malformed-packets *boolean*

| | |
|------------|--|
| Synopsis | Report alarm for malformed packets |
| Context | configure service cpipe string sap string cem report-alarm malformed-packets <i>boolean</i> |
| Tree | malformed-packets |
| Default | true |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

packet-loss *boolean*

| | |
|------------|--|
| Synopsis | Report remote peer is currently in packet loss status |
| Context | configure service cpipe string sap string cem report-alarm packet-loss <i>boolean</i> |
| Tree | packet-loss |
| Default | true |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

remote-fault *boolean*

| | |
|------------|---|
| Synopsis | Report remote TDM interface is currently not in service |
| Context | configure service cpipe string sap string cem report-alarm remote-fault <i>boolean</i> |
| Tree | remote-fault |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

remote-packet-loss *boolean*

| | |
|------------|---|
| Synopsis | Report remote peer is currently in packet loss status |
| Context | configure service cpipe string sap string cem report-alarm remote-packet-loss <i>boolean</i> |
| Tree | remote-packet-loss |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

remote-rdi *boolean*

| | |
|------------|---|
| Synopsis | Report remote TDM interface is currently in RDI status |
| Context | configure service cpipe string sap string cem report-alarm remote-rdi <i>boolean</i> |
| Tree | remote-rdi |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

stray-packets *boolean*

| | |
|------------|--|
| Synopsis | Report alarm for stray packets |
| Context | configure service cpipe string sap string cem report-alarm stray-packets <i>boolean</i> |
| Tree | stray-packets |
| Default | true |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

rtp-header *boolean*

| | |
|-------------|--|
| Synopsis | Use RTP header for transmitted packets to the PSN |
| Context | configure service cpipe string sap string cem rtp-header <i>boolean</i> |
| Tree | rtp-header |
| Description | When configured to true , the router uses the RTP header when packets are transmitted to the packet service network (PSN) by the CEM SAP. This mode must be enabled for differential-timed E1s. |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e |

collect-stats *boolean*

| | |
|----------|---|
| Synopsis | Collect accounting statistics |
| Context | configure service cpipe string sap string collect-stats <i>boolean</i> |
| Tree | collect-stats |
| Default | false |

Introduced 20.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

description *string*

Synopsis Text description
 Context **configure** [service](#) [cpipe](#) *string* [sap](#) *string* [description](#) *string*
 Tree [description](#)
 String Length 1 to 160
 Introduced 20.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

dist-cpu-protection *reference*

Synopsis Distributed CPU protection policy for SAP
 Context **configure** [service](#) [cpipe](#) *string* [sap](#) *string* [dist-cpu-protection](#) *reference*
 Tree [dist-cpu-protection](#)
 Reference **configure** [system](#) [security](#) [dist-cpu-protection](#) *policy* *string*
 Introduced 20.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

egress

Synopsis Enter the **egress** context
 Context **configure** [service](#) [cpipe](#) *string* [sap](#) *string* [egress](#)
 Tree [egress](#)
 Introduced 20.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

agg-rate

Synopsis Enter the **agg-rate** context
 Context **configure** [service](#) [cpipe](#) *string* [sap](#) *string* [egress](#) [agg-rate](#)
 Tree [agg-rate](#)
 Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

adaptation-rule *keyword*

Synopsis Adaptation rule to compute the operational PIR value when an aggregate shaper is used

Context **configure** [service](#) [cpipe](#) *string* [sap](#) *string* [egress](#) [agg-rate](#) [adaptation-rule](#) *keyword*

Tree [adaptation-rule](#)

Options max, min, closest

Default closest

Introduced 22.10.R1

Platforms 7750 SR-1, 7750 SR-s

burst-limit (*number* | *keyword*)

Synopsis Shaping burst size when an aggregate shaper is used

Context **configure** [service](#) [cpipe](#) *string* [sap](#) *string* [egress](#) [agg-rate](#) [burst-limit](#) (*number* | *keyword*)

Tree [burst-limit](#)

Range 1 to 14000000

Units bytes

Options auto

Default auto

Introduced 22.10.R1

Platforms 7750 SR-1, 7750 SR-s

limit-unused-bandwidth *boolean*

Synopsis Enable aggregate rate overrun protection

Context **configure** [service](#) [cpipe](#) *string* [sap](#) *string* [egress](#) [agg-rate](#) [limit-unused-bandwidth](#) *boolean*

Tree [limit-unused-bandwidth](#)

Default false

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

rate number

| | |
|------------|---|
| Synopsis | Enforced aggregate rate for all queues |
| Context | configure service cpipe string sap string egress agg-rate rate <i>number</i> |
| Tree | rate |
| Range | 1 to 6400000000 |
| Units | kilobps |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

qos

| | |
|------------|---|
| Synopsis | Enter the qos context |
| Context | configure service cpipe string sap string egress qos |
| Tree | qos |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

policer-control-policy

| | |
|------------|--|
| Synopsis | Enter the policer-control-policy context |
| Context | configure service cpipe string sap string egress qos policer-control-policy |
| Tree | policer-control-policy |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS |

overrides

| | |
|------------|--|
| Synopsis | Enable the overrides context |
| Context | configure service cpipe string sap string egress qos policer-control-policy overrides |
| Tree | overrides |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS |

root

| | |
|------------|---|
| Synopsis | Enter the root context |
| Context | configure service cpipe string sap string egress qos policer-control-policy overrides root |
| Tree | root |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS |

max-rate (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | Maximum frame-based bandwidth limit |
| Context | configure service cpipe string sap string egress qos policer-control-policy overrides root max-rate (<i>number</i> <i>keyword</i>) |
| Tree | max-rate |
| Range | 1 to 6400000000 |
| Options | max |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS |

priority-mbs-thresholds

| | |
|------------|---|
| Synopsis | Enter the priority-mbs-thresholds context |
| Context | configure service cpipe string sap string egress qos policer-control-policy overrides root priority-mbs-thresholds |
| Tree | priority-mbs-thresholds |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS |

min-thresh-separation (*number* | *keyword*)

| | |
|----------|--|
| Synopsis | Minimum amount of separation buffer space |
| Context | configure service cpipe string sap string egress qos policer-control-policy overrides root priority-mbs-thresholds min-thresh-separation (<i>number</i> <i>keyword</i>) |
| Tree | min-thresh-separation |
| Range | 0 to 16777216 |
| Units | bytes |
| Options | auto |

| | |
|------------|---|
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS |

priority [[priority-level](#)] *number*

| | |
|------------|---|
| Synopsis | Enter the priority list instance |
| Context | configure service cpipe string sap string egress qos policer-control-policy overrides root priority-mbs-thresholds priority number |
| Tree | priority |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS |

[priority-level] *number*

| | |
|------------|---|
| Synopsis | Priority level |
| Context | configure service cpipe string sap string egress qos policer-control-policy overrides root priority-mbs-thresholds priority number |
| Tree | priority |
| Range | 1 to 8 |
| Notes | This element is part of a list key. |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS |

mbs-contribution (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | Minimum amount of cumulative buffer space allowed |
| Context | configure service cpipe string sap string egress qos policer-control-policy overrides root priority-mbs-thresholds priority number mbs-contribution (number keyword) |
| Tree | mbs-contribution |
| Range | 0 to 16777216 |
| Units | bytes |
| Options | auto |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS |

policy-name *reference*

| | |
|------------|---|
| Synopsis | Policer control policy name |
| Context | configure service cpipe <i>string</i> sap <i>string</i> egress qos policer-control-policy policy-name <i>reference</i> |
| Tree | policy-name |
| Reference | configure qos policer-control-policy <i>string</i> |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS |

sap-egress

| | |
|------------|--|
| Synopsis | Enter the sap-egress context |
| Context | configure service cpipe <i>string</i> sap <i>string</i> egress qos sap-egress |
| Tree | sap-egress |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

overrides

| | |
|------------|--|
| Synopsis | Enter the overrides context |
| Context | configure service cpipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides |
| Tree | overrides |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

policer [[policer-id](#)] *reference*

| | |
|------------|---|
| Synopsis | Enter the policer list instance |
| Context | configure service cpipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer <i>reference</i> |
| Tree | policer |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS |

[policer-id] reference

| | |
|------------|---|
| Synopsis | Policer unique ID |
| Context | configure service cpipe <i>string sap string egress qos sap-egress overrides policer reference</i> |
| Tree | policer |
| Reference | configure qos sap-egress <i>string policer number</i> |
| Notes | This element is part of a list key. |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS |

cbs (number | keyword)

| | |
|------------|--|
| Synopsis | CBS |
| Context | configure service cpipe <i>string sap string egress qos sap-egress overrides policer reference cbs (number keyword)</i> |
| Tree | cbs |
| Range | 0 to 268435456 |
| Units | bytes |
| Options | auto |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS |

mbs (number | keyword)

| | |
|------------|--|
| Synopsis | MBS |
| Context | configure service cpipe <i>string sap string egress qos sap-egress overrides policer reference mbs (number keyword)</i> |
| Tree | mbs |
| Range | 0 to 268435456 |
| Units | bytes |
| Options | auto |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS |

packet-byte-offset *number*

| | |
|------------|---|
| Synopsis | Packet size modification for policing information |
| Context | configure service cpipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer reference packet-byte-offset <i>number</i> |
| Tree | packet-byte-offset |
| Range | -64 to 31 |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS |

percent-rate

| | |
|------------|---|
| Synopsis | Enter the percent-rate context |
| Context | configure service cpipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer reference percent-rate |
| Tree | percent-rate |
| Notes | The following elements are part of a choice: percent-rate or rate . |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS |

cir *decimal-number*

| | |
|------------|---|
| Synopsis | CIR percent rate |
| Context | configure service cpipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer reference percent-rate cir <i>decimal-number</i> |
| Tree | cir |
| Range | 0.00 to 100.00 |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS |

pir *decimal-number*

| | |
|----------|---|
| Synopsis | PIR percent rate |
| Context | configure service cpipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer reference percent-rate pir <i>decimal-number</i> |
| Tree | pir |
| Range | 0.01 to 100.00 |

| | |
|------------|---|
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS |

rate

| | |
|------------|---|
| Synopsis | Enter the rate context |
| Context | configure service cpipe string sap string egress qos sap-egress overrides policer
reference rate |
| Tree | rate |
| Notes | The following elements are part of a choice: percent-rate or rate . |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS |

cir (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | CIR rate |
| Context | configure service cpipe string sap string egress qos sap-egress overrides policer
reference rate cir (<i>number</i> <i>keyword</i>) |
| Tree | cir |
| Range | 0 to 6400000000 |
| Units | kilobps |
| Options | max |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS |

pir (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | PIR rate |
| Context | configure service cpipe string sap string egress qos sap-egress overrides policer
reference rate pir (<i>number</i> <i>keyword</i>) |
| Tree | pir |
| Range | 1 to 6400000000 |

reference hs-class-weight <i>number</i> |
| Tree | hs-class-weight |
| Range | 1 2 4 8 |
| Introduced | 20.10.R1 |
| Platforms | 7750 SR-7/12/12e |

hs-wred-queue

| | |
|------------|---|
| Synopsis | Enter the hs-wred-queue context |
| Context | configure service cpipe string sap string egress qos sap-egress overrides queue
reference hs-wred-queue |
| Tree | hs-wred-queue |
| Introduced | 20.10.R1 |
| Platforms | 7750 SR-7/12/12e |

policy reference

| | |
|------------|---|
| Synopsis | Slope policy applied to the HSQ queue group queue |
| Context | configure service cpipe string sap string egress qos sap-egress overrides queue reference hs-wred-queue policy reference |
| Tree | policy |
| Reference | configure qos slope-policy string |
| Introduced | 20.10.R1 |
| Platforms | 7750 SR-7/12/12e |

hs-wrr-weight number

| | |
|------------|---|
| Synopsis | WRR weight to parent with the queue into the scheduler |
| Context | configure service cpipe string sap string egress qos sap-egress overrides queue reference hs-wrr-weight number |
| Tree | hs-wrr-weight |
| Range | 1 to 127 |
| Default | 1 |
| Introduced | 20.10.R1 |
| Platforms | 7750 SR-7/12/12e |

mbs (number | keyword)

| | |
|------------|---|
| Synopsis | MBS |
| Context | configure service cpipe string sap string egress qos sap-egress overrides queue reference mbs (number keyword) |
| Tree | mbs |
| Range | 0 to 1073741824 |
| Units | bytes |
| Options | auto |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

monitor-queue-depth

| | |
|----------|---|
| Synopsis | Enable the monitor-queue-depth context |
|----------|---|

| | |
|------------|--|
| Context | configure service cpipe string sap string egress qos sap-egress overrides queue reference monitor-queue-depth |
| Tree | monitor-queue-depth |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

fast-polling *boolean*

| | |
|-------------|--|
| Synopsis | Enable fast polling of the queue depth |
| Context | configure service cpipe string sap string egress qos sap-egress overrides queue reference monitor-queue-depth fast-polling <i>boolean</i> |
| Tree | fast-polling |
| Description | When configured to true , this command enables fast polling of the queue depth. Faster polling allows a more accurate view of the actual depth. |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

violation-threshold *decimal-number*

| | |
|-------------|--|
| Synopsis | Threshold for queue depth before violation is raised |
| Context | configure service cpipe string sap string egress qos sap-egress overrides queue reference monitor-queue-depth violation-threshold <i>decimal-number</i> |
| Tree | violation-threshold |
| Description | This command specifies the threshold for the queue MBS. When the queue depth exceeds the threshold value, a violation is registered. |
| Range | 0.01 to 99.99 |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

parent

| | |
|------------|---|
| Synopsis | Enter the parent context |
| Context | configure service cpipe string sap string egress qos sap-egress overrides queue reference parent |
| Tree | parent |
| Introduced | 20.10.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

cir-weight *number*

Synopsis CIR parameter that overrides parent for queue group

Context **configure** [service cpipe](#) *string* [sap](#) *string* [egress qos sap-egress](#) [overrides queue reference](#) [parent cir-weight](#) *number*

Tree [cir-weight](#)

Range 0 to 100

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

weight *number*

Synopsis PIR parameter that overrides parent for queue group

Context **configure** [service cpipe](#) *string* [sap](#) *string* [egress qos sap-egress](#) [overrides queue reference](#) [parent weight](#) *number*

Tree [weight](#)

Range 0 to 100

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

percent-rate

Synopsis Enter the **percent-rate** context

Context **configure** [service cpipe](#) *string* [sap](#) *string* [egress qos sap-egress](#) [overrides queue reference](#) [percent-rate](#)

Tree [percent-rate](#)

Notes The following elements are part of a choice: **percent-rate** or **rate**.

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

cir *decimal-number*

Synopsis CIR percent rate

| | |
|------------|---|
| Context | configure service cpipe string sap string egress qos sap-egress overrides queue
reference percent-rate cir decimal-number |
| Tree | cir |
| Range | 0.00 to 100.00 |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

pir *decimal-number*

| | |
|------------|---|
| Synopsis | PIR percent rate |
| Context | configure service cpipe string sap string egress qos sap-egress overrides queue
reference percent-rate pir decimal-number |
| Tree | pir |
| Range | 0.01 to 100.00 |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

rate

| | |
|------------|--|
| Synopsis | Enter the rate context |
| Context | configure service cpipe string sap string egress qos sap-egress overrides queue
reference rate |
| Tree | rate |
| Notes | The following elements are part of a choice: percent-rate or rate . |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

cir (*number* | *keyword*)

| | |
|----------|---|
| Synopsis | CIR rate |
| Context | configure service cpipe string sap string egress qos sap-egress overrides queue
reference rate cir (<i>number</i> <i>keyword</i>) |
| Tree | cir |
| Range | 0 to 6400000000 |
| Units | kilobps |
| Options | max |

| | |
|------------|--|
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

pir (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | PIR rate |
| Context | configure service cpipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference rate pir (<i>number</i> <i>keyword</i>) |
| Tree | pir |
| Range | 1 to 6400000000 |
| Units | kilobps |
| Options | max |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

policy-name *reference*

| | |
|------------|---|
| Synopsis | Policy ID to associate with SAP for mirrored service |
| Context | configure service cpipe <i>string</i> sap <i>string</i> egress qos sap-egress policy-name <i>reference</i> |
| Tree | policy-name |
| Reference | configure qos sap-egress <i>string</i> |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

scheduler-policy

| | |
|------------|---|
| Synopsis | Enter the scheduler-policy context |
| Context | configure service cpipe <i>string</i> sap <i>string</i> egress qos scheduler-policy |
| Tree | scheduler-policy |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

overrides

| | |
|----------|------------------------------------|
| Synopsis | Enter the overrides context |
|----------|------------------------------------|

| | |
|------------|--|
| Context | configure service cpipe string sap string egress qos scheduler-policy overrides |
| Tree | overrides |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

scheduler [**scheduler-name**] *string*

| | |
|------------|---|
| Synopsis | Enter the scheduler list instance |
| Context | configure service cpipe string sap string egress qos scheduler-policy overrides scheduler string |
| Tree | scheduler |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

[scheduler-name] *string*

| | |
|---------------|--|
| Synopsis | Scheduler name |
| Context | configure service cpipe string sap string egress qos scheduler-policy overrides scheduler string |
| Tree | scheduler |
| Description | <p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context does not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context is not change.</p> |
| String Length | 1 to 32 |
| Notes | This element is part of a list key. |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

parent

| | |
|------------|---|
| Synopsis | Enter the parent context |
| Context | configure service cpipe string sap string egress qos scheduler-policy overrides scheduler string parent |
| Tree | parent |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

cir-weight *number*

| | |
|------------|--|
| Synopsis | Weight used at the within-CIR port priority level |
| Context | configure service cpipe string sap string egress qos scheduler-policy overrides scheduler string parent cir-weight <i>number</i> |
| Tree | cir-weight |
| Range | 0 to 100 |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

weight *number*

| | |
|------------|--|
| Synopsis | Relative weight of the scheduler to feed the queue |
| Context | configure service cpipe string sap string egress qos scheduler-policy overrides scheduler string parent weight <i>number</i> |
| Tree | weight |
| Range | 0 to 100 |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

rate

| | |
|------------|---|
| Synopsis | Enter the rate context |
| Context | configure service cpipe string sap string egress qos scheduler-policy overrides scheduler string rate |
| Tree | rate |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

cir (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | CIR at which the queue it to operate |
| Context | configure service cpipe <i>string</i> sap <i>string</i> egress qos scheduler-policy overrides scheduler <i>string</i> rate cir (<i>number</i> <i>keyword</i>) |
| Tree | cir |
| Range | 0 to 6400000000 |
| Units | kilobps |
| Options | sum, max |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

pir (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | PIR at which the queue is to operate |
| Context | configure service cpipe <i>string</i> sap <i>string</i> egress qos scheduler-policy overrides scheduler <i>string</i> rate pir (<i>number</i> <i>keyword</i>) |
| Tree | pir |
| Range | 1 to 6400000000 |
| Units | kilobps |
| Options | max |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

policy-name *reference*

| | |

scheduler [[scheduler-name](#)] *string*

| | |
|------------|---|
| Synopsis | Enter the scheduler list instance |
| Context | configure service cpipe string sap string ingress qos scheduler-policy overrides scheduler <i>string</i> |
| Tree | scheduler |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

[[scheduler-name](#)] *string*

| | |
|-------------|--|
| Synopsis | Scheduler name |
| Context | configure service cpipe string sap string ingress qos scheduler-policy overrides scheduler <i>string</i> |
| Tree | scheduler |
| Description | This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands. |

If the scheduler name exists within the policy on a different tier, an error occurs and the current context does not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.

If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context is not change.

| | |

[scheduler-name] *string*

| | |
|-------------|---|
| Synopsis | Scheduler name |
| Context | configure service customer <i>string</i> multi-service-site <i>string</i> egress scheduler-policy overrides scheduler <i>string</i> |
| Tree | scheduler |
| Description | <p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context will not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> |

If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context does not change.

| Platforms | All |

evi number

| | |
|----------|--|
| Synopsis | EVPN ID |
| Context | configure service epipe string <i>bgp-evpn evi number</i> |
| Tree | evi |

Description This command configures an EVPN instance (EVI) unique in the system. It is used for the service-carving algorithm for multi-homing and auto-deriving route target and route distinguishers.

The following options are supported:

If this EVPN identifier is not specified, the value is zero and no route distinguisher or route target is automatically derived from it. If the specified EVPN identifier is lower than 65535 and no other route distinguisher or route target is configured in the service, the following applies:

- the route distinguisher is derived from <system_ip>:evi
- the route target is derived from <autonomous-system>:evi

If the specified EVPN identifier is higher than 65535 and no other route distinguisher or route target is configured in the service, the following applies.

- The route distinguisher cannot be automatically derived. An error is generated if enabling EVPN is attempted without a route distinguisher. A manual or an **auto-rd** route distinguisher must be configured.

- The route target can only be automatically derived if the **evi-three-byte-auto-rt** command is configured. If configured, the route target is automatically derived in accordance with the rules described in RFC8365.

| Introduced | 16.0.R1 |
| Platforms | All |

bgp *boolean*

| | |
|-------------|---|
| Synopsis | Use BGP tunneling for next-hop resolution |
| Context | configure service epipe string bgp-evpn mpls number auto-bind-tunnel resolution-filter
bgp <i>boolean</i> |
| Tree | bgp |
| Description | When configured to true , BGP searches the BGP LSP for the address of the BGP next hop.

When configured to false , BGP tunneling is not used and inter-area or inter-as prefixes are not resolved. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

ldp *boolean*

| | |
|-------------|---|
| Synopsis | Use LDP tunneling for next-hop resolution |
| Context | configure service epipe string bgp-evpn mpls number auto-bind-tunnel resolution-filter
ldp <i>boolean</i> |
| Tree | ldp |
| Description | When configured to true , BGP searches for an LDP LSP with a FEC prefix corresponding to the address of the BGP next hop.

When configured to false , LDP tunneling is not used for next-hop resolution. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

mpls-fwd-policy *boolean*

| | |
|-------------|---|
| Synopsis | Use MPLS forwarding policy for next-hop resolution |
| Context | configure service epipe string bgp-evpn mpls number auto-bind-tunnel resolution-filter
mpls-fwd-policy <i>boolean</i> |
| Tree | mpls-fwd-policy |
| Description | When configured to true , BGP uses the MPLS forwarding policy to determine the address of the BGP next hop.

When configured to false , the MPLS forwarding policy is not used for next-hop resolution. |

| | |
|------------|---------|
| Default | false |
| Introduced | 19.5.R1 |
| Platforms | All |

rib-api *boolean*

| | |
|-------------|---|
| Synopsis | Use RIB API gRPC service for next-hop resolution |
| Context | configure service epipe <i>string</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter
rib-api <i>boolean</i> |
| Tree | rib-api |
| Description | When configured to true , BGP uses tunnels programmed using the RIB API gRPC service to resolve the next hops of routes imported into the EVPN service.
When configured to false , the RIB API service tunnels are not used for next-hop resolution. |
| Default | false |
| Introduced | 19.5.R1 |
| Platforms | All |

rsvp *boolean*

| | |
|-------------|---|
| Synopsis | Use RSVP tunneling for next-hop resolution |
| Context | configure service epipe <i>string</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter
rsvp <i>boolean</i> |
| Tree | rsvp |
| Description | When configured to true , BGP searches the best metric RSVP LSP to determine the address of the BGP next hop. This address can correspond to the system interface or to another loopback interface used by the BGP instance on the remote node. The LSP metric is provided by MPLS in the tunnel table. In the case of multiple RSVP LSPs with the same lowest metric, BGP selects the LSP with the lowest tunnel ID.
When configured to false , the RSVP LSP is not used for next-hop resolution. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

sr-isis *boolean*

| | |
|----------|--|
| Synopsis | Use IS-IS SR tunneling for next-hop resolution |
|----------|--|

| | |
|-------------|---|
| Context | configure service epipe <i>string</i> <i>bgp-evpn mpls number</i> <i>auto-bind-tunnel resolution-filter sr-isis</i> <i>boolean</i> |
| Tree | <i>sr-isis</i> |
| Description | When configured to true , BGP uses an IS-IS tunnel type to determine the address of the BGP next hop.
The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered IS-IS instance.
When configured to false , IS-IS tunneling is not used for next-hop resolution. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

sr-ospf *boolean*

| | |
|-------------|--|
| Synopsis | Use OSPF SR tunneling for next-hop resolution |
| Context | configure service epipe <i>string</i> <i>bgp-evpn mpls number</i> <i>auto-bind-tunnel resolution-filter sr-ospf</i> <i>boolean</i> |
| Tree | <i>sr-ospf</i> |
| Description | When configured to true , BGP uses an OSPF tunnel type to determine the address of the BGP next hop.
The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered OSPF instance.
When configured to false , OSPF tunneling is not used for next-hop resolution. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

sr-ospf3 *boolean*

| | |
|-------------|---|
| Synopsis | Use OSPFv3 SR tunneling for next-hop resolution |
| Context | configure service epipe <i>string</i> <i>bgp-evpn mpls number</i> <i>auto-bind-tunnel resolution-filter sr-ospf3</i> <i>boolean</i> |
| Tree | <i>sr-ospf3</i> |
| Description | When configured to true , BGP uses an OSPF3 tunnel type to determine the address of the BGP next hop.
The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered OSPF3 instance.
When configured to false , OSPF3 tunneling is not used for next-hop resolution. |

| | |
|------------|----------|
| Default | false |
| Introduced | 19.10.R1 |
| Platforms | All |

sr-policy *boolean*

| | |
|-------------|--|
| Synopsis | Use SR policies for next-hop resolution |
| Context | configure service epipe <i>string</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter sr-policy <i>boolean</i> |
| Tree | sr-policy |
| Description | When configured to true , this command instructs BGP to use an SR policy to determine the address of the BGP next hop. The SR policy search criteria includes a non-null endpoint and color value that matches the BGP next hop and color extended community value, respectively, of the EVPN route.

When configured to false , SR policies are not used for next-hop resolution. |
| Default | false |
| Introduced | 19.5.R1 |
| Platforms | All |

sr-te *boolean*

| | |
|-------------|--|
| Synopsis | Use SR-TE tunneling for next-hop resolution |
| Context | configure service epipe <i>string</i> bgp-evpn mpls <i>number</i> auto-bind-tunnel resolution-filter sr-te <i>boolean</i> |
| Tree | sr-te |
| Description | When configured to true , BGP uses an SR-TE tunnel type to determine the address of the BGP next hop.

The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered tunnel ID.

When configured to false , SR-TE tunneling is not used for next-hop resolution. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

udp *boolean*

| | |
|----------|---|
| Synopsis | Use MPLS over UDP tunneling for next-hop resolution |
|----------|---|

| | |
|-------------|--|
| Context | configure service epipe string bgp-evpn mpls number auto-bind-tunnel resolution-filter udp boolean |
| Tree | udp |
| Description | When configured to true , BGP uses an MPLS over UDP tunnel type to determine the address of the BGP next hop.
When configured to false , MPLS over UDP tunneling is not used for next-hop resolution. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

weighted-ecmp *boolean*

| | |
|-------------|--|
| Synopsis | Allow weighted load balancing |
| Context | configure service epipe string bgp-evpn mpls number auto-bind-tunnel weighted-ecmp boolean |
| Tree | weighted-ecmp |
| Description | When configured to true , this router enables weighted ECMP for packets using tunnels that a VPLS or Epipe automatically binds to. Packets are sprayed across LSPs in the ECMP according to the outcome of the hash algorithm and the configured load balancing weight of each LSP.
When configured to false , this command disables weighted ECMP for next-hop tunnel selection. |
| Default | false |
| Introduced | 22.7.R1 |
| Platforms | All |

control-word *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Enable support for control word |
| Context | configure service epipe string bgp-evpn mpls number control-word boolean |
| Tree | control-word |
| Description | When configured to true , the router enables the transmission and reception of the control word for all EVPN-MPLS destinations at the same time. |
| Default | false |

| | |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms | All |

default-route-tag *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Default route tag |
| Context | configure service epipe <i>string</i> bgp-evpn mpls <i>number</i> default-route-tag <i>string</i> |
| Tree | default-route-tag |
| Description | <p>This command configures a route tag that is used when sending a route to the BGP application (for the corresponding service and BGP instance). If the corresponding BGP instance is enabled, the command cannot be changed.</p> <p>When used for BGP EVPN contexts, only one route tag can be passed to BGP for matching on export policies. In case of a conflict with other route tags pushed by EVPN, the default route tag has the least priority.</p> <p>The following are examples of the conflict priority handling:</p> <ul style="list-style-type: none"> • If a service is configured with both default-route-tag <i>X</i> and proxy-arp evpn-route-tag <i>Y</i>, the EVPN uses route tag <i>Y</i> when sending EVPN proxy-arp routes to the BGP RIB for advertisement. • If a given IP-prefix route is tagged in the route-table with tag <i>A</i> and the R-VPLS, in which the route is advertised, uses <i>B</i> as the default-route-tag, then EVPN keeps tag <i>A</i> when sending the route to the BGP RIB. <p>The default-route-tag configuration is only supported on EVPN and IP-VPN service routes. The route tag for ES and AD per-ES routes is always zero.</p> |
| Introduced | 16.0.R4 |
| Platforms | All |

dynamic-egress-label-limit *boolean*

| | |
|-------------|---|
| Synopsis | Enables dynamic egress label limit |
| Context | configure service epipe <i>string</i> bgp-evpn mpls <i>number</i> dynamic-egress-label-limit <i>boolean</i> |
| Tree | dynamic-egress-label-limit |
| Description | <p>When configured to true, this command relaxes the egress MPLS label limit check when resolving BGP next hops in the tunnel table.</p> <p>For VPRN services, the OAM label is never computed and, therefore, one more egress label is allowed.</p> |

For EVPN (Epipe and VPLS) services, the system only computes the control word and ESI label if they are used. For the control word, the system reduces the egress label limit by one label if the control word is configured in the service. When configured, the ESI label is not counted for Epipes or VPLS services without an ES.

When configured to **false** this command, for EVPN, Epipe, and VPLS services, always accounts for the ESI label and control word.

| | |
|------------|---------|
| Default | false |
| Introduced | 22.2.R1 |
| Platforms | All |

eth-tag *number*

| | |
|-------------|---|
| Synopsis | Ethernet tag of the attachment circuit |
| Context | configure service epipe <i>string</i> bgp-evpn remote-attachment-circuit <i>string</i> eth-tag <i>number</i> |
| Tree | eth-tag |
| Description | This command configures the Ethernet tag value of the attachment circuit.

When configured in the local attachment circuit context, the tag value is used in the advertised AD per-EVI route sent for the attachment circuit.

When configured in the remote attachment circuit context, the value is compared with the Ethernet tag value of the imported D per-EVI routes for the service. When there is a match, the system creates an EVPN destination for the Epipe. |
| Range | 1 to 16777215 |
| Introduced | 20.10.R1 |
| Platforms | All |

| Introduced | 21.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

default-route-tag *string***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Default route tag |
| Context | configure service epipe <i>string</i> bgp-evpn segment-routing-v6 <i>number</i> default-route-tag <i>string</i> |
| Tree | default-route-tag |
| Description | <p>This command configures a route tag that is used when sending a route to the BGP application (for the corresponding service and BGP instance). If the corresponding BGP instance is enabled, the command cannot be changed.</p> <p>When used for BGP EVPN contexts, only one route tag can be passed to BGP for matching on export policies. In case of a conflict with other route tags pushed by EVPN, the default route tag has the least priority.</p> <p>The following are examples of the conflict priority handling:</p> |

- If a service is configured with both **default-route-tag X** and **proxy-arp evpn-route-tag Y**, the EVPN uses route tag Y when sending EVPN proxy-arp routes to the BGP RIB for advertisement.
- If a given IP-prefix route is tagged in the route-table with tag A and the R-VPLS, in which the route is advertised, uses B as the **default-route-tag**, then EVPN keeps tag A when sending the route to the BGP RIB.

The **default-route-tag** configuration is only supported on EVPN and IP-VPN service routes. The route tag for ES and AD per-ES routes is always zero.

| | |
|------------|---|
| Introduced | 21.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

| Tree | ecmp |
| Range | 1 to 32 |
| Default | 1 |
| Introduced | 21.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

evi-three-byte-auto-rt boolean

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Auto-derive the BGP EVPN route target |
| Context | configure service epipe string bgp-evpn segment-routing-v6 number evi-three-byte-auto-rt boolean |
| Tree | evi-three-byte-auto-rt |
| Description | When configured to true , the BGP-EVPN instance import and export route target is auto-derived as described in RFC 8365 (Global-Administrator:A/Type/D-ID/Service-ID).
Where: <ul style="list-style-type: none"> • Global Administrator – is the configured 2-octet AS number; if the configured ASN exceeds the 2 byte limit, the low order 16-bit value is taken • A=0 (for auto-derivation) • Type=4 (EVI-based route-target) |

- D-ID= [1..2] – encodes the BGP instance, which allows the auto-derivation of different route-targets in multi-instance services; the value is inherited from the corresponding BGP instance
- Service ID=3-octet EVI

When configured to **false**, route target derivation is not allowed.

| | |
|------------|---|
| Default | false |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

force-vc-forwarding *keyword*

| | |
|-------------|---|
| Synopsis | Datapath forwarding to force vlan-vc-type |
| Context | configure service epipe <i>string</i> bgp-evpn segment-routing-v6 <i>number</i> force-vc-forwarding <i>keyword</i> |
| Tree | force-vc-forwarding |
| Description | This command allows the system to preserve the VLAN ID and 802.1p bits of the service-delimiting qtag in a new tag added in the customer frame before sending it to the EVPN destinations.

This command may be used in conjunction with the sap ingress vlan-translation command. If so used, the configured translated VLAN ID is the VLAN ID sent to the EVPN destinations as opposed to the service-delimiting tag VLAN ID. If the ingress SAP/SDP binding is 'null'-encapsulated, the output VLAN ID and pbits is zero. |
| Options | vlan, qinq-c-tag-c-tag, qinq-s-tag-c-tag |
| Introduced | 21.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

oper-group *reference*

| | |
|-------------|---|
| Synopsis | Operational group |
| Context | configure service epipe <i>string</i> bgp-evpn segment-routing-v6 <i>number</i> oper-group <i>reference</i> |
| Tree | oper-group |
| Description | This command adds the BGP EVPN SRv6 instance or an Ethernet Segment (ES) as a member of the operational group.

When configured on a BGP EVPN instance, the operational group is up when it is either empty (meaning that the operational group has no members) or at least an EVPN destination is created under the EVPN instance added as member. When configured, no other SAP, SDP binding, or BGP EVPN instance can be added to the same operational group within the same or different service. |

| | |
|------------|---|
| Reference | configure service oper-group <i>string</i> |
| Introduced | 21.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

resolution *keyword*

| | |
|------------|--|
| Synopsis | Resolution options for routes |
| Context | configure service epipe <i>string</i> bgp-evpn segment-routing-v6 <i>number</i> resolution <i>keyword</i> |
| Tree | resolution |
| Options | route-table, tunnel-table, fallback-tunnel-to-route-table |
| Default | route-table |
| Introduced | 22.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

route-next-hop

| | |
|-------------|---|
| Synopsis | Enter the route-next-hop context |
| Context | configure service epipe <i>string</i> bgp-evpn segment-routing-v6 <i>number</i> route-next-hop |
| Tree | route-next-hop |
| Description | Commands in this context configure the next hop of the EVPN routes. |
| Introduced | 21.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

| Platforms | All |

eth-cfm

| | |
|----------|---|
| Synopsis | Enter the eth-cfm context |
| Context | configure service epipe <i>string</i> eth-cfm |
| Tree | eth-cfm |

| | |
|------------|--|
| Introduced | 19.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

ignore-l2vpn-mtu-mismatch *boolean*

| | |
|-------------|--|
| Synopsis | Ignore the L2 VPN MTU mismatch with local service MTU |
| Context | configure service epipe <i>string</i> ignore-l2vpn-mtu-mismatch <i>boolean</i> |
| Tree | ignore-l2vpn-mtu-mismatch |
| Description | When configured to true , the router does not check the value of the Layer 2 MTU in the Layer2 Info Extended Community received in a BGP update message against the local service MTU or locally signaled MTU. It may, therefore, bring up the BGP VPWS service regardless of any MTU mismatch.

When configured to false , an MTU mismatch prevents the system from bringing up a BGP-VPWS service. |
| Default | false |
| Introduced | 22.2.R1 |
| Platforms | All |

load-balancing

| | |
|------------|--|
| Synopsis | Enter the load-balancing context |
| Context | configure service epipe <i>string</i> load-balancing |
| Tree | load-balancing |
| Introduced | 16.0.R1 |
| Platforms | All |

lbl-eth-or-ip-l4-teid *boolean*

| | |
|-------------|--|
| Synopsis | Enable hashing of MPLS ethernet and IP packets on SAPs |
| Context | configure service epipe <i>string</i> load-balancing lbl-eth-or-ip-l4-teid <i>boolean</i> |
| Tree | lbl-eth-or-ip-l4-teid |
| Description | When configured to true , this command enables hashing of MPLS Ethernet and MPLS IP packets received on the Epipe and VPLS service SAP using the MPLS labels, the inner IP addresses, the port numbers, and the GTP TEID field, if read by the system. This capability is supported on line cards that are FP4-based and later. |
| Default | false |
| Introduced | 22.2.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

per-service-hashing *boolean*

Synopsis Enable per-service hashing for Ethernet services
 Context **configure** [service epipe](#) *string* [load-balancing per-service-hashing](#) *boolean*
 Tree [per-service-hashing](#)
 Default false
 Introduced 16.0.R1
 Platforms All

| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

local-switch-service-state *keyword*

| | |
|----------|---|
| Synopsis | Endpoint state used to determine PBB-Epipe state |
| Context | configure service epipe <i>string pbb local-switch-service-state keyword</i> |
| Tree | local-switch-service-state |

| | |
|-------------|--|
| Description | In a PBB Epipe with two SAPs and a PBB tunnel, this command controls whether the operational state of the PBB-Epipe service depends on the state of the PBB tunnel only, or on the state of two of the three endpoints (PBB tunnel and two SAPs). The second case implies that at least one of the SAPs must be up for the PBB-Epipe service to be operationally up. |
| Options | sap, pbb-tunnel |
| Default | sap |
| Introduced | 21.7.R1 |
| Platforms | All |

tunnel

| | |
|------------|---|

| | |
|------------|--|
| Synopsis | Enter the scheduler list instance |
| Context | configure service epipe string sap string egress qos scheduler-policy overrides scheduler <i>string</i> |
| Tree | scheduler |
| Introduced | 16.0.R1 |
| Platforms | All |

[[scheduler-name](#)] *string*

| | |
|-------------|--|
| Synopsis | Scheduler name |
| Context | configure service epipe string sap string egress qos scheduler-policy overrides scheduler <i>string</i> |
| Tree | scheduler |
| Description | This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands. |

If the scheduler name exists within the policy on a different tier, an error occurs and the current context does not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.

If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context is not change.

| Tree | rx-eth-ed |
| Description | This command enables the reception and processing of the ITU-T Y.1731 ETH-ED PDU on the MEP. |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

tx-eth-ed *boolean*

| | |
|----------|-----------------------------------|
| Synopsis | Transmit ETH-ED PDUs from the MEP |
|----------|-----------------------------------|

| | |
|------------|--|
| Context | configure service epipe <i>string sap string eth-cfm mep md-admin-name</i> <i>reference ma-admin-name reference mep-id number grace eth-ed tx-eth-ed</i> <i>boolean</i> |
| Tree | tx-eth-ed |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

eth-vsm-grace

| | |
|-------------|--|
| Synopsis | Enter the eth-vsm-grace context |
| Context | configure service epipe <i>string sap string eth-cfm mep md-admin-name</i> <i>reference ma-admin-name reference mep-id number grace eth-vsm-grace</i> |
| Tree | eth-vsm-grace |
| Description | Commands in this context configure the Nokia ETH-CFM Grace function. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

rx-eth-vsm-grace *boolean*

| | |
|-------------|---|
| Synopsis | Receive and process Nokia ETH-CFM Grace PDU on the MEP |
| Context | configure service epipe <i>string sap string eth-cfm mep md-admin-name</i> <i>reference ma-admin-name reference mep-id number grace eth-vsm-grace rx-eth-vsm-grace</i> <i>boolean</i> |
| Tree | rx-eth-vsm-grace |
| Description | When configured to true , the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.

When configured to false , the router disables the Nokia Grace function. |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

tx-eth-vsm-grace *boolean*

| | |
|----------|--|
| Synopsis | Transmit ETH-ED PDUs from the MEP |
| Context | configure service epipe <i>string sap string eth-cfm mep md-admin-name</i> <i>reference ma-admin-name reference mep-id number grace eth-vsm-grace tx-eth-vsm-grace</i> <i>boolean</i> |
| Tree | tx-eth-vsm-grace |

| | |
|-------------|---|
| Description | <p>When configured to true, the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.</p> <p>The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.</p> <p>The operator must configure the configure system eth-cfm grace command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).</p> <p>When configured to false, the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.</p> |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

lbm-svc-act-responder *boolean*

| Context | configure service epipe <i>string</i> sap <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> low-priority-defect <i>keyword</i> |
| Tree | low-priority-defect |
| Options | all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon |
| Default | mac-rem-err-xcon |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

mac-address *string*

| | |
|----------|------------------------|
| Synopsis | MAC address of the MEP |
|----------|------------------------|

| | |
|-------------|--|
| Context | configure service epipe <i>string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number mac-address string</i> |
| Tree | mac-address |
| Description | This command specifies the MAC address of the MEP.
When unconfigured, the MAC address of the port (if the MEP is on a SAP) or the MAC address of a bridge (if the MEP is on a spoke) is used. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

one-way-delay-threshold *number*

| | |
|------------|--|
| Synopsis | Threshold time limit for the one-way delay test |
| Context | configure service epipe <i>string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number one-way-delay-threshold number</i> |
| Tree | one-way-delay-threshold |
| Range | 0 to 600 |
| Units | seconds |
| Default | 3 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

primary-vlan *boolean*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | MEP provisioned using MA primary VLAN ID |
| Context | configure service epipe <i>string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number primary-vlan boolean</i> |
| Tree | primary-vlan |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

mip primary-vlan (*number* | *keyword*)

| | |
|-------------|---|
| Synopsis | Enter the mip list instance |
| Context | configure service epipe <i>string</i> sap <i>string</i> eth-cfm mip primary-vlan (<i>number</i> <i>keyword</i>) |
| Tree | mip |
| Description | This command allows the CFM function to include additional VLAN tags to the CFM packet that are carried to the egress and treated as service delimited. Typically, this function is used to influence the VLAN carried over a binding that uses the vc-type vlan or the binding forces the use of one or more VLAN tag that results in a mismatch between the service data arriving at the binding and the locally generated ETH-CFM PDUs arriving at the same egress. When this command is included under the MEP or MIP configuration, the tags used as part of the configuration typically match the SAP service delimited configuration. |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

primary-vlan (*number* | *keyword*)

| | |
|-------------|---|
| Synopsis | VLAN ID to which the MIP is attached |
| Context | configure service epipe <i>string</i> sap <i>string</i> eth-cfm mip primary-vlan (<i>number</i> <i>keyword</i>) |
| Tree | mip |
| Description | This command provides an option for linking a MIP with a Primary VLAN number or none. When the none option is provided, the MIP does not include the primary vlan. |
| Range | 1 to 4094 |
| Options | none |
| Notes | This element is part of a list key. |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

cfm-vlan-tag *string*

| | |
|-------------|---|
| Synopsis | VLAN tags to apply to CFM PDUs for egress processing |
| Context | configure service epipe <i>string</i> sap <i>string</i> eth-cfm mip primary-vlan (<i>number</i> <i>keyword</i>)
cfm-vlan-tag <i>string</i> |
| Tree | cfm-vlan-tag |
| Description | This command allows the CFM function to include additional VLAN tags to the CFM packet that are carried to the egress and treated as service delimited. Typically, this function is used to influence the VLAN carried over a binding that uses the vc-type vlan or the binding forces the use of one or more VLAN tag that results in a mismatch between the service data arriving at the binding and the locally generated ETH-CFM |

PDU's arriving at the same egress. When this command is included under the MEP or MIP configuration, the tags used as part of the configuration typically match the SAP service delimited configuration.

| | |
|---------------|--|
| String Length | 1 to 9 |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

mac-address *string*

| | |
|------------|--|
| Synopsis | MAC address of the MIP |
| Context | configure service epipe <i>string</i> sap <i>string</i> eth-cfm mip primary-vlan (<i>number</i> <i>keyword</i>)
mac-address <i>string</i> |
| Tree | mac-address |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

squelch-ingress-ctag-levels *number*

| | |
|-------------|--|
| Synopsis | Squelch levels using additional VLAN C-Tag space |
| Context | configure service epipe <i>string</i> sap <i>string</i> eth-cfm squelch-ingress-ctag-levels <i>number</i> |
| Tree | squelch-ingress-ctag-levels |
| Description | This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding plus an additional VLAN, up to a maximum tag length of two tags. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.

The list of levels must be a complete contiguous list from 0 up to the highest level to be dropped. |
| Range | 0 to 7 |
| Max. | 8 |
| Instances | |
| Introduced | 21.2.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

| Platforms | All |

llf

| | |
|-------------|--|
| Synopsis | Enter the llf context |
| Context | configure service epipe <i>string</i> sap <i>string</i> ethernet llf |
| Tree | llf |
| Description | <p>Commands in this context enable Link Loss Forwarding (LLF) on an Ethernet port. This feature provides an end-to-end OAM fault notification for Ethernet VLL service. It brings down the Ethernet port (Ethernet LLF) or sends a SONET/SDH Path AIS (ATM LLF) toward the attached CE when there is a local fault on the pseudowire or service, or a remote fault on the SAP or pseudowire, signaled with label withdrawal or T-LDP status bits. It ceases when the fault disappears.</p> <p>The Ethernet port must be configured for null encapsulation.</p> <p>This feature is also supported in Epipes with BGP-EVPN enabled. In this case, upon removal of the EVPN destination, the port transitions to an operationally down state, however the AD per-EVI route for the SAP is still advertised (the SAP remains</p> |

operationally up). The port transitions to the operationally up state when the EVPN destination is created.

| | |
|------------|---------|
| Introduced | 20.5.R1 |
| Platforms | All |

admin-state *keyword*

scheduler <i>string</i> |
| Tree | scheduler |
| Introduced | 16.0.R1 |
| Platforms | All |

[scheduler-name] *string*

| | |
|---------------|--|
| Synopsis | Scheduler name |
| Context | configure service epipe <i>string</i> sap <i>string</i> ingress qos scheduler-policy overrides
scheduler <i>string</i> |
| Tree | scheduler |
| Description | <p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (<code>#</code>, <code>\$</code>, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context does not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context is not change.</p> |
| String Length | 1 to 32 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

parent

| | |

| Tree | value |
| Description | This command assigns the optional static function value for the routes in the VPRN, VPLS, or Epipe instance.

When unconfigured, the system allocates a value dynamically. |
| Range | 1 to 1048575 |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

service-id *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Service ID |
| Context | configure service epipe <i>string</i> service-id <i>number</i> |
| Tree | service-id |
| Range | 1 to 2147483647 |
| Introduced | 16.0.R1 |
| Platforms | All |

service-mtu *number*

| | |
|-------------|---|
| Synopsis | MTU size |
| Context | configure service epipe <i>string</i> service-mtu <i>number</i> |
| Tree | service-mtu |
| Description | This command configures the Maximum Transmission Unit (MTU) value (payload) for the service. The system uses the value to validate the operational state of the SAP and SDP binding within the service. The value overrides the default MTU for the service type. |

The service MTU and a SAP's service delineation encapsulation overhead (4 bytes for a dot1q tag) are used to derive the required MTU of the physical port or channel on which the SAP was created. If the required payload is larger than the port or channel MTU, the SAP is placed in an inoperative state. If the required MTU is equal to or less than the port or channel MTU, the SAP transitions to the operative state.

When binding an SDP to a service, the service MTU is compared to the path MTU associated with the SDP. The path MTU can be administratively defined in the context of the SDP. The default or administrative path MTU can be dynamically reduced due to the MTU capabilities discovered by the tunneling mechanism of the SDP or the egress interface MTU capabilities based on the next hop in the tunnel path. If the service MTU is larger than the path MTU, the SDP binding for the service is placed in an inoperative state. If the service MTU is equal to or less than the path MTU, the SDP binding is placed in an operational state.

If a service MTU, port or channel MTU, or path MTU is dynamically or administratively modified, all associated SAP and SDP binding operational states are automatically reevaluated.

Binding operational states are automatically reevaluated.

For I-VPLS and Epipes bound to a B-VPLS, the service MTU must be at least 18 bytes smaller than the B-VPLS service MTU to accommodate the PBB header.

Because this connects a Layer 2 to a Layer 3 service, adjust the service MTU under the Epipe service. The MTU that is advertised from the Epipe side is service MTU minus EtherHeaderSize.

In the **configure service epipe spoke-sdp** context, the **adv-service-mtu** command can be used to override the configured MTU value used in T-LDP signaling to the far-end of an Epipe spoke-sdp. The **adv-service-mtu** command is also used to validate the value signaled by the far-end PE.

|-------------|---|
| Synopsis | VCCV BFD action taken on the SDP binding |
| Context | configure service epipe <i>string</i> spoke-sdp <i>string</i> bfd failure-action <i>keyword</i> |
| Tree | failure-action |
| Description | This command configures a named BFD template to be used by VCCV BFD on PWs belonging to the VLL service. The template specifies parameters, such as the minimum transmit and receive control packet timer intervals, used by the BFD session. Template parameters are configured under the configure router bfd context. |
| Options | none, down |
| Default | none |
| Introduced | 21.2.R1 |
| Platforms | All |

wait-for-up-timer *number*

| | |
|-------------|--|
| Synopsis | Time waited for BFD up status |
| Context | configure service epipe <i>string</i> spoke-sdp <i>string</i> bfd wait-for-up-timer <i>number</i> |
| Tree | wait-for-up-timer |
| Description | This command configures the time interval that is used to wait for a BFD session to come up.

This command is triggered when a spoke-SDP is first administratively enabled and a VCCV BFD session transitions from up to down. The command is required to allow time for BFD sessions to come up, and for BFD to settle before selecting the active spoke-SDP for use in a redundant set. In the case where a VCCV BFD session is bouncing, the timer prevents excessive flapping of the operational state of a spoke-SDP. |
| Range | 1 to 60 |
| Units | seconds |
| Introduced | 21.2.R1 |
| Platforms | All |

ccm boolean

| | |
|------------|---|
| Synopsis | Generate CCM messages |
| Context | configure service epipe <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm boolean</i> |
| Tree | ccm |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

ccm-ltm-priority number

| | |
|------------|---|
| Synopsis | Priority of CCM and LTM messages transmitted by the MEP |
| Context | configure service epipe <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm-ltm-priority number</i> |
| Tree | ccm-ltm-priority |
| Range | 0 to 7 |
| Default | 7 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

ccm-padding-size number

| | |
|-------------|---|
| Synopsis | Number of octets of padding to insert in CCM packets |
| Context | configure service epipe <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm-padding-size number</i> |
| Tree | ccm-padding-size |
| Description | This command sets the byte size of the optional Data TLV to be included in the ETH-CC PDU. |

This command increases the size of the ETH-CC PDU by the configured value. The base size of the ETH-CC PDU, including the Interface Status TLV and Port Status TLV, is 83 bytes not including the Layer 2 encapsulation. CCM padding is not supported when the CCM interval (configured through **configure eth-cfm domain association ccm-interval**) is less than 1 second.

| | |
|------------|--|
| Range | 3 to 1500 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

cfm-vlan-tag *string*

| | |
|---------------|--|
| Synopsis | VLAN tags to apply to CFM PDUs for egress processing |

| Description | When configured to true , the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.

When configured to false , the router disables the Nokia Grace function. |
| Default | true |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

tx-eth-vsm-grace *boolean*

Synopsis Transmit ETH-ED PDUs from the MEP

Context **configure** [service](#) [epipe](#) *string* [spoke-sdp](#) *string* [eth-cfm](#) [mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* [eth-vsm-grace](#) [tx-eth-vsm-grace](#) *boolean*

Tree [tx-eth-vsm-grace](#)

Description When configured to **true**, the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.

The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.

The operator must configure the **configure system eth-cfm grace** command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).

When configured to **false**, the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.

Default true

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

| | |
|-------------|---|
| Synopsis | VLAN ID to which the MIP is attached |
| Context | configure service epipe <i>string spoke-sdp string eth-cfm mip primary-vlan (number keyword)</i> |
| Tree | mip |
| Description | This command provides an option for linking a MIP with a Primary VLAN number or none. When the none option is provided, the MIP does not include the primary vlan. |
| Range | 1 to 4094 |
| Options | none |
| Notes | This element is part of a list key. |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

cfm-vlan-tag *string*

| | |
|----------|---|
| Synopsis | VLAN tags to apply to CFM PDUs for egress processing |
| Context | configure service epipe <i>string spoke-sdp string eth-cfm mip primary-vlan (number keyword) cfm-vlan-tag string</i> |
| Tree | cfm-vlan-tag |

| | |
|---------------|--|
| Description | This command allows the CFM function to include additional VLAN tags to the CFM packet that are carried to the egress and treated as service delimited. Typically, this function is used to influence the VLAN carried over a binding that uses the vc-type vlan or the binding forces the use of one or more VLAN tag that results in a mismatch between the service data arriving at the binding and the locally generated ETH-CFM PDUs arriving at the same egress. When this command is included under the MEP or MIP configuration, the tags used as part of the configuration typically match the SAP service delimited configuration. |
| String Length | 1 to 9 |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

dynamic-tunnel-redundant-nexthop *string*

Synopsis Redundant next-hop address for the dynamic IPsec tunnel

| | |
|-------------|--|
| Context | configure service ies <i>string</i> interface <i>string</i> dynamic-tunnel-redundant-nexthop <i>string</i> |
| Tree | dynamic-tunnel-redundant-nexthop |
| Description | This command specifies the redundant next-hop address on a public or private IPsec interface (with public or private tunnel SAP) for a dynamic IPsec tunnel. The next-hop address is used by a standby node to shunt traffic to a master if it receives the address. The next-hop address is resolved in the routing table of a corresponding service. |
| Notes | The following elements are part of a choice: multi-chassis-shunting-profile or (dynamic-tunnel-redundant-nexthop and static-tunnel-redundant-nexthop). |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

On the 7750 SR, this command can only be configured to a value less than 100 when the type command is configured to cpm-np . |
| Range | 10 to 100000 |
| Units | milliseconds |
| Default | 100 |
| Introduced | 16.0.R1 |
| Platforms | All |

type *keyword*

| | |
|-------------|---|
| Synopsis | Local termination point for the BFD session |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv4 bfd type <i>keyword</i> |
| Tree | type |
| Description | This command sets the local termination point for the BFD session to allow for fast timers down to 10 ms granularity.
The options to specify where the BFD session runs are: <ul style="list-style-type: none"> • auto (default) – the system chooses and uses the line card CPU only for single-hop BFD sessions with timer intervals equal to or greater than 100ms. All others are placed on the cpm-np. |

- **cpm-np** – BFD session runs on the FP complex associated with the CPM. This is either the FP on the CPM or the one elected on smaller systems.
- **fp** – BFD session runs on the line card CPU. This option can only be used for single-hop BFD sessions with timers equal to or greater than 100ms.

| | |
|------------|--|
| Options | cpm-np, auto, fp |
| Default | auto |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

dhcp

| | |
|------------|--|
| Synopsis | Enter the dhcp context |
| Context | configure service ies string interface string ipv4 dhcp |
| Tree | dhcp |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of DHCP |
| Context | configure service ies string interface string ipv4 dhcp admin-state keyword |
| Tree | admin-state |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | All |

description *string*

| | |
|---------------|---|
| Synopsis | Text description |
| Context | configure service ies string interface string ipv4 dhcp description string |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R1 |
| Platforms | All |

gi-address *string*

| | |
|-------------|---|
| Synopsis | GI address for the DHCP relay |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv4 dhcp gi-address <i>string</i> |
| Tree | gi-address |
| Description | <p>This command configures the GI address to distinguish between the different subscriber interfaces (and potentially group interfaces) defined when the router functions as a DHCP relay.</p> <p>By default, the GI address used in the relayed DHCP packet is the primary IP address of a normal IES interface. Specifying the GI address allows the user to choose a secondary address. For group interfaces, a GI address must be specified under the group interface DHCP context or subscriber interface DHCP context for DHCP to function.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

lease-populate

| | |
|------------|---|
| Synopsis | Enter the lease-populate context |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv4 dhcp lease-populate |
| Tree | lease-populate |
| Introduced | 16.0.R1 |
| Platforms | All |

max-leases *number*

| | |
|------------|--|
| Synopsis | Maximum number of DHCPv4 leases allowed |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv4 dhcp lease-populate max-leases <i>number</i> |
| Tree | max-leases |
| Range | 0 to 511999 |
| Introduced | 16.0.R1 |
| Platforms | All |

option-82

| | |
|----------|--|
| Synopsis | Enter the option-82 context |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv4 dhcp option-82 |

| | |
|-------------|---|
| Tree | option-82 |
| Description | Commands in this context configure the processing required when the router receives a DHCP request that already has an Option 82 field in the packet. |
| Introduced | 16.0.R1 |
| Platforms | All |

action *keyword*

| | |
|------------|--|
| Synopsis | Action to take with received DHCP Option 82 |
| Context | configure service ies string interface string ipv4 dhcp option-82 action <i>keyword</i> |
| Tree | action |
| Options | replace, drop, keep |
| Default | keep |
| Introduced | 16.0.R1 |
| Platforms | All |

circuit-id

| | |
|------------|---|
| Synopsis | Enter the circuit-id context |
| Context | configure service ies string interface string ipv4 dhcp option-82 circuit-id |
| Tree | circuit-id |
| Introduced | 16.0.R1 |
| Platforms | All |

ascii-tuple

| | |
|------------|---|
| Synopsis | Use the ASCII-encoded tuple for the circuit ID |
| Context | configure service ies string interface string ipv4 dhcp option-82 circuit-id ascii-tuple |
| Tree | ascii-tuple |
| Notes | The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple . |
| Introduced | 16.0.R1 |
| Platforms | All |

ifindex

| | |
|------------|---|
| Synopsis | Use the interface index for the circuit ID |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv4 dhcp option-82 circuit-id ifindex |
| Tree | ifindex |
| Notes | The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple . |
| Introduced | 16.0.R1 |
| Platforms | All |

none

| | |
|------------|--|
| Synopsis | Do not include the circuit ID |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv4 dhcp option-82 circuit-id none |
| Tree | none |
| Notes | The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple . |
| Introduced | 16.0.R1 |
| Platforms | All |

sap-id

| | |
|------------|--|
| Synopsis | Use the SAP ID |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv4 dhcp option-82 circuit-id sap-id |
| Tree | sap-id |
| Notes | The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple . |
| Introduced | 16.0.R1 |
| Platforms | All |

vlan-ascii-tuple

| | |
|----------|--|
| Synopsis | Include the VLAN ID and dot1p bits in the ASCII tuple |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv4 dhcp option-82 circuit-id vlan-ascii-tuple |
| Tree | vlan-ascii-tuple |

| | |
|-------------|---|
| Description | When configured, the router includes the VLAN ID and dot1p bits with the ASCII-tuple information. This only occurs on dot1q and QinQ-encapsulated ports. When the Option 82 bits are stripped, dot1p bits are copied to the Ethernet header of the outgoing packet.
When unconfigured, the router leaves the circuit ID sub-option of the DHCP packet empty. |
| Notes | The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple . |
| Introduced | 16.0.R1 |
| Platforms | All |

remote-id

| | |
|-------------|--|
| Synopsis | Enter the remote-id context |
| Context | configure service ies string interface string ipv4 dhcp option-82 remote-id |
| Tree | remote-id |
| Description | Commands in this context configure the remote IP sub-option of the DHCP packet with the identity of the remote host end (typically the DHCP client). |
| Introduced | 16.0.R1 |
| Platforms | All |

ascii-string *string*

| | |
|---------------|--|
| Synopsis | User-defined ASCII string for the remote ID |
| Context | configure service ies string interface string ipv4 dhcp option-82 remote-id ascii-string string |
| Tree | ascii-string |
| String Length | 1 to 32 |
| Notes | The following elements are part of a choice: ascii-string , mac , or none . |
| Introduced | 16.0.R1 |
| Platforms | All |

mac

| | |
|----------|--|
| Synopsis | Use the MAC address for the remote ID |
| Context | configure service ies string interface string ipv4 dhcp option-82 remote-id mac |
| Tree | mac |

| | |
|------------|--|
| Notes | The following elements are part of a choice: ascii-string , mac , or none . |
| Introduced | 16.0.R1 |
| Platforms | All |

none

| | |
|------------|--|
| Synopsis | Do not include the remote ID |
| Context | configure service ies string interface string ipv4 dhcp option-82 remote-id none |
| Tree | none |
| Notes | The following elements are part of a choice: ascii-string , mac , or none . |
| Introduced | 16.0.R1 |
| Platforms | All |

vendor-specific-option

| | |
|-------------|---|
| Synopsis | Enter the vendor-specific-option context |
| Context | configure service ies string interface string ipv4 dhcp option-82 vendor-specific-option |
| Tree | vendor-specific-option |
| Description | Commands in this context configure the Nokia Vendor-Specific Option (VSO) of the DHCP packet. |
| Introduced | 16.0.R1 |
| Platforms | All |

client-mac-address *boolean*

| | |
|------------|---|
| Synopsis | Send the MAC address in the VSO |
| Context | configure service ies string interface string ipv4 dhcp option-82 vendor-specific-option client-mac-address <i>boolean</i> |
| Tree | client-mac-address |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

pool-name *boolean*

| | |
|----------|-------------------------------|
| Synopsis | Send the pool name in the VSO |
|----------|-------------------------------|

| | |
|------------|--|
| Context | configure service ies <i>string</i> interface <i>string</i> ipv4 dhcp option-82 vendor-specific-option pool-name <i>boolean</i> |
| Tree | pool-name |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

sap-id *boolean*

| | |
|------------|---|
| Synopsis | Send SAP ID in the sub-option of the DHCP relay packet |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv4 dhcp option-82 vendor-specific-option sap-id <i>boolean</i> |
| Tree | sap-id |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

service-id *boolean*

| | |
|------------|---|
| Synopsis | Send the service ID in the Vendor Specific Option |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv4 dhcp option-82 vendor-specific-option service-id <i>boolean</i> |
| Tree | service-id |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

string *string*

| | |
|---------------|--|
| Synopsis | User-defined ASCII string for the VSO |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv4 dhcp option-82 vendor-specific-option string <i>string</i> |
| Tree | string |
| String Length | 1 to 32 |
| Introduced | 16.0.R1 |
| Platforms | All |

system-id *boolean*

| | |
|------------|--|
| Synopsis | Send the system ID in the VSO |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv4 dhcp option-82 vendor-specific-option system-id <i>boolean</i> |
| Tree | system-id |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

proxy-server

| | |
|------------|---|
| Synopsis | Enter the proxy-server context |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv4 dhcp proxy-server |
| Tree | proxy-server |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of the DHCP proxy server |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv4 dhcp proxy-server admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | All |

emulated-server *string*

| | |
|----------|---|
| Synopsis | IP address used as the DHCP server address for the SAP |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv4 dhcp proxy-server emulated-server <i>string</i> |
| Tree | emulated-server |

| | |
|-------------|--|
| Description | This command configures the IP address which will be used as the DHCP server address in the context of the SAP. Typically, the configured address should be in the context of the subnet represented by the service. |
| Introduced | 16.0.R1 |
| Platforms | All |

lease-time

| | |
|------------|--|
| Synopsis | Enter the lease-time context |
| Context | configure service ies string interface string ipv4 dhcp proxy-server lease-time |
| Tree | lease-time |
| Introduced | 16.0.R1 |
| Platforms | All |

radius-override *boolean*

| | |
|------------|--|
| Synopsis | Use lease time information provided by RADIUS server |
| Context | configure service ies string interface string ipv4 dhcp proxy-server lease-time radius-override boolean |
| Tree | radius-override |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

value *number*

| | |
|------------|---|
| Synopsis | DHCP lease time |
| Context | configure service ies string interface string ipv4 dhcp proxy-server lease-time value number |
| Tree | value |
| Range | 300 to 315446399 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | All |

python-policy *reference*

| | |
|------------|--|
| Synopsis | Python policy |
| Context | configure service ies string interface string ipv4 dhcp python-policy reference |
| Tree | python-policy |
| Reference | configure python python-policy string |
| Introduced | 16.0.R1 |
| Platforms | All |

relay-plain-bootp *boolean*

| | |
|------------|--|
| Synopsis | Enable relaying of plain BOOTP packets |
| Context | configure service ies string interface string ipv4 dhcp relay-plain-bootp boolean |
| Tree | relay-plain-bootp |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

relay-proxy

| | |
|------------|--|
| Synopsis | Enable the relay-proxy context |
| Context | configure service ies string interface string ipv4 dhcp relay-proxy |
| Tree | relay-proxy |
| Introduced | 16.0.R1 |
| Platforms | All |

release-update-src-ip *boolean*

| | |
|------------|--|
| Synopsis | Update the source IP address of a DHCP RELEASE message |
| Context | configure service ies string interface string ipv4 dhcp relay-proxy release-update-src-ip boolean |
| Tree | release-update-src-ip |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

siaddr-override *string*

| | |
|------------|---|
| Synopsis | DHCP server IP address for address hiding function |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv4 dhcp relay-proxy siaddr-override <i>string</i> |
| Tree | siaddr-override |
| Introduced | 16.0.R1 |
| Platforms | All |

release-include-gi-address *boolean*

| | |
|------------|---|
| Synopsis | Include gateway IP address in DHCP Release messages |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv4 dhcp release-include-gi-address <i>boolean</i> |
| Tree | release-include-gi-address |
| Default | false |
| Introduced | 21.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

server *string*

| | |
|----------------|--|
| Synopsis | IP addresses for DHCP server requests |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv4 dhcp server <i>string</i> |
| Tree | server |
| Description | This command configures a list of servers that this interface forwards requests to.
The operator can enter the list of servers as either IP addresses or fully qualified domain names. The operator must specify at least one server specified for DHCP relay to work. If there are multiple servers, the system forwards the request to all the servers in the list. |
| Max. Instances | 8 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | All |

src-ip-addr *keyword*

| | |
|----------|--|
| Synopsis | Type of source address to use for DHCP relay |
|----------|--|

| | |
|------------|---|
| Context | configure service ies <i>string</i> interface <i>string</i> ipv4 dhcp src-ip-addr <i>keyword</i> |
| Tree | src-ip-addr |
| Options | auto, gi-address |
| Default | auto |
| Introduced | 16.0.R1 |
| Platforms | All |

trusted *boolean*

| | |
|-------------|---|
| Synopsis | Relay untrusted packets |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv4 dhcp trusted <i>boolean</i> |
| Tree | trusted |
| Description | <p>When configured to true, the router enables the trusted mode on the interface. When enabled, the relay agent changes the existing GI address (of the request) to the ingress interface, and forwards the request.</p> <p>A DHCP request that contains a GI address of 0.0.0.0 and an Option 82 field in the packet is discarded unless it arrives on a trusted circuit.</p> <p>This behavior only applies if the Relay Agent Information Option action is to keep the existing information. When the Option 82 field is replaced by the relay agent, the original Option 82 information is lost, and there is no reason to enable the trusted option.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

use-arp *boolean*

| | |
|------------|---|
| Synopsis | Use ARP to determine the destination hardware address |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv4 dhcp use-arp <i>boolean</i> |
| Tree | use-arp |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

icmp

| | |
|----------|--|
| Synopsis | Enter the icmp context |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv4 icmp |

| | |
|------------|----------------------|
| Tree | icmp |
| Introduced | 16.0.R1 |
| Platforms | All |

mask-reply *boolean*

| | |
|------------|---|
| Synopsis | Allow responses to ICMP mask requests on the interface |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv4 icmp mask-reply <i>boolean</i> |
| Tree | mask-reply |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

param-problem

| | |
|-------------|---|
| Synopsis | Enter the param-problem context |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv4 icmp param-problem |
| Tree | param-problem |
| Description | Commands in this context specify the settings for ICMP Parameter Problem messages generated by the interface. |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of sent Parameter Problem messages |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv4 icmp param-problem admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | enable |
| Introduced | 16.0.R1 |
| Platforms | All |

number *number*

| | |
|------------|--|
| Synopsis | Maximum number of Parameter Problem messages to send |
| Context | configure service ies string interface string ipv4 icmp param-problem number <i>number</i> |
| Tree | number |
| Range | 10 to 1000 |
| Default | 100 |
| Introduced | 16.0.R1 |
| Platforms | All |

seconds *number*

| | |
|------------|---|
| Synopsis | Time used to limit number of Parameter Problem messages |
| Context | configure service ies string interface string ipv4 icmp param-problem seconds <i>number</i> |
| Tree | seconds |
| Range | 1 to 60 |
| Units | seconds |
| Default | 10 |
| Introduced | 16.0.R1 |
| Platforms | All |

redirects

| | |
|-------------|---|
| Synopsis | Enter the redirects context |
| Context | configure service ies string interface string ipv4 icmp redirects |
| Tree | redirects |
| Description | <p>Commands in this context configure the settings for ICMP redirect messages generated by the interface.</p> <p>The system sends ICMP redirect messages to alert the sending node that a more optimal route is available on another router on the same subnetwork.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|----------|--|
| Synopsis | Administrative state of sending ICMP redirect messages |
|----------|--|

| | |
|------------|---|
| Context | configure service ies <i>string</i> interface <i>string</i> ipv4 icmp redirects admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | enable |
| Introduced | 16.0.R1 |
| Platforms | All |

number *number*

| | |
|------------|---|
| Synopsis | Maximum number of ICMP redirect messages to send |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv4 icmp redirects number <i>number</i> |
| Tree | number |
| Range | 10 to 1000 |
| Default | 100 |
| Introduced | 16.0.R1 |
| Platforms | All |

seconds *number*

| | |
|------------|--|
| Synopsis | Time used to limit the number of ICMP redirect messages |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv4 icmp redirects seconds <i>number</i> |
| Tree | seconds |
| Range | 1 to 60 |
| Units | seconds |
| Default | 10 |
| Introduced | 16.0.R1 |
| Platforms | All |

ttl-expired

| | |
|-------------|---|
| Synopsis | Enter the ttl-expired context |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv4 icmp ttl-expired |
| Tree | ttl-expired |
| Description | Commands in this context configure the settings for ICMP TTL expired messages generated by the interface. |

| | |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of sending TTL expired messages |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv4 icmp ttl-expired admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | enable |
| Introduced | 16.0.R1 |
| Platforms | All |

number *number*

| | |
|------------|--|
| Synopsis | Maximum number of TTL expired messages to send |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv4 icmp ttl-expired number <i>number</i> |
| Tree | number |
| Range | 10 to 2000 |
| Default | 100 |
| Introduced | 16.0.R1 |
| Platforms | All |

seconds *number*

| | |
|------------|---|
| Synopsis | Time used to limit the number of TTL expired messages |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv4 icmp ttl-expired seconds <i>number</i> |
| Tree | seconds |
| Range | 1 to 60 |
| Units | seconds |
| Default | 10 |
| Introduced | 16.0.R1 |
| Platforms | All |

unreachables

| | |
|-------------|---|
| Synopsis | Enter the unreachables context |
| Context | configure service ies string interface string ipv4 icmp unreachables |
| Tree | unreachables |
| Description | Commands in this context specify the settings for ICMP host and network destination unreachable messages generated by the interface. |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of sending unreachable messages |
| Context | configure service ies string interface string ipv4 icmp unreachables admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | enable |
| Introduced | 16.0.R1 |
| Platforms | All |

number *number*

| | |
|------------|--|
| Synopsis | Maximum number of unreachable messages to send |
| Context | configure service ies string interface string ipv4 icmp unreachables number <i>number</i> |
| Tree | number |
| Range | 10 to 2000 |
| Default | 100 |
| Introduced | 16.0.R1 |
| Platforms | All |

seconds *number*

| | |
|----------|---|
| Synopsis | Time to limit the number of ICMP unreachable messages |
| Context | configure service ies string interface string ipv4 icmp unreachables seconds <i>number</i> |
| Tree | seconds |

| | |
|------------|---------|
| Range | 1 to 60 |
| Units | seconds |
| Default | 10 |
| Introduced | 16.0.R1 |
| Platforms | All |

ip-helper-address *string*

| | |
|------------|---|
| Synopsis | Gateway address |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv4 ip-helper-address <i>string</i> |
| Tree | ip-helper-address |
| Introduced | 16.0.R1 |
| Platforms | All |

local-dhcp-server *reference*

| | |
|------------|--|
| Synopsis | DHCP server for the interface |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv4 local-dhcp-server <i>reference</i> |
| Tree | local-dhcp-server |
| Reference | configure router <i>string</i> dhcp-server dhcpv4 <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

neighbor-discovery

| | |
|------------|--|
| Synopsis | Enter the neighbor-discovery context |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv4 neighbor-discovery |
| Tree | neighbor-discovery |
| Introduced | 16.0.R1 |
| Platforms | All |

host-route

| | |
|----------|---|
| Synopsis | Enter the host-route context |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv4 neighbor-discovery host-route |

| | |
|------------|----------------------------|
| Tree | host-route |
| Introduced | 19.10.R1 |
| Platforms | All |

populate [[route-type](#)] *keyword*

| | |
|------------|---|
| Synopsis | Enter the populate list instance |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv4 neighbor-discovery host-route populate <i>keyword</i> |
| Tree | populate |
| Introduced | 19.10.R1 |
| Platforms | All |

[route-type] *keyword*

| | |
|------------|---|
| Synopsis | Type of ARP or ND entries that generate host routes |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv4 neighbor-discovery host-route populate <i>keyword</i> |
| Tree | populate |
| Options | static, dynamic, evpn |
| Notes | This element is part of a list key. |
| Introduced | 19.10.R1 |
| Platforms | All |

route-tag *number*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Tag value used with the host route from an ARP/ND entry |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv4 neighbor-discovery host-route populate <i>keyword</i> route-tag <i>number</i> |
| Tree | route-tag |
| Description | This command specifies the route tag that is added in the route table for ARP or ND host routes. This tag can be matched on BGP VRF export and BGP peer export policies. |
| Range | 1 to 255 |

| | |
|------------|----------|
| Introduced | 19.10.R1 |
| Platforms | All |

learn-unsolicited *boolean*

| | |
|-------------|--|
| Synopsis | Learn new entries from any received NA message |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv4 neighbor-discovery learn-unsolicited <i>boolean</i> |
| Tree | learn-unsolicited |
| Description | <p>When configured to true, the router can learn neighbor entries from received unsolicited Neighbor Advertisement (NA) messages, with or without the solicited (S) flag set. The command can be enabled for global addresses, link-local addresses, or for both.</p> <p>When configured to false, the router follows standard behavior for learning neighbor entries.</p> <ul style="list-style-type: none"> • If an unsolicited NA (regardless of the S flag) is received from a neighbor that is not yet in the Neighbor Discovery (ND) cache, the NA is ignored. • If an NS, RS, RA, or Redirect message with a Link Layer Address (MAC) is received from a neighbor that is not yet in the ND cache, a new neighbor entry is created in the cache to store the received Link Layer MAC. The neighbor is put in the STALE state. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

limit

| | |
|------------|--|
| Synopsis | Enter the limit context |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv4 neighbor-discovery limit |
| Tree | limit |
| Introduced | 16.0.R1 |
| Platforms | All |

log-only *boolean*

| | |
|----------|--|
| Synopsis | Generate log entries only if limit is reached |

Default false

Introduced 16.0.R1

Platforms All

proactive-refresh *boolean*

Synopsis Send a single refresh message before entry timeout

Context **configure** [service ies](#) *string* [interface](#) *string* [ipv4 neighbor-discovery proactive-refresh](#) *boolean*

Tree [proactive-refresh](#)

Description When configured to **true**, the router always sends a refresh message 30 seconds before the timeout of the entry (a single refresh message with no retries).

When configured to **false**, the router marks an entry as stale 30 seconds before age-out, and the router only sends an ARP request to refresh the entry if the IOM receives traffic that uses it. Then, the IOM asks the ARP application to send a refresh message. With ARP proactive refresh enabled, the ARP module sends a refresh message regardless of the IOM receiving traffic.

Default false

Introduced 16.0.R1

admin-state *keyword*

| | |
|-------------|--|
| Synopsis | Administrative state of VRRP |
| Context | configure service ies string interface string ipv4 vrrp number admin-state keyword |
| Tree | admin-state |
| Description | <p>The command determines the administrative state of non-owner virtual router instances.</p> <p>Non-owner virtual router instances can be administratively disabled. This allows the termination of VRRP participation in the virtual router and stops all routing and other access capabilities with regards to the virtual router IP addresses. Disabling the virtual router instance provides a mechanism to maintain the virtual routers without causing false backup or master state changes.</p> <p>When disabled, no VRRP advertisement messages are generated and all received VRRP advertisement messages are silently discarded with no processing.</p> <p>Whenever the administrative or operational state of a virtual router instance transitions, a log message is generated.</p> <p>An owner virtual router context does not use this command. To administratively disable an owner virtual router instance, use the admin-state command within the parent IP interface node which administratively disables the IP interface.</p> |
| Options | enable, disable |
| Default | enable |
| Introduced | 16.0.R1 |
| Platforms | All |

authentication-key *string*

| | |
|----------|---|
| Synopsis | Password for simple text authentication |
| Context | configure service ies string interface string ipv4 vrrp number authentication-key string |

| | |
|---------------|--|
| Tree | authentication-key |
| Description | This command optionally assigns a simple text password authentication key to generate master VRRP advertisement messages and validate received VRRP advertisement messages.

If this command is re-executed with a different password key defined, the new key immediately replaces the old key. This command may be executed at any time. |
| String Length | 1 to 38 |
| Introduced | 16.0.R1 |
| Platforms | All |

backup string

| | |
|----------------|---|
| Synopsis | Virtual router IP addresses for the interface |
| Context | configure service ies string interface string ipv4 vrrp number backup string |
| Tree | backup |
| Description | This command associates virtual router IP addresses with those of the parental IP interface.

This command has two different functions based on whether it is being executed on an owner or non-owner virtual router instance.

Non-owner virtual router instances create a routable IP interface address that is operationally dependent on the virtual router instance mode (master or backup). This command, when executed on an owner virtual router instance, does not create a routable IP interface address; it simply defines the existing IP addresses of the parental IP interface that are advertised by the virtual router instance.

For owner virtual router instances, this command defines the IP addresses that are advertised within VRRP advertisement messages. This communicates the IP addresses that the master is advertising to backup virtual routers receiving the messages. The specified <i>unicast-ipv4-address</i> must be equal to one of the existing IP addresses in the parental IP interface (primary or secondary) or this command fails.

See "Owner and non-owner VRRP" in the <i>7450 ESS, 7750 SR, 7950 XRS, and VSR Router Configuration Guide</i> for more information about owner and non-owner virtual router instances. |

mac *string*

| | |
|-------------|--|
| Synopsis | Virtual MAC address to use in ARP responses |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv4 vrrp number mac <i>string</i> |
| Tree | mac |
| Description | <p>This command sets an explicit MAC address for the virtual router instance that overrides the VRRP default derived from the VRID.</p> <p>Changing the default MAC address is useful when an existing HSRP or other non-VRRP default MAC is in use by the IP hosts that use the virtual router IP address. Many hosts do not monitor unessential ARPs and continue to use the cached non-VRRP MAC address after the virtual router becomes master of the host's gateway address.</p> <p>Additionally, this command sets the MAC address used in ARP responses when the virtual router instance is master. Routing of IP packets with <i>unicast-mac-address</i> as the destination MAC is also enabled. The MAC must be the same for all virtual routers participating as a virtual router or indeterminate connectivity by the attached IP hosts</p> |

results. All VRRP advertisement messages are transmitted with *unicast-mac-address* as the source MAC.

An operator can execute this command at any time and it takes effect immediately. When the virtual router MAC on a master virtual router instance changes, a gratuitous ARP is immediately sent with a VRRP advertisement message. If the virtual router instance is disabled or operating as a backup, the gratuitous ARP and VRRP advertisement messages are not sent.

| | |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms | All |

master-int-inherit *boolean*

| | |
|-------------|---|
| Synopsis | Allow master instance to dictate the master down timer |
| Context | configure <i>service ies string interface string ipv4 vrrp number master-int-inherit boolean</i> |
| Tree | master-int-inherit |
| Description | <p>When configured to true, the virtual router instance inherits the advertisement interval timer of the master VRRP router, which backup routers use to calculate the master down timer.</p> <p>When configured to false, the locally configured message interval must match the master's VRRP advertisement message advertisement interval field value or the message is discarded.</p> |
| Introduced | 16.0.R1 |
| Platforms | All |

message-interval *number*

| | |
|-------------|--|
| Synopsis | Interval for sending VRRP advertisement messages |
| Context | configure <i>service ies string interface string ipv4 vrrp number message-interval number</i> |
| Tree | message-interval |
| Description | <p>This command configures the administrative advertisement message timer used by the master virtual router instance to send VRRP advertisement messages. The backup master down timer is derived from the value configured using this command.</p> <p>The usage of this command varies for non-owner virtual router instances, depending on the state of the virtual router (master or backup) and the state of the master-int-inherit command:</p> <ul style="list-style-type: none"> • When a non-owner is operating as master for the virtual router, the system uses the configured value of this command as the operational advertisement timer, similar to an owner virtual router instance. The master-int-inherit command has no effect when operating as master. • When a non-owner is in the backup state with master-int-inherit disabled, the system uses the configured value of this command to match the incoming |

advertisement interval field of the VRRP advertisement message. If the locally configured message interval does not match the advertisement interval field, the system discards the VRRP advertisement.

- When a non-owner is in the backup state with **master-int-inherit** enabled, the configured value of this command is ignored. The master down timer is indirectly derived from the advertisement interval field value of the incoming VRRP advertisement message.

oper-group *reference*

| | |
|-------------|---|
| Synopsis | Operational group name associated with the VRRP |
| Context | configure service ies string interface string ipv4 vrrp number oper-group reference |
| Tree | oper-group |
| Description | This command configures an operational group to associate with the VRRP. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router (MR), the operational group is up. The operational group is down for all other VRRP states. |
| Reference | configure service oper-group string |
| Introduced | 16.0.R1 |
| Platforms | All |

owner *boolean*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Designate the virtual router instance as owner |
| Context | configure service ies string interface string ipv4 vrrp number owner boolean |
| Tree | owner |
| Description | When configured to true , the router designates this virtual router instance as the owner of the virtual router IP addresses. Therefore, this virtual router becomes responsible for forwarding packets sent to the virtual router IP addresses. The owner also assumes the role of master virtual router.

When configured to false , this virtual router instance is designated as a non-owner. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

passive *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Suppress the processing of VRRP advertisement messages |
| Context | configure <i>service ies string interface string ipv4 vrrp number</i> passive <i>boolean</i> |
| Tree | passive |
| Description | <p>When configured to true, the router identifies this virtual router instance as passive; and therefore the owner of the virtual router IP addresses. A passive virtual router instance does not transmit or receive VRRP advertisement messages and is always in either the master state (if the interface is operationally up) or the init state (if the interface is operationally down).</p> <p>When configured to false, this virtual router instance is not identified as passive, meaning that it transmits and receives VRRP advertisement messages.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

ping-reply *boolean*

| | |
|-------------|---|
| Synopsis | Allow non-owner master to reply to ICMP echo requests |
| Context | configure <i>service ies string interface string ipv4 vrrp number</i> ping-reply <i>boolean</i> |
| Tree | ping-reply |
| Description | <p>When configured to true, the router allows the non-owner master to reply to ICMP echo requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the ping request. Ping must not have been disabled at the management security level (either on the parental IP interface or on the Ping source host address).</p> <p>When configured to false, ICMP echo requests sent to non-owner master virtual IP addresses are silently discarded.</p> <p>Non-owner backup virtual routers never respond to ICMP echo requests, regardless of the configuration of this command.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

policy *reference*

| | |
|----------|------------------------------|
| Synopsis | VRRP priority control policy |
|----------|------------------------------|

| | |
|-------------|--|
| Context | configure service ies string interface string ipv4 vrrp number policy reference |
| Tree | policy |
| Description | <p>This command configures a VRRP priority control policy to associate with the virtual router instance.</p> <p>VRRP priority control policies can override or adjust the base priority value of the virtual router instance, depending on events or conditions within the chassis.</p> <p>An operator can associate a policy with more than one virtual router instance. The priority events within the policy either override or diminish the base priority set with the priority command. As priority events clear in the policy, the in-use priority can eventually be restored to the base priority value.</p> <p>For non-owner virtual router instances, if this command is not executed, the base priority is used as the in-use priority.</p> |
| Reference | configure vrrp policy number |
| Introduced | 16.0.R1 |
| Platforms | All |

preempt boolean

| | |
|-------------|--|
| Synopsis | Allow the VRRP to override an existing non-owner master |
| Context | configure service ies string interface string ipv4 vrrp number preempt boolean |
| Tree | preempt |
| Description | <p>When configured to true, this virtual router instance overrides any non-owner master with an in-use message priority value less than the in-use priority value of this virtual router.</p> <p>When configured to false, this virtual router only becomes master if the master down timer expires before a VRRP advertisement message is received from another virtual router.</p> |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

priority number

| | |
|-------------|---|
| Synopsis | Base priority for the VRRP |
| Context | configure service ies string interface string ipv4 vrrp number priority number |
| Tree | priority |
| Description | This command configures the base router priority for the virtual router instance, which defines the selection order of the virtual router in the master election process. |

The in-use priority is derived from the base priority. However, the in-use priority is modified by optional VRRP priority control policies. An operator can use VRRP priority control policies to either override or adjust the base priority value depending on events or conditions within the chassis.

|-------------|---|
| Synopsis | Allow the non-owner master to reply to SSH requests |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv4 vrrp <i>number</i> ssh-reply <i>boolean</i> |
| Tree | ssh-reply |
| Description | <p>When configured to true, the router allows the non-owner master to reply to SSH requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the SSH request. SSH cannot be disabled at the management security level (either on the parental IP interface or on the SSH source host address).</p> <p>When configure to false, SSH requests to non-owner master virtual IP addresses are silently discarded.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

standby-forwarding *boolean*

| | |
|-------------|--|
| Synopsis | Allow standby router to forward traffic |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv4 vrrp <i>number</i> standby-forwarding <i>boolean</i> |
| Tree | standby-forwarding |
| Description | <p>When configured to true, the standby router forwards all traffic.</p> <p>When configured to false, the standby router cannot forward traffic sent to the MAC address of the virtual router. However, the standby router still forwards traffic sent to its own MAC address.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

telnet-reply *boolean*

| | |
|-------------|---|
| Synopsis | Allow non-owner master to reply to Telnet requests |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv4 vrrp <i>number</i> telnet-reply <i>boolean</i> |
| Tree | telnet-reply |
| Description | <p>When configured to true, the router allows the non-owner master to reply to Telnet requests directed at the IP addresses of the virtual router instance. Any routed interface can receive Telnet requests. Telnet cannot be disabled at the management security level (either on the parental IP interface or on the Telnet source host address).</p> <p>When configured to false, the router silently discards Telnet requests sent to non-owner master virtual IP addresses.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

traceroute-reply *boolean*

| | |
|-------------|---|
| Synopsis | Allow non-owner master to reply to traceroute requests |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv4 vrrp <i>number</i> traceroute-reply <i>boolean</i> |
| Tree | traceroute-reply |
| Description | <p>When configured to true, the router allows a non-owner master to reply to traceroute requests directed to the IP addresses of the virtual router instance.</p> <p>When configured to false, the router silently discards traceroute requests sent to non-owner master virtual IP addresses.</p> <p>Traceroute must not have been disabled at the management security level (either on the parental IP interface or the source host address).</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv6

| | |
|------------|--|
| Synopsis | Enable the ipv6 context |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv6 |
| Tree | ipv6 |
| Introduced | 16.0.R1 |
| Platforms | All |

address [ipv6-address] *string*

| | |
|------------|---|
| Synopsis | Enter the address list instance |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv6 address <i>string</i> |
| Tree | address |
| Introduced | 16.0.R1 |
| Platforms | All |

[ipv6-address] *string*

| | |
|------------|---|
| Synopsis | IPv6 address assigned to the interface |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv6 address <i>string</i> |
| Tree | address |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

duplicate-address-detection *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Enable Duplicate Address Detection |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv6 address <i>string</i> duplicate-address-detection <i>boolean</i> |
| Tree | duplicate-address-detection |
| Description | When configured to true , the router enables Duplicate Address Detection (DAD).
When configured to false , the router disables DAD and sets the address to preferred, even if there is a duplicated address. |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

eui-64 *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Form IPv6 address from prefix and 64-bit interface ID |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv6 address <i>string</i> eui-64 <i>boolean</i> |
| Tree | eui-64 |
| Description | When configured to true , the router forms a complete IPv6 address from the supplied prefix and 64-bit interface identifier. The 64-bit interface identifier is derived from the MAC address on Ethernet interfaces. For interfaces without a MAC address, for example POS interfaces, use the base MAC address of the chassis. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

prefix-length *number*

| | |
|------------|---|
| Synopsis | IPv6 address prefix length |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv6 address <i>string</i> prefix-length <i>number</i> |
| Tree | prefix-length |
| Range | 4 to 128 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

primary-preference *number*

| | |
|-------------|---|
| Synopsis | Index assigned to the IPv6 address of the interface |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv6 address <i>string</i> primary-preference <i>number</i> |
| Tree | primary-preference |
| Description | This command assigns a primary preference index to an IPv6 address of the interface to enforce the order in which the address is used by control plane protocols and applications that require a fixed address of the interface, such as LDP and Segment Routing. In cases where a fixed address is required when originating packets from the interface, the IPv6 address with the lowest primary preference index is selected. If the selected address is removed, the next IPv6 address with the next lowest primary preference index is selected. |

If this index is not specified for the IPv6 address, the system assigns the next available index value to the address. The address index space is unique across all addresses of a given interface.

| | |
|------------|-----------------|
| Range | 1 to 4294967295 |
| Introduced | 16.0.R1 |
| Platforms | All |

track-srrp *number*

| | |
|------------|--|
| Synopsis | SRRP ID whose state is tracked on this IP address |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv6 address <i>string</i> track-srrp <i>number</i> |
| Tree | track-srrp |
| Range | 1 to 4294967295 |
| Introduced | 16.0.R1 |
| Platforms | All |

bfd

| | |
|------------|---|
| Synopsis | Enter the bfd context |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv6 bfd |
| Tree | bfd |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of BFD sessions |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv6 bfd admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | All |

echo-receive *number*

| | |
|------------|--|
| Synopsis | Minimum echo interval over this interface |
| Context | configure service ies <i>string interface string ipv6 bfd echo-receive number</i> |
| Tree | echo-receive |
| Range | 100 to 100000 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | All |

multiplier *number*

| | |
|-------------|---|
| Synopsis | Number of consecutive BFD messages missed from the peer |
| Context | configure service ies <i>string interface string ipv6 bfd multiplier number</i> |
| Tree | multiplier |
| Description | This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments. |
| Range | 1 to 20 |
| Default | 3 |
| Introduced | 16.0.R1 |
| Platforms | All |

receive *number*

| | |
|-------------|--|
| Synopsis | BFD receive interval over this interface |
| Context | configure service ies <i>string interface string ipv6 bfd receive number</i> |
| Tree | receive |
| Description | This command specifies the receive interval for the BFD session.
On the 7750 SR, this command can only be configured to a value less than 100 when the type command is configured to cpm-np . |
| Range | 10 to 100000 |
| Units | milliseconds |
| Default | 100 |
| Introduced | 16.0.R1 |
| Platforms | All |

transmit-interval *number*

| | |
|-------------|---|
| Synopsis | BFD transmit interval over this interface |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv6 bfd transmit-interval <i>number</i> |
| Tree | transmit-interval |
| Description | This command configures the transmit intervals.

On the 7750 SR, this command can only be configured to a value less than 100 when the type command is configured to cpm-np . |
| Range | 10 to 100000 |
| Units | milliseconds |
| Default | 100 |
| Introduced | 16.0.R1 |
| Platforms | All |

type *keyword*

| | |
|-------------|---|
| Synopsis | Local termination point for the BFD session |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv6 bfd type <i>keyword</i> |
| Tree | type |
| Description | This command sets the local termination point for the BFD session to allow for fast timers down to 10 ms granularity.

The options to specify where the BFD session runs are: <ul style="list-style-type: none"> • auto (default) – the system chooses and uses the line card CPU only for single-hop BFD sessions with timer intervals equal to or greater than 100ms. All others are placed on the cpm-np. • cpm-np – BFD session runs on the FP complex associated with the CPM. This is either the FP on the CPM or the one elected on smaller systems. • fp – BFD session runs on the line card CPU. This option can only be used for single-hop BFD sessions with timers equal to or greater than 100ms. |
| Options | cpm-np, auto, fp |
| Default | auto |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

dhcp6

| | |

| Tree | lease-populate |
| Introduced | 16.0.R1 |
| Platforms | All |

max-nbr-of-leases *number*

| | |
|------------|--|
| Synopsis | Maximum lease state entries allowed for the interface |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv6 dhcp6 relay lease-populate max-nbr-of-leases <i>number</i> |
| Tree | max-nbr-of-leases |
| Range | 0 to 32767 |
| Default | 0 |
| Introduced | 16.0.R1 |
| Platforms | All |

route-populate

| | |
|------------|---|
| Synopsis | Enter the route-populate context |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv6 dhcp6 relay lease-populate route-populate |
| Tree | route-populate |
| Introduced | 16.0.R1 |
| Platforms | All |

na *boolean*

| | |
|------------|---|
| Synopsis | Create route based on IA_NA prefix option in relay-reply message |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv6 dhcp6 relay lease-populate route-populate na <i>boolean</i> |
| Tree | na |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

pd

| | |
|------------|--|
| Synopsis | Enable the pd context |
| Context | configure service ies string interface string ipv6 dhcp6 relay lease-populate route-populate pd |
| Tree | pd |
| Introduced | 16.0.R1 |
| Platforms | All |

exclude boolean

| | |
|------------|--|
| Synopsis | Create back hole route based on prefix exclude option in relay-reply message |
| Context | configure service ies string interface string ipv6 dhcp6 relay lease-populate route-populate pd exclude boolean |
| Tree | exclude |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

ta boolean

| | |
|------------|--|
| Synopsis | Create route based on IA_TA prefix option in relay-reply message |
| Context | configure service ies string interface string ipv6 dhcp6 relay lease-populate route-populate ta boolean |
| Tree | ta |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

link-address string

| | |
|------------|---|
| Synopsis | Link address of the DHCPv6 relay messages |
| Context | configure service ies string interface string ipv6 dhcp6 relay link-address string |
| Tree | link-address |
| Introduced | 16.0.R1 |
| Platforms | All |

neighbor-resolution *boolean*

| | |
|------------|--|
| Synopsis | Enable neighbor resolution via DHCPv6 relay |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv6 dhcp6 relay neighbor-resolution <i>boolean</i> |
| Tree | neighbor-resolution |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

option

| | |
|------------|--|
| Synopsis | Enter the option context |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv6 dhcp6 relay option |

packet-too-big

| | |
|-------------|--|
| Synopsis | Enter the packet-too-big context |
| Context | configure service ies string interface string ipv6 icmp6 packet-too-big |
| Tree | packet-too-big |
| Description | Commands in this context configure limiting the number of ICMPv6 Packet Too Big messages. |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of Packet Too Big message sends |
| Context | configure service ies string interface string ipv6 icmp6 packet-too-big admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | enable |
| Introduced | 16.0.R1 |
| Platforms | All |

number *number*

| | |
|------------|---|
| Synopsis | Number of Packet Too big Messages issued per time frame |
| Context | configure service ies string interface string ipv6 icmp6 packet-too-big number <i>number</i> |
| Tree | number |
| Range | 10 to 1000 |
| Default | 100 |
| Introduced | 16.0.R1 |
| Platforms | All |

seconds *number*

| | |
|------------|--|
| Synopsis | Time used to limit Packet Too Big messages |
| Context | configure service ies string interface string ipv6 icmp6 packet-too-big seconds <i>number</i> |
| Tree | seconds |
| Range | 1 to 60 |
| Default | 10 |
| Introduced | 16.0.R1 |
| Platforms | All |

param-problem

| | |
|------------|---|
| Synopsis | Enter the param-problem context |
| Context | configure service ies string interface string ipv6 icmp6 param-problem |
| Tree | param-problem |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of Parameter Problem message sends |
| Context | configure service ies string interface string ipv6 icmp6 param-problem admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | enable |
| Introduced | 16.0.R1 |
| Platforms | All |

number *number*

| | |
|----------|--|
| Synopsis | Number used to limit ICMPv6 Parameter Problem messages |
| Context | configure service ies string interface string ipv6 icmp6 param-problem number <i>number</i> |
| Tree | number |
| Range | 10 to 1000 |
| Default | 100 |

| | |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms | All |

seconds *number*

| | |
|------------|---|
| Synopsis | Time used to limit ICMPv6 Parameter Problem messages |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv6 icmp6 param-problem seconds <i>number</i> |
| Tree | seconds |
| Range | 1 to 60 |
| Default | 10 |
| Introduced | 16.0.R1 |

| Tree | route-tag |

| | |
|-------------|--|
| Description | This command specifies the route tag that is added in the route table for ARP or ND host routes. This tag can be matched on BGP VRF export and BGP peer export policies. |
| Range | 1 to 255 |
| Introduced | 20.2.R1 |
| Platforms | All |

learn-unsolicited *keyword*

| | |
|-------------|---|
| Synopsis | Type of entries learned from unsolicited NA messages |
| Context | configure service ies string interface string ipv6 neighbor-discovery learn-unsolicited keyword |
| Tree | learn-unsolicited |
| Description | This command enables the ability to learn neighbor entries out of received unsolicited Neighbor Advertisement (NA) messages, with or without the solicited flag set.

When unconfigured, the router follows standard RFC 4861 behavior for learning of neighbor entries. The neighbor is put in the stale state. This is the standard RFC behavior. |
| Options | global, link-local, both |
| Introduced | 16.0.R1 |
| Platforms | All |

limit

| | |
|------------|--|
| Synopsis | Enter the limit context |
| Context | configure service ies string interface string ipv6 neighbor-discovery limit |
| Tree | limit |
| Introduced | 16.0.R1 |
| Platforms | All |

log-only *boolean*

| | |
|-------------|---|
| Synopsis | Generate log entries when limit is reached |
| Context | configure service ies string interface string ipv6 neighbor-discovery limit log-only boolean |
| Tree | log-only |
| Description | When configured to true , the router sends the warning message at the specified threshold percentage or upon exceeding the specified limit. Entries that exceed the limit are learned. |

When configured to **false**, the router does not send the warning message.

| | |
|------------|---------|
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

max-entries *number*

| | |
|-------------|---|
| Synopsis | Maximum number of entries learned on an IP interface |
| Context | configure service ies string interface string ipv6 neighbor-discovery limit max-entries number |
| Tree | max-entries |
| Description | This command configures the maximum number of entries that can be learned on an IP interface.
When unconfigured, no maximum limit is imposed. |
| Range | 0 to 102400 |
| Introduced | 16.0.R1 |
| Platforms | All |

threshold *number*

| | |
|------------|---|
| Synopsis | Threshold percentage that triggers a warning message |
| Context | configure service ies string interface string ipv6 neighbor-discovery limit threshold number |
| Tree | threshold |
| Range | 1 to 100 |
| Units | percent |
| Default | 90 |
| Introduced | 16.0.R1 |
| Platforms | All |

local-proxy-nd *boolean*

| | |
|----------|---|
| Synopsis | Enable local proxy neighbor discovery on the interface |
| Context | configure service ies string interface string ipv6 neighbor-discovery local-proxy-nd boolean |
| Tree | local-proxy-nd |

| | |
|-------------|--|
| Description | When configured to true , the router enables local proxy neighbor discovery on the interface and replies to neighbor solicitation requests when both the hosts are on the same subnet. In this case, ICMP redirects are disabled.

When configured to false , the router disables local proxy neighbor discovery on the interface and does not reply to neighbor solicitation requests if both the hosts are on the same subnet. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

proactive-refresh *keyword*

| | |
|-------------|---|
| Synopsis | Proactive refresh of neighbor entries |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv6 neighbor-discovery proactive-refresh <i>keyword</i> |
| Tree | proactive-refresh |
| Description | This command enables a proactive refresh of the neighbor entries. After the stale timer expires, the router sends an NUD message to the host (regardless of the existence of traffic to the IP address on the IOM), so the entry can be refreshed or removed. |
| Options | global, link-local, both |
| Introduced | 16.0.R1 |
| Platforms | All |

proxy-nd-policy *reference*

| Range | 1 to 255 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|-------------|---|
| Synopsis | Administrative state of VRRP |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv6 vrrp <i>number</i> admin-state <i>keyword</i> |
| Tree | admin-state |
| Description | The command determines the administrative state of non-owner virtual router instances. |

Non-owner virtual router instances can be administratively disabled. This allows the termination of VRRP participation in the virtual router and stops all routing and other access capabilities with regards to the virtual router IP addresses. Disabling the virtual router instance provides a mechanism to maintain the virtual routers without causing false backup or master state changes.

When **disabled**, no VRRP advertisement messages are generated and all received VRRP advertisement messages are silently discarded with no processing.

Whenever the administrative or operational state of a virtual router instance transitions, a log message is generated.

An owner virtual router context does not use this command. To administratively disable an owner virtual router instance, use the **admin-state** command within the parent IP interface node which administratively disables the IP interface.

| | |
|------------|-----------------|
| Options | enable, disable |
| Default | enable |
| Introduced | 16.0.R1 |
| Platforms | All |

backup string

| | |
|----------------|--|
| Synopsis | Virtual router IP addresses for the interface |
| Context | configure service ies string interface string ipv6 vrrp number backup string |
| Tree | backup |
| Description | <p>This command associates router IPv6 virtual router IP addresses with those of the parental IP interface.</p> <p>This command has two different functions based on whether it is being executed on an owner or non-owner virtual router instance.</p> <p>Non-owner virtual router instance create a routable IP interface address that is operationally dependent on the virtual router instance mode (master or backup). This command, when executed on an owner virtual router instance, does not create a routable IP interface address; it simply defines the existing IP addresses of the parental IP interface that are advertised by the virtual router instance.</p> <p>For owner virtual router instances, this command defines the IP addresses that are advertised within VRRP advertisement messages. This communicates the IP addresses that the master is representing to backup virtual routers receiving the messages. The specified IPv6 address must be equal to one of the existing parental IP addresses in the parental IP interface (primary or secondary) or this command fails.</p> <p>See "Owner and non-owner VRRP" in the <i>7450 ESS, 7750 SR, 7950 XRS, and VSR Router Configuration Guide</i> for more information about owner and non-owner virtual router instances.</p> |

mac *string*

Synopsis Virtual MAC address to use in ARP responses

Context **configure** [service ies](#) *string* [interface](#) *string* [ipv6 vrrp](#) *number* [mac](#) *string*

Tree [mac](#)

Description This command sets an explicit MAC address for the virtual router instance that overrides the VRRP default derived from the VRID.

Changing the default MAC address is useful when an existing HSRP or other non-VRRP default MAC is in use by the IP hosts that use the virtual router IP address. Many hosts do not monitor unessential ARPs and continue to use the cached non-VRRP MAC address after the virtual router becomes master of the host's gateway address.

Additionally, this command sets the MAC address used in ARP responses when the virtual router instance is master. Routing of IP packets with *unicast-mac-address* as the destination MAC is also enabled. The MAC must be the same for all virtual routers participating as a virtual router or indeterminate connectivity by the attached IP hosts results. All VRRP advertisement messages are transmitted with *unicast-mac-address* as the source MAC.

An operator can execute this command at any time and it takes effect immediately. When the virtual router MAC on a master virtual router instance changes, a gratuitous ARP is immediately sent with a VRRP advertisement message. If the virtual router instance is disabled or operating as a backup, the gratuitous ARP and VRRP advertisement messages are not sent.

master-int-inherit *boolean*

| | |
|-------------|--|
| Synopsis | Allow master instance to dictate the master down timer |
| Context | configure <i>service ies string interface string ipv6 vrrp number master-int-inherit boolean</i> |
| Tree | master-int-inherit |
| Description | When configured to true , the virtual router instance inherits the advertisement interval timer of the master VRRP router, which backup routers use to calculate the master down timer.

When configured to false , the locally configured message interval must match the master's VRRP advertisement message advertisement interval field value or the message is discarded. |
| Introduced | 16.0.R1 |
| Platforms | All |

message-interval *number*

| | |
|-------------|---|
| Synopsis | Interval for sending VRRP advertisement messages |
| Context | configure <i>service ies string interface string ipv6 vrrp number message-interval number</i> |
| Tree | message-interval |
| Description | This command configures the administrative advertisement message timer used by the master virtual router instance to send VRRP advertisement messages. The backup master down timer is derived from the value configured using this command.

The use of this command varies for non-owner virtual router instances, depending on the state of the virtual router (master or backup) and the state of the master-int-inherit command: <ul style="list-style-type: none"> When a non-owner is operating as master for the virtual router, the system uses the configured value of this command as the operational advertisement timer, similar |

to an owner virtual router instance. The **master-int-inherit** command has no effect when operating as the master.

- When a non-owner is in the backup state with **master-int-inherit** disabled, the system uses the configured value of this command to match the incoming advertisement interval field of the VRRP advertisement message. If the locally configured message interval does not match the advertisement interval field, the system discards the VRRP advertisement.
- When a non-owner is in the backup state with **master-int-inherit** enabled, the configured value of this command is ignored. The master down timer is indirectly derived from the advertisement interval field value of the incoming VRRP advertisement message.

| Context | configure service ies <i>string</i> interface <i>string</i> ipv6 vrrp <i>number</i> owner <i>boolean</i> |
| Tree | owner |
| Description | When configured to true , the router designates this virtual router instance as the owner of the virtual router IP addresses. Therefore, this virtual router becomes responsible for forwarding packets sent to the virtual router IP addresses. The owner also assumes the role of master virtual router.
When configured to false , this virtual router instance is designated as a non-owner. |
| Default | false |
| Introduced | 16.0.R1 |

Platforms All

passive *boolean*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Suppress the processing of VRRP advertisement messages |
| Context | configure <i>service ies string interface string ipv6 vrrp number</i> passive <i>boolean</i> |
| Tree | passive |
| Description | <p>When configured to true, the router identifies this virtual router instance as passive; and therefore the owner of the virtual router IP addresses. A passive virtual router instance does not transmit or receive VRRP advertisement messages and is always in either the master state (if the interface is operationally up) or the init state (if the interface is operationally down).</p> <p>When configured to false, this virtual router instance is not identified as passive, meaning that it transmits and receives VRRP advertisement messages.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

ping-reply *boolean*

| | |
|-------------|---|
| Synopsis | Allow non-owner master to reply to ICMP echo requests |
| Context | configure <i>service ies string interface string ipv6 vrrp number</i> ping-reply <i>boolean</i> |
| Tree | ping-reply |
| Description | <p>When configured to true, the router allows the non-owner master to reply to ICMP echo requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the ping request. Ping must not have been disabled at the management security level (either on the parental IP interface or on the Ping source host address).</p> <p>When configured to false, ICMP echo requests sent to non-owner master virtual IP addresses are silently discarded.</p> <p>Non-owner backup virtual routers never respond to ICMP echo requests, regardless of the configuration of this command.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

policy reference

| | |
|-------------|--|
| Synopsis | VRRP priority control policy |
| Context | configure service ies string interface string ipv6 vrrp number policy reference |
| Tree | policy |
| Description | <p>This command configures a VRRP priority control policy to associate with the virtual router instance.</p> <p>VRRP priority control policies can override or adjust the base priority value of the virtual router instance, depending on events or conditions within the chassis.</p> <p>An operator can associate a policy with more than one virtual router instance. The priority events within the policy either override or diminish the base priority set with the priority command. As priority events clear in the policy, the in-use priority can eventually be restored to the base priority value.</p> <p>For non-owner virtual router instances, if this command is not executed, the base priority is used as the in-use priority.</p> |
| Reference | configure vrrp policy number |
| Introduced | 16.0.R1 |
| Platforms | All |

preempt boolean

| | |
|-------------|--|
| Synopsis | Allow the VRRP to override an existing non-owner master |
| Context | configure service ies string interface string ipv6 vrrp number preempt boolean |
| Tree | preempt |
| Description | <p>When configured to true, this virtual router instance overrides any non-owner master with an in-use message priority value less than the in-use priority value of this virtual router.</p> <p>When configured to false, this virtual router only becomes master if the master down timer expires before a VRRP advertisement message is received from another virtual router.</p> |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

priority number

| | |
|----------|---|
| Synopsis | Base priority for the VRRP |
| Context | configure service ies string interface string ipv6 vrrp number priority number |

| | |
|-------------|---|
| Tree | priority |
| Description | <p>This command configures the base router priority for the virtual router instance, which defines the selection order of the virtual router in the master election process.</p> <p>The in-use priority is derived from the base priority. However, the in-use priority is modified by optional VRRP priority control policies. An operator can use VRRP priority control policies to either override or adjust the base priority value depending on events or conditions within the chassis.</p> |
| Range | 1 to 255 |
| Introduced | 16.0.R1 |
| Platforms | All |

standby-forwarding *boolean*

| | |
|-------------|--|
| Synopsis | Allow standby router to forward traffic |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv6 vrrp <i>number</i> standby-forwarding <i>boolean</i> |
| Tree | standby-forwarding |
| Description | <p>When configured to true, the standby router forwards all traffic.</p> <p>When configured to false, the standby router cannot forward traffic sent to the MAC address of the virtual router. However, the standby router still forwards traffic sent to its own MAC address.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

telnet-reply *boolean*

| | |
|-------------|---|
| Synopsis | Allow non-owner master to reply to Telnet requests |
| Context | configure service ies <i>string</i> interface <i>string</i> ipv6 vrrp <i>number</i> telnet-reply <i>boolean</i> |
| Tree | telnet-reply |
| Description | <p>When configured to true, the router allows the non-owner master to reply to Telnet requests directed at the IP addresses of the virtual router instance. Any routed interface can receive Telnet requests. Telnet cannot be disabled at the management security level (either on the parental IP interface or on the Telnet source host address).</p> <p>When configured to false, the router silently discards Telnet requests sent to non-owner master virtual IP addresses.</p> |
| Default | false |
| Introduced | 16.0.R1 |

Platforms All

traceroute-reply *boolean*

Synopsis Allow non-owner master to reply to traceroute requests

Context **configure service ies** *string* **interface** *string* **ipv6 vrrp** *number* **traceroute-reply** *boolean*

Tree [traceroute-reply](#)

Description When configured to **true**, the router allows a non-owner master to reply to traceroute requests directed to the IP addresses of the virtual router instance.

When configured to **false**, the router silently discards traceroute requests sent to non-owner master virtual IP addresses.

Traceroute must not have been disabled at the management security level (either on the parental IP interface or the source host address).

Default false

Introduced 16.0.R1

Platforms All

load-balancing

Synopsis Enter the **load-balancing** context

Context **configure service ies** *string* **interface** *string* **load-balancing**

Tree [load-balancing](#)

Introduced 16.0.R1

Platforms All

flow-label-load-balancing *boolean*

Synopsis Enable flow label load balancing

Context **configure service ies** *string* **interface** *string* **load-balancing flow-label-load-balancing** *boolean*

Tree [flow-label-load-balancing](#)

Description When configured to **true**, the router enables load balancing in ECMP and LAG based on the output of a hash performed on the triplet (SA, DA, flow label) in the header of an IPv6 packet received on an IES, VPRN, R-VPLS, CSC, or network interface.

When configured to **false**, the router disables load balancing in ECMP and LAG.

Default false

Introduced 21.5.R1

Platforms All

ip-load-balancing *keyword*

Synopsis IP load-balancing algorithm

Context **configure** [service ies](#) *string* [interface](#) *string* [load-balancing](#) [ip-load-balancing](#) *keyword*

Tree [ip-load-balancing](#)

Description This command specifies whether to include the source address, destination address, or both in LAG or ECMP hash on IP interfaces. Additionally, when the **I4-load-balancing** command is enabled, this command also includes the source or destination port in the hash inputs.

Options both, destination, source, inner-ip

Default both

Introduced 16.0.R3

Platforms All

spi-load-balancing *boolean*

Synopsis Enable SPI use in hashing

Context **configure** [service ies](#) *string* [interface](#) *string* [load-balancing](#) [spi-load-balancing](#) *boolean*

Tree [spi-load-balancing](#)

Description When configured to **true**, the router uses the Security Parameter Index (SPI) in hashing for ESP and AH encrypted IPv4 and IPv6 traffic. This is a per-interface setting.

Default false

Introduced 16.0.R1

Platforms All

teid-load-balancing *boolean*

Synopsis Enable use of TEID in hashing

| | |
|------------|--|
| Synopsis | Enter the root context |
| Context | configure service ies string interface string sap string egress qos policer-control-policy overrides root |
| Tree | root |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

max-rate (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | Maximum frame-based bandwidth limit |
| Context | configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> egress qos policer-control-policy overrides root max-rate (<i>number</i> <i>keyword</i>) |
| Tree | max-rate |
| Range | 1 to 6400000000 |
| Options | max |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

priority-mbs-thresholds

| | |
|------------|--|
| Synopsis | Enter the priority-mbs-thresholds context |
| Context | configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> egress qos policer-control-policy overrides root priority-mbs-thresholds |
| Tree | priority-mbs-thresholds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

min-thresh-separation (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | Minimum amount of separation buffer space |
| Context | configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> egress qos policer-control-policy overrides root priority-mbs-thresholds min-thresh-separation (<i>number</i> <i>keyword</i>) |
| Tree | min-thresh-separation |
| Range | 0 to 16777216 |
| Units | bytes |
| Options | auto |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

priority [[priority-level](#)] *number*

| | |
|----------|---|
| Synopsis | Enter the priority list instance |
| Context | configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> egress qos policer-control-policy overrides root priority-mbs-thresholds priority <i>number</i> |

| | |
|------------|--|
| Tree | priority |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

[priority-level] *number*

| | |
|------------|--|
| Synopsis | Priority level |
| Context | configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> egress qos policer-control-policy overrides root priority-mbs-thresholds priority <i>number</i> |
| Tree | priority |
| Range | 1 to 8 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

mbs-contribution (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | Minimum amount of cumulative buffer space allowed |
| Context | configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> egress qos policer-control-policy overrides root priority-mbs-thresholds priority <i>number</i> mbs-contribution (<i>number</i> <i>keyword</i>) |
| Tree | mbs-contribution |
| Range | 0 to 16777216 |
| Units | bytes |
| Options | auto |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

policy-name *reference*

| | |
|------------|---|
| Synopsis | Policer control policy name |
| Context | configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> egress qos policer-control-policy policy-name <i>reference</i> |
| Tree | policy-name |
| Reference | configure qos policer-control-policy <i>string</i> |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

qinq-mark-top-only *boolean*

Synopsis Mark top Q-tags

Context **configure** [service](#) [ies](#) *string* [interface](#) *string* [sap](#) *string* [egress](#) [qos](#) [qinq-mark-top-only](#) *boolean*

Tree [qinq-mark-top-only](#)

Default false

Introduced 16.0.R1

Platforms All

sap-egress

Synopsis Enter the **sap-egress** context

Context **configure** [service](#) [ies](#) *string* [interface](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#)

Tree [sap-egress](#)

Introduced 16.0.R1

Platforms All

overrides

Synopsis Enter the **overrides** context

Context **configure** [service](#) [ies](#) *string* [interface](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#)

Tree [overrides](#)

Introduced 16.0.R1

Platforms All

hs-secondary-shaper *string*

Synopsis HS Secondary Shaper

Context **configure** [service](#) [ies](#) *string* [interface](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#) [hs-secondary-shaper](#) *string*

Tree [hs-secondary-shaper](#)

String Length 1 to 32

Introduced 16.0.R1

Platforms 7750 SR-7/12/12e

hs-wrr-group *[group-id] reference*

Synopsis Enter the **hs-wrr-group** list instance

Context **configure service ies string interface string sap string egress qos sap-egress overrides hs-wrr-group reference**

Tree [hs-wrr-group](#)

Introduced 16.0.R1

Platforms 7750 SR-7/12/12e

[group-id] reference

Synopsis HS WRR group identifier

Context **configure service ies string interface string sap string egress qos sap-egress overrides hs-wrr-group reference**

Tree [hs-wrr-group](#)

Reference **configure qos sap-egress string hs-wrr-group number**

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms 7750 SR-7/12/12e

hs-class-weight *number*

Synopsis Class weight override of the WRR group

Context **configure service ies string interface string sap string egress qos sap-egress overrides hs-wrr-group reference hs-class-weight number**

Tree [hs-class-weight](#)

Range 1 | 2 | 4 | 8

Introduced 16.0.R1

Platforms 7750 SR-7/12/12e

percent-rate *decimal-number*

Synopsis Percent rate override applied to the HS WRR group

| | |
|------------|--|
| Context | configure service ies string interface string sap string egress qos sap-egress overrides hs-wrr-group reference percent-rate decimal-number |
| Tree | percent-rate |
| Range | 0.01 to 100.00 |
| Notes | The following elements are part of a choice: percent-rate or rate . |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR-7/12/12e |

rate (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | Scheduling rate override applied to the HS WRR group |
| Context | configure service ies string interface string sap string egress qos sap-egress overrides hs-wrr-group reference rate (number keyword) |
| Tree | rate |
| Range | 1 to 2000000000 |
| Units | kilobps |
| Options | max |
| Notes | The following elements are part of a choice: percent-rate or rate . |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR-7/12/12e |

policer [[policer-id](#)] *reference*

| | |
|------------|---|
| Synopsis | Enter the policer list instance |
| Context | configure service ies string interface string sap string egress qos sap-egress overrides policer reference |
| Tree | policer |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

[policer-id] *reference*

| | |
|----------|---|
| Synopsis | Policer unique ID |
| Context | configure service ies string interface string sap string egress qos sap-egress overrides policer reference |
| Tree | policer |

| | |
|------------|--|
| Reference | configure qos sap-egress <i>string</i> policer <i>number</i> |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

cbs (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | CBS |
| Context | configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer <i>reference</i> cbs (<i>number</i> <i>keyword</i>) |
| Tree | cbs |
| Range | 0 to 268435456 |
| Units | bytes |
| Options | auto |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

mbs (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | MBS |
| Context | configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer <i>reference</i> mbs (<i>number</i> <i>keyword</i>) |
| Tree | mbs |
| Range | 0 to 268435456 |
| Units | bytes |
| Options | auto |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

packet-byte-offset *number*

| | |
|----------|--|
| Synopsis | Packet size modification for policing information |
| Context | configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer <i>reference</i> packet-byte-offset <i>number</i> |
| Tree | packet-byte-offset |
| Range | -64 to 31 |

| | |
|------------|--|
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

percent-rate

| | |
|------------|---|
| Synopsis | Enter the percent-rate context |
| Context | configure service ies string interface string sap string egress qos sap-egress overrides policer reference percent-rate |
| Tree | percent-rate |
| Notes | The following elements are part of a choice: percent-rate or rate . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

cir decimal-number

| | |
|------------|--|
| Synopsis | CIR percent rate |
| Context | configure service ies string interface string sap string egress qos sap-egress overrides policer reference percent-rate cir decimal-number |
| Tree | cir |
| Range | 0.00 to 100.00 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

pir decimal-number

| | |
|------------|--|
| Synopsis | PIR percent rate |
| Context | configure service ies string interface string sap string egress qos sap-egress overrides policer reference percent-rate pir decimal-number |
| Tree | pir |
| Range | 0.01 to 100.00 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

rate

| | |
|----------|-------------------------------|
| Synopsis | Enter the rate context |
|----------|-------------------------------|

| | |
|------------|--|
| Context | configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides
policer reference rate |
| Tree | rate |
| Notes | The following elements are part of a choice: percent-rate or rate . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

cir (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | CIR rate |
| Context | configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides
policer reference rate cir (<i>number</i> <i>keyword</i>) |
| Tree | cir |
| Range | 0 to 6400000000 |
| Units | kilobps |
| Options | max |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

pir (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | PIR rate |
| Context | configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides
policer reference rate pir (<i>number</i> <i>keyword</i>) |
| Tree | pir |
| Range | 1 to 6400000000 |
| Units | kilobps |
| Options | max |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

stat-mode *keyword*

| | |
|----------|--|
| Synopsis | Mode of statistics collected by the policer |
| Context | configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides
policer reference stat-mode <i>keyword</i> |

| | |
|------------|--|
| Tree | stat-mode |
| Options | no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-profile-cir, offered-limited-capped-cir, offered-profile-capped-cir, offered-total-cir-exceed, offered-four-profile-no-cir, offered-total-cir-four-profile |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

queue [\[queue-id\]](#) *reference*

| | |
|------------|---|
| Synopsis | Enter the queue list instance |
| Context | configure service ies string interface string sap string egress qos sap-egress overrides queue reference |
| Tree | queue |
| Introduced | 16.0.R1 |
| Platforms | All |

[queue-id] *reference*

| | |
|------------|---|
| Synopsis | Policer unique ID |
| Context | configure service ies string interface string sap string egress qos sap-egress overrides queue reference |
| Tree | queue |
| Reference | configure qos sap-egress string queue number |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

adaptation-rule

| | |
|------------|---|
| Synopsis | Enter the adaptation-rule context |
| Context | configure service ies string interface string sap string egress qos sap-egress overrides queue reference adaptation-rule |
| Tree | adaptation-rule |
| Introduced | 16.0.R1 |
| Platforms | All |

cir keyword

| | |
|------------|---|
| Synopsis | Constraint used when deriving the operational CIR value |
| Context | configure service ies string interface string sap string egress qos sap-egress overrides queue reference adaptation-rule cir keyword |
| Tree | cir |
| Options | max, min, closest |
| Introduced | 16.0.R1 |
| Platforms | All |

pir keyword

| | |
|------------|---|
| Synopsis | Constraint used when deriving the operational PIR value |
| Context | configure service ies string interface string sap string egress qos sap-egress overrides queue reference adaptation-rule pir keyword |
| Tree | pir |
| Options | max, min, closest |
| Introduced | 16.0.R1 |
| Platforms | All |

avg-frame-overhead decimal-number

| | |
|------------|---|
| Synopsis | Average packet-to-frame encapsulation overhead |
| Context | configure service ies string interface string sap string egress qos sap-egress overrides queue reference avg-frame-overhead decimal-number |
| Tree | avg-frame-overhead |
| Range | 0.00 to 100.00 |
| Introduced | 16.0.R1 |
| Platforms | All |

burst-limit (number | keyword)

| | |
|----------|--|
| Synopsis | Explicit shaping burst size for the queue |
| Context | configure service ies string interface string sap string egress qos sap-egress overrides queue reference burst-limit (number keyword) |
| Tree | burst-limit |
| Range | 1 to 14000000 |

| | |
|------------|---------|
| Units | bytes |
| Options | auto |
| Introduced | 16.0.R1 |
| Platforms | All |

cbs (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | CBS |
| Context | configure service ies string interface string sap string egress qos sap-egress overrides queue reference cbs (<i>number</i> <i>keyword</i>) |
| Tree | cbs |
| Range | 0 to 1048576 |
| Units | kilobytes |
| Options | auto |
| Introduced | 16.0.R1 |
| Platforms | All |

drop-tail

| | |
|------------|--|
| Synopsis | Enter the drop-tail context |
| Context | configure service ies string interface string sap string egress qos sap-egress overrides queue reference drop-tail |
| Tree | drop-tail |
| Introduced | 16.0.R1 |
| Platforms | All |

low

| | |
|------------|--|
| Synopsis | Enter the low context |
| Context | configure service ies string interface string sap string egress qos sap-egress overrides queue reference drop-tail low |
| Tree | low |
| Introduced | 16.0.R1 |
| Platforms | All |

percent-reduction-from-mbs (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | Percentage reduction from the MBS for a queue drop tail |
| Context | configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference drop-tail low percent-reduction-from-mbs (<i>number</i> <i>keyword</i>) |
| Tree | percent-reduction-from-mbs |
| Range | 0 to 100 |
| Options | auto |
| Introduced | 16.0.R1 |
| Platforms | All |

hs-class-weight *number*

| | |
|------------|--|
| Synopsis | Class weight override for the queue |
| Context | configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference hs-class-weight <i>number</i> |
| Tree | hs-class-weight |
| Range | 1 2 4 8 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR-7/12/12e |

hs-wred-queue

| | |
|------------|--|
| Synopsis | Enter the hs-wred-queue context |
| Context | configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference hs-wred-queue |
| Tree | hs-wred-queue |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR-7/12/12e |

policy *reference*

| | |
|-----------|--|
| Synopsis | Slope policy applied to the HSQ queue group queue |
| Context | configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference hs-wred-queue policy <i>reference</i> |
| Tree | policy |
| Reference | configure qos slope-policy <i>string</i> |

Introduced 16.0.R1
 Platforms 7750 SR-7/12/12e

hs-wrr-weight *number*

Synopsis WRR weight to parent with the queue into the scheduler
 Context **configure** [service ies string](#) [interface string](#) [sap string](#) [egress qos sap-egress overrides queue reference](#) [hs-wrr-weight number](#)
 Tree [hs-wrr-weight](#)
 Range 1 to 127
 Default 1
 Introduced 16.0.R1
 Platforms 7750 SR-7/12/12e

mbs (*number* | *keyword*)

Synopsis MBS
 Context **configure** [service ies string](#) [interface string](#) [sap string](#) [egress qos sap-egress overrides queue reference](#) [mbs \(number | keyword\)](#)
 Tree [mbs](#)
 Range 0 to 1073741824
 Units bytes
 Options auto
 Introduced 16.0.R1
 Platforms All

monitor-queue-depth

Synopsis Enable the **monitor-queue-depth** context
 Context **configure** [service ies string](#) [interface string](#) [sap string](#) [egress qos sap-egress overrides queue reference](#) [monitor-queue-depth](#)
 Tree [monitor-queue-depth](#)
 Introduced 20.10.R1
 Platforms All

fast-polling *boolean*

| | |
|-------------|---|
| Synopsis | Enable fast polling of the queue depth |
| Context | configure service ies string interface string sap string egress qos sap-egress overrides queue reference monitor-queue-depth fast-polling <i>boolean</i> |
| Tree | fast-polling |
| Description | When configured to true , this command enables fast polling of the queue depth. Faster polling allows a more accurate view of the actual depth. |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | All |

violation-threshold *decimal-number*

| | |
|-------------|---|
| Synopsis | Threshold for queue depth before violation is raised |
| Context | configure service ies string interface string sap string egress qos sap-egress overrides queue reference monitor-queue-depth violation-threshold <i>decimal-number</i> |
| Tree | violation-threshold |
| Description | This command specifies the threshold for the queue MBS. When the queue depth exceeds the threshold value, a violation is registered. |
| Range | 0.01 to 99.99 |
| Introduced | 20.10.R1 |
| Platforms | All |

parent

| | |
|------------|--|
| Synopsis | Enter the parent context |
| Context | configure service ies string interface string sap string egress qos sap-egress overrides queue reference parent |
| Tree | parent |
| Introduced | 16.0.R1 |
| Platforms | All |

cir-weight *number*

| | |
|----------|---|
| Synopsis | CIR parameter that overrides parent for queue group |
| Context | configure service ies string interface string sap string egress qos sap-egress overrides queue reference parent cir-weight <i>number</i> |

| | |
|------------|----------------------------|
| Tree | cir-weight |
| Range | 0 to 100 |
| Introduced | 16.0.R1 |
| Platforms | All |

weight *number*

| | |
|------------|---|
| Synopsis | PIR parameter that overrides parent for queue group |
| Context | configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference parent weight <i>number</i> |
| Tree | weight |
| Range | 0 to 100 |
| Introduced | 16.0.R1 |
| Platforms | All |

percent-rate

| | |
|------------|--|
| Synopsis | Enter the percent-rate context |
| Context | configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference percent-rate |
| Tree | percent-rate |
| Notes | The following elements are part of a choice: percent-rate or rate . |
| Introduced | 16.0.R1 |
| Platforms | All |

cir *decimal-number*

| | |
|------------|--|
| Synopsis | CIR percent rate |
| Context | configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference percent-rate cir <i>decimal-number</i> |
| Tree | cir |
| Range | 0.00 to 100.00 |
| Introduced | 16.0.R1 |
| Platforms | All |

pir *decimal-number*

| | |
|------------|---|
| Synopsis | PIR percent rate |
| Context | configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference percent-rate pir <i>decimal-number</i> |
| Tree | pir |
| Range | 0.01 to 100.00 |
| Introduced | 16.0.R1 |
| Platforms | All |

rate

| | |
|------------|---|
| Synopsis | Enter the rate context |
| Context | configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference rate |
| Tree | rate |
| Notes | The following elements are part of a choice: percent-rate or rate . |
| Introduced | 16.0.R1 |
| Platforms | All |

cir (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | CIR rate |
| Context | configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference rate cir (<i>number</i> <i>keyword</i>) |
| Tree | cir |
| Range | 0 to 6400000000 |
| Units | kilobps |
| Options | max |
| Introduced | 16.0.R1 |
| Platforms | All |

pir (*number* | *keyword*)

| | |
|----------|--|
| Synopsis | PIR rate |
| Context | configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference rate pir (<i>number</i> <i>keyword</i>) |

| | |
|------------|---------------------|
| Tree | pir |
| Range | 1 to 6400000000 |
| Units | kilobps |
| Options | max |
| Introduced | 16.0.R1 |
| Platforms | All |

policy-name *reference*

| | |
|------------|---|
| Synopsis | Policy ID to associate with SAP for mirrored service |
| Context | configure service ies string interface string sap string egress qos sap-egress policy-name reference |
| Tree | policy-name |
| Reference | configure qos sap-egress string |
| Introduced | 16.0.R1 |
| Platforms | All |

port-redirect-group

| | |
|------------|---|
| Synopsis | Enter the port-redirect-group context |
| Context | configure service ies string interface string sap string egress qos sap-egress port-redirect-group |
| Tree | port-redirect-group |
| Introduced | 16.0.R1 |
| Platforms | All |

group-name *reference*

| | |
|------------|--|
| Synopsis | Name of the queue group redirect list policy |
| Context | configure service ies string interface string sap string egress qos sap-egress port-redirect-group group-name reference |
| Tree | group-name |
| Reference | configure qos queue-group-templates egress queue-group string |
| Introduced | 16.0.R1 |
| Platforms | All |

instance *number*

| | |
|------------|---|
| Synopsis | Instance of port queue group |
| Context | configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> egress qos sap-egress port-redirect-group instance <i>number</i> |
| Tree | instance |
| Range | 1 to 65535 |
| Introduced | 16.0.R1 |
| Platforms | All |

scheduler-policy

| | |
|------------|--|
| Synopsis | Enter the scheduler-policy context |
| Context | configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> egress qos scheduler-policy |
| Tree | scheduler-policy |
| Introduced | 16.0.R1 |
| Platforms | All |

overrides

| | |

[scheduler-name] *string*

| | |
|---------------|--|
| Synopsis | Scheduler name |
| Context | configure service ies string interface string sap string egress qos scheduler-policy
overrides scheduler string |
| Tree | scheduler |
| Description | <p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context does not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context is not change.</p> |
| String Length | 1 to 32 |
| Notes | This element is part of a list key. |

| Tree | rx-eth-vsm-grace |
| Description | When configured to true , the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.

When configured to false , the router disables the Nokia Grace function. |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

tx-eth-vsm-grace *boolean*

| | |
|----------|-----------------------------------|
| Synopsis | Transmit ETH-ED PDUs from the MEP |
|----------|-----------------------------------|

| | |
|-------------|---|
| Context | configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> grace eth-vsm-grace tx-eth-vsm-grace <i>boolean</i> |
| Tree | tx-eth-vsm-grace |
| Description | <p>When configured to true, the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.</p> <p>The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.</p> <p>The operator must configure the configure system eth-cfm grace command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).</p> <p>When configured to false, the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.</p> |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

low-priority-defect *keyword*

| Units | seconds |
| Default | 3 |

| | |
|------------|--|
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

squelch-ingress-levels *number*

| | |
|----------------|--|
| Synopsis | Levels for which ETH-CFM packets are silently discarded |
| Context | configure service ies string interface string sap string eth-cfm squelch-ingress-levels number |
| Tree | squelch-ingress-levels |
| Description | <p>This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.</p> <p>The list of levels must be a complete contiguous list from 0 up to the highest level that will be dropped.</p> |
| Range | 0 to 7 |
| Max. Instances | 8 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

[scheduler-name] *string*

| | |
|---------------|--|
| Synopsis | Scheduler name |
| Context | configure service ies string interface string sap string ingress qos scheduler-policy overrides scheduler string |
| Tree | scheduler |
| Description | <p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context does not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context is not change.</p> |

clear-df-bit *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Clear the Do-not-Fragment bit |
| Context | configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> ip-tunnel <i>string</i> clear-df-bit <i>boolean</i> |
| Tree | clear-df-bit |
| Description | When configured to true , the DF bit is cleared (set to 0) in all payload IP packets associated with the GRE or IPsec tunnel, before any potential fragmentation resulting from the ip-mtu command. This requires a modification of the header checksum.

When configured to false , clearing of the DF bit is disabled. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

delivery-service *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|---------------|---|
| Synopsis | Service to originate and terminate GRE packets |
| Context | configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> ip-tunnel <i>string</i> delivery-service <i>string</i> |
| Tree | delivery-service |
| Description | This command specifies the service used to originate and terminate the GRE encapsulated packets belonging to the GRE tunnel. The delivery service may be the same service that owns the private tunnel SAP associated with the GRE tunnel.

The GRE tunnel does not come up until a valid delivery service is configured. |
| String Length | 1 to 64 |

| Context | configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> ip-tunnel <i>string</i> local-ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) |
| Tree | local-ip-address |
| Description | This command specifies the local IP address to use for the IP tunnel. This configuration applies to the outer IP header of the encapsulated packets. The address must belong to one of the IP subnets associated with the public SAP interface of the tunnel group. The source IP address, the remote IP address, and the backup remote IP address of a tunnel must all belong to the same address family (IPv4 or IPv6).

When this command specifies an IPv6 address, it must be a global unicast address. |
| Introduced | 16.0.R1 |
| Platforms | All |

pmtu-discovery-aging *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Time to age out the learned path MTU |
| Context | configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> ip-tunnel <i>string</i> pmtu-discovery-aging <i>number</i> |
| Tree | pmtu-discovery-aging |
| Description | This command configures the temporary public MTU expiration time. The temporary public MTU is used for MTU propagation. |
| Range | 900 to 3600 |
| Units | seconds |
| Default | 900 |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

private-tcp-mss-adjust *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|----------|--|

| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

client-db

| | |
|-------------|--|
| Synopsis | Enable the client-db context |
| Context | configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-gateway <i>string</i> client-db |
| Tree | client-db |
| Description | Commands in this context configure the IPsec client database. The client database is used to authenticate the IKEv2 dynamic LAN-to-LAN tunnel. |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

fallback *boolean*

| | |
|-------------|--|
| Synopsis | Fall back to the default authentication policy |
| Context | configure service ies <i>string</i> interface <i>string</i> sap <i>string</i> ipsec-gateway <i>string</i> client-db fallback <i>boolean</i> |
| Tree | fallback |
| Description | When configured to true , this command specifies whether the IPsec gateway can fall back to the default authentication policy when the IPsec tunnel authentication request fails to match any clients in the IPsec database.

When configured to false and the client database lookup fails to return a matched result, the system fails the tunnel setup. |
| Default | true |
| Introduced | 19.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

| Synopsis | VCCV BFD action taken on the SDP binding |
| Context | configure service ies <i>string</i> interface <i>string</i> spoke-sdp <i>string</i> bfd failure-action <i>keyword</i> |
| Tree | failure-action |
| Description | This command configures a named BFD template to be used by VCCV BFD on PWs belonging to the VLL service. The template specifies parameters, such as the minimum transmit and receive control packet timer intervals, used by the BFD session. Template parameters are configured under the configure router bfd context. |
| Options | none, down |
| Default | none |
| Introduced | 21.2.R1 |
| Platforms | All |

wait-for-up-timer *number*

| | |
|----------|---|
| Synopsis | Time waited for BFD up status |
| Context | configure service ies <i>string</i> interface <i>string</i> spoke-sdp <i>string</i> bfd wait-for-up-timer <i>number</i> |
| Tree | wait-for-up-timer |

| | |
|-------------|--|
| Description | This command configures the time interval that is used to wait for a BFD session to come up.

This command is triggered when a spoke-SDP is first administratively enabled and a VCCV BFD session transitions from up to down. The command is required to allow time for BFD sessions to come up, and for BFD to settle before selecting the active spoke-SDP for use in a redundant set. In the case where a VCCV BFD session is bouncing, the timer prevents excessive flapping of the operational state of a spoke-SDP. |
| Range | 1 to 60 |
| Units | seconds |
| Introduced | 21.2.R1 |
| Platforms | All |

collect-stats *boolean*

| | |
|------------|--|

| Tree | collect-lmm-fc-stats |
| Description | <p>Commands in this context configure per forwarding class (FC) LMM information collection.</p> <p>The commands fc-in-profile and fc in this context are mutually exclusive. The commands apply to either profile-aware or profile-unaware FCs respectively.</p> <p>This command and the collect-lmm-stats command are mutually exclusive when there is entity resource contention.</p> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

fc keyword

| | |
|-------------|---|
| Synopsis | Forwarding class name for profile-unaware counter |
| Context | configure service ies <i>string</i> interface <i>string</i> spoke-sdp <i>string</i> eth-cfm collect-lmm-fc-stats fc <i>keyword</i> |
| Tree | fc |
| Description | This command configures individual counters for the specified FCs without regard for profile. The system includes all countable packets that match a configured FC, regardless of profile, in this counter. |

An FC specified as part of this command and for this specific context cannot be specified as a profile-aware FC using the **fc-in-profile** command under the **collect-imm-fc-stats** context.

When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.

| | |
|----------------|--|
| Options | be, l2, af, l1, h2, ef, h1, nc |
| Max. Instances | 8 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

fc-in-profile *keyword*

| | |
|----------------|--|
| Synopsis | Forwarding class name for profile-aware counter |
| Context | configure service ies <i>string</i> interface <i>string</i> spoke-sdp <i>string</i> eth-cfm collect-imm-fc-stats fc-in-profile <i>keyword</i> |
| Tree | fc-in-profile |
| Description | This command configures individual counters for the specified FCs with regard to profile. The system includes all countable packets that match a configured FC and that are deemed to be in-profile in this counter.

An FC specified as part of this command and for this specific context cannot be specified as a profile-unaware FC using the fc command under the collect-imm-fc-stats context.

When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count. |
| Options | be, l2, af, l1, h2, ef, h1, nc |
| Max. Instances | 8 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

collect-imm-stats *boolean*

| | |
|-------------|---|
| Synopsis | Collect statistics for loss measurement message tests |
| Context | configure service ies <i>string</i> interface <i>string</i> spoke-sdp <i>string</i> eth-cfm collect-imm-stats <i>boolean</i> |
| Tree | collect-imm-stats |
| Description | When configured to true , the router instantiates the statistical counter to transmit and receive packets for the LAG facility MEP bindings. |

The **show eth-cfm collect-lmm-stats** command displays entities that have been enabled to collect transit and receive counters.

When configured to **false**, the router does not instantiate the counter and the LMM PDU associated with the MEP does not populate the counters in the packet.

| | |

| Tree | rx-eth-vsm-grace |
| Description | When configured to true , the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.

When configured to false , the router disables the Nokia Grace function. |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

tx-eth-vsm-grace *boolean*

| | |
|-------------|--|
| Synopsis | Transmit ETH-ED PDUs from the MEP |
| Context | configure service ies <i>string</i> interface <i>string</i> spoke-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> grace eth-vsm-grace tx-eth-vsm-grace <i>boolean</i> |
| Tree | tx-eth-vsm-grace |
| Description | When configured to true , the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.

The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.

The operator must configure the configure system eth-cfm grace command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).

When configured to false , the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP. |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

low-priority-defect *keyword*

| | |

| Tree | low-priority-defect |

| | |
|------------|--|
| Options | all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon |
| Default | mac-rem-err-xcon |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

one-way-delay-threshold *number*

| | |
|------------|---|
| Synopsis | Threshold time limit for the one-way delay test |
| Context | configure service ies <i>string</i> interface <i>string</i> spoke-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> one-way-delay-threshold <i>number</i> |
| Tree | one-way-delay-threshold |
| Range | 0 to 600 |
| Units | seconds |
| Default | 3 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

squelch-ingress-levels *number*

| | |
|-------------|--|
| Synopsis | Levels for which ETH-CFM packets are silently discarded |
| Context | configure service ies <i>string</i> interface <i>string</i> spoke-sdp <i>string</i> eth-cfm squelch-ingress-levels <i>number</i> |
| Tree | squelch-ingress-levels |
| Description | <p>This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.</p> <p>The list of levels must be a complete contiguous list from 0 up to the highest level that will be dropped.</p> |
| Range | 0 to 7 |
| Max. | 8 |
| Instances | |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

hash-label

| | |
|-------------|--|
| Synopsis | Enable the hash-label context |
| Context | configure service ies string interface string spoke-sdp string hash-label |
| Tree | hash-label |
| Description | Commands in this context configure the use of hash labels for egress datapaths. |
| Notes | The following elements are part of a choice: entropy-label or hash-label . |
| Introduced | 16.0.R1 |
| Platforms | All |

signal-capability

| | |
|-------------|---|
| Synopsis | Signal hash label capability to the remote PE |
| Context | configure service ies string interface string spoke-sdp string hash-label signal-capability |
| Tree | signal-capability |
| Description | When configured, this command enables the signaling and negotiating of the hash label between the local and remote PE nodes.

The signaling process outcome determines whether the local PE inserts the hash label on the user packets. This outcome can override the local PE configuration. |
| Introduced | 16.0.R1 |
| Platforms | All |

redundant-interface [[interface-name](#)] *string*

Synopsis Enter the **redundant-interface** list instance

Context **configure** [service ies](#) *string* [redundant-interface](#) *string*

Tree [redundant-interface](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[interface-name] *string*

Synopsis Interface name
 Context **configure service ies** *string* **redundant-interface** *string*
 Tree **redundant-interface**
 String Length 1 to 32
 Notes This element is part of a list key.
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis Administrative state of the interface
 Context **configure service ies** *string* **redundant-interface** *string* **admin-state** *keyword*
 Tree **admin-state**
 Options enable, disable
 Default enable
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis Text description
 Context **configure service ies** *string* **redundant-interface** *string* **description** *string*
 Tree **description**
 String Length 1 to 255
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hold-time

Synopsis Enter the **hold-time** context
 Context **configure service ies** *string* **redundant-interface** *string* **hold-time**

| | |
|------------|---|
| Tree | hold-time |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipv4

| | |
|------------|---|
| Synopsis | Enter the ipv4 context |
| Context | configure service ies <i>string</i> redundant-interface <i>string</i> hold-time ipv4 |
| Tree | ipv4 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

down

| | |
|-------------|--|
| Synopsis | Enter the down context |
| Context | configure service ies <i>string</i> redundant-interface <i>string</i> hold-time ipv4 down |
| Tree | down |
| Description | Commands in this context configure the down hold timer, which specifies the delay before activating the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface up, unless an operator configures the init-only command. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

init-only *boolean*

| | |
|-------------|---|
| Synopsis | Apply delay only at interface configuration or reboot |
| Context | configure service ies <i>string</i> redundant-interface <i>string</i> hold-time ipv4 down init-only <i>boolean</i> |
| Tree | init-only |
| Description | This command applies a delay only when the IP interface is first configured or after a system reboot. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

seconds *number*

| | |
|------------|--|
| Synopsis | Down hold time for the IP interface |
| Context | configure service ies <i>string</i> redundant-interface <i>string</i> hold-time ipv4 down seconds <i>number</i> |
| Tree | seconds |
| Range | 1 to 1200 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

up

| | |
|-------------|---|
| Synopsis | Enter the up context |
| Context | configure service ies <i>string</i> redundant-interface <i>string</i> hold-time ipv4 up |
| Tree | up |
| Description | Commands in this context configure the up hold timer, which specifies the delay before deactivation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface down. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

seconds *number*

| | |
|------------|--|
| Synopsis | Up hold time for the IP interface |
| Context | configure service ies <i>string</i> redundant-interface <i>string</i> hold-time ipv4 up seconds <i>number</i> |
| Tree | seconds |
| Range | 1 to 1200 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ip-mtu *number*

| | |
|----------|---|
| Synopsis | IP MTU applied to outgoing packets |
| Context | configure service ies <i>string</i> redundant-interface <i>string</i> ip-mtu <i>number</i> |

| | |
|-------------|--|
| Tree | ip-mtu |
| Description | This command configures the IP maximum transmission unit (MTU) for the associated router IP interface. |
| Range | 512 to 9786 |
| Units | bytes |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipv4

| | |
|------------|---|
| Synopsis | Enter the ipv4 context |
| Context | configure service ies <i>string</i> redundant-interface <i>string</i> ipv4 |
| Tree | ipv4 |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

primary

| | |
|------------|---|
| Synopsis | Enable the primary context |
| Context | configure service ies <i>string</i> redundant-interface <i>string</i> ipv4 primary |
| Tree | primary |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

address *string*

| | |
|------------|---|
| Synopsis | IPv4 address to be assigned to the interface |
| Context | configure service ies <i>string</i> redundant-interface <i>string</i> ipv4 primary address <i>string</i> |
| Tree | address |
| Notes | This element is mandatory. |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

prefix-length *number*

| | |
|------------|---|
| Synopsis | IPv4 address prefix length |
| Context | configure service ies <i>string</i> redundant-interface <i>string</i> ipv4 primary prefix-length <i>number</i> |
| Tree | prefix-length |
| Range | 0 to 32 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

remote-ip *string*

| | |
|------------|---|
| Synopsis | Remote IP address for the interface |
| Context | configure service ies <i>string</i> redundant-interface <i>string</i> ipv4 primary remote-ip <i>string</i> |
| Tree | remote-ip |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

spoke-sdp [[sdp-bind-id](#)] *string*

| | |
|----------------|--|
| Synopsis | Enter the spoke-sdp list instance |
| Context | configure service ies <i>string</i> redundant-interface <i>string</i> spoke-sdp <i>string</i> |
| Tree | spoke-sdp |
| Max. Instances | 1 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

[[sdp-bind-id](#)] *string*

| | |
|---------------|--|
| Synopsis | SDP binding ID |
| Context | configure service ies <i>string</i> redundant-interface <i>string</i> spoke-sdp <i>string</i> |
| Tree | spoke-sdp |
| String Length | 3 to 16 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis Administrative state of the SDP binding to the service

Context **configure** *service ies string redundant-interface string spoke-sdp string admin-state keyword*

Tree [admin-state](#)

Options enable, disable

Default enable

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

control-word *boolean*

Synopsis Use the control word as preferred

Context **configure** *service ies string redundant-interface string spoke-sdp string control-word boolean*

Tree [control-word](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis Text description

Context **configure** *service ies string redundant-interface string spoke-sdp string description string*

Tree [description](#)

String Length 1 to 80

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

egress

Synopsis Enter the **egress** context

| | |
|------------|---|
| Context | configure service ies <i>string</i> redundant-interface <i>string</i> spoke-sdp <i>string</i> egress |
| Tree | egress |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

filter

| | |
|------------|--|
| Synopsis | Enter the filter context |
| Context | configure service ies <i>string</i> redundant-interface <i>string</i> spoke-sdp <i>string</i> egress filter |
| Tree | filter |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ip reference

| | |
|------------|---|
| Synopsis | IPv4 filter policy name |
| Context | configure service ies <i>string</i> redundant-interface <i>string</i> spoke-sdp <i>string</i> egress filter ip reference |
| Tree | ip |
| Reference | configure filter ip-filter <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

vc-label *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Egress MPLS VC label to send packets to the far end |
| Context | configure service ies <i>string</i> redundant-interface <i>string</i> spoke-sdp <i>string</i> egress vc-label <i>number</i> |
| Tree | vc-label |
| Range | 16 to 1048575 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ingress

| | |
|------------|--|
| Synopsis | Enter the ingress context |
| Context | configure service ies string redundant-interface string spoke-sdp string ingress |
| Tree | ingress |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

filter

| | |
|------------|---|
| Synopsis | Enter the filter context |
| Context | configure service ies string redundant-interface string spoke-sdp string ingress filter |
| Tree | filter |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ip reference

| | |
|------------|---|
| Synopsis | IPv4 filter policy name |
| Context | configure service ies string redundant-interface string spoke-sdp string ingress filter ip reference |
| Tree | ip |
| Reference | configure filter ip-filter string |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

vc-label *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|----------|---|
| Synopsis | Ingress MPLS VC label to send packets to the far end |
| Context | configure service ies string redundant-interface string spoke-sdp string ingress vc-label number |
| Tree | vc-label |

| | |
|------------|---|
| Range | 1 to 1048575 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

service-id *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Service ID |
| Context | configure service ies <i>string</i> service-id <i>number</i> |
| Tree | service-id |
| Range | 1 to 2147483647 |
| Introduced | 16.0.R1 |
| Platforms | All |

subscriber-interface [*interface-name*] *string*

| | |
|------------|--|
| Synopsis | Enter the subscriber-interface list instance |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> |
| Tree | subscriber-interface |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

[interface-name] *string*

| | |

cflowd-parameters

| | |
|----------|--|
| Synopsis | Enter the cflowd-parameters context |
|----------|--|

| | |
|------------|--|
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> cflowd-parameters |
| Tree | cflowd-parameters |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sampling [**sampling-type**] *keyword*

| | |
|------------|---|
| Synopsis | Enter the sampling list instance |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> cflowd-parameters sampling <i>keyword</i> |
| Tree | sampling |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

[sampling-type] *keyword*

| | |
|-------------|---|
| Synopsis | Traffic sampling type |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> cflowd-parameters sampling <i>keyword</i> |
| Tree | sampling |
| Description | This command configures the type of traffic to be sampled on the associated IP interface. |
| Options | unicast, multicast, both |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

direction *keyword*

| | |
|-------------|---|
| Synopsis | Direction of traffic for cflowd sampling |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> cflowd-parameters sampling <i>keyword</i> direction <i>keyword</i> |
| Tree | direction |
| Description | This command configures the direction in which sampling occurs on the associated IP interfaces. |
| Options | ingress-only, egress-only, both |

| | |
|------------|---|
| Default | ingress-only |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sample-profile (*keyword | number*)

| | |
|-------------|---|
| Synopsis | Sample profile ID |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> cflowd-parameters sampling <i>keyword</i> sample-profile (<i>keyword number</i>) |
| Tree | sample-profile |
| Description | This command defines the sampling rate profile associated with this interface. |
| Max. Range | 0 to 4294967295 |
| Options | 1 |
| Introduced | 19.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

type *keyword*

| | |
|-------------|--|
| Synopsis | Type of cflowd analysis |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> cflowd-parameters sampling <i>keyword</i> type <i>keyword</i> |
| Tree | type |
| Description | This command configures the cflowd sampling type on the associated IP interface. |
| Options | acl, interface |
| Notes | This element is mandatory. |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

data-trigger

| | |
|------------|---|
| Synopsis | Enter the data-trigger context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> data-trigger |
| Tree | data-trigger |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis Administrative state of data-triggered host creation

Context **configure service ies** *string* *subscriber-interface* *string* *group-interface* *string* *data-trigger* **admin-state** *keyword*

Tree [admin-state](#)

Options enable, disable

Default disable

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis Text description

Context **configure service ies** *string* *subscriber-interface* *string* *group-interface* *string* *description* *string*

Tree [description](#)

String Length 1 to 255

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dynamic-routes-track-srrp

Synopsis Enable the **dynamic-routes-track-srrp** context

Context **configure service ies** *string* *subscriber-interface* *string* *group-interface* *string* **dynamic-routes-track-srrp**

Tree [dynamic-routes-track-srrp](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

hold-time *number*

Synopsis Time before route state updated after SRRP transition

Context **configure service ies** *string* *subscriber-interface* *string* *group-interface* *string* **dynamic-routes-track-srrp** **hold-time** *number*

| | |
|------------|---|
| Tree | hold-time |
| Range | 1 to 50 |
| Units | deciseconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

gtp-parameters

| | |
|------------|--|
| Synopsis | Enter the gtp-parameters context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> gtp-parameters |
| Tree | gtp-parameters |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of GTP access |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> gtp-parameters admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

fpe *reference*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-----------|---|
| Synopsis | PE that provisions the GTP user interface |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> gtp-parameters fpe <i>reference</i> |
| Tree | fpe |
| Reference | configure fwd-path-ext fpe <i>number</i> |

Introduced 16.0.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

gx-policy *reference*

Synopsis Diameter application policy
 Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [gx-policy](#) *reference*
 Tree [gx-policy](#)
 Reference **configure** [subscriber-mgmt](#) [diameter-gx-policy](#) *string*
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ingress

Synopsis Enter the **ingress** context
 Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [ingress](#)
 Tree [ingress](#)
 Introduced 19.7.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

policy-accounting *reference*

Synopsis Ingress policy accounting template name
 Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [ingress](#) [policy-accounting](#) *reference*
 Tree [policy-accounting](#)
 Reference **configure** [routing-options](#) [policy-accounting](#) [policy-acct-template](#) *string*
 Introduced 19.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-s

ingress-stats *boolean*

Synopsis Collect ingress interface statistics
 Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [ingress-stats](#) *boolean*

| | |
|------------|---|
| Tree | ingress-stats |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ip-mtu *number*

| | |
|------------|--|
| Synopsis | Interface IP MTU |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ip-mtu <i>number</i> |
| Tree | ip-mtu |
| Range | 512 to 9786 |
| Units | bytes |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipoe-linking

| | |
|------------|--|
| Synopsis | Enter the ipoe-linking context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-linking |
| Tree | ipoe-linking |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of IPoE host linking |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-linking admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

gratuitous-router-advertisement *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Send unsolicited router advertisement after DHCP setup |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-linking gratuitous-router-advertisement <i>boolean</i> |
| Tree | gratuitous-router-advertisement |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

shared-circuit-id *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Enable circuit ID in DHCPv4 Option82 to validate DHCPv6 |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-linking shared-circuit-id <i>boolean</i> |
| Tree | shared-circuit-id |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipoe-session

| | |
|------------|---|
| Synopsis | Enter the ipoe-session context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session |
| Tree | ipoe-session |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of IPoE session management |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

description *string*

| | |
|---------------|--|
| Synopsis | Text description |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session description <i>string</i> |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

force-auth

| | |
|------------|---|
| Synopsis | Enter the force-auth context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session force-auth |
| Tree | force-auth |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

cid-change *boolean*

| | |
|------------|--|
| Synopsis | Ignore min-auth-interval when circuit ID changed |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session force-auth cid-change <i>boolean</i> |
| Tree | cid-change |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

rid-change *boolean*

| | |
|------------|---|
| Synopsis | Ignore min-auth-interval when remote ID changed |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session force-auth rid-change <i>boolean</i> |
| Tree | rid-change |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipoe-session-policy *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | IPoE Session policy to be used for new sessions |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session ipoe-session-policy <i>reference</i> |
| Tree | ipoe-session-policy |
| Reference | configure subscriber-mgmt ipoe-session-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

min-auth-interval (*keyword | number*)

| | |
|------------|--|
| Synopsis | Minimum time between two authentication attempts |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session min-auth-interval (<i>keyword number</i>) |
| Tree | min-auth-interval |
| Range | 1 to 32000000 |
| Units | seconds |
| Options | infinite, always-reauthenticate |
| Default | infinite |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

radius-session-timeout *keyword*

| | |
|------------|--|
| Synopsis | Session timeout attribute to be interpreted |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session radius-session-timeout <i>keyword</i> |
| Tree | radius-session-timeout |
| Options | absolute, ignore, backwards-compatible |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sap-session-limit *number*

| | |
|------------|--|
| Synopsis | Maximum number of sessions per SAP |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session sap-session-limit <i>number</i> |
| Tree | sap-session-limit |
| Range | 1 to 131071 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

session-limit *number*

| | |
|------------|--|
| Synopsis | Maximum number of sessions on this group interface |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session session-limit <i>number</i> |
| Tree | session-limit |
| Range | 1 to 500000 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

stateless-redundancy *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|----------|---|
| Synopsis | Remove IPoE sessions when the system becomes stand-by in a stateless multi-chassis redundancy setup |
|----------|---|

| | |
|------------|---|
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session stateless-redundancy <i>boolean</i> |
| Tree | stateless-redundancy |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

user-db *reference*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Local user database for IPoE session authentication |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipoe-session user-db <i>reference</i> |
| Tree | user-db |
| Reference | configure subscriber-mgmt local-user-db <i>string</i> |
| Introduced | 16.0.R1 |

| Tree | filter |
| Reference | configure filter dhcp-filter <i>number</i> |

| | |
|------------|---|
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

gi-address *string*

| | |
|-------------|---|
| Synopsis | GI address for the DHCP relay |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp gi-address <i>string</i> |
| Tree | gi-address |
| Description | <p>This command configures the GI address to distinguish between the different subscriber interfaces (and potentially group interfaces) defined when the router functions as a DHCP relay.</p> <p>By default, the GI address used in the relayed DHCP packet is the primary IP address of a normal IES interface. Specifying the GI address allows the user to choose a secondary address. For group interfaces, a GI address must be specified under the group interface DHCP context or subscriber interface DHCP context for DHCP to function.</p> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

lease-populate

| | |
|------------|--|
| Synopsis | Enter the lease-populate context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp lease-populate |
| Tree | lease-populate |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

I2-header

| | |
|------------|--|
| Synopsis | Enable the I2-header context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp lease-populate I2-header |
| Tree | I2-header |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

mac string

| | |
|------------|--|
| Synopsis | IEEE address used in anti-spoofing entries for the SAP |
| Context | configure service ies string subscriber-interface string group-interface string ipv4 dhcp lease-populate l2-header mac string |
| Tree | mac |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

max-leases number

| | |
|------------|---|
| Synopsis | Maximum number of DHCPv4 leases |
| Context | configure service ies string subscriber-interface string group-interface string ipv4 dhcp lease-populate max-leases number |
| Tree | max-leases |
| Range | 1 to 511999 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

match-circuit-id boolean

| | |
|------------|---|
| Synopsis | Enable Option 82 circuit ID on relayed DHCP packets |
| Context | configure service ies string subscriber-interface string group-interface string ipv4 dhcp match-circuit-id boolean |
| Tree | match-circuit-id |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

offer-selection

| | |
|------------|--|
| Synopsis | Enter the offer-selection context |
| Context | configure service ies string subscriber-interface string group-interface string ipv4 dhcp offer-selection |
| Tree | offer-selection |
| Introduced | 20.10.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

client-mac

Synopsis Enter the **client-mac** context

Context **configure service ies string subscriber-interface string group-interface string ipv4 dhcp offer-selection client-mac**

Notes The following elements are part of a choice: **client-mac** or **server**.

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

discover-delay *number*

Synopsis Delay before sending DHCP Discover messages

Context **configure service ies string subscriber-interface string group-interface string ipv4 dhcp offer-selection client-mac discover-delay number**

Tree [discover-delay](#)

Description This command configures the time to delay sending DHCP Discover messages from the specified MAC addresses.

Range 1 to 100

Units deciseconds

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

mac-address *keyword*

Synopsis Designated client MAC addresses for Offer selection

Context **configure service ies string subscriber-interface string group-interface string ipv4 dhcp offer-selection client-mac mac-address keyword**

Tree [mac-address](#)

Description This command specifies the client MAC addresses for which the Discover delay applies.

Options odd, even

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

discover-delay *number*

| | |
|-------------|--|
| Synopsis | Delay before sending DHCP Discover messages |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp offer-selection discover-delay <i>number</i> |
| Tree | discover-delay |
| Description | This command configures the time to delay sending DHCP Discover messages. The delay is applied to all DHCP Discover messages for which no per DHCP server or per client MAC delay is configured. |
| Range | 1 to 100 |
| Units | deciseconds |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

server [**ipv4-address**] *string*

| | |
|----------------|--|
| Synopsis | Enter the server list instance |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp offer-selection server <i>string</i> |
| Tree | server |
| Max. Instances | 8 |
| Notes | The following elements are part of a choice: client-mac or server . |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

[ipv4-address] *string*

| | |
|------------|--|
| Synopsis | IP address of the DHCP server |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp offer-selection server <i>string</i> |
| Tree | server |
| Notes | This element is part of a list key. |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

discover-delay *number*

| | |
|-------------|--|
| Synopsis | Delay before sending DHCP Discover messages |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp offer-selection server <i>string</i> discover-delay <i>number</i> |
| Tree | discover-delay |
| Description | This command configures the time to delay DHCP Discover messages sent to the server. |
| Range | 1 to 100 |
| Units | deciseconds |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

option-82

| | |
|-------------|--|
| Synopsis | Enter the option-82 context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 |
| Tree | option-82 |
| Description | Commands in this context configure the processing required when the router receives a DHCP request that already has an Option 82 field in the packet. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

action *keyword*

| | |
|------------|---|
| Synopsis | Action to take with received DHCP Option 82 |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 action <i>keyword</i> |
| Tree | action |
| Options | replace, drop, keep |
| Default | keep |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

circuit-id

| | |
|------------|--|
| Synopsis | Enter the circuit-id context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 circuit-id |
| Tree | circuit-id |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ascii-tuple

| | |
|------------|---|
| Synopsis | Use the ASCII-encoded tuple for the circuit ID |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 circuit-id ascii-tuple |
| Tree | ascii-tuple |
| Notes | The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ifindex

| | |
|------------|---|
| Synopsis | Use the interface index for the circuit ID |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 circuit-id ifindex |
| Tree | ifindex |
| Notes | The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

none

| | |
|----------|--|
| Synopsis | Do not include the circuit ID |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 circuit-id none |
| Tree | none |

| | |
|------------|---|
| Notes | The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sap-id

| | |
|------------|--|
| Synopsis | Use the SAP ID |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 circuit-id sap-id |
| Tree | sap-id |
| Notes | The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

vlan-ascii-tuple

| | |
|-------------|---|
| Synopsis | Include the VLAN ID and dot1p bits in the ASCII tuple |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 circuit-id vlan-ascii-tuple |
| Tree | vlan-ascii-tuple |
| Description | When configured, the router includes the VLAN ID and dot1p bits with the ASCII-tuple information. This only occurs on dot1q and QinQ-encapsulated ports. When the Option 82 bits are stripped, dot1p bits are copied to the Ethernet header of the outgoing packet.
When unconfigured, the router leaves the circuit ID sub-option of the DHCP packet empty. |
| Notes | The following elements are part of a choice: ascii-tuple , ifindex , none , sap-id , or vlan-ascii-tuple . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

remote-id

| | |
|----------|---|
| Synopsis | Enter the remote-id context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 remote-id |
| Tree | remote-id |

| | |
|-------------|--|
| Description | Commands in this context configure the remote IP sub-option of the DHCP packet with the identity of the remote host end (typically the DHCP client). |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ascii-string *string*

| | |
|---------------|---|
| Synopsis | User-defined ASCII string for the remote ID |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 remote-id ascii-string <i>string</i> |
| Tree | ascii-string |
| String Length | 1 to 32 |
| Notes | The following elements are part of a choice: ascii-string , mac , or none . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

mac

| | |
|------------|--|
| Synopsis | Use the MAC address for the remote ID |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 remote-id mac |
| Tree | mac |
| Notes | The following elements are part of a choice: ascii-string , mac , or none . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

none

| | |
|------------|---|
| Synopsis | Do not include the remote ID |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp option-82 remote-id none |
| Tree | none |
| Notes | The following elements are part of a choice: ascii-string , mac , or none . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

vendor-specific-option

| | |
|-------------|---|
| Synopsis | Enter the vendor-specific-option context |
| Context | configure service ies string subscriber-interface string group-interface string ipv4 dhcp option-82 vendor-specific-option |
| Tree | vendor-specific-option |
| Description | Commands in this context configure the Nokia Vendor-Specific Option (VSO) of the DHCP packet. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

client-mac-address *boolean*

| | |
|------------|---|
| Synopsis | Send the MAC address in the VSO |
| Context | configure service ies string subscriber-interface string group-interface string ipv4 dhcp option-82 vendor-specific-option client-mac-address <i>boolean</i> |
| Tree | client-mac-address |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

pool-name *boolean*

| | |
|------------|--|
| Synopsis | Send the pool name in the VSO |
| Context | configure service ies string subscriber-interface string group-interface string ipv4 dhcp option-82 vendor-specific-option pool-name <i>boolean</i> |
| Tree | pool-name |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sap-id *boolean*

| | |
|----------|---|
| Synopsis | Send SAP ID in the sub-option of the DHCP relay packet |
| Context | configure service ies string subscriber-interface string group-interface string ipv4 dhcp option-82 vendor-specific-option sap-id <i>boolean</i> |
| Tree | sap-id |

| | |
|------------|---|
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

service-id *boolean*

| | |
|------------|---|
| Synopsis | Send the service ID in the Vendor Specific Option |
| Context | configure service ies string subscriber-interface string group-interface string ipv4 dhcp option-82 vendor-specific-option service-id <i>boolean</i> |
| Tree | service-id |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

string *string*

| | |
|---------------|--|
| Synopsis | User-defined ASCII string for the VSO |
| Context | configure service ies string subscriber-interface string group-interface string ipv4 dhcp option-82 vendor-specific-option string <i>string</i> |
| Tree | string |
| String Length | 1 to 32 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

system-id *boolean*

| | |
|------------|--|
| Synopsis | Send the system ID in the VSO |
| Context | configure service ies string subscriber-interface string group-interface string ipv4 dhcp option-82 vendor-specific-option system-id <i>boolean</i> |
| Tree | system-id |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

proxy-server

| | |
|------------|---|
| Synopsis | Enter the proxy-server context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp proxy-server |
| Tree | proxy-server |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of the DHCP proxy server |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp proxy-server admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

emulated-server *string*

| | |
|------------|---|
| Synopsis | IP address used as DHCP server address in SAP context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp proxy-server emulated-server <i>string</i> |
| Tree | emulated-server |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

lease-time

| | |
|------------|--|
| Synopsis | Enter the lease-time context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 dhcp proxy-server lease-time |
| Tree | lease-time |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

radius-override *boolean*

| | |
|------------|--|
| Synopsis | Use lease time information provided by RADIUS server |
| Context | configure service ies string subscriber-interface string group-interface string ipv4 dhcp proxy-server lease-time radius-override <i>boolean</i> |
| Tree | radius-override |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

value *number*

| | |
|------------|---|
| Synopsis | DHCP lease time |
| Context | configure service ies string subscriber-interface string group-interface string ipv4 dhcp proxy-server lease-time value <i>number</i> |
| Tree | value |
| Range | 300 to 315446399 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

python-policy *reference*

| | |
|-------------|---|
| Synopsis | Python policy name |
| Context | configure service ies string subscriber-interface string group-interface string ipv4 dhcp python-policy <i>reference</i> |
| Tree | python-policy |
| Description | This command associates a Python policy name with the interface. |
| Reference | configure python python-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

relay-proxy

| | |
|----------|---------------------------------------|
| Synopsis | Enable the relay-proxy context |
|----------|---------------------------------------|

| | |
|------------|---|
| Context | configure service ies <i>string subscriber-interface string group-interface string ipv4 dhcp relay-proxy</i> |
| Tree | relay-proxy |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

release-update-src-ip *boolean*

| | |
|------------|---|
| Synopsis | Update the source IP address of a DHCP RELEASE message |
| Context | configure service ies <i>string subscriber-interface string group-interface string ipv4 dhcp relay-proxy release-update-src-ip boolean</i> |
| Tree | release-update-src-ip |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

siaddr-override *string*

| | |
|------------|--|
| Synopsis | DHCP server IP address for address hiding function |
| Context | configure service ies <i>string subscriber-interface string group-interface string ipv4 dhcp relay-proxy siaddr-override string</i> |
| Tree | siaddr-override |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

release-include-gi-address *boolean*

| | |
|------------|--|
| Synopsis | Include gateway IP address in DHCP Release messages |
| Context | configure service ies <i>string subscriber-interface string group-interface string ipv4 dhcp release-include-gi-address boolean</i> |
| Tree | release-include-gi-address |
| Default | false |
| Introduced | 21.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

server string

| | |
|----------------|--|
| Synopsis | IP addresses for DHCP server requests |
| Context | configure service ies string subscriber-interface string group-interface string ipv4 dhcp server string |
| Tree | server |
| Description | This command configures a list of servers that this interface forwards requests to.
The operator can enter the list of servers as either IP addresses or fully qualified domain names. The operator must specify at least one server specified for DHCP relay to work. If there are multiple servers, the system forwards the request to all the servers in the list. |
| Max. Instances | 8 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

src-ip-addr keyword

| | |
|------------|--|
| Synopsis | Type of source address to use for DHCP relay |
| Context | configure service ies string subscriber-interface string group-interface string ipv4 dhcp src-ip-addr keyword |
| Tree | src-ip-addr |
| Options | auto, gi-address |
| Default | auto |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

trusted boolean

| | |
|-------------|---|
| Synopsis | Relay untrusted packets |
| Context | configure service ies string subscriber-interface string group-interface string ipv4 dhcp trusted boolean |
| Tree | trusted |
| Description | When configured to true , the router enables the trusted mode on the interface. When enabled, the relay agent changes the existing GI address (of the request) to the ingress interface, and forwards the request.

A DHCP request that contains a GI address of 0.0.0.0 and an Option 82 field in the packet is discarded unless it arrives on a trusted circuit. |

This behavior only applies if the Relay Agent Information Option action is to keep the existing information. When the Option 82 field is replaced by the relay agent, the original Option 82 information is lost, and there is no reason to enable the trusted option.

| | |
|------------|---|
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

user-db *reference*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|

| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 icmp redirects seconds <i>number</i> |
| Tree | seconds |
| Range | 1 to 60 |
| Units | seconds |
| Default | 10 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ttl-expired

| | |
|-------------|--|
| Synopsis | Enter the ttl-expired context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 icmp ttl-expired |
| Tree | ttl-expired |
| Description | Commands in this context configure the settings for ICMP TTL expired messages generated by the interface. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|----------|--|
| Synopsis | Administrative state of sending TTL expired messages |
|----------|--|

| | |
|------------|--|
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 icmp ttl-expired admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | enable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

number *number*

| | |
|------------|--|
| Synopsis | Maximum number of TTL expired messages to send |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 icmp ttl-expired number <i>number</i> |
| Tree | number |
| Range | 10 to 2000 |
| Default | 100 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

seconds *number*

| | |
|------------|---|
| Synopsis | Time used to limit the number of TTL expired messages |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 icmp ttl-expired seconds <i>number</i> |
| Tree | seconds |
| Range | 1 to 60 |
| Units | seconds |
| Default | 10 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

use-matching-address *boolean*

| | |
|----------|---|
| Synopsis | Use the subscriber interface address as source address |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 icmp ttl-expired use-matching-address <i>boolean</i> |

| | |
|-------------|--|
| Tree | use-matching-address |
| Description | <p>When configured to true, the system uses a matching subscriber interface address as the source address of the ICMP TTL expired message.</p> <p>For matching to occur, the source address of the offending packet must be in the same subnet of the subscriber interface address.</p> <p>When configured to false, the system uses the first configured address.</p> |
| Default | false |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

unreachables

| | |
|-------------|--|
| Synopsis | Enter the unreachables context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 icmp unreachables |
| Tree | unreachables |
| Description | Commands in this context specify the settings for ICMP host and network destination unreachable messages generated by the interface. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of sending unreachable messages |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 icmp unreachables admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | enable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

number *number*

| | |
|----------|---|
| Synopsis | Maximum number of unreachable messages to send |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 icmp unreachables number <i>number</i> |

| | |
|------------|---|
| Tree | number |
| Range | 10 to 2000 |
| Default | 100 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

seconds *number*

| | |
|------------|--|
| Synopsis | Time to limit the number of ICMP unreachable messages |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 icmp unreachable seconds <i>number</i> |
| Tree | seconds |
| Range | 1 to 60 |
| Units | seconds |
| Default | 10 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ignore-df-bit *boolean*

| | |
|-------------|--|
| Synopsis | Ignore DF bit in the IPv4 header when fragmenting |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv4 ignore-df-bit <i>boolean</i> |
| Tree | ignore-df-bit |
| Description | <p>When configured to true, fragmentation is applied according to the applicable egress MTU instead of the DF bit for frames egressing the WLAN-GW group. The DF bit is reset for frames that are fragmented.</p> <p>When configured to false, the router fragments a packet larger than the MTU if the DF bit is set to 0 and drops the packet if the DF bit is set to 1.</p> |
| Default | false |
| Introduced | 20.5.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

neighbor-discovery

| | |
|----------|---|
| Synopsis | Enter the neighbor-discovery context |
|----------|---|

| | |
|------------|---|
| Context | configure service ies <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>group-interface</i> <i>string</i> <i>ipv4</i> <i>neighbor-discovery</i> |
| Tree | neighbor-discovery |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

local-proxy-arp *boolean*

| | |
|-------------|--|
| Synopsis | Enable local proxy ARP on interface |
| Context | configure service ies <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>group-interface</i> <i>string</i> <i>ipv4</i> <i>neighbor-discovery</i> local-proxy-arp <i>boolean</i> |
| Tree | local-proxy-arp |
| Description | When configured to true , the router enables local proxy ARP on the interface.
When configured to false , the router does not respond to ARP requests for addresses on the same subnet. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

populate *boolean*

| | |
|------------|--|
| Synopsis | Allow population of static and dynamic hosts |
| Context | configure service ies <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>group-interface</i> <i>string</i> <i>ipv4</i> <i>neighbor-discovery</i> populate <i>boolean</i> |
| Tree | populate |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

proxy-arp-policy *reference*

| | |
|----------------|--|
| Synopsis | Proxy ARP policy name |
| Context | configure service ies <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>group-interface</i> <i>string</i> <i>ipv4</i> <i>neighbor-discovery</i> proxy-arp-policy <i>reference</i> |
| Tree | proxy-arp-policy |
| Reference | configure <i>policy-options</i> policy-statement <i>string</i> |
| Max. Instances | 5 |
| Notes | This element is ordered by the user. |

Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

remote-proxy-arp *boolean*

Synopsis Enable remote proxy ARP on the interface
 Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipv4** **neighbor-discovery** **remote-proxy-arp** *boolean*
 Tree **remote-proxy-arp**
 Default false
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

timeout *number*

Synopsis Timeout for an ARP entry learned on the interface
 Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipv4** **neighbor-discovery** **timeout** *number*
 Tree **timeout**
 Range 0 to 65535
 Units seconds
 Default 14400
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

qos-route-lookup *keyword*

Synopsis QoS route lookup
 Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipv4** **qos-route-lookup** *keyword*
 Tree **qos-route-lookup**
 Options destination
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

urpf-check

| | |
|------------|--|
| Synopsis | Enable the urpf-check context |
| Context | configure service ies <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>ipv4 urpf-check</i> |
| Tree | urpf-check |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

mode keyword

| | |
|------------|--|
| Synopsis | Unicast RPF check mode |
| Context | configure service ies <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>ipv4 urpf-check mode</i> <i>keyword</i> |
| Tree | mode |
| Options | strict, loose, strict-no-ecmp |
| Default | strict |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipv6

| | |
|------------|---|
| Synopsis | Enable the ipv6 context |
| Context | configure service ies <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>ipv6</i> |
| Tree | ipv6 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

allow-multiple-wan-addresses boolean

| | |
|------------|---|
| Synopsis | Allow multiple WAN addresses |
| Context | configure service ies <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>ipv6 allow-multiple-wan-addresses</i> <i>boolean</i> |
| Tree | allow-multiple-wan-addresses |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

auto-reply

| | |
|------------|--|
| Synopsis | Enter the auto-reply context |
| Context | configure service ies string subscriber-interface string group-interface string ipv6 auto-reply |
| Tree | auto-reply |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

neighbor-solicitation *boolean*

| | |
|------------|--|
| Synopsis | Enable auto-reply for NS |
| Context | configure service ies string subscriber-interface string group-interface string ipv6 auto-reply neighbor-solicitation boolean |
| Tree | neighbor-solicitation |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

router-solicitation *boolean*

| | |
|------------|--|
| Synopsis | Enable auto-reply for RS |
| Context | configure service ies string subscriber-interface string group-interface string ipv6 auto-reply router-solicitation boolean |
| Tree | router-solicitation |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

dhcp6

| | |
|------------|---|
| Synopsis | Enter the dhcp6 context |
| Context | configure service ies string subscriber-interface string group-interface string ipv6 dhcp6 |
| Tree | dhcp6 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

filter reference

| | |
|------------|---|
| Synopsis | DHCPv6 filter |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 filter reference |
| Tree | filter |
| Reference | configure filter dhcp6-filter <i>number</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

option

| | |
|------------|---|
| Synopsis | Enter the option context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 option |
| Tree | option |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

interface-id

| | |
|------------|--|
| Synopsis | Enter the interface-id context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 option interface-id |
| Tree | interface-id |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ascii-tuple

| | |
|------------|--|
| Synopsis | Use ASCII-encoded concatenated tuple |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 option interface-id ascii-tuple |
| Tree | ascii-tuple |
| Notes | The following elements are part of a choice: ascii-tuple , if-index , sap-id , or string . |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

if-index

Synopsis Use interface index in the DHCPv6 relay packet

Context **configure service ies string subscriber-interface string group-interface string ipv6 dhcp6 option interface-id if-index**

Tree [if-index](#)

Notes The following elements are part of a choice: **ascii-tuple**, **if-index**, **sap-id**, or **string**.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sap-id

Synopsis Use SAP ID in interface ID option in relay packet

Context **configure service ies string subscriber-interface string group-interface string ipv6 dhcp6 option interface-id sap-id**

Tree [sap-id](#)

Notes The following elements are part of a choice: **ascii-tuple**, **if-index**, **sap-id**, or **string**.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

string string

Synopsis String for interface ID option in DHCPv6 relay packet

Context **configure service ies string subscriber-interface string group-interface string ipv6 dhcp6 option interface-id string string**

Tree [string](#)

String Length 1 to 80

Notes The following elements are part of a choice: **ascii-tuple**, **if-index**, **sap-id**, or **string**.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

remote-id boolean

Synopsis Send remote ID option in the DHCPv6 relay packet

| | |
|------------|---|
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 option remote-id <i>boolean</i> |
| Tree | remote-id |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

override-slaac *boolean*

| | |
|------------|---|
| Synopsis | Allow WAN address offered by DHCP to overwrite the WAN address acquired from SLAAC |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 override-slaac <i>boolean</i> |
| Tree | override-slaac |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

pd-managed-route

| | |
|------------|--|
| Synopsis | Enable the pd-managed-route context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 pd-managed-route |
| Tree | pd-managed-route |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

next-hop *keyword*

| | |
|------------|--|
| Synopsis | Next hop type |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 pd-managed-route next-hop <i>keyword</i> |
| Tree | next-hop |
| Options | ipv4, ipv6 |
| Default | ipv6 |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

proxy-server

Synopsis Enter the **proxy-server** context

Context **configure service ies string subscriber-interface string group-interface string ipv6 dhcp6 proxy-server**

Tree [proxy-server](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis Administrative state of the DHCPv6 proxy server

Context **configure service ies string subscriber-interface string group-interface string ipv6 dhcp6 proxy-server admin-state keyword**

Tree [admin-state](#)

Options enable, disable

Default disable

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

client-applications

Synopsis Enter the **client-applications** context

Context **configure service ies string subscriber-interface string group-interface string ipv6 dhcp6 proxy-server client-applications**

Tree [client-applications](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcp *boolean*

Synopsis Enable IPoE clients to use DHCP relay or proxy server

Context **configure service ies string subscriber-interface string group-interface string ipv6 dhcp6 proxy-server client-applications dhcp boolean**

Tree [dhcp](#)

| | |
|------------|---|
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ppp *boolean*

| | |
|------------|--|
| Synopsis | Allow PPPoE clients to use DHCP relay functionality |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 proxy-server client-applications ppp <i>boolean</i> |
| Tree | ppp |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

preferred-lifetime (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | Time for prefix to remain preferred on this interface |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 proxy-server preferred-lifetime (<i>number</i> <i>keyword</i>) |
| Tree | preferred-lifetime |
| Range | 300 to 4294967294 |
| Units | seconds |
| Options | infinite |
| Default | 3600 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

rebind-timer *number*

| | |
|----------|---|
| Synopsis | Rebind timer (T2) for this interface |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 proxy-server rebind-timer <i>number</i> |
| Tree | rebind-timer |
| Range | 0 to 1209600 |
| Units | seconds |
| Default | 2880 |

| | |
|------------|---|
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

renew-timer *number*

| | |
|------------|---|
| Synopsis | Renew timer (T1) |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 proxy-server renew-timer <i>number</i> |
| Tree | renew-timer |
| Range | 0 to 604800 |
| Units | seconds |
| Default | 1800 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

server-id

| | |
|------------|---|
| Synopsis | Enter the server-id context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 proxy-server server-id |
| Tree | server-id |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

duid-en-ascii *string*

| | |
|---------------|--|
| Synopsis | Vendor-assigned ID based on Enterprise Number (DUID-EN) |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 proxy-server server-id duid-en-ascii <i>string</i> |
| Tree | duid-en-ascii |
| String Length | 1 to 58 |
| Notes | The following elements are part of a choice: duid-en-ascii , duid-en-hex , or duid-ll . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

duid-en-hex *string*

| | |
|---------------|--|
| Synopsis | DUID system ID in hexadecimal format |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 proxy-server server-id duid-en-hex <i>string</i> |
| Tree | duid-en-hex |
| String Length | 1 to 118 |
| Notes | The following elements are part of a choice: duid-en-ascii , duid-en-hex , or duid-ll . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

duid-ll

| | |
|------------|--|
| Synopsis | Use link-layer address (DUID-LL) as DUID |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 proxy-server server-id duid-ll |
| Tree | duid-ll |
| Notes | The following elements are part of a choice: duid-en-ascii , duid-en-hex , or duid-ll . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

valid-lifetime (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | Time for prefix to remain valid on this interface |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 proxy-server valid-lifetime (<i>number</i> <i>keyword</i>) |
| Tree | valid-lifetime |
| Range | 300 to 4294967294 |
| Units | seconds |
| Options | infinite |
| Default | 86400 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

python-policy *reference*

| | |
|----------|---------------|
| Synopsis | Python policy |
|----------|---------------|

| | |
|------------|--|
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 python-policy <i>reference</i> |
| Tree | python-policy |
| Reference | configure python python-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

relay

| | |
|------------|---|
| Synopsis | Enter the relay context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay |
| Tree | relay |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of DHCPv6 Relay |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

advertise-selection

| | |
|------------|---|
| Synopsis | Enter the advertise-selection context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection |
| Tree | advertise-selection |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

client-mac

| | |
|------------|--|
| Synopsis | Enter the client-mac context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection client-mac |
| Tree | client-mac |
| Notes | The following elements are part of a choice: client-mac or server . |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

mac-address *keyword*

| | |
|------------|--|
| Synopsis | Designated client MAC addresses for Advertise selection |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection client-mac mac-address <i>keyword</i> |
| Tree | mac-address |
| Options | odd, even |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

preference-option

| | |
|-------------|---|
| Synopsis | Enter the preference-option context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection client-mac preference-option |
| Tree | preference-option |
| Description | Commands in this context configure the DHCPv6 preference option that is inserted in the DHCPv6 Advertise message. |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

value *number*

| | |
|----------|--|
| Synopsis | Preference option value for DHCPv6 Advertise messages |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection client-mac preference-option value <i>number</i> |
| Tree | value |

| | |
|------------|---|
| Range | 0 to 255 |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

solicit-delay *number*

| | |
|-------------|---|
| Synopsis | Delay before sending DHCPv6 Solicit messages |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection client-mac solicit-delay <i>number</i> |
| Tree | solicit-delay |
| Description | This command configures the time to delay DHCPv6 Solicit messages sent from the designated client MAC addresses. |
| Range | 1 to 100 |
| Units | deciseconds |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

preference-option

| | |
|-------------|---|
| Synopsis | Enter the preference-option context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection preference-option |
| Tree | preference-option |
| Description | Commands in this context configure the DHCPv6 preference option that is inserted in the DHCPv6 Advertise message. |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

value *number*

| | |
|------------|---|
| Synopsis | Preference option value for DHCPv6 Advertise messages |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection preference-option value <i>number</i> |
| Tree | value |
| Range | 0 to 255 |
| Introduced | 20.10.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

server [*ipv6-address*] *string*

Synopsis Enter the **server** list instance

Context **configure service ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipv6 dhcp6 relay advertise-selection server** *string*

Tree [server](#)

Max. Instances 8

Notes The following elements are part of a choice: **client-mac** or **server**.

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[ipv6-address] *string*

Synopsis IP address of the DHCPv6 server

Context **configure service ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipv6 dhcp6 relay advertise-selection server** *string*

Tree [server](#)

Notes This element is part of a list key.

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preference-option

Synopsis Enter the **preference-option** context

Context **configure service ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipv6 dhcp6 relay advertise-selection server** *string* **preference-option**

Tree [preference-option](#)

Description Commands in this context configure the DHCPv6 preference option that is inserted in the DHCPv6 Advertise message.

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

value number

| | |
|------------|---|
| Synopsis | Preference option value for DHCPv6 Advertise messages |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection server <i>string</i> preference-option value <i>number</i> |
| Tree | value |
| Range | 0 to 255 |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

solicit-delay number

| | |
|-------------|---|
| Synopsis | Delay before sending DHCPv6 Solicit messages |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection server <i>string</i> solicit-delay <i>number</i> |
| Tree | solicit-delay |
| Description | This command configures the time to delay DHCPv6 Solicit messages sent to the server. |
| Range | 1 to 100 |
| Units | deciseconds |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

solicit-delay number

| | |
|-------------|--|
| Synopsis | Delay before sending DHCPv6 Solicit messages |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay advertise-selection solicit-delay <i>number</i> |
| Tree | solicit-delay |
| Description | This command configures the time to delay DHCPv6 Solicit messages. The delay is applied to DHCPv6 Solicit messages for which no overriding value is configured in the server instance or the client-mac context. |
| Range | 1 to 100 |
| Units | deciseconds |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

client-applications

| | |
|------------|---|
| Synopsis | Enter the client-applications context |
| Context | configure service ies <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>group-interface</i> <i>string</i> <i>ipv6 dhcp6 relay client-applications</i> |
| Tree | <i>client-applications</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

dhcp boolean

| | |
|------------|--|
| Synopsis | Enable IPoE clients to use DHCP relay or proxy server |
| Context | configure service ies <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>group-interface</i> <i>string</i> <i>ipv6 dhcp6 relay client-applications dhcp boolean</i> |
| Tree | <i>dhcp</i> |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ppp boolean

| | |
|------------|---|
| Synopsis | Allow PPPoE clients to use DHCP relay functionality |
| Context | configure service ies <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>group-interface</i> <i>string</i> <i>ipv6 dhcp6 relay client-applications ppp boolean</i> |
| Tree | <i>ppp</i> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

description string

| | |
|---------------|--|
| Synopsis | Text description |
| Context | configure service ies <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>group-interface</i> <i>string</i> <i>ipv6 dhcp6 relay description string</i> |
| Tree | <i>description</i> |
| String Length | 1 to 80 |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

lease-split

Synopsis Enter the **lease-split** context

Context **configure service ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipv6 dhcp6 relay lease-split**

Tree **lease-split**

Description Commands in this context configure DHCPv6 lease split.

DHCPv6 lease split is active when administratively enabled and for all IA_NA and IA_PD options in the transaction, the configured lease split valid lifetime (short lease time) is less than or equal to one of the following:

- the renew time T1 committed by the server (long renew time)
- half of the preferred lifetime committed by the server when T1 committed by the server equals zero

Introduced 21.2.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis Administrative state of DHCPv6 lease split

Context **configure service ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipv6 dhcp6 relay lease-split admin-state** *keyword*

Tree **admin-state**

Options enable, disable

Default disable

Introduced 21.2.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

valid-lifetime *number*

Synopsis DHCPv6 lease split valid lifetime (short lease time)

Context **configure service ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipv6 dhcp6 relay lease-split valid-lifetime** *number*

Tree **valid-lifetime**

Range 300 to 315446399

Units seconds

| | |
|------------|---|
| Default | 3600 |
| Introduced | 21.2.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

link-address *string*

| | |
|------------|---|
| Synopsis | Link address for the DHCPv6 relay messages |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay link-address <i>string</i> |
| Tree | link-address |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

server *string*

| | |
|----------------|---|
| Synopsis | DHCP6 server(s) to which the DHCP6 requests are forwarded |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay server <i>string</i> |
| Tree | server |
| Max. Instances | 8 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

source-address *string*

| | |
|------------|---|
| Synopsis | Source IPv6 address for the DHCPv6 relay messages |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 relay source-address <i>string</i> |
| Tree | source-address |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

snooping

| | |
|------------|--|
| Synopsis | Enter the snooping context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 snooping |
| Tree | snooping |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of DHCPv6 snooping |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 snooping admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

user-db *reference*

| | |
|------------|--|
| Synopsis | Local user database for authentication |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 user-db <i>reference</i> |
| Tree | user-db |
| Reference | configure subscriber-mgmt local-user-db <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

user-ident *keyword*

| | |
|----------|---|
| Synopsis | DHCP6 user identification for this interface |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 dhcp6 user-ident <i>keyword</i> |
| Tree | user-ident |
| Options | mac, mac-interface-id |

| | |
|------------|---|
| Default | mac |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipoe-bridged-mode *boolean*

| | |
|------------|--|
| Synopsis | Enable IPv6 IPoE bridged mode |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 ipoe-bridged-mode <i>boolean</i> |
| Tree | ipoe-bridged-mode |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

neighbor-discovery

| | |
|------------|--|
| Synopsis | Enter the neighbor-discovery context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 neighbor-discovery |
| Tree | neighbor-discovery |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

dad-snooping *boolean*

| | |
|------------|---|
| Synopsis | Populate table via duplicate address detection packets |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 neighbor-discovery dad-snooping <i>boolean</i> |
| Tree | dad-snooping |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

neighbor-limit *number*

| | |
|----------|---|
| Synopsis | Maximum neighbor entries learned per SLAAC host |
|----------|---|

| | |
|------------|---|
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 neighbor-discovery neighbor-limit <i>number</i> |
| Tree | neighbor-limit |
| Range | 1 to 8 |
| Default | 1 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

qos-route-lookup *keyword*

| | |
|------------|---|
| Synopsis | QoS route lookup |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 qos-route-lookup <i>keyword</i> |
| Tree | qos-route-lookup |
| Options | destination |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

router-advertisements

| | |
|------------|---|
| Synopsis | Enter the router-advertisements context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements |
| Tree | router-advertisements |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of router advertisements |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

force-mcast *keyword*

Synopsis Protocol with forced multicast

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipv6** **router-advertisements** **force-mcast** *keyword*

Tree **force-mcast**

Options ip, ip-mac

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

max-advertisement-interval *number*

Synopsis Maximum advertisement interval

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipv6** **router-advertisements** **max-advertisement-interval** *number*

Tree **max-advertisement-interval**

Range 900 to 1800

Units seconds

Default 1800

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

min-advertisement-interval *number*

Synopsis Minimum advertisement interval

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipv6** **router-advertisements** **min-advertisement-interval** *number*

Tree **min-advertisement-interval**

Range 900 to 1350

Units seconds

Default 900

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

options

| | |
|------------|---|
| Synopsis | Enter the options context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements options |
| Tree | options |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

current-hop-limit *number*

| | |
|------------|---|
| Synopsis | Hop limit to be advertised |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements options current-hop-limit <i>number</i> |
| Tree | current-hop-limit |
| Range | 0 to 255 |
| Default | 64 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

dns

| | |
|------------|---|
| Synopsis | Enter the dns context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements options dns |
| Tree | dns |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

include-rdnss *boolean*

| | |
|----------|--|
| Synopsis | Include the RDNSS server option 25 |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements options dns include-rdnss <i>boolean</i> |
| Tree | include-rdnss |
| Default | false |

| | |
|------------|---|
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

rdnss-lifetime (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | Maximum time for the RDNSS address to remain valid |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements options dns rdnss-lifetime (<i>number</i> <i>keyword</i>) |
| Tree | rdnss-lifetime |
| Range | 900 to 3600 |
| Units | seconds |
| Options | infinite |
| Default | 3600 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

managed-configuration *boolean*

| | |
|------------|---|
| Synopsis | Managed address configuration flag |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements options managed-configuration <i>boolean</i> |
| Tree | managed-configuration |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

mtu (*number* | *keyword*)

| | |
|----------|---|
| Synopsis | Advertised MTU value |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements options mtu (<i>number</i> <i>keyword</i>) |
| Tree | mtu |
| Range | 1280 to 9212 |
| Units | bytes |
| Options | not-included |
| Default | not-included |

Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

other-stateful-configuration *boolean*

Synopsis Other stateful configuration flag
 Context **configure** *service ies string subscriber-interface string group-interface string ipv6 router-advertisements options other-stateful-configuration boolean*
 Tree [other-stateful-configuration](#)
 Default false
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

reachable-time *number*

Synopsis Reachable time for advertisements
 Context **configure** *service ies string subscriber-interface string group-interface string ipv6 router-advertisements options reachable-time number*
 Tree [reachable-time](#)
 Range 0 to 3600000
 Units milliseconds
 Default 0
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

retransmit-timer *number*

Synopsis Retransmit time in router advertisements from interface
 Context **configure** *service ies string subscriber-interface string group-interface string ipv6 router-advertisements options retransmit-timer number*
 Tree [retransmit-timer](#)
 Range 0 to 1800000
 Units seconds
 Default 0
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

router-lifetime (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | Router lifetime |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements options router-lifetime (<i>number</i> <i>keyword</i>) |
| Tree | router-lifetime |
| Range | 2700 to 9000 |
| Units | seconds |
| Options | no-default-router |
| Default | 4500 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

prefix-options

| | |
|------------|---|
| Synopsis | Enter the prefix-options context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements prefix-options |
| Tree | prefix-options |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

autonomous *boolean*

| | |
|------------|---|
| Synopsis | Value of the autonomous flag |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements prefix-options autonomous <i>boolean</i> |
| Tree | autonomous |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

on-link *boolean*

| | |
|----------|---|
| Synopsis | Assign the prefix to an interface on the specified link |
|----------|---|

| | |
|------------|---|
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements prefix-options on-link <i>boolean</i> |
| Tree | on-link |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

preferred-lifetime (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | Time for a prefix to remain preferred |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements prefix-options preferred-lifetime (<i>number</i> <i>keyword</i>) |
| Tree | preferred-lifetime |
| Range | 0 to 4294967294 |
| Units | seconds |
| Options | infinite |
| Default | 3600 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

valid-lifetime (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | Time for a prefix to remain valid |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-advertisements prefix-options valid-lifetime (<i>number</i> <i>keyword</i>) |
| Tree | valid-lifetime |
| Range | 0 to 4294967294 |
| Units | seconds |
| Options | infinite |
| Default | 86400 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

router-solicit

| | |
|----------|---|
| Synopsis | Enter the router-solicit context |
|----------|---|

| | |
|------------|--|
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-solicit |
| Tree | router-solicit |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of router-solicit authentication |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-solicit admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

inactivity-timer (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | Time before an inactive host is removed |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-solicit inactivity-timer (<i>number</i> <i>keyword</i>) |
| Tree | inactivity-timer |
| Range | 1 to 31536000 |
| Units | seconds |
| Options | infinite |
| Default | 300 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

min-auth-interval *number*

| | |
|----------|--|
| Synopsis | Minimum time between successive authentication attempts |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-solicit min-auth-interval <i>number</i> |
| Tree | min-auth-interval |

| | |
|------------|---|
| Range | 1 to 360000 |
| Units | seconds |
| Default | 300 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

user-db *reference*

| | |
|------------|--|
| Synopsis | Local user database used for authentication |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 router-solicit user-db <i>reference</i> |
| Tree | user-db |
| Reference | configure subscriber-mgmt local-user-db <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

urpf-check

| | |
|------------|---|
| Synopsis | Enable the urpf-check context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 urpf-check |
| Tree | urpf-check |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

mode *keyword*

| | |
|------------|---|
| Synopsis | Unicast RPF check mode |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> ipv6 urpf-check mode <i>keyword</i> |
| Tree | mode |
| Options | strict, loose, strict-no-ecmp |
| Default | strict |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

local-address-assignment

| | |
|------------|---|
| Synopsis | Enter the local-address-assignment context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> local-address-assignment |
| Tree | local-address-assignment |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of Local Address Assignment |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> local-address-assignment admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipv4

| | |
|------------|--|
| Synopsis | Enter the ipv4 context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> local-address-assignment ipv4 |
| Tree | ipv4 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

client-applications

| | |
|------------|--|
| Synopsis | Enter the client-applications context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> local-address-assignment ipv4 client-applications |
| Tree | client-applications |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipoe *boolean*

Synopsis Request local addresses for non-DHCP/managed IPoE hosts

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [local-address-assignment](#) [ipv4](#) [client-applications](#) [ipoe](#) *boolean*

Tree [ipoe](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp *boolean*

Synopsis Request local addresses for PPP IPCP hosts

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [local-address-assignment](#) [ipv4](#) [client-applications](#) [ppp](#) *boolean*

Tree [ppp](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

default-pool *string*

Synopsis Default pools

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [local-address-assignment](#) [ipv4](#) [default-pool](#) *string*

Tree [default-pool](#)

String Length 1 to 32

Max. Instances 2

Notes This element is ordered by the user.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

server reference

| | |
|------------|--|
| Synopsis | Local DHCPv4 server for local pools management |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> local-address-assignment ipv4 server reference |
| Tree | server |
| Reference | configure router <i>string</i> dhcp-server dhcpv4 <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipv6

| | |
|------------|---|
| Synopsis | Enter the ipv6 context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> local-address-assignment ipv6 |
| Tree | ipv6 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

client-applications

| | |
|------------|---|
| Synopsis | Enter the client-applications context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> local-address-assignment ipv6 client-applications |
| Tree | client-applications |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipoe-slaac boolean

| | |
|------------|--|
| Synopsis | Request local addresses for IPoE SLAAC hosts |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> local-address-assignment ipv6 client-applications ipoe-slaac boolean |
| Tree | ipoe-slaac |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipoe-wan *boolean*

| | |
|------------|---|
| Synopsis | Request local addresses for IPoE IA NA hosts |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> local-address-assignment ipv6 client-applications ipoe-wan <i>boolean</i> |
| Tree | ipoe-wan |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ppp-slaac *boolean*

| | |
|------------|--|
| Synopsis | Request local addresses for PPP SLAAC hosts |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> local-address-assignment ipv6 client-applications ppp-slaac <i>boolean</i> |
| Tree | ppp-slaac |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

server *reference*

| | |
|------------|---|
| Synopsis | Local DHCPv6 server for local pools management |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> local-address-assignment ipv6 server <i>reference</i> |
| Tree | server |
| Reference | configure router <i>string</i> dhcp-server dhcpv6 <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

mac *string*

| | |
|------------|---|
| Synopsis | MAC address for the interface |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> mac <i>string</i> |
| Tree | mac |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

nasreq-auth-policy *reference*

Synopsis Diameter NASREQ application policy to use for authentication

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [nasreq-auth-policy](#) *reference*

Tree [nasreq-auth-policy](#)

Reference **configure** [subscriber-mgmt](#) [diameter-nasreq-policy](#) *string*

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

oper-up-while-empty *boolean*

Synopsis Enable this group interface without any active SAPs

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [oper-up-while-empty](#) *boolean*

Tree [oper-up-while-empty](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

pppoe

Synopsis Enter the **pppoe** context

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [pppoe](#)

Tree [pppoe](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis Administrative state of PPPoE

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [pppoe](#) [admin-state](#) *keyword*

Tree [admin-state](#)

| | |
|------------|---|
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

anti-spoof *keyword*

| | |
|------------|---|
| Synopsis | PPPoE anti-spoof filtering |
| Context | configure service ies string subscriber-interface string group-interface string pppoe anti-spoof keyword |
| Tree | anti-spoof |
| Options | mac-sid, mac-sid-ip |
| Default | mac-sid |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

description *string*

| | |
|---------------|---|
| Synopsis | Text description |
| Context | configure service ies string subscriber-interface string group-interface string pppoe description string |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

dhcp-client

| | |
|------------|--|
| Synopsis | Enter the dhcp-client context |
| Context | configure service ies string subscriber-interface string group-interface string pppoe dhcp-client |
| Tree | dhcp-client |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

client-id *keyword*

| | |
|------------|--|
| Synopsis | Type of information that DHCP option 61 contains |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> pppoe dhcp-client client-id <i>keyword</i> |
| Tree | client-id |
| Options | mac-pppoe-session-id |
| Introduced | 16.0.R7 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

policy *reference*

| | |
|------------|---|
| Synopsis | PPPoE policy |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> pppoe policy <i>reference</i> |
| Tree | policy |
| Reference | configure subscriber-mgmt ppp-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

python-policy *reference*

| | |
|------------|--|
| Synopsis | Python policy used to modify PPPoE packets |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> pppoe python-policy <i>reference</i> |
| Tree | python-policy |
| Reference | configure python python-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sap-session-limit *number*

| | |
|----------|---|
| Synopsis | Maximum PPPoE sessions per SAP |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> pppoe sap-session-limit <i>number</i> |
| Tree | sap-session-limit |
| Range | 1 to 131071 |

| | |
|------------|---|
| Default | 1 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

session-limit *number*

| | |
|------------|---|
| Synopsis | Maximum PPPoE sessions |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> pppoe session-limit <i>number</i> |
| Tree | session-limit |
| Range | 1 to 333823 |
| Default | 1 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

user-db *reference*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Local user database for authentication |

| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s |

car

| | |
|------------|---|
| Synopsis | Ignore Ethernet CFM packets when enforcing overall rate |
| Context | configure service ies string subscriber-interface string group-interface string sap string cpu-protection eth-cfm-monitoring car |
| Tree | car |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s |

ip-src-monitoring

| | |
|------------|--|
| Synopsis | Enable IP source monitoring for CPU protection |
| Context | configure service ies string subscriber-interface string group-interface string sap string cpu-protection ip-src-monitoring |
| Tree | ip-src-monitoring |
| Notes | The following elements are part of a choice: eth-cfm-monitoring , ip-src-monitoring , or mac-monitoring . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s |

mac-monitoring

| | |
|----------|---|
| Synopsis | Monitor MAC for CPU protection |
| Context | configure service ies string subscriber-interface string group-interface string sap string cpu-protection mac-monitoring |

| | |
|------------|--|
| Tree | mac-monitoring |
| Notes | The following elements are part of a choice: eth-cfm-monitoring , ip-src-monitoring , or mac-monitoring . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s |

policy-id *reference*

| | |
|------------|---|
| Synopsis | CPM protection policy |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> cpu-protection policy-id <i>reference</i> |
| Tree | policy-id |
| Reference | configure system security cpu-protection policy <i>number</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s |

default-host

| | |
|------------|--|
| Synopsis | Enter the default-host context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> default-host |
| Tree | default-host |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

ipv4 [[address](#)] *reference* [prefix-length](#) *number*

| | |
|------------|--|
| Synopsis | Enter the ipv4 list instance |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> default-host ipv4 <i>reference</i> prefix-length <i>number</i> |
| Tree | ipv4 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

[address] reference

| | |
|------------|---|
| Synopsis | IPv4 default host address |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> default-host ipv4 <i>reference</i> prefix-length <i>number</i> |
| Tree | ipv4 |
| Reference | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 <i>address</i> <i>string</i> |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

prefix-length number

| | |
|------------|---|
| Synopsis | IPv4 address prefix length |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> default-host ipv4 <i>reference</i> prefix-length <i>number</i> |
| Tree | ipv4 |
| Range | 0 to 32 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

next-hop string**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Next hop IP address |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> default-host ipv4 <i>reference</i> prefix-length <i>number</i> next-hop <i>string</i> |
| Tree | next-hop |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

ipv6 [**address**] *string* **prefix-length** *number*

| | |
|------------|---|
| Synopsis | Enter the ipv6 list instance |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> default-host ipv6 <i>string</i> prefix-length <i>number</i> |
| Tree | ipv6 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

[address] *string*

| | |
|------------|---|
| Synopsis | IPv6 default host address |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> default-host ipv6 <i>string</i> prefix-length <i>number</i> |

| Tree | dist-cpu-protection |
| Reference | configure system security dist-cpu-protection <i>policy</i> <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

egress

| | |
|------------|--|
| Synopsis | Enter the egress context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> egress |
| Tree | egress |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

agg-rate

| | |
|------------|---|
| Synopsis | Enter the agg-rate context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> egress agg-rate |
| Tree | agg-rate |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

adaptation-rule *keyword*

| | |
|------------|--|
| Synopsis | Adaptation rule to compute the operational PIR value when an aggregate shaper is used |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> egress agg-rate adaptation-rule <i>keyword</i> |
| Tree | adaptation-rule |
| Options | max, min, closest |
| Default | closest |
| Introduced | 22.10.R1 |
| Platforms | 7750 SR-1, 7750 SR-s |

burst-limit (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | Shaping burst size when an aggregate shaper is used |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> egress agg-rate burst-limit (<i>number</i> <i>keyword</i>) |
| Tree | burst-limit |
| Range | 1 to 14000000 |
| Units | bytes |
| Options | auto |
| Default | auto |
| Introduced | 22.10.R1 |
| Platforms | 7750 SR-1, 7750 SR-s |

limit-unused-bandwidth *boolean*

| | |
|----------|--|
| Synopsis | Enable aggregate rate overrun protection |
|----------|--|

| | |
|------------|---|
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> egress agg-rate limit-unused-bandwidth <i>boolean</i> |
| Tree | limit-unused-bandwidth |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

queue-frame-based-accounting *boolean*

| | |
|------------|---|
| Synopsis | Enable frame based accounting on policers and queues |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> egress agg-rate queue-frame-based-accounting <i>boolean</i> |
| Tree | queue-frame-based-accounting |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

rate *number*

| | |
|------------|--|
| Synopsis | Enforced aggregate rate for all queues |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> egress agg-rate rate <i>number</i> |
| Tree | rate |
| Range | 1 to 6400000000 |
| Units | kilobps |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

filter

| | |
|------------|---|
| Synopsis | Enter the filter context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> egress filter |
| Tree | filter |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ip reference

| | |

collect-imm-fc-stats

| | |
|----------|---|
| Synopsis | Enter the collect-imm-fc-stats context |
|----------|---|

| | |
|-------------|--|
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> eth-cfm collect-lmm-fc-stats |
| Tree | collect-lmm-fc-stats |
| Description | <p>Commands in this context configure per forwarding class (FC) LMM information collection.</p> <p>The commands fc-in-profile and fc in this context are mutually exclusive. The commands apply to either profile-aware or profile-unaware FCs respectively.</p> <p>This command and the collect-lmm-stats command are mutually exclusive when there is entity resource contention.</p> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

fc keyword

| | |
|----------------|---|
| Synopsis | Forwarding class name for profile-unaware counter |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> eth-cfm collect-lmm-fc-stats fc <i>keyword</i> |
| Tree | fc |
| Description | <p>This command configures individual counters for the specified FCs without regard for profile. The system includes all countable packets that match a configured FC, regardless of profile, in this counter.</p> <p>An FC specified as part of this command and for this specific context cannot be specified as a profile-aware FC using the fc-in-profile command under the collect-lmm-fc-stats context.</p> <p>When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.</p> |
| Options | be, l2, af, l1, h2, ef, h1, nc |
| Max. Instances | 8 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

fc-in-profile keyword

| | |
|----------|--|
| Synopsis | Forwarding class name for profile-aware counter |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> eth-cfm collect-lmm-fc-stats fc-in-profile <i>keyword</i> |
| Tree | fc-in-profile |

| | |
|----------------|---|
| Description | <p>This command configures individual counters for the specified FCs with regard to profile. The system includes all countable packets that match a configured FC and that are deemed to be in-profile in this counter.</p> <p>An FC specified as part of this command and for this specific context cannot be specified as a profile-unaware FC using the fc command under the collect-lmm-fc-stats context.</p> <p>When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.</p> |
| Options | be, l2, af, l1, h2, ef, h1, nc |
| Max. Instances | 8 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

collect-lmm-stats *boolean*

| | |
|-------------|--|
| Synopsis | Collect statistics for loss measurement message tests |
| Context | configure <i>service ies string subscriber-interface string group-interface string sap string eth-cfm collect-lmm-stats boolean</i> |
| Tree | <i>collect-lmm-stats</i> |
| Description | <p>When configured to true, the router instantiates the statistical counter to transmit and receive packets for the LAG facility MEP bindings.</p> <p>The show eth-cfm collect-lmm-stats command displays entities that have been enabled to collect transit and receive counters.</p> <p>When configured to false, the router does not instantiate the counter and the LMM PDU associated with the MEP does not populate the counters in the packet.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

mep *md-admin-name reference ma-admin-name reference mep-id number*

| | |

| | |
|-------------|---|
| Tree | rx-eth-vsm-grace |
| Description | When configured to true , the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.
When configured to false , the router disables the Nokia Grace function. |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

tx-eth-vsm-grace *boolean*

| | |
|-------------|--|
| Synopsis | Transmit ETH-ED PDUs from the MEP |
| Context | configure service ies string subscriber-interface string group-interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace tx-eth-vsm-grace <i>boolean</i> |
| Tree | tx-eth-vsm-grace |
| Description | When configured to true , the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.
The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.
The operator must configure the configure system eth-cfm grace command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).
When configured to false , the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP. |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s |

sap-ingress

| | |
|------------|---|
| Synopsis | Enter the sap-ingress context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> ingress qos sap-ingress |
| Tree | sap-ingress |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

policy-name *reference*

| | |
|------------|--|
| Synopsis | Policy ID |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> ingress qos sap-ingress policy-name <i>reference</i> |
| Tree | policy-name |
| Reference | configure qos sap-ingress <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

queuing-type *keyword*

| | |
|------------|---|
| Synopsis | Queuing type |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> ingress qos sap-ingress queuing-type <i>keyword</i> |
| Tree | queuing-type |
| Options | shared, multipoint-shared |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, VSR |

scheduler-policy

| | |
|----------|---|
| Synopsis | Enter the scheduler-policy context |
|----------|---|

| | |
|------------|---|
| Context | configure service ies <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>sap string</i> <i>ingress qos scheduler-policy</i> |
| Tree | scheduler-policy |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

policy-name *reference*

| | |
|------------|--|
| Synopsis | Scheduler policy name |
| Context | configure service ies <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>sap string</i> <i>ingress qos scheduler-policy</i> <i>policy-name reference</i> |
| Tree | policy-name |
| Reference | configure qos scheduler-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

lag

| | |
|------------|--|
| Synopsis | Enter the lag context |
| Context | configure service ies <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>sap string</i> <i>lag</i> |
| Tree | lag |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

link-map-profile *number*

| | |
|-------------|---|
| Synopsis | LAG link map profile for a SAP or network interface |
| Context | configure service ies <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>sap string</i> <i>lag link-map-profile number</i> |
| Tree | link-map-profile |
| Description | <p>This command assigns a preconfigured LAG link map profile to a SAP or network interface configured on a LAG or a PW port that exists on a LAG. After an operator assigns a LAG link map profile, the system rehashes the SAP or network interface egress traffic over the LAG as required by the new configuration.</p> <p>If the LAG link map profile for a SAP or network interface is deleted, the system reverts back to per-flow hashing.</p> |

| | |
|------------|---|
| Range | 1 to 64 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

per-link-hash

| | |
|------------|---|
| Synopsis | Enter the per-link-hash context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> lag per-link-hash |
| Tree | per-link-hash |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

class number

| | |
|------------|--|
| Synopsis | Class used on LAG egress using weighted per-link-hash |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> lag per-link-hash class number |
| Tree | class |
| Range | 1 to 3 |
| Default | 1 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

weight number

| | |
|------------|---|
| Synopsis | Weight used on LAG egress using weighted per-link-hash |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> lag per-link-hash weight number |
| Tree | weight |
| Range | 1 to 1024 |
| Default | 1 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

monitor-oper-group *reference*

| | |
|------------|---|
| Synopsis | Monitor operational group |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> monitor-oper-group <i>reference</i> |
| Tree | monitor-oper-group |
| Reference | configure service oper-group <i>string</i> |
| Notes | The following elements are part of a choice: monitor-oper-group or oper-group . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

multi-service-site *reference*

| | |
|------------|---|
| Synopsis | Multi service site name |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> multi-service-site <i>reference</i> |
| Tree | multi-service-site |
| Reference | configure service customer <i>string</i> multi-service-site <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

oper-group *reference*

| | |
|------------|---|
| Synopsis | Operational group |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> oper-group <i>reference</i> |
| Tree | oper-group |
| Reference | configure service oper-group <i>string</i> |
| Notes | The following elements are part of a choice: monitor-oper-group or oper-group . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

static-host

| | |
|----------|---|
| Synopsis | Enter the static-host context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host |

| | |
|------------|---|
| Tree | static-host |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipv4 [[ip](#)] *string* [mac](#) *string*

| | |
|------------|--|
| Synopsis | Enter the ipv4 list instance |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> |
| Tree | ipv4 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

[ip] *string*

| | |
|------------|--|
| Synopsis | IPv4 address used by the static host |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> |
| Tree | ipv4 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

mac *string*

| | |
|------------|--|
| Synopsis | MAC address used by the static host |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> |
| Tree | ipv4 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|----------|---|
| Synopsis | Administrative state of the static host |
|----------|---|

| | |
|------------|--|
| Context | configure service ies string subscriber-interface string group-interface string sap string static-host ipv4 string mac string admin-state keyword |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

anccp-string *string*

| | |
|---------------|--|
| Synopsis | ANCCP string |
| Context | configure service ies string subscriber-interface string group-interface string sap string static-host ipv4 string mac string anccp-string string |
| Tree | anccp-string |
| String Length | 1 to 63 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

app-profile

| | |
|------------|--|
| Synopsis | Enter the app-profile context |
| Context | configure service ies string subscriber-interface string group-interface string sap string static-host ipv4 string mac string app-profile |
| Tree | app-profile |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

profile *reference*

| | |
|------------|--|
| Synopsis | Application profile used by the static host |
| Context | configure service ies string subscriber-interface string group-interface string sap string static-host ipv4 string mac string app-profile profile reference |
| Tree | profile |
| Reference | configure application-assurance group number partition number policy app-profile string |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

scope *keyword*

| | |
|------------|---|
| Synopsis | Scope of the static host application profile |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> app-profile scope <i>keyword</i> |
| Tree | scope |
| Options | subscriber, mac |
| Default | subscriber |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

int-dest-id *string*

| | |
|---------------|--|
| Synopsis | Intermediate destination ID |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> int-dest-id <i>string</i> |
| Tree | int-dest-id |
| String Length | 1 to 32 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

managed-route [[prefix](#)] *string*

| | |
|-------------|--|
| Synopsis | Enter the managed-route list instance |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> managed-route <i>string</i> |
| Tree | managed-route |
| Description | Commands in this context configure managed route parameters. |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

[prefix] *string*

| | |
|----------|--|
| Synopsis | Managed route prefix associated with IPv4 static host |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> managed-route <i>string</i> |

| | |
|-------------|--|
| Tree | managed-route |
| Description | This command configures the managed route prefix. The prefix length must be in the range of 1 to 32. |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

cpe-check

| | |
|------------|--|
| Synopsis | Enable the cpe-check context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check |
| Tree | cpe-check |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

destination-ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | IP address of the target CPE device |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check destination-ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) |
| Tree | destination-ip-address |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

drop-count *number*

| | |
|----------|---|
| Synopsis | Consecutive ping replies missed before CPE deemed down |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check drop-count <i>number</i> |
| Tree | drop-count |
| Range | 1 to 255 |

| | |
|------------|---|
| Default | 3 |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

failed-action

| | |
|------------|---|
| Synopsis | Enter the failed-action context |
| Context | configure service ies string subscriber-interface string group-interface string sap string static-host ipv4 string mac string managed-route string cpe-check failed-action |
| Tree | failed-action |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

metric number

| | |
|------------|---|
| Synopsis | Metric associated with the provisioned managed route |
| Context | configure service ies string subscriber-interface string group-interface string sap string static-host ipv4 string mac string managed-route string cpe-check failed-action metric number |
| Tree | metric |
| Max. Range | 0 to 4294967295 |
| Default | 0 |
| Notes | The following elements are part of a choice: (metric , preference , and tag) or withdraw . |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

preference number

| | |
|------------|---|
| Synopsis | Preference associated to the provisioned managed route |
| Context | configure service ies string subscriber-interface string group-interface string sap string static-host ipv4 string mac string managed-route string cpe-check failed-action preference number |
| Tree | preference |
| Range | 0 to 255 |
| Notes | The following elements are part of a choice: (metric , preference , and tag) or withdraw . |
| Introduced | 22.10.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

tag number

Synopsis Route tag used if CPE check fails

Context **configure** *service ies string subscriber-interface string group-interface string sap string static-host ipv4 string mac string managed-route string cpe-check failed-action tag number*

Tree [tag](#)

Max. Range 0 to 4294967295

Default 0

Notes The following elements are part of a choice: (**metric**, **preference**, and **tag**) or **withdraw**.

Introduced 22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

withdraw boolean

Synopsis Withdraw the route when the CPE check fails

Context **configure** *service ies string subscriber-interface string group-interface string sap string static-host ipv4 string mac string managed-route string cpe-check failed-action withdraw boolean*

Tree [withdraw](#)

Default false

Notes The following elements are part of a choice: (**metric**, **preference**, and **tag**) or **withdraw**.

Introduced 22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interval number

Synopsis Interval between ICMP pings to target CPE IP address

Context **configure** *service ies string subscriber-interface string group-interface string sap string static-host ipv4 string mac string managed-route string cpe-check interval number*

Tree [interval](#)

Range 1 to 255

Units seconds

Default 1

| | |
|------------|---|
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

log *boolean*

| | |
|------------|--|
| Synopsis | Log CPE connectivity checks transitions |
| Context | configure service ies string subscriber-interface string group-interface string sap string static-host ipv4 string mac string managed-route string cpe-check log <i>boolean</i> |
| Tree | log |
| Default | false |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

padding-size *number*

| | |
|------------|--|
| Synopsis | Padding size for CPE connectivity checks |
| Context | configure service ies string subscriber-interface string group-interface string sap string static-host ipv4 string mac string managed-route string cpe-check padding-size <i>number</i> |
| Tree | padding-size |
| Range | 0 to 16384 |
| Units | bytes |
| Default | 56 |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

source-ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

| | |
|------------|---|
| Synopsis | Source IP address used in the ICMP messages |
| Context | configure service ies string subscriber-interface string group-interface string sap string static-host ipv4 string mac string managed-route string cpe-check source-ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) |
| Tree | source-ip-address |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

timeout number

| | |
|------------|--|
| Synopsis | Time interval determining that a ping is missed |
| Context | configure service ies string subscriber-interface string group-interface string sap string static-host ipv4 string mac string managed-route string cpe-check timeout number |
| Tree | timeout |
| Range | 1 to 10 |
| Units | seconds |
| Default | 1 |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

metric number

| | |
|------------|---|
| Synopsis | Metric associated with the managed route |
| Context | configure service ies string subscriber-interface string group-interface string sap string static-host ipv4 string mac string managed-route string metric number |
| Tree | metric |
| Max. Range | 0 to 4294967295 |
| Default | 0 |
| Introduced | 22.2.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

preference number

| | |
|------------|---|
| Synopsis | Preference associated with the managed route |
| Context | configure service ies string subscriber-interface string group-interface string sap string static-host ipv4 string mac string managed-route string preference number |
| Tree | preference |
| Range | 0 to 255 |
| Default | 0 |
| Introduced | 22.2.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

tag number

| | |
|----------|---|
| Synopsis | Route tag associated with the managed route |
|----------|---|

| | |
|------------|---|
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> managed-route <i>string</i> tag <i>number</i> |
| Tree | tag |
| Max. Range | 0 to 4294967295 |
| Default | 0 |
| Introduced | 22.2.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

rip-policy reference

| | |
|------------|--|
| Synopsis | RIP policy name |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> rip-policy <i>reference</i> |
| Tree | rip-policy |
| Reference | configure subscriber-mgmt rip-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

shcv

| | |
|------------|---|
| Synopsis | Enter the shcv context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> shcv |
| Tree | shcv |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sla-profile reference

| | |
|------------|---|
| Synopsis | SLA profile name |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv4 <i>string</i> mac <i>string</i> sla-profile <i>reference</i> |
| Tree | sla-profile |
| Reference | configure subscriber-mgmt sla-profile <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sub-profile *reference*

| | |
|------------|--|
| Synopsis | Sub-profile name |
| Context | configure service ies string subscriber-interface string group-interface string sap string static-host ipv4 string mac string sub-profile reference |
| Tree | sub-profile |
| Reference | configure subscriber-mgmt sub-profile string |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

subscriber-id

| | |
|------------|--|
| Synopsis | Enter the subscriber-id context |
| Context | configure service ies string subscriber-interface string group-interface string sap string static-host ipv4 string mac string subscriber-id |
| Tree | subscriber-id |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

string *string*

| | |
|---------------|--|
| Synopsis | Subscriber identification |
| Context | configure service ies string subscriber-interface string group-interface string sap string static-host ipv4 string mac string subscriber-id string string |
| Tree | string |
| String Length | 1 to 64 |
| Notes | The following elements are part of a choice: string or use-sap-id . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

use-sap-id

| | |
|----------|---|
| Synopsis | Use the SAP id as subscriber ID |
| Context | configure service ies string subscriber-interface string group-interface string sap string static-host ipv4 string mac string subscriber-id use-sap-id |
| Tree | use-sap-id |

| | |
|------------|---|
| Notes | The following elements are part of a choice: string or use-sap-id . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipv6 [**prefix**] *string mac string*

| | |
|------------|---|
| Synopsis | Enter the ipv6 list instance |
| Context | configure service ies <i>string subscriber-interface string group-interface string sap string static-host ipv6 string mac string</i> |
| Tree | ipv6 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

[prefix] *string*

| | |
|------------|---|
| Synopsis | IPv6 prefix |
| Context | configure service ies <i>string subscriber-interface string group-interface string sap string static-host ipv6 string mac string</i> |
| Tree | ipv6 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

mac *string*

| | |
|------------|---|
| Synopsis | MAC address |
| Context | configure service ies <i>string subscriber-interface string group-interface string sap string static-host ipv6 string mac string</i> |
| Tree | ipv6 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|----------|---|
| Synopsis | Administrative state of the static host |
|----------|---|

| | |
|------------|--|
| Context | configure service ies string subscriber-interface string group-interface string sap string static-host ipv6 string mac string admin-state keyword |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

anccp-string *string*

| | |
|---------------|--|
| Synopsis | ANCCP string |
| Context | configure service ies string subscriber-interface string group-interface string sap string static-host ipv6 string mac string anccp-string string |
| Tree | anccp-string |
| String Length | 1 to 63 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

app-profile

| | |
|------------|--|
| Synopsis | Enter the app-profile context |
| Context | configure service ies string subscriber-interface string group-interface string sap string static-host ipv6 string mac string app-profile |
| Tree | app-profile |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

profile *reference*

| | |
|------------|--|
| Synopsis | Application profile used by the static host |
| Context | configure service ies string subscriber-interface string group-interface string sap string static-host ipv6 string mac string app-profile profile reference |
| Tree | profile |
| Reference | configure application-assurance group number partition number policy app-profile string |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

scope *keyword*

| | |
|------------|---|
| Synopsis | Scope of the static host application profile |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> app-profile scope <i>keyword</i> |
| Tree | scope |
| Options | subscriber, mac |
| Default | subscriber |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

int-dest-id *string*

| | |
|---------------|---|
| Synopsis | Intermediate destination ID |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> int-dest-id <i>string</i> |
| Tree | int-dest-id |
| String Length | 1 to 32 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

mac-linking *string*

| | |
|------------|---|
| Synopsis | IPv6 host linked with IPv4 host via learned MAC address |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> mac-linking <i>string</i> |
| Tree | mac-linking |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

managed-route [**ipv6-prefix**] *string*

| | |
|----------|---|
| Synopsis | Enter the managed-route list instance |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> |
| Tree | managed-route |

| | |
|-------------|--|
| Description | Commands in this context configure managed route parameters. |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

[ipv6-prefix] *string*

| | |
|-------------|--|
| Synopsis | Managed route prefix associated with IPv6 static host |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> |
| Tree | managed-route |
| Description | This command configures the managed route prefix. The prefix length must be in the range of 1 to 128. |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

cpe-check

| | |
|------------|--|
| Synopsis | Enable the cpe-check context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check |
| Tree | cpe-check |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

destination-ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | IP address of the target CPE device |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check destination-ip-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) |
| Tree | destination-ip-address |
| Introduced | 22.10.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

drop-count *number*

Synopsis Consecutive ping replies missed before CPE deemed down

Context **configure** [service](#) [ies](#) [string](#) [subscriber-interface](#) [string](#) [group-interface](#) [string](#) [sap](#) [string](#) [static-host](#) [ipv6](#) [string](#) [mac](#) [string](#) [managed-route](#) [string](#) [cpe-check](#) [drop-count](#) *number*

Tree [drop-count](#)

Range 1 to 255

Default 3

Introduced 22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

failed-action

Synopsis Enter the **failed-action** context

Context **configure** [service](#) [ies](#) [string](#) [subscriber-interface](#) [string](#) [group-interface](#) [string](#) [sap](#) [string](#) [static-host](#) [ipv6](#) [string](#) [mac](#) [string](#) [managed-route](#) [string](#) [cpe-check](#) [failed-action](#)

Tree [failed-action](#)

Introduced 22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

metric *number*

Synopsis Metric associated with the provisioned managed route

Context **configure** [service](#) [ies](#) [string](#) [subscriber-interface](#) [string](#) [group-interface](#) [string](#) [sap](#) [string](#) [static-host](#) [ipv6](#) [string](#) [mac](#) [string](#) [managed-route](#) [string](#) [cpe-check](#) [failed-action](#) [metric](#) *number*

Tree [metric](#)

Max. Range 0 to 4294967295

Default 0

Notes The following elements are part of a choice: (**metric**, **preference**, and **tag**) or **withdraw**.

Introduced 22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

preference number

| | |
|------------|---|
| Synopsis | Preference associated to the provisioned managed route |
| Context | configure service ies string subscriber-interface string group-interface string sap string static-host ipv6 string mac string managed-route string cpe-check failed-action preference number |
| Tree | preference |
| Range | 0 to 255 |
| Notes | The following elements are part of a choice: (metric , preference , and tag) or withdraw . |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

tag number

| | |
|------------|--|
| Synopsis | Route tag used if CPE check fails |
| Context | configure service ies string subscriber-interface string group-interface string sap string static-host ipv6 string mac string managed-route string cpe-check failed-action tag number |
| Tree | tag |
| Max. Range | 0 to 4294967295 |
| Default | 0 |
| Notes | The following elements are part of a choice: (metric , preference , and tag) or withdraw . |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

withdraw boolean

| | |
|------------|--|
| Synopsis | Withdraw the route when the CPE check fails |
| Context | configure service ies string subscriber-interface string group-interface string sap string static-host ipv6 string mac string managed-route string cpe-check failed-action withdraw boolean |
| Tree | withdraw |
| Default | false |
| Notes | The following elements are part of a choice: (metric , preference , and tag) or withdraw . |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

interval number

| | |
|------------|---|
| Synopsis | Interval between ICMP pings to target CPE IP address |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check interval <i>number</i> |
| Tree | interval |
| Range | 1 to 255 |
| Units | seconds |
| Default | 1 |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

log boolean

| | |
|------------|---|
| Synopsis | Log CPE connectivity checks transitions |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check log <i>boolean</i> |
| Tree | log |
| Default | false |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

padding-size number

| | |
|------------|---|
| Synopsis | Padding size for CPE connectivity checks |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check padding-size <i>number</i> |
| Tree | padding-size |
| Range | 0 to 16384 |
| Units | bytes |
| Default | 56 |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

source-ip-address (ipv4-address-no-zone | ipv6-address-no-zone)

| | |
|----------|---|
| Synopsis | Source IP address used in the ICMP messages |
|----------|---|

| | |
|------------|--|
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check source-ip-address (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) |
| Tree | source-ip-address |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

timeout *number*

| | |
|------------|---|
| Synopsis | Time interval determining that a ping is missed |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> cpe-check timeout <i>number</i> |
| Tree | timeout |
| Range | 1 to 10 |
| Units | seconds |
| Default | 1 |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

metric *number*

| | |
|------------|--|
| Synopsis | Metric associated with the managed route |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> metric <i>number</i> |
| Tree | metric |
| Max. Range | 0 to 4294967295 |
| Default | 0 |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

preference *number*

| | |
|----------|--|
| Synopsis | Preference associated with the managed route |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> preference <i>number</i> |
| Tree | preference |
| Range | 0 to 255 |

| | |
|------------|---|
| Default | 0 |
| Introduced | 22.2.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

tag number

| | |
|------------|--|
| Synopsis | Route tag associated with the managed route |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> managed-route <i>string</i> tag number |
| Tree | tag |
| Max. Range | 0 to 4294967295 |
| Default | 0 |
| Introduced | 22.2.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

retail-svc-id number**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Retail service ID |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> retail-svc-id number |
| Tree | retail-svc-id |
| Range | 1 to 2147483647 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

shcv

| | |
|------------|--|
| Synopsis | Enter the shcv context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> shcv |
| Tree | shcv |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sla-profile *reference*

| | |
|------------|---|
| Synopsis | SLA profile name |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> sla-profile <i>reference</i> |
| Tree | sla-profile |
| Reference | configure subscriber-mgmt sla-profile <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sub-profile *reference*

| | |
|------------|---|
| Synopsis | Sub-profile name |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> sub-profile <i>reference</i> |
| Tree | sub-profile |
| Reference | configure subscriber-mgmt sub-profile <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

subscriber-id

| | |
|------------|--|
| Synopsis | Enter the subscriber-id context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> subscriber-id |
| Tree | subscriber-id |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

string *string*

| | |
|---------------|--|
| Synopsis | Subscriber identification |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> static-host ipv6 <i>string</i> mac <i>string</i> subscriber-id <i>string</i> <i>string</i> |
| Tree | string |
| String Length | 1 to 64 |

| | |
|------------|---|
| Notes | The following elements are part of a choice: string or use-sap-id . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

use-sap-id

| | |
|------------|---|
| Synopsis | Use the SAP id as subscriber ID |
| Context | configure service ies string subscriber-interface string group-interface string sap string static-host ipv6 string mac string subscriber-id use-sap-id |
| Tree | use-sap-id |
| Notes | The following elements are part of a choice: string or use-sap-id . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

mac-learning

| | |
|------------|--|
| Synopsis | Enter the mac-learning context |
| Context | configure service ies string subscriber-interface string group-interface string sap string static-host mac-learning |
| Tree | mac-learning |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

data-triggered *boolean*

| | |
|------------|---|
| Synopsis | Enable learning of MAC addresses from data packets |
| Context | configure service ies string subscriber-interface string group-interface string sap string static-host mac-learning data-triggered boolean |
| Tree | data-triggered |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

single-mac *boolean*

| | |
|----------|---|
| Synopsis | Enforce single MAC address and subscriber for the SAP |
|----------|---|

| | |
|------------|--|
| Context | configure service ies <i>string subscriber-interface string group-interface string sap string static-host mac-learning single-mac boolean</i> |
| Tree | single-mac |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sub-sla-mgmt

| | |
|------------|---|
| Synopsis | Enter the sub-sla-mgmt context |
| Context | configure service ies <i>string subscriber-interface string group-interface string sap string sub-sla-mgmt</i> |
| Tree | sub-sla-mgmt |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of SAP subscriber management |
| Context | configure service ies <i>string subscriber-interface string group-interface string sap string sub-sla-mgmt admin-state keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

defaults

| | |
|------------|--|
| Synopsis | Enter the defaults context |
| Context | configure service ies <i>string subscriber-interface string group-interface string sap string sub-sla-mgmt defaults</i> |
| Tree | defaults |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

app-profile *reference*

| | |
|------------|--|
| Synopsis | Default application profile name for this SAP |
| Context | configure service ies string subscriber-interface string group-interface string sap string
sub-sla-mgmt defaults app-profile reference |
| Tree | app-profile |
| Reference | configure application-assurance group number partition number policy app-profile string |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

int-dest-id

| | |
|------------|--|
| Synopsis | Enter the int-dest-id context |
| Context | configure service ies string subscriber-interface string group-interface string sap string
sub-sla-mgmt defaults int-dest-id |
| Tree | int-dest-id |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

string *string*

| | |
|---------------|--|
| Synopsis | Use the configured string |
| Context | configure service ies string subscriber-interface string group-interface string sap string
sub-sla-mgmt defaults int-dest-id string string |
| Tree | string |
| String Length | 1 to 32 |
| Notes | The following elements are part of a choice: string or top-q-tag . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

top-q-tag

| | |
|----------|--|
| Synopsis | Use the top Q-tag of this SAP |
| Context | configure service ies string subscriber-interface string group-interface string sap string
sub-sla-mgmt defaults int-dest-id top-q-tag |
| Tree | top-q-tag |
| Notes | The following elements are part of a choice: string or top-q-tag . |

Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sla-profile *reference*

Synopsis Default SLA profile for hosts on this SAP
 Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [sap](#) *string* [sub-sla-mgmt defaults sla-profile](#) *reference*
 Tree [sla-profile](#)
 Reference **configure** [subscriber-mgmt sla-profile](#) *string*
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

sub-profile *reference*

Synopsis Default subscriber profile for the SAP
 Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [sap](#) *string* [sub-sla-mgmt defaults sub-profile](#) *reference*
 Tree [sub-profile](#)
 Reference **configure** [subscriber-mgmt sub-profile](#) *string*
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

subscriber-id

Synopsis Enter the **subscriber-id** context
 Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [sap](#) *string* [sub-sla-mgmt defaults subscriber-id](#)
 Tree [subscriber-id](#)
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

auto-id

Synopsis Use auto-generated subscriber identification string

| | |
|------------|--|
| Context | configure service ies <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>sap string</i> <i>sub-sla-mgmt defaults subscriber-id auto-id</i> |
| Tree | auto-id |
| Notes | The following elements are part of a choice: auto-id , sap-id , or string . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sap-id

| | |
|------------|---|
| Synopsis | Use SAP ID as default subscriber identification string |
| Context | configure service ies <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>sap string</i> <i>sub-sla-mgmt defaults subscriber-id sap-id</i> |
| Tree | sap-id |
| Notes | The following elements are part of a choice: auto-id , sap-id , or string . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

string *string*

| | |
|---------------|--|
| Synopsis | Default subscriber identification string for the SAP |
| Context | configure service ies <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>sap string</i> <i>sub-sla-mgmt defaults subscriber-id string string</i> |
| Tree | string |
| String Length | 1 to 64 |
| Notes | The following elements are part of a choice: auto-id , sap-id , or string . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

single-sub-parameters

| | |
|------------|---|
| Synopsis | Enter the single-sub-parameters context |
| Context | configure service ies <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>sap string</i> <i>sub-sla-mgmt single-sub-parameters</i> |
| Tree | single-sub-parameters |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

non-sub-traffic

| | |
|------------|--|
| Synopsis | Enable the non-sub-traffic context |
| Context | configure service ies <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>group-interface</i> <i>string</i> <i>sap</i> <i>string</i> <i>sub-sla-mgmt</i> <i>single-sub-parameters</i> <i>non-sub-traffic</i> |
| Tree | non-sub-traffic |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

app-profile *reference*

| | |
|------------|--|
| Synopsis | Application profile name for all non-subscriber traffic |
| Context | configure service ies <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>group-interface</i> <i>string</i> <i>sap</i> <i>string</i> <i>sub-sla-mgmt</i> <i>single-sub-parameters</i> <i>non-sub-traffic</i> <i>app-profile</i> <i>reference</i> |
| Tree | app-profile |
| Reference | configure application-assurance <i>group</i> <i>number</i> <i>partition</i> <i>number</i> <i>policy</i> <i>app-profile</i> <i>string</i> |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

sla-profile *reference*

| | |
|------------|--|
| Synopsis | SLA profile applicable for all non-subscriber traffic |
| Context | configure service ies <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>group-interface</i> <i>string</i> <i>sap</i> <i>string</i> <i>sub-sla-mgmt</i> <i>single-sub-parameters</i> <i>non-sub-traffic</i> <i>sla-profile</i> <i>reference</i> |
| Tree | sla-profile |
| Reference | configure subscriber-mgmt <i>sla-profile</i> <i>string</i> |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sub-profile *reference*

| | |
|----------|--|
| Synopsis | Subscriber profile all non-subscriber traffic |
| Context | configure service ies <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>group-interface</i> <i>string</i> <i>sap</i> <i>string</i> <i>sub-sla-mgmt</i> <i>single-sub-parameters</i> <i>non-sub-traffic</i> <i>sub-profile</i> <i>reference</i> |
| Tree | sub-profile |

| | |
|------------|--|
| Reference | configure subscriber-mgmt sub-profile <i>string</i> |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

subscriber-id *string*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|---------------|--|
| Synopsis | Subscriber ID applied for all non-subscriber traffic |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> sub-sla-mgmt single-sub-parameters non-sub-traffic subscriber-id <i>string</i> |
| Tree | subscriber-id |
| String Length | 1 to 64 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

profiled-traffic-only *boolean*

| | |
|------------|---|
| Synopsis | Include all traffic in subscriber profile |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> sub-sla-mgmt single-sub-parameters profiled-traffic-only <i>boolean</i> |
| Tree | profiled-traffic-only |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sub-ident-policy *reference*

| | |
|-----------|--|
| Synopsis | Subscriber identification policy used on this SAP |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> sub-sla-mgmt sub-ident-policy <i>reference</i> |
| Tree | sub-ident-policy |
| Reference | configure subscriber-mgmt sub-ident-policy <i>string</i> |

| | |
|------------|---|
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

subscriber-limit (*keyword* | *number*)

| | |
|------------|---|
| Synopsis | Maximum number of subscribers on this SAP |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap <i>string</i> sub-sla-mgmt subscriber-limit (<i>keyword</i> <i>number</i>) |
| Tree | subscriber-limit |
| Range | 1 to 131071 |
| Options | no-limit |
| Default | 1 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sap-parameters

| | |
|------------|---|
| Synopsis | Enter the sap-parameters context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap-parameters |
| Tree | sap-parameters |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

anti-spoof *keyword*

| | |
|------------|--|
| Synopsis | Anti-spoof type of the SAP |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap-parameters anti-spoof <i>keyword</i> |
| Tree | anti-spoof |
| Options | ip-mac, nh-mac |
| Default | ip-mac |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

description *string*

| | |
|---------------|--|
| Synopsis | Text description |
| Context | configure service ies string subscriber-interface string group-interface string sap-parameters description string |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sub-sla-mgmt

| | |
|------------|--|
| Synopsis | Enter the sub-sla-mgmt context |
| Context | configure service ies string subscriber-interface string group-interface string sap-parameters sub-sla-mgmt |
| Tree | sub-sla-mgmt |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

defaults

| | |
|------------|---|
| Synopsis | Enter the defaults context |
| Context | configure service ies string subscriber-interface string group-interface string sap-parameters sub-sla-mgmt defaults |
| Tree | defaults |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

app-profile *reference*

| | |
|------------|---|
| Synopsis | Default application profile name |
| Context | configure service ies string subscriber-interface string group-interface string sap-parameters sub-sla-mgmt defaults app-profile reference |
| Tree | app-profile |
| Reference | configure application-assurance group number partition number policy app-profile string |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

sla-profile *reference*

| | |
|------------|---|
| Synopsis | Default SLA profile |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap-parameters sub-sla-mgmt defaults sla-profile <i>reference</i> |
| Tree | sla-profile |
| Reference | configure subscriber-mgmt sla-profile <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sub-profile *reference*

| | |
|------------|---|
| Synopsis | Default subscriber profile |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap-parameters sub-sla-mgmt defaults sub-profile <i>reference</i> |
| Tree | sub-profile |
| Reference | configure subscriber-mgmt sub-profile <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

subscriber-id

| | |
|------------|--|
| Synopsis | Enter the subscriber-id context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap-parameters sub-sla-mgmt defaults subscriber-id |
| Tree | subscriber-id |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

auto-id

| | |
|----------|--|
| Synopsis | Subscriber ID that is autogenerated |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap-parameters sub-sla-mgmt defaults subscriber-id auto-id |
| Tree | auto-id |
| Notes | The following elements are part of a choice: auto-id or string . |

| | |
|------------|---|
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

string *string*

| | |
|---------------|--|
| Synopsis | String to be used as default subscriber ID |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap-parameters sub-sla-mgmt defaults subscriber-id <i>string</i> <i>string</i> |
| Tree | string |
| String Length | 1 to 64 |
| Notes | The following elements are part of a choice: auto-id or string . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sub-ident-policy *reference*

| | |
|------------|---|
| Synopsis | Subscriber identification policy |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> sap-parameters sub-sla-mgmt sub-ident-policy <i>reference</i> |
| Tree | sub-ident-policy |
| Reference | configure subscriber-mgmt sub-ident-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

shcv-policy *reference*

| | |
|------------|--|
| Synopsis | SHCV policy for IPv4 and IPv6 subscriber hosts |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> shcv-policy <i>reference</i> |
| Tree | shcv-policy |
| Reference | configure subscriber-mgmt shcv-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

shcv-policy-ipv4 *reference*

| | |
|------------|---|
| Synopsis | SHCV for IPv4 subscriber hosts |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> shcv-policy-ipv4 <i>reference</i> |
| Tree | shcv-policy-ipv4 |
| Reference | configure subscriber-mgmt shcv-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

shcv-policy-ipv6 *reference*

| | |
|------------|---|
| Synopsis | SHCV for IPv6 subscriber hosts |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> shcv-policy-ipv6 <i>reference</i> |
| Tree | shcv-policy-ipv6 |
| Reference | configure subscriber-mgmt shcv-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

srrp [[srrp-id](#)] *number*

| | |
|----------------|--|
| Synopsis | Enter the srrp list instance |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> srrp <i>number</i> |
| Tree | srrp |
| Max. Instances | 1 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

[srrp-id] *number*

| | |
|----------|--|
| Synopsis | SRRP instance ID |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> srrp <i>number</i> |
| Tree | srrp |

| | |
|------------|---|
| Range | 1 to 4294967295 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of SRRP |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> srrp <i>number</i> admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

bfd-liveness

| | |
|------------|---|
| Synopsis | Enable the bfd-liveness context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> srrp <i>number</i> bfd-liveness |
| Tree | bfd-liveness |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

dest-ip *string*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |

| | |
|----------|--|
| Synopsis | Enter the gateway-address list instance |
|----------|--|

| | |
|----------------|--|
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw gateway-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) |
| Tree | gateway-address |
| Max. Instances | 10 |
| Introduced | 16.0.R4 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

[address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

| | |
|------------|--|
| Synopsis | Gateway endpoint address of the WLAN Gateway tunnel |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw gateway-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) |
| Tree | gateway-address |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R4 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

purpose

| | |
|------------|---|
| Synopsis | Enter the purpose context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw gateway-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) purpose |
| Tree | purpose |
| Introduced | 16.0.R4 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

xconnect *boolean*

| | |
|------------|---|
| Synopsis | Use tunnel IP address for crosse-connect traffic |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw gateway-address (<i>ipv4-address-no-zone</i> <i>ipv6-address-no-zone</i>) purpose xconnect <i>boolean</i> |
| Tree | xconnect |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

gateway-router *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Routing instance the WLAN-GW endpoint resides in |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw gateway-router <i>string</i> |
| Tree | gateway-router |
| Introduced | 16.0.R4 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

group-encryption

| | |
|------------|--|
| Synopsis | Enter the group-encryption context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw group-encryption |
| Tree | group-encryption |
| Introduced | 21.10.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

encryption-keygroup-inbound *reference*

| | |
|------------|---|
| Synopsis | Encryption keygroup for inbound traffic |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw group-encryption encryption-keygroup-inbound <i>reference</i> |
| Tree | encryption-keygroup-inbound |
| Reference | configure group-encryption encryption-keygroup <i>number</i> |
| Introduced | 21.10.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

encryption-keygroup-outbound *reference*

| | |
|----------|--|
| Synopsis | Encryption keygroup for inbound traffic |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw group-encryption encryption-keygroup-outbound <i>reference</i> |

| | |
|------------|---|
| Tree | encryption-keygroup-outbound |
| Reference | configure group-encryption encryption-keygroup <i>number</i> |
| Introduced | 21.10.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

I2-ap

| | |
|------------|---|
| Synopsis | Enter the I2-ap context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw I2-ap |
| Tree | I2-ap |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

access-point [[sap-id](#)] *string*

| | |
|------------|--|
| Synopsis | Enter the access-point list instance |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw I2-ap access-point <i>string</i> |
| Tree | access-point |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

[[sap-id](#)] *string*

| | |
|---------------|--|
| Synopsis | SAP ID for the Layer 2 access point |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw I2-ap access-point <i>string</i> |
| Tree | access-point |
| String Length | 1 to 45 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of the L2 access points |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw l2-ap access-point <i>string</i> admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

encap-type *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Service encapsulation type of this access point |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw l2-ap access-point <i>string</i> encap-type <i>keyword</i> |
| Tree | encap-type |
| Options | null, dot1q, qinq |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

epipe-sap-template *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Parameters template for the L2 access point SAP |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw l2-ap access-point <i>string</i> epipe-sap-template <i>reference</i> |
| Tree | epipe-sap-template |
| Reference | configure service template epipe-sap-template <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

auto-sub-id-fmt *keyword*

| | |
|------------|--|
| Synopsis | Format of the auto-generated subscriber ID |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw l2-ap auto-sub-id-fmt <i>keyword</i> |
| Tree | auto-sub-id-fmt |
| Options | include-ap-tags, sap-only |
| Default | include-ap-tags |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

default-encap-type *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Default encapsulation type for Layer 2 access points |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw l2-ap default-encap-type <i>keyword</i> |
| Tree | default-encap-type |
| Options | null, dot1q, qinq |
| Default | null |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

lanext**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Enable the lanext context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw lanext |
| Tree | lanext |
| Introduced | 16.0.R1 |

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

max-bd *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Maximum number of bridge domains

Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [wlan-gw](#)
[lanext](#) **max-bd** *number*

Tree [max-bd](#)

Range 1 to 131071

Default 131071

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

learn-ap-mac

Synopsis Enable the **learn-ap-mac** context

Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [wlan-gw](#)
[learn-ap-mac](#)

Tree [learn-ap-mac](#)

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

delay-auth *boolean*

Synopsis Delay AP-MAC until after ARP/ND authentication response

Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [wlan-gw](#)
[learn-ap-mac](#) **delay-auth** *boolean*

Tree [delay-auth](#)

Default false

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mobility

| | |
|------------|--|
| Synopsis | Enter the mobility context |
| Context | configure service ies string subscriber-interface string group-interface string wlan-gw
mobility |
| Tree | mobility |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

hold-time *number*

| | |
|------------|--|
| Synopsis | Minimum time between two mobility events for single UE |
| Context | configure service ies string subscriber-interface string group-interface string wlan-gw
mobility hold-time <i>number</i> |
| Tree | hold-time |
| Range | 0 to 255 |
| Units | seconds |
| Default | 5 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

inter-tunnel-type *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Enable mobility between terminating tunnel types |
| Context | configure service ies string subscriber-interface string group-interface string wlan-gw
mobility inter-tunnel-type <i>boolean</i> |
| Tree | inter-tunnel-type |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

inter-vlan *boolean*

| | |
|----------|---|
| Synopsis | Allow mobility within different VLANs of the same range |
|----------|---|

| | |
|------------|--|
| Context | configure service ies <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>wlan-gw mobility inter-vlan boolean</i> |
| Tree | inter-vlan |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

trigger

| | |
|------------|---|
| Synopsis | Enter the trigger context |
| Context | configure service ies <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>wlan-gw mobility trigger</i> |
| Tree | trigger |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

control *boolean*

| | |
|------------|---|
| Synopsis | Use control traffic as a mobility trigger |
| Context | configure service ies <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>wlan-gw mobility trigger control boolean</i> |
| Tree | control |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

data *boolean*

| | |
|------------|--|
| Synopsis | Use data traffic as mobility trigger |
| Context | configure service ies <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>wlan-gw mobility trigger data boolean</i> |
| Tree | data |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

iapp *boolean*

| | |
|------------|---|
| Synopsis | Use IAPP messages as a mobility trigger |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw mobility trigger iapp <i>boolean</i> |
| Tree | iapp |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

oper-down-on-group-degrade *boolean*

| | |
|------------|---|
| Synopsis | Bring interface down when the ISA WLAN Gateway degraded |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw oper-down-on-group-degrade <i>boolean</i> |
| Tree | oper-down-on-group-degrade |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

tcp-mss-adjust *number*

| | |
|------------|--|
| Synopsis | TCP Maximum Segment Size (MSS) adjustment for gateway |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw tcp-mss-adjust <i>number</i> |
| Tree | tcp-mss-adjust |
| Range | 160 to 10240 |
| Units | bytes |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

tunnel-egress-qos

| | |
|----------|---|
| Synopsis | Enter the tunnel-egress-qos context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw tunnel-egress-qos |
| Tree | tunnel-egress-qos |

Introduced 16.0.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Administrative state of egress QoS for WLAN-GW tunnels
 Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **wlan-gw** **tunnel-egress-qos** **admin-state** *keyword*
 Tree **admin-state**
 Options enable, disable
 Default disable
 Introduced 16.0.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

agg-rate-limit (*number* | *keyword*)

Synopsis HQoS aggregate rate limit
 Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **wlan-gw** **tunnel-egress-qos** **agg-rate-limit** (*number* | *keyword*)
 Tree **agg-rate-limit**
 Range 1 to 100000000
 Options max
 Default max
 Introduced 16.0.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

granularity *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Granularity of the egress shaping for WLAN Gateway

| | |
|------------|--|
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw tunnel-egress-qos granularity <i>keyword</i> |
| Tree | granularity |
| Options | per-tunnel, per-retailer |
| Default | per-tunnel |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

hold-time (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | Minimum time to hold egress shaping resources |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw tunnel-egress-qos hold-time (<i>number</i> <i>keyword</i>) |
| Tree | hold-time |
| Range | 1 to 86400 |
| Units | seconds |
| Options | infinite |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

multi-client-only *boolean*

| | |
|------------|--|
| Synopsis | Allow shaping for tunnel traffic for multiple UEs |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw tunnel-egress-qos multi-client-only <i>boolean</i> |
| Tree | multi-client-only |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

qos *reference*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|----------|---|
| Synopsis | Egress QoS policy linked with each interface tunnel |
|----------|---|

| | |
|------------|---|
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw tunnel-egress-qos qos <i>reference</i> |
| Tree | qos |
| Reference | configure qos sap-egress <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

scheduler-policy *reference*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Egress scheduler policy linked with each tunnel |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw tunnel-egress-qos scheduler-policy <i>reference</i> |
| Tree | scheduler-policy |
| Reference | configure qos scheduler-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

tunnel-encaps

| | |
|------------|---|
| Synopsis | Enter the tunnel-encaps context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw tunnel-encaps |
| Tree | tunnel-encaps |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

learn-l2tp-cookie (*keyword* | *hex-string*)

| | |
|---------------|---|
| Synopsis | System that learns the cookie from L2TP tunnels terminating on this interface |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw tunnel-encaps learn-l2tp-cookie (<i>keyword</i> <i>hex-string</i>) |
| Tree | learn-l2tp-cookie |
| String Length | 6 |

| | |
|------------|------------------------------------|
| Options | never, always |
| Default | never |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

vlan-range [*range*] *string*

| | |
|------------|---|
| Synopsis | Enter the vlan-range list instance |
| Context | configure <i>service ies string subscriber-interface string group-interface string wlan-gw</i>
<i>vlan-range string</i> |
| Tree | <i>vlan-range</i> |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

[range] *string*

| | |
|------------|---|
| Synopsis | IEEE 802.1q VLAN tag range |
| Context | configure <i>service ies string subscriber-interface string group-interface string wlan-gw</i>
<i>vlan-range string</i> |
| Tree | <i>vlan-range</i> |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

authentication

| | |
|------------|--|
| Synopsis | Enter the authentication context |
| Context | configure <i>service ies string subscriber-interface string group-interface string wlan-gw</i>
<i>vlan-range string authentication</i> |
| Tree | <i>authentication</i> |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

hold-time *number*

| | |
|----------|---|
| Synopsis | Minimum time UE held down after failed authentication |
|----------|---|

| | |
|------------|---|
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> authentication hold-time <i>number</i> |
| Tree | hold-time |
| Range | 0 to 3600 |
| Units | seconds |
| Default | 5 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

local

| | |
|------------|---|
| Synopsis | Enable the local context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> authentication local |
| Tree | local |
| Introduced | 22.2.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

coa-policy *reference*

| | |
|------------|--|
| Synopsis | RADIUS ISA policy applied to CoA or disconnect messages |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> authentication local coa-policy <i>reference</i> |
| Tree | coa-policy |
| Reference | configure aaa radius isa-policy <i>string</i> |
| Introduced | 22.2.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

default-ue-state *keyword*

| | |
|----------|--|
| Synopsis | UE state accepted for immediate authentication |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> authentication local default-ue-state <i>keyword</i> |
| Tree | default-ue-state |
| Options | portal, dsm |
| Notes | This element is mandatory. |

Introduced 22.2.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

on-control-plane *boolean*

Synopsis Allow authentication on first control plane packet
 Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [wlan-gw](#) [vlan-range](#) *string* **authentication on-control-plane** *boolean*
 Tree [on-control-plane](#)
 Default false
 Introduced 16.0.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

policy *reference*

Synopsis RADIUS policy for authentication
 Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [wlan-gw](#) [vlan-range](#) *string* **authentication policy** *reference*
 Tree [policy](#)
 Reference **configure** [aaa](#) [radius](#) [isa-policy](#) *string*
 Introduced 16.0.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

vlan-mismatch-timeout *number*

Synopsis Timeout if packet received with a non-matching VLAN tag
 Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [wlan-gw](#) [vlan-range](#) *string* **authentication vlan-mismatch-timeout** *number*
 Tree [vlan-mismatch-timeout](#)
 Range 5 to 60
 Units seconds
 Introduced 16.0.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

data-triggered-ue-creation

| | |
|------------|--|
| Synopsis | Enter the data-triggered-ue-creation context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> data-triggered-ue-creation |
| Tree | data-triggered-ue-creation |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of data-triggered UE creation |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> data-triggered-ue-creation admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

arp *boolean*

| | |
|------------|--|
| Synopsis | Authenticate ARP packets received from an unknown UE |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> data-triggered-ue-creation arp <i>boolean</i> |
| Tree | arp |
| Default | false |
| Introduced | 22.7.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

create-proxy-cache-entry

| | |
|------------|--|
| Synopsis | Enter the create-proxy-cache-entry context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> data-triggered-ue-creation create-proxy-cache-entry |
| Tree | create-proxy-cache-entry |
| Introduced | 16.0.R1 |

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

mac-format *string*

Synopsis MAC address format

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [wlan-gw](#) [vlan-range](#) *string* [data-triggered-ue-creation](#) [create-proxy-cache-entry](#) [mac-format](#) *string*

 Tree [egress](#)
 Introduced 16.0.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

policer *reference*

Synopsis Policer for egress traffic

| | |
|------------|--|
| Context | configure service ies <i>string subscriber-interface string group-interface string wlan-gw vlan-range string dsm egress policer reference</i> |
| Tree | policer |
| Reference | configure subscriber-mgmt isa-policer <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

ingress

| | |
|------------|---|
| Synopsis | Enter the ingress context |
| Context | configure service ies <i>string subscriber-interface string group-interface string wlan-gw vlan-range string dsm ingress</i> |
| Tree | ingress |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

ip-filter reference

| | |
|------------|---|
| Synopsis | Filter for ingress traffic |
| Context | configure service ies <i>string subscriber-interface string group-interface string wlan-gw vlan-range string dsm ingress ip-filter reference</i> |
| Tree | ip-filter |
| Reference | configure subscriber-mgmt isa-filter <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

policer reference

| | |
|------------|---|
| Synopsis | Policer for ingress traffic |
| Context | configure service ies <i>string subscriber-interface string group-interface string wlan-gw vlan-range string dsm ingress policer reference</i> |
| Tree | policer |
| Reference | configure subscriber-mgmt isa-policer <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

soft-quota-exhausted-filter *reference*

| | |
|-------------|---|
| Synopsis | Filter applied when soft volume quota is reached |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dsm ingress soft-quota-exhausted-filter <i>reference</i> |
| Tree | soft-quota-exhausted-filter |
| Description | This command applies a filter when a soft volume quota is reached. The filter replaces the currently applied filter (which can be preconfigured using the ip-filter command in the configure service vprn subscriber-interface group-interface wlan-gw vlan-range dsm ingress ip-filter context or be set using a RADIUS CoA message) for the UE upon quota exhaustion. If the quota is extended using a RADIUS CoA message, the filter is automatically reverted. Configuration changes apply only to new DSM UEs and not to existing UEs. |
| Reference | configure subscriber-mgmt isa-filter <i>string</i> |
| Introduced | 21.7.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

one-time-redirect

| | |
|------------|--|
| Synopsis | Enter the one-time-redirect context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dsm one-time-redirect |
| Tree | one-time-redirect |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

port *number*

| | |
|------------|---|
| Synopsis | Destination port of packets for HTTP redirect |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> dsm one-time-redirect port <i>number</i> |
| Tree | port |
| Range | 1 to 65535 |
| Default | 80 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

url string

| | |
|---------------|---|
| Synopsis | URL for redirected HTTP protocol packets |
| Context | configure service ies string subscriber-interface string group-interface string wlan-gw vlan-range string dsm one-time-redirect url string |
| Tree | url |
| String Length | 1 to 255 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

volume-quota-direction keyword

| | |
|-------------|---|
| Synopsis | Volume quota direction for WLAN GW |
| Context | configure service ies string subscriber-interface string group-interface string wlan-gw vlan-range string dsm volume-quota-direction keyword |
| Tree | volume-quota-direction |
| Description | This command specifies the direction that volume quotas are applied. Configuration changes apply only to new DSM UEs and not to existing UEs. |
| Options | both, ingress, egress |
| Default | both |
| Introduced | 21.7.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

extension [extension-range] string

| | |
|------------|---|
| Synopsis | Add a list entry for extension |
| Context | configure service ies string subscriber-interface string group-interface string wlan-gw vlan-range string extension string |
| Tree | extension |
| Introduced | 21.7.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

[extension-range] string

| | |
|----------|---|
| Synopsis | VLAN tag range used for matching |
| Context | configure service ies string subscriber-interface string group-interface string wlan-gw vlan-range string extension string |

| | |
|-------------|--|
| Tree | extension |
| Description | This command configures the additional VLAN range that is used for matching. Any traffic within the extension range is considered part of the same VLAN range for purposes of intra-SSID mobility. |
| Notes | This element is part of a list key. |
| Introduced | 21.7.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

http-redirect-policy *reference*

| | |
|------------|---|
| Synopsis | Default HTTP redirect policy for portal authentication |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> http-redirect-policy <i>reference</i> |
| Tree | http-redirect-policy |
| Reference | configure subscriber-mgmt http-redirect-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

idle-timeout-action *keyword*

| | |
|------------|--|
| Synopsis | Action to perform when the idle timeout expires |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> idle-timeout-action <i>keyword</i> |
| Tree | idle-timeout-action |
| Options | remove, shcv |
| Default | remove |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

I2-service

| | |
|------------|--|
| Synopsis | Enable the I2-service context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> I2-service |
| Tree | I2-service |
| Introduced | 16.0.R1 |

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

up

| | |
|-------------|---|
| Synopsis | Enter the up context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> hold-time ipv6 up |
| Tree | up |
| Description | Commands in this context configure the up hold timer, which specifies the delay before deactivation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface down. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

seconds *number*

| | |
|----------|--|
| Synopsis | Up hold time for the IP interface |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> hold-time ipv6 up <i>seconds</i> <i>number</i> |
| Tree | seconds |

| | |
|------------|---|
| Range | 1 to 1200 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipoe-linking

| | |
|------------|--|
| Synopsis | Enter the ipoe-linking context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipoe-linking |
| Tree | ipoe-linking |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

gratuitous-router-advertisement *boolean*

| | |
|------------|---|
| Synopsis | Send unsolicited router advertisement after DHCP setup |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipoe-linking gratuitous-router-advertisement <i>boolean</i> |
| Tree | gratuitous-router-advertisement |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipoe-session

| | |
|------------|--|
| Synopsis | Enter the ipoe-session context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipoe-session |
| Tree | ipoe-session |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

session-limit *number*

| | |
|----------|--|
| Synopsis | Maximum number of sessions on this group interface |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipoe-session session-limit <i>number</i> |

| | |
|------------|---|
| Tree | session-limit |
| Range | 1 to 500000 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipv4

| | |
|------------|--|
| Synopsis | Enter the ipv4 context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 |
| Tree | ipv4 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

address [[ipv4-address](#)] *string*

| | |
|------------|--|
| Synopsis | Enter the address list instance |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 address <i>string</i> |
| Tree | address |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

[[ipv4-address](#)] *string*

| | |
|------------|--|
| Synopsis | IP address associated with the subscriber subnet |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 address <i>string</i> |
| Tree | address |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

gateway *string*

| | |
|----------|--|
| Synopsis | Gateway IP address within the subnet for SRRP routing |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 address <i>string</i> gateway <i>string</i> |

| | |
|------------|---|
| Tree | gateway |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

holdup-time *number*

| | |
|------------|---|
| Synopsis | Wait time before accepting new state attribute |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 address <i>string</i> holdup-time <i>number</i> |
| Tree | holdup-time |
| Range | 100 to 5000 |
| Units | milliseconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

populate-host-routes *boolean*

| | |
|------------|---|
| Synopsis | Populate subscriber host routes in local FIB |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 address <i>string</i> populate-host-routes <i>boolean</i> |
| Tree | populate-host-routes |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

prefix-length *number*

| | |
|------------|---|
| Synopsis | IPv4 address prefix length |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 address <i>string</i> prefix-length <i>number</i> |
| Tree | prefix-length |
| Range | 0 to 32 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

track-srrp *number*

| | |
|------------|--|
| Synopsis | SRRP instance whose state is tracked on this IP address |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 address <i>string</i> track-srrp <i>number</i> |
| Tree | track-srrp |
| Range | 1 to 4294967295 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

allow-unmatching-subnets *boolean*

| | |
|------------|---|
| Synopsis | Allow subscriber hosts without a matching subnet |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 allow-unmatching-subnets <i>boolean</i> |
| Tree | allow-unmatching-subnets |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

default-dns *string*

| | |
|----------------|---|
| Synopsis | Default DNS server addresses |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 default-dns <i>string</i> |
| Tree | default-dns |
| Max. Instances | 2 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

dhcp

| | |
|----------|--|
| Synopsis | Enter the dhcp context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp |
| Tree | dhcp |

Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

admin-state *keyword*

Synopsis Administrative state of DHCP
 Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [ipv4](#) [dhcp](#) [admin-state](#) *keyword*
 Tree [admin-state](#)
 Options enable, disable
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

client-applications

Synopsis Enter the **client-applications** context
 Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [ipv4](#) [dhcp](#) [client-applications](#)
 Tree [client-applications](#)
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dhcp *boolean*

Synopsis Enable IPoE clients to use the DHCP relay or proxy server
 Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [ipv4](#) [dhcp](#) [client-applications](#) [dhcp](#) *boolean*
 Tree [dhcp](#)
 Default true
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ppp *boolean*

Synopsis Enable PPPoE clients to use DHCP relay or proxy server
 Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [ipv4](#) [dhcp](#) [client-applications](#) [ppp](#) *boolean*
 Tree [ppp](#)

| | |
|------------|---|
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

description *string*

| | |
|---------------|--|
| Synopsis | Text description |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp description <i>string</i> |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

gi-address *string*

| | |
|-------------|---|
| Synopsis | GI address for the DHCP relay |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp gi-address <i>string</i> |
| Tree | gi-address |
| Description | <p>This command configures the GI address to distinguish between the different subscriber interfaces (and potentially group interfaces) defined when the router functions as a DHCP relay.</p> <p>By default, the GI address used in the relayed DHCP packet is the primary IP address of a normal IES interface. Specifying the GI address allows the user to choose a secondary address. For group interfaces, a GI address must be specified under the group interface DHCP context or subscriber interface DHCP context for DHCP to function.</p> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

lease-populate

| | |
|------------|---|
| Synopsis | Enter the lease-populate context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp lease-populate |
| Tree | lease-populate |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

max-leases *number*

| | |
|------------|---|
| Synopsis | Maximum number of DHCPv4 leases |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp lease-populate max-leases <i>number</i> |
| Tree | max-leases |
| Range | 0 to 511999 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

option-82

| | |
|-------------|---|
| Synopsis | Enter the option-82 context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp option-82 |
| Tree | option-82 |
| Description | Commands in this context configure the processing required when the router receives a DHCP request that already has an Option 82 field in the packet. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

vendor-specific-option

| | |
|-------------|--|
| Synopsis | Enter the vendor-specific-option context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp option-82 vendor-specific-option |
| Tree | vendor-specific-option |
| Description | Commands in this context configure the Nokia Vendor-Specific Option (VSO) of the DHCP packet. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

client-mac-address *boolean*

| | |
|----------|--|
| Synopsis | Send the MAC address in the VSO |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp option-82 vendor-specific-option client-mac-address <i>boolean</i> |

| | |
|------------|---|
| Tree | client-mac-address |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sap-id *boolean*

| | |
|------------|--|
| Synopsis | Send SAP ID in the sub-option of the DHCP relay packet |
| Context | configure service ies string subscriber-interface string ipv4 dhcp option-82 vendor-specific-option sap-id <i>boolean</i> |
| Tree | sap-id |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

service-id *boolean*

| | |
|------------|--|
| Synopsis | Send the service ID in the Vendor Specific Option |
| Context | configure service ies string subscriber-interface string ipv4 dhcp option-82 vendor-specific-option service-id <i>boolean</i> |
| Tree | service-id |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

string *string*

| | |
|---------------|---|
| Synopsis | User-defined ASCII string for the VSO |
| Context | configure service ies string subscriber-interface string ipv4 dhcp option-82 vendor-specific-option string <i>string</i> |
| Tree | string |
| String Length | 1 to 32 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

system-id *boolean*

| | |
|------------|---|
| Synopsis | Send the system ID in the VSO |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp option-82 vendor-specific-option system-id <i>boolean</i> |
| Tree | system-id |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

proxy-server

| | |
|------------|--|
| Synopsis | Enter the proxy-server context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp proxy-server |
| Tree | proxy-server |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of the DHCP proxy server |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp proxy-server admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

emulated-server *string*

| | |
|------------|--|
| Synopsis | IP address used as DHCP server address in SAP context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp proxy-server emulated-server <i>string</i> |
| Tree | emulated-server |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

lease-time

| | |
|------------|---|
| Synopsis | Enter the lease-time context |
| Context | configure service ies string subscriber-interface string ipv4 dhcp proxy-server lease-time |
| Tree | lease-time |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

radius-override *boolean*

| | |
|------------|--|
| Synopsis | Use lease time information provided by RADIUS server |
| Context | configure service ies string subscriber-interface string ipv4 dhcp proxy-server lease-time radius-override <i>boolean</i> |
| Tree | radius-override |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

value *number*

| | |
|------------|---|
| Synopsis | DHCP lease time |
| Context | configure service ies string subscriber-interface string ipv4 dhcp proxy-server lease-time value <i>number</i> |
| Tree | value |
| Range | 300 to 315446399 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

python-policy *reference*

| | |
|----------|---|
| Synopsis | Python policy |
| Context | configure service ies string subscriber-interface string ipv4 dhcp python-policy reference |
| Tree | python-policy |

| | |
|------------|---|
| Reference | configure python python-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

relay-proxy

| | |
|------------|---|
| Synopsis | Enable the relay-proxy context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp relay-proxy |
| Tree | relay-proxy |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

release-update-src-ip *boolean*

| | |
|------------|--|
| Synopsis | Update the source IP address of a DHCP RELEASE message |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp relay-proxy release-update-src-ip <i>boolean</i> |
| Tree | release-update-src-ip |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

siaddr-override *string*

| | |
|------------|---|
| Synopsis | DHCP server IP address for address hiding function |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp relay-proxy siaddr-override <i>string</i> |
| Tree | siaddr-override |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

release-include-gi-address *boolean*

| | |
|----------|---|
| Synopsis | Include the GI address in DHCP relay messages |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp release-include-gi-address <i>boolean</i> |

| | |
|------------|---|
| Tree | release-include-gi-address |
| Default | false |
| Introduced | 21.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

server string

| | |
|----------------|--|
| Synopsis | DHCP server IP addresses |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp server <i>string</i> |
| Tree | server |
| Max. Instances | 8 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

src-ip-addr keyword

| | |
|------------|--|
| Synopsis | Type of source address to use for DHCP relay |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp src-ip-addr <i>keyword</i> |
| Tree | src-ip-addr |
| Options | auto, gi-address |
| Default | auto |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

virtual-subnet boolean

| | |
|------------|---|
| Synopsis | Enable a virtual subnet for DHCPv4 hosts |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 dhcp virtual-subnet <i>boolean</i> |
| Tree | virtual-subnet |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

export-host-routes *boolean*

| | |
|------------|---|
| Synopsis | Allow export of subscriber management host routes |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 export-host-routes <i>boolean</i> |
| Tree | export-host-routes |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

unnumbered

| | |
|------------|--|
| Synopsis | Enter the unnumbered context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 unnumbered |
| Tree | unnumbered |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ip-address *string*

| | |
|------------|--|
| Synopsis | IP address for the subscriber interface |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 unnumbered ip-address <i>string</i> |
| Tree | ip-address |
| Notes | The following elements are part of a choice: ip-address or ip-int-name . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ip-int-name *string*

| | |
|---------------|---|
| Synopsis | Interface name from which an IPv4 address is borrowed |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv4 unnumbered ip-int-name <i>string</i> |
| Tree | ip-int-name |
| String Length | 1 to 32 |
| Notes | The following elements are part of a choice: ip-address or ip-int-name . |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

ipv6

Synopsis Enable the **ipv6** context

Context **configure service ies string subscriber-interface string ipv6**

Tree **ipv6**

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

address [ipv6-address] string

Synopsis Enter the **address** list instance

Context **configure service ies string subscriber-interface string ipv6 address string**

Tree **address**

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[ipv6-address] string

Synopsis IPv6 address for the subscriber interface

Context **configure service ies string subscriber-interface string ipv6 address string**

Tree **address**

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host-type keyword

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Host type for subscriber interface prefixes

Context **configure service ies string subscriber-interface string ipv6 address string host-type keyword**

| | |
|------------|---|
| Tree | host-type |
| Options | pd, wan, pd-wan |
| Default | pd |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

prefix-length *number*

| | |
|------------|--|
| Synopsis | IPv6 address prefix length |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 address <i>string</i> prefix-length <i>number</i> |
| Tree | prefix-length |
| Range | 0 to 128 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

allow-multiple-wan-addresses *boolean*

| | |
|------------|--|
| Synopsis | Allow multiple WAN addresses |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 allow-multiple-wan-addresses <i>boolean</i> |
| Tree | allow-multiple-wan-addresses |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

allow-unmatching-prefixes *boolean*

| | |
|------------|---|
| Synopsis | Allow subscriber hosts without a matching prefix |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 allow-unmatching-prefixes <i>boolean</i> |
| Tree | allow-unmatching-prefixes |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

default-dns *string*

| | |
|----------------|--|
| Synopsis | Default DNS server addresses |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 default-dns <i>string</i> |
| Tree | default-dns |
| Max. Instances | 2 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

delegated-prefix-length (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | IPv6 delegated prefix length |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 delegated-prefix-length (<i>number</i> <i>keyword</i>) |
| Tree | delegated-prefix-length |
| Range | 48 to 64 |
| Options | variable |
| Default | 64 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

dhcp6

| | |
|------------|--|
| Synopsis | Enter the dhcp6 context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6 |
| Tree | dhcp6 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

override-slaac *boolean*

| | |
|----------|--|
| Synopsis | Allow WAN address offered by DHCP to overwrite the WAN address acquired from SLAAC |
|----------|--|

| | |
|------------|--|
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6 override-slaac <i>boolean</i> |
| Tree | override-slaac |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

pd-managed-route

| | |
|------------|---|
| Synopsis | Enable the pd-managed-route context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6 pd-managed-route |
| Tree | pd-managed-route |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

next-hop *keyword*

| | |
|------------|--|
| Synopsis | Next hop type |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6 pd-managed-route next-hop <i>keyword</i> |
| Tree | next-hop |
| Options | ipv4, ipv6 |
| Default | ipv6 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

proxy-server

| | |
|------------|---|
| Synopsis | Enter the proxy-server context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6 proxy-server |
| Tree | proxy-server |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of the DHCPv6 proxy server |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6 proxy-server admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

client-applications

| | |
|------------|--|
| Synopsis | Enter the client-applications context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6 proxy-server client-applications |
| Tree | client-applications |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

dhcp *boolean*

| | |
|------------|---|
| Synopsis | Enable IPoE clients to use DHCP relay or proxy server |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6 proxy-server client-applications dhcp <i>boolean</i> |
| Tree | dhcp |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ppp *boolean*

| | |
|----------|--|
| Synopsis | Allow PPPoE clients to use DHCP relay functionality |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6 proxy-server client-applications ppp <i>boolean</i> |
| Tree | ppp |
| Default | false |

| | |
|------------|---|
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

preferred-lifetime (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | Time for prefix to remain preferred on this interface |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6 proxy-server preferred-lifetime (<i>number</i> <i>keyword</i>) |
| Tree | preferred-lifetime |
| Range | 300 to 4294967294 |
| Units | seconds |
| Options | infinite |
| Default | 3600 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

rebind-timer *number*

| | |
|------------|---|
| Synopsis | Rebind timer (T2) for this interface |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6 proxy-server rebind-timer <i>number</i> |
| Tree | rebind-timer |
| Range | 0 to 1209600 |
| Units | seconds |
| Default | 2880 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

renew-timer *number*

| | |
|----------|--|
| Synopsis | Renew timer (T1) |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6 proxy-server renew-timer <i>number</i> |
| Tree | renew-timer |
| Range | 0 to 604800 |
| Units | seconds |

| | |
|------------|---|
| Default | 1800 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

server-id

| | |
|------------|---|
| Synopsis | Enter the server-id context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6 proxy-server server-id |
| Tree | server-id |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

duid-en-ascii *string*

| | |
|---------------|---|
| Synopsis | Vendor-assigned ID based on Enterprise Number (DUID-EN) |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6 proxy-server server-id duid-en-ascii <i>string</i> |
| Tree | duid-en-ascii |
| String Length | 1 to 58 |
| Notes | The following elements are part of a choice: duid-en-ascii , duid-en-hex , or duid-ll . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

duid-en-hex *string*

| | |
|---------------|---|
| Synopsis | DUID system ID in hexadecimal format |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6 proxy-server server-id duid-en-hex <i>string</i> |
| Tree | duid-en-hex |
| String Length | 1 to 118 |
| Notes | The following elements are part of a choice: duid-en-ascii , duid-en-hex , or duid-ll . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

duid-ll

| | |
|------------|---|
| Synopsis | Use link-layer address (DUID-LL) as DUID |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6 proxy-server server-id duid-ll |
| Tree | duid-ll |
| Notes | The following elements are part of a choice: duid-en-ascii , duid-en-hex , or duid-ll . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

valid-lifetime (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | Time for prefix to remain valid on this interface |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6 proxy-server valid-lifetime (<i>number</i> <i>keyword</i>) |
| Tree | valid-lifetime |
| Range | 300 to 4294967294 |
| Units | seconds |
| Options | infinite |
| Default | 86400 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

python-policy *reference*

| | |
|------------|---|
| Synopsis | Python policy |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6 python-policy <i>reference</i> |
| Tree | python-policy |
| Reference | configure python python-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

relay

| | |
|----------|--|
| Synopsis | Enter the relay context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6 relay |

| | |
|------------|---|
| Tree | relay |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of DHCPv6 Relay |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6 relay admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

client-applications

| | |
|------------|--|
| Synopsis | Enter the client-applications context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6 relay client-applications |
| Tree | client-applications |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

dhcp *boolean*

| | |
|------------|--|
| Synopsis | Enable IPoE clients to use DHCP relay or proxy server |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6 relay client-applications dhcp <i>boolean</i> |
| Tree | dhcp |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ppp boolean

| | |
|------------|--|
| Synopsis | Allow PPPoE clients to use DHCP relay functionality |
| Context | configure service ies string subscriber-interface string ipv6 dhcp6 relay client-applications ppp boolean |
| Tree | ppp |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

description string

| | |
|---------------|---|
| Synopsis | Text description |
| Context | configure service ies string subscriber-interface string ipv6 dhcp6 relay description string |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

lease-split

| | |
|-------------|---|
| Synopsis | Enter the lease-split context |
| Context | configure service ies string subscriber-interface string ipv6 dhcp6 relay lease-split |
| Tree | lease-split |
| Description | <p>Commands in this context configure DHCPv6 lease split.</p> <p>DHCPv6 lease split is active when administratively enabled and for all IA_NA and IA_PD options in the transaction, the configured lease split valid lifetime (short lease time) is less than or equal to one of the following:</p> <ul style="list-style-type: none"> the renew time T1 committed by the server (long renew time) half of the preferred lifetime committed by the server when T1 committed by the server equals zero |
| Introduced | 21.2.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state keyword

| | |
|----------|--|
| Synopsis | Administrative state of DHCPv6 lease split |
|----------|--|

| | |
|------------|---|
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6 relay lease-split admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 21.2.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

valid-lifetime *number*

| | |
|------------|---|
| Synopsis | DHCPv6 lease split valid lifetime (short lease time) |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6 relay lease-split valid-lifetime <i>number</i> |
| Tree | valid-lifetime |
| Range | 300 to 315446399 |
| Units | seconds |
| Default | 3600 |
| Introduced | 21.2.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

link-address *string*

| | |
|------------|---|
| Synopsis | Link address for the DHCPv6 relay messages |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6 relay link-address <i>string</i> |
| Tree | link-address |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

server *string*

| | |
|----------------|---|
| Synopsis | DHCP6 server(s) to which the DHCP6 requests are forwarded |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 dhcp6 relay server <i>string</i> |
| Tree | server |
| Max. Instances | 8 |

| | |
|------------|---|
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

source-address *string*

| | |
|------------|--|
| Synopsis | Source IPv6 address for the DHCPv6 relay messages |
| Context | configure service ies string subscriber-interface string ipv6 dhcp6 relay source-address string |
| Tree | source-address |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipoe-bridged-mode *boolean*

| | |
|------------|--|
| Synopsis | Enable IPv6 IPoE bridged mode |
| Context | configure service ies string subscriber-interface string ipv6 ipoe-bridged-mode boolean |
| Tree | ipoe-bridged-mode |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

link-local-address

| | |
|------------|---|
| Synopsis | Enter the link-local-address context |
| Context | configure service ies string subscriber-interface string ipv6 link-local-address |
| Tree | link-local-address |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

address *string*

| | |
|----------|--|
| Synopsis | IPv6 link local address |
| Context | configure service ies string subscriber-interface string ipv6 link-local-address address string |
| Tree | address |

Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

prefix [ipv6-prefix] *string*

Synopsis Enter the **prefix** list instance
Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [ipv6](#) [prefix](#) *string*
Tree [prefix](#)
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

[ipv6-prefix] *string*

Synopsis IPv6 address for a router interface
Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [ipv6](#) [prefix](#) *string*
Tree [prefix](#)
Notes This element is part of a list key.
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

holdup-time *number*

Synopsis Time to wait before route accepts new state attribute
Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [ipv6](#) [prefix](#) *string* [holdup-time](#) *number*
Tree [holdup-time](#)
Range 100 to 5000
Units milliseconds
Introduced 16.0.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host-type *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Host type for subscriber interface prefixes |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 prefix <i>string</i> host-type <i>keyword</i> |
| Tree | host-type |
| Options | pd, wan, pd-wan |
| Default | pd |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

track-srrp *number*

| | |
|------------|--|
| Synopsis | SRRP instance whose state is tracked on this IP address |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 prefix <i>string</i> track-srrp <i>number</i> |
| Tree | track-srrp |
| Range | 1 to 4294967295 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

router-advertisements

| | |
|------------|--|
| Synopsis | Enter the router-advertisements context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 router-advertisements |
| Tree | router-advertisements |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|----------|---|
| Synopsis | Administrative state of router advertisements |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 router-advertisements admin-state <i>keyword</i> |

| | |
|------------|---|
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

force-mcast *keyword*

| | |
|------------|--|
| Synopsis | Protocol with forced multicast |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 router-advertisements force-mcast <i>keyword</i> |
| Tree | force-mcast |
| Options | ip, ip-mac |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

max-advertisement-interval *number*

| | |
|------------|--|
| Synopsis | Maximum advertisement interval |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 router-advertisements max-advertisement-interval <i>number</i> |
| Tree | max-advertisement-interval |
| Range | 900 to 1800 |
| Units | seconds |
| Default | 1800 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

min-advertisement-interval *number*

| | |
|----------|--|
| Synopsis | Minimum advertisement interval |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 router-advertisements min-advertisement-interval <i>number</i> |
| Tree | min-advertisement-interval |
| Range | 900 to 1350 |
| Units | seconds |

| | |
|------------|---|
| Default | 900 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

options

| | |
|------------|--|
| Synopsis | Enter the options context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 router-advertisements options |
| Tree | options |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

current-hop-limit *number*

| | |
|------------|--|
| Synopsis | Hop limit to be advertised |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 router-advertisements options current-hop-limit <i>number</i> |
| Tree | current-hop-limit |
| Range | 0 to 255 |
| Default | 64 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

dns

| | |
|------------|--|
| Synopsis | Enter the dns context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 router-advertisements options dns |
| Tree | dns |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

include-rdnss *boolean*

| | |
|----------|------------------------------------|
| Synopsis | Include the RDNSS server option 25 |
|----------|------------------------------------|

| | |
|------------|--|
| Context | configure service ies string subscriber-interface string ipv6 router-advertisements options dns include-rdnss boolean |
| Tree | include-rdnss |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

rdnss-lifetime (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | Maximum time for the RDNSS address to remain valid |
| Context | configure service ies string subscriber-interface string ipv6 router-advertisements options dns rdnss-lifetime (number keyword) |
| Tree | rdnss-lifetime |
| Range | 900 to 3600 |
| Units | seconds |
| Options | infinite |
| Default | 3600 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

managed-configuration *boolean*

| | |
|------------|--|
| Synopsis | Managed address configuration flag |
| Context | configure service ies string subscriber-interface string ipv6 router-advertisements options managed-configuration boolean |
| Tree | managed-configuration |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

mtu (*number* | *keyword*)

| | |
|----------|---|
| Synopsis | Advertised MTU value |
| Context | configure service ies string subscriber-interface string ipv6 router-advertisements options mtu (number keyword) |
| Tree | mtu |

| | |
|------------|---|
| Range | 1280 to 9212 |
| Units | bytes |
| Options | not-included |
| Default | not-included |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

other-stateful-configuration *boolean*

| | |
|------------|---|
| Synopsis | Other stateful configuration flag |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 router-advertisements options other-stateful-configuration <i>boolean</i> |
| Tree | other-stateful-configuration |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

reachable-time *number*

| | |
|------------|--|
| Synopsis | Reachable time for advertisements |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 router-advertisements options reachable-time <i>number</i> |
| Tree | reachable-time |
| Range | 0 to 3600000 |
| Units | milliseconds |
| Default | 0 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

retransmit-timer *number*

| | |
|----------|--|
| Synopsis | Retransmit time in router advertisements from interface |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 router-advertisements options retransmit-timer <i>number</i> |
| Tree | retransmit-timer |
| Range | 0 to 1800000 |

| | |
|------------|---|
| Units | seconds |
| Default | 0 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

router-lifetime (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | Router lifetime |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 router-advertisements options router-lifetime (<i>number</i> <i>keyword</i>) |
| Tree | router-lifetime |
| Range | 2700 to 9000 |
| Units | seconds |
| Options | no-default-router |
| Default | 4500 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

prefix-options

| | |
|------------|---|
| Synopsis | Enter the prefix-options context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 router-advertisements prefix-options |
| Tree | prefix-options |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

autonomous *boolean*

| | |
|------------|--|
| Synopsis | Value of the autonomous flag |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 router-advertisements prefix-options autonomous <i>boolean</i> |
| Tree | autonomous |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

on-link *boolean*

| | |
|------------|--|
| Synopsis | Assign the prefix to an interface on the specified link |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 router-advertisements
prefix-options on-link <i>boolean</i> |
| Tree | on-link |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

preferred-lifetime (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | Time for a prefix to remain preferred |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 router-advertisements
prefix-options preferred-lifetime (<i>number</i> <i>keyword</i>) |
| Tree | preferred-lifetime |
| Range | 0 to 4294967294 |
| Units | seconds |
| Options | infinite |
| Default | 3600 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

valid-lifetime (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | Time for a prefix to remain valid |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> ipv6 router-advertisements
prefix-options valid-lifetime (<i>number</i> <i>keyword</i>) |
| Tree | valid-lifetime |
| Range | 0 to 4294967294 |
| Units | seconds |
| Options | infinite |
| Default | 86400 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

router-solicit

| | |
|------------|---|
| Synopsis | Enter the router-solicit context |
| Context | configure service ies string subscriber-interface string ipv6 router-solicit |
| Tree | router-solicit |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

inactivity-timer (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | Time before an inactive host is removed |
| Context | configure service ies string subscriber-interface string ipv6 router-solicit inactivity-timer
(<i>number</i> <i>keyword</i>) |
| Tree | inactivity-timer |
| Range | 1 to 31536000 |
| Units | seconds |
| Options | infinite |
| Default | 300 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

local-address-assignment

| | |
|------------|--|
| Synopsis | Enter the local-address-assignment context |
| Context | configure service ies string subscriber-interface string local-address-assignment |
| Tree | local-address-assignment |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|----------|--|
| Synopsis | Administrative state of Local Address Assignment |
| Context | configure service ies string subscriber-interface string local-address-assignment admin-state keyword |
| Tree | admin-state |
| Options | enable, disable |

| | |
|------------|---|
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipv4

| | |
|------------|---|
| Synopsis | Enter the ipv4 context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> local-address-assignment ipv4 |
| Tree | ipv4 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

client-applications

| | |
|------------|--|
| Synopsis | Enter the client-applications context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> local-address-assignment ipv4
client-applications |
| Tree | client-applications |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ppp *boolean*

| | |
|------------|---|
| Synopsis | Request local addresses for PPP IPCP hosts |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> local-address-assignment ipv4
client-applications ppp <i>boolean</i> |
| Tree | ppp |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

default-pool *string*

| | |
|----------|---|
| Synopsis | Default pools |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> local-address-assignment ipv4
default-pool <i>string</i> |

| | |
|----------------|---|
| Tree | default-pool |
| String Length | 1 to 32 |
| Max. Instances | 2 |
| Notes | This element is ordered by the user. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

server reference

| | |
|------------|--|
| Synopsis | Local DHCPv4 server for local pools management |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> local-address-assignment ipv4 server reference |
| Tree | server |
| Reference | configure router <i>string</i> dhcp-server dhcpv4 <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipv6

| | |
|------------|---|
| Synopsis | Enter the ipv6 context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> local-address-assignment ipv6 |
| Tree | ipv6 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

client-applications

| | |
|------------|---|
| Synopsis | Enter the client-applications context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> local-address-assignment ipv6 client-applications |
| Tree | client-applications |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipoe-slaac *boolean*

| | |
|------------|---|
| Synopsis | Request local addresses for IPoE SLAAC hosts |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> local-address-assignment ipv6
client-applications ipoe-slaac <i>boolean</i> |
| Tree | ipoe-slaac |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipoe-wan *boolean*

| | |
|------------|---|
| Synopsis | Request local addresses for IPoE IA NA hosts |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> local-address-assignment ipv6
client-applications ipoe-wan <i>boolean</i> |
| Tree | ipoe-wan |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ppp-slaac *boolean*

| | |
|------------|--|
| Synopsis | Request local addresses for PPP SLAAC hosts |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> local-address-assignment ipv6
client-applications ppp-slaac <i>boolean</i> |
| Tree | ppp-slaac |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

server *reference*

| | |
|-----------|--|
| Synopsis | Local DHCPv6 server for local pools management |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> local-address-assignment ipv6
server <i>reference</i> |
| Tree | server |
| Reference | configure router <i>string</i> dhcp-server dhcpv6 <i>string</i> |

| | |
|------------|---|
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

pppoe

| | |
|------------|---|
| Synopsis | Enter the pppoe context |
| Context | configure service ies string subscriber-interface string pppoe |
| Tree | pppoe |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

description *string*

| | |
|---------------|--|
| Synopsis | Text description |
| Context | configure service ies string subscriber-interface string pppoe description string |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

session-limit *number*

| | |
|------------|--|
| Synopsis | Maximum PPPoE sessions |
| Context | configure service ies string subscriber-interface string pppoe session-limit number |
| Tree | session-limit |
| Range | 1 to 333823 |
| Default | 1 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

wan-mode *keyword*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Mode of operation for hosts with /128 WAN IPv6 address |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> wan-mode <i>keyword</i> |
| Tree | wan-mode |
| Options | mode64, mode128 |
| Default | mode64 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

wlan-gw

| | |
|------------|---|
| Synopsis | Enable the wlan-gw context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> wlan-gw |
| Tree | wlan-gw |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

pool-manager

| | |
|------------|--|
| Synopsis | Enter the pool-manager context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> wlan-gw pool-manager |
| Tree | pool-manager |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

dhcp6-client

| | |
|------------|---|
| Synopsis | Enter the dhcp6-client context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> wlan-gw pool-manager dhcp6-client |
| Tree | dhcp6-client |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

dhcpv4-nat

| | |
|----------|-------------------------------------|
| Synopsis | Enter the dhcpv4-nat context |
|----------|-------------------------------------|

| | |
|------------|--|
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> wlan-gw pool-manager dhcp6-client dhcpv4-nat |
| Tree | dhcpv4-nat |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of the DHCPv6 client entity |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> wlan-gw pool-manager dhcp6-client dhcpv4-nat admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

link-address *string*

| | |
|------------|---|
| Synopsis | IPv6 address in the link address field of relay header |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> wlan-gw pool-manager dhcp6-client dhcpv4-nat link-address <i>string</i> |
| Tree | link-address |
| Default | :: |
| Introduced | 16.0.R4 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

pool-name *string*

| | |
|---------------|--|
| Synopsis | Pool name to be sent in the DHCPv6 messages |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> wlan-gw pool-manager dhcp6-client dhcpv4-nat pool-name <i>string</i> |
| Tree | pool-name |
| String Length | 1 to 32 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

ia-na

| | |
|------------|---|
| Synopsis | Enter the ia-na context |
| Context | configure service ies string subscriber-interface string wlan-gw pool-manager dhcp6-client ia-na |
| Tree | ia-na |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of the DHCPv6 client entity |
| Context | configure service ies string subscriber-interface string wlan-gw pool-manager dhcp6-client ia-na admin-state keyword |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

link-address *string*

| | |
|------------|---|
| Synopsis | IPv6 address in the link address field of relay header |
| Context | configure service ies string subscriber-interface string wlan-gw pool-manager dhcp6-client ia-na link-address string |
| Tree | link-address |
| Default | :: |
| Introduced | 16.0.R4 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

pool-name *string*

| | |
|----------|--|
| Synopsis | Pool name to be sent in the DHCPv6 messages |
| Context | configure service ies string subscriber-interface string wlan-gw pool-manager dhcp6-client ia-na pool-name string |
| Tree | pool-name |

| | |
|---------------|------------------------------------|
| String Length | 1 to 32 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

lease-query

| | |
|------------|---|
| Synopsis | Enable the lease-query context |
| Context | configure service ies string subscriber-interface string wlan-gw pool-manager dhcp6-client lease-query |
| Tree | lease-query |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

max-retries *number*

| | |
|------------|--|
| Synopsis | Retries before lease query assumes no allocated subnets |
| Context | configure service ies string subscriber-interface string wlan-gw pool-manager dhcp6-client lease-query max-retries number |
| Tree | max-retries |
| Range | 0 to 10 |
| Default | 2 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

servers *string*

| | |
|----------------|--|
| Synopsis | DHCPv6 servers that are used for requesting addresses |
| Context | configure service ies string subscriber-interface string wlan-gw pool-manager dhcp6-client servers string |
| Tree | servers |
| Max. Instances | 8 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

slaac

| | |
|------------|---|
| Synopsis | Enter the slaac context |
| Context | configure service ies string subscriber-interface string wlan-gw pool-manager dhcp6-client slaac |
| Tree | slaac |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

admin-state keyword

| | |
|------------|---|
| Synopsis | Administrative state of the DHCPv6 client entity |
| Context | configure service ies string subscriber-interface string wlan-gw pool-manager dhcp6-client slaac admin-state keyword |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

link-address string

| | |
|------------|---|
| Synopsis | IPv6 address in the link address field of relay header |
| Context | configure service ies string subscriber-interface string wlan-gw pool-manager dhcp6-client slaac link-address string |
| Tree | link-address |
| Default | :: |
| Introduced | 16.0.R4 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

pool-name string

| | |
|---------------|--|
| Synopsis | Pool name to be sent in the DHCPv6 messages |
| Context | configure service ies string subscriber-interface string wlan-gw pool-manager dhcp6-client slaac pool-name string |
| Tree | pool-name |
| String Length | 1 to 32 |

| | |
|------------|------------------------------------|
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

source-ip (*keyword | ipv6-address*)

| | |
|------------|--|
| Synopsis | Source IP address that is used by the DHCPv6 client |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> wlan-gw pool-manager dhcp6-client source-ip (<i>keyword ipv6-address</i>) |
| Tree | source-ip |
| Options | use-interface-ip |
| Default | use-interface-ip |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

watermarks

| | |
|------------|--|
| Synopsis | Enter the watermarks context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> wlan-gw pool-manager watermarks |
| Tree | watermarks |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

high *number*

| | |
|------------|---|
| Synopsis | High watermark when new prefix is allocated |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> wlan-gw pool-manager watermarks high <i>number</i> |
| Tree | high |
| Range | 51 to 99 |
| Default | 95 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

low number

| | |
|------------|--|
| Synopsis | Low watermark when unused prefix is released |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> wlan-gw pool-manager watermarks low <i>number</i> |
| Tree | low |
| Range | 50 to 98 |
| Default | 90 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

wlan-gw-group reference

| | |
|------------|---|
| Synopsis | ID of WLAN gateway group where prefixes are installed |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> wlan-gw pool-manager wlan-gw-group <i>reference</i> |
| Tree | wlan-gw-group |
| Reference | configure isa wlan-gw-group <i>number</i> |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

redundancy

| | |
|------------|---|
| Synopsis | Enter the redundancy context |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> wlan-gw redundancy |
| Tree | redundancy |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

admin-state keyword

| | |
|----------|---|
| Synopsis | Administrative state of WLAN-GW redundancy |
| Context | configure service ies <i>string</i> subscriber-interface <i>string</i> wlan-gw redundancy admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |

Introduced 16.0.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

export string

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Route to export to peer
 Context **configure** service ies string subscriber-interface string wlan-gw redundancy export string
 Tree export
 Introduced 16.0.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

monitor string

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Peer route to monitor
 Context **configure** service ies string subscriber-interface string wlan-gw redundancy monitor string
 Tree monitor
 Introduced 16.0.R1
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

subscriber-mgmt

Synopsis Enter the **subscriber-mgmt** context
 Context **configure** service ies string subscriber-mgmt
 Tree subscriber-mgmt
 Introduced 22.2.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

multi-chassis-shunt-id *number*

| | |
|-------------|---|
| Synopsis | Shunt ID for a pair of resilient nodes |
| Context | configure service ies <i>string subscriber-mgmt multi-chassis-shunt-id number</i> |
| Tree | multi-chassis-shunt-id |
| Description | <p>This command configures the shunt ID that is used to shunt downstream traffic from a standby node to an active node. Because this ID identifies the traffic service on the standby node, the same ID must be configured per service on each node.</p> <p>This configuration is required for inter-BNG-UP resiliency shunting, but not for non-BNG-UP shunting. However, when configured, it is also used for shunting non-BNG-UP sessions in the same service.</p> |
| Range | 1 to 8191 |
| Introduced | 22.2.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

up-resiliency

| | |

monitor-oper-group [[oper-group](#)] *reference*

| | |
|----------|---|
| Synopsis | Enter the monitor-oper-group list instance |
| Context | configure service ies <i>string subscriber-mgmt up-resiliency monitor-oper-group reference</i> |
| Tree | monitor-oper-group |

Description

Commands in this context define parameters to derive the service health based on monitored operational groups. The BNG UPF sends the health value to the BNG CPF. The BNG CPF uses the value to determine the need for a BNG UPF status change (active or standby).

Note:

The following is only applicable for the **configure service vpls capture-sap** context. If the configured groups are not the same for all capture SAPs sharing the same underlying port or LAG, the configuration of a Layer 2 access ID alias is required, or else the system chooses arbitrarily one set of configured groups.

| | |
|----------------|---|
| Max. Instances | 4 |
| Introduced | 22.2.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

| Synopsis | Enter the ipfix context |
| Context | configure service ipfix |
| Tree | ipfix |
| Introduced | 16.0.R1 |
| Platforms | All |

export-policy [*name*] *string*

| | |
|------------|--|
| Synopsis | Enter the export-policy list instance |
| Context | configure service ipfix export-policy <i>string</i> |
| Tree | export-policy |
| Introduced | 16.0.R1 |
| Platforms | All |

[name] *string*

| | |
|---------------|---|
| Synopsis | IPFIX policy name |
| Context | configure service ipfix export-policy string |
| Tree | export-policy |
| String Length | 1 to 32 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

collector router-instance string ip-address string

| | |
|------------|--|
| Synopsis | Enter the collector list instance |
| Context | configure service ipfix export-policy string collector router-instance string ip-address string |
| Tree | collector |
| Introduced | 16.0.R1 |
| Platforms | All |

router-instance string

| | |
|------------|--|
| Synopsis | Router where the collector is reached |
| Context | configure service ipfix export-policy string collector router-instance string ip-address string |
| Tree | collector |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R4 |
| Platforms | All |

ip-address string

| | |
|----------|--|
| Synopsis | IPv4 address of the external collector node |
| Context | configure service ipfix export-policy string collector router-instance string ip-address string |
| Tree | collector |
| Notes | This element is part of a list key. |

| | |
|------------|---------|
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of the collector |
| Context | configure service ipfix export-policy <i>string</i> collector router-instance <i>string</i> ip-address <i>string</i> admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | All |

mtu *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Maximum Transmission Unit |
| Context | configure service ipfix export-policy <i>string</i> collector router-instance <i>string</i> ip-address <i>string</i> mtu <i>number</i> |
| Tree | mtu |
| Range | 512 to 9212 |
| Units | octets |
| Default | 1500 |
| Introduced | 16.0.R1 |
| Platforms | All |

refresh-timeout *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|----------|-----------------------------|
| Synopsis | IPFIX template refresh time |
|----------|-----------------------------|

| | |
|------------|---|
| Context | configure service ipfix export-policy <i>string</i> collector router-instance <i>string</i> ip-address <i>string</i> refresh-timeout <i>number</i> |
| Tree | refresh-timeout |
| Range | 240 to 86400 |
| Units | seconds |
| Default | 600 |
| Introduced | 16.0.R1 |
| Platforms | All |

source-ip-address *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Source IP address from which UDP streams are sent |
| Context | configure service ipfix export-policy <i>string</i> collector router-instance <i>string</i> ip-address <i>string</i> source-ip-address <i>string</i> |
| Tree | source-ip-address |
| Introduced | 16.0.R1 |
| Platforms | All |

description *string*

| | |
|---------------|---|
| Synopsis | Text description |
| Context | configure service ipfix export-policy <i>string</i> description <i>string</i> |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R1 |
| Platforms | All |

template-format *keyword*

| | |
|----------|--|
| Synopsis | Template format used by this IPFIX export policy |
| Context | configure service ipfix export-policy <i>string</i> template-format <i>keyword</i> |
| Tree | template-format |

| | |
|------------|------------------|
| Options | format1, format2 |
| Default | format1 |
| Introduced | 16.0.R1 |
| Platforms | All |

ipipe [[service-name](#)] *string*

| | |
|------------|--|
| Synopsis | Enter the ipipe list instance |
| Context | configure service ipipe <i>string</i> |
| Tree | ipipe |
| Introduced | 20.10.R1 |
| Platforms | All |

[service-name] *string*

| | |
|---------------|--|
| Synopsis | Administrative service name |
| Context | configure service ipipe <i>string</i> |
| Tree | ipipe |
| String Length | 1 to 64 |
| Notes | This element is part of a list key. |
| Introduced | 20.10.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of the service |
| Context | configure service ipipe <i>string</i> admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 20.10.R1 |
| Platforms | All |

ce-address-discovery

| | |
|------------|--|
| Synopsis | Enable the ce-address-discovery context |
| Context | configure service ipipe string ce-address-discovery |
| Tree | ce-address-discovery |
| Introduced | 20.10.R1 |
| Platforms | All |

customer reference**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Service customer ID |
| Context | configure service ipipe string customer reference |
| Tree | customer |
| Reference | configure service customer string |
| Notes | This element is mandatory. |
| Introduced | 20.10.R1 |
| Platforms | All |

description string

| | |
|---------------|--|
| Synopsis | Text description |
| Context | configure service ipipe string description string |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 20.10.R1 |
| Platforms | All |

endpoint [name] string

| | |
|----------|---|
| Synopsis | Enter the endpoint list instance |
| Context | configure service ipipe string endpoint string |
| Tree | endpoint |

| | |
|----------------|----------|
| Max. Instances | 2 |
| Introduced | 20.10.R1 |
| Platforms | All |

[name] *string*

| | |
|---------------|---|
| Synopsis | Service endpoint name |
| Context | configure service ipipe <i>string</i> endpoint <i>string</i> |
| Tree | endpoint |
| String Length | 1 to 32 |
| Notes | This element is part of a list key. |
| Introduced | 20.10.R1 |
| Platforms | All |

description *string*

| | |
|---------------|---|
| Synopsis | Text description |
| Context | configure service ipipe <i>string</i> endpoint <i>string</i> description <i>string</i> |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 20.10.R1 |
| Platforms | All |

hold-time-active *number*

| | |
|------------|--|
| Synopsis | Time before entering standby when MC-LAG SAP goes down |
| Context | configure service ipipe <i>string</i> endpoint <i>string</i> hold-time-active <i>number</i> |
| Tree | hold-time-active |
| Range | 1 to 60 |
| Units | deciseconds |
| Introduced | 20.10.R1 |
| Platforms | All |

revert-time (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | Time to wait before reverting to primary spoke SDP |
| Context | configure service ipipe <i>string</i> endpoint <i>string</i> revert-time (<i>number</i> <i>keyword</i>) |
| Tree | revert-time |
| Range | 1 to 600 |
| Units | seconds |
| Options | never, immediate |
| Default | immediate |
| Introduced | 20.10.R1 |
| Platforms | All |

standby-signaling *keyword*

| | |
|------------|--|
| Synopsis | Endpoint behavior for status of sending PW standby bit |
| Context | configure service ipipe <i>string</i> endpoint <i>string</i> standby-signaling <i>keyword</i> |
| Tree | standby-signaling |
| Options | master |
| Introduced | 20.10.R1 |
| Platforms | All |

sap [**sap-id**] *string*

| | |
|------------|---|
| Synopsis | Enter the sap list instance |
| Context | configure service ipipe <i>string</i> sap <i>string</i> |
| Tree | sap |
| Introduced | 20.10.R1 |
| Platforms | All |

[sap-id] *string*

| | |
|---------------|---|
| Synopsis | SAP ID |
| Context | configure service ipipe <i>string</i> sap <i>string</i> |
| Tree | sap |
| String Length | 1 to 45 |
| Notes | This element is part of a list key. |

Introduced 20.10.R1
 Platforms All

accounting-policy *reference*

Synopsis Accounting policy
 Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [accounting-policy](#) *reference*
 Tree [accounting-policy](#)
 Reference **configure** [log](#) [accounting-policy](#) *number*
 Introduced 20.10.R1
 Platforms All

admin-state *keyword*

Synopsis Administrative state of the SAP
 Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [admin-state](#) *keyword*
 Tree [admin-state](#)
 Options enable, disable
 Default enable
 Introduced 20.10.R1
 Platforms All

app-profile *reference*

Synopsis Application profile name
 Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [app-profile](#) *reference*
 Tree [app-profile](#)
 Reference **configure** [application-assurance](#) [group](#) *number* [partition](#) *number* [policy](#) [app-profile](#) *string*
 Introduced 21.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

bandwidth *number*

Synopsis SAP bandwidth
 Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [bandwidth](#) *number*

| | |
|------------|---------------------------|
| Tree | bandwidth |
| Range | 1 to 6400000000 |
| Units | kilobps |
| Introduced | 20.10.R1 |
| Platforms | All |

ce-address (*ipv4-address-no-zone | ipv6-address-no-zone*)

| | |
|------------|--|
| Synopsis | IP address of the CE device |
| Context | configure service ipipe <i>string</i> sap <i>string</i> ce-address (<i>ipv4-address-no-zone ipv6-address-no-zone</i>) |
| Tree | ce-address |
| Introduced | 20.10.R1 |
| Platforms | All |

collect-stats *boolean*

| | |
|------------|---|
| Synopsis | Collect accounting statistics |
| Context | configure service ipipe <i>string</i> sap <i>string</i> collect-stats <i>boolean</i> |
| Tree | collect-stats |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | All |

cpu-protection

| | |
|------------|---|
| Synopsis | Enter the cpu-protection context |
| Context | configure service ipipe <i>string</i> sap <i>string</i> cpu-protection |
| Tree | cpu-protection |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS |

mac-monitoring

| | |
|----------|--|
| Synopsis | Monitor MAC for CPU protection |
| Context | configure service ipipe <i>string</i> sap <i>string</i> cpu-protection mac-monitoring |

| | |
|------------|---|
| Tree | mac-monitoring |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS |

policy-id *reference*

| | |
|------------|--|
| Synopsis | CPM protection policy |
| Context | configure service ipipe <i>string</i> sap <i>string</i> cpu-protection policy-id <i>reference</i> |
| Tree | policy-id |
| Reference | configure system security cpu-protection policy <i>number</i> |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS |

description *string*

| | |
|---------------|--|
| Synopsis | Text description |
| Context | configure service ipipe <i>string</i> sap <i>string</i> description <i>string</i> |
| Tree | description |
| String Length | 1 to 160 |
| Introduced | 20.10.R1 |
| Platforms | All |

dist-cpu-protection *reference*

| | |
|------------|---|
| Synopsis | Distributed CPU protection policy for SAP |
| Context | configure service ipipe <i>string</i> sap <i>string</i> dist-cpu-protection <i>reference</i> |
| Tree | dist-cpu-protection |
| Reference | configure system security dist-cpu-protection policy <i>string</i> |
| Introduced | 20.10.R1 |
| Platforms | All |

egress

| | |
|----------|---|
| Synopsis | Enter the egress context |
| Context | configure service ipipe <i>string</i> sap <i>string</i> egress |

Tree [egress](#)

Introduced 20.10.R1

Platforms All

agg-rate

Synopsis Enter the **agg-rate** context

Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [egress](#) [agg-rate](#)

Tree [agg-rate](#)

Introduced 20.10.R1

Platforms All

adaptation-rule *keyword*

Synopsis Adaptation rule to compute the operational PIR value when an aggregate shaper is used

Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [egress](#) [agg-rate](#) [adaptation-rule](#) *keyword*

Tree [adaptation-rule](#)

Options max, min, closest

Default closest

Introduced 22.10.R1

Platforms 7750 SR-1, 7750 SR-s

burst-limit (*number* | *keyword*)

Synopsis Shaping burst size when an aggregate shaper is used

Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [egress](#) [agg-rate](#) [burst-limit](#) (*number* | *keyword*)

Tree [burst-limit](#)

Range 1 to 14000000

Units bytes

Options auto

Default auto

Introduced 22.10.R1

Platforms 7750 SR-1, 7750 SR-s

limit-unused-bandwidth *boolean*

| | |
|------------|--|
| Synopsis | Enable aggregate rate overrun protection |
| Context | configure service ipipe <i>string</i> sap <i>string</i> egress agg-rate limit-unused-bandwidth <i>boolean</i> |
| Tree | limit-unused-bandwidth |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | All |

rate *number*

| | |
|------------|---|
| Synopsis | Enforced aggregate rate for all queues |
| Context | configure service ipipe <i>string</i> sap <i>string</i> egress agg-rate rate <i>number</i> |
| Tree | rate |
| Range | 1 to 6400000000 |
| Units | kilobps |
| Introduced | 20.10.R1 |
| Platforms | All |

filter

| | |
|------------|--|
| Synopsis | Enter the filter context |
| Context | configure service ipipe <i>string</i> sap <i>string</i> egress filter |
| Tree | filter |
| Introduced | 20.10.R1 |
| Platforms | All |

ip *reference*

| | |
|------------|--|
| Synopsis | MAC filter ID |
| Context | configure service ipipe <i>string</i> sap <i>string</i> egress filter ip <i>reference</i> |
| Tree | ip |
| Reference | configure filter ip-filter <i>string</i> |
| Introduced | 20.10.R1 |
| Platforms | All |

ipv6 reference

| | |
|------------|---|
| Synopsis | IPv6 filter identifier |
| Context | configure service ipipe <i>string</i> sap <i>string</i> egress filter ipv6 reference |
| Tree | ipv6 |
| Reference | configure filter ipv6-filter <i>string</i> |
| Introduced | 20.10.R1 |
| Platforms | All |

qos

| | |
|------------|---|
| Synopsis | Enter the qos context |
| Context | configure service ipipe <i>string</i> sap <i>string</i> egress qos |
| Tree | qos |
| Introduced | 20.10.R1 |
| Platforms | All |

policer-control-policy

| | |
|------------|--|
| Synopsis | Enter the policer-control-policy context |
| Context | configure service ipipe <i>string</i> sap <i>string</i> egress qos policer-control-policy |
| Tree | policer-control-policy |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

overrides

| | |
|------------|--|
| Synopsis | Enable the overrides context |
| Context | configure service ipipe <i>string</i> sap <i>string</i> egress qos policer-control-policy overrides |
| Tree | overrides |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

root

| | |
|------------|---|
| Synopsis | Enter the root context |
| Context | configure service ipipe string sap string egress qos policer-control-policy overrides root |
| Tree | root |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

max-rate (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | Maximum frame-based bandwidth limit |
| Context | configure service ipipe string sap string egress qos policer-control-policy overrides root max-rate (<i>number</i> <i>keyword</i>) |
| Tree | max-rate |
| Range | 1 to 6400000000 |
| Options | max |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

priority-mbs-thresholds

| | |
|------------|---|
| Synopsis | Enter the priority-mbs-thresholds context |
| Context | configure service ipipe string sap string egress qos policer-control-policy overrides root priority-mbs-thresholds |
| Tree | priority-mbs-thresholds |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

min-thresh-separation (*number* | *keyword*)

| | |
|----------|--|
| Synopsis | Minimum amount of separation buffer space |
| Context | configure service ipipe string sap string egress qos policer-control-policy overrides root priority-mbs-thresholds min-thresh-separation (<i>number</i> <i>keyword</i>) |
| Tree | min-thresh-separation |
| Range | 0 to 16777216 |
| Units | bytes |
| Options | auto |

Introduced 20.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

priority [[priority-level](#)] *number*

Synopsis Enter the **priority** list instance
 Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [policer-control-policy](#) [overrides](#) [root](#) [priority-mbs-thresholds](#) [priority](#) *number*

 Introduced 20.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

[priority-level] *number*

Synopsis Priority level
 Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [policer-control-policy](#) [overrides](#) [root](#) [priority-mbs-thresholds](#) [priority](#) *number*
 Tree [priority](#)
 Range 1 to 8
 Notes This element is part of a list key.
 Introduced 20.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

mbs-contribution (*number* | *keyword*)

Synopsis Minimum amount of cumulative buffer space allowed
 Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [policer-control-policy](#) [overrides](#) [root](#) [priority-mbs-thresholds](#) [priority](#) *number* [mbs-contribution](#) (*number* | *keyword*)
 Tree [mbs-contribution](#)
 Range 0 to 16777216
 Units bytes
 Options auto
 Introduced 20.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

policy-name *reference*

| | |
|------------|---|
| Synopsis | Policer control policy name |
| Context | configure service ipipe <i>string</i> sap <i>string</i> egress qos policer-control-policy policy-name <i>reference</i> |
| Tree | policy-name |
| Reference | configure qos policer-control-policy <i>string</i> |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

qinq-mark-top-only *boolean*

| | |
|------------|---|
| Synopsis | Mark top Q-tags |
| Context | configure service ipipe <i>string</i> sap <i>string</i> egress qos qinq-mark-top-only <i>boolean</i> |
| Tree | qinq-mark-top-only |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | All |

sap-egress

| | |
|------------|--|
| Synopsis | Enter the sap-egress context |
| Context | configure service ipipe <i>string</i> sap <i>string</i> egress qos sap-egress |
| Tree | sap-egress |
| Introduced | 20.10.R1 |
| Platforms | All |

overrides

| | |
|------------|--|
| Synopsis | Enter the overrides context |
| Context | configure service ipipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides |
| Tree | overrides |
| Introduced | 20.10.R1 |
| Platforms | All |

hs-secondary-shaper *string*

| | |
|---------------|--|
| Synopsis | HS Secondary Shaper |
| Context | configure service ipipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides hs-secondary-shaper <i>string</i> |
| Tree | hs-secondary-shaper |
| String Length | 1 to 32 |
| Introduced | 20.10.R1 |
| Platforms | 7750 SR-7/12/12e |

hs-wrr-group [[group-id](#)] *reference*

| | |
|------------|--|
| Synopsis | Enter the hs-wrr-group list instance |
| Context | configure service ipipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides hs-wrr-group <i>reference</i> |
| Tree | hs-wrr-group |
| Introduced | 20.10.R1 |
| Platforms | 7750 SR-7/12/12e |

[group-id] *reference*

| | |
|------------|--|
| Synopsis | HS WRR group identifier |
| Context | configure service ipipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides hs-wrr-group <i>reference</i> |
| Tree | hs-wrr-group |
| Reference | configure qos sap-egress <i>string</i> hs-wrr-group <i>number</i> |
| Notes | This element is part of a list key. |
| Introduced | 20.10.R1 |
| Platforms | 7750 SR-7/12/12e |

hs-class-weight *number*

| | |
|----------|--|
| Synopsis | Class weight override of the WRR group |
| Context | configure service ipipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides hs-wrr-group <i>reference</i> hs-class-weight <i>number</i> |
| Tree | hs-class-weight |
| Range | 1 2 4 8 |

Introduced 20.10.R1
 Platforms 7750 SR-7/12/12e

percent-rate *decimal-number*

Synopsis Percent rate override applied to the HS WRR group
 Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#) [hs-wrr-group](#)
reference [percent-rate](#) *decimal-number*
 Tree [percent-rate](#)
 Range 0.01 to 100.00
 Notes The following elements are part of a choice: **percent-rate** or **rate**.
 Introduced 20.10.R1
 Platforms 7750 SR-7/12/12e

rate (*number* | *keyword*)

Synopsis Scheduling rate override applied to the HS WRR group
 Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#) [hs-wrr-group](#)
reference [rate](#) (*number* | *keyword*)
 Tree [rate](#)
 Range 1 to 2000000000
 Units kilobps
 Options max
 Notes The following elements are part of a choice: **percent-rate** or **rate**.
 Introduced 20.10.R1
 Platforms 7750 SR-7/12/12e

policer [[policer-id](#)] *reference*

Synopsis Enter the **policer** list instance
 Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#) [policer](#)
reference
 Tree [policer](#)
 Introduced 20.10.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

[policer-id] reference

| | |
|------------|---|
| Synopsis | Policer unique ID |
| Context | configure service ipipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer <i>reference</i> |
| Tree | policer |
| Reference | configure qos sap-egress <i>string</i> policer <i>number</i> |
| Notes | This element is part of a list key. |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

cbs (number | keyword)

| | |
|------------|---|
| Synopsis | CBS |
| Context | configure service ipipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer <i>reference</i> cbs (<i>number keyword</i>) |
| Tree | cbs |
| Range | 0 to 268435456 |
| Units | bytes |
| Options | auto |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

mbs (number | keyword)

| | |
|------------|---|
| Synopsis | MBS |
| Context | configure service ipipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer <i>reference</i> mbs (<i>number keyword</i>) |
| Tree | mbs |
| Range | 0 to 268435456 |
| Units | bytes |
| Options | auto |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

packet-byte-offset *number*

| | |
|------------|---|
| Synopsis | Packet size modification for policing information |
| Context | configure service ipipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer reference packet-byte-offset <i>number</i> |
| Tree | packet-byte-offset |
| Range | -64 to 31 |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

percent-rate

| | |
|------------|---|
| Synopsis | Enter the percent-rate context |
| Context | configure service ipipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer reference percent-rate |
| Tree | percent-rate |
| Notes | The following elements are part of a choice: percent-rate or rate . |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

cir *decimal-number*

| | |
|------------|---|
| Synopsis | CIR percent rate |
| Context | configure service ipipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer reference percent-rate cir <i>decimal-number</i> |
| Tree | cir |
| Range | 0.00 to 100.00 |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

pir *decimal-number*

| | |
|----------|---|
| Synopsis | PIR percent rate |
| Context | configure service ipipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer reference percent-rate pir <i>decimal-number</i> |
| Tree | pir |
| Range | 0.01 to 100.00 |

| | |
|------------|--|
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

rate

| | |
|------------|--|
| Synopsis | Enter the rate context |
| Context | configure service ipipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer reference rate |
| Tree | rate |
| Notes | The following elements are part of a choice: percent-rate or rate . |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

cir (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | CIR rate |
| Context | configure service ipipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer reference rate cir (<i>number</i> <i>keyword</i>) |
| Tree | cir |
| Range | 0 to 6400000000 |
| Units | kilobps |
| Options | max |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

pir (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | PIR rate |
| Context | configure service ipipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer reference rate pir (<i>number</i> <i>keyword</i>) |
| Tree | pir |
| Range | 1 to 6400000000 |
| Units | kilobps |
| Options | max |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

stat-mode *keyword*

| | |
|------------|--|
| Synopsis | Mode of statistics collected by the policer |
| Context | configure service ipipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides policer reference stat-mode <i>keyword</i> |
| Tree | stat-mode |
| Options | no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-profile-cir, offered-limited-capped-cir, offered-profile-capped-cir, offered-total-cir-exceed, offered-four-profile-no-cir, offered-total-cir-four-profile |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

queue [[queue-id](#)] *reference*

| | |
|------------|--|
| Synopsis | Enter the queue list instance |
| Context | configure service ipipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference |
| Tree | queue |
| Introduced | 20.10.R1 |
| Platforms | All |

[queue-id] *reference*

| | |
|------------|--|
| Synopsis | Policer unique ID |
| Context | configure service ipipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference |
| Tree | queue |
| Reference | configure qos sap-egress <i>string</i> queue <i>number</i> |
| Notes | This element is part of a list key. |
| Introduced | 20.10.R1 |
| Platforms | All |

adaptation-rule

| | |
|----------|---|
| Synopsis | Enter the adaptation-rule context |
| Context | configure service ipipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference adaptation-rule |

| | |
|------------|---------------------------------|
| Tree | adaptation-rule |
| Introduced | 20.10.R1 |
| Platforms | All |

cir keyword

| | |
|------------|--|
| Synopsis | Constraint used when deriving the operational CIR value |
| Context | configure service ipipe string sap string egress qos sap-egress overrides queue reference adaptation-rule cir keyword |
| Tree | cir |
| Options | max, min, closest |
| Introduced | 20.10.R1 |
| Platforms | All |

pir keyword

| | |
|------------|--|
| Synopsis | Constraint used when deriving the operational PIR value |
| Context | configure service ipipe string sap string egress qos sap-egress overrides queue reference adaptation-rule pir keyword |
| Tree | pir |
| Options | max, min, closest |
| Introduced | 20.10.R1 |
| Platforms | All |

avg-frame-overhead decimal-number

| | |
|------------|--|
| Synopsis | Average packet-to-frame encapsulation overhead |
| Context | configure service ipipe string sap string egress qos sap-egress overrides queue reference avg-frame-overhead decimal-number |
| Tree | avg-frame-overhead |
| Range | 0.00 to 100.00 |
| Introduced | 20.10.R1 |
| Platforms | All |

burst-limit (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | Explicit shaping burst size for the queue |
| Context | configure service ipipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue
<i>reference</i> burst-limit (<i>number</i> <i>keyword</i>) |
| Tree | burst-limit |
| Range | 1 to 14000000 |
| Units | bytes |
| Options | auto |
| Introduced | 20.10.R1 |
| Platforms | All |

cbs (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | CBS |
| Context | configure service ipipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue
<i>reference</i> cbs (<i>number</i> <i>keyword</i>) |
| Tree | cbs |
| Range | 0 to 1048576 |
| Units | kilobytes |
| Options | auto |
| Introduced | 20.10.R1 |
| Platforms | All |

drop-tail

| | |
|------------|--|
| Synopsis | Enter the drop-tail context |
| Context | configure service ipipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue
<i>reference</i> drop-tail |
| Tree | drop-tail |
| Introduced | 20.10.R1 |
| Platforms | All |

low

| | |
|----------|------------------------------|
| Synopsis | Enter the low context |
|----------|------------------------------|

| | |
|------------|---|
| Context | configure service ipipe <i>string sap string egress qos sap-egress overrides queue reference drop-tail low</i> |
| Tree | low |
| Introduced | 20.10.R1 |
| Platforms | All |

percent-reduction-from-mbs (*number | keyword*)

| | |
|------------|--|
| Synopsis | Percentage reduction from the MBS for a queue drop tail |
| Context | configure service ipipe <i>string sap string egress qos sap-egress overrides queue reference drop-tail low percent-reduction-from-mbs</i> (<i>number keyword</i>) |
| Tree | percent-reduction-from-mbs |
| Range | 0 to 100 |
| Options | auto |
| Introduced | 20.10.R1 |
| Platforms | All |

hs-class-weight *number*

| | |
|------------|--|
| Synopsis | Class weight override for the queue |
| Context | configure service ipipe <i>string sap string egress qos sap-egress overrides queue reference hs-class-weight number</i> |
| Tree | hs-class-weight |
| Range | 1 2 4 8 |
| Introduced | 20.10.R1 |
| Platforms | 7750 SR-7/12/12e |

hs-wred-queue

| | |
|------------|---|
| Synopsis | Enter the hs-wred-queue context |
| Context | configure service ipipe <i>string sap string egress qos sap-egress overrides queue reference hs-wred-queue</i> |
| Tree | hs-wred-queue |
| Introduced | 20.10.R1 |
| Platforms | 7750 SR-7/12/12e |

policy reference

| | |
|------------|---|
| Synopsis | Slope policy applied to the HSQ queue group queue |
| Context | configure service ipipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference hs-wred-queue policy reference |
| Tree | policy |
| Reference | configure qos slope-policy <i>string</i> |
| Introduced | 20.10.R1 |
| Platforms | 7750 SR-7/12/12e |

hs-wrr-weight *number*

| | |
|------------|--|
| Synopsis | WRR weight to parent with the queue into the scheduler |
| Context | configure service ipipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference hs-wrr-weight <i>number</i> |
| Tree | hs-wrr-weight |
| Range | 1 to 127 |
| Default | 1 |
| Introduced | 20.10.R1 |
| Platforms | 7750 SR-7/12/12e |

mbs (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | MBS |
| Context | configure service ipipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference mbs (<i>number</i> <i>keyword</i>) |
| Tree | mbs |
| Range | 0 to 1073741824 |
| Units | bytes |
| Options | auto |
| Introduced | 20.10.R1 |
| Platforms | All |

monitor-queue-depth

| | |
|----------|---|
| Synopsis | Enable the monitor-queue-depth context |
|----------|---|

| | |
|------------|--|
| Context | configure service ipipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference monitor-queue-depth |
| Tree | monitor-queue-depth |
| Introduced | 20.10.R1 |
| Platforms | All |

fast-polling *boolean*

| | |
|-------------|---|
| Synopsis | Enable fast polling of the queue depth |
| Context | configure service ipipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference monitor-queue-depth fast-polling <i>boolean</i> |
| Tree | fast-polling |
| Description | When configured to true , this command enables fast polling of the queue depth. Faster polling allows a more accurate view of the actual depth. |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | All |

violation-threshold *decimal-number*

| | |
|-------------|---|
| Synopsis | Threshold for queue depth before violation is raised |
| Context | configure service ipipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference monitor-queue-depth violation-threshold <i>decimal-number</i> |
| Tree | violation-threshold |
| Description | This command specifies the threshold for the queue MBS. When the queue depth exceeds the threshold value, a violation is registered. |
| Range | 0.01 to 99.99 |
| Introduced | 20.10.R1 |
| Platforms | All |

parent

| | |
|------------|--|
| Synopsis | Enter the parent context |
| Context | configure service ipipe <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference parent |
| Tree | parent |
| Introduced | 20.10.R1 |

Platforms All

cir-weight *number*

Synopsis CIR parameter that overrides parent for queue group

| Context | configure service ipipe string sap string egress qos scheduler-policy overrides scheduler string |
| Tree | scheduler |
| Introduced | 20.10.R1 |
| Platforms | All |

[scheduler-name] string

| | |
|---------------|--|
| Synopsis | Scheduler name |
| Context | configure service ipipe string sap string egress qos scheduler-policy overrides scheduler string |
| Tree | scheduler |
| Description | <p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context does not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context is not change.</p> |
| String Length | 1 to 32 |
| Notes | This element is part of a list key. |
| Introduced | 20.10.R1 |
| Platforms | All |

parent

| | |
|------------|--|
| Synopsis | Enter the parent context |
| Context | configure service ipipe string sap string egress qos scheduler-policy overrides scheduler string parent |

[scheduler-name] *string*

| | |
|---------------|--|
| Synopsis | Scheduler name |
| Context | configure service ipipe <i>string</i> sap <i>string</i> ingress qos scheduler-policy overrides scheduler <i>string</i> |
| Tree | scheduler |
| Description | <p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context does not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context is not change.</p> |
| String Length | 1 to 32 |
| Notes | This element is part of a list key. |
| Introduced | 20.10.R1 |
| Platforms | All |

link-map-profile *number*

| | |
|-------------|--|
| Synopsis | LAG link map profile for a SAP or network interface |
| Context | configure service ipipe <i>string</i> sap <i>string</i> lag link-map-profile <i>number</i> |
| Tree | link-map-profile |
| Description | This command assigns a preconfigured LAG link map profile to a SAP or network interface configured on a LAG or a PW port that exists on a LAG. After an operator assigns a LAG link map profile, the system rehashes the SAP or network interface egress traffic over the LAG as required by the new configuration.

If the LAG link map profile for a SAP or network interface is deleted, the system reverts back to per-flow hashing. |
| Range | 1 to 64 |
| Introduced | 20.10.R1 |
| Platforms | All |

| Platforms | All |

service-mtu *number*

| | |
|----------|---|
| Synopsis | MTU size |
| Context | configure service ipipe <i>string service-mtu number</i> |
| Tree | service-mtu |

Description This command configures the Maximum Transmission Unit (MTU) value (payload) for the service. The system uses the value to validate the operational state of the SAP and SDP binding within the service. The value overrides the default MTU for the service type.

The service MTU and a SAP's service delineation encapsulation overhead (4 bytes for a dot1q tag) are used to derive the required MTU of the physical port or channel on which the SAP was created. If the required payload is larger than the port or channel MTU, the SAP is placed in an inoperative state. If the required MTU is equal to or less than the port or channel MTU, the SAP transitions to the operative state.

When binding an SDP to a service, the service MTU is compared to the path MTU associated with the SDP. The path MTU can be administratively defined in the context of the SDP. The default or administrative path MTU can be dynamically reduced due to the MTU capabilities discovered by the tunneling mechanism of the SDP or the egress interface MTU capabilities based on the next hop in the tunnel path. If the service MTU is larger than the path MTU, the SDP binding for the service is placed in an inoperative state. If the service MTU is equal to or less than the path MTU, the SDP binding is placed in an operational state.

If a service MTU, port or channel MTU, or path MTU is dynamically or administratively modified, all associated SAP and SDP binding operational states are automatically reevaluated.

Binding operational states are automatically reevaluated.

For I-VPLS and Epipes bound to a B-VPLS, the service MTU must be at least 18 bytes smaller than the B-VPLS service MTU to accommodate the PBB header.

Because this connects a Layer 2 to a Layer 3 service, adjust the service MTU under the Epipe service. The MTU that is advertised from the Epipe side is service MTU minus EtherHeaderSize.

In the **configure service epipe spoke-sdp** context, the **adv-service-mtu** command can be used to override the configured MTU value used in T-LDP signaling to the far-end of an Epipe spoke-sdp. The **adv-service-mtu** command is also used to validate the value signaled by the far-end PE.

 Introduced 20.10.R1
 Platforms All

action *keyword*

Synopsis Action applied for matching packets
 Context **configure** [service](#) [mrp](#) [policy](#) *string* [entry](#) *number* [action](#) *keyword*
 Tree [action](#)

| | |
|------------|---------------------------|
| Options | block, allow, end-station |
| Introduced | 20.10.R1 |
| Platforms | All |

description *string*

| | |
|---------------|---|
| Synopsis | Text description |
| Context | configure service mrp policy <i>string</i> entry <i>number</i> description <i>string</i> |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 20.10.R1 |
| Platforms | All |

match

| | |
|------------|---|
| Synopsis | Enter the match context |
| Context | configure service mrp policy <i>string</i> entry <i>number</i> match |
| Tree | match |
| Introduced | 20.10.R1 |
| Platforms | All |

isid [[value](#)] *number*

| | |
|------------|--|
| Synopsis | Enter the isid list instance |
| Context | configure service mrp policy <i>string</i> entry <i>number</i> match isid <i>number</i> |
| Tree | isid |
| Introduced | 20.10.R1 |
| Platforms | All |

[value] *number*

| | |
|----------|--|
| Synopsis | Lowest service instance ID to match the entry |
| Context | configure service mrp policy <i>string</i> entry <i>number</i> match isid <i>number</i> |
| Tree | isid |
| Range | 0 to 16777215 |

| | |
|------------|-------------------------------------|
| Notes | This element is part of a list key. |
| Introduced | 20.10.R1 |
| Platforms | All |

higher-value *number*

| | |
|------------|---|
| Synopsis | Highest service instance ID to match the entry |
| Context | configure service mrp policy string entry number match isid number higher-value number |
| Tree | higher-value |
| Range | 0 to 16777215 |
| Introduced | 20.10.R1 |
| Platforms | All |

scope *keyword*

| | |
|------------|--|
| Synopsis | Specify the scope of the mrp-policy definition |
| Context | configure service mrp policy string scope keyword |
| Tree | scope |
| Options | exclusive, template |
| Default | template |
| Introduced | 20.10.R1 |
| Platforms | All |

nat

| | |
|------------|--|
| Synopsis | Enter the nat context |
| Context | configure service nat |
| Tree | nat |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

classifier [[name](#)] *string*

| | |
|----------|---|
| Synopsis | Enter the classifier list instance |
|----------|---|

| | |
|----------------|---|
| Context | configure service nat classifier <i>string</i> |
| Tree | classifier |
| Max. Instances | 8 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

[name] *string*

| | |
|---------------|---|
| Synopsis | NAT classifier name |
| Context | configure service nat classifier <i>string</i> |
| Tree | classifier |
| String Length | 1 to 32 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

default

| | |
|------------|--|
| Synopsis | Enter the default context |
| Context | configure service nat classifier <i>string</i> default |
| Tree | default |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

action

| | |
|------------|--|
| Synopsis | Enter the action context |
| Context | configure service nat classifier <i>string</i> default action |
| Tree | action |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

destination-nat

| | |
|------------|--|
| Synopsis | Enable the destination-nat context |
| Context | configure service nat classifier <i>string</i> default action destination-nat |
| Tree | destination-nat |
| Notes | The following elements are part of a choice: (destination-nat , dnat , and dnat-ip-address) or forward . |
| Introduced | 21.2.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

ip-address *string*

| | |
|------------|---|
| Synopsis | Substitute destination IP address of matching packets |
| Context | configure service nat classifier <i>string</i> default action destination-nat ip-address <i>string</i> |
| Tree | ip-address |
| Introduced | 21.2.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

forward

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

| | |
|------------|--|
| Synopsis | Forward mode of operation |
| Context | configure service nat classifier <i>string</i> default action forward |
| Tree | forward |
| Notes | The following elements are part of a choice: (destination-nat , dnat , and dnat-ip-address) or forward . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

dnat-ip-address *string*

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

| | |
|----------|--|
| Synopsis | Default destination IP address for matching entries with dNAT action |
|----------|--|

| | |
|------------|--|
| Context | configure service nat classifier <i>string</i> default dnat-ip-address <i>string</i> |
| Tree | dnat-ip-address |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

description *string*

| | |
|---------------|--|
| Synopsis | Text description |
| Context | configure service nat classifier <i>string</i> description <i>string</i> |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

entry [**id**] *number*

| | |
|----------------|--|
| Synopsis | Enter the entry list instance |
| Context | configure service nat classifier <i>string</i> entry <i>number</i> |
| Tree | entry |
| Max. Instances | 32 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

[id] *number*

| | |
|------------|--|
| Synopsis | Classifier rule entry ID |
| Context | configure service nat classifier <i>string</i> entry <i>number</i> |
| Tree | entry |
| Range | 1 to 1000 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

action

| | |
|------------|--|
| Synopsis | Enter the action context |
| Context | configure service nat classifier string entry number action |
| Tree | action |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

destination-nat

| | |
|------------|--|
| Synopsis | Enable the destination-nat context |
| Context | configure service nat classifier string entry number action destination-nat |
| Tree | destination-nat |
| Notes | The following elements are part of a choice: (destination-nat , dnat , and dnat-ip-address) or forward . |
| Introduced | 21.2.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

ip-address *string*

| | |
|------------|--|
| Synopsis | Replacement destination IP address for packets |
| Context | configure service nat classifier string entry number action destination-nat ip-address string |
| Tree | ip-address |
| Introduced | 21.2.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

forward

**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

| | |
|----------|--|
| Synopsis | Forward mode of operation |
| Context | configure service nat classifier string entry number action forward |
| Tree | forward |
| Notes | The following elements are part of a choice: (destination-nat , dnat , and dnat-ip-address) or forward . |

Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

description *string*

Synopsis Text description
 Context **configure** [service nat classifier](#) *string entry number description string*
 Tree [description](#)
 String Length 1 to 80
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

match

Synopsis Enter the **match** context
 Context **configure** [service nat classifier](#) *string entry number match*
 Tree [match](#)
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

dst-port-range

Synopsis Enter the **dst-port-range** context
 Context **configure** [service nat classifier](#) *string entry number match dst-port-range*
 Tree [dst-port-range](#)
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

end *number*

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis Upper bound of the port range
 Context **configure** [service nat classifier](#) *string entry number match dst-port-range end number*
 Tree [end](#)

| | |
|------------|--|
| Range | 0 1 to 65535 |
| Default | 65535 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

start number**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

| | |
|------------|---|
| Synopsis | Lower bound of the port range |
| Context | configure service nat classifier string entry number match dst-port-range start number |
| Tree | start |
| Range | 0 1 to 65535 |
| Default | 0 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

foreign-ip-address string**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

| | |
|------------|---|
| Synopsis | Foreign IP address as the match criterion |
| Context | configure service nat classifier string entry number match foreign-ip-address string |
| Tree | foreign-ip-address |
| Introduced | 19.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

protocol keyword**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

| | |
|----------|--|
| Synopsis | IP protocol to match |
| Context | configure service nat classifier string entry number match protocol keyword |
| Tree | protocol |

| | |
|------------|--|
| Options | tcp, udp |
| Default | udp |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

deterministic-script

| | |
|------------|---|
| Synopsis | Enter the deterministic-script context |
| Context | configure service nat deterministic-script |
| Tree | deterministic-script |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

location string

| | |
|---------------|---|
| Synopsis | Remote location where Python script is exported |
| Context | configure service nat deterministic-script location string |
| Tree | location |
| String Length | 1 to 180 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

firewall-policy [name] string

| | |
|----------------|--|
| Synopsis | Enter the firewall-policy list instance |
| Context | configure service nat firewall-policy string |
| Tree | firewall-policy |
| Description | Commands in this context configure the attributes of the firewall policy, for use in contexts where basic protection from outside attack vectors is required.

Firewall policies cannot be deleted if they are in use. |
| Max. Instances | 2048 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

[name] *string*

| | |
|---------------|---|
| Synopsis | Firewall policy name |
| Context | configure service nat firewall-policy string |
| Tree | firewall-policy |
| String Length | 1 to 32 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

alg

| | |
|-------------|--|
| Synopsis | Enter the alg context |
| Context | configure service nat firewall-policy string alg |
| Tree | alg |
| Description | Commands in this context configure the Application Layer Gateway (ALG) attributes of the policy. |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

ftp *boolean*

| | |
|------------|---|
| Synopsis | Use FTP ALG for the policy |
| Context | configure service nat firewall-policy string alg ftp boolean |
| Tree | ftp |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

rtsp *boolean*

| | |
|-------------|--|
| Synopsis | Use RTSP ALG for the policy |
| Context | configure service nat firewall-policy string alg rtsp boolean |
| Tree | rtsp |
| Description | When configured to true , Real-Time Streaming Protocol (RTSP) ALG is used for the policy. |

| | |
|------------|------------------------------------|
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

sip *boolean*

| | |
|------------|--|
| Synopsis | Use SIP ALG for the policy |
| Context | configure service nat firewall-policy <i>string alg sip boolean</i> |
| Tree | sip |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

description *string*

| | |
|---------------|---|
| Synopsis | Text description |
| Context | configure service nat firewall-policy <i>string description string</i> |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

domain

| | |
|-------------|--|
| Synopsis | Enter the domain context |
| Context | configure service nat firewall-policy <i>string domain</i> |
| Tree | domain |
| Description | Commands in this context configure the attributes of the domain for the firewall policy. All associated traffic must be part of the prefixes specified by this domain. |
| Notes | The following elements are part of a choice: domain or I2-outside . |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

name *string*

| | |
|---------------|--|
| Synopsis | Firewall domain name |
| Context | configure service nat firewall-policy <i>string</i> domain name <i>string</i> |
| Tree | name |
| String Length | 1 to 32 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

router-instance *string*

| | |
|-------------|---|
| Synopsis | Router or VPRN service name |
| Context | configure service nat firewall-policy <i>string</i> domain router-instance <i>string</i> |
| Tree | router-instance |
| Description | This command specifies the router instance or VPRN service for this domain. All associated traffic must be part of the prefixes specified by this domain. |
| Introduced | 16.0.R4 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

filtering *keyword*

| | |
|------------|---|
| Synopsis | Filtering method for inbound traffic for the policy |
| Context | configure service nat firewall-policy <i>string</i> filtering <i>keyword</i> |
| Tree | filtering |
| Options | endpoint-independent, address-and-port-dependent |
| Default | endpoint-independent |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

I2-outside

| | |
|-------------|--|
| Synopsis | Use Layer 2 outside service address location |
| Context | configure service nat firewall-policy <i>string</i> I2-outside |
| Tree | I2-outside |
| Description | This command specifies Layer 2 outside service address location for the NAT policy instead of Layer 3 outside service. |

| | |
|------------|---|
| Notes | The following elements are part of a choice: domain or I2-outside . |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

port-limits

| | |
|------------|---|
| Synopsis | Enter the port-limits context |
| Context | configure service nat firewall-policy string port-limits |
| Tree | port-limits |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

forwarding *number*

| | |
|------------|---|
| Synopsis | Maximum number of port forwarding entries |
| Context | configure service nat firewall-policy string port-limits forwarding number |
| Tree | forwarding |
| Range | 1 to 64 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

priority-sessions

| | |
|------------|---|
| Synopsis | Enter the priority-sessions context |
| Context | configure service nat firewall-policy string priority-sessions |
| Tree | priority-sessions |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

fc

| | |
|----------|--|
| Synopsis | Enter the fc context |
| Context | configure service nat firewall-policy string priority-sessions fc |
| Tree | fc |

| | |
|-------------|---|
| Description | Commands in this context specify which Forwarding Class (FC) options have prioritized sessions. |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

af boolean

| | |
|-------------|--|
| Synopsis | Prioritize traffic from AF forwarding classes |
| Context | configure service nat firewall-policy <i>string</i> priority-sessions fc af boolean |
| Tree | af |
| Description | When configured to true , traffic from Assured Forwarding (AF) FC sessions is prioritized. When configured to false , AF traffic is not prioritized. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

be boolean

| | |
|-------------|---|
| Synopsis | Prioritize traffic from BE forwarding classes |
| Context | configure service nat firewall-policy <i>string</i> priority-sessions fc be boolean |
| Tree | be |
| Description | When configured to true , traffic from Best Effort (BE) FC sessions is prioritized. When configured to false , BE traffic is not prioritized. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

ef boolean

| | |
|------------|--|
| Synopsis | Prioritize traffic from EF forwarding classes |
| Context | configure service nat firewall-policy <i>string</i> priority-sessions fc ef boolean |
| Tree | ef |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

h1 *boolean*

| | |
|-------------|--|
| Synopsis | Prioritize traffic from H1 forwarding classes |
| Context | configure service nat firewall-policy <i>string</i> priority-sessions fc h1 <i>boolean</i> |
| Tree | h1 |
| Description | When configured to true , traffic from H1 sessions is prioritized. When configured to false, H1 traffic is not prioritized. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

h2 *boolean*

| | |
|------------|---|
| Synopsis | Prioritize traffic from H2 forwarding classes |
| Context | configure service nat firewall-policy <i>string</i> priority-sessions fc h2 <i>boolean</i> |
| Tree | h2 |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

l1 *boolean*

| | |
|------------|---|
| Synopsis | Prioritize traffic from L1 forwarding classes |
| Context | configure service nat firewall-policy <i>string</i> priority-sessions fc l1 <i>boolean</i> |
| Tree | l1 |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

l2 *boolean*

| | |
|----------|---|
| Synopsis | Prioritize traffic from L2 forwarding classes |
| Context | configure service nat firewall-policy <i>string</i> priority-sessions fc l2 <i>boolean</i> |
| Tree | l2 |

| | |
|-------------|--|
| Description | When configured to true , traffic from L2 sessions is prioritized. When configured to false, L2 traffic is not prioritized. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

nc boolean

| | |
|------------|---|
| Synopsis | Prioritize traffic from NC forwarding classes |
| Context | configure service nat firewall-policy string priority-sessions fc nc boolean |
| Tree | nc |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

session-limits

| | |
|-------------|---|
| Synopsis | Enter the session-limits context |
| Context | configure service nat firewall-policy string session-limits |
| Tree | session-limits |
| Description | Commands in this context configure session-limit attributes for the policy. |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

max number

| | |
|------------|---|
| Synopsis | Maximum number of sessions per subscriber |
| Context | configure service nat firewall-policy string session-limits max number |
| Tree | max |
| Range | 1 to 65535 |
| Default | 65535 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

reserved number

| | |
|-------------|--|
| Synopsis | Number of sessions reserved for prioritized sessions |
| Context | configure service nat firewall-policy string session-limits reserved number |
| Tree | reserved |
| Description | This command configures the number of sessions per block that are reserved for prioritized sessions. |
| Range | 1 to 65534 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

watermarks

| | |
|-------------|---|
| Synopsis | Enable the watermarks context |
| Context | configure service nat firewall-policy string session-limits watermarks |
| Tree | watermarks |
| Description | This command configures watermarks for NAT resources. |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

high number

| | |
|-------------|---|
| Synopsis | High watermark percentage |
| Context | configure service nat firewall-policy string session-limits watermarks high number |
| Tree | high |
| Description | This command configures the high threshold value as a percentage of the total port-block space in a NAT pool. |
| Range | 0 to 100 |
| Units | percent |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

low number

| | |
|----------|--------------------------|
| Synopsis | Low watermark percentage |
|----------|--------------------------|

| | |
|-------------|--|
| Context | configure service nat firewall-policy string session-limits watermarks low number |
| Tree | low |
| Description | This command configures the low threshold value as a percentage of the total port-block space in a NAT pool. |
| Range | 0 to 100 |
| Units | percent |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

tcp

| | |
|-------------|--|
| Synopsis | Enter the tcp context |
| Context | configure service nat firewall-policy string tcp |
| Tree | tcp |
| Description | Commands in this context configure the transmission control protocol (TCP) attributes of the policy. |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

mss-adjust number

| | |
|-------------|--|
| Synopsis | TCP MSS adjustment value |
| Context | configure service nat firewall-policy string tcp mss-adjust number |
| Tree | mss-adjust |
| Description | This command configures the value to use to adjust the TCP Maximum Segment Size (MSS) option, if not already present or the present value is higher. |
| Range | 160 to 10240 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

timeouts

| | |
|----------|--|
| Synopsis | Enter the timeouts context |
| Context | configure service nat firewall-policy string timeouts |

| | |
|-------------|--|
| Tree | timeouts |
| Description | Commands in this context configure the attributes of session idle timeouts for the policy. |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

icmp6-query *number*

| | |
|------------|---|
| Synopsis | Timeout applied to an ICMPv6 Query session |
| Context | configure service nat firewall-policy <i>string</i> timeouts icmp6-query <i>number</i> |
| Tree | icmp6-query |
| Range | 60 to 240 |
| Units | seconds |
| Default | 60 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

sip *number*

| | |
|------------|---|
| Synopsis | SIP inactive media timeout |
| Context | configure service nat firewall-policy <i>string</i> timeouts sip <i>number</i> |
| Tree | sip |
| Range | 10 to 7200 |
| Units | seconds |
| Default | 120 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

tcp

| | |
|-------------|---|
| Synopsis | Enter the tcp context |
| Context | configure service nat firewall-policy <i>string</i> timeouts tcp |
| Tree | tcp |
| Description | Commands in this context configure TCP timeout attributes. |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

established number

| | |
|------------|---|
| Synopsis | Idle timeout for TCP session in established state |
| Context | configure service nat firewall-policy string timeouts tcp established number |
| Tree | established |
| Range | 60 to 86400 |
| Units | seconds |
| Default | 7440 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

rst number

| | |
|-------------|---|
| Synopsis | Suspend time for TCP connection ports closed by RST |
| Context | configure service nat firewall-policy string timeouts tcp rst number |
| Tree | rst |
| Description | This command configures the suspend time for outside TCP ports that are used in translations for TCP connections, when they are closed by TCP Reset (RST). After the timer expires, the outside ports can be reused for new TCP translations. |
| Range | 0 to 240 |
| Units | seconds |
| Default | 0 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

syn number

| | |
|------------|---|
| Synopsis | TCP session timeout when synchronizing initial sequence |
| Context | configure service nat firewall-policy string timeouts tcp syn number |
| Tree | syn |
| Range | 6 to 86400 |
| Units | seconds |
| Default | 15 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

time-wait *number*

| | |
|------------|---|
| Synopsis | Timeout applied to a TCP session in the time-wait state |
| Context | configure service nat firewall-policy <i>string</i> timeouts tcp time-wait <i>number</i> |
| Tree | time-wait |
| Range | 0 to 240 |
| Units | seconds |
| Default | 0 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

transitory *number*

| | |
|------------|--|
| Synopsis | Idle timeout for TCP session in transitory state |
| Context | configure service nat firewall-policy <i>string</i> timeouts tcp transitory <i>number</i> |
| Tree | transitory |
| Range | 60 to 86400 |
| Units | seconds |
| Default | 240 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

udp

| | |
|-------------|---|
| Synopsis | Enter the udp context |
| Context | configure service nat firewall-policy <i>string</i> timeouts udp |
| Tree | udp |
| Description | Commands in this context configure the User Datagram Protocol (UDP) mapping timeout attributes. |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

dns *number*

| | |
|----------|---|
| Synopsis | Timeout applied to UDP session with destination port 53 |
|----------|---|

| | |
|------------|---|
| Context | configure service nat firewall-policy string timeouts udp dns number |
| Tree | dns |
| Range | 15 to 86400 |
| Units | seconds |
| Default | 15 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

initial number

| | |
|------------|---|
| Synopsis | UDP mapping timeout applied to new sessions |
| Context | configure service nat firewall-policy string timeouts udp initial number |
| Tree | initial |
| Range | 10 to 300 |
| Units | seconds |
| Default | 15 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

normal number

| | |
|------------|--|
| Synopsis | UDP mapping timeout |
| Context | configure service nat firewall-policy string timeouts udp normal number |
| Tree | normal |
| Range | 60 to 86400 |
| Units | seconds |
| Default | 300 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

unknown-protocol number**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

| | |
|------------|--|
| Synopsis | Timeout for flows with an unknown protocol |
| Context | configure service nat firewall-policy string timeouts unknown-protocol number |
| Tree | unknown-protocol |
| Range | 60 to 86400 |
| Units | seconds |
| Default | 300 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

udp

| | |
|------------|---|
| Synopsis | Enter the udp context |
| Context | configure service nat firewall-policy string udp |
| Tree | udp |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

inbound-refresh *boolean*

| | |
|-------------|---|
| Synopsis | Extend UDP session timeout on inbound traffic |
| Context | configure service nat firewall-policy string udp inbound-refresh boolean |
| Tree | inbound-refresh |
| Description | When configured to true , this command extends the UDP session timeout on inbound traffic.
When configured to false , the UDP session timeout is not extended. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

unknown-protocols

| | |
|----------|---|
| Synopsis | Enter the unknown-protocols context |
| Context | configure service nat firewall-policy string unknown-protocols |
| Tree | unknown-protocols |

| | |
|-------------|---|
| Description | Commands in this context configure the treatment of flows of unknown Layer 4 protocols that cannot be natively handled by the system. |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

all

| | |
|-------------|--|
| Synopsis | Allow all protocols to create unknown flows |
| Context | configure service nat firewall-policy <i>string</i> unknown-protocols all |
| Tree | all |
| Description | This command specifies that all protocols are permitted to create unknown flows. Protocol or IPv6 extension header values that are explicitly supported by SR OS are not treated as unknown protocols. |
| Notes | The following elements are part of a choice: all or protocol . |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

protocol *number*

| | |
|----------------|---|
| Synopsis | IANA number of protocol allowed to create unknown flow |
| Context | configure service nat firewall-policy <i>string</i> unknown-protocols protocol <i>number</i> |
| Tree | protocol |
| Description | This command specifies the Internet Assigned Numbers Authority (IANA) number of a protocol that is permitted to create unknown flows. Protocol or IPv6 extension header values that are explicitly supported by SR OS can be configured but are not treated as unknown protocols. |
| Range | 0 to 255 |
| Max. Instances | 8 |
| Notes | The following elements are part of a choice: all or protocol . |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

map-t

| | |
|----------|--|
| Synopsis | Enter the map-t context |
| Context | configure service nat map-t |

| | |
|------------|-----------------------|
| Tree | map-t |
| Introduced | 16.0.R4 |
| Platforms | VSR |

domain [[name](#)] *string*

| | |
|----------------|--|
| Synopsis | Enter the domain list instance |
| Context | configure service nat map-t domain string |
| Tree | domain |
| Max. Instances | 63 |
| Introduced | 16.0.R4 |
| Platforms | VSR |

[name] *string*

| | |
|---------------|--|
| Synopsis | MAP domain name |
| Context | configure service nat map-t domain string |
| Tree | domain |
| String Length | 1 to 32 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R4 |
| Platforms | VSR |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of the MAP domain |
| Context | configure service nat map-t domain string admin-state keyword |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R4 |
| Platforms | VSR |

description *string*

| | |
|---------------|---|
| Synopsis | Text description |
| Context | configure service nat map-t domain <i>string</i> description <i>string</i> |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R4 |
| Platforms | VSR |

dmr-prefix *string***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | The Default Mapping Rule prefix |
| Context | configure service nat map-t domain <i>string</i> dmr-prefix <i>string</i> |
| Tree | dmr-prefix |
| Introduced | 16.0.R4 |
| Platforms | VSR |

ip-fragmentation

| | |
|------------|--|
| Synopsis | Enter the ip-fragmentation context |
| Context | configure service nat map-t domain <i>string</i> ip-fragmentation |
| Tree | ip-fragmentation |
| Introduced | 16.0.R4 |
| Platforms | VSR |

v6-frag-header *boolean*

| | |
|------------|--|
| Synopsis | Enable insertion of fragmentation header in IPv6 packet |
| Context | configure service nat map-t domain <i>string</i> ip-fragmentation v6-frag-header <i>boolean</i> |
| Tree | v6-frag-header |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | VSR |

mapping-rule [[rule-name](#)] *string*

| | |
|----------------|--|
| Synopsis | Enter the mapping-rule list instance |
| Context | configure service nat map-t domain <i>string</i> mapping-rule <i>string</i> |
| Tree | mapping-rule |
| Max. Instances | 16383 |
| Introduced | 16.0.R4 |
| Platforms | VSR |

[rule-name] *string*

| | |
|---------------|--|
| Synopsis | The name that identifies this mapping rule |
| Context | configure service nat map-t domain <i>string</i> mapping-rule <i>string</i> |
| Tree | mapping-rule |
| String Length | 1 to 32 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R4 |
| Platforms | VSR |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of the MAP rule |
| Context | configure service nat map-t domain <i>string</i> mapping-rule <i>string</i> admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R4 |
| Platforms | VSR |

description *string*

| | |
|----------|--|
| Synopsis | Text description |
| Context | configure service nat map-t domain <i>string</i> mapping-rule <i>string</i> description <i>string</i> |
| Tree | description |

String Length 1 to 80
 Introduced 16.0.R4
 Platforms VSR

ea-length *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis The length of the EA bits field in the End-user IPv6 prefix part of the IPv6 Map Address
 Context **configure** [service nat map-t domain string mapping-rule string ea-length number](#)
 Tree [ea-length](#)
 Range 0 to 48
 Default 0
 Introduced 16.0.R4
 Platforms VSR

ipv4-prefix *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis The IPv4 prefix
 Context **configure** [service nat map-t domain string mapping-rule string ipv4-prefix string](#)
 Tree [ipv4-prefix](#)
 Introduced 16.0.R4
 Platforms VSR

psid-offset *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis The offset of the Port Set ID (PSID) within a 16 bits wide port space
 Context **configure** [service nat map-t domain string mapping-rule string psid-offset number](#)

| | |
|------------|-----------------------------|
| Tree | psid-offset |
| Range | 0 to 16 |
| Default | 6 |
| Introduced | 16.0.R4 |
| Platforms | VSR |

rule-prefix *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | The IPv6 prefix |
| Context | configure service nat map-t domain <i>string</i> mapping-rule <i>string</i> rule-prefix <i>string</i> |
| Tree | rule-prefix |
| Introduced | 16.0.R4 |
| Platforms | VSR |

mtu *number*

| | |
|------------|--|
| Synopsis | Configure the MTU |
| Context | configure service nat map-t domain <i>string</i> mtu <i>number</i> |
| Tree | mtu |
| Range | 160 to 8686 |
| Default | 8686 |
| Introduced | 16.0.R4 |
| Platforms | VSR |

tcp-mss-adjust *number*

| | |
|------------|---|
| Synopsis | The value to adjust the TCP Maximum Segment Size (MSS) option |
| Context | configure service nat map-t domain <i>string</i> tcp-mss-adjust <i>number</i> |
| Tree | tcp-mss-adjust |
| Range | 0 160 to 8626 |
| Default | 0 |
| Introduced | 16.0.R4 |

Platforms VSR

nat-policy [*name*] *string*

Synopsis Enter the **nat-policy** list instance
 Context **configure service nat nat-policy** *string*
 Tree [nat-policy](#)
 Max. Instances 4096
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

[name] *string*

Synopsis NAT policy name
 Context **configure service nat nat-policy** *string*
 Tree [nat-policy](#)
 String Length 1 to 32
 Notes This element is part of a list key.
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

alg

Synopsis Enter the **alg** context
 Context **configure service nat nat-policy** *string* **alg**
 Tree [alg](#)
 Description Commands in this context configure the Application Layer Gateway (ALG) attributes of the policy.
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

ftp *boolean*

Synopsis Use FTP ALG for the policy
 Context **configure service nat nat-policy** *string* **alg ftp** *boolean*

| | |
|------------|--|
| Tree | ftp |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

pptp *boolean*

| | |
|-------------|---|
| Synopsis | Use PPTP ALG for the policy |
| Context | configure service nat nat-policy <i>string alg pptp boolean</i> |
| Tree | pptp |
| Description | <p>When configured to true, the policy uses Point-to-Point Tunneling Protocol (PPTP) ALG.</p> <p>PPTP sessions can only be initiated from NAT inside.</p> <p>GRE traffic is allowed through NAT only if the corresponding mapping exists.</p> <p>There can be seven calls (GRE tunnels) per control session.</p> <p>When configured to false, PPTP ALG is not used.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

rtsp *boolean*

| | |
|-------------|--|
| Synopsis | Use RTSP ALG for the policy |
| Context | configure service nat nat-policy <i>string alg rtsp boolean</i> |
| Tree | rtsp |
| Description | When configured to true , Real-Time Streaming Protocol (RTSP) ALG is used for the policy. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

sip *boolean*

| | |
|----------|---|
| Synopsis | Use SIP ALG for the policy |
| Context | configure service nat nat-policy <i>string alg sip boolean</i> |
| Tree | sip |

| | |
|------------|--|
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

block-limit *number*

| | |
|------------|--|
| Synopsis | Maximum number of port blocks per subscriber |
| Context | configure service nat nat-policy <i>string</i> block-limit <i>number</i> |
| Tree | block-limit |
| Range | 1 to 40 |
| Default | 1 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

description *string*

| | |
|---------------|--|
| Synopsis | Text description |
| Context | configure service nat nat-policy <i>string</i> description <i>string</i> |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

dnat

| | |
|------------|---|
| Synopsis | Enter the dnat context |
| Context | configure service nat nat-policy <i>string</i> dnat |
| Tree | dnat |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

classifier *reference***WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

| | |
|-------------|---|
| Synopsis | NAT classifier |
| Context | configure service nat nat-policy <i>string</i> dnat classifier <i>reference</i> |
| Tree | classifier |
| Description | When configured within the NAT policy, this command references a NAT classifier that activates DNAT functionality. The configuration uses a filter-like approach to identify the traffic that is subjected to DNAT. It is required for translation of the destination IP address. |
| Reference | configure service nat classifier <i>string</i> |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

dnat-only

| | |
|-------------|--|
| Synopsis | Enable the dnat-only context |
| Context | configure service nat nat-policy <i>string</i> dnat-only |
| Tree | dnat-only |
| Description | Commands in this context configure the attributes of DNAT-only. When DNAT-only is configured, no source or port NAT (SNAPT) is performed. Only the destination IP address (going from inside to outside) is translated; the source IP address and port are not translated. |
| Notes | The following elements are part of a choice: dnat-only , l2-outside , or pool . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

nat-group *reference*

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | NAT group |
| Context | configure service nat nat-policy <i>string</i> dnat-only nat-group <i>reference</i> |
| Tree | nat-group |
| Description | This command configures the NAT group in which DNAT translation takes place for the outside routing context. |

| | |
|------------|---|
| Reference | configure isa nat-group number |
| Notes | The following elements are part of a mandatory choice: nat-group or wlan-gw-group . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

router-instance *string*

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

| | |
|------------|---|
| Synopsis | Router name or VPRN service name |
| Context | configure service nat nat-policy string dnat-only router-instance string |
| Tree | router-instance |
| Notes | This element is mandatory. |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

wlan-gw-group *reference*

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | WLAN GW group used for NAT |
| Context | configure service nat nat-policy string dnat-only wlan-gw-group reference |
| Tree | wlan-gw-group |
| Description | This command configures the NAT WLAN Gateway (GW) group in which DNAT translation takes place for the outside routing context. |
| Reference | configure isa wlan-gw-group number |
| Notes | The following elements are part of a mandatory choice: nat-group or wlan-gw-group . |
| Introduced | 16.0.R4 |
| Platforms | 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

filtering *keyword*

| | |
|------------|--|
| Synopsis | Filtering method for inbound traffic for the policy |
| Context | configure service nat nat-policy <i>string</i> filtering <i>keyword</i> |
| Tree | filtering |
| Options | endpoint-independent, address-and-port-dependent |
| Default | endpoint-independent |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

flow-log-policy

| | |
|------------|---|
| Synopsis | Enter the flow-log-policy context |
| Context | configure service nat nat-policy <i>string</i> flow-log-policy |
| Tree | flow-log-policy |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

ipfix *reference*

| | |
|-------------|--|
| Synopsis | IPFIX export policy |
| Context | configure service nat nat-policy <i>string</i> flow-log-policy ipfix <i>reference</i> |
| Tree | ipfix |
| Description | This command specifies an IP flow information export policy for the flow-log policy. |
| Reference | configure service ipfix export-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

syslog *reference*

| | |
|-------------|---|
| Synopsis | Syslog export policy name |
| Context | configure service nat nat-policy <i>string</i> flow-log-policy syslog <i>reference</i> |
| Tree | syslog |
| Description | This command configures a syslog export policy with a set of transport parameters used to transmit NAT flow records in syslog format to an external collector node. The policy name is referenced from the NAT policy applied to an inside routing context. |

| | |
|------------|---|
| Reference | configure service nat syslog export-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

I2-outside

| | |
|-------------|--|
| Synopsis | Use Layer 2 outside service address location |
| Context | configure service nat nat-policy <i>string</i> I2-outside |
| Tree | I2-outside |
| Description | This command specifies Layer 2 outside service address location for the NAT policy instead of Layer 3 outside service. |
| Notes | The following elements are part of a choice: dnat-only , I2-outside , or pool . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

pool

| | |
|------------|--|
| Synopsis | Enter the pool context |
| Context | configure service nat nat-policy <i>string</i> pool |
| Tree | pool |
| Notes | The following elements are part of a choice: dnat-only , I2-outside , or pool . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

name *string*

WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

| | |
|---------------|--|
| Synopsis | NAT pool name |
| Context | configure service nat nat-policy <i>string</i> pool name <i>string</i> |
| Tree | name |
| String Length | 1 to 32 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

router-instance *string***WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

| | |
|------------|---|
| Synopsis | Router or VPRN service name |
| Context | configure service nat nat-policy <i>string</i> pool router-instance <i>string</i> |
| Tree | router-instance |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

port-forwarding-range-end *number*

| | |
|-------------|---|
| Synopsis | End of the port forwarding range |
| Context | configure service nat nat-policy <i>string</i> port-forwarding-range-end <i>number</i> |
| Tree | port-forwarding-range-end |
| Description | <p>This command specifies the end of the port range available for port forwarding. The start of the range is always equal to one.</p> <p>The number of ports that can be configured is half of the available block => $64512 / 2 = 32256$. In combination with the configured value for port-forwarding-range-end, the formulas are:</p> <p>max port-reservation blocks = $65535 - \text{port-forwarding-range-end}$</p> <p>max port-reservation ports = $(65535 - \text{port-forwarding-range-end}) / 2$</p> <p>If port-reservation is already configured, the following applies for the maximum port-forwarding-range-end:</p> <p>max port-forwarding-range-end = $65535 - \text{port-reservation blocks}$</p> <p>max port-forwarding-range-end = $65535 - (\text{port-reservation ports} * 2)$</p> |
| Range | 1023 to 65535 |
| Default | 1023 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

port-limits

| | |
|----------|--|
| Synopsis | Enter the port-limits context |
| Context | configure service nat nat-policy <i>string</i> port-limits |
| Tree | port-limits |

| | |
|------------|--|
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

forwarding *number*

| | |
|------------|---|
| Synopsis | Maximum number of port forwarding entries |
| Context | configure service nat nat-policy <i>string port-limits forwarding number</i> |
| Tree | forwarding |
| Range | 1 to 64 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

reserved *number*

| | |
|-------------|---|
| Synopsis | Number of ports reserved for prioritized sessions |
| Context | configure service nat nat-policy <i>string port-limits reserved number</i> |
| Tree | reserved |
| Description | This command configures the number of ports per block that are reserved for prioritized sessions. |
| Range | 1 to 65534 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

watermarks

| | |
|-------------|--|
| Synopsis | Enable the watermarks context |
| Context | configure service nat nat-policy <i>string port-limits watermarks</i> |
| Tree | watermarks |
| Description | This command configures watermarks for NAT resources. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

high *number*

| | |
|----------|---------------------------|
| Synopsis | High watermark percentage |
|----------|---------------------------|

| | |
|-------------|---|
| Context | configure service nat nat-policy <i>string</i> port-limits watermarks high <i>number</i> |
| Tree | high |
| Description | This command configures the high threshold value as a percentage of the total port-block space in a NAT pool. |
| Range | 0 to 100 |
| Units | percent |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

low *number*

| | |
|-------------|--|
| Synopsis | Low watermark percentage |
| Context | configure service nat nat-policy <i>string</i> port-limits watermarks low <i>number</i> |
| Tree | low |
| Description | This command configures the low threshold value as a percentage of the total port-block space in a NAT pool. |
| Range | 0 to 100 |
| Units | percent |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

priority-sessions

| | |
|------------|--|
| Synopsis | Enter the priority-sessions context |
| Context | configure service nat nat-policy <i>string</i> priority-sessions |
| Tree | priority-sessions |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

fc

| | |
|----------|---|
| Synopsis | Enter the fc context |
| Context | configure service nat nat-policy <i>string</i> priority-sessions fc |

| | |
|-------------|---|
| Tree | fc |
| Description | Commands in this context specify which Forwarding Class (FC) options have prioritized sessions. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

af boolean

| | |
|-------------|--|
| Synopsis | Prioritize traffic from AF forwarding classes |
| Context | configure service nat nat-policy <i>string</i> priority-sessions fc af boolean |
| Tree | af |
| Description | When configured to true , traffic from Assured Forwarding (AF) FC sessions is prioritized. When configured to false , AF traffic is not prioritized. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

be boolean

| | |
|-------------|---|
| Synopsis | Prioritize traffic from BE forwarding classes |
| Context | configure service nat nat-policy <i>string</i> priority-sessions fc be boolean |
| Tree | be |
| Description | When configured to true , traffic from Best Effort (BE) FC sessions is prioritized. When configured to false , BE traffic is not prioritized. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

ef boolean

| | |
|------------|---|
| Synopsis | Prioritize traffic from EF forwarding classes |
| Context | configure service nat nat-policy <i>string</i> priority-sessions fc ef boolean |
| Tree | ef |
| Default | false |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

h1 *boolean*

Synopsis Prioritize traffic from H1 forwarding classes

Context **configure service nat nat-policy** *string* *priority-sessions* **fc h1** *boolean*

Tree [h1](#)

Description When configured to **true**, traffic from H1 sessions is prioritized. When configured to false, H1 traffic is not prioritized.

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

h2 *boolean*

Synopsis Prioritize traffic from H2 forwarding classes

Context **configure service nat nat-policy** *string* *priority-sessions* **fc h2** *boolean*

Tree [h2](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

l1 *boolean*

Synopsis Prioritize traffic from L1 forwarding classes

Context **configure service nat nat-policy** *string* *priority-sessions* **fc l1** *boolean*

Tree [l1](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

l2 *boolean*

Synopsis Prioritize traffic from L2 forwarding classes

Context **configure service nat nat-policy** *string* *priority-sessions* **fc l2** *boolean*

| | |
|-------------|--|
| Tree | l2 |
| Description | When configured to true , traffic from L2 sessions is prioritized. When configured to false, L2 traffic is not prioritized. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

nc boolean

| | |
|------------|---|
| Synopsis | Prioritize traffic from NC forwarding classes |
| Context | configure service nat nat-policy <i>string</i> priority-sessions fc nc <i>boolean</i> |
| Tree | nc |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

session-limits

| | |
|-------------|--|
| Synopsis | Enter the session-limits context |
| Context | configure service nat nat-policy <i>string</i> session-limits |
| Tree | session-limits |
| Description | Commands in this context configure session-limit attributes for the policy. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

max number

| | |
|------------|---|
| Synopsis | Maximum number of sessions per subscriber |
| Context | configure service nat nat-policy <i>string</i> session-limits max <i>number</i> |
| Tree | max |
| Range | 1 to 65535 |
| Default | 65535 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

reserved *number*

| | |
|-------------|--|
| Synopsis | Number of sessions reserved for prioritized sessions |
| Context | configure service nat nat-policy <i>string session-limits reserved number</i> |
| Tree | reserved |
| Description | This command configures the number of sessions per block that are reserved for prioritized sessions. |
| Range | 1 to 65534 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

watermarks

| | |
|-------------|---|
| Synopsis | Enable the watermarks context |
| Context | configure service nat nat-policy <i>string session-limits watermarks</i> |
| Tree | watermarks |
| Description | This command configures watermarks for NAT resources. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

high *number*

| | |
|-------------|---|
| Synopsis | High watermark percentage |
| Context | configure service nat nat-policy <i>string session-limits watermarks high number</i> |
| Tree | high |
| Description | This command configures the high threshold value as a percentage of the total port-block space in a NAT pool. |
| Range | 0 to 100 |
| Units | percent |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

low number

| | |
|-------------|--|
| Synopsis | Low watermark percentage |
| Context | configure service nat nat-policy string session-limits watermarks low number |
| Tree | low |
| Description | This command configures the low threshold value as a percentage of the total port-block space in a NAT pool. |
| Range | 0 to 100 |
| Units | percent |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

tcp

| | |
|-------------|--|
| Synopsis | Enter the tcp context |
| Context | configure service nat nat-policy string tcp |
| Tree | tcp |
| Description | Commands in this context configure the transmission control protocol (TCP) attributes of the policy. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

mss-adjust number

| | |
|-------------|--|
| Synopsis | TCP MSS adjustment value |
| Context | configure service nat nat-policy string tcp mss-adjust number |
| Tree | mss-adjust |
| Description | This command configures the value to use to adjust the TCP Maximum Segment Size (MSS) option, if not already present or the present value is higher. |
| Range | 160 to 10240 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

reset-unknown *boolean*

| | |
|-------------|---|
| Synopsis | Generate TCP reset for packets from unknown flows |
| Context | configure service nat nat-policy <i>string</i> tcp reset-unknown <i>boolean</i> |
| Tree | reset-unknown |
| Description | When configured to true , TCP packets are dropped and a TCP reset is generated if the NAT inside receives a TCP packet without the SYN flag set for an unknown flow.
When configured to false , no TCP reset is generated. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

timeouts

| | |
|-------------|--|
| Synopsis | Enter the timeouts context |
| Context | configure service nat nat-policy <i>string</i> timeouts |
| Tree | timeouts |
| Description | Commands in this context configure the attributes of session idle timeouts for the policy. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

icmp-query *number*

| | |
|------------|---|
| Synopsis | Timeout applied to an ICMP Query session |
| Context | configure service nat nat-policy <i>string</i> timeouts icmp-query <i>number</i> |
| Tree | icmp-query |
| Range | 60 to 240 |
| Units | seconds |
| Default | 60 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

sip *number*

| | |
|----------|--|
| Synopsis | SIP inactive media timeout |
| Context | configure service nat nat-policy <i>string</i> timeouts sip <i>number</i> |

| | |
|------------|--|
| Tree | sip |
| Range | 10 to 7200 |
| Units | seconds |
| Default | 120 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

subscriber-retention *number*

| | |
|-------------|--|
| Synopsis | IP address hold time after host and port blocks expire |
| Context | configure service nat nat-policy <i>string</i> timeouts subscriber-retention <i>number</i> |
| Tree | subscriber-retention |
| Description | This command configures the time to keep a NAT subscriber and its associated IP address after all hosts and associated port blocks expire. If a NAT subscriber host appears before the retention timeout elapses, it is given the same outside IP address. |
| Range | 0 to 1440 |
| Units | minutes |
| Default | 0 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

tcp

| | |
|-------------|--|
| Synopsis | Enter the tcp context |
| Context | configure service nat nat-policy <i>string</i> timeouts tcp |
| Tree | tcp |
| Description | Commands in this context configure TCP timeout attributes. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

established *number*

| | |
|----------|--|
| Synopsis | Idle timeout for TCP session in established state |
| Context | configure service nat nat-policy <i>string</i> timeouts tcp established <i>number</i> |
| Tree | established |

| | |
|------------|--|
| Range | 60 to 86400 |
| Units | seconds |
| Default | 7440 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

rst number

| | |
|-------------|---|
| Synopsis | Suspend time for TCP connection ports closed by RST |
| Context | configure service nat nat-policy string timeouts tcp rst number |
| Tree | rst |
| Description | This command configures the suspend time for outside TCP ports that are used in translations for TCP connections, when they are closed by TCP Reset (RST). After the timer expires, the outside ports can be reused for new TCP translations. |
| Range | 0 to 240 |
| Units | seconds |
| Default | 0 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

syn number

| | |
|------------|--|
| Synopsis | TCP session timeout when synchronizing initial sequence |
| Context | configure service nat nat-policy string timeouts tcp syn number |
| Tree | syn |
| Range | 6 to 86400 |
| Units | seconds |
| Default | 15 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

time-wait number

| | |
|----------|--|
| Synopsis | Timeout applied to a TCP session in the time-wait state |
| Context | configure service nat nat-policy string timeouts tcp time-wait number |

| | |
|------------|--|
| Tree | time-wait |
| Range | 0 to 240 |
| Units | seconds |
| Default | 0 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

transitory *number*

| | |
|------------|--|
| Synopsis | Idle timeout for TCP session in transitory state |
| Context | configure service nat nat-policy <i>string</i> timeouts tcp transitory <i>number</i> |
| Tree | transitory |
| Range | 60 to 86400 |
| Units | seconds |
| Default | 240 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

udp

| | |
|-------------|--|
| Synopsis | Enter the udp context |
| Context | configure service nat nat-policy <i>string</i> timeouts udp |
| Tree | udp |
| Description | Commands in this context configure the User Datagram Protocol (UDP) mapping timeout attributes. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

dns *number*

| | |
|----------|---|
| Synopsis | Timeout applied to UDP session with destination port 53 |
| Context | configure service nat nat-policy <i>string</i> timeouts udp dns <i>number</i> |
| Tree | dns |
| Range | 15 to 86400 |
| Units | seconds |

| | |
|------------|--|
| Default | 15 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

initial number

| | |
|------------|---|
| Synopsis | UDP mapping timeout applied to new sessions |
| Context | configure service nat nat-policy <i>string</i> timeouts udp initial number |
| Tree | initial |
| Range | 10 to 300 |
| Units | seconds |
| Default | 15 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

normal number

| | |
|------------|--|
| Synopsis | UDP mapping timeout |
| Context | configure service nat nat-policy <i>string</i> timeouts udp normal number |
| Tree | normal |
| Range | 60 to 86400 |
| Units | seconds |
| Default | 300 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

udp

| | |
|------------|---|
| Synopsis | Enter the udp context |
| Context | configure service nat nat-policy <i>string</i> udp |
| Tree | udp |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

inbound-refresh *boolean*

| | |
|-------------|---|
| Synopsis | Extend UDP session timeout on inbound traffic |
| Context | configure service nat nat-policy <i>string</i> udp inbound-refresh <i>boolean</i> |
| Tree | inbound-refresh |
| Description | When configured to true , this command extends the UDP session timeout on inbound traffic.
When configured to false , the UDP session timeout is not extended. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

pcp-server-policy [[name](#)] *string*

| | |
|------------|--|
| Synopsis | Enter the pcp-server-policy list instance |
| Context | configure service nat pcp-server-policy <i>string</i> |
| Tree | pcp-server-policy |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

[name] *string*

| | |
|---------------|--|
| Synopsis | PCP server policy name |
| Context | configure service nat pcp-server-policy <i>string</i> |
| Tree | pcp-server-policy |
| String Length | 1 to 32 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

description *string*

| | |
|---------------|--|
| Synopsis | Text description |
| Context | configure service nat pcp-server-policy <i>string</i> description <i>string</i> |
| Tree | description |
| String Length | 1 to 80 |

| | |
|------------|--|
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

lifetime

| | |
|------------|--|
| Synopsis | Enter the lifetime context |
| Context | configure service nat pcp-server-policy string lifetime |
| Tree | lifetime |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

maximum number

| | |
|------------|---|
| Synopsis | Maximum lifetime of explicit mappings made by the PCP servers |
| Context | configure service nat pcp-server-policy string lifetime maximum number |
| Tree | maximum |
| Range | 61 to 86400 |
| Default | 86400 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

minimum number

| | |
|------------|---|
| Synopsis | Minimum lifetime of explicit mappings made by the PCP servers |
| Context | configure service nat pcp-server-policy string lifetime minimum number |
| Tree | minimum |
| Range | 60 to 86399 |
| Default | 120 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

max-description-size number

| | |
|----------|---|
| Synopsis | Maximum length of mapping descriptions made by the PCP servers |
| Context | configure service nat pcp-server-policy string max-description-size number |

| | |
|------------|--|
| Tree | max-description-size |
| Range | 1 to 64 |
| Default | 64 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

opcode

| | |
|------------|--|
| Synopsis | Enter the opcode context |
| Context | configure service nat pcp-server-policy <i>string</i> opcode |
| Tree | opcode |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

announce *boolean*

| | |
|------------|---|
| Synopsis | Process the announce PCP requests |
| Context | configure service nat pcp-server-policy <i>string</i> opcode announce <i>boolean</i> |
| Tree | announce |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

get *boolean*

| | |
|------------|--|
| Synopsis | Process the get PCP requests |
| Context | configure service nat pcp-server-policy <i>string</i> opcode get <i>boolean</i> |
| Tree | get |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

map *boolean*

| | |
|----------|------------------------------|
| Synopsis | Process the map PCP requests |
|----------|------------------------------|

| | |
|------------|---|
| Context | configure service nat pcp-server-policy <i>string opcode map boolean</i> |
| Tree | map |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

option

| | |
|------------|---|
| Synopsis | Enter the option context |
| Context | configure service nat pcp-server-policy <i>string option</i> |
| Tree | option |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

description *boolean*

| | |
|------------|---|
| Synopsis | Text description |
| Context | configure service nat pcp-server-policy <i>string option description boolean</i> |
| Tree | description |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

next *boolean*

| | |
|------------|--|
| Synopsis | Process the PCP requests that contain the next option |
| Context | configure service nat pcp-server-policy <i>string option next boolean</i> |
| Tree | next |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

port-reservation *boolean*

| | |
|----------|---|
| Synopsis | Process the PCP requests that contain the prefer failure option |
|----------|---|

| | |
|------------|--|
| Context | configure service nat pcp-server-policy <i>string</i> option port-reservation <i>boolean</i> |
| Tree | port-reservation |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

port-set *boolean*

| | |
|-------------|---|
| Synopsis | Support the PORT_SET option in PCP MAP requests |
| Context | configure service nat pcp-server-policy <i>string</i> option port-set <i>boolean</i> |
| Tree | port-set |
| Description | <p>When configured to true, the PCP MAP option optimizes PCP performance for applications that require multiple sets of port forwards. A range of consecutive port forwards can be requested by the PCP client with a single PCP request.</p> <p>When configured to false, the default behavior is applied, where a plain MAP option is used to allocate a single port in a single request.</p> |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

prefer-failure *boolean*

| | |
|------------|--|
| Synopsis | Process the PCP requests that contain the port reservation option |
| Context | configure service nat pcp-server-policy <i>string</i> option prefer-failure <i>boolean</i> |
| Tree | prefer-failure |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

third-party *boolean*

| | |
|------------|---|
| Synopsis | Process the PCP requests that contain the third party option |
| Context | configure service nat pcp-server-policy <i>string</i> option third-party <i>boolean</i> |
| Tree | third-party |
| Default | false |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

reuse-external-ip-address *boolean*

Synopsis Reuse external IP address for NAT subscriber

Context **configure service nat pcp-server-policy** *string reuse-external-ip-address boolean*

Tree [reuse-external-ip-address](#)

Description When configured to **true**, the system reuses the external IP address assigned to a subscriber when the requested well-known port or external IP mapping is not available.

When configured to **false**, a request for a well-known port is allocated as requested on a different external IP address if the port is already allocated to another subscriber sharing the same external IP address. The existing external IP address is initially allocated to the subscriber as a result of the initial traffic flow.

This configuration flag can be set dynamically but the flag affects only PCP port forwards that are created after the flag has been set.

Default false

Introduced 19.10.R3

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

version

Synopsis Enter the **version** context

alg

| | |
|-------------|--|
| Synopsis | Enter the alg context |
| Context | configure service nat up-nat-policy <i>string</i> alg |
| Tree | alg |
| Description | Commands in this context configure the Application Layer Gateway (ALG) attributes of the policy. |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

ftp *boolean*

| | |
|------------|--|
| Synopsis | Use FTP ALG for the policy |
| Context | configure service nat up-nat-policy <i>string</i> alg ftp <i>boolean</i> |
| Tree | ftp |
| Default | true |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

pptp *boolean*

| | |
|-------------|---|
| Synopsis | Use PPTP ALG for the policy |
| Context | configure service nat up-nat-policy <i>string</i> alg pptp <i>boolean</i> |
| Tree | pptp |
| Description | <p>When configured to true, the policy uses Point-to-Point Tunneling Protocol (PPTP) ALG.</p> <p>PPTP sessions can only be initiated from NAT inside.</p> <p>GRE traffic is allowed through NAT only if the corresponding mapping exists.</p> <p>There can be seven calls (GRE tunnels) per control session.</p> |

| | |
|------------|---|
| | When configured to false , PPTP ALG is not used. |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

rtsp boolean

| | |
|-------------|--|
| Synopsis | Use RTSP ALG for the policy |
| Context | configure service nat up-nat-policy <i>string alg rtsp boolean</i> |
| Tree | rtsp |
| Description | When configured to true , Real-Time Streaming Protocol (RTSP) ALG is used for the policy. |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

sip boolean

| | |
|------------|--|
| Synopsis | Use SIP ALG for the policy |
| Context | configure service nat up-nat-policy <i>string alg sip boolean</i> |
| Tree | sip |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

default-host

| | |
|-------------|--|
| Synopsis | Enable the default-host context |
| Context | configure service nat up-nat-policy <i>string default-host</i> |
| Tree | default-host |
| Description | <p>Commands in this context configure the default DMZ host options. A default DMZ host is a node on the inside to which all unknown traffic is redirected by changing the destination IPv4 address in the traffic header. During this operation, the checksums in the Layer 3 and Layer 4 header (UDP and TCP) are recalculated.</p> <p>Unknown traffic in NAT represent all unmatched traffic arriving from the outside (where there is no pinhole or a matching flow record created by traffic initiated from the inside).</p> |

The purpose of the default DMZ host is to capture and analyze the unknown traffic as part of threat analysis.

The rate of redirected unknown traffic can be restricted by configuration.

| | |
|------------|--|
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

inside-router-instance *string*

| | |
|-------------|--|
| Synopsis | Router instance of the DMZ |
| Context | configure service nat up-nat-policy <i>string</i> default-host inside-router-instance <i>string</i> |
| Tree | inside-router-instance |
| Description | This command configures the router instance on the inside where the default DMZ host resides. |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

ip-address *string*

| | |
|-------------|---|
| Synopsis | IP address of the default DMZ host |
| Context | configure service nat up-nat-policy <i>string</i> default-host ip-address <i>string</i> |
| Tree | ip-address |
| Description | This command configures the IP address of the default DMZ host. Redirection to the default DMZ host is achieved by replacing the destination IP address in the traffic header in the unknown traffic initiated from the outside with the one of the default DMZ host. |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

rate-limit *number*

| | |
|-------------|--|
| Synopsis | Rate limit for unknown traffic sent to default DMZ host |
| Context | configure service nat up-nat-policy <i>string</i> default-host rate-limit <i>number</i> |
| Tree | rate-limit |
| Description | This command configures the rate limit of the unknown traffic sent to the default DMZ host. |

Unknown traffic sent to the default DMZ host is rate limited by a configurable value expressed in mbps. The rate limit is configurable per NAT pool per ISA, vISA, or ESA-VM.

| | |
|------------|--|
| Range | 1 to 10000 |
| Default | 10 |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

| | |
|-------------|---|
| Synopsis | Number of ports reserved for prioritized sessions |
| Context | configure service nat up-nat-policy <i>string</i> port-limits reserved <i>number</i> |
| Tree | reserved |
| Description | This command configures the number of ports per block that are reserved for prioritized sessions. |
| Range | 1 to 65534 |
| Introduced | 20.10.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

watermarks

Synopsis Enable the **watermarks** context

Context **configure service nat up-nat-policy** *string* port-limits **watermarks**

Tree **watermarks**

Description This command configures watermarks for NAT resources.

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

high number

Synopsis High watermark percentage

Context **configure service nat up-nat-policy** *string* port-limits **watermarks high number**

Tree **high**

Description This command configures the high threshold value as a percentage of the total port-block space in a NAT pool.

Range 0 to 100

Units percent

Notes This element is mandatory.

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

low number

Synopsis Low watermark percentage

Context **configure service nat up-nat-policy** *string* port-limits **watermarks low number**

Tree **low**

Description This command configures the low threshold value as a percentage of the total port-block space in a NAT pool.

Range 0 to 100

Units percent

Notes This element is mandatory.

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

priority-sessions

Synopsis Enter the **priority-sessions** context

Context **configure service nat up-nat-policy string priority-sessions**

Tree [priority-sessions](#)

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

fc

Synopsis Enter the **fc** context

Context **configure service nat up-nat-policy string priority-sessions fc**

Tree [fc](#)

Description Commands in this context specify which Forwarding Class (FC) options have prioritized sessions.

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

af boolean

Synopsis Prioritize traffic from AF forwarding classes

Context **configure service nat up-nat-policy string priority-sessions fc af boolean**

Tree [af](#)

Description When configured to **true**, traffic from Assured Forwarding (AF) FC sessions is prioritized. When configured to **false**, AF traffic is not prioritized.

Default false

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

be boolean

Synopsis Prioritize traffic from BE forwarding classes

Context **configure service nat up-nat-policy string priority-sessions fc be boolean**

Tree [be](#)

| | |
|-------------|---|
| Description | When configured to true , traffic from Best Effort (BE) FC sessions is prioritized. When configured to false , BE traffic is not prioritized. |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

ef *boolean*

| | |
|------------|--|
| Synopsis | Prioritize traffic from EF forwarding classes |
| Context | configure service nat up-nat-policy <i>string</i> priority-sessions fc ef <i>boolean</i> |
| Tree | ef |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

h1 *boolean*

| | |
|-------------|--|
| Synopsis | Prioritize traffic from H1 forwarding classes |
| Context | configure service nat up-nat-policy <i>string</i> priority-sessions fc h1 <i>boolean</i> |
| Tree | h1 |
| Description | When configured to true , traffic from H1 sessions is prioritized. When configured to false, H1 traffic is not prioritized. |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

h2 *boolean*

| | |
|------------|--|
| Synopsis | Prioritize traffic from H2 forwarding classes |
| Context | configure service nat up-nat-policy <i>string</i> priority-sessions fc h2 <i>boolean</i> |
| Tree | h2 |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

I1 *boolean*

| | |
|------------|---|
| Synopsis | Prioritize traffic from L1 forwarding classes |
| Context | configure service nat up-nat-policy <i>string</i> priority-sessions fc I1 <i>boolean</i> |
| Tree | I1 |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

I2 *boolean*

| | |
|-------------|--|
| Synopsis | Prioritize traffic from L2 forwarding classes |
| Context | configure service nat up-nat-policy <i>string</i> priority-sessions fc I2 <i>boolean</i> |
| Tree | I2 |
| Description | When configured to true , traffic from L2 sessions is prioritized. When configured to false, L2 traffic is not prioritized. |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

nc *boolean*

| | |
|------------|---|
| Synopsis | Prioritize traffic from NC forwarding classes |
| Context | configure service nat up-nat-policy <i>string</i> priority-sessions fc nc <i>boolean</i> |
| Tree | nc |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

session-limits

| | |
|-------------|---|
| Synopsis | Enter the session-limits context |
| Context | configure service nat up-nat-policy <i>string</i> session-limits |
| Tree | session-limits |
| Description | Commands in this context configure session-limit attributes for the policy. |
| Introduced | 20.10.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

max number

Synopsis Maximum number of sessions per subscriber
Context **configure service nat up-nat-policy** *string session-limits max number*
Tree [max](#)
Range 1 to 65535
Default 65535
Introduced 20.10.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

reserved number

Synopsis Number of sessions reserved for prioritized sessions
Context **configure service nat up-nat-policy** *string session-limits reserved number*
Tree [reserved](#)
Description This command configures the number of sessions per block that are reserved for prioritized sessions.
Range 1 to 65534
Introduced 20.10.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

watermarks

Synopsis Enable the **watermarks** context
Context **configure service nat up-nat-policy** *string session-limits watermarks*
Tree [watermarks](#)
Description This command configures watermarks for NAT resources.
Introduced 20.10.R1
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

high number

Synopsis High watermark percentage

| | |
|-------------|---|
| Context | configure service nat up-nat-policy <i>string session-limits watermarks high number</i> |
| Tree | high |
| Description | This command configures the high threshold value as a percentage of the total port-block space in a NAT pool. |
| Range | 0 to 100 |
| Units | percent |
| Notes | This element is mandatory. |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

low number

| | |
|-------------|--|
| Synopsis | Low watermark percentage |
| Context | configure service nat up-nat-policy <i>string session-limits watermarks low number</i> |
| Tree | low |
| Description | This command configures the low threshold value as a percentage of the total port-block space in a NAT pool. |
| Range | 0 to 100 |
| Units | percent |
| Notes | This element is mandatory. |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

tcp

| | |
|-------------|--|
| Synopsis | Enter the tcp context |
| Context | configure service nat up-nat-policy <i>string tcp</i> |
| Tree | tcp |
| Description | Commands in this context configure the transmission control protocol (TCP) attributes of the policy. |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

mss-adjust *number*

| | |
|-------------|--|
| Synopsis | TCP MSS adjustment value |
| Context | configure service nat up-nat-policy <i>string tcp mss-adjust number</i> |
| Tree | mss-adjust |
| Description | This command configures the value to use to adjust the TCP Maximum Segment Size (MSS) option, if not already present or the present value is higher. |
| Range | 160 to 10240 |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

reset-unknown *boolean*

| | |
|-------------|---|
| Synopsis | Generate TCP reset for packets from unknown flows |
| Context | configure service nat up-nat-policy <i>string tcp reset-unknown boolean</i> |
| Tree | reset-unknown |
| Description | When configured to true , TCP packets are dropped and a TCP reset is generated if the NAT inside receives a TCP packet without the SYN flag set for an unknown flow.
When configured to false , no TCP reset is generated. |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

timeouts

| | |
|-------------|--|
| Synopsis | Enter the timeouts context |
| Context | configure service nat up-nat-policy <i>string timeouts</i> |
| Tree | timeouts |
| Description | Commands in this context configure the attributes of session idle timeouts for the policy. |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

icmp-query *number*

| | |
|----------|---|
| Synopsis | Timeout applied to an ICMP Query session |
| Context | configure service nat up-nat-policy <i>string timeouts icmp-query number</i> |

| | |
|------------|--|
| Tree | icmp-query |
| Range | 60 to 240 |
| Units | seconds |
| Default | 60 |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

sip number

| | |
|------------|--|
| Synopsis | SIP inactive media timeout |
| Context | configure service nat up-nat-policy <i>string</i> timeouts sip number |
| Tree | sip |
| Range | 10 to 7200 |
| Units | seconds |
| Default | 120 |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

subscriber-retention number

| | |
|-------------|--|
| Synopsis | IP address hold time after host and port blocks expire |
| Context | configure service nat up-nat-policy <i>string</i> timeouts subscriber-retention number |
| Tree | subscriber-retention |
| Description | This command configures the time to keep a NAT subscriber and its associated IP address after all hosts and associated port blocks expire. If a NAT subscriber host appears before the retention timeout elapses, it is given the same outside IP address. |
| Range | 0 to 1440 |
| Units | minutes |
| Default | 0 |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

tcp

| | |
|----------|------------------------------|
| Synopsis | Enter the tcp context |
|----------|------------------------------|

| | |
|-------------|--|
| Context | configure service nat up-nat-policy <i>string</i> timeouts tcp |
| Tree | tcp |
| Description | Commands in this context configure TCP timeout attributes. |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

established *number*

| | |
|------------|--|
| Synopsis | Idle timeout for TCP session in established state |
| Context | configure service nat up-nat-policy <i>string</i> timeouts tcp established <i>number</i> |
| Tree | established |
| Range | 60 to 86400 |
| Units | seconds |
| Default | 7440 |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

rst *number*

| | |
|-------------|---|
| Synopsis | Suspend time for TCP connection ports closed by RST |
| Context | configure service nat up-nat-policy <i>string</i> timeouts tcp rst <i>number</i> |
| Tree | rst |
| Description | This command configures the suspend time for outside TCP ports that are used in translations for TCP connections, when they are closed by TCP Reset (RST). After the timer expires, the outside ports can be reused for new TCP translations. |
| Range | 0 to 240 |
| Units | seconds |
| Default | 0 |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

syn *number*

| | |
|----------|--|
| Synopsis | TCP session timeout when synchronizing initial sequence |
| Context | configure service nat up-nat-policy <i>string</i> timeouts tcp syn <i>number</i> |

| | |
|------------|--|
| Tree | syn |
| Range | 6 to 86400 |
| Units | seconds |
| Default | 15 |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

time-wait *number*

| | |
|------------|---|
| Synopsis | Timeout applied to a TCP session in the time-wait state |
| Context | configure service nat up-nat-policy <i>string</i> timeouts tcp time-wait <i>number</i> |
| Tree | time-wait |
| Range | 0 to 240 |
| Units | seconds |
| Default | 0 |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

transitory *number*

| | |
|------------|--|
| Synopsis | Idle timeout for TCP session in transitory state |
| Context | configure service nat up-nat-policy <i>string</i> timeouts tcp transitory <i>number</i> |
| Tree | transitory |
| Range | 60 to 86400 |
| Units | seconds |
| Default | 240 |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

udp

| | |
|----------|---|
| Synopsis | Enter the udp context |
| Context | configure service nat up-nat-policy <i>string</i> timeouts udp |
| Tree | udp |

| | |
|-------------|---|
| Description | Commands in this context configure the User Datagram Protocol (UDP) mapping timeout attributes. |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

dns number

| | |
|------------|---|
| Synopsis | Timeout applied to UDP session with destination port 53 |
| Context | configure service nat up-nat-policy string timeouts udp dns number |
| Tree | dns |
| Range | 15 to 86400 |
| Units | seconds |
| Default | 15 |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

initial number

| | |
|------------|---|
| Synopsis | UDP mapping timeout applied to new sessions |
| Context | configure service nat up-nat-policy string timeouts udp initial number |
| Tree | initial |
| Range | 10 to 300 |
| Units | seconds |
| Default | 15 |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

normal number

| | |
|----------|--|
| Synopsis | UDP mapping timeout |
| Context | configure service nat up-nat-policy string timeouts udp normal number |
| Tree | normal |
| Range | 60 to 86400 |
| Units | seconds |
| Default | 300 |

| | |
|------------|--|
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

udp

| | |
|------------|---|
| Synopsis | Enter the udp context |
| Context | configure service nat up-nat-policy string udp |
| Tree | udp |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

inbound-refresh *boolean*

| | |
|-------------|---|
| Synopsis | Extend UDP session timeout on inbound traffic |
| Context | configure service nat up-nat-policy string udp inbound-refresh boolean |
| Tree | inbound-refresh |
| Description | When configured to true , this command extends the UDP session timeout on inbound traffic.
When configured to false , the UDP session timeout is not extended. |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

oper-group [*name*] *string*

| | |
|----------------|--|
| Synopsis | Enter the oper-group list instance |
| Context | configure service oper-group string |
| Tree | oper-group |
| Max. Instances | 32768 |
| Introduced | 16.0.R1 |
| Platforms | All |

[*name*] *string*

| | |
|----------|------------------------|
| Synopsis | Operational group name |
|----------|------------------------|

| | |
|---------------|---|
| Context | configure service oper-group <i>string</i> |
| Tree | oper-group |
| String Length | 1 to 32 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

bfd-liveness

| | |
|------------|---|
| Synopsis | Enable the bfd-liveness context |
| Context | configure service oper-group <i>string</i> bfd-liveness |
| Tree | bfd-liveness |
| Introduced | 16.0.R1 |
| Platforms | All |

dest-ip *string*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Destination address for BFD |
| Context | configure service oper-group <i>string</i> bfd-liveness dest-ip <i>string</i> |
| Tree | dest-ip |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

interface-name *string*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|----------|---|
| Synopsis | Source interface name |
| Context | configure service oper-group <i>string</i> bfd-liveness interface-name <i>string</i> |

| | |

| Synopsis | Enter the port-redirect-group context |
| Context | configure service pw-template <i>string</i> egress qos network port-redirect-group |
| Tree | port-redirect-group |
| Introduced | 16.0.R1 |
| Platforms | All |

group-name *string*

| | |
|---------------|--|
| Synopsis | Name of the egress port queue group template |
| Context | configure service pw-template <i>string</i> egress qos network port-redirect-group group-name <i>string</i> |
| Tree | group-name |
| String Length | 1 to 32 |
| Introduced | 16.0.R1 |
| Platforms | All |

instance *number*

| | |
|------------|--|
| Synopsis | Instance for FP ingress queue group |
| Context | configure service pw-template <i>string</i> egress qos network port-redirect-group instance <i>number</i> |
| Tree | instance |
| Range | 1 to 65535 |
| Introduced | 16.0.R1 |
| Platforms | All |

encryption-keygroup

| | |
|------------|--|
| Synopsis | Enter the encryption-keygroup context |
| Context | configure service pw-template <i>string</i> encryption-keygroup |
| Tree | encryption-keygroup |
| Introduced | 19.10.R1 |
| Platforms | VSR |

inbound *number*

| | |
|------------|--|
| Synopsis | Keygroup identifier in the inbound direction |
| Context | configure service pw-template <i>string</i> encryption-keygroup inbound <i>number</i> |
| Tree | inbound |
| Range | 1 to 127 |
| Introduced | 19.10.R1 |
| Platforms | VSR |

outbound *number*

| | |
|------------|---|
| Synopsis | Keygroup identifier in the outbound direction |
| Context | configure service pw-template <i>string</i> encryption-keygroup outbound <i>number</i> |
| Tree | outbound |
| Range | 1 to 127 |
| Introduced | 19.10.R1 |
| Platforms | VSR |

entropy-label

| | |
|------------|--|
| Synopsis | Enable the use of an entropy label |
| Context | configure service pw-template <i>string</i> entropy-label |
| Tree | entropy-label |
| Notes | The following elements are part of a choice: entropy-label or hash-label . |
| Introduced | 16.0.R1 |
| Platforms | All |

fdb

| | |
|------------|---|
| Synopsis | Enter the fdb context |
| Context | configure service pw-template string fdb |
| Tree | fdb |
| Introduced | 16.0.R1 |
| Platforms | All |

auto-learn-mac-protect *boolean*

| | |
|------------|--|
| Synopsis | Enable automatic update of MAC protect list |
| Context | configure service pw-template string fdb auto-learn-mac-protect boolean |
| Tree | auto-learn-mac-protect |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

auto-learn-mac-protect-exclude-list *string*

| | |
|---------------|---|
| Synopsis | Name of the MAC protect exclusion list |
| Context | configure service pw-template string fdb auto-learn-mac-protect-exclude-list string |
| Tree | auto-learn-mac-protect-exclude-list |
| Description | <p>This command configures the name of a MAC protect exclusion list.</p> <p>Dynamically-learned MAC Source Addresses (SA) are protected if they are learned on an object with ALMP configured and no exclusion list is associated with the object, or if the MAC SA does not match any entry in an associated exclusion list.</p> <p>An exclusion list can be used in multiple objects of a service. If a list is empty, ALMP does not exclude any learned MAC SAs from protection on the object.</p> |
| String Length | 1 to 32 |
| Introduced | 20.5.R1 |
| Platforms | All |

discard-unknown-source *boolean*

| | |
|----------|--|
| Synopsis | Discard frames with unknown source |
| Context | configure service pw-template string fdb discard-unknown-source boolean |

| | |
|------------|--|
| Tree | discard-unknown-source |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

limit-mac-move *keyword*

| | |
|------------|--|
| Synopsis | MAC move limit |
| Context | configure service pw-template <i>string</i> fdb limit-mac-move <i>keyword</i> |
| Tree | limit-mac-move |
| Options | blockable, non-blockable |
| Default | blockable |
| Introduced | 16.0.R1 |
| Platforms | All |

mac-learning

| | |
|------------|---|
| Synopsis | Enter the mac-learning context |
| Context | configure service pw-template <i>string</i> fdb mac-learning |
| Tree | mac-learning |
| Introduced | 16.0.R1 |
| Platforms | All |

aging *boolean*

| | |
|------------|--|
| Synopsis | Enable aging of MAC addresses |
| Context | configure service pw-template <i>string</i> fdb mac-learning aging <i>boolean</i> |
| Tree | aging |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

learning *boolean*

| | |
|----------|--------------------------------------|
| Synopsis | Enable learning of new MAC addresses |
|----------|--------------------------------------|

| | |
|------------|--|
| Context | configure service pw-template <i>string</i> fdb mac-learning learning <i>boolean</i> |
| Tree | learning |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

mac-pinning *boolean*

| | |
|------------|--|
| Synopsis | Enable MAC address pinning on this spoke SDP |
| Context | configure service pw-template <i>string</i> fdb mac-pinning <i>boolean</i> |
| Tree | mac-pinning |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

maximum-mac-addresses *number*

| | |
|-------------|--|
| Synopsis | Maximum number of MAC address entries in the FDB |
| Context | configure service pw-template <i>string</i> fdb maximum-mac-addresses <i>number</i> |
| Tree | maximum-mac-addresses |
| Description | <p>This command specifies the maximum number of FDB entries for both learned and static MAC addresses for this PW template.</p> <p>When the configured limit is reached, no new addresses are learned from the SAP or spoke SDP until at least one FDB entry is aged out or cleared.</p> <p>When the configured limit is reached and the configure service pw-template fdb discard-unknown-source command is set to true for this PW template, packets with unknown source MAC addresses are discarded. If discard-unknown-source is set to false, the packets are forwarded if their destination MAC addresses are known, or flooded if their destination MAC addresses are unknown.</p> <p>However, if the configure service vpls fdb discard-unknown command is set to true, packets with unknown destination MAC addresses are discarded, even if the limit of FDB entries on the specific VPLS instance is not reached.</p> <p>When unconfigured, the PW template uses the global MAC learning limitations.</p> |
| Range | 1 to 511999 |
| Introduced | 16.0.R1 |
| Platforms | All |

protected-src-mac-violation-action *keyword*

| | |
|------------|--|
| Synopsis | Action for protected source MAC restriction |
| Context | configure service pw-template <i>string</i> fdb protected-src-mac-violation-action <i>keyword</i> |
| Tree | protected-src-mac-violation-action |
| Options | sdp-bind-oper-down, alarm-only, discard |
| Introduced | 16.0.R1 |
| Platforms | All |

force-vc-forwarding *keyword*

| | |
|------------|---|
| Synopsis | VC forwarding action |
| Context | configure service pw-template <i>string</i> force-vc-forwarding <i>keyword</i> |
| Tree | force-vc-forwarding |
| Options | vlan, qinq-c-tag-c-tag, qinq-s-tag-c-tag |
| Introduced | 16.0.R1 |
| Platforms | All |

hash-label

| | |
|------------|---|
| Synopsis | Enable the hash-label context |
| Context | configure service pw-template <i>string</i> hash-label |
| Tree | hash-label |
| Notes | The following elements are part of a choice: entropy-label or hash-label . |
| Introduced | 16.0.R1 |
| Platforms | All |

signal-capability

| | |
|------------|---|
| Synopsis | Hash label capability that is signaled to the remote PE |
| Context | configure service pw-template <i>string</i> hash-label signal-capability |
| Tree | signal-capability |
| Introduced | 16.0.R1 |
| Platforms | All |

igmp-snooping

| | |
|------------|---|
| Synopsis | Enter the igmp-snooping context |
| Context | configure service pw-template string igmp-snooping |
| Tree | igmp-snooping |
| Introduced | 16.0.R1 |
| Platforms | All |

fast-leave *boolean*

| | |
|------------|--|
| Synopsis | Allow IGMP fast leave processing |
| Context | configure service pw-template string igmp-snooping fast-leave boolean |
| Tree | fast-leave |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

import-policy *string*

| | |
|---------------|--|
| Synopsis | Import policy that filters IGMP packets |
| Context | configure service pw-template string igmp-snooping import-policy string |
| Tree | import-policy |
| String Length | 1 to 32 |
| Introduced | 16.0.R1 |
| Platforms | All |

maximum-number-groups *number*

| | |
|------------|--|
| Synopsis | Maximum multicast groups |
| Context | configure service pw-template string igmp-snooping maximum-number-groups number |
| Tree | maximum-number-groups |
| Range | 1 to 1000 |
| Introduced | 16.0.R1 |
| Platforms | All |

query-interval *number*

| | |
|------------|---|
| Synopsis | Time between two consecutive host-query messages |
| Context | configure service pw-template <i>string</i> igmp-snooping query-interval <i>number</i> |
| Tree | query-interval |
| Range | 2 to 1024 |
| Units | seconds |
| Default | 125 |
| Introduced | 16.0.R1 |
| Platforms | All |

query-last-member-interval *number*

| | |
|------------|---|
| Synopsis | Time between group-specific query messages |
| Context | configure service pw-template <i>string</i> igmp-snooping query-last-member-interval <i>number</i> |
| Tree | query-last-member-interval |
| Range | 1 to 50 |
| Units | deciseconds |
| Default | 10 |
| Introduced | 16.0.R1 |
| Platforms | All |

query-response-interval *number*

| | |
|------------|--|
| Synopsis | Time to wait for a response to the host-query messages |
| Context | configure service pw-template <i>string</i> igmp-snooping query-response-interval <i>number</i> |
| Tree | query-response-interval |
| Range | 1 to 1023 |
| Units | seconds |
| Default | 10 |
| Introduced | 16.0.R1 |
| Platforms | All |

robust-count *number*

| | |
|------------|--|
| Synopsis | Number of retries after expected message loss |
| Context | configure service pw-template <i>string</i> igmp-snooping robust-count <i>number</i> |
| Tree | robust-count |
| Range | 2 to 7 |
| Default | 2 |
| Introduced | 16.0.R1 |
| Platforms | All |

send-queries *boolean*

| | |
|------------|---|
| Synopsis | Generate IGMP general queries |
| Context | configure service pw-template <i>string</i> igmp-snooping send-queries <i>boolean</i> |
| Tree | send-queries |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

version *keyword*

| | |
|------------|--|
| Synopsis | IGMP version |
| Context | configure service pw-template <i>string</i> igmp-snooping version <i>keyword</i> |
| Tree | version |
| Options | 1, 2, 3 |
| Default | 3 |
| Introduced | 16.0.R1 |
| Platforms | All |

ingress

| | |
|------------|---|
| Synopsis | Enter the ingress context |
| Context | configure service pw-template <i>string</i> ingress |
| Tree | ingress |
| Introduced | 16.0.R1 |
| Platforms | All |

filter

| | |
|------------|---|
| Synopsis | Enter the filter context |
| Context | configure service pw-template <i>string</i> ingress filter |
| Tree | filter |
| Introduced | 16.0.R1 |
| Platforms | All |

ip string

| | |
|---------------|--|
| Synopsis | IPv4 filter policy name |
| Context | configure service pw-template <i>string</i> ingress filter ip <i>string</i> |
| Tree | ip |
| String Length | 1 to 64 |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv6 string

| | |
|---------------|--|
| Synopsis | IPv6 filter policy name |
| Context | configure service pw-template <i>string</i> ingress filter ipv6 <i>string</i> |
| Tree | ipv6 |
| String Length | 1 to 64 |
| Introduced | 16.0.R1 |
| Platforms | All |

mac string

| | |
|---------------|---|
| Synopsis | MAC filter policy name |
| Context | configure service pw-template <i>string</i> ingress filter mac <i>string</i> |
| Tree | mac |
| String Length | 1 to 64 |
| Introduced | 16.0.R1 |
| Platforms | All |

qos

| | |
|------------|--|
| Synopsis | Enter the qos context |
| Context | configure service pw-template <i>string</i> ingress qos |
| Tree | qos |
| Introduced | 16.0.R1 |
| Platforms | All |

network

| | |
|------------|--|
| Synopsis | Enter the network context |
| Context | configure service pw-template <i>string</i> ingress qos network |

| Introduced | 16.0.R1 |
| Platforms | All |

fp-redirect-group

| | |
|------------|--|
| Synopsis | Enter the fp-redirect-group context |
| Context | configure service pw-template <i>string</i> ingress qos network fp-redirect-group |
| Tree | fp-redirect-group |
| Introduced | 16.0.R1 |
| Platforms | All |

group-name *string*

| | |
|---------------|---|
| Synopsis | Name of the forwarding plane queue group template |
| Context | configure service pw-template <i>string</i> ingress qos network fp-redirect-group group-name <i>string</i> |
| Tree | group-name |
| String Length | 1 to 32 |
| Introduced | 16.0.R1 |
| Platforms | All |

instance *number*

| | |
|------------|--|
| Synopsis | Instance for FP ingress queue group |
| Context | configure service pw-template <i>string</i> ingress qos network fp-redirect-group instance number |
| Tree | instance |
| Range | 1 to 65535 |
| Introduced | 16.0.R1 |
| Platforms | All |

policy-name *string*

| | |
|---------------|--|
| Synopsis | Network policy ID |
| Context | configure service pw-template <i>string</i> ingress qos network policy-name <i>string</i> |
| Tree | policy-name |
| String Length | 1 to 64 |
| Introduced | 16.0.R1 |
| Platforms | All |

l2pt

| | |
|------------|---|
| Synopsis | Enter the l2pt context |
| Context | configure service pw-template <i>string</i> l2pt |
| Tree | l2pt |
| Introduced | 16.0.R1 |
| Platforms | All |

termination

| | |
|------------|---|
| Synopsis | Enable the termination context |
| Context | configure service pw-template <i>string</i> l2pt termination |
| Tree | termination |
| Introduced | 16.0.R1 |
| Platforms | All |

protocols

| | |
|------------|--|
| Synopsis | Enter the protocols context |
| Context | configure service pw-template string l2pt termination protocols |
| Tree | protocols |
| Introduced | 16.0.R1 |
| Platforms | All |

cdp boolean

| | |
|------------|--|
| Synopsis | Enable Cisco discovery protocol |
| Context | configure service pw-template string l2pt termination protocols cdp boolean |
| Tree | cdp |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

dtp boolean

| | |
|------------|--|
| Synopsis | Enable dynamic trunking protocol |
| Context | configure service pw-template string l2pt termination protocols dtp boolean |
| Tree | dtp |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

pagp boolean

| | |
|------------|---|
| Synopsis | Enable port aggregation protocol |
| Context | configure service pw-template string l2pt termination protocols pagp boolean |
| Tree | pagp |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

stp boolean

| | |
|------------|--|
| Synopsis | Enable all spanning tree protocols |
| Context | configure service pw-template <i>string</i> l2pt termination protocols stp <i>boolean</i> |
| Tree | stp |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

udld boolean

| | |
|------------|---|
| Synopsis | Enable unidirectional link detection |
| Context | configure service pw-template <i>string</i> l2pt termination protocols udld <i>boolean</i> |
| Tree | udld |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

vtp boolean

| | |
|------------|--|
| Synopsis | Enable virtual trunk protocol |
| Context | configure service pw-template <i>string</i> l2pt termination protocols vtp <i>boolean</i> |
| Tree | vtp |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

provisioned-sdp keyword**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |

 Notes This element is part of a list key.
 Introduced 16.0.R1
 Platforms All

signaling *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Signaling protocol used to obtain pseudowire labels
 Context **configure** [service sdp number signaling keyword](#)

| | |
|-------------|---|
| Tree | signaling |
| Description | This command specifies the signaling protocol used to obtain the ingress and egress pseudowire labels in frames transmitted and received on the SDP. The signaling value can only be changed while the administrative status of the SDP is down. Additionally, the signaling can only be changed on an SDP if the SDP is not in use by BGP-AD or BGP-VPLS. BGP signaling can only be enabled if the SDP does not already have pseudowires signaled over it. Also, BGP signaling is not supported with mixed mode LSP SDPs.

Note: If the tldp option is selected as the mechanism for exchanging service labels over an MPLS or GRE SDP and the T-LDP session is automatically established, an explicit T-LDP session that is subsequently configured takes precedence over the automatic T-LDP session. However, if the explicit, manually-configured session is then removed, the system does not revert to the automatic session and the automatic session is also deleted. To address this, recreate the T-LDP session by using the admin-state command to administratively disable and then enable the SDP. |
| Options | off, tldp, bgp |
| Introduced | 16.0.R1 |
| Platforms | All |

source-bmac-lsb

vprn-next-hop [[ip-address](#)] (*ipv4-address-no-zone | ipv6-address-no-zone*)

| | |
|----------------|---|
| Synopsis | Enter the vprn-next-hop list instance |
| Context | configure service system bgp evpn ethernet-segment <i>string association vprn-next-hop (ipv4-address-no-zone ipv6-address-no-zone)</i> |
| Tree | vprn-next-hop |
| Description | Commands in this list instance are used to associate an IPv4 or IPv6 address to an Ethernet segment. A virtual Ethernet segment using this VPRN next-hop association represents a Layer 3 Ethernet segment as described in <i>draft-sajassi-bess-evpn-ip-aliasing</i> . This IP address must be installed in the route table of the VPRN service identified by the EVI so that the Auto-Discovery per-ES or EVI routes for the ES are advertised. Only one VPRN next hop is supported per Ethernet segment. |
| Max. Instances | 1 |
| Notes | The following elements are part of a choice: lag , network-interconnect-vxlan , port , pw-port , sdp , or vprn-next-hop . |
| Introduced | 22.10.R1 |
| Platforms | All |

etree-leaf-label *boolean*

| | |
|-------------|---|
| Synopsis | Enable E-Tree leaf label for PE |
| Context | configure service system bgp evpn etree-leaf-label <i>boolean</i> |
| Tree | etree-leaf-label |
| Description | <p>When configured to true, this command enables EVPN Ethernet-Tree (E-Tree) VPLS services on the router (not B-VPLS), allocates an E-Tree leaf label for the Provider Edge (PE) device, and configures the ILM entry. This command ensures that in-flight traffic can perform an ILM entry lookup at any time, and avoids discards when administratively enabling or disabling services, or reduces the timing window so that it does not occur during normal operation or configuration. The value for the E-Tree leaf label is set via the etree-leaf-label-value command.</p> <p>When configured to false, PE leaf labels are not supported.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

| Synopsis | Ignore D-PATH length for BGP path selection of EVPN-IFF |
| Context | configure service system bgp evpn ip-prefix-routes d-path-length-ignore <i>boolean</i> |
| Tree | d-path-length-ignore |
| Default | false |
| Introduced | 21.10.R1 |
| Platforms | All |

iff-attribute-uniform-propagation *boolean*

| | |
|-------------|---|
| Synopsis | Enable uniform propagation of BGP attributes |
| Context | configure service system bgp evpn ip-prefix-routes iff-attribute-uniform-propagation <i>boolean</i> |
| Tree | iff-attribute-uniform-propagation |
| Description | <p>When configured to true, this command enables the uniform propagation of BGP attributes for EVPN-IFF (Interfaceful) routes. EVPN-IFF is used in R-VPLS services with bgp-evpn ip-route-advertisement. When enabled, the received EVPN-IFF routes for the R-VPLS can be propagated with the original BGP path attributes into EVPN-IFL, IPVPN, EVPN-IFF (in other R-VPLS services) or BGP IP routes advertised for the attached VPRN. The command also enables the attribute propagation in the opposite direction, for example, from EVPN-IFL/IPVPN/IP/EVPN-IFF routes into EVPN-IFF routes.</p> <p>The propagation follows the uniform mode defined in draft-ietf-bess-evpn-ipvpn-interworking.</p> |

When configured to **false**, this command re-originates the BGP Path Attributes when propagating EVPN-IFF routes into other Inter-Subnet Forwarding families.

| | |
|------------|---------|
| Default | false |
| Introduced | 21.2.R1 |
| Platforms | All |

iff-bgp-path-selection *boolean*

| | |
|-------------|---|
| Synopsis | Enable BGP path selection for EVPN-IFF routes |
| Context | configure service system bgp evpn ip-prefix-routes iff-bgp-path-selection <i>boolean</i> |
| Tree | iff-bgp-path-selection |
| Description | <p>When configured to true, this command enables the EVPN-IFF routes to be ordered and selected in a similar manner as IPVPN or EVPN-IFL routes, that is, based on the regular BGP path selection process.</p> <p>When configured to false, this command makes the system order EVPN-IFF routes based on their {RVPLS Iindex, RD, Ethernet Tag}. For example, if two EVPN-IFF routes are received for the same prefix on the same R-VPLS and with different RDs (Route Distinguishers), the route with the lowest RD is selected.</p> |
| Default | false |
| Introduced | 21.2.R1 |
| Platforms | All |

multicast-leave-sync-propagation *number*

| | |
|-------------|---|
| Synopsis | Multicast leave group synchronization delay |
| Context | configure service system bgp evpn multicast-leave-sync-propagation <i>number</i> |
| Tree | multicast-leave-sync-propagation |
| Description | <p>This command configures the additional amount of time that the system waits before removing a multicast state that was synchronized in an Ethernet Segment via Multicast Join or Leave Synch routes. This value represents a delta corresponding to the time it takes for a BGP advertisement to propagate to ES peers.</p> <p>The node triggering the route computes the maximum response time as the product of the locally configured values, Last Member Query Count and Last Member Query Interval, and adds the delta value to the maximum response time. The query count value is configured in the configure services vrpn igmp robust-count command. The query interval value is taken from the configure service vpls sap igmp-snooping query-last-member-interval or the configure service vpls spoke-sdp igmp-snooping query-last-member-interval configuration, depending on the Ethernet Segment.</p> <p>Increasing the maximum response time by this value can help minimize the churn of removing and recreating the state on the node.</p> |

This value should be configured consistently in all ES peers.

| | |
|------------|----------|
| Range | 0 to 300 |
| Units | seconds |
| Default | 5 |
| Introduced | 20.7.R1 |
| Platforms | All |

Context **configure** [service](#) [template](#) [epipe-sap-template](#) *string* [ingress qos queuing-type](#) *keyword*

Tree [queuing-type](#)

Options shared, multipoint-shared

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

upnp

Synopsis Enter the **upnp** context

Context **configure** [service](#) [upnp](#)

Tree [upnp](#)

Description Commands in this context configure Universal Plug 'n Play (UPnP) for the service.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

policy [[name](#)] *string*

Synopsis Enter the **policy** list instance

Context **configure** [service](#) [upnp](#) [policy](#) *string*

Tree [policy](#)

| | |
|----------------|---|
| Description | Commands in this context configure the attributes of the UPnP policy. |
| Max. Instances | 255 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

[name] *string*

| | |
|---------------|--|
| Synopsis | UPnP policy name |
| Context | configure service upnp policy <i>string</i> |
| Tree | policy |
| String Length | 1 to 32 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

description *string*

| | |
|---------------|--|
| Synopsis | Text description |
| Context | configure service upnp policy <i>string</i> description <i>string</i> |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

mapping-limit *number*

| | |
|------------|--|
| Synopsis | Maximum number of UPnP mappings per subscriber |
| Context | configure service upnp policy <i>string</i> mapping-limit <i>number</i> |
| Tree | mapping-limit |
| Range | 1 to 256 |
| Default | 256 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

port number

| | |
|------------|---|
| Synopsis | HTTP TCP port to which the UPnP IGD listens |
| Context | configure service upnp policy string port number |
| Tree | port |
| Range | 1 to 65535 |
| Default | 5000 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

strict-mode boolean

| | |
|-------------|---|
| Synopsis | Enable UPnP strict mode |
| Context | configure service upnp policy string strict-mode boolean |
| Tree | strict-mode |
| Description | When configured to true , this command enables UPnP strict mode, in which the system only allows changes to an existing UPnP mapping if the request comes from the same UPnP client. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

vpls [service-name] string

| | |
|------------|--------------------------------------|
| Synopsis | Enter the vpls list instance |
| Context | configure service vpls string |
| Tree | vpls |
| Introduced | 16.0.R1 |
| Platforms | All |

[service-name] string

| | |
|---------------|--------------------------------------|
| Synopsis | Administrative service name |
| Context | configure service vpls string |
| Tree | vpls |
| String Length | 1 to 64 |

| | |
|------------|-------------------------------------|
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of the service |
| Context | configure service vpls <i>string</i> admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | All |

bgp [[bgp-instance](#)] *number*

| | |
|------------|--|
| Synopsis | Enter the bgp list instance |
| Context | configure service vpls <i>string</i> bgp <i>number</i> |
| Tree | bgp |
| Introduced | 16.0.R1 |
| Platforms | All |

[bgp-instance] *number*

| | |
|------------|--|
| Synopsis | BGP instance |
| Context | configure service vpls <i>string</i> bgp <i>number</i> |
| Tree | bgp |
| Range | 1 to 2 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

adv-service-mtu *number*

| | |
|----------|------------------------------|
| Synopsis | Advertised service MTU value |
|----------|------------------------------|

| | |
|-------------|---|
| Context | configure service vpls string bgp number adv-service-mtu number |
| Tree | adv-service-mtu |
| Description | This command configures the MTU signaled value used in the BGP for the service. When configured, the router uses the value for signaling and for validation with the received MTU instead of the service MTU. However, the value does not affect the locally enforced value, which is still based on the service MTU. |
| Range | 0 to 9782 |
| Introduced | 22.2.R1 |
| Platforms | All |

pw-template-binding [\[pw-template-name\]](#) *reference*

| | |
|----------------|---|
| Synopsis | Enter the pw-template-binding list instance |
| Context | configure service vpls string bgp number pw-template-binding reference |
| Tree | pw-template-binding |
| Max. Instances | 100 |
| Introduced | 16.0.R1 |
| Platforms | All |

[pw-template-name] *reference*

| | |
|------------|---|
| Synopsis | Policy name |
| Context | configure service vpls string bgp number pw-template-binding reference |
| Tree | pw-template-binding |
| Reference | configure service pw-template string |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

bfd-liveness *boolean*

| | |
|----------|--|
| Synopsis | Enable BFD |
| Context | configure service vpls string bgp number pw-template-binding reference bfd-liveness boolean |
| Tree | bfd-liveness |

| | |
|------------|---------|
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

bfd-template *reference*

| | |
|------------|--|
| Synopsis | BFD template name for PW-Template binding |
| Context | configure service vpls string bgp number pw-template-binding reference bfd-template reference |
| Tree | bfd-template |
| Reference | configure bfd bfd-template string |
| Introduced | 16.0.R1 |
| Platforms | All |

import-rt *string*

| | |
|----------------|--|
| Synopsis | Import route-target communities |
| Context | configure service vpls string bgp number pw-template-binding reference import-rt string |
| Tree | import-rt |
| String Length | 10 to 28 |
| Max. Instances | 5 |
| Introduced | 16.0.R1 |
| Platforms | All |

monitor-oper-group *reference*

| | |
|------------|--|
| Synopsis | Operational group to monitor |
| Context | configure service vpls string bgp number pw-template-binding reference monitor-oper-group reference |
| Tree | monitor-oper-group |
| Reference | configure service oper-group string |
| Notes | The following elements are part of a choice: monitor-oper-group or oper-group . |
| Introduced | 16.0.R1 |
| Platforms | All |

oper-group *reference*

| | |
|------------|--|
| Synopsis | Operational group |
| Context | configure service vpls <i>string</i> bgp <i>number</i> pw-template-binding <i>reference</i> oper-group <i>reference</i> |
| Tree | oper-group |
| Reference | configure service oper-group <i>string</i> |
| Notes | The following elements are part of a choice: monitor-oper-group or oper-group . |
| Introduced | 16.0.R1 |
| Platforms | All |

split-horizon-group *string*

| | |
|---------------|--|
| Synopsis | Split horizon group |
| Context | configure service vpls <i>string</i> bgp <i>number</i> pw-template-binding <i>reference</i> split-horizon-group <i>string</i> |
| Tree | split-horizon-group |
| String Length | 1 to 32 |
| Introduced | 16.0.R1 |
| Platforms | All |

route-distinguisher (*keyword* | *vpn-route-distinguisher*)

| | |
|------------|---|
| Synopsis | High-order 6 bytes that are used as string to compose VSI-ID for use in NLRI |
| Context | configure service vpls <i>string</i> bgp <i>number</i> route-distinguisher (<i>keyword</i> <i>vpn-route-distinguisher</i>) |
| Tree | route-distinguisher |
| Options | auto-rd |
| Introduced | 16.0.R1 |
| Platforms | All |

route-target

| | |
|----------|--|
| Synopsis | Enter the route-target context |
| Context | configure service vpls <i>string</i> bgp <i>number</i> route-target |
| Tree | route-target |

Introduced 16.0.R1
Platforms All

export *string*

Synopsis Extended community name for default import policy

| Platforms | All |

bgp-evpn

| | |
|------------|---|
| Synopsis | Enable the bgp-evpn context |
| Context | configure service vpls string bgp-evpn |
| Tree | bgp-evpn |
| Introduced | 16.0.R1 |
| Platforms | All |

accept-ivpls-evpn-flush boolean

| | |
|------------|---|
| Synopsis | Accept and process non-zero ethernet-tag MAC routes |
| Context | configure service vpls string bgp-evpn accept-ivpls-evpn-flush boolean |
| Tree | accept-ivpls-evpn-flush |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

evi number

| | |
|-------------|---|
| Synopsis | EVPN ID |
| Context | configure service vpls string bgp-evpn evi number |
| Tree | evi |
| Description | <p>This command configures a 2-byte EVPN instance (EVI) unique in the system. It is used for the service-carving algorithm for multi-homing and auto-deriving route target and route distinguishers.</p> <p>If not specified, the EVPN ID value is zero and no route distinguisher or route targets are auto-derived from it.</p> <p>If the EVI ID value is specified and no other route-distinguisher or route-target is configured in the service, the following rules apply:</p> <ul style="list-style-type: none"> • the route distinguisher is derived from <system_ip>:evi • the route target is derived from <autonomous-system>:evi <p>If VSI import and export policies are configured, the route target must be configured in the policies and those values take precedence over the auto-derived route targets. If bgp-ad vpls-id and bgp-evpn evi are both configured on the same service, the VPLS ID auto-derived route target or route distinguisher takes precedence over the values auto-derived from the EVI. Use the show service id bgp command to display the operational route target for a service.</p> |
| Range | 1 to 16777215 |
| Introduced | 16.0.R1 |
| Platforms | All |

incl-mcast-orig-ip string

| | |
|------------|---|
| Synopsis | Originating IP address |
| Context | configure service vpls string bgp-evpn incl-mcast-orig-ip string |
| Tree | incl-mcast-orig-ip |
| Introduced | 16.0.R1 |
| Platforms | All |

isid-route-target

| | |

| Introduced | 16.0.R1 |

Platforms All

auto-bind-tunnel

Synopsis Enter the **auto-bind-tunnel** context

Context **configure** [service vpls string](#) [bgp-evpn mpls number](#) **auto-bind-tunnel**

Tree [auto-bind-tunnel](#)

Introduced 16.0.R1

Platforms All

allow-flex-algo-fallback *boolean*

Synopsis Enable flexible algorithm fallback

Context **configure** [service vpls string](#) [bgp-evpn mpls number](#) **auto-bind-tunnel** [allow-flex-algo-fallback](#) *boolean*

Tree [allow-flex-algo-fallback](#)

Description When configured to **true**, a BGP router with a Flex-Algorithm action configured (via the **configure policy-options policy-statement entry action flex-algo** command) can resolve to a tunnel with algorithm 0 if no target Flex-Algorithm tunnel is available.

When configured to **false**, the BGP router can resolve only to the intended Flex-Algorithm tunnel, which may cause traffic loss if no corresponding Flex-Algorithm tunnel is available.

Default false

Introduced 20.10.R1

Platforms All

ecmp *number*

Synopsis Maximum ECMP routes information

Context **configure** [service vpls string](#) [bgp-evpn mpls number](#) **auto-bind-tunnel** [ecmp](#) *number*

Tree [ecmp](#)

Range 1 to 32

Default 1

Introduced 19.10.R1

Platforms All

enforce-strict-tunnel-tagging *boolean*

| | |
|------------|---|
| Synopsis | Enable/disable enforcement of strict tunnel tagging |
| Context | configure service vpls string bgp-evpn mpls number auto-bind-tunnel enforce-strict-tunnel-tagging <i>boolean</i> |
| Tree | enforce-strict-tunnel-tagging |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | All |

resolution *keyword*

| | |
|------------|--|
| Synopsis | Resolution method for tunnel selection |
| Context | configure service vpls string bgp-evpn mpls number auto-bind-tunnel resolution <i>keyword</i> |
| Tree | resolution |
| Options | none, filter, any |
| Default | none |
| Introduced | 16.0.R1 |
| Platforms | All |

resolution-filter

| | |
|------------|--|
| Synopsis | Enter the resolution-filter context |
| Context | configure service vpls string bgp-evpn mpls number auto-bind-tunnel resolution-filter |
| Tree | resolution-filter |
| Introduced | 16.0.R1 |
| Platforms | All |

bgp *boolean*

| | |
|-------------|---|
| Synopsis | Use BGP tunneling for next-hop resolution |
| Context | configure service vpls string bgp-evpn mpls number auto-bind-tunnel resolution-filter bgp <i>boolean</i> |
| Tree | bgp |
| Description | When configured to true , BGP searches the BGP LSP for the address of the BGP next hop. |

When configured to **false**, BGP tunneling is not used and inter-area or inter-as prefixes are not resolved.

| | |
|------------|---------|
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

ldp boolean

| | |
|-------------|--|
| Synopsis | Use LDP tunneling for next-hop resolution |
| Context | configure service vpls string bgp-evpn mpls number auto-bind-tunnel resolution-filter ldp boolean |
| Tree | ldp |
| Description | When configured to true , BGP searches for an LDP LSP with a FEC prefix corresponding to the address of the BGP next hop.
When configured to false , LDP tunneling is not used for next-hop resolution. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

mpls-fwd-policy boolean

| | |
|-------------|---|
| Synopsis | Use MPLS forwarding policy for next-hop resolution |
| Context | configure service vpls string bgp-evpn mpls number auto-bind-tunnel resolution-filter mpls-fwd-policy boolean |
| Tree | mpls-fwd-policy |
| Description | When configured to true , BGP uses the MPLS forwarding policy to determine the address of the BGP next hop.
When configured to false , the MPLS forwarding policy is not used for next-hop resolution. |
| Default | false |
| Introduced | 19.5.R1 |
| Platforms | All |

rib-api boolean

| | |
|----------|--|
| Synopsis | Use RIB API gRPC service for next-hop resolution |
|----------|--|

| | |
|-------------|---|
| Context | configure service vpls string bgp-evpn mpls number auto-bind-tunnel resolution-filter rib-api boolean |
| Tree | rib-api |
| Description | When configured to true , BGP uses tunnels programmed using the RIB API gRPC service to resolve the next hops of routes imported into the EVPN service.
When configured to false , the RIB API service tunnels are not used for next-hop resolution. |
| Default | false |
| Introduced | 19.5.R1 |
| Platforms | All |

rsvp boolean

| | |
|-------------|---|
| Synopsis | Use RSVP tunneling for next-hop resolution |
| Context | configure service vpls string bgp-evpn mpls number auto-bind-tunnel resolution-filter rsvp boolean |
| Tree | rsvp |
| Description | When configured to true , BGP searches the best metric RSVP LSP to determine the address of the BGP next hop. This address can correspond to the system interface or to another loopback interface used by the BGP instance on the remote node. The LSP metric is provided by MPLS in the tunnel table. In the case of multiple RSVP LSPs with the same lowest metric, BGP selects the LSP with the lowest tunnel ID.
When configured to false , the RSVP LSP is not used for next-hop resolution. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

sr-isis boolean

| | |
|-------------|---|
| Synopsis | Use IS-IS SR tunneling for next-hop resolution |
| Context | configure service vpls string bgp-evpn mpls number auto-bind-tunnel resolution-filter sr-isis boolean |
| Tree | sr-isis |
| Description | When configured to true , BGP uses an IS-IS tunnel type to determine the address of the BGP next hop.
The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered IS-IS instance.
When configured to false , IS-IS tunneling is not used for next-hop resolution. |

| | |
|------------|---------|
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

sr-ospf *boolean*

| | |
|-------------|---|
| Synopsis | Use OSPF SR tunneling for next-hop resolution |
| Context | configure service vpls string bgp-evpn mpls number auto-bind-tunnel resolution-filter sr-ospf <i>boolean</i> |
| Tree | sr-ospf |
| Description | <p>When configured to true, BGP uses an OSPF tunnel type to determine the address of the BGP next hop.</p> <p>The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered OPSF instance.</p> <p>When configured to false, OSPF tunneling is not used for next-hop resolution.</p> |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

sr-ospf3 *boolean*

| | |
|-------------|--|
| Synopsis | Use OSPFv3 SR tunneling for next-hop resolution |
| Context | configure service vpls string bgp-evpn mpls number auto-bind-tunnel resolution-filter sr-ospf3 <i>boolean</i> |
| Tree | sr-ospf3 |
| Description | <p>When configured to true, BGP uses an OSPF3 tunnel type to determine the address of the BGP next hop.</p> <p>The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered OPSF3 instance.</p> <p>When configured to false, OSPF3 tunneling is not used for next-hop resolution.</p> |
| Default | false |
| Introduced | 19.10.R1 |
| Platforms | All |

sr-policy *boolean*

| | |
|----------|---|
| Synopsis | Use SR policies for next-hop resolution |
|----------|---|

| | |
|-------------|--|
| Context | configure service vpls string bgp-evpn mpls number auto-bind-tunnel resolution-filter sr-policy boolean |
| Tree | sr-policy |
| Description | When configured to true , this command instructs BGP to use an SR policy to determine the address of the BGP next hop. The SR policy search criteria includes a non-null endpoint and color value that matches the BGP next hop and color extended community value, respectively, of the EVPN route.

When configured to false , SR policies are not used for next-hop resolution. |
| Default | false |
| Introduced | 19.5.R1 |
| Platforms | All |

sr-te boolean

| | |
|-------------|--|
| Synopsis | Use SR-TE tunneling for next-hop resolution |
| Context | configure service vpls string bgp-evpn mpls number auto-bind-tunnel resolution-filter sr-te boolean |
| Tree | sr-te |
| Description | When configured to true , BGP uses an SR-TE tunnel type to determine the address of the BGP next hop.

The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered tunnel ID.

When configured to false , SR-TE tunneling is not used for next-hop resolution. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

udp boolean

| | |
|-------------|--|
| Synopsis | Use MPLS over UDP tunneling for next-hop resolution |
| Context | configure service vpls string bgp-evpn mpls number auto-bind-tunnel resolution-filter udp boolean |
| Tree | udp |
| Description | When configured to true , BGP uses an MPLS over UDP tunnel type to determine the address of the BGP next hop.

When configured to false , MPLS over UDP tunneling is not used for next-hop resolution. |
| Default | false |
| Introduced | 16.0.R1 |

Platforms All

weighted-ecmp *boolean*

Synopsis Allow weighted load balancing

Context **configure** *service vpls string bgp-evpn mpls number auto-bind-tunnel weighted-ecmp boolean*

Tree [weighted-ecmp](#)

Description When configured to **true**, this router enables weighted ECMP for packets using tunnels that a VPLS or Epipe automatically binds to. Packets are sprayed across LSPs in the ECMP according to the outcome of the hash algorithm and the configured load balancing weight of each LSP.

When configured to **false**, this command disables weighted ECMP for next-hop tunnel selection.

Default false

Introduced 22.7.R1

Platforms All

control-word *boolean*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enable control word support

Context **configure** *service vpls string bgp-evpn mpls number control-word boolean*

Tree [control-word](#)

Description When configured to **true**, the router enables the transmission and reception of the control word for all EVPN-MPLS destinations at the same time.

Default false

Introduced 16.0.R1

Platforms All

default-route-tag *string*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Default route tag |
| Context | configure <i>service vpls string</i> <i>bgp-evpn mpls number</i> <i>default-route-tag string</i> |
| Tree | <i>default-route-tag</i> |
| Description | <p>This command configures a route tag that is used when sending a route to the BGP application (for the corresponding service and BGP instance). If the corresponding BGP instance is enabled, the command cannot be changed.</p> <p>When used for BGP EVPN contexts, only one route tag can be passed to BGP for matching on export policies. In case of a conflict with other route tags pushed by EVPN, the default route tag has the least priority.</p> <p>The following are examples of the conflict priority handling:</p> <ul style="list-style-type: none"> • If a service is configured with both default-route-tag <i>X</i> and proxy-arp evpn-route-tag <i>Y</i>, the EVPN uses route tag <i>Y</i> when sending EVPN proxy-arp routes to the BGP RIB for advertisement. • If a given IP-prefix route is tagged in the route-table with tag <i>A</i> and the R-VPLS, in which the route is advertised, uses <i>B</i> as the default-route-tag, then EVPN keeps tag <i>A</i> when sending the route to the BGP RIB. <p>The default-route-tag configuration is only supported on EVPN and IP-VPN service routes. The route tag for ES and AD per-ES routes is always zero.</p> |
| Introduced | 16.0.R4 |
| Platforms | All |

dynamic-egress-label-limit *boolean*

| | |
|-------------|---|
| Synopsis | Enables dynamic egress label limit |
| Context | configure <i>service vpls string</i> <i>bgp-evpn mpls number</i> <i>dynamic-egress-label-limit boolean</i> |
| Tree | <i>dynamic-egress-label-limit</i> |
| Description | <p>When configured to true, this command relaxes the egress MPLS label limit check when resolving BGP next hops in the tunnel table.</p> <p>For VPRN services, the OAM label is never computed and, therefore, one more egress label is allowed.</p> <p>For EVPN (Epipe and VPLS) services, the system only computes the control word and ESI label if they are used. For the control word, the system reduces the egress label limit by one label if the control word is configured in the service. When configured, the ESI label is not counted for Epipes or VPLS services without an ES.</p> <p>When configured to false this command, for EVPN, Epipe, and VPLS services, always accounts for the ESI label and control word.</p> |
| Default | false |
| Introduced | 22.2.R1 |
| Platforms | All |

domain-id *string*

| | |
|-------------|---|
| Synopsis | Domain ID of received BGP route before readvertisement |
| Context | configure service vpls <i>string</i> bgp-evpn routes ip-prefix domain-id <i>string</i> |
| Tree | domain-id |
| Description | <p>This command specifies the domain ID. The domain ID identifies the network from which the BGP route was received before the RTM advertises it to a different neighbor. The domain ID is part of a domain, represented as <code>domain-id:isf_safi_type</code> in the D-PATH attribute, as described in <i>draft-ietf-bess-evpn-ipvpn-interworking</i>. Gateway routers modify the D-PATH attribute. A gateway is a PE where a VPRN is instantiated. The VPRN in this case advertises or receives routes from multiple BGP owners (for example, EVPN-IFL and BGP-IPVPN) or multiple instances of the same owner (for example, VPRN with two BGP-IPVPN instances).</p> <p>Gateways use the D-PATH attribute to detect loops (for received routes where the D-PATH contains a local domain ID) and to make BGP best-path selection decisions based on the D-PATH length (shorter D-PATH is preferred).</p> <p>In the following example, suppose a gateway receives prefix P in an EVPN-IFL instance with the following D-PATH from neighbor N:</p> <pre>Seg Len=1 / 65000:1:128</pre> <p>If the router imports the route in VPRN-1, BGP-EVPN SRv6 instance with domain 65000:2, it readvertises it to its BGP-IPVPN MPLS instance as follows:</p> <pre>Seg Len=2 / 65000:2:70 / 65000:1:128</pre> <p>That is, the gateway prepends the local domain ID and family to the D-PATH before readvertising the route into a different instance.</p> |

default-route-tag string

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Default route tag

Context **configure service vpls string bgp-evpn segment-routing-v6 number default-route-tag string**

Tree [default-route-tag](#)

Description This command configures a route tag that is used when sending a route to the BGP application (for the corresponding service and BGP instance). If the corresponding BGP instance is enabled, the command cannot be changed.

When used for BGP EVPN contexts, only one route tag can be passed to BGP for matching on export policies. In case of a conflict with other route tags pushed by EVPN, the default route tag has the least priority.

The following are examples of the conflict priority handling:

- If a service is configured with both **default-route-tag X** and **proxy-arp evpn-route-tag Y**, the EVPN uses route tag Y when sending EVPN proxy-arp routes to the BGP RIB for advertisement.
- If a given IP-prefix route is tagged in the route-table with tag A and the R-VPLS, in which the route is advertised, uses B as the **default-route-tag**, then EVPN keeps tag A when sending the route to the BGP RIB.

The **default-route-tag** configuration is only supported on EVPN and IP-VPN service routes. The route tag for ES and AD per-ES routes is always zero.

| | |
|------------|---|
| Introduced | 22.7.R1 |

evi-three-byte-auto-rt boolean

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|---|
| Synopsis | Auto-derive the BGP EVPN route target |
| Context | configure service vpls string bgp-evpn segment-routing-v6 number evi-three-byte-auto-rt boolean |
| Tree | evi-three-byte-auto-rt |
| Description | When configured to true , the BGP-EVPN instance import and export route target is auto-derived as described in RFC 8365 (Global-Administrator:A/Type/D-ID/Service-ID).
Where: |

- Global Administrator – is the configured 2-octet AS number; if the configured ASN exceeds the 2 byte limit, the low order 16-bit value is taken
- A=0 (for auto-derivation)
- Type=4 (EVI-based route-target)
- D-ID= [1..2] – encodes the BGP instance, which allows the auto-derivation of different route-targets in multi-instance services; the value is inherited from the corresponding BGP instance
- Service ID=3-octet EVI

When configured to **false**, route target derivation is not allowed.

| | |
|------------|---|
| Default | false |
| Introduced | 22.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

fdb

| | |
|------------|---|

force-vc-forwarding keyword

| | |
|----------|---|
| Synopsis | Datapath forwarding to force vlan-vc-type |
| Context | configure service vpls string bgp-evpn segment-routing-v6 number force-vc-forwarding keyword |
| Tree | force-vc-forwarding |

| | |
|-------------|---|
| Description | This command allows the system to preserve the VLAN ID and 802.1p bits of the service-delimiting qtag in a new tag added in the customer frame before sending it to the EVPN destinations.

This command may be used in conjunction with the sap ingress vlan-translation command. If so used, the configured translated VLAN ID is the VLAN ID sent to the EVPN destinations as opposed to the service-delimiting tag VLAN ID. If the ingress SAP/SDP binding is 'null'-encapsulated, the output VLAN ID and pbits is zero. |
| Options | vlan, qinq-c-tag-c-tag, qinq-s-tag-c-tag |

oper-group reference

| | |
|-------------|---|
| Synopsis | Operational group |
| Context | configure service vpls string bgp-evpn segment-routing-v6 number oper-group reference |
| Tree | oper-group |
| Description | This command adds the BGP EVPN SRv6 instance or an Ethernet Segment (ES) as a member of the operational group.

When configured on a BGP EVPN instance, the operational group is up when it is either empty (meaning that the operational group has no members) or at least an EVPN destination is created under the EVPN instance added as member. When configured, no other SAP, SDP binding, or BGP EVPN instance can be added to the same operational group within the same or different service. |
| Reference | configure service oper-group string |

| | |
|------------|---|
| Introduced | 22.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

default-route-tag string**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | Default route tag |
| Context | configure service vpls string bgp-evpn vxlan number default-route-tag string |
| Tree | default-route-tag |
| Description | <p>This command configures a route tag that is used when sending a route to the BGP application (for the corresponding service and BGP instance). If the corresponding BGP instance is enabled, the command cannot be changed.</p> <p>When used for BGP EVPN contexts, only one route tag can be passed to BGP for matching on export policies. In case of a conflict with other route tags pushed by EVPN, the default route tag has the least priority.</p> <p>The following are examples of the conflict priority handling:</p> <ul style="list-style-type: none"> If a service is configured with both default-route-tag X and proxy-arp evpn-route-tag Y, the EVPN uses route tag Y when sending EVPN proxy-arp routes to the BGP RIB for advertisement. |

- If a given IP-prefix route is tagged in the route-table with tag *A* and the R-VPLS, in which the route is advertised, uses *B* as the **default-route-tag**, then EVPN keeps tag *A* when sending the route to the BGP RIB.

The **default-route-tag** configuration is only supported on EVPN and IP-VPN service routes. The route tag for ES and AD per-ES routes is always zero.

association reference

| | |
|-------------|--|
| Synopsis | Association used for PFCP messages on the capture SAP |
| Context | configure service vpls string capture-sap string pfcp association reference |
| Tree | association |
| Description | This command links the capture SAP to a PFCP association. This enables CUPS for the capture SAP and any trigger packets are forwarded to the BNG CUPS CPF. |
| Reference | configure subscriber-mgmt pfcp association string |
| Introduced | 20.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

I2-access-id-alias string

| | |
|---------------|---|
| Synopsis | String used as Layer 2 access ID for the capture SAP |
| Context | configure service vpls string capture-sap string pfcp I2-access-id-alias string |
| Tree | I2-access-id-alias |
| Description | This command defines a Layer 2 access ID alias for the capture SAP. It replaces the default underlying port-based or LAG-based Layer 2 access ID. Different capture SAPs on the same underlying port or LAG can have different Layer 2 access ID aliases. |
| String Length | 1 to 32 |
| Introduced | 22.2.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

up-resiliency

| | |
|----------|--|
| Synopsis | Enter the up-resiliency context |
| Context | configure service vpls string capture-sap string pfcp up-resiliency |
| Tree | up-resiliency |

| | |
|------------|---|
| Introduced | 22.2.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

monitor-oper-group [[oper-group](#)] *reference*

| | |
|----------------|---|
| Synopsis | Enter the monitor-oper-group list instance |
| Context | configure service vpls string capture-sap string pfc up-resiliency monitor-oper-group reference |
| Tree | monitor-oper-group |
| Description | Commands in this context define parameters to derive the service health based on monitored operational groups. The BNG UPF sends the health value to the BNG CPF. The BNG CPF uses the value to determine the need for a BNG UPF status change (active or standby).

Note:
The following is only applicable for the configure service vpls capture-sap context. If the configured groups are not the same for all capture SAPs sharing the same underlying port or LAG, the configuration of a Layer 2 access ID alias is required, or else the system chooses arbitrarily one set of configured groups. |
| Max. Instances | 4 |
| Introduced | 22.2.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

[oper-group] *reference*

| | |

| Context | configure service vpls string capture-sap string pfc up-resiliency monitor-oper-group reference |
| Tree | monitor-oper-group |
| Reference | configure service oper-group string |
| Notes | This element is part of a list key. |
| Introduced | 22.2.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

health-drop *number*

| | |
|----------|---|
| Synopsis | Number subtracted from the health value per failure |
|----------|---|

| | |
|-------------|---|
| Context | configure service vpls string capture-sap string pfc up-resiliency monitor-oper-group reference health-drop number |
| Tree | health-drop |
| Description | This command configures the drop in the health value for every operational group member failure. Every failure of an operational group member decreases the base health value to a possible minimum of 0. |
| Range | 1 to 255 |
| Default | 1 |
| Introduced | 22.2.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

pppoe

| Tree | admin-state |
| Options | enable, disable |

| | |
|------------|--|
| Default | disable |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

alarm-notification

| | |
|-------------|--|
| Synopsis | Enter the alarm-notification context |
| Context | configure service vpls string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number alarm-notification |
| Tree | alarm-notification |
| Description | <p>Commands in this context configure the Fault Notification Generator (FNG) time values to raise an alarm or reset the CCM defect alarm.</p> <p>Use these timers for network management processes. The timers are not tied into delaying the notification to the fault management system on the network element and do not affect fault propagation mechanisms.</p> |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

fng-alarm-time *number*

| | |
|------------|---|
| Synopsis | Time that must expire before an FNG alarm is raised |
| Context | configure service vpls string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number alarm-notification fng-alarm-time number |
| Tree | fng-alarm-time |
| Range | 250 500 1000 |
| Units | centiseconds |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

fng-reset-time *number*

| | |
|----------|---|
| Synopsis | Time that must expire before an FNG alarm is reset |
| Context | configure service vpls string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number alarm-notification fng-reset-time number |
| Tree | fng-reset-time |
| Range | 250 500 1000 |
| Units | centiseconds |

| | |
|------------|--|
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

ccm boolean

| | |
|------------|--|
| Synopsis | Generate CCM messages |
| Context | configure service vpls string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm boolean |
| Tree | ccm |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

ccm-ltm-priority number

| | |
|------------|--|
| Synopsis | Priority of CCM and LTM messages transmitted by the MEP |
| Context | configure service vpls string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm-ltm-priority number |
| Tree | ccm-ltm-priority |
| Range | 0 to 7 |
| Default | 7 |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

ccm-padding-size number

| | |
|-------------|---|
| Synopsis | Number of octets of padding to insert in CCM packets |
| Context | configure service vpls string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm-padding-size number |
| Tree | ccm-padding-size |
| Description | This command sets the byte size of the optional Data TLV to be included in the ETH-CC PDU.

This command increases the size of the ETH-CC PDU by the configured value. The base size of the ETH-CC PDU, including the Interface Status TLV and Port Status TLV, is 83 bytes not including the Layer 2 encapsulation. CCM padding is not supported when the CCM interval (configured through configure eth-cfm domain association ccm-interval) is less than 1 second. |
| Range | 3 to 1500 |

| | |
|------------|--|
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

cfm-vlan-tag *string*

| | |
|---------------|--|
| Synopsis | VLAN tags to apply to CFM PDUs for egress processing |
| Context | configure service vpls <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> cfm-vlan-tag <i>string</i> |
| Tree | cfm-vlan-tag |
| String Length | 1 to 9 |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

description *string*

| | |
|---------------|---|
| Synopsis | Text description |
| Context | configure service vpls <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> description <i>string</i> |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

eth-test

| | |
|-------------|--|
| Synopsis | Enable the eth-test context |
| Context | configure service vpls <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test |
| Tree | eth-test |
| Description | Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the oam eth-cfm eth-test command. |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

bit-error-threshold *number*

| | |
|------------|---|
| Synopsis | Lowest priority defect allowed to generate fault alarm |
| Context | configure service vpls <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test bit-error-threshold <i>number</i> |
| Tree | bit-error-threshold |
| Range | 0 to 11840 |
| Units | bit errors |
| Default | 1 |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

test-pattern

| | |
|-------------|--|
| Synopsis | Enter the test-pattern context |
| Context | configure service vpls <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test test-pattern |
| Tree | test-pattern |
| Description | Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver. |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

crc-tlv *boolean*

| | |
|------------|---|
| Synopsis | Generate a CRC checksum |
| Context | configure service vpls <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> eth-test test-pattern crc-tlv <i>boolean</i> |
| Tree | crc-tlv |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

pattern *keyword*

| | |
|----------|---------------------------------------|
| Synopsis | Test pattern for Ethernet Test frames |
|----------|---------------------------------------|

| | |
|-------------|---|
| Context | configure service vpls string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test test-pattern pattern keyword |
| Tree | pattern |
| Description | This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver. |
| Options | all-zeros, all-ones |
| Default | all-zeros |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

grace

| | |
|-------------|---|
| Synopsis | Enter the grace context |
| Context | configure service vpls string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace |
| Tree | grace |
| Description | Commands in this context configure the Nokia ETH-CFM Grace function and the ITU-T Y.1731 Ethernet Expected Default (ETH-ED) function. |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

eth-ed

eth-vsm-grace

| | |
|-------------|--|
| Synopsis | Enter the eth-vsm-grace context |
| Context | configure service vpls string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace |
| Tree | eth-vsm-grace |
| Description | Commands in this context configure the Nokia ETH-CFM Grace function. |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

rx-eth-vsm-grace *boolean*

| | |
|-------------|---|
| Synopsis | Receive and process Nokia ETH-CFM Grace PDU on the MEP |
| Context | configure service vpls string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace rx-eth-vsm-grace boolean |
| Tree | rx-eth-vsm-grace |
| Description | When configured to true , the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.

When configured to false , the router disables the Nokia Grace function. |
| Default | true |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

tx-eth-vsm-grace *boolean*

| | |
|-------------|---|
| Synopsis | Transmit ETH-ED PDUs from the MEP |
| Context | configure service vpls string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace tx-eth-vsm-grace boolean |
| Tree | tx-eth-vsm-grace |
| Description | When configured to true , the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.

The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.

The operator must configure the configure system eth-cfm grace command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED). |

When configured to **false**, the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.

| | |
|------------|--|
| Default | true |
| Introduced | 16.0.R4 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

low-priority-defect *keyword*

| | |

local-age-time *number*

| | |
|-------------|--|
| Synopsis | Aging time for locally learned MAC addresses |
| Context | configure service vpls string fdb mac-learning local-age-time number |
| Tree | local-age-time |
| Description | This command configures the aging time for locally learned MAC addresses in the forwarding database (FDB) for the Virtual Private LAN Service (VPLS) instance. In a VPLS service, MAC addresses are associated with a Service Access Point (SAP) or a Service Distribution Point (SDP). MACs associated with a SAP are classified as local MACs, and MACs associated with an SDP are remote MACs. In each VPLS service instance, there are independent aging timers for locally learned MAC and remotely learned MAC entries in the FDB. |

As in a Layer 2 switch, learned MACs can be aged out if no packets are sourced from the MAC address for a period of time (the aging time).

| | |
|------------|-------------|
| Range | 60 to 86400 |
| Default | 300 |
| Introduced | 16.0.R1 |
| Platforms | All |

| Synopsis | Enable hashing of MPLS ethernet and IP packets on SAPs |
| Context | configure service vpls string load-balancing lbl-eth-or-ip-l4-teid boolean |
| Tree | lbl-eth-or-ip-l4-teid |
| Description | When configured to true , this command enables hashing of MPLS Ethernet and MPLS IP packets received on the Epipe and VPLS service SAP using the MPLS labels, the inner IP addresses, the port numbers, and the GTP TEID field, if read by the system. This capability is supported on line cards that are FP4-based and later. |
| Default | false |
| Introduced | 22.2.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

per-service-hashing *boolean*

| | |

tx-eth-vsm-grace *boolean*

Synopsis Transmit ETH-ED PDUs from the MEP

Context **configure** [service vpls](#) *string* [mesh-sdp](#) *string* [eth-cfm mep md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* [eth-vsm-grace tx-eth-vsm-grace](#) *boolean*

Tree [tx-eth-vsm-grace](#)

Description When configured to **true**, the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.

The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.

The operator must configure the **configure system eth-cfm grace** command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).

When configured to **false**, the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.

Default true

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

| Tree | cfm-vlan-tag |

| | |
|---------------|--|
| Description | This command allows the CFM function to include additional VLAN tags to the CFM packet that are carried to the egress and treated as service delimited. Typically, this function is used to influence the VLAN carried over a binding that uses the vc-type vlan or the binding forces the use of one or more VLAN tag that results in a mismatch between the service data arriving at the binding and the locally generated ETH-CFM PDUs arriving at the same egress. When this command is included under the MEP or MIP configuration, the tags used as part of the configuration typically match the SAP service delimited configuration. |
| String Length | 1 to 9 |

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

etree-leaf *boolean*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Enable etree leaf access-circuit status

Context **configure** **service vpls** *string* **mesh-sdp** *string* **etree-leaf** *boolean*

| | |
|------------|----------------------------|
| Tree | etree-leaf |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

etree-root-leaf-tag *boolean*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|------------|---|
| Synopsis | Status for E-tree root leaf tag |
| Context | configure service vpls <i>string</i> mesh-sdp <i>string</i> etree-root-leaf-tag <i>boolean</i> |
| Tree | etree-root-leaf-tag |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

fdb

| | |
|------------|--|
| Synopsis | Enter the fdb context |
| Context | configure service vpls <i>string</i> mesh-sdp <i>string</i> fdb |
| Tree | fdb |
| Introduced | 16.0.R1 |
| Platforms | All |

auto-learn-mac-protect *boolean*

| | |
|------------|--|
| Synopsis | Enable automatic population of the MAC protect list |
| Context | configure service vpls <i>string</i> mesh-sdp <i>string</i> fdb auto-learn-mac-protect <i>boolean</i> |
| Tree | auto-learn-mac-protect |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | All |

auto-learn-mac-protect-exclude-list *reference*

| | |
|-------------|--|
| Synopsis | Referenced MAC protect exclusion list name |
| Context | configure service vpls <i>string</i> mesh-sdp <i>string</i> fdb auto-learn-mac-protect-exclude-list <i>reference</i> |
| Tree | auto-learn-mac-protect-exclude-list |
| Description | This command references the name of a MAC protect exclusion list.

Dynamically-learned MAC Source Addresses (SA) are protected if they are learned on an object with ALMP configured and no exclusion list is associated with the object, or if the MAC SA does not match any entry in an associated exclusion list.

An exclusion list can be used in multiple objects of a service. If a list is empty, ALMP does not exclude any learned MAC SAs from protection on the object. |
| Reference | configure service mac-list <i>string</i> |
| Introduced | 20.5.R1 |
| Platforms | All |

mac-pinning *boolean*

| | |
|------------|---|
| Synopsis | MAC address pinning in active status |
| Context | configure service vpls <i>string</i> mesh-sdp <i>string</i> fdb mac-pinning <i>boolean</i> |
| Tree | mac-pinning |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

protected-src-mac-violation-action *keyword*

| | |
|------------|--|
| Synopsis | Action to take whenever a relearn request for a protected MAC is received |
| Context | configure service vpls <i>string</i> mesh-sdp <i>string</i> fdb protected-src-mac-violation-action <i>keyword</i> |
| Tree | protected-src-mac-violation-action |
| Options | sdp-bind-oper-down, alarm-only, discard |
| Introduced | 16.0.R4 |
| Platforms | All |

force-vc-forwarding *keyword*

| | |
|------------|---|
| Synopsis | VC forwarding action |
| Context | configure service vpls <i>string</i> mesh-sdp <i>string</i> force-vc-forwarding <i>keyword</i> |
| Tree | force-vc-forwarding |
| Options | vlan, qinq-c-tag-c-tag, qinq-s-tag-c-tag |
| Introduced | 16.0.R1 |
| Platforms | All |

hash-label

| | |
|-------------|---|
| Synopsis | Enable the hash-label context |
| Context | configure service vpls <i>string</i> mesh-sdp <i>string</i> hash-label |
| Tree | hash-label |
| Description | Commands in this context configure the use of hash labels for egress datapaths. |
| Notes | The following elements are part of a choice: entropy-label or hash-label . |
| Introduced | 16.0.R1 |
| Platforms | All |

signal-capability

| | |
|-------------|---|
| Synopsis | Signal hash label capability to the remote PE |
| Context | configure service vpls <i>string</i> mesh-sdp <i>string</i> hash-label signal-capability |
| Tree | signal-capability |
| Description | When configured, this command enables the signaling and negotiating of the hash label between the local and remote PE nodes.

The signaling process outcome determines whether the local PE inserts the hash label on the user packets. This outcome can override the local PE configuration. |
| Introduced | 16.0.R1 |
| Platforms | All |

igmp-snooping

| | |
|----------|--|
| Synopsis | Enter the igmp-snooping context |
| Context | configure service vpls <i>string</i> mesh-sdp <i>string</i> igmp-snooping |

| Options | unlimited |
| Default | unlimited |
| Introduced | 16.0.R1 |
| Platforms | All |

interface-policy *reference*

| | |
|------------|---|
| Synopsis | Name of multicast CAC interface policy |
| Context | configure service vpls <i>string</i> mesh-sdp <i>string</i> igmp-snooping mcac interface-policy <i>reference</i> |
| Tree | interface-policy |
| Reference | configure mcac interface-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

policy *reference*

| | |
|-------------|---|
| Synopsis | Multicast CAC policy name |
| Context | configure service vpls <i>string</i> mesh-sdp <i>string</i> igmp-snooping mcac policy <i>reference</i> |
| Tree | policy |
| Description | This command configures the name of the global channel bandwidth definition policy that is used for (H)MCAC and HQoS adjustment. |

Within the scope of HQoS adjustment, the channel definition policy under the group interface is used if redirection is unconfigured. In this case, the HQoS adjustment can be applied to IPoE subscribers in per-SAP replication mode.

If redirection is configured, the channel bandwidth definition policy applied under the Layer 3 redirected interface is in effect.

Hierarchical MCAC (HMCAC) is supported on two levels simultaneously:

- subscriber level and redirected interface when redirection is configured
- subscriber level and group-interface level when redirection is unconfigured

In HMCAC, the subscriber is checked against its bandwidth limits first, then against the bandwidth limits of the redirected or group interface. If redirection is configured but the policy is referenced only under the group interface, no admission control is executed (HMCAC or MCAC).

| | |
|------------|--|
| Reference | configure mcac policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

mrouter-port *boolean*

| | |
|------------|--|
| Synopsis | Operate port as a multicast router port |
| Context | configure service vpls <i>string</i> mesh-sdp <i>string</i> igmp-snooping mrouter-port <i>boolean</i> |
| Tree | mrouter-port |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

query-interval *number*

| | |
|------------|---|
| Synopsis | Time between two consecutive host-query messages |
| Context | configure service vpls <i>string</i> mesh-sdp <i>string</i> igmp-snooping query-interval <i>number</i> |
| Tree | query-interval |
| Range | 2 to 1024 |
| Units | seconds |
| Default | 125 |
| Introduced | 16.0.R1 |
| Platforms | All |

query-last-member-interval *number*

| | |
|------------|---|
| Synopsis | Time between group-specific query messages |
| Context | configure service vpls <i>string</i> mesh-sdp <i>string</i> igmp-snooping query-last-member-interval <i>number</i> |
| Tree | query-last-member-interval |
| Range | 1 to 50 |
| Units | deciseconds |
| Default | 10 |
| Introduced | 16.0.R1 |
| Platforms | All |

query-response-interval *number*

| | |
|------------|--|
| Synopsis | Time to wait for a response to the host-query messages |
| Context | configure service vpls <i>string</i> mesh-sdp <i>string</i> igmp-snooping query-response-interval <i>number</i> |
| Tree | query-response-interval |
| Range | 1 to 1023 |
| Units | seconds |
| Default | 10 |
| Introduced | 16.0.R1 |
| Platforms | All |

robust-count *number*

| | |
|------------|---|
| Synopsis | Number of retries after expected message loss |
| Context | configure service vpls <i>string</i> mesh-sdp <i>string</i> igmp-snooping robust-count <i>number</i> |
| Tree | robust-count |
| Range | 2 to 7 |
| Default | 2 |
| Introduced | 16.0.R1 |
| Platforms | All |

router-alert-check *boolean*

| | |
|------------|--|
| Synopsis | Enable IP router alert check option |
| Context | configure service vpls <i>string</i> mesh-sdp <i>string</i> igmp-snooping router-alert-check <i>boolean</i> |
| Tree | router-alert-check |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

send-queries *boolean*

| | |
|------------|--|
| Synopsis | Generate IGMP general queries |
| Context | configure service vpls <i>string</i> mesh-sdp <i>string</i> igmp-snooping send-queries <i>boolean</i> |

|------------|--|
| Synopsis | Enter the evpn-proxy context |
| Context | configure service vpls <i>string</i> mld-snooping evpn-proxy |
| Tree | evpn-proxy |
| Introduced | 20.10.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of EVPN proxy |
| Context | configure service vpls <i>string</i> mld-snooping evpn-proxy admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 20.10.R1 |
| Platforms | All |

mvr

| | |
|----------|------------------------------|
| Synopsis | Enter the mvr context |
|----------|------------------------------|

| | |
|------------|---|
| Context | configure service vpls string mld-snooping mvr |
| Tree | mvr |
| Introduced | 16.0.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of MVR |
| Context | configure service vpls string mld-snooping mvr admin-state keyword |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | All |

description *string*

| | |
|---------------|--|
| Synopsis | Text description |
| Context | configure service vpls string mld-snooping mvr description string |
| Tree | description |
| String Length | 1 to 80 |
| Introduced | 16.0.R1 |
| Platforms | All |

group-policy *string*

| | |
|---------------|---|
| Synopsis | Policy that applies MVR |
| Context | configure service vpls string mld-snooping mvr group-policy string |
| Tree | group-policy |
| String Length | 1 to 32 |
| Introduced | 16.0.R1 |
| Platforms | All |

query-interval *number*

| | |
|------------|---|
| Synopsis | Time between two consecutive host-query messages |
| Context | configure service vpls <i>string</i> mld-snooping query-interval <i>number</i> |
| Tree | query-interval |
| Range | 1 to 65535 |
| Units | seconds |
| Default | 125 |
| Introduced | 16.0.R1 |
| Platforms | All |

query-source-address (*keyword* | *ipv6-address*)

| | |
|------------|--|
| Synopsis | Source IP address used in MLD queries |
| Context | configure service vpls <i>string</i> mld-snooping query-source-address (<i>keyword</i> <i>ipv6-address</i>) |
| Tree | query-source-address |
| Options | system |
| Default | system |
| Introduced | 16.0.R1 |
| Platforms | All |

report-source-address *string*

| | |
|------------|--|
| Synopsis | Source IP address used when generating MLD reports |
| Context | configure service vpls <i>string</i> mld-snooping report-source-address <i>string</i> |
| Tree | report-source-address |
| Introduced | 16.0.R1 |
| Platforms | All |

robust-count *number*

| | |
|----------|---|
| Synopsis | Number of retries after expected message loss |
| Context | configure service vpls <i>string</i> mld-snooping robust-count <i>number</i> |
| Tree | robust-count |
| Range | 1 to 255 |

| | |
|------------|---------|
| Default | 2 |
| Introduced | 16.0.R1 |
| Platforms | All |

mrp

| | |
|------------|---|
| Synopsis | Enter the mrp context |
| Context | configure service vpls string mrp |
| Tree | mrp |
| Introduced | 20.10.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of MRP |
| Context | configure service vpls string mrp admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 20.10.R1 |
| Platforms | All |

mmp

| | |
|------------|--|
| Synopsis | Enter the mmp context |
| Context | configure service vpls string mrp mmp |
| Tree | mmp |
| Introduced | 20.10.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|----------|--|
| Synopsis | Administrative state of MMP |
| Context | configure service vpls string mrp mmp admin-state <i>keyword</i> |
| Tree | admin-state |

| | |
|------------|-----------------|
| Options | enable, disable |
| Introduced | 20.10.R1 |
| Platforms | All |

attribute-table

| | |
|------------|--|
| Synopsis | Enter the attribute-table context |
| Context | configure service vpls string mrp mmp attribute-table |
| Tree | attribute-table |
| Introduced | 20.10.R1 |
| Platforms | All |

high-wmark *number*

| | |
|------------|--|
| Synopsis | High watermark for the MMRP attribute table |
| Context | configure service vpls string mrp mmp attribute-table high-wmark number |
| Tree | high-wmark |
| Range | 0 to 100 |
| Default | 95 |
| Introduced | 20.10.R1 |
| Platforms | All |

low-wmark *number*

| | |
|------------|---|
| Synopsis | Low watermark for the MMRP attribute table |
| Context | configure service vpls string mrp mmp attribute-table low-wmark number |
| Tree | low-wmark |
| Range | 0 to 100 |
| Default | 90 |
| Introduced | 20.10.R1 |
| Platforms | All |

size *number*

| | |
|----------|---|
| Synopsis | Maximum number of attributes accepted by B-VPLS |
|----------|---|

| | |
|------------|--|
| Context | configure service vpls string mrp mmp attribute-table size number |
| Tree | size |
| Range | 1 to 8192 |
| Default | 2048 |
| Introduced | 20.10.R1 |
| Platforms | All |

end-station-only *boolean*

| | |
|------------|---|
| Synopsis | Prevent generation or processing of MMRP messages |
| Context | configure service vpls string mrp mmp end-station-only boolean |
| Tree | end-station-only |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | All |

flood-time *number*

| | |
|------------|--|
| Synopsis | Time when traffic is flooded after status change |
| Context | configure service vpls string mrp mmp flood-time number |
| Tree | flood-time |
| Range | 3 to 600 |
| Introduced | 20.10.R1 |
| Platforms | All |

multicast-info-policy *reference*

| | |
|------------|--|
| Synopsis | Multicast information policy |
| Context | configure service vpls string multicast-info-policy reference |
| Tree | multicast-info-policy |
| Reference | configure multicast-management multicast-info-policy string |
| Introduced | 16.0.R1 |
| Platforms | All |

pbb

| | |
|------------|--|
| Synopsis | Enter the pbb context |
| Context | configure service vpls string pbb |
| Tree | pbb |
| Introduced | 16.0.R1 |
| Platforms | All |

backbone-vpls [[backbone-vpls-service-name](#)] *reference*

| | |
|----------------|--|
| Synopsis | Enter the backbone-vpls list instance |
| Context | configure service vpls string pbb backbone-vpls reference |
| Tree | backbone-vpls |
| Max. Instances | 1 |
| Introduced | 16.0.R1 |
| Platforms | All |

[backbone-vpls-service-name] *reference*

| | |
|------------|--|
| Synopsis | Service name |
| Context | configure service vpls string pbb backbone-vpls reference |
| Tree | backbone-vpls |

| | |
|-------------|--|
| Synopsis | Advertisement type of static or dynamic entries in EVPN |
| Context | configure service vpls string proxy-nd evpn advertise-neighbor-type keyword |
| Tree | advertise-neighbor-type |
| Description | <p>This command enables the advertisement of static or dynamic entries that are learned as host, router, or host and router (only one option is possible in a specified service). It also determines the R flag (host or router) when sending Neighbor Advertisement (NA) messages for existing EVPN entries in the proxy-ND table.</p> <p>The router-host command option is only possible when the ARP/ND extended community is advertised along with the MAC/IP routes. It determines that both host and router (dynamic and static) entries are advertised in MAC/IP routes, with an indication whether the entry is host or router in the R flag. These EVPN entries are installed as host or router entries depending on the R flag of the route, and NA messages for them are sent with the proper host or router indication.</p> |
| Options | router, host |
| Default | router |
| Introduced | 16.0.R1 |
| Platforms | All |

flood

| Context | configure service vpls string routed-vpls multicast evpn-gateway advertise keyword |
| Tree | advertise |

| | |
|-------------|--|
| Description | This command configures EVPN OISM to advertise the type of OISM gateway function in the Inclusive Multicast Ethernet Tag routes. |
| Options | mvpn-pim, mvpn-only, pim-only |
| Default | mvpn-pim |
| Introduced | 21.10.R1 |
| Platforms | All |

dr-activation-timer *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| | |
|-------------|--|
| Synopsis | DR activation timer for the EVPN gateway |
| Context | configure service vpls string routed-vpls multicast evpn-gateway dr-activation-timer <i>number</i> |
| Tree | dr-activation-timer |
| Description | This command configures the the designated router (DR) activation timer for the EVPN gateway.

After the DR activation timer expires, each provider edge router (PE) runs the MEG or PEG DR election. The timer allows the PE to collect Inclusive Multicast Ethernet Tag routes from other MEG or PEG gateways and avoids running the DR election multiple times. |
| Range | 0 to 100 |
| Units | seconds |
| Default | 3 |
| Introduced | 21.10.R1 |
| Platforms | All |

non-dr-attract-traffic *keyword*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

| Tree | min-auth-interval |
| Range | 1 to 6000 |
| Units | minutes |
| Default | 15 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

arp-reply-agent keyword

| | |
|------------|---|
| Synopsis | Enable arp-reply-agent function |
| Context | configure service vpls string sap string arp-reply-agent keyword |
| Tree | arp-reply-agent |
| Options | true, with-subscr-ident |
| Introduced | 16.0.R1 |
| Platforms | All |

bandwidth number

| | |
|------------|--|
| Synopsis | SAP bandwidth |
| Context | configure service vpls string sap string bandwidth number |
| Tree | bandwidth |
| Range | 1 to 6400000000 |
| Units | kilobps |
| Introduced | 16.0.R1 |
| Platforms | All |

bgp-vpls-mh-veid number

| | |
|-------------|--|
| Synopsis | BGP-VPLS multi-homing VE-ID |
| Context | configure service vpls string sap string bgp-vpls-mh-veid number |
| Tree | bgp-vpls-mh-veid |
| Description | This command specifies a VE ID that is configured on SAPs that are part of an EVPN single-active Ethernet Segment. The configuration of this command allows the advertisement of L2VPN routes that indicate the state of multi-homed SAPs to the |

remote BGP-VPLS PEs, which can trigger a MAC flush operation on the service to avoid traffic from being blackholed when a failure occurs in the active PE.

When unconfigured from the SAP, L2VPN routes are withdrawn, which causes MAC flush processing on the remote BGP-VPLS.

| | |
|------------|------------|
| Range | 1 to 65535 |
| Introduced | 20.5.R1 |
| Platforms | All |

bpdu-translation *keyword*

option-82

| | |
|-------------|--|
| Synopsis | Enter the option-82 context |
| Context | configure service vpls string sap string dhcp option-82 |
| Tree | option-82 |
| Description | Commands in this context configure the processing required when the router receives a DHCP request that already has an Option 82 field in the packet. |
| Introduced | 16.0.R1 |
| Platforms | All |

action *keyword*

| | |
|------------|--|
| Synopsis | Action to take with received DHCP Option 82 |
| Context | configure service vpls string sap string dhcp option-82 action <i>keyword</i> |
| Tree | action |
| Options | replace, drop, keep |
| Default | keep |
| Introduced | 16.0.R1 |
| Platforms | All |

circuit-id

| | |
|------------|---|
| Synopsis | Enter the circuit-id context |
| Context | configure service vpls string sap string dhcp option-82 circuit-id |
| Tree | circuit-id |
| Introduced | 16.0.R1 |
| Platforms | All |

ascii-tuple

| | |
|------------|--|
| Synopsis | Use the ASCII-encoded tuple for the circuit ID |
| Context | configure service vpls string sap string dhcp option-82 circuit-id ascii-tuple |
| Tree | ascii-tuple |
| Notes | The following elements are part of a choice: ascii-tuple , hex-string , none , or vlan-ascii-tuple . |
| Introduced | 16.0.R1 |
| Platforms | All |

hex-string *string*

| | |
|---------------|--|
| Synopsis | User-defined hexadecimal value of the option |
| Context | configure service vpls string sap string dhcp option-82 circuit-id hex-string string |
| Tree | hex-string |
| String Length | 1 to 66 |
| Notes | The following elements are part of a choice: ascii-tuple , hex-string , none , or vlan-ascii-tuple . |
| Introduced | 16.0.R1 |
| Platforms | All |

none

| | |
|------------|--|
| Synopsis | Do not include the circuit ID |
| Context | configure service vpls string sap string dhcp option-82 circuit-id none |
| Tree | none |
| Notes | The following elements are part of a choice: ascii-tuple , hex-string , none , or vlan-ascii-tuple . |
| Introduced | 16.0.R1 |
| Platforms | All |

vlan-ascii-tuple

| | |
|----------|--|
| Synopsis | Include the VLAN ID and dot1p bits in the ASCII tuple |
| Context | configure service vpls string sap string dhcp option-82 circuit-id vlan-ascii-tuple |
| Tree | vlan-ascii-tuple |

| | |
|-------------|---|
| Description | When configured, the router includes the VLAN ID and dot1p bits with the ASCII-tuple information. This only occurs on dot1q and QinQ-encapsulated ports. When the Option 82 bits are stripped, dot1p bits are copied to the Ethernet header of the outgoing packet.
When unconfigured, the router leaves the circuit ID sub-option of the DHCP packet empty. |
| Notes | The following elements are part of a choice: ascii-tuple , hex-string , none , or vlan-ascii-tuple . |
| Introduced | 16.0.R1 |
| Platforms | All |

remote-id

| | |
|-------------|--|
| Synopsis | Enter the remote-id context |
| Context | configure service vpls string sap string dhcp option-82 remote-id |
| Tree | remote-id |
| Description | Commands in this context configure the remote IP sub-option of the DHCP packet with the identity of the remote host end (typically the DHCP client). |
| Introduced | 16.0.R1 |
| Platforms | All |

ascii-string *string*

| | |
|---------------|--|
| Synopsis | User-defined ASCII string for the remote ID |
| Context | configure service vpls string sap string dhcp option-82 remote-id ascii-string string |

 Range 1 to 14000000
 Units bytes
 Options auto
 Default auto
 Introduced 22.10.R1
 Platforms 7750 SR-1, 7750 SR-s

limit-unused-bandwidth *boolean*

Synopsis Enable aggregate rate overrun protection
 Context **configure** [service vpls string sap string egress agg-rate limit-unused-bandwidth](#) *boolean*
 Tree [limit-unused-bandwidth](#)
 Default false
 Introduced 16.0.R1
 Platforms All

queue-frame-based-accounting *boolean*

Synopsis Enable frame based accounting on policers and queues
 Context **configure** [service vpls string sap string egress agg-rate queue-frame-based-accounting](#) *boolean*
 Tree [queue-frame-based-accounting](#)
 Default false
 Introduced 16.0.R1
 Platforms All

rate number

| | |
|------------|---|
| Synopsis | Enforced aggregate rate for all queues |
| Context | configure service vpls string sap string egress agg-rate rate number |
| Tree | rate |
| Range | 1 to 6400000000 |
| Units | kilobps |
| Introduced | 16.0.R1 |
| Platforms | All |

dest-mac-rewrite string

| | |
|------------|--|
| Synopsis | Destination MAC overwrite for unicast |
| Context | configure service vpls string sap string egress dest-mac-rewrite string |
| Tree | dest-mac-rewrite |
| Introduced | 16.0.R5 |
| Platforms | All |

filter

| | |
|------------|---|
| Synopsis | Enter the filter context |
| Context | configure service vpls string sap string egress filter |
| Tree | filter |
| Introduced | 16.0.R1 |
| Platforms | All |

ip reference

| | |
|------------|--|
| Synopsis | IPv4 filter policy name |
| Context | configure service vpls string sap string egress filter ip reference |
| Tree | ip |
| Reference | configure filter ip-filter string |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv6 reference

| | |
|------------|--|
| Synopsis | IPv6 filter policy name |
| Context | configure service vpls <i>string</i> sap <i>string</i> egress filter ipv6 reference |
| Tree | ipv6 |
| Reference | configure filter ipv6-filter <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

mac reference

| | |
|------------|---|
| Synopsis | MAC filter policy name |
| Context | configure service vpls <i>string</i> sap <i>string</i> egress filter mac reference |
| Tree | mac |
| Reference | configure filter mac-filter <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

qos

| | |
|------------|--|
| Synopsis | Enter the qos context |
| Context | configure service vpls <i>string</i> sap <i>string</i> egress qos |
| Tree | qos |
| Introduced | 16.0.R1 |
| Platforms | All |

policer-control-policy

| | |
|------------|---|
| Synopsis | Enter the policer-control-policy context |
| Context | configure service vpls <i>string</i> sap <i>string</i> egress qos policer-control-policy |
| Tree | policer-control-policy |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

overrides

| | |
|------------|---|
| Synopsis | Enable the overrides context |
| Context | configure service vpls string sap string egress qos policer-control-policy overrides |
| Tree | overrides |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

root

| | |
|------------|--|
| Synopsis | Enter the root context |
| Context | configure service vpls string sap string egress qos policer-control-policy overrides root |
| Tree | root |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

max-rate (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | Maximum frame-based bandwidth limit |
| Context | configure service vpls string sap string egress qos policer-control-policy overrides root max-rate (<i>number</i> <i>keyword</i>) |
| Tree | max-rate |
| Range | 1 to 6400000000 |
| Options | max |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

priority-mbs-thresholds

| | |
|------------|--|
| Synopsis | Enter the priority-mbs-thresholds context |
| Context | configure service vpls string sap string egress qos policer-control-policy overrides root priority-mbs-thresholds |
| Tree | priority-mbs-thresholds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

min-thresh-separation (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | Minimum amount of separation buffer space |
| Context | configure service vpls <i>string</i> sap <i>string</i> egress qos policer-control-policy overrides root priority-mbs-thresholds min-thresh-separation (<i>number</i> <i>keyword</i>) |
| Tree | min-thresh-separation |
| Range | 0 to 16777216 |
| Units | bytes |
| Options | auto |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

priority [[priority-level](#)] *number*

| | |
|------------|--|
| Synopsis | Enter the priority list instance |
| Context | configure service vpls <i>string</i> sap <i>string</i> egress qos policer-control-policy overrides root priority-mbs-thresholds priority <i>number</i> |
| Tree | priority |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

[priority-level] *number*

| | |
|------------|--|
| Synopsis | Priority level |
| Context | configure service vpls <i>string</i> sap <i>string</i> egress qos policer-control-policy overrides root priority-mbs-thresholds priority <i>number</i> |
| Tree | priority |
| Range | 1 to 8 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

mbs-contribution (*number* | *keyword*)

| | |
|----------|---|
| Synopsis | Minimum amount of cumulative buffer space allowed |
| Context | configure service vpls <i>string</i> sap <i>string</i> egress qos policer-control-policy overrides root priority-mbs-thresholds priority <i>number</i> mbs-contribution (<i>number</i> <i>keyword</i>) |

| | |
|------------|--|
| Tree | mbs-contribution |
| Range | 0 to 16777216 |
| Units | bytes |
| Options | auto |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

policy-name *reference*

| | |
|------------|---|
| Synopsis | Policer control policy name |
| Context | configure service vpls string sap string egress qos policer-control-policy policy-name reference |
| Tree | policy-name |
| Reference | configure qos policer-control-policy string |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

qinq-mark-top-only *boolean*

| | |
|------------|---|
| Synopsis | Mark top Q-tags |
| Context | configure service vpls string sap string egress qos qinq-mark-top-only boolean |
| Tree | qinq-mark-top-only |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

sap-egress

| | |
|------------|---|
| Synopsis | Enter the sap-egress context |
| Context | configure service vpls string sap string egress qos sap-egress |
| Tree | sap-egress |
| Introduced | 16.0.R1 |
| Platforms | All |

overrides

| | |
|------------|---|
| Synopsis | Enter the overrides context |
| Context | configure service vpls string sap string egress qos sap-egress overrides |
| Tree | overrides |
| Introduced | 16.0.R1 |
| Platforms | All |

hs-secondary-shaper *string*

| | |
|---------------|--|
| Synopsis | HS Secondary Shaper |
| Context | configure service vpls string sap string egress qos sap-egress overrides hs-secondary-shaper string |
| Tree | hs-secondary-shaper |
| String Length | 1 to 32 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR-7/12/12e |

hs-wrr-group [*group-id*] *reference*

| | |
|------------|--|
| Synopsis | Enter the hs-wrr-group list instance |
| Context | configure service vpls string sap string egress qos sap-egress overrides hs-wrr-group reference |
| Tree | hs-wrr-group |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR-7/12/12e |

[*group-id*] *reference*

| | |
|------------|--|
| Synopsis | HS WRR group identifier |
| Context | configure service vpls string sap string egress qos sap-egress overrides hs-wrr-group reference |
| Tree | hs-wrr-group |
| Reference | configure qos sap-egress string hs-wrr-group number |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |

Platforms 7750 SR-7/12/12e

hs-class-weight *number*

Synopsis Class weight override of the WRR group

Context **configure service vpls string sap string egress qos sap-egress** overrides **hs-wrr-group**
reference **hs-class-weight number**

Tree [hs-class-weight](#)

Range 1 | 2 | 4 | 8

Introduced 16.0.R1

Platforms 7750 SR-7/12/12e

percent-rate *decimal-number*

Synopsis Percent rate override applied to the HS WRR group

Context **configure service vpls string sap string egress qos sap-egress** overrides **hs-wrr-group**
reference **percent-rate decimal-number**

Tree [percent-rate](#)

Range 0.01 to 100.00

Notes The following elements are part of a choice: **percent-rate** or **rate**.

Introduced 16.0.R1

Platforms 7750 SR-7/12/12e

rate (*number* | *keyword*)

Synopsis Scheduling rate override applied to the HS WRR group

Context **configure service vpls string sap string egress qos sap-egress** overrides **hs-wrr-group**
reference **rate (number | keyword)**

Tree [rate](#)

Range 1 to 2000000000

Units kilobps

Options max

Notes The following elements are part of a choice: **percent-rate** or **rate**.

Introduced 16.0.R1

Platforms 7750 SR-7/12/12e

policer [*policer-id*] *reference*

| | |
|------------|---|
| Synopsis | Enter the policer list instance |
| Context | configure service vpls string sap string egress qos sap-egress overrides policer reference |
| Tree | policer |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

[policer-id] *reference*

| | |
|------------|---|
| Synopsis | Policer unique ID |
| Context | configure service vpls string sap string egress qos sap-egress overrides policer reference |
| Tree | policer |
| Reference | configure qos sap-egress string policer number |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

cbs (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | CBS |
| Context | configure service vpls string sap string egress qos sap-egress overrides policer reference cbs (number keyword) |
| Tree | cbs |
| Range | 0 to 268435456 |
| Units | bytes |
| Options | auto |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

mbs (*number* | *keyword*)

| | |
|----------|-----|
| Synopsis | MBS |
|----------|-----|

| | |
|------------|---|
| Context | configure service vpls string sap string egress qos sap-egress overrides policer reference mbs (<i>number keyword</i>) |
| Tree | mbs |
| Range | 0 to 268435456 |
| Units | bytes |
| Options | auto |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

packet-byte-offset *number*

| | |
|------------|--|
| Synopsis | Packet size modification for policing information |
| Context | configure service vpls string sap string egress qos sap-egress overrides policer reference packet-byte-offset <i>number</i> |
| Tree | packet-byte-offset |
| Range | -64 to 31 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

percent-rate

| | |
|------------|--|
| Synopsis | Enter the percent-rate context |
| Context | configure service vpls string sap string egress qos sap-egress overrides policer reference percent-rate |
| Tree | percent-rate |
| Notes | The following elements are part of a choice: percent-rate or rate . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

cir *decimal-number*

| | |
|----------|--|
| Synopsis | CIR percent rate |
| Context | configure service vpls string sap string egress qos sap-egress overrides policer reference percent-rate cir <i>decimal-number</i> |
| Tree | cir |
| Range | 0.00 to 100.00 |

| | |
|------------|--|
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

pir *decimal-number*

| | |
|------------|---|
| Synopsis | PIR percent rate |
| Context | configure service vpls string sap string egress qos sap-egress overrides policer reference percent-rate pir <i>decimal-number</i> |
| Tree | pir |
| Range | 0.01 to 100.00 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

rate

| | |
|------------|---|
| Synopsis | Enter the rate context |
| Context | configure service vpls string sap string egress qos sap-egress overrides policer reference rate |
| Tree | rate |
| Notes | The following elements are part of a choice: percent-rate or rate . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

cir (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | CIR rate |
| Context | configure service vpls string sap string egress qos sap-egress overrides policer reference rate cir (<i>number</i> <i>keyword</i>) |
| Tree | cir |
| Range | 0 to 6400000000 |
| Units | kilobps |
| Options | max |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

pir (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | PIR rate |
| Context | configure service vpls string sap string egress qos sap-egress overrides policer reference rate pir (<i>number</i> <i>keyword</i>) |
| Tree | pir |
| Range | 1 to 6400000000 |
| Units | kilobps |
| Options | max |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

stat-mode *keyword*

| | |
|------------|--|
| Synopsis | Mode of statistics collected by the policer |
| Context | configure service vpls string sap string egress qos sap-egress overrides policer reference stat-mode keyword |
| Tree | stat-mode |
| Options | no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-profile-cir, offered-limited-capped-cir, offered-profile-capped-cir, offered-total-cir-exceed, offered-four-profile-no-cir, offered-total-cir-four-profile |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR |

queue [[queue-id](#)] *reference*

| | |
|------------|---|
| Synopsis | Enter the queue list instance |
| Context | configure service vpls string sap string egress qos sap-egress overrides queue reference |
| Tree | queue |
| Introduced | 16.0.R1 |
| Platforms | All |

[queue-id] *reference*

| | |
|----------|---|
| Synopsis | Policer unique ID |
| Context | configure service vpls string sap string egress qos sap-egress overrides queue reference |

| | |
|------------|---|
| Tree | queue |
| Reference | configure qos sap-egress <i>string</i> queue <i>number</i> |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

adaptation-rule

| | |
|------------|--|
| Synopsis | Enter the adaptation-rule context |
| Context | configure service vpls <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue <i>reference</i> adaptation-rule |
| Tree | adaptation-rule |
| Introduced | 16.0.R1 |
| Platforms | All |

cir keyword

| | |
|------------|---|
| Synopsis | Constraint used when deriving the operational CIR value |
| Context | configure service vpls <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue <i>reference</i> adaptation-rule cir <i>keyword</i> |
| Tree | cir |
| Options | max, min, closest |
| Introduced | 16.0.R1 |
| Platforms | All |

pir keyword

| | |
|------------|---|
| Synopsis | Constraint used when deriving the operational PIR value |
| Context | configure service vpls <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue <i>reference</i> adaptation-rule pir <i>keyword</i> |
| Tree | pir |
| Options | max, min, closest |
| Introduced | 16.0.R1 |
| Platforms | All |

avg-frame-overhead *decimal-number*

| | |
|------------|---|
| Synopsis | Average packet-to-frame encapsulation overhead |
| Context | configure service vpls <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference avg-frame-overhead <i>decimal-number</i> |
| Tree | avg-frame-overhead |
| Range | 0.00 to 100.00 |
| Introduced | 16.0.R1 |
| Platforms | All |

burst-limit (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | Explicit shaping burst size for the queue |
| Context | configure service vpls <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference burst-limit (<i>number</i> <i>keyword</i>) |
| Tree | burst-limit |
| Range | 1 to 14000000 |
| Units | bytes |
| Options | auto |
| Introduced | 16.0.R1 |
| Platforms | All |

cbs (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | CBS |
| Context | configure service vpls <i>string</i> sap <i>string</i> egress qos sap-egress overrides queue reference cbs (<i>number</i> <i>keyword</i>) |
| Tree | cbs |
| Range | 0 to 1048576 |
| Units | kilobytes |
| Options | auto |
| Introduced | 16.0.R1 |
| Platforms | All |

drop-tail

| | |
|----------|------------------------------------|
| Synopsis | Enter the drop-tail context |
|----------|------------------------------------|

| | |
|------------|---|
| Context | configure service vpls string sap string egress qos sap-egress overrides queue reference drop-tail |
| Tree | drop-tail |
| Introduced | 16.0.R1 |
| Platforms | All |

low

| | |
|------------|---|
| Synopsis | Enter the low context |
| Context | configure service vpls string sap string egress qos sap-egress overrides queue reference drop-tail low |
| Tree | low |
| Introduced | 16.0.R1 |
| Platforms | All |

percent-reduction-from-mbs (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | Percentage reduction from the MBS for a queue drop tail |
| Context | configure service vpls string sap string egress qos sap-egress overrides queue reference drop-tail low percent-reduction-from-mbs (number keyword) |
| Tree | percent-reduction-from-mbs |
| Range | 0 to 100 |
| Options | auto |
| Introduced | 16.0.R1 |
| Platforms | All |

hs-class-weight *number*

| | |
|------------|--|
| Synopsis | Class weight override for the queue |
| Context | configure service vpls string sap string egress qos sap-egress overrides queue reference hs-class-weight number |
| Tree | hs-class-weight |
| Range | 1 2 4 8 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR-7/12/12e |

hs-wred-queue

| | |
|------------|---|
| Synopsis | Enter the hs-wred-queue context |
| Context | configure service vpls string sap string egress qos sap-egress overrides queue reference hs-wred-queue |
| Tree | hs-wred-queue |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR-7/12/12e |

policy reference

| | |
|------------|--|
| Synopsis | Slope policy applied to the HSQ queue group queue |
| Context | configure service vpls string sap string egress qos sap-egress overrides queue reference hs-wred-queue policy reference |
| Tree | policy |
| Reference | configure qos slope-policy string |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR-7/12/12e |

hs-wrr-weight number

| | |
|------------|--|
| Synopsis | WRR weight to parent with the queue into the scheduler |
| Context | configure service vpls string sap string egress qos sap-egress overrides queue reference hs-wrr-weight number |
| Tree | hs-wrr-weight |
| Range | 1 to 127 |
| Default | 1 |
| Introduced | 16.0.R1 |
| Platforms | 7750 SR-7/12/12e |

mbs (number | keyword)

| | |
|----------|--|
| Synopsis | MBS |
| Context | configure service vpls string sap string egress qos sap-egress overrides queue reference mbs (number keyword) |
| Tree | mbs |
| Range | 0 to 1073741824 |

| | |
|------------|---------|
| Units | bytes |
| Options | auto |
| Introduced | 16.0.R1 |
| Platforms | All |

monitor-queue-depth

| | |
|------------|---|
| Synopsis | Enable the monitor-queue-depth context |
| Context | configure service vpls string sap string egress qos sap-egress overrides queue reference monitor-queue-depth |
| Tree | monitor-queue-depth |
| Introduced | 20.10.R1 |
| Platforms | All |

fast-polling *boolean*

| | |
|-------------|--|
| Synopsis | Enable fast polling of the queue depth |
| Context | configure service vpls string sap string egress qos sap-egress overrides queue reference monitor-queue-depth fast-polling boolean |
| Tree | fast-polling |
| Description | When configured to true , this command enables fast polling of the queue depth. Faster polling allows a more accurate view of the actual depth. |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | All |

violation-threshold *decimal-number*

| | |
|-------------|--|
| Synopsis | Threshold for queue depth before violation is raised |
| Context | configure service vpls string sap string egress qos sap-egress overrides queue reference monitor-queue-depth violation-threshold decimal-number |
| Tree | violation-threshold |
| Description | This command specifies the threshold for the queue MBS. When the queue depth exceeds the threshold value, a violation is registered. |
| Range | 0.01 to 99.99 |
| Introduced | 20.10.R1 |

Platforms All

parent

Synopsis Enter the **parent** context

| Tree | scheduler |
| Introduced | 16.0.R1 |
| Platforms | All |

[scheduler-name] *string*

| | |
|---------------|--|
| Synopsis | Scheduler name |
| Context | configure service vpls string sap string egress qos scheduler-policy overrides scheduler string |
| Tree | scheduler |
| Description | <p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context does not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context is not change.</p> |
| String Length | 1 to 32 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm boolean

Synopsis Generate CCM messages

Context **configure service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm boolean**

Tree **ccm**

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm-ltm-priority number

Synopsis Priority of CCM and LTM messages transmitted by the MEP

Context **configure service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm-ltm-priority number**

Tree **ccm-ltm-priority**

Range 0 to 7

Default 7

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ccm-padding-size number

Synopsis Number of octets of padding to insert in CCM packets

Context **configure service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm-padding-size number**

Tree **ccm-padding-size**

Description This command sets the byte size of the optional Data TLV to be included in the ETH-CC PDU.

This command increases the size of the ETH-CC PDU by the configured value. The base size of the ETH-CC PDU, including the Interface Status TLV and Port Status TLV, is 83 bytes not including the Layer 2 encapsulation. CCM padding is not supported when the CCM interval (configured through **configure eth-cfm domain association ccm-interval**) is less than 1 second.

Range 3 to 1500

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

cfm-vlan-tag *string*

| Synopsis | Enter the eth-ed context |
| Context | configure service vpls <i>string</i> sap <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> grace eth-ed |
| Tree | eth-ed |
| Description | Commands in this context configure the ITU-T Y.1731 ETH-ED function. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

max-rx-defect-window *number*

| | |
|------------|---|
| Synopsis | Maximum received ETH-ED expected defect window duration |
| Context | configure service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed max-rx-defect-window <i>number</i> |
| Tree | max-rx-defect-window |
| Range | 1 to 86400 |
| Units | seconds |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

priority *number*

| | |
|------------|---|
| Synopsis | Transmission priority for ETH-ED PDUs |
| Context | configure service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed priority <i>number</i> |
| Tree | priority |
| Range | 0 to 7 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

rx-eth-ed *boolean*

| | |
|-------------|---|
| Synopsis | Receive and process ETH-ED ITU-T Y.1731 PDUs on the MEP |
| Context | configure service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed rx-eth-ed <i>boolean</i> |
| Tree | rx-eth-ed |
| Description | This command enables the reception and processing of the ITU-T Y.1731 ETH-ED PDU on the MEP. |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

tx-eth-ed *boolean*

| | |
|----------|-----------------------------------|
| Synopsis | Transmit ETH-ED PDUs from the MEP |
|----------|-----------------------------------|

| | |
|------------|--|
| Context | configure service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed tx-eth-ed boolean |
| Tree | tx-eth-ed |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

eth-vsm-grace

| | |
|-------------|---|
| Synopsis | Enter the eth-vsm-grace context |
| Context | configure service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace |
| Tree | eth-vsm-grace |
| Description | Commands in this context configure the Nokia ETH-CFM Grace function. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

rx-eth-vsm-grace *boolean*

| | |
|-------------|---|
| Synopsis | Receive and process Nokia ETH-CFM Grace PDU on the MEP |
| Context | configure service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace rx-eth-vsm-grace boolean |
| Tree | rx-eth-vsm-grace |
| Description | When configured to true , the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.

When configured to false , the router disables the Nokia Grace function. |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

tx-eth-vsm-grace *boolean*

| | |
|----------|--|
| Synopsis | Transmit ETH-ED PDUs from the MEP |
| Context | configure service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace tx-eth-vsm-grace boolean |
| Tree | tx-eth-vsm-grace |

| | |
|-------------|---|
| Description | <p>When configured to true, the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.</p> <p>The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.</p> <p>The operator must configure the configure system eth-cfm grace command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).</p> <p>When configured to false, the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.</p> |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

lbm-svc-act-responder *boolean*

| | |
|------------|---|
| Synopsis | Process service activation streams in ETH-CFM LBM |
| Context | configure service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number lbm-svc-act-responder boolean |
| Tree | lbm-svc-act-responder |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

low-priority-defect *keyword*

| | |
|------------|---|
| Synopsis | Lowest priority defect allowed to generate fault alarm |
| Context | configure service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number low-priority-defect keyword |
| Tree | low-priority-defect |
| Options | all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon |
| Default | mac-rem-err-xcon |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

mac-address *string*

| | |
|----------|------------------------|
| Synopsis | MAC address of the MEP |
|----------|------------------------|

| | |
|-------------|--|
| Context | configure service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number mac-address string |
| Tree | mac-address |
| Description | This command specifies the MAC address of the MEP.
When unconfigured, the MAC address of the port (if the MEP is on a SAP) or the MAC address of a bridge (if the MEP is on a spoke) is used. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

one-way-delay-threshold *number*

| | |
|------------|--|
| Synopsis | Threshold time limit for the one-way delay test |
| Context | configure service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number one-way-delay-threshold number |
| Tree | one-way-delay-threshold |
| Range | 0 to 600 |
| Units | seconds |
| Default | 3 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

primary-vlan *boolean*

WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | MEP provisioned using MA primary VLAN ID |
| Context | configure service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number primary-vlan boolean |
| Tree | primary-vlan |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

mip primary-vlan (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | Enter the mip list instance |
| Context | configure service vpls string sap string eth-cfm mip primary-vlan (<i>number</i> <i>keyword</i>) |
| Tree | mip |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

primary-vlan (*number* | *keyword*)

| | |
|-------------|---|
| Synopsis | VLAN ID to which the MIP is attached |
| Context | configure service vpls string sap string eth-cfm mip primary-vlan (<i>number</i> <i>keyword</i>) |
| Tree | mip |
| Description | This command provides an option for linking a MIP with a Primary VLAN number or none. When the none option is provided, the MIP does not include the primary vlan. |
| Range | 1 to 4094 |
| Options | none |
| Notes | This element is part of a list key. |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

cfm-vlan-tag *string*

| | |
|---------------|--|
| Synopsis | VLAN tags to apply to CFM PDUs for egress processing |
| Context | configure service vpls string sap string eth-cfm mip primary-vlan (<i>number</i> <i>keyword</i>)
cfm-vlan-tag <i>string</i> |
| Tree | cfm-vlan-tag |
| Description | This command allows the CFM function to include additional VLAN tags to the CFM packet that are carried to the egress and treated as service delimited. Typically, this function is used to influence the VLAN carried over a binding that uses the vc-type vlan or the binding forces the use of one or more VLAN tag that results in a mismatch between the service data arriving at the binding and the locally generated ETH-CFM PDUs arriving at the same egress. When this command is included under the MEP or MIP configuration, the tags used as part of the configuration typically match the SAP service delimited configuration. |
| String Length | 1 to 9 |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

mac-address *string*

| | |
|------------|--|
| Synopsis | MAC address of the MIP |
| Context | configure service vpls <i>string</i> sap <i>string</i> eth-cfm mip primary-vlan (<i>number</i> <i>keyword</i>)
mac-address <i>string</i> |
| Tree | mac-address |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

squelch-ingress-ctag-levels *number*

| | |
|-------------------|--|
| Synopsis | Squelch levels using additional VLAN C-Tag space |
| Context | configure service vpls <i>string</i> sap <i>string</i> eth-cfm squelch-ingress-ctag-levels <i>number</i> |
| Tree | squelch-ingress-ctag-levels |
| Description | This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding plus an additional VLAN, up to a maximum tag length of two tags. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.

The list of levels must be a complete contiguous list from 0 up to the highest level to be dropped. |
| Range | 0 to 7 |
| Max.
Instances | 8 |
| Introduced | 21.2.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

squelch-ingress-levels *number*

| | |
|-------------|---|
| Synopsis | Levels for which ETH-CFM packets are silently discarded |
| Context | configure service vpls <i>string</i> sap <i>string</i> eth-cfm squelch-ingress-levels <i>number</i> |
| Tree | squelch-ingress-levels |
| Description | This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM |

criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.

The list of levels must be a complete contiguous list from 0 up to the highest level that will be dropped.

| | |
|----------------|--|
| Range | 0 to 7 |
| Max. Instances | 8 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

vmep-filter *boolean*

| | |
|------------|--|

| Tree | import-policy |
| Reference | configure policy-options policy-statement string |
| Introduced | 16.0.R1 |
| Platforms | All |

maximum-number-group-sources *number*

| | |
|----------|-----------------------------------|
| Synopsis | Maximum group source combinations |
|----------|-----------------------------------|

| | |
|------------|---|
| Context | configure service vpls string sap string igmp-snooping maximum-number-group-sources number |
| Tree | maximum-number-group-sources |
| Range | 1 to 32000 |
| Introduced | 16.0.R1 |
| Platforms | All |

maximum-number-groups number

| | |
|------------|--|
| Synopsis | Maximum groups allowed |
| Context | configure service vpls string sap string igmp-snooping maximum-number-groups number |
| Tree | maximum-number-groups |
| Range | 1 to 16000 |
| Introduced | 16.0.R1 |
| Platforms | All |

maximum-number-sources number

| | |
|------------|---|
| Synopsis | Maximum sources that are allowed per group |
| Context | configure service vpls string sap string igmp-snooping maximum-number-sources number |
| Tree | maximum-number-sources |
| Range | 1 to 1000 |
| Introduced | 16.0.R1 |
| Platforms | All |

mcac

| | |
|------------|--|
| Synopsis | Enter the mcac context |
| Context | configure service vpls string sap string igmp-snooping mcac |
| Tree | mcac |
| Introduced | 16.0.R1 |
| Platforms | All |

bandwidth

| | |
|------------|--|
| Synopsis | Enter the bandwidth context |
| Context | configure service vpls string sap string igmp-snooping mcac bandwidth |
| Tree | bandwidth |
| Introduced | 16.0.R1 |
| Platforms | All |

mandatory (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | Pre-reserved bandwidth for all mandatory channels |
| Context | configure service vpls string sap string igmp-snooping mcac bandwidth mandatory (number keyword) |
| Tree | mandatory |
| Range | 0 to 2147483647 |
| Options | unlimited |
| Default | unlimited |
| Introduced | 16.0.R1 |
| Platforms | All |

total (*number* | *keyword*)

| | |
|------------|---|
| Synopsis | Maximum allowed bandwidth |
| Context | configure service vpls string sap string igmp-snooping mcac bandwidth total (number keyword) |
| Tree | total |
| Range | 0 to 2147483647 |
| Options | unlimited |
| Default | unlimited |
| Introduced | 16.0.R1 |
| Platforms | All |

interface-policy *reference*

| | |
|----------|---|
| Synopsis | Name of multicast CAC interface policy |
| Context | configure service vpls string sap string igmp-snooping mcac interface-policy reference |

| | |
|------------|--|
| Tree | interface-policy |
| Reference | configure mcac interface-policy <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

mc-constraints

| | |
|------------|--|
| Synopsis | Enter the mc-constraints context |
| Context | configure service vpls <i>string sap string igmp-snooping mcac mc-constraints</i> |
| Tree | mc-constraints |
| Introduced | 16.0.R1 |
| Platforms | All |

level [[level-id](#)] *number*

| | |
|------------|---|
| Synopsis | Enter the level list instance |
| Context | configure service vpls <i>string sap string igmp-snooping mcac mc-constraints level number</i> |
| Tree | level |
| Introduced | 16.0.R1 |
| Platforms | All |

[[level-id](#)] *number*

| | |
|------------|---|
| Synopsis | Bandwidth level ID for an MCAC constraint |
| Context | configure service vpls <i>string sap string igmp-snooping mcac mc-constraints level number</i> |
| Tree | level |
| Range | 1 to 8 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

bandwidth *number*

| | |
|----------|------------------------------------|
| Synopsis | Bandwidth available for this level |
|----------|------------------------------------|

| | |
|------------|---|
| Context | configure service vpls string sap string igmp-snooping mcac mc-constraints level number bandwidth number |
| Tree | bandwidth |
| Range | 0 to 2147483647 |
| Units | kilobps |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

number-down [[number-lag-port-down](#)] *number*

| | |
|------------|--|
| Synopsis | Enter the number-down list instance |
| Context | configure service vpls string sap string igmp-snooping mcac mc-constraints number-down number |
| Tree | number-down |
| Introduced | 16.0.R1 |
| Platforms | All |

[number-lag-port-down] *number*

| | |
|------------|--|
| Synopsis | Number of ports that are down in this LAG link |
| Context | configure service vpls string sap string igmp-snooping mcac mc-constraints number-down number |
| Tree | number-down |
| Range | 1 to 64 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

level *number*

| | |
|----------|---|
| Synopsis | Level ID to associate with number of down LAG ports |
| Context | configure service vpls string sap string igmp-snooping mcac mc-constraints number-down number level number |
| Tree | level |

| | |
|-------------|---|
| Description | This command specifies the bandwidth for a given level. Level 1 has the highest priority and level 8 has the lowest priority. |
| Range | 1 to 8 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

use-lag-port-weight *boolean*

| | |
|-------------|---|
| Synopsis | Use LAG port weight in calculating MCAC constraints |
| Context | configure service vpls <i>string</i> sap <i>string</i> igmp-snooping mcac mc-constraints use-lag-port-weight <i>boolean</i> |
| Tree | use-lag-port-weight |
| Description | When configured to true , port weight is used when determining available bandwidth per level when LAG ports go down or come up. This command is required for proper operation on mixed port-speed LAGs and can also be used for unmixed port-speed LAGs. |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

policy *reference*

| | |
|-------------|---|
| Synopsis | Multicast CAC policy name |
| Context | configure service vpls <i>string</i> sap <i>string</i> igmp-snooping mcac policy <i>reference</i> |
| Tree | policy |
| Description | <p>This command configures the name of the global channel bandwidth definition policy that is used for (H)MCAC and HQoS adjustment.</p> <p>Within the scope of HQoS adjustment, the channel definition policy under the group interface is used if redirection is unconfigured. In this case, the HQoS adjustment can be applied to IPoE subscribers in per-SAP replication mode.</p> <p>If redirection is configured, the channel bandwidth definition policy applied under the Layer 3 redirected interface is in effect.</p> <p>Hierarchical MCAC (HMCAC) is supported on two levels simultaneously:</p> <ul style="list-style-type: none"> • subscriber level and redirected interface when redirection is configured • subscriber level and group-interface level when redirection is unconfigured <p>In HMCAC, the subscriber is checked against its bandwidth limits first, then against the bandwidth limits of the redirected or group interface. If redirection is configured but the</p> |

policy is referenced only under the group interface, no admission control is executed (HMCAC or MCAC).

| | |
|------------|-------------------------------------|
| Reference | configure mcac policy string |
| Introduced | 16.0.R1 |
| Platforms | All |

mrouter-port *boolean*

| | |
|------------|--|
| Synopsis | Operate port as a multicast router port |
| Context | configure service vpls string sap string igmp-snooping mrouter-port boolean |
| Tree | mrouter-port |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

mvr

| | |
|------------|---|
| Synopsis | Enter the mvr context |
| Context | configure service vpls string sap string igmp-snooping mvr |
| Tree | mvr |
| Introduced | 16.0.R1 |
| Platforms | All |

from-vpls *reference*

| | |
|------------|---|
| Synopsis | MVR VPLS from which the multicast channels are taken |
| Context | configure service vpls string sap string igmp-snooping mvr from-vpls reference |
| Tree | from-vpls |
| Reference | configure service vpls string |
| Introduced | 16.0.R1 |
| Platforms | All |

to-sap *string*

| | |
|----------|----------------------------------|
| Synopsis | Multicast channels copied to SAP |
|----------|----------------------------------|

| | |
|---------------|---|
| Context | configure service vpls string sap string igmp-snooping mvr to-sap string |
| Tree | to-sap |
| String Length | 1 to 45 |
| Introduced | 16.0.R1 |
| Platforms | All |

query-interval *number*

| | |
|------------|---|
| Synopsis | Time between two consecutive host-query messages |
| Context | configure service vpls string sap string igmp-snooping query-interval number |
| Tree | query-interval |
| Range | 2 to 1024 |
| Units | seconds |
| Default | 125 |
| Introduced | 16.0.R1 |
| Platforms | All |

query-last-member-interval *number*

| | |
|------------|---|
| Synopsis | Time between group-specific query messages |
| Context | configure service vpls string sap string igmp-snooping query-last-member-interval number |
| Tree | query-last-member-interval |
| Range | 1 to 50 |
| Units | deciseconds |
| Default | 10 |
| Introduced | 16.0.R1 |
| Platforms | All |

query-response-interval *number*

| | |
|----------|--|
| Synopsis | Time to wait for a response to the host-query messages |
| Context | configure service vpls string sap string igmp-snooping query-response-interval number |
| Tree | query-response-interval |
| Range | 1 to 1023 |

| | |
|------------|---------|
| Units | seconds |
| Default | 10 |
| Introduced | 16.0.R1 |
| Platforms | All |

robust-count *number*

| | |
|------------|---|
| Synopsis | Number of retries after expected message loss |
| Context | configure service vpls <i>string</i> sap <i>string</i> igmp-snooping robust-count <i>number</i> |
| Tree | robust-count |
| Range | 2 to 7 |
| Default | 2 |
| Introduced | 16.0.R1 |
| Platforms | All |

router-alert-check *boolean*

| | |
|------------|--|
| Synopsis | Enable IP router alert check option |
| Context | configure service vpls <i>string</i> sap <i>string</i> igmp-snooping router-alert-check <i>boolean</i> |
| Tree | router-alert-check |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

send-queries *boolean*

| | |
|------------|--|
| Synopsis | Generate IGMP general queries |
| Context | configure service vpls <i>string</i> sap <i>string</i> igmp-snooping send-queries <i>boolean</i> |
| Tree | send-queries |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

static

| | |

[scheduler-name] *string*

| | |
|---------------|--|
| Synopsis | Scheduler name |
| Context | configure service vpls <i>string</i> sap <i>string</i> ingress qos scheduler-policy overrides
scheduler <i>string</i> |
| Tree | scheduler |
| Description | <p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context does not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context is not change.</p> |
| String Length | 1 to 32 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |

link-map-profile *number*

Synopsis LAG link map profile for a SAP or network interface

Context **configure service vpls string sap string lag link-map-profile number**

Tree [link-map-profile](#)

Description This command assigns a preconfigured LAG link map profile to a SAP or network interface configured on a LAG or a PW port that exists on a LAG. After an operator assigns a LAG link map profile, the system rehashes the SAP or network interface egress traffic over the LAG as required by the new configuration.

If the LAG link map profile for a SAP or network interface is deleted, the system reverts back to per-flow hashing.

Range 1 to 64

Introduced 16.0.R1

|------------|--|
| Synopsis | Add a list entry for range |
| Context | configure service vpls string sap string managed-vlan-list range string |
| Tree | range |
| Introduced | 19.10.R1 |
| Platforms | All |

[vlan-range] *string*

| | |
|------------|--|
| Synopsis | Range of VLANs associated with the M-VPLS SAP |
| Context | configure service vpls string sap string managed-vlan-list range string |
| Tree | range |
| Notes | This element is part of a list key. |
| Introduced | 19.10.R1 |
| Platforms | All |

mc-ring

| | |
|------------|---|
| Synopsis | Enable the mc-ring context |
| Context | configure service vpls string sap string mc-ring |
| Tree | mc-ring |
| Introduced | 16.0.R1 |
| Platforms | All |

ring-node *string*

| | |
|---------------|--|
| Synopsis | Name for the ring node associated with this SAP |
| Context | configure service vpls string sap string mc-ring ring-node string |
| Tree | ring-node |
| String Length | 1 to 32 |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | All |

mld-snooping

| | |
|------------|--|
| Synopsis | Enter the mld-snooping context |
| Context | configure service vpls string sap string mld-snooping |
| Tree | mld-snooping |
| Introduced | 16.0.R1 |
| Platforms | All |

fast-leave *boolean*

| | |
|------------|---|
| Synopsis | Allow IGMP fast leave processing |
| Context | configure service vpls string sap string mld-snooping fast-leave boolean |
| Tree | fast-leave |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

import-policy *reference*

| | |
|------------|--|
| Synopsis | Import policy that filters IGMP packets |
| Context | configure service vpls string sap string mld-snooping import-policy reference |
| Tree | import-policy |
| Reference | configure policy-options policy-statement string |
| Introduced | 16.0.R1 |
| Platforms | All |

maximum-number-groups *number*

| | |
|------------|---|
| Synopsis | Maximum groups allowed |
| Context | configure service vpls string sap string mld-snooping maximum-number-groups number |
| Tree | maximum-number-groups |
| Range | 1 to 16000 |
| Introduced | 16.0.R1 |
| Platforms | All |

mrouter-port *boolean*

| | |
|------------|--|
| Synopsis | Operate port as a multicast router port |
| Context | configure service vpls <i>string sap string mld-snooping mrouter-port boolean</i> |
| Tree | mrouter-port |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

mvr

| | |
|------------|---|
| Synopsis | Enter the mvr context |
| Context | configure service vpls <i>string sap string mld-snooping mvr</i> |
| Tree | mvr |
| Introduced | 16.0.R1 |
| Platforms | All |

from-vpls *reference*

| | |
|------------|---|
| Synopsis | MVR VPLS from which the multicast channels are taken |
| Context | configure service vpls <i>string sap string mld-snooping mvr from-vpls reference</i> |
| Tree | from-vpls |
| Reference | configure service vpls <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

to-sap *string*

| | |
|---------------|---|
| Synopsis | SAP to which the multicast channels are copied |
| Context | configure service vpls <i>string sap string mld-snooping mvr to-sap string</i> |
| Tree | to-sap |
| String Length | 1 to 45 |
| Introduced | 16.0.R1 |
| Platforms | All |

query-interval *number*

| | |
|------------|--|
| Synopsis | Time between two consecutive host-query messages |
| Context | configure service vpls string sap string mld-snooping query-interval number |
| Tree | query-interval |
| Range | 2 to 1024 |
| Units | seconds |
| Default | 125 |
| Introduced | 16.0.R1 |
| Platforms | All |

query-last-member-interval *number*

| | |
|------------|--|
| Synopsis | Time between group-specific query messages |
| Context | configure service vpls string sap string mld-snooping query-last-member-interval number |
| Tree | query-last-member-interval |
| Range | 1 to 50 |
| Units | deciseconds |
| Default | 10 |
| Introduced | 16.0.R1 |
| Platforms | All |

query-response-interval *number*

| | |
|------------|---|
| Synopsis | Time to wait for a response to the host-query messages |
| Context | configure service vpls string sap string mld-snooping query-response-interval number |
| Tree | query-response-interval |
| Range | 1 to 1023 |
| Units | seconds |
| Default | 10 |
| Introduced | 16.0.R1 |
| Platforms | All |

robust-count *number*

| | |
|------------|--|
| Synopsis | Number of retries after expected message loss |
| Context | configure service vpls <i>string</i> sap <i>string</i> mld-snooping robust-count <i>number</i> |
| Tree | robust-count |
| Range | 2 to 7 |
| Default | 2 |
| Introduced | 16.0.R1 |
| Platforms | All |

router-alert-check *boolean*

| | |
|------------|---|
| Synopsis | Enable IP router alert check option |
| Context | configure service vpls <i>string</i> sap <i>string</i> mld-snooping router-alert-check <i>boolean</i> |
| Tree | router-alert-check |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

send-queries *boolean*

| | |
|------------|---|
| Synopsis | Generate IGMP general queries |
| Context | configure service vpls <i>string</i> sap <i>string</i> mld-snooping send-queries <i>boolean</i> |
| Tree | send-queries |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

static

| | |
|------------|--|
| Synopsis | Enter the static context |
| Context | configure service vpls <i>string</i> sap <i>string</i> mld-snooping static |
| Tree | static |
| Introduced | 16.0.R1 |
| Platforms | All |

group [[group-address](#)] *string*

| | |
|------------|--|
| Synopsis | Enter the group list instance |
| Context | configure service vpls string sap string mld-snooping static group string |
| Tree | group |
| Introduced | 16.0.R1 |
| Platforms | All |

[group-address] *string*

| | |
|------------|--|
| Synopsis | Group address of multicast channel |
| Context | configure service vpls string sap string mld-snooping static group string |
| Tree | group |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

source [[source-address](#)] *string*

| | |
|------------|--|
| Synopsis | Add a list entry for source |
| Context | configure service vpls string sap string mld-snooping static group string source string |
| Tree | source |
| Notes | The following elements are part of a mandatory choice: source or starg . |
| Introduced | 16.0.R1 |
| Platforms | All |

[source-address] *string*

| | |
|------------|--|
| Synopsis | Source IP address |
| Context | configure service vpls string sap string mld-snooping static group string source string |
| Tree | source |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R2 |
| Platforms | All |

starg

| | |
|------------|--|
| Synopsis | any source address (*,G) |
| Context | configure service vpls <i>string</i> sap <i>string</i> mld-snooping static group <i>string</i> starg |
| Tree | starg |
| Notes | The following elements are part of a mandatory choice: source or starg . |
| Introduced | 16.0.R2 |
| Platforms | All |

version *keyword*

| | |
|------------|---|
| Synopsis | Version of MLD running on the SAP or SDP |
| Context | configure service vpls <i>string</i> sap <i>string</i> mld-snooping version <i>keyword</i> |
| Tree | version |
| Options | 1, 2 |
| Default | 2 |
| Introduced | 16.0.R1 |
| Platforms | All |

monitor-oper-group *reference*

| | |
|------------|---|
| Synopsis | Monitor operational group |
| Context | configure service vpls <i>string</i> sap <i>string</i> monitor-oper-group <i>reference</i> |
| Tree | monitor-oper-group |
| Reference | configure service oper-group <i>string</i> |
| Notes | The following elements are part of a choice: monitor-oper-group or oper-group . |
| Introduced | 16.0.R1 |
| Platforms | All |

mrp

| | |
|------------|--|
| Synopsis | Enter the mrp context |
| Context | configure service vpls <i>string</i> sap <i>string</i> mrp |
| Tree | mrp |
| Introduced | 20.10.R1 |

Platforms All

join-time *number*

Synopsis Interval between transmit opportunities
 Context **configure** [service vpls string sap string mrp join-time number](#)
 Tree [join-time](#)
 Range 1 to 10
 Default 2
 Introduced 20.10.R1
 Platforms All

leave-all-time *number*

Synopsis Frequency that LeaveAll PDUs are generated
 Context **configure** [service vpls string sap string mrp leave-all-time number](#)
 Tree [leave-all-time](#)
 Range 60 to 300
 Default 100
 Introduced 20.10.R1
 Platforms All

leave-time *number*

Synopsis Time in leave state before transitioning to MT state
 Context **configure** [service vpls string sap string mrp leave-time number](#)
 Tree [leave-time](#)
 Range 30 to 60
 Default 30
 Introduced 20.10.R1
 Platforms All

periodic-time *number*

Synopsis Frequency of periodic events generation

| | |
|------------|--|
| Context | configure service vpls string sap string mrp periodic-time number |
| Tree | periodic-time |
| Range | 10 to 100 |
| Default | 10 |
| Introduced | 20.10.R1 |
| Platforms | All |

periodic-timer *boolean*

| | |
|------------|--|
| Synopsis | Enable the periodic transmission timer |
| Context | configure service vpls string sap string mrp periodic-timer boolean |
| Tree | periodic-timer |
| Default | false |
| Introduced | 20.10.R1 |
| Platforms | All |

policy *reference*

| | |
|------------|--|
| Synopsis | MMRP policy name |
| Context | configure service vpls string sap string mrp policy reference |
| Tree | policy |
| Reference | configure service mrp policy string |
| Introduced | 20.10.R1 |
| Platforms | All |

multi-service-site *reference*

| | |
|------------|--|
| Synopsis | Multi service site name |
| Context | configure service vpls string sap string multi-service-site reference |
| Tree | multi-service-site |
| Reference | configure service customer string multi-service-site string |
| Introduced | 16.0.R1 |
| Platforms | All |

oper-group *reference*

| | |
|------------|---|
| Synopsis | Operational group |
| Context | configure service vpls <i>string</i> sap <i>string</i> oper-group <i>reference</i> |
| Tree | oper-group |
| Reference | configure service oper-group <i>string</i> |
| Notes | The following elements are part of a choice: monitor-oper-group or oper-group . |
| Introduced | 16.0.R1 |
| Platforms | All |

pbb

| | |
|------------|---|
| Synopsis | Enter the pbb context |
| Context | configure service vpls <i>string</i> sap <i>string</i> pbb |
| Tree | pbb |
| Introduced | 20.10.R1 |
| Platforms | All |

fault-propagation

| | |
|------------|---|
| Synopsis | Enter the fault-propagation context |
| Context | configure service vpls <i>string</i> sap <i>string</i> pbb fault-propagation |
| Tree | fault-propagation |
| Introduced | 20.10.R1 |
| Platforms | All |

backbone-mac-address [[address](#)] *string*

| | |
|------------|--|
| Synopsis | Add a list entry for backbone-mac-address |
| Context | configure service vpls <i>string</i> sap <i>string</i> pbb fault-propagation backbone-mac-address <i>string</i> |
| Tree | backbone-mac-address |
| Introduced | 20.10.R1 |
| Platforms | All |

[address] *string*

| | |
|------------|---|
| Synopsis | Backbone MAC address |
| Context | configure service vpls string sap string pbb fault-propagation backbone-mac-address string |
| Tree | backbone-mac-address |
| Notes | This element is part of a list key. |
| Introduced | 20.10.R1 |
| Platforms | All |

backbone-mac-name [[name](#)] *reference*

| | |
|------------|---|
| Synopsis | Add a list entry for backbone-mac-name |
| Context | configure service vpls string sap string pbb fault-propagation backbone-mac-name reference |
| Tree | backbone-mac-name |
| Introduced | 20.10.R1 |
| Platforms | All |

[name] *reference*

| | |
|------------|---|
| Synopsis | Backbone MAC address name |
| Context | configure service vpls string sap string pbb fault-propagation backbone-mac-name reference |
| Tree | backbone-mac-name |
| Reference | configure service pbb mac string |
| Notes | This element is part of a list key. |
| Introduced | 20.10.R1 |
| Platforms | All |

pim-snooping

| | |
|------------|--|
| Synopsis | Enter the pim-snooping context |
| Context | configure service vpls string sap string pim-snooping |
| Tree | pim-snooping |
| Introduced | 16.0.R1 |

Platforms All

maximum-number-groups *number*

Synopsis Maximum groups for this interface
 Context **configure** [service vpls](#) *string* [sap](#) *string* [pim-snooping](#) **maximum-number-groups** *number*
 Tree [maximum-number-groups](#)
 Range 1 to 16000
 Introduced 16.0.R1
 Platforms All

process-cpm-traffic-on-sap-down *boolean*

Synopsis Process CPM traffic on SAP down event
 Context **configure** [service vpls](#) *string* [sap](#) *string* **process-cpm-traffic-on-sap-down** *boolean*
 Tree [process-cpm-traffic-on-sap-down](#)
 Default false
 Introduced 16.0.R1
 Platforms All

radius-auth-policy *reference*

Synopsis RADIUS authentication policy
 Context **configure** [service vpls](#) *string* [sap](#) *string* **radius-auth-policy** *reference*
 Tree [radius-auth-policy](#)
 Reference **configure** [subscriber-mgmt](#) **radius-authentication-policy** *string*
 Introduced 16.0.R1
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

shcv-policy-ipv4 *reference*

Synopsis Subscriber host connectivity verification policy for IPv4
 Context **configure** [service vpls](#) *string* [sap](#) *string* **shcv-policy-ipv4** *reference*
 Tree [shcv-policy-ipv4](#)
 Reference **configure** [subscriber-mgmt](#) **shcv-policy** *string*

| | |
|------------|---|
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

spb

| | |
|------------|---|
| Synopsis | Enable the spb context |
| Context | configure service vpls <i>string</i> sap <i>string</i> spb |
| Tree | spb |
| Introduced | 21.10.R1 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Admin state |
| Context | configure service vpls <i>string</i> sap <i>string</i> spb admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 21.10.R1 |
| Platforms | All |

level [*id*] *number*

| | |
|------------|--|
| Synopsis | Enter the level list instance |
| Context | configure service vpls <i>string</i> sap <i>string</i> spb level <i>number</i> |
| Tree | level |
| Introduced | 21.10.R1 |
| Platforms | All |

[id] *number*

| | |
|----------|--|
| Synopsis | Level identifier |
| Context | configure service vpls <i>string</i> sap <i>string</i> spb level <i>number</i> |
| Tree | level |
| Range | 1 |

| | |
|------------|-------------------------------------|
| Notes | This element is part of a list key. |
| Introduced | 21.10.R1 |
| Platforms | All |

hello-interval *number*

| | |
|------------|---|
| Synopsis | Hello interval |
| Context | configure service vpls <i>string</i> sap <i>string</i> spb level <i>number</i> hello-interval <i>number</i> |
| Tree | hello-interval |
| Range | 1 to 20000 |
| Units | seconds |
| Default | 9 |
| Introduced | 21.10.R1 |
| Platforms | All |

hello-multiplier *number*

| | |
|------------|---|
| Synopsis | Hello multiplier |
| Context | configure service vpls <i>string</i> sap <i>string</i> spb level <i>number</i> hello-multiplier <i>number</i> |
| Tree | hello-multiplier |
| Range | 2 to 100 |
| Default | 3 |
| Introduced | 21.10.R1 |
| Platforms | All |

metric *number*

| | |
|------------|---|
| Synopsis | Metric |
| Context | configure service vpls <i>string</i> sap <i>string</i> spb level <i>number</i> metric <i>number</i> |
| Tree | metric |
| Range | 0 to 16777215 |
| Default | 0 |
| Introduced | 21.10.R1 |
| Platforms | All |

lsp-pacing-interval *number*

| | |
|------------|---|
| Synopsis | Lsp pacing interval |
| Context | configure service vpls <i>string</i> sap <i>string</i> spb lsp-pacing-interval <i>number</i> |
| Tree | lsp-pacing-interval |
| Range | 0 to 65535 |
| Units | milliseconds |
| Default | 100 |
| Introduced | 21.10.R1 |
| Platforms | All |

retransmit-interval *number*

| | |
|------------|---|
| Synopsis | Retransmit interval |
| Context | configure service vpls <i>string</i> sap <i>string</i> spb retransmit-interval <i>number</i> |
| Tree | retransmit-interval |
| Range | 1 to 65535 |
| Units | seconds |
| Default | 5 |
| Introduced | 21.10.R1 |
| Platforms | All |

split-horizon-group *reference***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|------------|--|
| Synopsis | Split horizon group |
| Context | configure service vpls <i>string</i> sap <i>string</i> split-horizon-group <i>reference</i> |
| Tree | split-horizon-group |
| Reference | configure service vpls <i>string</i> split-horizon-group <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

static-host

| | |
|------------|---|
| Synopsis | Enter the static-host context |
| Context | configure service vpls string sap string static-host |
| Tree | static-host |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ipv4 [ip] string mac string

| | |
|------------|--|
| Synopsis | Enter the ipv4 list instance |
| Context | configure service vpls string sap string static-host ipv4 string mac string |
| Tree | ipv4 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

[ip] string

| | |
|------------|--|
| Synopsis | IP address |
| Context | configure service vpls string sap string static-host ipv4 string mac string |
| Tree | ipv4 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

mac string

| | |
|------------|--|
| Synopsis | MAC address |
| Context | configure service vpls string sap string static-host ipv4 string mac string |
| Tree | ipv4 |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|------------|--|
| Synopsis | Administrative state of the static host |
| Context | configure service vpls string sap string static-host ipv4 string mac string admin-state <i>keyword</i> |
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

ancp-string *string*

| | |
|---------------|---|
| Synopsis | ANCP string |
| Context | configure service vpls string sap string static-host ipv4 string mac string ancp-string <i>string</i> |
| Tree | ancp-string |
| String Length | 1 to 63 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

app-profile

| | |
|------------|---|
| Synopsis | Enter the app-profile context |
| Context | configure service vpls string sap string static-host ipv4 string mac string app-profile |

end number

| | |
|------------|---|
| Synopsis | Upper bound of the ISID range |
| Context | configure service vpls string sap string static-isid range number end number |
| Tree | end |
| Range | 1 to 16777215 |
| Introduced | 19.10.R1 |
| Platforms | All |

start number

| | |
|----------|-------------------------------|
| Synopsis | Lower bound of the ISID range |
|----------|-------------------------------|

| | |
|------------|---|
| Context | configure service vpls string sap string static-isid range number start number |
| Tree | start |
| Range | 1 to 16777215 |
| Introduced | 19.10.R1 |
| Platforms | All |

stp

| | |
|------------|---|
| Synopsis | Enter the stp context |
| Context | configure service vpls string sap string stp |
| Tree | stp |
| Introduced | 16.0.R4 |
| Platforms | All |

admin-state *keyword*

| | |
|------------|---|
| Synopsis | Administrative state of STP |
| Context | configure service vpls string sap string stp admin-state keyword |
| Tree | admin-state |
| Options | enable, disable |
| Introduced | 16.0.R4 |
| Platforms | All |

auto-edge *boolean*

| | |
|------------|---|
| Synopsis | Enable automatic detection of edge port characteristics |
| Context | configure service vpls string sap string stp auto-edge boolean |
| Tree | auto-edge |
| Default | true |
| Introduced | 16.0.R4 |
| Platforms | All |

edge-port *boolean*

| | |
|----------|--------------------------------------|
| Synopsis | Designate SAP or SDP as an edge port |
|----------|--------------------------------------|

| | |
|------------|---|
| Context | configure service vpls string sap string stp edge-port boolean |
| Tree | edge-port |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | All |

link-type *keyword*

| | |
|------------|---|
| Synopsis | Configure STP link-type |
| Context | configure service vpls string sap string stp link-type keyword |
| Tree | link-type |
| Options | pt-pt, shared |
| Default | pt-pt |
| Introduced | 16.0.R4 |
| Platforms | All |

mst-instance [**mst-inst-number**] *number*

| | |
|------------|---|
| Synopsis | Enter the mst-instance list instance |
| Context | configure service vpls string sap string stp mst-instance number |
| Tree | mst-instance |
| Introduced | 19.10.R1 |
| Platforms | All |

[mst-inst-number] *number*

| | |
|------------|---|
| Synopsis | Multiple Spanning Tree Instance number |
| Context | configure service vpls string sap string stp mst-instance number |
| Tree | mst-instance |
| Range | 1 to 4094 |
| Notes | This element is part of a list key. |
| Introduced | 19.10.R1 |
| Platforms | All |

mst-path-cost *number*

| | |
|------------|---|
| Synopsis | MSTI path cost |
| Context | configure service vpls <i>string</i> sap <i>string</i> stp mst-instance <i>number</i> mst-path-cost <i>number</i> |
| Tree | mst-path-cost |
| Range | 1 to 200000000 |
| Default | 10 |
| Introduced | 19.10.R1 |
| Platforms | All |

mst-port-priority *number*

| | |
|------------|---|
| Synopsis | MSTI port priority |
| Context | configure service vpls <i>string</i> sap <i>string</i> stp mst-instance <i>number</i> mst-port-priority <i>number</i> |
| Tree | mst-port-priority |
| Range | 0 16 32 48 64 80 96 112 128 144 160 176 192 208 224 240 |
| Default | 128 |
| Introduced | 19.10.R1 |
| Platforms | All |

path-cost *number*

| | |
|------------|--|
| Synopsis | Configure path-cost |
| Context | configure service vpls <i>string</i> sap <i>string</i> stp path-cost <i>number</i> |
| Tree | path-cost |
| Range | 1 to 200000000 |
| Default | 10 |
| Introduced | 16.0.R4 |
| Platforms | All |

port-num *number*

| | |
|----------|---|
| Synopsis | Configure virtual port number |
| Context | configure service vpls <i>string</i> sap <i>string</i> stp port-num <i>number</i> |
| Tree | port-num |

| | |
|------------|-----------|
| Range | 1 to 2047 |
| Introduced | 16.0.R4 |
| Platforms | All |

priority *number*

| | |
|------------|--|
| Synopsis | Configure STP priority |
| Context | configure service vpls <i>string</i> sap <i>string</i> stp priority <i>number</i> |
| Tree | priority |
| Range | 0 to 255 |
| Default | 128 |
| Introduced | 16.0.R4 |
| Platforms | All |

root-guard *boolean*

| | |
|------------|---|
| Synopsis | Enable/disable STP root-guard |
| Context | configure service vpls <i>string</i> sap <i>string</i> stp root-guard <i>boolean</i> |
| Tree | root-guard |
| Default | false |
| Introduced | 16.0.R4 |
| Platforms | All |

sub-sla-mgmt

| | |
|------------|--|
| Synopsis | Enter the sub-sla-mgmt context |
| Context | configure service vpls <i>string</i> sap <i>string</i> sub-sla-mgmt |
| Tree | sub-sla-mgmt |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

admin-state *keyword*

| | |
|----------|---|
| Synopsis | Administrative state of SAP subscriber management |
| Context | configure service vpls <i>string</i> sap <i>string</i> sub-sla-mgmt admin-state <i>keyword</i> |

| | |
|------------|---|
| Tree | admin-state |
| Options | enable, disable |
| Default | disable |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

defaults

| | |
|------------|---|
| Synopsis | Enter the defaults context |
| Context | configure service vpls string sap string sub-sla-mgmt defaults |
| Tree | defaults |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

app-profile *reference*

| | |
|------------|--|
| Synopsis | Default application profile name for this SAP |
| Context | configure service vpls string sap string sub-sla-mgmt defaults app-profile reference |
| Tree | app-profile |
| Reference | configure application-assurance group number partition number policy app-profile string |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

int-dest-id

| | |
|------------|---|
| Synopsis | Enter the int-dest-id context |
| Context | configure service vpls string sap string sub-sla-mgmt defaults int-dest-id |
| Tree | int-dest-id |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

string *string*

| | |
|----------|---|
| Synopsis | Use the configured string |
| Context | configure service vpls string sap string sub-sla-mgmt defaults int-dest-id string string |

| | |
|---------------|--|
| Tree | string |
| String Length | 1 to 32 |
| Notes | The following elements are part of a choice: string or top-q-tag . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

top-q-tag

| | |
|------------|---|
| Synopsis | Use the top Q-tag of this SAP |
| Context | configure service vpls string sap string sub-sla-mgmt defaults int-dest-id top-q-tag |
| Tree | top-q-tag |
| Notes | The following elements are part of a choice: string or top-q-tag . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sla-profile *reference*

| | |
|------------|---|
| Synopsis | Default SLA profile for hosts on this SAP |
| Context | configure service vpls string sap string sub-sla-mgmt defaults sla-profile reference |
| Tree | sla-profile |
| Reference | configure subscriber-mgmt sla-profile string |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sub-profile *reference*

| | |
|------------|---|
| Synopsis | Default subscriber profile for the SAP |
| Context | configure service vpls string sap string sub-sla-mgmt defaults sub-profile reference |
| Tree | sub-profile |
| Reference | configure subscriber-mgmt sub-profile string |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

subscriber-id

| | |
|------------|---|
| Synopsis | Enter the subscriber-id context |
| Context | configure service vpls string sap string sub-sla-mgmt defaults subscriber-id |
| Tree | subscriber-id |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

auto-id

| | |
|------------|--|
| Synopsis | Use auto-generated subscriber identification string |
| Context | configure service vpls string sap string sub-sla-mgmt defaults subscriber-id auto-id |
| Tree | auto-id |
| Notes | The following elements are part of a choice: auto-id , sap-id , or string . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sap-id

| | |
|------------|--|
| Synopsis | Use SAP ID as default subscriber identification string |
| Context | configure service vpls string sap string sub-sla-mgmt defaults subscriber-id sap-id |
| Tree | sap-id |
| Notes | The following elements are part of a choice: auto-id , sap-id , or string . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

string *string*

| | |
|---------------|---|
| Synopsis | Default subscriber identification string for the SAP |
| Context | configure service vpls string sap string sub-sla-mgmt defaults subscriber-id string string |
| Tree | string |
| String Length | 1 to 64 |
| Notes | The following elements are part of a choice: auto-id , sap-id , or string . |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

mac-da-hashing *boolean*

| | |
|------------|---|
| Synopsis | Use destination MAC address instead of subscriber ID to select egress LAG link |
| Context | configure service vpls string sap string sub-sla-mgmt mac-da-hashing boolean |
| Tree | mac-da-hashing |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

single-sub-parameters

| | |
|------------|--|
| Synopsis | Enter the single-sub-parameters context |
| Context | configure service vpls string sap string sub-sla-mgmt single-sub-parameters |
| Tree | single-sub-parameters |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

non-sub-traffic

| | |
|------------|--|
| Synopsis | Enable the non-sub-traffic context |
| Context | configure service vpls string sap string sub-sla-mgmt single-sub-parameters non-sub-traffic |
| Tree | non-sub-traffic |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

app-profile *reference*

| | |
|------------|--|
| Synopsis | Application profile name for all non-subscriber traffic |
| Context | configure service vpls string sap string sub-sla-mgmt single-sub-parameters non-sub-traffic app-profile reference |
| Tree | app-profile |
| Reference | configure application-assurance group number partition number policy app-profile string |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR |

sla-profile *reference*

| | |
|------------|--|
| Synopsis | SLA profile applicable for all non-subscriber traffic |
| Context | configure service vpls string sap string sub-sla-mgmt single-sub-parameters non-sub-traffic sla-profile reference |
| Tree | sla-profile |
| Reference | configure subscriber-mgmt sla-profile string |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sub-profile *reference*

| | |
|------------|--|
| Synopsis | Subscriber profile all non-subscriber traffic |
| Context | configure service vpls string sap string sub-sla-mgmt single-sub-parameters non-sub-traffic sub-profile reference |
| Tree | sub-profile |
| Reference | configure subscriber-mgmt sub-profile string |
| Notes | This element is mandatory. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

subscriber-id *string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

| | |
|---------------|---|
| Synopsis | Subscriber ID applied for all non-subscriber traffic |
| Context | configure service vpls string sap string sub-sla-mgmt single-sub-parameters non-sub-traffic subscriber-id string |
| Tree | subscriber-id |
| String Length | 1 to 64 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

profiled-traffic-only *boolean*

| | |
|------------|---|
| Synopsis | Include all traffic in subscriber profile |
| Context | configure service vpls <i>string</i> sap <i>string</i> sub-sla-mgmt single-sub-parameters profiled-traffic-only <i>boolean</i> |
| Tree | profiled-traffic-only |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR |

sub-ident-policy *reference*

| | |
|------------|--|
| Synopsis | Subscriber identification policy used on this SAP |
| Context | configure service vpls <i>string</i> sap <i>string</i> sub-sla-mgmt sub-ident-policy <i>reference</i> |

| Notes | This element is part of a list key. |
| Introduced | 22.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

function

| | |
|------------|---|
| Synopsis | Enter the function context |
| Context | configure service vpls string segment-routing-v6 number locator reference function |
| Tree | function |
| Introduced | 22.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

end-dt2m

| | |
|------------|--|
| Synopsis | Enable the end-dt2m context |
| Context | configure service vpls string segment-routing-v6 number locator reference function end-dt2m |
| Tree | end-dt2m |
| Introduced | 22.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

value *number*

| | |
|-------------|--|
| Synopsis | SRv6 function value |
| Context | configure service vpls string segment-routing-v6 number locator reference function end-dt2m value <i>number</i> |
| Tree | value |
| Description | This command assigns the optional static function value for the routes in the VPRN, VPLS, or Epipe instance.
When unconfigured, the system allocates a value dynamically. |
| Range | 1 to 1048575 |
| Introduced | 22.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

end-dt2u

| | |
|----------|--|
| Synopsis | Enable the end-dt2u context |
| Context | configure service vpls string segment-routing-v6 number locator reference function end-dt2u |
| Tree | end-dt2u |

| | |
|------------|---|
| Introduced | 22.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

value number

| | |
|-------------|--|
| Synopsis | SRv6 function value |
| Context | configure service vpls string segment-routing-v6 number locator reference function end-dt2u value number |
| Tree | value |
| Description | This command assigns the optional static function value for the routes in the VPRN, VPLS, or Epipe instance.
When unconfigured, the system allocates a value dynamically. |
| Range | 1 to 1048575 |
| Introduced | 22.7.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

micro-segment-locator [locator-name] reference

| | |
|----------------|--|
| Synopsis | Enter the micro-segment-locator list instance |
| Context | configure service vpls string segment-routing-v6 number micro-segment-locator reference |
| Tree | micro-segment-locator |
| Max. Instances | 1 |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

[locator-name] reference

| | |
|-------------|---|
| Synopsis | Micro-segment SRv6 locator name |
| Context | configure service vpls string segment-routing-v6 number micro-segment-locator reference |
| Tree | micro-segment-locator |
| Description | This command associates a pre-defined micro-segment SRv6 locator (defined in the configure router segment-routing segment-routing-v6 context) with the SRv6 instance in the service. The same micro-segment locator can be referenced in multiple BGP instances used by IPVPN or EVPN. |

| | |
|------------|---|
| Reference | configure router string segment-routing segment-routing-v6 micro-segment-locator <i>string</i> |
| Notes | This element is part of a list key. |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

function

| | |
|------------|--|
| Synopsis | Enter the function context |
| Context | configure service vpls string segment-routing-v6 <i>number</i> micro-segment-locator <i>reference</i> function |
| Tree | function |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

udt2m

| | |
|-------------|---|
| Synopsis | Enable the udt2m context |
| Context | configure service vpls string segment-routing-v6 <i>number</i> micro-segment-locator <i>reference</i> function udt2m |
| Tree | udt2m |
| Description | Commands in this context configure the SRv6 uDT2M behavior and the function value that is associated to the SRv6 instance in the service. When configured, decapsulation and table lookup for IPv6 prefixes occurs in the VPLS service. |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

value number

| | |
|-------------|--|
| Synopsis | SRv6 function value |
| Context | configure service vpls string segment-routing-v6 <i>number</i> micro-segment-locator <i>reference</i> function udt2m value <i>number</i> |
| Tree | value |
| Description | This command assigns the optional static function value for the routes in the VPRN, VPLS, or Epipe instance.
When unconfigured, the system allocates a value dynamically. |
| Range | 1 to 1048575 |

| | |
|------------|---|
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

udt2u

| | |
|-------------|---|
| Synopsis | Enable the udt2u context |
| Context | configure service vpls string segment-routing-v6 number micro-segment-locator reference function udt2u |
| Tree | udt2u |
| Description | Commands in this context configure the SRv6 uDT2U behavior and the function value that is associated to the SRv6 instance in the service. When configured, decapsulation and table lookup for IPv6 prefixes occurs in the VPLS service. |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

value number

| | |
|-------------|--|
| Synopsis | SRv6 function value |
| Context | configure service vpls string segment-routing-v6 number micro-segment-locator reference function udt2u value number |
| Tree | value |
| Description | This command assigns the optional static function value for the routes in the VPRN, VPLS, or Epipe instance.

When unconfigured, the system allocates a value dynamically. |
| Range | 1 to 1048575 |
| Introduced | 22.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR |

| Context | configure <i>service vpls string</i> service-mtu <i>number</i> |
| Tree | service-mtu |

Description This command configures the Maximum Transmission Unit (MTU) value (payload) for the service. The system uses the value to validate the operational state of the SAP and SDP binding within the service. The value overrides the default MTU for the service type.

The service MTU and a SAP's service delineation encapsulation overhead (4 bytes for a dot1q tag) are used to derive the required MTU of the physical port or channel on which the SAP was created. If the required payload is larger than the port or channel MTU, the SAP is placed in an inoperative state. If the required MTU is equal to or less than the port or channel MTU, the SAP transitions to the operative state.

When binding an SDP to a service, the service MTU is compared to the path MTU associated with the SDP. The path MTU can be administratively defined in the context of the SDP. The default or administrative path MTU can be dynamically reduced due to the MTU capabilities discovered by the tunneling mechanism of the SDP or the egress interface MTU capabilities based on the next hop in the tunnel path. If the service MTU is larger than the path MTU, the SDP binding for the service is placed in an inoperative state. If the service MTU is equal to or less than the path MTU, the SDP binding is placed in an operational state.

If a service MTU, port or channel MTU, or path MTU is dynamically or administratively modified, all associated SAP and SDP binding operational states are automatically reevaluated.

Binding operational states are automatically reevaluated.

For I-VPLS and Epipes bound to a B-VPLS, the service MTU must be at least 18 bytes smaller than the B-VPLS service MTU to accommodate the PBB header.

Because this connects a Layer 2 to a Layer 3 service, adjust the service MTU under the Epipe service. The MTU that is advertised from the Epipe side is service MTU minus EtherHeaderSize.

In the **configure service epipe spoke-sdp** context, the **adv-service-mtu** command can be used to override the configured MTU value used in T-LDP signaling to the far-end of an Epipe spoke-sdp. The **adv-service-mtu** command is also used to validate the value signaled by the far-end PE.

| Description | This command references the name of a MAC protect exclusion list.

Dynamically-learned MAC Source Addresses (SA) are protected if they are learned on an object with ALMP configured and no exclusion list is associated with the object, or if the MAC SA does not match any entry in an associated exclusion list.

An exclusion list can be used in multiple objects of a service. If a list is empty, ALMP does not exclude any learned MAC SAs from protection on the object. |

The template specifies parameters, such as the minimum transmit and receive control packet timer intervals, used by the BFD session. Template parameters are configured under the configure router bfd context. |
| Options | none, down |
| Default | none |
| Introduced | 21.2.R1 |
| Platforms | All |

wait-for-up-timer *number*

| | |
|-------------|--|
| Synopsis | Time waited for BFD up status |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> bfd wait-for-up-timer <i>number</i> |
| Tree | wait-for-up-timer |
| Description | This command configures the time interval that is used to wait for a BFD session to come up.

This command is triggered when a spoke-SDP is first administratively enabled and a VCCV BFD session transitions from up to down. The command is required to allow time for BFD sessions to come up, and for BFD to settle before selecting the active spoke-SDP for use in a redundant set. In the case where a VCCV BFD session is bouncing, the timer prevents excessive flapping of the operational state of a spoke-SDP. |

| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

rx-eth-ed boolean

| | |
|-------------|---|
| Synopsis | Receive and process ETH-ED ITU-T Y.1731 PDUs on the MEP |
| Context | configure service vpls <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed rx-eth-ed boolean</i> |
| Tree | rx-eth-ed |
| Description | This command enables the reception and processing of the ITU-T Y.1731 ETH-ED PDU on the MEP. |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

tx-eth-ed boolean

| | |
|------------|---|
| Synopsis | Transmit ETH-ED PDUs from the MEP |
| Context | configure service vpls <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed tx-eth-ed boolean</i> |
| Tree | tx-eth-ed |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

eth-vsm-grace

| | |
|----------|--|
| Synopsis | Enter the eth-vsm-grace context |
| Context | configure service vpls <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace</i> |

| | |
|-------------|--|
| Tree | eth-vsm-grace |
| Description | Commands in this context configure the Nokia ETH-CFM Grace function. |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

rx-eth-vsm-grace *boolean*

| | |
|-------------|--|
| Synopsis | Receive and process Nokia ETH-CFM Grace PDU on the MEP |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> grace eth-vsm-grace rx-eth-vsm-grace <i>boolean</i> |
| Tree | rx-eth-vsm-grace |
| Description | When configured to true , the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.

When configured to false , the router disables the Nokia Grace function. |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

tx-eth-vsm-grace *boolean*

| | |
|-------------|--|
| Synopsis | Transmit ETH-ED PDUs from the MEP |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> eth-cfm mep md-admin-name <i>reference</i> ma-admin-name <i>reference</i> mep-id <i>number</i> grace eth-vsm-grace tx-eth-vsm-grace <i>boolean</i> |
| Tree | tx-eth-vsm-grace |
| Description | When configured to true , the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.

The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.

The operator must configure the configure system eth-cfm grace command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).

When configured to false , the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP. |
| Default | true |
| Introduced | 16.0.R1 |

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

lbm-svc-act-responder *boolean*

mip primary-vlan (*number* | *keyword*)

| | |
|------------|--|
| Synopsis | Enter the mip list instance |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> eth-cfm mip primary-vlan (<i>number</i> <i>keyword</i>) |
| Tree | mip |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

primary-vlan (*number* | *keyword*)

| | |
|----------|--------------------------------------|
| Synopsis | VLAN ID to which the MIP is attached |
|----------|--------------------------------------|

| | |
|-------------|---|
| Context | configure service vpls string spoke-sdp string eth-cfm mip primary-vlan (number keyword) |
| Tree | mip |
| Description | This command provides an option for linking a MIP with a Primary VLAN number or none. When the none option is provided, the MIP does not include the primary vlan. |
| Range | 1 to 4094 |
| Options | none |
| Notes | This element is part of a list key. |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

cfm-vlan-tag string

| | |
|---------------|--|
| Synopsis | VLAN tags to apply to CFM PDUs for egress processing |
| Context | configure service vpls string spoke-sdp string eth-cfm mip primary-vlan (number keyword) cfm-vlan-tag string |
| Tree | cfm-vlan-tag |
| Description | This command allows the CFM function to include additional VLAN tags to the CFM packet that are carried to the egress and treated as service delimited. Typically, this function is used to influence the VLAN carried over a binding that uses the vc-type vlan or the binding forces the use of one or more VLAN tag that results in a mismatch between the service data arriving at the binding and the locally generated ETH-CFM PDUs arriving at the same egress. When this command is included under the MEP or MIP configuration, the tags used as part of the configuration typically match the SAP service delimited configuration. |
| String Length | 1 to 9 |
| Introduced | 21.10.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

mac-address string

| | |
|------------|--|
| Synopsis | MAC address of the MIP |
| Context | configure service vpls string spoke-sdp string eth-cfm mip primary-vlan (number keyword) mac-address string |
| Tree | mac-address |
| Introduced | 21.5.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

squelch-ingress-ctag-levels *number*

| | |
|----------------|---|
| Synopsis | Squelch levels using additional VLAN C-Tag space |
| Context | configure service vpls string spoke-sdp string eth-cfm squelch-ingress-ctag-levels number |
| Tree | squelch-ingress-ctag-levels |
| Description | <p>This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding plus an additional VLAN, up to a maximum tag length of two tags. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.</p> <p>The list of levels must be a complete contiguous list from 0 up to the highest level to be dropped.</p> |
| Range | 0 to 7 |
| Max. Instances | 8 |
| Introduced | 21.2.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

squelch-ingress-levels *number*

| | |
|----------------|--|
| Synopsis | Levels for which ETH-CFM packets are silently discarded |
| Context | configure service vpls string spoke-sdp string eth-cfm squelch-ingress-levels number |
| Tree | squelch-ingress-levels |
| Description | <p>This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.</p> <p>The list of levels must be a complete contiguous list from 0 up to the highest level that will be dropped.</p> |
| Range | 0 to 7 |
| Max. Instances | 8 |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

vmep-filter *boolean*

| | |
|------------|--|
| Synopsis | Suppress eth-cfm PDUs based on level lower than or equal to configured Virtual MEP |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> eth-cfm vmep-filter <i>boolean</i> |
| Tree | vmep-filter |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS |

auto-learn-mac-protect *boolean*

| | |
|------------|---|
| Synopsis | Populate automatically MAC protect list with source MAC addresses learned on SDP |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> fdb auto-learn-mac-protect <i>boolean</i> |
| Tree | auto-learn-mac-protect |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

auto-learn-mac-protect-exclude-list *reference*

| | |
|-------------|--|
| Synopsis | Referenced MAC protect exclusion list name |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> fdb auto-learn-mac-protect-exclude-list <i>reference</i> |
| Tree | auto-learn-mac-protect-exclude-list |
| Description | This command references the name of a MAC protect exclusion list.

Dynamically-learned MAC Source Addresses (SA) are protected if they are learned on an object with ALMP configured and no exclusion list is associated with the object, or if the MAC SA does not match any entry in an associated exclusion list.

An exclusion list can be used in multiple objects of a service. If a list is empty, ALMP does not exclude any learned MAC SAs from protection on the object. |
| Reference | configure service mac-list <i>string</i> |
| Introduced | 20.5.R1 |
| Platforms | All |

discard-unknown-source *boolean*

| | |

| Context | configure service vpls <i>string spoke-sdp</i> <i>string igmp-snooping query-last-member-interval</i> <i>number</i> |
| Tree | query-last-member-interval |
| Range | 1 to 50 |
| Units | deciseconds |
| Default | 10 |
| Introduced | 16.0.R1 |
| Platforms | All |

query-response-interval *number*

| | |
|------------|---|
| Synopsis | Time to wait for a response to the host-query messages |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> igmp-snooping query-response-interval <i>number</i> |
| Tree | query-response-interval |
| Range | 1 to 1023 |
| Units | seconds |
| Default | 10 |
| Introduced | 16.0.R1 |
| Platforms | All |

robust-count *number*

| | |
|------------|--|
| Synopsis | Number of retries after expected message loss |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> igmp-snooping robust-count <i>number</i> |
| Tree | robust-count |
| Range | 2 to 7 |
| Default | 2 |
| Introduced | 16.0.R1 |
| Platforms | All |

router-alert-check *boolean*

| | |
|------------|---|
| Synopsis | Enable IP router alert check option |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> igmp-snooping router-alert-check <i>boolean</i> |
| Tree | router-alert-check |
| Default | true |
| Introduced | 16.0.R1 |
| Platforms | All |

send-queries *boolean*

| | |
|----------|---|
| Synopsis | Generate IGMP general queries |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> igmp-snooping send-queries <i>boolean</i> |

| | |
|------------|------------------------------|
| Tree | send-queries |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

static

| | |
|------------|--|
| Synopsis | Enter the static context |
| Context | configure service vpls string spoke-sdp string igmp-snooping static |
| Tree | static |
| Introduced | 16.0.R1 |
| Platforms | All |

group [[group-address](#)] *string*

| | |
|------------|---|
| Synopsis | Enter the group list instance |
| Context | configure service vpls string spoke-sdp string igmp-snooping static group string |
| Tree | group |
| Introduced | 16.0.R1 |
| Platforms | All |

[[group-address](#)] *string*

| | |
|-------------|---|
| Synopsis | Group address of static IGMP multicast channel |
| Context | configure service vpls string spoke-sdp string igmp-snooping static group string |
| Tree | group |
| Description | This command configures an address that receives data on an interface. The IP address must be unique for each static group. |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R1 |
| Platforms | All |

source [[source-address](#)] *string*

| | |
|----------|------------------------------------|
| Synopsis | Add a list entry for source |
|----------|------------------------------------|

| | |
|------------|---|
| Context | configure service vpls string spoke-sdp string igmp-snooping static group string source string |
| Tree | source |
| Notes | The following elements are part of a mandatory choice: source or starg . |
| Introduced | 16.0.R1 |
| Platforms | All |

[source-address] string

| | |
|------------|---|
| Synopsis | Source IP address of multicast channel sending data |
| Context | configure service vpls string spoke-sdp string igmp-snooping static group string source string |
| Tree | source |
| Notes | This element is part of a list key. |
| Introduced | 16.0.R2 |
| Platforms | All |

starg

| | |
|------------|---|
| Synopsis | any source address (*,G) |
| Context | configure service vpls string spoke-sdp string igmp-snooping static group string starg |
| Tree | starg |
| Notes | The following elements are part of a mandatory choice: source or starg . |
| Introduced | 16.0.R2 |
| Platforms | All |

version keyword

| | |
|------------|---|
| Synopsis | IGMP protocol version |
| Context | configure service vpls string spoke-sdp string igmp-snooping version keyword |
| Tree | version |
| Options | 1, 2, 3 |
| Default | 3 |
| Introduced | 16.0.R1 |
| Platforms | All |

ignore-standby-signaling *boolean*

| | |
|------------|--|
| Synopsis | Ignore standby-bit received from TLDP peers when performing internal tasks |
| Context | configure service vpls string spoke-sdp string ignore-standby-signaling boolean |
| Tree | ignore-standby-signaling |
| Default | false |
| Introduced | 16.0.R1 |
| Platforms | All |

ingress

| | |
|------------|---|
| Synopsis | Enter the ingress context |
| Context | configure service vpls string spoke-sdp string ingress |
| Tree | ingress |
| Introduced | 16.0.R1 |
| Platforms | All |

filter

| | |
|------------|--|
| Synopsis | Enter the filter context |
| Context | configure service vpls string spoke-sdp string ingress filter |
| Tree | filter |
| Introduced | 16.0.R1 |
| Platforms | All |

ip reference

| | |
|------------|---|
| Synopsis | IPv4 filter policy name |
| Context | configure service vpls string spoke-sdp string ingress filter ip reference |
| Tree | ip |
| Reference | configure filter ip-filter string |
| Introduced | 16.0.R1 |
| Platforms | All |

ipv6 reference

| | |
|------------|---|
| Synopsis | IPv6 filter policy name |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> ingress filter ipv6 reference |
| Tree | ipv6 |
| Reference | configure filter ipv6-filter <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

mac reference

| | |
|------------|--|
| Synopsis | MAC filter policy name |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> ingress filter mac reference |
| Tree | mac |
| Reference | configure filter mac-filter <i>string</i> |
| Introduced | 16.0.R1 |
| Platforms | All |

qos

| | |
|------------|---|
| Synopsis | Enter the qos context |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> ingress qos |
| Tree | qos |
| Introduced | 16.0.R1 |
| Platforms | All |

network

| | |
|------------|---|
| Synopsis | Enter the network context |
| Context | configure service vpls <i>string</i> spoke-sdp <i>string</i> ingress qos network |
| Tree | network |
| Introduced | 16.0.R1 |
| Platforms | All |

fp-redirect-group

| | |
|------------|---|
| Synopsis | Enter the fp-redirect-group context |
| Context | configure service vpls string spoke-sdp string ingress qos network fp-redirect-group |
| Tree | fp-redirect-group |
| Introduced | 16.0.R1 |
| Platforms | All |

group-name *reference*

| | |
|------------|--|
| Synopsis | Name of the forwarding plane queue group template |
| Context | configure service vpls string spoke-sdp string ingress qos network fp-redirect-group group-name reference |
| Tree | group-name |
| Reference | configure qos queue-group-templates ingress queue-group string |
| Introduced | 16.0.R1 |
| Platforms | All |

instance *number*

| | |
|------------|---|
| Synopsis | Instance of FP ingress queue group for the SDP binding |
| Context | configure service vpls string spoke-sdp string ingress qos network fp-redirect-group instance number |
| Tree | instance |
| Range | 1 to 65535 |
| Introduced | 16.0.R1 |
| Platforms | All |

policy-name *reference*

| | |
|------------|---|
| Synopsis | Network policy ID |
| Context | configure service vpls string spoke-sdp string ingress qos network policy-name reference |
| Tree | policy-name |
| Reference | configure qos network string |
| Introduced | 16.0.R1 |

Platforms All

vc-label *number*

WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Ingress MPLS VC label to send packets to the far end
