Tree | message-interval |
| Description | This command configures the administrative advertisement message timer used by the master virtual router instance to send VRRP advertisement messages. The backup master down timer is derived from the value configured using this command. |

The usage of this command varies for non-owner virtual router instances, depending on the state of the virtual router (master or backup) and the state of the **master-int-inherit** command:

- When a non-owner is operating as master for the virtual router, the system uses the configured value of this command as the operational advertisement timer, similar to an owner virtual router instance. The **master-int-inherit** command has no effect when operating as master.
- When a non-owner is in the backup state with **master-int-inherit** disabled, the system uses the configured value of this command to match the incoming advertisement interval field of the VRRP advertisement message. If the locally configured message interval does not match the advertisement interval field, the system discards the VRRP advertisement.
- When a non-owner is in the backup state with **master-int-inherit** enabled, the configured value of this command is ignored. The master down timer is indirectly derived from the advertisement interval field value of the incoming VRRP advertisement message.

| | |
|------------|-------------|

monitor-oper-group *reference*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | VRRP instance to follow a specified operational group |
| Context | configure <i>service vprn string interface string ipv4 vrrp number monitor-oper-group reference</i> |
| Tree | <i>monitor-oper-group</i> |
| Description | This command configures VRRP to associate with an operational group. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router, the operational group is up and the operational group is down for all other VRRP states. |
| Reference | configure <i>service oper-group string</i> |
| Introduced | 22.2.R1 |
| Platforms | All |

ntp-reply *boolean*

| | |
|-------------|--|
| Synopsis | Allow processing of NTP requests |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 vrrp <i>number</i> ntp-reply <i>boolean</i> |
| Tree | ntp-reply |
| Description | When configured to true , the router redirects NTP requests to the VRRP virtual IP address. This behavior only applies to the router acting as the master VRRP router.
When configured to false , the router does not process NTP requests. |
| Default | false |
| Introduced | 20.2.R1 |
| Platforms | All |

oper-group *reference*

| | |
|-------------|---|
| Synopsis | Operational group name associated with the VRRP |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 vrrp <i>number</i> oper-group <i>reference</i> |
| Tree | oper-group |
| Description | This command configures an operational group to associate with the VRRP. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router (MR), the operational group is up. The operational group is down for all other VRRP states. |
| Reference | configure service oper-group <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

owner *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Designate the virtual router instance as owner |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 vrrp <i>number</i> owner <i>boolean</i> |
| Tree | owner |
| Description | When configured to true , the router designates this virtual router instance as the owner of the virtual router IP addresses. Therefore, this virtual router becomes responsible for |

forwarding packets sent to the virtual router IP addresses. The owner also assumes the role of master virtual router.

When configured to **false**, this virtual router instance is designated as a non-owner.

| | |
|------------|---------|
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

passive *boolean*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Suppress the processing of VRRP advertisement messages |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 vrrp <i>number</i> passive <i>boolean</i> |
| Tree | passive |
| Description | <p>When configured to true, the router identifies this virtual router instance as passive; and therefore the owner of the virtual router IP addresses. A passive virtual router instance does not transmit or receive VRRP advertisement messages and is always in either the master state (if the interface is operationally up) or the init state (if the interface is operationally down).</p> <p>When configured to false, this virtual router instance is not identified as passive, meaning that it transmits and receives VRRP advertisement messages.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

ping-reply *boolean*

| | |
|-------------|---|
| Synopsis | Allow non-owner master to reply to ICMP echo requests |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 vrrp <i>number</i> ping-reply <i>boolean</i> |
| Tree | ping-reply |
| Description | <p>When configured to true, the router allows the non-owner master to reply to ICMP echo requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the ping request. Ping must not have been disabled at the management security level (either on the parental IP interface or on the Ping source host address).</p> <p>When configured to false, ICMP echo requests sent to non-owner master virtual IP addresses are silently discarded.</p> |

Non-owner backup virtual routers never respond to ICMP echo requests, regardless of the configuration of this command.

| | |
|------------|---------|
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

policy reference

| | |
|-------------|--|
| Synopsis | VRRP priority control policy |
| Context | configure service vprn string interface string ipv4 vrrp number policy reference |
| Tree | policy |
| Description | <p>This command configures a VRRP priority control policy to associate with the virtual router instance.</p> <p>VRRP priority control policies can override or adjust the base priority value of the virtual router instance, depending on events or conditions within the chassis.</p> <p>An operator can associate a policy with more than one virtual router instance. The priority events within the policy either override or diminish the base priority set with the priority command. As priority events clear in the policy, the in-use priority can eventually be restored to the base priority value.</p> <p>For non-owner virtual router instances, if this command is not executed, the base priority is used as the in-use priority.</p> |
| Reference | configure vrrp policy number |
| Introduced | 16.0.R1 |
| Platforms | All |

preempt boolean

| | |
|-------------|--|
| Synopsis | Allow the VRRP to override an existing non-owner master |
| Context | configure service vprn string interface string ipv4 vrrp number preempt boolean |
| Tree | preempt |
| Description | <p>When configured to true, this virtual router instance overrides any non-owner master with an in-use message priority value less than the in-use priority value of this virtual router.</p> <p>When configured to false, this virtual router only becomes master if the master down timer expires before a VRRP advertisement message is received from another virtual router.</p> |
| Default | true |
| Introduced | 16.0.R1 |

Platforms All

priority number

Synopsis Base priority for the VRRP

Context **configure service vprn string interface string ipv4 vrrp number priority number**

Tree [priority](#)

Description This command configures the base router priority for the virtual router instance, which defines the selection order of the virtual router in the master election process.

The in-use priority is derived from the base priority. However, the in-use priority is modified by optional VRRP priority control policies. An operator can use VRRP priority control policies to either override or adjust the base priority value depending on events or conditions within the chassis.

Range 1 to 255

Introduced 16.0.R1

Platforms All

ssh-reply boolean

Synopsis Allow the non-owner master to reply to SSH requests

Context **configure service vprn string interface string ipv4 vrrp number ssh-reply boolean**

Tree [ssh-reply](#)

Description When configured to **true**, the router allows the non-owner master to reply to SSH requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the SSH request. SSH cannot be disabled at the management security level (either on the parental IP interface or on the SSH source host address).

When configure to **false**, SSH requests to non-owner master virtual IP addresses are silently discarded.

Default false

Introduced 16.0.R1

Platforms All

standby-forwarding boolean

Synopsis Allow standby router to forward traffic

Context **configure service vprn string interface string ipv4 vrrp number standby-forwarding boolean**

Tree [standby-forwarding](#)

| | |
|-------------|---|
| Description | When configured to true , the standby router forwards all traffic.
When configured to false , the standby router cannot forward traffic sent to the MAC address of the virtual router. However, the standby router still forwards traffic sent to its own MAC address. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

telnet-reply *boolean*

| | |
|-------------|--|
| Synopsis | Allow non-owner master to reply to Telnet requests |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 vrrp <i>number</i> telnet-reply <i>boolean</i> |
| Tree | telnet-reply |
| Description | When configured to true , the router allows the non-owner master to reply to Telnet requests directed at the IP addresses of the virtual router instance. Any routed interface can receive Telnet requests. Telnet cannot be disabled at the management security level (either on the parental IP interface or on the Telnet source host address).
When configured to false , the router silently discards Telnet requests sent to non-owner master virtual IP addresses. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

traceroute-reply *boolean*

| | |
|-------------|--|
| Synopsis | Allow non-owner master to reply to traceroute requests |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv4 vrrp <i>number</i> traceroute-reply <i>boolean</i> |
| Tree | traceroute-reply |
| Description | When configured to true , the router allows a non-owner master to reply to traceroute requests directed to the IP addresses of the virtual router instance.
When configured to false , the router silently discards traceroute requests sent to non-owner master virtual IP addresses.
Traceroute must not have been disabled at the management security level (either on the parental IP interface or the source host address). |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv6

| | |
|------------|--|
| Synopsis | Enable the ipv6 context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 |

| | |
|------------|--|
| Synopsis | Enter the address list instance |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 address <i>string</i> |
| Tree | address |
| Introduced | 16.0.R1 |
| Platforms | All |

[ipv6-address] *string*

| | |
|------------|--|
| Synopsis | IPv6 address assigned to the interface |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 address <i>string</i> |
| Tree | address |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

duplicate-address-detection *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Enable Duplicate Address Detection |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 address <i>string</i> duplicate-address-detection <i>boolean</i> |
| Tree | duplicate-address-detection |
| Description | When configured to true , the router enables Duplicate Address Detection (DAD). |

When configured to **false**, the router disables DAD and sets the address to preferred, even if there is a duplicated address.

| | |
|------------|---------|
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

eui-64 *boolean*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Form IPv6 address from prefix and 64-bit interface ID |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 address <i>string</i> eui-64 <i>boolean</i> |
| Tree | eui-64 |
| Description | When configured to true , the router forms a complete IPv6 address from the supplied prefix and 64-bit interface identifier. The 64-bit interface identifier is derived from the MAC address on Ethernet interfaces. For interfaces without a MAC address, for example POS interfaces, use the base MAC address of the chassis. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

prefix-length *number*

| | |
|------------|---|
| Synopsis | IPv6 address prefix length |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 address <i>string</i> prefix-length <i>number</i> |
| Tree | prefix-length |
| Range | 4 to 128 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

primary-preference *number*

| | |
|----------|---|
| Synopsis | Index assigned to the IPv6 address of the interface |
|----------|---|

| | |
|-------------|---|
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 address <i>string</i> primary-preference <i>number</i> |
| Tree | primary-preference |
| Description | <p>This command assigns a primary preference index to an IPv6 address of the interface to enforce the order in which the address is used by control plane protocols and applications that require a fixed address of the interface, such as LDP and Segment Routing. In cases where a fixed address is required when originating packets from the interface, the IPv6 address with the lowest primary preference index is selected. If the selected address is removed, the next IPv6 address with the next lowest primary preference index is selected.</p> <p>If this index is not specified for the IPv6 address, the system assigns the next available index value to the address. The address index space is unique across all addresses of a given interface.</p> |
| Range | 1 to 4294967295 |
| Introduced | 16.0.R1 |
| Platforms | All |

track-srrp *number*

| | |
|------------|--|
| Synopsis | SRRP ID whose state is tracked on this IP address |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 address <i>string</i> track-srrp <i>number</i> |
| Tree | track-srrp |
| Range | 1 to 4294967295 |
| Introduced | 16.0.R1 |
| Platforms | All |

bfd

| | |
|------------|--|
| Synopsis | Enter the bfd context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 bfd |
| Tree | bfd |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|----------|---|
| Synopsis | Administrative state of BFD sessions |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 bfd admin-state <i>keyword</i> |

| | |
|------------|-----------------------------|
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | All |

echo-receive *number*

| | |
|------------|---|
| Synopsis | Minimum echo interval over this interface |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 bfd echo-receive <i>number</i> |
| Tree | echo-receive |
| Range | 100 to 100000 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

multiplier *number*

| | |
|-------------|---|
| Synopsis | Number of consecutive BFD messages missed from the peer |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 bfd multiplier <i>number</i> |
| Tree | multiplier |
| Description | This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments. |
| Range | 1 to 20 |
| Default | 3 |
| Introduced | 16.0.R1 |
| Platforms | All |

receive *number*

| | |
|-------------|--|
| Synopsis | BFD receive interval over this interface |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 bfd receive <i>number</i> |
| Tree | receive |
| Description | This command specifies the receive interval for the BFD session. |

On the 7750 SR, this command can only be configured to a value less than 100 when the **type** command is configured to **cpm-np**.

| | |
|------------|--------------|
| Range | 10 to 100000 |
| Units | milliseconds |
| Default | 100 |
| Introduced | 16.0.R1 |
| Platforms | All |

transmit-interval *number*

| | |
|-------------|---|
| Synopsis | BFD transmit interval over this interface |
| Context | configure service vprn string interface string ipv6 bfd transmit-interval number |
| Tree | transmit-interval |
| Description | This command configures the transmit intervals.

On the 7750 SR, this command can only be configured to a value less than 100 when the type command is configured to cpm-np . |
| Range | 10 to 100000 |
| Units | milliseconds |
| Default | 100 |
| Introduced | 16.0.R1 |
| Platforms | All |

type *keyword*

| | |
|-------------|---|
| Synopsis | Local termination point for the BFD session |
| Context | configure service vprn string interface string ipv6 bfd type keyword |
| Tree | type |
| Description | This command sets the local termination point for the BFD session to allow for fast timers down to 10 ms granularity.

The options to specify where the BFD session runs are: <ul style="list-style-type: none"> • auto (default) – the system chooses and uses the line card CPU only for single-hop BFD sessions with timer intervals equal to or greater than 100ms. All others are placed on the cpm-np. • cpm-np – BFD session runs on the FP complex associated with the CPM. This is either the FP on the CPM or the one elected on smaller systems. • fp – BFD session runs on the line card CPU. This option can only be used for single-hop BFD sessions with timers equal to or greater than 100ms. |

| | |
|------------|--|
| Options | cpm-np, auto, fp |
| Default | auto |
| Introduced | 16.0.R1 |

| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 dhcp6 server prefix-delegation prefix <i>string</i> valid-lifetime (<i>number</i> <i>keyword</i>) |
| Tree | valid-lifetime |
| Range | 1 to 4294967294 |
| Units | seconds |
| Options | infinite |
| Default | 2592000 |
| Introduced | 16.0.R1 |
| Platforms | All |

duplicate-address-detection *boolean*

| | |
|------------|---|
| Synopsis | Enable Duplicate Address Detection per interface |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 duplicate-address-detection <i>boolean</i> |
| Tree | duplicate-address-detection |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

forward-ipv4-packets *boolean*

| | |
|----------|-------------------------------------|
| Synopsis | Forward unencapsulated IPv4 packets |
|----------|-------------------------------------|

| | |
|------------|--|
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 forward-ipv4-packets <i>boolean</i> |
| Tree | forward-ipv4-packets |
| Default | false |
| Introduced | 19.5.R1 |
| Platforms | All |

icmp6

| | |
|------------|--|
| Synopsis | Enter the icmp6 context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 icmp6 |
| Tree | icmp6 |
| Introduced | 16.0.R1 |
| Platforms | All |

packet-too-big

| | |
|-------------|---|
| Synopsis | Enter the packet-too-big context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 icmp6 packet-too-big |
| Tree | packet-too-big |
| Description | Commands in this context configure limiting the number of ICMPv6 Packet Too Big messages. |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of Packet Too Big message sends |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 icmp6 packet-too-big admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | enable |
| Introduced | 16.0.R1 |
| Platforms | All |

number *number*

| | |
|------------|---|
| Synopsis | Number of Packet Too big Messages issued per time frame |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 icmp6 packet-too-big number <i>number</i> |
| Tree | number |
| Range | 10 to 1000 |
| Default | 100 |
| Introduced | 16.0.R1 |
| Platforms | All |

seconds *number*

| | |
|------------|--|
| Synopsis | Time used to limit Packet Too Big messages |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 icmp6 packet-too-big seconds <i>number</i> |
| Tree | seconds |
| Range | 1 to 60 |
| Default | 10 |
| Introduced | 16.0.R1 |
| Platforms | All |

param-problem

| | |
|------------|--|
| Synopsis | Enter the param-problem context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 icmp6 param-problem |
| Tree | param-problem |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|----------|--|
| Synopsis | Administrative state of Parameter Problem message sends |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 icmp6 param-problem admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | enable |

Introduced 16.0.R1
Platforms All

number *number*

Synopsis Number used to limit ICMPv6 Parameter Problem messages
Context **configure** [service vprn](#) *string* [interface](#) *string* [ipv6 icmp6 param-problem](#) *number*
Tree [number](#)
Range 10 to 1000
Default 100
Introduced 16.0.R1
Platforms All

admin-state *keyword*

Synopsis Administrative state of Redirect message sends

| | |
|------------|---|
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 icmp6 redirects admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | enable |
| Introduced | 16.0.R1 |
| Platforms | All |

number *number*

| | |
|------------|---|
| Synopsis | Number to limit ICMPv6 Redirect messages per time frame |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 icmp6 redirects number <i>number</i> |
| Tree | number |
| Range | 10 to 1000 |
| Default | 100 |
| Introduced | 16.0.R1 |
| Platforms | All |

seconds *number*

| | |
|------------|--|
| Synopsis | Time used to limit ICMPv6 Redirect messages |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 icmp6 redirects seconds <i>number</i> |
| Tree | seconds |
| Range | 1 to 60 |
| Default | 10 |
| Introduced | 16.0.R1 |
| Platforms | All |

time-exceeded

| | |
|------------|--|
| Synopsis | Enter the time-exceeded context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 icmp6 time-exceeded |
| Tree | time-exceeded |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of Time Exceeded message sends |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 icmp6 time-exceeded admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | enable |
| Introduced | 16.0.R1 |
| Platforms | All |

number *number*

| | |
|------------|---|
| Synopsis | Number to limit Time Exceeded messages per time frame |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 icmp6 time-exceeded number <i>number</i> |
| Tree | number |
| Range | 10 to 2000 |
| Default | 100 |
| Introduced | 16.0.R1 |
| Platforms | All |

seconds *number*

| | |
|------------|--|
| Synopsis | Time used to limit ICMPv6 Time Exceeded messages |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 icmp6 time-exceeded seconds <i>number</i> |
| Tree | seconds |
| Range | 1 to 60 |
| Default | 10 |
| Introduced | 16.0.R1 |
| Platforms | All |

unreachables

| | |
|----------|---|
| Synopsis | Enter the unreachables context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 icmp6 unreachables |

| | |
|------------|------------------------------|
| Tree | unreachables |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of Unreachable message sends |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 icmp6 unreachables admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | enable |
| Introduced | 16.0.R1 |
| Platforms | All |

number *number*

| | |
|------------|---|
| Synopsis | Number to limit Unreachable messages per time frame |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 icmp6 unreachables number <i>number</i> |
| Tree | number |
| Range | 10 to 2000 |
| Default | 100 |
| Introduced | 16.0.R1 |
| Platforms | All |

seconds *number*

| | |
|------------|--|
| Synopsis | Time used to limit ICMPv6 Unreachable messages |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 icmp6 unreachables seconds <i>number</i> |
| Tree | seconds |
| Range | 1 to 60 |
| Default | 10 |
| Introduced | 16.0.R1 |
| Platforms | All |

link-local-address

| | |
|------------|---|
| Synopsis | Enter the link-local-address context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 link-local-address |
| Tree | link-local-address |
| Introduced | 16.0.R1 |
| Platforms | All |

address *string*

| | |
|------------|---|
| Synopsis | IPv6 link-local address |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 link-local-address address <i>string</i> |
| Tree | address |
| Introduced | 16.0.R1 |
| Platforms | All |

duplicate-address-detection *boolean*

| | |
|-------------|--|
| Synopsis | Enable Duplicate Address Detection |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 link-local-address duplicate-address-detection <i>boolean</i> |
| Tree | duplicate-address-detection |
| Description | When configured to true , the router enables Duplicate Address Detection (DAD) on the interface.

When configured to false , the router disables DAD and sets the address to preferred, even if there is a duplicated address. |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

local-dhcp-server *reference*

| | |
|------------|---|
| Synopsis | DHCP server for the interface |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 local-dhcp-server <i>reference</i> |
| Tree | local-dhcp-server |
| Reference | configure service vprn <i>string</i> dhcp-server dhcpv6 <i>string</i> |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

neighbor-discovery

Synopsis Enter the **neighbor-discovery** context

Context **configure service vprn** *string* **interface** *string* **ipv6 neighbor-discovery**

Tree [neighbor-discovery](#)

Introduced 16.0.R1

Platforms All

host-route

Synopsis Enter the **host-route** context

Context **configure service vprn** *string* **interface** *string* **ipv6 neighbor-discovery host-route**

Tree [host-route](#)

Introduced 20.2.R1

Platforms All

populate [*route-type*] *keyword*

Synopsis Enter the **populate** list instance

Context **configure service vprn** *string* **interface** *string* **ipv6 neighbor-discovery host-route populate** *keyword*

Tree [populate](#)

Introduced 20.2.R1

Platforms All

[*route-type*] *keyword*

Synopsis Type of ARP or ND entries that generate host routes

Context **configure service vprn** *string* **interface** *string* **ipv6 neighbor-discovery host-route populate** *keyword*

Tree [populate](#)

Options static, dynamic, evpn

Notes This element is part of a list key.

Introduced 20.2.R1

Platforms All

route-tag *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Tag value used with the host route from an ARP/ND entry |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 neighbor-discovery host-route populate <i>keyword</i> route-tag <i>number</i> |
| Tree | route-tag |
| Description | This command specifies the route tag that is added in the route table for ARP or ND host routes. This tag can be matched on BGP VRF export and BGP peer export policies. |
| Range | 1 to 255 |
| Introduced | 20.2.R1 |
| Platforms | All |

learn-unsolicited *keyword*

| | |
|-------------|---|
| Synopsis | Type of entries learned from unsolicited NA messages |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 neighbor-discovery learn-unsolicited <i>keyword</i> |
| Tree | learn-unsolicited |
| Description | This command enables the ability to learn neighbor entries out of received unsolicited Neighbor Advertisement (NA) messages, with or without the solicited flag set.

When unconfigured, the router follows standard RFC 4861 behavior for learning of neighbor entries. The neighbor is put in the stale state. This is the standard RFC behavior. |
| Options | global, link-local, both |
| Introduced | 16.0.R1 |
| Platforms | All |

limit

| | |
|----------|---|
| Synopsis | Enter the limit context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 neighbor-discovery limit |
| Tree | limit |

| | |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms | All |

log-only *boolean*

| | |
|-------------|--|
| Synopsis | Generate log entries when limit is reached |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 neighbor-discovery limit log-only <i>boolean</i> |
| Tree | log-only |
| Description | When configured to true , the router sends the warning message at the specified threshold percentage or upon exceeding the specified limit. Entries that exceed the limit are learned.

When configured to false , the router does not send the warning message. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

max-entries *number*

| | |
|-------------|---|
| Synopsis | Maximum number of entries learned on an IP interface |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 neighbor-discovery limit max-entries <i>number</i> |
| Tree | max-entries |
| Description | This command configures the maximum number of entries that can be learned on an IP interface.

When unconfigured, no maximum limit is imposed. |
| Range | 0 to 102400 |
| Introduced | 16.0.R1 |
| Platforms | All |

threshold *number*

| | |
|----------|---|
| Synopsis | Threshold percentage that triggers a warning message |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 neighbor-discovery limit threshold <i>number</i> |
| Tree | threshold |
| Range | 1 to 100 |

| | |
|------------|---------|
| Units | percent |
| Default | 90 |
| Introduced | 16.0.R1 |
| Platforms | All |

local-proxy-nd *boolean*

| | |
|-------------|---|
| Synopsis | Enable local proxy neighbor discovery on the interface |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 neighbor-discovery local-proxy-nd <i>boolean</i> |
| Tree | local-proxy-nd |
| Description | <p>When configured to true, the router enables local proxy neighbor discovery on the interface and replies to neighbor solicitation requests when both the hosts are on the same subnet. In this case, ICMP redirects are disabled.</p> <p>When configured to false, the router disables local proxy neighbor discovery on the interface and does not reply to neighbor solicitation requests if both the hosts are on the same subnet.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

proactive-refresh *keyword*

| | |
|-------------|---|
| Synopsis | Proactive refresh of neighbor entries |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 neighbor-discovery proactive-refresh <i>keyword</i> |
| Tree | proactive-refresh |
| Description | This command enables a proactive refresh of the neighbor entries. After the stale timer expires, the router sends an NUD message to the host (regardless of the existence of traffic to the IP address on the IOM), so the entry can be refreshed or removed. |
| Options | global, link-local, both |
| Introduced | 16.0.R1 |
| Platforms | All |

proxy-nd-policy *reference*

| | |
|----------|--|
| Synopsis | Proxy Neighbor Discovery policy name for the interface |
|----------|--|

| | |
|----------------|--|
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 neighbor-discovery proxy-nd-policy <i>reference</i> |
| Tree | proxy-nd-policy |
| Reference | configure policy-options policy-statement <i>string</i> |
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | All |

reachable-time *number*

| | |
|------------|--|
| Synopsis | Neighbor reachability detection timer |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 neighbor-discovery reachable-time <i>number</i> |
| Tree | reachable-time |
| Range | 30 to 3600 |
| Introduced | 16.0.R1 |
| Platforms | All |

secure-nd

| | |
|------------|---|
| Synopsis | Enter the secure-nd context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 neighbor-discovery secure-nd |
| Tree | secure-nd |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|----------|--|
| Synopsis | Administrative state of Secure Neighbor Discovery |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 neighbor-discovery secure-nd admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |

Introduced 16.0.R1
 Platforms All

allow-unsecured-msgs *boolean*

Synopsis Accept unsecured messages
 Context **configure** [service vprn string](#) [interface string ipv6 neighbor-discovery secure-nd allow-unsecured-msgs](#) *boolean*
 Tree [allow-unsecured-msgs](#)
 Description When configured to **true**, the router accepts unsecured messages. When Secure Neighbor Discovery (SeND) is enabled, only secure messages are accepted.
 When configured to **false**, the router disables the acceptance of unsecured messages.
 Default true
 Introduced 16.0.R1
 Platforms All

public-key-min-bits *number*

Synopsis Minimum acceptable key length for public keys in CGA
 Context **configure** [service vprn string](#) [interface string ipv6 neighbor-discovery secure-nd public-key-min-bits](#) *number*
 Tree [public-key-min-bits](#)
 Range 512 to 1024
 Default 1024
 Introduced 16.0.R1
 Platforms All

security-parameter *number*

Synopsis Security parameter used in the generation of a CGA
 Context **configure** [service vprn string](#) [interface string ipv6 neighbor-discovery secure-nd security-parameter](#) *number*
 Tree [security-parameter](#)
 Range 0 to 1
 Default 1
 Introduced 16.0.R1

Platforms All

stale-time *number*

Synopsis Time a Neighbor Discovery cache entry remains stale

mac-address *string*

Synopsis MAC address for the static neighbor
 Context **configure** [service](#) [vprn](#) *string* [interface](#) *string* [ipv6](#) [neighbor-discovery](#) **static-neighbor** *string* **mac-address** *string*
 Tree [mac-address](#)

| | |
|------------|----------------------------|
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

qos-route-lookup *keyword*

| | |
|-------------|---|
| Synopsis | IP address for QoS route lookup for ingress IP packets |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 qos-route-lookup <i>keyword</i> |
| Tree | qos-route-lookup |
| Description | This command specifies the IP address type used for QPPB enabled per-packet QoS handling (in terms of FC and priority). When using QPPB, routes are associated with a QoS treatment (FC and optionally priority) through either explicit configuration or the route policy. If an IPv4 or IPv6 packet arrives on an interface where the configuration of this command applies to the packet, the QoS treatment of the packet is based on the route that matched the destination IP address or the route that matched the source IP address. |
| Options | destination, source |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

tcp-mss *number*

| | |
|------------|---|
| Synopsis | TCP maximum segment size for the interface |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 tcp-mss <i>number</i> |
| Tree | tcp-mss |
| Range | 1220 to 9726 |
| Introduced | 16.0.R1 |
| Platforms | All |

urpf-check

| | |
|------------|--|
| Synopsis | Enable the urpf-check context |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 urpf-check |
| Tree | urpf-check |
| Introduced | 16.0.R1 |
| Platforms | All |

ignore-default *boolean*

| | |
|------------|---|
| Synopsis | Ignore default route when performing a uRPF check |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 urpf-check ignore-default <i>boolean</i> |
| Tree | ignore-default |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

mode *keyword*

| | |
|------------|---|
| Synopsis | Unicast RPF check mode |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 urpf-check mode <i>keyword</i> |
| Tree | mode |
| Options | strict, loose, strict-no-ecmp |
| Default | strict |
| Introduced | 16.0.R1 |
| Platforms | All |

vrrp [[virtual-router-id](#)] *number*

| | |
|----------------|---|
| Synopsis | Enter the vrrp list instance |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 vrrp <i>number</i> |
| Tree | vrrp |
| Max. Instances | 4 |
| Introduced | 16.0.R1 |
| Platforms | All |

[virtual-router-id] *number*

| | |
|----------|---|
| Synopsis | Virtual Router Identifier (VRID) for the IP interface |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 vrrp <i>number</i> |
| Tree | vrrp |
| Range | 1 to 255 |

| | |
|------------|-------------------------------------|
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|-------------|---|
| Synopsis | Administrative state of VRRP |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 vrrp <i>number</i> admin-state <i>keyword</i> |
| Tree | admin-state |
| Description | <p>The command determines the administrative state of non-owner virtual router instances. Non-owner virtual router instances can be administratively disabled. This allows the termination of VRRP participation in the virtual router and stops all routing and other access capabilities with regards to the virtual router IP addresses. Disabling the virtual router instance provides a mechanism to maintain the virtual routers without causing false backup or master state changes.</p> <p>When disabled, no VRRP advertisement messages are generated and all received VRRP advertisement messages are silently discarded with no processing.</p> <p>Whenever the administrative or operational state of a virtual router instance transitions, a log message is generated.</p> <p>An owner virtual router context does not use this command. To administratively disable an owner virtual router instance, use the admin-state command within the parent IP interface node which administratively disables the IP interface.</p> |
| Options | enable, disable |
| Default | enable |
| Introduced | 16.0.R1 |
| Platforms | All |

backup *string*

| | |
|-------------|--|
| Synopsis | Virtual router IP addresses for the interface |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 vrrp <i>number</i> backup <i>string</i> |
| Tree | backup |
| Description | <p>This command associates router IPv6 virtual router IP addresses with those of the parental IP interface.</p> <p>This command has two different functions based on whether it is being executed on an owner or non-owner virtual router instance.</p> <p>Non-owner virtual router instance create a routable IP interface address that is operationally dependent on the virtual router instance mode (master or backup). This command, when executed on an owner virtual router instance, does not create a</p> |

routable IP interface address; it simply defines the existing IP addresses of the parental IP interface that are advertised by the virtual router instance.

For owner virtual router instances, this command defines the IP addresses that are advertised within VRRP advertisement messages. This communicates the IP addresses that the master is representing to backup virtual routers receiving the messages. The specified IPv6 address must be equal to one of the existing parental IP addresses in the parental IP interface (primary or secondary) or this command fails.

See "Owner and non-owner VRRP" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR Router Configuration Guide* for more information about owner and non-owner virtual router instances.

| Context | configure service vprn string interface string ipv6 vrrp number mac string |
| Tree | mac |
| Description | <p>This command sets an explicit MAC address for the virtual router instance that overrides the VRRP default derived from the VRID.</p> <p>Changing the default MAC address is useful when an existing HSRP or other non-VRRP default MAC is in use by the IP hosts that use the virtual router IP address. Many hosts do not monitor unessential ARPs and continue to use the cached non-VRRP MAC address after the virtual router becomes master of the host's gateway address.</p> <p>Additionally, this command sets the MAC address used in ARP responses when the virtual router instance is master. Routing of IP packets with <i>unicast-mac-address</i> as the destination MAC is also enabled. The MAC must be the same for all virtual routers participating as a virtual router or indeterminate connectivity by the attached IP hosts results. All VRRP advertisement messages are transmitted with <i>unicast-mac-address</i> as the source MAC.</p> <p>An operator can execute this command at any time and it takes effect immediately. When the virtual router MAC on a master virtual router instance changes, a gratuitous ARP is immediately sent with a VRRP advertisement message. If the virtual router instance is disabled or operating as a backup, the gratuitous ARP and VRRP advertisement messages are not sent.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

master-int-inherit boolean

| | |
|-------------|---|
| Synopsis | Allow master instance to dictate the master down timer |
| Context | configure service vprn string interface string ipv6 vrrp number master-int-inherit boolean |
| Tree | master-int-inherit |
| Description | <p>When configured to true, the virtual router instance inherits the advertisement interval timer of the master VRRP router, which backup routers use to calculate the master down timer.</p> <p>When configured to false, the locally configured message interval must match the master's VRRP advertisement message advertisement interval field value or the message is discarded.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

message-interval *number*

| | |
|-------------|--|
| Synopsis | Interval for sending VRRP advertisement messages |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 vrrp <i>number</i> message-interval <i>number</i> |
| Tree | message-interval |
| Description | <p>This command configures the administrative advertisement message timer used by the master virtual router instance to send VRRP advertisement messages. The backup master down timer is derived from the value configured using this command.</p> <p>The use of this command varies for non-owner virtual router instances, depending on the state of the virtual router (master or backup) and the state of the master-int-inherit command:</p> <ul style="list-style-type: none"> • When a non-owner is operating as master for the virtual router, the system uses the configured value of this command as the operational advertisement timer, similar to an owner virtual router instance. The master-int-inherit command has no effect when operating as the master. • When a non-owner is in the backup state with master-int-inherit disabled, the system uses the configured value of this command to match the incoming advertisement interval field of the VRRP advertisement message. If the locally configured message interval does not match the advertisement interval field, the system discards the VRRP advertisement. • When a non-owner is in the backup state with master-int-inherit enabled, the configured value of this command is ignored. The master down timer is indirectly derived from the advertisement interval field value of the incoming VRRP advertisement message. |
| Range | 10 to 4095 |
| Units | centiseconds |
| Default | 100 |
| Introduced | 16.0.R1 |
| Platforms | All |

monitor-oper-group *reference***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | VRRP instance to follow a specified operational group |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 vrrp <i>number</i> monitor-oper-group <i>reference</i> |
| Tree | monitor-oper-group |
| Description | This command configures VRRP to associate with an operational group. When associated, VRRP notifies the operational group of its state changes so that other |

protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router, the operational group is up and the operational group is down for all other VRRP states.

| | |
|------------|---|
| Reference | configure service oper-group <i>string</i> |
| Introduced | 22.2.R1 |
| Platforms | All |

ntp-reply *boolean*

| | |
|-------------|--|
| Synopsis | Allow processing of NTP requests |
| Context | configure service vprn <i>string interface string ipv6 vrrp number ntp-reply boolean</i> |
| Tree | ntp-reply |
| Description | When configured to true , the router redirects NTP requests to the VRRP virtual IP address. This behavior only applies to the router acting as the master VRRP router.
When configured to false , the router does not process NTP requests. |
| Default | false |
| Introduced | 20.2.R1 |
| Platforms | All |

oper-group *reference*

| | |
|-------------|---|
| Synopsis | Operational group name associated with the VRRP |
| Context | configure service vprn <i>string interface string ipv6 vrrp number oper-group reference</i> |
| Tree | oper-group |
| Description | This command configures an operational group to associate with the VRRP. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router (MR), the operational group is up. The operational group is down for all other VRRP states. |
| Reference | configure service oper-group <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

owner boolean**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Designate the virtual router instance as owner |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 vrrp number owner <i>boolean</i> |
| Tree | owner |
| Description | <p>When configured to true, the router designates this virtual router instance as the owner of the virtual router IP addresses. Therefore, this virtual router becomes responsible for forwarding packets sent to the virtual router IP addresses. The owner also assumes the role of master virtual router.</p> <p>When configured to false, this virtual router instance is designated as a non-owner.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

passive boolean**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Suppress the processing of VRRP advertisement messages |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 vrrp number passive <i>boolean</i> |
| Tree | passive |
| Description | <p>When configured to true, the router identifies this virtual router instance as passive; and therefore the owner of the virtual router IP addresses. A passive virtual router instance does not transmit or receive VRRP advertisement messages and is always in either the master state (if the interface is operationally up) or the init state (if the interface is operationally down).</p> <p>When configured to false, this virtual router instance is not identified as passive, meaning that it transmits and receives VRRP advertisement messages.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

ping-reply *boolean*

| | |
|-------------|---|
| Synopsis | Allow non-owner master to reply to ICMP echo requests |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 vrrp <i>number</i> ping-reply <i>boolean</i> |
| Tree | ping-reply |
| Description | <p>When configured to true, the router allows the non-owner master to reply to ICMP echo requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the ping request. Ping must not have been disabled at the management security level (either on the parental IP interface or on the Ping source host address).</p> <p>When configured to false, ICMP echo requests sent to non-owner master virtual IP addresses are silently discarded.</p> <p>Non-owner backup virtual routers never respond to ICMP echo requests, regardless of the configuration of this command.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

policy *reference*

| | |
|-------------|--|
| Synopsis | VRRP priority control policy |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 vrrp <i>number</i> policy <i>reference</i> |
| Tree | policy |
| Description | <p>This command configures a VRRP priority control policy to associate with the virtual router instance.</p> <p>VRRP priority control policies can override or adjust the base priority value of the virtual router instance, depending on events or conditions within the chassis.</p> <p>An operator can associate a policy with more than one virtual router instance. The priority events within the policy either override or diminish the base priority set with the priority command. As priority events clear in the policy, the in-use priority can eventually be restored to the base priority value.</p> <p>For non-owner virtual router instances, if this command is not executed, the base priority is used as the in-use priority.</p> |
| Reference | configure vrrp policy <i>number</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

preempt *boolean*

| | |
|----------|---|
| Synopsis | Allow the VRRP to override an existing non-owner master |
|----------|---|

| | |
|-------------|--|
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 vrrp <i>number</i> preempt <i>boolean</i> |
| Tree | preempt |
| Description | <p>When configured to true, this virtual router instance overrides any non-owner master with an in-use message priority value less than the in-use priority value of this virtual router.</p> <p>When configured to false, this virtual router only becomes master if the master down timer expires before a VRRP advertisement message is received from another virtual router.</p> |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

priority *number*

| | |
|-------------|---|
| Synopsis | Base priority for the VRRP |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 vrrp <i>number</i> priority <i>number</i> |
| Tree | priority |
| Description | <p>This command configures the base router priority for the virtual router instance, which defines the selection order of the virtual router in the master election process.</p> <p>The in-use priority is derived from the base priority. However, the in-use priority is modified by optional VRRP priority control policies. An operator can use VRRP priority control policies to either override or adjust the base priority value depending on events or conditions within the chassis.</p> |
| Range | 1 to 255 |
| Introduced | 16.0.R1 |
| Platforms | All |

standby-forwarding *boolean*

| | |
|-------------|--|
| Synopsis | Allow standby router to forward traffic |
| Context | configure service vprn <i>string</i> interface <i>string</i> ipv6 vrrp <i>number</i> standby-forwarding <i>boolean</i> |
| Tree | standby-forwarding |
| Description | <p>When configured to true, the standby router forwards all traffic.</p> <p>When configured to false, the standby router cannot forward traffic sent to the MAC address of the virtual router. However, the standby router still forwards traffic sent to its own MAC address.</p> |
| Default | false |

| | |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms | All |

telnet-reply *boolean*

| | |
|-------------|---|
| Synopsis | Allow non-owner master to reply to Telnet requests |
| Context | configure service vprn string interface string ipv6 vrrp number telnet-reply boolean |
| Tree | telnet-reply |
| Description | <p>When configured to true, the router allows the non-owner master to reply to Telnet requests directed at the IP addresses of the virtual router instance. Any routed interface can receive Telnet requests. Telnet cannot be disabled at the management security level (either on the parental IP interface or on the Telnet source host address).</p> <p>When configured to false, the router silently discards Telnet requests sent to non-owner master virtual IP addresses.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

traceroute-reply *boolean*

| | |
|-------------|---|
| Synopsis | Allow non-owner master to reply to traceroute requests |
| Context | configure service vprn string interface string ipv6 vrrp number traceroute-reply boolean |
| Tree | traceroute-reply |
| Description | <p>When configured to true, the router allows a non-owner master to reply to traceroute requests directed to the IP addresses of the virtual router instance.</p> <p>When configured to false, the router silently discards traceroute requests sent to non-owner master virtual IP addresses.</p> <p>Traceroute must not have been disabled at the management security level (either on the parental IP interface or the source host address).</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

load-balancing

| | |
|----------|--|
| Synopsis | Enter the load-balancing context |
| Context | configure service vprn string interface string load-balancing |

| | |
|------------|--------------------------------|
| Tree | load-balancing |
| Introduced | 16.0.R1 |
| Platforms | All |

flow-label-load-balancing *boolean*

| | |
|-------------|--|
| Synopsis | Enable flow label load balancing |
| Context | configure service vprn <i>string</i> interface <i>string</i> load-balancing flow-label-load-balancing <i>boolean</i> |
| Tree | flow-label-load-balancing |
| Description | When configured to true , the router enables load balancing in ECMP and LAG based on the output of a hash performed on the triplet (SA, DA, flow label) in the header of an IPv6 packet received on an IES, VPRN, R-VPLS, CSC, or network interface.
When configured to false , the router disables load balancing in ECMP and LAG. |
| Default | false |
| Introduced | 21.5.R1 |
| Platforms | All |

ip-load-balancing *keyword*

| | |
|-------------|--|
| Synopsis | IP load-balancing algorithm |
| Context | configure service vprn <i>string</i> interface <i>string</i> load-balancing ip-load-balancing <i>keyword</i> |
| Tree | ip-load-balancing |
| Description | This command specifies whether to include the source address, destination address, or both in LAG or ECMP hash on IP interfaces. Additionally, when the l4-load-balancing command is enabled, this command also includes the source or destination port in the hash inputs. |
| Options | both, destination, source, inner-ip |
| Default | both |
| Introduced | 16.0.R3 |
| Platforms | All |

spi-load-balancing *boolean*

| | |
|----------|--|
| Synopsis | Enable SPI use in hashing |
| Context | configure service vprn <i>string</i> interface <i>string</i> load-balancing spi-load-balancing <i>boolean</i> |
| Tree | spi-load-balancing |

| | |
|-------------|---|
| Description | When configured to true , the router uses the Security Parameter Index (SPI) in hashing for ESP and AH encrypted IPv4 and IPv6 traffic. This is a per-interface setting. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

teid-load-balancing *boolean*

| | |
|------------|---|
| Synopsis | Enable use of TEID in hashing |
| Context | configure service vprn <i>string</i> interface <i>string</i> load-balancing teid-load-balancing <i>boolean</i> |
| Tree | teid-load-balancing |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

loopback *boolean*

| | |
|------------|---|
| Synopsis | Use interface as a loopback interface |
| Context | configure service vprn <i>string</i> interface <i>string</i> loopback <i>boolean</i> |
| Tree | loopback |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

mac *string*

|------------|---|
| Synopsis | Monitor MAC for CPU protection |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> cpu-protection mac-monitoring |
| Tree | mac-monitoring |
| Notes | The following elements are part of a choice: eth-cfm-monitoring , ip-src-monitoring , or mac-monitoring . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS |

policy-id *reference*

| | |
|------------|---|
| Synopsis | CPM protection policy |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> cpu-protection policy-id <i>reference</i> |
| Tree | policy-id |
| Reference | configure system security cpu-protection policy <i>number</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS |

description *string*

| | |
|----------|------------------|
| Synopsis | Text description |
|----------|------------------|

| | |
|---------------|--|
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> description <i>string</i> |
| Tree | description |
| String Length | 1 to 160 |
| Introduced | 16.0.R1 |
| Platforms | All |

dist-cpu-protection *reference*

| | |
|------------|---|
| Synopsis | Distributed CPU protection policy for SAP |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> dist-cpu-protection <i>reference</i> |
| Tree | dist-cpu-protection |
| Reference | configure system security dist-cpu-protection <i>policy</i> <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

egress

| | |
|------------|---|
| Synopsis | Enter the egress context |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress |
| Tree | egress |
| Introduced | 16.0.R1 |
| Platforms | All |

agg-rate

| | |
|------------|---|
| Synopsis | Enter the agg-rate context |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress agg-rate |
| Tree | agg-rate |
| Notes | The following elements are part of a choice: agg-rate or percent-agg-rate . |
| Introduced | 16.0.R1 |
| Platforms | All |

adaptation-rule *keyword*

| | |
|----------|---|
| Synopsis | Adaptation rule to compute the operational PIR value when an aggregate shaper is used |
|----------|---|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress agg-rate adaptation-rule <i>keyword</i> |
| Tree | adaptation-rule |
| Options | max, min, closest |
| Default | closest |
| Introduced | 22.10.R1 |
| Platforms | 7750 SR-1, 7750 SR-s |

burst-limit (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | Shaping burst size when an aggregate shaper is used |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress agg-rate burst-limit (<i>number</i> <i>keyword</i>) |
| Tree | burst-limit |
| Range | 1 to 14000000 |
| Units | bytes |
| Options | auto |
| Default | auto |
| Introduced | 22.10.R1 |
| Platforms | 7750 SR-1, 7750 SR-s |

limit-unused-bandwidth *boolean*

| | |
|------------|--|
| Synopsis | Enable aggregate rate overrun protection |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress agg-rate limit-unused-bandwidth <i>boolean</i> |
| Tree | limit-unused-bandwidth |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

queue-frame-based-accounting *boolean*

| | |
|----------|--|
| Synopsis | Enable frame based accounting on policers and queues |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress agg-rate queue-frame-based-accounting <i>boolean</i> |

| | |
|------------|--|
| Tree | queue-frame-based-accounting |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

rate number

| | |
|------------|--|
| Synopsis | Enforced aggregate rate for all queues |
| Context | configure service vprn string interface string sap string egress agg-rate rate number |
| Tree | rate |
| Range | 1 to 6400000000 |
| Units | kilobps |
| Introduced | 16.0.R1 |
| Platforms | All |

filter

| | |
|------------|--|
| Synopsis | Enter the filter context |
| Context | configure service vprn string interface string sap string egress filter |
| Tree | filter |
| Introduced | 16.0.R1 |
| Platforms | All |

ip reference

| | |
|------------|---|
| Synopsis | IPv4 filter policy name |
| Context | configure service vprn string interface string sap string egress filter ip reference |
| Tree | ip |
| Reference | configure filter ip-filter string |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv6 reference

| | |
|----------|-------------------------|
| Synopsis | IPv6 filter policy name |
|----------|-------------------------|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress filter ipv6 <i>reference</i> |
| Tree | ipv6 |
| Reference | configure filter ipv6-filter <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

qos

| | |
|------------|--|
| Synopsis | Enter the qos context |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos |
| Tree | qos |
| Introduced | 16.0.R1 |
| Platforms | All |

policer-control-policy

| | |
|------------|---|
| Synopsis | Enter the policer-control-policy context |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos policer-control-policy |
| Tree | policer-control-policy |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

overrides

| | |
|------------|---|
| Synopsis | Enable the overrides context |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos policer-control-policy overrides |
| Tree | overrides |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

root

| | |
|----------|--|
| Synopsis | Enter the root context |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos policer-control-policy overrides root |

| | |
|------------|--|
| Tree | root |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

max-rate (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | Maximum frame-based bandwidth limit |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos policer-control-policy overrides root max-rate (<i>number</i> <i>keyword</i>) |
| Tree | max-rate |
| Range | 1 to 6400000000 |
| Options | max |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

priority-mbs-thresholds

| | |
|------------|--|
| Synopsis | Enter the priority-mbs-thresholds context |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos policer-control-policy overrides root priority-mbs-thresholds |
| Tree | priority-mbs-thresholds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

min-thresh-separation (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | Minimum amount of separation buffer space |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos policer-control-policy overrides root priority-mbs-thresholds min-thresh-separation (<i>number</i> <i>keyword</i>) |
| Tree | min-thresh-separation |
| Range | 0 to 16777216 |
| Units | bytes |
| Options | auto |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

priority [[priority-level](#)] *number*

| | |
|------------|--|
| Synopsis | Enter the priority list instance |
| Context | configure service vprn string interface string sap string egress qos policer-control-policy overrides root priority-mbs-thresholds priority <i>number</i> |
| Tree | priority |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

[priority-level] *number*

| | |
|------------|--|
| Synopsis | Priority level |
| Context | configure service vprn string interface string sap string egress qos policer-control-policy overrides root priority-mbs-thresholds priority <i>number</i> |
| Tree | priority |
| Range | 1 to 8 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

mbs-contribution (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | Minimum amount of cumulative buffer space allowed |
| Context | configure service vprn string interface string sap string egress qos policer-control-policy overrides root priority-mbs-thresholds priority <i>number</i> mbs-contribution (<i>number</i> <i>keyword</i>) |
| Tree | mbs-contribution |
| Range | 0 to 16777216 |
| Units | bytes |
| Options | auto |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

policy-name *reference*

| | |
|----------|-----------------------------|
| Synopsis | Policer control policy name |
|----------|-----------------------------|

| | |
|------------|--|
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos policer-control-policy <i>policy-name</i> <i>reference</i> |
| Tree | policy-name |
| Reference | configure qos policer-control-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

qinq-mark-top-only *boolean*

| | |
|------------|---|
| Synopsis | Mark top Q-tags |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos qinq-mark-top-only <i>boolean</i> |
| Tree | qinq-mark-top-only |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

sap-egress

| | |
|------------|--|
| Synopsis | Enter the sap-egress context |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress |
| Tree | sap-egress |
| Introduced | 16.0.R1 |
| Platforms | All |

overrides

| | |
|------------|---|
| Synopsis | Enter the overrides context |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides |
| Tree | overrides |
| Introduced | 16.0.R1 |
| Platforms | All |

hs-secondary-shaper *string*

| | |
|---------------|--|
| Synopsis | HS Secondary Shaper |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress
overrides hs-secondary-shaper <i>string</i> |
| Tree | hs-secondary-shaper |
| String Length | 1 to 32 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR-7/12/12e |

hs-wrr-group [[group-id](#)] *reference*

| | |
|------------|--|
| Synopsis | Enter the hs-wrr-group list instance |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress
overrides hs-wrr-group <i>reference</i> |
| Tree | hs-wrr-group |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR-7/12/12e |

[group-id] *reference*

| | |
|------------|--|
| Synopsis | HS WRR group identifier |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress
overrides hs-wrr-group <i>reference</i> |
| Tree | hs-wrr-group |
| Reference | configure qos sap-egress <i>string</i> hs-wrr-group <i>number</i> |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR-7/12/12e |

hs-class-weight *number*

| | |
|----------|--|
| Synopsis | Class weight override of the WRR group |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress
overrides hs-wrr-group <i>reference</i> hs-class-weight <i>number</i> |
| Tree | hs-class-weight |
| Range | 1 2 4 8 |

Introduced 16.0.R1
 Platforms 7750 SR-7/12/12e

percent-rate *decimal-number*

Synopsis Percent rate override applied to the HS WRR group
 Context **configure** [service vprn](#) *string* [interface](#) *string* [sap](#) *string* [egress qos sap-egress](#)
[overrides hs-wrr-group](#) *reference* [percent-rate](#) *decimal-number*
 Tree [percent-rate](#)
 Range 0.01 to 100.00
 Notes The following elements are part of a choice: **percent-rate** or **rate**.
 Introduced 16.0.R1
 Platforms 7750 SR-7/12/12e

rate (*number* | *keyword*)

Synopsis Scheduling rate override applied to the HS WRR group
 Context **configure** [service vprn](#) *string* [interface](#) *string* [sap](#) *string* [egress qos sap-egress](#)
[overrides hs-wrr-group](#) *reference* [rate](#) (*number* | *keyword*)
 Tree [rate](#)
 Range 1 to 2000000000
 Units kilobps
 Options max
 Notes The following elements are part of a choice: **percent-rate** or **rate**.
 Introduced 16.0.R1
 Platforms 7750 SR-7/12/12e

policer [[policer-id](#)] *reference*

Synopsis Enter the **policer** list instance
 Context **configure** [service vprn](#) *string* [interface](#) *string* [sap](#) *string* [egress qos sap-egress](#)
[overrides policer](#) *reference*
 Tree [policer](#)
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

[policer-id] reference

| | |
|------------|--|
| Synopsis | Policer unique ID |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer <i>reference</i> |
| Tree | policer |
| Reference | configure qos sap-egress <i>string</i> policer <i>number</i> |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

cbs (number | keyword)

| | |
|------------|--|
| Synopsis | CBS |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer <i>reference</i> cbs (<i>number keyword</i>) |
| Tree | cbs |
| Range | 0 to 268435456 |
| Units | bytes |
| Options | auto |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

mbs (number | keyword)

| | |
|------------|--|
| Synopsis | MBS |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer <i>reference</i> mbs (<i>number keyword</i>) |
| Tree | mbs |
| Range | 0 to 268435456 |
| Units | bytes |
| Options | auto |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

packet-byte-offset *number*

| | |
|------------|--|
| Synopsis | Packet size modification for policing information |
| Context | configure service vprn string interface string sap string egress qos sap-egress overrides policer reference packet-byte-offset number |
| Tree | packet-byte-offset |
| Range | -64 to 31 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

percent-rate

| | |
|------------|---|
| Synopsis | Enter the percent-rate context |
| Context | configure service vprn string interface string sap string egress qos sap-egress overrides policer reference percent-rate |
| Tree | percent-rate |
| Notes | The following elements are part of a choice: percent-rate or rate . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

cir *decimal-number*

| | |
|------------|--|
| Synopsis | CIR percent rate |
| Context | configure service vprn string interface string sap string egress qos sap-egress overrides policer reference percent-rate cir decimal-number |
| Tree | cir |
| Range | 0.00 to 100.00 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

pir *decimal-number*

| | |
|----------|--|
| Synopsis | PIR percent rate |
| Context | configure service vprn string interface string sap string egress qos sap-egress overrides policer reference percent-rate pir decimal-number |
| Tree | pir |
| Range | 0.01 to 100.00 |

| | |
|------------|--|
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

rate

| | |
|------------|--|
| Synopsis | Enter the rate context |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer <i>reference</i> rate |
| Tree | rate |
| Notes | The following elements are part of a choice: percent-rate or rate . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

cir (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | CIR rate |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer <i>reference</i> rate cir (<i>number</i> <i>keyword</i>) |
| Tree | cir |
| Range | 0 to 6400000000 |

adaptation-rule

| | |
|----------|---|
| Synopsis | Enter the adaptation-rule context |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue <i>reference</i> adaptation-rule |

| | |
|------------|---------------------------------|
| Tree | adaptation-rule |
| Introduced | 16.0.R1 |
| Platforms | All |

cir keyword

| | |
|------------|--|
| Synopsis | Constraint used when deriving the operational CIR value |
| Context | configure service vprn string interface string sap string egress qos sap-egress overrides queue reference adaptation-rule cir keyword |
| Tree | cir |
| Options | max, min, closest |
| Introduced | 16.0.R1 |
| Platforms | All |

pir keyword

| | |
|------------|--|
| Synopsis | Constraint used when deriving the operational PIR value |
| Context | configure service vprn string interface string sap string egress qos sap-egress overrides queue reference adaptation-rule pir keyword |
| Tree | pir |
| Options | max, min, closest |
| Introduced | 16.0.R1 |
| Platforms | All |

avg-frame-overhead decimal-number

| | |
|------------|--|
| Synopsis | Average packet-to-frame encapsulation overhead |
| Context | configure service vprn string interface string sap string egress qos sap-egress overrides queue reference avg-frame-overhead decimal-number |
| Tree | avg-frame-overhead |
| Range | 0.00 to 100.00 |
| Introduced | 16.0.R1 |
| Platforms | All |

burst-limit (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | Explicit shaping burst size for the queue |
| Context | configure service vprn string interface string sap string egress qos sap-egress overrides queue reference burst-limit (<i>number</i> <i>keyword</i>) |
| Tree | burst-limit |
| Range | 1 to 14000000 |
| Units | bytes |
| Options | auto |
| Introduced | 16.0.R1 |
| Platforms | All |

cbs (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | CBS |
| Context | configure service vprn string interface string sap string egress qos sap-egress overrides queue reference cbs (<i>number</i> <i>keyword</i>) |
| Tree | cbs |
| Range | 0 to 1048576 |
| Units | kilobytes |
| Options | auto |
| Introduced | 16.0.R1 |
| Platforms | All |

drop-tail

| | |
|------------|--|
| Synopsis | Enter the drop-tail context |
| Context | configure service vprn string interface string sap string egress qos sap-egress overrides queue reference drop-tail |
| Tree | drop-tail |
| Introduced | 16.0.R1 |
| Platforms | All |

low

| | |
|----------|------------------------------|
| Synopsis | Enter the low context |
|----------|------------------------------|

| | |
|------------|--|
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue <i>reference</i> drop-tail low |
| Tree | low |
| Introduced | 16.0.R1 |
| Platforms | All |

percent-reduction-from-mbs (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | Percentage reduction from the MBS for a queue drop tail |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue <i>reference</i> drop-tail low percent-reduction-from-mbs (<i>number</i> <i>keyword</i>) |
| Tree | percent-reduction-from-mbs |
| Range | 0 to 100 |
| Options | auto |
| Introduced | 16.0.R1 |
| Platforms | All |

hs-class-weight *number*

| | |
|------------|--|
| Synopsis | Class weight override for the queue |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue <i>reference</i> hs-class-weight <i>number</i> |
| Tree | hs-class-weight |
| Range | 1 2 4 8 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR-7/12/12e |

hs-wred-queue

| | |
|------------|--|
| Synopsis | Enter the hs-wred-queue context |

| Tree | hs-wred-queue |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR-7/12/12e |

policy reference

| | |
|------------|---|
| Synopsis | Slope policy applied to the HSQ queue group queue |
| Context | configure service vprn string interface string sap string egress qos sap-egress overrides queue reference hs-wred-queue policy reference |
| Tree | policy |
| Reference | configure qos slope-policy string |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR-7/12/12e |

hs-wrr-weight number

| | |
|------------|---|
| Synopsis | WRR weight to parent with the queue into the scheduler |
| Context | configure service vprn string interface string sap string egress qos sap-egress overrides queue reference hs-wrr-weight number |
| Tree | hs-wrr-weight |
| Range | 1 to 127 |
| Default | 1 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR-7/12/12e |

mbs (number | keyword)

| | |
|------------|---|
| Synopsis | MBS |
| Context | configure service vprn string interface string sap string egress qos sap-egress overrides queue reference mbs (number keyword) |
| Tree | mbs |
| Range | 0 to 1073741824 |
| Units | bytes |
| Options | auto |
| Introduced | 16.0.R1 |
| Platforms | All |

monitor-queue-depth

| | |
|----------|---|
| Synopsis | Enable the monitor-queue-depth context |
|----------|---|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference monitor-queue-depth |
| Tree | monitor-queue-depth |
| Introduced | 20.10.R1 |
| Platforms | All |

fast-polling *boolean*

| | |
|-------------|---|
| Synopsis | Enable fast polling of the queue depth |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference monitor-queue-depth fast-polling <i>boolean</i> |
| Tree | fast-polling |
| Description | When configured to true , this command enables fast polling of the queue depth. Faster polling allows a more accurate view of the actual depth. |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | All |

violation-threshold *decimal-number*

| | |
|-------------|---|
| Synopsis | Threshold for queue depth before violation is raised |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference monitor-queue-depth violation-threshold <i>decimal-number</i> |
| Tree | violation-threshold |
| Description | This command specifies the threshold for the queue MBS. When the queue depth exceeds the threshold value, a violation is registered. |
| Range | 0.01 to 99.99 |
| Introduced | 20.10.R1 |
| Platforms | All |

parent

| | |
|------------|--|
| Synopsis | Enter the parent context |

[scheduler-name] *string*

| | |
|---------------|--|
| Synopsis | Scheduler name |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> egress qos scheduler-policy overrides scheduler <i>string</i> |
| Tree | scheduler |
| Description | <p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context does not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context is not change.</p> |
| String Length | 1 to 32 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |

| Tree | rx-eth-vsm-grace |
| Description | When configured to true , the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.

When configured to false , the router disables the Nokia Grace function. |
| Default | true |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tx-eth-vsm-grace *boolean*

Synopsis Transmit ETH-ED PDUs from the MEP

Context **configure** [service vprn string](#) [interface string](#) [sap string](#) [eth-cfm mep md-admin-name reference](#) [ma-admin-name reference](#) [mep-id number](#) [grace eth-vsm-grace tx-eth-vsm-grace](#) *boolean*

Tree [tx-eth-vsm-grace](#)

Description When configured to **true**, the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.

The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.

The operator must configure the **configure system eth-cfm grace** command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).

When configured to **false**, the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.

Default true

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

[scheduler-name] *string*

| | |
|---------------|--|
| Synopsis | Scheduler name |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ingress qos scheduler-policy overrides scheduler <i>string</i> |
| Tree | scheduler |
| Description | <p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context does not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context is not change.</p> |
| String Length | 1 to 32 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |

ip-mtu *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | IP MTU for the interface |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ip-tunnel <i>string</i> ip-mtu <i>number</i> |
| Tree | ip-mtu |
| Description | This command specifies the IP MTU for the interface. If the DF bit is not set in the packet, IP packet fragmentation is performed, if necessary, based on this configured value.

When unconfigured, all IP packets, regardless of the packet size or DF bit setting, are allowed into the tunnel without fragmentation. |
| Range | 512 to 9000 |
| Units | bytes |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

ipsec-transport-mode-profile *reference*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|----------|---|
| Synopsis | IPsec transport mode profile name |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ip-tunnel <i>string</i> ipsec-transport-mode-profile <i>reference</i> |
| Tree | ipsec-transport-mode-profile |

| | |
|------------|---|
| Reference | configure ipsec ipsec-transport-mode-profile <i>string</i> |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

local-ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Local IP address of this tunnel |
| Context | configure service vpn <i>string</i> interface <i>string</i> sap <i>string</i> ip-tunnel <i>string</i> local-ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) |
| Tree | local-ip-address |
| Description | This command specifies the local IP address to use for the IP tunnel. This configuration applies to the outer IP header of the encapsulated packets. The address must belong to one of the IP subnets associated with the public SAP interface of the tunnel group. The source IP address, the remote IP address, and the backup remote IP address of a tunnel must all belong to the same address family (IPv4 or IPv6).

When this command specifies an IPv6 address, it must be a global unicast address. |
| Introduced | 16.0.R1 |
| Platforms | All |

pmtu-discovery-aging *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Time to age out the learned path MTU |
| Context | configure service vpn <i>string</i> interface <i>string</i> sap <i>string</i> ip-tunnel <i>string</i> pmtu-discovery-aging <i>number</i> |
| Tree | pmtu-discovery-aging |
| Description | This command configures the temporary public MTU expiration time. The temporary public MTU is used for MTU propagation. |
| Range | 900 to 3600 |
| Units | seconds |
| Default | 900 |

| | |
|------------|--|
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

private-tcp-mss-adjust *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | TCP Maximum Segment Size (MSS) on the private side |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ip-tunnel <i>string</i> private-tcp-mss-adjust <i>number</i> |
| Tree | private-tcp-mss-adjust |
| Description | This command specifies the TCP MSS to adjust for tunnels on the private side. The value is used to adjust the TCP MSS option in the TCP SYN packet. |
| Range | 512 to 9000 |
| Units | bytes |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

dest-ip [[address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|----------------|--|
| Synopsis | Add a list entry for dest-ip |
| Context | configure service vpn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> dest-ip (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) |
| Tree | dest-ip |
| Max. Instances | 16 |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

[address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

| | |
|------------|--|
| Synopsis | Private IP address of the remote IP tunnel endpoint |
| Context | configure service vpn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> dest-ip (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) |
| Tree | dest-ip |
| Notes | This element is part of a list key. |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

encapsulated-ip-mtu *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|----------|--|
| Synopsis | Maximum size of the encapsulated tunnel packet |
|----------|--|

| | |
|-------------|---|
| Context | configure service vpn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> encapsulated-ip-mtu <i>number</i> |
| Tree | encapsulated-ip-mtu |
| Description | This command specifies the maximum size of the encapsulated tunnel packet to the IPsec tunnel, the IP tunnel, or the dynamic tunnels terminated on the IPsec Gateway. If the encapsulated IPv4 or IPv6 tunnel packet exceeds this value, the system fragments the packet. |
| Range | 512 to 9000 |
| Units | bytes |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

icmp-generation

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Enter the icmp-generation context |
| Context | configure service vpn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> icmp-generation |
| Tree | icmp-generation |
| Description | Commands in this context configure settings for ICMPv4 message generation. |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

frag-required

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Enter the frag-required context |
| Context | configure service vpn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> icmp-generation frag-required |
| Tree | frag-required |
| Description | Commands in this context configure the attributes for sending generated ICMP Destination Unreachable "fragmentation needed and DF set" messages (type 3, code 4) |

back to the source, if the received size of the IPv4 packet on the private side exceeds the private MTU size.

| | |
|------------|--|
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Administrative state of sending ICMP messages |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> icmp-generation frag-required admin-state <i>keyword</i> |
| Tree | admin-state |
| Description | This command configures the administrative state of sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) messages to the source if the received size of the IPv4 packet on the private side exceeds the private MTU size. |
| Options | enable, disable |
| Default | enable |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

interval *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Interval for sending ICMP messages |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> icmp-generation frag-required interval <i>number</i> |
| Tree | interval |
| Description | This command configures the interval for sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4). |
| Range | 1 to 60 |
| Units | seconds |
| Default | 10 |

| | |
|------------|--|
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

message-count *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Maximum number of ICMP messages that can be sent |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> icmp-generation frag-required message-count <i>number</i> |
| Tree | message-count |
| Description | This command configures the maximum number of ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) that can be sent during the configured interval. |
| Range | 10 to 1000 |
| Default | 100 |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

icmp6-generation

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Enter the icmp6-generation context |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> icmp6-generation |
| Tree | icmp6-generation |
| Description | Commands in this context configure settings for ICMPv6 message generation. |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

packet-too-big

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Enter the packet-too-big context |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> icmp6-generation packet-too-big |
| Tree | packet-too-big |
| Description | <p>Commands in this context configure the parameters to send ICMPv6 PTB (Packet Too Big) messages on the private side.</p> <p>The system sends PTB messages if a received IPv6 packet on the private side is greater than 1280 bytes and it exceeds the private MTU of the tunnel.</p> <p>The private MTU for the tunnel is configured via the configure router interface ipsec ipsec-tunnel ip-mtu command for the interface.</p> |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Administrative state of Packet Too Big message sends |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> icmp6-generation packet-too-big admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | enable |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

interval *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Interval for sending Packet Too Big messages |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> icmp6-generation packet-too-big interval <i>number</i> |
| Tree | interval |
| Range | 1 to 60 |
| Units | seconds |
| Default | 10 |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

message-count *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Maximum number of ICMPv6 PTB messages that can be sent |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> icmp6-generation packet-too-big message-count <i>number</i> |
| Tree | message-count |
| Description | This command configures the maximum number of PTB messages that can be sent during the configured interval. |
| Range | 10 to 1000 |
| Default | 100 |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

ip-mtu *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|----------|--|
| Synopsis | Private MTU of the IPsec tunnel |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> ip-mtu <i>number</i> |
| Tree | ip-mtu |

| | |
|-------------|---|
| Description | This command specifies the private MTU of the IPsec tunnel. The private MTU is used to determine the need for fragmentation before encapsulation of the payload packet. |
| Range | 512 to 9000 |
| Units | bytes |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

key-exchange

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | SPI of inbound and outbound packets |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> key-exchange manual keys <i>number</i> direction <i>keyword</i> spi <i>number</i> |
| Tree | spi |
| Description | This command specifies the Security Parameter Index (SPI) used to look up the instruction to verify and decrypt the incoming IPsec packets when the direction is inbound. When the direction is outbound, the SPI is used in the encoding of the outgoing packets.

The remote node can use the SPI to look up the instruction to verify and decrypt the packet. |
| Range | 256 to 16383 |

| | |
|------------|---|
| Synopsis | Maximum number of historical IKE key records |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> max-history-key-records ike <i>number</i> |
| Tree | ike |
| Range | 1 to 3 |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

pmtu-discovery-aging *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Aging out time of the learned path MTU |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> pmtu-discovery-aging <i>number</i> |
| Tree | pmtu-discovery-aging |
| Description | This command configures the temporary public and private MTU expiration time. The temporary MTU is used for MTU propagation. |
| Range | 900 to 3600 |
| Units | seconds |
| Default | 900 |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

private-tcp-mss-adjust *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | TCP maximum segment size (MSS) adjustment |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> private-tcp-mss-adjust <i>number</i> |
| Tree | private-tcp-mss-adjust |
| Description | This command specifies the TCP MSS to adjust for the tunnel on the private side. |

When configured, the system may use the value to update the MSS option in the received TCP SYN packet on the private side.

| | |
|------------|--|
| Range | 512 to 9000 |
| Units | bytes |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

propagate-pmtu-v4 *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Enable propagation of the path MTU to IPv4 hosts |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> propagate-pmtu-v4 <i>boolean</i> |
| Tree | propagate-pmtu-v4 |
| Description | When configured to true , the system propagates the path MTU learned from the public side to the private side (IPv4 hosts). |
| Default | true |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

propagate-pmtu-v6 *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Enable propagation of the path MTU to IPv6 hosts |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> propagate-pmtu-v6 <i>boolean</i> |
| Tree | propagate-pmtu-v6 |
| Description | When configured to true , the system propagates the path MTU learned from the public side to the private side (IPv6 hosts). |
| Default | true |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

public-tcp-mss-adjust (*number* | *keyword*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | TCP maximum segment size (MSS) on the public network |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> public-tcp-mss-adjust (<i>number</i> <i>keyword</i>) |
| Tree | public-tcp-mss-adjust |
| Description | This command configures the MSS for the TCP traffic in an IPsec tunnel that is sent from the public network to the private network. The system may use this value to adjust or insert the MSS option in the TCP SYN packet. |
| Range | 512 to 9000 |
| Units | bytes |
| Options | auto |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

replay-window *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Anti-replay window size |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> replay-window <i>number</i> |
| Tree | replay-window |
| Description | This command specifies the size of an IPsec anti-replay window. If unconfigured, IPsec anti-replay is disabled. |
| Range | 32 64 128 256 512 |
| Units | packets |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

security-policy

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

strict-match *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Enable strict match of the security policy entry |
| Context | configure service vpn <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-tunnel <i>string</i> security-policy strict-match <i>boolean</i> |
| Tree | strict-match |
| Description | When configured to true , this command enables strict match of the security policy entry.
When a CREATE_CHILD exchange request is received for a static IPsec tunnel, and this request is not a rekey request, ISA matches the received TS <i>i</i> and TS <i>r</i> with the |

configured security policy. This can be a match only when a received TS (in TSi or TSr) address range matches exactly with the subnet in a security policy entry.

If there is no match, the setup fails, and TS_UNACCEPTABLE is sent.

If there is a match, but there is an existing CHILD_SA for the matched security policy, the setup fails, and NO_PROPOSAL_CHOSEN is sent.

If there is a match, and there is not a CHILD_SA for the matched entry, the subnet is sent in the matched security policy entry as TSi and TSr, and the CHILD_SA is created.

| | |
|------------|--|
| Default | false |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

link-map-profile *number*

| | |
|-------------|--|
| Synopsis | LAG link map profile for a SAP or network interface |
| Context | configure service vprn <i>string</i> interface <i>string</i> sap <i>string</i> lag link-map-profile <i>number</i> |
| Tree | link-map-profile |
| Description | This command assigns a preconfigured LAG link map profile to a SAP or network interface configured on a LAG or a PW port that exists on a LAG. After an operator assigns a LAG link map profile, the system rehashes the SAP or network interface egress traffic over the LAG as required by the new configuration.

If the LAG link map profile for a SAP or network interface is deleted, the system reverts back to per-flow hashing. |
| Range | 1 to 64 |
| Introduced | 16.0.R1 |
| Platforms | All |

per-link-hash

bfd-template *reference*

| | |
|-------------|---|
| Synopsis | BFD template associated with the SDP binding |
| Context | configure service vprn <i>string</i> interface <i>string</i> spoke-sdp <i>string</i> bfd bfd-template <i>reference</i> |
| Tree | bfd-template |
| Description | This command configures a named BFD template to be used by VCCV BFD on PWs belonging to the VLL service. The template specifies parameters, such as the minimum transmit and receive control packet timer intervals, used by the BFD session. Template parameters are configured under the configure router bfd context. |
| Reference | configure bfd bfd-template <i>string</i> |
| Introduced | 21.2.R1 |
| Platforms | All |

failure-action *keyword*

| Default | none |
| Introduced | 21.2.R1 |
| Platforms | All |

wait-for-up-timer *number*

| | |
|-------------|--|
| Synopsis | Time waited for BFD up status |
| Context | configure service vprn <i>string</i> interface <i>string</i> spoke-sdp <i>string</i> bfd wait-for-up-timer <i>number</i> |
| Tree | wait-for-up-timer |
| Description | This command configures the time interval that is used to wait for a BFD session to come up.

This command is triggered when a spoke-SDP is first administratively enabled and a VCCV BFD session transitions from up to down. The command is required to allow time for BFD sessions to come up, and for BFD to settle before selecting the active spoke-SDP for use in a redundant set. In the case where a VCCV BFD session is bouncing, the timer prevents excessive flapping of the operational state of a spoke-SDP. |
| Range | 1 to 60 |
| Units | seconds |
| Introduced | 21.2.R1 |

|-------------|--|
| Synopsis | Enable the eth-test context |
| Context | configure service vprn <i>string</i> interface <i>string</i> spoke-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test |
| Tree | eth-test |
| Description | Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the oam eth-cfm eth-test command. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

bit-error-threshold *number*

| | |
|------------|--|
| Synopsis | Lowest priority defect allowed to generate fault alarm |
| Context | configure service vprn <i>string</i> interface <i>string</i> spoke-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test bit-error-threshold <i>number</i> |
| Tree | bit-error-threshold |
| Range | 0 to 11840 |
| Units | bit errors |
| Default | 1 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

test-pattern

| | |
|-------------|---|
| Synopsis | Enter the test-pattern context |
| Context | configure service vprn <i>string</i> interface <i>string</i> spoke-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test test-pattern |
| Tree | test-pattern |
| Description | Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver. |

| | |
|------------|--|
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

| Tree | rx-eth-vsm-grace |
| Description | When configured to true , the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.

When configured to false , the router disables the Nokia Grace function. |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

tx-eth-vsm-grace *boolean*

| | |
|-------------|--|
| Synopsis | Transmit ETH-ED PDUs from the MEP |
| Context | configure service vprn <i>string</i> interface <i>string</i> spoke-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> grace eth-vsm-grace tx-eth-vsm-grace <i>boolean</i> |
| Tree | tx-eth-vsm-grace |
| Description | When configured to true , the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.

The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.

The operator must configure the configure system eth-cfm grace command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).

When configured to false , the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP. |
| Default | true |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

squelch-ingress-levels *number*

Synopsis Levels for which ETH-CFM packets are silently discarded

Context **configure** [service vprn](#) *string* [interface](#) *string* [spoke-sdp](#) *string* [eth-cfm squelch-ingress-levels](#) *number*

Tree [squelch-ingress-levels](#)

Description This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.

The list of levels must be a complete contiguous list from 0 up to the highest level that will be dropped.

| | |
|----------------|--|
| Range | 0 to 7 |
| Max. Instances | 8 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

hash-label

| | |
|-------------|--|
| Synopsis | Enable the hash-label context |
| Context | configure service vprn <i>string</i> interface <i>string</i> spoke-sdp <i>string</i> hash-label |
| Tree | hash-label |
| Description | Commands in this context configure the use of hash labels for egress datapaths. |
| Notes | The following elements are part of a choice: entropy-label or hash-label . |
| Introduced | 16.0.R1 |
| Platforms | All |

signal-capability

| | |
|-------------|---|
| Synopsis | Signal hash label capability to the remote PE |
| Context | configure service vprn <i>string</i> interface <i>string</i> spoke-sdp <i>string</i> hash-label signal-capability |
| Tree | signal-capability |
| Description | When configured, this command enables the signaling and negotiating of the hash label between the local and remote PE nodes.

The signaling process outcome determines whether the local PE inserts the hash label on the user packets. This outcome can override the local PE configuration. |
| Introduced | 16.0.R1 |
| Platforms | All |

ingress

| Context | configure service vprn <i>string</i> interface <i>string</i> vpls <i>string</i> evpn arp flood-garp-and-unknown-req <i>boolean</i> |
| Tree | flood-garp-and-unknown-req |
| Description | When configured to true , the system allows CPM-originated ARP frames to be flooded in the R-VPLS service. Any frames that are data path flooded such as the ARP messages received on a SAP, are flooded irrespective of this command. |

When configured to **false**, CPM-originated ARP flooding is suppressed.

| | |
|------------|----------|
| Default | true |
| Introduced | 19.10.R1 |
| Platforms | All |

learn-dynamic *boolean*

| | |
|------------|---|
| Synopsis | Process ARP or ND messages on EVPN tunnels |
| Context | configure service vprn <i>string</i> interface <i>string</i> vpls <i>string</i> evpn arp learn-dynamic <i>boolean</i> |
| Tree | learn-dynamic |
| Default | true |
| Introduced | 19.10.R1 |
| Platforms | All |

nd

| | |
|------------|---|
| Synopsis | Enter the nd context |
| Context | configure service vprn <i>string</i> interface <i>string</i> vpls <i>string</i> evpn nd |
| Tree | nd |
| Introduced | 20.5.R1 |
| Platforms | All |

advertise [[route-type](#)] *keyword*

| | |
|-------------|--|
| Synopsis | Enter the advertise list instance |
| Context | configure service vprn <i>string</i> interface <i>string</i> vpls <i>string</i> evpn nd advertise <i>keyword</i> |
| Tree | advertise |
| Description | Commands in this context specify the configuration to allow ARP or ND entries that are installed in the ARP or ND cache to be advertised in EVPN MAC/IP routes.
The learn-dynamic command must be set to false when using this functionality. |
| Introduced | 20.5.R1 |
| Platforms | All |

[[route-type](#)] *keyword*

| | |
|----------|---|
| Synopsis | Type of ARP or ND entries that generate host routes |
|----------|---|

| | |
|-------------|--|
| Context | configure service vprn <i>string</i> interface <i>string</i> vpls <i>string</i> evpn nd advertise <i>keyword</i> |
| Tree | advertise |
| Description | This command specifies the type of ARP or ND entries that are installed in the ARP or ND cache into EVPN MAC/IP routes. |
| Options | static, dynamic |
| Notes | This element is part of a list key. |
| Introduced | 20.5.R1 |
| Platforms | All |

route-tag *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Tag value used with the host route from an ARP/ND entry |
| Context | configure service vprn <i>string</i> interface <i>string</i> vpls <i>string</i> evpn nd advertise <i>keyword</i> route-tag <i>number</i> |
| Tree | route-tag |
| Description | This command specifies the route tag that is added separately to dynamic or static ARP or ND entries that are advertised in EVPN MAC/IP routes. This tag can be matched on BGP vsi-export (in the R-VPLS) and BGP peer export policies. |
| Range | 0 to 255 |
| Introduced | 20.5.R1 |
| Platforms | All |

learn-dynamic *boolean*

| | |
|------------|--|
| Synopsis | Process ARP or ND messages on EVPN tunnels |
| Context | configure service vprn <i>string</i> interface <i>string</i> vpls <i>string</i> evpn nd learn-dynamic <i>boolean</i> |
| Tree | learn-dynamic |
| Default | true |
| Introduced | 20.5.R1 |
| Platforms | All |

evpn-tunnel

| | |
|------------|--|
| Synopsis | Enable the evpn-tunnel context |
| Context | configure service vprn <i>string</i> interface <i>string</i> vpls <i>string</i> evpn-tunnel |
| Tree | evpn-tunnel |
| Introduced | 16.0.R1 |
| Platforms | All |

allow-bfd *boolean*

| | |
|------------|---|
| Synopsis | Allow BFD on the EVPN tunnel |
| Context | configure service vprn <i>string</i> interface <i>string</i> vpls <i>string</i> evpn-tunnel allow-bfd <i>boolean</i> |
| Tree | allow-bfd |
| Default | false |
| Introduced | 22.5.R1 |
| Platforms | All |

ipv6-gateway-address *keyword*

| | |
|------------|--|
| Synopsis | Type of IPv6 gateway address |
| Context | configure service vprn <i>string</i> interface <i>string</i> vpls <i>string</i> evpn-tunnel ipv6-gateway-address <i>keyword</i> |
| Tree | ipv6-gateway-address |
| Options | ip, mac |
| Default | ip |
| Introduced | 16.0.R4 |
| Platforms | All |

supplementary-broadcast-domain *boolean*

| | |
|-------------|---|
| Synopsis | Use the EVPN tunnel as a Supplementary Broadcast Domain |
| Context | configure service vprn <i>string</i> interface <i>string</i> vpls <i>string</i> evpn-tunnel supplementary-broadcast-domain <i>boolean</i> |
| Tree | supplementary-broadcast-domain |
| Description | When configured to true , this command allows the EVPN tunnel to be used as a Supplementary Broadcast Domain (SBD). The SBD is used in EVPN OISM to advertise the SMET routes and to receive the multicast traffic on egress PEs that are not attached to the source R-VPLS service. |

When configured to **false**, this command disables EVPN tunnel use as an SBD.

| | |
|------------|----------|
| Default | false |
| Introduced | 19.10.R1 |
| Platforms | All |

ingress

| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of router advertisement |
| Context | configure service vprn <i>string</i> ipv6 router-advertisement interface <i>reference</i> admin-state keyword |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | All |

current-hop-limit *number*

| | |
|------------|---|
| Synopsis | Hop limit advertised in RA messages |
| Context | configure service vprn <i>string</i> ipv6 router-advertisement interface <i>reference</i> current-hop-limit number |
| Tree | current-hop-limit |
| Range | 0 to 255 |
| Default | 64 |
| Introduced | 16.0.R1 |
| Platforms | All |

dns-options

| | |
|------------|--|
| Synopsis | Enable the dns-options context |
| Context | configure service vprn <i>string</i> ipv6 router-advertisement interface <i>reference</i> dns-options |
| Tree | dns-options |
| Introduced | 16.0.R1 |
| Platforms | All |

include-rdnss *boolean*

| | |
|----------|--|
| Synopsis | Include the RDNSS option in the RA |
| Context | configure service vprn <i>string</i> ipv6 router-advertisement interface <i>reference</i> dns-options include-rdnss boolean |
| Tree | include-rdnss |
| Default | true |

Introduced 16.0.R1
 Platforms All

rdnss-lifetime (*number | keyword*)

Synopsis Maximum time over which the RDNSS address 25 is valid
 Context **configure** [service vprn](#) *string* [ipv6 router-advertisement interface](#) *reference* [dns-options rdnss-lifetime](#) (*number | keyword*)
 Tree [rdnss-lifetime](#)
 Range 0 | 4 to 3600
 Units seconds
 Options infinite
 Introduced 16.0.R1
 Platforms All

server *string*

Synopsis RAs that are forwarded to IPv6 DNS servers
 Context **configure** [service vprn](#) *string* [ipv6 router-advertisement interface](#) *reference* [dns-options server](#) *string*
 Tree [server](#)
 Max. Instances 4
 Notes This element is ordered by the user.
 Introduced 16.0.R1
 Platforms All

managed-configuration *boolean*

Synopsis Set the managed address configuration flag
 Context **configure** [service vprn](#) *string* [ipv6 router-advertisement interface](#) *reference* [managed-configuration](#) *boolean*
 Tree [managed-configuration](#)
 Default false
 Introduced 16.0.R1
 Platforms All

max-advertisement-interval *number*

| | |
|------------|---|
| Synopsis | Maximum time between sending advertisement messages |
| Context | configure service vprn <i>string</i> ipv6 router-advertisement interface <i>reference</i> max-advertisement-interval <i>number</i> |
| Tree | max-advertisement-interval |
| Range | 4 to 1800 |
| Units | seconds |
| Default | 600 |
| Introduced | 16.0.R1 |
| Platforms | All |

min-advertisement-interval *number*

| | |
|------------|---|
| Synopsis | Minimum interval between router advertisement messages |
| Context | configure service vprn <i>string</i> ipv6 router-advertisement interface <i>reference</i> min-advertisement-interval <i>number</i> |
| Tree | min-advertisement-interval |
| Range | 3 to 1350 |
| Units | seconds |
| Default | 200 |
| Introduced | 16.0.R1 |
| Platforms | All |

mtu *number*

| | |
|------------|--|
| Synopsis | MTU for sending packets to the router |
| Context | configure service vprn <i>string</i> ipv6 router-advertisement interface <i>reference</i> mtu <i>number</i> |
| Tree | mtu |
| Range | 1280 to 9800 |
| Introduced | 16.0.R1 |
| Platforms | All |

other-stateful-configuration *boolean*

| | |
|----------|----------------------------------|
| Synopsis | Set the other configuration flag |
|----------|----------------------------------|

| | |
|------------|--|
| Context | configure service vprn <i>string</i> ipv6 router-advertisement interface <i>reference</i> other-stateful-configuration <i>boolean</i> |
| Tree | other-stateful-configuration |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

prefix [**ipv6-prefix**] *string*

| | |
|----------------|---|
| Synopsis | Enter the prefix list instance |
| Context | configure service vprn <i>string</i> ipv6 router-advertisement interface <i>reference</i> prefix <i>string</i> |
| Tree | prefix |
| Max. Instances | 254 |
| Introduced | 16.0.R1 |
| Platforms | All |

[ipv6-prefix] *string*

| | |
|------------|---|
| Synopsis | IPv6 address prefix |
| Context | configure service vprn <i>string</i> ipv6 router-advertisement interface <i>reference</i> prefix <i>string</i> |
| Tree | prefix |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

autonomous *boolean*

| | |
|------------|--|
| Synopsis | Set the autonomous flag value |
| Context | configure service vprn <i>string</i> ipv6 router-advertisement interface <i>reference</i> prefix <i>string</i> autonomous <i>boolean</i> |
| Tree | autonomous |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

on-link *boolean*

| | |
|------------|--|
| Synopsis | Use prefix for on-link determination |
| Context | configure service vprn <i>string</i> ipv6 router-advertisement interface reference prefix <i>string</i>
on-link <i>boolean</i> |
| Tree | on-link |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

preferred-lifetime (*keyword* | *number*)

| | |
|------------|---|
| Synopsis | Remaining time that the prefix remains preferred |
| Context | configure service vprn <i>string</i> ipv6 router-advertisement interface reference prefix <i>string</i>
preferred-lifetime (<i>keyword</i> <i>number</i>) |
| Tree | preferred-lifetime |
| Range | 0 to 4294967294 |
| Units | seconds |
| Options | infinite |
| Default | 604800 |
| Introduced | 16.0.R1 |
| Platforms | All |

valid-lifetime (*keyword* | *number*)

| | |
|------------|---|
| Synopsis | Remaining time in which the prefix is still valid |
| Context | configure service vprn <i>string</i> ipv6 router-advertisement interface reference prefix <i>string</i>
valid-lifetime (<i>keyword</i> <i>number</i>) |
| Tree | valid-lifetime |
| Range | 0 to 4294967294 |
| Units | seconds |
| Options | infinite |
| Default | 2592000 |
| Introduced | 16.0.R1 |
| Platforms | All |

reachable-time *number*

| | |
|------------|---|
| Synopsis | Time the router is reachable by other hosts or nodes |
| Context | configure service vprn <i>string</i> ipv6 router-advertisement interface <i>reference</i> reachable-time <i>number</i> |
| Tree | reachable-time |
| Range | 0 to 3600000 |
| Units | milliseconds |
| Default | 0 |
| Introduced | 16.0.R1 |
| Platforms | All |

retransmit-time *number*

| | |
|------------|--|
| Synopsis | Time to advertise neighbor advertisement messages |
| Context | configure service vprn <i>string</i> ipv6 router-advertisement interface <i>reference</i> retransmit-time <i>number</i> |
| Tree | retransmit-time |
| Range | 0 to 1800000 |
| Units | milliseconds |
| Default | 0 |
| Introduced | 16.0.R1 |
| Platforms | All |

router-lifetime *number*

| | |
|------------|--|
| Synopsis | Lifetime value in neighbor advertisement messages |
| Context | configure service vprn <i>string</i> ipv6 router-advertisement interface <i>reference</i> router-lifetime <i>number</i> |
| Tree | router-lifetime |
| Range | 0 4 to 9000 |
| Units | seconds |
| Default | 1800 |
| Introduced | 16.0.R1 |
| Platforms | All |

use-virtual-mac *boolean*

| | |
|------------|---|
| Synopsis | Use VRRP virtual MAC address for advertisement message |
| Context | configure service vprn <i>string</i> ipv6 router-advertisement interface reference use-virtual-mac <i>boolean</i> |
| Tree | use-virtual-mac |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

isis [[isis-instance](#)] *number*

| | |
|------------|--|
| Synopsis | Enter the isis list instance |
| Context | configure service vprn <i>string</i> isis <i>number</i> |
| Tree | isis |
| Introduced | 16.0.R1 |
| Platforms | All |

[isis-instance] *number*

| | |
|------------|--|
| Synopsis | Instance ID for the IS-IS instance |
| Context | configure service vprn <i>string</i> isis <i>number</i> |
| Tree | isis |
| Range | 0 to 127 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|----------|--|
| Synopsis | Administrative state of the IS-IS instance |
| Context | configure service vprn <i>string</i> isis <i>number</i> admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |

Introduced 16.0.R1
Platforms All

advertise-passive-only *boolean*

Synopsis Advertise prefixes that belong to passive interfaces
Context **configure** [service vprn](#) *string* [isis number](#) **advertise-passive-only** *boolean*
Tree [advertise-passive-only](#)
Default false
Introduced 16.0.R1
Platforms All

advertise-router-capability *keyword*

Synopsis Router capabilities advertisement to neighbors
Context **configure** [service vprn](#) *string* [isis number](#) **advertise-router-capability** *keyword*
Tree [advertise-router-capability](#)
Options area, as
Introduced 16.0.R1
Platforms All

all-l1isis *string*

Synopsis Destination MAC address for all L1 IS-IS routers
Context **configure** [service vprn](#) *string* [isis number](#) **all-l1isis** *string*
Tree [all-l1isis](#)
Default 01:80:C2:00:00:14
Introduced 16.0.R1
Platforms All

all-l2isis *string*

Synopsis Destination MAC address for all L2 IS-IS routers
Context **configure** [service vprn](#) *string* [isis number](#) **all-l2isis** *string*
Tree [all-l2isis](#)

| | |
|------------|-------------------|
| Default | 01:80:C2:00:00:15 |
| Introduced | 16.0.R1 |
| Platforms | All |

area-address *string*

| | |
|----------------|---|
| Synopsis | Area address portion of the NSAP address |
| Context | configure service vprn <i>string</i> isis <i>number</i> area-address <i>string</i> |
| Tree | area-address |
| String Length | 2 to 38 |
| Max. Instances | 3 |
| Introduced | 16.0.R1 |
| Platforms | All |

authentication-check *boolean*

| | |
|------------|--|
| Synopsis | Perform authentication check to reject mismatch PDUs |
| Context | configure service vprn <i>string</i> isis <i>number</i> authentication-check <i>boolean</i> |
| Tree | authentication-check |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

authentication-key *string*

| | |
|---------------|---|
| Synopsis | Authentication key to verify PDUs sent from neighbors |
| Context | configure service vprn <i>string</i> isis <i>number</i> authentication-key <i>string</i> |
| Tree | authentication-key |
| String Length | 1 to 366 |
| Introduced | 16.0.R1 |
| Platforms | All |

authentication-keychain *reference*

| | |
|----------|--|
| Synopsis | Keychain used to sign and authenticate |
|----------|--|

| | |
|------------|---|
| Context | configure service vprn <i>string isis number authentication-keychain reference</i> |
| Tree | authentication-keychain |
| Reference | configure system security keychains keychain <i>string</i> |
| Introduced | 16.0.R3 |
| Platforms | All |

authentication-type *keyword*

| | |
|------------|---|
| Synopsis | Authentication type |
| Context | configure service vprn <i>string isis number authentication-type keyword</i> |
| Tree | authentication-type |
| Options | password, message-digest |
| Introduced | 16.0.R1 |
| Platforms | All |

csnp-authentication *boolean*

| | |
|------------|---|
| Synopsis | Authenticate individual IS-IS packets of the CSNP type |
| Context | configure service vprn <i>string isis number csnp-authentication boolean</i> |
| Tree | csnp-authentication |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

default-route-tag *number*

| | |
|------------|--|
| Synopsis | Route tag for the default route |
| Context | configure service vprn <i>string isis number default-route-tag number</i> |
| Tree | default-route-tag |
| Range | 1 to 4294967295 |
| Introduced | 16.0.R1 |
| Platforms | All |

export-limit

| | |
|------------|---|
| Synopsis | Enable the export-limit context |
| Context | configure service vprn string isis number export-limit |
| Tree | export-limit |
| Introduced | 16.0.R1 |
| Platforms | All |

log-percent number

| | |
|------------|--|
| Synopsis | Export limit before warning and SNMP notification sent |
| Context | configure service vprn string isis number export-limit log-percent number |
| Tree | log-percent |
| Range | 1 to 100 |
| Introduced | 16.0.R1 |
| Platforms | All |

number number

| | |
|------------|---|
| Synopsis | Maximum routes or prefixes exported from route table |
| Context | configure service vprn string isis number export-limit number number |
| Tree | number |
| Range | 1 to 4294967295 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

export-policy reference

| | |
|-------------|--|
| Synopsis | Export policies that determine exported routes |
| Context | configure service vprn string isis number export-policy reference |
| Tree | export-policy |
| Description | <p>This command configures export routing policies for the routes exported from the routing table to IS-IS.</p> <p>If the export policy is undefined, the system does not export non IS-IS routes from the routing table manager to IS-IS.</p> |

If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.

If the **aggregate** command is also configured in the **configure router** context, the aggregation is applied before the export policy is applied.

Routing policies are created in the **configure router policy-options** context.

| | |
|----------------|--|
| Reference | configure policy-options policy-statement <i>string</i> |
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | All |

graceful-restart

| | |
|------------|---|
| Synopsis | Enable the graceful-restart context |
| Context | configure service vprn <i>string</i> isis <i>number</i> graceful-restart |
| Tree | graceful-restart |
| Introduced | 16.0.R1 |
| Platforms | All |

helper-mode *boolean*

| | |
|------------|--|
| Synopsis | Enable the Graceful Restart helper for IS-IS |
| Context | configure service vprn <i>string</i> isis <i>number</i> graceful-restart helper-mode <i>boolean</i> |
| Tree | helper-mode |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

hello-authentication *boolean*

| | |
|------------|--|
| Synopsis | Authenticate Hello type IS-IS protocol packets |
| Context | configure service vprn <i>string</i> isis <i>number</i> hello-authentication <i>boolean</i> |
| Tree | hello-authentication |
| Default | true |
| Introduced | 16.0.R1 |

Platforms All

hello-padding *keyword*

Synopsis IS-IS Hello message padding
Context **configure service vprn string isis number hello-padding keyword**
Tree [hello-padding](#)
Options adaptive, loose, strict, none
Introduced 16.0.R1
Platforms All

ignore-attached-bit *boolean*

Synopsis Ignore attached bit on received Layer 1 LSPs
Context **configure service vprn string isis number ignore-attached-bit boolean**
Tree [ignore-attached-bit](#)
Default false
Introduced 16.0.R1
Platforms All

ignore-lsp-errors *boolean*

Synopsis Ignore LSP packets with errors
Context **configure service vprn string isis number ignore-lsp-errors boolean**
Tree [ignore-lsp-errors](#)
Default false
Introduced 16.0.R1
Platforms All

ignore-narrow-metric *boolean*

Synopsis Ignore links with narrow metrics
Context **configure service vprn string isis number ignore-narrow-metric boolean**
Tree [ignore-narrow-metric](#)
Default false

Introduced 16.0.R1
 Platforms All

iid-tlv *boolean*

Synopsis Use IID TLVs with IS-IS multi-instance
 Context **configure** [service](#) [vpn](#) *string* [isis](#) *number* **iid-tlv** *boolean*
 Tree [iid-tlv](#)
 Default false
 Introduced 16.0.R1
 Platforms All

import-policy *reference*

Synopsis Import policy names for routes from IGP to route table
 Context **configure** [service](#) [vpn](#) *string* [isis](#) *number* **import-policy** *reference*
 Tree [import-policy](#)
 Reference **configure** [policy-options](#) [policy-statement](#) *string*
 Max. Instances 5
 Notes This element is ordered by the user.
 Introduced 16.0.R1
 Platforms All

interface [[interface-name](#)] *string*

Synopsis Enter the **interface** list instance
 Context **configure** [service](#) [vpn](#) *string* [isis](#) *number* **interface** *string*
 Tree [interface](#)
 Introduced 16.0.R1
 Platforms All

[interface-name] *string*

Synopsis IP interface name

| | |
|---------------|--|
| Context | configure service vprn <i>string isis number interface string</i> |
| Tree | interface |
| String Length | 1 to 32 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of the IS-IS interface |
| Context | configure service vprn <i>string isis number interface string admin-state keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | enable |
| Introduced | 16.0.R1 |
| Platforms | All |

bfd-liveness

| | |
|-------------|---|
| Synopsis | Enter the bfd-liveness context |
| Context | configure service vprn <i>string isis number interface string bfd-liveness</i> |
| Tree | bfd-liveness |
| Description | Commands in this context enable the use of bidirectional forwarding (BFD) to control IPv4 and IPv6 adjacencies. Enabling BFD on an IPv4 or IPv6 protocol interface ties the protocol interface state to the BFD session state between the local and remote nodes. BFD must be enabled on the applicable IP interface. |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv4

| | |
|------------|--|
| Synopsis | Enable the ipv4 context |
| Context | configure service vprn <i>string isis number interface string bfd-liveness ipv4</i> |
| Tree | ipv4 |
| Introduced | 16.0.R1 |
| Platforms | All |

include-bfd-tlv *boolean*

| | |
|------------|--|
| Synopsis | Enable IS-IS BFD TLVs on the interface |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> bfd-liveness ipv4 include-bfd-tlv <i>boolean</i> |
| Tree | include-bfd-tlv |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv6

| | |
|------------|--|
| Synopsis | Enable the ipv6 context |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> bfd-liveness ipv6 |
| Tree | ipv6 |
| Introduced | 16.0.R1 |
| Platforms | All |

include-bfd-tlv *boolean*

| | |
|------------|--|
| Synopsis | Enable IS-IS BFD TLVs on the interface |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> bfd-liveness ipv6 include-bfd-tlv <i>boolean</i> |
| Tree | include-bfd-tlv |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

csnp-interval *number*

| | |
|----------|--|
| Synopsis | Time interval between successive CSN PDUs sent |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> csnp-interval <i>number</i> |
| Tree | csnp-interval |
| Range | 1 to 65535 |
| Units | seconds |
| Default | 10 |

Introduced 16.0.R1
 Platforms All

default-instance *boolean*

Synopsis Allow non-MI capable router to establish an adjacency
 Context **configure** [service](#) [vprn](#) *string* [isis](#) *number* [interface](#) *string* **default-instance** *boolean*
 Tree [default-instance](#)
 Default false
 Introduced 16.0.R1
 Platforms All

hello-authentication *boolean*

Synopsis Authenticate Hello type IS-IS protocol packets
 Context **configure** [service](#) [vprn](#) *string* [isis](#) *number* [interface](#) *string* **hello-authentication** *boolean*
 Tree [hello-authentication](#)
 Default true
 Introduced 16.0.R1
 Platforms All

hello-authentication-key *string*

Synopsis Authentication key or hash string for Hello PDUs
 Context **configure** [service](#) [vprn](#) *string* [isis](#) *number* [interface](#) *string* **hello-authentication-key** *string*
 Tree [hello-authentication-key](#)
 String Length 1 to 366
 Introduced 16.0.R1
 Platforms All

hello-authentication-keychain *reference*

Synopsis Authentication keychain to use for the session
 Context **configure** [service](#) [vprn](#) *string* [isis](#) *number* [interface](#) *string* **hello-authentication-keychain** *reference*
 Tree [hello-authentication-keychain](#)

| | |
|------------|---|
| Reference | configure system security keychains keychain <i>string</i> |
| Introduced | 16.0.R3 |
| Platforms | All |

hello-authentication-type *keyword*

| | |
|------------|---|
| Synopsis | Hello authentication type |
| Context | configure service vprn <i>string</i> isis number interface <i>string</i> hello-authentication-type <i>keyword</i> |
| Tree | hello-authentication-type |
| Options | password, message-digest |
| Introduced | 16.0.R1 |
| Platforms | All |

hello-padding *keyword*

| | |
|------------|---|
| Synopsis | Padding on IS-IS Hello packets |
| Context | configure service vprn <i>string</i> isis number interface <i>string</i> hello-padding <i>keyword</i> |
| Tree | hello-padding |
| Options | adaptive, loose, strict, none |
| Introduced | 16.0.R1 |
| Platforms | All |

interface-type *keyword*

| | |
|------------|--|
| Synopsis | Interface type to broadcast, point-to-point, or to be default |
| Context | configure service vprn <i>string</i> isis number interface <i>string</i> interface-type <i>keyword</i> |
| Tree | interface-type |
| Options | point-to-point, broadcast |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv4-multicast *boolean*

| | |
|----------|---|
| Synopsis | Enable IPv4 multicast routing for the interface |
|----------|---|

| | |
|------------|---|
| Context | configure service vprn <i>string isis number interface string ipv4-multicast boolean</i> |
| Tree | ipv4-multicast |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv6-unicast *boolean*

| | |
|------------|---|
| Synopsis | Enable IPv6 unicast routing for the interface |
| Context | configure service vprn <i>string isis number interface string ipv6-unicast boolean</i> |
| Tree | ipv6-unicast |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

level [[level-number](#)] *keyword*

| | |
|----------------|--|
| Synopsis | Enter the level list instance |
| Context | configure service vprn <i>string isis number interface string level keyword</i> |
| Tree | level |
| Max. Instances | 2 |
| Introduced | 16.0.R1 |
| Platforms | All |

[level-number] *keyword*

| | |
|------------|--|
| Synopsis | ISIS protocol level number |
| Context | configure service vprn <i>string isis number interface string level keyword</i> |
| Tree | level |
| Options | 1, 2 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

hello-authentication-key *string*

| | |
|---------------|---|
| Synopsis | Authentication key for Hello PDUs |
| Context | configure service vprn <i>string</i> isis number interface string level keyword hello-authentication-key <i>string</i> |
| Tree | hello-authentication-key |
| Description | This command configures the authentication key (password) for Hello PDUs. Both the Hello authentication key and the Hello authentication type on a segment must match.

If both IS-IS and Hello authentication are configured, Hello messages are validated using Hello authentication. If only IS-IS authentication is configured, it is used to authenticate all IS-IS (including Hello) protocol PDUs. |
| String Length | 1 to 366 |
| Introduced | 16.0.R1 |
| Platforms | All |

hello-authentication-keychain *reference*

| | |
|------------|---|
| Synopsis | Authentication keychain to use for the session |
| Context | configure service vprn <i>string</i> isis number interface string level keyword hello-authentication-keychain <i>reference</i> |
| Tree | hello-authentication-keychain |
| Reference | configure system security keychains keychain <i>string</i> |
| Introduced | 16.0.R3 |
| Platforms | All |

hello-authentication-type *keyword*

| | |
|-------------|---|
| Synopsis | Hello authentication enabled on the context |
| Context | configure service vprn <i>string</i> isis number interface string level keyword hello-authentication-type <i>keyword</i> |
| Tree | hello-authentication-type |
| Description | This command enables Hello authentication at the level context. Both the Hello authentication key and the Hello authentication type on a segment must match. The Hello authentication-key statement must also be included. |
| Options | password, message-digest |
| Introduced | 16.0.R1 |
| Platforms | All |

hello-interval *number*

| | |
|------------|--|
| Synopsis | Interval between Hello messages sent on this level |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> level <i>keyword</i> hello-interval <i>number</i> |
| Tree | hello-interval |
| Range | 1 to 20000 |
| Units | seconds |
| Default | 9 |
| Introduced | 16.0.R1 |
| Platforms | All |

hello-multiplier *number*

| | |
|------------|--|
| Synopsis | Hello messages missed from neighbor before router declares adjacency down |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> level <i>keyword</i> hello-multiplier <i>number</i> |
| Tree | hello-multiplier |
| Range | 2 to 100 |
| Default | 3 |
| Introduced | 16.0.R1 |
| Platforms | All |

hello-padding *keyword*

| | |
|------------|--|
| Synopsis | Padding on IS-IS Hello packets |
| Context | configure service vprn <i>string</i> isis <i>number</i> interface <i>string</i> level <i>keyword</i> hello-padding <i>keyword</i> |
| Tree | hello-padding |
| Options | adaptive, loose, strict, none |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv4-multicast-metric *number*

| | |
|----------|---|
| Synopsis | IS-IS interface metric applied for IPv4 multicast |
|----------|---|

| | |
|------------|--|
| Context | configure service vprn <i>string isis number interface string level</i> keyword ipv4-multicast-metric number |
| Tree | ipv4-multicast-metric |
| Range | 1 to 16777215 |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv6-unicast-metric *number*

| | |
|------------|--|
| Synopsis | IS-IS interface metric applied for IPv6 unicast |
| Context | configure service vprn <i>string isis number interface string level</i> keyword ipv6-unicast-metric number |
| Tree | ipv6-unicast-metric |
| Range | 1 to 16777215 |
| Introduced | 16.0.R1 |
| Platforms | All |

metric *number*

| | |
|------------|---|
| Synopsis | IS-IS interface metric applied for IPv4 unicast |
| Context | configure service vprn <i>string isis number interface string level</i> keyword metric number |
| Tree | metric |
| Range | 1 to 16777215 |
| Introduced | 16.0.R1 |
| Platforms | All |

passive *boolean*

| | |
|------------|---|
| Synopsis | Passive interface |
| Context | configure service vprn <i>string isis number interface string level</i> keyword passive boolean |
| Tree | passive |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

priority number

| | |
|------------|---|
| Synopsis | Router to become the designated router on a multi-access network |
| Context | configure service vprn string isis number interface string level keyword priority number |
| Tree | priority |
| Range | 0 to 127 |
| Default | 64 |
| Introduced | 16.0.R1 |
| Platforms | All |

sd-offset number

| | |
|------------|--|
| Synopsis | Value of the signal degrade offset |
| Context | configure service vprn string isis number interface string level keyword sd-offset number |
| Tree | sd-offset |
| Range | 1 to 16777215 |
| Introduced | 16.0.R1 |
| Platforms | All |

sf-offset number

| | |
|------------|--|
| Synopsis | Value of the signal fail offset |
| Context | configure service vprn string isis number interface string level keyword sf-offset number |
| Tree | sf-offset |
| Range | 1 to 16777215 |
| Introduced | 16.0.R1 |
| Platforms | All |

level-capability keyword

| | |
|----------|--|
| Synopsis | IS-IS levels for this interface |
| Context | configure service vprn string isis number interface string level-capability keyword |
| Tree | level-capability |
| Options | 1, 2, 1/2 |
| Default | 1/2 |

Introduced 16.0.R1
 Platforms All

load-balancing-weight *number*

Synopsis Load balancing weight
 Context **configure** [service vprn](#) *string* [isis number](#) [interface](#) *string* **load-balancing-weight** *number*
 Tree [load-balancing-weight](#)
 Max. Range 0 to 4294967295
 Introduced 16.0.R1
 Platforms All

loopfree-alternate

Synopsis Enter the **loopfree-alternate** context
 Context **configure** [service vprn](#) *string* [isis number](#) [interface](#) *string* **loopfree-alternate**
 Tree [loopfree-alternate](#)
 Introduced 16.0.R3
 Platforms All

exclude *boolean*

Synopsis Enable/disable Loopfree Alternative at interface level.
 Context **configure** [service vprn](#) *string* [isis number](#) [interface](#) *string* **loopfree-alternate** **exclude** *boolean*
 Tree [exclude](#)
 Default false
 Introduced 16.0.R3
 Platforms All

policy-map

Synopsis Enable the **policy-map** context
 Context **configure** [service vprn](#) *string* [isis number](#) [interface](#) *string* **loopfree-alternate** **policy-map**
 Tree [policy-map](#)
 Introduced 16.0.R3

Platforms All

route-nh-template *reference*

Synopsis Route next hop policy template name

Context **configure** [service vprn](#) *string* [isis](#) *number* [interface](#) *string* [loopfree-alternate](#) [policy-map](#) [route-nh-template](#) *reference*

Tree [route-nh-template](#)

Reference **configure** [routing-options](#) [route-next-hop-policy](#) [template](#) *string*

Notes This element is mandatory.

Introduced 16.0.R3

Platforms All

lsp-pacing-interval *number*

Synopsis Interval for sending LSPs from interface

Context **configure** [service vprn](#) *string* [isis](#) *number* [interface](#) *string* [lsp-pacing-interval](#) *number*

Tree [lsp-pacing-interval](#)

Range 0 to 65535

Units milliseconds

Default 100

Introduced 16.0.R1

Platforms All

mesh-group

Synopsis Enable the **mesh-group** context

Context **configure** [service vprn](#) *string* [isis](#) *number* [interface](#) *string* [mesh-group](#)

Tree [mesh-group](#)

Introduced 16.0.R1

Platforms All

blocked

Synopsis Prevent the interface from flooding LSPs

| | |
|------------|--|
| Context | configure service vprn string isis number interface string mesh-group blocked |
| Tree | blocked |
| Notes | The following elements are part of a choice: blocked or value . |
| Introduced | 16.0.R1 |
| Platforms | All |

value number

| | |
|------------|---|
| Synopsis | Mesh group for the interface |
| Context | configure service vprn string isis number interface string mesh-group value number |
| Tree | value |
| Range | 1 to 2000000000 |
| Notes | The following elements are part of a choice: blocked or value . |
| Introduced | 16.0.R1 |
| Platforms | All |

passive boolean

| | |
|------------|---|
| Synopsis | Passive interface |
| Context | configure service vprn string isis number interface string passive boolean |
| Tree | passive |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

retransmit-interval number

| | |
|------------|--|
| Synopsis | Minimum time between LSP PDU retransmissions on point-to-point interface |
| Context | configure service vprn string isis number interface string retransmit-interval number |
| Tree | retransmit-interval |
| Range | 1 to 65535 |
| Units | seconds |
| Default | 5 |
| Introduced | 16.0.R1 |
| Platforms | All |

tag number

| | |
|------------|--|
| Synopsis | Route tag for IP address of interface |
| Context | configure service vpn <i>string</i> isis <i>number</i> interface <i>string</i> tag <i>number</i> |
| Tree | tag |
| Range | 1 to 4294967295 |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv4-multicast-routing keyword

| | |
|------------|---|
| Synopsis | IS-IS topology for IPv4 multicast routing |
| Context | configure service vpn <i>string</i> isis <i>number</i> ipv4-multicast-routing <i>keyword</i> |
| Tree | ipv4-multicast-routing |
| Options | false, native, mt |
| Default | native |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv4-routing boolean

| | |
|------------|---|
| Synopsis | Support IPv4 routing for IS-IS instance |
| Context | configure service vpn <i>string</i> isis <i>number</i> ipv4-routing <i>boolean</i> |
| Tree | ipv4-routing |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv6-routing keyword

| | |
|----------|---|
| Synopsis | Routing topology for IPv6 |
| Context | configure service vpn <i>string</i> isis <i>number</i> ipv6-routing <i>keyword</i> |
| Tree | ipv6-routing |
| Options | false, native, mt |
| Default | false |

| | |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms | All |

level [[level-number](#)] *keyword*

| | |
|----------------|---|
| Synopsis | Enter the level list instance |
| Context | configure service vprn <i>string</i> isis <i>number</i> level <i>keyword</i> |
| Tree | level |
| Max. Instances | 2 |
| Introduced | 16.0.R1 |
| Platforms | All |

[level-number] *keyword*

| | |
|------------|---|
| Synopsis | ISIS protocol level number |
| Context | configure service vprn <i>string</i> isis <i>number</i> level <i>keyword</i> |
| Tree | level |
| Options | 1, 2 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

advertise-router-capability *boolean*

| | |
|------------|--|
| Synopsis | Allow router advertisement capabilities |
| Context | configure service vprn <i>string</i> isis <i>number</i> level <i>keyword</i> advertise-router-capability <i>boolean</i> |
| Tree | advertise-router-capability |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

authentication-key *string*

| | |
|----------|---|
| Synopsis | Authentication key to verify PDUs sent on the interface |
|----------|---|

| | |
|---------------|---|
| Context | configure service vprn <i>string isis number level</i> keyword authentication-key <i>string</i> |
| Tree | authentication-key |
| Description | This command sets the authentication key used to verify PDUs sent by neighboring routers on the interface.

Neighboring routers use passwords to authenticate PDUs sent from an interface. For authentication to work, both the authentication key and the authentication type on a segment must match. The authentication-type command must also be included. |
| String Length | 1 to 366 |
| Introduced | 16.0.R1 |
| Platforms | All |

authentication-keychain *reference*

| | |
|------------|---|
| Synopsis | Keychain used to sign and authenticate |
| Context | configure service vprn <i>string isis number level</i> keyword authentication-keychain <i>reference</i> |
| Tree | authentication-keychain |
| Reference | configure system security keychains keychain <i>string</i> |
| Introduced | 16.0.R3 |
| Platforms | All |

authentication-type *keyword*

| | |
|------------|---|
| Synopsis | Authentication type to be used |
| Context | configure service vprn <i>string isis number level</i> keyword authentication-type <i>keyword</i> |
| Tree | authentication-type |
| Options | password, message-digest |
| Introduced | 16.0.R1 |
| Platforms | All |

csnp-authentication *boolean*

| | |
|----------|---|
| Synopsis | Enable authentication of CSNP IS-IS protocol packets |
| Context | configure service vprn <i>string isis number level</i> keyword csnp-authentication <i>boolean</i> |
| Tree | csnp-authentication |
| Default | true |

| | |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms | All |

default-ipv4-multicast-metric *number*

| | |
|------------|---|
| Synopsis | Default metric for IPv4 unicast |
| Context | configure service vprn <i>string</i> isis <i>number</i> level <i>keyword</i> default-ipv4-multicast-metric <i>number</i> |
| Tree | default-ipv4-multicast-metric |
| Range | 1 to 16777215 |
| Default | 10 |
| Introduced | 16.0.R1 |
| Platforms | All |

default-ipv6-unicast-metric *number*

| | |
|------------|---|
| Synopsis | Default metric for IPv6 unicast |
| Context | configure service vprn <i>string</i> isis <i>number</i> level <i>keyword</i> default-ipv6-unicast-metric <i>number</i> |
| Tree | default-ipv6-unicast-metric |
| Range | 1 to 16777215 |
| Default | 10 |
| Introduced | 16.0.R1 |
| Platforms | All |

default-metric *number*

| | |
|------------|--|
| Synopsis | Default metric |
| Context | configure service vprn <i>string</i> isis <i>number</i> level <i>keyword</i> default-metric <i>number</i> |
| Tree | default-metric |
| Range | 1 to 16777215 |
| Default | 10 |
| Introduced | 16.0.R1 |
| Platforms | All |

external-preference *number*

| | |
|------------|---|
| Synopsis | External route preference for IS-IS level |
| Context | configure service vprn <i>string isis number level</i> keyword external-preference <i>number</i> |
| Tree | external-preference |
| Range | 1 to 255 |
| Introduced | 16.0.R1 |
| Platforms | All |

hello-authentication *boolean*

| | |
|------------|---|
| Synopsis | Authenticate Hello type IS-IS protocol packets |
| Context | configure service vprn <i>string isis number level</i> keyword hello-authentication <i>boolean</i> |
| Tree | hello-authentication |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

hello-padding *keyword*

| | |
|------------|--|
| Synopsis | Padding on IS-IS Hello packets |
| Context | configure service vprn <i>string isis number level</i> keyword hello-padding <i>keyword</i> |
| Tree | hello-padding |
| Options | adaptive, loose, strict, none |
| Introduced | 16.0.R1 |
| Platforms | All |

loopfree-alternate-exclude *boolean*

| | |
|------------|---|
| Synopsis | Exclude interface participating in specific IS-IS level in SPF LFA computation |
| Context | configure service vprn <i>string isis number level</i> keyword loopfree-alternate-exclude <i>boolean</i> |
| Tree | loopfree-alternate-exclude |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

lsp-mtu-size *number***WARNING:**

Modifying this element requires the **admin-state** of the parent element to be toggled manually for the new value to take effect.

| | |
|------------|--|
| Synopsis | LSP MTU size |
| Context | configure service vprn <i>string</i> isis <i>number</i> level <i>keyword</i> lsp-mtu-size <i>number</i> |
| Tree | lsp-mtu-size |
| Range | 490 to 9778 |
| Units | bytes |
| Default | 1492 |
| Introduced | 16.0.R1 |
| Platforms | All |

preference *number*

| | |
|------------|--|
| Synopsis | External route preference at level |
| Context | configure service vprn <i>string</i> isis <i>number</i> level <i>keyword</i> preference <i>number</i> |
| Tree | preference |
| Range | 1 to 255 |
| Introduced | 16.0.R1 |
| Platforms | All |

psnp-authentication *boolean*

| | |
|------------|--|
| Synopsis | Enable authentication on PSNP IS-IS protocol packets |
| Context | configure service vprn <i>string</i> isis <i>number</i> level <i>keyword</i> psnp-authentication <i>boolean</i> |
| Tree | psnp-authentication |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

wide-metrics-only *boolean*

| | |
|----------|---|
| Synopsis | Use wide metrics advertisements in the LSPs |
|----------|---|

| | |
|------------|---|
| Context | configure service vprn <i>string isis number level keyword wide-metrics-only boolean</i> |
| Tree | wide-metrics-only |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

level-capability *keyword*

| | |
|------------|--|
| Synopsis | Routing level for instance |
| Context | configure service vprn <i>string isis number level-capability keyword</i> |
| Tree | level-capability |
| Options | 1, 2, 1/2 |
| Default | 1/2 |
| Introduced | 16.0.R1 |
| Platforms | All |

link-group [[link-group-name](#)] *string*

| | |
|------------|---|
| Synopsis | Enter the link-group list instance |
| Context | configure service vprn <i>string isis number link-group string</i> |
| Tree | link-group |
| Introduced | 16.0.R1 |
| Platforms | All |

[link-group-name] *string*

| | |
|---------------|---|
| Synopsis | Link group name for the IS-IS protocol |
| Context | configure service vprn <i>string isis number link-group string</i> |
| Tree | link-group |
| String Length | 1 to 32 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

description *string*

| | |
|---------------|---|
| Synopsis | Text description |
| Context | configure service vprn <i>string</i> isis <i>number</i> link-group <i>string</i> description <i>string</i> |
| Tree | description |
| String Length | 1 to 255 |
| Introduced | 16.0.R1 |
| Platforms | All |

level [[level-number](#)] *keyword*

| | |
|----------------|--|
| Synopsis | Enter the level list instance |
| Context | configure service vprn <i>string</i> isis <i>number</i> link-group <i>string</i> level <i>keyword</i> |
| Tree | level |
| Max. Instances | 2 |
| Introduced | 16.0.R1 |
| Platforms | All |

[level-number] *keyword*

| | |
|------------|--|
| Synopsis | ISIS protocol level number |
| Context | configure service vprn <i>string</i> isis <i>number</i> link-group <i>string</i> level <i>keyword</i> |
| Tree | level |
| Options | 1, 2 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv4-multicast-metric-offset *number*

| | |
|----------|---|
| Synopsis | Offset value for the IPv4 multicast address family |
| Context | configure service vprn <i>string</i> isis <i>number</i> link-group <i>string</i> level <i>keyword</i> ipv4-multicast-metric-offset <i>number</i> |
| Tree | ipv4-multicast-metric-offset |
| Range | 1 to 16777215 |

Introduced 16.0.R1
 Platforms All

ipv4-unicast-metric-offset *number*

Synopsis Offset value for the IPv4 unicast address family
 Context **configure** [service](#) [vprn](#) *string* [isis](#) *number* [link-group](#) *string* [level](#) *keyword* [ipv4-unicast-metric-offset](#) *number*
 Tree [ipv4-unicast-metric-offset](#)
 Range 1 to 16777215
 Introduced 16.0.R1
 Platforms All

ipv6-unicast-metric-offset *number*

Synopsis Offset value for the IPv6 unicast address family
 Context **configure** [service](#) [vprn](#) *string* [isis](#) *number* [link-group](#) *string* [level](#) *keyword* [ipv6-unicast-metric-offset](#) *number*

 Range 1 to 16777215
 Introduced 16.0.R1
 Platforms All

member [[interface-name](#)] *reference*

Synopsis Add a list entry for **member**
 Context **configure** [service](#) [vprn](#) *string* [isis](#) *number* [link-group](#) *string* [level](#) *keyword* [member](#) *reference*
 Tree [member](#)
 Max. Instances 8
 Introduced 16.0.R1
 Platforms All

[interface-name] *reference*

Synopsis Interface name for the associated link group

| | |
|------------|--|
| Context | configure service vprn <i>string isis number link-group string level keyword member reference</i> |
| Tree | member |
| Reference | configure service vprn <i>string isis number interface string</i> |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

oper-members *number*

| | |
|------------|---|
| Synopsis | Minimum number of operational links |
| Context | configure service vprn <i>string isis number link-group string level keyword oper-members number</i> |
| Tree | oper-members |
| Range | 1 to 8 |
| Introduced | 16.0.R1 |
| Platforms | All |

revert-members *number*

| | |
|------------|---|
| Synopsis | Minimum number of operational links to return link group to normal state and remove offsets |
| Context | configure service vprn <i>string isis number link-group string level keyword revert-members number</i> |
| Tree | revert-members |
| Range | 1 to 8 |
| Introduced | 16.0.R1 |
| Platforms | All |

loopfree-alternate

| | |
|------------|--|
| Synopsis | Enable the loopfree-alternate context |
| Context | configure service vprn <i>string isis number loopfree-alternate</i> |
| Tree | loopfree-alternate |
| Introduced | 16.0.R1 |
| Platforms | All |

exclude

| | |
|------------|---|
| Synopsis | Enter the exclude context |
| Context | configure service vprn string isis number loopfree-alternate exclude |
| Tree | exclude |
| Introduced | 16.0.R3 |
| Platforms | All |

prefix-policy *reference*

| | |
|----------------|--|
| Synopsis | Policy to exclude prefixes from LFA SPF calculation |
| Context | configure service vprn string isis number loopfree-alternate exclude prefix-policy reference |
| Tree | prefix-policy |
| Description | This command specifies the name of the policy for the prefixes to exclude from the LFA SPF calculation.

An excluded prefix is not included in LFA calculation regardless of its priority. The prefix tag is, however, used in the main SPF. |
| Reference | configure policy-options policy-statement string |
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R3 |
| Platforms | All |

lsp-lifetime *number***WARNING:**

Modifying this element requires the **admin-state** of the parent element to be toggled manually for the new value to take effect.

| | |
|----------|--|
| Synopsis | Amount of time during which an LSP is considered valid |
| Context | configure service vprn string isis number lsp-lifetime number |
| Tree | lsp-lifetime |
| Range | 350 to 65535 |
| Units | seconds |
| Default | 1200 |

| | |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms | All |

lsp-minimum-remaining-lifetime *number*

| | |
|------------|--|
| Synopsis | Minimum value for the Remaining Lifetime of an LSP |
| Context | configure service vprn <i>string</i> isis <i>number</i> lsp-minimum-remaining-lifetime <i>number</i> |
| Tree | lsp-minimum-remaining-lifetime |
| Range | 350 to 65535 |
| Units | seconds |
| Introduced | 19.7.R1 |
| Platforms | All |

lsp-mtu-size *number*

WARNING:

Modifying this element requires the **admin-state** of the parent element to be toggled manually for the new value to take effect.

| | |
|------------|--|
| Synopsis | LSP MTU size |
| Context | configure service vprn <i>string</i> isis <i>number</i> lsp-mtu-size <i>number</i> |
| Tree | lsp-mtu-size |
| Range | 490 to 9778 |
| Units | bytes |
| Default | 1492 |
| Introduced | 16.0.R1 |
| Platforms | All |

lsp-refresh

| | |
|------------|---|
| Synopsis | Enter the lsp-refresh context |
| Context | configure service vprn <i>string</i> isis <i>number</i> lsp-refresh |
| Tree | lsp-refresh |
| Introduced | 16.0.R1 |
| Platforms | All |

half-lifetime *boolean*

| | |
|------------|---|
| Synopsis | Set the refresh interval to always be half the LSP lifetime |
| Context | configure service vprn string isis number lsp-refresh half-lifetime <i>boolean</i> |
| Tree | half-lifetime |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

interval *number*

| | |
|------------|---|
| Synopsis | Refresh timer interval |
| Context | configure service vprn string isis number lsp-refresh interval <i>number</i> |
| Tree | interval |
| Range | 150 to 65535 |
| Units | seconds |
| Default | 600 |
| Introduced | 16.0.R1 |
| Platforms | All |

mru-mismatch-detection *boolean*

| | |
|-------------|--|
| Synopsis | Enable detection of MRU mismatch |
| Context | configure service vprn string isis number mru-mismatch-detection <i>boolean</i> |
| Tree | mru-mismatch-detection |
| Description | <p>When configured to true, this command verifies that the received IS-IS Hello (IIH) packet size does not exceed the configured maximum port MTU size. The received IIH packet is dropped when its size exceeds the maximum port MTU size.</p> <p>When configured to false, the IS-IS router instance will not drop oversized IIH packets.</p> <p>By default, FP-based hardware can receive oversized packets but it will not originate them.</p> |
| Default | false |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

multi-topology

| | |
|------------|---|
| Synopsis | Enable the multi-topology context |
| Context | configure service vprn string isis number multi-topology |
| Tree | multi-topology |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv4-multicast *boolean*

| | |
|------------|--|
| Synopsis | Support IPv4 topology (MT3) |
| Context | configure service vprn string isis number multi-topology ipv4-multicast boolean |
| Tree | ipv4-multicast |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv6-unicast *boolean*

| | |
|------------|--|
| Synopsis | Support multi-topology TLVs |
| Context | configure service vprn string isis number multi-topology ipv6-unicast boolean |
| Tree | ipv6-unicast |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

multicast-import

| | |
|------------|---|
| Synopsis | Enter the multicast-import context |
| Context | configure service vprn string isis number multicast-import |
| Tree | multicast-import |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv4 *boolean*

| | |
|------------|---|
| Synopsis | Submit IPv4 routes into the multicast RPF of the RTM |
| Context | configure service vprn string isis number multicast-import ipv4 <i>boolean</i> |
| Tree | ipv4 |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

overload

| | |
|------------|---|
| Synopsis | Enable the overload context |
| Context | configure service vprn string isis number overload |
| Tree | overload |
| Introduced | 16.0.R1 |
| Platforms | All |

max-metric *boolean*

| | |
|------------|---|
| Synopsis | Advertise transit links with maximum metric instead of setting overload bit |
| Context | configure service vprn string isis number overload max-metric <i>boolean</i> |
| Tree | max-metric |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

overload-export-external *boolean*

| | |
|------------|--|
| Synopsis | Advertise the external routes when router is in overloaded |
| Context | configure service vprn string isis number overload-export-external <i>boolean</i> |
| Tree | overload-export-external |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

overload-export-interlevel *boolean*

| | |
|------------|--|
| Synopsis | Advertise the inter-level routes when router is overloaded |
| Context | configure service vprn <i>string isis number</i> overload-export-interlevel <i>boolean</i> |
| Tree | overload-export-interlevel |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

overload-on-boot

| | |
|------------|---|
| Synopsis | Enable the overload-on-boot context |
| Context | configure service vprn <i>string isis number</i> overload-on-boot |
| Tree | overload-on-boot |
| Introduced | 16.0.R1 |
| Platforms | All |

max-metric *boolean*

| | |
|------------|--|
| Synopsis | Advertise transit links with maximum metric instead of setting overload bit |
| Context | configure service vprn <i>string isis number</i> overload-on-boot max-metric <i>boolean</i> |
| Tree | max-metric |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

timeout *number*

| | |
|------------|--|
| Synopsis | Time during which the router operates in overload state after reboot |
| Context | configure service vprn <i>string isis number</i> overload-on-boot timeout <i>number</i> |
| Tree | timeout |
| Range | 60 to 1800 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

poi-tlv *boolean*

| | |
|------------|---|
| Synopsis | Purge Originator Identification TLV |
| Context | configure service vprn <i>string</i> isis <i>number</i> poi-tlv <i>boolean</i> |
| Tree | poi-tlv |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

prefix-attributes-tlv *boolean*

| | |
|------------|---|
| Synopsis | Use IS-IS Prefix Attributes TLV to exchange extended IPv4 and IPv6 reachability information |
| Context | configure service vprn <i>string</i> isis <i>number</i> prefix-attributes-tlv <i>boolean</i> |
| Tree | prefix-attributes-tlv |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

prefix-limit

| | |
|------------|---|
| Synopsis | Enable the prefix-limit context |
| Context | configure service vprn <i>string</i> isis <i>number</i> prefix-limit |
| Tree | prefix-limit |
| Introduced | 16.0.R1 |
| Platforms | All |

limit *number*

| | |
|------------|---|
| Synopsis | Maximum number of prefixes for IS-IS instance |
| Context | configure service vprn <i>string</i> isis <i>number</i> prefix-limit limit <i>number</i> |
| Tree | limit |
| Range | 1 to 4294967295 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |

Platforms All

log-only *boolean*

Synopsis Send warning message when the prefix limit is reached
 Context **configure** *service vprn string isis number prefix-limit log-only boolean*
 Tree [log-only](#)
 Default false
 Introduced 16.0.R1
 Platforms All

overload-timeout (*number | keyword*)

Synopsis Time in overload state when prefix limit is reached
 Context **configure** *service vprn string isis number prefix-limit overload-timeout (number | keyword)*
 Tree [overload-timeout](#)
 Range 1 to 1800
 Units seconds
 Options forever
 Default forever
 Introduced 16.0.R1
 Platforms All

warning-threshold *number*

Synopsis Threshold value to trigger a warning message to be sent
 Context **configure** *service vprn string isis number prefix-limit warning-threshold number*
 Tree [warning-threshold](#)
 Range 0 to 100
 Units percent
 Default 0
 Introduced 16.0.R1
 Platforms All

psnp-authentication *boolean*

| | |
|------------|---|
| Synopsis | Authenticate individual IS-IS protocol packets of partial sequence number PDU (PSNP) type |
| Context | configure service vprn <i>string</i> isis <i>number</i> psnp-authentication <i>boolean</i> |
| Tree | psnp-authentication |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

reference-bandwidth *number*

| | |
|------------|--|
| Synopsis | Reference bandwidth for bandwidth relative costing |
| Context | configure service vprn <i>string</i> isis <i>number</i> reference-bandwidth <i>number</i> |
| Tree | reference-bandwidth |
| Range | 1 to 18446744073709551615 |
| Units | kilobps |
| Introduced | 16.0.R1 |
| Platforms | All |

rib-priority

| | |
|------------|---|
| Synopsis | Enter the rib-priority context |
| Context | configure service vprn <i>string</i> isis <i>number</i> rib-priority |
| Tree | rib-priority |
| Introduced | 16.0.R1 |
| Platforms | All |

high

| | |
|------------|--|
| Synopsis | Enter the high context |
| Context | configure service vprn <i>string</i> isis <i>number</i> rib-priority high |
| Tree | high |
| Introduced | 16.0.R1 |
| Platforms | All |

prefix-list *reference*

| | |
|------------|---|
| Synopsis | List used to select routes processed at higher priority through OSPF route calculation process |
| Context | configure service vprn <i>string</i> isis <i>number</i> rib-priority high prefix-list <i>reference</i> |
| Tree | prefix-list |
| Reference | configure policy-options prefix-list <i>string</i> |
| Notes | The following elements are part of a choice: prefix-list or tag . |
| Introduced | 16.0.R1 |
| Platforms | All |

tag *number*

| | |
|------------|--|
| Synopsis | Tag value that is used to match IS-IS routes |
| Context | configure service vprn <i>string</i> isis <i>number</i> rib-priority high tag <i>number</i> |
| Tree | tag |
| Range | 1 to 4294967295 |
| Notes | The following elements are part of a choice: prefix-list or tag . |
| Introduced | 16.0.R1 |
| Platforms | All |

router-id *string***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Unique router ID for the ISIS instance |
| Context | configure service vprn <i>string</i> isis <i>number</i> router-id <i>string</i> |
| Tree | router-id |
| Introduced | 16.0.R1 |
| Platforms | All |

standard-multi-instance *boolean*

| | |
|----------|---|
| Synopsis | Enable RFC standards compliant multi-instance behavior |
| Context | configure service vprn <i>string</i> isis <i>number</i> standard-multi-instance <i>boolean</i> |

| | |
|------------|---|
| Tree | standard-multi-instance |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

strict-adjacency-check *boolean*

| | |
|------------|---|
| Synopsis | Enable strict checking of address families for IS-IS adjacencies |
| Context | configure service vprn <i>string</i> isis <i>number</i> strict-adjacency-check <i>boolean</i> |
| Tree | strict-adjacency-check |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

summary-address [[ip-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

| | |
|------------|---|
| Synopsis | Enter the summary-address list instance |
| Context | configure service vprn <i>string</i> isis <i>number</i> summary-address (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) |
| Tree | summary-address |
| Introduced | 16.0.R1 |
| Platforms | All |

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

| | |
|------------|---|
| Synopsis | IP prefix for the summary address |
| Context | configure service vprn <i>string</i> isis <i>number</i> summary-address (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) |
| Tree | summary-address |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

level-capability *keyword*

| | |
|----------|-------------------------------------|
| Synopsis | IS-IS level for the summary address |
|----------|-------------------------------------|

| | |
|------------|--|
| Context | configure service vprn <i>string isis number summary-address (ipv4-prefix ipv6-prefix) level-capability keyword</i> |
| Tree | level-capability |
| Options | 1, 2, 1/2 |
| Default | 1/2 |
| Introduced | 16.0.R1 |
| Platforms | All |

route-tag *number*

| | |
|------------|--|
| Synopsis | Route tag assigned to the summary address |
| Context | configure service vprn <i>string isis number summary-address (ipv4-prefix ipv6-prefix) route-tag number</i> |
| Tree | route-tag |
| Range | 1 to 4294967295 |
| Introduced | 16.0.R1 |
| Platforms | All |

suppress-attached-bit *boolean*

| | |
|------------|---|
| Synopsis | Allow IS-IS to suppress setting attached bit on LSPs |
| Context | configure service vprn <i>string isis number suppress-attached-bit boolean</i> |
| Tree | suppress-attached-bit |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

system-id *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|----------|--|
| Synopsis | System ID |
| Context | configure service vprn <i>string isis number system-id string</i> |
| Tree | system-id |

| | |
|---------------|----------------|
| String Length | 14 |
| Default | 0000.0000.0000 |
| Introduced | 16.0.R1 |
| Platforms | All |

timers

| | |
|------------|---|
| Synopsis | Enter the timers context |
| Context | configure service vprn string isis number timers |
| Tree | timers |
| Introduced | 16.0.R1 |
| Platforms | All |

lsp-wait

| | |
|------------|--|
| Synopsis | Enter the lsp-wait context |
| Context | configure service vprn string isis number timers lsp-wait |
| Tree | lsp-wait |
| Introduced | 16.0.R1 |
| Platforms | All |

lsp-initial-wait *number*

| | |
|------------|---|
| Synopsis | Initial LSP generation delay |
| Context | configure service vprn string isis number timers lsp-wait lsp-initial-wait <i>number</i> |
| Tree | lsp-initial-wait |
| Range | 10 to 100000 |
| Units | milliseconds |
| Default | 10 |
| Introduced | 16.0.R1 |
| Platforms | All |

lsp-max-wait *number*

| | |
|----------|--|
| Synopsis | Maximum time between two consecutive LSP occurrences |
|----------|--|

| | |
|------------|--|
| Context | configure service vprn string isis number timers lsp-wait lsp-max-wait number |
| Tree | lsp-max-wait |
| Range | 10 to 120000 |
| Units | milliseconds |
| Default | 5000 |
| Introduced | 16.0.R1 |
| Platforms | All |

lsp-second-wait number

| | |
|------------|---|
| Synopsis | Delay between first and second LSP generation |
| Context | configure service vprn string isis number timers lsp-wait lsp-second-wait number |
| Tree | lsp-second-wait |
| Range | 10 to 100000 |
| Units | milliseconds |
| Default | 1000 |
| Introduced | 16.0.R1 |
| Platforms | All |

spf-wait

| | |
|------------|--|
| Synopsis | Enter the spf-wait context |
| Context | configure service vprn string isis number timers spf-wait |
| Tree | spf-wait |
| Introduced | 16.0.R1 |
| Platforms | All |

spf-initial-wait number

| | |
|----------|--|
| Synopsis | Initial SPF calculation delay after topology change |
| Context | configure service vprn string isis number timers spf-wait spf-initial-wait number |
| Tree | spf-initial-wait |
| Range | 10 to 100000 |
| Units | milliseconds |
| Default | 1000 |

| | |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms | All |

spf-max-wait *number*

| | |
|------------|---|
| Synopsis | Maximum interval amid two consecutive SPF calculations |
| Context | configure service vprn <i>string</i> isis <i>number</i> timers spf-wait spf-max-wait <i>number</i> |
| Tree | spf-max-wait |
| Range | 10 to 120000 |
| Units | milliseconds |
| Default | 10000 |
| Introduced | 16.0.R1 |
| Platforms | All |

spf-second-wait *number*

| | |
|------------|--|
| Synopsis | Hold time between first and second SPF calculations |
| Context | configure service vprn <i>string</i> isis <i>number</i> timers spf-wait spf-second-wait <i>number</i> |
| Tree | spf-second-wait |
| Range | 10 to 100000 |
| Units | milliseconds |
| Default | 1000 |
| Introduced | 16.0.R1 |
| Platforms | All |

unicast-import

| | |
|------------|---|
| Synopsis | Enter the unicast-import context |
| Context | configure service vprn <i>string</i> isis <i>number</i> unicast-import |
| Tree | unicast-import |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv4 *boolean*

| | |
|------------|--|
| Synopsis | Submit IPv4 routes into unicast RTM |
| Context | configure service vprn string isis number unicast-import ipv4 boolean |
| Tree | ipv4 |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv6 *boolean*

| | |
|------------|--|
| Synopsis | Submit IPv6 routes into unicast RTM |
| Context | configure service vprn string isis number unicast-import ipv6 boolean |
| Tree | ipv6 |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

l2tp

| | |
|------------|---|
| Synopsis | Enable the l2tp context |
| Context | configure service vprn string l2tp |
| Tree | l2tp |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of L2TP |
| Context | configure service vprn string l2tp admin-state keyword |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

avp-hiding *keyword*

| | |
|------------|--|
| Synopsis | Attribute of the Value Pair (AVP) hiding algorithm |
| Context | configure service vprn <i>string</i> l2tp avp-hiding <i>keyword</i> |
| Tree | avp-hiding |
| Options | sensitive, always |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

challenge *boolean*

| | |
|------------|---|
| Synopsis | Use challenge-response authentication |
| Context | configure service vprn <i>string</i> l2tp challenge <i>boolean</i> |
| Tree | challenge |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

destruct-timeout *number*

| | |
|------------|---|
| Synopsis | Destruction timeout |
| Context | configure service vprn <i>string</i> l2tp destruct-timeout <i>number</i> |
| Tree | destruct-timeout |
| Range | 60 to 86400 |
| Units | seconds |
| Default | 60 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ethernet-tunnel

| | |
|------------|--|
| Synopsis | Enter the ethernet-tunnel context |
| Context | configure service vprn <i>string</i> l2tp ethernet-tunnel |
| Tree | ethernet-tunnel |
| Introduced | 16.0.R4 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

reconnect-timeout (*number* | *keyword*)

Synopsis Timeout for a session setup retry

Context **configure service vprn** *string* **l2tp ethernet-tunnel reconnect-timeout** (*number* | *keyword*)

Tree **reconnect-timeout**

Range 10 to 3600

Units seconds

Options infinite

Default infinite

Introduced 16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

exclude-avps

Synopsis Enter the **exclude-avps** context

Context **configure service vprn** *string* **l2tp exclude-avps**

Tree **exclude-avps**

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

calling-number *boolean*

Synopsis Calling Number AVP to exclude

Context **configure service vprn** *string* **l2tp exclude-avps calling-number** *boolean*

Tree **calling-number**

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

initial-rx-lcp-conf-req *boolean*

Synopsis Exclude the Initial Received LCP CONFREQ AVP

Context **configure service vprn** *string* **l2tp exclude-avps initial-rx-lcp-conf-req** *boolean*

| | |
|------------|---|
| Tree | initial-rx-lcp-conf-req |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

failover

| | |
|------------|--|
| Synopsis | Enter the failover context |
| Context | configure service vprn string l2tp failover |
| Tree | failover |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

recovery-max-session-lifetime *number*

| | |
|------------|---|
| Synopsis | Subset of sessions that this system attempts to synchronize in the Session State Synchronization phase |
| Context | configure service vprn string l2tp failover recovery-max-session-lifetime number |
| Tree | recovery-max-session-lifetime |
| Range | 2 to 4294967295 |
| Units | centiseconds |
| Default | 2 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

recovery-method *keyword*

| | |
|------------|--|
| Synopsis | Recovery method of the sequence numbers after failover |
| Context | configure service vprn string l2tp failover recovery-method keyword |
| Tree | recovery-method |
| Options | mcs, recovery-tunnel |
| Default | mcs |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

recovery-time *number*

| | |
|------------|--|
| Synopsis | Time requested from the L2TP peer before assuming failover as failed |
| Context | configure service vpn <i>string</i> l2tp failover recovery-time <i>number</i> |
| Tree | recovery-time |
| Range | 0 to 900 |
| Units | seconds |
| Default | 0 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

track-srrp [*id*] *reference*

| | |
|------------|--|
| Synopsis | Enter the track-srrp list instance |
| Context | configure service vpn <i>string</i> l2tp failover track-srrp <i>reference</i> |
| Tree | track-srrp |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

[id] *reference*

| | |
|------------|--|
| Synopsis | SRRP instance ID for multi-chassis redundancy failover |
| Context | configure service vpn <i>string</i> l2tp failover track-srrp <i>reference</i> |
| Tree | track-srrp |
| Reference | configure redundancy multi-chassis peer (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) sync track-srrp <i>number</i> |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

peer *reference*

| | |
|----------|--|
| Synopsis | Multi-chassis peer address |
| Context | configure service vpn <i>string</i> l2tp failover track-srrp <i>reference</i> peer <i>reference</i> |
| Tree | peer |

| | |
|------------|--|
| Reference | configure redundancy multi-chassis peer (ipv4-address-no-zone ipv6-address-no-zone) |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sync-tag *string*

| | |
|---------------|---|
| Synopsis | Synchronization tag on the multi-chassis peer |
| Context | configure service vprn <i>string</i> l2tp failover track-srrp reference sync-tag <i>string</i> |
| Tree | sync-tag |
| String Length | 1 to 32 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

group [[tunnel-group-name](#)] *string*

| | |
|------------|--|
| Synopsis | Enter the group list instance |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> |
| Tree | group |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

[[tunnel-group-name](#)] *string*

| | |
|---------------|--|
| Synopsis | Tunnel group name |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> |
| Tree | group |
| String Length | 1 to 63 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of the L2TP tunnel group |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

avp-hiding *keyword*

| | |
|------------|--|
| Synopsis | The AVP hiding algorithm |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> avp-hiding <i>keyword</i> |
| Tree | avp-hiding |
| Options | never, sensitive, always |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

challenge *keyword*

| | |
|------------|---|
| Synopsis | Enable use of challenge-response authentication |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> challenge <i>keyword</i> |
| Tree | challenge |
| Options | false, true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

description *string*

| | |
|---------------|--|
| Synopsis | Text description |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> description <i>string</i> |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

destruct-timeout *number*

| | |
|------------|--|
| Synopsis | Destruction timeout |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> destruct-timeout <i>number</i> |
| Tree | destruct-timeout |
| Range | 60 to 86400 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ethernet-tunnel

| | |
|------------|---|
| Synopsis | Enter the ethernet-tunnel context |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> ethernet-tunnel |
| Tree | ethernet-tunnel |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

reconnect-timeout (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | Timeout for a session setup retry at group level |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> ethernet-tunnel reconnect-timeout (<i>number</i> <i>keyword</i>) |
| Tree | reconnect-timeout |
| Range | 10 to 3600 |
| Units | seconds |
| Options | infinite |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

failover

| | |
|----------|--|
| Synopsis | Enter the failover context |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> failover |
| Tree | failover |

Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

recovery-method *keyword*

Synopsis Recovery method of the sequence numbers after failover
Context **configure** [service vprn](#) *string* [l2tp group](#) *string* [failover recovery-method](#) *keyword*
Tree [recovery-method](#)
Options mcs, recovery-tunnel
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

recovery-time *number*

Synopsis Time requested from the L2TP peer before assuming failover as failed
Context **configure** [service vprn](#) *string* [l2tp group](#) *string* [failover recovery-time](#) *number*
Tree [recovery-time](#)
Range 0 to 900
Units seconds
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hello-interval (*number* | *keyword*)

Synopsis Hello interval
Context **configure** [service vprn](#) *string* [l2tp group](#) *string* [hello-interval](#) (*number* | *keyword*)
Tree [hello-interval](#)
Range 10 to 3600
Units seconds
Options infinite
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

idle-timeout (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | Idle timeout |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> idle-timeout (<i>number</i> <i>keyword</i>) |
| Tree | idle-timeout |
| Range | 0 to 3600 |
| Units | seconds |
| Options | infinite |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

l2tpv3

| | |
|------------|---|
| Synopsis | Enter the l2tpv3 context |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> l2tpv3 |
| Tree | l2tpv3 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

cookie-length (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | Cookie field length |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> l2tpv3 cookie-length (<i>number</i> <i>keyword</i>) |
| Tree | cookie-length |
| Range | 4 8 |
| Options | disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

digest-type *keyword*

| | |
|------------|---|
| Synopsis | Hashing algorithm that calculates the message digest |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> l2tpv3 digest-type <i>keyword</i> |
| Tree | digest-type |
| Options | none, md5, sha1 |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

nonce-length *number*

Synopsis Length for the local L2TPv3 nonce (random number)
 Context **configure service vpn** *string* **l2tp group** *string* **l2tpv3 nonce-length** *number*
 Tree [nonce-length](#)
 Range 0 | 16 to 64
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

password *string*

Synopsis L2TPv3 password
 Context **configure service vpn** *string* **l2tp group** *string* **l2tpv3 password** *string*
 Tree [password](#)
 String Length 1 to 115
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

private-tcp-mss-adjust (*number* | *keyword*)

Synopsis TCP maximum segment size (MSS) on private network
 Context **configure service vpn** *string* **l2tp group** *string* **l2tpv3 private-tcp-mss-adjust** (*number* | *keyword*)
 Tree [private-tcp-mss-adjust](#)
 Range 512 to 9000
 Units octets
 Options disable
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

public-tcp-mss-adjust (*number* | *keyword*)

Synopsis TCP Maximum Segment Size (MSS) on public network

| | |
|------------|--|
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> l2tpv3 public-tcp-mss-adjust (<i>number</i> <i>keyword</i>) |
| Tree | public-tcp-mss-adjust |
| Range | 512 to 9000 |
| Units | octets |
| Options | disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

pw-cap-list

| | |
|------------|---|
| Synopsis | Enter the pw-cap-list context |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> l2tpv3 pw-cap-list |
| Tree | pw-cap-list |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ethernet *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Advertise Ethernet pseudowire type |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> l2tpv3 pw-cap-list ethernet <i>boolean</i> |
| Tree | ethernet |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ethernet-vlan *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|----------|---|
| Synopsis | Advertise Ethernet VLAN pseudowire type |
|----------|---|

| | |
|------------|--|
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> l2tpv3 pw-cap-list ethernet-vlan <i>boolean</i> |
| Tree | ethernet-vlan |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

rem-router-id *string*

| | |
|------------|---|
| Synopsis | Filter on remote router ID |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> l2tpv3 rem-router-id <i>string</i> |
| Tree | rem-router-id |
| Default | 0.0.0.0 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

track-password-change *boolean*

| | |
|------------|--|
| Synopsis | Enable tracking of password changes |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> l2tpv3 track-password-change <i>boolean</i> |
| Tree | track-password-change |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

lac

| | |
|------------|--|
| Synopsis | Enter the lac context |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> lac |
| Tree | lac |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

df-bit *keyword*

| | |
|----------|---|
| Synopsis | DF (do not fragment) bit in data traffic transmitted as LAC |
|----------|---|

| | |
|------------|--|
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> lac df-bit <i>keyword</i> |
| Tree | df-bit |
| Options | false, true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

Ins

| | |
|------------|--|
| Synopsis | Enter the Ins context |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> Ins |
| Tree | Ins |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

Ins-group *reference*

| | |
|------------|---|
| Synopsis | ISA LNS group |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> Ins Ins-group <i>reference</i> |
| Tree | Ins-group |
| Reference | configure isa Ins-group <i>number</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

load-balance-method *keyword*

| | |
|------------|---|
| Synopsis | New sessions for L2TP ISA MDA |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> Ins load-balance-method <i>keyword</i> |
| Tree | load-balance-method |
| Options | per-session, per-tunnel |
| Default | per-session |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

mlppp

| | |
|------------|--|
| Synopsis | Enter the mlppp context |
| Context | configure service vprn string l2tp group string lns mlppp |
| Tree | mlppp |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of MLPPP in the L2TP tunnel group |
| Context | configure service vprn string l2tp group string lns mlppp admin-state keyword |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

endpoint

| | |
|------------|---|
| Synopsis | Enter the endpoint context |
| Context | configure service vprn string l2tp group string lns mlppp endpoint |
| Tree | endpoint |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

ip (*ipv4-address* | *keyword*)

| | |
|------------|---|
| Synopsis | Endpoint ID as an IP address |
| Context | configure service vprn string l2tp group string lns mlppp endpoint ip (ipv4-address keyword) |
| Tree | ip |
| Options | system |
| Notes | The following elements are part of a choice: ip or mac . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

mac (*mac-address* | *keyword*)

| | |
|------------|---|
| Synopsis | Endpoint ID as a MAC address |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> lns mlppp endpoint mac (<i>mac-address</i> <i>keyword</i>) |
| Tree | mac |
| Options | system |
| Notes | The following elements are part of a choice: ip or mac . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

interleave *boolean*

| | |
|------------|--|
| Synopsis | Enable link fragmentation and interleaving |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> lns mlppp interleave <i>boolean</i> |
| Tree | interleave |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

max-fragment-delay (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | Maximum fragment delay caused by transmission on a link |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> lns mlppp max-fragment-delay (<i>number</i> <i>keyword</i>) |
| Tree | max-fragment-delay |
| Range | 5 to 1000 |
| Units | milliseconds |
| Options | no-fragmentation |
| Default | no-fragmentation |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

max-links *number*

| | |
|----------|---------------------|
| Synopsis | Maximum MLPPP links |
|----------|---------------------|

| | |
|------------|--|
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> lns mlppp max-links <i>number</i> |
| Tree | max-links |
| Range | 1 to 8 |
| Default | 1 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

reassemble-timeout *number*

| | |
|------------|---|
| Synopsis | Reassembly timeout |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> lns mlppp reassemble-timeout <i>number</i> |
| Tree | reassemble-timeout |
| Range | 100 1000 |
| Units | milliseconds |
| Default | 1000 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

short-sequence-numbers *boolean*

| | |
|------------|--|
| Synopsis | Request a peer to send short sequence numbers |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> lns mlppp short-sequence-numbers <i>boolean</i> |
| Tree | short-sequence-numbers |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

ppp

| | |
|------------|--|
| Synopsis | Enter the ppp context |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> lns ppp |
| Tree | ppp |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

authentication *keyword*

| | |
|------------|---|
| Synopsis | PPP authentication protocol to negotiate |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> ins ppp authentication <i>keyword</i> |
| Tree | authentication |
| Options | pap, chap, pref-chap, pref-pap |
| Default | pref-chap |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

authentication-policy *string*

| | |
|---------------|---|
| Synopsis | Authentication policy when a DHCP message is received |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> ins ppp authentication-policy <i>string</i> |
| Tree | authentication-policy |
| String Length | 1 to 32 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

chap-challenge-length

| | |
|------------|---|
| Synopsis | Enter the chap-challenge-length context |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> ins ppp chap-challenge-length |
| Tree | chap-challenge-length |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

end *number*

| | |
|----------|--|
| Synopsis | Upper bound of the PPP CHAP challenge length |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> ins ppp chap-challenge-length <i>end</i> <i>number</i> |
| Tree | end |
| Range | 8 to 64 |
| Units | octets |

| | |
|------------|--|
| Default | 64 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

start number

| | |
|------------|---|
| Synopsis | Lower bound of the PPP CHAP challenge length |
| Context | configure service vprn string l2tp group string lns ppp chap-challenge-length start number |
| Tree | start |
| Range | 8 to 64 |
| Units | octets |
| Default | 32 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

default-group-interface

| | |
|------------|--|
| Synopsis | Enter the default-group-interface context |
| Context | configure service vprn string l2tp group string lns ppp default-group-interface |
| Tree | default-group-interface |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

interface string

| | |
|---------------|---|
| Synopsis | Group interface |
| Context | configure service vprn string l2tp group string lns ppp default-group-interface interface string |
| Tree | interface |
| String Length | 1 to 32 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

service-name *string*

| | |
|---------------|---|
| Synopsis | Administrative service name |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> lns ppp default-group-interface service-name <i>string</i> |
| Tree | service-name |
| String Length | 1 to 64 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

ipcp-subnet-negotiation *boolean*

| | |
|------------|---|
| Synopsis | Allow IPCP subnet negotiation for PPPoE hosts |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> lns ppp ipcp-subnet-negotiation <i>boolean</i> |
| Tree | ipcp-subnet-negotiation |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

keepalive

| | |
|------------|--|
| Synopsis | Enter the keepalive context |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> lns ppp keepalive |
| Tree | keepalive |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

interval *number*

| | |
|------------|---|
| Synopsis | PPP keepalive interval |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> lns ppp keepalive interval <i>number</i> |
| Tree | interval |
| Range | 10 to 300 |
| Units | seconds |
| Default | 30 |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

multiplier *number*

Synopsis PPP keepalive multiplier
Context **configure** [service vprn](#) *string* [l2tp group](#) *string* [lns ppp keepalive multiplier](#) *number*
Tree [multiplier](#)
Range 1 to 5
Default 3
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

lcp-force-ack-accm *boolean*

Synopsis Force acknowledgement of the LCP Asynchronous Control Character Map (ACCM) option
Context **configure** [service vprn](#) *string* [l2tp group](#) *string* [lns ppp lcp-force-ack-accm](#) *boolean*
Tree [lcp-force-ack-accm](#)
Default false
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

lcp-ignore-magic-numbers *boolean*

Synopsis Check magic number in echo request and reply messages
Context **configure** [service vprn](#) *string* [l2tp group](#) *string* [lns ppp lcp-ignore-magic-numbers](#) *boolean*
Tree [lcp-ignore-magic-numbers](#)
Default false
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mtu *number*

Synopsis Maximum PPP MTU size
Context **configure** [service vprn](#) *string* [l2tp group](#) *string* [lns ppp mtu](#) *number*

| | |
|------------|--|
| Tree | mtu |
| Range | 512 to 9212 |
| Units | octets |
| Default | 1500 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

proxy-authentication *boolean*

| | |
|------------|--|
| Synopsis | Use authentication AVPs that are received from LAC |
| Context | configure service vprn string l2tp group string lns ppp proxy-authentication <i>boolean</i> |
| Tree | proxy-authentication |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

proxy-lcp *boolean*

| | |
|------------|---|
| Synopsis | Proxy LCP AVPs that are received from LAC |
| Context | configure service vprn string l2tp group string lns ppp proxy-lcp <i>boolean</i> |
| Tree | proxy-lcp |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

reject-disabled-ncp *boolean*

| | |
|------------|---|
| Synopsis | Force LCP Protocol Reject for IPv6CP Configure Request |
| Context | configure service vprn string l2tp group string lns ppp reject-disabled-ncp <i>boolean</i> |
| Tree | reject-disabled-ncp |
| Default | false |
| Introduced | 16.0.R6 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

user-db string

| | |
|---------------|---|
| Synopsis | Local user database for PPP PAP and CHAP authentication |
| Context | configure service vprn string l2tp group string lns ppp user-db string |
| Tree | user-db |
| String Length | 1 to 32 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

local-address string

| | |
|------------|---|
| Synopsis | Local address |
| Context | configure service vprn string l2tp group string local-address string |
| Tree | local-address |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

local-name string

| | |
|---------------|--|
| Synopsis | Local host name used to distinguish tunnels |
| Context | configure service vprn string l2tp group string local-name string |
| Tree | local-name |
| String Length | 1 to 64 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

max-retries-estab number

| | |
|------------|---|
| Synopsis | Maximum retries for established tunnels |
| Context | configure service vprn string l2tp group string max-retries-estab number |
| Tree | max-retries-estab |
| Range | 2 to 7 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

max-retries-not-estab *number*

| | |
|------------|--|
| Synopsis | Maximum retries for unestablished tunnels |
| Context | configure service vprn string l2tp group string max-retries-not-estab <i>number</i> |
| Tree | max-retries-not-estab |
| Range | 2 to 7 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

password *string*

| | |
|---------------|---|
| Synopsis | Password between L2TP LAC and LNS |
| Context | configure service vprn string l2tp group string password <i>string</i> |
| Tree | password |
| String Length | 1 to 115 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

protocol *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Protocol version |
| Context | configure service vprn string l2tp group string protocol <i>keyword</i> |
| Tree | protocol |
| Options | v2, v3, v3draft |
| Default | v2 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

radius-accounting-policy *reference*

| | |
|----------|--|
| Synopsis | RADIUS accounting policy |
| Context | configure service vprn string l2tp group string radius-accounting-policy <i>reference</i> |
| Tree | radius-accounting-policy |

Reference **configure** [aaa radius l2tp-accounting-policy](#) *string*
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

receive-window-size *number*

Synopsis L2TP receive window size
Context **configure** [service vpn](#) *string* [l2tp group](#) *string* [receive-window-size](#) *number*
Tree [receive-window-size](#)
Range 4 to 1024
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

session-assign-method *keyword*

Synopsis Session assignment method
Context **configure** [service vpn](#) *string* [l2tp group](#) *string* [session-assign-method](#) *keyword*
Tree [session-assign-method](#)
Options existing-first, weighted, weighted-random
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

session-limit (*number* | *keyword*)

Synopsis Session limit
Context **configure** [service vpn](#) *string* [l2tp group](#) *string* [session-limit](#) (*number* | *keyword*)
Tree [session-limit](#)
Range 1 to 250000
Options unlimited
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

tunnel [[tunnel-name](#)] *string*

Synopsis Enter the **tunnel** list instance

| | |
|----------------|--|
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> |
| Tree | tunnel |
| Max. Instances | 31 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

[tunnel-name] *string*

| | |
|---------------|--|
| Synopsis | Tunnel name |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> |
| Tree | tunnel |
| String Length | 1 to 32 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of the L2TP tunnel |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

auto-establish *boolean*

| | |
|------------|---|
| Synopsis | Allow the tunnel to be automatically set up by the system |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> auto-establish <i>boolean</i> |
| Tree | auto-establish |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

avp-hiding *keyword*

| | |
|------------|--|
| Synopsis | The AVP hiding algorithm |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> avp-hiding <i>keyword</i> |
| Tree | avp-hiding |
| Options | never, sensitive, always |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

challenge *keyword*

| | |
|------------|---|
| Synopsis | Enable use of challenge-response authentication |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> challenge <i>keyword</i> |
| Tree | challenge |
| Options | false, true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

description *string*

| | |
|---------------|--|
| Synopsis | Text description |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> description <i>string</i> |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

destruct-timeout *number*

| | |
|------------|---|
| Synopsis | Destruction timeout |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> destruct-timeout <i>number</i> |
| Tree | destruct-timeout |
| Range | 60 to 86400 |
| Units | seconds |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

failover

Synopsis Enter the **failover** context

Context **configure service vpn** *string* **l2tp group** *string* **tunnel** *string* **failover**

Tree **failover**

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

recovery-method *keyword*

Synopsis Recovery method of the sequence numbers after failover

Context **configure service vpn** *string* **l2tp group** *string* **tunnel** *string* **failover recovery-method** *keyword*

Tree **recovery-method**

Options mcs, recovery-tunnel

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

recovery-time *number*

Synopsis Time requested from the L2TP peer before assuming failover as failed

Context **configure service vpn** *string* **l2tp group** *string* **tunnel** *string* **failover recovery-time** *number*

Tree **recovery-time**

Range 0 to 900

Units seconds

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hello-interval (*number* | *keyword*)

Synopsis Hello interval

Context **configure service vpn** *string* **l2tp group** *string* **tunnel** *string* **hello-interval** (*number* | *keyword*)

| | |
|------------|---|
| Tree | hello-interval |
| Range | 10 to 3600 |
| Units | seconds |
| Options | infinite |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

idle-timeout (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | Idle timeout |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> idle-timeout (<i>number</i> <i>keyword</i>) |
| Tree | idle-timeout |
| Range | 0 to 3600 |
| Units | seconds |
| Options | infinite |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

l2tpv3

| | |
|------------|---|
| Synopsis | Enter the l2tpv3 context |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> l2tpv3 |
| Tree | l2tpv3 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

private-tcp-mss-adjust (*number* | *keyword*)

| | |
|----------|---|
| Synopsis | TCP maximum segment size (MSS) on private network |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> l2tpv3 private-tcp-mss-adjust (<i>number</i> <i>keyword</i>) |
| Tree | private-tcp-mss-adjust |
| Range | 512 to 9000 |
| Units | octets |
| Options | disable |

| | |
|------------|---|
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

public-tcp-mss-adjust (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | TCP maximum segment size (MSS) on public network |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> l2tpv3 public-tcp-mss-adjust (<i>number</i> <i>keyword</i>) |
| Tree | public-tcp-mss-adjust |
| Range | 512 to 9000 |
| Units | octets |
| Options | disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

lac

| | |
|------------|--|
| Synopsis | Enter the lac context |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lac |
| Tree | lac |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

df-bit *keyword*

| | |
|------------|---|
| Synopsis | DF (do not fragment) bit in data traffic transmitted as LAC |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lac df-bit <i>keyword</i> |
| Tree | df-bit |
| Options | false, true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

lns

| | |
|----------|--|
| Synopsis | Enter the lns context |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns |

| | |
|------------|--|
| Tree | Ins |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

Ins-group *reference*

| | |
|------------|--|
| Synopsis | ISA LNS group |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> Ins Ins-group <i>reference</i> |
| Tree | Ins-group |
| Reference | configure isa Ins-group <i>number</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

load-balance-method *keyword*

| | |
|------------|--|
| Synopsis | New sessions for L2TP ISA MDA |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> Ins load-balance-method <i>keyword</i> |
| Tree | load-balance-method |
| Options | per-session, per-tunnel |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

mlppp

| | |
|------------|---|
| Synopsis | Enter the mlppp context |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> Ins mlppp |
| Tree | mlppp |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

admin-state *keyword*

| | |
|----------|--|
| Synopsis | Administrative state of MLPPP in the L2TP tunnel |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> Ins mlppp admin-state <i>keyword</i> |

| | |
|------------|---|
| Tree | admin-state |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

endpoint

| | |
|------------|---|
| Synopsis | Enter the endpoint context |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lms mlppp endpoint |
| Tree | endpoint |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

ip (*ipv4-address* | *keyword*)

| | |
|------------|--|
| Synopsis | Endpoint ID as an IP address |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lms mlppp endpoint ip (<i>ipv4-address</i> <i>keyword</i>) |
| Tree | ip |
| Options | system |
| Notes | The following elements are part of a choice: ip or mac . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

mac (*mac-address* | *keyword*)

| | |
|------------|--|
| Synopsis | Endpoint ID as a MAC address |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lms mlppp endpoint mac (<i>mac-address</i> <i>keyword</i>) |
| Tree | mac |
| Options | system |
| Notes | The following elements are part of a choice: ip or mac . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

interleave *keyword*

| | |
|------------|--|
| Synopsis | Use of Link fragmentation and interleaving |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns mlppp interleave <i>keyword</i> |
| Tree | interleave |
| Options | false, true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

max-fragment-delay *number*

| | |
|------------|---|
| Synopsis | Maximum fragment delay caused by transmission on a link |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns mlppp max-fragment-delay <i>number</i> |
| Tree | max-fragment-delay |
| Range | 5 to 1000 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

max-links *number*

| | |
|------------|--|
| Synopsis | Maximum MLPPP links |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns mlppp max-links <i>number</i> |
| Tree | max-links |
| Range | 1 to 8 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

reassemble-timeout *number*

| | |
|----------|---|
| Synopsis | Reassembly timeout |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns mlppp reassemble-timeout <i>number</i> |
| Tree | reassemble-timeout |
| Range | 100 1000 |

| | |
|------------|---|
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

short-sequence-numbers *keyword*

| | |
|------------|--|
| Synopsis | Request a peer to send short sequence numbers |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns mlppp short-sequence-numbers <i>keyword</i> |
| Tree | short-sequence-numbers |
| Options | false, true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s |

ppp

| | |
|------------|--|
| Synopsis | Enter the ppp context |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns ppp |
| Tree | ppp |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

authentication *keyword*

| | |
|------------|---|
| Synopsis | PPP authentication protocol to negotiate |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns ppp authentication <i>keyword</i> |
| Tree | authentication |
| Options | pap, chap, pref-chap, pref-pap |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

authentication-policy *string*

| | |
|----------|---|
| Synopsis | Authentication policy when a DHCP message is received |
|----------|---|

| | |
|---------------|--|
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns ppp authentication-policy <i>string</i> |
| Tree | authentication-policy |
| String Length | 1 to 32 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

chap-challenge-length

| | |
|------------|--|
| Synopsis | Enter the chap-challenge-length context |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns ppp chap-challenge-length |
| Tree | chap-challenge-length |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

end number

| | |
|------------|--|
| Synopsis | Upper bound of the PPP CHAP challenge length |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns ppp chap-challenge-length end <i>number</i> |
| Tree | end |
| Range | 8 to 64 |
| Units | octets |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

start number

| | |
|------------|--|
| Synopsis | Lower bound of the PPP CHAP challenge length |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns ppp chap-challenge-length start <i>number</i> |
| Tree | start |
| Range | 8 to 64 |
| Units | octets |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-group-interface

Synopsis Enter the **default-group-interface** context

Context **configure service vprn** *string* **l2tp group** *string* **tunnel** *string* **lns ppp default-group-interface**

Tree [default-group-interface](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

interface *string*

Synopsis Group interface

Context **configure service vprn** *string* **l2tp group** *string* **tunnel** *string* **lns ppp default-group-interface interface** *string*

Tree [interface](#)

String Length 1 to 32

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

service-name *string*

Synopsis Administrative service name

Context **configure service vprn** *string* **l2tp group** *string* **tunnel** *string* **lns ppp default-group-interface service-name** *string*

Tree [service-name](#)

String Length 1 to 64

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ipcp-subnet-negotiation *keyword*

Synopsis Use of IPCP subnet negotiation for PPPoE hosts

Context **configure service vprn** *string* **l2tp group** *string* **tunnel** *string* **lns ppp ipcp-subnet-negotiation** *keyword*

Tree [ipcp-subnet-negotiation](#)

| | |
|------------|--|
| Options | false, true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

keepalive

| | |
|------------|--|
| Synopsis | Enter the keepalive context |
| Context | configure service vprn string l2tp group string tunnel string lns ppp keepalive |
| Tree | keepalive |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

interval *number*

| | |
|------------|--|
| Synopsis | PPP keepalive interval |
| Context | configure service vprn string l2tp group string tunnel string lns ppp keepalive interval number |
| Tree | interval |
| Range | 10 to 300 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

multiplier *number*

| | |
|------------|--|
| Synopsis | PPP keepalive multiplier |
| Context | configure service vprn string l2tp group string tunnel string lns ppp keepalive multiplier number |
| Tree | multiplier |
| Range | 1 to 5 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

lcp-force-ack-accm *keyword*

| | |
|------------|--|
| Synopsis | Forced acknowledgement of the LCP Asynchronous Control Character Map (ACCM) option |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns ppp lcp-force-ack-accm <i>keyword</i> |
| Tree | lcp-force-ack-accm |
| Options | false, true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

lcp-ignore-magic-numbers *keyword*

| | |
|------------|--|
| Synopsis | Magic-Number field in LCP Echo-Request and LCP Echo-Reply messages that are checked |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns ppp lcp-ignore-magic-numbers <i>keyword</i> |
| Tree | lcp-ignore-magic-numbers |
| Options | false, true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

mtu *number*

| | |
|------------|--|
| Synopsis | Maximum PPP MTU size |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns ppp mtu <i>number</i> |
| Tree | mtu |
| Range | 512 to 9212 |
| Units | octets |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

proxy-authentication *keyword*

| | |
|----------|--|
| Synopsis | Authentication AVPs that are received from LAC |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns ppp proxy-authentication <i>keyword</i> |

| | |
|------------|--|
| Tree | proxy-authentication |
| Options | false, true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

proxy-lcp *keyword*

| | |
|------------|---|
| Synopsis | Use the Proxy LCP AVPs that are received from the LAC |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns ppp proxy-lcp <i>keyword</i> |
| Tree | proxy-lcp |
| Options | false, true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

reject-disabled-ncp *keyword*

| | |
|------------|---|
| Synopsis | Force LCP Project Reject for IPv6CP Configure Request |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns ppp reject-disabled-ncp <i>keyword</i> |
| Tree | reject-disabled-ncp |
| Options | false, true |
| Introduced | 16.0.R6 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

user-db *string*

| | |
|---------------|--|
| Synopsis | Local user database for PPP PAP and CHAP authentication |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> lns ppp user-db <i>string</i> |
| Tree | user-db |
| String Length | 1 to 32 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

local-address *string*

| | |
|----------|---------------|
| Synopsis | Local address |
|----------|---------------|

| | |
|------------|---|
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> local-address <i>string</i> |
| Tree | local-address |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

local-name *string*

| | |
|---------------|--|
| Synopsis | Local host name used to distinguish tunnels |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> local-name <i>string</i> |
| Tree | local-name |
| String Length | 1 to 64 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

max-retries-estab *number*

| | |
|------------|---|
| Synopsis | Maximum retries for established tunnels |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> max-retries-estab <i>number</i> |
| Tree | max-retries-estab |
| Range | 2 to 7 |
| Introduced | 16.0.R1 |

max-retries-not-estab *number*

| | |
|------------|---|
| Synopsis | Maximum retries for unestablished tunnels |
| Context | configure service vpn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> max-retries-not-estab <i>number</i> |
| Tree | max-retries-not-estab |
| Range | 2 to 7 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

password *string*

| | |
|----------|-----------------------------------|
| Synopsis | Password between L2TP LAC and LNS |
|----------|-----------------------------------|

| | |
|---------------|--|
| Context | configure service vpn <i>string l2tp group string tunnel string password string</i> |
| Tree | password |
| String Length | 1 to 115 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

peer string

| | |
|------------|--|
| Synopsis | Peer address |
| Context | configure service vpn <i>string l2tp group string tunnel string peer string</i> |
| Tree | peer |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

preference number

| | |
|------------|--|
| Synopsis | Tunnel preference number with its group |
| Context | configure service vpn <i>string l2tp group string tunnel string preference number</i> |
| Tree | preference |
| Range | 0 to 16777215 |
| Default | 50 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

radius-accounting-policy reference

| | |
|------------|---|
| Synopsis | RADIUS accounting policy |
| Context | configure service vpn <i>string l2tp group string tunnel string radius-accounting-policy reference</i> |
| Tree | radius-accounting-policy |
| Reference | configure aaa radius l2tp-accounting-policy string |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

receive-window-size *number*

| | |
|------------|---|
| Synopsis | L2TP receive window size |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> receive-window-size <i>number</i> |
| Tree | receive-window-size |
| Range | 4 to 1024 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

remote-name *string*

| | |
|---------------|---|
| Synopsis | Remote tunnel host name |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> remote-name <i>string</i> |
| Tree | remote-name |
| String Length | 1 to 64 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

session-limit (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | L2TP session limit for each tunnel of this router |
| Context | configure service vprn <i>string</i> l2tp group <i>string</i> tunnel <i>string</i> session-limit (<i>number</i> <i>keyword</i>) |
| Tree | session-limit |
| Range | 1 to 65534 |
| Options | unlimited |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

group-session-limit *number*

| | |
|------------|--|
| Synopsis | L2TP session limit for each group of this router |
| Context | configure service vprn <i>string</i> l2tp group-session-limit <i>number</i> |
| Tree | group-session-limit |
| Range | 1 to 250000 |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hello-interval (*number* | *keyword*)

Synopsis Hello interval
Context **configure service vprn** *string* **l2tp hello-interval** (*number* | *keyword*)
Tree **hello-interval**
Range 10 to 3600
Units seconds
Options infinite
Default 300
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

idle-timeout (*number* | *keyword*)

Synopsis Idle timeout
Context **configure service vprn** *string* **l2tp idle-timeout** (*number* | *keyword*)
Tree **idle-timeout**
Range 0 to 3600
Units seconds
Options infinite
Default infinite
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ignore-avps

Synopsis Enter the **ignore-avps** context
Context **configure service vprn** *string* **l2tp ignore-avps**
Tree **ignore-avps**
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sequencing-required *boolean*

| | |
|------------|---|
| Synopsis | Ignore Sequencing Required AVP |
| Context | configure service vprn <i>string</i> l2tp ignore-avps sequencing-required <i>boolean</i> |
| Tree | sequencing-required |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

l2tpv3

| | |
|------------|---|
| Synopsis | Enter the l2tpv3 context |
| Context | configure service vprn <i>string</i> l2tp l2tpv3 |
| Tree | l2tpv3 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

cookie-length *number*

| | |
|------------|---|
| Synopsis | Cookie field length |
| Context | configure service vprn <i>string</i> l2tp l2tpv3 cookie-length <i>number</i> |
| Tree | cookie-length |
| Range | 4 8 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

digest-type *keyword*

| | |
|------------|--|
| Synopsis | Hashing algorithm that calculates the message digest |
| Context | configure service vprn <i>string</i> l2tp l2tpv3 digest-type <i>keyword</i> |
| Tree | digest-type |
| Options | md5, sha1 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

nonce-length *number*

| | |
|------------|--|
| Synopsis | Length of the local L2TPv3 nonce (random number) |
| Context | configure service vprn string l2tp l2tpv3 nonce-length number |
| Tree | nonce-length |
| Range | 0 16 to 64 |
| Default | 0 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

password *string*

| | |
|---------------|--|
| Synopsis | L2TPv3 password |
| Context | configure service vprn string l2tp l2tpv3 password string |
| Tree | password |
| String Length | 1 to 115 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

private-tcp-mss-adjust *number*

| | |
|------------|--|
| Synopsis | TCP maximum segment size (MSS) on private network |
| Context | configure service vprn string l2tp l2tpv3 private-tcp-mss-adjust number |
| Tree | private-tcp-mss-adjust |
| Range | 512 to 9000 |
| Units | octets |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

public-tcp-mss-adjust *number*

| | |
|----------|---|
| Synopsis | TCP maximum segment size (MSS) on public network |
| Context | configure service vprn string l2tp l2tpv3 public-tcp-mss-adjust number |
| Tree | public-tcp-mss-adjust |
| Range | 512 to 9000 |
| Units | octets |

| | |
|------------|---|
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

transport-type

| | |
|------------|---|
| Synopsis | Enter the transport-type context |
| Context | configure service vprn string l2tp l2tpv3 transport-type |
| Tree | transport-type |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ip boolean

| | |
|------------|--|
| Synopsis | Use IP as the transport type for the L2TPv3 tunnel |
| Context | configure service vprn string l2tp l2tpv3 transport-type ip boolean |
| Tree | ip |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

lac

| | |
|------------|---|
| Synopsis | Enter the lac context |
| Context | configure service vprn string l2tp lac |
| Tree | lac |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

calling-number-format string

| | |
|---------------|--|
| Synopsis | Calling Number AVP for L2TP control messages |
| Context | configure service vprn string l2tp lac calling-number-format string |
| Tree | calling-number-format |
| String Length | 1 to 255 |
| Default | %S %s |

Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

cisco-nas-port

Synopsis Enter the **cisco-nas-port** context
Context **configure service vprn string l2tp lac cisco-nas-port**
Tree [cisco-nas-port](#)
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ethernet string

Synopsis L2TP Cisco NAS port AVP with binary patterns for Ethernet
Context **configure service vprn string l2tp lac cisco-nas-port ethernet string**
Tree [ethernet](#)
String Length 1 to 255
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

df-bit boolean

Synopsis Send all L2TP packets with DF bit set to 1
Context **configure service vprn string l2tp lac df-bit boolean**
Tree [df-bit](#)
Default true
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

local-address string

Synopsis Local address
Context **configure service vprn string l2tp local-address string**
Tree [local-address](#)
Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

local-name *string*

Synopsis Local host name
Context **configure service vprn** *string* **l2tp local-name** *string*
Tree **local-name**
String Length 1 to 64
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-retries-estab *number*

Synopsis Maximum retries for established tunnels
Context **configure service vprn** *string* **l2tp max-retries-estab** *number*
Tree **max-retries-estab**
Range 2 to 7
Default 5
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-retries-not-estab *number*

Synopsis Maximum retries for unestablished tunnels
Context **configure service vprn** *string* **l2tp max-retries-not-estab** *number*
Tree **max-retries-not-estab**
Range 2 to 7
Default 5
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

next-attempt *keyword*

Synopsis Tunnel that is selected when previous session setup failed
Context **configure service vprn** *string* **l2tp next-attempt** *keyword*

| | |
|------------|---|
| Tree | next-attempt |
| Options | same-preference-level, next-preference-level |
| Default | next-preference-level |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

password *string*

| | |
|---------------|--|
| Synopsis | L2TP password |
| Context | configure service vpn <i>string</i> l2tp password <i>string</i> |
| Tree | password |
| String Length | 1 to 115 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

peer-address-change-policy *keyword*

| | |
|------------|---|
| Synopsis | Reaction for L2TP response from a different address |
| Context | configure service vpn <i>string</i> l2tp peer-address-change-policy <i>keyword</i> |
| Tree | peer-address-change-policy |
| Options | accept, ignore, reject |
| Default | reject |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

radius-accounting-policy *reference*

| | |
|------------|---|
| Synopsis | RADIUS accounting policy |
| Context | configure service vpn <i>string</i> l2tp radius-accounting-policy <i>reference</i> |
| Tree | radius-accounting-policy |
| Reference | configure aaa radius l2tp-accounting-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

receive-window-size *number*

| | |
|------------|--|
| Synopsis | L2TP receive window size |
| Context | configure service vprn <i>string</i> l2tp receive-window-size <i>number</i> |
| Tree | receive-window-size |
| Range | 4 to 1024 |
| Default | 64 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

replace-result-code

| | |
|------------|--|
| Synopsis | Enter the replace-result-code context |
| Context | configure service vprn <i>string</i> l2tp replace-result-code |
| Tree | replace-result-code |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

cdn-invalid-dst *boolean*

| | |
|------------|---|
| Synopsis | Replace result code with general error code |
| Context | configure service vprn <i>string</i> l2tp replace-result-code cdn-invalid-dst <i>boolean</i> |
| Tree | cdn-invalid-dst |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

cdn-permanent-no-facilities *boolean*

| | |
|------------|---|
| Synopsis | Replace result code with general error |
| Context | configure service vprn <i>string</i> l2tp replace-result-code cdn-permanent-no-facilities <i>boolean</i> |
| Tree | cdn-permanent-no-facilities |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

cdn-temporary-no-facilities *boolean*

| | |
|------------|--|
| Synopsis | Replace result code with general error |
| Context | configure service vpn <i>string</i> l2tp replace-result-code cdn-temporary-no-facilities <i>boolean</i> |
| Tree | cdn-temporary-no-facilities |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

rtm-debounce-time (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | Debounce timer that declares L2TP action for route table management events |
| Context | configure service vpn <i>string</i> l2tp rtm-debounce-time (<i>number</i> <i>keyword</i>) |
| Tree | rtm-debounce-time |
| Range | 0 to 5000 |
| Units | milliseconds |
| Options | infinite |
| Default | infinite |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

session-assign-method *keyword*

| | |
|------------|--|
| Synopsis | Session assignment method |
| Context | configure service vpn <i>string</i> l2tp session-assign-method <i>keyword</i> |
| Tree | session-assign-method |
| Options | existing-first, weighted, weighted-random |
| Default | existing-first |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

session-limit *number*

| | |
|----------|-----------------------------------|
| Synopsis | L2TP session limit of this router |
|----------|-----------------------------------|

| | |
|------------|--|
| Context | configure service vprn string l2tp session-limit number |
| Tree | session-limit |
| Range | 1 to 250000 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

tunnel-selection-blacklist

| | |
|------------|--|
| Synopsis | Enter the tunnel-selection-blacklist context |
| Context | configure service vprn string l2tp tunnel-selection-blacklist |
| Tree | tunnel-selection-blacklist |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

add-tunnel-on

| | |
|------------|--|
| Synopsis | Enter the add-tunnel-on context |
| Context | configure service vprn string l2tp tunnel-selection-blacklist add-tunnel-on |
| Tree | add-tunnel-on |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

address-change-timeout *boolean*

| | |
|------------|--|
| Synopsis | Enable a timed-out tunnel to be forced to the denylist |
| Context | configure service vprn string l2tp tunnel-selection-blacklist add-tunnel-on address-change-timeout <i>boolean</i> |
| Tree | address-change-timeout |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

cdn-err-code *boolean*

| | |
|----------|---|
| Synopsis | Add to deny if CDN is received with code: General error |
|----------|---|

| | |
|------------|---|
| Context | configure service vprn string l2tp tunnel-selection-blacklist add-tunnel-on cdn-err-code boolean |
| Tree | cdn-err-code |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

cdn-invalid-dst boolean

| | |
|------------|--|
| Synopsis | Force tunnel to the denylist in case of Result Codes 6 |
| Context | configure service vprn string l2tp tunnel-selection-blacklist add-tunnel-on cdn-invalid-dst boolean |
| Tree | cdn-invalid-dst |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

cdn-permanent-no-facilities boolean

| | |
|------------|--|
| Synopsis | Force tunnel to the denylist in case of Result Codes 5 |
| Context | configure service vprn string l2tp tunnel-selection-blacklist add-tunnel-on cdn-permanent-no-facilities boolean |
| Tree | cdn-permanent-no-facilities |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

cdn-temporary-no-facilities boolean

| | |
|------------|--|
| Synopsis | Force tunnel to the denylist in case of Result Codes 4 |
| Context | configure service vprn string l2tp tunnel-selection-blacklist add-tunnel-on cdn-temporary-no-facilities boolean |
| Tree | cdn-temporary-no-facilities |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

stop-ccn-err-code *boolean*

| | |
|------------|---|
| Synopsis | Add to denylist if received with general error code |
| Context | configure service vprn string l2tp tunnel-selection-blacklist add-tunnel-on stop-ccn-err-code <i>boolean</i> |
| Tree | stop-ccn-err-code |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

stop-ccn-other *boolean*

| | |
|------------|--|
| Synopsis | Add to denylist if StopCCN received with general error |
| Context | configure service vprn string l2tp tunnel-selection-blacklist add-tunnel-on stop-ccn-other <i>boolean</i> |
| Tree | stop-ccn-other |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

tx-cdn-not-established-in-time *boolean*

| | |
|------------|--|
| Synopsis | Add to denylist if CDN transmitted with result code |
| Context | configure service vprn string l2tp tunnel-selection-blacklist add-tunnel-on tx-cdn-not-established-in-time <i>boolean</i> |
| Tree | tx-cdn-not-established-in-time |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

max-list-length (*number* | *keyword*)

| | |
|----------|---|
| Synopsis | Number of tunnels or peers in the denylist |
| Context | configure service vprn string l2tp tunnel-selection-blacklist max-list-length (<i>number</i> <i>keyword</i>) |
| Tree | max-list-length |

| | |
|------------|---|
| Range | 1 to 65535 |
| Options | infinite |
| Default | infinite |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

max-time *number*

| | |
|------------|---|
| Synopsis | Time that a tunnel or peer can remain in the denylist |
| Context | configure service vprn <i>string</i> l2tp tunnel-selection-blacklist max-time <i>number</i> |
| Tree | max-time |
| Range | 1 to 60 |
| Units | minutes |
| Default | 5 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

timeout-action *keyword*

| | |
|------------|--|
| Synopsis | Action when a tunnel or peer exceeds time in denylist |
| Context | configure service vprn <i>string</i> l2tp tunnel-selection-blacklist timeout-action <i>keyword</i> |
| Tree | timeout-action |
| Options | remove-from-blacklist, try-one-session |
| Default | remove-from-blacklist |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

tunnel-session-limit *number*

| | |
|------------|---|
| Synopsis | L2TP session limit for each tunnel of this router |
| Context | configure service vprn <i>string</i> l2tp tunnel-session-limit <i>number</i> |
| Tree | tunnel-session-limit |
| Range | 1 to 65534 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

label-mode *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Allocation mode for VPRN service labels |
| Context | configure service vprn <i>string label-mode keyword</i> |
| Tree | label-mode |
| Options | vrf, next-hop |
| Default | vrf |
| Introduced | 16.0.R1 |
| Platforms | All |

local-routes-domain-id *string*

| | |
|-------------|--|
| Synopsis | Local routes domain ID |
| Context | configure service vprn <i>string local-routes-domain-id string</i> |
| Tree | local-routes-domain-id |
| Description | <p>This command specifies the domain ID that is used in the D-PATH attribute for local routes before those routes are exported to a BGP neighbor using BGP-IPVPN, EVPN-IFF, EVPN-IFL, or PE-CE BGP. A local route is a non-BGP route installed in the VPRN route table and learned using static route or an IGP.</p> <p>The domain IDs are used in the D-PATH attribute, in accordance with draft-ietf-bess-evpn-ipvpn-interworking. Gateway routers modify the D-PATH attribute. A gateway is a PE where a VPRN is instantiated. The VPRN in this case advertises or receives routes from multiple BGP owners (for example, EVPN IFL and BGP IPVPN).</p> <p>Gateways use the D-PATH attribute to detect loops (for received routes where the D-PATH contains a local domain ID) and to make BGP best-path selection decisions based on the D-PATH length (shorter D-PATH is preferred).</p> |
| Introduced | 21.10.R1 |

| Synopsis | Syslog name |
| Context | configure service vprn <i>string</i> log syslog <i>string</i> |
| Tree | syslog |
| String Length | 1 to 64 |
| Notes | This element is part of a list key. |
| Introduced | 21.2.R1 |
| Platforms | All |

address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

| | |
|------------|---|
| Synopsis | IP address of the Syslog target host |
| Context | configure service vprn <i>string</i> log syslog <i>string</i> address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) |
| Tree | address |
| Introduced | 16.0.R1 |
| Platforms | All |

description *string*

| | |
|---------------|---|
| Synopsis | Text description |
| Context | configure service vprn <i>string</i> log syslog <i>string</i> description <i>string</i> |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R1 |
| Platforms | All |

facility *keyword*

| | |
|----------|---|
| Synopsis | Facility code for messages |
| Context | configure service vprn <i>string</i> log syslog <i>string</i> facility <i>keyword</i> |
| Tree | facility |
| Options | kernel, user, mail, systemd, auth, syslogd, printer, netnews, uucp, cron, authpriv, ftp, ntp, logaudit, logalert, cron2, local0, local1, local2, local3, local4, local5, local6, local7 |
| Default | local7 |

| | |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms | All |

log-prefix (*keyword* | *string*)

| | |
|---------------|--|
| Synopsis | String that is prepended to every log message sent to this target syslog host |
| Context | configure service vprn <i>string</i> log syslog <i>string</i> log-prefix (<i>keyword</i> <i>string</i>) |
| Tree | log-prefix |
| String Length | 1 to 32 |
| Options | no-prefix |
| Default | TMNX |
| Introduced | 16.0.R1 |
| Platforms | All |

port number

| | |
|------------|--|
| Synopsis | Destination port when sending syslog over UDP |
| Context | configure service vprn <i>string</i> log syslog <i>string</i> port number |
| Tree | port |
| Range | 0 1 to 65535 |
| Default | 514 |
| Introduced | 16.0.R1 |
| Platforms | All |

severity keyword

| | |
|------------|--|
| Synopsis | Severity level threshold for the syslog message |
| Context | configure service vprn <i>string</i> log syslog <i>string</i> severity <i>keyword</i> |
| Tree | severity |
| Options | emergency, alert, critical, error, warning, notice, info, debug |
| Default | info |
| Introduced | 16.0.R1 |
| Platforms | All |

tls-client-profile *reference***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | TLS client profile used to encrypt syslog communication |
| Context | configure service vprn <i>string</i> log syslog <i>string</i> tls-client-profile <i>reference</i> |
| Tree | tls-client-profile |
| Description | <p>This command specifies the Transport Layer Security (TLS) client profile used to encrypt syslog communications. When configured, syslog messages are sent using TLS.</p> <p>Any change to this command results in a brief interruption of the event log, which may cause the loss of a few syslog messages.</p> <p>When this command is unconfigured, the syslog messages are sent over UDP.</p> |
| Reference | configure system security tls client-tls-profile <i>string</i> |
| Introduced | 21.10.R1 |
| Platforms | All |

management

| | |
|------------|---|
| Synopsis | Enable the management context |
| Context | configure service vprn <i>string</i> management |
| Tree | management |
| Introduced | 16.0.R4 |
| Platforms | All |

allow-ftp *boolean*

| | |
|-------------|--|
| Synopsis | Allow access to the FTP server |
| Context | configure service vprn <i>string</i> management allow-ftp <i>boolean</i> |
| Tree | allow-ftp |
| Description | <p>When configured to true, this command allows FTP access to the SR OS router via the VPRN router instance.</p> <p>When configured to false, this command disallows access to the SR OS FTP server.</p> |
| Default | false |
| Introduced | 16.0.R6 |
| Platforms | All |

allow-grpc *boolean*

| | |
|-------------|--|
| Synopsis | Allow access to the gRPC server |
| Context | configure service vprn <i>string</i> management allow-grpc <i>boolean</i> |
| Tree | allow-grpc |
| Description | When configured to true , this command allows access to the gRPC server via the VPRN router instance.
When configured to false , this command disallows gRPC server access. |
| Default | false |
| Introduced | 19.5.R1 |
| Platforms | All |

allow-netconf *boolean*

| | |
|-------------|--|
| Synopsis | Allow access to the NETCONF server |
| Context | configure service vprn <i>string</i> management allow-netconf <i>boolean</i> |
| Tree | allow-netconf |
| Description | When configured to true , this command allows NETCONF server access to the SR OS router via the VPRN router instance.
When configured to false , this command disallows access to the NETCONF server. |
| Default | false |
| Introduced | 19.5.R1 |
| Platforms | All |

allow-ssh *boolean*

| | |
|-------------|---|
| Synopsis | Allow access to the SSH server |
| Context | configure service vprn <i>string</i> management allow-ssh <i>boolean</i> |
| Tree | allow-ssh |
| Description | When configured to true , this command allows SSH server access to the SR OS router via the VPRN router instance.
When configured to false , this command disallows SSH server access. |
| Default | false |
| Introduced | 16.0.R5 |
| Platforms | All |

allow-telnet *boolean*

| | |
|-------------|--|
| Synopsis | Allow access to the IPv4 Telnet server |
| Context | configure service vprn <i>string</i> management allow-telnet <i>boolean</i> |
| Tree | allow-telnet |
| Description | When configured to true , this command allows IPv4 Telnet server access to the SR OS router via the VPRN router instance.
When configured to false , this command disallows access to the IPv4 Telnet server. |
| Default | false |
| Introduced | 16.0.R5 |
| Platforms | All |

allow-telnet6 *boolean*

| | |
|-------------|--|
| Synopsis | Allow access to the Telnet IPv6 server |
| Context | configure service vprn <i>string</i> management allow-telnet6 <i>boolean</i> |
| Tree | allow-telnet6 |
| Description | When configured to true , this command allows IPv6 Telnet server access to the SR OS router via the VPRN router instance.
When configured to false , this command removes access to the IPv6 Telnet server. |
| Default | false |
| Introduced | 16.0.R5 |
| Platforms | All |

maximum-ipv4-routes

| | |
|------------|---|
| Synopsis | Enter the maximum-ipv4-routes context |
| Context | configure service vprn <i>string</i> maximum-ipv4-routes |
| Tree | maximum-ipv4-routes |
| Introduced | 16.0.R1 |
| Platforms | All |

log-only *boolean*

| | |
|----------|---|
| Synopsis | Action when the maximum number of routes, held within a VRF context, is reached |
| Context | configure service vprn <i>string</i> maximum-ipv4-routes log-only <i>boolean</i> |

| | |
|------------|--------------------------|
| Tree | log-only |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

threshold *number*

| | |
|------------|---|
| Synopsis | Mid-level water marker for the number of routes which this VRF holds |
| Context | configure service vprn <i>string</i> maximum-ipv4-routes threshold <i>number</i> |
| Tree | threshold |
| Range | 1 to 100 |
| Units | percent |
| Introduced | 16.0.R1 |
| Platforms | All |

value *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Maximum number of routes that are configured on this virtual router |
| Context | configure service vprn <i>string</i> maximum-ipv4-routes value <i>number</i> |
| Tree | value |
| Range | 1 to 2147483647 |

| Reference | configure mcac interface-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

policy *reference*

| | |
|-------------|---|
| Synopsis | Multicast CAC policy name |
| Context | configure service vprn <i>string</i> mld group-interface <i>reference</i> mcac policy <i>reference</i> |
| Tree | policy |
| Description | <p>This command configures the name of the global channel bandwidth definition policy that is used for (H)MCAC and HQoS adjustment.</p> <p>Within the scope of HQoS adjustment, the channel definition policy under the group interface is used if redirection is unconfigured. In this case, the HQoS adjustment can be applied to IPoE subscribers in per-SAP replication mode.</p> |

If redirection is configured, the channel bandwidth definition policy applied under the Layer 3 redirected interface is in effect.

Hierarchical MCAC (HMCAC) is supported on two levels simultaneously:

- subscriber level and redirected interface when redirection is configured
- subscriber level and group-interface level when redirection is unconfigured

In HMCAC, the subscriber is checked against its bandwidth limits first, then against the bandwidth limits of the redirected or group interface. If redirection is configured but the policy is referenced only under the group interface, no admission control is executed (HMCAC or MCAC).

| | |
|------------|---|
| Reference | configure mcac policy string |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

query-interval number

| Introduced | 16.0.R1 |
| Platforms | All |

query-response-interval *number*

| | |
|------------|--|
| Synopsis | Time to wait for a response to the host-query messages |
| Context | configure service vprn <i>string</i> mld query-response-interval <i>number</i> |
| Tree | query-response-interval |
| Range | 1 to 1023 |
| Units | seconds |
| Default | 10 |
| Introduced | 16.0.R1 |

Platforms All

robust-count *number*

Synopsis Number of retries after expected message loss
 Context **configure** [service](#) [vprn](#) *string* **mld** **robust-count** *number*
 Tree [robust-count](#)
 Range 2 to 10
 Default 2
 Introduced 16.0.R1
 Platforms All

ssm-translate

Synopsis Enter the **ssm-translate** context
 Context **configure** [service](#) [vprn](#) *string* **mld** **ssm-translate**
 Tree [ssm-translate](#)
 Introduced 16.0.R1
 Platforms All

group-range [start](#) *string* [end](#) *string*

Synopsis Enter the **group-range** list instance
 Context **configure** [service](#) [vprn](#) *string* **mld** [ssm-translate](#) [group-range](#) [start](#) *string* [end](#) *string*
 Tree [group-range](#)
 Introduced 16.0.R1
 Platforms All

start *string*

Synopsis Lower bound of the group range
 Context **configure** [service](#) [vprn](#) *string* **mld** [ssm-translate](#) [group-range](#) [start](#) *string* [end](#) *string*
 Tree [group-range](#)
 Notes This element is part of a list keys.
 Introduced 16.0.R1

Platforms All

end string

Synopsis Upper bound of the group range
 Context **configure service vpn string mld ssm-translate group-range start string end string**
 Tree [group-range](#)
 Notes This element is part of a list key.
 Introduced 16.0.R1
 Platforms All

source [source-address] string

Synopsis Add a list entry for **source**
 Context **configure service vpn string mld ssm-translate group-range start string end string source string**
 Tree [source](#)
 Min. Instances 1
 Introduced 16.0.R1
 Platforms All

[source-address] string

Synopsis Source IP address
 Context **configure service vpn string mld ssm-translate group-range start string end string source string**
 Tree [source](#)
 Notes This element is part of a list key.
 Introduced 16.0.R2
 Platforms All

msdp

Synopsis Enable the **msdp** context
 Context **configure service vpn string msdp**

| | |

|------------|---|
| Synopsis | TCP-MSS option value in transmitted TCP SYN requests |
| Context | configure service vprn <i>string</i> mss-adjust segment-size <i>number</i> |
| Tree | segment-size |
| Range | 160 to 10240 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

mtrace2

| | |
|------------|---|
| Synopsis | Enter the mtrace2 context |
| Context | configure service vprn <i>string</i> mtrace2 |
| Tree | mtrace2 |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of multicast path tracing |
| Context | configure service vprn <i>string</i> mtrace2 admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | All |

udp-port *number*

| | |
|----------|--|
| Synopsis | Destination and listening port for the mtrace2 command |
| Context | configure service vprn <i>string</i> mtrace2 udp-port <i>number</i> |

| | |
|------------|--------------------------|
| Tree | udp-port |
| Range | 1024 to 49151 |
| Default | 5000 |
| Introduced | 16.0.R1 |
| Platforms | All |

multicast-info-policy *reference*

| | |
|------------|--|
| Synopsis | Multicast policy name for virtual router |
| Context | configure service vprn <i>string</i> multicast-info-policy <i>reference</i> |
| Tree | multicast-info-policy |
| Reference | configure multicast-management multicast-info-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

mvpn

| | |
|------------|--|
| Synopsis | Enable the mvpn context |
| Context | configure service vprn <i>string</i> mvpn |
| Tree | mvpn |
| Introduced | 19.5.R1 |
| Platforms | All |

auto-discovery

| | |
|------------|---|
| Synopsis | Enter the auto-discovery context |
| Context | configure service vprn <i>string</i> mvpn auto-discovery |
| Tree | auto-discovery |
| Introduced | 19.5.R1 |
| Platforms | All |

source-address *string*

| | |
|----------|--|
| Synopsis | IPv4 source address |
| Context | configure service vprn <i>string</i> mvpn auto-discovery source-address <i>string</i> |

| | |
|------------|--------------------------------|
| Tree | source-address |
| Default | 0.0.0.0 |
| Introduced | 19.5.R1 |
| Platforms | All |

type *keyword*

| | |
|------------|---|
| Synopsis | Status of multicast VPN membership auto-discovery |
| Context | configure service vpn <i>string</i> mvpn auto-discovery type <i>keyword</i> |
| Tree | type |
| Options | bgp, mdt-safi |
| Introduced | 19.5.R1 |
| Platforms | All |

c-mcast-signaling *keyword*

| | |
|------------|--|
| Synopsis | Protocol for PE-to-PE signaling of CE multicast states |
| Context | configure service vpn <i>string</i> mvpn c-mcast-signaling <i>keyword</i> |
| Tree | c-mcast-signaling |
| Options | bgp, pim |
| Default | pim |
| Introduced | 19.5.R1 |
| Platforms | All |

intersite-shared

| | |
|-------------|---|
| Synopsis | Enter the intersite-shared context |
| Context | configure service vpn <i>string</i> mvpn intersite-shared |
| Tree | intersite-shared |
| Description | Commands in this context configure whether to use inter-site shared C-trees. Optional parameters allow enabling additional intersite shared functionality. Not specifying an optional parameter when executing the command disables that parameter. |
| Introduced | 19.5.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of inter-site shared C-trees use |
| Context | configure service vpn <i>string</i> mvpn intersite-shared admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | enable |
| Introduced | 19.5.R1 |
| Platforms | All |

kat-type5-advertisement-withdraw *boolean*

| | |
|-------------|---|
| Synopsis | Enable KATs on source PEs for ng-MVPN deployments |
| Context | configure service vpn <i>string</i> mvpn intersite-shared kat-type5-advertisement-withdraw <i>boolean</i> |
| Tree | kat-type5-advertisement-withdraw |
| Description | When configured to true , this command specifies that the MVPN Type-5 “Source Active AD routes” are not removed even if all receivers are removed from the tree. |
| Default | false |
| Introduced | 19.5.R1 |
| Platforms | All |

persistent-type5-advertisement *boolean*

| | |
|-------------|--|
| Synopsis | Ensure Type-5 S-A routes are generated for MCAST source |
| Context | configure service vpn <i>string</i> mvpn intersite-shared persistent-type5-advertisement <i>boolean</i> |
| Tree | persistent-type5-advertisement |
| Description | When configured to true , this command removes the MVPN Type-5 “Source Active AD routes” even if receivers are present but the keepalive timer (KAT) has timed out because of no traffic. |
| Default | false |
| Introduced | 19.5.R1 |
| Platforms | All |

mdt-type *keyword*

| | |
|------------|---|
| Synopsis | MVPN instance type per PE node |
| Context | configure service vprn <i>string mvpn mdt-type keyword</i> |
| Tree | mdt-type |
| Options | sender-only, receiver-only, sender-receiver |
| Default | sender-receiver |
| Introduced | 19.5.R1 |
| Platforms | All |

provider-tunnel

| | |
|------------|--|
| Synopsis | Enter the provider-tunnel context |
| Context | configure service vprn <i>string mvpn provider-tunnel</i> |
| Tree | provider-tunnel |
| Introduced | 19.5.R1 |
| Platforms | All |

inclusive

| | |
|------------|--|
| Synopsis | Enter the inclusive context |
| Context | configure service vprn <i>string mvpn provider-tunnel inclusive</i> |
| Tree | inclusive |
| Introduced | 19.5.R1 |
| Platforms | All |

bier

| | |
|------------|---|
| Synopsis | Enable the bier context |
| Context | configure service vprn <i>string mvpn provider-tunnel inclusive bier</i> |
| Tree | bier |
| Notes | The following elements are part of a choice: bier , mldp , p2mp-sr , pim , or rsvp . |
| Introduced | 19.5.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of BIER |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive bier admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 19.5.R1 |
| Platforms | All |

sub-domain *number*

| | |
|------------|---|
| Synopsis | Sub-domain used to attach the BIER provider tunnel |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive bier sub-domain <i>number</i> |
| Tree | sub-domain |
| Range | 0 to 255 |
| Introduced | 19.5.R1 |
| Platforms | All |

bsr *keyword*

| | |
|------------|--|
| Synopsis | BSR signaling type |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive bsr <i>keyword</i> |
| Tree | bsr |
| Options | unicast, spmsi |
| Introduced | 19.5.R1 |
| Platforms | All |

mldp

| | |
|------------|---|
| Synopsis | Enable the mldp context |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive mldp |
| Tree | mldp |
| Notes | The following elements are part of a choice: bier , mldp , p2mp-sr , pim , or rsvp . |
| Introduced | 19.5.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of MLDP LSP use for tunnels |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive mldp admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 19.5.R1 |
| Platforms | All |

p2mp-sr

| | |
|------------|---|
| Synopsis | Enable the p2mp-sr context |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive p2mp-sr |
| Tree | p2mp-sr |
| Notes | The following elements are part of a choice: bier , mldp , p2mp-sr , pim , or rsvp . |
| Introduced | 21.5.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state for P2MP SR |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive p2mp-sr admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 21.5.R1 |
| Platforms | All |

bfd-leaf *boolean*

| | |
|----------|---|
| Synopsis | Enable unidirectional multipoint BFD on the leaf PE |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive p2mp-sr bfd-leaf <i>boolean</i> |
| Tree | bfd-leaf |

| | |
|-------------|--|
| Description | When configured to true , this command enables unidirectional multipoint BFD sessions on a receiver (leaf) PE node for upstream fast failure detection over P2MP SR tree LSP. |
| Default | false |
| Introduced | 21.10.R1 |
| Platforms | All |

bfd-root

| | |
|------------|---|
| Synopsis | Enable the bfd-root context |
| Context | configure service vpn string mvpn provider-tunnel inclusive p2mp-sr bfd-root |
| Tree | bfd-root |
| Introduced | 21.10.R1 |
| Platforms | All |

multiplier number

| | |
|-------------|--|
| Synopsis | Multiplier for the transmit interval of the BFD session |
| Context | configure service vpn string mvpn provider-tunnel inclusive p2mp-sr bfd-root multiplier number |
| Tree | multiplier |
| Description | This command configures the multiplier for the transmit interval. The interval and the multiplier are used to calculate the detection time, which is the period of time without receiving BFD packets after which the session failure is determined. |
| Range | 1 to 20 |
| Default | 3 |
| Introduced | 21.10.R1 |
| Platforms | All |

transmit-interval number

| | |
|-------------|---|
| Synopsis | Transmit interval of the BFD session |
| Context | configure service vpn string mvpn provider-tunnel inclusive p2mp-sr bfd-root transmit-interval number |
| Tree | transmit-interval |
| Description | This command configures the transmit interval. The interval and the multiplier are used to calculate the detection time, which is the period of time without receiving BFD packets after which the session failure is determined. |

| | |
|------------|----------------------------|
| Range | 10 to 100000 |
| Notes | This element is mandatory. |
| Introduced | 21.10.R1 |
| Platforms | All |

p2mp-policy *boolean*

| | |
|------------|---|
| Synopsis | Use P2MP policy for inclusive MVPN provider tunnel |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive p2mp-sr p2mp-policy <i>boolean</i> |
| Tree | p2mp-policy |
| Default | false |
| Introduced | 21.5.R1 |
| Platforms | All |

static-policy *reference*

| | |
|------------|---|
| Synopsis | Static policy for inclusive MVPN provider tunnel |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive p2mp-sr static-policy <i>reference</i> |
| Tree | static-policy |
| Reference | configure router <i>string</i> p2mp-sr-tree p2mp-policy <i>string</i> |
| Introduced | 21.5.R1 |
| Platforms | All |

pim

| | |
|------------|--|
| Synopsis | Enable the pim context |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive pim |
| Tree | pim |
| Notes | The following elements are part of a choice: bier , mldp , p2mp-sr , pim , or rsvp . |
| Introduced | 19.5.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of PIM use for provider tunnels |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive pim admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | enable |
| Introduced | 19.5.R1 |
| Platforms | All |

group-address *string*

| | |
|------------|---|
| Synopsis | Multicast group address |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive pim group-address <i>string</i> |
| Tree | group-address |
| Notes | This element is mandatory. |
| Introduced | 19.5.R1 |
| Platforms | All |

hello-interval *number*

| | |
|------------|--|
| Synopsis | Frequency at which PIM Hello messages are transmitted |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive pim hello-interval <i>number</i> |
| Tree | hello-interval |
| Range | 0 to 255 |
| Default | 30 |
| Introduced | 19.5.R1 |
| Platforms | All |

hello-multiplier *number*

| | |
|----------|--|
| Synopsis | Multiplier to determine the holdtime for a PIM neighbor |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive pim hello-multiplier <i>number</i> |
| Tree | hello-multiplier |
| Range | 20 to 100 |
| Default | 35 |

Introduced 19.5.R1
 Platforms All

improved-assert *boolean*

Synopsis Enable the improved assert procedure
 Context **configure** [service](#) [vprn](#) *string* [mvpn](#) [provider-tunnel](#) [inclusive](#) [pim](#) [improved-assert](#) *boolean*
 Tree [improved-assert](#)
 Default true
 Introduced 19.5.R1
 Platforms All

mode *keyword*

Synopsis PIM mode for the inclusive provider tunnel
 Context **configure** [service](#) [vprn](#) *string* [mvpn](#) [provider-tunnel](#) [inclusive](#) [pim](#) [mode](#) *keyword*
 Tree [mode](#)
 Options asm, ssm
 Notes This element is mandatory.
 Introduced 19.5.R1
 Platforms All

three-way-hello *boolean*

Synopsis Enable PIM three-way hello
 Context **configure** [service](#) [vprn](#) *string* [mvpn](#) [provider-tunnel](#) [inclusive](#) [pim](#) [three-way-hello](#) *boolean*
 Tree [three-way-hello](#)
 Default false
 Introduced 19.5.R1
 Platforms All

tracking-support *boolean*

Synopsis Enable the T bit in the LAN Prune Delay option

| | |
|------------|---|
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive pim tracking-support <i>boolean</i> |
| Tree | tracking-support |
| Default | false |
| Introduced | 19.5.R1 |
| Platforms | All |

rsvp

| | |
|------------|---|
| Synopsis | Enable the rsvp context |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive rsvp |
| Tree | rsvp |
| Notes | The following elements are part of a choice: bier , mldp , p2mp-sr , pim , or rsvp . |
| Introduced | 19.5.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of RSVP use for provider tunnels |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive rsvp admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 19.5.R1 |
| Platforms | All |

bfd-leaf *boolean*

| | |
|------------|--|
| Synopsis | Enable unidirectional multi-point BFD on a receiver |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive rsvp bfd-leaf <i>boolean</i> |
| Tree | bfd-leaf |
| Default | false |
| Introduced | 19.5.R1 |
| Platforms | All |

bfd-root

| | |
|------------|--|
| Synopsis | Enable the bfd-root context |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive rsvp bfd-root |
| Tree | bfd-root |
| Introduced | 19.5.R1 |
| Platforms | All |

multiplier number

| | |
|------------|--|
| Synopsis | Enable unidirectional multi-point BFD on a sender |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive rsvp bfd-root multiplier number |
| Tree | multiplier |
| Range | 1 to 20 |
| Default | 3 |
| Introduced | 19.5.R1 |
| Platforms | All |

transmit-interval number

| | |
|------------|---|
| Synopsis | Transmit interval for the BFD session |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive rsvp bfd-root transmit-interval number |
| Tree | transmit-interval |
| Range | 10 to 100000 |
| Notes | This element is mandatory. |
| Introduced | 19.5.R1 |
| Platforms | All |

Isp-template reference

| | |
|-----------|--|
| Synopsis | P2MP LSP created as the provider tunnel |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel inclusive rsvp Isp-template reference |
| Tree | Isp-template |
| Reference | configure router <i>string</i> mpls Isp-template <i>string</i> |

Introduced 19.5.R1
 Platforms All

umh-rate-monitoring

Synopsis Enter the **umh-rate-monitoring** context
 Context **configure service vprn string mvpn provider-tunnel inclusive umh-rate-monitoring**
 Tree [umh-rate-monitoring](#)
 Introduced 21.5.R1
 Platforms All

revertive-timer number

Synopsis Time until switch to primary PMSI after recovering rate
 Context **configure service vprn string mvpn provider-tunnel inclusive umh-rate-monitoring revertive-timer number**
 Tree [revertive-timer](#)
 Range 0 to 3600
 Introduced 21.5.R1
 Platforms All

traffic-rate-delta number

Synopsis Rate delta between PMSIs under which traffic switches
 Context **configure service vprn string mvpn provider-tunnel inclusive umh-rate-monitoring traffic-rate-delta number**
 Tree [traffic-rate-delta](#)
 Range 0 to 4294967294
 Introduced 21.5.R1
 Platforms All

wildcard-spmsi boolean

Synopsis Enable RFC 6625 S-PMSI functionality for NG-MVPN
 Context **configure service vprn string mvpn provider-tunnel inclusive wildcard-spmsi boolean**
 Tree [wildcard-spmsi](#)

| | |
|------------|---------|
| Default | false |
| Introduced | 19.5.R1 |
| Platforms | All |

selective

| | |
|------------|---|
| Synopsis | Enter the selective context |
| Context | configure service vprn string mvpn provider-tunnel selective |
| Tree | selective |
| Introduced | 19.5.R1 |
| Platforms | All |

asm-mdt *boolean*

| | |
|------------|--|
| Synopsis | Enable Data MDT with PIM-ASM mode on receiver PE node |
| Context | configure service vprn string mvpn provider-tunnel selective asm-mdt <i>boolean</i> |
| Tree | asm-mdt |
| Default | false |
| Introduced | 19.5.R1 |
| Platforms | All |

auto-discovery *boolean*

| | |
|------------|---|
| Synopsis | Enable C-trees to P-tunnel binding auto-discovery |
| Context | configure service vprn string mvpn provider-tunnel selective auto-discovery <i>boolean</i> |
| Tree | auto-discovery |
| Default | false |
| Introduced | 19.5.R1 |
| Platforms | All |

bier

| | |
|----------|--|
| Synopsis | Enable the bier context |
| Context | configure service vprn string mvpn provider-tunnel selective bier |
| Tree | bier |

| | |
|------------|---|
| Notes | The following elements are part of a choice: bier , mldp , p2mp-sr , pim , or rsvp . |
| Introduced | 19.5.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of BIER |
| Context | configure service vprn string mvpn provider-tunnel selective bier admin-state keyword |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 19.5.R1 |
| Platforms | All |

sub-domain *number*

| | |
|------------|--|
| Synopsis | Sub-domain used to attach the BIER provider tunnel |
| Context | configure service vprn string mvpn provider-tunnel selective bier sub-domain number |
| Tree | sub-domain |
| Range | 0 to 255 |
| Introduced | 19.5.R1 |
| Platforms | All |

data-delay-interval *number*

| | |
|------------|--|
| Synopsis | Interval a PE switches from inclusive to selective |
| Context | configure service vprn string mvpn provider-tunnel selective data-delay-interval number |
| Tree | data-delay-interval |
| Range | 3 to 180 |
| Default | 3 |
| Introduced | 19.5.R1 |
| Platforms | All |

data-threshold

| | |
|------------|--|
| Synopsis | Enter the data-threshold context |
| Context | configure service vpn <i>string</i> mvpn provider-tunnel selective data-threshold |
| Tree | data-threshold |
| Introduced | 19.5.R1 |
| Platforms | All |

group-prefix [[ip-group-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

| | |
|------------|---|
| Synopsis | Enter the group-prefix list instance |
| Context | configure service vpn <i>string</i> mvpn provider-tunnel selective data-threshold group-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) |
| Tree | group-prefix |
| Introduced | 19.5.R1 |
| Platforms | All |

[ip-group-prefix] (*ipv4-prefix* | *ipv6-prefix*)

| | |
|------------|---|
| Synopsis | IPv4 or IPv6 multicast group address and prefix |
| Context | configure service vpn <i>string</i> mvpn provider-tunnel selective data-threshold group-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) |
| Tree | group-prefix |
| Notes | This element is part of a list key. |
| Introduced | 19.5.R1 |
| Platforms | All |

pe-threshold-add *number*

| | |
|------------|--|
| Synopsis | PE add threshold |
| Context | configure service vpn <i>string</i> mvpn provider-tunnel selective data-threshold group-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) pe-threshold-add <i>number</i> |
| Tree | pe-threshold-add |
| Range | 1 to 65535 |
| Default | 65535 |
| Introduced | 19.5.R1 |
| Platforms | All |

pe-threshold-delete *number*

| | |
|------------|--|
| Synopsis | PE delete threshold |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective data-threshold group-prefix (ipv4-prefix ipv6-prefix) pe-threshold-delete <i>number</i> |
| Tree | pe-threshold-delete |
| Range | 2 to 65535 |
| Default | 65535 |
| Introduced | 19.5.R1 |
| Platforms | All |

threshold *number*

| | |
|------------|--|
| Synopsis | S-PMSI threshold |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective data-threshold group-prefix (ipv4-prefix ipv6-prefix) threshold <i>number</i> |
| Tree | threshold |
| Range | 0 to 4294967294 |
| Units | kilobps |
| Notes | This element is mandatory. |
| Introduced | 19.5.R1 |
| Platforms | All |

join-tlv-packing *boolean*

| | |
|------------|--|
| Synopsis | Enable packing of MDT join TLVs into a single PDU |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective join-tlv-packing <i>boolean</i> |
| Tree | join-tlv-packing |
| Default | true |
| Introduced | 19.5.R1 |
| Platforms | All |

mldp

| | |
|----------|--|
| Synopsis | Enable the mldp context |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective mldp |

| | |
|------------|---|
| Tree | mldp |
| Notes | The following elements are part of a choice: bier , mldp , p2mp-sr , pim , or rsvp . |
| Introduced | 19.5.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of MLDP LSP use for tunnels |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective mldp admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 19.5.R1 |
| Platforms | All |

maximum-p2mp-spmsi *number*

| | |
|------------|---|
| Synopsis | Maximum number of RSVP P2MP or LDP P2MP S-PMSI tunnels |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective mldp maximum-p2mp-spmsi <i>number</i> |
| Tree | maximum-p2mp-spmsi |
| Range | 1 to 4000 |
| Default | 10 |
| Introduced | 19.5.R1 |
| Platforms | All |

multistream-spmsi [[multistream-id](#)] *number*

| | |
|------------|--|
| Synopsis | Enter the multistream-spmsi list instance |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective multistream-spmsi <i>number</i> |
| Tree | multistream-spmsi |
| Introduced | 19.5.R1 |
| Platforms | All |

[multistream-id] number

| | |
|------------|--|
| Synopsis | Multistream spmsi id |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective multistream-spmsi <i>number</i> |
| Tree | multistream-spmsi |
| Range | 1 to 1024 |
| Notes | This element is part of a list key. |
| Introduced | 19.5.R1 |
| Platforms | All |

admin-state keyword

| | |
|------------|---|
| Synopsis | Administrative state of multi-stream S-PMSI |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective multistream-spmsi <i>number</i> admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 19.5.R1 |
| Platforms | All |

group-prefix [ip-group-prefix] (ipv4-prefix | ipv6-prefix) source-prefix (ipv4-prefix | ipv6-prefix)

| | |
|------------|---|
| Synopsis | Add a list entry for group-prefix |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective multistream-spmsi <i>number</i> group-prefix <i>(ipv4-prefix ipv6-prefix)</i> source-prefix <i>(ipv4-prefix ipv6-prefix)</i> |
| Tree | group-prefix |
| Introduced | 19.5.R1 |
| Platforms | All |

[ip-group-prefix] (ipv4-prefix | ipv6-prefix)

| | |
|----------|---|
| Synopsis | IPv4 or IPv6 multicast group address and prefix |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective multistream-spmsi <i>number</i> group-prefix <i>(ipv4-prefix ipv6-prefix)</i> source-prefix <i>(ipv4-prefix ipv6-prefix)</i> |
| Tree | group-prefix |

| | |
|------------|-------------------------------------|
| Notes | This element is part of a list key. |
| Introduced | 19.5.R1 |
| Platforms | All |

source-prefix (*ipv4-prefix* | *ipv6-prefix*)

| | |
|------------|--|
| Synopsis | IPv4 or IPv6 unicast source address and prefix |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective multistream-spmsi <i>number</i> group-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) source-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) |
| Tree | group-prefix |
| Notes | This element is part of a list key. |
| Introduced | 19.5.R1 |
| Platforms | All |

lsp-template *reference*

| | |
|------------|--|
| Synopsis | RSVP-TE LSP template for S-PMSI |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective multistream-spmsi <i>number</i> lsp-template <i>reference</i> |
| Tree | lsp-template |
| Reference | configure router <i>string</i> mpls lsp-template <i>string</i> |
| Notes | The following elements are part of a choice: lsp-template , p2mp-sr , or pim . |
| Introduced | 19.5.R1 |
| Platforms | All |

p2mp-sr

| | |
|------------|--|
| Synopsis | Enter the p2mp-sr context |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective multistream-spmsi <i>number</i> p2mp-sr |
| Tree | p2mp-sr |
| Notes | The following elements are part of a choice: lsp-template , p2mp-sr , or pim . |
| Introduced | 21.5.R1 |
| Platforms | All |

p2mp-policy *boolean*

| | |
|------------|--|
| Synopsis | Use P2MP policy for selective MVPN provider tunnel |
| Context | configure service vprn <i>string</i> mvpn provider-tunnel selective multistream-spmsi <i>number</i>
p2mp-sr p2mp-policy <i>boolean</i> |
| Tree | p2mp-policy |
| Default | false |
| Introduced | 21.5.R1 |
| Platforms | All |

| | |
|------------|---|
| Synopsis | Outside IP address mapped to inside IP address range |
| Context | configure service vprn <i>string nat inside large-scale dual-stack-lite deterministic prefix-map string nat-policy reference map string to string first-outside-address string</i> |
| Tree | first-outside-address |
| Notes | This element is mandatory. |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

endpoint [[address](#)] *string*

| | |
|----------------|--|
| Synopsis | Enter the endpoint list instance |
| Context | configure service vprn <i>string nat inside large-scale dual-stack-lite endpoint string</i> |
| Tree | endpoint |
| Max. Instances | 128 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

[address] string

| | |
|------------|---|
| Synopsis | Dual Stack Lite IPv6 address |
| Context | configure service vprn string nat inside large-scale dual-stack-lite endpoint string |
| Tree | endpoint |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

ip-fragmentation keyword

| | |
|------------|--|
| Synopsis | Fragmentation control of the AFTR originated downstream IPv6 traffic |
| Context | configure service vprn string nat inside large-scale dual-stack-lite endpoint string ip-fragmentation keyword |
| Tree | ip-fragmentation |
| Options | fragment-ipv6, fragment-ipv6-unless-ipv4-df-set |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

min-first-fragment-size-rx number

| | |
|-------------|---|
| Synopsis | Minimum MTU size for upstream packets |
| Context | configure service vprn string nat inside large-scale dual-stack-lite endpoint string min-first-fragment-size-rx number |
| Tree | min-first-fragment-size-rx |
| Description | This command configures the minimum MTU size for the first fragment in the upstream direction. This command can be used to enable processing of first IPv6 fragments smaller than 1280 bytes. RFC 8200 recommends the minimum MTU in IPv6 be 1280 bytes which allows fragmentation only for packets that are larger than 1280 bytes. If a first fragment is smaller than 1280 bytes, DS-lite implementation in the SR OS, by default, drops the first fragment. |
| Range | 512 to 1280 |
| Default | 1280 |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

reassemble *boolean*

| | |
|------------|---|
| Synopsis | Reassembly of IPv6 payload datagrams |
| Context | configure service vprn <i>string</i> nat inside large-scale dual-stack-lite endpoint <i>string</i> reassemble <i>boolean</i> |
| Tree | reassemble |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

tunnel-mtu *number*

| | |
|-------------|--|
| Synopsis | DS-Lite tunnel MTU for this address |
| Context | configure service vprn <i>string</i> nat inside large-scale dual-stack-lite endpoint <i>string</i> tunnel-mtu <i>number</i> |
| Tree | tunnel-mtu |
| Description | This command configures the Dual Stack Lite (DS-Lite) tunnel MTU for this address. |
| Range | 464 to 9212 |
| Default | 1500 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

icmp-echo-reply *boolean*

| | |
|-------------|---|
| Synopsis | Allow NAT pool IP addresses to respond to ICMP PINGS |
| Context | configure service vprn string nat outside pool string icmp-echo-reply boolean |
| Tree | icmp-echo-reply |
| Description | <p>This command allows IP addresses in the NAT pool to respond to ICMP Echo requests (PINGs). The configuration can be toggled while the pool is in use.</p> <p>In L2-aware NAT when port-block-extensions is disabled, the reply from an outside IP address is generated only when this IP address has at least one host (binding) behind it.</p> <p>In L2-aware NAT when port-block-extensions is enabled, the reply from an outside IP address is generated regardless if a binding is present.</p> <p>In LSN, the reply from an outside IP address is generated regardless if a binding is present.</p> |

| | |
|------------|--|
| Default | false |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

I2-aware

| | |
|------------|---|
| Synopsis | Enter the I2-aware context |
| Context | configure service vprn string nat outside pool string I2-aware |
| Tree | I2-aware |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

default-host

| | |
|-------------|--|
| Synopsis | Enable the default-host context |
| Context | configure service vprn string nat outside pool string I2-aware default-host |
| Tree | default-host |
| Description | <p>Commands in this context configure the default DMZ host options. A default DMZ host is a node on the inside to which all unknown traffic is redirected by changing the destination IPv4 address in the traffic header. During this operation, the checksums in the Layer 3 and Layer 4 header (UDP and TCP) are recalculated.</p> <p>Unknown traffic in NAT represent all unmatched traffic arriving from the outside (where there is no pinhole or a matching flow record created by traffic initiated from the inside). The purpose of the default DMZ host is to capture and analyze the unknown traffic as part of threat analysis.</p> <p>The rate of redirected unknown traffic can be restricted by configuration.</p> |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

inside-router-instance *string*

| | |
|-------------|--|
| Synopsis | Router instance of the DMZ |
| Context | configure service vprn string nat outside pool string I2-aware default-host inside-router-instance string |
| Tree | inside-router-instance |
| Description | This command configures the router instance on the inside where the default DMZ host resides. |

| | |
|------------|--|
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

ip-address *string*

| | |
|-------------|---|
| Synopsis | IP address of the default DMZ host |
| Context | configure service vprn <i>string</i> nat outside pool <i>string</i> l2-aware default-host ip-address <i>string</i> |
| Tree | ip-address |
| Description | This command configures the IP address of the default DMZ host. Redirection to the default DMZ host is achieved by replacing the destination IP address in the traffic header in the unknown traffic initiated from the outside with the one of the default DMZ host. |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

rate-limit *number*

| | |
|-------------|--|
| Synopsis | Rate limit for unknown traffic sent to default DMZ host |
| Context | configure service vprn <i>string</i> nat outside pool <i>string</i> l2-aware default-host rate-limit <i>number</i> |
| Tree | rate-limit |
| Description | This command configures the rate limit of the unknown traffic sent to the default DMZ host.

Unknown traffic sent to the default DMZ host is rate limited by a configurable value expressed in mbps. The rate limit is configurable per NAT pool per ISA, vISA, or ESA-VM. |
| Range | 1 to 10000 |
| Default | 10 |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

| Context | configure service vpn string nat outside pool string large-scale default-host |
| Tree | default-host |
| Description | <p>Commands in this context configure the default DMZ host options. A default DMZ host is a node on the inside to which all unknown traffic is redirected by changing the destination IPv4 address in the traffic header. During this operation, the checksums in the Layer 3 and Layer 4 header (UDP and TCP) are recalculated.</p> <p>Unknown traffic in NAT represent all unmatched traffic arriving from the outside (where there is no pinhole or a matching flow record created by traffic initiated from the inside). The purpose of the default DMZ host is to capture and analyze the unknown traffic as part of threat analysis.</p> <p>The rate of redirected unknown traffic can be restricted by configuration.</p> |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

inside-router-instance *string*

| | |
|-------------|--|
| Synopsis | Router instance of the DMZ |
| Context | configure service vpn string nat outside pool string large-scale default-host inside-router-instance string |
| Tree | inside-router-instance |
| Description | This command configures the router instance on the inside where the default DMZ host resides. |
| Introduced | 22.10.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ip-address *string*

Synopsis IP address of the default DMZ host

Context **configure** [service vprn](#) *string* [nat outside pool](#) *string* [large-scale default-host ip-address](#) *string*

Tree [ip-address](#)

Description This command configures the IP address of the default DMZ host. Redirection to the default DMZ host is achieved by replacing the destination IP address in the traffic header in the unknown traffic initiated from the outside with the one of the default DMZ host.

Introduced 22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

rate-limit *number*

Synopsis Rate limit for unknown traffic sent to default DMZ host

Context **configure** [service vprn](#) *string* [nat outside pool](#) *string* [large-scale default-host rate-limit](#) *number*

Tree [rate-limit](#)

Description This command configures the rate limit of the unknown traffic sent to the default DMZ host.

Unknown traffic sent to the default DMZ host is rate limited by a configurable value expressed in mbps. The rate limit is configurable per NAT pool per ISA, vISA, or ESA-VM.

Range 1 to 10000

Default 10

Introduced 22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

deterministic

Synopsis Enter the **deterministic** context

Context **configure** [service vprn](#) *string* [nat outside pool](#) *string* [large-scale deterministic](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

port-reservation *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis Number of ports per deterministic port-block

Context **configure** [service vprn string nat outside pool string large-scale deterministic port-reservation number](#)

Tree [port-reservation](#)

Range 1 to 65536

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

watermarks

Synopsis Enable the **watermarks** context

Context **configure** [service vprn string nat outside pool string large-scale deterministic watermarks](#)

Tree [watermarks](#)

Description Commands in this context monitor extended (dynamic) port-block utilization per outside IP in a NAT pool in deterministic LSN.

High and low thresholds are configured in percentages of total available extended port-blocks per outside IP in a pool. Both values represent extended port-block utilization or occupancy per outside IP in a pool.

For the system to generate those events, the NAT event-id 2045 must be enabled through configuration in the log event-control.

Introduced 22.2.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

high *number*

Synopsis High watermark percentage

| | |
|-------------|--|
| Context | configure service vprn <i>string</i> nat outside pool <i>string</i> large-scale deterministic watermarks high <i>number</i> |
| Tree | high |
| Description | This command configures the high threshold value as a percentage of the total port-block space in a NAT pool. |
| Range | 0 to 100 |
| Units | percent |
| Notes | This element is mandatory. |
| Introduced | 22.2.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

low *number*

| | |

dynamic-block-reservation *boolean*

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Reserve dynamic block for subscriber |
| Context | configure service vprn <i>string</i> nat outside pool <i>string</i> port-forwarding dynamic-block-reservation <i>boolean</i> |
| Tree | dynamic-block-reservation |
| Description | <p>When configured to true, the system reserves dynamic port block when the first port forward for the subscriber is created. The dynamic port block allocation is logged only if the block is being used and mappings are created. Dynamic port block reservation due to the port forward creation but without any dynamic mapping, is not logged.</p> <p>The reserved port block is released only when the last mapping in the block expires and there are no port forwards associated with the subscriber. The de-allocation log (syslog or RADIUS) is generated when the dynamic port block is completely released.</p> <p>Dynamic port block reservations can be enabled only if the configured maximum number of subscribers per outside IP addresses are less than or equal to the maximum number of configured port blocks per outside IP address.</p> <p>When configured to false, dynamic port blocks are not reserved when the first port forward for the subscriber is created.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

range-end *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

| | |
|----------|---|
| Synopsis | End of the wildcard range for port forwards |
| Context | configure service vprn <i>string</i> nat outside pool <i>string</i> port-forwarding range-end <i>number</i> |
| Tree | range-end |

| | |
|-------------|--|
| Description | <p>This command configures the upper boundary of the wildcard port range dedicated to port forwarding in a NAT pool, whereas the range-start command configures the lower boundary (the starting port) of the wildcard port range dedicated to port forwarding in a NAT pool.</p> <p>If unconfigured, the range-end implicit value is set to 1023, that represents the end of the well-known port range that is always enabled.</p> <p>Port forwards are supported only in pools in NAPT mode. Pools in 1:1 mode do not support port-forwards.</p> |
| Range | 0 1023 to 65535 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

range-start *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Start of the wildcard range for port forwards |
| Context | configure service vprn <i>string</i> nat outside pool <i>string</i> port-forwarding range-start <i>number</i> |
| Tree | range-start |
| Description | <p>This command configures the lower boundary (the starting port) of the wildcard port range dedicated to port forwarding in a NAT pool, whereas the range-end command configures the upper boundary of the wildcard port range dedicated to port forwarding in a NAT pool.</p> <p>Port 0 is always excluded from the port forwarding range.</p> <p>Port forwards are supported only in pools in Network Address and Port Translation (NAPT) mode. Pools in 1:1 mode do not support configured port forwards.</p> |
| Range | 0 1 1025 to 65535 |
| Introduced | 22.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Port block size for NAT subscribers |
| Context | configure service vprn string nat outside pool string port-reservation port-blocks number |
| Tree | port-blocks |
| Description | <p>In CGN, this command specifies the number of port-blocks per outside IP address in the NAT pool. The available ports per outside IP address (the end port minus the upper bound value of the static port-forwarding range) are divided into the number of port blocks specified in this command. This implicitly determines the size of each port block.</p> <p>For L2-aware NAT, this command can be configured only if the port block extensions (extended port blocks) are disabled. You must disable the l2-aware port-block-extension hierarchy in the NAT pool.</p> |
| Range | 1 to 64512 |
| Notes | The following elements are part of a choice: port-blocks or ports . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

ipv4

| | |
|------------|--|
| Synopsis | Enter the ipv4 context |
| Context | configure service vprn string network-interface string hold-time ipv4 |
| Tree | ipv4 |
| Introduced | 16.0.R1 |
| Platforms | All |

down

| | |
|-------------|--|
| Synopsis | Enter the down context |
| Context | configure service vprn string network-interface string hold-time ipv4 down |
| Tree | down |
| Description | Commands in this context configure the down hold timer, which specifies the delay before activating the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface up, unless an operator configures the init-only command. |
| Introduced | 16.0.R1 |
| Platforms | All |

init-only *boolean*

| | |
|-------------|---|
| Synopsis | Apply delay only at interface configuration or reboot |
| Context | configure service vprn string network-interface string hold-time ipv4 down init-only boolean |
| Tree | init-only |
| Description | This command applies a delay only when the IP interface is first configured or after a system reboot. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

seconds *number*

| | |
|----------|--|
| Synopsis | Down hold time for the IP interface |
| Context | configure service vprn string network-interface string hold-time ipv4 down seconds number |

| | |
|------------|-------------------------|
| Tree | seconds |
| Range | 1 to 1200 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

up

| | |
|-------------|---|
| Synopsis | Enter the up context |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> hold-time ipv4 up |
| Tree | up |
| Description | Commands in this context configure the up hold timer, which specifies the delay before deactivation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface down. |
| Introduced | 16.0.R1 |
| Platforms | All |

seconds *number*

| | |
|------------|---|
| Synopsis | Up hold time for the IP interface |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> hold-time ipv4 up seconds <i>number</i> |
| Tree | seconds |
| Range | 1 to 1200 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

filter

| | |
|------------|--|
| Synopsis | Enter the filter context |
| Context | configure service vprn string network-interface string ingress filter |
| Tree | filter |
| Introduced | 16.0.R1 |
| Platforms | All |

ip reference

| | |
|------------|---|
| Synopsis | IPv4 filter policy name |
| Context | configure service vprn string network-interface string ingress filter ip reference |
| Tree | ip |
| Reference | configure filter ip-filter string |
| Introduced | 16.0.R1 |
| Platforms | All |

ingress-stats boolean

| | |
|------------|---|
| Synopsis | Collect ingress statistics |
| Context | configure service vprn string network-interface string ingress-stats boolean |
| Tree | ingress-stats |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

ip-mtu number

| | |
|-------------|--|
| Synopsis | IP MTU applied to outgoing packets |
| Context | configure service vprn string network-interface string ip-mtu number |
| Tree | ip-mtu |
| Description | This command configures the IP maximum transmission unit (MTU) for the associated router IP interface. |
| Range | 512 to 9786 |
| Units | bytes |

| | |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms | All |

ipv4

| | |
|------------|--|
| Synopsis | Enter the ipv4 context |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> ipv4 |
| Tree | ipv4 |
| Introduced | 16.0.R1 |
| Platforms | All |

allow-directed-broadcasts *boolean*

| | |
|------------|---|
| Synopsis | Accept broadcasts that are directed to this interface |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> ipv4 allow-directed-broadcasts <i>boolean</i> |
| Tree | allow-directed-broadcasts |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

bfd

| | |
|------------|--|
| Synopsis | Enter the bfd context |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> ipv4 bfd |
| Tree | bfd |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|----------|---|
| Synopsis | Administrative state of BFD sessions |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> ipv4 bfd admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |

| | |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms | All |

echo-receive *number*

| | |
|------------|---|
| Synopsis | Minimum echo interval over this interface |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> ipv4 bfd echo-receive <i>number</i> |
| Tree | echo-receive |
| Range | 100 to 100000 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

multiplier *number*

| | |
|-------------|---|
| Synopsis | Number of consecutive BFD messages missed from the peer |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> ipv4 bfd multiplier <i>number</i> |
| Tree | multiplier |
| Description | This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments. |
| Range | 1 to 20 |
| Default | 3 |
| Introduced | 16.0.R1 |
| Platforms | All |

receive *number*

| | |
|-------------|--|
| Synopsis | BFD receive interval over this interface |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> ipv4 bfd receive <i>number</i> |
| Tree | receive |
| Description | This command specifies the receive interval for the BFD session.
On the 7750 SR, this command can only be configured to a value less than 100 when the type command is configured to cpm-np . |
| Range | 10 to 100000 |
| Units | milliseconds |

| | |
|------------|---------|
| Default | 100 |
| Introduced | 16.0.R1 |
| Platforms | All |

transmit-interval *number*

| | |
|-------------|---|
| Synopsis | BFD transmit interval over this interface |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> ipv4 bfd transmit-interval <i>number</i> |
| Tree | transmit-interval |
| Description | This command configures the transmit intervals.
On the 7750 SR, this command can only be configured to a value less than 100 when the type command is configured to cpm-np . |
| Range | 10 to 100000 |
| Units | milliseconds |
| Default | 100 |
| Introduced | 16.0.R1 |
| Platforms | All |

type *keyword*

| | |
|-------------|---|
| Synopsis | Local termination point for the BFD session |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> ipv4 bfd type <i>keyword</i> |
| Tree | type |
| Description | This command sets the local termination point for the BFD session to allow for fast timers down to 10 ms granularity.
The options to specify where the BFD session runs are: <ul style="list-style-type: none"> • auto (default) – the system chooses and uses the line card CPU only for single-hop BFD sessions with timer intervals equal to or greater than 100ms. All others are placed on the cpm-np. • cpm-np – BFD session runs on the FP complex associated with the CPM. This is either the FP on the CPM or the one elected on smaller systems. • fp – BFD session runs on the line card CPU. This option can only be used for single-hop BFD sessions with timers equal to or greater than 100ms. |
| Options | cpm-np, auto, fp |
| Default | auto |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

icmp

| | |
|------------|---|
| Synopsis | Enter the icmp context |
| Context | configure service vprn string network-interface string ipv4 icmp |

| Tree | neighbor-discovery |
| Introduced | 16.0.R1 |
| Platforms | All |

retry-timer *number*

| | |
|------------|---|
| Synopsis | ARP retry interval |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> ipv4 neighbor-discovery retry-timer <i>number</i> |
| Tree | retry-timer |
| Range | 1 to 300 |
| Units | deciseconds |
| Default | 50 |
| Introduced | 16.0.R1 |
| Platforms | All |

static-neighbor [*ipv4-address*] *string*

| | |
|------------|---|
| Synopsis | Enter the static-neighbor list instance |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> ipv4 neighbor-discovery static-neighbor <i>string</i> |
| Tree | static-neighbor |
| Introduced | 16.0.R1 |
| Platforms | All |

[ipv4-address] *string*

| | |
|------------|---|
| Synopsis | IPv4 address that corresponds to the physical address |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> ipv4 neighbor-discovery static-neighbor <i>string</i> |
| Tree | static-neighbor |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

mac-address *string*

| | |
|------------|---|
| Synopsis | MAC address for the static neighbor |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> ipv4 neighbor-discovery static-neighbor <i>string</i> mac-address <i>string</i> |
| Tree | mac-address |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

timeout *number*

| | |
|-------------|---|
| Synopsis | Timeout for an ARP entry learned on the interface |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> ipv4 neighbor-discovery timeout <i>number</i> |
| Tree | timeout |
| Description | This command configures the minimum time an ARP entry learned on the IP interface is stored in the ARP table. ARP entries are automatically refreshed when an ARP request |

or gratuitous ARP is seen by an IP host. Otherwise, the ARP entry is aged from the ARP table.

| | |
|------------|------------|
| Range | 0 to 65535 |
| Units | seconds |
| Default | 14400 |
| Introduced | 16.0.R1 |
| Platforms | All |

primary

| | |

Synopsis TCP maximum segment size for the interface

Context **configure** [service vprn](#) *string* [network-interface](#) *string* [ipv4](#) **tcp-mss** *number*

Tree [tcp-mss](#)

Range 384 to 9746

Introduced 16.0.R1

Platforms All

urpf-check

| | |
|------------|---|
| Synopsis | Enable the urpf-check context |
| Context | configure service vprn string network-interface string ipv4 urpf-check |
| Tree | urpf-check |
| Introduced | 16.0.R1 |
| Platforms | All |

ignore-default *boolean*

| | |
|------------|--|
| Synopsis | Ignore default route when performing a uRPF check |
| Context | configure service vprn string network-interface string ipv4 urpf-check ignore-default boolean |
| Tree | ignore-default |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

mode *keyword*

| | |
|------------|--|
| Synopsis | Unicast RPF check mode |
| Context | configure service vprn string network-interface string ipv4 urpf-check mode keyword |
| Tree | mode |
| Options | strict, loose, strict-no-ecmp |
| Default | strict |
| Introduced | 16.0.R1 |
| Platforms | All |

lag

| | |
|------------|---|
| Synopsis | Enter the lag context |
| Context | configure service vprn string network-interface string lag |
| Tree | lag |
| Introduced | 16.0.R1 |
| Platforms | All |

link-map-profile *number*

| | |
|-------------|--|
| Synopsis | LAG link map profile for a SAP or network interface |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> lag link-map-profile <i>number</i> |
| Tree | link-map-profile |
| Description | This command assigns a preconfigured LAG link map profile to a SAP or network interface configured on a LAG or a PW port that exists on a LAG. After an operator assigns a LAG link map profile, the system reshapes the SAP or network interface egress traffic over the LAG as required by the new configuration.

If the LAG link map profile for a SAP or network interface is deleted, the system reverts back to per-flow hashing. |
| Range | 1 to 64 |
| Introduced | 16.0.R1 |
| Platforms | All |

per-link-hash

| | |
|------------|---|
| Synopsis | Enter the per-link-hash context |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> lag per-link-hash |
| Tree | per-link-hash |
| Introduced | 16.0.R1 |
| Platforms | All |

class *number*

| | |
|------------|---|
| Synopsis | Class used on LAG egress using weighted per-link-hash |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> lag per-link-hash class <i>number</i> |
| Tree | class |
| Range | 1 to 3 |
| Default | 1 |
| Introduced | 16.0.R1 |
| Platforms | All |

weight *number*

| | |
|----------|--|
| Synopsis | Weight used on LAG egress using weighted per-link-hash |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> lag per-link-hash weight <i>number</i> |

| | |
|------------|------------------------|
| Tree | weight |
| Range | 1 to 1024 |
| Default | 1 |
| Introduced | 16.0.R1 |
| Platforms | All |

load-balancing

| | |
|------------|--|
| Synopsis | Enter the load-balancing context |
| Context | configure service vprn string network-interface string load-balancing |
| Tree | load-balancing |
| Introduced | 16.0.R1 |
| Platforms | All |

flow-label-load-balancing *boolean*

| | |
|-------------|--|
| Synopsis | Enable flow label load balancing |
| Context | configure service vprn string network-interface string load-balancing flow-label-load-balancing boolean |
| Tree | flow-label-load-balancing |
| Description | When configured to true , the router enables load balancing in ECMP and LAG based on the output of a hash performed on the triplet (SA, DA, flow label) in the header of an IPv6 packet received on an IES, VPRN, R-VPLS, CSC, or network interface.

When configured to false , the router disables load balancing in ECMP and LAG. |
| Default | false |
| Introduced | 21.5.R1 |
| Platforms | All |

ip-load-balancing *keyword*

| | |
|-------------|--|
| Synopsis | IP load-balancing algorithm |
| Context | configure service vprn string network-interface string load-balancing ip-load-balancing keyword |
| Tree | ip-load-balancing |
| Description | This command specifies whether to include the source address, destination address, or both in LAG or ECMP hash on IP interfaces. Additionally, when the l4-load-balancing |

command is enabled, this command also includes the source or destination port in the hash inputs.

| | |
|------------|-------------------------------------|
| Options | both, destination, source, inner-ip |
| Default | both |
| Introduced | 16.0.R3 |
| Platforms | All |

lsr-load-balancing *keyword*

| | |
|-------------|--|
| Synopsis | LSR load-balancing algorithm |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> load-balancing lsr-load-balancing <i>keyword</i> |
| Tree | lsr-load-balancing |
| Description | This command specifies whether the IP header is used in the LAG and ECMP LSR hashing algorithm. This is the per-interface setting. |
| Options | lbl-only, lbl-ip, ip-only, eth-encap-ip, lbl-ip-l4-teid |
| Introduced | 16.0.R1 |
| Platforms | All |

spi-load-balancing *boolean*

| | |
|-------------|--|
| Synopsis | Enable SPI use in hashing |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> load-balancing spi-load-balancing <i>boolean</i> |
| Tree | spi-load-balancing |
| Description | When configured to true , the router uses the Security Parameter Index (SPI) in hashing for ESP and AH encrypted IPv4 and IPv6 traffic. This is a per-interface setting. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

teid-load-balancing *boolean*

| | |
|----------|---|
| Synopsis | Enable use of TEID in hashing |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> load-balancing teid-load-balancing <i>boolean</i> |
| Tree | teid-load-balancing |

| | |
|------------|---------|
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

loopback

| | |
|------------|--|
| Synopsis | Use interface as a loopback interface |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> loopback |
| Tree | loopback |
| Notes | The following elements are part of a choice: loopback or port . |
| Introduced | 16.0.R1 |
| Platforms | All |

mac string

| | |
|------------|---|
| Synopsis | MAC address for the interface |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> mac <i>string</i> |
| Tree | mac |
| Introduced | 16.0.R1 |
| Platforms | All |

port string

| | |
|---------------|--|
| Synopsis | Port to bind the interface |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> port <i>string</i> |
| Tree | port |
| String Length | 1 to 45 |
| Notes | The following elements are part of a choice: loopback or port . |
| Introduced | 16.0.R1 |
| Platforms | All |

qos

| | |
|----------|---|
| Synopsis | Enter the qos context |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> qos |

| | |
|------------|---------------------|
| Tree | qos |
| Introduced | 16.0.R1 |
| Platforms | All |

egress-instance *number*

| | |
|-------------|---|
| Synopsis | Port egress queue group instance for this interface |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> qos egress-instance <i>number</i> |
| Tree | egress-instance |
| Description | This command specifies which instance to associate with this specific network IP interface since multiple instances of the same egress queue-group can be applied to the same port. |
| Range | 1 to 65535 |
| Introduced | 16.0.R1 |
| Platforms | All |

egress-port-redirect-group *reference*

| | |
|-------------|---|
| Synopsis | QoS queue group name |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> qos egress-port-redirect-group <i>reference</i> |
| Tree | egress-port-redirect-group |
| Description | This command configures the egress queue group used for all egress forwarding-class redirections specified within the network QoS policy ID. The specified queue group name must exist as an egress queue group applied to the egress context of the port associated with the IP interface. |
| Reference | configure qos queue-group-templates egress queue-group <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

ingress-fp-redirect-group *reference*

| | |
|----------|--|
| Synopsis | Forwarding plane queue group policy for the interface |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> qos ingress-fp-redirect-group <i>reference</i> |
| Tree | ingress-fp-redirect-group |

| | |
|-------------|---|
| Description | This command configures the ingress queue-group used for all ingress forwarding-class redirections specified within the network QoS policy ID. The specified queue group name must exist as an ingress queue group applied to the ingress context of the forwarding plane associated with the IP interface. |
| Reference | configure qos queue-group-templates ingress queue-group <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

ingress-instance *number*

| | |
|-------------|---|
| Synopsis | Forwarding plane ingress queue group for this interface |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> qos ingress-instance <i>number</i> |
| Tree | ingress-instance |
| Description | This command configures which instance to associate with this specific network IP interface. An operator can apply multiple instances of the same ingress queue group to the same forwarding plane. |
| Range | 1 to 65535 |
| Introduced | 16.0.R1 |
| Platforms | All |

network-policy *reference*

| | |
|-------------|---|
| Synopsis | Network policy name associated with a network interface |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> qos network-policy <i>reference</i> |
| Tree | network-policy |
| Description | This command associates an existing network policy name with the IP interface. |
| Reference | configure qos network <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

tos-marking-state *keyword*

| | |
|----------|--|
| Synopsis | TOS marking state |
| Context | configure service vprn <i>string</i> network-interface <i>string</i> tos-marking-state <i>keyword</i> |
| Tree | tos-marking-state |
| Options | trusted, untrusted |

| | |
|------------|---------|
| Default | trusted |
| Introduced | 16.0.R1 |
| Platforms | All |

ntp

| | |
|------------|--|
| Synopsis | Enable the ntp context |
| Context | configure service vprn string ntp |
| Tree | ntp |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of NTP execution |
| Context | configure service vprn string ntp admin-state keyword |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | All |

authenticate *boolean*

| | |
|------------|---|
| Synopsis | Authentication of NTP PDUs when acting as a server |
| Context | configure service vprn string ntp authenticate boolean |
| Tree | authenticate |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

authentication-check *boolean*

| | |
|----------|---|
| Synopsis | Authenticate NTP PDUs and reject mismatches |
| Context | configure service vprn string ntp authentication-check boolean |

| | |
|------------|--------------------------------------|
| Tree | authentication-check |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

authentication-key [[key-id](#)] *number*

| | |
|------------|--|
| Synopsis | Enter the authentication-key list instance |
| Context | configure service vprn <i>string</i> ntp authentication-key <i>number</i> |
| Tree | authentication-key |
| Introduced | 16.0.R1 |
| Platforms | All |

[key-id] *number*

| | |
|------------|--|
| Synopsis | Authentication key ID used for NTP packets |
| Context | configure service vprn <i>string</i> ntp authentication-key <i>number</i> |
| Tree | authentication-key |
| Range | 1 to 255 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

key *string*

| | |
|---------------|--|
| Synopsis | Key to authenticate NTP packets |
| Context | configure service vprn <i>string</i> ntp authentication-key <i>number</i> key <i>string</i> |
| Tree | key |
| String Length | 1 to 71 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

type keyword

| | |
|------------|---|
| Synopsis | Authentication method to authenticate NTP packet |
| Context | configure service vprn string ntp authentication-key number type keyword |
| Tree | type |
| Options | des, message-digest |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

broadcast [interface-name] reference

| | |
|------------|--|
| Synopsis | Enter the broadcast list instance |
| Context | configure service vprn string ntp broadcast reference |
| Tree | broadcast |
| Introduced | 16.0.R1 |
| Platforms | All |

[interface-name] reference

| | |
|------------|--|
| Synopsis | Local interface used to transmit NTP broadcast packets |
| Context | configure service vprn string ntp broadcast reference |
| Tree | broadcast |
| Reference | configure service vprn string interface string |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

key-id reference

| | |
|------------|---|
| Synopsis | Authentication key and type used by the node |
| Context | configure service vprn string ntp broadcast reference key-id reference |
| Tree | key-id |
| Reference | configure service vprn string ntp authentication-key number |
| Introduced | 16.0.R1 |

Platforms All

t*ttl number*

Synopsis TTL of messages transmitted by the broadcast address
 Context **configure service vprn string ntp broadcast reference ttl number**
 Tree **ttl**
 Range 1 to 255
 Default 127
 Introduced 16.0.R1
 Platforms All

v*ersion number*

Synopsis NTP version number generated by the node
 Context **configure service vprn string ntp broadcast reference version number**
 Tree **version**
 Range 2 to 4
 Default 4
 Introduced 16.0.R1
 Platforms All

ospf [*ospf-instance*] *number*

Synopsis Enter the **ospf** list instance
 Context **configure service vprn string ospf number**
 Tree **ospf**
 Max. Instances 32
 Introduced 16.0.R1
 Platforms All

[ospf-instance] *number*

Synopsis Specifies the value of the integrated OSPF instance.
 Context **configure service vprn string ospf number**

| | |
|------------|-------------------------------------|
| Tree | ospf |
| Range | 0 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of the OSPF instance |
| Context | configure service vprn <i>string</i> ospf <i>number</i> admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | All |

advertise-router-capability *keyword*

| | |
|------------|---|
| Synopsis | Allow router advertisement capabilities |
| Context | configure service vprn <i>string</i> ospf <i>number</i> advertise-router-capability <i>keyword</i> |
| Tree | advertise-router-capability |
| Options | false, link, area, as |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

area [[area-id](#)] *string*

| | |
|------------|---|
| Synopsis | Enter the area list instance |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> |
| Tree | area |
| Introduced | 16.0.R1 |
| Platforms | All |

[area-id] string

| | |
|------------|---|
| Synopsis | Area-ID attribute |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> |
| Tree | area |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

advertise-ne-profile reference

| | |
|------------|---|
| Synopsis | Network element profile to be advertised |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> advertise-ne-profile <i>reference</i> |
| Tree | advertise-ne-profile |
| Reference | configure system network-element-discovery <i>profile</i> <i>string</i> |
| Introduced | 19.5.R1 |
| Platforms | All |

advertise-router-capability boolean

| | |
|------------|--|
| Synopsis | Allow router advertisement capabilities |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> advertise-router-capability <i>boolean</i> |
| Tree | advertise-router-capability |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

area-range [ip-prefix-mask] string

| | |
|------------|--|
| Synopsis | Enter the area-range list instance |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> area-range <i>string</i> |
| Tree | area-range |
| Introduced | 16.0.R1 |
| Platforms | All |

[ip-prefix-mask] *string*

| | |
|------------|--|
| Synopsis | IPv4 unicast address prefix and mask |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> area-range <i>string</i> |
| Tree | area-range |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

advertise *boolean*

| | |
|------------|--|
| Synopsis | Advertise summarized range of addresses to other areas |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> area-range <i>string</i> advertise <i>boolean</i> |
| Tree | advertise |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

blackhole-aggregate *boolean*

| | |
|------------|--|
| Synopsis | Install a low priority blackhole route to avoid loops |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> blackhole-aggregate <i>boolean</i> |
| Tree | blackhole-aggregate |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

export-policy *reference*

| | |
|-----------|--|
| Synopsis | Type 3 Summary-LSA/OSPFv3 inter-area-prefix-LSA route |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> export-policy <i>reference</i> |
| Tree | export-policy |
| Reference | configure policy-options policy-statement <i>string</i> |

| | |
|----------------|--------------------------------------|
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | All |

import-policy *reference*

| | |
|----------------|--|
| Synopsis | Route imported as Summary Type 3/Inter-Area-Prefix-LSA |
| Context | configure service vpn <i>string</i> ospf <i>number</i> area <i>string</i> import-policy <i>reference</i> |
| Tree | import-policy |
| Reference | configure policy-options policy-statement <i>string</i> |
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | All |

interface [[interface-name](#)] *string*

| | |
|------------|---|
| Synopsis | Enter the interface list instance |
| Context | configure service vpn <i>string</i> ospf <i>number</i> area <i>string</i> interface <i>string</i> |
| Tree | interface |
| Introduced | 16.0.R1 |
| Platforms | All |

[interface-name] *string*

| | |
|---------------|---|
| Synopsis | IP interface name |
| Context | configure service vpn <i>string</i> ospf <i>number</i> area <i>string</i> interface <i>string</i> |
| Tree | interface |
| String Length | 1 to 32 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of the OSPF interface |
| Context | configure service vpn <i>string</i> ospf <i>number</i> area <i>string</i> interface <i>string</i> admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | enable |
| Introduced | 16.0.R1 |
| Platforms | All |

advertise-router-capability *boolean*

| | |
|------------|--|
| Synopsis | Allow router advertisement capabilities |
| Context | configure service vpn <i>string</i> ospf <i>number</i> area <i>string</i> interface <i>string</i> advertise-router-capability <i>boolean</i> |
| Tree | advertise-router-capability |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

advertise-subnet *boolean*

| | |
|------------|---|
| Synopsis | Advertise point-to-point interfaces as subnet routes |
| Context | configure service vpn <i>string</i> ospf <i>number</i> area <i>string</i> interface <i>string</i> advertise-subnet <i>boolean</i> |
| Tree | advertise-subnet |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

authentication-key *string*

| | |
|----------|--|
| Synopsis | Authentication key |
| Context | configure service vpn <i>string</i> ospf <i>number</i> area <i>string</i> interface <i>string</i> authentication-key <i>string</i> |

| | |
|---------------|------------------------------------|
| Tree | authentication-key |
| String Length | 1 to 38 |
| Introduced | 16.0.R1 |
| Platforms | All |

authentication-keychain *reference*

| | |
|------------|--|
| Synopsis | TCP authentication keychain for the session |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> interface <i>string</i> authentication-keychain <i>reference</i> |
| Tree | authentication-keychain |
| Reference | configure system security keychains keychain <i>string</i> |
| Introduced | 16.0.R3 |
| Platforms | All |

authentication-type *keyword*

| | |
|------------|--|
| Synopsis | Authentication type used on OSPF interface |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> interface <i>string</i> authentication-type <i>keyword</i> |
| Tree | authentication-type |
| Options | password, message-digest |
| Introduced | 16.0.R1 |
| Platforms | All |

bfd-liveness

| | |
|------------|--|
| Synopsis | Enable the bfd-liveness context |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> interface <i>string</i> bfd-liveness |
| Tree | bfd-liveness |
| Introduced | 16.0.R1 |
| Platforms | All |

remain-down-on-failure *boolean*

| | |
|----------|---|
| Synopsis | Force adjacency down on failure until session returns |
|----------|---|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> interface <i>string</i> bfd-liveness remain-down-on-failure <i>boolean</i> |
| Tree | remain-down-on-failure |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

dead-interval *number*

| | |
|------------|---|
| Synopsis | OSPF wait time for Hellos before neighbor declared down |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> interface <i>string</i> dead-interval <i>number</i> |
| Tree | dead-interval |
| Range | 2 to 65535 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

hello-interval *number*

| | |
|------------|--|
| Synopsis | Time between OSPF Hellos of this interface |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> interface <i>string</i> hello-interval <i>number</i> |
| Tree | hello-interval |
| Range | 1 to 65535 |
| Units | seconds |
| Default | 10 |
| Introduced | 16.0.R1 |
| Platforms | All |

interface-type *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|----------|----------------|
| Synopsis | Interface type |
|----------|----------------|

| | |
|-------------|---|
| Context | configure service vprn <i>string ospf number area string interface string interface-type keyword</i> |
| Tree | interface-type |
| Description | This command specifies the interface type.
broadcast - Broadcast network
To significantly improve adjacency forming and network convergence, configure a network as point-to-point if only two routers are connected, even if the network is a broadcast media such as Ethernet.
non-broadcast - Non-broadcast network
point-to-point - Point-to-point link
Set the interface type of an Ethernet link to point-to-point to avoid having to carry the broadcast adjacency maintenance overhead if the Ethernet link provided is used as a point-to-point. Set the interface type of an Ethernet link to point-to-point to avoid having to carry the broadcast adjacency maintenance overhead if the Ethernet link provided is used as a point-to-point.
secondary - Multiple secondary adjacencies allowed
A secondary interface allows multiple secondary adjacencies, in addition to the primary adjacency, to be established over a single IP interface. This interface type can also be applied to the system interface and to loopback interfaces to allow them to participate in multiple areas, although no adjacencies are formed over these types of interfaces. |
| Options | broadcast, non-broadcast, point-to-point, secondary |
| Introduced | 16.0.R1 |
| Platforms | All |

load-balancing-weight *number*

| | |
|------------|---|
| Synopsis | Configure load-balancing-weight. |
| Context | configure service vprn <i>string ospf number area string interface string load-balancing-weight number</i> |
| Tree | load-balancing-weight |
| Range | 1 to 4294967295 |
| Introduced | 20.2.R1 |
| Platforms | All |

loopfree-alternate

| | |
|----------|---|
| Synopsis | Enter the loopfree-alternate context |
| Context | configure service vprn <i>string ospf number area string interface string loopfree-alternate</i> |
| Tree | loopfree-alternate |

| | |
|------------|---------|
| Introduced | 16.0.R3 |
| Platforms | All |

exclude *boolean*

| | |
|------------|--|
| Synopsis | Enable fast reroute at OSPF primary interface level |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> interface <i>string</i> loopfree-alternate exclude <i>boolean</i> |
| Tree | exclude |
| Default | false |
| Introduced | 16.0.R3 |
| Platforms | All |

policy-map

| | |
|------------|--|
| Synopsis | Enable the policy-map context |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> interface <i>string</i> loopfree-alternate policy-map |
| Tree | policy-map |
| Introduced | 16.0.R3 |
| Platforms | All |

route-nh-template *reference*

| | |
|------------|---|
| Synopsis | Route next hop policy template name |
| Context | configure service vprn <i>string</i> ospf <i>number</i> area <i>string</i> interface <i>string</i> loopfree-alternate policy-map route-nh-template <i>reference</i> |
| Tree | route-nh-template |
| Reference | configure routing-options route-next-hop-policy template <i>string</i> |
| Notes | This element is mandatory. |
| Introduced | 16.0.R3 |
| Platforms | All |

lsa-filter-out *keyword*

| | |
|----------|------------------------|
| Synopsis | LSA flooding reduction |
|----------|------------------------|

| | |
|------------|---|
| Context | configure service vprn <i>string ospf number area string interface string isa-filter-out keyword</i> |
| Tree | isa-filter-out |
| Options | none, all, except-own-rtrlsa, except-own-rtrlsa-and-defaults |
| Default | none |
| Introduced | 16.0.R1 |
| Platforms | All |

message-digest-key [[key-id](#)] *number*

| | |
|------------|--|
| Synopsis | Enter the message-digest-key list instance |
| Context | configure service vprn <i>string ospf number area string interface string message-digest-key number</i> |
| Tree | message-digest-key |
| Introduced | 16.0.R1 |
| Platforms | All |

[key-id] *number*

| | |
|------------|--|
| Synopsis | Message digest index |
| Context | configure service vprn <i>string ospf number area string interface string message-digest-key number</i> |
| Tree | message-digest-key |
| Range | 1 to 255 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

md5 *string*

| | |
|---------------|---|
| Synopsis | MD5 hash key |
| Context | configure service vprn <i>string ospf number area string interface string message-digest-key number md5 string</i> |
| Tree | md5 |
| String Length | 1 to 51 |
| Notes | This element is mandatory. |

| | |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms | All |

metric number

| | |
|------------|---|
| Synopsis | Route cost metric for the interface |
| Context | configure service vprn string ospf number area string interface string metric number |
| Tree | metric |
| Range | 1 to 65535 |
| Introduced | 16.0.R1 |
| Platforms | All |

mtu number

| | |
|------------|--|
| Synopsis | MTU for the OSPF to use on the interface |
| Context | configure service vprn string ospf number area string interface string mtu number |
| Tree | mtu |
| Range | 512 to 9786 |
| Introduced | 16.0.R1 |
| Platforms | All |

neighbor [address] string

| | |
|------------|---|
| Synopsis | Add a list entry for neighbor |
| Context | configure service vprn string ospf number area string interface string neighbor string |
| Tree | neighbor |
| Introduced | 16.0.R1 |
| Platforms | All |

[address] string

| | |
|----------|---|
| Synopsis | IPv4 address of the OSPFv2 neighbor |
| Context | configure service vprn string ospf number area string interface string neighbor string |
| Tree | neighbor |
| Notes | This element is part of a list key. |

Introduced 16.0.R1
 Platforms All

passive *boolean*

Synopsis Advertise passive interfaces as OSPF interfaces
 Context **configure** [service](#) [vprn](#) *string* [ospf](#) *number* [area](#) *string* [interface](#) *string* [passive](#) *boolean*

export-limit

| | |
|------------|---|
| Synopsis | Enable the export-limit context |
| Context | configure service vprn string ospf number export-limit |
| Tree | export-limit |
| Introduced | 16.0.R1 |
| Platforms | All |

log-percent number

| | |
|------------|--|
| Synopsis | Export limit before warning and SNMP notification sent |
| Context | configure service vprn string ospf number export-limit log-percent number |
| Tree | log-percent |
| Range | 1 to 100 |
| Introduced | 16.0.R1 |
| Platforms | All |

number number

| | |
|------------|---|
| Synopsis | Maximum routes or prefixes exported from route table |
| Context | configure service vprn string ospf number export-limit number number |
| Tree | number |
| Range | 1 to 4294967295 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

export-policy reference

| | |
|-------------|--|
| Synopsis | Export policies that determine exported routes |
| Context | configure service vprn string ospf number export-policy reference |
| Tree | export-policy |
| Description | <p>This command configures export routing policies for the routes exported from the routing table to IS-IS.</p> <p>If the export policy is undefined, the system does not export non IS-IS routes from the routing table manager to IS-IS.</p> |

If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.

If the **aggregate** command is also configured in the **configure router** context, the aggregation is applied before the export policy is applied.

Routing policies are created in the **configure router policy-options** context.

| | |
|----------------|--|
| Reference | configure policy-options policy-statement <i>string</i> |
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | All |

external-db-overflow

| | |
|------------|---|
| Synopsis | Enable the external-db-overflow context |
| Context | configure service vprn <i>string</i> ospf <i>number</i> external-db-overflow |
| Tree | external-db-overflow |
| Introduced | 16.0.R1 |
| Platforms | All |

interval *number*

| | |
|------------|--|
| Synopsis | Time during which the router operates in overload |
| Context | configure service vprn <i>string</i> ospf <i>number</i> external-db-overflow interval <i>number</i> |
| Tree | interval |
| Range | 0 to 2147483647 |
| Units | seconds |
| Default | 0 |
| Introduced | 16.0.R1 |
| Platforms | All |

limit *number*

| | |
|----------|---|
| Synopsis | Number of external LSA at which overload is triggered |
| Context | configure service vprn <i>string</i> ospf <i>number</i> external-db-overflow limit <i>number</i> |
| Tree | limit |

| | |
|------------|-----------------|
| Range | 0 to 2147483647 |
| Default | 0 |
| Introduced | 16.0.R1 |
| Platforms | All |

external-preference *number*

| | |
|------------|--|
| Synopsis | Preference for OSPF external routes |
| Context | configure service vprn <i>string</i> ospf <i>number</i> external-preference <i>number</i> |
| Tree | external-preference |
| Range | 1 to 255 |
| Default | 150 |
| Introduced | 16.0.R1 |
| Platforms | All |

graceful-restart

| | |
|------------|---|
| Synopsis | Enable the graceful-restart context |
| Context | configure service vprn <i>string</i> ospf <i>number</i> graceful-restart |
| Tree | graceful-restart |
| Introduced | 16.0.R1 |
| Platforms | All |

helper-mode *boolean*

| | |
|------------|--|
| Synopsis | Enable graceful restart helper for OSPF |
| Context | configure service vprn <i>string</i> ospf <i>number</i> graceful-restart helper-mode <i>boolean</i> |
| Tree | helper-mode |
| Default | true |
| Introduced | 16.0.R1 |

|------------|--|
| Synopsis | Max number of LSAs one router can advertise |
| Context | configure service vprn <i>string ospf number rtr-adv-lsa-limit max-lsa-count number</i> |
| Tree | max-lsa-count |
| Range | 1 to 4294967295 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

overload-timeout (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | Maximum time in overload after LSA limit is reached |
| Context | configure service vprn <i>string ospf number rtr-adv-lsa-limit overload-timeout</i> (<i>number</i> <i>keyword</i>) |
| Tree | overload-timeout |
| Range | 1 to 1800 |
| Units | seconds |
| Options | forever |
| Default | forever |
| Introduced | 16.0.R1 |
| Platforms | All |

warning-threshold *number*

| | |
|------------|---|
| Synopsis | Percentage of the max LSA count that causes a warning |
| Context | configure service vprn <i>string ospf number rtr-adv-lsa-limit warning-threshold</i> <i>number</i> |
| Tree | warning-threshold |
| Range | 0 to 100 |
| Units | percent |
| Default | 0 |
| Introduced | 16.0.R1 |
| Platforms | All |

super-backbone *boolean*

| | |
|------------|---|
| Synopsis | Enable/disable super-backbone functionality. |
| Context | configure service vprn <i>string ospf number super-backbone</i> <i>boolean</i> |
| Tree | super-backbone |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

suppress-dn-bit *boolean*

| | |
|----------|--|
| Synopsis | Suppress the DN bit setting for OSPF LSA packets |
|----------|--|

| | |
|------------|---|
| Context | configure service vprn <i>string ospf number suppress-dn-bit boolean</i> |
| Tree | suppress-dn-bit |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

timers

| | |
|------------|--|
| Synopsis | Enter the timers context |
| Context | configure service vprn <i>string ospf number timers</i> |
| Tree | timers |
| Introduced | 16.0.R1 |
| Platforms | All |

incremental-spf-wait *number*

| | |
|------------|--|
| Synopsis | Delay time before an incremental SPF calculation starts |
| Context | configure service vprn <i>string ospf number timers incremental-spf-wait number</i> |
| Tree | incremental-spf-wait |
| Range | 0 to 1000 |
| Units | milliseconds |
| Default | 1000 |
| Introduced | 16.0.R1 |
| Platforms | All |

lsa-accumulate *number*

| | |
|------------|--|
| Synopsis | Delay to gather LSAs before advertising to neighbors |
| Context | configure service vprn <i>string ospf number timers lsa-accumulate number</i> |
| Tree | lsa-accumulate |
| Range | 0 to 1000 |
| Units | milliseconds |
| Default | 1000 |
| Introduced | 16.0.R1 |
| Platforms | All |

Isa-arrival *number*

| | |
|------------|--|
| Synopsis | Min delay between receipt of same LSAs from neighbors |
| Context | configure service vprn string ospf number timers Isa-arrival <i>number</i> |
| Tree | Isa-arrival |
| Range | 0 to 600000 |
| Units | milliseconds |
| Default | 1000 |
| Introduced | 16.0.R1 |
| Platforms | All |

Isa-generate

| | |
|------------|---|
| Synopsis | Enter the Isa-generate context |
| Context | configure service vprn string ospf number timers Isa-generate |
| Tree | Isa-generate |
| Introduced | 16.0.R1 |
| Platforms | All |

Isa-initial-wait *number*

| | |
|------------|--|
| Synopsis | First wait period between OSPF LSA generation |
| Context | configure service vprn string ospf number timers Isa-generate Isa-initial-wait <i>number</i> |
| Tree | Isa-initial-wait |
| Range | 10 to 600000 |
| Units | milliseconds |
| Default | 5000 |
| Introduced | 16.0.R1 |
| Platforms | All |

Isa-second-wait *number*

| | |
|----------|---|
| Synopsis | Hold time between the first and second LSA generation |
| Context | configure service vprn string ospf number timers Isa-generate Isa-second-wait <i>number</i> |
| Tree | Isa-second-wait |

| | |
|------------|--------------|
| Range | 10 to 600000 |
| Units | milliseconds |
| Default | 5000 |
| Introduced | 16.0.R1 |
| Platforms | All |

max-lsa-wait *number*

| | |
|------------|--|
| Synopsis | Max time between two LSAs being generated |
| Context | configure service vprn <i>string</i> ospf <i>number</i> timers lsa-generate max-lsa-wait <i>number</i> |
| Tree | max-lsa-wait |
| Range | 10 to 600000 |
| Units | milliseconds |
| Default | 5000 |
| Introduced | 16.0.R1 |
| Platforms | All |

redistribute-delay *number*

| | |
|------------|--|
| Synopsis | Hold down timer for external routes into OSPF |
| Context | configure service vprn <i>string</i> ospf <i>number</i> timers redistribute-delay <i>number</i> |
| Tree | redistribute-delay |
| Range | 0 to 1000 |
| Units | milliseconds |
| Default | 1000 |
| Introduced | 16.0.R1 |
| Platforms | All |

spf-wait

| | |
|------------|--|
| Synopsis | Enter the spf-wait context |
| Context | configure service vprn <i>string</i> ospf <i>number</i> timers spf-wait |
| Tree | spf-wait |
| Introduced | 16.0.R1 |
| Platforms | All |

spf-initial-wait *number*

| | |
|------------|--|
| Synopsis | Initial SPF calculation delay after a topology change |
| Context | configure service vprn <i>string</i> ospf number timers spf-wait spf-initial-wait <i>number</i> |
| Tree | spf-initial-wait |
| Range | 10 to 100000 |
| Units | milliseconds |
| Default | 1000 |
| Introduced | 16.0.R1 |
| Platforms | All |

spf-max-wait *number*

| | |
|------------|--|
| Synopsis | Max interval between two consecutive SPF calculations |
| Context | configure service vprn <i>string</i> ospf number timers spf-wait spf-max-wait <i>number</i> |
| Tree | spf-max-wait |
| Range | 10 to 120000 |
| Units | milliseconds |
| Default | 10000 |
| Introduced | 16.0.R1 |
| Platforms | All |

spf-second-wait *number*

| | |
|------------|---|
| Synopsis | Hold time between the first and second SPF calculation |
| Context | configure service vprn <i>string</i> ospf number timers spf-wait spf-second-wait <i>number</i> |
| Tree | spf-second-wait |
| Range | 10 to 100000 |
| Units | milliseconds |
| Default | 1000 |
| Introduced | 16.0.R1 |
| Platforms | All |

unicast-import *boolean*

| | |
|------------|--|
| Synopsis | Submit routes into the unicast Route Table Manager |
| Context | configure service vpn <i>string</i> ospf <i>number</i> unicast-import <i>boolean</i> |
| Tree | unicast-import |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

vpn-domain

| | |
|------------|---|
| Synopsis | Enable the vpn-domain context |
| Context | configure service vpn <i>string</i> ospf <i>number</i> vpn-domain |
| Tree | vpn-domain |
| Introduced | 16.0.R1 |
| Platforms | All |

id *string*

| | |
|---------------|---|
| Synopsis | OSPF VPN domain ID |
| Context | configure service vpn <i>string</i> ospf <i>number</i> vpn-domain id <i>string</i> |
| Tree | id |
| Description | This command specifies the OSPF VPN domain. This is exchanged using BGP in the Extended Community attribute associated with a prefix. |
| String Length | 14 |
| Default | 0000.0000.0000 |
| Introduced | 16.0.R1 |
| Platforms | All |

type *keyword*

| | |
|----------|--|
| Synopsis | VPN domain type |
| Context | configure service vpn <i>string</i> ospf <i>number</i> vpn-domain type <i>keyword</i> |
| Tree | type |
| Options | 0005, 0105, 0205, 8005 |
| Notes | This element is mandatory. |

| | |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms | All |

vpn-tag *number*

| | |
|------------|---|
| Synopsis | OSPF VPN tag |
| Context | configure service vprn <i>string ospf number vpn-tag number</i> |
| Tree | vpn-tag |
| Max. Range | 0 to 4294967295 |
| Default | 0 |
| Introduced | 16.0.R1 |
| Platforms | All |

ospf3 [**ospf-instance**] *number*

| | |
|----------------|---|
| Synopsis | Enter the ospf3 list instance |
| Context | configure service vprn <i>string ospf3 number</i> |
| Tree | ospf3 |
| Max. Instances | 32 |
| Introduced | 16.0.R1 |
| Platforms | All |

[ospf-instance] *number*

| | |
|------------|---|
| Synopsis | Specifies the value of the integrated OSPF instance. |
| Context | configure service vprn <i>string ospf3 number</i> |
| Tree | ospf3 |
| Range | 0 to 31 64 to 95 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of the OSPF instance |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | All |

advertise-router-capability *keyword*

| | |
|------------|--|
| Synopsis | Allow router advertisement capabilities |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> advertise-router-capability <i>keyword</i> |
| Tree | advertise-router-capability |
| Options | false, link, area, as |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

area [[area-id](#)] *string*

| | |
|------------|--|
| Synopsis | Enter the area list instance |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> |
| Tree | area |
| Introduced | 16.0.R1 |
| Platforms | All |

[area-id] *string*

| | |
|------------|--|
| Synopsis | Area-ID attribute |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> |
| Tree | area |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

advertise-router-capability *boolean*

| | |
|------------|---|
| Synopsis | Allow router advertisement capabilities |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> advertise-router-capability <i>boolean</i> |
| Tree | advertise-router-capability |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

area-range [[ip-prefix-mask](#)] (*ipv4-prefix* | *ipv6-prefix*)

| | |
|------------|---|
| Synopsis | Enter the area-range list instance |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> area-range (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) |
| Tree | area-range |
| Introduced | 16.0.R1 |
| Platforms | All |

[ip-prefix-mask] (*ipv4-prefix* | *ipv6-prefix*)

| | |
|------------|---|
| Synopsis | Address ranges to create on an ABR for route summarization or suppression |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> area-range (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) |
| Tree | area-range |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

advertise *boolean*

| | |
|----------|--|
| Synopsis | Advertise summarized range of addresses to other areas |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> area-range (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) advertise <i>boolean</i> |
| Tree | advertise |
| Default | true |

Introduced 16.0.R1
 Platforms All

blackhole-aggregate *boolean*

Synopsis Install a low priority blackhole route to avoid loops
 Context **configure** [service vprn](#) *string* [ospf3](#) *number* [area](#) *string* **blackhole-aggregate** *boolean*
 Tree [blackhole-aggregate](#)
 Default true
 Introduced 16.0.R1
 Platforms All

export-policy *reference*

Synopsis Type 3 Summary-LSA/OSPFv3 inter-area-prefix-LSA route
 Context **configure** [service vprn](#) *string* [ospf3](#) *number* [area](#) *string* **export-policy** *reference*
 Tree [export-policy](#)
 Reference **configure** [policy-options](#) [policy-statement](#) *string*
 Max. Instances 5
 Notes This element is ordered by the user.
 Introduced 16.0.R1
 Platforms All

import-policy *reference*

Synopsis Route imported as Summary Type 3/Inter-Area-Prefix-LSA
 Context **configure** [service vprn](#) *string* [ospf3](#) *number* [area](#) *string* **import-policy** *reference*
 Tree [import-policy](#)
 Reference **configure** [policy-options](#) [policy-statement](#) *string*
 Max. Instances 5
 Notes This element is ordered by the user.
 Introduced 16.0.R1
 Platforms All

interface [[interface-name](#)] *string*

| | |
|------------|--|
| Synopsis | Enter the interface list instance |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> interface <i>string</i> |
| Tree | interface |
| Introduced | 16.0.R1 |
| Platforms | All |

[interface-name] *string*

| | |
|---------------|--|
| Synopsis | IP interface name |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> interface <i>string</i> |
| Tree | interface |
| String Length | 1 to 32 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of the OSPF interface |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> interface <i>string</i> admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | enable |
| Introduced | 16.0.R1 |
| Platforms | All |

advertise-router-capability *boolean*

| | |
|----------|--|
| Synopsis | Allow router advertisement capabilities |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> interface <i>string</i> advertise-router-capability <i>boolean</i> |
| Tree | advertise-router-capability |
| Default | true |

Introduced 16.0.R1
 Platforms All

authentication

Synopsis Enable the **authentication** context
 Context **configure** [service vprn](#) *string* [ospf3](#) *number* [area](#) *string* [interface](#) *string* [authentication](#)
 Tree [authentication](#)
 Introduced 16.0.R6
 Platforms All

inbound reference

Synopsis sa-name
 Context **configure** [service vprn](#) *string* [ospf3](#) *number* [area](#) *string* [interface](#) *string* [authentication](#) [inbound](#) *reference*
 Tree [inbound](#)
 Reference **configure** [ipsec static-sa](#) *string*
 Notes This element is mandatory.
 Introduced 16.0.R6
 Platforms All

outbound reference

Synopsis sa-name
 Context **configure** [service vprn](#) *string* [ospf3](#) *number* [area](#) *string* [interface](#) *string* [authentication](#) [outbound](#) *reference*
 Tree [outbound](#)
 Reference **configure** [ipsec static-sa](#) *string*
 Notes This element is mandatory.
 Introduced 16.0.R6
 Platforms All

bfd-liveness

| | |
|------------|---|
| Synopsis | Enable the bfd-liveness context |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> interface <i>string</i> bfd-liveness |
| Tree | bfd-liveness |
| Introduced | 16.0.R1 |
| Platforms | All |

remain-down-on-failure *boolean*

| | |
|------------|---|
| Synopsis | Force adjacency down on failure until session returns |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> interface <i>string</i> bfd-liveness remain-down-on-failure <i>boolean</i> |
| Tree | remain-down-on-failure |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

dead-interval *number*

| | |
|------------|--|
| Synopsis | OSPF wait time for Hellos before neighbor declared down |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> interface <i>string</i> dead-interval <i>number</i> |
| Tree | dead-interval |
| Range | 2 to 65535 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

hello-interval *number*

| | |
|----------|---|
| Synopsis | Time between OSPF Hellos of this interface |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> interface <i>string</i> hello-interval <i>number</i> |
| Tree | hello-interval |
| Range | 1 to 65535 |
| Units | seconds |

| | |
|------------|---------|
| Default | 10 |
| Introduced | 16.0.R1 |
| Platforms | All |

interface-type *keyword*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Interface type |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> interface <i>string</i> interface-type <i>keyword</i> |
| Tree | interface-type |
| Description | <p>This command specifies the interface type.</p> <p>broadcast - Broadcast network</p> <p>To significantly improve adjacency forming and network convergence, configure a network as point-to-point if only two routers are connected, even if the network is a broadcast media such as Ethernet.</p> <p>non-broadcast - Non-broadcast network</p> <p>point-to-point - Point-to-point link</p> <p>Set the interface type of an Ethernet link to point-to-point to avoid having to carry the broadcast adjacency maintenance overhead if the Ethernet link provided is used as a point-to-point. Set the interface type of an Ethernet link to point-to-point to avoid having to carry the broadcast adjacency maintenance overhead if the Ethernet link provided is used as a point-to-point.</p> <p>secondary - Multiple secondary adjacencies allowed</p> <p>A secondary interface allows multiple secondary adjacencies, in addition to the primary adjacency, to be established over a single IP interface. This interface type can also be applied to the system interface and to loopback interfaces to allow them to participate in multiple areas, although no adjacencies are formed over these types of interfaces.</p> |
| Options | broadcast, non-broadcast, point-to-point, secondary |
| Introduced | 16.0.R1 |
| Platforms | All |

load-balancing-weight *number*

| | |
|----------|----------------------------------|
| Synopsis | Configure load-balancing-weight. |
|----------|----------------------------------|

| | |
|------------|--|
| Context | configure service vprn <i>string ospf3 number area string interface string load-balancing-weight number</i> |
| Tree | load-balancing-weight |
| Range | 1 to 4294967295 |
| Introduced | 20.2.R1 |
| Platforms | All |

loopfree-alternate

| | |
|------------|--|
| Synopsis | Enter the loopfree-alternate context |
| Context | configure service vprn <i>string ospf3 number area string interface string loopfree-alternate</i> |
| Tree | loopfree-alternate |
| Introduced | 16.0.R3 |
| Platforms | All |

exclude *boolean*

| | |
|------------|--|
| Synopsis | Enable fast reroute at OSPF primary interface level |
| Context | configure service vprn <i>string ospf3 number area string interface string loopfree-alternate exclude boolean</i> |
| Tree | exclude |
| Default | false |
| Introduced | 16.0.R3 |
| Platforms | All |

policy-map

| | |
|------------|---|
| Synopsis | Enable the policy-map context |
| Context | configure service vprn <i>string ospf3 number area string interface string loopfree-alternate policy-map</i> |
| Tree | policy-map |
| Introduced | 16.0.R3 |
| Platforms | All |

route-nh-template *reference*

| | |
|------------|---|
| Synopsis | Route next hop policy template name |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> interface <i>string</i> loopfree-alternate policy-map route-nh-template <i>reference</i> |
| Tree | route-nh-template |
| Reference | configure routing-options route-next-hop-policy template <i>string</i> |
| Notes | This element is mandatory. |
| Introduced | 16.0.R3 |
| Platforms | All |

lsa-filter-out *keyword*

| | |
|------------|--|
| Synopsis | LSA flooding reduction |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> interface <i>string</i> lsa-filter-out <i>keyword</i> |
| Tree | lsa-filter-out |
| Options | none, all, except-own-rtrlsa, except-own-rtrlsa-and-defaults |
| Default | none |
| Introduced | 16.0.R1 |
| Platforms | All |

metric *number*

| | |
|------------|---|
| Synopsis | Route cost metric for the interface |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> interface <i>string</i> metric <i>number</i> |
| Tree | metric |
| Range | 1 to 65535 |
| Introduced | 16.0.R1 |
| Platforms | All |

mtu *number*

| | |
|----------|--|
| Synopsis | MTU for the OSPF to use on the interface |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> interface <i>string</i> mtu <i>number</i> |
| Tree | mtu |

| | |
|------------|-------------|
| Range | 512 to 9786 |
| Introduced | 16.0.R1 |
| Platforms | All |

neighbor [[address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

| | |
|------------|--|
| Synopsis | Add a list entry for neighbor |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> interface <i>string</i> neighbor (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) |
| Tree | neighbor |
| Introduced | 16.0.R1 |
| Platforms | All |

[address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

| | |
|------------|--|
| Synopsis | IPv6 link local address of the OSPFv3 neighbor |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> interface <i>string</i> neighbor (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) |
| Tree | neighbor |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

passive *boolean*

| | |
|------------|--|
| Synopsis | Advertise passive interfaces as OSPF interfaces |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> interface <i>string</i> passive <i>boolean</i> |
| Tree | passive |
| Introduced | 16.0.R1 |
| Platforms | All |

poll-interval *number*

| | |
|----------|---|
| Synopsis | Interval for Hellos to non-adjacent OSPF NBMA neighbor |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> interface <i>string</i> poll-interval <i>number</i> |

| | |
|------------|-------------------------------|
| Tree | poll-interval |
| Max. Range | 0 to 4294967295 |
| Units | seconds |
| Default | 120 |
| Introduced | 16.0.R1 |
| Platforms | All |

priority *number*

| | |
|------------|--|
| Synopsis | Interface priority in the DR election on the subnet |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> interface <i>string</i> priority <i>number</i> |
| Tree | priority |
| Range | 0 to 255 |
| Default | 1 |
| Introduced | 16.0.R1 |
| Platforms | All |

retransmit-interval *number*

| | |
|------------|---|
| Synopsis | Time before OSPF retransmits an unacknowledged LSA |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> interface <i>string</i> retransmit-interval <i>number</i> |
| Tree | retransmit-interval |
| Range | 1 to 1800 |
| Units | seconds |
| Default | 5 |
| Introduced | 16.0.R1 |
| Platforms | All |

rib-priority *keyword*

| | |
|----------|---|
| Synopsis | RIB priority for OSPF |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> interface <i>string</i> rib-priority <i>keyword</i> |
| Tree | rib-priority |
| Options | high |

| | |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms | All |

transit-delay *number*

| | |
|------------|---|
| Synopsis | Required LSA transmit time |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> interface <i>string</i> transit-delay <i>number</i> |
| Tree | transit-delay |
| Range | 1 to 1800 |
| Units | seconds |
| Default | 1 |
| Introduced | 16.0.R1 |
| Platforms | All |

key-rollover-interval *number*

| | |
|------------|---|
| Synopsis | Key rollover interval |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> key-rollover-interval <i>number</i> |
| Tree | key-rollover-interval |
| Range | 10 to 300 |
| Units | seconds |
| Default | 10 |
| Introduced | 16.0.R1 |
| Platforms | All |

loopfree-alternate-exclude *boolean*

| | |
|------------|---|
| Synopsis | Exclude interfaces in OSPF areas in SPF LFA computation |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> loopfree-alternate-exclude <i>boolean</i> |
| Tree | loopfree-alternate-exclude |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

nssa

| | |
|------------|--|
| Synopsis | Enable the nssa context |
| Context | configure service vprn string ospf3 number area string nssa |
| Tree | nssa |
| Introduced | 16.0.R1 |
| Platforms | All |

area-range [**ip-prefix-mask**] (*ipv4-prefix* | *ipv6-prefix*)

| | |
|------------|---|
| Synopsis | Enter the area-range list instance |
| Context | configure service vprn string ospf3 number area string nssa area-range (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) |
| Tree | area-range |
| Introduced | 16.0.R1 |
| Platforms | All |

[ip-prefix-mask] (*ipv4-prefix* | *ipv6-prefix*)

| | |
|------------|---|
| Synopsis | Address ranges to create on an ABR for route summarization or suppression |
| Context | configure service vprn string ospf3 number area string nssa area-range (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) |
| Tree | area-range |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

advertise boolean

| | |
|------------|--|
| Synopsis | Advertise summarized range of addresses to other areas |
| Context | configure service vprn string ospf3 number area string nssa area-range (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) advertise boolean |
| Tree | advertise |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

originate-default-route

| | |
|------------|--|
| Synopsis | Enable the originate-default-route context |
| Context | configure service vprn <i>string ospf3 number area string nssa</i> originate-default-route |
| Tree | originate-default-route |
| Introduced | 16.0.R1 |
| Platforms | All |

adjacency-check *boolean*

| | |
|------------|---|
| Synopsis | Perform adjacency checks before originating a default route |
| Context | configure service vprn <i>string ospf3 number area string nssa</i> originate-default-route
adjacency-check <i>boolean</i> |
| Tree | adjacency-check |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

type-nssa *boolean*

| | |
|------------|---|
| Synopsis | Generate a default route using NSSA-LSA type |
| Context | configure service vprn <i>string ospf3 number area string nssa</i> originate-default-route
type-nssa <i>boolean</i> |
| Tree | type-nssa |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

redistribute-external *boolean*

| | |
|------------|--|
| Synopsis | Redistribute external routes into the NSSA |
| Context | configure service vprn <i>string ospf3 number area string nssa</i> redistribute-external
<i>boolean</i> |
| Tree | redistribute-external |
| Default | true |
| Introduced | 16.0.R1 |

Platforms All

summaries *boolean*

Synopsis Send summary (Type 3) LSAs into the NSSA on an ABR
 Context **configure** [service vprn](#) *string* [ospf3](#) *number* [area](#) *string* [nssa summaries](#) *boolean*
 Tree [summaries](#)
 Default true
 Introduced 16.0.R1
 Platforms All

stub

Synopsis Enable the **stub** context
 Context **configure** [service vprn](#) *string* [ospf3](#) *number* [area](#) *string* [stub](#)
 Tree [stub](#)
 Introduced 16.0.R1
 Platforms All

default-metric *number*

Synopsis Metric used by ABR for default route into the stub area
 Context **configure** [service vprn](#) *string* [ospf3](#) *number* [area](#) *string* [stub default-metric](#) *number*
 Tree [default-metric](#)
 Range 1 to 16777214
 Default 1
 Introduced 16.0.R1
 Platforms All

summaries *boolean*

Synopsis Send summary (Type 3) LSAs into the stub area on an ABR
 Context **configure** [service vprn](#) *string* [ospf3](#) *number* [area](#) *string* [stub summaries](#) *boolean*
 Tree [summaries](#)
 Default true

| | |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms | All |

virtual-link [**router-id**] *string transit-area reference*

| | |
|------------|---|
| Synopsis | Enter the virtual-link list instance |
| Context | configure service vprn <i>string ospf3 number area string virtual-link string transit-area reference</i> |
| Tree | virtual-link |
| Introduced | 16.0.R1 |
| Platforms | All |

[router-id] *string*

| | |
|------------|---|
| Synopsis | Router identity of the virtual link neighbor |
| Context | configure service vprn <i>string ospf3 number area string virtual-link string transit-area reference</i> |
| Tree | virtual-link |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

transit-area *reference*

| | |
|------------|---|
| Synopsis | Transit area that links backbone area to area without physical connection with the backbone |
| Context | configure service vprn <i>string ospf3 number area string virtual-link string transit-area reference</i> |
| Tree | virtual-link |
| Reference | configure service vprn <i>string ospf3 number area string</i> |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of the OSPF interface |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> virtual-link <i>string</i> transit-area <i>reference</i> admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | enable |
| Introduced | 16.0.R1 |
| Platforms | All |

authentication

| | |
|------------|--|
| Synopsis | Enable the authentication context |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> virtual-link <i>string</i> transit-area <i>reference</i> authentication |
| Tree | authentication |
| Introduced | 16.0.R6 |
| Platforms | All |

inbound *reference*

| | |
|------------|---|
| Synopsis | sa-name |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> virtual-link <i>string</i> transit-area <i>reference</i> authentication inbound <i>reference</i> |
| Tree | inbound |
| Reference | configure ipsec static-sa <i>string</i> |
| Notes | This element is mandatory. |
| Introduced | 16.0.R6 |
| Platforms | All |

outbound *reference*

| | |
|----------|--|
| Synopsis | sa-name |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> virtual-link <i>string</i> transit-area <i>reference</i> authentication outbound <i>reference</i> |
| Tree | outbound |

| | |
|------------|---|
| Reference | configure ipsec static-sa string |
| Notes | This element is mandatory. |
| Introduced | 16.0.R6 |
| Platforms | All |

dead-interval *number*

| | |
|------------|---|
| Synopsis | OSPF wait time for Hellos before neighbor declared down |
| Context | configure service vprn string ospf3 number area string virtual-link string transit-area reference dead-interval number |
| Tree | dead-interval |
| Range | 2 to 65535 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

hello-interval *number*

| | |
|------------|--|
| Synopsis | Time between OSPF Hellos of this interface |
| Context | configure service vprn string ospf3 number area string virtual-link string transit-area reference hello-interval number |
| Tree | hello-interval |
| Range | 1 to 65535 |
| Units | seconds |
| Default | 10 |
| Introduced | 16.0.R1 |
| Platforms | All |

retransmit-interval *number*

| | |
|----------|---|
| Synopsis | Time before OSPF retransmits an unacknowledged LSA |
| Context | configure service vprn string ospf3 number area string virtual-link string transit-area reference retransmit-interval number |
| Tree | retransmit-interval |
| Range | 1 to 1800 |
| Units | seconds |

| | |
|------------|---------|
| Default | 5 |
| Introduced | 16.0.R1 |
| Platforms | All |

transit-delay *number*

| | |
|------------|--|
| Synopsis | Required LSA transmit time |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> area <i>string</i> virtual-link <i>string</i> transit-area <i>reference</i> transit-delay <i>number</i> |
| Tree | transit-delay |
| Range | 1 to 1800 |
| Units | seconds |
| Default | 1 |
| Introduced | 16.0.R1 |
| Platforms | All |

export-limit

| | |
|------------|---|
| Synopsis | Enable the export-limit context |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> export-limit |
| Tree | export-limit |
| Introduced | 16.0.R1 |
| Platforms | All |

log-percent *number*

| | |
|------------|---|
| Synopsis | Export limit before warning and SNMP notification sent |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> export-limit log-percent <i>number</i> |
| Tree | log-percent |
| Range | 1 to 100 |
| Introduced | 16.0.R1 |
| Platforms | All |

number *number*

| | |
|----------|--|
| Synopsis | Maximum routes or prefixes exported from route table |
|----------|--|

| | |
|------------|---|
| Context | configure service vprn <i>string ospf3 number export-limit number number</i> |
| Tree | number |
| Range | 1 to 4294967295 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

export-policy *reference*

| | |
|----------------|--|
| Synopsis | Export policies that determine exported routes |
| Context | configure service vprn <i>string ospf3 number export-policy reference</i> |
| Tree | export-policy |
| Description | <p>This command configures export routing policies for the routes exported from the routing table to IS-IS.</p> <p>If the export policy is undefined, the system does not export non IS-IS routes from the routing table manager to IS-IS.</p> <p>If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.</p> <p>If the aggregate command is also configured in the configure router context, the aggregation is applied before the export policy is applied.</p> <p>Routing policies are created in the configure router policy-options context.</p> |
| Reference | configure policy-options policy-statement <i>string</i> |
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | All |

external-db-overflow

| | |
|------------|---|
| Synopsis | Enable the external-db-overflow context |
| Context | configure service vprn <i>string ospf3 number external-db-overflow</i> |
| Tree | external-db-overflow |
| Introduced | 16.0.R1 |
| Platforms | All |

interval *number*

| | |
|------------|--|
| Synopsis | Time during which the router operates in overload |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> external-db-overflow <i>interval</i> <i>number</i> |
| Tree | interval |
| Range | 0 to 2147483647 |
| Units | seconds |
| Default | 0 |
| Introduced | 16.0.R1 |
| Platforms | All |

limit *number*

| | |
|------------|---|
| Synopsis | Number of external LSA at which overload is triggered |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> external-db-overflow <i>limit</i> <i>number</i> |
| Tree | limit |
| Range | 0 to 2147483647 |
| Default | 0 |
| Introduced | 16.0.R1 |
| Platforms | All |

external-preference *number*

| | |
|------------|---|
| Synopsis | Preference for OSPF external routes |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> external-preference <i>number</i> |
| Tree | external-preference |
| Range | 1 to 255 |
| Default | 150 |
| Introduced | 16.0.R1 |
| Platforms | All |

graceful-restart

| | |
|----------|--|
| Synopsis | Enable the graceful-restart context |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> graceful-restart |

| | |
|------------|----------------------------------|
| Tree | graceful-restart |
| Introduced | 16.0.R1 |
| Platforms | All |

helper-mode *boolean*

| | |
|------------|---|
| Synopsis | Enable graceful restart helper for OSPF |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> graceful-restart helper-mode <i>boolean</i> |
| Tree | helper-mode |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

strict-lsa-checking *boolean*

| | |
|------------|---|
| Synopsis | Perform strict LSA checking during graceful restart |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> graceful-restart strict-lsa-checking <i>boolean</i> |
| Tree | strict-lsa-checking |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

ignore-dn-bit *boolean*

| | |
|------------|--|
| Synopsis | Ignore the DN bit for OSPF LSA packets for the instance |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> ignore-dn-bit <i>boolean</i> |
| Tree | ignore-dn-bit |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

import-policy *reference*

| | |
|----------|--|
| Synopsis | Import policy names for routes from IGP to route table |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> import-policy <i>reference</i> |

| | |
|----------------|--|
| Tree | import-policy |
| Reference | configure policy-options policy-statement <i>string</i> |
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | All |

loopfree-alternate

| | |
|------------|---|
| Synopsis | Enable the loopfree-alternate context |
| Context | configure service vpn <i>string</i> ospf3 <i>number</i> loopfree-alternate |
| Tree | loopfree-alternate |
| Introduced | 16.0.R1 |
| Platforms | All |

exclude

| | |
|------------|---|
| Synopsis | Enter the exclude context |
| Context | configure service vpn <i>string</i> ospf3 <i>number</i> loopfree-alternate exclude |
| Tree | exclude |
| Introduced | 16.0.R3 |
| Platforms | All |

prefix-policy *reference*

| | |
|-------------|--|
| Synopsis | Policy to exclude prefixes from LFA SPF calculation |
| Context | configure service vpn <i>string</i> ospf3 <i>number</i> loopfree-alternate exclude prefix-policy <i>reference</i> |
| Tree | prefix-policy |
| Description | This command specifies the name of the policy for the prefixes to exclude from the LFA SPF calculation.

An excluded prefix is not included in LFA calculation regardless of its priority. The prefix tag is, however, used in the main SPF. |
| Reference | configure policy-options policy-statement <i>string</i> |

| | |
|----------------|--------------------------------------|
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R3 |
| Platforms | All |

multicast-import *boolean*

| | |
|------------|--|
| Synopsis | Submit routes into the multicast Route Table Manager |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> multicast-import <i>boolean</i> |
| Tree | multicast-import |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

overload *boolean*

| | |
|------------|--|
| Synopsis | Change local router state to appear overloaded |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> overload <i>boolean</i> |
| Tree | overload |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

overload-include-ext-1 *boolean*

| | |
|------------|--|
| Synopsis | Advertise routes with maximum metric value for overload |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> overload-include-ext-1 <i>boolean</i> |
| Tree | overload-include-ext-1 |
| Default | false |
| Introduced | 19.7.R1 |
| Platforms | All |

overload-include-ext-2 *boolean*

| | |
|------------|--|
| Synopsis | Advertise routes with maximum metric value for overload |
| Context | configure service vprn <i>string ospf3 number</i> overload-include-ext-2 <i>boolean</i> |
| Tree | overload-include-ext-2 |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

overload-include-stub *boolean*

| | |
|------------|---|
| Synopsis | Advertise all stub interfaces with max metric value |
| Context | configure service vprn <i>string ospf3 number</i> overload-include-stub <i>boolean</i> |
| Tree | overload-include-stub |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

overload-on-boot

| | |
|------------|---|
| Synopsis | Enable the overload-on-boot context |
| Context | configure service vprn <i>string ospf3 number</i> overload-on-boot |
| Tree | overload-on-boot |
| Introduced | 16.0.R1 |
| Platforms | All |

timeout *number*

| | |
|------------|---|
| Synopsis | Time during which the router operates in overload state before reestablishing normal operations |
| Context | configure service vprn <i>string ospf3 number</i> overload-on-boot timeout <i>number</i> |
| Tree | timeout |
| Range | 60 to 1800 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

preference *number*

| | |
|------------|--|
| Synopsis | Preference for OSPF internal routes |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> preference <i>number</i> |
| Tree | preference |
| Range | 1 to 255 |
| Default | 10 |
| Introduced | 16.0.R1 |
| Platforms | All |

reference-bandwidth *number*

| | |
|------------|---|
| Synopsis | Bandwidth to reference default costing of interfaces |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> reference-bandwidth <i>number</i> |
| Tree | reference-bandwidth |
| Range | 1 to 18446744073709551615 |
| Units | kilobps |
| Default | 100000000 |
| Introduced | 16.0.R1 |
| Platforms | All |

rib-priority

| | |
|------------|--|
| Synopsis | Enter the rib-priority context |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> rib-priority |
| Tree | rib-priority |
| Introduced | 16.0.R1 |
| Platforms | All |

high

| | |
|------------|---|
| Synopsis | Enter the high context |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> rib-priority high |
| Tree | high |
| Introduced | 16.0.R1 |

Platforms All

prefix-list *reference*

Synopsis Higher priority list used during OSPF route calculation
 Context **configure** [service](#) [vprn](#) *string* [ospf3](#) *number* [rib-priority](#) [high](#) [prefix-list](#) *reference*
 Tree [prefix-list](#)
 Reference **configure** [policy-options](#) [prefix-list](#) *string*
 Introduced 16.0.R1
 Platforms All

router-id *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Unique router ID for the OSPF instance
 Context **configure** [service](#) [vprn](#) *string* [ospf3](#) *number* [router-id](#) *string*
 Tree [router-id](#)
 Introduced 16.0.R1
 Platforms All

rtr-adv-lsa-limit

Synopsis Enable the **rtr-adv-lsa-limit** context
 Context **configure** [service](#) [vprn](#) *string* [ospf3](#) *number* [rtr-adv-lsa-limit](#)
 Tree [rtr-adv-lsa-limit](#)
 Introduced 16.0.R1
 Platforms All

log-only *boolean*

Synopsis Log the event without triggering overload
 Context **configure** [service](#) [vprn](#) *string* [ospf3](#) *number* [rtr-adv-lsa-limit](#) [log-only](#) *boolean*
 Tree [log-only](#)

| | |
|------------|---------|
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

max-lsa-count *number*

| | |
|------------|---|
| Synopsis | Max number of LSAs one router can advertise |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> rtr-adv-lsa-limit max-lsa-count <i>number</i> |
| Tree | max-lsa-count |
| Range | 1 to 4294967295 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

overload-timeout (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | Maximum time in overload after LSA limit is reached |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> rtr-adv-lsa-limit overload-timeout (<i>number</i> <i>keyword</i>) |
| Tree | overload-timeout |
| Range | 1 to 1800 |
| Units | seconds |
| Options | forever |
| Default | forever |
| Introduced | 16.0.R1 |
| Platforms | All |

warning-threshold *number*

| | |
|----------|---|
| Synopsis | Percentage of the max LSA count that causes a warning |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> rtr-adv-lsa-limit warning-threshold <i>number</i> |
| Tree | warning-threshold |
| Range | 0 to 100 |
| Units | percent |
| Default | 0 |

Introduced 16.0.R1
Platforms All

suppress-dn-bit *boolean*

Synopsis Suppress the DN bit setting for OSPF LSA packets
Context **configure** [service vprn](#) *string* [ospf3](#) *number* **suppress-dn-bit** *boolean*
Tree [suppress-dn-bit](#)
Default false
Introduced 16.0.R1
Platforms All

timers

Synopsis Enter the **timers** context
Context **configure** [service vprn](#) *string* [ospf3](#) *number* **timers**
Tree [timers](#)
Introduced 16.0.R1
Platforms All

incremental-spf-wait *number*

Synopsis Delay time before an incremental SPF calculation starts
Context **configure** [service vprn](#) *string* [ospf3](#) *number* [timers](#) **incremental-spf-wait** *number*
Tree [incremental-spf-wait](#)
Range 0 to 1000
Units milliseconds
Default 1000
Introduced 16.0.R1
Platforms All

lsa-accumulate *number*

Synopsis Delay to gather LSAs before advertising to neighbors
Context **configure** [service vprn](#) *string* [ospf3](#) *number* [timers](#) **lsa-accumulate** *number*

| | |
|------------|--------------------------------|
| Tree | lsa-accumulate |
| Range | 0 to 1000 |
| Units | milliseconds |
| Default | 1000 |
| Introduced | 16.0.R1 |
| Platforms | All |

lsa-arrival *number*

| | |
|------------|--|
| Synopsis | Min delay between receipt of same LSAs from neighbors |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> timers lsa-arrival <i>number</i> |
| Tree | lsa-arrival |
| Range | 0 to 600000 |
| Units | milliseconds |
| Default | 1000 |
| Introduced | 16.0.R1 |
| Platforms | All |

lsa-generate

| | |
|------------|---|
| Synopsis | Enter the lsa-generate context |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> timers lsa-generate |
| Tree | lsa-generate |
| Introduced | 16.0.R1 |
| Platforms | All |

lsa-initial-wait *number*

| | |
|------------|--|
| Synopsis | First wait period between OSPF LSA generation |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> timers lsa-generate lsa-initial-wait <i>number</i> |
| Tree | lsa-initial-wait |
| Range | 10 to 600000 |
| Units | milliseconds |
| Default | 5000 |
| Introduced | 16.0.R1 |

Platforms All

lsa-second-wait *number*

Synopsis Hold time between the first and second LSA generation

Context **configure** [service vprn](#) *string* [ospf3](#) *number* [timers lsa-generate lsa-second-wait](#) *number*

Tree [lsa-second-wait](#)

Range 10 to 600000

Units milliseconds

Default 5000

Introduced 16.0.R1

Platforms All

max-lsa-wait *number*

Synopsis Max time between two LSAs being generated

Context **configure** [service vprn](#) *string* [ospf3](#) *number* [timers lsa-generate max-lsa-wait](#) *number*

Tree [max-lsa-wait](#)

Range 10 to 600000

Units milliseconds

Default 5000

Introduced 16.0.R1

Platforms All

redistribute-delay *number*

Synopsis Hold down timer for external routes into OSPF

Context **configure** [service vprn](#) *string* [ospf3](#) *number* [timers redistribute-delay](#) *number*

Tree [redistribute-delay](#)

Range 0 to 1000

Units milliseconds

Default 1000

Introduced 16.0.R1

Platforms All

spf-wait

| | |
|------------|---|
| Synopsis | Enter the spf-wait context |
| Context | configure service vprn string ospf3 number timers spf-wait |
| Tree | spf-wait |
| Introduced | 16.0.R1 |
| Platforms | All |

spf-initial-wait *number*

| | |
|------------|---|
| Synopsis | Initial SPF calculation delay after a topology change |
| Context | configure service vprn string ospf3 number timers spf-wait spf-initial-wait number |
| Tree | spf-initial-wait |
| Range | 10 to 100000 |
| Units | milliseconds |
| Default | 1000 |
| Introduced | 16.0.R1 |
| Platforms | All |

spf-max-wait *number*

| | |
|------------|---|
| Synopsis | Max interval between two consecutive SPF calculations |
| Context | configure service vprn string ospf3 number timers spf-wait spf-max-wait number |
| Tree | spf-max-wait |
| Range | 10 to 120000 |
| Units | milliseconds |
| Default | 10000 |
| Introduced | 16.0.R1 |
| Platforms | All |

spf-second-wait *number*

| | |
|----------|--|
| Synopsis | Hold time between the first and second SPF calculation |
| Context | configure service vprn string ospf3 number timers spf-wait spf-second-wait number |
| Tree | spf-second-wait |

| | |
|------------|--------------|
| Range | 10 to 100000 |
| Units | milliseconds |
| Default | 1000 |
| Introduced | 16.0.R1 |
| Platforms | All |

unicast-import *boolean*

| | |
|------------|--|
| Synopsis | Submit routes into the unicast Route Table Manager |
| Context | configure service vprn <i>string</i> ospf3 <i>number</i> unicast-import <i>boolean</i> |
| Tree | unicast-import |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

pcp

| | |
|------------|--|
| Synopsis | Enter the pcp context |
| Context | configure service vprn <i>string</i> pcp |
| Tree | pcp |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

server [*name*] *string*

| | |
|----------------|---|
| Synopsis | Enter the server list instance |
| Context | configure service vprn <i>string</i> pcp server <i>string</i> |
| Tree | server |
| Max. Instances | 8 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

[name] *string*

| | |
|----------|-----------------|
| Synopsis | PCP server name |
|----------|-----------------|

| Notes | This element is part of a list key. |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

policy *reference*

| | |
|------------|---|
| Synopsis | PCP server policy |
| Context | configure service vprn <i>string</i> pcp server <i>string</i> policy <i>reference</i> |
| Tree | policy |
| Reference | configure service nat pcp-server-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

pim

| | |
|------------|--|
| Synopsis | Enable the pim context |
| Context | configure service vprn string pim |
| Tree | pim |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of PIM |
| Context | configure service vprn string pim admin-state keyword |
| Tree | admin-state |
| Options | enable, disable |
| Default | enable |
| Introduced | 16.0.R1 |
| Platforms | All |

apply-to *keyword*

| | |
|------------|---|
| Synopsis | IES and non-IES interfaces to create in PIM |
| Context | configure service vprn string pim apply-to keyword |
| Tree | apply-to |
| Options | all, none |
| Default | none |
| Introduced | 16.0.R1 |
| Platforms | All |

bgp-nh-override *boolean*

| | |
|-------------|---|
| Synopsis | Disable VRF import EC support for next-hop resolution |
| Context | configure service vprn string pim bgp-nh-override boolean |
| Tree | bgp-nh-override |
| Description | When configured to true , the RPF check is performed using IPv4 VPN AF next-hop instead of IPv4 AF VRF import extended community (EC). |

When configured to **false**, the RPF check is performed using IPv4 AF VRF import EC.

| | |
|------------|---------|
| Default | false |
| Introduced | 19.7.R1 |
| Platforms | All |

import

| | |
|------------|---|
| Synopsis | Enter the import context |
| Context | configure service vprn string pim import |
| Tree | import |
| Introduced | 16.0.R1 |
| Platforms | All |

join-policy *reference*

| | |
|----------------|--|
| Synopsis | Policy name |
| Context | configure service vprn string pim import join-policy <i>reference</i> |
| Tree | join-policy |
| Reference | configure policy-options policy-statement <i>string</i> |
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |

bfd-liveness

| | |
|------------|--|
| Synopsis | Enter the bfd-liveness context |
| Context | configure service vprn string pim interface string bfd-liveness |
| Tree | bfd-liveness |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv4 boolean

| | |
|------------|---|
| Synopsis | Use Bidirectional Forwarding Detection for IPv4 on PIM interface |
| Context | configure service vprn string pim interface string bfd-liveness ipv4 boolean |
| Tree | ipv4 |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv6 boolean

| | |
|------------|---|
| Synopsis | Use Bidirectional Forwarding Detection for IPv6 on PIM interface |
| Context | configure service vprn string pim interface string bfd-liveness ipv6 boolean |
| Tree | ipv6 |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

bsm-check-rtr-alert boolean

| | |
|----------|---|
| Synopsis | Check router alert option in bootstrap messages received |
| Context | configure service vprn string pim interface string bsm-check-rtr-alert boolean |

| | |
|------------|-------------------------------------|
| Tree | bsm-check-rtr-alert |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

hello-interval *number*

| | |
|------------|--|
| Synopsis | Frequency at which PIM Hello messages are sent over this interface |
| Context | configure service vprn <i>string</i> pim interface <i>string</i> hello-interval <i>number</i> |
| Tree | hello-interval |
| Range | 0 to 255 |
| Default | 30 |
| Introduced | 16.0.R1 |
| Platforms | All |

hello-multiplier *number*

| | |
|------------|--|
| Synopsis | Multiplier to determine the hold time for PIM neighbor |
| Context | configure service vprn <i>string</i> pim interface <i>string</i> hello-multiplier <i>number</i> |
| Tree | hello-multiplier |
| Range | 20 to 100 |
| Default | 35 |
| Introduced | 16.0.R1 |
| Platforms | All |

improved-assert *boolean*

| | |
|------------|--|
| Synopsis | Allow improved assert processing on interface |
| Context | configure service vprn <i>string</i> pim interface <i>string</i> improved-assert <i>boolean</i> |
| Tree | improved-assert |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

instant-prune-echo *boolean*

| | |
|------------|---|
| Synopsis | Allow PIM to send an instant prune echo when router starts the prune pending timer for PIM interface |
| Context | configure service vprn <i>string</i> pim interface <i>string</i> instant-prune-echo <i>boolean</i> |
| Tree | instant-prune-echo |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv4

| | |
|------------|--|
| Synopsis | Enter the ipv4 context |
| Context | configure service vprn <i>string</i> pim interface <i>string</i> ipv4 |
| Tree | ipv4 |
| Introduced | 16.0.R1 |
| Platforms | All |

monitor-oper-group

| | |
|------------|---|
| Synopsis | Enter the monitor-oper-group context |
| Context | configure service vprn <i>string</i> pim interface <i>string</i> ipv4 monitor-oper-group |
| Tree | monitor-oper-group |
| Introduced | 16.0.R1 |
| Platforms | All |

name *reference*

| | |
|------------|---|
| Synopsis | Operational group identifier |
| Context | configure service vprn <i>string</i> pim interface <i>string</i> ipv4 monitor-oper-group name <i>reference</i> |
| Tree | name |
| Reference | configure service oper-group <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

operation *keyword*

| | |
|------------|--|
| Synopsis | Operation performed when operational group is active |
| Context | configure service vprn <i>string</i> pim interface <i>string</i> ipv4 monitor-oper-group operation <i>keyword</i> |
| Tree | operation |
| Options | add, subtract, set |
| Introduced | 16.0.R1 |
| Platforms | All |

priority-delta *number*

| | |
|------------|--|
| Synopsis | Delta priority with operation when operational group is active |
| Context | configure service vprn <i>string</i> pim interface <i>string</i> ipv4 monitor-oper-group priority-delta <i>number</i> |
| Tree | priority-delta |
| Range | 1 to 4294967295 |
| Introduced | 16.0.R1 |
| Platforms | All |

multicast *boolean*

| | |
|------------|---|
| Synopsis | Enable PIM interface operation |
| Context | configure service vprn <i>string</i> pim interface <i>string</i> ipv4 multicast <i>boolean</i> |
| Tree | multicast |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv6

| | |

| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

level *number*

| | |
|----------|---|
| Synopsis | Level ID to associate with number of down LAG ports |
|----------|---|

| | |
|-------------|--|
| Context | configure service vprn <i>string</i> pim interface <i>string</i> mcac mc-constraints number-down <i>number</i> level <i>number</i> |
| Tree | level |
| Description | This command specifies the bandwidth for a given level. Level 1 has the highest priority and level 8 has the lowest priority. |
| Range | 1 to 8 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

use-lag-port-weight *boolean*

| | |
|-------------|---|
| Synopsis | Use LAG port weight in calculating MCAC constraints |
| Context | configure service vprn <i>string</i> pim interface <i>string</i> mcac mc-constraints use-lag-port-weight <i>boolean</i> |
| Tree | use-lag-port-weight |
| Description | When configured to true , port weight is used when determining available bandwidth per level when LAG ports go down or come up. This command is required for proper operation on mixed port-speed LAGs and can also be used for unmixed port-speed LAGs. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

policy *reference*

| | |
|-------------|---|
| Synopsis | Multicast CAC policy name |
| Context | configure service vprn <i>string</i> pim interface <i>string</i> mcac policy <i>reference</i> |
| Tree | policy |
| Description | <p>This command configures the name of the global channel bandwidth definition policy that is used for (H)MCAC and HQoS adjustment.</p> <p>Within the scope of HQoS adjustment, the channel definition policy under the group interface is used if redirection is unconfigured. In this case, the HQoS adjustment can be applied to I PoE subscribers in per-SAP replication mode.</p> <p>If redirection is configured, the channel bandwidth definition policy applied under the Layer 3 redirected interface is in effect.</p> <p>Hierarchical MCAC (HMCAC) is supported on two levels simultaneously:</p> <ul style="list-style-type: none"> subscriber level and redirected interface when redirection is configured |

- subscriber level and group-interface level when redirection is unconfigured

In HMCAC, the subscriber is checked against its bandwidth limits first, then against the bandwidth limits of the redirected or group interface. If redirection is configured but the policy is referenced only under the group interface, no admission control is executed (HMCAC or MCAC).

| | |
|------------|--|
| Reference | configure mcac policy <i>string</i> |
| Introduced | 16.0.R1 |

|------------|--|
| Synopsis | Route table for RPF lookup |
| Context | configure service vprn <i>string</i> pim ipv6 rpf-table <i>keyword</i> |
| Tree | rpf-table |
| Options | rtable-m, rtable-u, both |
| Default | rtable-u |
| Introduced | 16.0.R1 |
| Platforms | All |

ssm-default-range *boolean*

| | |
|------------|--|
| Synopsis | SSM default range |
| Context | configure service vprn <i>string</i> pim ipv6 ssm-default-range <i>boolean</i> |
| Tree | ssm-default-range |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

mc-ecmp-balance *boolean*

| | |
|------------|---|
| Synopsis | Enable multicast balancing of traffic over ECMP links |
| Context | configure service vprn <i>string</i> pim mc-ecmp-balance <i>boolean</i> |
| Tree | mc-ecmp-balance |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

mc-ecmp-balance-hold *number*

| | |
|------------|---|
| Synopsis | Hold time for multicast balancing over ECMP links |
| Context | configure service vprn <i>string</i> pim mc-ecmp-balance-hold <i>number</i> |
| Tree | mc-ecmp-balance-hold |
| Range | 2 to 600 |
| Units | minutes |
| Introduced | 16.0.R1 |
| Platforms | All |

mc-ecmp-hashing

| | |
|------------|--|
| Synopsis | Enable the mc-ecmp-hashing context |
| Context | configure service vprn <i>string</i> pim mc-ecmp-hashing |
| Tree | mc-ecmp-hashing |
| Introduced | 16.0.R1 |
| Platforms | All |

rebalance *boolean*

| | |
|------------|---|
| Synopsis | Rebalance flows to newly added links immediately instead of waiting until they are pruned |
| Context | configure service vprn <i>string</i> pim mc-ecmp-hashing rebalance <i>boolean</i> |
| Tree | rebalance |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

mtu-over-head *number*

| | |
|-------------|---|
| Synopsis | MVPN tunnel MTU size reduction to allow for BIER header |
| Context | configure service vprn <i>string</i> pim mtu-over-head <i>number</i> |
| Tree | mtu-over-head |
| Description | This command subtracts the specified value from the MVPN tunnel MTU to allow a BIER header to be added without exceeding the network MTU. |
| Range | 0 44 76 140 268 536 |
| Default | 0 |
| Introduced | 20.5.R1 |
| Platforms | All |

non-dr-attract-traffic *boolean*

| | |
|------------|--|
| Synopsis | Attract traffic when the router is not the designated one |
| Context | configure service vprn <i>string</i> pim non-dr-attract-traffic <i>boolean</i> |
| Tree | non-dr-attract-traffic |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

rp

| | |
|----------|---|
| Synopsis | Enter the rp context |
| Context | configure service vprn <i>string</i> pim rp |
| Tree | rp |

Introduced 16.0.R1
 Platforms All

bootstrap

Synopsis Enter the **bootstrap** context
 Context **configure** [service vprn string pim rp bootstrap](#)
 Tree [bootstrap](#)
 Introduced 16.0.R1
 Platforms All

export reference

Synopsis Export policy to control the flow of bootstrap messages
 Context **configure** [service vprn string pim rp bootstrap export reference](#)
 Tree [export](#)
 Reference **configure** [policy-options policy-statement string](#)
 Max. Instances 5
 Notes This element is ordered by the user.
 Introduced 16.0.R1
 Platforms All

import reference

Synopsis Import policy to control the flow of bootstrap messages
 Context **configure** [service vprn string pim rp bootstrap import reference](#)
 Tree [import](#)
 Reference **configure** [policy-options policy-statement string](#)
 Max. Instances 5
 Notes This element is ordered by the user.
 Introduced 16.0.R1
 Platforms All

ipv4

| | |
|------------|---|
| Synopsis | Enter the ipv4 context |
| Context | configure service vprn <i>string</i> pim rp ipv4 |
| Tree | ipv4 |
| Introduced | 16.0.R1 |
| Platforms | All |

anycast [[ipv4-address](#)] *string* [rp-set-peer](#) *string*

| | |
|------------|---|
| Synopsis | Add a list entry for anycast |
| Context | configure service vprn <i>string</i> pim rp ipv4 anycast <i>string</i> rp-set-peer <i>string</i> |
| Tree | anycast |
| Introduced | 16.0.R1 |
| Platforms | All |

[ipv4-address] *string*

| | |
|------------|---|
| Synopsis | Loopback IP address shared by routes in RP set |
| Context | configure service vprn <i>string</i> pim rp ipv4 anycast <i>string</i> rp-set-peer <i>string</i> |
| Tree | anycast |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

rp-set-peer *string*

| | |
|------------|---|
| Synopsis | Configure a peer in the anycast rp-set. |
| Context | configure service vprn <i>string</i> pim rp ipv4 anycast <i>string</i> rp-set-peer <i>string</i> |
| Tree | anycast |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

auto-rp-discovery *boolean*

| | |
|-------------|--|
| Synopsis | Enable auto-RP discovery mode and auto-RP listener |
| Context | configure service vprn string pim rp ipv4 auto-rp-discovery <i>boolean</i> |
| Tree | auto-rp-discovery |
| Description | When configured to true , the system enables the auto-RP protocol in discovery mode and the auto-RP listener functionality. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

bsr-candidate

| | |
|------------|--|
| Synopsis | Enter the bsr-candidate context |
| Context | configure service vprn string pim rp ipv4 bsr-candidate |
| Tree | bsr-candidate |
| Introduced | 16.0.R1 |
| Platforms | All |

address *string*

| | |
|------------|--|
| Synopsis | Candidate BSR IP address for Bootstrap Router election |
| Context | configure service vprn string pim rp ipv4 bsr-candidate address <i>string</i> |
| Tree | address |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of the Candidate BSR |
| Context | configure service vprn string pim rp ipv4 bsr-candidate admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | All |

hash-mask-len *number*

| | |
|------------|--|
| Synopsis | Length for bootstrap hash mask |
| Context | configure service vprn string pim rp ipv4 bsr-candidate hash-mask-len <i>number</i> |
| Tree | hash-mask-len |
| Range | 0 to 32 |
| Default | 30 |
| Introduced | 16.0.R1 |
| Platforms | All |

priority *number*

| | |
|------------|---|
| Synopsis | Bootstrap priority of the router |
| Context | configure service vprn string pim rp ipv4 bsr-candidate priority <i>number</i> |
| Tree | priority |
| Range | 0 to 255 |
| Default | 0 |
| Introduced | 16.0.R1 |
| Platforms | All |

candidate *boolean*

| | |
|-------------|---|
| Synopsis | Enable auto-RP to advertise candidate RP information |
| Context | configure service vprn string pim rp ipv4 candidate <i>boolean</i> |
| Tree | candidate |
| Description | <p>When configured to true, the auto-RP is enabled to advertise the candidate RP information. The auto-RP candidate RP announces the candidate RP messages on the 224.0.1.39 multicast address. This functionality is in addition to the listener functionality enabled by the auto RP discovery.</p> <p>When configured to false, the candidate RP information is not specified.</p> |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | All |

mapping-agent *boolean*

| | |
|-------------|---|
| Synopsis | Enable the mapping agent on the node |
| Context | configure service vprn <i>string</i> pim rp ipv4 mapping-agent <i>boolean</i> |
| Tree | mapping-agent |
| Description | When configured to true , the mapping agent is enabled on the node. The auto-RP MA observes the auto-rp-announcement messages, selects the RP and generates the RP discovery 224.0.1.40 messages. This functionality is in addition to the auto-RP discovery functionality. |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | All |

rp-candidate

| | |
|------------|--|
| Synopsis | Enter the rp-candidate context |
| Context | configure service vprn <i>string</i> pim rp ipv4 rp-candidate |
| Tree | rp-candidate |
| Introduced | 16.0.R1 |
| Platforms | All |

address *string*

| | |
|-------------|--|
| Synopsis | Local RP address |
| Context | configure service vprn <i>string</i> pim rp ipv4 rp-candidate address <i>string</i> |
| Tree | address |
| Description | This command specifies the local RP address that is sent in the RP candidate advertisements to the Bootstrap Router. |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|----------|---|
| Synopsis | Administrative state of the Candidate RP |
| Context | configure service vprn <i>string</i> pim rp ipv4 rp-candidate admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |

| | |
|------------|---------|
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | All |

group-range [[ipv4-prefix](#)] *string*

| | |
|------------|---|
| Synopsis | Add a list entry for group-range |
| Context | configure service vprn <i>string</i> pim rp ipv4 rp-candidate group-range <i>string</i> |
| Tree | group-range |
| Introduced | 16.0.R1 |
| Platforms | All |

[ipv4-prefix] *string*

| | |
|------------|--|
| Synopsis | IPv4 address and prefix length |
| Context | configure service vprn <i>string</i> pim rp ipv4 rp-candidate group-range <i>string</i> |
| Tree | group-range |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

holdtime *number*

| | |
|------------|--|
| Synopsis | Time during which the neighboring router considers this router to be up |
| Context | configure service vprn <i>string</i> pim rp ipv4 rp-candidate holdtime <i>number</i> |
| Tree | holdtime |
| Range | 5 to 255 |
| Units | seconds |
| Default | 150 |
| Introduced | 16.0.R1 |
| Platforms | All |

priority *number*

| | |
|----------|-----------------------|
| Synopsis | Candidate RP priority |
|----------|-----------------------|

| | |
|------------|--|
| Context | configure service vprn <i>string</i> pim rp ipv4 rp-candidate priority <i>number</i> |
| Tree | priority |
| Range | 0 to 255 |
| Default | 192 |
| Introduced | 16.0.R1 |
| Platforms | All |

static

| | |
|------------|---|
| Synopsis | Enter the static context |
| Context | configure service vprn <i>string</i> pim rp ipv4 static |
| Tree | static |
| Introduced | 16.0.R1 |
| Platforms | All |

address [*ipv4-address*] *string*

| | |
|------------|---|
| Synopsis | Enter the address list instance |
| Context | configure service vprn <i>string</i> pim rp ipv4 static address <i>string</i> |
| Tree | address |
| Introduced | 16.0.R1 |
| Platforms | All |

[*ipv4-address*] *string*

| | |
|------------|---|
| Synopsis | IPv4 address for the static RP |
| Context | configure service vprn <i>string</i> pim rp ipv4 static address <i>string</i> |
| Tree | address |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

group-prefix [*ipv4-prefix*] *string*

| | |
|----------|--|
| Synopsis | Add a list entry for group-prefix |
|----------|--|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> pim rp ipv4 static address <i>string</i> group-prefix <i>string</i> |
| Tree | group-prefix |
| Introduced | 16.0.R1 |
| Platforms | All |

[ipv4-prefix] *string*

| | |
|------------|---|
| Synopsis | IPv4 address and prefix length |
| Context | configure service vprn <i>string</i> pim rp ipv4 static address <i>string</i> group-prefix <i>string</i> |
| Tree | group-prefix |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

override *boolean*

| | |
|------------|--|
| Synopsis | Change the precedence for static RP over dynamically learnt RP |
| Context | configure service vprn <i>string</i> pim rp ipv4 static address <i>string</i> override <i>boolean</i> |
| Tree | override |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv6

| | |
|------------|--|
| Synopsis | Enter the ipv6 context |
| Context | configure service vprn <i>string</i> pim rp ipv6 |
| Tree | ipv6 |
| Introduced | 16.0.R1 |
| Platforms | All |

anycast [**ipv6-address**] *string* **rp-set-peer** *string*

| | |
|----------|---|
| Synopsis | Add a list entry for anycast |
| Context | configure service vprn <i>string</i> pim rp ipv6 anycast <i>string</i> rp-set-peer <i>string</i> |

| | |
|------------|-------------------------|
| Tree | anycast |
| Introduced | 16.0.R1 |

|---------------|---|
| Synopsis | Prefix string |
| Context | configure service vprn <i>string</i> radius proxy <i>string</i> attribute-matching entry <i>number</i> prefix-string <i>string</i> |
| Tree | prefix-string |
| String Length | 1 to 128 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

suffix-string *string*

| | |
|---------------|---|
| Synopsis | Prefix string |
| Context | configure service vprn <i>string</i> radius proxy <i>string</i> attribute-matching entry <i>number</i> suffix-string <i>string</i> |
| Tree | suffix-string |
| String Length | 1 to 128 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

type *number*

| | |
|------------|--|
| Synopsis | Matching attribute type to RADIUS server policy |
| Context | configure service vprn <i>string</i> radius proxy <i>string</i> attribute-matching type <i>number</i> |
| Tree | type |
| Range | 1 to 255 |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

vendor (*number* | *keyword*)

Synopsis Matching Vendor ID to RADIUS server policy

Context **configure service vprn** *string* **radius proxy** *string* **attribute-matching vendor** (*number* | *keyword*)

Tree **vendor**

Range 1 to 16777215

Options nokia

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

cache

Synopsis Enter the **cache** context

Context **configure service vprn** *string* **radius proxy** *string* **cache**

Tree **cache**

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis Administrative state of the RADIUS proxy cache

Context **configure service vprn** *string* **radius proxy** *string* **cache admin-state** *keyword*

Tree **admin-state**

Options enable, disable

Default disable

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

key

Synopsis Enable the **key** context

Context **configure service vprn** *string* **radius proxy** *string* **cache key**

Tree **key**

| | |
|------------|---|
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

attribute-type *number*

| | |
|------------|---|
| Synopsis | RADIUS attribute type to cache for this RADIUS proxy server |
| Context | configure service vprn <i>string</i> radius proxy <i>string</i> cache key attribute-type <i>number</i> |
| Tree | attribute-type |
| Range | 1 to 255 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

packet-type *keyword*

| | |
|------------|---|
| Synopsis | Packet type of the RADIUS messages |
| Context | configure service vprn <i>string</i> radius proxy <i>string</i> cache key packet-type <i>keyword</i> |
| Tree | packet-type |
| Options | access-request, access-accept |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

vendor (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | RADIUS Vendor ID |
| Context | configure service vprn <i>string</i> radius proxy <i>string</i> cache key vendor (<i>number</i> <i>keyword</i>) |
| Tree | vendor |
| Range | 1 to 16777215 |
| Options | nokia |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

timeout *number*

| | |
|------------|--|
| Synopsis | Idle timeout value |
| Context | configure service vprn <i>string</i> radius proxy <i>string</i> cache timeout <i>number</i> |
| Tree | timeout |
| Range | 60 to 3600 |
| Units | seconds |
| Default | 300 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

track-accounting

| | |
|------------|---|
| Synopsis | Enter the track-accounting context |
| Context | configure service vprn <i>string</i> radius proxy <i>string</i> cache track-accounting |
| Tree | track-accounting |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

accounting-off *boolean*

| | |
|------------|---|
| Synopsis | Remove all ESM hosts associated with the RADIUS client |
| Context | configure service vprn <i>string</i> radius proxy <i>string</i> cache track-accounting accounting-off <i>boolean</i> |
| Tree | accounting-off |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

accounting-on *boolean*

| | |
|----------|--|
| Synopsis | Remove all ESM hosts associated with the RADIUS client |
| Context | configure service vprn <i>string</i> radius proxy <i>string</i> cache track-accounting accounting-on <i>boolean</i> |
| Tree | accounting-on |
| Default | false |

Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interim-update *boolean*

Synopsis Update the ESM host with the RADIUS client that generated the interim update
Context **configure** [service](#) [vprn](#) *string* [radius](#) [proxy](#) *string* [cache](#) [track-accounting](#) [interim-update](#) *boolean*
Tree [interim-update](#)
Default false
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

start *boolean*

Synopsis Update host with client that generated accounting-start
Context **configure** [service](#) [vprn](#) *string* [radius](#) [proxy](#) *string* [cache](#) [track-accounting](#) [start](#) *boolean*
Tree [start](#)
Default false
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

stop *boolean*

Synopsis Remove ESM host and forward accounting-stop packet
Context **configure** [service](#) [vprn](#) *string* [radius](#) [proxy](#) *string* [cache](#) [track-accounting](#) [stop](#) *boolean*
Tree [stop](#)
Default false
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

track-authentication

Synopsis Enter the **track-authentication** context
Context **configure** [service](#) [vprn](#) *string* [radius](#) [proxy](#) *string* [cache](#) [track-authentication](#)
Tree [track-authentication](#)

Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

accept *boolean*

Synopsis Track Access-Accept message for mobility
Context **configure** [service](#) [vprn](#) *string* [radius proxy](#) *string* [cache](#) [track-authentication](#) [accept](#) *boolean*
Tree [accept](#)
Default true
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

track-delete-hold-time *number*

Synopsis Delete hold time
Context **configure** [service](#) [vprn](#) *string* [radius proxy](#) *string* [cache](#) [track-delete-hold-time](#) *number*
Tree [track-delete-hold-time](#)
Range 0 to 6000
Units seconds
Default 0
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

defaults

Synopsis Enter the **defaults** context
Context **configure** [service](#) [vprn](#) *string* [radius proxy](#) *string* [defaults](#)
Tree [defaults](#)
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

accounting-server-policy *string*

Synopsis Default accounting RADIUS server policy
Context **configure** [service](#) [vprn](#) *string* [radius proxy](#) *string* [defaults](#) [accounting-server-policy](#) *string*

Tree [accounting-server-policy](#)
 String Length 1 to 32
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

authentication-server-policy *string*

Synopsis Default authentication RADIUS server policy
 Context **configure** [service](#) [vprn](#) *string* [radius proxy](#) *string* [defaults](#) [authentication-server-policy](#) *string*
 Tree [authentication-server-policy](#)
 String Length 1 to 32
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis Text description
 Context **configure** [service](#) [vprn](#) *string* [radius proxy](#) *string* [description](#) *string*
 Tree [description](#)
 String Length 1 to 80
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interface [[interface-name](#)] *reference*

Synopsis Add a list entry for **interface**
 Context **configure** [service](#) [vprn](#) *string* [radius proxy](#) *string* [interface](#) *reference*
 Tree [interface](#)
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[interface-name] *reference*

Synopsis IP interface name
 Context **configure** [service](#) [vprn](#) *string* [radius proxy](#) *string* [interface](#) *reference*

| | |
|------------|---|
| Tree | interface |
| Reference | configure service vpn string interface string |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

load-balance-key

| | |
|------------|--|
| Synopsis | Enter the load-balance-key context |
| Context | configure service vpn string radius proxy string load-balance-key |
| Tree | load-balance-key |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

attribute-1

| | |
|------------|---|
| Synopsis | Enter the attribute-1 context |
| Context | configure service vpn string radius proxy string load-balance-key attribute-1 |
| Tree | attribute-1 |
| Notes | The following elements are part of a choice: (attribute-1 , attribute-2 , attribute-3 , attribute-4 , and attribute-5) or source-ip-udp . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

type number

| | |
|------------|--|
| Synopsis | Attribute type to cache for this RADIUS Proxy server |
| Context | configure service vpn string radius proxy string load-balance-key attribute-1 type number |
| Tree | type |
| Range | 1 to 255 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

vendor (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | Vendor-Id attribute |
| Context | configure service vprn <i>string</i> radius proxy <i>string</i> load-balance-key attribute-1 vendor (<i>number</i> <i>keyword</i>) |
| Tree | vendor |
| Range | 1 to 16777215 |
| Options | nokia |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

attribute-2

| | |
|------------|---|
| Synopsis | Enter the attribute-2 context |
| Context | configure service vprn <i>string</i> radius proxy <i>string</i> load-balance-key attribute-2 |
| Tree | attribute-2 |
| Notes | The following elements are part of a choice: (attribute-1 , attribute-2 , attribute-3 , attribute-4 , and attribute-5) or source-ip-udp . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

type *number*

| | |
|------------|--|
| Synopsis | Attribute type to cache for this RADIUS Proxy server |
| Context | configure service vprn <i>string</i> radius proxy <i>string</i> load-balance-key attribute-2 type <i>number</i> |
| Tree | type |
| Range | 1 to 255 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

vendor (*number* | *keyword*)

| | |
|----------|---|
| Synopsis | Vendor-Id attribute |
| Context | configure service vprn <i>string</i> radius proxy <i>string</i> load-balance-key attribute-2 vendor (<i>number</i> <i>keyword</i>) |
| Tree | vendor |

| | |
|------------|---|
| Range | 1 to 16777215 |
| Options | nokia |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

attribute-3

| | |
|------------|---|
| Synopsis | Enter the attribute-3 context |
| Context | configure service vprn string radius proxy string load-balance-key attribute-3 |
| Tree | attribute-3 |
| Notes | The following elements are part of a choice: (attribute-1 , attribute-2 , attribute-3 , attribute-4 , and attribute-5) or source-ip-udp . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

type number

| | |
|------------|---|
| Synopsis | Attribute type to cache for this RADIUS Proxy server |
| Context | configure service vprn string radius proxy string load-balance-key attribute-3 type number |
| Tree | type |
| Range | 1 to 255 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

vendor (number | keyword)

| | |
|------------|---|
| Synopsis | Vendor-Id attribute |
| Context | configure service vprn string radius proxy string load-balance-key attribute-3 vendor (number keyword) |
| Tree | vendor |
| Range | 1 to 16777215 |
| Options | nokia |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

attribute-4

| | |
|------------|---|
| Synopsis | Enter the attribute-4 context |
| Context | configure service vpn string radius proxy string load-balance-key attribute-4 |
| Tree | attribute-4 |
| Notes | The following elements are part of a choice: (attribute-1 , attribute-2 , attribute-3 , attribute-4 , and attribute-5) or source-ip-udp . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

type number

| | |
|------------|--|
| Synopsis | Attribute type to cache for this RADIUS Proxy server |
| Context | configure service vpn string radius proxy string load-balance-key attribute-4 type number |
| Tree | type |
| Range | 1 to 255 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

vendor (number | keyword)

| | |
|------------|--|
| Synopsis | Vendor-Id attribute |
| Context | configure service vpn string radius proxy string load-balance-key attribute-4 vendor (number keyword) |
| Tree | vendor |
| Range | 1 to 16777215 |
| Options | nokia |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

attribute-5

| | |
|----------|--|
| Synopsis | Enter the attribute-5 context |
| Context | configure service vpn string radius proxy string load-balance-key attribute-5 |
| Tree | attribute-5 |

| | |
|------------|---|
| Notes | The following elements are part of a choice: (attribute-1 , attribute-2 , attribute-3 , attribute-4 , and attribute-5) or source-ip-udp . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

type number

| | |
|------------|---|
| Synopsis | Attribute type to cache for this RADIUS Proxy server |
| Context | configure service vprn string radius proxy string load-balance-key attribute-5 type number |
| Tree | type |
| Range | 1 to 255 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

vendor (number | keyword)

| | |
|------------|---|
| Synopsis | Vendor-Id attribute |
| Context | configure service vprn string radius proxy string load-balance-key attribute-5 vendor (number keyword) |
| Tree | vendor |
| Range | 1 to 16777215 |
| Options | nokia |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

source-ip-udp

| | |
|------------|---|
| Synopsis | Key to consist of the source IP address and source UDP port of the RADIUS message |
| Context | configure service vprn string radius proxy string load-balance-key source-ip-udp |
| Tree | source-ip-udp |
| Notes | The following elements are part of a choice: (attribute-1 , attribute-2 , attribute-3 , attribute-4 , and attribute-5) or source-ip-udp . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

purpose *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Purpose of the RADIUS proxy |
| Context | configure service vpn <i>string</i> radius proxy <i>string</i> purpose <i>keyword</i> |
| Tree | purpose |
| Options | accounting, authentication, accounting-authentication |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

python-policy *reference*

| | |
|------------|--|
| Synopsis | Python policy |
| Context | configure service vpn <i>string</i> radius proxy <i>string</i> python-policy <i>reference</i> |
| Tree | python-policy |
| Reference | configure python python-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

secret *string*

| | |
|---------------|--|
| Synopsis | Format of the secret key to access the RADIUS proxy server |
| Context | configure service vpn <i>string</i> radius proxy <i>string</i> secret <i>string</i> |
| Tree | secret |
| String Length | 1 to 115 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

send-accounting-response *boolean*

| | |
|----------|---|
| Synopsis | Allow RADIUS proxy server to respond to Accounting-Response messages |
| Context | configure service vpn <i>string</i> radius proxy <i>string</i> send-accounting-response <i>boolean</i> |

| | |
|------------|---|
| Tree | send-accounting-response |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

wlan-gw

| | |
|------------|--|
| Synopsis | Enter the wlan-gw context |
| Context | configure service vprn <i>string</i> radius proxy <i>string</i> wlan-gw |
| Tree | wlan-gw |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

address *string*

| | |
|-------------|--|
| Synopsis | IPv4 address of the distributed RADIUS proxy server |
| Context | configure service vprn <i>string</i> radius proxy <i>string</i> wlan-gw address <i>string</i> |
| Tree | address |
| Description | This command configures the IPv4 address of the distributed RADIUS proxy server for use by the access points. |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

ipv6-address *string*

| | |
|-------------|---|
| Synopsis | IPv6 address of the distributed RADIUS proxy server |
| Context | configure service vprn <i>string</i> radius proxy <i>string</i> wlan-gw ipv6-address <i>string</i> |
| Tree | ipv6-address |
| Description | This command configures the IPv6 address of the distributed RADIUS proxy server for use by the access points. |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

wlan-gw-group *reference***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | ISA WLAN gateway group |
| Context | configure service vprn <i>string</i> radius proxy <i>string</i> wlan-gw-group <i>reference</i> |
| Tree | wlan-gw-group |
| Reference | configure isa wlan-gw-group <i>number</i> |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

server [*name*] *string*

| | |
|----------------|--|
| Synopsis | Enter the server list instance |
| Context | configure service vprn <i>string</i> radius server <i>string</i> |
| Tree | server |
| Max. Instances | 64 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

[name] *string*

| | |
|---------------|--|
| Synopsis | External RADIUS server name |
| Context | configure service vprn <i>string</i> radius server <i>string</i> |
| Tree | server |
| String Length | 1 to 32 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

accept-coa *boolean*

| | |
|----------|---|
| Synopsis | Process Change of Authorization (CoA) messages |
| Context | configure service vprn <i>string</i> radius server <i>string</i> accept-coa <i>boolean</i> |

| | |
|------------|---|
| Tree | accept-coa |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

acct-port *number*

| | |
|------------|--|
| Synopsis | UDP port number of the RADIUS for accounting events |
| Context | configure service vprn <i>string</i> radius server <i>string</i> acct-port <i>number</i> |
| Tree | acct-port |
| Range | 1 to 65535 |
| Default | 1813 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

address (*ipv4-address-no-zone | ipv6-address-no-zone*)

| | |
|------------|---|
| Synopsis | IP address of the RADIUS server |
| Context | configure service vprn <i>string</i> radius server <i>string</i> address (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) |
| Tree | address |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

auth-port *number*

| | |
|------------|--|
| Synopsis | UDP port number of the RADIUS to be used as match criteria |
| Context | configure service vprn <i>string</i> radius server <i>string</i> auth-port <i>number</i> |
| Tree | auth-port |
| Range | 1 to 65535 |
| Default | 1812 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

description *string*

| | |
|---------------|---|
| Synopsis | Text description |
| Context | configure service vprn <i>string</i> radius server <i>string</i> description <i>string</i> |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

pending-requests-limit *number*

| | |
|------------|--|
| Synopsis | Limit of the number for pending RADIUS requests |
| Context | configure service vprn <i>string</i> radius server <i>string</i> pending-requests-limit <i>number</i> |
| Tree | pending-requests-limit |
| Range | 1 to 4096 |
| Default | 4096 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

python-policy *reference*

| | |
|------------|--|
| Synopsis | Python script policy to modify CoA messages |
| Context | configure service vprn <i>string</i> radius server <i>string</i> python-policy <i>reference</i> |
| Tree | python-policy |
| Reference | configure python python-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

secret *string*

| | |
|---------------|--|
| Synopsis | Secret key associated with this RADIUS server |
| Context | configure service vprn <i>string</i> radius server <i>string</i> secret <i>string</i> |
| Tree | secret |
| String Length | 1 to 115 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

reassemble

Synopsis Enable the **reassemble** context
 Context **configure service vpn string reassemble**
 Tree [reassemble](#)
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

nat-group *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis NAT group (including WLAN Gateway group) that executes the reassemble
 Context **configure service vpn string reassemble nat-group number**
 Tree [nat-group](#)
 Max. Range 0 to 4294967295
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

to-base-network *boolean*

Synopsis Allow reassembled traffic sent to network interface
 Context **configure service vpn string reassemble to-base-network boolean**
 Tree [to-base-network](#)
 Default false
 Introduced 19.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

redundant-interface [*interface-name*] *string*

Synopsis Enter the **redundant-interface** list instance
 Context **configure service vpn string redundant-interface string**

| | |
|------------|---|
| Tree | redundant-interface |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

[interface-name] string

| | |
|---------------|---|
| Synopsis | Interface name |
| Context | configure service vprn <i>string</i> redundant-interface <i>string</i> |
| Tree | redundant-interface |
| String Length | 1 to 32 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state keyword

| | |
|------------|--|
| Synopsis | Administrative state of the interface |
| Context | configure service vprn <i>string</i> redundant-interface <i>string</i> admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | enable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

description string

| | |
|---------------|---|
| Synopsis | Text description |
| Context | configure service vprn <i>string</i> redundant-interface <i>string</i> description <i>string</i> |
| Tree | description |
| String Length | 1 to 255 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

hold-time

| | |
|------------|---|
| Synopsis | Enter the hold-time context |
| Context | configure service vprn string redundant-interface string hold-time |
| Tree | hold-time |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipv4

| | |
|------------|--|
| Synopsis | Enter the ipv4 context |
| Context | configure service vprn string redundant-interface string hold-time ipv4 |
| Tree | ipv4 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

down

| | |
|-------------|--|
| Synopsis | Enter the down context |
| Context | configure service vprn string redundant-interface string hold-time ipv4 down |
| Tree | down |
| Description | Commands in this context configure the down hold timer, which specifies the delay before activating the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface up, unless an operator configures the init-only command. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

init-only *boolean*

| | |
|-------------|--|
| Synopsis | Apply delay only at interface configuration or reboot |
| Context | configure service vprn string redundant-interface string hold-time ipv4 down init-only <i>boolean</i> |
| Tree | init-only |
| Description | This command applies a delay only when the IP interface is first configured or after a system reboot. |
| Default | false |

| | |
|------------|---|
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

seconds *number*

| | |
|------------|---|
| Synopsis | Down hold time for the IP interface |
| Context | configure service vprn <i>string</i> redundant-interface <i>string</i> hold-time ipv4 down seconds <i>number</i> |
| Tree | seconds |
| Range | 1 to 1200 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

up

| | |
|-------------|---|
| Synopsis | Enter the up context |
| Context | configure service vprn <i>string</i> redundant-interface <i>string</i> hold-time ipv4 up |
| Tree | up |
| Description | Commands in this context configure the up hold timer, which specifies the delay before deactivation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface down. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

seconds *number*

| | |
|------------|---|
| Synopsis | Up hold time for the IP interface |
| Context | configure service vprn <i>string</i> redundant-interface <i>string</i> hold-time ipv4 up seconds <i>number</i> |
| Tree | seconds |
| Range | 1 to 1200 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ip-mtu *number*

| | |
|-------------|--|
| Synopsis | IP MTU applied to outgoing packets |
| Context | configure service vprn <i>string</i> redundant-interface <i>string</i> ip-mtu <i>number</i> |
| Tree | ip-mtu |
| Description | This command configures the IP maximum transmission unit (MTU) for the associated router IP interface. |
| Range | 512 to 9786 |
| Units | bytes |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipv4

| | |
|------------|--|
| Synopsis | Enter the ipv4 context |
| Context | configure service vprn <i>string</i> redundant-interface <i>string</i> ipv4 |
| Tree | ipv4 |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

primary

| | |
|------------|--|
| Synopsis | Enable the primary context |
| Context | configure service vprn <i>string</i> redundant-interface <i>string</i> ipv4 primary |
| Tree | primary |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

address *string*

| | |
|------------|--|
| Synopsis | IPv4 address to be assigned to the interface |
| Context | configure service vprn <i>string</i> redundant-interface <i>string</i> ipv4 primary address <i>string</i> |
| Tree | address |
| Notes | This element is mandatory. |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

prefix-length *number*

| | |
|------------|--|
| Synopsis | IPv4 address prefix length |
| Context | configure service vprn <i>string</i> redundant-interface <i>string</i> ipv4 primary prefix-length <i>number</i> |
| Tree | prefix-length |
| Range | 0 to 32 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

remote-ip *string*

| | |
|------------|--|
| Synopsis | Remote IP address for the interface |
| Context | configure service vprn <i>string</i> redundant-interface <i>string</i> ipv4 primary remote-ip <i>string</i> |
| Tree | remote-ip |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

spoke-sdp [[sdp-bind-id](#)] *string*

| | |
|----------------|---|
| Synopsis | Enter the spoke-sdp list instance |
| Context | configure service vprn <i>string</i> redundant-interface <i>string</i> spoke-sdp <i>string</i> |
| Tree | spoke-sdp |
| Max. Instances | 1 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

[sdp-bind-id] *string*

| | |
|---------------|---|
| Synopsis | SDP binding ID |
| Context | configure service vprn <i>string</i> redundant-interface <i>string</i> spoke-sdp <i>string</i> |
| Tree | spoke-sdp |
| String Length | 3 to 16 |

| | |
|------------|---|
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of the SDP binding to the service |
| Context | configure service vpn <i>string</i> redundant-interface <i>string</i> spoke-sdp <i>string</i> admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | enable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

control-word *boolean*

| | |
|------------|---|
| Synopsis | Use the control word as preferred |
| Context | configure service vpn <i>string</i> redundant-interface <i>string</i> spoke-sdp <i>string</i> control-word <i>boolean</i> |
| Tree | control-word |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

description *string*

| | |
|---------------|---|
| Synopsis | Text description |
| Context | configure service vpn <i>string</i> redundant-interface <i>string</i> spoke-sdp <i>string</i> description <i>string</i> |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

egress

| | |
|------------|--|
| Synopsis | Enter the egress context |
| Context | configure service vprn <i>string</i> redundant-interface <i>string</i> spoke-sdp <i>string</i> egress |
| Tree | egress |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

filter

| | |
|------------|---|
| Synopsis | Enter the filter context |
| Context | configure service vprn <i>string</i> redundant-interface <i>string</i> spoke-sdp <i>string</i> egress filter |
| Tree | filter |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ip reference

| | |
|------------|--|
| Synopsis | IPv4 filter policy name |
| Context | configure service vprn <i>string</i> redundant-interface <i>string</i> spoke-sdp <i>string</i> egress filter ip reference |
| Tree | ip |
| Reference | configure filter ip-filter <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

vc-label *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|----------|---|
| Synopsis | Egress MPLS VC label to send packets to the far end |
| Context | configure service vprn <i>string</i> redundant-interface <i>string</i> spoke-sdp <i>string</i> egress vc-label <i>number</i> |
| Tree | vc-label |
| Range | 16 to 1048575 |

Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ingress

Synopsis Enter the **ingress** context
 Context **configure** [service](#) [vprn](#) *string* [redundant-interface](#) *string* [spoke-sdp](#) *string* [ingress](#)
 Tree [ingress](#)
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

filter

Synopsis Enter the **filter** context
 Context **configure** [service](#) [vprn](#) *string* [redundant-interface](#) *string* [spoke-sdp](#) *string* [ingress](#) [filter](#)

 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ip reference

Synopsis IPv4 filter policy name
 Context **configure** [service](#) [vprn](#) *string* [redundant-interface](#) *string* [spoke-sdp](#) *string* [ingress](#) [filter](#) [ip](#) [reference](#)
 Tree [ip](#)
 Reference **configure** [filter](#) [ip-filter](#) *string*
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

vc-label *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Ingress MPLS VC label to send packets to the far end

| | |
|------------|---|
| Context | configure service vprn <i>string</i> redundant-interface <i>string</i> spoke-sdp <i>string</i> ingress vc-label <i>number</i> |
| Tree | vc-label |
| Range | 1 to 1048575 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

rip

| | |
|------------|--|
| Synopsis | Enable the rip context |
| Context | configure service vprn <i>string</i> rip |
| Tree | rip |
| Introduced | 16.0.R4 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of the RIP instance |
| Context | configure service vprn <i>string</i> rip admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | enable |
| Introduced | 16.0.R4 |
| Platforms | All |

authentication-key *string*

| | |
|-------------|---|
| Synopsis | Authentication password passed between RIP neighbors |
| Context | configure service vprn <i>string</i> rip authentication-key <i>string</i> |
| Tree | authentication-key |
| Description | <p>This command sets the authentication password to be passed between RIP neighbors. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.</p> <p>The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.</p> <p>When unconfigured, this command removes the authentication password from the configuration and disables authentication.</p> |

| | |
|---------------|---------|
| String Length | 1 to 51 |
| Introduced | 16.0.R4 |
| Platforms | All |

authentication-type *keyword*

| | |
|-------------|---|
| Synopsis | Authentication type used between RIP neighbors |
| Context | configure service vprn <i>string rip authentication-type keyword</i> |
| Tree | authentication-type |
| Description | <p>This command sets the type of authentication to be used between RIP neighbors.</p> <p>The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.</p> <p>When unconfigured, this command removes the authentication type from the configuration and effectively disables authentication.</p> |
| Options | none, password, md5, md20 |
| Default | none |
| Introduced | 16.0.R4 |
| Platforms | All |

bfd-liveness *boolean*

| | |
|-------------|---|
| Synopsis | Enable BFD to control the state of protocol adjacency |
| Context | configure service vprn <i>string rip bfd-liveness boolean</i> |
| Tree | bfd-liveness |
| Description | <p>When configured to true, this command enables BFD to control the state of the associated protocol adjacency.</p> <p>When configured to false, this command removes BFD from the associated protocol adjacency.</p> |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | All |

check-zero *boolean*

| | |
|----------|--|
| Synopsis | Enable checking of mandatory zero fields |
| Context | configure service vprn <i>string rip check-zero boolean</i> |

| | |
|-------------|---|
| Tree | check-zero |
| Description | When configured to true , this command enables checking of the mandatory zero fields in the RIPv1 and RIPv2 specifications and rejecting non-compliant RIP messages.
When configured to false , this command disables the check and allows the receipt of RIP messages even if the mandatory zero fields are non-zero. |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | All |

description *string*

| | |
|---------------|---|
| Synopsis | Text description |
| Context | configure service vprn <i>string</i> rip description <i>string</i> |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R4 |
| Platforms | All |

export-limit

| | |
|------------|--|
| Synopsis | Enable the export-limit context |
| Context | configure service vprn <i>string</i> rip export-limit |
| Tree | export-limit |
| Introduced | 16.0.R4 |
| Platforms | All |

log-percent *number*

| | |
|------------|--|
| Synopsis | Export limit before warning and SNMP notification sent |
| Context | configure service vprn <i>string</i> rip export-limit log-percent <i>number</i> |
| Tree | log-percent |
| Range | 1 to 100 |
| Introduced | 16.0.R4 |
| Platforms | All |

number *number*

| | |
|------------|---|
| Synopsis | Maximum routes or prefixes exported from route table |
| Context | configure service vprn <i>string</i> rip export-limit number <i>number</i> |
| Tree | number |
| Range | 1 to 4294967295 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R4 |
| Platforms | All |

export-policy *reference*

| | |
|----------------|--|
| Synopsis | Policies to determine exported routes |
| Context | configure service vprn <i>string</i> rip export-policy <i>reference</i> |
| Tree | export-policy |
| Reference | configure policy-options policy-statement <i>string</i> |
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R4 |
| Platforms | All |

group [[group-name](#)] *string*

| | |
|------------|---|
| Synopsis | Enter the group list instance |
| Context | configure service vprn <i>string</i> rip group <i>string</i> |
| Tree | group |
| Introduced | 16.0.R4 |
| Platforms | All |

[group-name] *string*

| | |
|---------------|---|
| Synopsis | RIP group name |
| Context | configure service vprn <i>string</i> rip group <i>string</i> |
| Tree | group |
| String Length | 1 to 32 |

| | |
|------------|-------------------------------------|
| Notes | This element is part of a list key. |
| Introduced | 16.0.R4 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of RIP neighbor interface group |
| Context | configure service vprn <i>string</i> rip group <i>string</i> admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | enable |
| Introduced | 16.0.R4 |
| Platforms | All |

authentication-key *string*

| | |
|---------------|--|
| Synopsis | Authentication password passed between RIP neighbors |
| Context | configure service vprn <i>string</i> rip group <i>string</i> authentication-key <i>string</i> |
| Tree | authentication-key |
| Description | <p>This command sets the authentication password to be passed between RIP neighbors. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.</p> <p>The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.</p> <p>When unconfigured, the authentication password is removed from the configuration and authentication is disabled.</p> |
| String Length | 1 to 51 |
| Introduced | 16.0.R4 |
| Platforms | All |

authentication-type *keyword*

| | |
|-------------|---|
| Synopsis | Authentication type |
| Context | configure service vprn <i>string</i> rip group <i>string</i> authentication-type <i>keyword</i> |
| Tree | authentication-type |
| Description | This command configures the type of authentication to be used. |

The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.

When unconfigured, this command removes the authentication type from the configuration and effectively disables authentication.

| | |
|------------|---------------------------|
| Options | none, password, md5, md20 |
| Introduced | 16.0.R4 |
| Platforms | All |

bfd-liveness *boolean*

| | |
|-------------|--|
| Synopsis | Enable BFD to control the state of protocol adjacency |
| Context | configure service vprn <i>string</i> rip group <i>string</i> bfd-liveness <i>boolean</i> |
| Tree | bfd-liveness |
| Description | When configured to true , this command enables BFD to control the state of the associated protocol adjacency.

When configured to false , this command removes BFD from the associated protocol adjacency. |
| Introduced | 16.0.R4 |
| Platforms | All |

check-zero *boolean*

| | |
|-------------|---|
| Synopsis | Enable checking of mandatory zero fields |
| Context | configure service vprn <i>string</i> rip group <i>string</i> check-zero <i>boolean</i> |
| Tree | check-zero |
| Description | When configured to true , this command enables checking of the mandatory zero fields in the RIPv1 and RIPv2 specifications and rejecting non-compliant RIP messages.

When configured to false , this command disables the check and allows the receipt of RIP messages even if the mandatory zero fields are non-zero. |
| Introduced | 16.0.R4 |
| Platforms | All |

description *string*

| | |
|----------|--|
| Synopsis | Text description |
| Context | configure service vprn <i>string</i> rip group <i>string</i> description <i>string</i> |
| Tree | description |

| | |
|---------------|---------|
| String Length | 1 to 80 |
| Introduced | 16.0.R4 |
| Platforms | All |

export-policy *reference*

| | |
|----------------|---|
| Synopsis | Policies used to rule which routes are exported to RIP |
| Context | configure service vprn <i>string</i> rip group <i>string</i> export-policy <i>reference</i> |
| Tree | export-policy |
| Description | This command specifies the export route policies used to determine which routes are exported to RIP.

If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied. |
| Reference | configure policy-options policy-statement <i>string</i> |
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R4 |
| Platforms | All |

import-policy *reference*

| | |
|----------------|---|
| Synopsis | Policies to decide routes accepted from RIP neighbors |
| Context | configure service vprn <i>string</i> rip group <i>string</i> import-policy <i>reference</i> |
| Tree | import-policy |
| Description | This command configures import route policies to determine which routes are accepted from RIP neighbors.

If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied. |
| Reference | configure policy-options policy-statement <i>string</i> |
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R4 |
| Platforms | All |

| | |
|------------|--|
| Synopsis | Maximum number of routes per RIP update message |
| Context | configure service vprn <i>string</i> rip group <i>string</i> message-size <i>number</i> |
| Tree | message-size |
| Range | 25 to 255 |
| Introduced | 16.0.R4 |
| Platforms | All |

metric-in *number*

| | |
|------------|---|
| Synopsis | Metric added to routes received from a RIP neighbor |
| Context | configure service vprn <i>string</i> rip group <i>string</i> metric-in <i>number</i> |
| Tree | metric-in |
| Range | 1 to 16 |
| Introduced | 16.0.R4 |
| Platforms | All |

metric-out *number*

| | |
|------------|--|
| Synopsis | Metric added to routes exported into RIP |
| Context | configure service vprn <i>string</i> rip group <i>string</i> metric-out <i>number</i> |
| Tree | metric-out |
| Range | 1 to 16 |
| Introduced | 16.0.R4 |
| Platforms | All |

neighbor [[interface-name](#)] *string*

| | |
|------------|--|
| Synopsis | Enter the neighbor list instance |
| Context | configure service vprn <i>string</i> rip group <i>string</i> neighbor <i>string</i> |
| Tree | neighbor |
| Introduced | 16.0.R4 |
| Platforms | All |

[interface-name] string

| | |
|---------------|---|
| Synopsis | IP interface name |
| Context | configure service vprn string rip group string neighbor string |
| Tree | neighbor |
| String Length | 1 to 32 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R4 |
| Platforms | All |

admin-state keyword

| | |
|------------|---|
| Synopsis | Administrative state of the RIP neighbor interface |
| Context | configure service vprn string rip group string neighbor string admin-state keyword |
| Tree | admin-state |
| Options | enable, disable |
| Default | enable |
| Introduced | 16.0.R4 |
| Platforms | All |

authentication-key string

| | |
|---------------|---|
| Synopsis | Authentication password passed between RIP neighbors |
| Context | configure service vprn string rip group string neighbor string authentication-key string |
| Tree | authentication-key |
| Description | <p>This command sets the authentication password to be passed between RIP neighbors. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.</p> <p>The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.</p> <p>When unconfigured, this command removes the authentication password from the configuration and disables authentication.</p> |
| String Length | 1 to 51 |
| Introduced | 16.0.R4 |
| Platforms | All |

authentication-type *keyword*

| | |
|-------------|--|
| Synopsis | Authentication type |
| Context | configure service vprn <i>string</i> rip group <i>string</i> neighbor <i>string</i> authentication-type <i>keyword</i> |
| Tree | authentication-type |
| Description | This command configures the type of authentication to be used.

The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.

When unconfigured, this command removes the authentication type from the configuration and effectively disables authentication. |
| Options | none, password, md5, md20 |
| Introduced | 16.0.R4 |
| Platforms | All |

bfd-liveness *boolean*

| | |
|-------------|--|
| Synopsis | Enable BFD to control the state of protocol adjacency |
| Context | configure service vprn <i>string</i> rip group <i>string</i> neighbor <i>string</i> bfd-liveness <i>boolean</i> |
| Tree | bfd-liveness |
| Description | When configured to true , this command enables BFD to control the state of the associated protocol adjacency.

When configured to false , this command removes BFD from the associated protocol adjacency. |
| Introduced | 16.0.R4 |
| Platforms | All |

check-zero *boolean*

| | |
|-------------|---|
| Synopsis | Enable checking of mandatory zero fields |
| Context | configure service vprn <i>string</i> rip group <i>string</i> neighbor <i>string</i> check-zero <i>boolean</i> |
| Tree | check-zero |
| Description | When configured to true , this command enables checking of the mandatory zero fields in the RIPv1 and RIPv2 specifications and rejecting non-compliant RIP messages.

When configured to false , this command disables the check and allows the receipt of RIP messages even if the mandatory zero fields are non-zero. |
| Introduced | 16.0.R4 |

Platforms All

description *string*

Synopsis Text description

| Tree | metric-out |
| Range | 1 to 16 |
| Introduced | 16.0.R4 |
| Platforms | All |

preference *number*

| | |
|------------|---|
| Synopsis | Route preference |
| Context | configure service vprn <i>string</i> rip group <i>string</i> neighbor <i>string</i> preference <i>number</i> |
| Tree | preference |
| Range | 1 to 255 |
| Introduced | 16.0.R4 |
| Platforms | All |

receive *keyword*

| | |
|------------|---|
| Synopsis | Accepted version on received packets |
| Context | configure service vprn <i>string</i> rip group <i>string</i> neighbor <i>string</i> receive <i>keyword</i> |
| Tree | receive |
| Options | version-1, version-2, both, none |
| Introduced | 16.0.R4 |
| Platforms | All |

send *keyword*

| | |
|------------|--|
| Synopsis | RIP version and method used to send RIP updates |
| Context | configure service vprn <i>string</i> rip group <i>string</i> neighbor <i>string</i> send <i>keyword</i> |
| Tree | send |
| Options | none, version-1, broadcast, multicast, unicast |
| Introduced | 16.0.R4 |
| Platforms | All |

split-horizon *boolean*

| | |
|-------------|---|
| Synopsis | Enable split horizon and poison reverse |
| Context | configure service vprn <i>string</i> rip group <i>string</i> neighbor <i>string</i> split-horizon <i>boolean</i> |
| Tree | split-horizon |
| Description | When configured to true , this command enables the use of split horizon with poison reverse. Split-horizon with poison reverse means that routes learned from a neighbor through a given interface are advertised in updates out of the same interface but with a metric of 16 (infinity). |

When configured to **false**, this command enables split horizon without poison reverse. This allows the routes to be re-advertised on interfaces other than the interface that learned the route, with the advertised metric equaling an increment of the metric-in value.

| | |

| Range | 1 to 16 |
| Introduced | 16.0.R4 |
| Platforms | All |

neighbor [[interface-name](#)] *reference*

| | |
|------------|---|
| Synopsis | Enter the neighbor list instance |
| Context | configure service vprn <i>string</i> ripng group <i>string</i> neighbor <i>reference</i> |
| Tree | neighbor |
| Introduced | 16.0.R4 |
| Platforms | All |

[interface-name] *reference*

| | |
|----------|---|
| Synopsis | IP interface name |
| Context | configure service vprn <i>string</i> ripng group <i>string</i> neighbor <i>reference</i> |

| | |
|------------|---|
| Tree | neighbor |
| Reference | configure service vprn string interface string |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R4 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of the RIPng neighbor |
| Context | configure service vprn string ripng group string neighbor reference admin-state keyword |
| Tree | admin-state |
| Options | enable, disable |
| Default | enable |
| Introduced | 16.0.R4 |
| Platforms | All |

bfd-liveness *boolean*

| | |
|-------------|--|
| Synopsis | Enable BFD to control the state of protocol adjacency |
| Context | configure service vprn string ripng group string neighbor reference bfd-liveness boolean |
| Tree | bfd-liveness |
| Description | When configured to true , this command enables BFD to control the state of the associated protocol adjacency.
When configured to false , this command removes BFD from the associated protocol adjacency. |
| Introduced | 16.0.R4 |
| Platforms | All |

check-zero *boolean*

| | |
|-------------|---|
| Synopsis | Enable checking of mandatory zero fields |
| Context | configure service vprn string ripng group string neighbor reference check-zero boolean |
| Tree | check-zero |
| Description | When configured to true , this command enables checking of the mandatory zero fields in the RIPv1 and RIPv2 specifications and rejecting non-compliant RIP messages. |

When configured to **false**, this command disables the check and allows the receipt of RIP messages even if the mandatory zero fields are non-zero.

| | |
|------------|---------|
| Introduced | 16.0.R4 |
| Platforms | All |

description *string*

| | |
|---------------|--|
| Synopsis | Text description |
| Context | configure service vprn <i>string</i> ripng group <i>string</i> neighbor reference description <i>string</i> |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R4 |
| Platforms | All |

export-policy *reference*

| | |
|----------------|---|
| Synopsis | Policies used to rule which routes are exported to RIP |
| Context | configure service vprn <i>string</i> ripng group <i>string</i> neighbor reference export-policy <i>reference</i> |
| Tree | export-policy |
| Description | This command specifies the export route policies used to determine which routes are exported to RIP.

If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied. |
| Reference | configure policy-options policy-statement <i>string</i> |
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R4 |
| Platforms | All |

import-policy *reference*

| | |
|----------|---|
| Synopsis | Policies to decide routes accepted from RIP neighbors |
| Context | configure service vprn <i>string</i> ripng group <i>string</i> neighbor reference import-policy <i>reference</i> |
| Tree | import-policy |

| | |
|----------------|---|
| Description | This command configures import route policies to determine which routes are accepted from RIP neighbors.

If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied. |
| Reference | configure policy-options policy-statement <i>string</i> |
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R4 |
| Platforms | All |

message-size *number*

| | |
|------------|---|
| Synopsis | Maximum number of routes in the message |
| Context | configure service vprn <i>string</i> ripng group <i>string</i> neighbor reference message-size <i>number</i> |
| Tree | message-size |
| Range | 25 to 255 |
| Introduced | 16.0.R4 |
| Platforms | All |

metric-in *number*

| | |
|------------|--|
| Synopsis | Metric added to routes received from the neighbor |
| Context | configure service vprn <i>string</i> ripng group <i>string</i> neighbor reference metric-in <i>number</i> |
| Tree | metric-in |
| Range | 1 to 16 |
| Introduced | 16.0.R4 |
| Platforms | All |

metric-out *number*

| | |
|----------|---|
| Synopsis | Metric added to routes exported into RIPng |
| Context | configure service vprn <i>string</i> ripng group <i>string</i> neighbor reference metric-out <i>number</i> |
| Tree | metric-out |
| Range | 1 to 16 |

| | |
|------------|---------|
| Introduced | 16.0.R4 |
| Platforms | All |

preference *number*

| | |
|------------|--|
| Synopsis | Route preference |
| Context | configure service vprn <i>string</i> ripng group <i>string</i> neighbor <i>reference</i> preference <i>number</i> |
| Tree | preference |
| Range | 1 to 255 |
| Introduced | 16.0.R4 |
| Platforms | All |

receive *keyword*

| | |
|------------|--|
| Synopsis | Accepted version on received packets |
| Context | configure service vprn <i>string</i> ripng group <i>string</i> neighbor <i>reference</i> receive <i>keyword</i> |
| Tree | receive |
| Options | none, ripng |
| Introduced | 16.0.R4 |
| Platforms | All |

send *keyword*

| | |
|------------|---|
| Synopsis | RIPng version and method used to send RIPng updates |
| Context | configure service vprn <i>string</i> ripng group <i>string</i> neighbor <i>reference</i> send <i>keyword</i> |
| Tree | send |
| Options | none, ripng, unicast |
| Introduced | 16.0.R4 |
| Platforms | All |

split-horizon *boolean*

| | |
|----------|--|
| Synopsis | Enable split horizon and poison reverse |
| Context | configure service vprn <i>string</i> ripng group <i>string</i> neighbor <i>reference</i> split-horizon <i>boolean</i> |
| Tree | split-horizon |

| | |
|-------------|---|
| Description | <p>When configured to true, this command enables the use of split horizon with poison reverse. Split-horizon with poison reverse means that routes learned from a neighbor through a given interface are advertised in updates out of the same interface but with a metric of 16 (infinity).</p> <p>When configured to false, this command enables split horizon without poison reverse. This allows the routes to be re-advertised on interfaces other than the interface that learned the route, with the advertised metric equaling an increment of the metric-in value.</p> |
| Introduced | 16.0.R4 |
| Platforms | All |

timers

| | |
|------------|---|
| Synopsis | Enable the timers context |
| Context | configure service vprn <i>string</i> ripng group <i>string</i> neighbor reference timers |
| Tree | timers |
| Introduced | 16.0.R4 |
| Platforms | All |

flush number

| | |
|-------------|---|
| Synopsis | RIP flush timer |
| Context | configure service vprn <i>string</i> ripng group <i>string</i> neighbor reference timers flush <i>number</i> |
| Tree | flush |
| Description | This command specifies the time a route is maintained in the RIP database after it has been declared invalid. When the timer expires, the route is flushed from the RIP database completely. |
| Range | 1 to 1200 |
| Units | seconds |
| Notes | This element is mandatory. |
| Introduced | 16.0.R4 |
| Platforms | All |

timeout number

| | |
|----------|---|
| Synopsis | RIP timeout timer |
| Context | configure service vprn <i>string</i> ripng group <i>string</i> neighbor reference timers timeout <i>number</i> |

| | |
|-------------|--|
| Tree | timeout |
| Description | This command specifies the RIP timeout timer. If a route is not updated by the time the timer expires, the route is declared invalid, but the route is maintained in the RIP database. |
| Range | 1 to 1200 |
| Units | seconds |
| Notes | This element is mandatory. |
| Introduced | 16.0.R4 |
| Platforms | All |

update *number*

| | |
|------------|---|
| Synopsis | Timer that controls the frequency of updates |
| Context | configure service vprn <i>string</i> ripng group <i>string</i> neighbor reference timers update number |
| Tree | update |
| Range | 1 to 600 |
| Units | seconds |
| Notes | This element is mandatory. |
| Introduced | 16.0.R4 |
| Platforms | All |

unicast-address [[address](#)] *string*

| | |
|------------|---|
| Synopsis | Add a list entry for unicast-address |
| Context | configure service vprn <i>string</i> ripng group <i>string</i> neighbor reference unicast-address string |
| Tree | unicast-address |
| Introduced | 16.0.R4 |
| Platforms | All |

[address] *string*

| | |
|----------|---|
| Synopsis | Unicast IPv6 address for the neighbor |
| Context | configure service vprn <i>string</i> ripng group <i>string</i> neighbor reference unicast-address string |

| | |
|------------|-------------------------------------|
| Tree | unicast-address |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R4 |
| Platforms | All |

preference *number*

| | |
|------------|--|
| Synopsis | Route preference |
| Context | configure service vprn <i>string</i> ripng group <i>string</i> preference <i>number</i> |
| Tree | preference |
| Range | 1 to 255 |
| Introduced | 16.0.R4 |
| Platforms | All |

receive *keyword*

| | |
|------------|--|
| Synopsis | Accepted version on received packets |
| Context | configure service vprn <i>string</i> ripng group <i>string</i> receive <i>keyword</i> |
| Tree | receive |
| Options | none, ripng |
| Introduced | 16.0.R4 |
| Platforms | All |

send *keyword*

| | |
|------------|---|
| Synopsis | RIPng version and method used to send RIPng updates |
| Context | configure service vprn <i>string</i> ripng group <i>string</i> send <i>keyword</i> |
| Tree | send |
| Options | none, ripng |
| Introduced | 16.0.R4 |
| Platforms | All |

split-horizon *boolean*

| | |
|----------|---|
| Synopsis | Enable split horizon and poison reverse |
|----------|---|

| | |
|-------------|---|
| Context | configure service vprn <i>string ripng group string split-horizon boolean</i> |
| Tree | split-horizon |
| Description | <p>When configured to true, this command enables the use of split horizon with poison reverse. Split-horizon with poison reverse means that routes learned from a neighbor through a given interface are advertised in updates out of the same interface but with a metric of 16 (infinity).</p> <p>When configured to false, this command enables split horizon without poison reverse. This allows the routes to be re-advertised on interfaces other than the interface that learned the route, with the advertised metric equaling an increment of the metric-in value.</p> |
| Introduced | 16.0.R4 |
| Platforms | All |

timers

| | |
|------------|---|
| Synopsis | Enable the timers context |
| Context | configure service vprn <i>string ripng group string timers</i> |
| Tree | timers |
| Introduced | 16.0.R4 |
| Platforms | All |

flush number

| | |
|-------------|--|
| Synopsis | RIP flush timer |
| Context | configure service vprn <i>string ripng group string timers flush number</i> |
| Tree | flush |
| Description | This command specifies the time a route is maintained in the RIP database after it has been declared invalid. When the timer expires, the route is flushed from the RIP database completely. |
| Range | 1 to 1200 |
| Units | seconds |
| Notes | This element is mandatory. |
| Introduced | 16.0.R4 |
| Platforms | All |

timeout *number*

| | |
|-------------|--|
| Synopsis | RIP timeout timer |
| Context | configure service vprn <i>string</i> ripng group <i>string</i> timers timeout <i>number</i> |
| Tree | timeout |
| Description | This command specifies the RIP timeout timer. If a route is not updated by the time the timer expires, the route is declared invalid, but the route is maintained in the RIP database. |
| Range | 1 to 1200 |
| Units | seconds |
| Notes | This element is mandatory. |
| Introduced | 16.0.R4 |
| Platforms | All |

update *number*

| | |
|------------|---|
| Synopsis | Timer that controls the frequency of updates |
| Context | configure service vprn <i>string</i> ripng group <i>string</i> timers update <i>number</i> |
| Tree | update |
| Range | 1 to 600 |
| Units | seconds |
| Notes | This element is mandatory. |
| Introduced | 16.0.R4 |
| Platforms | All |

import-policy *reference*

| | |
|----------------|--|
| Synopsis | Import policies to decide routes for routing table |
| Context | configure service vprn <i>string</i> ripng import-policy <i>reference</i> |
| Tree | import-policy |
| Reference | configure policy-options policy-statement <i>string</i> |
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R4 |
| Platforms | All |

message-size *number*

| | |
|------------|---|
| Synopsis | Maximum number of routes in the message |
| Context | configure service vprn <i>string</i> ripng message-size <i>number</i> |
| Tree | message-size |
| Range | 25 to 255 |
| Default | 25 |
| Introduced | 16.0.R4 |
| Platforms | All |

metric-in *number*

| | |
|------------|--|
| Synopsis | Metric added to routes received from the neighbor |
| Context | configure service vprn <i>string</i> ripng metric-in <i>number</i> |
| Tree | metric-in |
| Range | 1 to 16 |
| Default | 1 |
| Introduced | 16.0.R4 |
| Platforms | All |

metric-out *number*

| | |
|------------|---|
| Synopsis | Metric added to routes exported into RIPng |
| Context | configure service vprn <i>string</i> ripng metric-out <i>number</i> |
| Tree | metric-out |
| Range | 1 to 16 |
| Default | 1 |
| Introduced | 16.0.R4 |
| Platforms | All |

preference *number*

| | |

| | |
|----------|---------------------|
| Synopsis | SRv6 function value |
|----------|---------------------|

| | |
|-------------|--|
| Context | configure service vprn <i>string</i> segment-routing-v6 <i>number</i> micro-segment-locator <i>reference</i> function udt46 <i>value</i> <i>number</i> |
| Tree | value |
| Description | This command assigns the optional static function value for the routes in the VPRN, VPLS, or Epipe instance.

When unconfigured, the system allocates a value dynamically. |
| Range | 1 to 1048575 |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

udt6

| | |
|-------------|---|
| Synopsis | Enable the udt6 context |
| Context | configure service vprn <i>string</i> segment-routing-v6 <i>number</i> micro-segment-locator <i>reference</i> function udt6 |
| Tree | udt6 |
| Description | Commands in this context configure the SRv6 uDT6 behavior and the function value that is associated with the SRv6 instance in the service. When configured, decapsulation and table lookup for IPv6 prefixes occur in the VPRN service. |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

value *number*

| | |
|-------------|---|
| Synopsis | SRv6 function value |
| Context | configure service vprn <i>string</i> segment-routing-v6 <i>number</i> micro-segment-locator <i>reference</i> function udt6 <i>value</i> <i>number</i> |
| Tree | value |
| Description | This command assigns the optional static function value for the routes in the VPRN, VPLS, or Epipe instance.

When unconfigured, the system allocates a value dynamically. |
| Range | 1 to 1048575 |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

selective-fib *boolean*

| | |
|------------|---|
| Synopsis | Enable selective FIB |
| Context | configure service vprn <i>string</i> selective-fib <i>boolean</i> |
| Tree | selective-fib |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

service-id *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Service ID |
| Context | configure service vprn <i>string</i> service-id <i>number</i> |
| Tree | service-id |
| Range | 1 to 2147483647 |
| Introduced | 16.0.R1 |
| Platforms | All |

sfm-overload

| | |
|------------|--|
| Synopsis | Enable the sfm-overload context |
| Context | configure service vprn <i>string</i> sfm-overload |
| Tree | sfm-overload |
| Introduced | 16.0.R2 |
| Platforms | 7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s, 7750 SR-14s, 7950 XRS, VSR |

holdoff-time *number*

| | |
|----------|---|
| Synopsis | Delay in detecting SFM failures and setting overload |
| Context | configure service vprn <i>string</i> sfm-overload holdoff-time <i>number</i> |
| Tree | holdoff-time |
| Range | 1 to 600 |

| | |
|------------|--|
| Units | seconds |
| Introduced | 16.0.R2 |
| Platforms | 7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, 7750 SR-2s, 7750 SR-2se, 7750 SR-7s, 7750 SR-14s, 7950 XRS, VSR |

sgt-qos

| | |
|------------|---|
| Synopsis | Enter the sgt-qos context |
| Context | configure service vprn <i>string</i> sgt-qos |
| Tree | sgt-qos |
| Introduced | 16.0.R1 |
| Platforms | All |

dot1p

| | |
|------------|---|
| Synopsis | Enter the dot1p context |
| Context | configure service vprn <i>string</i> sgt-qos dot1p |

| Options | be, l2, af, l1, h2, ef, h1, nc |
| Introduced | 16.0.R2 |
| Platforms | All |

snmp

| | |
|------------|---|
| Synopsis | Enter the snmp context |
| Context | configure service vprn string snmp |
| Tree | snmp |
| Introduced | 16.0.R5 |
| Platforms | All |

access boolean

| | |
|------------|--|
| Synopsis | Enable SNMP access for the VPRN service |
| Context | configure service vprn string snmp access boolean |
| Tree | access |
| Default | false |
| Introduced | 16.0.R5 |
| Platforms | All |

community [**community-string**] *string*

| | |
|-------------|--|
| Synopsis | Enter the community list instance |
| Context | configure service vprn string snmp community string |
| Tree | community |
| Description | <p>Commands in this context set the SNMP community names to be used with the associated VPRN instance. These VPRN community names are used to associate SNMP v1/v2c requests with a particular VPRN context and to return a reply that contains VPRN-specific data or limit SNMP access to data in a specific VPRN instance.</p> <p>VPRN SNMP communities configured with an access permission of 'r' are automatically associated with the default access group "snmp-vprn-ro" and the "vprn-view" view (read only). VPRN SNMP communities configured with an access permission of 'rw' are automatically associated with the default access group "snmp-vprn" and the "vprn-view" view (read/write).</p> <p>The community in an SNMP v1/v2 request determines the SNMP context (that is, the VPRN number for accessing SNMP tables) and not the VPRN of the incoming interface on which the request was received. For example, when an SNMP request arrives on VPRN 5 interface "ringo" with a destination IP address equal to the "ringo" interface, but the community in the SNMP request is the community configured against VPRN 101, the SNMP request is processed using the VPRN 101 context. (the response contains information about VPRN 101). Nokia recommends avoiding the use of a simple series of VPRN SNMP community values that are similar to each other (for example, avoid my-vprncomm-1, my-vprn-comm-2, and so on).</p> |
| Introduced | 16.0.R5 |
| Platforms | All |

[community-string] *string*

| | |
|---------------|--|
| Synopsis | SNMP v1/v2c community name associated with the VPRN |
| Context | configure service vprn string snmp community string |
| Tree | community |
| String Length | 1 to 114 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R5 |
| Platforms | All |

hold-down

| | |
|------------|---|
| Synopsis | Enable the hold-down context |
| Context | configure service vprn <i>string</i> static-routes hold-down |
| Tree | hold-down |
| Introduced | 16.0.R1 |
| Platforms | All |

initial *number*

| | |
|-------------|--|
| Synopsis | Value for the initial hold-down time |
| Context | configure service vprn <i>string</i> static-routes hold-down initial <i>number</i> |
| Tree | initial |
| Description | This command specifies the initial value of the hold-down time globally for static routes in the system.

When a static route is ready to become active, it remains inactive for the hold-down time before activating the static-route. If, during this hold-down period, the static route becomes inactive again because of factors such as interface failure, the hold-down timer is reset, effectively postponing the activation of the route until the next opportunity. |
| Range | 1 to 65535 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

max-value *number*

| | |
|-------------|---|
| Synopsis | Maximum value of the hold-down time |
| Context | configure service vprn <i>string</i> static-routes hold-down max-value <i>number</i> |
| Tree | max-value |
| Description | This command specifies the maximum value of the hold-down time globally for static routes in the system. |
| Range | 1 to 65535 |

| | |
|------------|----------------------------|
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

multiplier *number*

| | |
|-------------|---|
| Synopsis | Multiplier of the previous hold-down time |
| Context | configure service vprn <i>string</i> static-routes hold-down multiplier <i>number</i> |
| Tree | multiplier |
| Description | This command specifies the multiplier value by which the previous hold-down time is multiplied to calculate the new one. This value applies globally for static routes in the system. |
| Range | 1 to 10 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

route [**ip-prefix**] (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword*

| | |
|------------|---|
| Synopsis | Enter the route list instance |
| Context | configure service vprn <i>string</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> |
| Tree | route |
| Introduced | 16.0.R1 |
| Platforms | All |

[ip-prefix] (*ipv4-prefix* | *ipv6-prefix*)

| | |
|------------|---|
| Synopsis | IP prefix and prefix length for the static routes |
| Context | configure service vprn <i>string</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type <i>keyword</i> |
| Tree | route |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

route-type *keyword*

| | |
|------------|--|
| Synopsis | Static route type |
| Context | configure service vprn <i>string</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword |
| Tree | route |
| Options | unicast, multicast |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

backup-tag *number*

| | |
|-------------|---|
| Synopsis | Static route backup tag |
| Context | configure service vprn <i>string</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword backup-tag number |
| Tree | backup-tag |
| Description | <p>This command associates a 4-byte backup route tag with the static route when the backup next-hop functionality is activated. The tag value is used in route policies to control distribution of the static route into other protocols when the backup next-hop function is activated for the associated static route.</p> <p>The tag specified at this level of the static route causes the tag values that are configured under the next-hop, black-hole, and indirect contexts of the static route to be ignored.</p> |
| Range | 1 to 4294967295 |
| Introduced | 21.2.R1 |
| Platforms | All |

cpe-check [**address**] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

| | |
|-------------|---|
| Synopsis | Enter the cpe-check list instance |
| Context | configure service vprn <i>string</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword indirect (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) cpe-check (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) |
| Tree | cpe-check |
| Description | <p>When configured, this command enables the Customer Premises Equipment (CPE) check feature and specifies the IP address of the target CPE device.</p> <p>This option initiates a background ICMP ping test to the configured target IP address. The IP address can either be an IPv4 address for IPv4 static routes or an IPv6 address for IPv6 static routes. To avoid possible circular references, the target IP address cannot exist in the same subnet as the static route subnet. This command is mutually exclusive with BFD support on a specific static route.</p> |

Note: A node that is sourcing CPE-check packets waits an additional full interval before taking action, which gives the CPE time to respond. For example, with a drop-count of 3 and an interval of 1s, three CPE-check packets are sent out and the node waits for the duration of another interval before acting on the loss. Failure declaration may take extra time depending on the load, interval, and other factors. In line with multitasking, multi-priority operating principles of the node, and the relative priority of **cpe-ping**, the node paces these minor events.

| Tree | cpe-check |

Description When configured, this command enables the Customer Premises Equipment (CPE) check feature and specifies the IP address of the target CPE device.

This option initiates a background ICMP ping test to the configured target IP address. The IP address can either be an IPv4 address for IPv4 static routes or an IPv6 address for IPv6 static routes. To avoid possible circular references, the target IP address cannot exist in the same subnet as the static route subnet. This command is mutually exclusive with BFD support on a specific static route.

Note: A node that is sourcing CPE-check packets waits an additional full interval before taking action, which gives the CPE time to respond. For example, with a drop-count of 3 and an interval of 1s, three CPE-check packets are sent out and the node waits for the duration of another interval before acting on the loss. Failure declaration may take extra time depending on the load, interval, and other factors. In line with multitasking, multi-priority operating principles of the node, and the relative priority of **cpe-ping**, the node paces these minor events.

backup-next-hop

| | |
|-------------|---|
| Synopsis | Enter the backup-next-hop context |
| Context | configure service vprn <i>string static-routes route (ipv4-prefix ipv6-prefix) route-type keyword next-hop (ipv4-address-with-zone ipv6-address-with-zone) backup-next-hop</i> |
| Tree | backup-next-hop |
| Description | Commands in this context configure static route entry fast failover. |
| Introduced | 21.2.R1 |
| Platforms | All |

address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

| | |
|-------------|---|
| Synopsis | Backup next-hop IP address |
| Context | configure service vprn <i>string</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) backup-next-hop address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) |
| Tree | address |
| Description | <p>This command specifies the backup IP forwarding address that is used for static route Fast ReRoute (FRR). The configured address, if reachable, acts as pre-installed backup forwarding information that can be used when the primary IP next-hop suddenly fails.</p> <p>The configured backup next-hop IP address can be directly or indirectly connected (using an IGP or tunnel) to the node. The backup next-hop forwarding information or the Next-hop Label Forwarding Entry (NHLFE) tunnel forwarding information from the IP Routing Table Manager (RTM) is used to preconfigure an IP fast-reroute backup path.</p> <p>One backup next-hop address can protect a single primary static route entry next-hop address without ECMP and it is only activated when the primary next-hop has no active ECMP.</p> <p>The configured IP address can be either on the network or the access side.</p> |
| Introduced | 21.2.R1 |
| Platforms | All |

bfd-liveness *boolean*

| | |
|------------|---|
| Synopsis | Use Bidirectional Forwarding Detection on this static route |
| Context | configure service vprn <i>string</i> static-routes route (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-type keyword next-hop (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) bfd-liveness <i>boolean</i> |

| Synopsis | Allow BRGs that have been pre-authenticated |
| Context | configure <i>service vprn string subscriber-interface string group-interface string brg authenticated-brg-only boolean</i> |
| Tree | <i>authenticated-brg-only</i> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

default-brg-profile *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Default BRG profile for new BRGs |
| Context | configure <i>service vprn string subscriber-interface string group-interface string brg default-brg-profile reference</i> |
| Tree | <i>default-brg-profile</i> |
| Reference | configure <i>subscriber-mgmt vrgw brg-profile string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

cflowd-parameters

| | |
|------------|--|
| Synopsis | Enter the cflowd-parameters context |
| Context | configure <i>service vprn string subscriber-interface string group-interface string cflowd-parameters</i> |
| Tree | <i>cflowd-parameters</i> |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sampling [[sampling-type](#)] *keyword*

| | |
|------------|--|
| Synopsis | Enter the sampling list instance |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> cflowd-parameters sampling <i>keyword</i> |
| Tree | sampling |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

[sampling-type] *keyword*

| | |
|-------------|--|
| Synopsis | Traffic sampling type |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> cflowd-parameters sampling <i>keyword</i> |
| Tree | sampling |
| Description | This command configures the type of traffic to be sampled on the associated IP interface. |
| Options | unicast, multicast, both |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

direction *keyword*

| | |
|-------------|---|
| Synopsis | Direction of traffic for cflowd sampling |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> cflowd-parameters sampling <i>keyword</i> direction <i>keyword</i> |
| Tree | direction |
| Description | This command configures the direction in which sampling occurs on the associated IP interfaces. |
| Options | ingress-only, egress-only, both |
| Default | ingress-only |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sample-profile (*keyword | number*)

| | |
|-------------|--|
| Synopsis | Sample profile ID |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> cflowd-parameters sampling <i>keyword</i> sample-profile (<i>keyword number</i>) |
| Tree | sample-profile |
| Description | This command defines the sampling rate profile associated with this interface. |
| Max. Range | 0 to 4294967295 |
| Options | 1 |
| Introduced | 19.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

type *keyword*

| | |
|-------------|---|
| Synopsis | Type of cflowd analysis |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> cflowd-parameters sampling <i>keyword</i> type <i>keyword</i> |
| Tree | type |
| Description | This command configures the cflowd sampling type on the associated IP interface. |
| Options | acl, interface |
| Notes | This element is mandatory. |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

data-trigger

| | |
|------------|---|
| Synopsis | Enter the data-trigger context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> data-trigger |
| Tree | data-trigger |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|----------|--|
| Synopsis | Administrative state of data-triggered host creation |
|----------|--|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> data-trigger admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

description *string*

| | |
|---------------|---|
| Synopsis | Text description |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> description <i>string</i> |
| Tree | description |
| String Length | 1 to 255 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

dynamic-routes-track-srrp

| | |
|------------|---|
| Synopsis | Enable the dynamic-routes-track-srrp context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> dynamic-routes-track-srrp |
| Tree | dynamic-routes-track-srrp |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

hold-time *number*

| | |
|------------|---|
| Synopsis | Time before route state updated after SRRP transition |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> dynamic-routes-track-srrp hold-time <i>number</i> |
| Tree | hold-time |
| Range | 1 to 50 |
| Units | deciseconds |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

gtp-parameters

Synopsis Enter the **gtp-parameters** context

Context **configure service vprn** *string* **subscriber-interface** *string* **group-interface** *string* **gtp-parameters**

Tree **gtp-parameters**

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis Administrative state of GTP access

Context **configure service vprn** *string* **subscriber-interface** *string* **group-interface** *string* **gtp-parameters admin-state** *keyword*

Tree **admin-state**

Options enable, disable

Default disable

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

fpe *reference*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis PE that provisions the GTP user interface

Context **configure service vprn** *string* **subscriber-interface** *string* **group-interface** *string* **gtp-parameters fpe** *reference*

Tree **fpe**

Reference **configure fwd-path-ext fpe** *number*

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

gx-policy *reference*

| | |
|------------|---|
| Synopsis | Diameter application policy |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> gx-policy <i>reference</i> |
| Tree | gx-policy |
| Reference | configure subscriber-mgmt diameter-gx-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ingress

| | |
|------------|--|
| Synopsis | Enter the ingress context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ingress |
| Tree | ingress |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

policy-accounting *reference*

| | |
|------------|---|
| Synopsis | Ingress policy accounting template name |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ingress policy-accounting <i>reference</i> |
| Tree | policy-accounting |
| Reference | configure routing-options policy-accounting policy-acct-template <i>string</i> |
| Introduced | 19.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s |

ingress-stats *boolean*

| | |
|------------|---|
| Synopsis | Collect ingress interface statistics |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ingress-stats <i>boolean</i> |
| Tree | ingress-stats |
| Default | false |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ip-mtu *number*

Synopsis Interface IP MTU

Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* **ip-mtu** *number*

Tree [ip-mtu](#)

Range 512 to 9786

Units bytes

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipoe-linking

Synopsis Enter the **ipoe-linking** context

Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* **ipoe-linking**

Tree [ipoe-linking](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis Administrative state of IPoE host linking

Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* **ipoe-linking** **admin-state** *keyword*

Tree [admin-state](#)

Options enable, disable

Default disable

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

gratuitous-router-advertisement *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Send unsolicited router advertisement after DHCP setup |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-linking gratuitous-router-advertisement <i>boolean</i> |
| Tree | gratuitous-router-advertisement |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

shared-circuit-id *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Enable circuit ID in DHCPv4 Option82 to validate DHCPv6 |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-linking shared-circuit-id <i>boolean</i> |
| Tree | shared-circuit-id |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipoe-session

| | |
|------------|---|
| Synopsis | Enter the ipoe-session context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session |
| Tree | ipoe-session |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of IPoE session management |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

description *string*

| | |
|---------------|---|
| Synopsis | Text description |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session description <i>string</i> |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

force-auth

| | |
|------------|--|
| Synopsis | Enter the force-auth context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session force-auth |
| Tree | force-auth |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

cid-change *boolean*

| | |
|------------|---|
| Synopsis | Ignore min-auth-interval when circuit ID changed |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session force-auth cid-change <i>boolean</i> |
| Tree | cid-change |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

rid-change *boolean*

| | |
|------------|--|
| Synopsis | Ignore min-auth-interval when remote ID changed |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session force-auth rid-change <i>boolean</i> |
| Tree | rid-change |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipoe-session-policy *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | IPoE Session policy to be used for new sessions |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session ipoe-session-policy <i>reference</i> |
| Tree | ipoe-session-policy |
| Reference | configure subscriber-mgmt ipoe-session-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

min-auth-interval (*keyword* | *number*)

| | |
|------------|--|
| Synopsis | Minimum time between two authentication attempts |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session min-auth-interval (<i>keyword</i> <i>number</i>) |
| Tree | min-auth-interval |
| Range | 1 to 32000000 |
| Units | seconds |
| Options | infinite, always-reauthenticate |
| Default | infinite |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

radius-session-timeout *keyword*

| | |
|------------|---|
| Synopsis | Session timeout attribute to be interpreted |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session radius-session-timeout <i>keyword</i> |
| Tree | radius-session-timeout |
| Options | absolute, ignore, backwards-compatible |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sap-session-limit *number*

| | |
|------------|---|
| Synopsis | Maximum number of sessions per SAP |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session sap-session-limit <i>number</i> |
| Tree | sap-session-limit |
| Range | 1 to 131071 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

session-limit *number*

| | |
|------------|---|
| Synopsis | Maximum number of sessions on this group interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session session-limit <i>number</i> |
| Tree | session-limit |
| Range | 1 to 500000 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

stateless-redundancy *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|----------|---|
| Synopsis | Remove IPoE sessions when the system becomes stand-by in a stateless multi-chassis redundancy setup |
|----------|---|

| | |
|------------|--|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session stateless-redundancy <i>boolean</i> |
| Tree | stateless-redundancy |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

user-db *reference*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Local user database for IPoE session authentication |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session user-db <i>reference</i> |
| Tree | user-db |
| Reference | configure subscriber-mgmt local-user-db <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipv4

| | |
|------------|--|
| Synopsis | Enter the ipv4 context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 |
| Tree | ipv4 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

arp-host

| | |
|------------|---|
| Synopsis | Enter the arp-host context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 arp-host |
| Tree | arp-host |
| Introduced | 16.0.R6 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of ARP hosts |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 arp-host admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Introduced | 16.0.R6 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

host-limit *number*

| | |
|------------|--|
| Synopsis | Maximum number of ARP hosts |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 arp-host host-limit <i>number</i> |
| Tree | host-limit |
| Range | 1 to 524287 |
| Introduced | 16.0.R6 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

min-auth-interval *number*

| | |
|------------|---|
| Synopsis | Minimum authentication interval |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 arp-host min-auth-interval <i>number</i> |
| Tree | min-auth-interval |
| Range | 1 to 6000 |
| Units | minutes |
| Default | 15 |
| Introduced | 16.0.R6 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sap-host-limit *number*

| | |
|----------|-------------------------------------|
| Synopsis | Maximum number of ARP hosts per SAP |
|----------|-------------------------------------|

| | |
|------------|--|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 arp-host sap-host-limit <i>number</i> |
| Tree | sap-host-limit |
| Range | 1 to 131071 |
| Default | 1 |
| Introduced | 16.0.R6 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

bfd

| | |
|-------------|---|
| Synopsis | Enter the bfd context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 bfd |
| Tree | bfd |
| Description | Commands in this context configure the attributes of bidirectional forwarding detection (BFD) sessions that control the state of ESM dynamic BGP peers. |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of BFD sessions |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 bfd admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

echo-receive *number*

| | |
|----------|---|
| Synopsis | Minimum echo interval over this interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 bfd echo-receive <i>number</i> |
| Tree | echo-receive |
| Range | 100 to 100000 |

| | |
|------------|---|
| Units | milliseconds |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

multiplier *number*

| | |
|-------------|---|
| Synopsis | Number of consecutive BFD messages missed from the peer |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 bfd multiplier <i>number</i> |
| Tree | multiplier |
| Description | This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments. |
| Range | 1 to 20 |
| Default | 3 |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

receive *number*

| | |
|-------------|--|
| Synopsis | BFD receive interval over this interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 bfd receive <i>number</i> |
| Tree | receive |
| Description | This command specifies the receive interval for the BFD session.
On the 7750 SR, this command can only be configured to a value less than 100 when the type command is configured to cpm-np . |
| Range | 10 to 100000 |
| Units | milliseconds |
| Default | 100 |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

transmit-interval *number*

| | |
|----------|---|
| Synopsis | BFD transmit interval over this interface |
|----------|---|

| | |
|-------------|---|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 bfd transmit-interval <i>number</i> |
| Tree | transmit-interval |
| Description | This command configures the transmit intervals.
On the 7750 SR, this command can only be configured to a value less than 100 when the type command is configured to cpm-np . |
| Range | 10 to 100000 |
| Units | milliseconds |
| Default | 100 |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

type *keyword*

| | |
|-------------|---|
| Synopsis | Local termination point for the BFD session |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 bfd type <i>keyword</i> |
| Tree | type |
| Description | This command sets the local termination point for the BFD session to allow for fast timers down to 10 ms granularity.
The options to specify where the BFD session runs are: <ul style="list-style-type: none"> • auto (default) – the system chooses and uses the line card CPU only for single-hop BFD sessions with timer intervals equal to or greater than 100ms. All others are placed on the cpm-np. • cpm-np – BFD session runs on the FP complex associated with the CPM. This is either the FP on the CPM or the one elected on smaller systems. • fp – BFD session runs on the line card CPU. This option can only be used for single-hop BFD sessions with timers equal to or greater than 100ms. |
| Options | cpm-np, auto, fp |
| Default | auto |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

dhcp

| | |
|----------|---|
| Synopsis | Enter the dhcp context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp |

| | |
|------------|---|
| Tree | dhcp |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of DHCP |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

client-applications

| | |
|------------|--|
| Synopsis | Enter the client-applications context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp client-applications |
| Tree | client-applications |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

dhcp *boolean*

| | |
|------------|--|
| Synopsis | Enable IPoE clients to use DHCP relay or proxy server |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp client-applications dhcp <i>boolean</i> |
| Tree | dhcp |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ppp *boolean*

| | |
|----------|--|
| Synopsis | Enable PPPoE clients to use DHCP relay or proxy server |
|----------|--|

| | |
|------------|--|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp client-applications ppp <i>boolean</i> |
| Tree | ppp |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

description *string*

| | |
|---------------|---|
| Synopsis | Text description |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp description <i>string</i> |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

filter *reference*

| | |
|------------|---|
| Synopsis | DHCP filter ID for the group interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp filter <i>reference</i> |
| Tree | filter |
| Reference | configure filter dhcp-filter <i>number</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

gi-address *string*

| | |
|-------------|---|
| Synopsis | GI address for the DHCP relay |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp gi-address <i>string</i> |
| Tree | gi-address |
| Description | This command configures the GI address to distinguish between the different subscriber interfaces (and potentially group interfaces) defined when the router functions as a DHCP relay. |

By default, the GI address used in the relayed DHCP packet is the primary IP address of a normal IES interface. Specifying the GI address allows the user to choose a secondary address. For group interfaces, a GI address must be specified under the group interface DHCP context or subscriber interface DHCP context for DHCP to function.

| | |
|------------|---|
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

lease-populate

| | |
|------------|--|
| Synopsis | Enter the lease-populate context |
| Context | configure service vprn string subscriber-interface string group-interface string ipv4 dhcp lease-populate |
| Tree | lease-populate |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

I2-header

| | |
|------------|--|
| Synopsis | Enable the I2-header context |
| Context | configure service vprn string subscriber-interface string group-interface string ipv4 dhcp lease-populate I2-header |
| Tree | I2-header |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

mac string

| | |
|------------|---|
| Synopsis | IEEE address used in anti-spoofing entries for the SAP |
| Context | configure service vprn string subscriber-interface string group-interface string ipv4 dhcp lease-populate I2-header mac string |
| Tree | mac |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

max-leases number

| | |
|----------|---------------------------------|
| Synopsis | Maximum number of DHCPv4 leases |
|----------|---------------------------------|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp lease-populate max-leases <i>number</i> |
| Tree | max-leases |
| Range | 1 to 511999 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

match-circuit-id *boolean*

| | |
|------------|---|
| Synopsis | Enable Option 82 circuit ID on relayed DHCP packets |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp match-circuit-id <i>boolean</i> |
| Tree | match-circuit-id |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

offer-selection

| | |
|------------|---|
| Synopsis | Enter the offer-selection context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp offer-selection |
| Tree | offer-selection |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

client-mac

| | |
|------------|--|
| Synopsis | Enter the client-mac context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp offer-selection client-mac |
| Tree | client-mac |
| Notes | The following elements are part of a choice: client-mac or server . |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

discover-delay *number*

| | |
|-------------|---|
| Synopsis | Delay before sending DHCP Discover messages |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp offer-selection client-mac discover-delay <i>number</i> |
| Tree | discover-delay |
| Description | This command configures the time to delay sending DHCP Discover messages from the specified MAC addresses. |
| Range | 1 to 100 |
| Units | deciseconds |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

mac-address *keyword*

| | |
|-------------|---|
| Synopsis | Designated client MAC addresses for Offer selection |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp offer-selection client-mac mac-address <i>keyword</i> |
| Tree | mac-address |
| Description | This command specifies the client MAC addresses for which the Discover delay applies. |
| Options | odd, even |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

discover-delay *number*

| | |
|-------------|---|
| Synopsis | Delay before sending DHCP Discover messages |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp offer-selection discover-delay <i>number</i> |
| Tree | discover-delay |
| Description | This command configures the time to delay sending DHCP Discover messages. The delay is applied to all DHCP Discover messages for which no per DHCP server or per client MAC delay is configured. |
| Range | 1 to 100 |
| Units | deciseconds |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

server [*ipv4-address*] *string*

| | |
|----------------|---|
| Synopsis | Enter the server list instance |
| Context | configure service vpn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp offer-selection server <i>string</i> |
| Tree | server |
| Max. Instances | 8 |
| Notes | The following elements are part of a choice: client-mac or server . |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

[ipv4-address] *string*

| | |
|------------|---|
| Synopsis | IP address of the DHCP server |
| Context | configure service vpn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp offer-selection server <i>string</i> |
| Tree | server |
| Notes | This element is part of a list key. |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

discover-delay *number*

| | |
|-------------|---|
| Synopsis | Delay before sending DHCP Discover messages |
| Context | configure service vpn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp offer-selection server <i>string</i> discover-delay <i>number</i> |
| Tree | discover-delay |
| Description | This command configures the time to delay DHCP Discover messages sent to the server. |
| Range | 1 to 100 |
| Units | deciseconds |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

option-82

| | |
|-------------|---|
| Synopsis | Enter the option-82 context |
| Context | configure service vprn string subscriber-interface string group-interface string ipv4 dhcp option-82 |
| Tree | option-82 |
| Description | Commands in this context configure the processing required when the router receives a DHCP request that already has an Option 82 field in the packet. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

action keyword

| | |
|------------|--|
| Synopsis | Action to take with received DHCP Option 82 |
| Context | configure service vprn string subscriber-interface string group-interface string ipv4 dhcp option-82 action keyword |
| Tree | action |
| Options | replace, drop, keep |
| Default | keep |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

circuit-id

| | |
|------------|--|
| Synopsis | Enter the circuit-id context |
| Context | configure service vprn string subscriber-interface string group-interface string ipv4 dhcp option-82 circuit-id |
| Tree | circuit-id |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ascii-tuple

| | |
|----------|--|
| Synopsis | Use the ASCII-encoded tuple for the circuit ID |
| Context | configure service vprn string subscriber-interface string group-interface string ipv4 dhcp option-82 circuit-id ascii-tuple |
| Tree | ascii-tuple |

| | |
|------------|---|
| Notes | The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ifindex

| | |
|------------|---|
| Synopsis | Use the interface index for the circuit ID |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 circuit-id ifindex |
| Tree | ifindex |
| Notes | The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

none

| | |
|------------|--|
| Synopsis | Do not include the circuit ID |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 circuit-id none |
| Tree | none |
| Notes | The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sap-id

| | |
|------------|--|
| Synopsis | Use the SAP ID |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 circuit-id sap-id |
| Tree | sap-id |
| Notes | The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

vlan-ascii-tuple

| | |
|-------------|---|
| Synopsis | Include the VLAN ID and dot1p bits in the ASCII tuple |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 circuit-id vlan-ascii-tuple |
| Tree | vlan-ascii-tuple |
| Description | When configured, the router includes the VLAN ID and dot1p bits with the ASCII-tuple information. This only occurs on dot1q and QinQ-encapsulated ports. When the Option 82 bits are stripped, dot1p bits are copied to the Ethernet header of the outgoing packet.

When unconfigured, the router leaves the circuit ID sub-option of the DHCP packet empty. |
| Notes | The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

remote-id

| | |
|-------------|--|
| Synopsis | Enter the remote-id context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 remote-id |
| Tree | remote-id |
| Description | Commands in this context configure the remote IP sub-option of the DHCP packet with the identity of the remote host end (typically the DHCP client). |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ascii-string *string*

| | |
|---------------|---|
| Synopsis | User-defined ASCII string for the remote ID |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 remote-id ascii-string <i>string</i> |
| Tree | ascii-string |
| String Length | 1 to 32 |
| Notes | The following elements are part of a choice: ascii-string , mac , or none . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

mac

| | |
|------------|---|
| Synopsis | Use the MAC address for the remote ID |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 remote-id mac |
| Tree | mac |
| Notes | The following elements are part of a choice: ascii-string , mac , or none . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

none

| | |
|------------|--|
| Synopsis | Do not include the remote ID |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 remote-id none |
| Tree | none |
| Notes | The following elements are part of a choice: ascii-string , mac , or none . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

vendor-specific-option

| | |
|-------------|---|
| Synopsis | Enter the vendor-specific-option context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 vendor-specific-option |
| Tree | vendor-specific-option |
| Description | Commands in this context configure the Nokia Vendor-Specific Option (VSO) of the DHCP packet. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

client-mac-address *boolean*

| | |
|----------|---|

| Tree | <i>admin-state</i> |
| Options | enable, disable |
| Default | disable |

| | |
|------------|---|
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

emulated-server *string*

| | |
|------------|---|
| Synopsis | IP address used as DHCP server address in SAP context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp proxy-server emulated-server <i>string</i> |
| Tree | emulated-server |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

lease-time

| | |
|------------|--|
| Synopsis | Enter the lease-time context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp proxy-server lease-time |
| Tree | lease-time |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

radius-override *boolean*

| | |
|------------|---|
| Synopsis | Use lease time information provided by RADIUS server |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp proxy-server lease-time radius-override <i>boolean</i> |
| Tree | radius-override |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

value *number*

| | |
|----------|--|
| Synopsis | DHCP lease time |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp proxy-server lease-time value <i>number</i> |
| Tree | value |

| | |
|------------|---|
| Range | 300 to 315446399 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

python-policy *reference*

| | |
|-------------|--|
| Synopsis | Python policy name |
| Context | configure service vpn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp python-policy <i>reference</i> |
| Tree | python-policy |
| Description | This command associates a Python policy name with the interface. |
| Reference | configure python python-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

relay-proxy

| | |
|------------|---|
| Synopsis | Enable the relay-proxy context |
| Context | configure service vpn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp relay-proxy |
| Tree | relay-proxy |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

release-update-src-ip *boolean*

| | |
|------------|--|
| Synopsis | Update the source IP address of a DHCP RELEASE message |
| Context | configure service vpn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp relay-proxy release-update-src-ip <i>boolean</i> |
| Tree | release-update-src-ip |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

siaddr-override *string*

| | |
|------------|---|
| Synopsis | DHCP server IP address for address hiding function |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp relay-proxy siaddr-override <i>string</i> |
| Tree | siaddr-override |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

release-include-gi-address *boolean*

| | |
|------------|--|
| Synopsis | Include gateway IP address in DHCP Release messages |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp release-include-gi-address <i>boolean</i> |
| Tree | release-include-gi-address |
| Default | false |
| Introduced | 21.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

server *string*

| | |
|----------------|--|
| Synopsis | IP addresses for DHCP server requests |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp server <i>string</i> |
| Tree | server |
| Description | This command configures a list of servers that this interface forwards requests to.
The operator can enter the list of servers as either IP addresses or fully qualified domain names. The operator must specify at least one server specified for DHCP relay to work. If there are multiple servers, the system forwards the request to all the servers in the list. |
| Max. Instances | 8 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

src-ip-addr *keyword*

| | |
|----------|--|
| Synopsis | Type of source address to use for DHCP relay |
|----------|--|

| | |
|------------|---|
| Context | configure service vpn <i>string subscriber-interface string group-interface string ipv4 dhcp src-ip-addr keyword</i> |
| Tree | src-ip-addr |
| Options | auto, gi-address |
| Default | auto |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

trusted *boolean*

| | |
|-------------|---|
| Synopsis | Relay untrusted packets |
| Context | configure service vpn <i>string subscriber-interface string group-interface string ipv4 dhcp trusted boolean</i> |
| Tree | trusted |
| Description | <p>When configured to true, the router enables the trusted mode on the interface. When enabled, the relay agent changes the existing GI address (of the request) to the ingress interface, and forwards the request.</p> <p>A DHCP request that contains a GI address of 0.0.0.0 and an Option 82 field in the packet is discarded unless it arrives on a trusted circuit.</p> <p>This behavior only applies if the Relay Agent Information Option action is to keep the existing information. When the Option 82 field is replaced by the relay agent, the original Option 82 information is lost, and there is no reason to enable the trusted option.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

user-db *reference*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Local user database for authentication |
| Context | configure service vpn <i>string subscriber-interface string group-interface string ipv4 dhcp user-db reference</i> |
| Tree | user-db |
| Reference | configure subscriber-mgmt local-user-db <i>string</i> |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

icmp

Synopsis Enter the **icmp** context

number *number*

| | |
|------------|--|
| Synopsis | Maximum number of ICMP redirect messages to send |
| Context | configure service vpn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 icmp redirects number <i>number</i> |
| Tree | number |
| Range | 10 to 1000 |
| Default | 100 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

seconds *number*

| | |
|----------|---|
| Synopsis | Time used to limit the number of ICMP redirect messages |
| Context | configure service vpn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 icmp redirects seconds <i>number</i> |
| Tree | seconds |
| Range | 1 to 60 |
| Units | seconds |

| | |
|------------|---|
| Default | 10 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ttl-expired

| | |
|-------------|---|
| Synopsis | Enter the ttl-expired context |
| Context | configure service vprn string subscriber-interface string group-interface string ipv4 icmp ttl-expired |
| Tree | ttl-expired |
| Description | Commands in this context configure the settings for ICMP TTL expired messages generated by the interface. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state keyword

| | |
|------------|---|
| Synopsis | Administrative state of sending TTL expired messages |
| Context | configure service vprn string subscriber-interface string group-interface string ipv4 icmp ttl-expired admin-state keyword |
| Tree | admin-state |
| Options | enable, disable |
| Default | enable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

number number

| | |
|------------|---|
| Synopsis | Maximum number of TTL expired messages to send |
| Context | configure service vprn string subscriber-interface string group-interface string ipv4 icmp ttl-expired number number |
| Tree | number |
| Range | 10 to 2000 |
| Default | 100 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

seconds *number*

| | |
|------------|--|
| Synopsis | Time used to limit the number of TTL expired messages |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 icmp ttl-expired seconds <i>number</i> |
| Tree | seconds |
| Range | 1 to 60 |
| Units | seconds |
| Default | 10 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

use-matching-address *boolean*

| | |
|-------------|--|
| Synopsis | Use the subscriber interface address as source address |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 icmp ttl-expired use-matching-address <i>boolean</i> |
| Tree | use-matching-address |
| Description | <p>When configured to true, the system uses a matching subscriber interface address as the source address of the ICMP TTL expired message.</p> <p>For matching to occur, the source address of the offending packet must be in the same subnet of the subscriber interface address.</p> <p>When configured to false, the system uses the first configured address.</p> |
| Default | false |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

unreachables

| | |
|-------------|---|
| Synopsis | Enter the unreachables context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 icmp unreachables |
| Tree | unreachables |
| Description | Commands in this context specify the settings for ICMP host and network destination unreachable messages generated by the interface. |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis Administrative state of sending unreachable messages

Context **configure service vprn** *string* **subscriber-interface** *string* **group-interface** *string* **ipv4 icmp unreachables admin-state** *keyword*

Tree **admin-state**

Options enable, disable

Default enable

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

number *number*

Synopsis Maximum number of unreachable messages to send

Context **configure service vprn** *string* **subscriber-interface** *string* **group-interface** *string* **ipv4 icmp unreachables number** *number*

Tree **number**

Range 10 to 2000

Default 100

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

seconds *number*

Synopsis Time to limit the number of ICMP unreachable messages

Context **configure service vprn** *string* **subscriber-interface** *string* **group-interface** *string* **ipv4 icmp unreachables seconds** *number*

Tree **seconds**

Range 1 to 60

Units seconds

Default 10

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ignore-df-bit *boolean*

| | |
|-------------|---|
| Synopsis | Ignore DF bit in the IPv4 header when fragmenting |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 ignore-df-bit <i>boolean</i> |
| Tree | ignore-df-bit |
| Description | When configured to true , fragmentation is applied according to the applicable egress MTU instead of the DF bit for frames egressing the WLAN-GW group. The DF bit is reset for frames that are fragmented.

When configured to false , the router fragments a packet larger than the MTU if the DF bit is set to 0 and drops the packet if the DF bit is set to 1. |
| Default | false |
| Introduced | 20.5.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

neighbor-discovery

| | |
|------------|--|
| Synopsis | Enter the neighbor-discovery context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 neighbor-discovery |
| Tree | neighbor-discovery |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

local-proxy-arp *boolean*

| | |
|-------------|---|
| Synopsis | Enable local proxy ARP on interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 neighbor-discovery local-proxy-arp <i>boolean</i> |
| Tree | local-proxy-arp |
| Description | When configured to true , the router enables local proxy ARP on the interface.

When configured to false , the router does not respond to ARP requests for addresses on the same subnet. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

populate *boolean*

| | |
|------------|---|
| Synopsis | Allow population of static and dynamic hosts |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 neighbor-discovery populate <i>boolean</i> |
| Tree | populate |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

proxy-arp-policy *reference*

| | |
|----------------|---|
| Synopsis | Proxy ARP policy name |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 neighbor-discovery proxy-arp-policy <i>reference</i> |
| Tree | proxy-arp-policy |
| Reference | configure policy-options policy-statement <i>string</i> |
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

remote-proxy-arp *boolean*

| | |
|------------|---|
| Synopsis | Enable remote proxy ARP on the interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 neighbor-discovery remote-proxy-arp <i>boolean</i> |
| Tree | remote-proxy-arp |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

timeout *number*

| | |
|----------|---|
| Synopsis | Timeout for an ARP entry learned on the interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 neighbor-discovery timeout <i>number</i> |

| | |
|------------|---|
| Tree | timeout |
| Range | 0 to 65535 |
| Units | seconds |
| Default | 14400 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

qos-route-lookup *keyword*

| | |
|------------|--|
| Synopsis | QoS route lookup |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 qos-route-lookup <i>keyword</i> |
| Tree | qos-route-lookup |
| Options | destination |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

urpf-check

| | |
|------------|---|
| Synopsis | Enable the urpf-check context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 urpf-check |
| Tree | urpf-check |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

mode *keyword*

| | |
|------------|--|
| Synopsis | Unicast RPF check mode |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 urpf-check mode <i>keyword</i> |
| Tree | mode |
| Options | strict, loose, strict-no-ecmp |
| Default | strict |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipv6

| | |
|------------|--|
| Synopsis | Enable the ipv6 context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 |
| Tree | ipv6 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

allow-multiple-wan-addresses *boolean*

| | |
|------------|---|
| Synopsis | Allow multiple WAN addresses |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 allow-multiple-wan-addresses <i>boolean</i> |
| Tree | allow-multiple-wan-addresses |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

auto-reply

| | |
|------------|--|
| Synopsis | Enter the auto-reply context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 auto-reply |
| Tree | auto-reply |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

neighbor-solicitation *boolean*

| | |
|------------|--|
| Synopsis | Enable auto-reply for NS |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 auto-reply neighbor-solicitation <i>boolean</i> |
| Tree | neighbor-solicitation |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

router-solicitation *boolean*

| | |
|------------|---|
| Synopsis | Enable auto-reply for RS |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 auto-reply router-solicitation <i>boolean</i> |
| Tree | router-solicitation |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

bfd

| | |
|-------------|---|
| Synopsis | Enter the bfd context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 bfd |
| Tree | bfd |
| Description | Commands in this context configure the attributes of bidirectional forwarding detection (BFD) sessions that control the state of ESM dynamic BGP peers. |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of BFD sessions |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 bfd admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

echo-receive *number*

| | |
|----------|--|
| Synopsis | Minimum echo interval over this interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 bfd echo-receive <i>number</i> |

| | |
|------------|---|
| Tree | echo-receive |
| Range | 100 to 100000 |
| Units | milliseconds |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

multiplier number

| | |
|-------------|---|
| Synopsis | Number of consecutive BFD messages missed from the peer |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 bfd multiplier number |
| Tree | multiplier |
| Description | This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments. |
| Range | 1 to 20 |
| Default | 3 |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

receive number

| | |
|-------------|--|
| Synopsis | BFD receive interval over this interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 bfd receive number |
| Tree | receive |
| Description | This command specifies the receive interval for the BFD session.
On the 7750 SR, this command can only be configured to a value less than 100 when the type command is configured to cpm-np . |
| Range | 10 to 100000 |
| Units | milliseconds |
| Default | 100 |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

transmit-interval *number*

| | |
|-------------|--|
| Synopsis | BFD transmit interval over this interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 bfd transmit-interval <i>number</i> |
| Tree | transmit-interval |
| Description | This command configures the transmit intervals.
On the 7750 SR, this command can only be configured to a value less than 100 when the type command is configured to cpm-np . |
| Range | 10 to 100000 |
| Units | milliseconds |
| Default | 100 |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

type *keyword*

| | |
|-------------|---|
| Synopsis | Local termination point for the BFD session |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 bfd type <i>keyword</i> |
| Tree | type |
| Description | This command sets the local termination point for the BFD session to allow for fast timers down to 10 ms granularity.
The options to specify where the BFD session runs are: <ul style="list-style-type: none"> • auto (default) – the system chooses and uses the line card CPU only for single-hop BFD sessions with timer intervals equal to or greater than 100ms. All others are placed on the cpm-np. • cpm-np – BFD session runs on the FP complex associated with the CPM. This is either the FP on the CPM or the one elected on smaller systems. • fp – BFD session runs on the line card CPU. This option can only be used for single-hop BFD sessions with timers equal to or greater than 100ms. |
| Options | cpm-np, auto, fp |
| Default | auto |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

dhcp6

| | |
|------------|--|
| Synopsis | Enter the dhcp6 context |
| Context | configure service vprn string subscriber-interface string group-interface string ipv6 dhcp6 |
| Tree | dhcp6 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

filter reference

| | |
|------------|---|
| Synopsis | DHCPv6 filter |
| Context | configure service vprn string subscriber-interface string group-interface string ipv6 dhcp6 filter reference |
| Tree | filter |
| Reference | configure filter dhcp6-filter number |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

option

| | |
|------------|---|
| Synopsis | Enter the option context |
| Context | configure service vprn string subscriber-interface string group-interface string ipv6 dhcp6 option |
| Tree | option |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

interface-id

| | |
|------------|--|
| Synopsis | Enter the interface-id context |
| Context | configure service vprn string subscriber-interface string group-interface string ipv6 dhcp6 option interface-id |
| Tree | interface-id |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ascii-tuple

| | |
|------------|---|
| Synopsis | Use ASCII-encoded concatenated tuple |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 option interface-id ascii-tuple |
| Tree | ascii-tuple |
| Notes | The following elements are part of a choice: ascii-tuple , if-index , sap-id , or string . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

if-index

| | |
|------------|--|
| Synopsis | Use interface index in the DHCPv6 relay packet |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 option interface-id if-index |
| Tree | if-index |
| Notes | The following elements are part of a choice: ascii-tuple , if-index , sap-id , or string . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sap-id

| | |
|------------|--|
| Synopsis | Use SAP ID in interface ID option in relay packet |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 option interface-id sap-id |
| Tree | sap-id |
| Notes | The following elements are part of a choice: ascii-tuple , if-index , sap-id , or string . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

string *string*

| | |
|----------|--|
| Synopsis | String for interface ID option in DHCPv6 relay packet |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 option interface-id string <i>string</i> |
| Tree | string |

| | |
|---------------|--|
| String Length | 1 to 80 |
| Notes | The following elements are part of a choice: ascii-tuple , if-index , sap-id , or string . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

remote-id *boolean*

| | |
|------------|---|
| Synopsis | Send remote ID option in the DHCPv6 relay packet |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 option remote-id <i>boolean</i> |
| Tree | remote-id |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

override-slaac *boolean*

| | |
|------------|--|
| Synopsis | Allow WAN address offered by DHCP to overwrite the WAN address acquired from SLAAC |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 override-slaac <i>boolean</i> |
| Tree | override-slaac |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

pd-managed-route

| | |
|------------|---|
| Synopsis | Enable the pd-managed-route context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 pd-managed-route |
| Tree | pd-managed-route |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

next-hop *keyword*

| | |
|------------|--|
| Synopsis | Next hop type |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 pd-managed-route next-hop <i>keyword</i> |
| Tree | next-hop |
| Options | ipv4, ipv6 |
| Default | ipv6 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

proxy-server

| | |
|------------|--|
| Synopsis | Enter the proxy-server context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 proxy-server |
| Tree | proxy-server |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of the DHCPv6 proxy server |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 proxy-server admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

client-applications

| | |
|----------|--|
| Synopsis | Enter the client-applications context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 proxy-server client-applications |
| Tree | client-applications |

| | |
|------------|---|
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

dhcp boolean

| | |
|------------|--|
| Synopsis | Enable IPoE clients to use the DHCP proxy server |
| Context | configure service vprn string subscriber-interface string group-interface string ipv6 dhcp6 proxy-server client-applications dhcp boolean |
| Tree | dhcp |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ppp boolean

| | |
|------------|---|
| Synopsis | Allow PPPoE clients to use DHCP relay functionality |
| Context | configure service vprn string subscriber-interface string group-interface string ipv6 dhcp6 proxy-server client-applications ppp boolean |
| Tree | ppp |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

preferred-lifetime (number | keyword)

| | |
|------------|---|
| Synopsis | Time for prefix to remain preferred on this interface |
| Context | configure service vprn string subscriber-interface string group-interface string ipv6 dhcp6 proxy-server preferred-lifetime (number keyword) |
| Tree | preferred-lifetime |
| Range | 300 to 4294967294 |
| Units | seconds |
| Options | infinite |
| Default | 3600 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

rebind-timer *number*

| | |
|------------|--|
| Synopsis | Rebind timer (T2) for this interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 proxy-server rebind-timer <i>number</i> |
| Tree | rebind-timer |
| Range | 0 to 1209600 |
| Units | seconds |
| Default | 2880 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

renew-timer *number*

| | |
|------------|---|
| Synopsis | Renew timer (T1) |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 proxy-server renew-timer <i>number</i> |
| Tree | renew-timer |
| Range | 0 to 604800 |
| Units | seconds |
| Default | 1800 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

server-id

| | |
|------------|---|
| Synopsis | Enter the server-id context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 proxy-server server-id |
| Tree | server-id |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

duid-en-ascii *string*

| | |
|----------|---|
| Synopsis | Vendor-assigned ID based on Enterprise Number (DUID-EN) |
|----------|---|

| | |
|---------------|---|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 proxy-server server-id duid-en-ascii <i>string</i> |
| Tree | duid-en-ascii |
| String Length | 1 to 58 |
| Notes | The following elements are part of a choice: duid-en-ascii , duid-en-hex , or duid-ll . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

duid-en-hex *string*

| | |
|---------------|---|
| Synopsis | DUID system ID in hexadecimal format |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 proxy-server server-id duid-en-hex <i>string</i> |
| Tree | duid-en-hex |
| String Length | 1 to 118 |
| Notes | The following elements are part of a choice: duid-en-ascii , duid-en-hex , or duid-ll . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

duid-ll

| | |
|------------|---|
| Synopsis | Use link-layer address (DUID-LL) as DUID |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 proxy-server server-id duid-ll |
| Tree | duid-ll |
| Notes | The following elements are part of a choice: duid-en-ascii , duid-en-hex , or duid-ll . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

valid-lifetime (*number* | *keyword*)

| | |
|----------|---|
| Synopsis | Time for prefix to remain valid on this interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 proxy-server valid-lifetime (<i>number</i> <i>keyword</i>) |
| Tree | valid-lifetime |
| Range | 300 to 4294967294 |

| | |
|------------|---|
| Units | seconds |
| Options | infinite |
| Default | 86400 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

python-policy *reference*

| | |
|------------|---|
| Synopsis | Python policy |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 python-policy reference |
| Tree | python-policy |
| Reference | configure python python-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

relay

| | |
|------------|---|
| Synopsis | Enter the relay context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay |
| Tree | relay |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of DHCPv6 Relay |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

advertise-selection

| | |
|------------|--|
| Synopsis | Enter the advertise-selection context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection |
| Tree | advertise-selection |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

client-mac

| | |
|------------|---|
| Synopsis | Enter the client-mac context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection client-mac |
| Tree | client-mac |
| Notes | The following elements are part of a choice: client-mac or server . |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

mac-address *keyword*

| | |
|------------|--|
| Synopsis | Designated client MAC addresses for Advertise selection |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection client-mac mac-address <i>keyword</i> |
| Tree | mac-address |
| Options | odd, even |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

preference-option

| | |
|----------|---|
| Synopsis | Enter the preference-option context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection client-mac preference-option |
| Tree | preference-option |

| | |
|-------------|---|
| Description | Commands in this context configure the DHCPv6 preference option that is inserted in the DHCPv6 Advertise message. |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

value *number*

| | |
|------------|---|
| Synopsis | Preference option value for DHCPv6 Advertise messages |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection client-mac preference-option value <i>number</i> |
| Tree | value |
| Range | 0 to 255 |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

solicit-delay *number*

| | |
|-------------|--|
| Synopsis | Delay before sending DHCPv6 Solicit messages |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection client-mac solicit-delay <i>number</i> |
| Tree | solicit-delay |
| Description | This command configures the time to delay DHCPv6 Solicit messages sent from the designated client MAC addresses. |
| Range | 1 to 100 |
| Units | deciseconds |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

preference-option

| | |
|-------------|--|
| Synopsis | Enter the preference-option context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection preference-option |
| Tree | preference-option |
| Description | Commands in this context configure the DHCPv6 preference option that is inserted in the DHCPv6 Advertise message. |
| Introduced | 20.10.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

value *number*

Synopsis Preference option value for DHCPv6 Advertise messages

Context **configure** *service vprn string subscriber-interface string group-interface string ipv6 dhcp6 relay advertise-selection preference-option value number*

Tree *value*

Range 0 to 255

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

server [*ipv6-address*] *string*

Synopsis Enter the **server** list instance

Context **configure** *service vprn string subscriber-interface string group-interface string ipv6 dhcp6 relay advertise-selection server string*

Tree *server*

Max. Instances 8

Notes The following elements are part of a choice: **client-mac** or **server**.

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[ipv6-address] *string*

Synopsis IP address of the DHCPv6 server

Context **configure** *service vprn string subscriber-interface string group-interface string ipv6 dhcp6 relay advertise-selection server string*

Tree *server*

Notes This element is part of a list key.

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preference-option

| | |
|-------------|--|
| Synopsis | Enter the preference-option context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection server <i>string</i> preference-option |
| Tree | preference-option |
| Description | Commands in this context configure the DHCPv6 preference option that is inserted in the DHCPv6 Advertise message. |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

value number

| | |
|------------|--|
| Synopsis | Preference option value for DHCPv6 Advertise messages |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection server <i>string</i> preference-option value <i>number</i> |
| Tree | value |
| Range | 0 to 255 |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

solicit-delay number

| | |
|-------------|--|
| Synopsis | Delay before sending DHCPv6 Solicit messages |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection server <i>string</i> solicit-delay <i>number</i> |
| Tree | solicit-delay |
| Description | This command configures the time to delay DHCPv6 Solicit messages sent to the server. |
| Range | 1 to 100 |
| Units | deciseconds |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

solicit-delay number

| | |
|----------|--|
| Synopsis | Delay before sending DHCPv6 Solicit messages |
|----------|--|

| | |
|-------------|--|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection solicit-delay <i>number</i> |
| Tree | solicit-delay |
| Description | This command configures the time to delay DHCPv6 Solicit messages. The delay is applied to DHCPv6 Solicit messages for which no overriding value is configured in the server instance or the client-mac context. |
| Range | 1 to 100 |
| Units | deciseconds |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

client-applications

| | |
|------------|--|
| Synopsis | Enter the client-applications context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay client-applications |
| Tree | client-applications |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

dhcp boolean

| | |
|------------|--|
| Synopsis | Enable IPoE clients to use DHCP relay or proxy server |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay client-applications dhcp <i>boolean</i> |
| Tree | dhcp |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ppp boolean

| | |
|----------|---|
| Synopsis | Allow the PPP application to use DHCP relay functionality |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay client-applications ppp <i>boolean</i> |
| Tree | ppp |
| Default | false |

| | |
|------------|---|
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

description *string*

| | |
|---------------|---|
| Synopsis | Text description |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay description <i>string</i> |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

lease-split

| | |
|-------------|---|
| Synopsis | Enter the lease-split context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay lease-split |
| Tree | lease-split |
| Description | <p>Commands in this context configure DHCPv6 lease split.</p> <p>DHCPv6 lease split is active when administratively enabled and for all IA_NA and IA_PD options in the transaction, the configured lease split valid lifetime (short lease time) is less than or equal to one of the following:</p> <ul style="list-style-type: none"> • the renew time T1 committed by the server (long renew time) • half of the preferred lifetime committed by the server when T1 committed by the server equals zero |
| Introduced | 21.2.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|----------|--|
| Synopsis | Administrative state of DHCPv6 lease split |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay lease-split admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |

| | |
|------------|---|
| Introduced | 21.2.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

valid-lifetime *number*

| | |
|------------|--|
| Synopsis | DHCPv6 lease split valid lifetime (short lease time) |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay lease-split valid-lifetime <i>number</i> |
| Tree | valid-lifetime |
| Range | 300 to 315446399 |
| Units | seconds |
| Default | 3600 |
| Introduced | 21.2.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

link-address *string*

| | |
|------------|--|
| Synopsis | Link address for the DHCPv6 relay messages |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay link-address <i>string</i> |
| Tree | link-address |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

server *string*

| | |
|----------------|--|
| Synopsis | DHCP6 server(s) to which the DHCP6 requests are forwarded |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay server <i>string</i> |
| Tree | server |
| Max. Instances | 8 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

source-address *string*

| | |
|------------|--|
| Synopsis | Source IPv6 address for the DHCPv6 relay messages |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay source-address <i>string</i> |
| Tree | source-address |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

snooping

| | |
|------------|--|
| Synopsis | Enter the snooping context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 snooping |
| Tree | snooping |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of DHCPv6 snooping |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 snooping admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

user-db *reference*

| | |
|------------|--|
| Synopsis | Local user database used for authentication |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 user-db <i>reference</i> |
| Tree | user-db |
| Reference | configure subscriber-mgmt local-user-db <i>string</i> |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

user-ident *keyword*

Synopsis DHCP6 user identification for this interface

Context **configure service vprn** *string subscriber-interface string group-interface string ipv6 dhcp6 user-ident keyword*

Tree [user-ident](#)

Options mac, mac-interface-id

Default mac

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipoe-bridged-mode *boolean*

Synopsis Enable IPv6 IPoE bridged mode

Context **configure service vprn** *string subscriber-interface string group-interface string ipv6 ipoe-bridged-mode boolean*

Tree [ipoe-bridged-mode](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

neighbor-discovery

Synopsis Enter the **neighbor-discovery** context

Context **configure service vprn** *string subscriber-interface string group-interface string ipv6 neighbor-discovery*

Tree [neighbor-discovery](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dad-snooping *boolean*

Synopsis Populate table via duplicate address detection packets

Context **configure service vprn** *string subscriber-interface string group-interface string ipv6 neighbor-discovery dad-snooping boolean*

| | |
|------------|---|
| Tree | dad-snooping |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

neighbor-limit *number*

| | |
|------------|---|
| Synopsis | Maximum neighbor entries learned per SLAAC host |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 neighbor-discovery neighbor-limit <i>number</i> |
| Tree | neighbor-limit |
| Range | 1 to 8 |
| Default | 1 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

qos-route-lookup *keyword*

| | |
|------------|---|
| Synopsis | QoS route lookup |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 qos-route-lookup <i>keyword</i> |
| Tree | qos-route-lookup |
| Options | destination |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

router-advertisements

| | |
|------------|---|
| Synopsis | Enter the router-advertisements context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements |
| Tree | router-advertisements |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of router advertisements |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

force-mcast *keyword*

| | |
|------------|---|
| Synopsis | Protocol with forced multicast |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements force-mcast <i>keyword</i> |
| Tree | force-mcast |
| Options | ip, ip-mac |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

max-advertisement-interval *number*

| | |
|------------|---|
| Synopsis | Maximum advertisement interval |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements max-advertisement-interval <i>number</i> |
| Tree | max-advertisement-interval |
| Range | 900 to 1800 |
| Units | seconds |
| Default | 1800 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

min-advertisement-interval *number*

| | |
|----------|--------------------------------|
| Synopsis | Minimum advertisement interval |
|----------|--------------------------------|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements min-advertisement-interval <i>number</i> |
| Tree | min-advertisement-interval |
| Range | 900 to 1350 |
| Units | seconds |
| Default | 900 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

options

| | |
|------------|--|
| Synopsis | Enter the options context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements options |
| Tree | options |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

current-hop-limit *number*

| | |
|------------|--|
| Synopsis | Hop limit to be advertised |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements options current-hop-limit <i>number</i> |
| Tree | current-hop-limit |
| Range | 0 to 255 |
| Default | 64 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

dns

| | |
|------------|--|
| Synopsis | Enter the dns context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements options dns |
| Tree | dns |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

include-rdnss *boolean*

Synopsis Include the RDNSS server option 25

Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [ipv6](#) [router-advertisements](#) [options dns include-rdnss](#) *boolean*

Tree [include-rdnss](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

rdnss-lifetime (*number* | *keyword*)

Synopsis Maximum time for the RDNSS address to remain valid

Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [ipv6](#) [router-advertisements](#) [options dns rdnss-lifetime](#) (*number* | *keyword*)

Tree [rdnss-lifetime](#)

Range 900 to 3600

Units seconds

Options infinite

Default 3600

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

managed-configuration *boolean*

Synopsis Managed address configuration flag

Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [ipv6](#) [router-advertisements](#) [options managed-configuration](#) *boolean*

Tree [managed-configuration](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mtu (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | Advertised MTU value |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements options mtu (<i>number</i> <i>keyword</i>) |
| Tree | mtu |
| Range | 1280 to 9212 |
| Units | bytes |
| Options | not-included |
| Default | not-included |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

other-stateful-configuration *boolean*

| | |
|------------|---|
| Synopsis | Other stateful configuration flag |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements options other-stateful-configuration <i>boolean</i> |
| Tree | other-stateful-configuration |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

reachable-time *number*

| | |
|------------|--|
| Synopsis | Reachable time for advertisements |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements options reachable-time <i>number</i> |
| Tree | reachable-time |
| Range | 0 to 3600000 |
| Units | milliseconds |
| Default | 0 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

retransmit-timer *number*

| | |
|------------|--|
| Synopsis | Retransmit time in router advertisements from interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6
router-advertisements options retransmit-timer <i>number</i> |
| Tree | retransmit-timer |
| Range | 0 to 1800000 |
| Units | seconds |
| Default | 0 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

router-lifetime (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | Router lifetime |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6
router-advertisements options router-lifetime (<i>number</i> <i>keyword</i>) |
| Tree | router-lifetime |
| Range | 2700 to 9000 |
| Units | seconds |
| Options | no-default-router |
| Default | 4500 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

prefix-options

| | |
|------------|---|
| Synopsis | Enter the prefix-options context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6
router-advertisements prefix-options |
| Tree | prefix-options |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

autonomous *boolean*

| | |
|----------|------------------------------|
| Synopsis | Value of the autonomous flag |
|----------|------------------------------|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6
router-advertisements prefix-options autonomous <i>boolean</i> |
| Tree | autonomous |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

on-link *boolean*

| | |
|------------|--|
| Synopsis | Assign the prefix to an interface on the specified link |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6
router-advertisements prefix-options on-link <i>boolean</i> |
| Tree | on-link |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

preferred-lifetime (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | Time for a prefix to remain preferred |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6
router-advertisements prefix-options preferred-lifetime (<i>number</i> <i>keyword</i>) |
| Tree | preferred-lifetime |
| Range | 0 to 4294967294 |
| Units | seconds |
| Options | infinite |
| Default | 3600 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

valid-lifetime (*number* | *keyword*)

| | |
|----------|---|
| Synopsis | Time for a prefix to remain valid |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6
router-advertisements prefix-options valid-lifetime (<i>number</i> <i>keyword</i>) |
| Tree | valid-lifetime |

| | |
|------------|---|
| Range | 0 to 4294967294 |
| Units | seconds |
| Options | infinite |
| Default | 86400 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

router-solicit

| | |
|------------|---|
| Synopsis | Enter the router-solicit context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6
router-solicit |
| Tree | router-solicit |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of router-solicit authentication |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6
router-solicit admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

inactivity-timer (*number* | *keyword*)

| | |
|----------|---|
| Synopsis | Time before an inactive host is removed |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6
router-solicit inactivity-timer (<i>number</i> <i>keyword</i>) |
| Tree | inactivity-timer |
| Range | 1 to 31536000 |
| Units | seconds |
| Options | infinite |

| | |
|------------|---|
| Default | 300 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

min-auth-interval *number*

| | |
|------------|--|
| Synopsis | Minimum time between successive authentication attempts |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-solicit min-auth-interval <i>number</i> |
| Tree | min-auth-interval |
| Range | 1 to 360000 |
| Units | seconds |
| Default | 300 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

user-db *reference*

| | |
|------------|---|
| Synopsis | Local user database used for authentication |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-solicit user-db <i>reference</i> |
| Tree | user-db |
| Reference | configure subscriber-mgmt local-user-db <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

urpf-check

| | |
|------------|--|
| Synopsis | Enable the urpf-check context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 urpf-check |
| Tree | urpf-check |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

mode *keyword*

| | |
|------------|--|
| Synopsis | Unicast RPF check mode |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 urpf-check mode <i>keyword</i> |
| Tree | mode |
| Options | strict, loose, strict-no-ecmp |
| Default | strict |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

local-address-assignment

| | |
|------------|---|
| Synopsis | Enter the local-address-assignment context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> local-address-assignment |
| Tree | local-address-assignment |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of Local Address Assignment |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> local-address-assignment admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipv4

| | |
|----------|---|
| Synopsis | Enter the ipv4 context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> local-address-assignment ipv4 |
| Tree | ipv4 |

Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

client-applications

Synopsis Enter the **client-applications** context
 Context **configure** [service](#) [vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [local-address-assignment](#) [ipv4](#) [client-applications](#)
 Tree [client-applications](#)
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipoe *boolean*

Synopsis Request local addresses for non-DHCP/managed IPoE hosts
 Context **configure** [service](#) [vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [local-address-assignment](#) [ipv4](#) [client-applications](#) [ipoe](#) *boolean*
 Tree [ipoe](#)
 Default false
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp *boolean*

Synopsis Request local addresses for PPP IPCP hosts
 Context **configure** [service](#) [vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [local-address-assignment](#) [ipv4](#) [client-applications](#) [ppp](#) *boolean*
 Tree [ppp](#)
 Default false
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

default-pool *string*

Synopsis Default pools
 Context **configure** [service](#) [vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [local-address-assignment](#) [ipv4](#) [default-pool](#) *string*

| | |
|----------------|---|
| Tree | default-pool |
| String Length | 1 to 32 |
| Max. Instances | 2 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

server reference

| | |
|------------|---|
| Synopsis | Local DHCPv4 server for local pools management |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> local-address-assignment ipv4 server reference |
| Tree | server |
| Reference | configure service vprn <i>string</i> dhcp-server dhcpv4 <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipv6

| | |
|------------|--|
| Synopsis | Enter the ipv6 context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> local-address-assignment ipv6 |
| Tree | ipv6 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

client-applications

| | |
|------------|--|
| Synopsis | Enter the client-applications context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> local-address-assignment ipv6 client-applications |
| Tree | client-applications |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipoe-slaac *boolean*

| | |
|------------|--|
| Synopsis | Request local addresses for IPoE SLAAC hosts |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> local-address-assignment ipv6 client-applications ipoe-slaac <i>boolean</i> |
| Tree | ipoe-slaac |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipoe-wan *boolean*

| | |
|------------|--|
| Synopsis | Request local addresses for IPoE IA NA hosts |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> local-address-assignment ipv6 client-applications ipoe-wan <i>boolean</i> |
| Tree | ipoe-wan |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ppp-slaac *boolean*

| | |
|------------|---|
| Synopsis | Request local addresses for PPP SLAAC hosts |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> local-address-assignment ipv6 client-applications ppp-slaac <i>boolean</i> |
| Tree | ppp-slaac |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

server *reference*

| | |
|----------|--|
| Synopsis | Local DHCPv6 server for local pools management |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> local-address-assignment ipv6 server <i>reference</i> |
| Tree | server |

| | |
|------------|--|
| Reference | configure service vpn <i>string dhcp-server dhcpv6 string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

mac *string*

| | |
|------------|--|
| Synopsis | MAC address for the interface |
| Context | configure service vpn <i>string subscriber-interface string group-interface string mac string</i> |
| Tree | mac |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

nasreq-auth-policy *reference*

| | |
|------------|--|
| Synopsis | Diameter NASREQ application policy to use for authentication |
| Context | configure service vpn <i>string subscriber-interface string group-interface string nasreq-auth-policy reference</i> |
| Tree | nasreq-auth-policy |
| Reference | configure subscriber-mgmt diameter-nasreq-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

oper-up-while-empty *boolean*

| | |
|------------|---|
| Synopsis | Enable this group interface without any active SAPs |
| Context | configure service vpn <i>string subscriber-interface string group-interface string oper-up-while-empty boolean</i> |
| Tree | oper-up-while-empty |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

pppoe

| | |
|----------|--------------------------------|
| Synopsis | Enter the pppoe context |
|----------|--------------------------------|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> pppoe |
| Tree | pppoe |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of PPPoE |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> pppoe
admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

anti-spoof *keyword*

| | |
|------------|---|
| Synopsis | PPPoE anti-spoof filtering |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> pppoe
anti-spoof <i>keyword</i> |
| Tree | anti-spoof |
| Options | mac-sid, mac-sid-ip |
| Default | mac-sid |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

description *string*

| | |
|---------------|---|
| Synopsis | Text description |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> pppoe
description <i>string</i> |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

dhcp-client

| | |
|------------|--|
| Synopsis | Enter the dhcp-client context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> pppoe dhcp-client |
| Tree | dhcp-client |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

client-id *keyword*

| | |
|------------|---|
| Synopsis | Type of information that DHCP option 61 contains |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> pppoe dhcp-client client-id <i>keyword</i> |
| Tree | client-id |
| Options | mac-pppoe-session-id |
| Introduced | 16.0.R7 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

policy *reference*

| | |
|------------|--|
| Synopsis | PPPoE policy |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> pppoe policy <i>reference</i> |
| Tree | policy |
| Reference | configure subscriber-mgmt ppp-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

python-policy *reference*

| | |
|-----------|---|
| Synopsis | Python policy used to modify PPPoE packets |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> pppoe python-policy <i>reference</i> |
| Tree | python-policy |
| Reference | configure python python-policy <i>string</i> |

| | |
|------------|---|
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sap-session-limit *number*

| | |
|------------|--|
| Synopsis | Maximum PPPoE sessions per SAP |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> pppoe sap-session-limit <i>number</i> |
| Tree | sap-session-limit |
| Range | 1 to 131071 |
| Default | 1 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

session-limit *number*

| | |
|------------|--|
| Synopsis | Maximum PPPoE sessions |

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

redundant-interface *reference*

Synopsis Redundant interface

Context **configure** [service vpn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [redundant-interface](#) *reference*

Tree [redundant-interface](#)

Reference **configure** [service vpn](#) *string* [redundant-interface](#) *string*

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap [[sap-id](#)] *string*

Synopsis Enter the **sap** list instance

Context **configure** [service vpn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [sap](#) *string*

Tree [sap](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[sap-id] *string*

Synopsis SAP ID

Context **configure** [service vpn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [sap](#) *string*

Tree [sap](#)

String Length 1 to 45

| | |
|------------|---|
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

accounting-policy *reference*

| | |
|------------|---|
| Synopsis | Accounting policy |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> accounting-policy <i>reference</i> |
| Tree | accounting-policy |
| Reference | configure log accounting-policy <i>number</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of the SAP |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | enable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

anti-spoof *keyword*

| | |
|------------|--|
| Synopsis | Type of anti-spoof filtering |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> anti-spoof <i>keyword</i> |
| Tree | anti-spoof |
| Options | source-ip-addr, source-ip-and-mac-addr, next-hop-ip-and-mac-addr |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

app-profile *reference*

| | |
|------------|---|
| Synopsis | Application profile name |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> app-profile <i>reference</i> |
| Tree | app-profile |
| Reference | configure application-assurance group <i>number</i> partition <i>number</i> policy app-profile <i>string</i> |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

calling-station-id *string*

| | |
|---------------|---|
| Synopsis | Calling station ID |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> calling-station-id <i>string</i> |
| Tree | calling-station-id |
| String Length | 1 to 64 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

collect-stats *boolean*

| | |
|------------|---|
| Synopsis | Collect accounting statistics |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> collect-stats <i>boolean</i> |
| Tree | collect-stats |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

cpu-protection

| | |
|------------|---|
| Synopsis | Enter the cpu-protection context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> cpu-protection |
| Tree | cpu-protection |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s

eth-cfm-monitoring

Synopsis Enable the **eth-cfm-monitoring** context

Context **configure service vprn** *string* **subscriber-interface** *string* **group-interface** *string* **sap** *string* **cpu-protection eth-cfm-monitoring**

Tree [eth-cfm-monitoring](#)

Notes The following elements are part of a choice: **eth-cfm-monitoring**, **ip-src-monitoring**, or **mac-monitoring**.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s

aggregate

Synopsis Apply rate limit to the sum of the per peer packet rates

Context **configure service vprn** *string* **subscriber-interface** *string* **group-interface** *string* **sap** *string* **cpu-protection eth-cfm-monitoring aggregate**

Tree [aggregate](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s

car

Synopsis Ignore Ethernet CFM packets when enforcing overall rate

Context **configure service vprn** *string* **subscriber-interface** *string* **group-interface** *string* **sap** *string* **cpu-protection eth-cfm-monitoring car**

Tree [car](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s

ip-src-monitoring

Synopsis Enable IP source monitoring for CPU protection

Context **configure service vprn** *string* **subscriber-interface** *string* **group-interface** *string* **sap** *string* **cpu-protection ip-src-monitoring**

Tree [ip-src-monitoring](#)

| | |
|------------|--|
| Notes | The following elements are part of a choice: eth-cfm-monitoring , ip-src-monitoring , or mac-monitoring . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s |

mac-monitoring

| | |
|------------|--|
| Synopsis | Monitor MAC for CPU protection |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> cpu-protection mac-monitoring |
| Tree | mac-monitoring |
| Notes | The following elements are part of a choice: eth-cfm-monitoring , ip-src-monitoring , or mac-monitoring . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s |

policy-id *reference*

| | |
|------------|---|
| Synopsis | CPM protection policy |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> cpu-protection policy-id reference |
| Tree | policy-id |
| Reference | configure system security cpu-protection policy <i>number</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s |

default-host

| | |
|------------|---|
| Synopsis | Enter the default-host context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> default-host |
| Tree | default-host |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

ipv4 [address] *reference* **prefix-length** *number*

| | |
|------------|---|
| Synopsis | Enter the ipv4 list instance |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> default-host ipv4 <i>reference</i> prefix-length <i>number</i> |
| Tree | ipv4 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

[address] *reference*

| | |
|------------|---|
| Synopsis | IPv4 default host address |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> default-host ipv4 <i>reference</i> prefix-length <i>number</i> |
| Tree | ipv4 |
| Reference | configure service vprn <i>string</i> subscriber-interface <i>string</i> ipv4 address <i>string</i> |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

prefix-length *number*

| | |
|------------|---|
| Synopsis | IPv4 address prefix length |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> default-host ipv4 <i>reference</i> prefix-length <i>number</i> |
| Tree | ipv4 |
| Range | 0 to 32 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

next-hop *string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Next-hop IP address used to forward traffic on the SAP |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> default-host ipv4 <i>reference</i> prefix-length <i>number</i> next-hop <i>string</i> |
| Tree | next-hop |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

ipv6 [**address**] *string* **prefix-length** *number*

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

fc-in-profile *keyword*

Synopsis Forwarding class name for profile-aware counter

Context **configure** **service** **vprn** *string* **subscriber-interface** *string* **group-interface** *string* **sap** *string* **eth-cfm** **collect-lmm-fc-stats** **fc-in-profile** *keyword*

Tree **fc-in-profile**

Description This command configures individual counters for the specified FCs with regard to profile. The system includes all countable packets that match a configured FC and that are deemed to be in-profile in this counter.

An FC specified as part of this command and for this specific context cannot be specified as a profile-unaware FC using the **fc** command under the **collect-lmm-fc-stats** context.

When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.

Options be, l2, af, l1, h2, ef, h1, nc

Max. Instances 8

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

collect-lmm-stats *boolean*

Synopsis Collect statistics for loss measurement message tests

Context **configure** **service** **vprn** *string* **subscriber-interface** *string* **group-interface** *string* **sap** *string* **eth-cfm** **collect-lmm-stats** *boolean*

Tree **collect-lmm-stats**

Description When configured to **true**, the router instantiates the statistical counter to transmit and receive packets for the LAG facility MEP bindings.

The **show eth-cfm collect-lmm-stats** command displays entities that have been enabled to collect transit and receive counters.

When configured to **false**, the router does not instantiate the counter and the LMM PDU associated with the MEP does not populate the counters in the packet.

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

| Tree | rx-eth-vsm-grace |
| Description | When configured to true , the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.
When configured to false , the router disables the Nokia Grace function. |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

tx-eth-vsm-grace *boolean*

| | |
|-------------|--|
| Synopsis | Transmit ETH-ED PDUs from the MEP |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> grace eth-vsm-grace tx-eth-vsm-grace <i>boolean</i> |
| Tree | tx-eth-vsm-grace |
| Description | When configured to true , the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.
The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.
The operator must configure the configure system eth-cfm grace command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).
When configured to false , the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP. |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

| Tree | one-way-delay-threshold |
| Range | 0 to 600 |
| Units | seconds |
| Default | 3 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

squelch-ingress-levels *number*

| | |
|----------------|--|
| Synopsis | Levels for which ETH-CFM packets are silently discarded |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> eth-cfm squelch-ingress-levels <i>number</i> |
| Tree | squelch-ingress-levels |
| Description | <p>This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.</p> <p>The list of levels must be a complete contiguous list from 0 up to the highest level that will be dropped.</p> |
| Range | 0 to 7 |
| Max. Instances | 8 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

link-map-profile *number*

| | |
|-------------|---|
| Synopsis | LAG link map profile for a SAP or network interface |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> lag link-map-profile <i>number</i> |
| Tree | link-map-profile |
| Description | This command assigns a preconfigured LAG link map profile to a SAP or network interface configured on a LAG or a PW port that exists on a LAG. After an operator |

assigns a LAG link map profile, the system rehashes the SAP or network interface egress traffic over the LAG as required by the new configuration.

If the LAG link map profile for a SAP or network interface is deleted, the system reverts back to per-flow hashing.

| | |
|------------|---|

| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> app-profile |
| Tree | app-profile |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

profile *reference*

| | |
|----------|---|
| Synopsis | Application profile used by the static host |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> app-profile <i>profile reference</i> |
| Tree | profile |

| | |
|------------|---|
| Reference | configure application-assurance group <i>number</i> partition <i>number</i> policy app-profile <i>string</i> |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

scope *keyword*

| | |
|------------|---|
| Synopsis | Scope of the static host application profile |
| Context | configure service vpn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> app-profile scope <i>keyword</i> |
| Tree | scope |
| Options | subscriber, mac |
| Default | subscriber |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

int-dest-id *string*

| | |
|---------------|--|
| Synopsis | Intermediate destination ID |
| Context | configure service vpn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> int-dest-id <i>string</i> |
| Tree | int-dest-id |
| String Length | 1 to 32 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

managed-route [[prefix](#)] *string*

| | |
|-------------|--|
| Synopsis | Enter the managed-route list instance |
| Context | configure service vpn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> managed-route <i>string</i> |
| Tree | managed-route |
| Description | Commands in this context configure managed route parameters. |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

[prefix] string

| | |
|-------------|--|
| Synopsis | Managed route prefix associated with IPv4 static host |
| Context | configure service vprn string subscriber-interface string group-interface string sap string static-host ipv4 string mac string managed-route string |
| Tree | managed-route |
| Description | This command configures the managed route prefix. The prefix length must be in the range of 1 to 32. |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

cpe-check

| | |
|------------|--|
| Synopsis | Enable the cpe-check context |
| Context | configure service vprn string subscriber-interface string group-interface string sap string static-host ipv4 string mac string managed-route string cpe-check |
| Tree | cpe-check |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

destination-ip-address (*ipv4-address-no-zone | ipv6-address-no-zone*)**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | IP address of the target CPE device |
| Context | configure service vprn string subscriber-interface string group-interface string sap string static-host ipv4 string mac string managed-route string cpe-check destination-ip-address (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) |
| Tree | destination-ip-address |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

drop-count number

| | |
|----------|--|
| Synopsis | Consecutive ping replies missed before CPE deemed down |
|----------|--|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check drop-count <i>number</i> |
| Tree | drop-count |
| Range | 1 to 255 |
| Default | 3 |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

failed-action

| | |
|------------|--|
| Synopsis | Enter the failed-action context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check failed-action |
| Tree | failed-action |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

metric number

| | |
|------------|---|
| Synopsis | Metric associated with the provisioned managed route |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check failed-action metric <i>number</i> |
| Tree | metric |
| Max. Range | 0 to 4294967295 |
| Default | 0 |
| Notes | The following elements are part of a choice: (metric , preference , and tag) or withdraw . |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

preference number

| | |
|----------|---|
| Synopsis | Preference associated to the provisioned managed route |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check failed-action preference <i>number</i> |
| Tree | preference |

| | |
|------------|--|
| Range | 0 to 255 |
| Notes | The following elements are part of a choice: (metric , preference , and tag) or withdraw . |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

tag number

| | |
|------------|--|
| Synopsis | Route tag used if CPE check fails |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check failed-action tag number |
| Tree | tag |
| Max. Range | 0 to 4294967295 |
| Default | 0 |
| Notes | The following elements are part of a choice: (metric , preference , and tag) or withdraw . |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

withdraw boolean

| | |
|------------|--|
| Synopsis | Withdraw the route when the CPE check fails |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check failed-action withdraw boolean |
| Tree | withdraw |
| Default | false |
| Notes | The following elements are part of a choice: (metric , preference , and tag) or withdraw . |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

interval number

| | |
|----------|---|
| Synopsis | Interval between ICMP pings to target CPE IP address |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check interval number |
| Tree | interval |

| | |
|------------|---|
| Range | 1 to 255 |
| Units | seconds |
| Default | 1 |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

log *boolean*

| | |
|------------|--|
| Synopsis | Log CPE connectivity checks transitions |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check log <i>boolean</i> |
| Tree | log |
| Default | false |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

padding-size *number*

| | |
|------------|--|
| Synopsis | Padding size for CPE connectivity checks |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check padding-size <i>number</i> |
| Tree | padding-size |
| Range | 0 to 16384 |
| Units | bytes |
| Default | 56 |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

source-ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

| | |
|------------|---|
| Synopsis | Source IP address used in the ICMP messages |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check source-ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) |
| Tree | source-ip-address |
| Introduced | 22.10.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

timeout *number*

Synopsis Time interval determining that a ping is missed

Context **configure** **service** **vprn** *string* **subscriber-interface** *string* **group-interface** *string* **sap** *string* **static-host** **ipv4** *string* **mac** *string* **managed-route** *string* **cpe-check** **timeout** *number*

Tree **timeout**

Range 1 to 10

Units seconds

Default 1

Introduced 22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

metric *number*

Synopsis Metric associated with the managed route

Context **configure** **service** **vprn** *string* **subscriber-interface** *string* **group-interface** *string* **sap** *string* **static-host** **ipv4** *string* **mac** *string* **managed-route** *string* **metric** *number*

Tree **metric**

Max. Range 0 to 4294967295

Default 0

Introduced 22.2.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preference *number*

Synopsis Preference associated with the managed route

Context **configure** **service** **vprn** *string* **subscriber-interface** *string* **group-interface** *string* **sap** *string* **static-host** **ipv4** *string* **mac** *string* **managed-route** *string* **preference** *number*

Tree **preference**

Range 0 to 255

Default 0

Introduced 22.2.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

tag number

| | |
|------------|--|
| Synopsis | Route tag associated with the managed route |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> managed-route <i>string</i> tag number |
| Tree | tag |
| Max. Range | 0 to 4294967295 |
| Default | 0 |
| Introduced | 22.2.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

rip-policy reference

| | |
|------------|---|
| Synopsis | RIP policy name |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> rip-policy <i>reference</i> |
| Tree | rip-policy |
| Reference | configure subscriber-mgmt rip-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

shcv

| | |
|------------|--|
| Synopsis | Enter the shcv context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> shcv |
| Tree | shcv |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sla-profile reference

| | |
|----------|--|
| Synopsis | SLA profile name |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> sla-profile <i>reference</i> |
| Tree | sla-profile |

| | |
|------------|--|
| Reference | configure subscriber-mgmt sla-profile <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sub-profile *reference*

| | |
|------------|--|
| Synopsis | Sub-profile name |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> sub-profile <i>reference</i> |
| Tree | sub-profile |
| Reference | configure subscriber-mgmt sub-profile <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

subscriber-id

| | |
|------------|---|
| Synopsis | Enter the subscriber-id context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> subscriber-id |
| Tree | subscriber-id |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

string *string*

| | |
|---------------|---|
| Synopsis | Subscriber identification |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> subscriber-id <i>string</i> <i>string</i> |
| Tree | string |
| String Length | 1 to 64 |
| Notes | The following elements are part of a choice: string or use-sap-id . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

use-sap-id

| | |
|------------|--|
| Synopsis | Use the SAP id as subscriber ID |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> subscriber-id use-sap-id |
| Tree | use-sap-id |
| Notes | The following elements are part of a choice: string or use-sap-id . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipv6 [[prefix](#)] *string* [mac](#) *string*

| | |
|------------|---|
| Synopsis | Enter the ipv6 list instance |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> |
| Tree | ipv6 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

[prefix] *string*

| | |
|------------|---|
| Synopsis | IPv6 prefix |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> |
| Tree | ipv6 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

mac *string*

| | |
|------------|---|
| Synopsis | MAC address |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> |
| Tree | ipv6 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis Administrative state of the static host

Context **configure** [service vprn string](#) [subscriber-interface string](#) [group-interface string](#) [sap string](#) [static-host ipv6 string](#) [mac string](#) **admin-state** *keyword*

Tree [admin-state](#)

Options enable, disable

Default disable

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ancp-string *string*

Synopsis ANCP string

Context **configure** [service vprn string](#) [subscriber-interface string](#) [group-interface string](#) [sap string](#) [static-host ipv6 string](#) [mac string](#) **ancp-string** *string*

Tree [ancp-string](#)

String Length 1 to 63

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

app-profile

Synopsis Enter the **app-profile** context

Context **configure** [service vprn string](#) [subscriber-interface string](#) [group-interface string](#) [sap string](#) [static-host ipv6 string](#) [mac string](#) **app-profile**

Tree [app-profile](#)

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

profile *reference*

Synopsis Application profile used by the static host

Context **configure** [service vprn string](#) [subscriber-interface string](#) [group-interface string](#) [sap string](#) [static-host ipv6 string](#) [mac string](#) **app-profile** *profile reference*

| | |
|------------|--|
| Tree | profile |
| Reference | configure application-assurance group number partition number policy app-profile string |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

scope keyword

| | |
|------------|---|
| Synopsis | Scope of the static host application profile |
| Context | configure service vprn string subscriber-interface string group-interface string sap string static-host ipv6 string mac string app-profile scope keyword |
| Tree | scope |
| Options | subscriber, mac |
| Default | subscriber |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

int-dest-id string

| | |
|---------------|--|
| Synopsis | Intermediate destination ID |
| Context | configure service vprn string subscriber-interface string group-interface string sap string static-host ipv6 string mac string int-dest-id string |
| Tree | int-dest-id |
| String Length | 1 to 32 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

mac-linking string

| | |
|------------|--|
| Synopsis | IPv6 host linked with IPv4 host via learned MAC address |
| Context | configure service vprn string subscriber-interface string group-interface string sap string static-host ipv6 string mac string mac-linking string |
| Tree | mac-linking |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

managed-route [*ipv6-prefix*] *string*

| | |
|-------------|--|
| Synopsis | Enter the managed-route list instance |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> |
| Tree | managed-route |
| Description | Commands in this context configure managed route parameters. |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

[ipv6-prefix] *string*

| | |
|-------------|--|
| Synopsis | Managed route prefix associated with IPv6 static host |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> |
| Tree | managed-route |
| Description | This command configures the managed route prefix. The prefix length must be in the range of 1 to 128. |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

cpe-check

| | |
|------------|--|
| Synopsis | Enable the cpe-check context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check |
| Tree | cpe-check |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

destination-ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|----------|-------------------------------------|
| Synopsis | IP address of the target CPE device |
|----------|-------------------------------------|

| | |
|------------|--|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check destination-ip-address (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) |

| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

preference *number*

| | |
|------------|--|
| Synopsis | Preference associated to the provisioned managed route |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check failed-action preference <i>number</i> |
| Tree | preference |
| Range | 0 to 255 |
| Notes | The following elements are part of a choice: (metric , preference , and tag) or withdraw . |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

tag *number*

| | |
|------------|---|
| Synopsis | Route tag used if CPE check fails |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check failed-action tag <i>number</i> |
| Tree | tag |
| Max. Range | 0 to 4294967295 |
| Default | 0 |
| Notes | The following elements are part of a choice: (metric , preference , and tag) or withdraw . |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

withdraw *boolean*

| | |
|----------|---|
| Synopsis | Withdraw the route when the CPE check fails |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check failed-action withdraw <i>boolean</i> |
| Tree | withdraw |
| Default | false |
| Notes | The following elements are part of a choice: (metric , preference , and tag) or withdraw . |

| | |
|------------|---|
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

interval *number*

| | |
|------------|---|
| Synopsis | Interval between ICMP pings to target CPE IP address |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check interval <i>number</i> |
| Tree | interval |
| Range | 1 to 255 |
| Units | seconds |
| Default | 1 |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

log *boolean*

| | |
|------------|---|
| Synopsis | Log CPE connectivity checks transitions |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check log <i>boolean</i> |
| Tree | log |
| Default | false |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

padding-size *number*

| | |
|------------|---|
| Synopsis | Padding size for CPE connectivity checks |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check padding-size <i>number</i> |
| Tree | padding-size |
| Range | 0 to 16384 |
| Units | bytes |
| Default | 56 |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

source-ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

| | |
|------------|---|
| Synopsis | Source IP address used in the ICMP messages |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check source-ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) |
| Tree | source-ip-address |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

timeout *number*

| | |
|------------|---|
| Synopsis | Time interval determining that a ping is missed |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check timeout <i>number</i> |
| Tree | timeout |
| Range | 1 to 10 |
| Units | seconds |
| Default | 1 |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

metric *number*

| | |
|------------|--|
| Synopsis | Metric associated with the managed route |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> metric <i>number</i> |
| Tree | metric |
| Max. Range | 0 to 4294967295 |
| Default | 0 |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

preference *number*

| | |
|----------|--|
| Synopsis | Preference associated with the managed route |
|----------|--|

| | |
|------------|---|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> preference <i>number</i> |
| Tree | preference |
| Range | 0 to 255 |
| Default | 0 |
| Introduced | 22.2.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

tag *number*

| | |
|------------|--|
| Synopsis | Route tag associated with the managed route |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> tag <i>number</i> |
| Tree | tag |
| Max. Range | 0 to 4294967295 |
| Default | 0 |
| Introduced | 22.2.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

retail-svc-id *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Retail service ID |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> retail-svc-id <i>number</i> |
| Tree | retail-svc-id |
| Range | 1 to 2147483647 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

shcv

| | |
|----------|-------------------------------|
| Synopsis | Enter the shcv context |
|----------|-------------------------------|

| | |
|------------|---|
| Context | configure service vpn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> shcv |
| Tree | shcv |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sla-profile *reference*

| | |
|------------|---|
| Synopsis | SLA profile name |
| Context | configure service vpn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> sla-profile <i>reference</i> |
| Tree | sla-profile |
| Reference | configure subscriber-mgmt sla-profile <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sub-profile *reference*

| | |
|------------|---|
| Synopsis | Sub-profile name |
| Context | configure service vpn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> sub-profile <i>reference</i> |
| Tree | sub-profile |
| Reference | configure subscriber-mgmt sub-profile <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

subscriber-id

| | |
|------------|--|
| Synopsis | Enter the subscriber-id context |
| Context | configure service vpn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> subscriber-id |
| Tree | subscriber-id |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

string *string*

| | |
|---------------|---|
| Synopsis | Subscriber identification |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> subscriber-id <i>string</i> <i>string</i> |
| Tree | string |
| String Length | 1 to 64 |
| Notes | The following elements are part of a choice: string or use-sap-id . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

use-sap-id

| | |
|------------|--|
| Synopsis | Use the SAP id as subscriber ID |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> subscriber-id use-sap-id |
| Tree | use-sap-id |
| Notes | The following elements are part of a choice: string or use-sap-id . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

mac-learning

| | |
|------------|---|
| Synopsis | Enter the mac-learning context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host mac-learning |
| Tree | mac-learning |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

data-triggered *boolean*

| | |
|----------|---|
| Synopsis | Enable learning of MAC addresses from data packets |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host mac-learning data-triggered <i>boolean</i> |
| Tree | data-triggered |
| Default | false |

Introduced 16.0.R4
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

single-mac *boolean*

Synopsis Enforce single MAC address and subscriber for the SAP
Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [sap](#) *string* [static-host](#) [mac-learning](#) **single-mac** *boolean*
Tree [single-mac](#)
Default false
Introduced 16.0.R4
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sub-sla-mgmt

Synopsis Enter the **sub-sla-mgmt** context
Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [sap](#) *string* [sub-sla-mgmt](#)
Tree [sub-sla-mgmt](#)
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis Administrative state of SAP subscriber management
Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [sap](#) *string* [sub-sla-mgmt](#) **admin-state** *keyword*
Tree [admin-state](#)
Options enable, disable
Default disable
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

defaults

Synopsis Enter the **defaults** context

| | |
|------------|--|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> sub-sla-mgmt defaults |
| Tree | defaults |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

app-profile *reference*

| | |
|------------|---|
| Synopsis | Default application profile name for this SAP |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> sub-sla-mgmt defaults app-profile <i>reference</i> |
| Tree | app-profile |
| Reference | configure application-assurance group <i>number</i> partition <i>number</i> policy app-profile <i>string</i> |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

int-dest-id

| | |
|------------|--|
| Synopsis | Enter the int-dest-id context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> sub-sla-mgmt defaults int-dest-id |
| Tree | int-dest-id |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

string *string*

| | |
|---------------|---|
| Synopsis | Use the configured string |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> sub-sla-mgmt defaults int-dest-id string <i>string</i> |
| Tree | string |
| String Length | 1 to 32 |
| Notes | The following elements are part of a choice: string or top-q-tag . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

top-q-tag

| | |
|------------|--|
| Synopsis | Use the top Q-tag of this SAP |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> sub-sla-mgmt defaults int-dest-id top-q-tag |
| Tree | top-q-tag |
| Notes | The following elements are part of a choice: string or top-q-tag . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sla-profile *reference*

| | |
|------------|---|
| Synopsis | Default SLA profile for hosts on this SAP |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> sub-sla-mgmt defaults sla-profile <i>reference</i> |
| Tree | sla-profile |
| Reference | configure subscriber-mgmt sla-profile <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sub-profile *reference*

| | |
|------------|---|
| Synopsis | Default subscriber profile for the SAP |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> sub-sla-mgmt defaults sub-profile <i>reference</i> |
| Tree | sub-profile |
| Reference | configure subscriber-mgmt sub-profile <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

subscriber-id

| | |
|----------|--|
| Synopsis | Enter the subscriber-id context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> sub-sla-mgmt defaults subscriber-id |
| Tree | subscriber-id |

| | |
|------------|---|
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

auto-id

| | |
|------------|--|
| Synopsis | Use auto-generated subscriber identification string |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> sub-sla-mgmt defaults subscriber-id auto-id |
| Tree | auto-id |
| Notes | The following elements are part of a choice: auto-id , sap-id , or string . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sap-id

| | |
|------------|---|
| Synopsis | Use SAP ID as default subscriber identification string |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> sub-sla-mgmt defaults subscriber-id sap-id |
| Tree | sap-id |
| Notes | The following elements are part of a choice: auto-id , sap-id , or string . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

string *string*

| | |
|---------------|---|
| Synopsis | Default subscriber identification string for the SAP |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> sub-sla-mgmt defaults subscriber-id string <i>string</i> |
| Tree | string |
| String Length | 1 to 64 |
| Notes | The following elements are part of a choice: auto-id , sap-id , or string . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

single-sub-parameters

| | |
|------------|---|
| Synopsis | Enter the single-sub-parameters context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> sub-sla-mgmt single-sub-parameters |
| Tree | single-sub-parameters |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

non-sub-traffic

| | |
|------------|---|
| Synopsis | Enable the non-sub-traffic context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> sub-sla-mgmt single-sub-parameters non-sub-traffic |
| Tree | non-sub-traffic |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

app-profile *reference*

| | |
|------------|--|
| Synopsis | Application profile name for all non-subscriber traffic |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> sub-sla-mgmt single-sub-parameters non-sub-traffic app-profile <i>reference</i> |
| Tree | app-profile |
| Reference | configure application-assurance group <i>number</i> partition <i>number</i> policy app-profile <i>string</i> |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

sla-profile *reference*

| | |
|------------|--|
| Synopsis | SLA profile applicable for all non-subscriber traffic |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> sub-sla-mgmt single-sub-parameters non-sub-traffic sla-profile <i>reference</i> |
| Tree | sla-profile |
| Reference | configure subscriber-mgmt sla-profile <i>string</i> |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sub-profile *reference*

Synopsis Subscriber profile all non-subscriber traffic

Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [sap](#) *string* [sub-sla-mgmt](#) [single-sub-parameters](#) [non-sub-traffic](#) [sub-profile](#) *reference*

Tree [sub-profile](#)

Reference **configure** [subscriber-mgmt](#) [sub-profile](#) *string*

Notes This element is mandatory.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

subscriber-id *string*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Subscriber ID applied for all non-subscriber traffic

Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [sap](#) *string* [sub-sla-mgmt](#) [single-sub-parameters](#) [non-sub-traffic](#) [subscriber-id](#) *string*

Tree [subscriber-id](#)

String Length 1 to 64

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

profiled-traffic-only *boolean*

Synopsis Include all traffic in subscriber profile

Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [sap](#) *string* [sub-sla-mgmt](#) [single-sub-parameters](#) [profiled-traffic-only](#) *boolean*

Tree [profiled-traffic-only](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sub-ident-policy *reference*

| | |
|------------|---|
| Synopsis | Subscriber identification policy used on this SAP |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> sub-sla-mgmt sub-ident-policy <i>reference</i> |
| Tree | sub-ident-policy |
| Reference | configure subscriber-mgmt sub-ident-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

subscriber-limit (*keyword* | *number*)

| | |
|------------|---|
| Synopsis | Maximum number of subscribers on this SAP |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> sub-sla-mgmt subscriber-limit (<i>keyword</i> <i>number</i>) |
| Tree | subscriber-limit |
| Range | 1 to 131071 |
| Options | no-limit |
| Default | 1 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sap-parameters

| | |
|------------|---|
| Synopsis | Enter the sap-parameters context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap-parameters |
| Tree | sap-parameters |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

anti-spoof *keyword*

| | |
|----------|---|
| Synopsis | Anti-spoof type of the SAP |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap-parameters anti-spoof <i>keyword</i> |

| | |
|------------|---|
| Tree | anti-spoof |
| Options | ip-mac, nh-mac |
| Default | ip-mac |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

description *string*

| | |
|---------------|---|
| Synopsis | Text description |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap-parameters description <i>string</i> |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sub-sla-mgmt

| | |
|------------|--|
| Synopsis | Enter the sub-sla-mgmt context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap-parameters sub-sla-mgmt |
| Tree | sub-sla-mgmt |
| Introduced | 16.0.R1 |

| Reference | configure subscriber-mgmt sla-profile string |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sub-profile *reference*

| | |
|------------|--|
| Synopsis | Default subscriber profile |
| Context | configure service vprn string subscriber-interface string group-interface string sap-parameters sub-sla-mgmt defaults sub-profile reference |
| Tree | sub-profile |
| Reference | configure subscriber-mgmt sub-profile string |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

subscriber-id

| | |
|------------|--|
| Synopsis | Enter the subscriber-id context |
| Context | configure service vprn string subscriber-interface string group-interface string sap-parameters sub-sla-mgmt defaults subscriber-id |
| Tree | subscriber-id |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

auto-id

Synopsis Subscriber ID that is autogenerated

Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [sap-parameters](#) [sub-sla-mgmt](#) [defaults](#) [subscriber-id](#) [auto-id](#)

Tree [auto-id](#)

Notes The following elements are part of a choice: **auto-id** or **string**.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

string *string*

Synopsis String to be used as default subscriber ID

Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [sap-parameters](#) [sub-sla-mgmt](#) [defaults](#) [subscriber-id](#) [string](#) [string](#)

Tree [string](#)

String Length 1 to 64

Notes The following elements are part of a choice: **auto-id** or **string**.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sub-ident-policy *reference*

Synopsis Subscriber identification policy

Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [sap-parameters](#) [sub-sla-mgmt](#) [sub-ident-policy](#) [reference](#)

Tree [sub-ident-policy](#)

Reference **configure** [subscriber-mgmt](#) [sub-ident-policy](#) *string*

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

shcv-policy *reference*

Synopsis SHCV policy for IPv4 and IPv6 subscriber hosts

| | |
|------------|--|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> shcv-policy <i>reference</i> |
| Tree | shcv-policy |
| Reference | configure subscriber-mgmt shcv-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

shcv-policy-ipv4 *reference*

| | |
|------------|---|
| Synopsis | SHCV for IPv4 subscriber hosts |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> shcv-policy-ipv4 <i>reference</i> |
| Tree | shcv-policy-ipv4 |
| Reference | configure subscriber-mgmt shcv-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

shcv-policy-ipv6 *reference*

| | |
|------------|---|
| Synopsis | SHCV for IPv6 subscriber hosts |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> shcv-policy-ipv6 <i>reference</i> |
| Tree | shcv-policy-ipv6 |
| Reference | configure subscriber-mgmt shcv-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

srrp [**srrp-id**] *number*

| | |
|----------------|--|
| Synopsis | Enter the srrp list instance |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> srrp <i>number</i> |
| Tree | srrp |
| Max. Instances | 1 |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[srrp-id] *number*

Synopsis SRRP instance ID

Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [srrp](#) *number*

Tree [srrp](#)

Range 1 to 4294967295

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis Administrative state of SRRP

Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [srrp](#) *number* [admin-state](#) *keyword*

Tree [admin-state](#)

Options enable, disable

Default disable

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

bfd-liveness

Synopsis Enable the **bfd-liveness** context

Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [srrp](#) *number* [bfd-liveness](#)

Tree [bfd-liveness](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dest-ip *string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Destination IPv4 prefix |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> srrp <i>number</i> bfd-liveness dest-ip <i>string</i> |
| Tree | dest-ip |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

interface-name *string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|---------------|--|
| Synopsis | Name of the interface running BFD |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> srrp <i>number</i> bfd-liveness interface-name <i>string</i> |
| Tree | interface-name |
| String Length | 1 to 32 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

service-name *string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|----------|--|
| Synopsis | Administrative service name |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> srrp <i>number</i> bfd-liveness service-name <i>string</i> |
| Tree | service-name |

| | |
|---------------|---|
| String Length | 1 to 64 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

description *string*

| | |
|---------------|--|
| Synopsis | Text description |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> srrp <i>number</i> description <i>string</i> |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

gw-mac *string*

| | |
|------------|---|
| Synopsis | Gateway MAC address |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> srrp <i>number</i> gw-mac <i>string</i> |
| Tree | gw-mac |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

keep-alive-interval *number*

| | |
|------------|--|
| Synopsis | Interval between SRRP advertisements |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> srrp <i>number</i> keep-alive-interval <i>number</i> |
| Tree | keep-alive-interval |
| Range | 1 to 100 |
| Units | deciseconds |
| Default | 10 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

message-path *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | SAP to use as the SRRP message path |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> srrp <i>number</i> message-path <i>reference</i> |
| Tree | message-path |
| Reference | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

monitor-oper-group

| | |
|------------|--|
| Synopsis | Enter the monitor-oper-group context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> srrp <i>number</i> monitor-oper-group |
| Tree | monitor-oper-group |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

group-name *reference*

| | |
|------------|--|
| Synopsis | Operational group name |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> srrp <i>number</i> monitor-oper-group group-name <i>reference</i> |
| Tree | group-name |
| Reference | configure service oper-group <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

priority-step *number*

| | |
|----------|--|
| Synopsis | Step value to change priority of SRRP instance |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> srrp <i>number</i> monitor-oper-group priority-step <i>number</i> |

| | |
|------------|---|
| Tree | priority-step |
| Range | 1 to 10 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

one-garp-per-sap *boolean*

| | |
|------------|--|
| Synopsis | Send one gratuitous ARP to each SAP |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> srrp <i>number</i> one-garp-per-sap <i>boolean</i> |
| Tree | one-garp-per-sap |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

policy *reference*

| | |
|----------------|--|
| Synopsis | VRRP priority control policy associated with the SRRP |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> srrp <i>number</i> policy <i>reference</i> |
| Tree | policy |
| Reference | configure vrrp policy <i>number</i> |
| Max. Instances | 2 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

preempt *boolean*

| | |
|------------|---|
| Synopsis | Allow the SRRP instance to override an existing master |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> srrp <i>number</i> preempt <i>boolean</i> |
| Tree | preempt |
| Default | true |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

priority *number*

Synopsis Priority for this interface at this level

Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [srrp](#) *number* **priority** *number*

Tree [priority](#)

Range 1 to 254

Default 100

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

send-fib-population-packets *keyword*

Synopsis Mode used to send FIB population packets on switchover

Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [srrp](#) *number* **send-fib-population-packets** *keyword*

Tree [send-fib-population-packets](#)

Options all, outer-tag-only

Default all

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

suppress-aa-sub *boolean*

Synopsis Enable application assurance suppression for ESM subscribers

Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* **suppress-aa-sub** *boolean*

Tree [suppress-aa-sub](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

tos-marking-state *keyword*

| | |
|------------|--|
| Synopsis | TOS marking state |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> tos-marking-state <i>keyword</i> |
| Tree | tos-marking-state |
| Options | trusted, untrusted |
| Default | trusted |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

type *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Group interface type |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> type <i>keyword</i> |
| Tree | type |
| Options | plain, lns, wlan-gw, gtp, bonding |
| Default | plain |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

wlan-gw

| | |
|------------|---|
| Synopsis | Enter the wlan-gw context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw |
| Tree | wlan-gw |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|----------|--------------------------------------|
| Synopsis | Administrative state of WLAN Gateway |
|----------|--------------------------------------|

| | |
|------------|--|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw
admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

gateway-address [**address**] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

| | |
|----------------|---|
| Synopsis | Enter the gateway-address list instance |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw
gateway-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) |
| Tree | gateway-address |
| Max. Instances | 10 |
| Introduced | 16.0.R4 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

[address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

| | |
|------------|---|
| Synopsis | Gateway endpoint address of the WLAN Gateway tunnel |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw
gateway-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) |
| Tree | gateway-address |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R4 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

purpose

| | |
|------------|--|
| Synopsis | Enter the purpose context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw
gateway-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) purpose |
| Tree | purpose |
| Introduced | 16.0.R4 |

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

xconnect *boolean*

Synopsis Use tunnel IP address for crosse-connect traffic

Context **configure** *service vprn string subscriber-interface string group-interface string wlan-gw gateway-address (ipv4-address-no-zone | ipv6-address-no-zone) purpose xconnect boolean*

Tree [xconnect](#)

Default false

Introduced 16.0.R4

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

gateway-router *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Routing instance the WLAN-GW endpoint resides in

Context **configure** *service vprn string subscriber-interface string group-interface string wlan-gw gateway-router string*

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

max-bd *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Maximum number of bridge domains

Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [wlan-gw](#) **lanext** **max-bd** *number*

Tree [max-bd](#)

Range 1 to 131071

Default 131071

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

learn-ap-mac

Synopsis Enable the **learn-ap-mac** context

Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [wlan-gw](#) **learn-ap-mac**

Tree [learn-ap-mac](#)

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

delay-auth *boolean*

| | |
|------------|--|
| Synopsis | Delay AP-MAC until after ARP/ND authentication response |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw learn-ap-mac delay-auth <i>boolean</i> |
| Tree | delay-auth |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

mobility

| | |
|------------|--|
| Synopsis | Enter the mobility context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw mobility |
| Tree | mobility |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

hold-time *number*

| | |
|------------|---|
| Synopsis | Minimum time between two mobility events for single UE |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw mobility hold-time <i>number</i> |
| Tree | hold-time |
| Range | 0 to 255 |
| Units | seconds |
| Default | 5 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

inter-tunnel-type *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Enable mobility between terminating tunnel types |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw mobility inter-tunnel-type <i>boolean</i> |
| Tree | inter-tunnel-type |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

inter-vlan *boolean*

| | |
|------------|--|
| Synopsis | Allow mobility within different VLANs of the same range |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw mobility inter-vlan <i>boolean</i> |
| Tree | inter-vlan |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

trigger

| | |
|------------|--|
| Synopsis | Enter the trigger context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw mobility trigger |
| Tree | trigger |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

control *boolean*

| | |
|------------|---|
| Synopsis | Use control traffic as a mobility trigger |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw mobility trigger control <i>boolean</i> |
| Tree | control |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

data *boolean*

| | |
|------------|---|
| Synopsis | Use data traffic as mobility trigger |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw mobility trigger data <i>boolean</i> |
| Tree | data |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

iapp *boolean*

| | |
|------------|---|
| Synopsis | Use IAPP messages as a mobility trigger |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw mobility trigger iapp <i>boolean</i> |
| Tree | iapp |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

oper-down-on-group-degrade *boolean*

| | |
|------------|--|
| Synopsis | Bring interface down when the ISA WLAN Gateway degraded |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw oper-down-on-group-degrade <i>boolean</i> |
| Tree | oper-down-on-group-degrade |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

tcp-mss-adjust *number*

| | |
|----------|---|
| Synopsis | TCP Maximum Segment Size (MSS) adjustment for gateway |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw tcp-mss-adjust <i>number</i> |
| Tree | tcp-mss-adjust |

| | |
|------------|------------------------------------|
| Range | 160 to 10240 |
| Units | bytes |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

tunnel-egress-qos

| | |
|------------|---|
| Synopsis | Enter the tunnel-egress-qos context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw tunnel-egress-qos |
| Tree | tunnel-egress-qos |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Administrative state of egress QoS for WLAN-GW tunnels |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw tunnel-egress-qos admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

agg-rate-limit (*number* | *keyword*)

| | |
|----------|--|
| Synopsis | HQoS aggregate rate limit |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw tunnel-egress-qos agg-rate-limit (<i>number</i> <i>keyword</i>) |
| Tree | agg-rate-limit |
| Range | 1 to 100000000 |
| Options | max |

| | |
|------------|------------------------------------|
| Default | max |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

granularity *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Granularity of the egress shaping for WLAN Gateway |
| Context | configure service vpn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw tunnel-egress-qos granularity <i>keyword</i> |
| Tree | granularity |
| Options | per-tunnel, per-retailer |
| Default | per-tunnel |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

hold-time (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | Minimum time to hold egress shaping resources |
| Context | configure service vpn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw tunnel-egress-qos hold-time (<i>number</i> <i>keyword</i>) |
| Tree | hold-time |
| Range | 1 to 86400 |
| Units | seconds |
| Options | infinite |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

multi-client-only *boolean*

| | |
|----------|--|
| Synopsis | Allow shaping for tunnel traffic for multiple UEs |
| Context | configure service vpn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw tunnel-egress-qos multi-client-only <i>boolean</i> |
| Tree | multi-client-only |

| | |
|------------|------------------------------------|
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

qos reference

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Egress QoS policy linked with each interface tunnel |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw tunnel-egress-qos qos <i>reference</i> |
| Tree | qos |
| Reference | configure qos sap-egress <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

scheduler-policy reference

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Egress scheduler policy linked with each tunnel |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw tunnel-egress-qos scheduler-policy <i>reference</i> |
| Tree | scheduler-policy |
| Reference | configure qos scheduler-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

tunnel-encaps

| | |
|----------|---|
| Synopsis | Enter the tunnel-encaps context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw tunnel-encaps |

Tree [tunnel-encaps](#)
 Introduced 16.0.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

learn-l2tp-cookie (*keyword* | *hex-string*)

Synopsis System that learns the cookie from L2TP tunnels terminating on this interface
 Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [wlan-gw](#) [tunnel-encaps](#) [learn-l2tp-cookie](#) (*keyword* | *hex-string*)
 Tree [learn-l2tp-cookie](#)
 String Length 6
 Options never, always
 Default never
 Introduced 16.0.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

vlan-range [[range](#)] *string*

Synopsis Enter the **vlan-range** list instance
 Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [wlan-gw](#) [vlan-range](#) *string*
 Tree [vlan-range](#)
 Introduced 16.0.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[range] *string*

Synopsis IEEE 802.1q VLAN tag range
 Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [wlan-gw](#) [vlan-range](#) *string*
 Tree [vlan-range](#)
 Notes This element is part of a list key.
 Introduced 16.0.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

authentication

| | |
|------------|--|
| Synopsis | Enter the authentication context |
| Context | configure service vprn string subscriber-interface string group-interface string wlan-gw vlan-range string authentication |
| Tree | authentication |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

hold-time *number*

| | |
|------------|---|
| Synopsis | Minimum time UE held down after failed authentication |
| Context | configure service vprn string subscriber-interface string group-interface string wlan-gw vlan-range string authentication hold-time number |
| Tree | hold-time |
| Range | 0 to 3600 |
| Units | seconds |
| Default | 5 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

local

| | |
|------------|--|
| Synopsis | Enable the local context |
| Context | configure service vprn string subscriber-interface string group-interface string wlan-gw vlan-range string authentication local |
| Tree | local |
| Introduced | 22.2.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

coa-policy *reference*

| | |
|-----------|---|
| Synopsis | RADIUS ISA policy applied to CoA or disconnect messages |
| Context | configure service vprn string subscriber-interface string group-interface string wlan-gw vlan-range string authentication local coa-policy reference |
| Tree | coa-policy |
| Reference | configure aaa radius isa-policy string |

Introduced 22.2.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

default-ue-state *keyword*

Synopsis UE state accepted for immediate authentication
 Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [wlan-gw](#) [vlan-range](#) *string* [authentication local default-ue-state](#) *keyword*
 Tree [default-ue-state](#)
 Options portal, dsm
 Notes This element is mandatory.
 Introduced 22.2.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

on-control-plane *boolean*

Synopsis Allow authentication on first control plane packet
 Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [wlan-gw](#) [vlan-range](#) *string* [authentication on-control-plane](#) *boolean*
 Tree [on-control-plane](#)
 Default false
 Introduced 16.0.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

policy *reference*

Synopsis RADIUS policy for authentication
 Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [wlan-gw](#) [vlan-range](#) *string* [authentication policy](#) *reference*
 Tree [policy](#)
 Reference **configure** [aaa radius isa-policy](#) *string*
 Introduced 16.0.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

vlan-mismatch-timeout *number*

| | |
|------------|--|
| Synopsis | Timeout if packet received with a non-matching VLAN tag |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> authentication vlan-mismatch-timeout <i>number</i> |
| Tree | vlan-mismatch-timeout |
| Range | 5 to 60 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

data-triggered-ue-creation

| | |
|------------|--|
| Synopsis | Enter the data-triggered-ue-creation context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> data-triggered-ue-creation |
| Tree | data-triggered-ue-creation |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of data-triggered UE creation |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> data-triggered-ue-creation admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

arp *boolean*

| | |
|----------|---|
| Synopsis | Authenticate ARP packets received from an unknown UE |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> data-triggered-ue-creation arp <i>boolean</i> |
| Tree | arp |

| | |
|------------|------------------------------------|
| Default | false |
| Introduced | 22.7.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

create-proxy-cache-entry

| | |
|------------|---|
| Synopsis | Enter the create-proxy-cache-entry context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> data-triggered-ue-creation create-proxy-cache-entry |
| Tree | create-proxy-cache-entry |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

mac-format *string*

| | |
|---------------|--|
| Synopsis | MAC address format |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> data-triggered-ue-creation create-proxy-cache-entry mac-format <i>string</i> |
| Tree | mac-format |
| String Length | 2 to 7 |
| Default | aa: |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

proxy-server

| | |
|------------|--|
| Synopsis | Enable the proxy-server context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> data-triggered-ue-creation create-proxy-cache-entry proxy-server |
| Tree | proxy-server |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

name *string*

| | |
|----------|--------------------------|
| Synopsis | RADIUS Proxy server name |
|----------|--------------------------|

| | |
|---------------|---|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> data-triggered-ue-creation create-proxy-cache-entry proxy-server name <i>string</i> |
| Tree | name |
| String Length | 1 to 32 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

router-instance *string*

| | |
|------------|--|
| Synopsis | Router instance of the RADIUS proxy server |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> data-triggered-ue-creation create-proxy-cache-entry proxy-server router-instance <i>string</i> |
| Tree | router-instance |
| Notes | This element is mandatory. |
| Introduced | 16.0.R4 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

dhcp4

| | |
|------------|--|
| Synopsis | Enter the dhcp4 context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dhcp4 |
| Tree | dhcp4 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|----------|--|
| Synopsis | Administrative state of DHCPv4 |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dhcp4 admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |

| | |
|------------|------------------------------------|
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

dns string

| | |
|----------------|---|
| Synopsis | DNS servers signaled in DHCP |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dhcp4 dns <i>string</i> |
| Tree | dns |
| Max. Instances | 2 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

l2-aware-ip-address (*ipv4-unicast-address* | *keyword*)

| | |
|------------|--|
| Synopsis | L2-Aware NAT inside IP address |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dhcp4 l2-aware-ip-address (<i>ipv4-unicast-address</i> <i>keyword</i>) |
| Tree | l2-aware-ip-address |
| Options | from-pool |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

lease-time

| | |
|------------|--|
| Synopsis | Enter the lease-time context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dhcp4 lease-time |
| Tree | lease-time |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

active number

| | |
|------------|--|
| Synopsis | Lease time an authenticated user |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dhcp4 lease-time active <i>number</i> |
| Tree | active |
| Range | 300 to 3600 |
| Units | seconds |
| Default | 600 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

initial number

| | |
|------------|---|
| Synopsis | Lease time for migrant user (unauthenticated) |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dhcp4 lease-time initial <i>number</i> |
| Tree | initial |
| Range | 300 to 3600 |
| Units | seconds |
| Default | 600 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

nbns string

| | |
|----------------|---|
| Synopsis | NetBIOS servers signaled in DHCP |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dhcp4 nbns <i>string</i> |
| Tree | nbns |
| Max. Instances | 2 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

dhcp6

| | |
|------------|---|
| Synopsis | Enter the dhcp6 context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dhcp6 |
| Tree | dhcp6 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of the protocol |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dhcp6 admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

preferred-lifetime

| | |
|------------|--|
| Synopsis | Enter the preferred-lifetime context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dhcp6 preferred-lifetime |
| Tree | preferred-lifetime |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

active *number*

| | |
|----------|---|
| Synopsis | Preferred signaled lifetime after full authentication |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dhcp6 preferred-lifetime active <i>number</i> |
| Tree | active |
| Range | 300 to 3600 |
| Units | seconds |

| | |
|------------|------------------------------------|
| Default | 600 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

initial number

| | |
|------------|--|
| Synopsis | Signaled preferred lifetime after full authentication |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dhcp6 preferred-lifetime initial number |
| Tree | initial |
| Range | 300 to 3600 |
| Units | seconds |
| Default | 300 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

valid-lifetime

| | |
|------------|---|
| Synopsis | Enter the valid-lifetime context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dhcp6 valid-lifetime |
| Tree | valid-lifetime |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

active number

| | |
|------------|---|
| Synopsis | Signaled valid lifetime after full authentication |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dhcp6 valid-lifetime active number |
| Tree | active |
| Range | 300 to 3600 |

| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

initial number

| | |
|------------|---|
| Synopsis | Valid signaled lifetime UE is not fully authenticated |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dhcp6 valid-lifetime initial <i>number</i> |
| Tree | initial |
| Range | 300 to 3600 |
| Units | seconds |
| Default | 300 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

dsm

| | |
|------------|--|
| Synopsis | Enter the dsm context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dsm |
| Tree | dsm |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

accounting-policy *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | ISA Radius Policy for accounting |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dsm accounting-policy <i>reference</i> |
| Tree | accounting-policy |
| Reference | configure aaa radius isa-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

accounting-update

| | |
|------------|---|
| Synopsis | Enable the accounting-update context |
| Context | configure service vprn string subscriber-interface string group-interface string wlan-gw vlan-range string dsm accounting-update |
| Tree | accounting-update |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

interval *number*

| | |
|------------|---|
| Synopsis | Interim accounting update messages interval |
| Context | configure service vprn string subscriber-interface string group-interface string wlan-gw vlan-range string dsm accounting-update interval number |
| Tree | interval |
| Range | 5 to 259200 |
| Units | minutes |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of DSM |
| Context | configure service vprn string subscriber-interface string group-interface string wlan-gw vlan-range string dsm admin-state keyword |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

application-assurance

| | |
|----------|---|
| Synopsis | Enter the application-assurance context |
| Context | configure service vprn string subscriber-interface string group-interface string wlan-gw vlan-range string dsm application-assurance |

Tree [application-assurance](#)
 Introduced 21.10.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

accounting-statistics *boolean*

Synopsis Collect AA statistics

 Tree [accounting-statistics](#)
 Default false
 Introduced 21.10.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

profile *reference*

Synopsis AA application profile used for portal authentication
 Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [wlan-gw](#) [vlan-range](#) *string* [dsm](#) [application-assurance](#) [profile](#) *reference*
 Tree [profile](#)
 Reference **configure** [application-assurance](#) [group](#) *number* [partition](#) *number* [policy](#) [app-profile](#) *string*
 Introduced 21.10.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

url-parameter *string*

Synopsis AA URL parameter included for HTTP portal redirect
 Context **configure** [service vprn](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [wlan-gw](#) [vlan-range](#) *string* [dsm](#) [application-assurance](#) [url-parameter](#) *string*
 Tree [url-parameter](#)
 String Length 1 to 247
 Introduced 22.2.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

egress

| | |
|------------|--|
| Synopsis | Enter the egress context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dsm egress |
| Tree | egress |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

policer reference

| | |
|------------|---|
| Synopsis | Policer for egress traffic |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dsm egress policer <i>reference</i> |
| Tree | policer |
| Reference | configure subscriber-mgmt isa-policer <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

ingress

| | |
|------------|---|
| Synopsis | Enter the ingress context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dsm ingress |
| Tree | ingress |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

ip-filter reference

| | |
|------------|--|
| Synopsis | Filter for ingress traffic |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dsm ingress ip-filter <i>reference</i> |
| Tree | ip-filter |
| Reference | configure subscriber-mgmt isa-filter <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

policer *reference*

| | |
|------------|---|
| Synopsis | Policer for ingress traffic |
| Context | configure service vprn string subscriber-interface string group-interface string wlan-gw vlan-range string dsm ingress policer reference |
| Tree | policer |
| Reference | configure subscriber-mgmt isa-policer string |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

soft-quota-exhausted-filter *reference*

| | |
|-------------|---|
| Synopsis | Filter applied when soft volume quota is reached |
| Context | configure service vprn string subscriber-interface string group-interface string wlan-gw vlan-range string dsm ingress soft-quota-exhausted-filter reference |
| Tree | soft-quota-exhausted-filter |
| Description | This command applies a filter when a soft volume quota is reached. The filter replaces the currently applied filter (which can be preconfigured using the ip-filter command in the configure service vprn subscriber-interface group-interface wlan-gw vlan-range dsm ingress ip-filter context or be set using a RADIUS CoA message) for the UE upon quota exhaustion. If the quota is extended using a RADIUS CoA message, the filter is automatically reverted. Configuration changes apply only to new DSM UEs and not to existing UEs. |
| Reference | configure subscriber-mgmt isa-filter string |
| Introduced | 21.7.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

one-time-redirect

| | |
|------------|---|
| Synopsis | Enter the one-time-redirect context |
| Context | configure service vprn string subscriber-interface string group-interface string wlan-gw vlan-range string dsm one-time-redirect |
| Tree | one-time-redirect |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

port number

| | |
|------------|--|
| Synopsis | Destination port of packets for HTTP redirect |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dsm one-time-redirect port <i>number</i> |
| Tree | port |
| Range | 1 to 65535 |
| Default | 80 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

url string

| | |
|---------------|---|
| Synopsis | URL for redirected HTTP protocol packets |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dsm one-time-redirect url <i>string</i> |
| Tree | url |
| String Length | 1 to 255 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

volume-quota-direction keyword

| | |
|-------------|---|
| Synopsis | Volume quota direction for WLAN GW |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dsm volume-quota-direction <i>keyword</i> |
| Tree | volume-quota-direction |
| Description | This command specifies the direction that volume quotas are applied. Configuration changes apply only to new DSM UEs and not to existing UEs. |
| Options | both, ingress, egress |
| Default | both |
| Introduced | 21.7.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

extension [[extension-range](#)] string

| | |
|----------|---------------------------------------|
| Synopsis | Add a list entry for extension |
|----------|---------------------------------------|

| | |
|------------|--|
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> extension <i>string</i> |
| Tree | extension |
| Introduced | 21.7.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

[extension-range] *string*

| | |
|-------------|--|
| Synopsis | VLAN tag range used for matching |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> extension <i>string</i> |
| Tree | extension |
| Description | This command configures the additional VLAN range that is used for matching. Any traffic within the extension range is considered part of the same VLAN range for purposes of intra-SSID mobility. |
| Notes | This element is part of a list key. |
| Introduced | 21.7.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

http-redirect-policy *reference*

| | |
|------------|--|
| Synopsis | Default HTTP redirect policy for portal authentication |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> http-redirect-policy <i>reference</i> |
| Tree | http-redirect-policy |
| Reference | configure subscriber-mgmt http-redirect-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

idle-timeout-action *keyword*

| | |
|----------|---|
| Synopsis | Action to perform when the idle timeout expires |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> idle-timeout-action <i>keyword</i> |
| Tree | idle-timeout-action |
| Options | remove, shcv |
| Default | remove |

| | |
|------------|------------------------------------|
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

I2-service

| | |
|------------|---|
| Synopsis | Enable the I2-service context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> I2-service |
| Tree | I2-service |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of Layer 2 service for VLAN range |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> I2-service admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

description *string*

| | |
|---------------|--|
| Synopsis | Text description |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> I2-service description <i>string</i> |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

service reference

| | |
|----------|---|
| Synopsis | Layer 2 service associated with the range |

| | |
|------------|---|
| Synopsis | Allow MAC address translation for HLE services |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> vrgw lanext mac-translation <i>boolean</i> |
| Tree | mac-translation |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

network

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Enter the network context |
| Context | configure service vprn string subscriber-interface string group-interface string wlan-gw vlan-range string vrgw lanext network |
| Tree | network |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Administrative state of the HLE network |
| Context | configure service vprn string subscriber-interface string group-interface string wlan-gw vlan-range string vrgw lanext network admin-state keyword |
| Tree | admin-state |
| Options | enable, disable |
| Default | enable |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

max-mac *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Maximum number of allowed MAC entries on network side |
| Context | configure service vprn string subscriber-interface string group-interface string wlan-gw vlan-range string vrgw lanext network max-mac number |
| Tree | max-mac |
| Range | 1 to 64 |
| Default | 20 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

policer *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Policer for ingress data center traffic |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> vrgw lanext network policer <i>reference</i> |
| Tree | policer |
| Reference | configure subscriber-mgmt isa-policer <i>string</i> |
| Introduced | 19.7.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

xconnect

| | |
|------------|--|
| Synopsis | Enter the xconnect context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> xconnect |
| Tree | xconnect |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

accounting

| | |
|------------|---|
| Synopsis | Enter the accounting context |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> xconnect accounting |
| Tree | accounting |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

mobility-updates *boolean*

| | |
|----------|---|
| Synopsis | Accounting updates triggered by mobility |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> xconnect accounting mobility-updates <i>boolean</i> |
| Tree | mobility-updates |

| | |
|------------|------------------------------------|
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

policy reference

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | ISA RADIUS accounting policy for cross-connected UEs |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> xconnect accounting policy <i>reference</i> |
| Tree | policy |
| Reference | configure aaa radius isa-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

update-interval number

| | |
|------------|---|
| Synopsis | Time between successive interim accounting updates |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> xconnect accounting update-interval <i>number</i> |
| Tree | update-interval |
| Range | 5 to 259200 |
| Units | minutes |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

admin-state keyword

| | |
|----------|---|
| Synopsis | Administrative state of the cross-connect |
| Context | configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> xconnect admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |

| | |
|------------|------------------------------------|
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

wlan-gw-group *reference*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | ID of WLAN Gateway ISA group that gateway binds to |
| Context | configure service vpn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw-wlan-gw-group <i>reference</i> |
| Tree | wlan-gw-group |
| Reference | configure isa wlan-gw-group <i>number</i> |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

wpp

| | |
|------------|---|
| Synopsis | Enable the wpp context |
| Context | configure service vpn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wpp |
| Tree | wpp |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of WPP |
| Context | configure service vpn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wpp admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

initial

| | |
|------------|---|
| Synopsis | Enter the initial context |
