1 Getting Started

This guide contains command descriptions for the common operational **clear**, **monitor**, **show**, and **tools** CLI commands that are used to manage the SR OS in either the classic CLI or the MD-CLI.

The output of the common operational commands is always the same in the classic CLI and the MD-CLI. The command names and syntaxes of the common operational commands in the classic CLI and the MD-CLI are also compatible. The MD-CLI ? help and command completion only displays parameters that are valid next in order based on what has been entered, while the classic CLI displays all parameters that can be entered out of order. Commands in the MD-CLI can be entered out of order by entering the complete command and parameters without using command completion.

This guide does not include any other classic or MD-CLI commands. These commands are documented in the *7450 ESS, 7750 SR, 7950 XRS, and VSR Classic CLI Command Reference Guide* and *7450 ESS, 7750 SR, 7950 XRS, and VSR MD-CLI Command Reference Guide*.

Note:

This guide generically covers Release 3HE 18412 000 x TQZZA, for information about the supported features and applicable platforms in each load of the Release 22.x.Rx software.

The full set of CLI commands supported by the SR OS is documented in three related guides that are listed in the following table.

Table 1: Documentation for SR OS CLI Commands

| Guide Title | Classic CLI Commands | MD-CLI Commands |
|---|---|---|
| <i>7450 ESS, 7750 SR, 7950 XRS, and VSR Clear, Monitor, Show, and Tools Command Reference Guide</i> | All clear , monitor , show , and tools commands | All clear , monitor , show , and tools commands |
| <i>7450 ESS, 7750 SR, 7950 XRS, and VSR Classic CLI Command Reference Guide</i> | All other commands | — |
| <i>7450 ESS, 7750 SR, 7950 XRS, and VSR MD-CLI Command Reference Guide</i> | — | All other commands |

Note:

Unless explicitly noted otherwise, this guide uses the terminology defined in the following table to collectively designate the specified platforms.

Table 2: Platforms and Terminology

| Platform | Collective platform designation |
|-------------|---------------------------------|
| 7450 ESS-7 | All |
| 7450 ESS-12 | |

| Platform | Collective platform designation |
|----------------|---------------------------------|
| 7750 SR-1 | |
| 7750 SR-1-24D | |
| 7750 SR-1-46S | |
| 7750 SR-1-48D | |
| 7750 SR-1-92S | |
| 7750 SR-1x-48D | |
| 7750 SR-1x-92S | |
| 7750 SR-7 | |
| 7750 SR-12 | |
| 7750 SR-12e | |
| 7750 SR-a4 | |
| 7750 SR-a8 | |
| 7750 SR-1e | |
| 7750 SR-2e | |
| 7750 SR-3e | |
| 7750 SR-1s | |
| 7750 SR-1se | |
| 7750 SR-2s | |
| 7750 SR-7s | |
| 7750 SR-14s | |
| 7950 XRS-20 | |
| 7950 XRS-20e | |
| 7950 XRS-40 | |
| VSR | |
| VSR-NRC | |
| 7450 ESS-7 | 7450 ESS |
| 7450 ESS-12 | |
| 7750 SR-1 | 7750 SR |
| 7750 SR-1-24D | |
| 7750 SR-1-46S | |

| Platform | Collective platform designation |
|----------------|---------------------------------|
| 7750 SR-1-48D | |
| 7750 SR-1-92S | |
| 7750 SR-1x-48D | |
| 7750 SR-1x-92S | |
| 7750 SR-7 | |
| 7750 SR-12 | |
| 7750 SR-12e | |
| 7750 SR-7 | 7750 SR-7/12/12e |
| 7750 SR-12 | |
| 7750 SR-12e | |
| 7750 SR-7 | 7750 SR-7/12 |
| 7750 SR-12 | |
| 7750 SR-a4 | 7750 SR-a |
| 7750 SR-a8 | |
| 7750 SR-1e | 7750 SR-e |
| 7750 SR-2e | |
| 7750 SR-3e | |
| 7750 SR-1s | 7750 SR-s |
| 7750 SR-1se | |
| 7750 SR-2s | |
| 7750 SR-7s | |
| 7750 SR-14s | |
| 7950 XRS-20 | 7950 XRS |
| 7950 XRS-20e | |
| 7950 XRS-40 | |
| VSR | VSR |
| VSR-NRC | |

1.1 Command Tree

The SR OS CLI command tree is a hierarchical inverted tree. The highest level is the root level. Below this level are other tree levels with the major command groups; for example, **show** commands and **tools** commands are levels below root.

In the tree, you can click on a command to link directly to the command description.

Note:

Commands that are listed in the tree but are not linked to an associated description are available on one or more platforms but are not currently described in the guide.

1.2 Command Descriptions

Command descriptions are listed in alphabetical order by command name.

The following figure shows an example of a command description.

Figure 1: Command Description Example

policers

- Syntax** **policers**
- Context** [Tree] (show>app-assure>group>policy>aa-sub policers)
- Full Context** show application-assurance group policy aa-sub policers
- Description** This command displays policer configuration information.
- Output** The following is an example output for the **policers** command.

Sample Output

```
A:cpm-a>show>app-assure>group>aa-sub# policers
=====
Application-Assurance Subscriber Policler Summary
=====
AA-Subscriber      : Alex (esm)
-----
Type: single-bucket-bandwidth Direction: subscriber-to-network
AQP  Policler                      Resource Exceeded?
-----
61   SuspectUp_policler              N
-----

Type: single-bucket-bandwidth Direction: network-to-subscriber
AQP  Policler                      Resource Exceeded?
-----
62   SuspectDown_policler           N
-----

Policler usage counts:
single-bucket-bandwidth
  subscriber-to-network  1   out of   32
  network-to-subscriber  1   out of   32
dual-bucket-bandwidth
  subscriber-to-network  0   out of    1
  network-to-subscriber  0   out of    1
flow-count-limit        0   out of    8
flow-rate-limit         0   out of    8
=====
A:cpm-a>show>app-assure>group>aa-sub#
```

sw3088

The following table describes the fields that may be shown for a command. Not all fields are applicable for all commands.

Table 3: Command Description Fields

| Field | Description |
|--------------|--|
| Command Name | Name of the command |
| Syntax | Command syntax required to execute the command. For further information on command syntax, see the <i>7450 ESS, 7750 SR, 7950 XRS, and VSR Classic CLI Command Reference Guide</i> or the <i>7450 ESS, 7750 SR, 7950 XRS, and VSR MD-CLI User Guide</i> |
| Context | Path to the command as it is displayed in the CLI prompt. Clicking on [Tree] links to the command in the CLI tree. |
| Full Context | Complete contextual path to perform the command |
| Description | Description of the command functionality and any restrictions |
| Default | Command default value |
| Parameters | Descriptions of command parameters |
| Values | Values allowed for the parameter |
| Default | Parameter default value |
| Platforms | Hardware platforms on which the command is available. See Table 2: Platforms and Terminology for more information about the platforms. Note: Some SR OS features are platform-specific and therefore may not be available or visible on all platforms. See the SR OS R22.x.Rx Software Release Notes, part number 3HE 18412 000 x TQZZA, for information about platform support. |

The **monitor** and **show** commands may also show command output and a description of the fields found in that output. Command outputs shown in this guide are examples only; actual displays may differ depending on supported functionality and user configuration.

Note:

All options for enumerated types and numerical ranges are listed in the command descriptions; however, not all options or ranges are valid on all platforms.

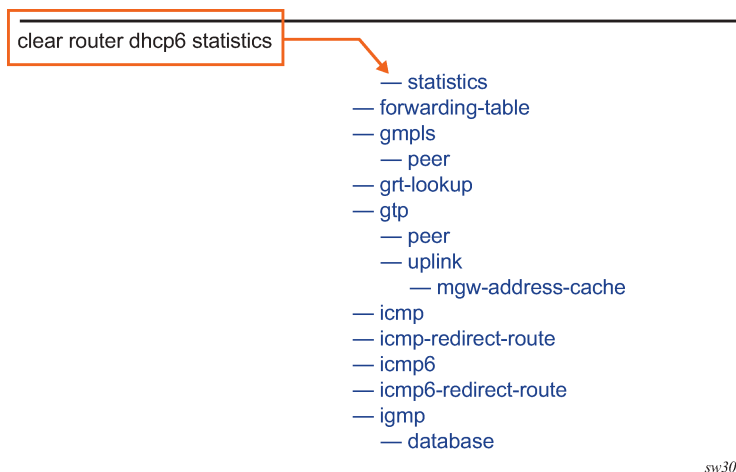

1.3 Navigational Aids

The following aids help you navigate the guide and find specific commands.

1.3.1 Context Path

In the CLI tree section, the complete contextual path to the first command on the page is shown at the top of the page, as shown in the following figure.

Figure 2: Command Tree Navigation

1.3.2 Searching

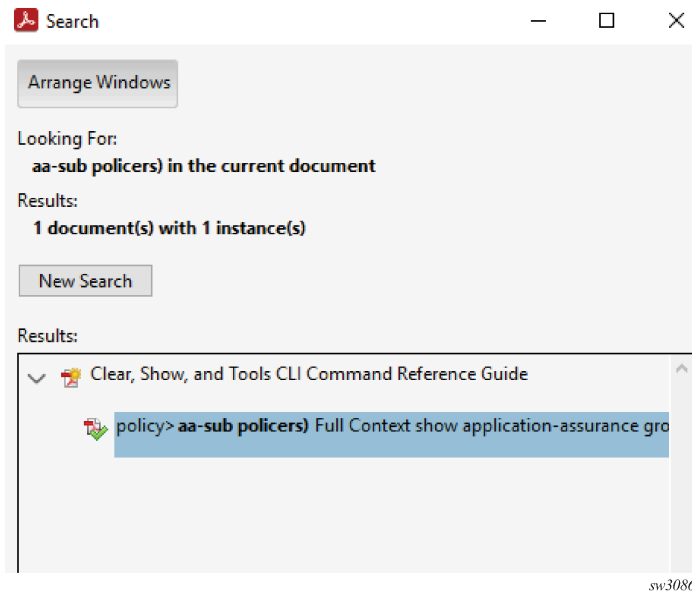

The Context field in each command description shows, in parentheses, the full path to the command as displayed in the CLI prompt. This form of the contextual path often abbreviates terms. For example:

(cfg>qos>qgrps>egr>qgrp>queue wred-queue)

To search this guide for a specific command using the Acrobat search function, enter the command name and append a closing parenthesis in the search window. For more efficient searching, add the previous level of the contextual path before the command name.

If you add the context and closing parenthesis, the resulting search returns only matching Context entries. It will not return instances of the same command found elsewhere in the guide. The following figure shows an example of a search.

Figure 3: Search Window

1.3.3 Linking to the Tree

Clicking on [Tree] in a command description context links directly to the command in the CLI tree. The following figure shows the [Tree] element.

Figure 4: Link to CLI Tree

policers

| | |
|---------------------|---|
| Syntax | policers |
| Context | [Tree] (show>app-assure>group>policy>aa-sub policers) |
| Full Context | show application-assurance group policy aa-sub policers |
| Description | This command displays policer configuration information. |
| Output | The following is an example output for the policers command. |

sw3087

2 Overview

2.1 CLI clear Commands

The CLI **clear** commands are primarily used to:

- set statistics in a particular area back to a value of zero
- reset specific hardware assemblies (for example, cards)
- delete temporary operational state data (for example, contents of a log in memory)

For more information on the **clear** commands, see the respective command sections in this guide.

2.2 CLI monitor Commands

The CLI **monitor** commands are found in the **monitor** context of the operational root of the CLI tree. The **monitor** commands display specified statistical information related to the monitor subject (such as filter, port, QoS, router, service, and VRRP) at a configurable interval until a count is reached.

The **monitor** command output displays a snapshot of the current statistics. The output refreshes with subsequent statistical information at each configured interval and is displayed as a delta to the previous output.

The <Ctrl-c> keystroke interrupts a monitoring process. **monitor** command configurations cannot be saved. You must enter the command for each monitoring session. If the maximum limits are configured, you can monitor the statistical information for a maximum of 60 × 999 s (approximately 1000 minutes).

For more information on the **monitor** commands, see the respective command sections in this guide.

2.3 CLI show Commands

The CLI **show** commands display useful information in the format of a human-readable report, with the ability to add or remove output based on optional parameters. The information in the output of the **show** commands consists of configuration and operational information, and may also perform calculations or additional processing to display some of the output.

The information in the output of the **show** commands can also be found in the **state** and **configure** branches of the MD-CLI (as well as via model-driven interfaces such as NETCONF and gRPC). The output of these branches is fully modeled in YANG with structured data that can be easily manipulated by tools and applications (including pySROS and NETCONF clients). The pySROS and MD-CLI command alias features can be used together to create custom **show** commands using the modeled data. See "Command aliases" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR MD-CLI User Guide* for more information.

For more information on the **show** commands, see the respective command sections in this guide.

2.4 CLI tools Commands

The CLI **tools** commands provide two primary functions:

- dump
- perform

The **tools dump** commands provide additional detailed and enhanced information about the router.

The **tools perform** commands provide the ability to trigger a variety of actions in the router, such as a card power cycle (**tools perform card power-cycle**), and APS switchovers.

For more information on the **tools** commands, see the respective command sections in this guide.

3 Command Trees

3.1 clear Commands

```
- clear
  - aaa
    - diameter-node
    - diameter-peer-policy
    - isa-radius-policy

4 2 Commands

4.1 24-hours

24-hours

Syntax

24-hours

24-hours application *license-app*

24-hours application *license-app history*

24-hours history

Context

[\[Tree\]](#) (show>system>license-statistics 24-hours)

Full Context

show system license-statistics 24-hours

Description

This command displays application license statistics for the last 24 hours.

Parameters

license-app

Specifies the application license.

Values Ins, nat, sub-mgmt, wlan-gw, aa, ipsec

history

Displays additional 24 hour statistics.

Platforms

VSR

5 a Commands

5.1 aa-anl-list

aa-anl-list

Syntax

aa-anl-list [**congested-only**] [**sort-type** { **top-by-subs** | **top-by-rate**}] [**isa** *mda-id*]

aa-anl-list summary

Context

[Tree] (tools>dump>app-assure>group aa-anl-list)

Full Context

tools dump application-assurance group aa-anl-list

Description

This command displays the list of active ANLs detected by AA along with the associated conditions (for example, congestion, measured rate, and number of subscribers).

Parameters

congested-only

Specifies only congested ANLs.

sort-type

Filters by the specified sub-type.

Values **top-by-subs** — Displays the top ANLs sorted by measured ANL bandwidth.

top-by-rate — Displays the top ANLs sorted by those ANLs that have the highest number of subscribers.

mda-id

Specifies the slot and MDA in the format *slot/mda*.

Values *slot*—1 to 10

mda—1 or 2

summary

Displays summary information.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output displays aa-anl-list information.

Sample Output

```
A:Dut-C# tools dump application-assurance group 120:10 aa-anl-list
=====
Application-Assurance Access Network Location List: Group 120:10, ISA 3/1
=====
Type                Location                Congestion State    Rate (kbps)  Subscribers
-----
AP-MAC+VLAN        23:89:be:c2:64:50+1034  RTT Limits Exceeded  21961        113
AP-MAC+VLAN        83:2d:3d:73:c4:9a+4090  RTT Limits Exceeded  15963        86
AP-MAC+VLAN        f2:ee:cc:47:71:f7+0034  Not Congested        6147         12
=====
```

5.2 aa-interface

aa-interface

Syntax

aa-interface isa *mda-id*

Context

[\[Tree\]](#) (show>app-assure>group aa-interface)

Full Context

show application-assurance group aa-interface

Description

This command displays AA interface information.

Parameters

mda-id

Specifies the MDA ID.

Values

| | |
|----------|-----------------------------------|
| <mda-id> | <slot>/<mda> |
| slot | [1 to 10] (depending on platform) |
| mda | [1 to 2] |

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

5.3 aa-sub

aa-sub

Syntax

aa-sub esm *sub-ident-string* [**snapshot**]

aa-sub esm-mac *esm-mac-name* [**snapshot**]

aa-sub sap *sap-id*

aa-sub spoke-id *sdp-id:vc-id* [**snapshot**]

aa-sub transit *transit-aasub-name* [**snapshot**]

Context

[\[Tree\]](#) (show>app-assure>group aa-sub)

Full Context

show application-assurance group aa-sub

Description

This command displays per-subscriber statistics.

Parameters

esm *sub-ident-string*

Specifies an existing subscriber identification string.

esm-mac *esm-mac-name*

Specifies an existing subscriber MAC.

sap *sap-id*

Specifies the physical port identifier portion of the SAP definition.

spoke-id *sdp-id:vc-id*

Specifies the spoke SDP ID and VC ID.

| | |
|---------------|-----------------|
| Values | 1 to 17407 |
| | 1 to 4294967295 |

snapshot

Specifies that the statistics retrieved include the sum of the statistics from the previous collection windows, and the statistics for any closed flows since the last collection window.

transit *transit-aasub-name*

Specifies an existing transit subscriber name string up to 32 characters in length.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following is an example of show output for the **aa-sub** command.

Sample Output

```

aa-sub

Syntax

aa-sub dsm mac *mac-address* [**snapshot**]

aa-sub esm *sub-ident-string*

aa-sub esm-mac *esm-mac-name*

aa-sub transit *transit-aasub-name*

Context

[\[Tree\]](#) (tools>dump>app-assure>group aa-sub)

Full Context

tools dump application-assurance group aa-sub

Description

This command displays AA subscriber information for a specific ISA.

Parameters

esm-mac-name

Specifies the ESM MAC name; a maximum of 32 characters.

mac-address

Specifies the MAC address in *xx:xx:xx:xx:xx:xx* or *xx-xx-xx-xx-xx-xx* format.

snapshot

Displays snapshot statistics.

sub-ident-string

Specifies the AA subscriber identifier string, up to 32 characters.

transit-aasub-name

Specifies the AA transit subscriber name, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output display AA subscriber information.

Sample Output

```
A:Dut-C# tools dump application-assurance group 120:10 aa-sub dsm mac 00:01:02:00:00:00
summary
```

```

aa-sub

Syntax

aa-sub esm *sub-ident-string*

aa-sub esm-mac *esm-mac-name*

aa-sub sap *sap-id*

aa-sub spoke-id *sdp-id:vc-id*

aa-sub transit *transit-aasub-name*

Context

[\[Tree\]](#) (tools>perform>app-assure>group aa-sub)

Full Context

tools perform application-assurance group aa-sub

Description

This command performs application assurance group aa-sub operations.

Parameters

esm sub-ident-string

Specifies an existing subscriber identification string.

esm-mac esm-mac-name

Specifies an existing subscriber MAC.

sap sap-id

Specifies the physical port identifier portion of the SAP definition.

spoke-id sdp-id:vc-id

Specifies the spoke SDP ID and VC ID.

Values 1 to 17407
1 to 4294967295

transit transit-aasub-name

Specifies an existing transit subscriber name string up to 32 characters in length.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

5.4 aa-sub-list

aa-sub-list

Syntax

aa-sub-list [*isa mda-id*]

aa-sub-list policers-exceeded

aa-sub-list summary

Context

[\[Tree\]](#) (show>app-assure>group aa-sub-list)

Full Context

show application-assurance group aa-sub-list

Description

This command displays AA subscriber lists.

Parameters

isa mda-id

Displays the slot and MDA ID.

Values 1 to 10 (depending on chassis model)
 1, 2

policers-exceeded

Displays the policer resources which are exceeded.

summary

Displays summary information.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following is an example show output for the **aa-sub-list** command.

Sample Output

```

aa-sub-list

Syntax

aa-sub-list [*filter-by-type sub-type*] [*isa mda-id*] **quarantined-only**
aa-sub-list [*filter-by-type sub-type*] [*isa mda-id*] **policers-exceeded**
aa-sub-list summary

Context

[\[Tree\]](#) (tools>dump>app-assure>group aa-sub-list)

Full Context

tools dump application-assurance group aa-sub-list

Description

This command displays the AA subscriber list for a specific ISA.

Parameters

filter-by-type sub-type

Filters by the specified sub-type.

Values dsm, esm, esm-mac, sap, spoke-sdp, transit

mda-id

Specifies the slot and MDA in the format *slot/mda*.

Values *slot*—1 to 10
mda—1 or 2

summary

Displays summary information.

quarantined-only

Displays the AA subscribers that are under quarantine.

policers-exceeded

Displays subscribers that have exceeded policer resources.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output displays AA subscriber list information.

Sample Output

```

tools dump application-assurance group aa-sub-search

Description

This command displays AA aa-sub information.

Parameters

search-type

Specifies the type of search.

Values top

granularity

Specifies the granularity of the search.

Values bytes, packets, flows

direction *direction*

Specifies the network/subscriber direction.

Values from-sub, to-sub, both

max-count *max-count*

Specifies the maximum flows to display.

Values 1 to 100

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output display AA aa-sub information.

Sample Output

```

show application-assurance group aa-sub-study

Description

This command displays per-subscriber special study statistics.

Parameters

esm sub-ident-string

Specifies an existing subscriber identification string.

esm-mac esm-mac-name

Specifies an existing subscriber MAC.

sap sap-id

Specifies the physical port identifier portion of the SAP definition.

spoke-id sdp-id:vc-id

Specifies the spoke SDP ID and VC ID.

Values 1 to 17407
1 to 4294967295

snapshot

Specifies that the statistics retrieved include the sum of the statistics from the previous collection windows, and the statistics for any closed flows since the last collection window.

transit transit-aasub-name

Specifies an existing transit subscriber name string.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Full Context

monitor port atm aal-5

Description

This command monitors ATM AAL-5 statistics.

Parameters

seconds

Configures the interval for each display in seconds.

Values 3 to 60

Default 10

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, 7950 XRS

5.10 aarp

aarp

Syntax

aarp

aarp *aarpld*

Context

[Tree] (show>app-assur aarp)

Full Context

show application-assurance aarp

Description

This command displays the Application Assurance Redundancy Protocol (AARP) instance status.

Parameters

aarpld

Specifies an integer that identifies an AARP instance.

Values 1 to 65535

detail

Displays detailed information.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aarp

Syntax

aarp *aarpld* event-history [clear]

Context

[\[Tree\]](#) (tools>dump>application-assurance aarp)

Full Context

tools dump application-assurance aarp

Description

This command dumps application-assurance AARP information for a specified instance.

Parameters

aarpld

Specifies the AARP ID.

Values 1 to 65535

event-history

Dumps historical information for the instance.

clear

Clears the event history after reading.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

aarp

Syntax

aarp *aarpld* **force-evaluate**

Context

[\[Tree\]](#) (tools>perform>app-assure aarp)

Full Context

tools perform application-assurance aarp

Description

This command performs Application Assurance Redundancy Protocol instance operations.

Parameters

aarpld

Specifies an integer that identifies an AARP instance.

Values 1 to 65535

force-evaluate

Forces a re-evaluation of the preferred AARP instance.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

5.11 abort-startup-wait

abort-startup-wait

Syntax

abort-startup-wait

Context

[Tree] (tools>perform>router>dhcp>server>pool>failover abort-startup-wait)

[Tree] (tools>perform>router>dhcp6>server>pool>failover abort-startup-wait)

[Tree] (tools>perform>router>dhcp6>server>failover abort-startup-wait)

[Tree] (tools>perform>router>dhcp>server>failover abort-startup-wait)

Full Context

tools perform router dhcp local-dhcp-server pool failover abort-startup-wait

tools perform router dhcp6 local-dhcp-server pool failover abort-startup-wait

tools perform router dhcp6 local-dhcp-server failover abort-startup-wait

tools perform router dhcp local-dhcp-server failover abort-startup-wait

Description

This command aborts the running start-up-wait time, forcing the DHCP server to transition immediately to the COMMUNICATIONS-INTERRUPTED state.

The start-up-wait time is started after a boot to enable two redundant routers to synchronize the DHCP server lease database before transitioning to the (PRE-)NORMAL state when the last state record from the peer is synchronized. If the last state record is not received before the start-up-wait time expires, it is assumed that the remote DHCP server is not operational and the DHCP server goes in COMMUNICATIONS-INTERRUPTED state.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

5.12 access-group

access-group

Syntax

access-group *[group-name]*

Context

[\[Tree\]](#) (show>system>security access-group)

Full Context

show system security access-group

Description

This command displays SNMP access group information.

Parameters

group-name

This command displays information for the specified access group.

Platforms

All

Output

The following is an example of access group information.

[Table 4: Show System Security Access Group Output Fields](#) describes security access group output fields.

Sample Output

```
A:ALA-4# show system security access-group

accounting-policy

Syntax

accounting-policy [acct-policy-id] [access | network] [associations]

Context

[\[Tree\]](#) (show>log accounting-policy)

Full Context

show log accounting-policy

Description

This command displays accounting policy information.

Parameters

policy-id

Specifies the policy ID that uniquely identifies the accounting policy, expressed as a decimal integer.

Values 1 to 99

access

Specifies to only display access accounting policies.

network

Specifies to only display network accounting policies.

association

Displays accounting-policy associations.

Table 6: Show Accounting Policy Output Fields

| Label | Description |
|-----------|--|
| Policy ID | The identifying value assigned to a specific policy. |
| Type | Identifies accounting record type forwarded to the configured accounting file. access — Indicates that the policy is an access accounting policy. network — Indicates that the policy is a network accounting policy. none — Indicates no accounting record types assigned. |

| Label | Description |
|---------------------------|---|
| Def | Yes — Indicates that the policy is a default access or network policy. No — Indicates that the policy is not a default access or network policy. |
| Admin State | Displays the administrative state of the policy. Up — Indicates that the policy is administratively enabled. Down — Indicates that the policy is administratively disabled. |
| Oper State | Displays the operational state of the policy. Up — Indicates that the policy is operationally up. Down — Indicates that the policy is operationally down. |
| Intvl | Displays the interval, in minutes, in which statistics are collected and written to their destination. The default depends on the record name type. |
| File ID | The log destination. |
| Record Name | The accounting record name which represents the configured record type. |
| This policy is applied to | Specifies the entity where the accounting policy is applied. |

5.14 accounting-records

accounting-records

Syntax

accounting-records

Context

5.15 acct-off

acct-off

Syntax

acct-off [**radius-server-policy** *policy-name*] [**force**] [**acct-terminate-cause** *number*]

Context

[\[Tree\]](#) (tools>perform>aaa acct-off)

Full Context

tools perform aaa acct-off

Description

This command triggers a RADIUS Accounting-Off message:

- for all radius-server-policies that have acct-on-off configured
- for the specified radius-server-policy if the acct-on-off is configured

The Accounting-Off message is not sent when the last successful event for the radius server policy was an Accounting-Off message. In this case, an Accounting-On should be sent first. By specifying the keyword **force**, this is overruled.

Parameters

policy-name

Specifies the **radius-server-policy** for which the Accounting-Off should be sent.

force

Sends an Accounting-On also if the last successful event was an Accounting-Off.

number

Overrides the default Acct-Terminate-Cause (User-Request) in the Accounting-Off message.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

5.16 acct-on

acct-on

Syntax

```
acct-on [radius-server-policy policy-name] [force]
```

Context

[\[Tree\]](#) (tools>perform>aaa acct-on)

Full Context

```
tools perform aaa acct-on
```

Description

This command triggers a RADIUS Accounting-On message:

- for all radius-server-policies that have acct-on-off configured.
- for the specified radius-server-policy if the acct-on-off is configured

The Accounting-On message is not sent when the last successful event for the RADIUS server policy was an Accounting-On message. In this case, an Accounting-Off should be sent first. By specifying the keyword **force**, this is overruled.

Parameters

policy-name

Specifies the **radius-server-policy** for which the Accounting-On should be sent.

force

Sends an Accounting-On also if the last successful event was an Accounting-On.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

5.17 acct-on-off-group

acct-on-off-group

Syntax

acct-on-off-group [*group-name*]

Context

[Tree] (show>aaa acct-on-off-group)

Full Context

show aaa acct-on-off-group

Description

This command displays Acct-On-Off group information and the associated RADIUS server policies.

Parameters

group-name

Displays information pertaining to the specified acct-on-off group.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of AAA Acct-On-Off group information.

Sample Output

```
# show aaa acct-on-off-group "group-1"

5.18 accu-stats

accu-stats

Syntax

accu-stats subscriber *subscriber-id*

Context

[\[Tree\]](#) (show>subscriber-mgmt accu-stats)

Full Context

show subscriber-mgmt accu-stats

Description

This command displays the accumulated statistics for both online and offline statistics.

Parameters

subscriber-id

Specifies the subscriber ID, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following is an example of subscriber statistics.

Sample Output

```

A:active# show subscriber-mgmt accu-stats subscriber home-1
=====
Subscriber accumulated statistics for "home-1"
=====

-----
Subscriber accumulated statistics ingress queue 1
-----
                                packets          octets
-----
Offered high priority           0             0
Offered low priority            0             0
Dropped high priority           0             0
Dropped low priority            0             0
Forwarded in-profile            0             0
Forwarded out-of-profile        0             0
-----

-----
Subscriber accumulated statistics egress queue 1
-----
                                packets          octets

Forwarded out-of-profile        0             0
Dropped in-profile              0             0
Dropped out-of-profile          0             0
-----
=====
  
```

Table 10: Accumulated Statistics Field Descriptions describes accumulated statistics output fields.

Table 10: Accumulated Statistics Field Descriptions

| Field | Description |
|--------------------------|--|
| packets | The number of packets associated with this policy |
| octets | The number of octets associated with this policy |
| Offered high priority | The number of offered high priority packets or octets |
| Offered low priority | The number of offered low priority packets or octets |
| Dropped high priority | The number of dropped high priority packets or octets |
| Forwarded in-profile | The number of forwarded in-profile packets or octets |
| Forwarded out-of-profile | The number of forwarded out-of-profile packets or octets |
| Dropped in-profile | The number of dropped in-profile packets or octets |
| Dropped out-of-profile | The number of dropped out-of-profile packets or octets |

accu-stats

Syntax

accu-stats active subs no-accu-stats-policy
accu-stats active subs sub-profile *profile-name*
accu-stats inactive subs
accu-stats subscriber *subscriber-id*

Context

[\[Tree\]](#) (clear>subscriber-mgmt accu-stats)

Full Context

clear subscriber-mgmt accu-stats

Description

This command removes the accumulated statistics for a subscriber.

Parameters

active subs no-accu-stats-policy

Removes the accumulated statistics that are no longer associated with an **accu-stats-policy**. These are active subscribers that are referencing a subscriber profile that removed an **accu-stats-policy**.

active subs sub-profile *profile-name*

Removes the accumulated statistics for the specified subscriber profile.

inactive subs

Removes the accumulated statistics from all inactive subscribers.

profile-name

Specifies the subscriber profile up to 32 characters.

subscriber-id

Specifies the subscriber up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

5.19 accu-stats-policy

accu-stats-policy

Syntax

accu-stats-policy

accu-stats-policy *policy-name* [**associations**]

Context

[Tree] (show>subscriber-mgmt accu-stats-policy)

Full Context

show subscriber-mgmt accu-stats-policy

Description

This command displays the configuration of the accumulated statistics policy for the subscriber profile that referenced the accumulated statistics policy.

Parameters

policy-name

Specifies the policy name, up to 32 characters.

associations

Lists the sub-profile that referenced the policy.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following displays subscriber management accumulated statistics information.

Sample Output

```
A:active# show subscriber-mgmt accu-stats-policy "accu-stats-policy-01" associations
=====
Subscriber profile associations
=====
no-prof
sub-prof
-----
No. of subscriber profiles: 2
=====
```

```
A:active# show subscriber-mgmt accu-stats-policy "accu-stats-policy-01"
=====
Subscriber accumulated statistics policy accu-stats-policy-01
=====
Description                : (Not Specified)
Last management change     : 09/23/2016 16:48:46
=====

Entries
=====
Direction Type    Id
-----
ingress  queue    1
egress   queue    1
```

Table 11: Accumulated Statistics Policy Field Descriptions describes subscriber management accumulated statistics policy fields.

Table 11: Accumulated Statistics Policy Field Descriptions

| Field | Description |
|----------------------------|---|
| Description | The user provided description of this policy |
| Last management change | The date and time of the last management change |
| Direction Type | The specific direction for the policer or the queue to be stored, ingress or egress |
| ID | The queue ID |
| No. of subscriber profiles | The number of entries matching the search criteria |

5.20 accu-stats-subscribers

accu-stats-subscribers

Syntax

accu-stats-subscribers [**subscriber** *sub-ident*] [**sub-profile** *name*]

Context

[Tree] (show>subscriber-mgmt accu-stats-subscribers)

Full Context

show subscriber-mgmt accu-stats-subscribers

Description

This command lists all subscribers on the system that had referenced an accumulated statistics policy. The list contains subscribers that are currently referencing an **accu-stats-policy** as well as subscribers that no longer reference an **accu-stats-policy** (due to removal of the policy from the subscriber profile).

Parameters

sub-ident

Specifies a specific subscriber ID, up to 32 characters.

sub-profile name

Lists all subscribers that are referencing the specified subscriber profile, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output displays subscriber management accumulated statistics information.

Sample Output

```
*DUT# show subscriber-mgmt accu-stats-subscribers
=====
Subscribers with accumulated statistics
=====
Subscriber                : home-1
Subscriber profile        : no-prof
Accumulated-stats policy  : accu-stats-policy-01
-----
Subscriber                : home-2
Subscriber profile        : no-prof
Accumulated-stats policy  : accu-stats-policy-02
-----
Subscriber                : twamp-host
Subscriber profile        : no-prof
Accumulated-stats policy  : (Unknown)
-----
No. of Subscribers with accumulated statistics: 3
=====
```

Sample Output

The **show subscriber-mgmt status system** command shows the number of subscribers using accumulated statistics and whether the statistics usage has reached the peak value.

```
*A:Dut-C# show subscriber-mgmt status system
=====
Subscriber Management System Status
=====
Chassis 1
-----
Memory usage high                : No

BRG on hold                       : 0
BRG authenticated by proxy       : 0
=====
```

[Table 12: Status System Field Descriptions](#) describes subscriber management status system fields.

Table 12: Status System Field Descriptions

| Field | Description |
|--|--|
| Chassis | The chassis number |
| Memory usage high | The memory usage of the subscriber management function on this chassis is near the limit; Yes or No |
| DHCP message processing overload | The subscriber management DHCP message processing function is in overload; Yes or No |
| Statistics usage high | The memory used for subscriber statistics on this chassis is near the limit; Yes or No |
| Number of subscribers using statistics | The number of subscribers using memory to store accumulated statistics |
| Packets received | The number of data packets received that may trigger creation of data-triggered subscriber hosts on this system |
| Packets dropped | The number of data packets dropped that could have triggered creation of data-triggered subscriber hosts on this system |
| Packets in queue (actual) | The number of data packets currently in the waiting queue that may trigger creation of data-triggered subscriber hosts on this system |
| Packets in queue (peak) | The maximum value of the packets in queue object since the start up of this system or the last time that the value of packets in queue was reset |
| BRG initialized | The number of BRGs with the init timer running; waiting for the first host |
| BRG operational | The number of BRGs in the normal operating state, with dynamic hosts |
| BRG in connectivity verification | The number of BRGs with no hosts, pinging the residential gateway |
| BRG on hold | The number of BRGs with no hosts attached, in hold |
| BRG authenticated by proxy | The number of BRGs in this system |

5.21 activate-best-dest

activate-best-dest

Syntax

activate-best-dest

Context

[\[Tree\]](#) (tools>perform>filter>redirect-policy activate-best-dest)

Full Context

tools perform filter redirect-policy activate-best-dest

Description

This command allows the operator to force a PBR switch to the best destination selected by the redirect policy when that destination is not currently active as result of sticky destination functionality being enabled for the specified redirect policy. If **hold-time-up** is running, the timer is also expired.

Platforms

All

5.22 activate-primary-action

activate-primary-action

Syntax

activate-primary-action

Context

[\[Tree\]](#) (tools>perform>filter>ipv6-filter>entry activate-primary-action)

[\[Tree\]](#) (tools>perform>filter>ip-filter>entry activate-primary-action)

[\[Tree\]](#) (tools>perform>filter>mac-filter>entry activate-primary-action)

Full Context

tools perform filter ipv6-filter entry activate-primary-action

tools perform filter ip-filter entry activate-primary-action

tools perform filter mac-filter entry activate-primary-action

Description

This command allows an operator to activate the primary action for the given filter policy entry. If the primary action is already active, the command has no effect. If a secondary action is active, the primary action will be activated unless the primary target is down. If the sticky destination timer is running for the primary action entry, it will expire.

Context

[Tree] (show>router>ldp>bindings active)

Full Context

show router ldp bindings active

Description

This command display information about LDP active bindings.

Parameters

detail

Displays detailed information.

summary

Displays information in a summarized format.

family

Displays either IPv4 or IPv6 active LDP information.

opaque-type *opaque-type*

Specifies the type of a Multi-Point Opaque Value Element.

Values generic, ssm, vpn-ssm, recursive-ssm

egress-lsp *tunnel-id*

Displays LDP active bindings by matching on the egress RSVP-TE LSP *tunnel-id* for LDP FECs which are tunneled over a RSVP-TE LSP. The *tunnel-id* for the RSVP-TE LSP can be found in the output of the **show router mpls lsp detail** command and in the **show router tunnel-table** command. It is not the *path LSP ID* shown in the output of the **show router mpls lsp path detail** command.

Values 0 to 4294967295

egress-nh *ip-address*

Displays LDP active bindings by matching egress-nh.

Values

| | |
|--------------|---------------------------------------|
| ipv4-address | - a.b.c.d |
| ipv6-address | - x:x:x:x:x:x:x (eight 16-bit pieces) |
| | x:x:x:x:x:d.d.d.d |
| | x - [0 to FFFF]H |
| | d - [0 to 255]D |

egress-if *port-id*

Displays LDP active bindings by matching egress-if.

inner-root *ip-address*

Displays recursive FECs whose inner root address matches the specified address.

innermost-root *ip-address*

Displays recursive FECs whose inner root address matches the specified address and non-recursive FECs that have a root address that matches the specified address.

p2mp source *ip-address*

Displays LDP active P2MP source bindings.

Values

| | |
|--------------|---------------------------------------|
| ipv4-address | - a.b.c.d |
| ipv6-address | - x:x:x:x:x:x:x (eight 16-bit pieces) |
| | x:x:x:x:x:d.d.d.d |
| | x - [0 to FFFF]H |
| | d - [0 to 255]D |

p2mp-id *identifier*

Displays LDP active P2MP identifier bindings.

Values 0 to 4294 967 295

group *mcast-address*

Displays the P2MP group multicast address bindings.

root ip-address

Displays root IP address information.

rd rd

Displays information for the route distinguisher.

Values *ip-addr:comm-val | 2byte-asnumber:ext-comm-val | 4byte-asnumber:comm-val*

prefix ip-prefix/ip-prefix-length

Specifies information for the specified IP prefix and mask length.

Values

| | |
|--------------|---------------------------------------|
| ipv4-address | - a.b.c.d |
| ipv6-address | - x:x:x:x:x:x:x (eight 16-bit pieces) |
| | x:x:x:x:x:d.d.d.d |
| | x - [0 to FFFF]H |
| | d - [0 to 255]D |

community

The string defining the LDP community assigned to the session. Allowed values are any string up to 32 characters long composed of printable, 7-bit ASCII characters excluding double quotes. If the string contains spaces, use double quotes to delimit the start and end of the string.

Platforms

All

5.24 active-subscribers

active-subscribers

Syntax

active-subscribers detail

active-subscribers mirror

active-subscribers [summary]

Context

[\[Tree\]](#) (show>service active-subscribers)

Full Context

show service active-subscribers

Description

This command displays active subscriber information.

Parameters

detail

Displays detailed output.

mirror

Displays active subscriber mirror information.

summary

Displays active subscriber information in a brief format.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of active service subscriber information. [Table 13: Active Subscriber Field Descriptions](#) describes the fields.

Sample Output

```
*A:Dut-C# show service active-subscribers

Table 13: Active Subscriber Field Descriptions

| Field | Description |
|------------------------------|--|
| Active Subscribers | The active subscriber's name |
| IP Address | The IP address of the active subscriber |
| MAC Address | The MAC address of the active subscriber |
| Session | The session type |
| Origin | The IPCP parameter |
| Svc | The service ID |
| Fwd | Option to forward |
| Number of active subscribers | The total number of active subscribers |

5.25 adi

adi

Syntax

adi [**service** *service-id*] [**interface** *ip-int-name*] [**address** *mcast-address*] [**source** *ip-address*] [**detail**]

Context

[\[Tree\]](#) (show>video adi)

Full Context

show video adi

Description

This command displays ad insertion channel information.

Parameters

service *service-id*

Displays information pertaining to the specified service ID.

Values 1 — 2147483648 *svc-name* — a string up to 64 characters in length.

interface *ip-int-name*

Displays information pertaining to the specified interface.

address *mcast-address*

Displays information pertaining to the specified multicast channel address.

source *ip-address*

Displays information pertaining to the source IP address.

detail

The output displays detailed information.

Platforms

7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

5.26 adi-session

adi-session

Syntax

adi-session

Context

[\[Tree\]](#) (clear>video>statistics>id adi-session)

Full Context

clear video statistics id adi-session

Description

This command clears video statistics for an ADI session.

Platforms

7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

5.27 adjacency

adjacency

Syntax

adjacency [detail]

Context

adjacency

Syntax

adjacency [*ip-address* | *ip-int-name* | *nbr-system-id*] [**detail**]

Context

[\[Tree\]](#) (show>router>isis adjacency)

Full Context

show router isis adjacency

Description

This command displays information regarding IS-IS neighbors. When no *ip-address*, *ip-int-name*, or *nbr-system-id* is specified, then all adjacencies are displayed.

Parameters

ip-address

When specified, only adjacencies with that interface is displayed.

- Values**
- ipv4-address:
 - a.b.c.d (host bits must be 0)
 - ipv6-address:
 - x:x:x:x:x:x:x (eight 16-bit pieces)
 - x:x:x:x:x:d.d.d.d
 - x: [0 to FFFF]H
 - d: [0 to 255]D

ip-int-name

When specified, only adjacencies with that interface is displayed.

nbr-system-id

When specified, only the adjacency with that ID is displayed.

detail

All output is displayed in the detailed format.

mt-id-number

Specifies the multi topology ID number for this route.

Platforms

All

Output

Standard and Detailed IS-IS Adjacency Output

[Table 14: Standard and Detailed Adjacency Output Fields](#) describes the standard and detailed command output fields for an IS-IS adjacency.

Table 14: Standard and Detailed Adjacency Output Fields

| Label | Description |
|--------------|--|
| Interface | Interface name associated with the neighbor. |
| System-id | Neighbor's system ID. |
| Level | 1-L1 only, 2-L2 only, 3-L1 and L2. |
| State | Up, down, new, one-way, initializing, or rejected. |
| Hold | Hold time remaining for the adjacency. |
| SNPA | Subnetwork point of attachment, MAC address of the next hop. |
| Circuit type | Level on the interface L1, L2, or both. |
| Expires In | Number of seconds until adjacency expires. |

| Label | Description |
|---------------------|---|
| Priority | Priority to become designated router. |
| Up/down transitions | Number of times neighbor state has changed. |
| Event | Event causing last transition. |
| Last transition | Time since last transition change. |
| Speaks | Supported protocols (only IP). |
| IP address | IP address of neighbor. |
| MT enab | Yes — The neighbor is advertising at least 1 non MTID#0. |
| Topology | Derived from the MT TLV in the IIH <ul style="list-style-type: none"> • MT#0, MT#2 => "Topology : Unicast, IPv6-Unicast" • Native IPv4 or native IPv6 => "Topology : Unicast" Not supported MTIDs => Topology line suppressed |

Sample Output

Full Context

```
clear service id spb adjacency
```

Description

This command clears and resets IS-IS adjacencies.

Parameters

system-id

Specifies the system ID. When the system ID is entered, only the specified entries are removed from the IS-IS adjacency database.

Values 6-octet system identifier (xxxx.xxxx.xxxx)

Platforms

All

5.28 adjust-autobandwidth

adjust-autobandwidth

Syntax

```
adjust-autobandwidth [lsp lsp-name [force [bandwidth mbps]]]
```

Context

[\[Tree\]](#) (tools>perform>router>mpls adjust-autobandwidth)

Full Context

```
tools perform router mpls adjust-autobandwidth
```

Description

This command initiates an immediate automatic bandwidth adjustment attempt for either one specific LSP or all active LSPs. The automatic bandwidth adjustment is made to the primary or secondary path of the LSP, whichever is the currently active path. If an LSP is not specified, then the system assumes the command applies to all LSPs. The optional **force** parameter, which is available only when an LSP is referenced, determines whether **adjust-up** and **adjust-down** threshold checks are applied. If **force** is not specified then the maximum average data rate must differ from the current reservation by more than the **adjust-up** or **adjust-down** thresholds, otherwise no bandwidth adjustment occurs. If the force option is specified then, bandwidth adjustment ignores the configured thresholds. If a bandwidth is specified as part of the force option then the bandwidth of the LSP is changed to this specific value, otherwise the bandwidth

is changed to the maximum average data rate that has been measured by the system in the current adjust interval.

The adjust-count and maximum average data rate are not reset by the manual **auto-bandwidth** command, whether or not the bandwidth adjustment succeeds or fails. The overflow count is reset only if the manual **auto-bandwidth** attempt is successful.

Parameters

isp-name

Specifies the LSP name, up to 64 characters, to which this command applies. If this parameter is not supplied the command applies to all active LSPs.

mbps

Specifies the bandwidth that the LSP should be immediately resized to.

Values 0 to 6400000

5.29 admin

admin

Syntax

admin

Context

[\[Tree\]](#) (show>app-assure>group>policy admin)

Full Context

show application-assurance group policy admin

Description

This command displays the application-assurance policy uncommitted changes.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following is an example output for the **admin** command.

Sample Output

```
*A:ALA-48>show>app-assure>group>policy# admin
```

```

begin
  app-filter
    entry 10 create
      shutdown
    exit

5.30 admin-group

admin-group

Syntax

admin-group [*name*]

Context

[\[Tree\]](#) (show>router>if-attribute admin-group)

Full Context

show router if-attribute admin-group

Description

This command displays administrative group statistics.

Parameters

name

Displays entries that are associated with the specified administrative group name, up to 32 characters.

Platforms

All

Output

The following output is an example of administrative group statistics, and [Table 15: Administrative Group Fields](#) describes the fields.

Sample Output

```

*A:node-3# show router if-attribute admin-group
=====
Interface Administrative Groups
  
```

```

=====
Group Name                Group Value

| No. of Groups | The total number of displayed administrative groups |

5.31 admin-lock

admin-lock

Syntax

admin-lock

Context

[\[Tree\]](#) (tools>perform>service>id admin-lock)

Full Context

tools perform service id admin-lock

Description

Commands in this context apply an administrative lock for a spoke SDP that is bound to a VLL SAP, another spoke-\ sdp or a VPLS interface for an MPLS-TP PW. After the PW is locked, it can be put into loopback mode. The command must be executed at both ends of the PW or MS-PW represented by the spoke-\ SDP. Test traffic can then be injected using a test SAP.

Table 16: Show QoS Scheduler-Hierarchy Customer Output Fields

| Label | Description |
|-------------------|---|
| Policy Name | Displays the policy name. |
| Description | Displays the policy description. |
| OM Add PIR Prcnt | Displays the percentage of the administrative PIR by which the measured rate is increased. |
| OM Add Rate | Displays the amount, in kb/s, by which the measured rate is increased. |
| OM Add | <p>min-only — When this option is true, the system uses the specified increase as a minimum offered rate even for inactive queues or policers associated with the policy.</p> <p>active-min-only — When this option is true, the respective rate or percentage is treated as the minimum offered rate for a queue only when the queue has an actual non-zero offered rate. This is intended to limit the artificial increase in offered rate to queues that are currently active. When a queue's measured offered rate drops to zero, the system stops enforcing the minimum value.</p> |
| OM Gran PIR Prcnt | Displays the percentage of the child's administrative PIR that is used as the threshold sensitivity to the offered rate change. If a value of 0 or 0.00 is used, the system will interpret this equivalent to no granularity. |
| OM Gran Rate | Displays the explicit rate, in kb/s, that are used as the child's offered rate change sensitivity value. If a rate sensitivity of 0 is specified, the system interprets this equivalent to no granularity. |
| Max Dec PIR Prcnt | Displays the percentage of the child's administrative PIR that is used as the decrement limit to the offered rate change. If a value of 100 or 100.00 is used, the system interprets this equivalent as no max-decrement . |
| Max Dec Rate | Displays the rate, in kb/s, that is used as the child's offered rate change sensitivity value. If a rate sensitivity of 0 is specified, the system interprets this equivalent to no granularity. |
| Abv Off PIR Prcnt | Displays the percentage of the child's administrative PIR that is used as the fair share increase limit. The new operational PIR result is capped by the child's PIR. |

| Label | Description |
|---------------------|--|
| | <p>If a value of 0 or 0.00 is specified, the system will disable the fair share increase function and only configure the actual distribution rate.</p> <p>If a value of 100 or 100.00 is used, the system will interpret this equivalent to executing the no above-offered-cap command and return the fair-share operation to the default behavior.</p> |
| Abv Off Rate | <p>Specifies the explicit rate, in kb/s, that is used as the limit to the child's fair share increase to the operational PIR. The new operational PIR result is capped by the child's PIR.</p> <p>If a value of 0 is used, the system will disable the fair share increase function and only configure the actual distribution rate.</p> |
| BWD Gran PIR Prcnt | <p>Displays the percentage of the child's administrative PIR that is used as the rounding step value. If a value of 0 or 0.00 is used, the system will interpret this equivalent to no granularity.</p> |
| BWD Gran Rate | <p>Displays the rate, in kb/s, that is used as the rounding step value. If a value of 0 is used, the system will interpret this equivalent to no granularity.</p> |
| Fast Start | <p>Displays whether fast detection of initial bandwidth on a child policer or queue associated with the policy is enabled.</p> |
| Fast Stop | <p>Displays whether fast detection of lack of offered rate on a child policer or queue associated with the policy is enabled.</p> |
| Time Average Factor | <p>Displays the time average factor used to calculate the weight of the new offered rate using a portion of the previous offered rate.</p> <p>If dec-only is true, the time average factor adjustment is only applied if the new offered rate is decreasing compared to the previous offered rate.</p> |
| Hi Rate Hold Time | <p>Displays the time period that the current offered rate is maintained for a child policer or queue when it is seen that the offered rate is decreasing. The offered measurement that triggers the hold time is used when the hold timer expires, unless a higher offered rate is seen in the interim. When a higher rate is observed, the hold timer is canceled and the higher offered rate is used immediately.</p> <p>If active-min-only is true, the respective rate or percentage is treated as the minimum offered rate for a queue, only when the queue has an actual non-zero offered rate.</p> |
| Sample Interval | <p>Displays the number of intervening sample periods before a new offered rate is measured.</p> |
| Enqueue on PIR Zero | <p>Displays whether enqueue-on-pir-zero is enabled. If it is enabled, when the operational PIR is set to zero, the queue's</p> |

| Label | Description |
|-----------------------------|--|
| | MBS remains set to the normal value and is not also set to zero. |
| Limit PIR Zero Drain | If true, the system to use the minimum configurable PIR instead of an H-QoS derived zero operational PIR. |
| Init LUB with min PIR | If true, new queues associated with a LUB context are assigned a minimum rate operational PIR to be applied to the queue for use by enqueued packets prior to an H-QoS iteration. |
| Internal Sched Wght Mode | Specifies the internal scheduler weight: default — Specifies that queues are equally weighted, except at ingress for mixed-speed LAGs without per-fp-inq-queuing enabled and at egress for all mixed-speed LAGs, in which cases the queues are weighted based on port speed. force-equal — Specifies that the queues are always equally weighted. offered-load — Specifies that the queues are weighted based on observed offered load. capped-offered-load — Specifies that the queues are weighted based on observed offered load capped by PIR. |
| Unconsumed Agg-rate | Displays the percentage of the unconsumed aggregate rate that can be given to a queue at the end of an H-QoS pass. |
| Delta Consumed Agg-rate | Displays the percentage of the delta consumed aggregate rate that can be given to a queue at the end of an H-QoS pass. |
| Unconsumed Hi-tier-rate | Displays the percentage of the unconsumed higher tier rate that can be given to a queue at the end of an H-QoS pass. |
| Delta Consumed Hi-tier-rate | Displays the percentage of the delta consumed higher tier rate that can be given to a queue at the end of an H-QoS pass. |

Full Context

show alias

Description

This command shows command aliases.

Note:

This command is not available in the MD-CLI. Use the MD-CLI **info detail environment command-alias** command.

Platforms

All

Output

The following output is an example of alias information, and [Table 20: Show Alias Output Fields](#) describes the output fields.

Sample Output

```
A:ALA-103>config>system# show alias
=====
Alias-Name                Alias-command-name
=====
sri                       show router interface
sse                       show service service-using epipe
ssvpls                    show service service-using vpls
ssvprn                    show service service-using vprn
ssi                       show service service-using ies
```

```
-----
Number of aliases : 5
=====
A:ALA-103>config>system#
```

Table 20: Show Alias Output Fields

| Label | Description |
|--------------------|---|
| Alias-Name | Displays the name of the alias. |
| Alias-command-name | The command and parameter syntax that define the alias. |
| Number of aliases | The total number of aliases configured on the router. |

5.40 all

```

Table 21: All Service-ID Field Descriptions describes the show all service-id command output fields:

Table 21: All Service-ID Field Descriptions

| Label | Description |
|------------|-------------------------------------|
| Service Id | The value that identifies a service |

| Label | Description |
|---------------------|--|
| VPN Id | The number that identifies the VPN |
| Service Type | The type of service |
| SDP Id | The SDP identifier |
| Description | The text string describing general information about the service |
| Customer Id | The customer identifier |
| Last Mgmt Change | The date and time of the most recent management-initiated change to this customer |
| SAP Count | The number of SAPs specified for this service |
| SDP Bind Count | The number of SDPs bound to this service |
| Evpn Mcast GW | The status of the EVPN multicast gateway |
| Mcast-GW Type | The multicast gateway type: MEG, PEG, or MEG-PEG |
| Split Horizon Group | The name of the split horizon group for this service |
| Description | The text string describing the split horizon group |
| Last Changed | The date and time of the most recent management-initiated change to this split horizon group |
| SDP Id | The SDP identifier |
| Type | The service SDP binding type, spoke or mesh |
| Admin Path MTU | The desired largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented |
| Oper Path MTU | The actual largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented |
| Delivery | The type of delivery used by the SDP: GRE or MPLS |
| Admin State | The administrative state of this SDP |
| Oper State | The operational status of the KeepAlive protocol. |
| Ingress Label | The label used by the far-end device to send packets to this device in this service by this SDP |
| Egress Label | The label used by this device to send packets to the far-end device in this service by this SDP |
| Ingress Filter | The ID of the ingress filter policy |

| Label | Description |
|------------------------|--|
| Egress Filter | The ID of the egress filter policy |
| Far End | The IP address of the remote end of the GRE or MPLS tunnel defined by this SDP |
| Last Changed | The date and time of the most recent change to this customer |
| Signaling | The signaling protocol used to obtain the ingress and egress labels used in frames transmitted and received on this SDP. |
| Admin State | The operating status of the SDP |
| Oper State | The operational state of the SDP |
| Hello Time | The frequency that SDP echo request messages are transmitted on this SDP |
| Hello Msg Len | The length of the SDP echo request messages transmitted on this SDP |
| Max Drop Count | The maximum number of consecutive SDP echo request messages that can be unacknowledged before the keepalive protocol reports a fault |
| Hold Down Time | The amount of time to wait before the keepalive operating status is eligible to enter the alive state. |
| SDP Delivery Mechanism | When the SDP type is MPLS, a list of LSPs used to reach the far-end router displays. All the LSPs in the list must terminate at the IP address specified in the Far End field. If the SDP type is GRE, then the following message displays: SDP Delivery Mechanism is not MPLS |
| Number of SDPs | The total number SDPs applied to this service ID |
| Service Access Points | |
| Service Id | The value that identifies a service |
| Port Id | The ID of the access port where this SAP is defined |
| Description | The generic information about the SAP |
| Encap Value | The value of the label used to identify this SAP on the access port. |
| Admin State | The desired state of the SAP |
| Oper State | The operating state of the SAP |
| Last Changed | The date and time of the last change |

| Label | Description |
|-----------------------|--|
| Admin MTU | The desired largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented |
| Oper MTU | The actual largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented |
| Ingress qos-policy | The SAP ingress QoS policy ID |
| Egress qos-policy | The SAP egress QoS policy ID |
| Ingress Filter-Id | The SAP ingress filter policy ID |
| Egress Filter-Id | The SAP egress filter policy ID |
| Multi Svc Site | The multi-service site in which the SAP is a member |
| Ingress sched-policy | The ingress QoS scheduler for the SAP |
| Egress sched-policy | The egress QoS scheduler for the SAP |
| Acct. Pol | The accounting policy applied to the SAP |
| Collect Stats | Accounting statistics collected on the SAP |
| Dropped | The number of packets or octets dropped |
| Offered Hi Priority | The number of high priority packets, as determined by the SAP ingress QoS policy |
| Offered Low Priority | The number of low priority packets, as determined by the SAP ingress QoS policy |
| Forwarded In Profile | The number of in-profile packets or octets (rate below CIR) forwarded |
| Forwarded Out Profile | The number of out-of-profile packets or octets (rate above CIR) forwarded |
| Dropped In Profile | The number of in-profile packets or octets discarded |
| Dropped Out Profile | The number of out-of-profile packets or octets discarded |
| Forwarded In Profile | The number of in-profile packets or octets (rate below CIR) forwarded |
| Forwarded Out Profile | The number of out-of-profile packets or octets (rate above CIR) forwarded |
| Ingress Queue 1 | The index of the ingress QoS queue of this SAP |
| High priority offered | The packets or octets count of the high priority traffic for the SAP |

| Label | Description |
|-----------------------|---|
| High priority dropped | The number of high priority traffic packets or octets dropped |
| Low priority offered | The packets or octets count of the low priority traffic |
| Low priority dropped | The number of low priority traffic packets or octets dropped |
| In profile forwarded | The number of in-profile packets or octets (rate below CIR) forwarded |
| Out profile forwarded | The number of out-of-profile octets (rate above CIR) forwarded |
| Egress Queue 1 | The index of the egress QoS queue of the SAP |
| In profile forwarded | The number of in-profile packets or octets (rate below CIR) forwarded |
| In profile dropped | The number of in-profile packets or octets dropped for the SAP |
| Out profile forwarded | The number of out-of-profile packets or octets (rate above CIR) forwarded |
| Out profile dropped | The number of out-of-profile packets or octets discarded |
| State | The DHCP relay state on this SAP |
| Info Option | Option 82 processing state on this SAP |
| Action | Option 82 processing state SAP or interface: keep, replace or drop |
| Circuit ID | If index is inserted in Circuit ID sub-option of Option 82 |
| Remote ID | The far-end MAC address inserted in remote ID sub-option of Option 82 |
| Managed by Service | The service-id of the management VPLS managing this SAP |
| Managed by SAP | The SAP ID inside the management VPLS managing this SAP |
| Prune state | The STP state inherited from the management VPLS |
| Managed by Service | The service ID of the management VPLS managing this spoke SDP |
| Managed by Spoke | The SAP ID inside the management VPLS managing this spoke SDP |
| Prune state | The STP state inherited from the management VPLS |

all

Syntax

all

Context

[\[Tree\]](#) (show>service>id all)

Full Context

show service id all

Description

This command displays detailed information for all aspects of the service.

Platforms

All

Output

The following output is an example of all service ID information, and [Table 22: Show Service ID Output Fields](#) describes the output fields.

Sample Output

```
*A:PE# show service id 1 all

Table 22: Show Service ID Output Fields describes the Show service ID output fields when the **all** option is specified.

Table 22: Show Service ID Output Fields

| Label | Description |
|--------------------------------------|---|
| Service Id | The service identifier |
| VPN Id | The number which identifies the VPN |
| Service Type | The type of service |
| VLL Type | The the VLL type |
| SDP Id | The SDP identifier for the 7450 ESS or 7750 SR |
| Description | Generic information about the service |
| Customer Id | The customer identifier |
| Last Mgmt Change | The date and time of the most recent management-initiated change |
| Endpoint | The name of the service endpoint for the 7450 ESS or 7750 SR |
| Flags | The conditions that affect the operating status of this SAP. Display output includes: ServiceAdminDown, SapAdmin Down, InterfaceAdminDown, PortOperDown, PortMTUToo Small, L2OperDown, SapIngressQoSMismatch, SapEgress QoSMismatch, RelearnLimitExceeded, RxProtSrcMac, Parent IfAdminDown, NoSapIpceIpAddr, SapParamMismatch, Cem SapNoEcidOrMacAddr, StandByForMcRing, ServiceMTUToo Small, NoSapEpipeRingNode. |
| SAP Count | The number of SAPs specified for this service |
| SDP Bind Count | The number of SDPs bound to this service for the 7450 ESS or 7750 SR |
| Split Horizon Group Specifics | |

| Label | Description |
|--|--|
| Split Horizon Group | The name of the split horizon group for this VPLS for the 7450 ESS or 7750 SR |
| Description | The description of the split horizon group for the 7450 ESS or 7750 SR |
| Last Changed | The date and time of the most recent management-initiated change to this split horizon group for the 7450 ESS or 7750 SR |
| Service Destination Points (SDPs) | |
| SDP Id | The SDP identifier for the 7450 ESS or 7750 SR |
| Type | Indicates whether this service SDP binding is a spoke or a mesh for the 7450 ESS or 7750 SR |
| Admin Path MTU | The desired largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented for the 7450 ESS or 7750 SR. |
| Oper Path MTU | The actual largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented for the 7450 ESS or 7750 SR |
| Delivery | The type of delivery used by the SDP: GRE or MPLS for the 7450 ESS or 7750 SR |
| Admin State | The administrative state of this SD for the 7450 ESS or 7750 SR |
| Oper State | The operational state of this SDP for the 7450 ESS or 7750 SR |
| Jitter Buffer (packets) | The jitter buffer length in number of packet buffers for the 7450 ESS or 7750 SR |
| Playout Threshold (packets) | The playout buffer packets threshold in number of packet buffers for the 7450 ESS or 7750 SR |
| Playout Threshold (packets) | Indicates the current packet depth of the jitter buffer for the 7450 ESS or 7750 SR |
| Peer Pw Bits | The bits set by the LDP peer when there is a fault on its side of the pseudowire for the 7450 ESS or 7750 SR. LAC failures occur on the SAP that has been configured on the pipe service, PSN bits are set by SDP-binding failures on the pipe service. The pw NotForwarding bit is set when none of the above failures apply, such as an MTU mismatch failure. This value is only applicable if the peer is using the pseudowire status signaling method to indicate faults. pwNotForwarding — Pseudowire not forwarding |

| Label | Description |
|--------------------|--|
| | lacIngressFault Local — Attachment circuit RX fault lacEgressFault Local — Attachment circuit TX fault psnIngressFault Local — PSN-facing PW RX fault psnEgressFault Local — PSN-facing PW TX fault pwFwdingStandby — Pseudowire in standby mode |
| Signaling Override | The overriding signaled pseudowire type, as configured under the signaled-vc-type-override option for Apipes. This field is only displayed if signaled-vc-type-override is configured for the 7750 SR. |

Syntax

all

Context

[\[Tree\]](#) (show>service>id all)

Full Context

show service id all

Description

This command displays detailed information for all aspects of the service.

Platforms

All

Output

The following output displays an example of a service displaying all information.

Sample Output

```
*A:PE# show service id 1 all

Table 23: Show Service ID All Output Fields describes the command output fields.

Table 23: Show Service ID All Output Fields

| Label | Description |
|------------|--------------------------------------|
| Service Id | The service identifier. |
| VPN Id | The number which identifies the VPN. |

| Label | Description |
|---------------------|---|
| Service Type | Specifies the type of service. |
| SDP Id | The SDP identifier. |
| Description | Generic information about the service. |
| Customer Id | The customer identifier. |
| Last Mgmt Change | The date and time of the most recent management-initiated change to this customer. |
| SAP Count | The number of SAPs specified for this service. |
| SDP Bind Count | The number of SDPs bound to this service. |
| Split Horizon Group | Name of the split horizon group for this service. |
| Description | Description of the split horizon group. |
| Last Changed | The date and time of the most recent management-initiated change to this split horizon group. |
| SDP Id | The SDP identifier. |
| Type | Indicates whether this service SDP binding is a spoke or a mesh. |
| Admin Path MTU | The desired largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented. |
| Oper Path MTU | The actual largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented. |
| Delivery | Specifies the type of delivery used by the SDP: GRE or MPLS. |
| Admin State | The administrative state of this SDP. |
| Oper State | The operational state of this SDP. |
| Ingress Label | The label used by the far-end device to send packets to this device in this service by this SDP. |
| Egress Label | The label used by this device to send packets to the far-end device in this service by this SDP. |
| Ingress Filter | The ID of the ingress filter policy. |
| Egress Filter | The ID of the egress filter policy. |
| Far End | Specifies the IP address of the remote end of the GRE or MPLS tunnel defined by this SDP. |

| Label | Description |
|------------------------|--|
| Last Changed | The date and time of the most recent change to this customer. |
| Hello Time | Specifies how often the SDP echo request messages are transmitted on this SDP. |
| Hello Msg Len | Specifies the length of the SDP echo request messages transmitted on this SDP. |
| Max Drop Count | Specifies the maximum number of consecutive SDP Echo Request messages that can be unacknowledged before the keepalive protocol reports a fault. |
| Hold Down Time | Specifies the amount of time to wait before the keepalive operating status is eligible to enter the alive state. |
| SDP Delivery Mechanism | When the SDP type is MPLS, a list of LSPs used to reach the far-end router displays. All the LSPs in the list must terminate at the IP address specified in the Far End field. If the SDP type is GRE, then the following message displays: SDP Delivery Mechanism is not MPLS |
| Number of SDPs | The total number SDPs applied to this service ID. |
| Service Id | The service identifier. |
| Port Id | The ID of the access port where this SAP is defined. |
| Description | Generic information about the SAP. |
| Encap Value | The value of the label used to identify this SAP on the access port. |
| Admin State | The administrative state of the SAP. |
| Oper State | The operating state of the SAP. |
| Last Changed | The date and time of the last change. |
| Admin MTU | The desired largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented. |
| Oper MTU | The actual largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented. |
| Ingress qos-policy | The SAP ingress QoS policy ID. |
| Egress qos-policy | The SAP egress QoS policy ID. |
| Ingress Filter-Id | The SAP ingress filter policy ID. |

| Label | Description |
|-----------------------|---|
| Egress Filter-Id | The SAP egress filter policy ID. |
| Multi Svc Site | Indicates the multi-service site that the SAP is a member. |
| Ingress sched-policy | Indicates the ingress QoS scheduler for the SAP. |
| Egress sched-policy | Indicates the egress QoS scheduler for the SAP. |
| Acct. Pol | Indicates the accounting policy applied to the SAP. |
| Collect Stats | Specifies whether accounting statistics are collected on the SAP. |
| Dropped | The number of packets or octets dropped. |
| Offered Hi Priority | The number of high priority packets, as determined by the SAP ingress QoS policy. |
| Offered Low Priority | The number of low priority packets, as determined by the SAP ingress QoS policy. |
| Offered Low Priority | The number of low priority packets, as determined by the SAP ingress QoS policy. |
| Forwarded In Profile | The number of in-profile packets or octets (rate below CIR) forwarded. |
| Forwarded Out Profile | The number of out-of-profile packets or octets (rate above CIR) forwarded. |
| Dropped In Profile | The number of in-profile packets or octets discarded. |
| Dropped Out Profile | The number of out-of-profile packets or octets discarded. |
| Forwarded In Profile | The number of in-profile packets or octets (rate below CIR) forwarded. |
| Forwarded Out Profile | The number of out-of-profile packets or octets (rate above CIR) forwarded. |
| Ingress Queue 1 | The index of the ingress QoS queue of this SAP. |
| High priority offered | The packets or octets count of the high priority traffic for the SAP. |
| High priority dropped | The number of high priority traffic packets/octets dropped. |
| Low priority offered | The packets or octets count of the low priority traffic. |
| Low priority dropped | The number of low priority traffic packets/octets dropped. |
| In profile forwarded | The number of in-profile packets or octets (rate below CIR) forwarded. |
| Out profile forwarded | The number of out-of-profile octets (rate above CIR) forwarded. |

| Label | Description |
|-----------------------|--|
| Egress Queue 1 | The index of the egress QoS queue of the SAP. |
| In profile forwarded | The number of in-profile packets or octets (rate below CIR) forwarded. |
| In profile dropped | The number of in-profile packets or octets dropped for the SAP. |
| Out profile forwarded | The number of out-of-profile packets or octets (rate above CIR) forwarded. |
| Out profile dropped | The number of out-of-profile packets or octets discarded. |
| State | Specifies whether DHCP Relay is enabled on this SAP. |
| Info Option | Specifies whether Option 82 processing is enabled on this SAP. |
| Action | Specifies the Option 82 processing on this SAP or interface: keep, replace or drop. |
| Circuit ID | Specifies whether the If Index is inserted in Circuit ID sub-option of Option 82. |
| Remote ID | Specifies whether the far-end MAC address is inserted in Remote ID sub-option of Option 82. |
| Managed by Service | Specifies the service-id of the management VPLS managing this SAP. |
| Managed by MSTI | Specifies the MST instance inside the management VPLS managing this SAP. |
| Last BPDU from | The bridge ID of the sender of the last BPDU received on this SAP. |
| Managed by SAP | Specifies the sap-id inside the management VPLS managing this SAP. |
| Prune state | Specifies the STP state inherited from the management VPLS. |
| Managed by Service | Specifies the service-id of the management VPLS managing this spoke-SDP. |
| Last BPDU from | The bridge ID of the sender of the last BPDU received on this SAP. |
| Managed by Spoke | Specifies the sap-id inside the management VPLS managing this spoke-SDP. |
| Prune state | Specifies the STP state inherited from the management VPLS. |
| Peer Pw Bits | Indicates the bits set by the LDP peer when there is a fault on its side of the pseudowire. LAC failures occur on the SAP that has been configured on the pipe service, PSN bits are set by SDP- |

| Label | Description |
|-------|--|
| | <p>binding failures on the pipe service. The pwNotForwarding bit is set when none of the above failures apply, such as an MTU mismatch failure. This value is only applicable if the peer is using the pseudowire status signaling method to indicate faults.</p> <p>pwNotForwarding — Pseudowire not forwarding.</p> <p>lacIngressFault Local — Attachment circuit RX fault.</p> <p>lacEgressFault Local — Attachment circuit TX fault.</p> <p>psnIngressFault Local — PSN-facing PW RX fault.</p> <p>psnEgressFault Local — PSN-facing PW TX fault.</p> <p>pwFwdingStandby — Pseudowire in standby mode.</p> |

all

Syntax

all

Context

[\[Tree\]](#) (show>service>id all)

Full Context

show service id all

Description

This command displays detailed information for all aspects of the service.

Platforms

All

Output

The following output is an example of service id information, and [Table 24: Show All Service-ID Field Descriptions](#) describes the output fields.

Sample Output

```
A:PE# show service id 500 all

Table 24: Show All Service-ID Field Descriptions

| Label | Description |
|------------------------------|--------------------------------------|
| Service Detailed Information | |
| Service Id | The service identifier. |
| VPN Id | The number which identifies the VPN. |
| Service Type | Specifies the type of service. |

| Label | Description |
|-----------------------------------|--|
| SDP Id | The SDP identifier. |
| Description | Generic information about the service. |
| Customer Id | The customer identifier. |
| Last Mgmt Change | The date and time of the most recent management-initiated change to this customer. |
| SAP Count | The number of SAPs specified for this service. |
| SDP Bind Count | The number of SDPs bound to this service. |
| Service Destination Points (SDPs) | |
| SDP Id | The SDP identifier. |
| Type | Indicates whether this Service SDP binding is a spoke or a mesh. |
| Admin Path MTU | The largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented. |
| Oper Path MTU | The actual largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented. |
| Delivery | Specifies the type of delivery used by the SDP: GRE or MPLS. |
| Admin State | The administrative state of this SDP. |
| Oper State | The operational state of this SDP. |
| Ingress Label | The label used by the far-end device to send packets to this device in this service by this SDP. |
| Egress Label | The label used by this device to send packets to the far-end device in this service by this SDP. |
| Ingress Filter | The ID of the ingress filter policy. |
| Egress Filter | The ID of the egress filter policy. |
| Far End | Specifies the IP address of the remote end of the GRE or MPLS tunnel defined by this SDP. |
| Last Changed | The date and time of the most recent change to this customer. |
| Signaling | Specifies the signaling protocol used to obtain the ingress and egress labels used in frames transmitted and received on this SDP. |
| Admin State | Specifies the operating status of the service. |

| Label | Description |
|------------------------|---|
| Oper State | The current status of the service. |
| Hello Time | Specifies how often the SDP echo request messages are transmitted on this SDP. |
| Hello Msg Len | Specifies the length of the SDP echo request messages transmitted on this SDP. |
| Max Drop Count | Specifies the maximum number of consecutive SDP Echo Request messages that can be unacknowledged before the keepalive protocol reports a fault. |
| Hold Down Time | Specifies the amount of time to wait before the keepalive operating status is eligible to enter the alive state. |
| SDP Delivery Mechanism | When the SDP type is MPLS, a list of LSPs used to reach the far-end router displays. All the LSPs in the list must terminate at the IP address specified in the far-end field. If the SDP type is GRE, then the following message displays: "SDP Delivery Mechanism is not MPLS". |
| Number of SDPs | The total number SDPs applied to this service ID. |
| Service Access Points | |
| Service Id | The service identifier. |
| Port Id | The ID of the access port where this SAP is defined. |
| Description | Generic information about the SAP. |
| Encap | The value of the label used to identify this SAP on the access port. |
| Admin State | The desired state of the SAP. |
| Oper State | The operating state of the SAP. |
| Last Changed | The date and time of the last change. |
| Admin MTU | The largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented. |
| Oper MTU | The actual largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented. |
| Ingress qos-policy | The SAP ingress QoS policy ID. |
| Egress qos-policy | The SAP egress QoS policy ID. |

| Label | Description |
|-----------------------|---|
| Ingress Filter-Id | The SAP ingress filter policy ID. |
| Egress Filter-Id | The SAP egress filter policy ID. |
| Multi Svc Site | Indicates the multi-service site that the SAP is a member. |
| Ingress sched-policy | Indicates the ingress QoS scheduler for the SAP. |
| Egress sched-policy | Indicates the egress QoS scheduler for the SAP. |
| Acct. Pol | Indicates the accounting policy applied to the SAP. |
| Collect Stats | Specifies whether accounting statistics are collected on the SAP. |
| SAP Statistics | |
| Dropped | The number of packets or octets dropped. |
| Offered Hi Priority | The number of high priority packets, as determined by the SAP ingress QoS policy. |
| Offered Low Priority | The number of low priority packets, as determined by the SAP ingress QoS policy. |
| Forwarded In Profile | The number of in-profile packets or octets (rate below CIR) forwarded. |
| Forwarded Out Profile | The number of out-of-profile packets or octets (rate above CIR) forwarded. |
| Queueing Stats | |
| Dropped In Profile | The number of in-profile packets or octets discarded. |
| Dropped Out Profile | The number of out-of-profile packets or octets discarded. |
| Forwarded In Profile | The number of in-profile packets or octets (rate below CIR) forwarded. |
| Forwarded Out Profile | The number of out-of-profile packets or octets (rate above CIR) forwarded. |
| SAP per Queue stats | |
| Ingress Queue 1 | The index of the ingress QoS queue of this SAP. |
| High priority offered | The packets or octets count of the high priority traffic for the SAP. |
| High priority dropped | The number of high priority traffic packets/octets dropped. |
| Low priority offered | The packets or octets count of the low priority traffic. |
| Low priority dropped | The number of low priority traffic packets/octets dropped. |

| Label | Description |
|--------------------------------|---|
| In profile forwarded | The number of in-profile packets or octets (rate below CIR) forwarded. |
| Out profile forwarded | The number of out-of-profile octets (rate above CIR) forwarded. |
| Egress Queue 1 | The index of the egress QoS queue of the SAP. |
| In profile forwarded | The number of in-profile packets or octets (rate below CIR) forwarded. |
| IPCP Address Extension Details | |
| In profile dropped | The number of in-profile packets or octets dropped for the SAP. |
| Peer IP Addr | Specifies the remote IP address to be assigned to the far-end of the associated PPP/MLPPP link via IPCP extensions. |
| Peer Pri DNS Addr | Specifies a unicast IPv4 address for the primary DNS server to be signaled to the far-end of the associate PPP/MLPPP link via IPCP extensions. |
| Peer Sec DNS Addr | Specifies a unicast IPv4 address for the secondary DNS server to be signaled to the far-end of the associate PPP/MLPPP link via IPCP extensions (optional). |

all

Syntax

all

Context

[\[Tree\]](#) (show>service>id all)

Full Context

show service id all

Description

This command displays detailed information for all aspects of the service.

Platforms

All

Output

The following output is an example of show all service-ID information, and [Table 25: Show All Service-ID Field Descriptions](#) describes the output fields.

Sample Output

Note:

Ing ipv6 Fltr and Egr ipv6 Fltr are for the 7750 SR only.

```
A:PE# show service id 9 all

Table 25: Show All Service-ID Field Descriptions

| Label | Description |
|------------------------------|--|
| Service Detailed Information | |
| Service Id | The service identifier. |
| VPN Id | The number which identifies the VPN. |
| Customer Id | The customer identifier. |
| Last Status Change | The date and time of the most recent change in the administrative or operating status of the service. |
| Last Mgmt Change | The date and time of the most recent management-initiated change to this customer. |
| Admin State | The current administrative state. |
| Oper State | The current operational state. |
| Route Dist. | Displays the route distribution number. |
| AS Number | Displays the autonomous system number. |
| Router Id | Displays the router ID for this service. |
| ECMP | Displays equal cost multipath information. |
| ECMP Max Routes | Displays the maximum number of routes that can be received from the neighbors in the group or for the specific neighbor. |
| Max Routes | Displays the maximum number of routes that can be used for path sharing. |
| Auto Bind | Specifies the automatic binding type for the SDP assigned to this service. |
| Vrf Target | Specifies the VRF target applied to this service. |
| Vrf Import | Specifies the VRF import policy applied to this service. |
| Vrf Export | Specifies the VRF export policy applied to this service. |
| SDP Id | The SDP identifier. |

| Label | Description |
|-----------------------------------|---|
| Description | Generic information about the service. |
| SAP Count | The number of SAPs specified for this service. |
| SDP Bind Count | The number of SDPs bound to this service. |
| Split Horizon Group | Name of the split horizon group for this service. |
| Description | Description of the split horizon group. |
| Last Changed | The date and time of the most recent management-initiated change to this split horizon group. |
| ETH-CFM Service Specifics | |
| Tunnel Faults | Whether tunnel faults are ignored or accepted. |
| Service Destination Points (SDPs) | |
| SDP Id | The SDP identifier. |
| Type | Indicates whether this Service SDP binding is a spoke or a mesh. |
| Admin Path MTU | The desired largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented. |
| Oper Path MTU | The actual largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented. |
| Delivery | Specifies the type of delivery used by the SDP: GRE or MPLS. |
| Admin State | The administrative state of this SDP. |
| Oper State | The operational state of this SDP. |
| Ingress Label | The label used by the far-end device to send packets to this device in this service by this SDP. |
| Egress Label | The label used by this device to send packets to the far-end device in this service by this SDP. |
| Ingress Filter | The ID of the ingress filter policy. |
| Egress Filter | The ID of the egress filter policy. |
| Far End | Specifies the IP address of the remote end of the GRE or MPLS tunnel defined by this SDP. |
| Last Changed | The date and time of the most recent change to this customer. |

| Label | Description |
|------------------------|---|
| Signaling | Specifies the signaling protocol used to obtain the ingress and egress labels used in frames transmitted and received on this SDP. |
| Admin State | Specifies the operating status of the keepalive protocol. |
| Oper State | The current status of the keepalive protocol. |
| Hello Time | Specifies how often the SDP echo request messages are transmitted on this SDP. |
| Hello Msg Len | Specifies the length of the SDP echo request messages transmitted on this SDP. |
| Max Drop Count | Specifies the maximum number of consecutive SDP Echo Request messages that can be unacknowledged before the keepalive protocol reports a fault. |
| Hold Down Time | Specifies the amount of time to wait before the keepalive operating status is eligible to enter the alive state. |
| SDP Delivery Mechanism | When the SDP type is MPLS, a list of LSPs used to reach the far-end router displays. All the LSPs in the list must terminate at the IP address specified in the far end field. If the SDP type is GRE, then the following message displays: SDP delivery mechanism is not MPLS. |
| Max Drop Count | Specifies the maximum number of consecutive SDP Echo Request messages that can be unacknowledged before the keepalive protocol reports a fault. |
| Number of SDPs | The total number SDPs applied to this service ID. |
| Service Access Points | |
| Service Id | The service identifier. |
| Port Id | The ID of the access port where this SAP is defined. |
| Description | Generic information about the SAP. |
| Encap Value | The value of the label used to identify this SAP on the access port. |
| Admin State | The desired state of the SAP. |
| Oper State | The operating state of the SAP. |
| Last Changed | The date and time of the last change. |

| Label | Description |
|-----------------------|---|
| Admin MTU | The desired largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented. |
| Oper MTU | The actual largest service frame size (in octets) that can be transmitted through this SDP to the far-end router, without requiring the packet to be fragmented. |
| Ingress qos-policy | The SAP ingress QoS policy ID. |
| Egress qos-policy | The SAP egress QoS policy ID. |
| Ingress Filter-Id | The SAP ingress filter policy ID. |
| Egress Filter-Id | The SAP egress filter policy ID. |
| Multi Svc Site | Indicates the multi-service site that the SAP is a member. |
| Ingress sched-policy | Indicates the ingress QoS scheduler for the SAP. |
| Egress sched-policy | Indicates the egress QoS scheduler for the SAP. |
| Acct. Pol | Indicates the accounting policy applied to the SAP. |
| Collect Stats | Specifies whether accounting statistics are collected on the SAP. |
| SAP Statistics | |
| Dropped | The number of packets or octets dropped. |
| Offered Hi Priority | The number of high priority packets, as determined by the SAP ingress QoS policy. |
| Offered Low Priority | The number of low priority packets, as determined by the SAP ingress QoS policy. |
| Forwarded In Profile | The number of in-profile packets or octets (rate below CIR) forwarded. |
| Forwarded Out Profile | The number of out-of-profile packets or octets (rate above CIR) forwarded. |
| Queueing Stats | |
| Dropped In Profile | The number of in-profile packets or octets discarded. |
| Dropped Out Profile | The number of out-of-profile packets or octets discarded. |
| Forwarded In Profile | The number of in-profile packets or octets (rate below CIR) forwarded. |
| Forwarded Out Profile | The number of out-of-profile packets or octets (rate above CIR) forwarded. |

| Label | Description |
|-----------------------|---|
| SAP per Queue stats | |
| Ingress Queue 1 | The index of the ingress QoS queue of this SAP. |
| High priority offered | The packets or octets count of the high priority traffic for the SAP. |
| High priority dropped | The number of high priority traffic packets/octets dropped. |
| Low priority offered | The packets or octets count of the low priority traffic. |
| Low priority dropped | The number of low priority traffic packets/octets dropped. |
| In profile forwarded | The number of in-profile packets or octets (rate below CIR) forwarded. |
| Out profile forwarded | The number of out-of-profile octets (rate above CIR) forwarded. |
| Egress Queue 1 | The index of the egress QoS queue of the SAP. |
| In profile forwarded | The number of in-profile packets or octets (rate below CIR) forwarded. |
| In profile dropped | The number of in-profile packets or octets dropped for the SAP. |
| Out profile forwarded | The number of out-of-profile packets or octets (rate above CIR) forwarded. |
| Out profile dropped | The number of out-of-profile packets or octets discarded. |
| State | Specifies whether DHCP relay is enabled on this SAP. |
| Info Option | Specifies whether Option 82 processing is enabled on this SAP. |
| Action | Specifies the Option 82 processing on this SAP or interface: keep, replace or drop. |
| Circuit ID | Specifies whether the If index is inserted in circuit ID sub-option of Option 82. |
| Remote ID | Specifies whether the far-end MAC address is inserted in Remote ID sub-option of Option 82. |
| Service Access Points | |
| Managed by Service | Specifies the service-id of the management VPLS managing this SAP. |
| Managed by SAP | Specifies the sap-id inside the management VPLS managing this SAP. |
| Prune state | Specifies the STP state inherited from the management VPLS. |
| Spoke SDPs | |

| Label | Description |
|--------------------------------|--|
| Managed by Service | Specifies the service-id of the management VPLS managing this spoke SDP. |
| Managed by Spoke | Specifies the sap-id inside the management VPLS managing this spoke SDP. |
| Prune state | Specifies the STP state inherited from the management VPLS. |
| Peer Pw Bits | <p>Indicates the bits set by the LDP peer when there is a fault on its side of the pseudowire. LAC failures occur on the SAP that has been configured on the pipe service, PSN bits are set by SDP-binding failures on the pipe service. The pwNotForwarding bit is set when none of the above failures apply, such as an MTU mismatch failure. This value is only applicable if the peer is using the pseudowire status signaling method to indicate faults.</p> <p>pwNotForwarding — Pseudowire not forwarding. lacIngressFault Local — Attachment circuit RX fault. lacEgressFault Local — Attachment circuit TX fault. psnIngressFault Local — PSN-facing PW RX fault. psnEgressFault Local — PSN-facing PW TX fault. pwFwdingStandby — Pseudowire in standby mode.</p> |
| IPCP Address Extension Details | |
| Peer IP Addr | Specifies the remote IP address to be assigned to the far-end of the associated PPP/MLPPP link via IPCP extensions. |
| Peer Pri DNS Addr | Specifies a unicast IPv4 address for the primary DNS server to be signaled to the far-end of the associate PPP/MLPPP link via IPCP extensions. |
| Peer Sec DNS Addr | Specifies a unicast IPv4 address for the secondary DNS server to be signaled to the far-end of the associate PPP/MLPPP link via IPCP extensions. |

Context

[\[Tree\]](#) (show>router>seg-rt>sr-policies all)

Full Context

show router segment-routing sr-policies all

Description

This command displays the traffic statistics of all or a filtered set of the BGP and static policies, or displays summary parameters.

Parameters

color

Specifies to filter on the color.

Values 0 to 4294967295

ipv4-address | *ipv6-address*

Specifies to filter on the end-point IPv4 or IPv6 address.

Values ipv4-address — a.b.c.d
 ipv6-address — x:x:x:x:x:x:x (eight 16-bit pieces) or
 x:x:x:x:x:x:d:d:d:d
 x — [0..FFFF]H
 d — [0..255]D

preference-id

Specifies to filter on the preference ID.

Values 0 to 4294967295

distinguisher-id

Specifies to filter on the distinguisher ID.

Values 0 to 4294967295

summary

Displays the summary information for the BGP and static policies.

Platforms

All

Output

The following outputs are examples of traffic statistics for the BGP and static policies.

Sample Output Information for all BGP and Static Policies

```
*A:Dut-C# show router segment-routing sr-policies all

[Tree] (show>app-assure>group>aa-sub-study application)

Full Context

show application-assurance group application

show application-assurance group aa-sub application

show application-assurance group aa-sub-study application

Description

This command displays per-application statistics. The system-wide statistics displayed account for all flows completed and the last internal snapshot of the active flows.

Subscriber statistics are available for special-study subscribers and account for all completed and active flows at the moment of this statistics request.

Parameters

application-name

Displays information about the specified application name.

count

Displays counter information.

detail

Displays detailed information.

top

Displays counters sorted by granularity.

granularity

Displays counters sorted by octets, packets, or floe. This is indicated by granularity.

Values octets, packets, flows

max-count

If the value is greater than 0, displays up to the indicated value of statistic rows. If 0, displays all.

Values 1 to 4294967295

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following is an example show output for the **application** command.

application

Syntax

application [*app-name*]

Context

[\[Tree\]](#) (show>app-assure>group>policy application)

Full Context

show application-assurance group policy application

Description

This command displays application-assurance policy application information.

Parameters

app-name

Specifies the application name, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

application

Syntax

application [*application-name*] **count**

Context

[\[Tree\]](#) (show>app-assure>group>aa-sub>um application)

Full Context

show application-assurance group aa-sub usage-monitor application

Description

This command displays usage monitor statistics for the application.

Parameters

application-name

Specifies the application name, up to 32 characters.

count

Displays counters for the application.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

application

Syntax

application [*application-name*] **count** [**detail**]

Context

[\[Tree\]](#) (tools>dump>app-assure>group>aa-sub application)

Full Context

```
tools dump application-assurance group aa-sub application
```

Description

This command displays per-subscriber per-application statistics.

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

application

Syntax

```
application [app-name] [{dscp | dot1p}]
```

Context

[\[Tree\]](#) (show>router>sgt-qos application)

Full Context

```
show router sgt-qos application
```

Description

This command displays application QoS settings.

Parameters

app-name

Specifies the application.

Values Some of the following values may only apply to specific products. Refer to the *SR OS R22.x.Rx Software Release Notes* for details about application support for different SR OS products:

arp, bgp, bmp, call-trace, cflowd, dhcp, diameter, dns, ftp, grpc, gtp, http, icmp, igmp, igmp-reporter, isis, l2tp, ldp, mld, mpls-udp-return, msdp, mtrace2, ndis, ntp, ospf, pcep, pim, pppoe, ptp, radius, rip, rsvp, sflow, snmp, snmp-notification, srrp, ssh, syslog, tacplus, telnet, tftp, traceroute, vrrp

dscp

Specifies to show DSCP values only.

dot1p

Specifies to show dot1p values only.

Platforms

All

Output

The following output is an example of SGT QoS application information.

Sample Output

```
A:ALA-A# show router sgt-qos application
=====
DSCP Application Values

5.53 application-assurance-group

application-assurance-group

Syntax

application-assurance-group [*aa-group-id* [**load-balance** [**unassigned**]]]

Context

[Tree] (show>isa application-assurance-group)

Full Context

show isa application-assurance-group

Description

This command displays ISA group information.

Parameters

aa-group-id

Specifies the AA ISA group ID.

load-balance

Specifies load balancing information.

unassigned

Specifies load balancing unassigned aa-sub information.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

[Table 32: Show Application Assurance Group Output Fields](#) describes the show command output fields:

Table 32: Show Application Assurance Group Output Fields

| Label | Description |
|-------------------------------|--|
| ISA-AA Group Index | Indicates the group number of this group of MDAs. |
| Description | |
| Primary ISA-AA | Displays the primary slot and card number and whether the status is up or down and is either active or standby. |
| Backup ISA-AA | Displays the backup slot and card number and whether the status is up or down and is either active or standby. The status should be up and standby. |
| Last Active change | Indicates the last time a successful change was performed. |
| Admin State | Displays the administrative state, up or down. |
| Oper State | Displays the operational state, up or down. |
| Diverted FCs | Displays the forwarding class to be diverted. |
| Fail to mode | Displays how traffic is handled when there are no available ISA-AA cards to handle the traffic, either failToWire or failToOpen. |
| Partitions | Indicates whether partitions are enabled or disabled within an ISA-AA group. When the value of this object is set to enabled , partitions can be created in the tmnxBsxAaGrpPartTable. |
| Egress from subscriber | |
| Pool | Displays the buffer pool as defined in TIMETRA-PORT-MIB::tmnxObjectAppPool for subscriber to network traffic egressing towards the ISA-AA MDA. |
| Reserved Cbs | Displays the percentage of the buffer pool reserved for high priority traffic for subscriber to network traffic egressing towards the ISA-AA MDA. |
| Slope Policy | Displays the policy as defined in TIMETRA-QOS-MIB::tSlopePolicyTable for subscriber to network traffic egressing towards the ISA-AA MDA. |
| Queue Policy | Displays the policy as defined in TIMETRA-QOS-MIB::tNetworkQueueTable for subscriber to network traffic egressing towards the ISA-AA MDA. |

| Label | Description |
|-----------------------------|---|
| Scheduler Policy | Displays the policy as defined in TIMETRA-QOS-MIB::tSlope PolicyTable for network to subscriber traffic egressing towards the ISA-AA MDA |
| Egress to subscriber | |
| Pool | Displays the buffer pool as defined in TIMETRA-PORT-MIB::tmnxObjectAppPool for network to subscriber traffic egressing towards the ISA-AA MDA. |
| Reserved Cbs | Displays the percentage of the buffer pool reserved for high priority traffic for network to subscriber traffic egressing towards the ISA-AA MDA. |
| Slope Policy | Displays the policy as defined in TIMETRA-QOS-MIB::tSlope PolicyTable for network to subscriber traffic egressing towards the ISA-AA MDA. |
| Queue Policy | Displays the policy as defined in TIMETRA-QOS-MIB::tNetwork QueueTable for network to subscriber traffic egressing towards the ISA-AA MDA. |
| Scheduler Policy | Displays the policy as defined in TIMETRA-QOS-MIB::t SchedulerPolicyTable for network to subscriber traffic egressing towards the ISA-AA MDA. |
| Overload Sub-quarantine | Displays the overload quarantine state, up or down. |
| Overload Cut Through | Displays the overload cut through state, enabled or disabled. |

Sample Output

```

applications

Syntax

applications [*isa mda-id/esa-vm-id*]

Context

[Tree] (tools>dump>app-assure>group>ipassist applications)

Full Context

tools dump application-assurance group ip-identification-assist applications

Description

This command dumps statistics showing the amount of traffic detected by IP identification assist for supported applications.

Parameters

isa mda-id

Specifies the slot and MDA of the ISA in the format *slot/mda*.

Values

slot/mda

slot

1 to 10, depending on chassis model

mda 1 to 2, depending on chassis model

isa esa-vm-id

Specifies the ESA and ESA VM in the format *esa-esa-id/vm-id*.

| | |
|---------------|-------------------------|
| Values | <i>esa-esa-id/vm-id</i> |
| | <i>esa-id</i> 1 to 16 |
| | <i>vm-id</i> 1 to 4 |

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

Use the following command to display statistics showing how much traffic is detected by the IP identification assist feature for supported applications.

```
tools dump application-assurance group 1:0 ip-identification-assist applications isa 1/1
```

Sample Output

```
=====

aps

Syntax

aps [*aps-id*] [**detail**]

Context

[\[Tree\]](#) (show aps)

Full Context

show aps

Description

This command displays Automated Protection Switching (APS) information.

Parameters

aps-id

Displays information for the specified APS group ID.

Values *aps-group-idaps*: keyword*group-id*: 1 to 128

detail

Displays detailed APS information.

Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

Output

See the following sections for output samples:

- [Sample Output: show aps \(Working Multi-chassis APS Node\)](#)
- [Sample Output: show aps \(Protect MC-APS Node\)](#)

- [Output Fields: show aps](#)

Sample Output: show aps (Working Multi-chassis APS Node)

Output Fields: show aps

Table 33: Output Fields: show aps describes output fields for the show aps command.

Table 33: Output Fields: show aps

| Label | Description |
|-------------|---|
| Interface | Specifies the APS interface name (the APS group port). |
| Admin State | Up — APS is administratively up. Down — APS port is administratively down. |

| Label | Description |
|----------------------|---|
| Oper State | Up — APS port is operationally up. Down — APS is operationally down. |
| MC-CTL State | Specifies the multi-chassis state. |
| Work Circuit | Specifies the working circuit ID. |
| Prot Circuit | Specifies the physical port that acts as the protection circuit for this APS group. |
| Active Circuit | Specifies the active circuit. |
| Tx/Rx K1 Byte | Displays the value of the SONET/SDH K1 byte received or transmitted on the protection circuit. |
| Group Id | Displays the APS group name. |
| Protection Circuit | Displays the physical port that will act as the protection circuit for this APS group. |
| Switching-mode | Displays the switching mode of the APS group. |
| Switching-arch | The architecture of the APS group. |
| Revertive-mode | Displays the revertive mode of the APS group. non-revertive — Traffic remains on the protection line until another switch request is received. revertive — When the condition that caused a switch to the protection line has been cleared the signal is switched back to the working line. |
| Revert-time | Displays the configured time, in minutes, to wait after the working circuit has become functional again, before making the working circuit active again. If the revertive mode is non-revertive, then this field will be empty. |
| Rx K1/K2 byte | Displays the value of the SONET/SDH K1/K2 byte received on the interface. |
| Tx K1/K2 byte | Displays the value of the SONET/SDH K1/K2 byte transmitted on the interface. |
| Current APS Status | Displays the current APS status. |
| Mode Mismatch Cnt | Indicates the number of times a conflict occurs between the current local mode and the received K2 mode information. |
| Channel mismatch Cnt | Indicates the number of mismatches between the transmitted K1 channel and the received K2 channel has been detected. |

| Label | Description |
|----------------------|--|
| PSB failure Cnt | Displays a count of Protection Switch Byte (PSB) failure conditions. This condition occurs when either an inconsistent APS byte or an invalid code is detected. |
| FEPL failure Cnt | Displays a count of far-end protection-line (FEPL) failure conditions. This condition is declared based on receiving SF on the protection line in the K1 byte. |
| No. of Switchovers | Displays the number of times a switchover has occurred. |
| Last Switchover | Displays the time stamp of the last switchover. |
| Switchover seconds | Displays the cumulative Protection Switching Duration (PSD) time in seconds. For a working channel, this is the cumulative number of seconds that service was carried on the protection line. For the protection line, this is the cumulative number of seconds that the protection line has been used to carry any working channel traffic. This information is only valid if revertive switching is enabled. |
| Signal Degrade Cnt | Displays the number of times the signal was degraded. |
| Signal Failure Cnt | Displays the number of times the signal failed. |
| Last Switch Cmd | Reports the last switch command that was performed on a circuit. |
| Last Exercise Result | The result of the last exercise request on a circuit. |
| Neighbor address | Displays the neighbor IP address. |
| Advertise Interval | Displays the advertise interval. |
| Hold time | Displays the hold time. |

aps

Syntax

aps *aps-id* [clear]

aps mc-aps-signaling [clear]

aps mc-aps-ppp [clear]

Context

[\[Tree\]](#) (tools>dump aps)

Full Context

tools dump aps

Description

This command displays Automated Protection Switching (APS) information.

Parameters

aps-id

Specifies the APS ID.

Values *aps-group-id*
 aps: keyword
 group-id: 1 to 64

clear

Removes all Automated Protection Switching (APS) operational commands.

mc-aps-signaling

Displays multi-chassis APS signaling information.

mc-aps-ppp

Displays multi-chassis APS PPP information.

Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

Output

The following output is an example of APS information.

Sample Output

```
*A:AS_SR7_2# tools dump aps aps-33

show router ospf area

Description

This command displays configuration information about all areas or the specified area.

Parameters

area-id

Displays the OSPF area ID expressed in dotted decimal notation or as a 32-bit decimal integer.

Values ip-address — a.b.c.d

area — 0 to 4294967295

flex-algo-id

Displays the flexible algorithm identifier.

Values 128 to 255

detail

Displays detailed operational and statistical information about the specified area.

lfa

Displays Loop-Free Alternate (LFA) next-hop information. This information corresponds to the backup next hops for IP links and nodes written in RTM by the base LFA feature.

flex-algo

Displays OSPFv2 information for the specified algorithm identifier.

flex-algo all

Displays OSPFv2 information for all flexible algorithms.

Platforms

All

Output

The following examples display OSPF area outputs.

[Table 34: OSPF Area Output Fields](#) describes the standard and detailed command output fields for an OSPF area.

Table 34: OSPF Area Output Fields

| Label | Description |
|-------------------|--|
| Area Id | A 32 bit integer uniquely identifying an area. |
| Type | NSSA — This area is configured as an NSSA area. Standard — This area is configured as a standard area (not NSSA or Stub). Stub — This area is configured as a stub area. |
| SPF Runs | The number of times that the intra-area route table has been calculated using this area's link state database. |
| LSA Count | The total number of link-state advertisements in this area's link state database, excluding AS External LSAs. |
| LSA Cksum Sum | The 32-bit unsigned sum of the link-state database advertisements LS checksums contained in this area's link state database. This checksum excludes AS External LSAs (type-5). |
| No. of OSPF Areas | The number of areas configured on the router. |

| Label | Description |
|--------------------|--|
| Virtual Links | The number of virtual links configured through this transit area. |
| Active IFs | The active number of interfaces configured in this area. |
| Area Bdr Rtrs | The total number of ABRs reachable within this area. |
| AS Bdr Rtrs | The total number of ASBRs reachable within this area. |
| Last SPF Run | The time when the last intra-area SPF was run on this area. |
| Router LSAs | The total number of router LSAs in this area. |
| Network LSAs | The total number of network LSAs in this area. |
| Summary LSAs | The summary of LSAs in this area. |
| Asbr-summ LSAs | The summary of ASBR LSAs in this area. |
| Nssa-ext LSAs | The total number of NSSA-EXT LSAs in this area. |
| Area opaque LSAs | The total number of opaque LSAs in this area. |
| Total Nbrs | The total number of neighbors in this area. |
| Total IFs | The total number of interfaces configured in this area. |
| Total LSAs | The sum of LSAs in this area excluding autonomous system external LSAs. |
| Blackhole Range | False — No blackhole route is installed for aggregates configured in this area. True — A lowest priority blackhole route is installed for aggregates configured in this area. |
| Export Database | False — The extended TE Database (TE-DB) is not exported in this area. True — The extended TE Database (TE-DB) is exported in this area. |
| Export Policies | The export policies configured in this area. |
| Export Filtrd LSAs | The total number of LSAs filtered by area export policies. |
| Import Policies | The import policies configured in this area. |
| Import Filtrd LSAs | The total number of LSAs filtered by area import policies. |

area

Syntax

area [*area-id*] [**detail**] [**lfa**]

Context

[\[Tree\]](#) (show>router>ospf3 area)

Full Context

show router ospf3 area

Description

This command displays configuration information about all areas or the specified area. When detail is specified operational and statistical information will be displayed.

Parameters

area-id

Displays the OSPF area ID expressed in dotted decimal notation or as a 32-bit decimal integer.

Values ip-address — a.b.c.d
 area — 0 to 4294967295

detail

Displays detailed information about the specified area.

lfa

Displays Loop-Free Alternate (LFA) next-hop information. This information corresponds to the backup next hops for IP links and nodes written in RTM by the base LFA feature.

Platforms

All

Output

OSPF Area Output

The following table describes the standard and detailed command output fields for an OSPF area.

Table 35: OSPF Area Output Fields

| Label | Description |
|-------------------|--|
| Area Id | A 32 bit integer uniquely identifying an area. |
| Type | NSSA — This area is configured as an NSSA area. Standard — This area is configured as a standard area (not NSSA or Stub). Stub — This area is configured as a stub area. |
| SPF Runs | The number of times that the intra-area route table has been calculated using this area's link state database. |
| LSA Count | The total number of link-state advertisements in this area's link state database, excluding AS External LSAs. |
| LSA Cksum Sum | The 32-bit unsigned sum of the link-state database advertisements LS checksums contained in this area's link state database. This checksum excludes AS External LSAs (type-5). |
| No. of OSPF Areas | The number of areas configured on the router. |
| Virtual Links | The number of virtual links configured through this transit area. |
| Active IFs | The active number of interfaces configured in this area. |
| Area Bdr Rtrs | The total number of ABRs reachable within this area. |
| AS Bdr Rtrs | The total number of ASBRs reachable within this area. |
| Last SPF Run | The time when the last intra-area SPF was run on this area. |
| Router LSAs | The total number of router LSAs in this area. |
| Network LSAs | The total number of network LSAs in this area. |
| Summary LSAs | The summary of LSAs in this area. |
| Asbr-summ LSAs | The summary of ASBR LSAs in this area. |
| Nssa-ext LSAs | The total number of NSSA-EXT LSAs in this area. |
| Area opaque LSAs | The total number of opaque LSAs in this area. |
| Total Nbrs | The total number of neighbors in this area. |

| Label | Description |
|-------------------|--|
| Total IFs | The total number of interfaces configured in this area. |
| Total LSAs | The sum of LSAs in this area excluding autonomous system external LSAs. |
| Blackhole Range | False — No blackhole route is installed for aggregates configured in this area. True — A lowest priority blackhole route is installed for aggregates configured in this area. |
| Export Database | False — The extended TE Database (TE-DB) is not exported in this area. True — The extended TE Database (TE-DB) is exported in this area. |
| Export Policies | The export policies configured in this area. |
| Export Fltrd LSAs | The total number of LSAs filtered by area export policies. |
| Import Policies | The import policies configured in this area. |
| Import Fltrd LSAs | The total number of LSAs filtered by area import policies. |

Sample Output

```

5.58 arp

arp

Syntax

```
arp {[ip-address] | [mac ieee-address] | [ sap sap-id] | [interface ip-int-name] | [ sdp sdp-id:vc-id] |
[summary] }
```

Context

[\[Tree\]](#) (show>service>id arp)

Full Context

show service id arp

Description

This command displays the ARP cache entries for this service.

Parameters

ip-address

Specifies the IP address in IP address dotted decimal notation.

ieee-mac-address

Specifies the 48-bit MAC address in the form aa:bb:cc:dd:ee:ff or aa-bb-cc-dd-ee-ff where aa, bb, cc, dd, ee and ff are hexadecimal numbers. Allowed values are any non-broadcast, non-multicast MAC and non-IEEE reserved MAC addresses.

sap-id

Specifies a Service Access Point (SAP) within a service.

ip-int-name

Specifies the name of the IP interface. Interface names can be from 1 to 32 alphanumeric characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed between double quotes.

sdp-id

Specifies the SDP identifier. Allowed values are integers in the range of 1 and 17407 for existing SDPs.

vc-id

Specifies the virtual circuit identifier.

Values 1 to 4294967295

Platforms

All

Output

The following output is an example of service ID information. [Table 36: Service-ID ARP Field Descriptions](#) describes the output fields.

Sample Output

```
A:ALA-A# show service id 100 base

```

Table 36: Service-ID ARP Field Descriptions

| Label | Description |
|-------------|--|
| IP Address | Specifies the IP address of the ARP cache entry. |
| MAC Address | Specifies the MAC address associated with the IP address. |
| Type | Other — Learned through normal ARP queries. Static — Configured by static-arp commands. Managed — Learned from DHCP snooping or configured by host commands. |
| Age | Indicates age of the ARP entry. |
| Interface | Indicates the name of the IP interface. |
| Port | Indicates the port upon which the entry was learned. |

arp

Syntax

arp {all | *ip-address*}

arp interface {*ip-int-name* | *ip-address*}

Context

[\[Tree\]](#) (clear>router arp)

Full Context

clear router arp

Description

This command clears all or specific ARP entries.

The scope of ARP cache entries cleared depends on the command line options specified.

Parameters

all

Clears all ARP cache entries.

ip-address

Clears the ARP cache entry for the specified IP address.

Values

ipv4-address: a.b.c.d

ip-int-name

Clears all ARP cache entries for the IP interface with the specified name, up to 32 characters.

ip-address

Clears all ARP cache entries for the specified IP interface with the specified IP address.

Values ipv4-address: a.b.c.d

Platforms

All

arp

Syntax

arp

Context

[\[Tree\]](#) (clear>service>id arp)

Full Context

clear service id arp

Description

This command clears all ARP entries. This command is only valid for Ipipe and VPRN services.

Platforms

All

arp

Syntax

arp *[[ip-int-name | ip-address[/mask] | mac ieee-mac-address | summary]] [arp-type]*

Context

[\[Tree\]](#) (show>router arp)

Full Context

show router arp

Description

This command displays the router ARP table sorted by IP address. If no command line options are specified, all ARP entries are displayed.

Parameters

ip-int-name

Only displays ARP entries associated with the specified IP interface name.

ip-address[/mask]

Only displays ARP entries associated with the specified IP address and mask.

ieee-mac-address

Only displays ARP entries associated with the specified MAC address.

summary

Displays an abbreviate list of ARP entries.

arp-type

Only displays ARP information associated with the keyword.

Values local, dynamic, static, managed

Platforms

All

Output

ARP Table Output — The following output is an example of router ARP table information, and [Table 37: ARP Fields](#) describes the ARP table output fields.

Sample Output

Table 37: ARP Fields

| Label | Description |
|--------------------|--|
| IP Address | The IP address of the ARP entry |
| MAC Address | The MAC address of the ARP entry |
| Expiry | The age of the ARP entry |
| Type | Dyn — the ARP entry is a dynamic ARP entry Inv — the ARP entry is an inactive static ARP entry (invalid) Oth — the ARP entry is a local or system ARP entry Sta — the ARP entry is an active static ARP entry |
| *Man | The ARP entry is a managed ARP entry |
| Int | The ARP entry is an internal ARP entry |
| [!] | The ARP entry is in use |
| Interface | The IP interface name associated with the ARP entry |
| No. of ARP Entries | The number of ARP entries displayed in the list |

5.59 arp-host

arp-host

Syntax

```
arp-host [wholesaler service-id] {[sap sap-id | interface interface-name | ip-address ip-address[/mask] |
  mac ieee-address | {[ port port-id] [no-inter-dest-id | inter-dest-id inter-dest-id]]} [detail]
arp-host statistics [sap sap-id | interface interface-name]
arp-host summary {[interface interface-name | saps ]
```

Context

[\[Tree\]](#) (show>service>id arp-host)

Full Context

```
show service id arp-host
```

Description

This command displays ARP host related information.

Parameters

service-id

The VPRN service ID of the wholesaler. When specified in this context, SAP, SDP, interface, IP address and MAC parameters are ignored.

Values 1 to 2148007980, *svc-name: 64 chars max*

sap-id

Specifies the physical port identifier portion of the SAP definition.

interface-name

Displays information for the specified IP interface. 32 characters maximum.

ip-address[/mask]

Displays information associated with the specified IP address.

Values ip-address: a.b.c.d.
mask: 1 to 32

ieee-address

Specifies the MAC address.

Values xx:xx:xx:xx:xx:xx or xx-xx-xx-xx-xx-xx

port-id

Specifies the port ID.

Values slot, mda, port

no-inter-dest-id

Displays the information about no intermediate destination ID.

inter-dest-id

Indicates the intermediate destination identifier received from either the DHCP or the RADIUS server or the local user database. 32 characters maximum

detail

Displays detailed information.

statistics

Displays ARP host statistics.

summary

Displays summary information.

saps

Displays SAP ARP host related information.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example ARP host information for specified service IDs.

Sample Output

```
*A:Dut-C# show service id 2 arp-host

Table 38: Service ARP Host Field Descriptions describes service ARP host information.

Table 38: Service ARP Host Field Descriptions

| Field | Description |
|--|--|
| IP Address | The IP address |
| Mac Address | The MAC address of the this ARP host |
| Sap Id | The service SAP ID |
| Remaining Time | The remaining time |
| MC Stdbby | The MC standby |
| Number of ARP hosts | The total number of ARP hosts |
| Service ID | The service identifier |
| Sub-Ident | The name of the subscriber identification policy |
| Sub-Profile-String | The name of the subscriber profile |
| SLA-Profile-String | The name of the SLA profile |
| App-Profile-String | The application profile string |
| ARP host ANCP-String | The name of the ARP host |
| ARP host Int Dest Id | The ARP host internal destination ID |
| RADIUS-User-Name | The RADIUS user name |
| Session Timeout (s) | The session timeout value |
| Start Time | The start time |
| Last Auth | The date and time of the last authentication |
| Last Refresh | The date and time of the last refresh |
| Persistence Key | The key value that can be used to track this ARP host in the persistence file. |
| Subscriber Host Limit Overrides and SLA Profile Instance Host Limit Overrides: | |

| Field | Description |
|--|---|
| (only shown when overrides are active) | |
| ipv4-arp | The total number of IPv4 ARP hosts limit |
| ipv4-dhcp | The total number of IPv4 DHCP hosts limit |
| ipv4-ppp | The total number of IPv4 PPP hosts limit |
| ipv4-overall | The total number of IPv4 hosts limit |
| ipv6-pd-ipoe-dhcp | The total number of IPv6 IPoE DHCP Prefix Delegation hosts (IA-PD) limit |
| ipv6-pd-ppp-dhcp | The total number of IPv6 PPPoE DHCP Prefix Delegation hosts (IA-PD) limit |
| ipv6-pd-overall | The total number of IPv6 DHCP Prefix Delegation hosts (IA-PD) limit |
| ipv6-wan-ipoe-dhcp | The total number of IPv6 IPoE DHCP WAN hosts (IA-NA) limit |
| ipv6-wan-ipoe-slaac | The total number of IPv6 IPoE SLAAC WAN hosts limit |
| ipv6-wan-ppp-dhcp | The total number of IPv6 PPPoE DHCP WAN hosts (IA-NA) limit |
| ipv6-wan-ppp-slaac | The total number of IPv6 IPoE SLAAC WAN hosts limit |
| ipv6-wan-overall | The total number of IPv6 WAN hosts limit |
| ipv6-overall | The total number of IPv6 hosts limit |
| lac-overall | The total number of L2TP LAC hosts limit |
| overall | The total number of subscriber hosts limit |
| Subscriber Session Limit Overrides and SLA Profile Instance Session Limit Overrides: (only shown when overrides are active) | |
| ipoe | The total number of IPoE sessions limit |
| ppoe-local | The total number of PPPoE local terminated sessions (PTA) limit |
| ppoe-lac | The total number of PPPoE L2TP LAC sessions limit |
| ppoe-overall | The total number of PPPoE sessions limit |
| l2tp-lns | The total number of L2TP LNS sessions limit |
| l2tp-lts | The total number of L2TP LTS sessions limit |

| Field | Description |
|-----------------|---|
| l2tp-overall | The total number of L2TP sessions limit |
| overall | The total number of subscriber sessions limit |
| Number of hosts | The total number of hosts matching the search criteria |
| MC-Stdby | The number of SAPs defined on this service on a port which is in multi-chassis standby mode |

arp-host

Syntax

```
arp-host {all | mac ieee-address | sap sap-id | ip-address ip-address[/mask]}
arp-host {port port-id | {inter-dest-id intermediate-destination-id | no-inter-dest-id} [port port-id]}
arp-host statistics [sap sap-id | interface interface-name]
```

Context

[\[Tree\]](#) (clear>service>id arp-host)

Full Context

```
clear service id arp-host
```

Description

This command clears ARP host data.

Parameters

all

Clears all ARP host statistics.

ieee-address

Clears the ARP host MAC address information. The 48-bit MAC address for the static ARP in the form aa:bb:cc:dd:ee:ff or aa-bb-cc-dd-ee-ff where aa, bb, cc, dd, ee, and ff are hexadecimal numbers. Allowed values are any non-broadcast, non-multicast MAC and non-IEEE reserved MAC addresses.

Values xx:xx:xx:xx:xx:xx or xx-xx-xx-xx-xx-xx

sap-id

Clears the specified SAP information.

ip-address[/*mask*]

Clears the specified IP address and mask.

Values a.b.c.d

mask: 1 to 32

port-id

Clear the specified port ID information.

Values

| <i>port-id</i> | <i>slot/mda/port [.channel]</i> | |
|----------------|--|-------------------|
| bundle-id | <i>bundle-type-slot/mda.bundle-num</i> | |
| | bundle | keyword |
| | <i>type</i> | ppp |
| | <i>bundle-num</i> | 1 to 336 |
| bpgrp-id | <i>bpgrp-type-bpgrp-num</i> | |
| | bpgrp | keyword |
| | <i>type</i> | ppp |
| | <i>bpgrp-num</i> | 1 to 2000 |
| aps-id | <i>aps-group-id[.channel]</i> | |
| | aps | keyword |
| | <i>group-id</i> | 1 to 64 |
| ccag-id | <i>ccag-id.path-id [cc-type]</i> | |
| | ccag | keyword |
| | id | 1 to 8 |
| | path-id | a, b |
| | cc-type | .sap-net, net-sap |
| eth-tunnel-id | <i>eth-tunnel-id</i> | |
| | eth-tunnel | keyword |
| | id | 1 to 1024 |
| lag-id | <i>lag-id</i> | |
| | lag | keyword |
| | id | 1 to 800 |
| gtg-id | <i>gmpls-tun-grp-id</i> | |
| | gmpls-tun-group | keyword |
| | id | 1 to 1024 |

intermediate-destination-id

Displays information about the specified intermediate destination ID. 32 characters maximum.

no-inter-dest-id

Displays the information about no intermediate destination ID.

interface-name

Clears the interface name. 32 characters maximum.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

5.60 arp-table

arp-table

Syntax

arp-table [*ip ipv4-address*] [**class** *class*] [**next-index** *index*]

Context

[\[Tree\]](#) (tools>dump>wlan-gw>lanext>bd arp-table)

Full Context

tools dump wlan-gw lanext bd arp-table

Description

This command dumps the specified ARP table entries for the specified HLE BD.

Parameters

ipv4-address

Specifies the IP address of the ARP entry to be displayed.

class

Specifies the source on which to filter the ARP table entries.

Values access, network, remote

index

Specifies the next set of results if there are more results than the current output. The additional results are shown at the bottom of the current output.

Values 0 to 4294967295

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of ARP table information.

Sample Output

```
tools>dump>wlan-gw>lanext>bd# arp-table
=====

5.61 aspath-regex

aspath-regex

Syntax

aspath-regex *reg-exp* {**detail** | **longer**}

aspath-regex *reg-exp*

aspath-regex *reg-exp* **hunt**

Context

[\[Tree\]](#) (show>router>bgp>routes aspath-regex)

Full Context

show router bgp routes aspath-regex

Description

This command displays BGP routes with an AS path matching the specified regular expression.

aspath-regex is a parameter of the **show router bgp routes** command. Depending on the parameters that are used to issue the command, the output can display a narrower or wider set of routes, including routes belonging to other address families. See the **show router bgp routes** command description for syntax variants, parameter descriptions and values, and output examples.

Platforms

All

5.62 association

association

Syntax

association [*ma-index*] [**detail**]

Context

[\[Tree\]](#) (show>eth-cfm association)

Full Context

show eth-cfm association

Description

This command displays eth-cfm association information.

Parameters

ma-index

Specifies the maintenance association (MA) index.

Values 1 to 4294967295

detail

Displays detailed information for the eth-cfm association.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following example displays ETH CFM association information.

[Table 39: ETH-CFM Association Field Descriptions](#) describes show eth-cfm association command output fields:

| CCM-interval | Displays the CCM transmission interval for all MEPs in the association. |
| Bridge-id | Displays the bridge-identifier value for the domain association. |
| MHF Creation | Displays the MIP half function (MHF) for the association. |
| Primary VLAN | Displays the primary bridge-identifier VLAN ID. |
| Num Vids | Displays the number of VIDs associated with the VLAN. |
| Remote Mep Id | Displays the remote maintenance association end point (MEP) identifier |

association

Syntax

association

association *name* [statistics]

Context

[\[Tree\]](#) (show>subscr-mgmt>pfcf association)

Full Context

show subscriber-mgmt pfcf association

Description

This command displays PFCF association information. If no parameters are entered, it displays an overview of all PFCF associations present on the system.

Parameters

name

Specifies the name of the configured PFCP association, up to 32 characters, for which detailed overview information is displayed.

statistics

Specifies that the packet counters for each PFCP message and upstream IBCP message for the specified PFCP association *name* are displayed.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following examples display PFCP association output information and the corresponding table describes the output fields:

associations

Syntax

associations

Context

[Tree] (show>router>dhcp>local-dhcp-server associations)

[Tree] (show>router>dhcp6>local-dhcp-server associations)

Full Context

show router dhcp local-dhcp-server associations

show router dhcp6 local-dhcp-server associations

Description

This command displays the interfaces associated with this DHCP or DHCP6 server.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of information associated with this DHCP or DHCP6 server.

Sample Output

```
*A:SUB-Dut-A# show router dhcp local-dhcp-server dhcpS1 associations
=====
DHCP server s1  router 3
=====
Associations          Admin
-----
tosim5                Up
=====
*A:SUB-Dut-A#
```

```
*A:SUB-Dut-A# show router dhcp6 local-dhcp-server abc associations
=====
DHCP server abc  router 3
=====
Associations          Admin
-----
tosimxyz              Up
=====
*A:SUB-Dut-A#
```

[Table 42: DHCP6 Summary Field Descriptions](#) describes DHCP associations fields.

| Configured VTs | Displays the number of configured VTs. |
| Configured minimum VPI | Displays the minimum VPI configured for this bundle. |
| Last Unknown VPI/VCI | Indicates the last unknown VPI/VCI that was received on this interface. |
| Mapping | Displays ATM cell mapping used on this interface: Direct or PLCP. |
| Configured VPs | Displays the number of configured VPs. |
| Configured IFCs | Displays the number of configured IFCs. |

atm

Syntax

atm [interval seconds] [repeat repeat] [absolute|rate]

Context

[\[Tree\]](#) (monitor>port atm)

Full Context

monitor port atm

Description

This command monitors ATM statistics.

Parameters

seconds

Configures the interval for each display in seconds.

Values 3 to 60

Default 10

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, 7950 XRS

atm

Syntax

show port atm

Description

Commands in this context display ATM port information.

Parameters

detail

Displays detailed information.

Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, 7950 XRS

5.65 atm-td-profile

atm-td-profile

Syntax

atm-td-profile [*traffic-desc-profile-id*] [**detail**]

Context

[\[Tree\]](#) (show>qos atm-td-profile)

Full Context

show qos atm-td-profile

Description

This command displays ATM traffic descriptor profile information.

Parameters

traffic-desc-profile-id

Displays the ATM traffic descriptor profile.

Values 1 to 1000

detail

Displays detailed policy information including policy associations.

Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, 7950 XRS

Output

The following output is an example of ATM traffic descriptor profile information, and [Table 44: ATM Traffic Descriptor Profile Command Output Fields](#) describes ATM traffic descriptor profile show command output.

Sample

```

A:ALA-48>config>qos>atm-td-profile# show qos atm-td-profile

5.67 authentication

authentication

Syntax

```
authentication user-name user-name password password [circuit-id circuit-id] [circuit-id-hex circuit-id-hex] [derived-id derived-id] [mac ieee-address] [remote-id remote-id] [remote-id-hex remote-id-hex] [sap-id sap-id] [service-name service-name]
```

Context

[\[Tree\]](#) (tools>perform>subscr-mgmt>loc-user-db>ppp authentication)

Full Context

tools perform subscriber-mgmt local-user-db ppp authentication

Description

This command authenticates the PPPoE user name.

Parameters

user-name

Specifies the PPP user name up to 253 characters.

password

Specifies the password of this host up to 64 characters.

circuit-id

Specifies the circuit ID up to 127 characters.

circuit-id-hex

Specifies the circuit ID in hexadecimal format.

Values 0x0 to 0xFFFFFFFF (maximum 254 hex nibbles)

derived-id

Specifies an ASCII string that uniquely identifies a host, and is derived by a Python script from packet content available during a DHCP transaction up to 255 characters.

ieee-address

Specifies information about the MAC address of the PPP session.

remote-id

Specifies that information that goes into the remote-id sub-option in the DHCP relay packet, up to 255 characters.

remote-id-hex

Specifies the remote ID in hexadecimal format.

Values 0x0 to 0xFFFFFFFF (maximum 510hex nibbles)

sap-id

Specifies a SAP ID, up to 255 characters.

service-name

Specifies the service name.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

authentication

Syntax

authentication *policy-name* **association**

authentication [*policy-name*]

authentication [*policy-name*] **statistics**

authentication **coa-statistics**

Context

[Tree] (show>subscr-mgmt authentication)

Full Context

show subscriber-mgmt authentication

Description

This command displays subscriber management RADIUS authentication policy information and statistics.

Parameters

policy-name

Specifies the subscriber management RADIUS authentication policy name, up to 32 characters, for which information is requested.

association

Displays SAP, interface, local user database host, AA and L2TP associations of this policy.

coa-statistics

Displays the overall statistics for incoming RADIUS Change of Authorization (CoA) messages and Disconnect Messages. For dropped requests, a counter for different drop reasons is available.

statistics

Displays a list of policies with basic statistics (without specifying a policy name) or detailed statistics, including per-server statistics for the specified policy-name. These statistics apply only to the legacy RADIUS server configuration method where the servers are directly configured in the authentication policy.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following is an example of subscriber management authentication information.

Sample Output

```
# show subscriber-mgmt authentication

Table 45: Subscriber Authentication Field Descriptions

| Label | Description |
|----------------------|---|
| Re-authentication | Whether re-authentication on IPOE renewal is enabled |
| Username Format | The user name format in RADIUS message |
| PPPoE Access Method | The PPPoE access method, none, padi, pap-chap |
| Username Mac-Format | The username is represented when contacting a RADIUS server. |
| PPP-Username Oper | The PPP user name operation |
| PPP-Domain-Name | The PPP domain name |
| Username Oper | The username |
| Acct-Stop-On-Fail | The failure condition a RADIUS accounting-stop message indicating the failure has to be sent |
| RADIUS Server Policy | The RADIUS server policy name |
| Fallback Action | The authentication action in case no RADIUS server is available |
| Lack Mgmt Change | The time of the most recent management-initiated change to this policy server |
| Remote Id | The value of the remote ID sub-option |
| NAS Port Id | NAS port ID generation enabled or disabled |
| PPPoE Service Name | The PPPoE service name |
| Access Loop Options | The generation of the DSL forum access loop characteristics RADIUS attributes enabled or disabled |
| NAS Port Prefix | The type of prefix added to the NAS-Port attribute if included in RADIUS authentication request messages |
| NAS-Port-Type | The kind of value to be put in the RADIUS NAS-Port-Type attribute if included in RADIUS authentication request messages |
| Calling Station Id | The string will be put in the RADIUS Calling-Station-Id attribute if included in RADIUS authentication request messages |
| Tunnel Server Attr | The tunnel-server-attrs RADIUS attribute enabled or disabled |
| NAS Port | The NAS-Port attribute included or excluded |
| NAS Port Bits Spec | The number that will be put in the RADIUS NAS-Port attribute if included in RADIUS authentication request messages |

| Label | Description |
|-------------------------|--|
| Circuit Id | Circuit ID generation enabled or disabled |
| NAS Identifier | NAS-Identifier RADIUS attribute enabled or disabled |
| DHCP Vendor Class Id | dhcp-vendor-class-id RADIUS attribute enabled or disabled |
| MAC Address | The generation of the client MAC address RADIUS attribute enabled or disabled |
| NAS Port Suffix | The type of suffix is added to the NAS-Port-Id attribute if included in RADIUS accounting-request messages |
| Acct Session Id | The RADIUS accounting session id for this subscriber host |
| DHCP Options | DHCP options enabled or disabled |
| Router | The RADIUS router name |
| Access Algorithm | The algorithm used to access the set of RADIUS servers |
| Timeout (s) | The timeout for a response from the RADIUS server |
| Source Address | The source address of the RADIUS message |
| Retry | The number of retries for contacting the RADIUS server |
| Hold down time (s) | The hold down time |
| Index IP Address | The IP address of the index |
| Port | The port ID |
| Pend-Req-Limit | The limit of the number of pending RADIUS authentication requests for this RADIUS server |
| Out/Overload time (s) | The accumulated time that the value of the object RADIUS server has been equal to 'overloaded' since created |
| Oper State | The operational state |
| Access-Request | The number of Access-Request packets received by this RADIUS proxy server |
| Access-Accept | The number of Access-Accept packets received by this RADIUS proxy server |
| Change-of-Authorization | Change of authorization enabled or disabled |
| Policy Name | The authentication policy name |

| Label | Description |
|-----------------------------------|---|
| Subscr. Pkts Authenticated | The number of subscriber packets authenticated |
| Subscr. Pkts Rejected | The number of subscriber packets rejected |
| Subscr. Pkts Rejected Send Failed | The number of subscriber messages (such as DHCP and PPPoE) failed to be sent |
| subscriber packets authenticated | The number of subscriber packets authenticated |
| subscriber packets rejected | The number of subscriber packets rejected |
| subscriber packets send failed | The number of subscriber packets failed to be sent |
| Requests Received | The number of notify Change-of-Authorization requests received |
| Requests Accepted | The number of notify Change-of-Authorization requests accepted |
| Requests Rejected | The number of notify Change-of-Authorization requests rejected |
| Requests Dropped | The number of notify Change-of-Authorization requests dropped |
| No Auth Policy found | The number of notify Change-of-Authorization requests found |
| Invalid message | The number of notify Change-of-Authorization requests rejected because of decode errors |
| Out of resources | The number of notify Change-of-Authorization requests rejected due to lack of resources |
| Authentication Failure | The number of notify Change-of-Authorization requests which do not have NAS-Port-ID or Framed-IP-Address set or have mismatched subscriber-id |

authentication

Syntax

authentication [*policy-name*]

authentication coa-statistics

Context

[Tree] (clear>subscr-mgmt authentication)

Full Context

clear subscriber-mgmt authentication

Description

This command clears subscriber authentication data.

Parameters

policy-name

Clears the specifies existing authentication policy name.

coa-statistics

Clears statistics for incoming RADIUS Change of Authorization requests.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

authentication

5.69 authentication-server-check

authentication-server-check

Syntax

```

authentication-server-check server-address ip-address [port port] {{user-name user-name password
password} | attr-from-file file-url} secret key [source-address ip-address] [timeout seconds] [
router router-instance | service-name service-name] [ debug]
    
```

Context

[\[Tree\]](#) (tools>perform>security authentication-server-check)

Full Context

tools perform security authentication-server-check

Description

This command is used to perform an authentication check on the RADIUS server.

Parameters

server-address *ip-address*

Specifies the IP address of the RADIUS server.

port

Specifies the port of the RADIUS server.

Values 1 to 65535

user-name

Specifies the user name, up to 253 characters.

password

Specifies the user password, up to 64 characters.

file-url

specifies to attach additional VSAs from a file.

| Values | | |
|----------------------|--|--|
| <i>local-url:</i> | [<i>cflash-id</i>] [<i>file-path</i>] | |
| | 200 characters maximum, including cflash-id directory length, up to 99 characters each | |
| <i>remote-url:</i> | [{ftp:// tftp://}<login>:<pswd>@<remote-locn>]/[<file-path>] | |
| | 255 characters maximum, directory length, up to 99 characters each | |
| <i>remote-locn:</i> | [<hostname> <ipv4-address> <ipv6-address>] | |
| <i>ipv4-address:</i> | a.b.c.d | |
| <i>ipv6-address:</i> | x:x:x:x:x:x:x[-interface] x:x:x:x:x:d.d.d.d[-interface] | |
| | x - [0..FFFF]H d - [0..255]D | |
| | interface - up to 32 characters for link local addresses | |
| <i>cflash-id:</i> | cf1:, cf1-A:, cf1-B:, cf2:, cf2-A:, cf2-B:, cf3:, cf3-A:, cf3-B: | |

key

Specifies the secret key shared between the RADIUS client and server, up to 64characters.

source address ip-address

Specifies the source address used for the access-request message.

| Values | | |
|---------------------|--|--|
| <i>ipv4-address</i> | a.b.c.d | |
| <i>ipv6-address</i> | x:x:x:x:x:x:x (eight 16-bit pieces) x:x:x:x:x:d.d.d.d | |
| | x - [0 to FFFF]H d - [0 to 255]D | |

seconds

Specifies the time to wait for the RADIUS server response.

| | |
|---------------|---------|
| Values | 1 to 90 |
|---------------|---------|

router-instance

Specifies the router instance that should be used by the access request message.

| Values | | |
|---------------|---|------------------|
| | <i>router-name</i> <i>vprn-svc-id</i> | |
| | <i>router-name</i> | Base, management |
| | | Default - Base |
| | <i>vprn-svc-id</i> | 1 to 2147483647 |

service-name

Specifies the service name that should be used by the access request message, up to 64 characters.

debug

Specifies to display the full debug message, including all VSAs and full hex sting, of the RADIUS reply message.

Platforms

All

5.70 auto-boot

auto-boot

Syntax

auto-boot {**retry** | **terminate**}
auto-boot echo [**debugger**]
no auto-boot echo [**debugger**]

Context

[\[Tree\]](#) (tools auto-boot)

Full Context

tools auto-boot

Description

This command starts and stops the auto-boot process. It is also used to enable the display of auto-discovery information in the CLI.

This command can be used only if the **auto-boot** flag is enabled in the BOF.

The **no** form of this command disables the display of auto-discovery information.

Parameters

retry

Executes the auto-boot process.

terminate

Stops an ongoing auto-boot process.

echo

Enables the display of auto-discovery information in the CLI.

debugger

Includes debugging information in the displayed auto-discovery information.

Platforms

7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-s

auto-boot

Syntax

auto-boot [detail]

auto-boot log

Context

[\[Tree\]](#) (tools>dump auto-boot)

Full Context

tools dump auto-boot

Description

This command displays auto-boot process information.

Parameters

detail

Displays detailed information.

log

Saves auto-boot process information to a log file.

Platforms

7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-s

5.71 auto-disc

auto-disc

Syntax

auto-disc [**hunt** | **detail**] [**rd** *rd*] [**community** *comm-id*] [**tag** *tag*] [**next-hop** *next-hop*] [**esi** *esi*] [**aspath-regex** *reg-exp*]

Context

[\[Tree\]](#) (show>router>bgp>routes>evpn auto-disc)

Full Context

show router bgp routes evpn auto-disc

Description

This command displays BGP-EVPN auto discovery routes.

Parameters

hunt

Displays entries for the specified route.

detail

Displays detailed information.

rd

Displays information for the route distinguisher.

Values *ip-addr:comm-val* | *2byte-asnumber:ext-comm-val* | *4byte-asnumber:comm-val*

comm-id

Specifies the community ID, up to 72 characters.

Values [*as-num:comm-val* | *ext-comm* | *well-known-comm*]

where:

- *as-num* — 0 to 65535
- *comm-val* — 0 to 65535
- *ext-comm* — the extended community, defined as the following:
type:{ *ip-address:comm-val1* | *as-number1:comm-val2* | *as-number2:comm-val1*}

where:

- *as-number1* — 0 to 65535
- *comm-val1* — 0 to 65535
- **type** — target, origin
- *ip-address* — a.b.c.d
- *comm-val2* — 0 to 4294967295
- *as-number2* — 0 to 4294967295

- *well-known-comm* — **null** | **no-export** | **no-export-subconfed** | **no-advertise** |

tag

Specifies the auto discovery route tag.

Values 0to 4294967295 | MAX-ET

next-hop

Specifies the IPv4 or IPv6 BGP next-hop address.

Values

| | |
|---------------|-------------------------------------|
| ipv4-address: | a.b.c.d |
| ipv6-address: | x:x:x:x:x:x:x (eight 16-bit pieces) |
| | x:x:x:x:x:d.d.d.d |
| | x: [0 to FFFF]H |
| | d: [0 to 255]D |

esi

Specifies a 10-byte ESI by which to filter the displayed information. For example, ESI-0 | ESI-MAX or 00-11-22-33-44-55-66-77-88-99 with any of these separators('-',':',';')

reg-exp

Displays routes matching the specified regular expression, up to 80 characters.

Platforms

All

5.72 auto-discovered-meps

auto-discovered-meps

Syntax

auto-discovered-meps [*mep-id*] **domain** *md-index* **association** *ma-index*

Context

[Tree] (clear>eth-cfm auto-discovered-meps)

Full Context

clear eth-cfm auto-discovered-meps

Description

This command clears remote MEPs that were auto discovered. The function clears a specific auto-discovered MEP learned within an association or all auto-discovered MEPs in the association. When the *mep-id* representing the auto-discovered MEP is omitted and only the **domain** *md-index* and **association** *ma-index* are provided, all auto-discovered MEPs in the association are cleared. At a minimum the **domain** *md-index* and the **association** *ma-index* must be provided.

Only auto-discovered MEPs may be cleared. This command has no effect on manually configured MEPs.

Parameters

mep-id

Specifies the MEP ID of the remote MEP that was auto-discovered.

Values 1 to 8191

md-index

Specifies the domain context in which the remote MEP was auto-discovered.

Values 1 to 4294967295

ma-index

Specifies the association context in which the remote MEP was auto-discovered.

Values 1 to 4294967295

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

5.73 auto-lsp

auto-lsp

Syntax

auto-lsp

Context

[\[Tree\]](#) (clear>router>mpls>lsp auto-lsp)

Full Context

clear router mpls lsp auto-lsp

Description

Commands in this context reset and restart all auto LSPs.

Platforms

All

5.74 auto-node-provisioning

auto-node-provisioning

Syntax

auto-node-provisioning

Context

[\[Tree\]](#) (tools>perform>system auto-node-provisioning)

Full Context

tools perform system auto-node-provisioning

Description

This command initiates auto-provisioning of the node on all ports that are operationally up but do not have an IP address.

Platforms

All

5.75 autoconfigure

autoconfigure

Syntax

autoconfigure

Context

[\[Tree\]](#) (clear>router autoconfigure)

Full Context

clear router autoconfigure

Description

Commands in this context clear IP autoconfiguration information.

Platforms

7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-s

autoconfigure

Syntax

autoconfigure

Context

[\[Tree\]](#) (show>router autoconfigure)

Full Context

show router autoconfigure

Description

Commands in this context display IP autoconfiguration information.

Platforms

7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-s

5.76 avp-match-learned-session-id

avp-match-learned-session-id

Syntax

avp-match-learned-session-id

Context

[\[Tree\]](#) (tools>dump>debug>diameter avp-match-learned-session-id)

Full Context

tools dump debug diameter avp-match-learned-session-id

Description

This command displays the diameter session IDs that are learned by the AVP value matching in a diameter debug.

Per **avp-match** *id* in a diameter peer policy, a single diameter session ID can be learned. "N/A" means no session ID is learned.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following is a sample output for the **avp-match-learned-session-id** command.

Sample output

```
# tools dump debug diameter avp-match-learned-session-id
=====
Learned Session-Id
=====
Diameter Peer Policy          ID Session-Id
-----
diameter-peer-policy-1       1  bng.domain.com;1452197100;13
diameter-peer-policy-1       2  N/A
-----
No. of AVP matches: 2

6 b Commands

6.1 bandwidth-policy

bandwidth-policy

Syntax

bandwidth-policy *policy-name* [**detail**]

Context

[\[Tree\]](#) (show>mcast-management bandwidth-policy)

Full Context

show mcast-management bandwidth-policy

Description

This command displays multicast path management bandwidth policy information.

Parameters

policy-name

Specifies the bandwidth policy name, up to 32 characters.

detail

Displays detailed information.

Platforms

7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

Output

The following output displays an example of multicast management bandwidth policy information.

Sample Output

```

| Service Id | Displays the service identifier |

| Label | Description |
|--------------------|--|
| Vpn Id | Displays the VPN ID assigned to the service |
| Service Type | Displays the type of service: Epipe, Apipe, Fpipe, Ipipe, VPLS, IES, VPRN |
| MACSec enabled | Indicates whether MACsec is enabled |
| Name | Displays the service name |
| Description | Displays the generic information about the service |
| Customer Id | Displays the customer identifier |
| Creation Origin | Displays how the service was created |
| Last Status Change | Displays the date and time of the most recent status change to this customer |
| Last Mgmt Change | Displays the date and time of the most recent management-initiated change to this customer |
| Etree Mode | Indicates whether Etree mode is enabled |
| Admin State | Displays the state of the service |
| Oper State | Displays the operating state of the service |
| MTU | Displays the largest frame size (in octets) that the service can handle |
| SAP Count | Displays the number of SAPs defined on the service |
| SDP Bind Count | Displays the number of SDPs bound to the service |
| Snd Flush on Fail | Indicates whether sending MAC flush messages is enabled |
| Host Conn Verify | Indicates whether the host is connected |
| Propagate MacFlush | Indicates whether MAC flush messages are propagated to remote Target LDP (TLDP) peers |
| Per Svc Hashing | Indicates whether per-service hashing is enabled for this service |
| Allow IP Intf Bind | Indicates whether allow IP interface binding is enabled for R-VPLS services |
| Fwd-IPv4-Mcast-To* | Indicates whether IPv4 multicast traffic to the VPRN interface attached to the R-VPLS is enabled |
| Fwd-IPv6-Mcast-To* | Indicates whether IPv6 multicast traffic to the VPRN interface attached to the R-VPLS is enabled |
| Mcast IPv6 scope | Displays the IPv6 multicast scope |

| Label | Description |
|---------------------|--|
| Def. Gateway IP | Displays the default gateway |
| Def. Gateway MAC | Displays the default gateway MAC address |
| Temp Flood Time | Displays the temporary flood time |
| Temp Flood | Displays the temporary flood time state |
| Temp Flood Chg Cnt | Displays the temporary flood change count |
| SPI load-balance | Indicates whether SPI load-balance is enabled |
| TEID load-balance | Indicates whether TEID load balancing is enabled |
| Lbl Eth/IP L4 TEID | Indicates whether load balancing based on MPLS labels and inner Ethernet, IP addresses, L4 ports, and TEID is enabled |
| Src Tep IP | Displays the Termination Endpoint address |
| Vxlan ECMP | Indicates whether VXLAN ECMP is enabled |
| MPLS ECMP | Indicates whether MPLS ECMP is enabled |
| Ignore MTU Mismatch | Displays the configuration state of the ignore-l2-mtu-mismatch command for the service |
| VSD Domain | Displays the Nuage Virtual Service Directory (VSD) domain |
| SAP Type | Displays the type of SAPs allowed in the service and describes the processing applied by the node packets received on these SAPs |
| Vxlan Src Tep Ip | Displays the VXLAN source tunnel endpoint (TEP) ID |
| Force QTag Fwd | Indicates whether force Q-tag forwarding is enabled |
| Oper Group | Displays the operational group for this service |
| Identifier | Displays the service access (SAP) and destination (SDP) points |
| Type | Displays the signaling protocol used to obtain the ingress and egress labels used in frames transmitted and received on the SDP |
| AdmMTU | Displays the largest service frame size (in octets) that can be transmitted through this SDP to the far-end ESR, without requiring the packet to be fragmented |
| OprMTU | Displays the operational MTU of the SAP or SDP bind |
| Admin State (Adm) | Displays the administrative state |
| Oper State (Opr) | Displays the operation state |

| Label | Description |
|--------------------|---|
| PBB Tunnel Point | Displays the endpoint in the B-VPLS environment where the Epipe terminates |
| Admin MTU | Displays the B-VPLS admin MTU |
| Backbone-Flooding | Indicates whether traffic is flooded in the B-VPLS for the destination instead of unicast. If the backbone destination MAC is in the B-VPLS FDB, it is unicast. |
| ISID | Displays the 24 bit field carrying the service instance identifier associated with the frame. It is used at the destination PE as a demultiplex or field. |
| Router Oper State | Displays the operational state of the router |
| Route Dist. | Displays the route distinguisher (RD) type |
| VPRN Type | Displays the VPRN type |
| Oper Route Dist | Displays the IP address of the operational RD |
| Oper RD Type | Displays the operational RD type |
| AS Number | Displays the AS number |
| Router Id | Displays the router ID |
| ECMP | Displays the status of ECMP |
| ECMP Max Routes | Displays the maximum ECMP routes |
| Max IPv4 Routes | Displays the maximum IPv4 routes |
| Local Rt Domain-id | Displays the local route domain ID |

show router segment-routing-v6 base-routing-instance

Description

This command displays SRv6 Base routing instances.

Parameters

locator-name

Specifies the locator or micro-segment locator name, up to 64 characters.

end-x

Displays the End.X SID function associated with a P2P interface.

end-dt4

Displays the End.DT4 function associated with the Base routing instance.

end-dt6

Displays the End.DT6 function associated with the Base routing instance.

end-dt46

Displays the End.DT46 function associated with the Base routing instance.

end

Displays the End SID function of a locator.

ua

Displays the uA SID function associated with a P2P interface.

udt4

Displays the uDT4 function associated with the Base routing instance.

udt6

Displays the uDT6 function associated with the Base routing instance.

udt46

Displays the uDT46 function associated with the Base routing instance.

bcg *card-slot-number* [**ingress** | **egress**]

Context

[[Tree](#)] (show>qos bcg)

Full Context

show qos bcg

Description

The **show qos bcg** command outputs the current and historical visitation time associated with the specified BCG name.

A Burst Control Group (BCG) represents a list of queues that share the same non-scheduling PIR and CIR bucket target update interval. When a queue's scheduled rate bursts above its PIR bucket depth, the queue is removed from its scheduling context. The system uses a BCG in order to visit the queues PIR bucket to periodically drain an appropriate amount from the bucket. When the bucket has been drained below the PIR bucket threshold, the queue is allowed back onto its scheduling context. The amount decremented from the bucket is a function of the amount of time that has elapsed since the last bucket update and the queue's shaping rate (PIR). If the queue's shaping rate is configured as 1 Mb/s and 1 ms has elapsed since the last bucket update, the system decrements the PIR bucket by 125 bytes. One caveat is that the bucket cannot be decremented past a depth of 0. This fact drives how the system chooses which BCG is used to manage the queue bucket update interval.

If a queue's shaping rate is 1 Mb/s and the threshold (burst limit) is set to 10 kbytes, the maximum amount of time that can expire before the queue is updated without resulting in a negative bucket depth is 81.92 ms. This can be calculated by taking the number of bits represented by the bucket depth (10 kbytes = 10 * 1,024 * 8 = 81,920 bits) and dividing it by the rate (81,920 bits / 1,000,000 bits per second = 81.92 ms). The queue is not removed from the scheduler until the PIR bucket depth has equaled or exceeded the configured burst threshold, so the bucket is at least 10 kbytes deep. If the system visits the queue PIR bucket within 81.92 ms, the resulting decrement operation leaves the bucket. If the system takes longer than 81.92 ms, the decrement result will be greater than 10 kbytes and part of the decrement result is lost.

The net result is that, because of less than timely updates, the queue will not be returned to the scheduler context fast enough and some shaping bandwidth for the queue will be lost (underrun the shaping rate).

Each FP2- and FP3-based Q-chip maintains eight BCGs, each targeting a certain queue bucket visitation time. A 1 s, 40 ms, 20 ms, 10 ms, 5 ms, 1 ms, 500 μ s, and 100 μ s BCG is supported. An FP4-based Q-chip has an additional four BCGs with target visitation times of 50 μ s, 10 μ s, 5 μ s, and 1 μ s. By default, queues are placed in a BCG based on shaping rate and the queue's burst limit (PIR threshold depth) is set based on the BCG visitation time and the queue's specified shaping rate.

When explicit burst-limit threshold values are defined for a shaping queue, the system picks an appropriate BCG based on the queue's configured shaping rate and the explicit threshold to find a BCG with the best target visitation time that results in worst-case decrement values that are less than the configured threshold. However, when a queue is placed on a 'faster' BCG, more visitation resources are consumed and it is possible that the system will not meet a queue's decrement constraints.

The **show qos bcg** command allows visibility into a BCG's historic and current visitation time. The system samples the amount of time it takes each list to visit each of its associated queues once each second and stores the last 10 samples. It also keeps the longest visitation time seen since the last time the BCG statistics were cleared, the longest visitation time for the current queue-to-BCG lists associations, calculated longest visitation time based on maximum scheduling bandwidth, and the longest visitation time for an optionally defined scheduling rate.

With each sample, the system indirectly calculates the amount of scheduling bandwidth based on how many Q-chip resources were diverted from BCG visitation processing. This calculated scheduling bandwidth is used to evaluate the worst-case visitation times for each BCG. The calculated scheduling bandwidth value is stored with the longest-seen-visitiation time and the longest-seen-visitiation time with the current queue-to-BCG mappings. This is not applicable to an FP4-based Q-chip, so the **exp-util-bw** parameter is not applicable to an FP4-based Q-chip.

Parameters

Burst-Control-Group-name

Specifies which globally unique Burst Control Group to display. If the specified Burst Control Group does not exist, the show command will fail.

Values <slot>/<fp>-< target-visitiation-time>[-<direction>]

slot - 1 to 20

fp - 1 to 8

target-visitiation-time -1 μ s, 5 μ s, 10 μ s, 50 μ s, 100 μ s, 500 μ s, 1ms, 5ms, 10ms, 20ms, 40ms, 1s

direction - i, e

member-queues

Includes a list of all queues attached to the specified burst-control-group-name. The 100% scheduling bandwidth used in the 'at-risk' determination may be overridden with a specified scheduling bandwidth by using the exp-util-bw parameter. When the **member-queues** parameter is specified, the output includes a single-entry summary of the internal queues.

exp-util-bw mega-bits-per-second

Displays a calculated worst-case visitation rate for the specified BCG name based on the specified value of *megabits-persecond* which also modifies the member queue's 'at-risk' state output. This parameter is not applicable to FP4-based hardware which has dedicated internal resources for handling BCG visitations and is unaffected by scheduling bandwidth.

Values 0 to 4294967

port *port-id*

Specifies that the system should find and display the BCG and calculate the slowest accurate visitation time for the queues associated with the specified *port-id*. If the specified *port-id* does not exist, the show command will fail.

Values Up to 17 characters

sap *sap-id*

Specifies that the system should find and display the BCG and calculate the slowest accurate visitation time for the queues associated with the specified *sap-id*. If the specified *sap-id* does not exist, the show command will fail.

Values Up to 64 characters

subscriber *sub-ident*

Specifies that the system should find and display the BCG and calculate the slowest accurate visitation time for the queues associated with the specified *sub-ident*. If the specified *sub-ident* does not exist, the show command will fail.

Values Up to 32 characters

access-queue-grp *queue-group-name*

Specifies that the system should find and display the BCG and calculate the slowest accurate visitation time for the queues within the specified *queue-group-name*. If the specified *queue-group-name* is not found, the show command will fail.

Values Up to 32 characters

service *service-id*

Specifies that the system should find and display the BCG and calculate the slowest accurate visitation time for the queues associated with the specified *service-id*. If the specified *service-id* does not exist, the show command will fail.

Values 1 to 2147483647

card-slot-number

Specifies that the system should find and display the BCG and calculate the slowest accurate visitation time for all queues associated with the specified *card-slot-number*. If the specified *card-slot-number* does not exist, the show command will fail.

Values 1 to 40

[*ingress* | *egress*]

The **ingress** and **egress** keywords specify the direction to display and are mutually exclusive.

show router segment-routing sr-policies bgp

Description

This command displays the traffic statistics of all or a filtered set of the BGP policies, or displays summary parameters.

Parameters

color

Filters on the color.

Values 0 to 4294967295

ipv4-address | *ipv6-address*

Filters on the end-point IPv4 or IPv6 address.

Values *ipv4-address* — a.b.c.d
ipv6-address — x:x:x:x:x:x:x (eight 16-bit pieces) or x:x:x:x:x:d:d:d
x — [0 to FFFF]H
d — [0 to 255]D

preference-id

Filters on the preference ID.

Values 0 to 4294967295

distinguisher-id

Filters on the distinguisher ID.

Values 0 to 4294967295

summary

Displays the summary information for the BGP policies.

Platforms

bgp-evpn

Syntax

bgp-evpn

Context

[\[Tree\]](#) (show>service>id bgp-evpn)

Full Context

show service id bgp-evpn

Description

This command displays the **bgp-evpn** configured parameters for a specified service, including the administrative status of VXLAN, the configuration for **mac-advertisement** and **unknown-mac-route**, as well as the **mac-duplication** parameters. The command displays the duplicate MAC addresses that **mac-duplication** has detected.

This command also displays whether the **ip-route-advertisement** command (and the **incl-host** parameter) is enabled. If the service is BGP-EVPN MPLS, the command also displays the parameters corresponding to EVPN-MPLS.

Platforms

All

Output

The following is an example of BGP EVPN information.

bgp-evpn

Syntax

bgp-evpn [ethernet-segment]

bgp-evpn ethernet-segment name *name* [**all**] [**evi** *evi*] [**isid** *isid*]

Context

[\[Tree\]](#) (show>service>system bgp-evpn)

Full Context

show service system bgp-evpn

Description

This command displays all the information related to the base EVPN instance, including the base RD used for Ethernet Segment (ES) routes, the ESs or individual ES information.

Parameters

ethernet-segment

Displays information for ES.

name

Specifies the name of an ES, up to 32 characters.

all

Displays all available information for the specified ES.

evi

Displays information for the specified EVI.

Values 1 to 65535

isid

Displays information for the specified ISID.

Values 1 to 16777215

Platforms

All

Output

The following output is an example of service system BGP EVPN information, and [Table 50: BGP EVPN Output Fields](#) describes the output fields.

Table 50: BGP EVPN Output Fields

| Label | Description |
|-------------------------|---|
| Eth Seg Route Dist | Specifies the ES Route Distinguisher. |
| Eth Seg Oper Route Dist | Specifies the operational ES Route Distinguisher. |

| Label | Description |
|------------------------------|---|
| Eth Seg Oper Route Dist Type | Specifies the operational ES Route Distinguisher type. |
| Ad Per ES Route Target | Specifies the AD per-ES route target. |
| Leaf Label | Specifies the leaf label. |
| Alloc Leaf Label | Specifies the allocated leaf label. |
| Leaf Label Value | Specifies the leaf label value. |
| EVI RT set Route Dist. | Specifies the EVI RT set range. |
| Extended Evi Range | Specifies the EVI extended range status. |
| Mcast Leave Sync Prop | Specifies the multicast leave synchronization propagation time. |
| Attribute Uniform Prop | Specifies the attribute uniform propagation configuration. |
| BGP Path Selection | Specifies the configuration of the BGP Path Selection. |

Description

This command displays BGP-Link State (BGP-LS) routes.

Parameters

hunt

Displays detailed information about the routes, including information about the advertised routes (RIB-OUT).

node

Displays BGP-LS link NLRI routes.

link

Displays BGP-LS node NLRI routes.

ipv4-prefix

Displays BGP-LS IPv4-prefix NLRI routes.

ipv4-prefix/prefix-length

Displays the entries matching the specified IPv4 prefix and length.

| Values | | |
|---------------------|--|-------------------------------|
| ipv4-prefix: | | a.b.c.d (host bits must be 0) |
| ipv4-prefix-length: | | 0 to 32 |

Platforms

All

Output

The following outputs are examples of information displayed by the **bgp-ls** command.

Output Sample

```
# show router bgp routes bgp-ls

6.15 bgp-multi-homing

bgp-multi-homing

Syntax

bgp-multi-homing

Context

[Tree] (show>redundancy bgp-multi-homing)

Full Context

show redundancy bgp-multi-homing

Description

This command displays BGP multi-homing information.

Platforms

All

6.16 bgp-nh-info

bgp-nh-info

Syntax

bgp-nh-info [**location** *location-id*] [**bgp-nh** *ip-address*]

Context

[\[Tree\]](#) (show>router>bgp>orr bgp-nh-info)

Full Context

show router bgp optimal-route-reflection bgp-nh-info

Description

This command displays the calculated IGP cost from a particular location ID to all prefixes containing BGP next-hop addresses.

Parameters

location-id

Specifies the ORR location identifier.

| | |
|---------------|--------------------------------|
| Values | 1 to 16 (7750 SR-12, VSR) |
| | 1 to 255 (all other platforms) |

ip-address

Specifies the IPv4 or IPv6 BGP next-hop address.

| | | |
|---------------|---------------|-----------------------------------|
| Values | ipv4-address: | a.b.c.d. |
| | ipv6-address: | x:x:x:x:x:x (eight 16-bit pieces) |
| | | x:x:x:x:x:d.d.d.d |
| | | x: [0 to FFFF]H |

d: [0 to 255]D

Platforms

All

Output

The following table describes the command output fields for the **show router bgp optimal-route-reflection bgp-nh-info** command output.

Table 52: ORR bgp-nh-info Fields

| Label | Description |
|--------------|--|
| Next Hop Loc | The address of the next-hop location. |
| Dest-Prefix | Displays the longest prefix match for the BGP next-hop address from the point of view of a specific location. Displays "unreachable" if no route exists to the BGP next-hop from the location. |
| DB-Source | Displays the source of the reachability information in the TE database. |
| Type | Displays the type of route or reachability, either intra-area or inter-area. |
| Proto | Displays the source protocol that is providing reachability to the BGP next-hop address. |
| Metric | Displays the IGP cost to reach the BGP next-hop from the location reference point. |
| Preference | Displays the routing preference of the route that is providing reachability to the BGP next-hop address. This is derived from standard protocol preference values. |

Sample Output

```
*A:Dut-C# show router bgp optimal-route-reflection bgp-nh-info

bgp-route-distinguisher ad-evi-rt-set

bgp-route-distinguisher system

Context

[Tree] (show>service>system bgp-route-distinguisher)

Full Context

show service system bgp-route-distinguisher

Description

This command displays the BGP operational route distinguishers (RDs) used by all the BGP-enabled services in the system. The information can be filtered by service: VPRN, VPLS, or Epipe. The output can also be filtered to show only the relevant RD information related to services (**svc**), or the EVPN Auto-Discovery routes (**ad-evi-rt-set**), or the system RDs (**system**).

Platforms

All

Output

The following is an example of service BGP RD information.

```
Auto-rd <none>
Ethernet-segment <none>
EVI RT Set RD Range 1.2.3.6:1-1.2.3.6:512 configured
// the above is the case when the "Extended Evi Range" is disabled.
// When enabled :it is "1.2.3.6:1-1.2.3.6:65535"
```

Sample Output

```
*A:PE-2# show service system bgp-route-distinguisher

6.23 bin-group-using

bin-group-using

Syntax

bin-group-using [**bin-group** *bin-group-number*]

Context

[\[Tree\]](#) (show>oam-pm bin-group-using)

Full Context

show oam-pm bin-group-using

Description

Show the list of sessions configured against one or all OAM Performance Monitoring bin groups.

Parameters

bin-group-number

Specifies an OAM Performance Monitoring bin group.

Values 1 to 255

Platforms

All

Output

The following is an example of OAM-PM bin group session information.

Sample Output

```
show oam-pm bin-group-using
=====
OAM Performance Monitoring Bin Group Configuration for Sessions
=====
Bin Group      Admin  Session                               Session State
-----
2              Up    vpls1000-PM-AL5-1/1/9:1000.1000      Act
-----
3              Up    vpls1000-PM-YL4-1/1/9:1000.1000      Act
-----
Admin: State of the bin group
Session State: The state of session referencing the bin-group

show oam-pm bin-group-using bin-group 2

6.24 binding-label

binding-label

Syntax

binding-label [*label*] [*detail*]

binding-label [*label*] **egress-stats**

binding-label [*label*] **ingress-stats**

Context

[\[Tree\]](#) (show>router>mpls>forwarding-policies binding-label)

Full Context

show router mpls forwarding-policies binding-label

Description

This command displays the MPLS forwarding policy binding label information.

Parameters

label

Specifies the label value.

Values 32 to 1048575

detail

Displays detailed information of the binding label.

egress-stats

Displays the egress statistics, if any, of all the instances of the specified forwarding policy.

ingress-stats

Displays ingress statistics information.

Platforms

All

Output

[Table 53: MPLS Binding Label Output Fields](#) describes MPLS binding label output fields.

Table 53: MPLS Binding Label Output Fields

| Label | Description |
|-----------------------|--|
| Label | Specifies the label number. |
| Preference | Specifies the preference. |
| Oper State | Specifies the operational state (up down). |
| Policy Name | Specifies the MPLS forwarding policies binding label name. |
| No. of Binding Labels | Specifies the number of binding labels. |
| OperDown Reason | Specifies the reason for being operationally down. |
| Down Time | Specifies the downtime date and time. |

| Label | Description |
|-----------------|---|
| NumNextHop Grps | Specifies the number of next-hop groups. |
| Ingress Stats | Specifies if ingress stats are enabled for collection (disabled enabled). |
| IngOperState | Specifies the ingress operational state (up down) |
| Revert Timer | Specifies the revert timer value. |
| Retry Count | Specifies the retry count. |
| Next Retry In | Specifies the next retry value. |
| Next-hop Group | Specifies the next-hop group. |
| Resolution Type | Specifies the resolution type (direct indirect). |
| Num Revert | Specifies the number of reverts. |
| Num Failover | Specifies the number of failovers. |
| Next Revert In | Specifies the next revert interval. |
| Primary nexthop | Specifies the IP address of the primary next-hop. |
| Resolved | Specifies the resolved status (false true). |
| NHopDown Reason | Specifies the reason for the next-hop down. |
| Backup nexthop | Specifies the IP address of the backup next-hop. |
| StatsOperState | Specifies if a statistic index is allocated to the next-hop. |
| EgrStatsState | Specifies if all next-hops have a statistic index allocated. |

Sample Output

```

binding-label

Syntax

binding-label *label* **ingress-stats** [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**]

Context

[Tree] (monitor>router>mpls>forwarding-policies binding-label)

Full Context

monitor router mpls forwarding-policies binding-label

Description

This command monitors statistics for Forwarding Policy Binding Label.

Parameters

label

Specifies the label value.

Values 32 to 1048575

ingress-stats

Displays ingress statistics information.

seconds

Configures the interval for each display in seconds.

Values 3 to 60

Default 10

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

Platforms

All

binding-label

Syntax

binding-label *label* **ingress-stats**

Context

[Tree] (clear>router>mpls>forwarding-policies binding-label)

Full Context

clear router mpls forwarding-policies binding-label

Description

This command clears or resets statistics for the MPLS forwarding policy binding label.

Parameters

label

Specifies the label value.

Values 32 to 1048575

ingress-stats

Displays ingress statistics information.

Platforms

All

6.25 bindings

bindings

Syntax

bindings [**mac** *ieee-address*]

Context

[\[Tree\]](#) (show>subscr-mgmt>vrgw>brg>gateway bindings)

Full Context

show subscriber-mgmt vrgw brg gateway bindings

Description

This command lists all the DHCP bindings of the local pool associated with the specified BRG. If the MAC attribute is specified, only the binding for that MAC address is displayed.

Parameters

ieee-address

specifies the MAC address identifying a specific binding.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of BRG gateway binding information.

Sample Output

```

Node# show subscriber-mgmt brg gateway brg-id "00:00:00:00:00:05" bindings
=====

6.26 bluetooth

bluetooth

Syntax

bluetooth [**device-mac** [*ieee-address*] | **module** [*cpm-slot*]]

Context

[Tree] (show>system bluetooth)

Full Context

show system bluetooth

Description

This command displays detailed information about the Bluetooth configuration on the CPM or chassis.

Parameters

ieee-address

Specifies the source MAC address.

Values xx:xx:xx:xx:xx:xx or xx-xx-xx-xx-xx-xx

cpm-slot

Specifies the CPM slot.

Values A , B, C, D

Platforms

7750 SR-1, 7750 SR-s, 7950 XRS-20e

Output

The following is an example of Bluetooth configuration information. [Table 54: System Bluetooth Field Descriptions](#) describes the output fields.

Sample Output

```
*A:bkvm18>show>system# bluetooth
=====
System-wide Bluetooth Configuration

Table 54: System Bluetooth Field Descriptions

| Label | Description |
|---------------------|---|
| Passkey | The Bluetooth passkey in use by the system. |
| Advertising Timeout | The amount of time the Bluetooth will advertise that it is ready to pair. |
| Power State | The operating mode for Bluetooth. |
| Pairing Button | Displays whether the pairing button is enabled for use. |
| Device | The MAC address of the Bluetooth device. |
| Description | The customer-entered description for the Bluetooth device. |
| Module | Displays which CPM module contains the Bluetooth device. |
| Connected Device | Displays if there is a device actively paired to the module. |
| Device MAC | The MAC address of the Bluetooth device connected to the module. |

| Label | Description |
|------------------------|---|
| Device Description | The description associated with the connected Bluetooth device. |
| Configured Identifier | The customer-defined Bluetooth identifier for the module. |
| Operational Identifier | The Bluetooth identifier in use for the module. |

6.28 bof

bof

Syntax

bof [*cflash-id* | **booted**]

Context

[\[Tree\]](#) (show bof)

Full Context

show bof

Description

This command displays the Boot Option File (BOF) executed on last system boot or on the specified device.

If no device is specified, the BOF used in the last system boot displays. If the BOF has been modified since the system boot, a message displays.

Note:

This command is not available in the MD-CLI. Use the MD-CLI **admin show configuration bof** command or the **info** command in the bof configuration region.

Parameters

cflash-id

Displays the cflash directory name. The slot name is not case-sensitive. Use upper or lowercase "A" or "B" for the slot name.

Values cf1:, cf1-A:, cf1-B:, cf2:, cf2-A:, cf2-B:, cf3:, cf3-A:, cf3-B:

booted

displays the boot option file used to boot the system.

Platforms

All

Output

The following output is an example of BOF, and [Table 55: Show BOF Output Fields](#) describes the output fields.

Sample Output

```

Table 55: Show BOF Output Fields

| Label | Description |
|------------------|---|
| primary-image | The primary location of the directory that contains the runtime images of both CPM and XCM/IOM. |
| primary-config | The primary location of the file that contains the configuration. |
| primary-dns | The primary DNS server for resolution of host names to IP addresses. |
| secondary-image | The secondary location of the directory that contains the runtime images of both CPM and XCM/IOM. |
| secondary-config | The secondary location of the file that contains the configuration. |
| secondary-dns | The secondary DNS server for resolution of host names to IP addresses. |

| Label | Description |
|-------------------------|--|
| tertiary-image | The tertiary location of the directory that contains the runtime images of both CPM and XCM/IOM. |
| tertiary-config | The tertiary location of the file that contains the configuration. |
| address | The IP address and mask associated with the CPM Ethernet port or the secondary CPM port. |
| tertiary-dns | The tertiary DNS server for resolution of host names to IP addresses. |
| persist | on — Persistent indexes between system reboots is enabled. off — Persistent indexes between system reboots is disabled. |
| wait | The time configured for the boot to pause while waiting for console input. |
| autonegotiate | no autonegotiate — Autonegotiate not enabled. autonegotiate — Autonegotiate is enabled. |
| duplex | half — Specifies that the system uses half duplex. full — Specifies that the system uses full duplex. |
| speed | The speed of the CPM Ethernet interface. |
| console speed | The console port baud rate. |
| dns domain | The domain name used when performing DNS address resolution. |
| uplinkA-address | Displays the Uplink-A IP address. |
| uplinkA-port | Displays the primary port to be used for auto-boot. |
| uplinkA-route | Displays the static route associated with Uplink-A. |
| uplinkA-vlan | Displays the VLAN ID to be used on Uplink-A. |
| uplinkB-address | Displays the Uplink-B IP address. |
| uplinkB-port | Displays the secondary port to be used for auto-boot. |
| uplinkB-route | Displays the static route associated with Uplink-B. |
| uplinkB-vlan | Displays the VLAN ID to be used on Uplink-B. |
| uplink-mode | Displays the uplink mode of the device. |
| no-service-ports | Displays the ports on which service traffic is not processed. |
| use-expansion-card-type | The expansion card type. |

| Label | Description |
|----------------|--|
| system-profile | The system profile used by the system when it is rebooted. |

6.29 bonding

bonding

Syntax

bonding [detail]

bonding bonding-id *bonding-id* [detail]

Context

[\[Tree\]](#) (show>service bonding)

Full Context

show service bonding

Description

This command displays an overview of active bonding contexts and the associated access connections. When a bonding ID is specified, only information for that specific context is displayed.

Parameters

bonding-id

Specifies the ID of a specific bonding context.

detail

Displays additional detailed bonding settings, such as load-balancing.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following is an example of bonding information.

Sample Output

```
Node# show service bonding
=====
Bonding Summary
=====
-----
Bond1 - svc:40 - itf:grp_itf_bonding
-----

6.34 brief

brief

Syntax

brief

Context

[Tree] (show>router>bgp>routes brief)

Full Context

show router bgp routes brief

Description

This command displays summary information about the BGP routes.

brief is a parameter of the **show router bgp routes** command. Depending on the parameters that are used to issue the command, the output can display a narrower or wider set of routes, including routes belonging to other address families. See the **show router bgp routes** command description for syntax variants, parameter descriptions and values, and output examples.

6.37 bypass-tunnel

bypass-tunnel

Syntax

```
bypass-tunnel [to ip-address] [protected-lsp [ name]] [dynamic | manual | p2mp] [detail] [lsp-name  
  session-name]
```

Context

[\[Tree\]](#) (show>router>mpls bypass-tunnel)

Full Context

```
show router mpls bypass-tunnel
```

Description

If fast reroute is enabled on an LSP and the facility method is selected, instead of creating a separate LSP for every LSP that is to be backed up, a single LSP is created which serves as a backup for a set of LSPs. Such an LSP tunnel is called a bypass tunnel.

Parameters

ip-address

Specifies the IP address of the egress router.

name

Specifies the name of the LSP protected by the bypass tunnel up to 160 characters. "*" is accepted as a wild card character.

dynamic

Displays dynamically-assigned labels for bypass protection.

manual

Displays manually-assigned labels for bypass protection.

detail

Displays detailed information.

p2mp

Displays P2MP bypass tunnel information.

session-name

Specifies the session name, up to 160 characters, of the LSP used in the path. "*" can be used as a wildcard character.

Platforms

All

Output

The following output is an example of MPLS bypass tunnel information.

[Table 56: MPLS Bypass Tunnel Output Fields](#) describes MPLS bypass tunnel output fields.

Table 56: MPLS Bypass Tunnel Output Fields

| Label | Description |
|--------------------|---|
| To | The IP address of the egress router. |
| State | The LSP's administrative state. |
| Out I/F | Specifies the name of the network IP interface. |
| Out Label | Specifies the incoming MPLS label on which to match. |
| Reserved BW (kb/s) | Specifies the amount of bandwidth in Mb/s reserved for the LSP. |

Sample Output

```

7.2 cache

cache

Syntax

cache [peer *ip-address*] [group *ip-address*] [source *ip-address*] [originrp *ip-address*]

Context

[\[Tree\]](#) (clear>router>msdp cache)

Full Context

clear router msdp cache

Description

This command clears the MSDP cache.

Parameters

peer *ip-address*

Clears the cache of the IP address of the peer to which Multicast Source Discovery protocol (MSDP) source-active (SA) requests for groups matching this entry's group range were sent.

group *ip-address*

Clears the group IP address of the SA entry.

source *ip-address*

Clears the source IP address of the SA entry.

originrp *ip-address*

Clears the origin rendezvous point (RP) address type of the SA entry.

Platforms

All

cache

Syntax

cache aggregate {src-dst-proto | src-dst-proto-port} family {ipv4 | ipv6}

cache all family {ipv4 | ipv6}

Context

[\[Tree\]](#) (tools>dump>cflowd cache)

Full Context

tools dump cflowd cache

Description

This command displays the contents of the cflowd active cache. This information can be displayed either in raw form where every flow entry is displayed or in an aggregated form.

[Table 57: Tools Dump cflowd Cache Output Fields](#) describes the cflowd cache output fields.

Table 57: Tools Dump cflowd Cache Output Fields

| Label | Description |
|----------------------------|---|
| Proto/Protocol | Displays the IPv4 or IPv6 protocol type |
| Source Address/Src-IP | Displays the source IP address of the flow (IPv4 or IPv6) |
| Destination Address/Dst-IP | Displays the destination IP address of the flow (IPv4 or IPv6) |
| Intf/Ingr | Displays the ingress interface associated with the sampled flow (only displayed with the raw (all) output) |
| Intf/Egr | Displays the egress interface associated with the sampled flow (only displayed with the raw (all) output) |
| S-Port | Displays the source protocol port number |
| D-Port | Displays the destination protocol port number |
| Pkt-Cnt | Displays the total number of packets sampled for the associated flow |
| Byte-Cnt | Displays the total number of bytes of traffic sampled for the associated flow |
| Start-Time | Displays the system time when the first packet was sampled for the associated flow |
| Flags | Displays the IP flag value from the sampled IP flow header (only displayed with the raw (all) output) |
| ToS | Displays the ToS byte values from the sampled IP flow header (only displayed with the raw (all) output) |
| (Src) Mask | Displays the IP route mask for the route to the flow source IP address associated with the flow (only displayed with the raw (all) output) |
| (Dst) Mask | Displays the IP route mask for the route to the flow destination IP address associated with the flow (only displayed with the raw (all) output) |
| (Src) AS | Displays the ASN associated with the route to the flow source IP address associated with the flow (only displayed with the raw (all) output) |
| (Dst) AS | Displays the ASN associated with the route to the flow destination IP address associated with the flow (only displayed with the raw (all) output) |

| Label | Description |
|---------|--|
| vRtr-ID | Displays the Virtual Router ID associated with the reported IP flow (only displayed with the raw (all) output) |

Parameters

aggregate

Displays the aggregated active cache flow data.

Values src-dst-proto — Aggregates the active flow cache based on the source and destination IP address and the IP protocol value.

src-dst-proto-port — Aggregates the active flow cache based on the source and destination IP address, IP protocol value, and the source and destination port numbers.

family

Specifies which IP address family flow data should be displayed.

Values ipv4 — Displays the IPv4 flow data.

ipv6 — Displays the IPv6 flow data.

all

Displays the raw active cache flow data with no aggregation.

Platforms

All

7.3 cache-contents

cache-contents

Syntax

cache-contents [*isa mda-id/esa-vm-id*] *url file-url*

Context

[Tree] (tools>dump>app-assure>group>ipassist cache-contents)

Full Context

tools dump application-assurance group ip-identification-assist cache-contents

Description

This command dumps the cache contents generated by the IP identification assist feature into a local or remote destination.

Parameters

isa *mda-id*

Specifies the slot and MDA of the ISA in the format *slot/mda*.

| Values | |
|-----------------|-------------------------------------|
| <i>slot/mda</i> | |
| <i>slot</i> | 1 to 10, depending on chassis model |
| <i>mda</i> | 1 to 2, depending on chassis model |

isa *esa-vm-id*

Specifies the ESA and ESA VM in the format *esa-esa-id/vm-id*.

| Values | |
|-------------------------|---------|
| <i>esa-esa-id/vm-id</i> | |
| <i>esa-id</i> | 1 to 16 |
| <i>vm-id</i> | 1 to 4 |

url *file-url*

Specifies a local or remote destination to which the cache content output is directed.

| Values | |
|-------------------------------|--|
| <i>local-url remote-url</i> | |
| <i>local-url</i> | <i>[cflash-id]/file-path</i> 200 characters maximum, including <i>cflash-id</i> directory length 99 characters maximum each |
| <i>remote-url</i> | {ftp tftp}://[login:pswd@]remote-locn/[filepath] 255 characters maximum, <i>filepath</i> 199 characters maximum |
| <i>remote-locn</i> | {hostname ipv4-address ["ipv6-address"]}[:port] |
| <i>ipv4-address</i> | a.b.c.d |
| <i>ipv6-address</i> | x:x:x:x:x:x[-interface] x:x:x:x:x:d.d.d[-interface] x - [0 to FFFF]H d - [0 to 255]D |
| <i>port</i> | interface - 32 characters maximum, for link local addresses [0 to 65535] |

cflash-id

cf1: | cf1-A: | cf1-B: | cf2: | cf2-A: | cf2-B: | cf3: | cf3-A: | cf3-B:

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

Use the following command to direct the cache contents generated by the IP identification assist feature to a remote destination.

```
tools dump application-assurance group 1 ip-identification-assist cache-contents isa 1/1 url
ftp://exuser:expassword@192.0.2.1/tmp/sample-cache
```

Sample Output

7.4 calculate-maps

calculate-maps

Syntax

calculate-maps **router** *router-instance* **subscriber-type** *nat-sub-type* **prefix** *ip-prefix/length*

Context

[\[Tree\]](#) (tools>perform>nat>deterministic calculate-maps)

Full Context

tools perform nat deterministic calculate-maps

Description

This command allows the operator to reveal the auto-mappings before they are created in the system, while the inside prefix is still out of service (in a **shutdown** administrative state). Based on the auto-mapping results, the user can decide to use the auto-mapping and operationalize the prefix (**no shutdown** command), or to use custom mappings.

The inside IP addresses for deterministic subscribers and for 1:1 protocol agnostic subscribers can be mapped to outside IP addresses in the following ways:

- Automatically by the system. By enabling the deterministic prefix (**no shutdown** command), the system will automatically create map commands and sequentially map subscribers into outside IP address space.
- Manually by the operator by configuring the map commands. This gives the operator control over mappings beyond the sequential auto-mapping.

Parameters

router-instance

Specifies the inside router name or VPRN service instance where the deterministic prefix resides.

Values <router-name> | <vprn-svc-id>
 router-name — "Base"
 vprn-svc-id — 1 to 2147483647

nat-sub-type

Specifies the NAT subscriber type.

Values classic-lsn-sub, dslite-lsn-sub

ip-prefix/length

Specifies the inside prefix containing IP addresses for which mapping is sought. The IP prefix is IPv4 family type for classic LSN subscriber and IPv6 family type for a DS-Lite subscriber.

Values

| | |
|------------------------------|--|
| <ip-prefix/ip-prefix-length> | <ipv4-prefix>/<ipv4-prefix-length> <ipv6-prefix>/<ipv6-prefix-length> |
| <ipv4-prefix> | a.b.c.d (host bits must be 0) |
| <ipv4-prefix-length> | 0 to 32 |
| <ipv6-prefix> | x:x:x:x:x:x (eight 16-bit pieces) x:x:x:x:x:d.d.d.d |
| | x - [0 to FFFF]H d - [0 to 255]D |
| <ipv6-prefix-length> | [0 to 128] |

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Full Context

clear call-trace

Description

This command clears call trace jobs.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

7.6 cam-utilization

cam-utilization

Syntax

cam-utilization [**card** *slot-number*]

Context

[\[Tree\]](#) (tools>dump>filter cam-utilization)

Full Context

tools dump filter cam-utilization

Description

This command, when used without parameters, specifies the utilization per CAM table for line card ACL filters per FP for FP4 based cards in the system. Optionally, the card number can be provided as a parameter to limit the output to a single card.

Parameters

slot-number

Specifies the IOM slot number.

Values 1 to 10, **A**, **B**

Platforms

All

Output

The following output is an example of CAM utilization information for filters.

Sample Output

```
*A:7750# tools dump filter cam-utilization
=====
Filter Cam Utilization
=====
Slot FP  Dir  Type      Cam Utilization %
-----
2    1   Ing  ip-mac           0
2    1   Egr  ip-mac          100
2    1   Ing  ipv6             0
2    1   Egr  ipv6             0
=====
```

7.7 candidate

candidate

Syntax

candidate

Context

[\[Tree\]](#) (show>system candidate)

Full Context

show system candidate

Description

This command shows classic CLI candidate configuration information.

Note:

This command is not available in the MD-CLI. Use the MD-CLI **info** command in a configuration region.

Platforms

All

Output

The following output is an example of candidate information, and [Table 58: Candidate Output Fields](#) describes the output fields.

Sample Output

```
*A:bksim3107# show system candidate
=====
Candidate Config Information
=====
Candidate configuration state      : modified
Num editors/viewers               : 0
Candidate cfg exclusive locked    : no
Last commit state                 : revert-failed
Last commit time                  : 10/23/2012 17:21:47
Checkpoint created with last commit : yes
Scheduled revert time             : N/A
Last commit revert time           : 10/23/2012 17:22:47

Table 58: Candidate Output Fields

| Label | Description |
|-------------------------------------|--|
| Candidate configuration state | <ul style="list-style-type: none"> • empty — indicates there are no uncommitted changes in the candidate config • modified — indicates there are uncommitted changes in the candidate config • unconfirmed — indicates there are no uncommitted changes in the candidate config but the result of the last commit will be auto-reverted unless it is confirmed before the timeout expires |
| Num editors/viewers | Displays the number of CLI sessions currently in edit-cfg mode |
| Candidate cfg exclusive locked | Indicates if a user has exclusively locked the candidate using the candidate edit exclusive command |
| Last commit state | <ul style="list-style-type: none"> • none — indicates there have been no commits since the last reboot of the node • in-progress — indicates the system is currently committing the candidate config • success — indicates the last commit finished successfully • revert-pending — indicates the last commit finished successfully but has not been confirmed yet, and will be auto-reverted if it is not confirmed before the timeout expires • failed — indicates the last commit failed and has been undone • revert-in-progress — indicates the last commit finished successfully but was not confirmed in time and is currently being reverted • reverted — indicates the last commit finished successfully but was not confirmed in time and has been reverted • revert-failed — indicates the last commit finished successfully but was not confirmed in time and the system attempted to revert it but failed |
| Last commit time | Displays the time at which the last commit attempt was started |
| Checkpoint created with last commit | Indicates if a rollback checkpoint was created after the previous commit completed |
| Scheduled revert time | Indicates the currently scheduled auto-revert time based on the confirmed option being used with a candidate commit |
| Last commit revert time | Displays the time the commit was last reverted |
| Users in edit-cfg mode | Lists all the user sessions that are currently in edit-cfg mode |

| Label | Description |
|-------------|--|
| Type (from) | Indicates the type of session (such as Console, Telnet, and so on) and also the source of the session (such as the source IP address of the remote host) |

7.8 capabilities

capabilities

Syntax

capabilities [*system-id* | *lsp-id*] [**level** *level*]

Context

[Tree] (show>router>isis capabilities)

Full Context

show router isis capabilities

Description

This command displays the IS-IS capability information.

Parameters

system-id

Only the LSPs related to the specified *system-id* are listed.

lsp-id

Only the specified LSP is listed.

level

Specifies the interface level (1, 2, or 1 and 2).

Platforms

All

Output

The following output is an example of IS-IS capability information, and [Table 59: IS-IS Capability Information Output Fields](#) describes the output fields.

7.9 capture-sap

capture-sap

Syntax

capture-sap [**statistics**] *sap-id*

Context

[\[Tree\]](#) (show>service>id>dynsvc capture-sap)

Full Context

show service id dynamic-services capture-sap

Description

This command displays the status and statistics of a dynamic services capture. Statistics include counters for the number of data triggers received and data trigger drop reasons.

Note:

This command is not available in the MD-CLI.

Parameters

sap-id

Specifies the dynamic services capture SAP.

statistics

Displays data trigger receive and drop reason counters for this dynamic services capture SAP.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of capture SAP information.

Sample Output

```
# show service id 10 dynamic-services capture-sap 1/1/1:10.*
=====
Dynamic Services Capture SAP 1/1/1:10.*
=====
Dynamic services policy      : dyn-svc-1

Corresponding dynamic SAP is not created    : 0
=====
```

Table 60: Capture SAP Field Descriptions describes the Capture SAP policy fields.

Table 60: Capture SAP Field Descriptions

| Counter | Description |
|---|--|
| Data packets received by SAP | The number of dynamic service data triggers received on the capture SAP that reached the CPM. |
| No policy configured at capture SAP level | There is no dynamic-services-policy configured at the capture SAP. This is required to determine the authentication destination. |
| No authentication configured in policy | The authentication section in the specified in dynamic services policy is missing or incomplete. |
| Data-trigger already exists | A new data trigger frame is received for an existing data trigger that is authenticated, but the corresponding dynamic SAP is not yet created. The new data trigger packet is dropped. |
| Lockout is active | The data trigger for this managed SAP is currently in a lockout state due to previous authentication failures. |
| Reached data-trigger system limit | The maximum number of dynamic service data triggers supported on the system is reached. Additional data triggers are dropped. |
| No memory available | There is not enough system memory available to process the data trigger. |
| Unsuccessful authentication | The authentication for a data trigger on this capture SAP failed or timed out. |
| No data-trigger SAP-id in authentication | The dynamic services data trigger SAP ID is not provided in authentication. This is a mandatory parameter. |
| Corresponding dynamic SAP is not created | The data trigger successfully authenticated but the corresponding dynamic SAP was not created. This is typically caused by a dynamic services script error. |

capture-sap

Syntax

capture-sap [**statistics**] *sap-id*

Context

[Tree] (clear>service>id>dynsvc capture-sap)

Full Context

clear service id dynamic-services capture-sap

Description

This command clears the dynamic services capture SAP control plane statistics (data triggers received and data trigger drop reason counters).

Parameters

statistics

Clears the data trigger statistics for a capture SAP.

sap-id

Specifies the dynamic services capture SAP.

Context

[\[Tree\]](#) (show card)

Full Context

show card

Description

This command shows card information.

If no command line parameters are specified, a card summary for all cards is displayed.

Parameters

slot-number

Displays information for the specified card slot.

Values Depending on the chassis model, IOM/XCM slots are numbered from 1 to 10. CPM slots are A, B. The 7950 XRS has additional slots C, D (upper or lowercase). SFM slots are not addressed as cards. See the **show sfm** command.

cpu

Displays CPU utilization.

seconds

Displays the number of seconds over which to sample CPU task utilization.

Values 1 to 300

fp-number

Displays information for the specified forwarding plane.

Values 1 to 8

dist-cpu-protection

Displays the distributed CPU protection information.

policy-accounting

Displays the policy accounting information.

memory-pools

Displays the memory pools for the card.

state

Displays provisioned and equipped card and MDA information.

detail

Displays detailed card information.

fwd-engine

Displays forwarding engine information.

drop-reason

Displays drop reason information.

statistics

Displays statistics information.

ingress

Specifies statistics are ingress related.

egress

Specifies statistics are egress related.

tap-number

Displays the source TAP number.

Values 1 to 2

per-egress-fp-stats

Displays packet and octet statistics for unicast traffic sent from the specified FP to each destination FP. Only supported on 7750 SR-1 and 7750 SR-s platforms.

per-ingress-fp-stats

Displays packet and octet statistics for unicast traffic received by the specified FP from each source FP. Only supported on 7750 SR-1 and 7750 SR-s platforms.

queue-group

Displays queue group information.

mode

Specifies the mode in which the card will operate.

access

Displays information for the queue groups related to access mode.

network

Displays information for the queue groups related to network mode.

Platforms

All

Output Fields: show card

[Table 61: Output Field: show card](#) describes the output fields for the **show card** command.

Table 61: Output Field: show card

| Label | Description |
|------------------|--|
| Slot | The slot number of the card in the chassis. |
| Provisioned Type | The card type that is configured for the slot. Note: CPMs C and D do not appear in the summary unless the Chassis Topology is Extended (for the 7950 XRS-40). |
| Equipped Type | The card type that is actually populated in the slot. |

| Label | Description |
|-------------------|--|
| | Note: CPMs C and D do not appear in the summary unless the Chassis Topology is Extended (for the 7950 XRS-40). |
| Admin State | Up — The card is administratively up. Down — The card is administratively down. |
| Operational State | Up — The card is operationally up. Down — The card is operationally down. active — The CPM is the Active CPM for the system (actively managing the system components, processing various protocols, and so on). standby — The CPM is the Standby CPM. The standby is hot synchronized with the Active CPM. ext-actv — The CPM is operating in an Extension role in a 7950 XRS-40 system and is the active extension CPM for the chassis in which it sits. ext-stby — The CPM is operating in an Extension role in a 7950 XRS-40 system and is the standby extension CPM for the chassis in which it sits. |
| Comments | Active — Indicates if the CPM is the active state. Standby — Indicates if the CPM is the standby state. No SFM — Indicates no SFM is online that is usable by this card. Pwr Save — Indicates if the card is in power save mode. Lo Power — Indicates if the card is in low power mode. It is prevented from booting by power management. SFM Test — Indicates card is being held in booting because a B2B standalone SFM inter-connect test is in progress. No MDA — Indicates the card is waiting for MDAs. MDAs are either missing or failed. |

Output Fields: show card state

Table 62: Output Fields: show card state describes the output fields for the **show card state** command.

Table 62: Output Fields: show card state

| Label | Description |
|-------------------|--|
| Slot/MDA | The slot number of the card in the chassis. |
| Provisioned Type | The card type that is configured for the slot. |
| Equipped Type | The card type that is actually populated in the slot. |
| Admin State | Up — The card is administratively up. Down — The card is administratively down. |
| Operational State | Up — The card is operationally up. Provisioned — There is no card in the slot but it has been pre-configured. |
| Num Ports | The number of ports available on the MDA. |
| Num MDA | The number of MDAs installed. |
| Comments | Active — Indicates if the CPM is the active state. Standby — Indicates if the CPM is the standby state. No SFM — Indicates no SFM is online that is usable by this card. Pwr Save — Indicates if the card is in power save mode. Lo Power — Indicates if the card is in low power mode. It is prevented from booting by power management. SFM Test — Indicates card is being held in booting because a B2B standalone SFM inter-connect test is in progress. No MDA — Indicates the card is waiting for MDAs. MDAs are either missing or failed. |

Output Fields: show card <slot-number> detail (for an IOM or XCM Card)

Table 63: [Output Fields: show card <slot-number> detail \(for an IOM or XCM Card\)](#) describes the output fields for the **show card detail** command.

Table 63: *Output Fields: show card <slot-number> detail (for an IOM or XCM Card)*

| Label | Description |
|-------------------------------|---|
| Clock source | Source of clock for the IOM. Currently this parameter always displays "none". |
| Available MDA slots | The number of MDA slots available on the IOM. |
| Installed MDAs | The number of MDAs installed on the IOM. |
| FP Resource Policy | The FP resource policy for the specified FP. |
| Initial Extract Priority Mode | The scheme used to select the initial drop priority of extracted control plane traffic. uniform — Initializes the drop priority of all extracted control traffic as high priority. l3-classify — Initializes the drop priority of all Layer 3 extracted control traffic (for example, BGP or OSPF) based on the QoS classification of the packets. See "Classification-Based Priority for Extracted Protocol Traffic" in the <i>7450 ESS, 7750 SR, 7950 XRS, and VSR System Management Guide</i> for more details. |
| Part number | The IOM part number. |
| CLEI code | The Common Language Location Identifier (CLLI) code string for the router. |
| Serial number | The serial number. Not user-modifiable. |

| Label | Description |
|------------------------------|--|
| Manufacture date | The chassis manufacture date. Not user-modifiable. |
| Manufacturing string | Factory-inputted manufacturing text string. Not user-modifiable. |
| Manufacturing deviations | Displays a record of changes by manufacturing to the hardware or software that is outside the normal revision control process. |
| Administrative state | Up — The card is administratively up. Down — The card is administratively down. |
| Operational state | Up — The card is operationally up. Down — The card is operationally down. |
| Temperature | Internal chassis temperature. |
| Temperature threshold | The value above which the internal temperature must rise in order to indicate that the temperature is critical. |
| Software boot version | The version of the boot image. |
| Software version | The software version number. |
| Time of last boot | The date and time the most recent boot occurred. |
| Current alarm state | Displays the alarm conditions for the specific board. |
| Base MAC address | Displays the base MAC address of the hardware component. |
| Memory capacity | Displays the memory capacity of the card. |
| Generation | Displays the FP generation of the assembly. N/A is displayed if there is no XMA installed in the card slot. |
| Comments | Active — Indicates if the CPM is the active state. Standby — Indicates if the CPM is the standby state. No SFM — Indicates no SFM is online that is usable by this card. Pwr Save — Indicates if the card is in power save mode. Lo Power — Indicates if the card is in low power mode. It is prevented from booting by power management. SFM Test — Indicates card is being held in booting because a B2B standalone SFM inter-connect test is in progress. No MDA — Indicates the card is waiting for MDAs. MDAs are either missing or failed. |
| Network ingress queue policy | Displays the name of the network ingress queue policy applied to the FP. |

Sample Output: show card <slot-number> detail (showing CPM5 Cards)

Output Fields: show card <slot-number> detail (for a CPM)

Table 64: Output Fields: show card <slot-number> detail (for a CPM) describes the output fields for the show card detail command for a CPM card.

Table 64: Output Fields: show card <slot-number> detail (for a CPM)

| Label | Description |
|--------------------------------|---|
| Slot | The slot of the card in the chassis. |
| Card Provisioned | The CPM type that is configured for the slot. Note: CPMs C and D will not show up in the summary unless the Chassis Topology is Extended (XRS-40). |
| Card Equipped | The CPM type that is actually populated in the slot. Note: CPMs C and D will not show up in the summary unless the Chassis Topology is Extended (XRS-40). |
| Admin State | Up — The CPM is administratively up. Down — The CPM is administratively down. |
| Operational State | Up — The CPM is operationally up. Down — The CPM is operationally down. |
| Inter chassis cpm interconnect | Up — The CPM is operationally up. Down — The CPM is operationally down. |
| BOF last modified | The date and time of the most recent BOF modification. |
| Config file version | The configuration file version. |
| Config file last modified | The date and time of the most recent config file modification. |

| Label | Description |
|---------------------------|--|
| Config file last modified | The date and time of the most recent config file modification. |
| Config file last saved | The date and time of the most recent config file save. |
| CPM card status | active — The card is acting as the primary (active) CPM in a redundant system. standby — The card is acting as the standby (secondary) CPM in a redundant system. |
| Administrative state | Up — The CPM is administratively up. Down — The CPM is administratively down. |
| Operational state | Up — The CPM is operationally up. Down — The CPM is operationally down. |
| Serial number | The compact flash part number. Not user modifiable. |
| Firmware revision | The firmware version. Not user modifiable. |
| Model number | The compact flash model number. Not user modifiable. |
| Size | The amount of space available on the compact flash card. |
| Free space | The amount of space remaining on the compact flash card. |
| Part number | The CPM part number. |
| CLEI code | The code used to identify the router. |
| Serial number | The CPM part number. Not user modifiable. |
| Manufacture date | The chassis manufacture date. Not user modifiable. |
| Manufacturing string | Factory-set manufacturing text string. Not user modifiable. |
| Administrative state | Up — The card is administratively up. Down — The card is administratively down. |
| Operational state | Up — The card is operationally up. Down — The card is operationally down. |
| Time of last boot | The date and time the most recent boot occurred. |
| Current alarm state | Displays the alarm conditions for the specific board. |
| Status | Displays the current status. |
| Temperature | Internal chassis temperature. |
| Temperature threshold | The value above which the internal temperature must rise in order to indicate that the temperature is critical. |
| Software boot version | The version of the boot image. |

| Label | Description |
|-----------------|---|
| Memory capacity | The total amount of memory. |
| Comments | <p>Active — Indicates if the CPM is the active state.</p> <p>Standby — Indicates if the CPM is the standby state.</p> <p>No SFM — Indicates no SFM is online that is usable by this card.</p> <p>Pwr Save — Indicates if the card is in power save mode.</p> <p>Lo Power — Indicates if the card is in low power mode. It is prevented from booting by power management.</p> <p>SFM Test — Indicates card is being held in booting because a B2B standalone SFM inter-connect test is in progress.</p> <p>No MDA — Indicates the card is waiting for MDAs. MDAs are either missing or failed.</p> |

Output Fields: show card <slot-number> detail (showing IOM with license level)

Table 65: Output Fields: show card <slot-number> detail (showing IOM with license level) describes the output fields for the **show card detail** command with IOM licensing information.

Table 65: Output Fields: show card <slot-number> detail (showing IOM with license level)

| Label | Description |
|------------------------------|--|
| Slot | The slot of the card in the chassis. |
| Provisioned Type | The IOM type and level that is configured for the slot. |
| Equipped Type (if different) | The IOM type and level that is actually populated in the slot if it is different than the Provisioned Type. |
| Admin State | Up — The IOM is administratively up. Down — The IOM is administratively down. |
| Operational State | Up — The IOM is operationally up. Down — The IOM is operationally down. |
| Licensed Level | License level of the card. |
| Description | Description of the license. |
| Licensed Bandwidth Used | The total connector bandwidth configured on the assembly. |
| Comments | Active — Indicates if the CPM is the active state. Standby — Indicates if the CPM is the standby state. No SFM — Indicates no SFM is online that is usable by this card. Pwr Save — Indicates if the card is in power save mode. Lo Power — Indicates if the card is in low power mode. It is prevented from booting by power management. SFM Test — Indicates card is being held in booting because a B2B standalone SFM inter-connect test is in progress. No MDA — Indicates the card is waiting for MDAs. MDAs are either missing or failed. |

Sample Output: show card <slot-number> fp fwd-engine drop-reason statistics

```
*A:cses-V93# show card 1 fp 1 fwd-engine drop-reason statistics
=====
Card 1 FP 1 Egress Forwarding Engine Drop Reason Statistics
=====
Egress Encapsulation Exceeded          0
MTU Exceeded                            0
Frame too big for port                  4
=====
```

Output Fields: show card<slot-number> fp fwd-engine drop-reason statistics

Table 66: [Output Fields: show card slot-number fp fwd-engine drop-reason](#) describes the output fields for the **show card fp fwd-engine drop-reason** command.

Table 66: Output Fields: show card slot-number fp fwd-engine drop-reason

| Label | Description |
|-------------------------------|---|
| Card | The card in the chassis. |
| FP | The egress forwarding plane hardware component. |
| Egress Encapsulation Exceeded | Addition of egress encapsulation headers would have exceeded the maximum frame size. |
| MTU Exceeded | Protocol supports packet fragmentation but fragmentation was blocked (for example, packet is IPv6 or packet is IPv4 and DF set to one). |
| Frame too big for port | Final check before transmitting has detected frame exceeded the port MTU. |

Note:

A single frame can only result in one drop reason statistic being incremented.

Context

[\[Tree\]](#) (clear card)

Full Context

clear card

Description

This command re-initializes the card in the specified slot. A **clear card** command (without the soft) is referred to as a *Hard Reset*. A **clear card x soft** command (with the soft) is referred to as a *Soft Reset*.

Parameters

slot-number

Clears information for the specified card slot.

Values 1 to 20, A, B, C, D

fp-number

Displays information for the specified forwarding plane.

Values 1 to 8

high-water-mark

Clears the high water marks within the HS pool on the specified card and FP.

mid-pool

Clears the high water marks within the mid pools in the HS pool and on the specified card and FP.

Values 1 to 16

root-pool

Clears the high water marks within the root pools in the HS pool and on the specified card and FP.

Values 1 to 16

system

Clears the high water marks within the in the HS system pool and on the specified card and FP.

dist-cpu-protection

Clears the distributed CPU protection information.

soft

Issues a soft reset of the I/O module (IOM).

hard-reset-unsupported-mdas

Allows a soft reset operation when some of the MDA's cannot perform a soft reset. A soft reset is performed on MDAs that support a soft reset and a hard reset is performed on MDAs that do not support soft resets.

fwd-engine

Specifies to clear the forwarding engine information.

drop-reason

Specifies to clear the drop reason information.

statistics

Specifies to clear the statistics.

ingress

Specifies to clear the ingress information.

egress

Specifies to clear the egress information.

per-egress-fp-stats

Specifies to clear packet and octet statistics for unicast traffic sent from the specified FP to each destination FP. Only supported on 7750 SR-1 and 7750 SR-s platforms.

per-ingress-fp-stats

Specifies to clear packet and octet statistics for unicast traffic received by the specified FP from each source FP. Only supported on 7750 SR-1 and 7750 SR-s platforms.

mode

Specifies the mode in which the card is to operate.

access

Specifies to clear the access mode information.

network

Specifies to clear the network mode information.

group-name

Specifies the group name, to a maximum of 32 characters.

instance

Specifies the instance of the named queue group to be cleared.

Values 1 to 65535

Platforms

All

card

Syntax

card *slot-number* **fp** *fp-number* **queue-group** *queue-group-name* **instance** *instance-id* [{**access** | **network**}] [{**ingress** | **egress**}] [**arbiter** {*name* | *root*}] [**port** *port-id*] [{**detail** | **root-detail** | **thresholds** | **priority-info** | **depth**}]

Context

[\[Tree\]](#) (show>qos>policer-hierarchy card)

Full Context

show qos policer-hierarchy card

Description

This command displays physical card related information.

Parameters

slot-number

Displays information about the slot number of the card in the chassis. The maximum slot number is platform dependent.

Values 1 to 10

fp-number

Displays information about the specified forwarding plane number.

Values 1

queue-group-name

Displays information about the specified queue group name, up to 32 characters.

instance-id

Displays information about the instance of the named queue group.

Values 1 to 65535

name

Displays information about the name of the QoS arbiter.

root

Displays information about the arbiter root.

port-id

Displays information about the specified port ID.

access

Displays policer-hierarchy statistics applied on an access port.

network

Displays policer-hierarchy statistics applied on a network port.

ingress

Displays ingress queue group information.

egress

Displays egress queue group information.

detail

Displays detailed information.

root-detail

Displays detailed information about the arbiter root.

thresholds

Displays the threshold, parenting, rate, and traffic information related to a policer.

priority-info

Displays the threshold information related to the root arbiter.

depth

Displays the bucket depth, parenting, rate, and traffic information related to a policer.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

card

Syntax

card [*slot-num*]

card [*slot-num*] **all**

Context

[\[Tree\]](#) (tools>dump>resource-usage card)

Full Context

tools dump resource-usage card

Description

This command displays resource information for cards.

Parameters

slot-num

Specifies a card slot.

Values 1 to 10

all

Displays all available information for the card, including resource usage information for all child objects of the card such as FPs and MDAs.

Platforms

All

card

Syntax

```
card slot-number fp fp-number ingress {access | network} queue-group queue-group-name instance  
instance-id [absolute | percent-rate] [interval seconds] [repeat repeat] policer policer-id [reference-  
rate]
```

```
card slot-number fp fp-number ingress [tap tap-number] per-egress-fp-stats [interval seconds] [repeat  
repeat] [absolute | rate]
```

```
card slot-number fp fp-number [tap tap-number] egress per-ingress-fp-stats [interval seconds] [repeat  
repeat] [absolute | rate]
```

Context

[\[Tree\]](#) (monitor card)

Full Context

monitor card

Description

This command monitors statistics in an ingress and egress Forwarding Plane (FP).

Parameters

slot-number

Monitors information on the specified card slot.

Values 1 to 20 (The maximum slot number is platform dependent)

fp-number

Monitors information on the specified FP.

Values 1 to 8

ingress

Monitors information on the ingress.

egress

Monitors information on the egress.

access

Displays policer statistics on the FP access.

network

Displays policer statistics on the FP network.

queue-group-name

Specifies the queue group name, up to 32 characters.

instance-id

Specifies the identification of a specific instance of the queue group.

Values 1 to 65535

absolute

Displays the raw statistics, without processing. No calculations are performed on the delta or rate statistics.

percent-rate

Displays the rate-per-second for each statistic based on the reference rate of 10G.

seconds

Specifies the interval for each display in seconds.

Values 11 to 60

Default 11

repeat

Specifies how many times the command is repeated.

Values 1 to 999

Default 10

policer-id

Must exist within the queue-group template applied to the ingress context of the forwarding plane.

Values 1 to 32

reference-rate

Displays the rate-per-second for each statistic as a percentage based on the reference rate specified.

Values 100M, 1G, 10G, 40G, 100G, 400G

Default 10G

tap-number

Specifies the source TAP.

Values 1 to 2

per-egress-fp-stats

Displays packet and octet statistics for unicast traffic sent from the specified FP to each destination FP.

per-ingress-fp-stats

Displays packet and octet statistics for unicast traffic received by the specified FP from each source FP.

rate

Displays the rate-per-second for each statistic instead of the delta.

Platforms

All

card

Syntax

```

card slot-number fp fp-number queue-group queue-group-name instance instance-id [ingress] [access
| networks] [interval seconds] [repeat repeat] [absolute | percent-rate [reference-rate]] [arbiter root
| name]
  
```

Context

[\[Tree\]](#) (monitor>qos>arbiter-stats card)

Full Context

monitor qos arbiter-stats card

Description

This command monitors arbiter statistics in an ingress FP queue group.

Parameters

slot-number

Specifies the slot number associated with the queue group, expressed as an integer.

Values 1 to 20

fp-number

Specifies the FP number associated with the queue group, expressed as an integer.

Values 1 to 8

ingress

Displays policer statistics applied on the ingress FP.

access

Displays policer statistics on the FP access.

network

Displays policer statistics on the FP network.

queue-group-name

Specifies the name of the queue group up to 32 characters.

instance-id

Specifies the identification of a specific instance of the queue-group.

Values 1 to 65535

seconds

Configures the interval for each display in seconds.

Default 11 seconds

Values 11 to 60

repeat

Configures how many times the command is repeated.

Default 10

Values 1 to 999

absolute

When the absolute keyword is specified, the raw statistics are displayed, without processing. No calculations are performed on the delta or rate statistics.

percent-rate

When the percent-rate keyword is specified, the rate-per-second for each statistic is displayed based on the reference rate of 10G.

reference-rate

When a reference-rate value is specified, the rate-per-second for each statistic is displayed as a percentage based on the reference rate specified.

Values 100M, 1G, 10G, 40G, 100G, 400G

name

Specify the name of the policer control policy arbiter.

Values An existing arbiter-name in the form of a string up to 32 characters, composed of printable, 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, etc.), the entire string must be enclosed within double quotes.

root

Specifies the root arbiter.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

card

Syntax

card *slot-number* **fp** *fp-number* **ingress** [**access** | **network**] **queue-group** *queue-group-name* [**instance** *instance-id*] [**arbiter** {*name* | *root*}]

Context

[\[Tree\]](#) (clear>qos>arbiter-stats card)

Full Context

clear qos arbiter-stats card

Description

This command clears arbiter statistics per card.

Parameters

slot-number

Specifies the slot number associated with the queue group.

Values 1 to 2 (7750 SR-2s)
1 to 5 (7750 SR-7)
1 to 6 (7750 SR-14s)
1 to 10 (7450 ESS, 7750 SR-12)
1 to 14 (VSR)
1 to 20 (7950 XRS, VSR)

fp-number

Specifies the FP number associated with the queue group.

Values 1 to 4

access

Clears policer statistics on the FP access.

network

Clears policer statistics on the FP network.

queue-group-name

Specifies the queue group name, up to 32 characters.

name

Specifies the arbiter name, up to 32 characters.

root

Specifies the arbiter root, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

card

Syntax

card *slot-number* **fp** *fp-number* **ingress** [**access** | **network**] [**queue-group** *queue-group-name*] [**instance** *instance-id*] [**arbiter** *name* | *root*]

Context

[\[Tree\]](#) (show>qos>arbiter-stats card)

Full Context

show qos arbiter-stats card

Description

This command displays the arbiter statistics per card.

Parameters

slot-number

Displays information for the specified card slot.

Values 1 (7750 SR-1, VSR)
1 to 2 (7750 SR-2s)
1 to 5 (7750 SR-7)
1 to 6 (7750 SR-14s)
1 to 10 (7450 ESS, 7750 SR-12)
1 to 14 (VSR)

1 to 20 (7950 XRS, VSR)

fp-number

Specifies the FP number associated with the queue group.

Values 1

access

Displays arbiter statistics applied on an access port.

network

Displays arbiter statistics applied on a network port.

queue-group-name

Specifies the queue group name, up to 32 characters.

name

Specifies the arbiter name, up to 32 characters.

root

Specifies the arbiter root, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

card

Syntax

card *slot-number* **fp** *fp-number* **queue-group** *group-name* **instance** *instance-id* {**access** | **network**}
[**detail**] [**ingress**]

Context

[\[Tree\]](#) (show>qos>policer card)

Full Context

show qos policer card

Description

This command displays the policer statistics per card.

Parameters

slot-number

Displays information for the specified card slot.

Values 1 (7750 SR-1, VSR)
1 to 2 (7750 SR-2s)
1 to 5 (7750 SR-7)

1 to 6 (7750 SR-14s)
1 to 10 (7450 ESS, 7750 SR-12)
1 to 14 (VSR)
1 to 20 (7950 XRS, VSR)

fp-number

Specifies the FP number associated with the queue group.

Values 1

group-name

Specifies the queue group name, up to 32 characters.

access

Displays policer statistics applied on an access port.

network

Displays policer statistics applied on a network port.

detail

Displays detailed information.

ingress

Displays ingress queue group information.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

7.11 card-status

card-status

Syntax

card-status

Context

[\[Tree\]](#) (tools>dump>service>id>fdb card-status)

Full Context

tools dump service id fdb card-status

Description

This command displays the following MAC address information for each line card in the system:

- the number of allocated MAC addresses
- the number of pending MAC address allocations

- the number of pending free MAC addresses

Platforms

All

Output

Sample Output

7.12 category-map

category-map

Syntax

category-map [*category-map*]

category-map *category-map* **subscribers**

Context

[Tree] (show>subscr-mgmt category-map)

Full Context

show subscriber-mgmt category-map

Description

This command displays category map information.

With no parameters specified, a summary view of all configured category maps is displayed.

With the optional *category-map* name parameter specified, the detailed configuration of the specified category map name is displayed.

With the *category-map* **subscribers** parameters specified, all subscribers that have the specified *category-map* associated are displayed.

Parameters

category-map

Specifies the category map name for which information is displayed.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following is an example of subscriber management category map information.

Sample Output

```

7.14 ccrt-replay

ccrt-replay

Syntax

ccrt-replay [*session-id session-id*] [*diameter-application-policy name*]

ccrt-replay diameter-application-policy name summary

ccrt-replay summary

Context

[\[Tree\]](#) (show>subscr-mgmt>diam-session ccrt-replay)

Full Context

show subscriber-mgmt diameter-session ccrt-replay

Description

This command displays:

- information for all diameter sessions that are in CCR-T replay mode:
 - Diameter session ID
 - Diameter Application Policy
 - Replay Time left
- statistics per diameter application policy for diameter sessions in CCR-T replay mode or that were in CCR-T replay mode and were dropped or terminated:

- Sessions in CCR-T replay mode: the number of Diameter Gx or Gy sessions from the specified diameter application policy that are currently in CCR-T replay mode
- Replay sessions dropped (maximum life-time expired): the number of Diameter Gx or Gy sessions from the specified diameter application policy that were in CCR-T replay mode and got dropped because no CCA-t was received before **max-lifetime** expiration
- Replay sessions dropped (to free resources): the number of Diameter Gx or Gy sessions from the specified diameter application policy that were in CCR-T replay mode and got dropped because the maximum number of active Diameter sessions for Gx or Gy was reached
- Replay sessions dropped (cleared): the number of Diameter Gx or Gy sessions from the specified diameter application policy that were in CCR-T replay mode and got dropped because the operator issued a **clear subscriber-mgmt diameter-session ccrt-replay diameter-application-policy name sessions** command
- Replay sessions terminated (CCA-T received): the number of Diameter Gx or Gy sessions from the specified diameter application policy that were in CCR-T replay mode and for which a CCA-t was received before **max-lifetime** expiration
- Statistics last cleared time: timestamp when the statistics were last cleared or n/a if the statistics were never cleared

Parameters

name

Specifies the application policy, up to 32 characters.

session-id

Specifies a diameter session ID.

summary

Displays summarized information about CCR-T replay.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following is an example of subscriber management CCR-T replay information.

Table 69: CCR-T Replay Field Descriptions describes CCRT replay output fields.

Table 69: CCR-T Replay Field Descriptions

| Field | Description |
|-------------------------------|---|
| Session-id | The diameter session ID that is in CCR-T replay mode |
| Diameter Application Policy | The diameter application policy name to which the Gx or Gy session in CCR-T replay mode belongs |
| Replay Time Left | The remaining max-lifetime before the Diameter Gx or Gy session in CCR-T replay mode is dropped |
| No. of Matching Entries | The number of entries matching the search criteria |
| Sessions in CCR-T replay mode | The number of Diameter Gx or Gy sessions from the specified diameter application policy that are in CCR-T replay mode |

| Field | Description |
|---|---|
| Replay sessions dropped (maximum life-time expired) | The number of Diameter Gx or Gy sessions from the specified diameter application policy that were in CCR-T replay mode and got dropped because no CCA-t was received before max-lifetime expiration |
| Replay sessions dropped (to free resources) | The number of Diameter Gx or Gy sessions from the specified diameter application policy that were in CCR-T replay mode and got dropped because the maximum number of Diameter sessions was reached |
| Replay sessions dropped (cleared) | The number of Diameter Gx or Gy sessions from the specified diameter application policy that were in CCR-T replay mode and got dropped because the operator issued a clear subscriber-mgmt diameter-session ccrt-replay diameter-application-policy <i>name</i> sessions command |
| Replay sessions terminated (CCA-T received) | The number of Diameter Gx or Gy sessions from the specified diameter application policy that were in CCR-T replay mode and for which a CCA-t was received before max-lifetime expiration |
| Statistics last cleared time | The timestamp when the statistics were last cleared or n/a if the statistics were never cleared |

ccrt-replay

Syntax

ccrt-replay diameter-application-policy *name* statistics

ccrt-replay diameter-application-policy *name* sessions

Context

[\[Tree\]](#) (clear>subscr-mgmt>diam-session ccrt-replay)

Full Context

clear subscriber-mgmt diameter-session ccrt-replay

Description

This command, when the **statistics** parameter is specified, clears the CCR-T replay statistics and updates the "Statistics last cleared time" value.

This command, when the **sessions** parameter is specified, drops the diameter Gx or Gy sessions that are in CCR-T replay mode.

Parameters

name

Specifies the diameter application policy, up to 32 characters.

statistics

Clears the CCR-T replay statistics.

sessions

Clears the sessions that are in CCR-T replay mode.

cflowd

Syntax

cflowd

Context

[\[Tree\]](#) (clear cflowd)

Full Context

clear cflowd

Description

This command clears the raw and aggregation flow caches which are sending flow data to the configured collectors. This action will trigger all the flows to be discarded. The cache restarts flow data collection from a fresh state. This command also clears global stats collector stats listed in the cflowd **show** commands.

Platforms

```

Context

[\[Tree\]](#) (show>eth-cfm cfm-stack-table)

Full Context

```
show eth-cfm cfm-stack-table
```

Description

This command displays stack-table information. This stack-table is used to display the various management points MEPs and MIPs that are configured on the system. These can be service-based or facility-based. The various options allow the operator to be specific. If no parameters are included then the entire stack-table is displayed.

Parameters

port *port-id*

Displays the bridge port or aggregated port on which MEPs or MHFs are configured.

| Values | <i>port-id</i> | <i>slot/mda/port</i> [<i>channel</i>] |
|--------|----------------|---|
| | lag-id | lag-id |
| | lag | keyword |
| | id | 1 to 800 |
| | eth-sat-id | esat-<id>/<slot>/[u]<port> |
| | esat | keyword |
| | id | 1 to 20 |

| | | |
|------------|---|--------------------------|
| | u | keyword for up-link port |
| tdm-sat-id | tsat- <i><id></i> / <i><slot></i> / <i>[<u>]<port></i> . <i><channel></i> | |
| | tsat | keyword |
| | id | 1 to 20 |
| | u | keyword for up-link port |

vlan *vlan-id*

Displays the associated VLAN ID.

Values 1 or 4094 or all

level

Displays the MD level of the maintenance point.

Values 0 to 7

collect-lmm-stats

Displays facility MEPs on which LMM collection is enabled.

direction up | down

Displays the direction in which the MP faces on the bridge port.

facility

Displays the CFM stack table information for facility MEPs. The base command displays all the facility MEPs. Options may be included in order to further parse the table for specific facility MEP information.

sdp *sdp-id*[:*vc-id*]

Displays CFM stack table information for the specified SDP.

Values sdp-id: 1 to 32767
vc-id: 1 to 4294967295

virtual *service-id*

Displays CFM stack table information for the specified SDP.

Values service-id: 1..2148278386]
svc-name: up to 64 characters

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following is an example of stack table information. [Table 70: ETH-CFM CFM Stack Table Field Descriptions](#) describes the output content.

Sample Output

```

7.21 change-key

change-key

Syntax

change-key authentication *authentication-protocol old-authentication-key new-authentication-key*

change-key authentication authentication-protocol privacy *privacy-protocol old-privacy-key new-privacy-key*

Context

[\[Tree\]](#) (tools>perform>system>mgmt-itf>snmp change-key)

Full Context

tools perform system management-interface snmp change-key

Description

This command generates KeyChange strings to change SNMPv3 authentication or privacy keys. The SNMP engine ID is not needed because localized keys are required as input. The KeyChange algorithm uses a random string, which generates a different output each time the command is executed.

Parameters

authentication

Generates a KeyChange string for an authentication key.

authentication-protocol

Specifies the SNMPv3 authentication protocol.

- Values**
- hmac-md5-96** — Specifies use of the HMAC-MD5-96 authentication protocol.
 - hmac-sha1-96** — Specifies use of the HMAC-SHA-96 authentication protocol.
 - hmac-sha2-224** — Specifies use of the HMAC-SHA-224 authentication protocol.
 - hmac-sha2-256** — Specifies use of the HMAC-SHA-256 authentication protocol.
 - hmac-sha2-384** — Specifies use of the HMAC-SHA-384 authentication protocol.

hmac-sha-512 — Specifies use of the HMAC-SHA-512 authentication protocol.

old-authentication-key

Specifies the old localized authentication key.

new-authentication-key

Specifies the new localized authentication key.

privacy

Keyword to generate a KeyChange string for a privacy key.

privacy-protocol

Specifies the SNMPv3 privacy protocol.

- Values**
- cbc-des** — Specifies the use of the CBC-DES privacy protocol. This parameter is not available in FIPS-140-2 mode.
 - cfb128-aes-128** — Specifies the use of the CFB128-AES-128 privacy protocol.
 - cfb128-aes-192** — Specifies the use of the CFB128-AES-192 privacy protocol.
 - cfb128-aes-256** — Specifies the use of the CFB128-AES-256 privacy protocol.

old-privacy-key

Specifies the old localized privacy key.

new-privacy-key

Specifies the new localized privacy key.

Platforms

All

Output

The following output is an example of a generated KeyChange string.

Sample Output

```

7.22 channel

channel

Syntax

```
channel [router router-instance | vpls service-id | service-name service-name] [fp slot-number[/fp-number]] [group ip-address [source ip-address]] [path path-type] [detail]
```

Context

[\[Tree\]](#) (show>mcast-management channel)

Full Context

```
show mcast-management channel
```

Description

This command displays multicast path management channel related information.

Parameters

service-id

Specifies an existing VPLS service ID.

Values 1 to 214748364

service-name

A string up to 64 characters.

slot-number

Displays information for the specified card slot.

fp-number

Specifies an FP.

Values 1 to 8

ip-address

ipv4-address in the form *a.b.c.d*

path-type

Specifies the path type.

Values primary, secondary

Platforms

7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

Output

The following output displays an example of multicast management channel information.

Sample Output

```
*A:PE# show mcast-management channel
```

```

channel

Syntax

channel [**service** *service-id*] [**interface** *ip-int-name*] [**address** *mcast-address*] [**source** *ip-address*] [**detail**]

Context

[\[Tree\]](#) (show>video>adi channel)

Full Context

show video adi channel

Description

This command displays video channel information.

Parameters

service *service-id*

Displays video channel information pertaining to the specified service ID.

Values service-id: 1 to 2148278381
 svc-name: A string up to 64 characters

router-name: Base, management, vpls-management

Default Base

interface *ip-int-name*

Displays video channel information pertaining to the specified interface.

address *mcast-address*

Displays video channel information pertaining to the specified multicast channel address.

source *ip-address*

Displays video channel information pertaining to the source IP address.

detail

The output displays detailed video channel information.

Platforms

7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

channel

Syntax

channel [**service** *service-id*] [**interface** *ip-int-name*] [**address** *mcast-address*] [**source** *ip-address*]
[**summary** | **detail**] [**pid** | **config** | [**analyzer** [**interval** *time-interval*]]]

Full Context

show video channel

Description

This command displays video channel information.

Parameters

service *service-id*

Displays video channel information pertaining to the specified service ID.

Values service-id: 1 to 214748364
svc-name: A string up to 64 characters
router-name: Base, management, vpls-management

Default Base

interface *ip-int-name*

Displays video channel information pertaining to the specified interface.

address mcast-address

Displays video channel information pertaining to the specified multicast channel address.

source ip-address

Displays video channel information pertaining to the source IP address.

summary

The output displays summarized video channel information.

detail

The output displays detailed video channel information.

Platforms

7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

Output

The following is an example output for this command.

Sample Output

```

*A:SR-12/Dut-C#
```

channel

Syntax

channel all [**rt-client**] [**rt-server**] [**fcc-server**] [**ad-insert**]

channel *grp-address* [**source** *srcAddr*] [**rt-client**] [**rt-server**] [**fcc-server**] [**ad-insert**]

Context

[\[Tree\]](#) (clear>video>statistics>id channel)

Full Context

clear video statistics id channel

Description

This command clears video statistics for a particular channel.

Parameters

all

Clears statistics for all channels.

rt-client

Clears all RET client related statistics.

rt-server

Clears all RET server related statistics.

fcc-server

Clears all FCC server related statistics.

ad-insert

Clears all ad insert related statistics.

grp-address

Clears statistics for the specified channel group address.

source *srcAddr*

Clears statistics for the specified source address.

Platforms

7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

7.23 charging-filter

charging-filter

Syntax

charging-filter {*charging-filter-id* | **non-zero**}

Context

[\[Tree\]](#) (show>app-assure>group>policy charging-filter)

Full Context

show application-assurance group policy charging-filter

Description

This command displays information about the charging filter.

Parameters

charging-filter-id

Specifies the ID of an existing charging filter entry.

Values 1 to 65535

non-zero

Specifies to show all non-zero count entries.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output example shows the charging filter information, and [Table 71: Show AA group policy charging filter output fields](#) describes the fields.

```
show application-assurance group 1:0 policy charging-filter 1
```

Sample Output

```
=====
Charging Filter Entry 1
=====
Description       : "Charging-filter entry for WhatsApp Video"
Admin State       : in-service
Charging Group    : "cgVideo100"
Hits              : 0 flows

Match :
  Application      : eq "Whats App"
  Flow Attribute   : flow-attribute video confidence gte 100
=====
```

Table 71: Show AA group policy charging filter output fields

| Label | Description |
|-----------------------|---|
| Charging Filter Entry | The charging filter |
| Description | The description of the charging filter |
| Admin State | The administrative state of the filter |
| Charging Group | The charging group |
| Hits | The number of hits |
| Application | The matched application |
| Flow Attribute | The flow attribute used by the match criteria |

7.24 charging-group

charging-group

Syntax

charging-group

charging-group *charging-group-name*

Context

[\[Tree\]](#) (show>app-assure>group>policy charging-group)

Full Context

show application-assurance group policy charging-group

Description

This command displays application-assurance policy application information.

Parameters

charging-group-name

Specifies the application name, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

charging-group

Syntax

```
charging-group [charging-group-name] count [detail]  
charging-group count top granularity [max-count max-count]
```

Context

[\[Tree\]](#) (show>app-assure>group>aa-sub charging-group)

Full Context

```
show application-assurance group aa-sub charging-group
```

Description

This command displays application-assurance group charging group information.

Parameters

charging-group-name

Specifies an existing charging group.

count

Displays the counters for the charging group.

detail

Displays detailed information.

top

Displays counters sorted by granularity.

granularity

Specifies the granularity of the search.

Values octets, packets, flows

max-count

Specifies the maximum flows to display.

Values 1 to 4294967295

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

charging-group

Syntax

```
charging-group [charging-group-name] count
```

Context

[Tree] (show>app-assure>group>aa-sub>um charging-group)

Full Context

show application-assurance group aa-sub usage-monitor charging-group

Description

This command displays usage monitor statistics for the charging group.

Parameters

charging-group-name

Specifies the charging group name, up to 32 characters.

count

Displays counters for the charging group.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

charging-group

Syntax

charging-group [*charging-group-name*] **count** [**detail**]

Context

[Tree] (tools>dump>app-assure>group>aa-sub charging-group)

Full Context

tools dump application-assurance group aa-sub charging-group

Description

This command displays per-subscriber per-charging-group statistics.

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

7.25 chassis

chassis

Syntax

chassis [**environment**] [**ccm**] [**power-supply**] [*chassis-id*]

chassis class *chassis-class*

chassis detail [**class** *chassis-class*]

Context

[\[Tree\]](#) (show chassis)

Full Context

show chassis

Description

This command displays general status information about the chassis.

Parameters

chassis-id

Specifies the ID of the chassis.

chassis-class

Displays information related to the chassis of the specified class.

Values router or eth-sat

environment

Displays environmental status information about the chassis.

Default Displays all chassis information.

power-supply

Displays the status of the power supply in the chassis.

Default Displays all chassis information.

detail

Displays detailed information for all chassis in the system.

ccm

Displays chassis control module information for platforms that support CCMs.

Platforms

All

Output

See the following sections for sample outputs:

- [Output Fields: show chassis](#)

- [Sample Output: show chassis \(showing 7750 SR\)](#)
- [Sample Output: show chassis environment](#)
- [Sample Output: show chassis power-supply \(showing 7750 SR-1\)](#)
- [Sample Output: show chassis ccm](#)

Output Fields: show chassis

Table 72: Output Fields: show chassis describes the output fields for the **show chassis** command.

Table 72: Output Fields: show chassis

| Label | Description |
|------------------|--|
| Name | The system name for the router. |
| Type | Displays the router model number. |
| Chassis Topology | Indicates the inter-chassis topology mode in which the system is operating. Standalone indicates that the system is comprised of a single physical router chassis. Extended (XRS-40) on a 7950 XRS based system indicates that two router chassis are connected together in a "back-to-back" topology with no additional switch fabric chassis. An extended chassis topology is comprised of two XRS-20 chassis and is also known as an XRS-40 system. |
| Chassis role | Specifies the Chassis Roles. Standalone — Specifies the value for all non-7950 XRS SR OS systems and for 7950 XRS-20 standalone systems. 7950 XRS-40 Master 7950 XRS-40 Extension |
| Location | The system location for the device. |
| Coordinates | A user-configurable string that indicates the Global Positioning System (GPS) coordinates for the location of the chassis. For example: <ul style="list-style-type: none"> N 45 58 23, W 34 56 12 |

| Label | Description |
|-------------------------------|---|
| | <ul style="list-style-type: none"> N37 37' 00 latitude, W122 22' 00 longitude N36*39.246' W121*40.121' |
| CLLI Code | The Common Language Location Identifier (CLLI) that uniquely identifies the geographic location of places and certain functional categories of equipment unique to the telecommunications industry. |
| Number of slots | The number of slots in the 7450 ESS and 7750 SR chassis that are available for plug-in cards. The total number includes the IOM/CCM slot(s) and the CPM slots. |
| Number of ports | The total number of ports currently installed in this chassis. This count does not include the Ethernet ports on the CPMs/CCMs that are used for management access. |
| Oper Number of Slots | The number of slots in the 7950 XRS chassis that are available for XCM cards and CPM cards operating as the active or standby CPM. Oper Number of Slots goes to 24 when Chassis Topology is Extended. |
| Critical LED state | The current state of the Critical LED in this chassis. |
| Major LED state | The current state of the Major LED in this chassis. |
| Minor LED state | The current state of the Minor LED in this chassis. |
| Base MAC address | The base chassis Ethernet MAC address. |
| FP Generations | Identifies the FP generations for cards in the system. |
| System Profile | The scaling profile in use by the system. |
| Over Temperature state | Indicates if there is currently an over temperature condition (OK = not currently over temp). |
| Admin chassis mode | The configured chassis mode (chassis mode D). |
| Oper chassis mode | The current chassis mode. |
| Part number | The part number of the particular hardware assembly. In the show chassis output, the first set of Hardware Data output is for the chassis mid-plane. |
| CLEI code | The Common Language Equipment Code of the particular hardware assembly. |
| Serial number | The serial number of the particular hardware assembly. |
| Manufacture date | The manufacture date of the particular hardware assembly. |
| Manufacturing string | The factory inputted manufacturing text string for the particular hardware assembly. |
| Manufacturing deviations | Additional manufacturing data. |
| Manufacturing assembly number | Additional manufacturing data. |

| Label | Description |
|--------------------------|---|
| Time of last boot | The date and time the most recent boot occurred. |
| Current alarm state | Displays the alarm conditions for the specific board. |
| Number of fan trays | The total number of fan trays installed in this chassis. |
| Number of fans | The total number of fans installed in this chassis. |
| Fan tray number | The ID for each fan tray installed in the chassis |
| Fan tray type | Indicates the type of fan tray: Chassis - standard fan tray PCM - dedicated to cooling PCMs in the 7950 XRS-20e Universal chassis |
| Operational status | Current status of the fan tray. |
| Speed | Indicates the speed of the fans as a percentage. |
| Status | Current status of the particular hardware assembly (up, down, or not equipped). |
| Number of power supplies | The number of power supplies installed in the chassis. |
| Power supply number | The ID for each power supply installed in the chassis. |
| Power supply type | The basic type of the power supply. |
| Power supply model | The model of the power supply. |
| Input voltage | The input voltage for the specific power supply or power module. This field is only displayed for a subset of platforms. |
| CCM Slot | The identifier of the CCM (A or B). |
| Equipped | Indicates if the CCM is detected as physically present. |
| Temperature | The current temperature detected by the particular hardware assembly. |
| Temperature threshold | The temperature at which the particular hardware assembly considers an over temperature condition to exist. |
| Part number | The CCM part number. |
| CLEI code | The code used to identify the router. |
| Serial number | The CCM serial number. Not user modifiable. |
| Manufacture date | The chassis manufacture date. Not user modifiable. |
| Manufacturing string | Factory-inputted manufacturing text string. Not user modifiable. |
| Administrative state | Up — The card is administratively up. |

| Label | Description |
|-----------------------|---|
| | Down — The card is administratively down. |
| Operational state | Up — The card is operationally up. Down — The card is operationally down. |
| Temperature | The internal chassis temperature. |
| Temperature threshold | The value above which the internal temperature must rise in order to indicate that the temperature is critical. |
| Time of last boot | The date and time the most recent boot occurred. |
| Current alarm state | Displays the alarm conditions for the CCM. |

chassis

Syntax

chassis [*phys-chassis-id*]

Context

[\[Tree\]](#) (tools>perform chassis)

Full Context

tools perform chassis

Description

The following command performs chassis maintenance operations.

Parameters

phys-chassis-id

The identifier of the physical chassis for the tools perform context.

Values 1

Platforms

All

chassis

Syntax

chassis

Context

[\[Tree\]](#) (clear chassis)

Full Context

clear chassis

Description

Commands in this context clear data for various pieces of equipment that sit in a chassis.

Platforms

7750 SR-s

chassis

Syntax

chassis

Context

[\[Tree\]](#) (show>mcast-mgmt chassis)

Full Context

show mcast-management chassis

Description

This command displays multicast path management chassis information.

Platforms

7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

7.26 check-bp-eprom

check-bp-eprom

Syntax

check-bp-eprom

Context

[\[Tree\]](#) (tools>perform>chassis check-bp-eprom)

Full Context

tools perform chassis check-bp-eprom

Description

This command checks the chassis BP EPROM. The function reads the EPROM and is corrected with one of the following:

- for each SEEP that is found to be acceptable or can be corrected:
"BP eprom X: ok" with X = seep number
- for each SEEP that is found to be unacceptable and cannot be corrected:
"BP eprom X: not ok"

Platforms

All

7.27 cisco-hdlc

cisco-hdlc

Syntax

cisco-hdlc

Context

[\[Tree\]](#) (show>port cisco-hdlc)

Full Context

show port cisco-hdlc

Description

This command displays Cisco HDLC port information.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

7.28 class-forwarding-policy

class-forwarding-policy

Syntax

class-forwarding-policy [*policy-name*]

Context

[\[Tree\]](#) (show>router>mpls class-forwarding-policy)

Full Context

show router mpls class-forwarding-policy

Description

This command displays the mapping of the Forwarding Classes (FCs) to the set IDs as well as the default set ID of the CBF policy. It also shows the number of MPLS LSPs that reference this CBF policy.

Parameters

policy-name

Specifies the name of the class-forwarding-policy, up to 256 characters and composed of printable, 7-bit ASCII characters excluding double quotes. If the string contains spaces, use double quotes to delimit the start and end of the string.

Platforms

All

Output

The following is an example of class forwarding policy information.

Sample Output

```
*A:Dut-B>show>router# show router mpls class-forwarding-policy "policy1"
=====
MPLS Class Forwarding Policy Table
=====
Policy Name                Default Forwarding Class Set-id Ref
Set-Id                    be l2 af l1 h2 ef h1 nc Count
-----
policy1                    3      1 1 2 2 3 3 4 4 50
-----
No. of Forwarding Policies: 1
=====
```

7.29 classic-lsn-sub

classic-lsn-sub

Syntax

classic-lsn-sub *router-instance* **ip-prefix** *ip-prefix/length*

classic-lsn-sub *router-instance* **ip-prefix** *ip-prefix/length* **subscriber-string**

Context

[\[Tree\]](#) (clear>nat classic-lsn-sub)

Full Context

clear nat classic-lsn-sub

Description

This command clears NAT mappings for classic LSN subscribers.

Parameters

router-instance

Specifies the router instance, up to 32 characters.

ip-prefix/length

Specifies the IP prefix and length.

Values ip-prefix: a.b.c.d (host bits must be 0)length: 0 to 32

subscriber-string

Clears subscriber string information.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

7.30 clear

clear

Syntax

clear *aps-id* {**protect** | **working**} [**number** *number*]

Context

[\[Tree\]](#) (tools>perform>aps clear)

Full Context

tools perform aps clear

Description

This command removes all Automated Protection Switching (APS) operational commands.

Parameters

aps-id

This option clears a specific APS on un-bundled SONET/SDH ports.

| Values | <i>aps-id</i> | <i>aps-group-id</i> |
|--------|---------------|---------------------|
| | aps | keyword |
| | group-id | 1 to 128 |

protect

This command clears a physical port that is acting as the protection circuit for the APS group.

working

This command clears a physical port that is acting as the working circuit for this APS group.

number

Specifies the APS channel number.

| Values |
|--------|
| 1, 2 |

Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

clear

Syntax

clear

Context

[\[Tree\]](#) (clear)

Full Context

clear

Description

Commands in this context clear statistics for a specified entity or clear and reset the entity.

Platforms

All

clear

Syntax

`clear ring-index`

Context

[\[Tree\]](#) (tools>perform>eth-ring clear)

Full Context

tools perform eth-ring clear

Description

The clear command, at the Ethernet Ring Node, is used for the following operations:

- Clearing an active local administrative command, such as a Forced Switch or Manual Switch
- Triggering reversion before the WTR or WTB timer expires in case of revertive operation
- Triggering reversion in case of non-reactive operation

Parameters

ring-index

Specifies an Ethernet Ring index.

Values 1 to 128

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

clear

Syntax

`clear id tunnel-id`

`clear lsp-name`

Context

[\[Tree\]](#) (tools>perform>router>mpls>tp-tunnel clear)

Full Context

tools perform router mpls tp-tunnel clear

Description

This command clears all the MPLS-TP linear protection operational commands for the specified LSP that are currently active.

Parameters

tunnel-id

Specifies the tunnel number of the MPLS-TP LSP.

Values 1 to 61440

lsp-name

Specifies the name of the MPLS-TP LSP, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

7.31 clear-arp

clear-arp

Syntax

clear-arp [**ip** *ipv4-address*]

Context

[\[Tree\]](#) (tools>perform>wlan-gw>lanext>bd clear-arp)

Full Context

tools perform wlan-gw lanext bd clear-arp

Description

This command clears all ARP table entries for the specified HLE BD or a specific entry if an IPv4 address is specified.

Parameters

ipv4-address

Specifies the IPv4 address of the ARP table entry to be cleared.

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

7.32 clear-force

clear-force

Syntax

clear-force all-mc

clear-force lag-id *lag-id* [**sub-group** *sub-group-id*]

clear-force peer-mc *ip-address*

Context

[\[Tree\]](#) (tools>perform>lag clear-force)

Full Context

tools perform lag clear-force

Description

This command clears forced status.

Parameters

all-mc

Specifies all MC-LAGs.

lag-id

Specifies the LAG ID.

Values 1 to 800

sub-group-id

Specifies the subscriber group ID.

Values 1 to 16

ip-address

Specifies the peer MC IP address.

Values ipv4-address: a.b.c.d

ipv6-address:

- x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:d.d.d.d, where x: [0 to FFFF]H and d: [0 to 255]D

7.33 clear-lockout-annexb

clear-lockout-annexb

Syntax

clear-lockout-annexb *aps-id*

Context

[\[Tree\]](#) (tools>perform>aps clear-lockout-annexb)

Full Context

tools perform aps clear-lockout-annexb

Description

This command clears lockout of the Annex B APS group.

Parameters

aps-id

Specifies an APS ID.

Values

| <i>aps-id</i> | <i>aps-group-id</i> |
|---------------|---------------------|
| aps | keyword |
| group-id | 1 to 128 |

Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

clear-mac

Syntax

clear-mac [**mac** *ieee-address*]

Context

[\[Tree\]](#) (tools>perform>wlan-gw>lanext>bd clear-mac)

Full Context

tools perform wlan-gw lanext bd clear-mac

Description

This command clears all MAC table entries for the specified HLE BD or a specific entry if a MAC address is specified.

Parameters

ieee-address

Specifies the MAC address of the MAC table entry to be cleared.

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

7.35 clear-neighbor

clear-neighbor

Syntax

clear-neighbor [**ip6** *ipv6-address*]

Context

[\[Tree\]](#) (tools>perform>wlan-gw>lanext>bd clear-neighbor)

Full Context

tools perform wlan-gw lanext bd clear-neighbor

Description

This command clears all neighbor table entries for the specified HLE BD or a specific entry if an IPv6 address is specified.

Parameters

ipv6-address

Specifies the IPv6 address of the neighbor table entry to be cleared.

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

7.36 cli

cli

Syntax

cli

Context

[\[Tree\]](#) (show>log cli)

Full Context

show log cli

Description

Commands in this context display log information specific to CLI users (classic CLI or MD-CLI).

show system security cli-session-group

Description

This command displays the user profiles of this CLI session group and the session group details.

Parameters

session-group-name

Specifies a session group, up to 32 characters.

Platforms

All

7.38 client

client

Syntax

client all

client client-address ip-address

Context

[\[Tree\]](#) (show>test-oam>twamp client)

Full Context

show test-oam twamp client

Description

This command displays TWAMP client information.

Parameters

ip-address

Specifies the IPv4 or IPv6 address of a client.

Values

| | |
|---------------|-------------------------------------|
| ipv4-address: | a.b.c.d |
| ipv6-address: | x:x:x:x:x:x:x (eight 16-bit pieces) |
| | x:x:x:x:x:d.d.d.d |
| x: | [0 to FFFF]H |
| d: | [0 to 255]D |

all

Displays all TWAMP client information.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following sample output shows TWAMP client information.

```

Description

This commands displays information for client databases. Using this command without any parameters will list all configured client database.

Parameters

db-name

Species to list all IPsec gateways that use the specified client database.

association

Displays information for which this client database is associated.

client client-index

Specifies the client index or client name of client entry in the client database.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following is an example output of the **show client-db** command.

Sample Output

```
show ipsec client-db

Matched Record  : 1 "client-1"
Elapsed Time (us) : 2

```

Parameters

db-name

Specifies the name of the client-db.

peer-ip *peer-ip-address*

Specifies the peer's tunnel IP address as input, either v4 or v6.

string-type

Specifies the peer's IDi as input.

Values fqdn, rfc822

idi-ip-address

Specifies the peer's IDi of address type as input, either v4 or v6

string-value *string-value*

Specifies the value of FQDN or RFC822 IDi.

  string] [router-or-service attr-string] [debug]
```

Context

[\[Tree\]](#) (tools>perform>subscr-mgmt coa)

Full Context

tools perform subscriber-mgmt coa

Description

This command triggers a Change of Authorization (CoA) without a RADIUS authentication policy.

This command can be used to spoof a CoA from a configured server for purposes such as testing CoA python scripts. However, spoofing a CoA from a RADIUS server requires the configuration of a RADIUS authentication policy.

Parameters

nas-port-id attr-string

Specifies the physical access circuit of the NAS up to 253 characters.

ip-address

Specifies the IPv4 host address.

Values *ipv4-address:* a.b.c.d

ipv6-address

Specifies the IPv6 host address.

Values *ipv6-address:* x:x:x:x:x:x:x (eight 16-bit pieces)
x:x:x:x:x:d.d.d.d
x - [0 to FFFF]H
d - [0 to 255]D

ipv6-prefix[/ipv6-prefix-length]

Specifies the IPv6 PD host prefix.

Values *ipv6-prefix:* x:x:x:x:x:x:x (eight 16-bit pieces)
ipv6-prefix-length [0 to 128]

ipv6-prefix[/ipv6-prefix-length]

Specifies the IPv6 SLAAC host prefix.

Values *ipv6-prefix:* x:x:x:x:x:x:x (eight 16-bit pieces)
ipv6-prefix-length [0 to 128]

serv-id

Specifies the service ID of the LNS subscriber.

Values 0 to 4294967295

acct-session-id attr-string

Specifies the subscriber accounting session ID up to 22 characters.

alc-subscr-id attr-string

Specifies the subscriber ID up to 32 characters.

alc-brg-id attr-string

Specifies the BRG ID to a maximum of 32 characters.

user-name attr-string

Specifies the string matching RADIUS VSA [1] username associated to the host(s), up to 32 characters.

mac-address

Specifies the subscriber host MAC address in the form: xx:xx:xx:xx:xx:xx.

attribute

Specifies the attributes (RADIUS VSAs) for override. The VSA must be specified in number format. For example, VSA Alc-Subsc-Prof-Str="1M-prof" is expressed as 6527.12 ="1M-prof". Up to five attributes can be specified within this command.

For more information on VSAs, refer to the *7750 SR and VSR RADIUS Attributes Reference Guide*.

Values

```

<type>=<value>
<type>:<tag>=<value>
<vendor>,<type>=<value>
e,<type>,<exttyp>=<value> (type=[241| 242| 243| 244])
le,<type>,<exttyp>=<value> (type=[245| 246])
evs,<type>,<vendor>,<vendor-type>=<value>
levs,<type>,<vendor>,<vendor-type>=<value>
  
```

file-url

Specifies the file URL where the VSAs are located.

Values

```

local-url      [cflash-id/] [file-path] (up to 200 characters
                including the cflash-id directory length of up to
                99 characters each)
remote-url     [{ftp://| tftp://}login:pswd@remote-locn/][file-
                path] (up to 255 characters with the directory
                length of up to 99 characters each)
remote-locn    [hostname | ipv4-address | ipv6-address]
ipv4-address:  a.b.c.d
ipv6-address:  x:x:x:x:x:x:x [-interface]
                x:x:x:x:x:d.d.d.d[-interface]
                x - [0 to FFFF]H
                d - [0 to 255]D
interface     - Specifies the link local addresses, up
                to 32 characters
  
```

cflash-id cf1: | cf1-A: | cf1-B: | cf2 :| cf2-A: | cf2-B: | cf3: |
 cf3-A: | cf3-B:

attr-string

Specifies the RADIUS server name that is configured under the router or VPRN service context, up to 32 characters.

attr-string

Specifies the router or VPRN service instance where the RADIUS server is configured, up to 32 characters.

debug

Displays the debug message associated with the CoA command.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

7.43 collect-lmm-fc-stats

collect-lmm-fc-stats

Syntax

collect-lmm-fc-stats [{**sap** {*sap-id* | **all**} | **sdp** {*sdp-id* | **all**} | **interface** {*interface-name* | **all**}]

Context

[\[Tree\]](#) (show>eth-cfm collect-lmm-fc-stats)

Full Context

show eth-cfm collect-lmm-fc-stats

Description

This command displays the entities that are configured with per-FC LMM counters, and whether those counters are counting in-profile packets only or all countable packets.

Each entity may have up to eight individual FC-based counters. Each FC includes a positional index value (1 to 8) under the FC that is counting. A "P" indicates that the index is only counting in-profile traffic.

When no display filters are applied, this command displays all entities and the individual FC counters. Optional filters help to reduce the output that is visible to the operator.

Parameters

sap-id

Specifies a SAP entity for which to display active individual FC counters.

sdp-id

Specifies an SDP entity for which to display active individual FC counters.

Values *sdp-id* — 1 to 32767
vc-id — 1 to 4294967295

interface-name

Specifies an interface entity for which to display active individual FC counters, up to 32 characters maximum.

all

Keyword to display all SAP, SDP, and interface entities, and the associated active individual FC counters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following sample output shows information about entities that are configured with per-FC counters.

Sample Output

```
show eth-cfm collect-lmm-fc-stats
=====
The FC to priority bit mapping for collect-lmm-fc-stats is as follows:
NC = 7, H1 = 6, EF = 5, H2 = 4, L1 = 3, AF = 2, L2 = 1, BE = 0

The number below each FC column indicates which counter index PDUs matching
that FC will be counted in. Entries with a "P" beside the number indicate
that only in-profile traffic is being counted. Entries without a "P" are not
profile aware and count all PDUs associated with that FC.

collect-lmm-stats

Syntax

collect-lmm-stats [*sdp-id[:vc-id]*]

Context

[\[Tree\]](#) (show>service>sdp-using>eth-cfm collect-lmm-stats)

Full Context

show service sdp-using eth-cfm collect-lmm-stats

Description

This command displays SDP bindings which are configured to collect statistics for LMM tests.

Parameters

sdp-id[:vc-id]

Specifies the SDP ID and virtual circuit ID on the SDP ID.

Values sdp-id: 1 to 32767
 vc-id: 1 to 4294967295

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

7.45 collector

collector

Syntax

collector [*detail*]

Context

[\[Tree\]](#) (show>app-assure>group>cflowd collector)

Full Context

show application-assurance group cflowd collector

Description

Commands in this context display cflowd output.

Parameters

detail

Displays detailed information.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following is an example show output for the **collector** command.

Sample Output

```
A:ALU-A# show application-assurance group 1 cflowd collector

Table 74: Show cflowd Collector Detailed Output Fields

| Label | Description |
|------------------|---|
| Address | The IP address of a remote cflowd collector host to receive the exported cflowd data |
| Port | The UDP port number on the remote cflowd collector host to receive the exported cflowd data |
| Description | A user-provided descriptive string for this cflowd remote collector host |
| Version | The version of the flow data sent to the collector |
| AS Type | The style of AS reporting used in the exported flow data |
| | origin — reflects the endpoints of the AS path which the flow is following |
| | peer — reflects the AS of the previous and next hops for the flow |
| Admin State | The desired administrative state for this cflowd remote collector host |
| Oper State | The current operational status of this cflowd remote collector host |
| Records Sent | The number of cflowd records that have been transmitted to this remote collector host |
| Last Changed | The time when this row entry was last changed |
| Last Pkt Sent | The time when the last cflowd packet was sent to this remote collector host |
| Aggregation Type | The bit mask which specifies the aggregation schemes used to aggregate multiple individual flows into an aggregated flow for export to this remote host collector |
| | none — no data will be exported for this remote collector host |
| | raw — flow data is exported without aggregation in version 5 format |
| | All other aggregation types use version 8 format to export the flow data to this remote host collector |
| Collectors | The total number of collectors using this IP address |
| Sent | The number of packets with flow data sent to the associated collector |

| Label | Description |
|-------|---|
| Open | This counter shows the number of partially filled packets which have some flow data but are not yet filled or have been timed out (60 seconds maximum) |
| Error | This counter increments when there was an error during exporting of the collector packet; the most common reason will be a UDP unreachable destination for the configured collector |

7.46 command-list

command-list

Syntax

command-list

Context

[\[Tree\]](#) (tools>dump>service>vsd-services command-list)

Full Context

tools dump service vsd-services command-list

Description

This command displays the list of CLI nodes allowed in the VSD fully dynamic provisioning model. Python will have access to the shown nodes.

When access is granted to a node, all commands in that node are allowed; however, CLI nodes are only allowed if explicitly listed. Nodes in CLI are shown with a "+" in the CLI.

While you can navigate special "Pass through nodes" via these nodes, the commands in that node are not implicitly allowed. When configured in a service through VSD, these commands will not be shown in the 'info' output of the **config** command.

Note:

A 'node' implies leaf-nodes and leaf-table nodes in reality. A 'Leaf-table' is a sub-table that looks like a leaf (i.e. it is entered/displayed as a one-liner). An example of leaf-table node is **/configure router policy-options prefix-list x prefix 0.0.0.0/0** - since you can have multiple instances of prefixes.

7.47 commit-history

commit-history

Syntax

commit-history

commit-history [*keyword*] [**commit-id** *number*]

Context

[\[Tree\]](#) (show>system>management-interface commit-history)

Full Context

show system management-interface commit-history

Description

This command displays the history of configuration changes that were committed in model-driven interfaces. A separate history of the last commits is maintained for each configuration region (bof, configure, debug, and li). Each commit is uniquely identified by a numerical sequential incrementing commit ID assigned by the system.

Note:

This command is not available in the classic CLI.

Parameters

keyword

Specifies the configuration region to display.

Values bof, configure, debug, li

Default configure

number

Specifies the commit history ID to display.

Values 1 to 4294967295

Platforms

All

Output

The following is an example of commit history information.

The following table describes the commit history output fields.

Sample Output

```
A:admin@node-2# show system management-interface commit-history
```

```

Table 76: Show Community Output Fields

| Label | Description |
|-------------------|--|
| Community | Displays the community string name for SNMPv1 and SNMPv2c access only. |
| Access | Displays access information. r — The community string allows read-only access. rw — The community string allows read-write access. rwa — The community string allows read-write access. mgmt — The unique SNMP community string assigned to the management router. vpls-mgmt — The unique SNMP community string assigned for vpls management. |
| View | Displays the view name. |
| Version | Displays the SNMP version. |
| Group Name | Displays the access group name. |
| src-access-list | Displays the name of the list of source IP addresses that are allowed to use the community, as configured using the community configuration command. |
| authFailures | Displays the number of SNMP requests that have failed validation using this community . |
| No of Communities | Displays the total number of configured community strings. |

community

Syntax

community *comm-id* {**detail** | **longer**}

community *comm-id*

community *comm-id* **hunt**

Context

[\[Tree\]](#) (show>router>bgp>routes community)

Full Context

show router bgp routes community

Description

This command displays BGP routes with routes with a community value matching the specified value.

community is a parameter of the **show router bgp routes** command. Depending on the parameters that are used to issue the command, the output can display a narrower or wider set of routes, including routes belonging to other address families. See the **show router bgp routes** command description for syntax variants, parameter descriptions and values, and output examples.

Parameters

comm-id

Specifies the community ID, up to 72 characters.

Values *[as-num:comm-val | ext-comm | well-known-comm | large-comm]*

where:

- *as-num* — 0 to 65535
- *comm-val* — 0 to 65535
- *ext-comm* — the extended community, defined as one of the following:

- *{target | origin}:ip-address:comm-val*
- *{target | origin}:asnum:ext-comm-val*
- *{target | origin}:ext-asnum:comm-val*
- **bandwidth:asnum:val-in-mbps**
- **ext:4300:ovstate**
- **ext:value1:value2**
- **flowspec-set:ext-asnum:group-id**

where:

- *target* — route target
- *origin* — route origin
- *ip-address* — a.b.c.d
- *ext-comm-val* — 0 to 4294967295
- *ext-asnum* — 0 to 4294967295
- **bandwidth** — bandwidth
- *val-in-mbps* — 0 to 16777215
- **ext** — extended
- **ext:4300** — origin verification
- *ovstate* — 0, 1, or 2 (0 for valid, 1 for not found, 2 for invalid)
- *value1* — 0000 to FFFF
- *value2* — 0 to FFFFFFFFFF
- **flowspec-set** — flow-spec set
- *group-id* — 0 to 16383

- *well-known-comm* — **null** | **no-export** | **no-export-subconfed** | **no-advertise** | **blackhole**
- *large-comm* — *asn-or-ex:val-or-ex:val-or-ex*

hunt

Displays entries for the specified route.

| Lock State | Locked — Indicates the session is in a locked state. Unlocked — Indicates the session is in an unlocked state. |
| Username | The name of the user. |
| Session Mode | Exclusive — An exclusive session. Global — A shared session. Private — A private session. Private Exclusive — A private exclusive session. Read-Only — A read-only session. |
| Idle Time | The idle time of the session. |
| Session Type | NETCONF — Indicates a NETCONF session is running. MD-CLI — Indicates an MD-CLI session is running. gRPC — Indicates a gRPC session is running. SNMP — Indicates an SNMP session is running. Classic CLI — Indicates a classic CLI session is running. System — Indicates a system session is running. |
| From | The originating IP address, CRON, or EHS. |

7.52 connection-profile

connection-profile

Syntax

connection-profile [1 to 8000]

Context

[\[Tree\]](#) (show connection-profile)

Full Context

show connection-profile

Description

This command displays connection profile information.

Parameters

conn-prof-id

Specifies the connection profile ID.

Values 1 to 8000

Platforms

7450 ESS, 7750 SR-7/12/12e

Output

The following output is an example of connection profile information.

Sample Output

```
*A:Dut-A# show connection-profile

7.53 connection-profile-vlan

connection-profile-vlan

Syntax

```
connection-profile-vlan [conn-prof-id]
```

Context

[\[Tree\]](#) (show connection-profile-vlan)

Full Context

```
show connection-profile-vlan
```

Description

This command displays information about the connection-profiles (VLAN) in the system. When a specific connection profile is shown, the vlan-ranges that it contains are displayed.

Parameters

conn-prof-id

Specifies the VLAN connection profile ID.

Values 1 to 8000

Platforms

All

Output

The following is an example of connection profile VLAN information.

Sample Output

```
*A:Dut# show connection-profile-vlan

```

Table 78: Output Fields: show multilink-bundle <bundle-id> ima atm connections

| Label | Description |
|-------|---|
| Owner | Identifies the system entity that owns a specific ATM connection. |

| Label | Description |
|---------|--|
| Type | Specifies the type of this multilink bundle. mlppp — Indicates that the bundle is of type MLPPP. ima — Indicates that the bundle is of type IMA group. |
| Ingr.TD | Specifies the ATM traffic descriptor profile that applies to the receive direction of the interface connection. |
| Egr.TD | Specifies the ATM traffic descriptor profile that applies to the transmit direction of the interface connection. |
| Adm | ima — Indicates that the bundle is of type IMA group. Down — The bundle is administratively down. |
| Opr | Up — The bundle is operationally up. Down — The bundle is operationally down. |
| OAM | Indicates the OAM operational status of ATM connections. |

connections

Syntax

connections [**detail**] [**address** *ip-address*] [**port** *port-number*]

Context

[Tree] (show>system connections)

Full Context

show system connections

Description

This command displays UDP and TCP connection information.

If no command line options are specified, a summary of the TCP and UDP connections displays.

Parameters

ip-address

Displays only the connection information for the specified IP address.

Values

| | |
|---------------|--|
| ipv4-address: | a.b.c.d (host bits must be 0) |
| ipv6-address: | x:x:x:x:x:x:x[-interface] x:x:x:x:x:d.d.d.d[-interface] |

x: [0 to FFFF]H

d: [0 to 255]D

interface: up to 32 characters, mandatory for link local addresses

port-number

Displays only the connection information for the specified port number.

Values 0 to 65535

detail

Appends TCP statistics to the display output.

Platforms

All

Output

The following output is an example of system connections information, and [Table 79: System Connections Field Descriptions](#) describes the output fields.

Sample Output

```
A:ALA-12# show system connections

This command dumps information about a control channel of an LMP peer.

Parameters

Imp-cc-id

An unsigned integer identifier for the control channel.

Values 1 to 4294967295

clear

Keyword to clear statistics after reading.

Platforms

7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of control channel information.

Sample Output

```
A:ALU-7# tools dump router lmp peer 10.2.2.2 control-channel 42

control-channel

Syntax

control-channel *Imp-cc-id* **statistics**

Context

[Tree] (clear>router>lmp>peer control-channel)

Full Context

clear router lmp peer control-channel

Description

This command clears LMP control channel statistics.

Parameters

Imp-cc-id

Specifies the unsigned integer ID for the control channel.

Values 1 to 4294967295

Platforms

7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

7.57 convergence

convergence

Syntax

convergence

Context

[\[Tree\]](#) (show>router>bgp convergence)

Full Context

show router bgp convergence

Description

This command displays information about how the router reconverged its IPv4-unicast and IPv6-unicast routing state after the last restart of BGP.

Platforms

All

Output

The following is an example BGP convergence information.

Table 83: Show Router BGP Convergence Field Descriptions

| Label | Description |
|--|---|
| Min wait advertise timer | The operational value of min-wait-to-advertise (0 if the feature is disabled) |
| Established peers at min wait timer expiry | The number of address-family peers that were established when the min-wait-to-advertise command timer value expired (N/A if the feature is disabled) |

| Label | Description |
|--------------------------------|---|
| Current established peers | The current number of address family peers that are in the established state |
| First session established time | The time, relative to BGP instance restart at time T=0, when the first address family session was established. This stops being tracked when the min-wait-to-advertise timer expires. |
| Last session established time | The time, relative to BGP instance restart at time T=0, when the last address-family session was established. |
| Max Wait advertise timer | The operational value of the max-wait-to-advertise command for the address family (0 if the feature is disabled) |
| Converged peers | The number of address-family converged peers. This is the number of BGP neighbors that have, up to now, sent an EOR marker for the address family. N/A if the feature is disabled. |
| Converged state | The convergence state of the address family: waiting, started, partial, timeout or converged. N/A if the feature is disabled. Waiting is when no peers have reconnected yet. The waiting to start transition occurs when the first session comes up. The started to partial transition occurs when at least one address-family peer has sent the EOR marker. The partial to converged transition occurs when all address-family peers that have been up continuously since the min-wait-to-advertise timer expired have sent the EOR marker. The partial to timeout transition occurs when the max-wait-to-advertise timer expires and not all address family peers that have been up continuously since the min-wait-to-advertise timer expired have sent the EOR marker. |
| Converged time | The convergence time of the address family after the last restart, relative to BGP instance restart at time T=0. N/A is displayed if the convergence state is waiting, started, partial or timeout. |

Sample Output

```

Table 85: Show Streaming Counters Output Fields

| Label | Description |
|---------------|---|
| in getTables | Displays the number of GetTable request packets received. |
| in getManys | Displays the number of GetMany request packets received. |
| out responses | Displays the number of response packets sent. |

7.60 cp

cp

Syntax

cp *cp* [*interval seconds*] [*repeat repeat*] [*absolute| rate*]

Context

[Tree] (monitor>port>atm cp)

Full Context

monitor port atm cp

Description

This command monitors ATM connection profile statistics.

Parameters

cp

Specifies the connection profile.

Values 1 to 8000

seconds

Configures the interval for each display in seconds.

Values 3 to 60

Default 10

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

Platforms

7450 ESS, 7750 SR-7/12/12e

cp

Syntax

cp [*cp*] [**detail**]

Context

[\[Tree\]](#) (show>port>atm cp)

Full Context

show port atm cp

Description

This command displays ATM port connection profile information.

Parameters

cp

Specifies the ATM port connection profile.

Values 1 to 8000

detail

Displays detailed information.

Platforms

7450 ESS, 7750 SR-7/12/12e

7.61 cpm

cpm

Syntax

cpm

Context

[\[Tree\]](#) (tools>dump>filter>resources cpm)

Full Context

tools dump filter resources cpm

Description

This command displays information about filter resource utilization on the CPM, consumption by filter-using services such as OpenFlow, and the filters that use the most resources.

Platforms

All

Output

The following output is an example of filter resource utilization information.

Sample Output

```
*A:Dut-C>tools>dump>filter>resources># cpm

Table 87: System CPU Field Descriptions

| Label | Description |
|-----------------|-------------------------------|
| CPU Utilization | The total amount of CPU time. |
| Name | The process or protocol name. |

| Label | Description |
|--------------------------|---|
| CPU Time (uSec) | The CPU time each process or protocol has used in the specified time. |
| CPU Usage | The sum of CPU usage of all the processes and protocols. |
| Capacity Usage | The level the specified service is being utilized. When this number hits 100%, this part of the system is busied out. There may be extra CPU cycles still left for other processes, but this service is running at capacity. This column does not reflect the true CPU utilization value; that data is still available in the CPU Usage column. This column is the busiest task in each group, where busiest is defined as either actually running or blocked attempting to acquire a lock. |
| Idle | The current CPU utilization for the system. |
| Usage | The overall percentage of CPU idleness over the specified sample time. |
| Busiest Core Utilization | The utilization percentage of the busiest processor core over the specified sample time. On single core CPUs, this is the overall system utilization percentage over the specified sample time. |

cpu

Syntax

cpu [*sample-period seconds*]

Context

[\[Tree\]](#) (show>system cpu)

Full Context

show system cpu

Description

This command displays CPU utilization per task over a sample period.

Parameters

seconds

Specifies the number of seconds over which to sample CPU task utilization.

Values 1 to 300

Default 1

Platforms

All

Output

The following is an example of system CPU information. [Table 88: System CPU Field Descriptions](#) describes the output fields.

Sample Output

```
*A:cses-E11# show system cpu sample-period 2

| ===== | | | |

Table 88: System CPU Field Descriptions

| Label | Description |
|-----------------|---|
| CPU Utilization | The total amount of CPU time. |
| Name | The process or protocol name. |
| CPU Time (uSec) | The CPU time each process or protocol has used in the specified time. |
| CPU Usage | The sum of CPU usage of all the processes and protocols. |
| Capacity Usage | <p>Displays the level the specified service is being utilized. When this number hits 100%, this part of the system is busied out. There may be extra CPU cycles still left for other processes, but this service is running at capacity.</p> <p>This column does not reflect the true CPU utilization value; that data is still available in the CPU Usage column. This column is the busiest task in each group, where busiest is defined as either actually running or blocked attempting to acquire a lock.</p> |

7.66 cpu-protection

cpu-protection

Syntax

cpu-protection

Context

[\[Tree\]](#) (show>system>security cpu-protection)

Full Context

show system security cpu-protection

Description

Commands in this context display CPU protection information.

Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

Output

The following output is an example of ETH CFM monitoring.

Sample Output

```
show system security cpu-protection eth-cfm-monitoring
=====
SAP's where the protection policy Eth-CFM rate limit is exceeded
=====

7.68 cpu-usage

cpu-usage

Syntax

cpu-usage *mda* [**history-stats-in-count** *count*] [**history-stats-in-min** *minutes*] [**current**]

cpu-usage *mda* [**history-stats-in-count** *count*] [**history-stats-in-min** *minutes*] [**current**] **esa-vm** *esa-id/vm-id*

cpu-usage *mda* [**history-stats-in-count** *count*] [**history-stats-in-min** *minutes*] [**current**] [**show-oid**] **type** {**control-plane** | **data-plane**}

cpu-usage *mda* [**history-stats-in-count** *count*] [**history-stats-in-min** *minutes*] [**current**] [**show-oid**] **type** {**control-plane** | **data-plane**} **esa-vm** *esa-id/vm-id*

Context

[\[Tree\]](#) (show>isa>stats>tunnel-isa cpu-usage)

Full Context

show isa statistics tunnel-isa cpu-usage

Description

This command displays the CPU usage of the specified ISA. The information includes control plane usage and data plane usage.

The data plane usage collection depends on the configuration of the **config>isa>tunnel-grp>stats-collection>isa-dp-cpu-usage system** and collects usage every 5 minutes for the last 24 hours. The output also includes the current value.

Parameters

count

Displays information for the number of statistics intervals to be displayed (starting with the most recent).

Values 1 to 24

minutes

Displays information about the specified period covered by the statistics to be displayed (starting with the most recent).

Values 1 to 1440

current

Displays information about the current statistic value. The values of count and minutes are ignored by the system when this parameter is specified.

show-oid

Displays information about the Object Identifier (OID) of the current statistical value.

mda

Displays information about the specified ISA.

Values slot/mda

control-plane

Displays information about the control plane.

data-plane

Displays information about the data plane.

esa-vm

Displays the ID of the configured ESA and ESA VM.

| | | | |
|---------------|---------|---------------------|---------|
| Values | esa-vm: | <i>esa-id/vm-id</i> | |
| | | <i>esa-id</i> | 1 to 16 |
| | | <i>vm-id</i> | 1 to 4 |

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following is an example output of the **show isa stats tunnel-isa cpu-usage** configuration.

Sample Output

```
show>isa>stats>tunnel-isa# cpu-usage 1/2

7.69 create-sticky-lease

create-sticky-lease

Syntax

create-sticky-lease *host-name* [**mac** *ieee-address*] [**circuit-id** *circuit-id*] [**client-id** *client-id*] [**requested-ip-address** *ip-address*] [**circuit-id-hex** *circuit-id-hex-string*] [**client-id-hex** *client-id-hex-string*]

Context

[Tree] (tools>perform>router>dhcp>server>pool create-sticky-lease)

Full Context

tools perform router dhcp local-dhcp-server pool create-sticky-lease

Description

This command tries to create a lease-state in the specified local-dhcp-server pool with the supplied parameters. The hostname uniquely identifies this lease for subsequent operations. mac, circuit-id, and client-id should also have a unique combination of values according to the configured user-ident variables. If the requested-ip-address is provided the server tries to create a lease with this address. If this address is not available in the pool, the command fails.

Parameters

host-name

Specifies a string to identify the lease, up to 32 characters. If not specified, it can be internally generated based on MAC@ or another key.

ieee-address

Specifies the MAC address in xx:xx:xx:xx:xx:xx or xx-xx-xx-xx-xx-xx format.

circuit-id

Specifies the circuit-id string, up to 255 characters.

client-id

Specifies the client-id string, up to 255 characters.

ip-address

Specifies the IPv4 address in dotted notation a.b.c.d.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

7.70 credit-control

credit-control

Syntax

credit-control [**subscriber** *sub-ident-string*]

credit-control out-of-credit [**action** *action*] [**summary**]

credit-control extended-failure-handling [*state*] [**summary**]

Context

[\[Tree\]](#) (show>service>active-subscribers credit-control)

Full Context

show service active-subscribers credit-control

Description

This command displays active subscriber credit control information. Without additional filters, the output lists information for all active subscribers.

The output of this command can be filtered:

- per subscriber by specifying the optional **subscriber** *sub-ident-string* parameter
- per all subscribers that are out of credit by specifying the **out-of-credit** parameter with the optional **action** *action* parameter
- per subscribers that have a Diameter Gy session with Extended Failure Handling (EFH) enabled by specifying the **extended-failure-handling** parameter with the optional *state* parameter.

Parameters

sub-ident-string

Displays credit control information for the specified subscriber, up to 32 characters.

out-of-credit [**action** *action*]

Displays credit control information for subscribers that are out of credit and, optionally, have the specified out of credit action enabled.

Values continue, block-category, change-service-level

extended-failure-handling [*state*]

Displays credit control information for subscribers with a Diameter Gy session with EFH enabled. The optional *state* parameter lists subscribers for which the Diameter Gy session EFH is active, inactive, or both (all).

Values active, inactive, all

summary

Lists the number of matching entries for the specified filter.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of active subscriber's credit control information.

Sample Output

```
A:eng-BNG-2 # show service active-subscribers credit-control

[Table 89: Credit Control Field Descriptions](#) describes credit control output fields.

- (1) These fields are only shown when EFH is enabled in the Diameter application policy. EFH is enabled using the **configure subscriber-mgmt diameter-application-policy gy extended-failure-handling no shutdown** command.
- (2) These fields are only shown when the EFH state is active.

Table 89: Credit Control Field Descriptions

| Label | Description |
|--|--|
| Credit Control Policy | The credit control policy name in use for this subscriber session |
| Category Map | The active category map in use for this subscriber session |
| Diameter Session Gy | The Diameter Gy session ID |
| CC Failure Handling | The current value for Credit Control Failure Handling (CCFH) as configured in the Diameter Gy application policy or as received in an Answer message from the Online Charging Server (OCS) in the CCFH AVP Values: terminate, continue, or retry-and-terminate |
| Extended Failure Handling (EFH) - State ⁽¹⁾ | The EFH state: active — EFH is enabled and currently active inactive — EFH is enabled and currently inactive |
| EFH - Attempts ⁽¹⁾⁽²⁾ | The number of times interim credit is assigned to all rating groups followed by an attempt to establish a new Diameter Gy session with the Online Charging Server (OCS), or credit control server |
| EFH - Maximum Attempts ⁽¹⁾⁽²⁾ | The configured maximum attempts value in the Diameter application policy When an attempt to establish a new Diameter Gy session with the OCS continues to fail after the maximum attempts value is reached, then the user session is terminated (the subscriber hosts are deleted from the system). |
| EFH - Active Time ⁽¹⁾⁽²⁾ | The time since the EFH state became active for this subscriber session |
| EFH - Total Active Time ⁽¹⁾ | The accumulated time of all occurrences that EFH was active during the lifetime of this subscriber session |
| EFH - Total Active Count ⁽¹⁾ | The number of times that EFH was active during the lifetime of this subscriber session |
| Number of categories - static | The number of static categories in use for this subscriber session. |
| Number of categories - gx-session | The number of categories reserved for this subscriber session for Gx session level Usage Monitoring. |

| Label | Description |
|---------------------------------|--|
| Number of categories - gx-pcc | The number of dynamic categories in use by this subscriber session for Gx PCC rule-based Usage Monitoring. |
| Category - Category Name | The name of the category as configured in the category map |
| Category - Ingress Queues | The ingress queues for which credit control is applied in this category as configured in the category map |
| Category - Egress Queues | The egress queues for which credit control is applied in this category as configured in the category map |
| Category - Ingress Policers | The ingress policers for which credit control is applied in this category as configured in the category map |
| Category - Egress Policers | The egress policers for which credit control is applied in this category as configured in the category map |
| Category - Credit Volume Used | The used total octets counter (ingress and egress combined) since the last usage reporting of this rating group |
| Category - Credit Volume Avail. | The remaining total granted octets available before a new credit negotiation is triggered for this rating group (category) or the out of credit action is triggered |
| Category - Credit Volume Thres. | The volume quota threshold in octets as received from the OCS. When the Credit Volume Available octets fall below the Credit Volume Threshold, a new credit negotiation is triggered for this rating group (category). The Credit Volume Threshold value is set to Expired and Credit Negotiating is set to True. |
| Category - Credit Time Used | The number of seconds passed since the last reporting of this rating group |
| Category - Credit Time Avail. | The remaining number of seconds before a new credit negotiation is triggered for this rating group (category) or the out of credit action is triggered |
| Category - Credit Time Thres. | The time quota threshold in seconds as received from the OCS When the Credit Time Available falls below the Credit Time Threshold, a new credit negotiation is triggered for this rating group (category). The Credit Time Threshold value is set to Expired and Credit Negotiating is set to true. |

| Label | Description |
|--|--|
| Category - Credit Expired | The credit expired value: False—Negotiated credit is still available True—All granted credit is exhausted; either new credit is being negotiated with the OCS or the out of credit action is activated. |
| Category - Credit Negotiating | The credit negotiating value: False—There is no credit being requested to the OCS True—New credit is being requested to the OCS |
| Category - Out Of Credit Action | The out of credit action value: None—Out-of-credit action is not active When the out-of-credit action is active, the value is set to one of: ChangeServiceLevel, BlockCategory, Continue, or DisconnectHost |
| Category - Quota Holding Time | The Idle timeout associated with the granted quota. When no traffic associated with the quota is observed for the time specified, a credit negotiation is triggered with the OCS. |
| Category - Validity Time Used | The number of seconds passed since the Validity Time was installed |
| Category - Validity Time Avail. | The remaining number of seconds of the Validity Time before a new usage reporting is triggered for this rating group (category) |
| Category - EFH Unreported Credit - Current Volume ^{(1) (2)} | The unreported volume credit for the current occurrence of EFH in an active state. This counter includes the unreported used volume credit for the initial Diameter Gy session that caused the active EFH state and the unreported volume interim credit for previous attempts. Used interim credit for the current attempt is shown in the Credit Volume Used counter. |
| Category - EFH Unreported Credit - Total Volume ⁽¹⁾ | The accumulated total unreported volume credit for the previous occurrences of EFH in an active state. The total counter is updated when the EFH state toggles from active to inactive. When interim credit reporting is enabled, the counters are reset to zero when the actual usage reporting for this rating group (category) occurs. When interim credit reporting is disabled, the counters accumulate the total unreported volume credit during the lifetime of the subscriber session. |
| Category - EFH Unreported Credit - Current Time ^{(1) (2)} | The unreported time credit for the current occurrence of EFH in an active state. This counter includes the |

| Label | Description |
|--|--|
| | unreported used time credit for the initial Diameter Gy session that caused the active EFH state and the unreported time interim credit for previous attempts. Used interim credit for the current attempt is shown in the Credit Time Used counter. |
| Category - EFH Unreported Credit - Total Time ⁽¹⁾ | The accumulated total unreported time credit for the previous occurrences of EFH in an active state. The total counter is updated when the EFH state toggles from active to inactive. When interim credit reporting is enabled, the counters are reset to zero when the actual usage reporting for this rating group (category) occurs. When interim credit reporting is disabled, the counters accumulate the total unreported time credit during the lifetime of the subscriber session. |
| Category - HTTP Rdr URL Override | The URL returned by a Diameter OCS in a Credit Control Answer (CCA) message Final-Unit-Indication/Redirect-Server/Redirect-Server-Address AVP. This URL is used for Diameter Gy http-redirect out-of-credit actions when allow-override is configured. |

```

Context

[\[Tree\]](#) (tools>perform>subscr-mgmt credit-reset)

Full Context

tools perform subscriber-mgmt credit-reset

Description

This command resets the credit for an SLA-profile instance.

Parameters

sap-id

Specifies the physical port identifier portion of the SAP definition.

sub-ident-string

Resets the credit for the specified subscriber identification, up to 32 characters.

sla-profile-name

Resets the credit for the specified SLA profile, up to 32 characters.

category-name

Resets the credit for the specified category, up to 32 characters.

spi-sharing-type

Resets the credit for sessions with the specified SPI sharing type.

Values per-group, per-session-ipoe, per-session-ppp

spi-sharing-id

Resets the credit for sessions with the specified SPI sharing type and sharing identifier.
The SPI sharing identifier is:

- an identifier when the sharing type is per-group
- an internal PPP or IPoE identifier when the sharing type is a per-PPP or per-IPoE session

Values 0 to 4294967295

ip-address

Resets the credit for the specified IP address.

mac-address

Resets the credit for the specified MAC IP address.

sub-profile-string

Resets the credit for the specified subscriber profile, up to 32 characters.

service-id

Resets the credit for the specified service ID.

Values service-id: 1 2147483647 svc-name: up to 64 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Table 90: PIM CRP Fields provides PIM CRP field descriptions.

Table 90: PIM CRP Fields

| Label | Description |
|---------------|---|
| RP Address | The Candidate RP address |
| Group Address | The range of multicast group addresses for which the CRP is the Candidate RP |
| Priority | The Candidate RP's priority for becoming a rendezvous point (RP). This value is used to elect RP for a group range. A value of 0 is considered as the highest priority. |
| Holdtime | The hold time of the candidate RP. It is used by the Bootstrap router to time out the RP entries if it does not listen to another CRP advertisement within the holdtime period. |
| Expiry | The minimum time remaining before the CRP will be declared down. If the local router is not the BSR, this value is 0. |
| Candidate RPs | The number of CRP entries. |

Context

[Tree] (tools>perform>router>mpls cspf)

Full Context

tools perform router mpls cspf

Description

This command computes a CSPF path with specified user constraints.

Parameters

to *ip-addr*

Specifies the destination IP address.

Values a.b.c.d

from *ip-addr*

Specifies the originating IP address.

Values a.b.c.d

bandwidth *bandwidth*

Specifies the amount of bandwidth in Mb/s to be reserved.

Values 1 to 6400000

include-bitmap *bitmap*

Specifies to include a bit-map that specifies a list of admin groups that should be included during setup. Accepted in decimal, hex, or binary.

Values 1 to 4294967295

exclude-bitmap *bitmap*

Specifies to exclude a bit-map that specifies a list of admin groups that should be included during setup. Accepted in decimal, hex, or binary.

Values 1 to 4294967295

hop-limit *limit*

Specifies the maximum number of hops for the path.

Values 2 to 255

exclude-address *ip-addr*

Specifies IP addresses, up to eight, that should be excluded in the path computation.

Values a.b.c.d

use-te-metric

Specifies the use of the link traffic engineering metric to optimize the path. By default, the link IGP metric is used.

strict-srlg

Specifies the computation of a path which is strictly disjoint from links which are members of the entered SRLG

srlg-group *grp-id*

Specifies up to eight Shared Risk Loss Groups (SRLGs) that path computation should avoid, or must avoid if the **strict-srlg** option is enabled. An SRLG group represents a set of interfaces which could be subject to the same failures or defects and thus share the same risk of failing.

Values 0 to 4294967295

exclude-node *excl-node-id*

Specifies a list of up to eight addresses, that should be excluded during the path computation.

Values a.b.c.d

skip-interface *interface-name*

Specifies an interface name of up to 32 characters, that should be skipped during the path computation.

ds-class-type *class-type*

Specifies the class type (CT) to associate with the computed path.

Values 0 to 7

cspf-reqtype *req-type*

Specifies the if all ECMP paths or a single path, selected randomly or using the **least-fill** parameter, should be returned.

Values all, random, least-fill

least-fill-min-thd *thd*

Specifies the use of the least-fill path selection method in the computation of the path.

Values 1 to 100

setup-priority *val*

Specifies the setup priority value to use for the path.

Values 0 to 7

hold-priority *val*

Specifies the hold priority value to use for the path.

Values 0 to 7

Table 91: Show Customer Field Descriptions

| Label | Description |
|---------------------|---|
| Customer-ID | The ID that uniquely identifies a customer. |
| Contact | The name of the primary contact person. |
| Description | Generic information about the customer. |
| Phone | The phone/pager number to reach the primary contact person. |
| Total Customers | The total number of customers configured. |
| Multi-service site | |
| Site | Multi-service site name. A multi-service customer site is a group of SAPs with common origination and termination points. |
| Description | Information about a specific customer's multi-service site. |
| Assignment | The port ID, MDA, or card number, where the SAP's that are members of this multi- service site are defined. |
| I. Sched Pol | The ingress QoS scheduler policy assigned to this multi-service site. |
| E. Sched Pol | The egress QoS scheduler policy assigned to this multi-service site. |
| Service Association | |
| Service-ID | The ID that uniquely identifies a service. |
| SAP | The SAP assigned to the service. |

customer

Syntax

customer *customer-id* **site** *customer-site-name* [{**ingress** | **egress**}] [**arbiter** {*name* | **root**}] [{**detail** | **depth**}]

Context

[\[Tree\]](#) (show>qos>policer-hierarchy customer)

Full Context

show qos policer-hierarchy customer

Description

This command displays information about the policer hierarchy per customer.

Parameters

customer-id

Specifies the customer ID that identifies the customer to the service.

customer-site-name

Specifies the unique customer site name, up to 32 characters.

ingress

Displays ingress queue group information.

egress

Displays egress queue group information.

name

Displays information about the name of the QoS arbiter.

root

Displays information about the arbiter root.

detail

Displays detailed information.

depth

Displays the bucket depth, parenting, rate, and traffic information related to a policer.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

show qos scheduler-hierarchy customer

Description

This command displays the scheduler hierarchy per customer multiservice site.

Parameters

customer-id

Specifies the ID number associated with a particular customer.

Values 1 to 2147483647

customer-site-name

Specifies the unique name customer site name.

scheduler-name

Specifies the unique scheduler name created in the context of the scheduler policy.

ingress

Displays ingress SAP customer scheduler stats.

egress

Displays egress SAP customer scheduler stats.

detail

Displays detailed information.

Table 92: Show QoS Scheduler-Hierarchy Customer Output Fields

| Label | Description |
|------------|--|
| Legend | Admin CIR/PIR: Specifies the configured value of CIR/PIR. Assigned CIR/PIR: Specifies the PIR/CIR rate given to a member by that parent level. Offered CIR/PIR: Specifies the offered load on that member. Consumed CIR/PIR: Specifies the amount of scheduler bandwidth used by this member. |
| Lvl/Wt | Specifies the priority level of the scheduler when compared to other child schedulers and queues vying for bandwidth on the parent schedulers during the above-CIR distribution phase of bandwidth allocation. Weight defines the relative weight of this scheduler in comparison to other child schedulers and queues at the same level. |
| Cir Lvl/Wt | Specifies the level of hierarchy when compared to other schedulers and queues when vying for bandwidth on the parent scheduler. Weight defines the relative weight of this queue as |

| Label | Description |
|--------------------|--|
| | compared to other child schedulers and queues while vying for bandwidth on the parent scheduler. |
| PIR | Specifies the PIR rate. |
| CIR | Specifies the CIR rate. |
| Parent | Specifies the parent scheduler that governs the available bandwidth given the queue aside from the queue's PIR setting. |
| Service-Id | The ID that uniquely identifies the policy. |
| Customer-Id | The ID that uniquely identifies the customer. |
| SAP | Specifies the Service Access Point (SAP) within the service where the policy is applied. |
| Multi Service Site | Specifies the multiservice site name. |
| Orphan Queues | Specifies the number of queues in an orphaned state. |
| Hierarchy | Displays the scheduler policy tree structure. |
| Tier0 | Specifies the weight of the queue at its parent internal (Tier0) scheduler. This is a normalized value based on the port speed, or hash weight when used within a LAG. |

Table 94: Show QoS Aggregation Rate Customer Output Fields

| Label | Description |
|------------------------|---|
| AdminRate | Displays the configured aggregate rate in the subscriber profile. |
| OperRate | Displays the actual downstream rate. |
| Limit Unused Bandwidth | Indicates whether the limit-unused-bandwidth command is enabled to protect against exceeding the aggregated bandwidth. |
| OnTheWireRates | Indicates whether the displayed rates are on-the-wire rates. |
| LastMileOnTheWireRates | Indicates whether the displayed rates are on-the-wire rates for the last mile only. |

customer

Syntax

customer *customer-id* **site** *customer-site-name* [**arbiter** {**root** | *name*}] [**ingress** | **egress**] [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**]

Context

[\[Tree\]](#) (monitor>qos>arbiter-stats customer)

Full Context

monitor qos arbiter-stats customer

Description

This command monitors arbiter statistics for a customer site.

Parameters

customer-id

Specifies the ID number to be associated with the customer, expressed as an integer.

Values 1 to 2147483647

customer-site-name

Specifies the customer site which is an anchor point for ingress and egress arbiter hierarchy.

name

Specifies the name of the policer control policy arbiter. This parameter is mandatory if the SAP resides on a LAG in adapt-qos link or port-fair mode.

Values An existing arbiter-name in the form of a string up to 32 characters long composed of printable, 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.

root

Specifies the root arbiter.

ingress

Displays arbiter-name statistics applied on the site ingress.

egress

Displays arbiter-name statistics applied on the site egress.

seconds

Configures the interval for each display in seconds.

Values 11 to 60

Default 11 seconds

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

customer

Syntax

customer *customer-id* **site** *customer-site-name* [**scheduler** *scheduler-name*] [**ingress** | **egress**] [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**]

Context

[Tree] (monitor>qos>scheduler-stats customer)

Full Context

monitor qos scheduler-stats customer

Description

This command monitors scheduler statistics per customer multi-service-site. The first screen displays the current statistics related to the specified customer ID and customer site name. The subsequent statistical information listed for each interval is displayed as a delta to the previous display. When the keyword **rate** is specified, the rate-per-second for each statistic is displayed instead of the delta. Monitor commands are similar to **show** commands but only statistical information displays. These commands display selected statistics per the configured number of times at the interval specified.

Parameters

customer-id

Specifies the ID number to be associated with the customer, expressed as an integer.

Values 1 to 2147483647

customer-site-name

Specifies the customer site, which is an anchor point for ingress and egress virtual scheduler hierarchy.

scheduler-name

Specifies an existing *scheduler-name*. Scheduler names are configured in the **config>qos>scheduler-policy>tier level** context. This parameter is mandatory if the customer resides on a LAG in adapt-qos link or port-fair mode.

Values An existing *scheduler-name* is in the form of a string, up to 32 characters, composed of printable, 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.

ingress

Displays the customer's multi-service-site ingress scheduler policy.

egress

Displays the customer's multi-service-site egress scheduler policy.

seconds

Configures the interval for each display in seconds.

Values 11 to 60

Default 11 seconds

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

Platforms

All

customer

Syntax

customer *customer-id* **site** *customer-site-name* [**arbiter** {*name* | *root*}] [**ingress** | **egress**]

Context

[\[Tree\]](#) (clear>qos>arbiter-stats customer)

Full Context

clear qos arbiter-stats customer

Description

This command clears the arbiter statistics per customer.

Parameters

customer-id

Specifies the ID number of the associated customer.

Values 1 to 2147483647

customer-site-name

Specifies the customer site name, up to 32 characters.

name

Specifies the arbiter name, up to 32 characters.

root

Specifies the arbiter root, up to 32 characters.

ingress

Clears the arbiter name statistics applied on the site ingress.

egress

Clears the arbiter name statistics applied on the site egress.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

customer

Syntax

8 d Commands

8.1 dampening

dampening

Syntax

dampening

Context

[\[Tree\]](#) (clear>port>eth dampening)

Full Context

clear port ethernet dampening

Description

This command clears Exponential Port Dampening (EPD) accumulated penalties on the port.

Platforms

All

8.2 damping

damping

Syntax

damping [*ip-prefix* [*ip-prefix-length*]] [damp-type] [detail] [ipv4]

damping [*ip-prefix* [*ip-prefix-length*]] [damp-type] [detail] {ipv6 | label-ipv4 | label-ipv6 | mcast-ipv4 | mcast-ipv6 | mvpn-ipv4 | vpn-ipv4 | vpn-ipv6}

Context

[\[Tree\]](#) (show>router>bgp damping)

Full Context

show router bgp damping

Description

This command displays BGP routes that have been dampened due to route flapping. This command can be entered with or without a route parameter.

When the keyword **detail** is included, more detailed information displays.

When only the command is entered (without any parameters included except **detail**), then all dampened routes are listed.

When a parameter is specified, then the matching route or routes are listed.

When a **decayed**, **history**, or **suppressed** keyword is specified, only those types of dampened routes are listed.

Parameters

ip-prefix[ip-prefix-length]

Displays damping information for the specified IP prefix length.

Values ipv4-prefix: a.b.c.d (host bits must be 0)
 ipv4-prefix-le: 0 to 32
 ipv6-prefix:
 • x:x:x:x:x:x:x (eight 16-bit pieces)
 • x:x:x:x:x:d.d.d.d
 • x: [0 to FFFF] H
 • d: [0 to 255] D
 ipv6-prefix-le: 0 to 128

damp-type

Displays damping type for the specified IP address.

decayed

Displays damping entries that are decayed but are not suppressed.

history

Displays damping entries that are withdrawn but have history.

suppressed

Displays damping entries suppressed because of route damping.

detail

Displays detailed information.

ipv4

Displays dampened routes for the IPv4 family.

ipv6

Displays dampened routes for the IPv6 family.

label-ipv4

Displays dampened routes for the label IPv4 family.

label-ipv6

Displays dampened routes for the label IPv6 family.

mcast-ipv4

Displays damped routes for the MCAST IPv4 family.

mcast-ipv6

Displays damped routes for the MCAST IPv6 family.

mvpn-ipv4

Displays damped routes for the MVPN IPv4 family.

vpn-ipv4

Displays damped routes for the VPN IPv4 family.

vpn-ipv6

Displays damped routes for the VPN IPv6 family.

Table 95: Show Damping Field Descriptions

| Label | Description |
|---------------|--|
| BGP Router ID | The local BGP router ID. |
| AS | The configured autonomous system number. |
| Local AS | The configured or inherited local AS for the specified peer group. If not configured, then it is the same value as the AS. |
| Network | Route IP prefix and mask length for the route. |
| Flag(s) | Legend: Status codes: u- used, s-suppressed, h-history, d-decayed, *-valid. If a * is not present, then the status is invalid. Origin codes: i-IGP, e-EGP, ?-incomplete, >-best |
| Network | The IP prefix and mask length for the route. |
| From | The originator ID path attribute value. |
| Reuse time | The time when a suppressed route can be used again. |
| AS Path | The BGP AS path for the route. |
| Peer | The router ID of the advertising router. |

| Label | Description |
|-----------------|---|
| NextHop | BGP nexthop for the route. |
| Peer AS | The autonomous system number of the advertising router. |
| Peer Router-Id | The router ID of the advertising router. |
| Local Pref | BGP local preference path attribute for the route. |
| Age | The time elapsed since the service was enabled. |
| Last update | The time when BGP was updated last in second/minute/hour (SS:MM:HH) format. |
| FOM Present | The current Figure of Merit (FOM) value. |
| Number of Flaps | The number of flaps in the neighbor connection. |
| Reuse time | The time when the route can be reused. |
| Path | The BGP AS path for the route. |
| Applied Policy | The applied route policy name. |

damping

Syntax

damping [{*ip-prefix/ip-prefix-length*] [**neighbor** *ip-address*]} | **group name**]

Context

[\[Tree\]](#) (clear>router>bgp damping)

Full Context

clear router bgp damping

Description

This command clears or resets the route damping information for received routes.

Parameters

ip-prefix/ip-prefix-length

Clears damping information for entries that match the IP prefix and prefix length.

- Values**
- ipv4-prefix:
 - a.b.c.d (host bits must be 0)
 - ipv4-prefix-length: [0 to 32]
 - ipv6-prefix:

- x:x:x:x:x:x:x (eight 16-bit pieces)
 - x:x:x:x:x:d.d.d.d
 - x: [0 to FFFF]H
 - d: [0 to 255]D
- ipv6-prefix-length: [0 to 128]

neighbor ip-address

Clears damping information for entries received from the BGP neighbor.

- Values**
- ipv4-address:
- a.b.c.d
- ipv6-prefix:
- x:x:x:x:x:x:x (eight 16-bit pieces)
 - x:x:x:x:x:d.d.d.d
 - x: [0 to FFFF]H
 - d: [0 to 255]D
- interface: up to 32 characters, mandatory for link local addresses

group name

Clears damping information for entries received from any BGP neighbors in the peer group.

- Values** up to 32 characters

Platforms

All

8.3 data-bearer

data-bearer

Syntax

data-bearer [*data-bearer-id*] [**detail**]

Context

[\[Tree\]](#) (show>router>Imp>te-link data-bearer)

Full Context

show router Imp te-link data-bearer

Description

This command displays LMP data bearer information for a specific TE link.

Parameters

data-bearer-id

Specifies the ID of a data bearer link.

Values 1 to 4294967295

detail

Keyword to display more detailed output.

Platforms

7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of data bearer information, and [Table 96: Data Bearer Output Fields](#) describes the output fields.

Sample Output

```
*A:SRU4>show>router>lmp>te-link# data-bearer 254
=====
LMP Data Bearer Link 254 Statistics
=====
Admin State   : In Service           Oper State    : Up Free
Remote Id     : 10                      Port         : 1/1/1
=====
```

Table 96: Data Bearer Output Fields

| Label | Description |
|-------------|---|
| Admin State | The administrative state of the data bearer link. |
| Oper State | The operational state of the data bearer link. |
| Remote Id | The remote ID of the data bearer link. |
| Port | The port used by the data bearer link. |

8.4 data-trigger

data-trigger

Syntax

data-trigger sap *sap-id*

Context

[Tree] (clear>service>dynsvc data-trigger)

Full Context

clear service dynamic-services data-trigger

Description

This command deletes all dynamic services associated with a dynamic services data trigger.

Note:

This command is not available in the MD-CLI.

Parameters

sap-id

Specifies the dynamic services data trigger SAP to delete.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

8.5 data-triggers

data-triggers

Syntax

data-triggers [sap *sap-id* **] [summary]**

Context

[Tree] (show>service>dynsvc data-triggers)

Full Context

show service dynamic-services data-triggers

Description

This command displays the active dynamic services data trigger details.

Note:
This command is not available in the MD-CLI.

Parameters

sap-id

Specifies the dynamic services SAP for which the details are shown.

summary

Limits the output to one line per data trigger SAP.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of data trigger information.

Sample Output

```
# show service dynamic-services data-triggers
=====
Dynamic Services Data-triggers
=====
SAP                : 1/1/4:1214.101
-----
Acct session-ID    : 144DFF0000009156A24138
MAC                : 00:51:00:dd:01:01
IP                 :
State              : sapCreated
-----
No. of Data-triggers: 1
=====
```

[Table 97: Data Trigger Field Descriptions](#) describes data trigger fields.

Table 97: Data Trigger Field Descriptions

| Output field | Description |
|-----------------|--|
| Acct session-ID | The RADIUS accounting session ID for this dynamic services data trigger. This accounting session ID is used as an accounting multi-session ID in RADIUS accounting for the associated dynamic services. It can also be used as a key in CoA or Disconnect Messages to set up or terminate associated dynamic services. |
| MAC | The MAC address learned to set up this dynamic service data trigger. The MAC address is included in the Access-Request message for RADIUS authentication. |
| IP | The IPv4 or IPv6 address learned to set up this dynamic service data trigger. If the data trigger packet was not an IP packet, then this field is empty. When available, the IP address is included in the RADIUS authentication and accounting messages. |

| Output field | Description |
|--------------|---|
| State | The current state of the dynamic service data trigger: Pending—(initial state) data trigger received and authentication started Accepted—(transient state) authentication succeeded; dynsvc script started but not yet completed sapCreated—(final state) corresponding dynamic services sap created |

8.6 database

database

Syntax

database

Context

[\[Tree\]](#) (show>service>id>spb database)

Full Context

show service id spb database

Description

This command displays SPB database information.

Platforms

Context

[\[Tree\]](#) (clear>service>id>pim-snooping database)

Full Context

```
clear service id pim-snooping database
```

Description

This command clears PIM snooping source group database information.

Parameters

sap-id

Clears PIM snooping SAP information

sdp-id

Clears PIM snooping entries associated with the specified SDP. For a spoke-SDP, the VC ID must be specified; for a mesh SDP, the VC ID is optional.

Values 1 to 17407

grp-ip-address

Clears PIM snooping information matching the specified group address

src-ip-address

Clears PIM snooping information matching one particular source within the multicast group

family

Displays either IPv4 or IPv6 information

Values ipv4 or ipv6

evpn-mpls

Clears PIM snooping statistics for EVPN-MPLS destinations

Platforms

All

database

Syntax

```
database [ip-address [/mask] [longer]] [peer ip-address] [detail qos]
```

Context

[\[Tree\]](#) (show>router>rip database)

Full Context

```
show router rip database
```

Description

Displays all routes in the RIP database.

Parameters

ip-address /mask

Specifies the IP address.

Values ip-address: a.b.c.d.
mask: 1 to 32

longer

Specifies the longer prefix match entries should also be displayed.

peer ip-address

Specifies the peer IP address.

Values a.b.c.d

detail

Displays detailed information.

qos

Specifies the QoS.

Platforms

All

Output

The following output is an example of RIP route database information, and [Table 98: Show RIP Database Field Descriptions](#) describes the output fields.

Sample Output

```
*A:ALA-1# show rip database

Context

[\[Tree\]](#) (clear>router>rip database)

Full Context

clear router rip database

Description

This command flushes all routes in the RIP database.

Platforms

All

database

Syntax

database [**sub-domain** *sub-domain*] [**template** *template-name*]

Context

[\[Tree\]](#) (show>router>bier database)

Full Context

show router bier database

Description

This command shows the BIER database and assigned labels for <SD, BSL, SI>.

Parameters

sub-domain

Displays detailed information about the sub-domain.

Values 0 to 255

template-name

Displays template name, up to 32 characters.

Platforms

All

Output

The following displays an example of a BIER database. [Table 99: Bier Database Fields](#) provides BIER database field descriptions.

Sample Output

```
*A:Dut-A# show router bier database
=====
BIER Database
=====
Template          MT          Sub-domain      BSL
BFR-ID           Start      End             Total
```

```

Table 99: Bier Database Fields

| Label | Description |
|------------|--|
| Template | The template name |
| MT | The IGP topology associated with the sub-domain |
| Sub-domain | The sub-domain ID |
| BSL | The BitStringLength used in the sub-domain |
| BFR-ID | The BFR ID which identifies the router in the BitString |
| Start | The start label allocated for this sub-domain |
| End | The end label allocated for this sub-domain |
| Total | The total number of labels allocated for this sub-domain |
| BFR-Prefix | The routable IP address of a BFR, used by BIER to identify a BFR |

database

Syntax

database [group *grp-ip-address*] [source *src-ip-address*]

database interface {*ip-int-name* | *ip-address*} [**group** *grp-ip-address*] [**source** *src-ip-address*]

database host *ip-address* [**group** *grp-ip-address*] [**source** *src-ip-address*]

database host all [**group** *grp-ip-address*] [**source** *src-ip-address*]

database group-interface all

Context

[\[Tree\]](#) (clear>router>igmp database)

Full Context

clear router igmp database

Description

This command clears IGMP or PIM database statistics on a specified interface or IP address.

Parameters

group *grp-ip-address*

Clears the multicast group address (IPv4/IPv6) or zero in the specified address group.

source *src-ip-address*

Clears the IGMP database from the specified source IP address.

interface *ip-int-name*

Clears the IGMP database on the specified interface.

interface *ip-address*

Clears the IGMP database on the specified IP address.

host *ip-address*

Clears the IGMP database on the specified host.

host all

Clears the IGMP database on all hosts.

group-interface *interface-name*

Clears the IGMP database on the specified group interface.

group-interface all

Clears the IGMP database on all group interfaces.

Platforms

All

database

Syntax

database [**group** *ipv6-address* [**source** *ipv6-address*]]

```
database interface {ip-int-name | ipv6-address} [group ipv6-address [source ipv6-address]]  
database ipsec-interface ip-int-name [group ipv6-address [source ipv6-address]]  
database host ipv6-address [group ipv6-address [source ipv6-address]]  
database host all [group ipv6-address [source ipv6-address]]  
database group-interface interface-name [fwd-service service-id] [group grp-ipv6-address [source  
ipv6-address]]  
database group-interface all
```

Context

[\[Tree\]](#) (clear>router>mld database)

Full Context

clear router mld database

Description

This command clears MLD database parameters.

Parameters

host *ipv6-address*

Clears the MLD database on the specified host.

host all

Clears the MLD database on all hosts.

interface *ip-int-name*

Clears database information for the specified MLD interface name.

interface *ipv6-address*

Clears database information for the specified MLD interface IPv6 address.

ipsec-interface *ip-int-name*

Clears database information for the specified dynamic name for the MLD-enabled child_SA.

group *ipv6-address*

Clears database information for the specified MLD group IPv6 address.

source *ipv6-address*

Clears database information for the specified MLD source IPv6 address.

service-id

Clears database information for the specified service ID.

Values service-id: 1 to 2148278386
svc-name: up to 64 characters.

Platforms

All

database

Syntax

```
database [interface ip-int-name | mt-int-name | int-ip-address] [group grp-ip-address [source ip-address]]  
[family]
```

Context

[Tree] (clear>router>pim database)

Full Context

clear router pim database

Description

This command clears IGMP or PIM database statistics on a specified interface or IP address.

Parameters

ip-int-name

Clears the IGMP or PIM database on the specified interface.

mt-int-name

Clears the default core group address of the Multicast Distribution Tree (MDT) for the VPRN instance. The Multicast Tunnel (MT) interface for a VPRN is created when this object is set to a valid group address.

Syntax: *vprn-id-mt-grp-ip-address*

int-ip-address

Clears the IGMP or PIM database on the specified IP address.

group-ip-address

Clears the multicast group address (ipv4, ipv6) or zero in the specified address group.

ip-address

Clears the IGMP or PIM database from the specified source IP address.

family

Clears database family information.

Values ipv4, ipv6

mpls-if-name

Clears the MPLS interface name.

Syntax: *mpls-if-index*

Platforms

All

database

Syntax

database

Context

[\[Tree\]](#) (show>router>p2mp-sr-tree database)

Full Context

show router p2mp-sr-tree database

Description

Commands in this context display P2MP SR tree database information.

Platforms

All

database

Syntax

database [*family*] [*ip-prefix/ip-prefix-length*] [**up to prefix-length**] [**origin-as** *as-number*]

database [*family*] [*ip-prefix/ip-prefix-length*] **{longer}**

database **{summary}**

database [*family*] [**{static}**]

Context

[\[Tree\]](#) (show>router>origin-validation database)

Full Context

show router origin-validation database

Description

This command displays database information.

Parameters

family

Specifies the type of routing information to be displayed.

Values *ipv4* — Displays IPv4 entries.

ipv6 — Displays IPv6 entries.

ip-prefix/ip-prefix-length

Displays routes only matching the specified IP address and length, up to 64 characters.

prefix-length

Displays routes matching up to the specified length.

Values 1 to 128

as-number

Specifies the origin AS number.

Values 0 to 4294967295

longer

Displays routes matching the *ip-prefix-ip-prefix-length* and routes with longer masks.

summary

Displays database summary information.

static

Displays static routes.

Platforms

All

Output

The following output is an example of database information.

Sample Output

```
A:Dut-C# show router origin-validation database

database

Syntax

database [*system-id* | *lsp-id*] [**detail**] [**level** *level*]

Context

[\[Tree\]](#) (show>router>isis database)

Full Context

show router isis database

Description

This command displays the entries in the IS-IS link state database.

Parameters

system-id

Only the LSPs related to the specified *system-id* are listed. If no *system-id* or *lsp-id* are specified, all database entries are listed.

lsp-id

Only the specified LSP (hostname) is listed. If no *system-id* or *lsp-id* are specified, all database entries are listed.

level

Specifies the interface level (1, 2, or 1 and 2).

detail

All output is displayed in the detailed format.

Platforms

Table 100: IS-IS Link State Database Output Fields

| Label | Description |
|------------------|--|
| Flex-Algorithm | The flexible algorithm number |
| Priority | Displays the FAD priority; It is the tiebreaker when multiple FADs are received |
| Metric Type | The metric used by the winning FAD igp — the IGP metric is used te-metric — the TE metric is used delay — the delay metric is used |
| Calculation Type | Displays the calculation type; for SPF a zero value is only defined |
| Prefix SID Flags | Displays the prefix SID flags |
| Fad Flags | Displays the FAD Flags; the M-flag is used for inter-area; when set, the metric must be used for inter-area traffic to avoid loops and blackhole traffic on ABR/ASBR |

database

Syntax

database [*system-id*]

Context

[\[Tree\]](#) (clear>router>isis database)

Full Context

clear router isis database

Description

This command removes the entries from the IS-IS link-state database which contains information about PDUs.

Parameters

system-id

When the system ID is entered, only the specified entries are removed from the IS-IS link-state database.

Platforms

All

database

Syntax

database [**type** {**router** | **network** | **summary** | **asbr-summary** | **external** | **nssa** | **all**}] [**area** *area-id*] [**adv-router** *router-id*] [*link-state-id*] [**detail**] [**filtered**]

database [**type** {**router** | **network** | **inter-area-pfx** | **inter-area-rtr** | **external** | **nssa** | **intra-area-pfx** | **rtr-info** | **all**}] [**area** *area-id*] [**adv-router** *router-id*] [*link-state-id*] [**detail**] [**filtered**]

[\[Tree\]](#) (show>router>ospf3 database)

Full Context

show router ospf database

show router ospf3 database

Description

This command displays information about the OSPF link state database (LSDB).

When no command line options are specified, the command displays brief output for all database entries.

Parameters

type *keyword*

Specifies to filter the OSPF LSDB information based on the type specified by *keyword*.

router

Displays only router (Type 1) LSAs in the LSDB.

network

Displays only network (Type 2) LSAs in the LSDB.

summary

Displays only summary (Type 3) LSAs in the LSDB.

asbr-summary

Displays only ASBR summary (Type 4) LSAs in the LSDB.

external

Displays only AS external (Type 5) LSAs in the LSDB. External LSAs are maintained globally and not per area. If the display of external links is requested, the area parameter, if present, is ignored.

nssa

Displays only NSSA area-specific AS external (Type 7) LSAs in the LSDB.

inter-area-pfx

Displays inter-area prefix LSAs.

inter-area-rtr

Displays inter-area router LSAs.

intra-area-pfx

Displays intra-area prefix LSAs.

rtr-info

Displays router info LSAs.

all

Displays all LSAs in the LSDB. The all keyword is intended to be used with either the **area area-id** or the **adv-router router-id [link-state-id]** parameters.

area area-id

Displays LSDB information associated with the specified OSPF *area-id*.

Values ip-address — a.b.c.d
 area — 0 to 4294967295

adv-router router-id [link-state-id]

Displays LSDB information associated with the specified advertising router. To further narrow the number of items displayed, the *link-state-id* can optionally be specified.

detail

Displays detailed information on the LSDB entries.

filtered

Displays LSDB entries that were filtered by an area import or export policy.

Platforms

All

Output

OSPF Database Output

[Table 101: OSPF Database Output Fields](#) describes the standard and detailed command output fields for an OSPF database.

Table 101: OSPF Database Output Fields

| Label | Description |
|---------|---------------------------|
| Area Id | The OSPF area identifier. |

| Label | Description |
|-----------------------------|---|
| Type LSA Type | Router — LSA type of router (OSPF) Network — LSA type of network (OSPF) Summary — LSA type of summary (OSPF) ASBR Summary — LSA type of ASBR summary (OSPF) Nssa-ext — LSA area-specific, NSSA external (OSPF) Area opaque — LSA type of area opaque (OSPF) router — LSA type of router (OSPF3) Network — LSA type of network (OSPF3) IE Pfx — LSA type of inter-area prefix (OSPF3) Newline IE Rtr LSA type of inter-area router (OSPF3) IA Pfx — LSA type of intra-area prefix (OSPF3) |
| Link State Id | The link state Id is an LSA type specific field containing either a number to distinguish several LSAs from the same router, an interface ID, or a router-id; it identifies the piece of the routing domain being described by the advertisement. |
| Adv Rtr Id Adv Router Id | The router identifier of the router advertising the LSA. |
| Age | The age of the link state advertisement in seconds. |
| Sequence Sequence No | The signed 32-bit integer sequence number. |
| Cksum Checksum | The 32-bit unsigned sum of the link-state advertisements' LS checksums. |
| No. of LSAs | The number of LSAs displayed. |
| Options | EA — External Attribute LSA Support DC — Demand Circuit Support R — If clear, a node can participate in OSPF topology distribution without being used to forward transit traffic. N — Type 7 LSA Support MC — Multicast Support E — External Routes Support V6 — V6 works in conjunction with R. If V6 is clear, a node can participate in OSPF topology distribution without being used to forward IPv6 datagrams. If R is set and V6 is clear, IPv6 datagrams are not forwarded but diagrams belonging to another protocol family may be forwarded. |

| Label | Description |
|--------------------------|---|
| Prefix Options | <p>P — Propagate NSSA LSA.</p> <p>MC — Multicast support.</p> <p>LA — Local address capability. If set, the prefix is an IPv6 interface address of the advertising router.</p> <p>NU — No unicast capability. If set, the prefix is excluded from IPv6 unicast calculations.</p> |
| Flags | <p>None — No flags set</p> <p>V — The router is an endpoint for one or more fully adjacent Virtual Links having the described area as the transit area</p> <p>E — The router is an AS Boundary Router</p> <p>B — The router is an Area Border Router</p> |
| Link Count | The number of links advertised in the LSA. |
| Link Type (<i>n</i>) | The link type of the <i>n</i> th link in the LSA. |
| Network (<i>n</i>) | The network address of the <i>n</i> th link in the LSA. |
| Mask (<i>n</i>) | The mask of the <i>n</i> th link in the LSA. |
| No of TOS (<i>n</i>) | The ToS of the <i>n</i> th link in the LSA. |
| Metric-0 (<i>n</i>) | The cost metric of the <i>n</i> th link in the LSA. |
| Not Flooded (<i>n</i>) | <p>Filtered on Import</p> <p>The <i>n</i>th LSA was filtered by an area import policy.</p> <p>Filtered on Export</p> <p>The <i>n</i>th LSA was filtered by an area export policy.</p> <p>Note: this line does not appear if there is no filtering and the LSA was flooded.</p> |

database

Syntax

database [purge]

Context

[\[Tree\]](#) (clear>router>ospf3 database)

[\[Tree\]](#) (clear>router>ospf database)

Full Context

clear router ospf3 database

clear router ospf database

Description

This command clears all LSAs received from other nodes, sets all adjacencies other than two-way to one-way, and refreshes all self-originated LSAs.

Parameters

purge

Clears all self-originated LSAs and re-originates all self-originated LSAs.

Platforms

All

database

Syntax

database [**peer** *ipv6-address*] [**detail**]

database [**peer** *ipv6-address*] **detail** [**qos**]

database *ipv6-address*[/*prefix-length*] [**longer**] [**peer** *ipv6-address*] [**detail**]

database *ipv6-address*[/*prefix-length*] [**longer**] [**peer** *ipv6-address*] **detail** [**qos**]

Context

[\[Tree\]](#) (show>router>ripng database)

Full Context

show router ripng database

Description

This command displays the routes in the RIPng database.

Parameters

ipv6-address

Specifies the RIPng IPv6 address.

Values

ipv6-address: x:x:x:x:x:x:x [-interface]

x:x:x:x:x:d.d.d.d [-interface]

x: [0..FFFF]H

d: [0..255]D

interface — link local addresses up to 32 characters

prefix-length

The IP prefix in dotted decimal notation for the range used by the ABR to advertise that summarizes the area into another area.

- Values** ipv6-prefix:
- x:x:x:x:x:x:x (eight 16-bit pieces)
 - x:x:x:x:x:d.d.d.d
 - x: [0 to FFFF]H
 - d: [0 to 255]D
- prefix-length: 0 to 128

detail

Displays detailed information.

qos

Displays QoS information.

longer

Displays more detailed information.

Platforms

All

Output

The following are examples of router RIPng database information.

Sample Output

```
*A:Dut-C>config>router>if# show router ripng database

database

Syntax

database

Context

[\[Tree\]](#) (clear>router>ripng database)

Full Context

clear router ripng database

Description

This command flushes all routes in the RIPng database.

Platforms

All

database

Syntax

database [bsl [256..1024]] subdomain-id [0..255]

Context

[\[Tree\]](#) (clear>router>bier database)

Full Context

clear router bier database

Description

This command clears the BIER database.

Platforms

All

database

Syntax

database [*system-id*]

Context

[\[Tree\]](#) (clear>service>id>spb database)

Full Context

clear service id spb database

Description

This command clears and resets the Shortest Path Bridging (SPB)database.

Parameters

system-id

Specifies the system ID. When the system ID is entered, only the specified entries are removed from the IS-IS adjacency database.

Values 6-octet system identifier (xxxx.xxxx.xxxx)

Platforms

All

8.7 datapath

datapath

Syntax

datapath *port-id* [**mac** *mac-chip-number*] [**fp** *fp-number*] [**detail**]

Context

[\[Tree\]](#) (show datapath)

Full Context

show datapath

Description

This command displays the datapath mapping for the specified card, MDA, FP, MAC, connector, and port combinations. Fully qualified port identifiers are displayed for ports when the **detail** or **port** parameters are specified.

This command is supported on FP4-based hardware only.

Parameters

port-id

Specifies the port ID.

slot

Specifies the slot number of the card in the chassis to display. The maximum slot number is platform dependent. See the *Installation Guides* for more information.

Values 1 to 10

mda

Specifies the MDA number in the slot to display. This is an integer value relative to the card.

Values 1 to 2

xiom

Specifies the XIOM number in the slot to display.

Values x1

connector

Specifies the connector number to display. This is an integer value relative to the MDA.

Values c1 to c54

port

Specifies the connector port number to display. The full port identifier is displayed. This is an integer value relative to the connector.

Values 1 to 10

fp-number

Specifies the FP number to display. This is an integer value relative to the card.

Values 1 to 8

mac-chip-number

Specifies the MAC number to display. This is an integer value relative to the MDA.

Values 1 to 12

detail

Displays the full port identifiers for all ports with configured connectors.

Platforms

All

Output

The following output is an example of the **show datapath** command.

Sample Output:

```
*A:PE# show datapath 1/2/c1/1
```

| Card | MDA | FP | MAC Chip Num | Connector | Ports |
|------|-----|----|--------------|-----------|----------|
| 1 | 2 | 1 | 1 | c1 | 1/2/c1/1 |

8.8 datastore-locks

datastore-locks

Syntax

datastore-locks [detail]

Context

[\[Tree\]](#) (show>system>management-interface datastore-locks)

Full Context

show system management-interface datastore-locks

Description

This command displays datastore locks information.

Parameters

detail

Displays session-specific information.

Platforms

All

Output

The following is an example of detail datastore locks information for all datastores. [Table 102: Datastore-locks Output Fields](#) describes the output fields.

Sample Output

```
[ ]
A:admin@node-1# show system management-interface datastore-locks detail
=====
Session ID  Region                Datastore              Lock State
Username    Session Mode          Idle Time
Session Type From
-----
6           configure             Candidate              Unlocked
admin      Global                0d 00:00:09
MD-CLI (1) Console
-----
Number of sessions: 1
'#' indicates the current active session
'(n)' indicates the number of internal sessions
=====
```

Table 102: Datastore-locks Output Fields

| Label | Description |
|------------|--|
| Session ID | The session ID. |
| Region | The region or scope that the datastore belongs to. |

| Label | Description |
|--------------|--|
| Datastore | Datastores that can be locked. For example: Running and Candidate. |
| Lock State | Locked — Indicates the session is in a locked state. Unlocked — Indicates the session is in an unlocked state. |
| Username | The name of the user. |
| Session Mode | Global — A shared session. Exclusive — An exclusive session. |
| Idle Time | The idle time of the session. |
| Session Type | NETCONF — Indicates a NETCONF session is running. MD-CLI — Indicates an MD-CLI session is running. gRPC — Indicates a gRPC session is running. SNMP — Indicates an SNMP session is running. Classic CLI — Indicates a classic CLI session is running. System — Indicates a system (EHS or CRON) session is running. |
| From | The originating IP address. |

8.9 debounce

debounce

Syntax

debounce peer *ip-address* ring *sync-tag*

Context

[\[Tree\]](#) (clear>redundancy>multi-chassis>mcr debounce)

Full Context

clear redundancy multi-chassis mc-ring debounce

Description

This command clears multi-chassis ring operational state debounce history.

Parameters

ip-address

Clears debounce history for the specified IP address.

- Values**
- ipv4-address: a.b.c.d
 - ipv6-address:
 - x:x:x:x:x:x:x (eight 16-bit pieces)
 - x:x:x:x:x:d.d.d.d
 - x – [0 to FFFF] H
 - d – [0 to 255] D

sync-tag

Clears debounce history for the specified sync tag.

Platforms

All

8.10 debug

debug

Syntax

debug [*application*]

Context

[\[Tree\]](#) (show debug)

Full Context

show debug

Description

This command displays set debug points.

Note:

This command is not available in the MD-CLI. Use the MD-CLI **admin show configuration debug** command or the **info** command in the debug configuration region.

Parameters

application

Display which debug points have been set.

- Values**
- aaa, application-assurance, atm, bgp, bier, call-trace, certificate, cisco-hdlc, diameter, dynamic-services, eth-cfm, ethernet, filter, frame-relay, gmpls, gtp, igmp, ip, ipsec, isis, l2tp, lag, ldp, lmp, local-dhcp-server, mcast-management, mirror, mld, mpls, msdp, mtrace, mtrace2, nat,

debug

Syntax

debug

Context

[\[Tree\]](#) (tools>dump debug)

Full Context

tools dump debug

Description

Commands in this context dump debug information.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

8.11 debug-packet

debug-packet

Syntax

debug-packet [clear]

Context

[\[Tree\]](#) (tools>dump>eth-cfm debug-packet)

Full Context

tools dump eth-cfm debug-packet

Description

This command displays and optionally clears the counters representing the number of CFM PDUs that matched the debug criteria but were not passed to the debug logger. This situation is caused by a full message queue.

Parameters

clear

Clears the current counters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of CFM-PDU information.

Sample Output

```
tools dump eth-cfm debug-packet
=====
ETH-CFM Debug Logging Message Queue Statistics
=====
Rx Debug Exceptions      : 0
Tx Debug Exceptions      : 0
=====
```

8.12 declined-addresses

declined-addresses

Syntax

declined-addresses *ip-address*[/*mask*] [**detail**]

declined-addresses pool *pool-name*

Context

[\[Tree\]](#) (show>router>dhcp>server declined-addresses)

Full Context

show router dhcp local-dhcp-server declined-addresses

Description

This command display information about declined addresses.

Parameters

pool-name

Specifies a DHCP pool name on the router.

ip-address

Specifies the IP address of the DNS server. This address must be unique within the subnet and specified in dotted decimal notation. Allowed values are IP addresses in the range 1.0.0.0 – 223.255.255.255 (with support of /31 subnets).

detail

Displays detailed information.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of declined address information

Sample Output

```
*A:ALA-48>show>router>dhcp>server# declined-addresses pool test
=====
Declined addresses for server test Base
=====
  Pool                Subnet          IP Address
  PPpoe User Name    Time           MAC Address    Type
  Option 82 Circuit ID
  -----
  No Matching Entries
  =====
*A:ALA-48>show>router>dhcp>server#
```

[Table 103: Declined Address Pool Field Descriptions](#) describes declined address pool output fields.

Table 103: Declined Address Pool Field Descriptions

| Field | Description |
|----------------------|--|
| Pool | The name of the IP address pool |
| Subnet | The subnet address |
| IP Address | The declined IP address |
| Time | The creation time of this entry |
| MAC Address | The declined MAC address |
| Type | The type of declined address |
| PPPoE User Name | The name of the PPPoE user name |
| Option 82 Circuit ID | The declined circuit ID from the Option 82 |

declined-addresses

Syntax

declined-addresses *ip-address[/mask]*

declined-addresses pool *pool-name*

Context

[\[Tree\]](#) (clear>router>dhcp>server declined-addresses)

Full Context

clear router dhcp local-dhcp-server declined-addresses

Description

This command clears declined DHCP addresses.

Parameters

pool-name

Clears information about the declined pool name.

ip-address[/mask]

Clears information about the declined IP address and mask.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

8.13 default-domain

default-domain

Syntax

default-domain [**bridge-identifier** *bridge-id*] [**vlan** *vlan-id*] [**system-settings**]

Context

[\[Tree\]](#) (show>eth-cfm default-domain)

Full Context

show eth-cfm default-domain

Description

This command displays per-MIP index (**bridge-identifier** and **vlan**) configuration as entered under the **default-domain** entries.

Parameters

bridge-id

The bridge identifier related to the MIP. This is equivalent to the *service-id*.

Values 1 to 2147483647

vlan-id

The VLAN ID matching the primary VLAN, or "none" if **primary-vlan-enable** is not configured.

Values 1 to 4094, none

system-settings

Specifies the system settings.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following is an example of default domain information.

[Table 104: ETH-CFM Default Domain Field Descriptions](#) describes the show default domain command output fields.

Sample Output

```
show eth-cfm default-domain
=====
Default Domain Information

Table 104: ETH-CFM Default Domain Field Descriptions

| Label | Description |
|---------------------|--|
| BridgeName:BridgeID | The name and ID of the association service BridgeName:BridgeID combinations that exceed the allowed column length causes the associated output to be produced on a separate line. |
| VLAN | The numerical value of the primary VLAN associated with the MIP, or the value none |
| Level | The configured level value, or defer to the value specified under the system settings for the MIP |
| Creation | The configured MHF creation mode, or defer to the value specified under the system settings for the MIP |
| IdPerm | The configured identifier that is carried in supporting ETH-CFM PDUs, or defer to the value specified under the system settings |

| Label | Description |
|-------|---|
| LtrPr | The configured MIP LTR priority, or defer to the value specified under the system settings for the MIP |

8.14 delay-template

delay-template

Syntax

`delay-template template-name`

Context

[Tree] (show>oam-pm>streaming delay-template)

Full Context

show oam-pm streaming delay-template

Description

This command displays the configuration data for one or all OAM performance monitoring delay templates.

Parameters

template-name

Displays the results for a specific delay template, up to 64 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following is an example of OAM-PM streaming **delay-template** summary information. [Table 105: Show delay-template Output Fields](#) describes the delay template fields.

Sample Output

```
show oam-pm streaming delay-template
-----
Streaming Delay Templates
-----
Name                                     Admin  Tests

Sample Window    : 10 seconds
Window Integrity : 80%
Active Test Refs : 6
Total Test Refs  : 7
-----
  
```

Table 105: Show delay-template Output Fields

| Label | Description |
|------------------|--|
| Name | Name of the delay template |
| Admin | State of the delay template |
| Tests | Number of tests referencing the delay template |
| Tmpl Name | Name of the delay template |
| Description | Description of the delay template (truncated beyond width) |
| Admin State | Up — The delay template is administratively enabled Down — The delay template is administratively disabled |
| FD Average | forward — The average frame delay metric for forward direction backward — The average frame delay metric for backward direction round-trip — The average frame delay metric for round-trip direction |
| IFDV Average | forward — The average inter-frame delay variation metric for forward direction backward — The average inter-frame delay variation metric for backward direction round-trip — The average inter-frame delay variation metric for round-trip direction |
| Sample Window | Length of the sample window |
| Window Integrity | Percentage required to ensure integrity of the reporting |
| Active Test Refs | Number of tests actively referencing the delay template |
| Total Test Refs | Number of total tests referencing the delay template |

8.15 delay-template-using

delay-template-using

Syntax

delay-template-using [**delay-template** *template-name*]

Context

[Tree] (show>oam-pm>streaming delay-template-using)

Full Context

show oam-pm streaming delay-template-using

Description

This command displays the list of sessions configured against one or all OAM performance monitoring delay templates.

Parameters

template-name

Displays the results for a specific delay template up to 64 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following is an example of OAM-PM streaming **delay-template-using** summary information.

Sample Output

```
show oam-pm streaming delay-template-using

8.16 dest-tracking

dest-tracking

Syntax

dest-tracking ip [detail]

dest-tracking ipv6 [detail]

dest-tracking sap [detail]

dest-tracking sdp [detail]

Context

[\[Tree\]](#) (tools>dump>filter>resources dest-tracking)

Full Context

tools dump filter resources dest-tracking

Description

This command displays information about resources pertaining to tracked targets.

Parameters

ip

Displays information about IPv4 targets.

ipv6

Displays information about IPv6 targets.

sap

Displays information about SAP targets.

sdp

Displays information about SDP targets.

detail

Displays detailed information.

Platforms

All

Output

The following output is an example of filter resource SAP destination tracking information.

Sample Output

```
dest-tracking sap
=====
Unique SAPs with tracked forwarding states =====
Used : 1
Free : 4095
Total : 4096
=====
```

The following output is an example of filter resource SAP destination tracking detailed information.

```
dest-tracking# sap detail
=====
Unique SAPs with tracked forwarding states =====
Num Destination                               Ref. count
-----
  1 sap 1/2/2                                 1
=====
Unique SAPs with tracked forwarding states =====

detail

Syntax

detail [*session ip-addr [label-space]*] [*family*]

Context

[\[Tree\]](#) (show>router>ldp>bindings>active detail)

Full Context

show router ldp bindings active detail

Description

This command displays details of LDP bindings.

Parameters

family

Displays either IPv4 or IPv6 LDP information.

session *ip-addr*[*label-space*]

Specifies the IP address and label space identifier.

Values <ip-addr[*label-spa**> : ipv4-address:label-space ipv6-address[*label-space*] label-space - [0 to 65535]

```

Table 106: PCEP Detail Output Fields

| Label | Description |
|-------------------------|--|
| Admin Status | Down — PCEP is administratively disabled. Up — PCEP is administratively enabled. |
| Oper Status | Down — PCEP is operationally down. Up — PCEP is operationally up. |
| Unknown Msg Limit | Specifies the unknown messages, per minute, limit. |
| Keepalive Interval | Specifies the keepalive interval. |
| DeadTimer Interval | Specifies the number of matching entries. |
| Capabilities List | Specifies the capabilities listing. |
| Address | Specifies the IP address. |
| Report Path Constraints | True — Path constraints will be reported. False — Path constraints will not be reported. |
| Redelegation Interval | Specifies the redelegation timer interval. |
| State Interval | Specifies the state timer interval. |
| State Timer Action | Remove — Specifies the state timer action is remove. None — Specifies the state timer action is none. |
| Max SR-TE PCE Init Lsps | Specifies the maximum number of PCE initiated SR-TE LSPs that can be created by the router. |
| Open Wait Timer | Specifies the open wait timer value. |
| Keep Wait Timer | Specifies the keep wait timer value. |
| Sync Timer | Specifies the sync timer value. |
| Request Timer | Specifies the request timer value. |
| Connection Timer | Specifies the connection timer value. |

| Label | Description |
|--------------------|---|
| Allow Negotiations | True — Allow negotiations will occur. False — Allow negotiations will not occur. |
| Max Sessions | Specifies the maximum sessions value. |
| Max Unknown Req | Specifies the maximum unknown requests value. |

detail

Syntax

detail [*partition*]

Context

[Tree] (show>app-assure>group>http-enrich detail)

Full Context

show application-assurance group http-enrich detail

Description

This command displays detailed HTTP Enrichment information.

Parameters

partition

Specifies the partition within the group.

Values 1 to 65535

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

detail

Syntax

detail

Context

[Tree] (show>router>bgp>routes detail)

Full Context

show router bgp routes detail

Description

This command displays detailed information about the BGP routes, including information about the original path attribute values.

detail is a parameter of the **show router bgp routes** command. Depending on the parameters that are used to issue the command, the output can display a narrower or wider set of routes, including routes belonging to other address families. See the **show router bgp routes** command description for syntax variants, parameter descriptions and values, and output examples.

Platforms

All

8.18 detected-protocols

detected-protocols

Syntax

detected-protocols {**all** | **sap** *sap-id* | **spoke-sdp** *sdp-id[:vc-id]*}

Context

[\[Tree\]](#) (clear>service>id>stp detected-protocols)

Full Context

clear service id stp detected-protocols

Description

RSTP automatically falls back to STP mode when it receives an STP BPDU. The **clear detected-protocols** command forces the system to revert to the default RSTP mode on the SAP or spoke SDP.

Parameters

all

Clears all detected protocol information.

sap-id

Clears the specified lease state SAP information.

sdp-id

The SDP ID to be cleared.

Values 1 to 17407

vc-id

The virtual circuit ID on the SDP ID to be cleared.

Values 1 to 4294967295

Platforms

All

8.19 deterministic

deterministic

Syntax

deterministic

Context

[\[Tree\]](#) (tools>perform>nat deterministic)

Full Context

tools perform nat deterministic

Description

Commands in this context perform actions of deterministic NAT.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

8.20 device

device

Syntax

device [*ieee-address*]

Context

[\[Tree\]](#) (show>system>bluetooth device)

Full Context

show system bluetooth device

Description

This command displays information for Bluetooth devices registered with the system.

Parameters

ieee-address

Specifies the MAC address, up to 30 characters.

Platforms

7750 SR-1, 7750 SR-s, 7950 XRS-20e

8.21 dhcp

dhcp

Syntax

dhcp

Context

dhcp-client interface *ip-int-name*

Context

[\[Tree\]](#) (show>router>autoconfigure dhcp-client)

Full Context

show router autoconfigure dhcp-client

Description

This command displays DHCP client information.

Parameters

ip-int-name

Specifies the IP interface name, up to 32 characters.

statistics

Displays DHCP client statistics.

routes

Displays routes received by the DHCP protocol.

Platforms

7450 ESS-7, 7750 SR-1, 7750 SR-7, 7750 SR-1e, 7750 SR-s

8.23 dhcp-rx-stats

dhcp-rx-stats

Syntax

dhcp-rx-stats [clear]

Context

[\[Tree\]](#) (tools>dump dhcp-rx-stats)

Full Context

tools dump dhcp-rx-stats

Description

This command displays the DHCP received packet statistics.

Parameters

clear

Clears DHCP RX statistics.

Platforms

All

Output

The following output is an example of DHCP RX statistics information.

Sample Output

```
*A:# tools dump dhcp-rx-stats
=====

diameter-node *origin-host-string* **routing-table**

Context

[Tree] (show>aaa diameter-node)

Full Context

show aaa diameter-node

Description

This command displays information about a Diameter node.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following are examples of Diameter node information.

Sample Output

```
show aaa diameter node "node1.myrealm.com" routing-table
=====
Diameter Routing Table (Node: node1.myrealm.com)
=====
Realm Name                Appl      Pref:Index  Server-Identifier
-----
subrealm.telenet.be      Gx        30:1        node1.subrealm.telenet.be
telenet.be                Gx        60          node2.subrealm.telenet.be
telenet.be                relay     50          node3.subrealm.telenet.be
-----
No. of Routes: 5
=====
```

[Table 108: Diameter Node Routing Table Field Descriptions](#) describes routing entries in the Diameter realm-based routing table fields.

Table 108: Diameter Node Routing Table Field Descriptions

| Field | Description |
|-------------------|---|
| Realm Name | The destination realm name |
| Appl | The application for which this route will be used. Supported applications: <ul style="list-style-type: none"> • NASREQ • Gx • Gy • Relay (encompass all applications) |
| Pref:Index | The preference and index of the peer. Peers for the same realm are selected in order of preference. Peers with the lowest preference are preferred. If multiple peers have the same preference for the same realm, the peer with a lowest index is selected. Preference and index are user-configured parameters. |
| Server-Identifier | The next hop peer name |

```
show aaa diameter node "node1.myrealm.com" peer "relay.telenet.be"
=====
Diameter Node : node1.myrealm.com
```

```

=====
Index : 1
Remote Host Identity : relay.telenet.be
Remote Realm : telenet.be
Remote IP address : 13.0.1.5
Remote Port: 3868
Remote Origin-State-Id : 1522062441
Local Host Identity : bng1.bng.nokia.com
Local Realm : bng.nokia.com
Local IP address : 13.0.1.4
Local port: 3456
Peer Admin State : Up
Peer Active : Yes
Peer Status : I-Open
Active Applications : nasreq gx
Last Disconnect Cause : rebooting

[Table 109: Diameter Node Peer Field Descriptions](#) describes Diameter node peer fields.

Table 109: Diameter Node Peer Field Descriptions

| Field | Description |
|------------------------|---|
| Diameter Node | The Diameter node under which this peer is active |
| Index | The Peer index is a peer configuration parameter |
| Remote Host Identity | The peer identity |
| Remote Realm | The realm to which the peer belongs |
| Remote IP address | The IP address of the peer |
| Remote Port | The port on the peer used for Diameter communication |
| Remote Origin-State-Id | The Origin-State-Id of the peer |
| Local Host Identity | The local identity |
| Local Realm | The local realm name |
| Local IP address | The local IP address |
| Local Port | The local port used for Diameter communication |
| Peer Admin State | The administrative state of the configured peer |
| Peer Active | Indicates whether the connection towards the peer is active |
| Peer Status | The operational status of the configured peer |
| Active Applications | The applications used over this peer |

| Field | Description |
|-----------------------|---|
| Last Disconnect Cause | The last disconnect cause |
| Preference | The configured preference of the peer |
| Connection Timer (Tc) | The timer used to initiate connections towards the peer. In case that the connection is not successfully established, a new attempt is periodically tried (every Tc interval) |
| Watchdog Timer (Tw) | The watchdog timer value that detects the failed connection towards the peer |
| Last Mgmt Change | The date and time of the last management change |

```

[Table 111: Diameter Node SR Routing Table Field Descriptions](#) describes the Diameter node SR table fields.

Table 111: Diameter Node SR Routing Table Field Descriptions

| Field | Description |
|-------------------|---|
| Realm Name | The destination realm name |
| Application | The application for which this route will be used. Supported applications: <ul style="list-style-type: none"> NASREQ Gx Gy Relay (all applications) |
| Pref | The preference and index of the peer. Peers for the same realm are selected in order of preference. Peers with higher preference are preferred. If multiple peers have the same preference for the same realm, the peer with a lowest index is selected. Preference and index are user-configured parameters. |
| Entry | Dynamic or static diameter route |
| Server-Identifier | The next hop peer name |

diameter-node

Syntax

diameter-node *origin-host-string* **peer** *dest-host-string* **statistics**

Context

[Tree] (clear>aaa diameter-node)

Full Context

clear aaa diameter-node

Description

This command clears Diameter node data.

Parameters

origin-host-string

Specifies the origin host name, up to 80 characters.

dest-host-string

Specifies the destination host name, up to 80 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

8.29 diameter-peer-policy

diameter-peer-policy

Syntax

diameter-peer-policy [*peer-policy-name*]

diameter-peer-policy *peer-policy-name* **peer** *peer-name* [**statistics**]

diameter-peer-policy *peer-policy-name* **client-side-peer-ip** *ip-address* **port** *tcp-port* [**statistics**]

Context

[Tree] (show>aaa diameter-peer-policy)

Full Context

show aaa diameter-peer-policy

Description

This command displays diameter peer policy information and diameter peer information and statistics. For the diameter proxy, the incoming peer can be specified with an IP address and port number.

Parameters

peer-policy-name

Specifies the diameter peer policy name, up to 32 characters.

peer-name

Specifies the diameter peer name, up to 32 characters.

ip-address

Specifies the IP address of the incoming peer (client side) of a diameter proxy.

tcp-port

Specifies the TCP port number of the incoming peer (client side) of a diameter proxy.

statistics

Displays the diameter peer statistics with details per diameter application, per message type, and per direction (rx/ tx).

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following is an example of AAA Diameter peer policy information.

Sample Output

```
# show aaa diameter-peer-policy "diameter-peer-policy-1"
=====
Diameter Peer Policy : diameter-peer-policy-1

Table 112: AAA Diameter Peer Policy Field Descriptions provides a description of the counters in the output of the **show aaa diameter-peer-policy** command. and Table 113: Aggregate Failed Request Rx and Answer Rx Counters provides the failure reasons for the aggregate Failed counter (Request Rx and Answer Rx).

Table 112: AAA Diameter Peer Policy Field Descriptions

| Counter | | Counts |
|---------------------------------------|------------|---|
| Aggregates Total | Request Tx | Aggregated counter — The sum of all successfully transmitted diameter request messages (all applications, all message types) |
| | Answer Rx | Aggregated counter — The sum of all successfully received diameter answer messages (all applications, all message types) |
| | Request Rx | Aggregated counter — The sum of all successfully received diameter request messages (all applications, all message types) |
| | Answers Tx | Aggregated counter — The sum of all successfully transmitted diameter answer messages (all applications, all message types) |
| Aggregates Failed | Request Tx | Aggregated counter — The sum of all request messages that could not be sent for internal reasons, such as TCP socket error (for example, congestion), failure reported to application (for example, no retries left) Dropped by Python — Timeouts (requests for which no answer was received within the configured timeout interval) |
| | Answer Rx | Aggregated counter — The sum of all Answer messages that failed to be successfully decoded, such as such as invalid header length or a violation against the Command Code Format (CCF) specification See Table 113: Aggregate Failed Request Rx and Answer Rx Counters Table 113: Aggregate Failed Request Rx and Answer Rx Counters for more information. |
| | Request Rx | Aggregated counter — The sum of all Request messages that failed to be successfully decoded, such as invalid header length or a violation against the Command Code Format (CCF) specification See Table 113: Aggregate Failed Request Rx and Answer Rx Counters Table 113: Aggregate Failed Request Rx and Answer Rx Counters for more information. |
| | Answers Tx | Aggregated counter — The sum of all answer messages that could not be sent for internal reasons such as TCP socket error (for example, congestion) Dropped by Python |
| Application ID <i>id</i> message type | Request Tx | Successfully transmitted diameter request messages for the corresponding application and message type |
| | Answer Rx | Successfully received diameter answer messages for the corresponding application and message type |

| Counter | | Counts |
|---------|------------|--|
| | Request Rx | Successfully received diameter request messages for the corresponding application and message type |
| | Answers Tx | Successfully transmitted diameter answer messages for the corresponding application and message type |

Table 113: Aggregate Failed Request Rx and Answer Rx Counters

| Role | Failed reasons |
|--------------------------------------|---|
| Proxy | <p>Proxy (message length too short, too long, or version unsupported)</p> <p>Consistency check failed: header size, message length, illegal flag combination, AVP header too small, AVP present but not allowed (base RFC messages), and so on</p> <p>Not a base message</p> <p>Not a request</p> <p>Tx overload (message received to be send to client)</p> <p>Dropped by python</p> <p>Failed to create answer</p> <p>No transaction (answer to server, but request is not found - 5 min)</p> |
| Diameter base / Diameter application | <p>Message dropped due to result code</p> <p>Message too big / too small</p> <p>Dropped by python</p> <p>Consistency check failed</p> <p>end-2-end mismatch hop-to-hop command code (answer/request mismatch)</p> <p>Cool down sequence drop</p> <p>cc error request</p> <p>Application id in header error</p> <p>T bit in header</p> |

diameter-peer-policy

Syntax

diameter-peer-policy *peer-policy-name* **peer** *peer-name* **statistics**

diameter-peer-policy *peer-policy-name* **statistics proxy client-side-peer-ip** *ip-address* **port** *port*

Context

[Tree] (clear>aaa diameter-peer-policy)

Full Context

```
clear aaa diameter-peer-policy
```

Description

This command clears diameter peer policy data.

Parameters

peer-policy-name

Specifies the diameter peer policy name, up to 32 characters.

peer-name

Specifies the diameter peer name, up to 32 characters.

statistics

Clears the diameter peer statistics.

ip-address

Specifies the IP address of the incoming peer (client side) of a diameter proxy.

port

Specifies the port number.

Values 1 to 65535

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

8.30 diameter-session

diameter-session

Syntax

```
diameter-session
```

Context

[\[Tree\]](#) (show>subscr-mgmt diameter-session)

Full Context

```
show subscriber-mgmt diameter-session
```

Description

Commands in this context display diameter session information.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

diameter-session

Syntax

diameter-session

Context

[\[Tree\]](#) (clear>subscr-mgmt diameter-session)

Full Context

clear subscriber-mgmt diameter-session

Description

This command clears diameter session data.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

8.31 direct-export

direct-export

Syntax

direct-export

Context

[\[Tree\]](#) (show>app-assure>group>cflowd direct-export)

Full Context

show application-assurance group cflowd direct-export

Description

Commands in this context display cflowd direct-export output.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

8.32 discovery

discovery

Syntax

```
discovery [{peer [ip-address]} | {interface [ ip-int-name]]] [state state] [detail] [ adjacency-type type]
discovery [state state] [detail | summary] [adjacency-type type] [session ip-addr[label-space]]
discovery [state state] [detail | summary] [adjacency-type type] [family]
discovery interface [ip-int-name] [state state] [detail | summary] [session ip-addr[label-space]]
discovery peer [ip-address] [state state] [ detail | summary] [session ip-addr[ label-space]]
```

Context

[\[Tree\]](#) (show>router>ldp discovery)

Full Context

```
show router ldp discovery
```

Description

This command displays the status of the interfaces participating in LDP discovery.

Parameters

peer ip-address

Specifies to display the IP address of the peer.

interface ip-int-name

The name of an existing interface. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.

state state

Specifies to display the current operational state of the adjacency.

Values established, trying, down

detail

Specifies to display detailed information.

family

Displays either IPv4 or IPv6 LDP session information.

adjacency-type type

Specifies to display the adjacency type.

Values link, targeted

Platforms

All

Output

LDP Discovery Output

Table 114: LDP Discovery Output Fields describes the LDP discovery output fields.

Table 114: LDP Discovery Output Fields

| Label | Description |
|--------------------------|---|
| Interface Name | The name of the interface. |
| Local Addr | The IP address of the originating (local) router. |
| Peer Addr | The IP address of the peer. |
| AdjType | The adjacency type between the LDP peer and LDP session is targeted. |
| State | Established — The adjacency is established. Trying — The adjacency is not yet established. |
| No. of Hello Adjacencies | The total number of hello adjacencies discovered. |
| Up Time | The amount of time the adjacency has been enabled. |
| Hold Time Remaining | The time left before a neighbor is declared to be down. |

Sample Output

```

8.33 dist-cpu-protection

dist-cpu-protection

Syntax

cpu-protection

Context

[\[Tree\]](#) (show>system>security dist-cpu-protection)

Full Context

show system security dist-cpu-protection

Description

Commands in this context display Distributed CPU Protection information.

Platforms

All

dist-cpu-protection

Syntax

dist-cpu-protection

Context

[Tree] (tools>dump>security dist-cpu-protection)

[Tree] (tools>perform>security dist-cpu-protection)

Full Context

tools dump security dist-cpu-protection

tools perform security dist-cpu-protection

Description

This command displays to release Distributed CPU Protection parameters and status at the per card and forwarding plane level.

Platforms

All

dist-cpu-protection

Syntax

dist-cpu-protection [detail]

Context

[Tree] (show>port dist-cpu-protection)

Full Context

show port dist-cpu-protection

Description

This command displays distributed CPU protection information.

Parameters

detail

Displays detailed information.

Platforms

All

8.34 diversity

diversity

Syntax

diversity *diversity-assoc-name*

Context

[Tree] (show>router>pcep>pcc>pce-assoc diversity)

Full Context

show router pcep pcc pce-associations diversity

Description

This command displays the diversity association information.

If a diversity association name is not specified, the information for all configured diversity associations is displayed.

Parameters

diversity-assoc-name

Specifies the diversity association name.

Platforms

All

Output

The following output is an example of diversity association information, and [Table 115: Show Diversity Association Descriptions](#) describes the output fields.

Sample Output

```
*A:Dut-C>config>router>mpls>lsp# show router pcep pcc pce-associations diversity "test_div"
=====
PCEP PCC Diversity Associations Info
=====
Association Name      : test_div
Association ID        : 20
Diversity Type       : link
Disjoint Reference   : False
Association Source    : 192.168.213.59
Disjointness Type    : loose
=====
```

Table 115: Show Diversity Association Descriptions

| Label | Description |
|------------------|--------------------------------|
| Association Name | The diversity association name |

| Label | Description |
|--------------------|--|
| Association ID | The diversity association ID |
| Association Source | The diversity source address of the diversity association. Both IPv4 and IPv6 addresses are supported. |
| Diversity Type | The diversity type of the diversity association |
| Disjointness Type | The disjointness type of the diversity association |
| Disjoint Reference | The P-flag value conveyed to the disjointness configuration TLV |

8.35 dm

dm

Syntax

dm [*interval seconds*] [*repeat repeat*] [**absolute** | **rate**]

Context

[\[Tree\]](#) (monitor>oam-pm>session dm)

Full Context

monitor oam-pm session dm

Description

This command monitors the MPLS Delay Measurement (DM) statistics for the specified test's raw measurement interval.

Parameters

seconds

Specifies the time interval, in seconds.

Values 3 to 60

Default 10

repeat

Specifies the number of times the command is repeated.

Values 1 to 999

Default 10

absolute

Specifies that the raw statistics are displayed, without processing. No calculations are performed on the delta or rate statistics.

rate

Specifies that the rate-per-second is displayed.

Default delta

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

dm

Syntax

dm

Context

[\[Tree\]](#) (show>oam-pm>stats>session dm)

Full Context

show oam-pm statistics session dm

Description

This command selects the session's MPLS DM test for the statistical display.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

8.36 dmm

dmm

Syntax

dmm [interval *seconds*] [repeat *repeat*] [absolute | rate]

Context

[\[Tree\]](#) (monitor>oam-pm>session dmm)

Full Context

monitor oam-pm session dmm

Description

This command monitors the Ethernet Delay Measurement Message (DMM) statistics for the specified test's raw measurement interval.

Parameters

seconds

Specifies the time interval, in seconds.

Values 3 to 60

Default 10

repeat

Specifies the number of times the command is repeated.

Values 1 to 999

Default 10

absolute

Specifies that the raw statistics are displayed, without processing. No calculations are performed on the delta or rate statistics.

rate

Specifies that the rate-per-second is displayed.

Default delta

Platforms

All

dmm

Syntax

dmm

Context

[\[Tree\]](#) (show>oam-pm>stats>session dmm)

Full Context

show oam-pm statistics session dmm

Description

This command selects the session's Ethernet DMM test for the statistical display.

Platforms

All

8.37 dns

dns

Syntax

dns

Context

[\[Tree\]](#) (show>router dns)

Full Context

show router dns

Description

This command displays DNS information.

Platforms

All

Output

The following output is an example of DNS settings information.

Sample Output

```
*A:Dut-C# show router dns
=====
Redirect VPRN           : Service: 300
Administrative state    : enabled

```

8.38 dns-ip-cache

dns-ip-cache

Syntax

dns-ip-cache *cache-name* **isa** *mda-id*

dns-ip-cache *cache-name*

Context

[\[Tree\]](#) (show>app-assure>group dns-ip-cache)

Full Context

show application-assurance group dns-ip-cache

Description

This command displays the application assurance DNS IP cache statistics and status information.

Parameters

cache-name

Specifies the DNS IP cache for a particular ISA-AA card, up to 32 characters.

mda-id

Specifies the AA ISA.

Values slot 1 to 10, mda 1 to 2

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

[Table 116: Show DNS IP Cache Output Fields](#) describes the **show** command output fields.

Table 116: Show DNS IP Cache Output Fields

| Label | Description |
|--------------------|---|
| Admin Status | Indicates the administrative status of the DNS IP cache. [Up Down] |
| Domain expressions | Indicates the number of DNS domain expressions configured. |
| Server addresses | Indicates the number of server-addresses configured |
| High-Watermark | Indicates the value, in percentage, of the configured high watermark. |
| Low-Watermark | Indicates the value, in percentage, of the configured low watermark. |
| Cache-size | Indicates the value of the configured maximum cache size. |

| Label | Description |
|-------------------------|--|
| Usage | Indicates the value, in percentage, of the total for the number of entries in the cache. |
| Alarm State | Indicates the status of the alarm related to the DNS IP cache high/low watermark utilization. The alarm is raised when the high watermark is crossed; it is cleared when it goes below the low watermark. [Clear Raised] |
| Hit-Count | Indicates the number of times an IP address lookup in this cache was successful. |
| Total responses | Indicates the total number of DNS responses analyzed. |
| Domain name matched | Indicates the number of times a domain name defined in the DNS match criteria matched a DNS response. |
| Domain & server matched | Indicates the number of times both the domain name and server address defined in the DNS match criteria matched a DNS response. |
| Total entries added | Indicates the total number of IP entries added in the cache. |
| Total entries removed | Indicates the total number of IP entries removed from the cache after the entry expired. |
| Full count | Indicates the total number of IP entries in the cache. |
| Hit Count | Indicates the number of times an IP address lookup in this cache was successful. The IP address lookup is performed in app-filters and is successful if the server address DNS IP cache criteria is met. |
| Miss Count | Indicates the number of times an IP address lookup in this cache was unsuccessful. The IP address lookup is performed in app-filters and is unsuccessful if the server address DNS IP cache criteria is not met. |

Sample Output

dns-ip-cache

Syntax

dns-ip-cache *dns-ip-cache-name* *url file-url*

dns-ip-cache *dns-ip-cache-name* **isa** *mda-id/esa-vm-id* [*url file-url*] [**new-ip-count**]

Context

[Tree] (tools>dump>app-assure>group dns-ip-cache)

Full Context

tools dump application-assurance group dns-ip-cache

Description

This command displays the list of IP addresses stored in a DNS IP cache.

Parameters

dns-ip-cache-name

Specifies a DNS IP cache name, up to 32 characters.

url file-url

Specifies the URL for the file to direct the search output to. The file may be local or remote.

Values

| | | |
|------------------------|--------------|--|
| local-url remote-url | local-url | [<cf-flash-id>/][<file-path>] 200 chars max, including cflash-id directory length 99 chars max each |
| | remote-url | {ftp tftp}://[<login>:<pswd>@] <remote-locn>/[<file-path>] 255 chars max <file-path> 199 chars max |
| | remote-locn | { <hostname> <ipv4-address> "["<ipv6-address>"]" }[:<port>] |
| | ipv4-address | a.b.c.d |
| | ipv6-address | x:x:x:x:x:x:x[-interface] x:x:x:x:x:d.d.d.d[-interface] x - [0..FFFF]H d - [0..255]D interface - 32 chars max, for link local addresses |
| | port | [0..65535] |
| | cflash-id | cf1: cf1-A: cf1-B: cf2: cf2-A: cf2-B: cf3: cf3-A: cf3-B: |

isa mda-id/esa-vm-id

Specifies the DNS IP cache for a particular ISA-AA card.

Values

| | |
|------------------|----------------------------------|
| slot/mda | slot: 1 to 10 mda: 1, 2 |
| esa-esa-id/vm-id | esa-id: 1 to 16 vm-id: 1 to 4 |

new-ip-count

Displays the number of new IP addresses added to the cache.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following are output examples for this command.

Sample Output

```

Table 117: Tools DNS IP Cache Output Fields

| Label | Description |
|--------------------|---|
| ip-address | Indicates the IP address stored in the DNS IP cache. The address is added into the cache if the DNS response meets the DNS IP cache match criteria (domain name and DNS server address). |
| creationTime | Indicates the time at which the entry was created. The entry is created by a DNS response meeting the DNS IP cache match criteria (domain name and DNS server address). |
| lastUpdated(UTC) | Indicates the time at which the entry was last updated, either from a new IP flow (fully classified) using the same IP address or a new DNS response meeting the DNS IP cache match criteria. |
| numDNSResponses | Indicates the number of DNS responses including this IP address meeting the DNS IP cache match criteria. |
| lastMatchTime(UTC) | Indicates the last time the IP address matched an app-filter with a server address DNS IP cache criteria. |
| numTimesMatched | Indicates the number of times the IP address matched an app-filter with a server address DNS IP cache. |
| domain | Indicates the domain as configured in dns-ip-cache. |
| hostname | Indicates the hostname as configured in dns-ip-cache. |
| new-ip-count | Indicates the number of new IP addresses added in the cache for the domain. |

tools dump service domain-to-vsd-mapping domain

Description

This command shows mapping of a specified VSD to a vsd-domain.

Parameters

name

Specifies a VSD domain name.

Platforms

All

Output

Sample Output

```

Dut# tools dump service domain-to-vsd-mapping domain name "nuage_501"
=====
Domain to VSD Mapping
=====
Domain name          VSD
-----
nuage_501           cna@vsd1-hy.alu-srpm.us/nuage
=====

```

domain

Syntax

domain name [*name*] **refresh-config**

Context

[\[Tree\]](#) (tools>perform>service>vsd domain)

Full Context

tools perform service vsd domain

Description

This command instructs the system to refresh the configuration of a specified domain immediately instead of waiting for the next audit interval.

Parameters

name

Specifies the name of the VSD domain.

Platforms

All

domain

Syntax

domain [*md-index*] [**association** *ma-index* | **all-associations** [**detail**]]

Context

[\[Tree\]](#) (show>eth-cfm domain)

Full Context

show eth-cfm domain

Description

This command displays domain information.

Parameters

md-index

Specifies the Maintenance Domain (MD) index value.

Values 1 to 4294967295

ma-index

Specifies the Maintenance Association (MA) index value.

Values 1 to 4294967295

all-associations

Displays information all maintenance associations.

detail

Displays detailed information.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following are examples of ETH-CFM domain information. The following table describes the output fields.

Sample Output

```
*A:node-1# show eth-cfm domain
=====
CFM Domain Table

Table 118: ETH-CFM Domain Field Descriptions

| Label | Description |
|----------|---|
| Md-index | Displays the Maintenance Domain (MD) index value. |

| Label | Description |
|--------|--|
| Level | Displays an integer identifying the Maintenance Domain Level (MD Level). Higher numbers correspond to higher Maintenance Domains, those with the greatest physical reach, with the highest values for customers' CFM PDUs. Lower numbers correspond to lower Maintenance Domains, those with more limited physical reach, with the lowest values for CFM PDUs protecting single bridges or physical links. |
| Name | Displays a generic Maintenance Domain (MD) name. |
| Format | Displays the type of the Maintenance Domain (MD) name. Values include dns , mac , and <i>string</i> . |

domain

Syntax

domain [*domain-name*]

Context

[\[Tree\]](#) (show>router>firewall domain)

Full Context

show router firewall domain

Description

This command lists an overview of all firewall domains that are provisioned in the routing instance.

Configuring the *domain-name* parameter will display operational details for the specified firewall domain.

Parameters

domain-name

Specifies the name of a firewall domain, up to 32 characters maximum.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of firewall domain information.

Sample Output

```
Node# show router 4 firewall domain
=====
Firewall domains
=====
Domain                               NAT-group  Admin-state
```

domain

Syntax

```

domain ipsec-domain-id [now] auto
domain ipsec-domain-id [now] to router-id

```

Context

[\[Tree\]](#) (tools>perform>redundancy>multi-chassis>mc-ipsec>force-switchover domain)

Full Context

tools perform redundancy multi-chassis mc-ipsec force-switchover domain

Description

This command triggers an IPsec N:M switchover for the specified IPsec domain.

Parameters

ipsec-domain-id

Specifies the multi-chassis IPsec domain value.

Values 1 to 255

now

Specifies to switchover without confirmation.

auto

Automatically elects a new active node, excluding the current active node.

to router-id

Specifies the router ID of the new active node.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

8.40 domain-to-vsd-mapping

domain-to-vsd-mapping

Syntax

domain-to-vsd-mapping

Context

[\[Tree\]](#) (tools>dump>service domain-to-vsd-mapping)

Full Context

tools dump service domain-to-vsd-mapping

Description

Commands in this context dump domain-to-vsd mappings.

Platforms

All

8.41 dot1x

dot1x

Syntax

dot1x

Context

[\[Tree\]](#) (show>system>security dot1x)

Full Context

show system security dot1x

Description

This command displays IEEE 802.1X authentication information.

Platforms

All

8.42 downgrade

downgrade

Syntax

downgrade target-version *target* [**reboot**]

Context

[\[Tree\]](#) (tools>perform>persistence downgrade)

Full Context

tools perform persistence downgrade

Description

This command downgrades persistence files to a previous version.

Parameters

target

Specifies the downgrade version.

reboot

Specifies to reboot the system after a successful conversion.

Platforms

All

8.43 drain

drain

Syntax

[no] **drain**

Context

[\[Tree\]](#) (tools>perform>router>l2tp>group drain)

Full Context

tools perform router l2tp group drain

Description

This command triggers an attempt to drain a specified L2TP tunnel group.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

drain

Syntax

[\[Tree\]](#) (tools>perform>router>l2tp>tunnel drain)

[\[Tree\]](#) (tools>perform>router>l2tp>group>tunnel drain)

Full Context

tools perform router l2tp tunnel drain

tools perform router l2tp group tunnel drain

Description

This command triggers an attempt to drain a specified L2TP tunnel.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

drain

Syntax

[no] drain

Context

[\[Tree\]](#) (tools>perform>router>l2tp>peer drain)

Full Context

tools perform router l2tp peer drain

Description

This command triggers an attempt to drain a specified L2TP peer.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

8.44 ds-lite-b4

ds-lite-b4

Syntax

dscp-table [*value dscp-value*]

Context

[\[Tree\]](#) (show>subscr-mgmt>vrgw>brg>gateway ds-lite-b4)

Full Context

show subscriber-mgmt vrgw brg gateway ds-lite-b4

Description

This command displays the DS-Lite B4 services of a gateway.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

8.45 dscp-map

dscp-map

Syntax

dscp-map [*dscp-name*]

Context

[\[Tree\]](#) (show>router>sgt-qos dscp-map)

Full Context

show router sgt-qos dscp-map

Description

This command displays DSCP to FC mappings.

Parameters

dscp-name

Specifies the DSCP name.

Values be, ef, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cp9, cs1, cs2, cs3, cs4, cs5, nc1, nc2, af11, af12, af13, af21, af22, af23, af31, af32, af33, af41, af42, af43, cp11, cp13, cp15, cp17, cp19, cp21, cp23, cp25, cp27, cp29, cp31, cp33, cp35, cp37, cp39, cp41, cp42, cp43, cp44, cp45, cp47, cp49, cp50, cp51, cp52, cp53, cp54, cp55, cp57, cp58, cp59, cp60, cp61, cp62, cp63

Syntax

dslite-lsn-sub **router** *router-instance* **b4-address-prefix** *ipv6-prefix*

Context

[\[Tree\]](#) (clear>nat dslite-lsn-sub)

Full Context

clear nat dslite-lsn-sub

Description

This command clears NAT mappings for Dual-Stack Lite (DS-Lite) LSN subscribers.

Parameters

router-instance

Specifies the router instance, up to 32 characters.

ipv6-prefix

Specifies the IPv6 prefix and length.

- Values**
- x:x:x:x:x:x:x (eight 16-bit pieces)
 - x:x:x:x:x:d.d.d.d
 - x: [0 to FFFF]H
 - d: [0 to 255]D

dynamic ip-address

Context

[\[Tree\]](#) (clear>service>id>proxy-arp dynamic)

Full Context

clear service id proxy-arp dynamic

Description

This command clears proxy-ARP dynamic entries.

Parameters

ip-address

Specifies the IP address.

Values a.b.c.d

Platforms

All

dynamic

Syntax

dynamic *ipv6-address*

Context

[\[Tree\]](#) (clear>service>id>proxy-nd dynamic)

Full Context

clear service id proxy-nd dynamic

Description

This command clears proxy-ND dynamic entries.

Parameters

ipv6-address

Specifies the IPv6 address.

- Values**
- x:x:x:x:x:x:x (eight 16-bit pieces)
 - x:x:x:x:x:d.d.d.d
 - x: [0 to FFFF] H
 - d: [0 to 255] D

Platforms

All

8.51 dynamic-blocks

dynamic-blocks

Syntax

dynamic-blocks subscriber *sub-ident-string* [**nat-policy** *policy-name*]

Context

[\[Tree\]](#) (tools>dump>nat>l2-aware dynamic-blocks)

Full Context

tools dump nat l2-aware dynamic-blocks

Description

This command displays information about dynamic blocks.

Parameters

sub-ident-string

Specifies the subscriber identification string, up to 64 characters

policy-name

Specifies the NAT policy name, up to 32 characters

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of dynamic block information, and [Table 120: Dynamic Blocks Field Descriptions](#) describes the output fields.

Sample Output

```
/tools dump nat l2-aware dynamic-blocks subscriber "dynblocks sub"
=====
Dynamic blocks
=====
NAT policy          Router Outside IP      Dynamic block
-----
dynblocks pol       101    40.101.200.5          1049 - 1058
                                                1059 - 1068
```

Table 120: Dynamic Blocks Field Descriptions

| Field | Description |
|---------------|-------------------------|
| NAT policy | The NAT policy name |
| Router | The router number |
| Outside IP | The outside IP address |
| Dynamic block | The dynamic block range |

8.52 dynamic-resolve

dynamic-resolve

Syntax

dynamic-resolve all [force]

dynamic-resolve *ip-address* [force]

Context

[\[Tree\]](#) (tools>perform>service>id>proxy-arp dynamic-resolve)

Full Context

tools perform service id proxy-arp dynamic-resolve

Description

This command triggers the resolve procedure for dynamic IP entries. When executed, a resolve message (ARP-request) is issued for the requested IP or, if the **all** option used, for all the configured dynamic IPs.

The **force** option triggers the resolve process even for IPs with an existing entry in the proxy-ARP table.

Parameters

ip-address

Specifies the IP address.

Values a.b.c.d

all

Runs the command for all configured dynamic IPs.

force

Issues a resolve message even when configured dynamic IP entries are present.

Platforms

All

dynamic-resolve

Syntax

dynamic-resolve all [force]

dynamic-resolve *ipv6-address* [force]

Context

[\[Tree\]](#) (tools>perform>service>id>proxy-nd dynamic-resolve)

Full Context

tools perform service id proxy-nd dynamic-resolve

Description

This command triggers the resolve procedure for dynamic IPv6 entries. When executed, a resolve message (Neighbor Solicitation) is issued for the requested IPv6 or, if the **all** option used, for all the configured dynamic IPv6s. The **force** option triggers the resolve process even for IPv6 addresses with an existing entry in the proxy-ARP table.

Parameters

ipv6-address

Specifies the IPv4 or IPv6 address.

Values ip-address: a.b.c.d
ipv6-address: x:x:x:x:x:x:x (eight 16-bit pieces)
x:x:x:x:x:d.d.d.d
where:
x: [0 to FFFF]H
d: [0 to 255]D

all

Runs the command for all configured dynamic IPv6 addresses.

force

Issues a resolve message even when configured dynamic IP entries are present.

Platforms

All

8.53 dynamic-services

dynamic-services

Syntax

dynamic-services

Context

[Tree] (show>service dynamic-services)

[Tree] (show>service>id dynamic-services)

Full Context

show service dynamic-services

show service id dynamic-services

Description

Commands in this context show dynamic services information.

Note:

These commands are not available in the MD-CLI.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dynamic-services

Syntax

dynamic-services

Context

[\[Tree\]](#) (clear>service dynamic-services)

[\[Tree\]](#) (clear>service>id dynamic-services)

Full Context

clear service dynamic-services

clear service id dynamic-services

Description

Commands in this context clear dynamic services related data.

Note:

These commands are not available in the MD-CLI.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dynamic-services

Syntax

dynamic-services

Context

[\[Tree\]](#) (clear>service>stats dynamic-services)

Full Context

clear service statistics dynamic-services

Description

This command resets the dynamic services script statistics. See also **show service dynamic services script statistics**.

Note:

This command is not available in the MD-CLI.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

dynamic-services

Syntax

dynamic-services command-list

Context

[Tree] (tools>dump>service dynamic-services)

Full Context

tools dump service dynamic-services

Description

This command displays the list of supported commands that can be used in dynamic service CLI scripts.

There are two types of CLI nodes in this list:

- Pass through nodes: navigation is allowed but attributes creation or attribute changes are prohibited in this node.
- Allowed nodes: navigation, attribute creation and attribute changes are allowed in this node.

Note:

These commands are not available in the MD-CLI.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

8.54 dynamic-services-policy

dynamic-services-policy

Syntax

dynamic-services-policy [*policy-name*]

Context

[\[Tree\]](#) (show>service>dynsvc dynamic-services-policy)

Full Context

show service dynamic-services dynamic-services-policy

Description

This command displays the dynamic services policy information.

Note:

This command is not available in the MD-CLI.

Parameters

policy-name

specifies for which dynamic services policy the information is requested.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of dynamic service policy information.

Sample Output

```
# show service dynamic-services dynamic-services-policy "dynsvc-policy-1"
=====
Dynamic Service Policies
=====

```

[Table 121: Dynamic Services Policy Field Descriptions](#) describes the Dynamic Services policy fields.

Table 121: Dynamic Services Policy Field Descriptions

| Output Field | Description |
|---------------------------|---|
| dynsrv-policy-name | The unique name of a dynamic services policy, up to 32 characters. |
| cli-user | The identifier name of the CLI user associated with this Dynamic Services policy. |
| script-policy | The identifier name of the script policy associated with this Dynamic Services policy. |
| sap-limit | The limit of the number of SAPs (Service Access Point) that can be created using this Dynamic Services policy. |
| Stats type | The value used to identify the type of accounting statistics gathered, either volume-time or time . |
| server policy | The identifier name of a RADIUS server policy to be used for accounting. |
| update interval (minutes) | The time interval between consecutive accounting updates when using this Dynamic Services policy. |
| update interval jitter | The amount of jitter to be applied on the update interval. |
| No. of Services-policies | The total number Dynamic Services policies. |

9 e Commands

9.1 ecmp

ecmp

Syntax

ecmp

Context

[\[Tree\]](#) (show>router ecmp)

```

Table 122: ECMP Fields

| Label | Description |
|------------------------|--|
| Instance | The router instance number |
| Router Name | The name of the router instance |
| ECMP | False — ECMP is disabled for the instance True — ECMP is enabled for the instance |
| Configured-ECMP-Routes | The number of ECMP routes configured for path sharing |

9.2 edit-ipoe-session

edit-ipoe-session

Syntax

edit-ipoe-session sap *sap-id* **mac** *mac-address* [**subscriber** *sub-ident-string*] [**sub-profile-string** *sub-profile-string*] [**sla-profile-string** *sla-profile-string*] [**inter-dest-id** *intermediate-destination-id*] [**ancp-string** *ancp-string*] [**app-profile-string** *app-profile-string*] [**circuit-id** *circuit-id*] [**remote-id** *remote-id*]

Context

[\[Tree\]](#) (tools>perform>subscr-mgmt edit-ipoe-session)

Full Context

tools perform subscriber-mgmt edit-ipoe-session

Description

This command updates the data of the IPoE session identified with the given MAC address and SAP identifier. Optionally the remote ID and circuit ID can be specified to identify the IPoE session to update.

Note:

The changes take effect immediately.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

9.3 edit-lease-state

edit-lease-state

Syntax

edit-lease-state sap *sap-id* **ip** *ip-address* [**mac** *ieee-address*] [**subscriber** *sub-ident-string*] [**sub-profile-string** *sub-profile-string*] [**sla-profile-string** *sla-profile-string*] [**app-profile-string** [*app-profile-string*]] [**inter-dest-id** *intermediate-destination-id*] [**ancp-string** *ancp-string*]

edit-lease-state svc-id *service-id* **ip** *ip-address* [**mac** *ieee-address*] [**subscriber** *sub-ident-string*] [**sub-profile-string** *sub-profile-string*] [**sla-profile-string** *sla-profile-string*] [**app-profile-string** [*app-profile-string*]] [**inter-dest-id** *intermediate-destination-id*] [**ancp-string** *ancp-string*]

Context

[\[Tree\]](#) (tools>perform>subscr-mgmt edit-lease-state)

Full Context

tools perform subscriber-mgmt edit-lease-state

Description

This command provides the parameters to edit lease state information.

Parameters

sap-id

Specifies the physical port identifier portion of the SAP definition.

ip-address

Modifies lease state information for the specified IP address.

ieee-address

Specifies the 48-bit MAC address for the static ARP in the form aa:bb:cc:dd:ee:ff or aa-bb-cc-dd-ee-ff where aa, bb, cc, dd, ee, and ff are hexadecimal numbers. Allowed values are any non-broadcast, non-multicast MAC and non-IEEE reserved MAC addresses.

sub-ident-string

Modifies the lease state information for the specified subscriber identification.

sub-profile-string

Modifies lease state information for the specified subscriber profile.

sla-profile-string

Modifies lease state information for the specified SLA profile.

service-id

Modifies lease state information for the specified service ID.

Values

| | |
|---------------------|-----------------------|
| <i>service-id</i> : | 1 to 2147483647 |
| <i>svc-name</i> : | 64 characters maximum |

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

9.4 edit-ppp-session

edit-ppp-session

Syntax

edit-ppp-session sap *sap-id* [**user-name** *user-name*] [**mac** *mac-address*] [**session-id** *session-id*] [**ip-address** *ip-address*] [**subscriber** *sub-ident-string*] [**sub-profile-string** *sub-profile-string*] [**sla-profile-string** *sla-profile-string*] [**inter-dest-id** *intermediate-destination-id*] [**ancp-string** *ancp-string*] [**app-profile-string** *app-profile-string*]

edit-ppp-session svc *service-id* [**user-name** *user-name*] [**mac** *mac-address*] [**session-id** *session-id*] [**ip-address** *ip-address*] [**subscriber** *sub-ident-string*] [**sub-profile-string** *sub-profile-string*] [**sla-profile-string** *sla-profile-string*] [**inter-dest-id** *intermediate-destination-id*] [**ancp-string** *ancp-string*] [**app-profile-string** *app-profile-string*]

Context

[\[Tree\]](#) (tools>perform>subscr-mgmt edit-ppp-session)

Full Context

tools perform subscriber-mgmt edit-ppp-session

Description

This command updates the data of the PPP session identified with the given MAC address and SAP identifier. Optionally the remote-id and circuit-id can be specified to identify the IPoE session to update.

Note:

The changes take immediate effect.

Parameters

sap-id

Specifies a SAP ID, up to 255 characters.

user-name

Specifies the PPP user name, up to 253 characters.

mac-address

Specifies the 48-bit MAC address for the static ARP in the form aa:bb:cc:dd:ee:ff or aa-bb-cc-dd-ee-ff where aa, bb, cc, dd, ee, and ff are hexadecimal numbers.

session-id

Specifies information about the ID of the PPP session.

Values 1 to 65535

sub-ident-string

Specifies an existing subscriber identification profile.

sla-profile-string

Identifies the SLA profile string up, to 16 characters.

ip-address

Specifies the peer's IP address.

service-id

Specifies an existing subscriber service ID.

Values 1 to 2147483647

sub-profile-string

Specifies the subscriber profile string, up to 16 characters.

sub-profile-name

Specifies the subscriber profile name, up to 32 characters.

intermediate-destination-id

Specifies the intermediate destination identifier which is encoded in the identification strings, up to 32 characters.

ancp-string

Specifies the ASCII representation of the string, up to 63 characters.

app-profile-string

Specifies the application profile string, up to 16 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

9.5 edit-slaac-host

edit-slaac-host

Syntax

edit-slaac-host sap *sap-id* [**user-name** *user-name*] [**mac** *mac-address*] [**session-id** *session-id*] [**ip-address** *ip-address*] [**subscriber** *sub-ident-string*] [**sub-profile-string** *sub-profile-string*] [**sla-profile-string** *sla-profile-string*] [**inter-dest-id** *intermediate-destination-id*] [**ancp-string** *ancp-string*] [**app-profile-string** *app-profile-string*]

edit-slaac-host svc *service-id* [**user-name** *user-name*] [**mac** *mac-address*] [**session-id** *session-id*] [**ip-address** *ip-address*] [**subscriber** *sub-ident-string*] [**sub-profile-string** *sub-profile-string*] [**sla-profile-string** *sla-profile-string*] [**inter-dest-id** *intermediate-destination-id*] [**ancp-string** *ancp-string*] [**app-profile-string** *app-profile-string*]

Context

[Tree] (tools>perform>subscr-mgmt edit-slaac-host)

Full Context

tools perform subscriber-mgmt edit-slaac-host

Description

This command updates the data of the SLAAC host information.

Parameters

sap-id

Specifies a SAP ID, up to 255 characters.

user-name

Specifies the PPP user name up to 253 characters.

mac-address

Specifies the 48-bit MAC address for the static ARP in the form aa:bb:cc:dd:ee:ff or aa-bb-cc-dd-ee-ff where aa, bb, cc, dd, ee, and ff are hexadecimal numbers.

session-id

Specifies information about the ID of the PPP session.

Values 1 to 65535

sub-ident-string

Specifies an existing subscriber identification profile.

sla-profile-string

Identifies the SLA profile string up to 16 characters.

ip-address

Specifies the peer's IP address.

service-id

Specifies an existing subscriber service ID.

Values 1 to 2147483647

sub-profile-string

Specifies the subscriber profile string up to 16 characters.

sub-profile-name

Specifies the subscriber profile name up to 32 characters.

intermediate-destination-id

Specifies the intermediate destination identifier which is encoded in the identification strings up to 32 characters.

ancp-string

Specifies the ASCII representation of the up to 63 characters.

app-profile-string

Specifies the application profile string up to 16 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

| | |
|-----------------|---------|
| pxc | keyword |
| <i>id</i> | 1 to 64 |
| <i>sub-port</i> | a to b |

family

Specifies the address family.

Values ipv4, ipv6

Platforms

All

9.8 egress-label

egress-label

Syntax

egress-label *start-label* [*end-label*]

Context

[Tree] (show>service egress-label)

Full Context

show service egress-label

Description

This command displays service information using the range of egress labels.

If only the mandatory *egress-label1* parameter is specified, only services using the specified label are displayed.

If both *start-label* and *end-label* parameters are specified, the services using the range of labels X where *start-label* <= X <= *end-label* are displayed.

Use the **show router ldp bindings** command to display dynamic labels.

Parameters

start-label

The starting egress label value for the label range. If only *start-label* is specified, services only using *start-label* are displayed.

Values 0,18432 to 524287

end-label

The ending egress label value for the label range.

Default The *start-label* value.

Values 18432 to 524287

Platforms

All

Output

The following output displays an example of service egress label information.

Sample Output

```
*A:ALA-12# show service egress-label 0 10000

egress-nh [*family*] [**summary** | **detail**] *ip-address*

Context

[\[Tree\]](#) (show>router>ldp>bindings>active egress-nh)

Full Context

show router ldp bindings active egress-nh

Description

This command displays LDP active bindings by matching the egress Next-Hop (NH).

Parameters

family

Specifies the address family.

Values ipv4, ipv6

ip-address

Specifies the IPv4 or IPv6 address.

Values

| | |
|---------------|-------------------------------------|
| ipv4-address: | a.b.c.d |
| ipv6-address: | x:x:x:x:x:x:x (eight 16-bit pieces) |
| | x:x:x:x:x:d.d.d.d |
| | x: [0 to FFFF]H |
| | d: [0 to 255]D |

Platforms

All

9.11 egress-pbr

egress-pbr

Syntax

egress-pbr [detail]

Context

[\[Tree\]](#) (tools>dump>filter>resources egress-pbr)

Full Context

tools dump filter resources egress-pbr

Description

This command displays the number of allocated unique egress PBR destinations.

Parameters

detail

Displays number of allocated unique egress PBR destinations together with a list of destinations and their ref counts.

Platforms

All

Output

The following output is an example of filter resource egress PBR destination information.

Sample Output

```
*A:Dut-C>tools dump filter resources egress-pbr

=====
Egress PBR destinations

9.12 egress-rate-distribution

egress-rate-distribution

Syntax

egress-rate-distribution

Context

[\[Tree\]](#) (show>lag egress-rate-distribution)

Full Context

show lag egress-rate-distribution

Description

This command displays adaptive load-balancing egress rate distribution information.

Platforms

All

9.13 egress-statistics

egress-statistics

Syntax

egress-statistics color *color* [end-point {*ipv4-address* | *ipv6-address*}]

Context

[\[Tree\]](#) (show>router>segment-routing>sr-policies egress-statistics)

Full Context

show router segment-routing sr-policies egress-statistics

Description

This command displays the egress traffic statistics of the SR policy specified by its color and end-point.

Parameters

color

Displays the color that is configured for this SR policy.

Values 0 to 4294967295

ipv4-address | *ipv6-address*

Displays the IPv4 or IPv6 address expressed in dotted decimal notation.

Values ipv4-address:

- a.b.c.d

ipv6-address:

- x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:d.d.d.d
- x: [0 to FFFF]H
- d: [0 to 255]D

Platforms

All

Output

The following output is an example of egress traffic statistics of the SR policy, and [Table 124: Show Egress Statistics Field Descriptions](#) describes the output fields.

Sample Output Show Router Segment Route Policy Egress Statistics

```
# show router segment-routing sr-policies egress-statistics color 20102011 end-point

| Label | Description |
|---------------|--|
| Color | Indicates the color of the SR policy. |
| Endpoint Addr | Indicates the endpoint address of the SR policy. |
| Segment-List | Indicates the index of the segment list. |
| TunnelId | Indicates the tunnel identifier of the SR policy. |
| BSID | Indicates the binding SID value. |
| Pkt Count | Indicates the count of packets for the corresponding segment list. |
| Octet Count | Indicates the count of octets for the corresponding segment list. |

egress-statistics

Syntax

egress-statistics color *color* [**end-point** {*ipv4-address* | *ipv6-address*}]

Context

[Tree] (clear>router>segment-routing>sr-policies egress-statistics)

Full Context

clear router segment-routing sr-policies egress-statistics

Description

This command clears the egress traffic statistics of the SR policy specified by its color and end-point.

Parameters

color

Displays the color that is configured for this SR policy.

Values 0 to 4294967295

ipv4-address* | *ipv6-address

Displays the IPv4 or IPv6 address expressed in dotted decimal notation.

Values ipv4-address:

- a.b.c.d

ipv6-address:

- x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:d.d.d.d
- x: [0 to FFFF]H
- d: [0 to 255]D

Platforms

All

egress-statistics

Syntax

egress-statistics color [0..4294967295] **endpoint** *ip-address* | *ipv6-address* [**interval** *seconds*] [**repeat** *repeat*]

Context

[\[Tree\]](#) (monitor>router>seg-rt>sr-policies egress-statistics)

Full Context

monitor router segment-routing sr-policies egress-statistics

Description

This command monitors SR Policy Egress Statistics.

Parameters

ip-address

Specifies the IPv4 address of the endpoint.

Values 64 characters maximum

ipv6-address

Specifies the IPv6 address of the endpoint.

Values 64 characters maximum

seconds

Configures the interval for each display in seconds.

Values 3 to 60

repeat

Configures how many times the command is repeated.

Values 1 to 999

Platforms

All

9.14 elmi

elmi

Syntax

elmi

Context

[\[Tree\]](#) (show elmi)

Full Context

show elmi

Description

This command displays Ethernet Link Management Interface (E-LMI) information.

[Table 125: Output Fields: show elmi](#) describes the output fields for the **show elmi** command.

Table 125: Output Fields: show elmi

| Field | Description |
|--------------|--|
| Link Status | Status of the E-LMI protocol when the elmi mode is set to uni-n. Link Status will indicate up if E-LMI mode is set to "none". |
| T391 | Pooling timer used by UNI-C. UNI-N will send the consecutive single EVC asynchronous status messages every (T391/10) rounded to the second interval. |
| T392 | Pooling verification timer for UNI-N |
| N393 | Status counter for UNI-N. |
| Rx Enq. Time | Last time a status inquiry message was received from UNI-C. |
| Rx Enq. Msg | Number of status inquiry messages received. |

| Field | Description |
|---------------------|--|
| Rx Check Time | Last time a status inquiry E-LMI check message was received. |
| Rx Inv. SeqNum | Counts the number of E-LMI messages received with invalid sequence number. |
| Enq Timeouts | Counts the number of T392 timer expired. |
| Tx Status Time | Last time a status message was sent by UNI-N. |
| Tx Status Msg | Number of status messages sent by UNI-N. |
| Tx Check Time | Last time a status E-LMI check message was sent by UNI-N. |
| Tx Async Status Msg | Counter for single EVC asynchronous status messages sent by UNI-N. |
| Discard Msg | Counter for the status inquiry messages discarded due to errors. |

Platforms

9.15 encryption-keygroup

encryption-keygroup

Syntax

encryption-keygroup *keygroup-id* [**spi** *spi*]

Context

[\[Tree\]](#) (show>grp-encryp encryption-keygroup)

Full Context

show group-encryption encryption-keygroup

Description

This command displays NGE information for a key group.

Parameters

keygroup-id

Specifies the key group identifier to use for the output display.

Values 1 to 15 or *keygroup-name* (up to 64 characters)

spi

Specifies the SPI to use for the output display.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of encryption key group information, and [Table 126: Show Encryption Key Group Output Fields](#) describes the fields.

Output Example

```

Table 126: Show Encryption Key Group Output Fields

| Label | Description |
|---|--|
| Encryption Keygroup Configuration Detail | |
| Keygroup Id | The key group identifier |
| Keygroup Name | The key group name |
| Description | The key group description |
| Authentication Algo | The authentication algorithm used for the key group |
| Encryption Algo | The encryption algorithm used for the key group |
| Active Outbound SA | The active outbound SA for the key group |
| Activation Time | The date and time that the key group was activated |
| Security Associations | |
| Spi | The security parameter index for the SA in the key group |

| Label | Description |
|---|--|
| Install Time | The date and time that the SA was installed in the key group |
| Key CRC | The CRC for the key belonging to the SA |
| Encryption Keygroup Forwarded Statistics | |
| Encrypted Pkts | The number of encrypted packets forwarded by the key group |
| Encrypted Bytes | The number of encrypted bytes forwarded by the key group |
| Decrypted Pkts | The number of decrypted packets forwarded by the key group |
| Decrypted Bytes | The number of decrypted bytes forwarded by the key group |
| Encryption Keygroup Outbound Discarded Statistics (Pkts) | |
| Total Discard | The total number of outbound packets discarded by the key group |
| Unsupported Uplink | The total number of outbound packets discarded by the key group due to an unsupported uplink |
| Enqueue Error | The total number of outbound packets discarded by the key group due to an enqueueing error |
| Other | The total number of outbound packets discarded by the key group due to some other reason, such as an internal configuration error (for example, a key group that points to an SA, but the SA is not valid) |
| Encryption Keygroup Inbound Discarded Statistics (Pkts) | |
| Total Discard | The total number of inbound packets discarded by the key group |
| Invalid Spi | The total number of inbound packets discarded by the key group due to an invalid SPI |
| Authentication Failure * | The total number of inbound packets discarded by the key group due to an authorization failure |
| Control Word Mismatch | The total number of inbound packets discarded by the key group due to a control word (CW) mismatch between the encrypted (protected) CW in the ESP payload and the CW that is not encrypted |
| Padding Error | The total number of inbound packets discarded by the key group due to a padding error |

| Label | Description |
|--|---|
| Enqueue Error | The total number of inbound packets discarded by the key group due to an enqueueing error |
| Other | The total number of inbound packets discarded by the key group due to some other reason (for example, an incoming packet length is incorrect) |
| SDP Keygroup Association Table | |
| SDP ID | The SDP ID |
| Direction | The direction in which key group authentication and encryption occurs for traffic on the SDP |
| Inbound Keygroup SDP Association Count | The number of SDPs configured to use inbound SA |
| Outbound Keygroup SDP Association Count | The number of SDPs configured to use outbound SA |
| VPRN Keygroup Association Table | |
| VPRN SVC ID | The VPRN service identifier |
| Direction | The direction in which key group authentication and encryption occurs for traffic on the VPRN |
| Inbound Keygroup VPRN Association Count | The number of VPRNs configured to use inbound SA |
| Outbound Keygroup VPRN Association Count | The number of VPRNs configured to use outbound SA |

encryption-keygroup

Syntax

encryption-keygroup *keygroup-id*
encryption-keygroup *keygroup-id spi spi*

Context

[\[Tree\]](#) (clear>grp-encryp encryption-keygroup)

Full Context

clear group-encryption encryption-keygroup

Description

This command clears NGE information for a key group.

Parameters

keygroup-id

Specifies the key group identifier.

Values 1 to 127, *keygroup-name* (up to 64 characters)

spi

Specifies the SPI ID.

Values 1 to 127

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

9.16 end-sid

end-sid

Syntax

end-sid [mt {0 | 2}] [**prefix** *ipv6-prefix[/prefix-length]*] [**adv-router** *system-id | hostname*] [**algo** *algo-id*]

Context

[\[Tree\]](#) (show>router>isis>srv6 end-sid)

Full Context

show router isis segment-routing-v6 end-sid

Description

This command displays IS-IS SRv6 End SIDs.

Parameters

ipv6-prefix[/prefix-length]

Displays routes only matching the specified *ip-address* and length.

Values *ipv6-prefix[/prefix]*: x:x:x:x:x:x:x (eight 16-bit pieces)

x:x:x:x:x:d.d.d.d

x: [0 to FFFF]H

d: [0 to 255]D

prefix-length: 1 to 128

system-id | hostname

Displays information for the specific IS-IS advertising router. The host name can be up to 38 characters.

algo-id

Displays information for the specified algorithm.

Values 0 to 255

Platforms

7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

9.17 endpoint

endpoint

Syntax

endpoint [*endpoint-name*]

Context

[\[Tree\]](#) (show>service>id endpoint)

Full Context

show service id endpoint

Description

This command displays service endpoint information.

Parameters

endpoint-name

Specifies the name of an existing endpoint for the service.

Platforms

All

Output

The following output is an example of service endpoint information.

Sample Output

```
*A:ALA-48>config>service>epipe# show service id 6 endpoint
=====
Service 6 endpoints
=====
Endpoint name      : x

```

endpoint

Syntax

```

endpoint [{ip-address | ipv6-address}] [ detail]
endpoint [{ip-address | ipv6-address}] egress-stats
  
```

Context

[\[Tree\]](#) (show>router>mpls>forwarding-policies endpoint)

Full Context

show router mpls forwarding-policies endpoint

Description

This command displays the MPLS forwarding policy endpoint information.

Parameters

ip-address

Specifies the IPv4 address of the endpoint up to 64 characters.

ipv6-address

Specifies the IPv6 address of the endpoint up to 64 characters.

detail

Specifies detailed information for the endpoint.

egress-stats

Displays the egress statistics, if any, of all the instances of the specified forwarding policy.

Platforms

All

Output

[Table 127: MPLS Endpoint Output Fields](#) describes MPLS endpoint output fields.

Table 127: MPLS Endpoint Output Fields

| Label | Description |
|-----------------|--|
| Endpoint | Specifies the endpoint IP address. |
| Preference | Specifies the preference. |
| Policy Name | Specifies the MPLS forwarding policies binding label name. |
| Active | Specifies the active state (Y N). |
| InactiveReason | Specifies the inactive reason. |
| Last Updated | Specifies the date and time of the last update. |
| Num Grps | Specifies the number of groups. |
| OperState | Specifies the operational state (up down). |
| Metric | Specifies the metric value. |
| TTM Preference | Specifies the TTM preference value. |
| Revert Timer | Specifies the revert timer value. |
| Path Pref | Specifies the path preference. |
| Retry Count | Specifies the retry count. |
| Next Retry In | Specifies the next retry value. |
| Next-hop Group | Specifies the next-hop group. |
| Resolution Type | Specifies the resolution type (direct indirect). |
| Oper State | Specifies the operational state (down up). |
| Oper Down Reas* | Specifies the reason for being operationally down. |
| Num Revert | Specifies the number of reverts. |
| Num Failover | Specifies the number of failovers. |
| Next Revert In | Specifies the next revert interval. |
| Weight | Specifies the weight value. |
| Primary | Specifies the IP address of the primary next-hop. |
| Resolved | Specifies the resolved status (false true). |
| Down Reason | Specifies the down reason. |

| Label | Description |
|----------------|--|
| Backup | Specifies the IP address of the backup next-hop. |
| StatsOperState | Specifies if a statistic index is allocated to the next-hop. |
| EgrStatsState | Specifies if all next-hops have a statistic index allocated. |

Sample Output

```

9.20 epipe-map-access-to-egress-port

epipe-map-access-to-egress-port

Syntax

epipe-map-access-to-egress-port service *service-id* [end-service *service-id*] | lag *lag-id* summary

Context

[Tree] (tools>dump epipe-map-access-to-egress-port)

Full Context

tools dump epipe-map-access-to-egress-port

Description

This command will display the egress port that will be used to transmit traffic associated with the displayed Epipe service(s). The information displayed shows the egress port for traffic traveling from SAP to egress SDP or SAP.

This command will support Epipe services with the following combinations:

- SAP to SDP (with no endpoint configuration)
- SAP to SAP (with or without an ICB)
- SAP to SDP using endpoints with 1 or 2 SDPs

The command can be executed by specifying either a service ID, service-ID range or an ingress LAG ID.

This command will not display the egress port for traffic traveling from the SDP to egress SAP. This command also does not work with services that use policers or shared queues and also does not support PBB services.

This command replaces the command tools dump epipe-map-to-network, which has been deprecated.

Parameters

service service-id

Identifies the service ID for which the command will return the egress port. If used in conjunction with the end-service parameter, this value represent the beginning of the service ID range for which the command will be executed against.

Values 1 to 2148278316, *svc-name: 64 characters max*

end-service service-id

This parameter is used to identify the end of the service ID range for which the command will be executed against.

Values 1 to 2148278316, *svc-name: 64 characters max*

lag-id

This parameter caused the command to return the egress port for all service with SAPs associated with the specified LAG ID.

Values 1 to 800

Syntax

esa *esa-id*

Context

[\[Tree\]](#) (clear esa)

Full Context

clear esa

Description

This command clears the statistics or status pertaining to the specified ESA.

Parameters

esa-id

Specifies the ESA.

Values 1 to 16

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

9.27 esa-vm

esa-vm

Syntax

esa [esa-id/vm-id] [detail]

Context

[\[Tree\]](#) (show esa-vm)

Full Context

show esa-vm

Description

This command displays ESA-VM details.

Parameters

esa-id

Specifies the ESA.

Values 1 to 16

vm-id

Specifies the VM.

Values 1 to 4

detail

Specifies the detailed ESA-VM information.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

Output

The following are output examples for this command.

Sample Output

```

Table 130: Show ESA-VM Output Fields

| Label | Description |
|-------------------|-----------------------------------|
| ESA | The ESA identification number |
| VM | The VM identification number |
| VM Type | The VM type (aa, bb, or tunnel) |
| Cores | The number of cores of the ESA-VM |
| Memory (GB) | The memory on the ESA-VM |
| Admin State | up — Administratively up |
| | down — Administratively down |
| Operational State | up — Operationally up |
| | down — Operationally down |
| | booting |
| | failed |

| Label | Description |
|-------------------|--|
| | provisioned |
| | unprovisioned |
| IOM Host Port | The IOM host port in <i>slot/mda/port</i> format |
| Oper flags | The operational flags for the ESA-VM |
| Virtual Core Role | The virtual core role (Mgmt-#, Worker-#, Idle-#, Scheduler-#, Nic-#) |
| Virtual Core Id | The Virtual Core identification number |
| Current % | The current processing load of the virtual core |
| 15min Average % | The 15 minute average processing load of the virtual core |
| All-time Peak % | The all-time peak processing load of the virtual core |

esa-vm

Syntax

esa-vm [*esa-id/vm-id*]

Context

[\[Tree\]](#) (clear esa-vm)

Full Context

clear esa-vm

Description

This command clears the statistics or status pertaining to the specified ESA-VM.

Parameters

esa-id

Specifies the ESA.

Values 1 to 16

vm-id

Specifies the VM.

Values 1 to 4

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

9.28 est-profile

est-profile

Syntax

est-profile [*name*]

Context

[\[Tree\]](#) (show>certificate est-profile)

Full Context

show certificate est-profile

Description

This command displays EST profile information. If a profile name is not specified, the command displays information about all the EST profiles.

Parameters

name

Specifies an existing EST profile name, up to 32 characters.

Platforms

All

Output

The following is an example output for the **show certificate est-profile** command

Sample Output

```
*A:cses-V27# show certificate est-profile
=====
EST Profile          Server
                    Address:Port
-----
No. of EST Profiles: 0
=====
```

9.29 eth

eth

Syntax

eth

Context

[\[Tree\]](#) (tools>perform>service>id>loopback eth)

Full Context

tools perform service id loopback eth

Description

Commands in this context configure a loopback on Ethernet SAPs or MPLS SDP bindings.

Platforms

All

9.30 eth-cfm

eth-cfm

Syntax

eth-cfm

Context

[\[Tree\]](#) (show eth-cfm)

Full Context

show eth-cfm

Description

Commands in this context display eth-cfm information.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-cfm

Syntax

eth-cfm

Context

[\[Tree\]](#) (clear eth-cfm)

Full Context

clear eth-cfm

Description

Commands in this context display CFM information.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-cfm

Syntax

eth-cfm

Context

[\[Tree\]](#) (tools>dump eth-cfm)

Full Context

tools dump eth-cfm

Description

Commands in this context configure debugging for Ethernet Connectivity Fault Management.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-cfm

Syntax

eth-cfm

Context

[\[Tree\]](#) (monitor eth-cfm)

Full Context

monitor eth-cfm

Description

Commands in this context monitor statistics for Ethernet connectivity fault management.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-cfm

Syntax

eth-cfm

Context

[\[Tree\]](#) (show>service>sdp-using eth-cfm)

Full Context

show service sdp-using eth-cfm

Description

Commands in this context display SDP binding information for a specific ETH-CFM.

Platforms

All

eth-cfm

Syntax

eth-cfm [**tunnel** *tunnel-id*] [**detail**]

Context

[\[Tree\]](#) (show>lag eth-cfm)

Full Context

show lag eth-cfm

Description

This command displays ETH-CFM information.

Parameters

tunnel-id

Filters ETH-CFM MEP information to one tunnel.

Values 1 to 4094

detail

Displays detailed information.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-cfm

Syntax

eth-cfm [**detail**]

Context

[\[Tree\]](#) (show>port>ethernet eth-cfm)

Full Context

show port ethernet eth-cfm

Description

This command displays ETH-CFM information.

Parameters

detail

Displays detailed information.

Platforms

All

9.31 eth-cfm-monitoring

eth-cfm-monitoring

Syntax

eth-cfm-monitoring [{**service-id** *service-id* **sap-id** *sap-id*} | {**service-id** *service-id* **sdp-id** *sdp-id:vc-id*}]

Context

[\[Tree\]](#) (show>system>security>cpu-protection eth-cfm-monitoring)

Full Context

show system security cpu-protection eth-cfm-monitoring

Description

This command displays sources exceeding their eth-cfm-monitoring rate limit.

Parameters

service-id

Specifies the service ID.

Values 1 to 2148278317, svc-name up to 64 characters in length

Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

eth-cfm-monitoring

Syntax

eth-cfm-monitoring

Context

[\[Tree\]](#) (clear>cpu-protection eth-cfm-monitoring)

Full Context

clear cpu-protection eth-cfm-monitoring

Description

This command clears records of flows exceeding the ETH-CFM monitoring rate limit.

Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

9.32 eth-ring

eth-ring

Syntax

eth-ring

Context

[\[Tree\]](#) (tools>perform eth-ring)

Full Context

tools perform eth-ring

Description

This command performs Ethernet ring operations.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-ring

Syntax

eth-ring [**status**]

eth-ring [*ring-index*] **hierarchy**

eth-ring *ring-index* [**path** {**a** | **b**}]

Context

[\[Tree\]](#) (show eth-ring)

Full Context

show eth-ring

Description

This command displays Ethernet Ring information.

Parameters

status

Specifies to display an Ethernet Ring status summary

ring-index

Specifies an Ethernet Ring index

Values 1 to 128

hierarchy

Specifies to display Ethernet Ring hierarchical relationships

path

Specifies to show information for a specific path

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

eth-ring

Syntax

eth-ring *ring-index* [**clear**]

Context

[\[Tree\]](#) (tools>dump eth-ring)

Full Context

tools dump eth-ring

Description

This command displays Ethernet Ring information.

Parameters

ring-index

Specifies an Ethernet Ring index.

Values 1 to 128

clear

Keyword to clear stored information for the specified Ethernet Ring.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

9.33 eth-sat

eth-sat

Syntax

eth-sat [*sat-id*]

Context

[\[Tree\]](#) (show>system>satellite eth-sat)

Full Context

show system satellite eth-sat

Description

This command displays information about configured Ethernet satellites. If a sat-id is specified, this command displays information only about the specified Ethernet satellite.

Parameters

sat-id

Specifies the Ethernet satellite chassis.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of Ethernet satellite information.

Sample Output

```
A:Dut-A# show system satellite eth-sat 1

Description

Commands in this context clear Ethernet satellite information.

Parameters

sat-id

Specifies the Ethernet satellite ID.

Values 1 to 20

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

9.34 eth-seg

eth-seg

Syntax

```
eth-seg [hunt | detail] [rd rd] [community comm-id] [originator-ip ip-address | ipv6-address] [next-hop  
next-hop] [esi esi] [aspath-regex reg-exp]
```

Context

[\[Tree\]](#) (show>router>bgp>routes>evpn eth-seg)

Full Context

```
show router bgp routes evpn eth-seg
```

Description

This command displays BGP-EVPN Ethernet Segment (ES) routes.

Parameters

hunt

Displays entries for the specified route.

detail

Displays detailed information.

rd

Displays information for the route distinguisher.

Values *ip-addr:comm-val | 2byte-asnumber:ext-comm-val | 4byte-asnumber:comm-val*

comm-id

Specifies community ID, up to 72 characters.

Values [*as-num:comm-val | ext-comm | well-known-comm*]

where:

- *as-num* — 0 to 65535
- *comm-val* — 0 to 65535
- *ext-comm* — the extended community, defined as the following:
type:{ ip-address:comm-val1 | as-number1:comm-val2 | as-number2:comm-val1}
 where:
 - *as-number1* — 0 to 65535
 - *comm-val1* — 0 to 65535
 - **type** — target, origin
 - *ip-address* — a.b.c.d
 - *comm-val2* — 0 to 4294967295
 - *as-number2* — 0 to 4294967295
- *well-known-comm* — **null | no-export | no-export-subconfed | no-advertise |**

ip-address | ipv6-address

Specifies the IPv4 or IPv6 originator address, up to 64 characters.

next-hop

Specifies the IPv4 or IPv6 BGP next-hop address.

Values

| | |
|---------------|-------------------------------------|
| ipv4-address: | a.b.c.d |
| ipv6-address: | x:x:x:x:x:x:x (eight 16-bit pieces) |
| | x:x:x:x:x:d.d.d.d |

x: [0 to FFFF]H

d: [0 to 255]D

esi

Specifies a 10-byte ESI by which to filter the displayed information. For example, ESI-0 | ESI-MAX or 00-11-22-33-44-55-66-77-88-99 with any of these separators('-',':',';')

reg-exp

Displays routes matching the specified regular expression, up to 80 characters.

Platforms

9.35 eth-tunnel

eth-tunnel

Syntax

eth-tunnel [**group** *tunnel-group-name*] [**vc-id** *vc-id*]

Context

[\[Tree\]](#) (show>router>l2tp eth-tunnel)

Full Context

show router l2tp eth-tunnel

Description

This command displays information about configured L2TPv3 Ethernet tunnels. These Ethernet tunnels are the L2TPv3 sessions setup between the local private L2 SAP and the far end device.

If this command is executed without any parameters, then a list of all configured Ethernet tunnels are displayed.

If this command is executed with a tunnel group name or a VC-ID, then a detailed view of the associated Ethernet tunnel is displayed.

Parameters

tunnel-group-name

Specifies the configured tunnel group name used for the associated Ethernet tunnel.

vc-id

Specifies the VC ID for the L2TPv3 Ethernet tunnel.

Values 0 to 4294967295

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of L2TPv3 Ethernet tunnel information

Sample Output

```

eth-tunnel

Syntax

eth-tunnel

eth-tunnel {aps | status}

eth-tunnel *tunnel-index* [path *path-index*] [detail]

Context

[\[Tree\]](#) (show eth-tunnel)

Full Context

show eth-tunnel

Description

This command displays Ethernet tunnel information. Any data SAP missing a tag for a defined path has the EthTunTagMismatch flag generated. In the example provided below, SAP eth-tunnel-1:1 does not have the tag for path 2 configured. Therefore, it is operationally down with the reason indicated by the EthTunTagMismatch flag.

Parameters

aps

Shows APS Ethernet tunnel information.

status

Shows Ethernet tunnel status information.

tunnel-index

Specifies the tunnel index.

Values 1 to 1024

path-index

Specifies the path index.

Values 1 to 16

detail

Displays detailed information.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of Ethernet tunnel information, and [Table 131: Output Fields: show eth-tunnel](#) describes the output fields.

[Table 132: BGP EVPN ES Field Descriptions](#) describes BGP EVPN ES output fields.

Table 132: BGP EVPN ES Field Descriptions

| Field | Description |
|--------------|--|
| Name | The Ethernet Segment name |
| Eth Seg Type | The Ethernet Segment type |
| Admin State | The administrative state for this service Ethernet Segment |
| Oper State | The operational state for this service Ethernet Segment |
| ESI | The Ethernet Segment Identifier |

| Field | Description |
|------------------------------|---|
| Oper ESI | The current operational Ethernet Segment Identifier |
| Auto-ESI Type | The auto-derived Ethernet Segment Identifier type |
| AC DF Capability | The AC-DF Capability status (Exclude or Include) |
| Multi-homing | The multi-homing information |
| Oper Multi-homing | The operational multi-homing state |
| ES SHG Label | The ES Split Horizon Group label |
| Source BMac LSB | The source BMac least significant bit |
| Vprn Next Hop | The IP address associated with an Ethernet Segment |
| PW Port Id | The PW port ID |
| PW Port Headend | The PW port headend status |
| ES BMac Tbl Size | The ES BMac table size |
| ES BMac Entries | The ES BMac entries |
| Lag Id | The LAG ID |
| ES Activation Timer | The ES activation timer |
| Svc Carving | The service carving type |
| Oper Svc Carving | The operational service carving type |
| Cfg Range Type | The configured range type |
| DF Pref Election Information | |
| Preference Mode | The preference mode |
| Preference Value | The preference value |
| Last Admin Change | The date and time of the last administrative change |
| Oper Pref Value | The operational preference value |
| Do No Preempt | The Do Not Preempt status |
| EVI Ranges | The EVI ranges |
| ISID Ranges | The ISID ranges |
| Vprn NextHop Evi Ranges | |
| From | The beginning point of the EVI range |

| Field | Description |
|-------------------------------|---|
| To | The ending point of the EVI range |
| Last Update | The date and time of the last range update |
| EVI Information | |
| EVI | The EVPN instance |
| SvcId | The service ID |
| Actv Timer Rem | The active timer rem value |
| DF | The designated forwarder status |
| Number of entries: | The number of entries |
| EVI DF and Candidate List | |
| DF Last Change | The date and time of the last DF candidate change |
| DF Candidates | The DF candidate IP address |
| Time Added | The date and time of the DF candidate addition |
| Q-Tag Ranges | |
| Q-Tag Start | The Q-Tag start range value |
| Q-Tag End | The Q-Tag end range value |
| Last Changed | The date and time of the last change |
| VC-Id Ranges | |
| VC-Id Start | The VC-Id start range value |
| VC-Id End | The VC-Id end range value |
| S-Tag Ranges | |
| S-Tag Start | The S-Tag start value |
| S-Tag End | The S-Tag end value |
| S-Tag C-Tag Ranges | |
| C-Tag Start | The C-Tag start value |
| C-Tag End | The C-Tag end value |
| Vxlan Instance Service Ranges | |

| Field | Description |
|-----------------|--|
| Svc Range Start | The service range start in this Vxlan instance |
| Svc Range End | The service range end in this Vxlan instance |

ethernet-segment

Syntax

```
ethernet-segment name evi evi df
ethernet-segment name isid isid df
ethernet-segment name local-bias
```

Context

[\[Tree\]](#) (tools>dump>service>system>bgp-evpn ethernet-segment)

Full Context

```
tools dump service system bgp-evpn ethernet-segment
```

Description

This command shows the computed DF PE for a specified EVI or ISID when the **evi** or **isid** parameters are selected, respectively. When the **local-bias** parameter is used, the output lists the PEs that are in the candidate DF Election list for the ES, and whether local bias procedures are enabled on them.

The PE can only enable local bias procedures on up to three PEs that are attached to the same ES and use multihomed VXLAN services. If more than three PEs exists, the PEs are ordered by either lowest IP (if **service-carving auto** is used in the ES) or lowest preference (if preference-based service-carving is used) and only the top three PEs are considered for local bias.

Parameters

name

Specifies the name of the Ethernet Segment, up to 32 characters.

evi

Specifies the EVI.

Values 1 to 65535

isid

Specifies the ISID.

Values 1 to 16777215

local-bias

Specifies that output lists the PEs that are in the candidate DF Election list for the ES, and whether local bias procedures are enabled on them.

Platforms

All

Output

The following is an example of Ethernet Segment information.

Sample Output

```
# tools dump service system bgp-evpn ethernet-segment "ESI-71" evi 1 df

9.39 eval-group-interface-template

eval-group-interface-template

Syntax

eval-group-interface-template *name*

Context

[Tree] (tools>perform>subscr-mgmt eval-group-interface-template)

Full Context

tools perform subscriber-mgmt eval-group-interface-template

Description

This command reapplies the specified group-interface template to all the group interfaces that were created using this template. This command can be used after changing the group-interface template, because not all the changed parameters are automatically applied to the existing group interfaces.

This command reports the total number of group interfaces linked to the template, the number of group interfaces that were changed or did not require a change, and the number of group interfaces for which a change was attempted but failed.

Parameters

name

Specifies a group-interface template name, up to 32 characters, as configured under **configure subscriber-mgmt group-interface-template**.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following is an example of the output information.

Sample Output

```
A:BNG-UPF# /tools perform subscriber-mgmt eval-group-interface-template "default"
Group interface instances:
- total submitted : 1
- changed         : 1
- change failed   : 0
```

9.40 eval-ipoe-session

eval-ipoe-session

Syntax

eval-ipoe-session [**svc-id** *service-id*] [**sap** *sap-id*] [**mac** *mac-address*] [**circuit-id** *circuit-id*] [**remote-id** *remote-id*] [**subscriber** *sub-ident-string*]

Context

[\[Tree\]](#) (tools>perform>subscr-mgmt eval-ipoe-session)

Full Context

tools perform subscriber-mgmt eval-ipoe-session

Description

This command re-evaluates the mapping between authentication strings such as the SLA profile string and the actual profiles for the identified IPoE sessions.

Parameters

service-id

Specifies an existing subscriber service ID.

Values 1 to 2147483647

sap-id

Specifies a SAP ID, up to 255 characters.

mac-address

Specifies the 48-bit MAC address for the static ARP in the form aa:bb:cc:dd:ee:ff or aa-bb-cc-dd-ee-ff where aa, bb, cc, dd, ee, and ff are hexadecimal numbers.

circuit-id

Specifies the circuit ID up to 127 characters.

remote-id

Specifies that information that goes into the remote-id sub-option in the DHCP relay packet, up to 255 characters.

sub-ident-string

Specifies an existing subscriber identification profile.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

9.41 eval-lease-state

eval-lease-state

Syntax

```
eval-lease-state [svc-id service-id] [sap sap-id] [subscriber sub-ident-string] [ip ip-address] [mac mac-address]
```

Context

[\[Tree\]](#) (tools>perform>subscr-mgmt eval-lease-state)

Full Context

tools perform subscriber-mgmt eval-lease-state

Description

This command evaluates lease state.

Parameters

sap-id

Specifies the physical port identifier portion of the SAP definition.

ip-address

Specifies the server's IP address. This address must be unique within the subnet and specified in dotted decimal notation. Allowed values are IP addresses in the range 1.0.0.0 – 223.255.255.255 (with support of /31 subnets).

sub-ident-string

Specifies the subscriber ID string, up to 32 characters.

service-id

Specifies an existing service ID.

Values 1 to 2147483647

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

9.42 eval-msap

eval-msap

Syntax

```
eval-msap {policy msap-policy-name | msap sap-id}
```

Context

[\[Tree\]](#) (tools>perform>subscr-mgmt eval-msap)

Full Context

```
tools perform subscriber-mgmt eval-msap
```

Description

This command re-applies the managed SAP policy to the managed SAP identified by the specified *sap-id* or to all managed SAPs associated with the specified *msap-policy name*.

Parameters

msap-policy-name

Specifies an existing MSAP policy. The MSAP policy is re-applied to all associated managed SAPs.

sap-id

Specifies an MSAP SAP ID. The MSAP policy is re-applied to the specified MSAP.

Values [port-id | lag-id]:qtag1
[port-id | lag-id]:qtag1.qtag2

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

9.43 eval-ppp-session

eval-ppp-session

Syntax

eval-ppp-session [svc-id service-id] [user-name user-name] [sap sap-id] [ip ip-address] [subscriber sub-ident-string]

eval-ppp-session [svc-id service-id] [user-name user-name] [sap sap-id] mac mac-address [session-id session-id] [ip ip-address] [subscriber sub-ident-string]

Context

[\[Tree\]](#) (tools>perform>subscr-mgmt eval-ppp-session)

Full Context

tools perform subscriber-mgmt eval-ppp-session

Description

This command evaluates PPP sessions.

Parameters

service-id

Specifies an existing subscriber service ID.

Values 1 to 2147483647

user-name

Specifies the PPP user name up to 253 characters.

sap-id

Specifies a SAP ID up to 255 characters.

ip-address

Specifies the peer's IP address.

sub-ident-string

Specifies an existing subscriber identification profile.

mac-address

Specifies the 48-bit MAC address for the static ARP in the form aa:bb:cc:dd:ee:ff or aa-bb-cc-dd-ee-ff where aa, bb, cc, dd, ee, and ff are hexadecimal numbers.

session-id

Specifies information about the ID of the PPP session.

Values 1 to 65535

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

9.44 eval-rates

eval-rates

Syntax

eval-rates

Context

[\[Tree\]](#) (tools>perform>subscr-mgmt>bonding eval-rates)

Full Context

tools perform subscriber-mgmt bonding eval-rates

Description

This command evaluates all bonding contexts and recalculates all reference rates. This command can be useful in handling changes that are not automatically tracked, such as adapting a scheduler rate in a QoS policy.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

9.45 eval-sap-template

eval-sap-template

Syntax

eval-sap-template *name*

Context

[\[Tree\]](#) (tools>perform>subscr-mgmt eval-sap-template)

Full Context

tools perform subscriber-mgmt eval-sap-template

Description

This command reapplies the SAP template to all the SAPs that were created using this template. This command can be used after changing the SAP template because not all the changed parameters are automatically applied to the existing SAPs.

This command reports the total number of SAPs linked to the template, the number of SAPs that changed or did not require a change, and the number of SAPs for which a change was attempted but failed.

Parameters

name

Specifies a SAP template name, up to 32 characters, as configured under **configure subscriber-mgmt sap-template**.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following is an example of the output information.

Sample Output

```
A:BNG-UPF# /tools perform subscriber-mgmt eval-sap-template "default"
Sap instances:
- total submitted : 1
- changed        : 1
- change failed  : 0
```

9.46 eval-slaac-host

eval-slaac-host

Syntax

```
eval-slaac-host [svc-id service-id] [sap sap-id] [subscriber sub-ident-string] [ipv6-address ipv6-prefix]
[mac ieee-address]
```

Context

[\[Tree\]](#) (tools>perform>subscr-mgmt eval-slaac-host)

Full Context

tools perform subscriber-mgmt eval-slaac-host

Description

This command evaluates the SLAAC host.

Parameters

service-id

Specifies an existing subscriber service ID.

Values 1 to 2147483647

sap-id

Specifies a SAP ID, up to 255 characters.

sub-ident-string

Specifies an existing subscriber identification profile.

ieee-address

Specifies the 48-bit MAC address for the static ARP in the form aa:bb:cc:dd:ee:ff or aa-bb-cc-dd-ee-ff where aa, bb, cc, dd, ee, and ff are hexadecimal numbers.

ipv6-prefix

Specifies an IPv6 prefix and prefix length.

Values ipv6-prefix x:x:x:x:x:x:x (eight 16-bit pieces)
 x:x:x:x:x:d.d.d.d

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

9.47 evaluate-script

evaluate-script

Syntax

```
evaluate-script sap sap-id control-session acct-session-id action script-action [ dynsvc-policy name ]  
[param-string string]
```

Context

[[Tree](#)] (tools>perform>service>dynamic-services evaluate-script)

Full Context

tools perform service dynamic-services evaluate-script

Description

This tools command performs the execution of a dynamic service script action as if the corresponding RADIUS attributes were received from RADIUS. It is possible to setup, modify or teardown a dynamic service associated with the specified control channel.

Note:

This command is not available in the MD-CLI.

Parameters

sap *sap-id*

specifies the dynamic service SAP id.

control-session *acct-session-id*

Specifies the accounting session id of the control channel associated with this dynamic service.

action *script-action*

Specifies the requested action: setup, modify or teardown.

dynsvc-policy *name*

Specifies the dynamic services policy to use for this action. Mandatory parameter for setup and modify actions. In case of a modify action, the dynamic services policy must be the same as the policy used at setup.

param-string *string*

Specifies the dynamic service parameter list. Mandatory parameter for setup and modify actions.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

evaluate-script

Syntax

```
evaluate-script domain-name [domain-name] type [type] action script-action [vni vni-id] [rt-i ext-community] [rt-e ext-community] [metadata metadata] policy python-policy
```

Context

[\[Tree\]](#) (tools>perform>service>vsd evaluate-script)

Full Context

tools perform service vsd evaluate-script

Description

The command enables the user to test their setup, and modify and tear down Python scripts in a lab environment without the need to be connected to a VSD. The successful execution of the command for action setup will create a VSD domain and the corresponding configuration, just as the system would do when the parameters are received from VSD.

Parameters

domain-name

Specifies the VSD domain name. 32 characters maximum.

type

Specifies the VSD domain type.

Values l2-domain, vrf-gre, vrf-vxlan, l2-domain-irb

script-action

Specifies the action taken for Python scripts.

Values setup, modify, teardown

vni-id

Specifies the VNI ID.

Values 1 to 16777215

rt-i ext-community

Specifies the internal route-target (RT-i).

Values target: {*ip-addr:comm-val* | *2byte-asnumber.ext-comm-val* | *4byte-asnumber:comm-val*}
ip-addr: a.b.c.d
comm-val: 0 to 65535
2byte-asnumber: 0 to 65535
ext-comm-val: 0 to 4294967295
4byte-asnumber: 0 to 4294967295

rt-e ext-community

Specifies the external route-target (RT-e).

Values target: {*ip-addr:comm-val* | *2byte-asnumber.ext-comm-val* | *4byte-asnumber:comm-val*}
ip-addr: a.b.c.d
comm-val: 0 to 65535
2byte-asnumber: 0 to 65535
ext-comm-val: 0 to 4294967295
4byte-asnumber: 0 to 4294967295

metadata

Specifies the opaque *key=value* pairs. 500 characters maximum.

python-policy

Specifies the name of the Python script used to translate the VSD parameters into a configuration. 32 characters maximum.

Platforms

All

Output

Sample Output

```
*A:PE1# tools perform service vsd evaluate-script domain-name "L2-DOMAIN-5" type l2-  
domain action setup policy "py-l2" vni 64000 rt-i target:64000:64000 rt-  
e target:64000:64000 metadata "rd=1:1, sap=1/1/10:3000"
```

Success

9.48 evc

evc

Syntax

evc [*port-id* [*vlan* *vlan-id*]]

Context

[\[Tree\]](#) (show>elmi evc)

Full Context

show elmi evc

Description

This command displays Ethernet Virtual Connections (EVC). No argument displays all the EVC on the service router. The port and VLAN arguments display information related to EVC associated with the port and VLAN.

Parameters

port-id

Displays information related to the EVCs configured on the port.

Values *slot/mda/port*

vlan-id

Specifies the VLAN Identifier of the EVC.

Values 0 to 4094, *

Platforms

9.49 event-control

event-control

Syntax

```
event-control [application-id [event-name | event-number]]  
event-control application-id event-name detail
```

Context

[\[Tree\]](#) (show>log event-control)

Full Context

```
show log event-control
```

Description

This command displays event control settings for events including whether the event is suppressed or generated and the severity level for the event.

If no options are specified all events, alarms and traps are listed.

Parameters

application-id

Only displays event control for the specified application.

Default All applications.

The following are some sample applications:

Values application_assurance, aps, atm, auto_prov, bfd, bgp, bier, bmp, ccag, cflowd, chassis, cpmhwfilter, cpmhwqueue, debug, dhcp, dhcps, diameter, dot1x, dynsvc, efm_oam, elmi, ering, eth_cfm, etun, filter, fpe, gsm, gmpls, gtp, gtungrp, icl, igh, igmp, igmp_snooping, ip, ipfix, ipsec, ipsec_cpm, isis, l2tp, lag, ldap, ldp, li, lldp, lmp, logger, macsec, mcac, mcpath, mc_redundancy, mgmt_core, mirror, mld, mld_snooping, mpls, mpls_tp, mpls_lmgr, mrp, msdp, nat, nge, ntp,

oam, open_flow, ospf, pcap, pcep, pfc, pim, im_snooping, port, ppp, pppoe, pppoe_clnt, profile, ptp, pxc, python, qos, radius, rib_api, rip, rip_ng, route_next_hop, route_policy, rpki, rsvp, security, sflow, snmp, sr_policy, stp, subscr_mgmt, sub_host_trk, svcmgr, system, tip, tls, user, user_db, video, vrrp, vrtr, wlan_gw, wpp

event-name

Only displays event control for the named application event, up to 32 characters.

Default All events for the application.

event-number

Only displays event control for the specified application event number.

Default All events for the application.

Platforms

All

Output

The following is an example of event control information.

[Table 134: Event-Control Output Field Descriptions](#) describes the output fields for the event control.

Sample Output

The following is a sample output:

```
A:gal171# show log event-control

Table 134: Event-Control Output Field Descriptions

| Label | Description |
|-------------|---|
| Application | The application name. |
| ID# | The event ID number within the application. L ID# An "L" in front of an ID represents event types that do not generate an associated SNMP notification. Most events do generate a notification, only the exceptions are marked with a preceding "L". |
| Event Name | The event name. |
| P | CL — The event has a cleared severity or priority. CR — The event has critical severity or priority. IN — The event has indeterminate severity or priority. MA — The event has major severity or priority. MI — The event has minor severity or priority. WA — The event has warning severity or priority. |
| g/s | gen — The event will be generated or logged by event control. sup — The event will be suppressed or dropped by event control. thr — Specifies that throttling is enabled. |
| Logged | The number of events logged or generated. |
| Dropped | The number of events dropped/suppressed. |

| Label | Description |
|--|---|
| Severity | The severity level of the event (cleared, indeterminate, critical, major, minor, or warning). |
| Generated | Indicates whether the log event is enabled (true) or suppressed (false). |
| Count | The number of events logged or generated. |
| Drop count | The number of events dropped/suppressed. |
| Throttle | Indicates whether the event is subject to global throttling (true or false). |
| Specific throttle | Indicates whether the event is subject to specific per event throttling (true or false). |
| Specific throttle limit | The configured number of events per interval for specific throttling. |
| Specific throttle interval (s) | The configured interval over which the specific throttling limit is applied. |
| Specific throttle by default | Indicates whether the specific throttling is enabled or not when it has not been explicitly configured. |
| Specific throttle limit default | The default number of events per-interval for specific throttling of this event. |
| Specific throttle interval default (s) | The default interval over which the specific default throttling limit is applied. |
| Repeat | Specifies that the log event should be repeated every minute until the underlying condition is cleared. |

9.53 event-parameters

event-parameters

Syntax

event-parameters [*application-id* [*event-name* | *event-number*]]

Context

[\[Tree\]](#) (show>log event-parameters)

Full Context

show log event-parameters

Description

This command displays an event's (or all events) common parameters and specific parameters. This allows a user to know what parameters can be passed from a triggering event to the triggered EHS script.

There is a common event parameter for all log events called 'timestamp' that contains the same information as 'gentime', but in a different format and unit. The 'timestamp' parameter is only available to python3 applications.

Parameters

application-id

Displays event parameters for the specified application.

Default All applications.

The following are some sample applications:

Values application_assurance, aps, atm, bfd, bgp, calltrace, ccag, cflowd, chassis, cpmhwfilter, cpmhwqueue, debug, dhcp, dhcps, diameter, dot1x, dynsvc, efm_oam, elmi, ering, eth_cfm, etun, filter, fpe, gsmp, gmpls, gtungrp, icl, igh, igmp, igmp_snooping, ip, ipfix, ipsec, ipsec_cpm, isis, l2tp, lag, ldap, ldp, li, lldp, lmp, logger, mcac, mcpath, mc_redundancy, mirror, mld, mld_snooping, mpls, mpls_tp, mrp, msdp, nat, ntp, oam, open_flow, ospf, pcep, pim, pim_snooping, port, ppp,

pppoe, ptp, pxc, python, qos, radius, rip, rip_ng, route_next_hop,
 route_policy, rpki, rsvp, security, sflow, snmp, stp, subscr_mgmt,
 sub_host_trk, svcmgr, system, tip, tls, user, user_db, video, vrrp, vrtr,
 wlan_gw, wpp

event-name

Displays event parameters for the named application event up to 32 characters in length.

Default All events for the application.

event-number

Displays event parameters for the specified application event number.

Default All events for the application.

Values 0 — 4294967295

Platforms

All

Output

The following is an example of log event parameter information.

Sample output

clear port ethernet efm-oam events

Description

This command clears all link monitoring events on the port.

Parameters

local

Clears the local events only.

remote

Clears the remote events only.

Platforms

All

9.55 evpn

evpn

Syntax

evpn mac-dup-detect *ieee-address*

evpn mac-dup-detect all

Context

[\[Tree\]](#) (clear>service>id evpn)

Full Context

clear service id evpn

Description

This command clears a duplicate MAC and restarts the MAC duplication process. It also clears black-hole MACs.

Parameters

ieee-address

Specifies the MAC address, up to 30 characters.

all

Specifies that the **clear** command applies to all duplicate MACs.

Platforms

All

evpn

Syntax

evpn usage

Context

[\[Tree\]](#) (tools>dump>service evpn)

Full Context

tools dump service evpn

Description

This command displays the consumed EVPN resources in the system. The Vxlan Destinations include static VXLAN destinations as well as Ethernet Segment (ES) Vxlan destinations.

Platforms

All

Output

The following is an example the displayed information.

Sample Output

```
*A:PE-1# tools dump service evpn usage
vxlan-evpn-mpls usage statistics at 04/16/2018 17:56:02:

Description

This command shows the maximum number of EVPN-tunnel interface IP next hops per R-VPLS as well as the current usage for a specified R-VPLS service.

Platforms

All

Output

The following is an example of tools dump EVPN usage information.

Sample Output

```
*A:PE71# tools dump service id 504 evpn usage
Evpn Tunnel Interface IP Next Hop: 1/8189
```

9.56 evpn-mcast-gateway

evpn-mcast-gateway

Syntax

```
evpn-mcast-gateway {all | pim | mvpn}
```

Context

[\[Tree\]](#) (show>service>id evpn-mcast-gateway)

Full Context

```
show service id evpn-mcast-gateway
```

Description

This command displays the EVPN multicast gateway information.

Parameters

all

Displays EVPN mulitcast gateway information for the MVPN-to-EVPN Gateway (MEG) and PIM-to-EVPN Gateway (PEG) cases.

pim

Displays EVPN mulitcast gateway information for the PEG case.

mvpn

Displays EVPN mulitcast gateway information for the MEG case.

Platforms

All

Output

The following output is an example of EVPN multicast gateway information, and [Table 135: Show EVPN Multicast Gateway Information Fields](#) describes the output fields.

Sample Output

```
# show service id 2 evpn-mcast-gateway {all|pim|mvpn}
```

```

evpn-mpls es-bmac ieee-address
```

Context

[\[Tree\]](#) (show>service>id evpn-mpls)

Full Context

```
show service id evpn-mpls
```

Description

This command displays the existing EVPN-MPLS destinations for a specified service and all related information. The command allows filtering based on **esi** (for EVPN multi-homing) and **es-bmac** (for PBB-EVPN multi-homing) to display the EVPN-MPLS destinations associated to an Ethernet Segment Identifier (ESI).

Parameters

esi

Specifies a 10-byte ESI by which to filter the displayed information. For example, ESI-0 | ESI-MAX or 00-11-22-33-44-55-66-77-88-99 with any of these separators ('-',':',';')

ieee-address

Specifies a 48-bit MAC address for which to display information. The parameter is entered in the form xx:xx:xx:xx:xx:xx or xx-xx-xx-xx-xx-xx, where xx represents a hexadecimal number.

| Transport:Tnl | Displays the transport tunnel. |
| Num. MAC | Displays the number of MACs. |
| Mcast | Displays the multicast information. |
| Sup BCast Domain | Displays the Sup BCast Domain. |

9.58 evpn-proxy-db

evpn-proxy-db

Syntax

```
evpn-proxy-db [detail]
evpn-proxy-db [group grp-ip-address]
```

Context

[Tree] (show>service>id>mld-snooping evpn-proxy-db)
 [Tree] (show>service>id>igmp-snooping evpn-proxy-db)

Full Context

```
show service id mld-snooping evpn-proxy-db
show service id igmp-snooping evpn-proxy-db
```

Description

This command displays the EVPN proxy database that is created when **config>service>vpls> igmp/mld-snooping>evpn-proxy** is enabled in the service. The EVPN proxy database is populated with local reports received on SAP or SDP binds but not with the received SMET routes. The output shows the IGMP and MLD versions of the database entries that are conveyed in the SMET routes advertised for the entries.

Parameters

grp-ip-address

Specifies the group IP address, in dotted decimal notation.

detail

Specifies detailed information for the EVPN proxy database.

Platforms

All

Output

The following is an example of EVPN proxy database information.

Sample Output

```
A:PE-2# show service id 4000 igmp-snooping evpn-proxy-db
=====
IGMP Snooping Evpn-Proxy-reporting DB for service 4000

Context

[\[Tree\]](#) (show>system>security>cpu-protection excessive-sources)

Full Context

show system security cpu-protection excessive-sources

Description

This command displays sources exceeding their per-source rate limit.

Parameters

service-id

Displays information for services exceeding their per-source rate limit.

sap-id

Displays information for SAPs exceeding their per-source rate limit.

Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

excessive-sources

Syntax

excessive-sources

Context

[\[Tree\]](#) (clear>cpu-protection excessive-sources)

Full Context

clear cpu-protection excessive-sources

Description

This command clears the records of sources exceeding their per-source rate limit.

Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

9.60 exercise

exercise

Syntax

exercise *aps-id* {**protect** | **working**}

Context

[\[Tree\]](#) (tools>perform>aps exercise)

Full Context

tools perform aps exercise

Description

This command performs an exercise request on the protection or working circuit.

Parameters

aps-id

Specifies the APS ID.

| Values | <i>aps-id</i> | <i>aps-group-id</i> |
|--------|---------------|---------------------|
| | aps | keyword |
| | group-id | 1 to 128 |

protect

This command clears a physical port that is acting as the protection circuit for the APS group.

working

This command clears a physical port that is acting as the working circuit for this APS group.

Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

Table 139: Failover Pool Statistics Field Descriptions describes failover pool statistics output fields.

Table 139: Failover Pool Statistics Field Descriptions

| Field | Description |
|----------------------|---|
| Failover Admin State | Identifies the failover state of the DHCP server instance inService — The failover admin state is in service outOfService — The failover admin state is out of service |
| Failover Oper State | The operational state of a DHCP server instance |
| Failover Persist Key | The maximum amount of time that one server can extend a lease for a client's binding beyond the time known by the partner server |
| Administrative MCLT | The administrative Maximum Client Lead Time (MCLT) |
| Operational MCLT | Indicates the operational MCLT |
| Startup Wait Time | The startup wait time. The startup wait time is the time that one IP address pool attempts to contact the partner IP address pool. During this time, the IP address pool is unresponsive to DHCP client requests. |

| Field | Description |
|------------------------------|--|
| Partner Down Delay | The minimum safe-time after the beginning of COMMUNICATIONS-INTERRUPTED state. After the expiry of this time, the server enters the PARTNER-DOWN state. |
| Ignore McLT | The ignore McLT status. If, after the transition COMMUNICATIONS-INTERRUPTED-to-PARTNER-DOWN state, the DHCP server instance ignores the safety period with a duration of Maximum Client Lead Time; a 'true' value has the effect that the DHCP server starts offering IP addresses from the partner's scope immediately after this transition, without waiting for existing leases allocated by the partner and not known by this system to time out. A 'true' value increases the risk that duplicate addresses are offered; if the transition to PARTNER-DOWN state is likely to be caused by a failure of the partner system rather than a communications problem, this risk is reduced. |
| Failover statistics for pool | The failover statistics for each pool |
| Dropped Invalid Packets | The number of BNDUPD packets that were dropped because the packet was malformed |
| Failover Shutdown | The number of BNDUPD packets that were dropped because the failover state if the DHCP server instance is shut down |
| Lease Already Expired | The number of BNDUPD packets that were dropped because the corresponding lease has expired |
| Maximum Lease Count Reached | The number of BNDUPD packets that were dropped because the maximum number of leases were reached |
| Subnet Not Found | The number of BNDUPD packets that were dropped because a valid subnet could not be found for the lease |
| Range Not Found | The number of BNDUPD packets that were dropped because a valid include range could not be found for the lease |
| Host Conflict | The number of BNDUPD packets that were dropped because this DHCP server instance has already leased this address to another host |
| Address Conflict | The number of BNDUPD packets that were dropped because this DHCP server instance has already leased another address to this host |
| Peer Conflict | The number of BNDUPD packets that were dropped because the failover peer has leased an address within a |

| Field | Description |
|-------------------------------|--|
| | subnet range of which the failover control is set to local on this local DHCP server instance |
| Persist Congestion | The number of BNDUPD packets that were dropped because of persistence congestion on this DHCP server instance |
| No Lease Hold Time Configured | The number of BNDUPD packets that were dropped because the lease hold time is zero on this DHCP server instance |
| Lease Not Found | The number of Binding Database Update (BNDUPD) remove packets were dropped because the corresponding lease could not be found. |
| Number of pools found | The total number of pools found |

failover-pool-stats

Syntax

failover-pool-stats [*pool-name*]

Context

[Tree] (clear>router>dhcp6>server failover-pool-stats)

[Tree] (clear>router>dhcp>server failover-pool-stats)

Full Context

clear router dhcp6 local-dhcp-server failover-pool-stats

clear router dhcp local-dhcp-server failover-pool-stats

Description

This command clears failover pool statistics.

Parameters

pool-name

Clears information about the pool name which is defined in the system.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

10.3 failover-server-stats

failover-server-stats

Syntax

failover-server-stats

Context

[Tree] (show>router>dhcp>local-dhcp-server failover-server-stats)

[Tree] (show>router>dhcp6>local-dhcp-server failover-server-stats)

Full Context

show router dhcp local-dhcp-server failover-server-stats

show router dhcp6 local-dhcp-server failover-server-stats

Description

This command displays failover server statistics.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of failover server stats information.

Sample Output

```
show>router>dhcp# local-dhcp-server "y" failover-server-stats
=====
Failover config for server      y

Table 140: [Failover Server Statistics Field Descriptions](#) describes failover server stats fields.

Table 140: *Failover Server Statistics Field Descriptions*

| Field | Description |
|----------------------|---|
| Failover Admin State | Identifiers the failover state of the DHCP server instance inService — The failover admin state is in service outOfService — The failover admin state is out of service |
| Failover Oper State | The operational state of a DHCP server instance |
| Failover Persist Key | The maximum amount of time that one server can extend a lease for a client's binding beyond the time known by the partner server |
| Administrative MCLT | The administrative Maximum Client Lead Time (MCLT) |
| Operational MCLT | Indicates the operational MCLT |
| Startup Wait Time | The startup wait time. The startup wait time is the time that one IP address pool attempts to contact the partner |

| Field | Description |
|--------------------------------|--|
| | IP address pool. During this time, the IP address pool is unresponsive to DHCP client requests. |
| Partner Down Delay | The minimum safe-time after the beginning of COMMUNICATIONS-INTERRUPTED state. After the expiry of this time, the server enters the PARTNER-DOWN state. |
| Ignore McLT | The ignore McLT status. If, after the transition COMMUNICATIONS-INTERRUPTED-to-PARTNER-DOWN state, the DHCP server instance ignores the safety period with a duration of Maximum Client Lead Time; a 'true' value has the effect that the DHCP server starts offering IP addresses from the partner's scope immediately after this transition, without waiting for existing leases allocated by the partner and not known by this system to time out. A 'true' value increases the risk that duplicate addresses are offered; if the transition to PARTNER-DOWN state is likely to be caused by a failure of the partner system rather than a communications problem, this risk is reduced. |
| Failover statistics for server | The failover statistics for each pool |
| Dropped Invalid Packets | The number of BNDUPD packets that were dropped because the packet was malformed |
| Failover Shutdown | The number of BNDUPD packets that were dropped because the failover state if the DHCP server instance is shut down |
| Lease Already Expired | The number of BNDUPD packets that were dropped because the corresponding lease has expired |
| Maximum Lease Count Reached | The number of BNDUPD packets that were dropped because the maximum number of leases were reached |
| Subnet Not Found | The number of BNDUPD packets that were dropped because a valid subnet could not be found for the lease |
| Range Not Found | The number of BNDUPD packets that were dropped because a valid include range could not be found for the lease. |
| Host Conflict | The number of BNDUPD packets that were dropped because this DHCP server instance has already leased this address to another host |

| Field | Description |
|-------------------------------|--|
| Address Conflict | The number of BNDUPD packets that were dropped because this DHCP server instance has already leased another address to this host |
| Peer Conflict | The number of BNDUPD packets that were dropped because the failover peer has leased an address within a subnet range of which the failover control is set to local on this local DHCP server instance |
| Persist Congestion | The number of BNDUPD packets that were dropped because of persistence congestion on this DHCP server instance |
| No Lease Hold Time Configured | The number of BNDUPD packets that were dropped because the lease hold time is zero on this DHCP server instance |
| Lease Not Found | The number of Binding Database Update (BNDUPD) remove packets were dropped because the corresponding lease could not be found. |

10.4 failure-recovery

failure-recovery

Syntax

failure-recovery {**start** | **abort** | **clear-hold-down**}

Context

[\[Tree\]](#) (tools>perform>system>switch-fabric failure-recovery)

Full Context

tools perform system switch-fabric failure-recovery

Description

This command controls the automatic switch-fabric failure recovery.

Parameters

start

Forces the initiation of the recovery process.

abort

Terminates a running recovery process.

clear-hold-down

Clears the hold-down condition and allows the recovery to run immediately when the trigger condition occurs.

Platforms

7450 ESS, 7750 SR-7, 7950 XRS-20, 7950 XRS-40

10.5 fate-sharing

fate-sharing

Syntax

fate-sharing

Context

[\[Tree\]](#) (show>service>id>spb fate-sharing)

Full Context

show service id spb fate-sharing

Description

This command displays SPB fate-sharing information on User B-VPLS service, in correspond to associated Control B-VPLS service.

Platforms

All

Output

The following output is an example of service SPB fate sharing information.

Sample Output

```
*A:Dut-A# Node show service id spb fate-sharing
=====
User service fate-shared sap/sdp-bind information
=====
Control   Control Sap/      FID      User      User Sap/
SvcId     SdpBind
-----
500       1/1/20:500        502      502      1/1/20:502
=====
```

10.6 fd-domain-sync

fd-domain-sync

Syntax

```
fd-domain-sync {full | diff}
```

Context

[\[Tree\]](#) (tools>perform>service>vsd fd-domain-sync)

Full Context

```
tools perform service vsd fd-domain-sync
```

Description

This command instructs the system to audit the VSD and retrieve either the "DIFF" list or the "FULL" list of domains in the VSD.

Parameters

full

Retrieves the full VSD domain list.

diff

Retrieves the diff VSD domain list.

Platforms

All

10.7 fdb

fdb

Syntax

```
fdb [sap sap-id [expiry]] | [ sdp sdp-id [expiry]] | [mac ieee-address [expiry]] | endpoint endpoint | [detail] [expiry] [pbb]
```

Context

[\[Tree\]](#) (show>service>id fdb)

Full Context

```
show service id fdb
```

Description

This command displays FDB entries for a specified MAC address.

Parameters

sap-id

Specifies the physical port identifier portion of the SAP

detail

Displays detailed information

expiry

Displays time until MAC is aged out

pbb

Displays PBB related information. This keyword is only applicable to B-VPLS or I-VPLS services. This parameter applies to the 7450 ESS or 7750 SR only.

endpoint-name

Specifies an endpoint name up to 32 characters in length. This parameter applies to the 7450 ESS or 7750 SR only.

Platforms

All

Output

The following is an example of service FDB information.

Sample Output

```
A:ALA-48>show>service>id# fdb mac detail

Table 141: Show FDB Information Fields describes service FDB output fields.

Table 141: Show FDB Information Fields

| Label | Description |
|-------------------|--|
| ServID | Displays the service ID. |
| MAC | Displays the associated MAC address. |
| Transport:Tnl-Id | Displays the tunnel type and tunnel ID of the FDB entry. |
| Source Identifier | Displays the id of the source MAC. |
| Type/Age | Type — Specifies the number of seconds used to age out TLS FDB entries learned on local SAPs. Age — Specifies the number of seconds used to age out TLS FDB entries learned on an SDP. These entries correspond to MAC addresses learned on remote SAPs. L — Learned - Dynamic entries created by the learning process. OAM — Entries created by the OAM process. H — Host, the entry added by the system for a static configured subscriber host. |

| Label | Description |
|-------------|---|
| | <p>D or DHCP — DHCP-installed MAC. Learned addresses can be temporarily frozen by the DHCP snooping application for the duration of a DHCP lease.</p> <p>P — Indicates the MAC is protected by the MAC protection feature.</p> <p>Static — Statically configured.</p> |
| Last Change | Indicates the time of the most recent state changes. |

fdb

Syntax

```
fdb {all | mac ieee-address | sap sap-id | mesh-sdp sdp-id [: vc-id] | spoke-sdp sdp-id [:vc-id] | vxlan-instance instance [vtep ip-address]}
```

Context

[\[Tree\]](#) (clear>service>id fdb)

Full Context

```
clear service id fdb
```

Description

This command clears the FDB entries for the service.

Parameters

all

Clears all FDB entries.

ieee-address

Clears only FDB entries in the FDB table with the specified 48-bit address. The MAC address can be expressed in the form aa:bb:cc:dd:ee:ff or aa-bbcc-dd-ee-ff where aa, bb, cc, dd, ee and ff are hexadecimal numbers.

sap-id

Clears the physical port identifier portion of the SAP definition.

mesh-sdp

Clears only the service FDB entries associated with the specified mesh SDP ID. For a mesh SDP, the VC ID is optional.

spoke-sdp

Clears only the service FDB entries associated with the specified spoke-SDP ID. For a spoke-SDP, the VC ID must be specified.

sap-id

Specifies the SDP ID for which the associated FDB entries will be cleared.

vc-id

Specifies the virtual circuit ID on the SDP ID for which the associated FDB entries are cleared.

Values sdp-id[:vc-id] sdp-id: 1 to 32767
vc-id: 1 to 4294967295
sdp-id:vc-id sdp-id: 1 to 32767
vc-id: 1 to 4294967295

instance

Clears only the service FDB entries associated with the specified static VXLAN instance.

Values 1, 2

vtep ip-address

Specifies, optionally and along with the VXLAN instance, a specific configured static egress VTEP to clear the FDB entries associated only with the VTEP.

Table 142: Show FDB Information Fields describes show FDB-Info command output.

Table 142: Show FDB Information Fields

| Label | Description |
|------------------|--|
| ServID | Displays the service ID. |
| MAC | Displays the associated MAC address. |
| Mac Move | Displays the administrative state of the MAC movement feature associated with this service. |
| Primary Factor | Displays a factor for the primary ports defining how many MAC-relearn periods should be used to measure the MAC-relearn rate. |
| Secondary Factor | Displays a factor for the secondary ports defining how many MAC-relearn periods should be used to measure the MAC-relearn rate. |
| Mac Move Rate | <p>Displays the maximum rate at which MACs can be re-learned in this service, before the SAP where the moving MAC was last seen is automatically disabled in order to protect the system against undetected loops or duplicate MAs.</p> <p>The rate is computed as the maximum number of re-learns allowed in a 5 second interval: for example, the default rate of 2 re-learns per second corresponds to 10 re-learns in a 5 second period.</p> |
| Mac Move Timeout | <p>Displays the time in seconds to wait before a SAP that has been disabled after exceeding the maximum re-learn rate is re-enabled.</p> <p>A value of zero indicates that the SAP will not be automatically re-enabled after being disabled. If after the SAP is re-enabled it is disabled again, the effective retry timeout is doubled in order to avoid thrashing.</p> |
| Mac Move Retries | Displays the number of times retries are performed for re-enabling the SAP/SDP. |
| Table Size | Specifies the maximum number of learned and static entries allowed in the FDB of this service. |
| Allocated Count | Displays the total number of allocated entries in the FDB of this service. |
| Total In Use | Displays the total number of entries in use in the FDB of this service. |
| Learned Count | Displays the current number of learned entries in the FDB of this service. |

| Label | Description |
|------------------|---|
| Static Count | Displays the current number of static entries in the FDB of this service. |
| OAM MAC Count | Displays the current number of OAM entries in the FDB of this service. |
| DHCP MAC Count | Displays the current number of DHCP-learned entries in the FDB of this service. |
| Host MAC Count | Displays the current number of host-learned entries in the FDB of this service. |
| Intf MAC Count | Displays the total number of interface MAC entries in the FDB of this service. |
| SPB Count | Displays the total number of SPB entries in the FDB of this service. |
| Cond MAC Count | Displays the total number of conditional static MAC entries in the FDB of this service. |
| BGP EVPN Count | Displays the total number of BGP EVPN entries in the FDB of this service. |
| EVPN Static Cnt | Displays the total number of BGP EVPN MAC entries with the sticky bit set in the FDB of this service. |
| EVPN Dup Det Cnt | Displays the total number of times a BGP EVPN duplicate MAC address has been detected in this service. |
| Remote Age | Displays the number of seconds used to age out FDB entries learned on an SDP. These entries correspond to MAC addresses learned on remote SAPs. |
| Local Age | Displays the number of seconds used to age out FDB entries learned on local SAPs. |
| High Watermark | Displays the utilization of the FDB table of this service at which a table full alarm will be raised by the agent. |
| Low Watermark | Displays the utilization of the FDB table of this service at which a table full alarm will be cleared by the agent. |
| Mac Learning | Specifies whether the MAC learning process is enabled. |
| Discard Unknown | Specifies whether frames received with an unknown destination MAC are discarded. |
| Mac Aging | Indicates whether the MAC aging process is enabled. |
| Relearn Only | When one of the FDB table size limits (service, line card, system) has been reached, the learning of new MAC addresses |

| Label | Description |
|-------------------|--|
| | is temporary disabled and only MAC relearns are allowed. When in this state, the Relearn Only flag is True, otherwise it is False. |
| Mac Subnet Len | Displays the number of bits to be considered when performing MAC-learning or MAC-switching. |
| Source-Identifier | The location where the MAC is defined. |
| Type/Age | Type — Specifies the number of seconds used to age out TLS FDB entries learned on local SAPs. Age — Specifies the number of seconds used to age out TLS FDB entries learned on an SDP. These entries correspond to MAC addresses learned on remote SAPs. L — Learned - Dynamic entries created by the learning process. OAM — Entries created by the OAM process. H — Host, the entry added by the system for a static configured subscriber host. D or DHCP — DHCP-installed MAC. Learned addresses can be temporarily frozen by the DHCP snooping application for the duration of a DHCP lease. P — Indicates the MAC is protected by the MAC protection feature. Static — Statically configured. |
| Last Change | Indicates the time of the most recent state changes. |
| Sel Learned FDB | Displays the administrative state of the selective learned FDB feature associated with this service. |

10.9 fdb-mac

fdb-mac

Syntax

fdb-mac *ieee-address* [expiry]

Context

[Tree] (show>service fdb-mac)

Full Context

show service fdb-mac

Description

This command displays the FDB entry for a specified MAC address.

Parameters

ieee-address

The 48-bit MAC address for which the FDB entry will be displayed in the form *aa:bb:cc:dd:ee:ff* or *aa-bb-cc-dd-ee-ff* where *aa*, *bb*, *cc*, *dd*, *ee* and *ff* are hexadecimal numbers.

expiry

Shows the time until the MAC is aged out.

Platforms

All

Output

The following output displays an example of FDB MAC information.

Sample Output

```
*A:ian2# show service fdb-mac

Context

[\[Tree\]](#) (tools>dump>router>ldp fec)

Full Context

tools dump router ldp fec

Description

This command dumps information for an LDP FEC.

Parameters

p2mp-id *identifier*

Dumps LDP active P2MP identifier bindings information.

Values 0 to 4294967295

inner-root *ip-address*

Dumps inner root IP address information.

root *ip-address*

Dumps root IP address information.

prefix *ip-address[/mask]*

Dumps LDP active prefix and mask information.

Values ip-address[/mask]:

ipv4-prefix a.b.c.d

ipv4-prefix-
le 0 to 32

ipv6-prefix x:x:x:x:x:x:x (eight 16-bit
pieces)

x:x:x:x:x:d.d.d.d

x: [0 to FFFF] H

d: [0 to 255] D

ipv6-prefix-
le 0 to 128

source ip-address

Dumps source IP address information.

group mcast-address

Dumps the group multicast address bindings.

rd rd

Dumps information for the route distinguisher.

Values ip-addr:comm-val | 2byte-asnumber:ext-comm-val | 4byte-
asnumber:comm-val

vc-type vc-type

Dumps information for the specified VC type.

Values ethernet, vlan, framerelay, atm-all5, atm-cell, hdlc, ppp, cem, atm-vcc,
atm-vpc, ipipe, atm-vcc-1-1, atm-vpc-1-1, atm-aal5-pdu, fr, cep, e1-
satop, t1-satop, e3-satop, t3-satop, cesopsn, tdmoip, cesopsn-cas,
tdmoip-cas, fr-dlci, mirror

vc-id vc-id

Dumps information for the specified VC-ID.

Values 1 to 4294967295

agi agi

Specifies the Attachment Group identifier TLV associated with this service FEC.

Values <ip-addr:comm-val> | <2byte-asnumber:ext-comm-val> | <4byte-
asnumber:comm-val>

ip-addr - a.b.c.d

comm-val - [0 to 65535]

2byte-asnumber - [1 to 65535]

ext-comm-val - [0 to 4294967295]
 4byte-asnumber - [1 to 4294967295]
 null - means all value is 0

saii-type2 global-id:prefix:ac-id

Dumps Source Attachment Individual Identifier (SAII) information.

Values <number>:<number> | <a.b.c.d>:<number>

taii-type2 global-id:prefix:ac-id

Dumps Target Attachment Individual Identifier (TAII)

svc-fec-type

Specifies the FEC type.

Values fec128, fec129

Platforms

All

Table 144: LDP FEC Output Fields describes the LDP FEC parameters output fields.

Table 144: LDP FEC Output Fields

| Label | Description |
|--------------|---|
| LSP ID | Specifies the LSP identifier. |
| Metric | Specifies the metric type of the LSP. |
| inLabel | Specifies the incoming MPLS label on which to match. |
| egress Label | Specifies the egress label associated with this next-hop entry. |

10.12 fec-egress-stats

fec-egress-stats

Syntax

fec-egress-stats [*ip-prefix/mask*]

fec-egress-stats [active] [family]

Context

[Tree] (show>router>ldp fec-egress-stats)

Full Context

show router ldp fec-egress-stats

Description

This command displays LDP prefix FECs egress statistics.

Parameters

ip-prefix

Specify information for the specified IP prefix. Host bits must be 0.

mask

Specifies the address mask used to indicate the bits of an IP address that are being used for the subnet address.

Values IPv4: 0 to 32
 IPv6: 0 to 128

family

Displays either IPv4 or IPv6 LDP session information.

Platforms

All

Output

The following is an example of LDP FEC egress statistics information.

Sample Output

```
*A:Dut-C>config>router>ldp# show router ldp fec-egress-stats 3ffe::a14:101/128

fec-egress-stats

Syntax

fec-egress-stats *ip-prefix/mask* [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**]

Context

[\[Tree\]](#) (monitor>router>ldp fec-egress-stats)

Full Context

monitor router ldp fec-egress-stats

Description

This command monitors egress statistics for LDP FEC prefixes.

Parameters

ip-prefix/mask

Specifies information for the specified IP prefix and mask length.

Values

| | |
|--------------------|--|
| ipv4-prefix | a.b.c.d |
| ipv4-prefix- le | 0 to 32 |
| ipv6-prefix | x:x:x:x:x:x:x (eight 16-bit pieces) |
| | x:x:x:x:x:d.d.d.d |
| | x: [0 to FFFF] H |
| | d: [0 to 255] D |
| ipv6-prefix- le | 0 to 128 |

seconds

Configures the interval for each display in seconds.

Values 3 to 60

Default 10

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

Platforms

All

10.13 fec-originate

fec-originate

Syntax

fec-originate [*ip-prefix/mask*] [*operation-type*]

Context

[\[Tree\]](#) (show>router>ldp fec-originate)

Full Context

show router ldp fec-originate

Description

This command displays LDP static prefix FECs.

Parameters

ip-prefix

Specify information for the specified IP prefix. Host bits must be 0.

mask

Specifies the 32-bit address mask used to indicate the bits of an IP address that are being used for the subnet address.

Values 0 to 32

operation-type

Specify the operation type to display.

Values pop, swap

Platforms

All

Output

FEC Originate Output

[Table 145: FEC Originate Output Fields](#) describes the FEC originate parameters output fields.

Table 145: FEC Originate Output Fields

| Label | Description |
|--------|----------------------------------|
| Prefix | Specifies the static prefix FEC. |

| Label | Description |
|--------------------------|---|
| NHType | Specifies the type of next-hop represented by this row entry: unknown — The next-hop type has not been set. IP Addr — The next-hop is an IP address. pop — There is no next-hop (pop the label and route). |
| NextHop | The IP address of the next-hop. |
| NHIfName | The name of the next-hop. |
| IngLabel | Specifies the label that is advertised to the upstream peer. If this variable is set to the default value of 4294967295, the ingress label will be dynamically assigned by the label manager. |
| EgrLabel | Specifies the egress label associated with this next-hop entry. The LSR will swap the incoming label with the configured egress label. If this egress label has a value of 4294967295, the LSR will pop the incoming label. |
| OprInLbl OperIngLabel | Specifies the actual or operational value of the label that was advertised to the upstream peer. |

Sample Output

```

fetch-ahs-log

Syntax

fetch-ahs-log *period days file-url file-url*

Context

[\[Tree\]](#) (tools>perform>esa fetch-ahs-log)

Full Context

tools perform esa fetch-ahs-log

Description

This command retrieves the ESA instance AHS log for a specified number of past days and copies it to a local or remote destination.

Note: To retrieve an AHS log that includes all AHS log events saved on the ESA, configure the **period** keyword to use a value of *all*. This is helpful when trying to retrieve a record of AHS log events occurring over 31 days ago.

Parameters

period *days*

Specifies the number of past days for which AHS log events are retrieved.

Values 1 to 31, all

file-url *file-url*

Specifies a local or remote destination for the AHS log.

Values

local-url | remote-url

local-url

[cflash-id]/file-path 200 characters maximum, including cflash-id

directory length 99 characters maximum each

| | |
|---------------------|---|
| <i>remote-url</i> | {ftp tftp}://[login:pswd@]remote-locn/[filepath] |
| | 255 characters maximum, <i>filepath</i> 199 characters maximum |
| <i>remote-locn</i> | {hostname ipv4-address "["ipv6- address"]" }[:port] |
| <i>ipv4-address</i> | a.b.c.d |
| <i>ipv6-address</i> | x:x:x:x:x:x:x[-interface] x:x:x:x:x:d.d.d.d[-interface] x - [0 to FFFF]H d - [0 to 255]D interface - 32 characters maximum, for link local addresses |
| <i>port</i> | [0 to 65535] |
| <i>cflash-id</i> | cf1: cf1-A: cf1-B: cf2: cf2-A: cf2- B: cf3: cf3-A: cf3-B: |

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

Output

Use the following command to copy the AHS log to a local destination.

```
tools perform esa 1 fetch-ahs-log period 1 file-url cf3:/test.ahs
```

Sample Output

```
Updating (1 day) AHS Log @09/19/2022 21:28:25 on esa-1 ... DONE @ 09/19/2022  
21:30:50 - File Name: /tmp/HPE_CZ21520FD6_20220919.ahs Size: 54104161 bytes  
  
Transferring file /tmp/HPE_CZ21520FD6_20220919.ahs from esa-1 to cf3:/test.ahs ...

10.15 fib

fib

Syntax

fib *slot-number* [*family*] [*ip-prefix/prefix-length* [**longer**]] [**secondary**] [**qos**] [**accounting-class**] [**all**]

fib *slot-number* **extensive** [*ip-prefix/prefix-length*] [*family*] [**all**]

fib *slot-number* [*family*] **summary**

fib *slot-number* **nh-table-usage**

fib **all** **summary**

Context

[\[Tree\]](#) (show>router fib)

Full Context

show router fib

Description

This command displays the active FIB entries for a specific IOM or line card.

Parameters

slot-number

Displays routes only matching the specified chassis slot number.

Values 1 to 20

Note:

The actual range can be less depending on the platform.

family

Displays the router IP interface table.

Values **ipv4** — Displays IPv4 routes installed in the FIB.

ipv6 — Displays IPv6 routes installed in the FIB.

ip-prefix/prefix-length

Displays FIB entries only matching the specified *ip-prefix* and length.

| Values | | |
|---------------------|--|-------------------------------------|
| ipv4-prefix: | | a.b.c.d (host bits must be 0) |
| ipv4-prefix-length: | | 0 to 32 |
| ipv6-prefix: | | x:x:x:x:x:x:x (eight 16-bit pieces) |
| | | x:x:x:x:x:d.d.d.d |
| | | x: [0 to FFFF]H |
| | | d: [0 to 255]D |
| ipv6-prefix-length: | | 0 to 128 |

Note:

It is possible that a specific platform only supports a subset of the above values.

longer

Displays FIB entries matching the *ip-prefix/mask* and routes with longer masks.

secondary

Displays secondary VRF ID information.

qos

Displays the QoS priority and fc values.

accounting-class

Displays the accounting class information.

Note:

Not all platforms support this parameter.

all

Displays all information.

summary

Displays summary FIB information for the specified slot number.

nh-table-usage

Displays next-hop table usage.

Platforms

All

Output

The following output is an example of FIB information and [Table 146: FIB Fields](#) describes the output fields for the router FIB settings.

Sample Output

```

Full Context

show router fib-telemetry

Description

This command displays FIB telemetry information.

Parameters

label

Specifies the label value.

Values 0 to 1048575

family

Specifies the IPv4 or IPv6 address FIB telemetry route or tunnel family.

Values ipv4, ipv6

ip-prefix/prefix-length

Displays FIB telemetry route or tunnel entries only matching the specified IP prefix and length.

Values

| | | |
|---------------------|-------------------------------------|--------------|
| ipv4-prefix: | a.b.c.d (host bits must be 0) | |
| ipv4-prefix-length | 0 to 32 | |
| ipv6-prefix: | x:x:x:x:x:x:x (eight 16-bit pieces) | |
| | x:x:x:x:x:d.d.d.d | |
| | x: | [0 to FFFF]H |
| | d: | [0 to 255]D |

Table 147: FIB Telemetry Fields

| Label | Description |
|---------------------------|--|
| Label | The label number of the FIB entry |
| Owner | The owner (protocol name) of the label entry |
| LastUpdt | The time stamp of when the entry was last updated |
| Primary NextHop[If/TnlId] | The primary path next-hop IP or tunnel ID or interface |
| Weight | The normalized ECMP weight associated with the next-hop |
| GrpId | The next-hop group ID |
| PriActv | The boolean value (YES or NO) that indicates whether the primary path is active or not |
| Pushed Labels | The pushed labels number |
| Backup NextHop[If/TnlId] | The backup path next-hop IP or tunnel ID or interface |
| Number of Entries | The total number of displayed labels |
| Flags | The flags: <ul style="list-style-type: none"> • b — backup • i — indirect • l — LFA |
| Dest Prefix | The destination IP prefix of the route FIB entry |
| Owner | The protocol owner (routing protocol) of the FIB entry |
| FIB Update Time | The time stamp of when the route was last updated in FIB |
| NextHop [If/TnlId] | The IP address of the next-hop and interface name or tunnel ID |
| Number of Entries | The total number of displayed routes |

| Label | Description |
|-------------------|--|
| Flags | The flags: <ul style="list-style-type: none"> • a — active • b — backup • l — LFA |
| Dest Prefix | The destination IP prefix of the FIB tunnel entry |
| Owner | The protocol owner of the FIB tunnel entry |
| Pref | The preference number that indicates the priority of the tunnel |
| FIB Update Time | The time stamp of when the tunnel was last updated in FIB |
| Tnllid | The global tunnel ID |
| Tnlnst | The tunnel instance of the type indicated by protocol |
| Number of Entries | The total number of displayed tunnels |

fid [*fid*] **mfib** [**isid** *isid*]

Context

[\[Tree\]](#) (show>service>id>spb fid)

Full Context

show service id spb fid

Description

This command displays SPB control service FID information.

Parameters

fid

A user service FID may be specified. All user service FIDs are displayed if the FID is not specified.

Values 1 to 4095

fate-sharing

Displays fate-sharing information

user-service

Specifies user VPLS information for each control VPLS per forwarding data-base identifier. A user service FID may be specified. All user service FIDs are displayed if the FID is not specified.

fdb

Displays forwarding database (FDB) information

mfib

Displays multicast forwarding information base (MFIB) information

ieee-address

Specifies the 48-bit IEEE 802.3 group MAC address

isid

Specifies the value of ISID of the group MAC address of this entry

Values 0 to 16777215

Platforms

All

Output

The following output is an example of service SPB FID fare sharing information.

Sample Output

```

tools perform system auto-node-provisioning file

Description

This command executes the auto-provisioning process. When the auto-provisioning process is executed using the **file** command, DHCP discovery and solicitation is not performed.

Parameters

provisioning-file-url

Specifies the location of the provisioning file.

Values *local-url, remote-url*

local-url — [*cflash-id*]/*file-path*; 200 characters max

remote-url — {ftp | http | https}://[*login:password*@]*remote-locn*/*file-path*

remote-locn — {*hostname* | *ipv4-address* | *ipv6-address*][:*port*]

ipv4-address — a.b.c.d

ipv6-address — x:x:x:x:x:x:x[-*interface*]

x:x:x:x:x:d.d.d.d[-*interface*]

x — 0 to FFFF (hexadecimal)

d — 0 to 255 (decimal)

port — 0 to 65535

cflash-id — cf1:m cf1-A:, cf1-B:, cf2:, cf2-A:, cf2-B:, cf3:, cf3-A:, cf3-B:

file-url

Specifies the location to save the provisioning file.

Values [*cflash-id*]/*file-path*

cflash-id — cf1:m cf1-A:, cf1-B:, cf2:, cf2-A:, cf2-B:, cf3:, cf3-A:, cf3-B:

reboot-on-success

Reboots the router when the auto-provisioning process completes successfully.

Description

This command displays file transmission profile information.

Parameters

name

Specifies the file transmission profile name, up to 32 characters.

Platforms

All

10.23 files

files

Syntax

files [**running** | **finished**] [**detail**]

Context

[Tree] (show>call-trace files)

Full Context

show call-trace files

Description

This command gives an overview of all the files in use by the call-trace module, either for running or finished jobs.

Parameters

running

Displays the active jobs that are tracing events triggered by the host being monitored.

finished

Displays the jobs that have already finished and not tracing events generated by the host anymore.

detail

Displays detailed information about the files.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output displays call trace local log files information.

Sample Output

```

Node# show call-trace files
=====
Call trace files of running jobs
=====
File path                                     File size

Event Log Filter Detailed Output

[Table 151: Event Log Filter Detail Output Fields](#) describes the output fields for detailed event log filter information.

Table 151: Event Log Filter Detail Output Fields

| Label | Description |
|----------------------------|--|
| Filter Name/Id | The event log filter name or ID. |
| Applied | no — The event log filter is not currently in use by a log ID. yes — The event log filter is currently in use by a log ID. |
| Default Action | drop — The default action for the event log filter is to drop events not matching filter entries. forward — The default action for the event log filter is to forward events not matching filter entries. |
| Description (Filter-id) | The description string for the filter ID. |

Table 152: Log Filter Match Criteria Output Fields describes the output fields for log filter match criteria information.

Table 152: Log Filter Match Criteria Output Fields

| Label | Description |
|---------------------------|--|
| Entry-id | The event log filter entry ID. |
| Action | default — There is no explicit action for the event log filter entry and the filter's default action is used on matching events. drop — The action for the event log filter entry is to drop matching events. forward — The action for the event log filter entry is to forward matching events. |
| Description (Entry-id) | The description string for the event log filter entry. |
| Application | The event log filter entry application match criterion. |
| Event Number | The event log filter entry application event ID match criterion. |
| Severity | cleared — The log event filter entry application event severity cleared match criterion. indeterminate — The log event filter entry application event severity indeterminate match criterion. critical — The log event filter entry application event severity critical match criterion. major — The log event filter entry application event severity cleared match criterion. |

| Label | Description |
|----------|--|
| | <p>minor — The log event filter entry application event severity minor match criterion.</p> <p>warning — The log event filter entry application event severity warning match criterion.</p> |
| Subject | Displays the event log filter entry application event ID subject string match criterion. |
| Router | Displays the event log filter entry application event ID router <i>router-instance</i> string match criterion. |
| Operator | <p>There is an operator field for each match criteria:</p> <p>application, event number, severity, and subject.</p> <p>equal — Matches when equal to the match criterion.</p> <p>greaterThan — Matches when greater than the match criterion.</p> <p>greaterThanOrEqualTo — Matches when greater than or equal to the match criterion.</p> <p>lessThan — Matches when less than the match criterion.</p> <p>lessThanOrEqualTo — Matches when less than or equal to the match criterion.</p> <p>notEqual — Matches when not equal to the match criterion.</p> <p>off — No operator specified for the match criterion.</p> |

10.26 firewall

firewall

Syntax

firewall

Context

[\[Tree\]](#) (show>router firewall)

Full Context

show router firewall

Description

This command displays firewall information.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

10.27 firewall-hosts

firewall-hosts

Syntax

```
firewall-hosts [subscriber sub-ident] [ip ipv6-address/prefix-length] [mac ieee-address] [firewall-policy  
policy-name] [router router-instance]
```

Context

[\[Tree\]](#) (show>service>nat firewall-hosts)

Full Context

```
show service nat firewall-hosts
```

Description

This command lists ESM hosts that have an active firewall. Configuring the optional parameters will narrow the scope of the list.

Parameters

ieee-address

Specifies the MAC address of a host, in the format xx:xx:xx:xx:xx:xx or xx-xx-xx-xx-xx-xx.

ipv6-address/prefix-length

Specifies the IPv6 prefix of a host.

Values *ipv6-address* — x:x:x:x:x:x:x (eight 16-bit pieces)
x:x:x:x:x:d.d.d.d
x — 0 to FFFF (in hexadecimal)
d — 0 to 255 (in decimal)
prefix-length — 1 to 128

policy-name

Specifies the name of a firewall policy, up to 32 characters.

router-instance

Specifies the ID of the router that contains the firewall domain.

Values *router-name* | *vprn-svc-id*
router-name — "Base", "management"
vprn-svc-id — 1 to 2147483647

sub-ident

Specifies the subscriber identity string, up to 32 characters.

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

10.28 firewall-policy

firewall-policy

Syntax

firewall-policy [*policy-name* [**associations**]]

Context

[\[Tree\]](#) (show>service>nat firewall-policy)

Full Context

show service nat firewall-policy

Description

This command lists the firewall policies that are present in the system.

Configuring the *policy-name* parameter will display all information for the specified policy.

Parameters

associations

Keyword to display all configuration objects that use the specified firewall policy.

policy-name

Specifies the name of a firewall policy, up to 32 characters.

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of firewall policy information.

Sample Output

```
Node# show service nat firewall-policy

10.29 flap-statistics

flap-statistics

Syntax

flap-statistics [{*ip-prefix/mask* [**neighbor** *ip-addr*] | **group** *group-name* | **regex** *reg-exp* | [**policy** *policy-name*]}]

Context

[\[Tree\]](#) (clear>router>bgp flap-statistics)

Full Context

clear router bgp flap-statistics

Description

This command clears route flap statistics.

Parameters

ip-prefix/mask

Clears route flap statistics for entries that match the specified IP prefix and mask length.

Values ipv4-prefix: a.b.c.d (host bits must be 0)

ipv4-prefix-le: 0 to 32

ipv6-prefix:

- x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:d.d.d.d
- x: [0 to FFFF] H
- d: [0 to 255] D

ipv6-prefix-le: 0 to 128

ip-addr

Clears route flap statistics for entries received from the specified BGP neighbor.

Values ipv4-prefix: a.b.c.d (host bits must be 0)

ipv6-prefix:

- x:x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:d.d.d.d
- x: [0 to FFFF] H
- d: [0 to 255] D

interface: 32 chars max, mandatory for link local addresses

group-name

Clears route flap statistics for entries received from any BGP neighbors in the specified peer group. 32 characters maximum.

reg-exp

Clears route flap statistics for all entries which have the regular expression and the AS path that matches the regular expression. 80 characters maximum.

policy-name

Clears route flap statistics for entries that match the specified route policy. 32 characters maximum.

Platforms

All

10.30 flex-algo

flex-algo

Syntax

flex-algo [*flex-algo-id*] [*level level*] [*detail*]

Context

[\[Tree\]](#) (show>router>isis flex-algo)

Full Context

show router isis flex-algo

Description

This command displays the IS-IS flexible algorithm information.

This command displays the flexible algorithms, the winning FAD for which the router is enabled and whether the local router is advertising a FAD.

When the keyword **detail** is used, all other FADs (beyond the winning FAD) advertised by any other router in the area are also displayed.

The displayed output can be filtered by using the *flex-algo-id* or *level* keywords.

Parameters

flex-algo-id

Specifies the keyword filter to display output for the requested algorithm only.

level

Displays the IS-IS area level information constrained to IS-IS level-1 or level-2 only.

level

Specifies the IS-IS area level, it filters the displayed information constrained to IS-IS level-1 or level-2 only.

detail

Displays not only the winning FAD information, but also all other FADs that the router has advertised in IS-IS.

Platforms

All

Output

The following output is an example of flexible algorithm information, and [Table 153: Flexible Algorithm Output Fields](#) describes the output fields.

Table 153: Flexible Algorithm Output Fields

| Label | Description |
|-----------------|---|
| Flex-Algo | The flexible algorithm number |
| Advertising FAD | The FAD name when the local router is advertising a FAD |

| Label | Description |
|---------------------|--|
| Participating | The flexible algorithm participation is enabled |
| Loop-Free-Alternate | Displays Loop-Free-Alternates; if enabled, then the configuration is inherited from base SPF |
| L1 Oper State | Displays the L1 operational flexible algorithm state |
| L2 Oper State | Displays the L2 operational flexible algorithm state |
| FADs-Count | Displays the number of FADs in the area available to the router |
| FAD-Owner | Displays the winning FAD owner |
| Supported | Displays local router support for the flexible algorithm definition that is advertised in the FAD |
| Priority | Displays the FAD priority; It is the tiebreaker when multiple FADs are received |
| Metric Type | The metric used by the winning FAD igp — the IGP metric is used te-metric — the TE metric is used delay — the delay metric is used |
| Calculation Type | Displays the calculation type; for SPF a zero value is only defined |
| Exclude | The list of administrative groups for links to be excluded from the flexible algorithm topology graph |
| Include Any | The list of administrative groups for links to be included in the flexible algorithm topology graph |
| Include All | The list of administrative groups for links where all administrative groups have to match to be included in the flexible algorithm topology graph |
| Fad Flags | Displays the FAD Flags; the M-flag is used for inter-area; when set, the metric must be used for inter-area traffic to avoid loops and blackhole traffic on ABR/ASBR |
| Level | The IS-IS area level where the FAD is received |

flex-algo

Syntax

flex-algo [*flex-algo-id*] [**area** *area-id*] [**detail**]

Context

[\[Tree\]](#) (show>router>ospf flex-algo)

Full Context

show router ospf flex-algo

Description

This command displays OSPFv2 flexible algorithm information, which includes the flexible algorithms, the winning FAD for which the router is enabled, and whether the local router is advertising a FAD.

The displayed output can be filtered using either the *area-id* or *flex-algo-id* keywords.

Parameters

flex-algo-id

Specifies the keyword filter to display output for the requested algorithm only.

area-id

Specifies the OSPFv2 area to display output.

area

Displays the information constrained to a particular OSPFv2 area.

detail

Displays the winning FAD information and all other FADs that the router has advertised in OSPFv2.

Platforms

All

Output

Table 156: Flow Attributes Output Field Descriptions

| Label | Description |
|----------------|--|
| Flow attribute | Displays information for a specific flow attribute. |
| Confidence | An indication of the certainty that an attribute applies to a flow. Displays the percentage of flows within each range of confidence levels for the attribute. |
| Octets | Number of octets in the confidence level range. |
| Packets | Number of packets in the confidence level range. |
| Flows | Number of flows in the confidence level range. |
| Total bytes | Percentage of the total bytes per confidence range for a specific flow attribute. |

| Label | Description |
|---------------|---|
| Total packets | Percentage of the total packets per confidence range for a specific flow attribute. |
| Total flows | Percentage of the total flows per confidence range for a specific flow attribute. |

10.34 flow-distribution

flow-distribution

Syntax

flow-distribution

Context

[\[Tree\]](#) (show>lag flow-distribution)

Full Context

show lag flow-distribution

Description

This command displays the allocated distribution of traffic flows.

Platforms

All

10.35 flow-ipv4

flow-ipv4

Syntax

flow-ipv4 [hunt] [aspath-regex *reg-exp*] [community *comm-id*]

Context

[\[Tree\]](#) (show>router>bgp>routes flow-ipv4)

Full Context

show router bgp routes flow-ipv4

Description

This command displays BGP flow IPv4 routes.

Parameters

reg-exp

Displays routes matching the specified regular expression, up to 80 characters.

comm-id

Specifies the community ID, up to 72 characters.

Values [*as-num:comm-val* | *ext-comm* | *well-known-comm* | *large-comm*]

where:

- *as-num* — 0 to 65535
- *comm-val* — 0 to 65535
- *ext-comm* — the extended community, defined as one of the following:
 - *{target | origin}:ip-address:comm-val*
 - *{target | origin}:asnum:ext-comm-val*
 - *{target | origin}:ext-asnum:comm-val*
 - **bandwidth:asnum:val-in-mbps**
 - **ext:4300:ovstate**
 - **ext:value1:value2**
 - **flowspec-set:ext-asnum:group-id**

where:

 - *target* — route target
 - *origin* — route origin
 - *ip-address* — a.b.c.d
 - *ext-comm-val* — 0 to 4294967295
 - *ext-asnum* — 0 to 4294967295
 - **bandwidth** — bandwidth
 - *val-in-mbps* — 0 to 16777215
 - **ext** — extended
 - **ext:4300** — origin verification
 - *ovstate* — 0, 1, or 2 (0 for valid, 1 for not found, 2 for invalid)
 - *value1* — 0000 to FFFF
 - *value2* — 0 to FFFFFFFFFF
 - **flowspec-set** — flow-spec set
 - *group-id* — 0 to 16383
- *well-known-comm* — **null** | **no-export** | **no-export-subconfed** | **no-advertise** | **blackhole**

```

Context

[\[Tree\]](#) (tools>dump>app-assure>group flow-record-search)

Full Context

tools dump application-assurance group flow-record-search

Description

This command dumps application-assurance flow-records matching the specified criteria for a specific AA subscriber.

Parameters

application *app-name*

Displays flows for the specified application name.

app-group *app-group-name*

Displays flows for the specified application group.

bytes-tx *kbytes*

Display flows with the specified minimum kilobytes.

Values 0 to 4294967295

classified *classified*

Specifies the starting flow ID.

Values yes, no

client-ip *ip-address*

Display flows with the specified client IP address.

Values ipv4-address - a.b.c.d ipv6-address - x:x:x:x:x:x:x (eight 16-bit pieces)

dsm mac *mac-address*

Displays flows for the specified subscriber.

esm sub-ident-string

Displays flows for the specified subscriber.

esm-mac *esm-mac-name*

Displays flows for the specified ESM MAC.

flow-duration *minutes*

Display flows with the specified minimum duration in minutes.

Values 0 to 4294967295

flow-status *flow-status*

Displays only flows that are active or closed.

Values active, closed

max-count *max-count*

Specifies the maximum count of flows to display.

Values 1 to 4294967295

protocol *protocol-name*

Displays flows for the specified protocol.

sap *sap-id*

Displays flows for the specified SAP.

search-type *search-type*

Specifies the level of detail displayed for flows that match the search criteria.

Values default — Displays some per flow information.
 count — Displays the number of matching flows.
 detail — Displays all per flow information available.

server-ip *ip-address*

Display flows with the specified server IP address.

Values ipv4-address - a.b.c.d
 ipv6-address - x:x:x:x:x:x:x (eight 16-bit pieces)

server-port *port-num*

Display flows with the specified server port number.

Values 0 to 65535

spoke-sdp *sdp-id:vc-id*

Displays flows for the specified spoke SDP.

start-flowid *start-flowid*

Specifies the starting flow ID.

Values 0 to 4294967295

transit *transit-aasub-name*

Displays flows for the specified transit subscriber.

url *file-url*

Specifies the URL for the file to direct the search output to. The file may be local or remote.

Values

local-url | remote-url

| | |
|------------|---|
| local-url | [<flash-id>/] [<file-path>] |
| | 200 chars max, including cflash-id |
| | directory length 99 chars max each |
| remote-url | [[ftp://] tftp://] <login>:<pswd>@<remote-locn>/] [<file-path>] |

255 chars max

directory length 99 chars max each

remote-locn [<hostname> | <ipv4-address> | <ipv6-address>]

ipv4-address a.b.c.d

ipv6-address x:x:x:x:x:x[-interface]
 x:x:x:x:x:d.d.d.d[-interface]
 x - [0..FFFF]H
 d - [0..255]D

interface - 32 chars max, for link

local addresses

cflash-id flash slot ID

Platforms

10.38 force

force

Syntax

force *aps-id* {**protect** | **working**} [**number** *number*]

Context

[\[Tree\]](#) (tools>perform>aps force)

Full Context

tools perform aps force

Description

This command forces a switch to either the protect or working circuit

Parameters

aps-id

Specifies the APS ID.

Values

| <i>aps-id</i> | <i>aps-group-id</i> |
|---------------|---------------------|
| aps | keyword |
| group-id | 1 to 128 |

protect

This command clears a physical port that is acting as the protection circuit for the APS group.

working

This command clears a physical port that is acting as the working circuit for this APS group.

number

Specifies the APS channel number.

Values 1, 2

Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

force

Syntax

force *ring-index* **path** {a | b}

Context

[Tree] (tools>perform>eth-ring force)

Full Context

tools perform eth-ring force

Description

This command forces a block on the ring port where the command is issued.

Parameters

ring-index

Specifies the ring index.

Values 1 to 128

path

Displays information for a specific path.

Values a, b

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

force

Syntax

force all-mc {active | standby}

force lag-id *lag-id* [**sub-group** *sub-group-id*] { active | standby}

force peer-mc *ip-address* {active | standby}

Context

[Tree] (tools>perform>lag force)

Full Context

tools perform lag force

Description

This command allows forcing the specified LAG, subgroup, all MC-LAGs, or remote peer for MC-LAGs to become active or standby when LAG runs in Active/Standby mode. To remove the forced condition, execute the **tools perform lag clear-force** command.

Parameters

all-mc

Specifies all MC-LAGs.

active

Specifies to become active.

standby

Specifies to become standby.

lag-id

Specifies the LAG ID.

Values 1 to 800

sub-group-id

Specifies the subscriber group ID.

Values 1 to 16

ip-address

Specifies the IP address.

Values ipv4-address: a.b.c.d

ipv6-address:

- x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:d.d.d.d, where x: [0 to FFFF]H and d: [0 to 255]D

Platforms

All

force

Syntax

force id *tunnel-id*

force *lsp-name*

Context

[\[Tree\]](#) (tools>perform>router>mpls>tp-tunnel force)

Full Context

tools perform router mpls tp-tunnel force

Description

This command performs a force switchover of the MPLS-TP LSP from the active path to the protect path.

Parameters

tunnel-id

Specifies the tunnel number of the MPLS-TP LSP.

Values 1 to 61440

isp-name

Specifies name of the MPLS-TP LSP, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

10.39 force-partner-down

force-partner-down

Syntax

force-partner-down

Context

[\[Tree\]](#) (tools>perform>router>dhcp>server>pool>failover force-partner-down)

[\[Tree\]](#) (tools>perform>router>dhcp6>server>pool>failover force-partner-down)

[\[Tree\]](#) (tools>perform>router>dhcp6>server>failover force-partner-down)

[\[Tree\]](#) (tools>perform>router>dhcp>server>failover force-partner-down)

Full Context

tools perform router dhcp local-dhcp-server pool failover force-partner-down

tools perform router dhcp6 local-dhcp-server pool failover force-partner-down

tools perform router dhcp6 local-dhcp-server failover force-partner-down

tools perform router dhcp local-dhcp-server failover force-partner-down

Description

This command forces a DHCP server to transition from the COMMUNICATIONS-INTERRUPTED state to the PARTNER-DOWN state.

It is important to note that this command should only be used if the remote DHCP server is out of service, else duplicate address allocations could occur.

In case of a communication failure between two redundant DHCP servers, the DHCP server transitions to the COMMUNICATIONS-INTERRUPTED state. In this state, the DHCP server allocates IP addresses for new leases from the local and address-driven address-ranges only. This prevents duplicate address allocations.

If during the partner-down-delay time, the communication with the remote DHCP server is not restored, then the DHCP server transitions to the PARTNER-DOWN state. In this state, the DHCP server also allocates IP addresses for new leases from the remote ranges. A DHCP server should only reach this state when the remote DHCP server is out of service, else IP address conflicts can occur.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

10.40 force-switch-path

force-switch-path

Syntax

```
force-switch-path [lsp lsp-name] [path path-name]
```

```
no force-switch-path lsp lsp-name
```

Context

[\[Tree\]](#) (tools>perform>router>mpls force-switch-path)

Full Context

```
tools perform router mpls force-switch-path
```

Description

Use this command to move from a standby path to any other standby path regardless of priority.

The **no** form of the command reverts to priority path.

Parameters

lsp-name

Specifies an existing LSP name, up to 64 characters in length.

path-name

Specifies the path name to which to move the specified LSP.

Platforms

All

10.41 force-switchover

force-switchover

Syntax

```
force-switchover tunnel-group local-group-id [ now] [to {master | standby}]
```

Context

[\[Tree\]](#) (tools>perform>redundancy>multi-chassis>mc-ipsec force-switchover)

Full Context

tools perform redundancy multi-chassis mc-ipsec force-switchover

Description

This command manually switches over the 7750 SR mc-ipsec mastership of specified tunnel-group.

Parameters

local-group-id

Specifies the local tunnel-group id configured in the **config>redundancy>multi-chassis>peer>mc-ipsec** context.

now

This optional parameter removes the prompt of confirmation.

to {master | standby}

specifies the desired mastership state to be achieved following a forced switch between this tunnel group and its redundant peer. If the target state matches the current state when the switch is attempted, then no switch will occur.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

10.42 force-uplink-switch

force-uplink-switch

Syntax

```
force-uplink-switch client-port-id
```

Context

[\[Tree\]](#) (tools>perform>satellite force-uplink-switch)

Full Context

tools perform satellite force-uplink-switch

Description

This command forces traffic associated with the specified satellite client port to be switched away from the current uplink depending on which uplink is currently active.

Parameters

client-port-id

Specifies the satellite client port associated with the port mapping, in the format **esat- id/ slot/port force**.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

10.43 forced-single-sfm-overload

forced-single-sfm-overload

Syntax

[no] forced-single-sfm-overload

Context

[\[Tree\]](#) (tools>perform>redundancy forced-single-sfm-overload)

Full Context

tools perform redundancy forced-single-sfm-overload

Description

This command forces the single-sfm-overload state on or off.

Platforms

7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s, 7950 XRS, VSR

10.44 forcerenew

forcerenew

Syntax

forcerenew **svc-id** *service-id* {**ip** *ip-address*[/*mask*] | **mac** *ieee-address*}

forcerenew {**interface** *interface-name* | **sap** *sap-id* | **sdp** *sdp-id:vc-id*} [**ip** *ip-address*[/*mask*] | **mac** *ieee-address*]

Context

[\[Tree\]](#) (tools>perform>subscr-mgmt forcerenew)

Full Context

tools perform subscriber-mgmt forcerenew

Description

This command forces the renewal of lease state and only applies to the 7450 ESS and 7750 SR.

In cases where the IPoE hosts resides in a private retail subnet VPRN, the MAC address must be used for the **tools>perform>subscriber-mgmt>forcerenew** command instead of the IP address.

Parameters

service-id

Forces renewal of the lease state for the specified service ID.

Values 1 to 2147483647

sap-id

Forces renewal of the lease state for the specified SAP.

ip-address

Forces renewal of the lease state for the specified IP address.

ieee-address

Forces renewal of the lease state for the specified MAC address.

interface-name

Forces renewal of the lease state for the specified interface name.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

```

Table 157: BIER Forwarding Fields

| Label | Description |
|---------------------|---|
| Neighbor | The neighbor IP address |
| Nexthop | The next-hop IP address |
| Interface | The egress interface name for the programmed tunnel |
| [SI]:Label | The SI and label. The BitString and the SI together determine the set of BFERs to which a given packet will be delivered. The label is the egress transport label used for the given SI/SD. |
| Forwarding Bit Mask | The BitString forwarding mask |
| BFR-ID: Prefix | The BFR ID and the prefix reachable through this SD/SI/BFR-ID |

10.46 forwarding-policies

forwarding-policies

Syntax
forwarding-policies

Context
[Tree] (clear>router>mpls forwarding-policies)

Full Context
clear router mpls forwarding-policies

Description

This command resets or clears statistics for forwarding policies.

Platforms

All

forwarding-policies

Syntax

forwarding-policies

Context

[\[Tree\]](#) (show>router>mpls forwarding-policies)

Full Context

show router mpls forwarding-policies

Description

Commands in this context display forwarding policies.

Platforms

All

forwarding-policies

Syntax

forwarding-policies

Context

[\[Tree\]](#) (monitor>router>mpls forwarding-policies)

Full Context

monitor router mpls forwarding-policies

Description

This command monitors statistics for MPLS forwarding policies.

Platforms

All

10.47 forwarding-policy

forwarding-policy

Syntax

forwarding-policy [*policy*] [**detail**]

Context

[\[Tree\]](#) (show>router>mpls>forwarding-policies forwarding-policy)

Full Context

show router mpls forwarding-policies forwarding-policy

Description

This command displays the MPLS forwarding policy information.

Parameters

policy

Specifies the policy name.

detail

Specifies detailed information.

Platforms

All

Output

[Table 158: MPLS Forward-policy Output Fields](#) describes MPLS forward-policy output fields.

Table 158: MPLS Forward-policy Output Fields

| Label | Description |
|----------------------------|---|
| Policy Name | Specifies the MPLS forwarding policy name. |
| Binding Label | Specifies the binding label number. |
| Admin | Specifies the administrative state (up down). |
| OperState | Specifies the operational state (up down). |
| No. of Forwarding Policies | Specifies the number of forwarding policies. |
| Type | Specifies the type. |

| Label | Description |
|---------------|---|
| Binding Label | Specifies the binding label number. |
| Last Change | Specifies the date and time of the last change. |

Sample Output

```

forwarding-policy

Syntax

forwarding-policy *name* **egress-stats**

Context

[Tree] (clear>router>mpls>forwarding-policies forwarding-policy)

Full Context

clear router mpls forwarding-policies forwarding-policy

Description

This command clears the egress statistics of the specified forwarding policy instance.

Parameters

name

Specifies the forwarding policy name up to 64 characters.

egress-stats

Clears the egress statistics of the specified forwarding policy.

Platforms

All

forwarding-policy

Syntax

forwarding-policy *plcy* **egress-stats** [**interval** *seconds*] [**repeat** *repeat*] [{**absolute** | **rate**}]

Context

[Tree] (monitor>router>mpls>forwarding-policies forwarding-policy)

Full Context

monitor router mpls forwarding-policies forwarding-policy

Description

This command clears the egress statistics of the specified forwarding policy instance.

Parameters

plcy

Specifies the forwarding policy up to 64 characters.

egress-stats

Monitors the egress statistics of the specified forwarding policy.

seconds

Configures the interval for each display in seconds.

Values 3 to 60

repeat

Configures how many times the command is repeated.

Values 1 to 999

absolute

Displays the absolute statistics of the specified forwarding policy.

rate

Displays the rate statistics of the specified forwarding policy.

Platforms

All

10.48 forwarding-table

forwarding-table

Syntax

forwarding-table [*slot-number*]

Context

[\[Tree\]](#) (clear>router forwarding-table)

Full Context

clear router forwarding-table

Description

This command clears the route table on the specified IOM with the route table.
If the slot number is not specified, the command forces the route table to be recalculated.

Parameters

slot-number

Clears the specified IOM slot.

Values 1 to 10 (depending on chassis model)

Default all IOMs

Platforms

All

10.49 fp

fp

Syntax

fp

Context

[\[Tree\]](#) (show>card>virtual fp)

Full Context

show card virtual fp

Description

This command displays virtual FP information on the card.

Platforms

VSR

fp

Syntax

fp [*slot-number*[/*fp-number*]] [*path path-type*]

Context

[\[Tree\]](#) (show>mcast-management fp)

Full Context

show mcast-management fp

Description

This command displays multicast path management FP-related information.

Parameters

slot-number

Displays information for the specified card slot.

fp-number

Specifies an FP.

Values 1 to 8

path-type

Specifies the path type.

Values primary, secondary, blackhole

Platforms

7450 ESS, 7750 SR-1x-48D, 7750 SR-1x-92S, 7750 SR-7/12/12e, 7750 SR-s, 7950 XRS, VSR

Output

The following output displays an example of multicast management MDA information.

Sample Output

```
*A:PE# show mcast-management fp 5/1
=====
Fp 5/1
=====
S/F Bw-policy Type In-use-Bw Admin

10.50 fp-resource-policy

fp-resource-policy

Syntax

fp-resource-policy [*fp-resource-policy-name*] [**association**]

fp-resource-policy [*fp-resource-policy-name*] [**detail**]

Context

[\[Tree\]](#) (show>qos fp-resource-policy)

Full Context

show qos fp-resource-policy

Description

This command displays the FP resource policies configured on the system.

Parameters

fp-resource-policy-name

Displays the FP resource policy name, up to 32 characters.

association

Displays the entities associated to the specified FP resource policy.

detail

Displays detailed FP resource policies information, including FP resource policy associations.

Platforms

7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

Output

The following output is an example of FP resource policy information.

Sample Output

10.51 fp-tunnel-table

fp-tunnel-table

Syntax

fp-tunnel-table *slot-number* [*ip-prefix/prefix-length*]

fp-tunnel-table *slot-number* [{**ipv4** | **ipv6**}]

Context

[Tree] (show>router fp-tunnel-table)

Full Context

show router fp-tunnel-table

Description

This command displays the IOM/IMM label, next-hop and outgoing interface information for BGP, LDP and RSVP tunnels used in any of the following applications:

- BGP shortcut (**config>router>bgp>next-hop-resolution>shortcut-tunnel**)
- IGP shortcut (**config>router>isis[ospf]>igp-shortcut**)
- IGP prefix resolved to an LDP LSP (**config>router>ldp-shortcut**)
- Static route resolved to a LDP or RSVP LSP
- VPRN auto-bind
- 6PE/6VPE.

Parameters

slot-number

Displays information for the specified slot.

Values 1 to 10

ip-prefix[/prefix-length]

Displays routes only matching the specified *ip-address* and length.

Values

| | |
|---------------------|-----------------------------------|
| ipv4-prefix: | a.b.c.d (host bits must be 0) |
| ipv4-prefix-length: | 0 to 32 |
| ipv6 | ipv6-prefix[/pref*: |
| | x:x:x:x:x:x (eight 16-bit pieces) |
| | x:x:x:x:x.d.d.d.d |
| | x: [0 to FFFF]H |
| | d: [0 to 255]D |
| prefix-length: | 1 to 128 |

ipv4

Displays the output to IPv4-based FP tunnel tables.

ipv6

Displays the output to IPv6-based FP tunnel tables.

Platforms

All

Output

The following output is an example of router FP tunnel information.

Sample Output

```

=====
```

Table 159: Map Frag-Stats Output Fields

| Label | Description |
|-----------------------|---|
| Rx Resolved Packets | Specifies fragments that were resolved and never buffered. This includes: <ul style="list-style-type: none"> first fragments (MF=1, FO=0), which are always resolved by definition non-first fragments that have matching flow records |
| Rx Unresolved Packets | Specifies the number of packets that were queued in the system since the last clear command was invoked. For example, out-of-order fragments without a matching flow record (missing the first fragment). These packets can be eventually resolved and forwarded, or discarded (for example, as a result of timeout). |
| Tx Frags | Specifies the fragments that were transmitted (Rx Resolved and Rx Unresolved that were eventually resolved) out of the |

| Label | Description |
|-------------------------------|---|
| | fragmentation logic within the VSR. There is no guarantee that these fragments will be transmitted out of the system as they may be dropped on egress due to congestion or restrictions imposed by the configured filter. |
| Dropped Frags | Specifies the dropped fragments due to some fragmentation issue (timeout, buffer full). |
| Created Flows | <p>A cumulative counter that represents the total number of flow records since the last clear command was invoked. It only counts the first fragment and roughly represents the amount of fragmented packets that were processed by the system since the last clear command.</p> <p>The counter does not provide any indication about the number of flows (packets whose fragments were transmitted fully) that were actually transmitted.</p> |
| Flow Collisions | Represents the number of overlapping first fragments. For example, when a flow record already exists and another first fragment for this flow is received. |
| Exceeded Max Flows | Specifies the number of occurrences when the number of flows in the system exceeded its maximum supported value. |
| Exceeded Max Timeouts | <p>Specifies the number of fragments that have timed out (since the last clear command):</p> <ul style="list-style-type: none"> • Rx unresolved (buffered) fragments that have timed out, due to a missing first fragment • deleted flow-records because they have not received all fragments within the timeout period |
| Exceeded Max Buffers | Specifies the number of occurrences when the number of buffers in the system exceeded its maximum supported value. |
| Exceeded Max Timeouts | <p>Specifies the number of fragments that have timed out (since the last clear command):</p> <ul style="list-style-type: none"> • Rx unresolved (buffered) fragments that have timed out, due to a missing 1st fragment • deleted flow-records because they have not received all fragments within the timeout period |
| Exceeded Max Buffers | Specifies the number of occurrences when the number of buffers in the system exceeded its maximum supported value. |
| Exceeded Max Buffers Per Flow | Specifies the number of occurrences when a fragment count per flow has exceeded its limit. |
| In-Use Flows | An approximation of the number of flow records that are currently in use. The counter provides an estimate, expressed |

| Label | Description |
|----------------|--|
| | in percent, of the number of fragmented packets that were being processed at the time the counter was invoked. |
| Max Flows | Specifies the amount of time in seconds that the system will remain in a hold down state before being used again. |
| In-Use Buffers | Represents the amount of buffered fragments, expressed in percent of the maximum buffer space, that can be used for fragmentation. |
| Max Buffers | A non-cumulative counter that represents the maximum number of buffers allocated since the last clear command. The counter captures the highest value of the buffers-in-use counter since the last clear command. The counter shows the percentage of the total buffer space that can be used by fragmentation. |

10.53 frame-relay

frame-relay

Syntax

`frame-relay port-id`

Context

[\[Tree\]](#) (tools>dump frame-relay)

Full Context

tools dump frame-relay

Description

This command displays frame-relay information.

Parameters

port-id

Specifies the physical port ID.

port-id

slot/mda/port [.channel]

bundle-id

bundle-type-slot/mda.bundle-num

bundle

keyword

type

frame-relay

Syntax

frame-relay [detail]

Context

[Tree] (show>multilink-bundle>mlfr frame-relay)

Full Context

show multilink-bundle mlfr frame-relay

Description

This command displays frame-relay group data.

Parameters

detail

Displays detailed information.

Platforms

7450 ESS, 7750 SR-7/12/12e

frame-relay

Syntax

frame-relay [**detail**]

Context

[\[Tree\]](#) (show>port frame-relay)

Full Context

show port frame-relay

Description

This command displays frame-relay port information.

Parameters

detail

Displays detailed information.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

10.54 free-addresses

free-addresses

Syntax

free-addresses *ip-address*[/*mask*]

free-addresses summary [**subnet** *ip-address*[/ *mask*]

free-addresses pool *pool-name*

Context

[\[Tree\]](#) (show>router>dhcp>local-dhcp-server free-addresses)

Full Context

show router dhcp local-dhcp-server free-addresses

Description

This command displays the free addresses in a subnet.

Parameters

pool-name

Specifies a DHCP pool name on the router.

subnet

Specifies a subnet of IP addresses that are served from the pool.

summary

Displays summary output of the free addresses.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of free address information

Sample Output

```
*A:ALA-48>show>router>dhcp>local-dhcp-server# free addresses pool test subnet 10.0.0.0/24
=====
Free addresses in subnet 10.0.0.0/24
=====
IP Address
-----
No. of free addresses: 0
=====
*A:ALA-48>show>router>dhcp>local-dhcp-server#
```

[Table 160: Free Addresses Field Descriptions](#) describes free addresses pool command output fields.

Table 160: Free Addresses Field Descriptions

| Field | Description |
|----------------------|--|
| IP Address | The free IP addresses in the subnet |
| No of free addresses | The total number of free addresses in the subnet |

10.55 ftn

ftn

Syntax

```
ftn [endpoint endpoint | sender sender | nexthop nexthop | lsp-id lsp-id | tunnel-id tunnel-id | label  
start-label end-label]
```

Context

[\[Tree\]](#) (tools>dump>router>mpls ftn)

Full Context

tools dump router mpls ftn

Description

This command dumps FEC-to-NHLFE (FTN) information for MPLS.

Parameters

endpoint

Specifies the endpoint or destination IP address.

Values a.b.c.d

sender

Specifies the sender IP address.

Values a.b.c.d

lsp-id

Specifies the LSP ID.

Values 0 to 65535

tunnel-id

Specifies the tunnel ID.

Values 0 to 65535

nexthop

Specifies the next hop IP address.

Values a.b.c.d

start-label

Specifies the start label value for the label range of the display.

Values 32 to 524287

end-label

Specifies the end label value for the label range of the display.

Values 32 to 524287

Platforms

All

10.56 fwd-path-ext

Table 161: Output Fields: show fwd-path-ext

| Field | Description |
|----------------------|--|
| FPE Id | Displays the configured ID of the FPE. |
| Path pxc/ xc-a, xc-b | Displays the path associated with this FPE. This can be a single PXC (pair of PXC sub-ports .a and .b), or it can be a LAG with PXC sub-ports as member ports. PXC based LAG is used for redundancy and increased throughput of the FPE. In case of a PXC based LAG, the path is referred to as xc-a and xc-b. |
| Application | Displays the application associated with this FPE. Based on the application type, the system will internally configure logic on underlying PXC (or PXC based LAG) necessary to accommodate the application. |
| Description | Displays the user-configurable string used to describe the use of the FPE. |
| SDP-id Range | Displays the configurable SDP-id range used for internal SDPs that are utilized by FPEs. |
| Path | Path associated with this FPE. This can be a single PXC (pair of PXC sub-ports .a and .b), or it can be a LAG with PXC sub-ports as member ports. PXC based LAG is used for redundancy and increased throughput of the FPE. |
| PW-Port | Displays the FPE that is used by PW-port application. |
| VXLAN-Termination | Displays the FPE that is used by Vxlan-Termination application. |
| Oper | Displays the status of the application. |
| EPIPE svc Id | Displays the Epipe service ID with which the PW-port is associated. |
| PW-Port Id | Displays the PW-port ID that is associated with the EPIPE. |
| Tunnel termination | Displays the IP addresses on which the VXLAN tunnel is terminated. |

11 g Commands

11.1 gateway

gateway

Syntax

gateway *brg-id* *brg-ident*

Context

[Tree] (show>subscr-mgmt>vrgw>brg gateway)

Full Context

show subscriber-mgmt vrgw brg gateway

Description

This command displays all operational data related to the BRG.

Parameters

brg-ident

Specifies the BRG identifier, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of subscriber management BRG gateway information.

Sample Output

```
Node# show subscriber-mgmt brg gateway brg-id "00:00:00:00:00:05"
=====

gateway

Syntax

```

gateway brg-id brg-ident
gateway brg-id brg-ident idle-bindings [binding ieee-address]
gateway all-gateways
gateway brg-id brg-ident all-hosts
gateway brg-id brg-ident host ieee-address
  
```

Context

[\[Tree\]](#) (clear>subscr-mgmt>vrgw>brg gateway)

Full Context

```
clear subscriber-mgmt vrgw brg gateway
```

Description

This command clears BRG gateway data.

Parameters

brg-ident

Clears the specified BRG and all related hosts from the system.

idle-bindings

Clears a specific idle binding or all idle binding from the BRG. An idle binding is a DHCP lease that has not been expired but for which the host has been removed due to idle timeout.

ieee-address

Specifies the MAC address of the binding to remove.

all-gateways

Clears all BRGs and related hosts from the system.

all-hosts

Clears all hosts belonging to a specified BRG.

ieee-address

Clears a specific host belonging to a specified BRG.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

gateway

Syntax

gateway name *name*

gateway [**name** *name*] **tunnel** [**private-address-type** *private-address-type*]

gateway [**service** *service-id*]

gateway tunnel [*ip-address:port*]

gateway name *name* **tunnel** *ip-address:port*

gateway name *name* **tunnel**

gateway [**name** *name*] **tunnel state** *state*

gateway [**name** *name*] **tunnel idi-value** *idi-prefix*

gateway tunnel count

gateway tunnel [**private-address-type** *private-address-type*]

Context

[\[Tree\]](#) (show>ipsec gateway)

Full Context

show ipsec gateway

Description

This command displays IPsec gateway information.

Parameters

name

Specifies an IPsec gateway name.

service-id

Specifies the service ID of the default security service used by the IPsec gateway.

Values 1 to 214748364 svc-name: Up to 64 characters maximum

ip-address:port

Displays the IP address and UDP port of the SAP IPsec gateway to the tunnel.

Values 0 to 65535

state

Specifies the state of the tunnel.

Values up, down

idi-prefix

Displays a string as an IDi prefix. With this parameter, the system lists all the peers with IDi that has specified prefixes.

count

Displays the number of IPsec gateway tunnels with the **ike-policy>authmethod** command set to **psk**.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following is an example output of the **show ipsec gateway** command.

Sample Output

```
show ipsec gateway tunnel 10.2.2.100:500

gateway

Syntax

gateway name name tunnel ip-address:port [statistics] [saved-key]

gateway name name tunnel ip-address:port [temp-mtu]

gateway name name [saved-key]

gateway name name tunnel ip-address:port [saved-key]

Context

[Tree] (clear>ipsec gateway)

Full Context

clear ipsec gateway

Description

This command clears dynamic IPsec tunnel states.

The system clears the statistics counter for the specified tunnel when the **statistics** parameter option is specified.

The system clears the saved IKE and ESP keys for the specified tunnel, or for all tunnels on the specified gateway if no tunnel is specified when the **saved-key** parameter option is specified.

The system removes the specified tunnel when the **statistics**, **saved-key**, or **temp-mtu** parameters are not specified.

Parameters

name

Specifies the name of the IPsec GW, up to 32 characters.

ip-address

Specifies the IP address and port of the remote peer.

| | | | |
|---------------|--------------|--------------|---|
| Values | <ip-address> | ip-address | a.b.c.d |
| | | ipv6-address | x:x:x:x:x:x:x x:x:x:x:x:d.d.d.d x - [0 to FFFF]H d - [0 to 255]D |

port

Specifies the port of the remote peer. The specifies channel is cleared if the **statistics**, **saved-key**, or **temp-mtu** parameters are not specified.

Values 0 to 65535

statistics

Clears the stats counter.

saved-key

Clears the saved IKE and ESP keys.

temp-mtu

Clears temporary MTU learned from MTU propagation for the specified tunnel.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

gateways

Syntax

gateways
gateways brg-profile *profile-name*

Context

[\[Tree\]](#) (show>subscr-mgmt>vrgw>brg gateways)

Full Context

show subscriber-mgmt vrgw brg gateways

Description

This command lists operational gateway information for all BRGs active on the system. This list can optionally be reduced by specifying a BRG profile.

Parameters

profile-name

Specifies the name of the BRG profile to filter.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of BRG gateway information.

Sample Output

11.3 generate-key

generate-key

Syntax

generate-key authentication *authentication-protocol authentication-password* [**privacy** *privacy-protocol privacy-password*] [**engine-id** *identifier*]

Context

[[Tree](#)] (tools>perform>system>mgmt-itf>snmp generate-key)

Full Context

tools perform system management-interface snmp generate-key

Description

This command generates localized SNMPv3 authentication and privacy keys, which are a hash of the SNMP engine ID and a password. The SNMP engine ID can be displayed with the **show system information | match "SNMP Engine ID"** command and does not need to be entered. If keys are being generated for a different system, its SNMP engine ID must be specified.

Parameters

authentication

Generates a localized authentication key.

authentication-protocol

Specifies the SNMPv3 authentication protocol.

| Values | |
|----------------------|--|
| hmac-md5-96 | — Specifies use of the HMAC-MD5-96 authentication protocol. |
| hmac-sha1-96 | — Specifies use of the HMAC-SHA-96 authentication protocol. |
| hmac-sha2-224 | — Specifies use of the HMAC-SHA-224 authentication protocol. |
| hmac-sha2-256 | — Specifies use of the HMAC-SHA-256 authentication protocol. |
| hmac-sha2-384 | — Specifies use of the HMAC-SHA-384 authentication protocol. |
| hmac-sha-512 | — Specifies use of the HMAC-SHA-512 authentication protocol. |

authentication-password

Specifies the password used to generate the authentication key.

privacy

Keyword to generate a localized privacy key.

privacy-protocol

Specifies the SNMPv3 privacy protocol.

- Values**
- cbc-des** — Specifies the use of the CBC-DES privacy protocol. This parameter is not available in FIPS-140-2 mode.
 - cfb128-aes-128** — Specifies the use of the CFB128-AES-128 privacy protocol.
 - cfb128-aes-192** — Specifies the use of the CFB128-AES-192 privacy protocol.
 - cfb128-aes-256** — Specifies the use of the CFB128-AES-256 privacy protocol.

privacy-password

Specifies the privacy password used to generate the privacy key.

engine-id identifier

Keyword that specifies the SNMP engine ID. The identifier must be a hexadecimal string between 10 and 64 digits in length.

Output

The following output is an example of a generated authentication and privacy key.

Sample Output

```
A:ALA-1# tools perform system management-interface snmp generate-key authentication hmac-sha2-512 thisistheauthenticationpassword privacy cfb128-aes-256 thisistheprivacypassword

global

Syntax

global

Context

[Tree] (clear>redundancy>multi-chassis>mcr>statistics global)

Full Context

clear redundancy multi-chassis mc-ring statistics global

Description

This command clears multi-chassis ring global statistics.

Platforms

All

11.5 gmpls

gmpls

Syntax

gmpls

Context

[\[Tree\]](#) (show>router gmpls)

Full Context

show router gmpls

Description

This command displays RSVP status information for the GMPLS instance of RSVP.

Platforms

7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

gmpls

Syntax

gmpls

Context

[\[Tree\]](#) (clear>router gmpls)

Full Context

clear router gmpls

Description

Commands in this context clear and reset GMPLS entities and statistics.

Platforms

7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

gmpls

Syntax

gmpls

Context

[\[Tree\]](#) (tools>dump>router gmpls)

Full Context

tools dump router gmpls

Description

This command dumps tools for the GMPLS Protocol instance.

Platforms

7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

11.6 gmpls-tun-grp

gmpls-tun-grp

Syntax

gmpls-tun-grp *gmpls-tunnel-group-id*

Context

[\[Tree\]](#) (clear gmpls-tun-grp)

Full Context

clear gmpls-tun-grp

Description

Commands in this context clear the GMPLS tunnel group information.

Parameters

gmpls-tunnel-group-id

Specifies the GMPLS tunnel group ID.

Values 1 to 1024

Platforms

7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

gmpls-tun-grp

Syntax

gmpls-tun-grp [*gmpls-tunnel-group-id*] [**statistics**]

Context

[\[Tree\]](#) (show gmpls-tun-grp)

Full Context

show gmpls-tun-grp

Description

This command displays GMPLS tunnel group status and lists the gLSPs bound to each tunnel group.

Parameters

gmpls-tunnel-group-id

Specifies that only GMPLS tunnel groups of the configured ID are displayed.

Values 1 to 1024

statistics

Keyword to display GMPLS tunnel group statistics.

Platforms

7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

gmpls-tun-grp

Syntax

gmpls-tun-grp *gmpls-tunnel-group-id* [**clear**]

Context

[\[Tree\]](#) (tools>dump gmpls-tun-grp)

Full Context

tools dump gmpls-tun-grp

Description

This command dumps information about a GMPLS tunnel group.

Parameters

gmpls-tunnel-group-id

The identifier of the GMPLS tunnel group.

Values 1 to 1024

clear

Keyword to clear statistics after reading.

Platforms

7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of GMPLS tunnel group information.

group

Syntax

group [*name*] [*detail*]

Context

[\[Tree\]](#) (show>router>bgp group)

Full Context

show router bgp group

Description

This command displays group information for a BGP peer group. This command can be entered with or without parameters.

When this command is issued without a group name, information about all peer groups displays.

When the command is issued with a specific group name, information only pertaining to that specific peer group displays.

The "State" field displays the BGP group's operational state. Other valid states are:

- Up - BGP global process is configured and running.
- Down - BGP global process is administratively shutdown and not running.
- Disabled - BGP global process is operationally disabled. The process must be restarted by the operator.

Parameters

name

Displays information for the specified BGP group, up to 64 characters.

detail

Displays detailed information.

Platforms

All

Output

The following outputs are example of BGP group information, and [Table 163: Standard and Detailed Group Field Descriptions](#) describes the output fields.

| Group | BGP group name |
| Group Type | No Type — Peer type not configured External — Peer type configured as external BGP peers Internal — Peer type configured as internal BGP peers |
| State | Disabled — The BGP peer group has been operationally disabled Down — The BGP peer group is operationally inactive Up — The BGP peer group is operationally active |
| Peer AS | The configured or inherited peer AS for the specified peer group |
| Local AS | The configured or inherited local AS for the specified peer group |
| Local Address | The configured or inherited local address for originating peering for the specified peer group |
| Loop Detect | The configured or inherited loop detect setting for the specified peer group |
| Connect Retry | The configured or inherited connect retry timer value |
| Authentication | n/a — No authentication is configured MD5 — MD5 authentication is configured |
| Local Pref | The configured or inherited local preference value |
| MED Out | The configured or inherited MED value assigned to advertised routes without a MED attribute |
| Min Route Advt. | The minimum amount of time that must pass between route updates for the same IP prefix |
| Min AS Originate | The minimum amount of time that must pass between updates for a route originated by the local router |
| Multihop | The maximum number of router hops a BGP connection can traverse |
| Multipath | The configured or inherited multipath value, determining the maximum number of ECMP routes BGP can advertise to the RTM |
| Prefix Limit | No Limit — No route limit assigned to the BGP peer group 1 to 4294967295 — The maximum number of routes BGP can learn from a peer |
| Passive | Disabled — BGP attempts to establish BGP connections with neighbors in the specified peer group Enabled — BGP does actively attempt to establish BGP connections with neighbors in the specified peer group |

| Label | Description |
|--------------------|---|
| Next Hop Self | Disabled — BGP is not configured to send only its own IP address as the BGP nexthop in route updates to neighbors in the peer group Enabled — BGP sends only its own IP address as the BGP nexthop in route updates to neighbors in the specified peer group |
| Aggregator ID 0 | Disabled — BGP is not configured to set the aggregator ID to 0.0.0.0 in all originated route aggregates sent to the neighbor in the peer group Enabled — BGP is configured to set the aggregator ID to 0.0.0.0 in all originated route aggregates sent to the neighbor in the peer group |
| Remove Private | Disabled — BGP will not remove all private AS numbers from the AS path attribute in updates sent to the neighbor in the peer group Enabled — BGP removes all private AS numbers from the AS path attribute in updates sent to the neighbor in the peer group |
| Damping | Disabled — The peer group is configured not to dampen route flaps Enabled — The peer group is configured to dampen route flaps |
| Export Policy | The configured export policies for the peer group |
| Import Policy | The configured import policies for the peer group |
| Hold Time | The configured hold time setting |
| Keep Alive | The configured keepalive setting |
| Cluster Id | n/a — No cluster ID has been configured |
| Client Reflect | Disabled — The BGP route reflector will not reflect routes to this neighbor Enabled — The BGP route reflector is configured to reflect routes to this neighbor |
| NLRI | The type of NLRI information that the specified peer group can accept Unicast — IPv4 unicast routing information can be carried |
| Preference | The configured route preference value for the peer group |
| Egress Engineering | Enabled — EPE is enabled for the peer group Disabled — EPE is disabled for the peer group |
| List of Peers | A list of BGP peers configured under the peer group |
| Total Peers | The total number of peers configured under the peer group |
| Established | The total number of peers that are in an established state |

group

Syntax

group *aa-group-id* [:*partition-id*]

Context

[Tree] (show>app-assure group)

Full Context

show application-assurance group

Description

Commands in this context display application-assurance group information.

Parameters

aa-group-id

Specifies an AA ISA group ID.

Values 1

partition-id

Specifies a partition within a group.

Values 1 to 65535

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output displays application assurance group information.

Sample Output

```
*A:Dut-C# /show application-assurance group 1:1 aa-sub esm Subscriber1 summary
=====
Application-Assurance Subscriber Summary (realtime)
=====
AA-Subscriber          : Subscriber1 (esm)
ISA assigned           : esa-1/1
App-Profile            : dpi
App-Profile divert     : Yes
Capacity cost          : 1
Aarp Instance Id      : N/A
Sub-quarantined        : No
HTTP URL Parameters    : (Not Specified)
Last HTTP Notified Time : N/A
SAP                    : 6/1/5:1
MAC                    : c2:4d:ff:8a:b2:cc
Circuit Id : (Not Specified)
Remote Id : (Not Specified)
Tethering Status       : not-detected (disabled)
Devices Detected       : N/A
```

```
Sub Congestion State      : Not Congested|RTT Limits Exceeded (Stage X)
```

group

Syntax

```
group aa-group-id resources
```

Context

[\[Tree\]](#) (tools>dump>application-assurance group)

Full Context

```
tools dump application-assurance group
```

Description

This command dumps application-assurance information within a group.

Parameters

aa-group-id

Specifies the AA group identifier.

Values *aa-group-id*: partition:*aa-group-id*[:*partition-id*]
aa-group-id: 1 to 255

resources

Specifies the AA group resources.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following output displays group resources information.

Sample Output

```
*A:Dut-C# tools dump application-assurance group 1 resources
=====
Application-Assurance Group 1 Resource Usage and Limits

group

Syntax

group *aa-group-id* [: *partition-id*]

Context

[\[Tree\]](#) (tools>dump>application-assurance group)

Full Context

tools dump application-assurance group

Description

This command dumps application-assurance information within a group/partition.

Parameters

aa-group-id

Specifies the AA group identifier.

Values

| | | |
|--------------|--------------------------------------|------------|
| aa-group-id: | partition:aa-group-id[:partition-id] | |
| | aa-group-id | 1 to 255 |
| | partition-id | 1 to 65535 |

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

group

Syntax

group *aa-group-id* **load-balance** [**service** *service-id*]

Context

[\[Tree\]](#) (tools>perform>app-assure group)

Full Context

tools perform application-assurance group

Description

This command performs application assurance group operations.

Parameters

aa-group-id

Specifies the application assurance group ID.

Values 1 to 255

load-balance

Load balances subscribers within the group.

service *service-id*

Load balances the specified service.

Values 1 to 2148278381, svc-name (up to 64 char max.)

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

group

Syntax

group [*grp-ipv6-address*] [**hosts** | **interfaces** | **saps**]

group summary [**hosts** | **interfaces** | **saps**]

Context

[\[Tree\]](#) (show>router>mld group)

Full Context

show router mld group

Description

This command displays the multicast group and (S,G) addresses. If no *grp-ipv6-address* parameters are specified, then all MLD group, (*,G) and (S,G) addresses are displayed.

Parameters

grp-ipv6-address

Displays specific multicast group addresses.

hosts

Displays hosts for the multicast group address.

interfaces

Displays interfaces for the multicast group address.

saps

Displays SAPs for the multicast group address.

Platforms

All

Output

The following is an example of MLD group information. [Table 164: MLD Group Information Output Fields](#) describes the output fields for MLD group information.

Sample Output

```
*A:Dut-A# show router mld group

Table 165: MSDP Group Fields

| Label | Description |
|------------------|---|
| Group Name | The MSDP group name. |
| Mode | The groups of peers in a full mesh topology to limit excessive flooding of source-active messages to neighboring peers. |
| Act Srcs | The configured maximum number of active source messages that will be accepted by MSDP. |
| Local Address | The local end of a MSDP session. |
| Admin State | The administrative state. |
| Receive Msg Rate | Displays rate that the messages are read from the TCP session. |
| Receive Msg Time | The time of MSDP messages that are read from the TCP session within the configured number of seconds. |
| Receive Msg Thd | The configured threshold number of MSDP messages can be processed before the MSDP message rate limiting function. |
| SA Limit | The source-active limit. |

group

Syntax

```
group grp-ip-address [source ip-address [type {starstarrp | starg | sg}] [detail] [family]
```

```
group grp-ip-address [source ip-address [type {starstarrp | starg | sg}] [detail] [family] rpfv
```

Context

```
[Tree] (show>router>pim group)
```

Full Context

```
show router pim group
```

Description

This command displays PIM source group database information.

Parameters

grp-ip-address

Specifies the IP multicast group address for which this entry contains information.

source ip-address

Specifies the source address for which this entry contains information.

type starstarrp

Specifies that only (*, *, rp) entries are displayed.

type starg

Specifies that only (*,G) entries are displayed.

type sg

Specifies that only (S,G) entries are displayed.

detail

Displays detailed group information.

family

Displays family information.

Values ipv4, ipv6

rpfv

Displays proxy RPF vectors that are used for inter-AS Rosen MVPN.

Platforms

All

Output

The following displays an example of PIM group information. [Table 166: PIM Group Fields](#) provides PIM group field descriptions.

PIM Source Group ipv4

```

Table 166: PIM Group Fields

| Label | Description |
|----------------|---|
| Group Address | The IP multicast group address for which this entry contains information |
| Source Address | The source address of the multicast sender. The value is 0 if the type is configured as starg . The address of the Rendezvous Point (RP) display when the type is configured as starRP . |
| RP Address | The RP address |
| Type | The type of entry, (*,*, rp)/(*,G) or (S,G). |
| Spt Bit | Specifies whether to forward on (*,*, rp)/(*,G) or on (S,G) state. It is updated when the (S,G) data comes on the RPF interface towards the source. |
| Incoming Intf | The interface on which the traffic comes in. It can be the RPF interface to the RP (if starg) or the source (if sg). |
| Num Oifs | The number of interfaces in the inherited outgoing interface list. An inherited list inherits the state from other types. |
| Flags | The different lists to which this interface belongs |

| Label | Description |
|---------------------|---|
| Keepalive Timer Exp | The keepalive timer expiration which is applicable only for (S,G) entries. The (S,G) keepalive timer is updated by data being forwarded using this (S,G) Forwarding state. It is used to keep (S,G) state alive in the absence of explicit (S,G) joins. |
| MRIB Next Hop | The next hop address towards the RP |
| MRIB Src Flags | MRIB information about the source. If the entry is of type starg or starstarrp, it will contain information about the RP for the group. |
| Up Time | The time since this source group entry was created. |
| Resolved By | The route table used for RPF check. |
| Up JP State | The upstream join prune state for this entry on the interface. PIM join prune messages are sent by the downstream routers towards the RPF neighbor. |
| Up JP Expiry | The minimum amount of time remaining before this entry will be aged out. |
| Up JP Rpt | The join prune Rpt state for this entry on the interface. PIM join/prune messages are sent by the downstream routers towards the RPF neighbor. (S,G, rpt) state is a result of receiving (S,G, rpt) JP message from the downstream router on the RP tree. |
| Up JP Rpt Override | The value used to delay triggered Join (S,G, rpt) messages to prevent implosions of triggered messages. If this has a non-zero value, it means that the router was in 'not Pruned' state and it saw a prune (S,G, rpt) message being sent to RPF (S,G, rpt). If the router sees a join (S,G, rpt) override message being sent by some other router on the LAN while the timer is still non-zero, it simply cancels the override timer. If it does not see a join (S,G, rpt) message, then on expiry of the override timer, it sends its own join (S,G, rpt) message to RPF (S,G, rpt). A similar scenario exists when RPF (S,G, rpt) changes to become equal to RPF (*,G). |
| Register State | The register state. The register state is kept at the source DR. When the host starts sending multicast packets and if there are no entries programmed for that group, the source DR sends a register packet to the RP (g). Register state transition happen based on the register stop timer and the response received from the RP. |
| Register Stop Exp | The time remaining before the register state might transition to a different state |

| Label | Description |
|--------------------------|---|
| Register from Anycast RP | The status of the register packet for that group received from one of the RP from the anycast-RP set |
| RPF Neighbor | The address of the RPF neighbor |
| Outgoing Intf List | A list of interfaces on which data is forwarded. |
| Curr Fwding Rate | The current forwarding rate of the multicast data for this group and source. This forwarding rate is calculated before ingress QoS policing or shaping is applied. |
| Forwarded Packets | The number of multicast packets that were forwarded to the interfaces in the outgoing interface list. This packet count is before ingress QoS policing or shaping is applied. |
| Discarded Packets | The number of multicast packets that matched this source group entry but were discarded. For (S,G) entries, if the traffic is getting forwarded on the SPT, the packets arriving from the RPT will be discarded. |
| Forwarded Octets | The number of octets forwarded |
| RPF Mismatches | The number of multicast packets that matched this source group entry but they did not arrive on the interface. |
| Spt threshold | The value of the SPT threshold configured for that group. 0 kb/s means that the switch to the SP tree occurs immediately. |

group

Syntax

```
group aa-group-id [: partition-id]
```

Context

[\[Tree\]](#) (clear>application-assurance group)

Full Context

```
clear application-assurance group
```

Description

This command clears application assurance group data.

Parameters

aa-group-id

Specifies a group of ISA MDAs.

Values 1 to 255

partition-id

Specifies a partition within a group.

Values 1 to 65535

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

group

Syntax

group [*group-name*] [**detail**]

Context

[\[Tree\]](#) (show>router>rip group)

Full Context

show router rip group

Description

This command displays RIP group information.

Parameters

group-name

Displays RIP group information for the specified group.

detail

Displays detailed RIP group information.

Platforms

All

Output

[Table 167: RIP Group Fields](#) describes the standard command output fields for a RIP group.

Table 167: RIP Group Fields

| Label | Description |
|-------|--|
| Group | The RIP group name. |
| Adm | Down — The RIP group is administratively down. Up — The RIP group is administratively up. |

| Label | Description |
|-----------|--|
| Opr | Down — The RIP group is operationally down. Up — The RIP group is operationally up. |
| Send Mode | Bcast — Specifies that RIPv2 formatted messages are sent to the broadcast address. Mcast — Specifies that RIPv2 formatted messages are sent to the multicast address. None — Specifies that no RIP messages are sent (silent listener). RIPv1 — Specifies that RIPv1 formatted messages are sent to the broadcast address.asp |
| Recv Mode | Both — Specifies that RIP updates in either version 1 or version 2 format will be accepted. None — Specifies that RIP updates will not be accepted. RIPv1 — Specifies that RIP updates in version 1 format only will be accepted. RIPv2 — Specifies that RIP updates in version 2 format only will be accepted. |
| Metric In | The metric value added to routes received from a RIP neighbor. |

The following output is an example of RIP group information.

Sample Standard RIP Group Output

```
A:ALA-A# show router rip group
=====
RIP Groups

group

Syntax

group *grp-ip-address* [**source** *ip-address*] [**interval** *interval*] [**repeat** *repeat*] [**absolute** | **rate**]

Context

[\[Tree\]](#) (monitor>router>pim group)

Full Context

monitor router pim group

Description

This command monitors statistics for a PIM source group.

Parameters

grp-ip-address

Specifies the IP address of an multicast group that identifies a set of recipients that are interested in a particular data stream.

ip-address

Specifies the source IP address to use in the ping requests in dotted decimal notation.

Values 0.0.0.0 to 255.255.255.255

Default the IP address of the egress IP interface

interval

Configures the interval for each display, in seconds.

Values 10, 20, 30, 40, 50, 60

Default 10

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

Platforms

All

group-interface

Syntax

group-interface [**fwd-service** *service-id*] [*ip-int-name*] [**detail**] [**group**] [*grp-address*]

Context

[\[Tree\]](#) (show>router>igmp group-interface)

Full Context

show router igmp group-interface

Description

This command displays IGMP group-interface information.

Parameters

service-id

Specifies the service ID.

Values service-id: 1 to 2148278386
svc-name: up to 64 characters.

ip-int-name

Specifies an IP interface name, up to 32 characters.

detail

Displays detailed information.

group

Displays information for the group IP address.

grp-address

Displays information for the group IP address in the multicast group address format or zero.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

group-interface

Syntax

group-interface [**fwd-service** *service-id*] [*ip-int-name*] [**detail**] [**group**] [*grp-ipv6-address*]

Context

[\[Tree\]](#) (show>router>mld group-interface)

Full Context

show router mld group-interface

Description

This command displays MLD group-interface information.

Parameters

service-id

Specifies the service ID.

Values service-id: 1 to 2148278386
svc-name: up to 64 characters.

ip-int-name

IP interface name, up to 32 characters.

detail

Displays detailed information.

group

Displays information from the group IPv6 address.

grp-ipv6-address

Group IPv6 address.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

group-interface

Syntax

```
group-interface [fwd-service service-id] [ip-int-name]
```

Context

[\[Tree\]](#) (show>router>mld>statistics group-interface)

Full Context

```
show router mld statistics group-interface
```

Description

This command displays MLD group interface statistics information.

Parameters

service-name

Displays information associated with the specified service name.

ip-int-name

Displays information associated with the specified IP interface name.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

group-interface

Syntax

```
group-interface [fwd-service service-id] [ip-int-name]
```

Context

[\[Tree\]](#) (show>router>igmp>statistics group-interface)

Full Context

```
show router igmp statistics group-interface
```

Description

This command displays IGMP statistics for group interfaces.

Parameters

service-id

Specifies the service ID.

Values *service-id*: 1 to 2148278386

svc-name: Up to 64 characters

ip-int-name

Specifies the IP interface name, up to 32 characters.

Platforms

All

11.12 groups

groups

Syntax

groups [**group** *group-ip-address*]

groups [**group** *group-ip-address*] **detail**

groups [**group** *group-ip-address*] **summary**

Context

[\[Tree\]](#) (show>service>active-subscribers>host-tracking groups)

Full Context

show service active-subscribers host-tracking groups

Description

This command displays active subscriber host tracking groups information.

Parameters

group-ip-address

Displays information about the group address of the active subscriber group.

Values ipv4address: a.b.c.d
 ipv6address: FFx4::/16 up to FFxE::/16
 x [0..F]H

detail

Displays detailed information about the group address of the active subscriber group.

summary

Displays summarized group information for active subscribers.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

11.13 grpc

grpc

Syntax

grpc

11.17 gtp

gtp

Syntax

```
gtp
```

Context

[\[Tree\]](#) (show>router gtp)

Full Context

```
show router gtp
```

Description

This command displays operational information related to GTP usage in the specified routing context.

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

gtp

Syntax

```
gtp
```

Context

[\[Tree\]](#) (show>subscr-mgmt gtp)

Full Context

```
show subscriber-mgmt gtp
```

Description

This command displays router operational GTP information.

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

```
gtp
```

Syntax

```
gtp
```

Context

[\[Tree\]](#) (clear>router gtp)

Full Context

```
clear router gtp
```

Description

Commands in this context clear GTP information in this routing context.

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

```
gtp
```

Syntax

```
gtp session all
```

```
gtp session apn apn
```

```
gtp session apn apn imsi imsi
```

```
gtp session imsi imsi
```

```
gtp statistics
```

Context

[\[Tree\]](#) (clear>subscr-mgmt gtp)

Full Context

```
clear subscriber-mgmt gtp
```

Description

This command clears all GTP sessions matching the specified criteria. Associated objects, such as the ESM subscriber in a GTP uplink scenario are also removed.

Parameters

session

Specifies to remove GTP sessions.

all

Specifies to remove all GTP sessions in the system.

statistics

Specifies to clear GTP statistics.

apn

Specifies the APN identifying the session, up to 100 characters.

imsi

Specifies the IMSI identifying the session, in the format of a string of digits between 9 and 15.

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

gtp

Syntax

```
gtp
```

```
gtp gtp-filter gtp-filter-name
```

Context

[\[Tree\]](#) (show>app-assure>group gtp)

Full Context

```
show application-assurance group gtp
```

Description

This command displays GTP (General packet radio service (GPRS) Tunneling Protocol) information.

Parameters

gtp-filter-name

Specifies a GTP filter name, up to 32 characters. When a filter is specified, all traffic is examined as described in the `tmnxBsxGtpFiltrTable`.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following is an example output for the **gtp gtp-filter** command.

Sample Output

```

show application-assurance group 1:0 gtp gtp-filter "bob"

12.1 handler

```
handler
```

Syntax

```
handler [handler-name]
```

```
handler detail
```

Context

```
[Tree] (show>log>event-handling handler)
```

Full Context

```
show log event-handling handler
```

Description

Commands in this context display EHS handler information.

Parameters

handler-name

Specifies the name of a specific handler up to 32 characters in length.

detail

Keyword to list details of all handlers.

Platforms

All

Output

The following is an example of handler information.

[Table 170: Handler Output Field Descriptions](#) describes handler output fields.

Sample Output

```

=====

```

Table 170: Handler Output Field Descriptions

| Label | Description |
|----------------------------------|--|
| Handler | The name of the handler. |
| Description | The handler description string. |
| Admin State | The administrative state of the handler. |
| Oper State | The operational state of the handler. |
| Handler Action-List Entry | |
| Entry-id | The action-list entry identifier. |
| Description | The action-list entry description string. |
| Admin State | The administrative state of the action-list entry. |
| Policy Name | The name of the related script policy. |
| Policy Owner | The owner of the related script policy. |
| Last Exec | The timestamp of the last successful execution of the action-list entry. |

| Label | Description |
|---|---|
| Handler Action-List Entry Execution Statistics | |
| Enqueued | The number of times the action-list entry was successfully passed on to the SR OS sub-system or module that will attempt to process and execute the action. For a script-policy entry, this indicates that the script request has been enqueued but does not necessarily indicate that the script has successfully launched or completed. For status and information about the script, use the show>system>script-control command. |
| Err Launch | The number of times the action-list entry was not successfully handed over to the next SR OS sub-system or module in the processing chain. This can be caused by a variety of conditions including a full script request input queue. |
| Err Adm Status | The number of times the action-list entry was not executed because the entry was administratively disabled. |
| Total | The total number of times that the action-list entry attempted execution. |

handler

Syntax

handler *event-handler-name*

Context

[\[Tree\]](#) (clear>log>event-handling handler)

Full Context

clear log event-handling handler

Description

This command clears the counters in the **show log event-handling handler** *handler-name* output. It does not affect the global or aggregate counters shown using the **information** command.

Parameters

handler-name

Specifies the name of the event handler, up to 32 characters in length.

Platforms

All

12.2 hash-control

hash-control

Syntax

hash-control

Context

[\[Tree\]](#) (show>system>security hash-control)

Full Context

show system security hash-control

Description

Commands in this context display hash-control configuration information.

Platforms

All

12.3 hierarchy

hierarchy

Syntax

hierarchy [**subscriber** *sub-ident-string*]

Context

[\[Tree\]](#) (show>service>active-subscribers hierarchy)

Full Context

show service active-subscribers hierarchy

Description

This command displays active subscriber hierarchy information. To display an IPoE/PPP session, the group of hosts within the session is visually indented. Additional information related to the session is also shown. For PPPoE, the circuit ID and remote ID if used is shown. For IPoE, the key used to group the session is shown (for example, the circuit ID). The command also display PD host which are modeled as a managed route. The PD managed route is directly underneath and points to the host that it is using as the next hop. The PD managed route forwarding status is also shown, where (N) indicates that the route is not forwarding.

Parameters

sub-ident-string

Specifies the subscriber ID of the active subscriber, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output displays active subscriber hierarchy information.

Sample Output

```

12.4 histogram

histogram

Syntax

histogram router *router-instance* **pool** *pool-name* **bucket-size** [1..65536] **num-buckets** [2..50]

Context

[\[Tree\]](#) (tools>dump>nat histogram)

Full Context

tools dump nat histogram

Description

This command displays a NAT pool port usage histogram

Parameters

router *router-instance*

Specifies the router instance.

pool *pool-name*

Specifies the identification of the NAT pool.

bucket-size [1..65536]

Specifies the unit of the X-axis of the histogram; a value of ten, for example, would return in a histogram with results for [0-9], [10-19], [20-29], ... ports.

num-buckets [2..50]

Specifies the size of the histogram; a value of five, for example, would result in five results:
[0-9], [10-19], [20-29], [30-39], [40-infinite].

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

12.5 host

host

Syntax

host [**detail**] [**wholesaler** *service-id*] [**session** {**none** | **ipoe** | **ppp**}] [**router-advertisement-policy** *policy-name*]

host interface *interface-name* [**detail**] [**wholesaler** *service-id*] [**session** {**none** | **ipoe** | **ppp**}] [**router-advertisement-policy** *policy-name*]

Context

[\[Tree\]](#) (show>service>id>slaac host)

Full Context

show service id slaac host

Description

This command displays SLAAC host related information.

Parameters

detail

Specifies to display detailed SLAAC host related information.

service-id

Specifies the service ID of the wholesaler.

Values 1 to 2147483647

session

Specifies to display information about SLAAC hosts that are associated with an IPoE session or a PPP session.

Values none, ipoe, ppp

interface-name

Specifies the interface name, up to 32 characters.

ieee-address

Specifies the MAC address for which to display SLAAC host information.

ipv6-address

Specifies the IPv6 address for which to display SLAAC host information.

sap-id

Specifies the physical port identifier portion of the SAP definition.

policy-name

Specifies the name of the router advertisement policy.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following is an example of detailed SLAAC host information.

Sample Output

```

[Table 171: Service SLAAC Host Field Descriptions](#) describes service SLAAC host information.

Table 171: Service SLAAC Host Field Descriptions

| Field | Description |
|----------------------|---|
| Service ID | The service identifier. |
| Prefix | The prefix for the service |
| Interface Id | The interface identifier of this SLAAC host. If the SLAAC host has multiple addresses, this field will only show the interface identifier of one of them. |
| Mac Address | The MAC address of the this SLAAC host |
| Subscriber-interface | The subscriber interface name |
| Group-interface | The subscriber interface group interface name |
| SAP | The service SAP ID |
| Termination Type | The termination type of this SLAAC host |
| Creation Time | The date and time the service was created |
| Persistence Key | The key value that can be used to track this SLAAC host in the persistence file. |
| Router adv. policy | The name of the router advertisement policy associated with the SLAAC host during authentication |
| IPoE PPP session | The indication if this SLAAC host belongs to an IPoE or PPP session |
| Radius sub-if prefix | The subscriber interface prefix that is received from a Radius server |
| IPoE Trigger | The trigger name |
| Last Auth Time | The sysUpTime at the time of the last authentication for this session |
| Inactivity Timer | The remaining time in seconds before the host is removed. A value of 0 indicates no inactivity timer is active. |

| Field | Description |
|--|--|
| Sub-Ident | The name of the subscriber identification policy |
| Sub-Profile-String | The name of the subscriber profile |
| SLA-Profile-String | The name of the SLA profile |
| App-Profile-String | The application profile string |
| ANCP-String | The ANCP string applicable for this session |
| Int Dest ID | The intermediate destination identifier applicable for this session |
| Category-Map-Name | The category map name applicable for this session |
| Info origin | The server that provided the Sub-profile, SLA profile, Ancp string and Intermediate Destination Id |
| Pool | the DHCP server pool from which the SLAAC prefix is allocated |
| Primary-Dns | the primary DNS server |
| Secondary-Dns | the secondary DNS server |
| Circuit ID | circuit ID of this host |
| Remote ID | remote ID of this host |
| Subscriber Host Limit Overrides and SLA Profile Instance Host Limit Overrides: (only shown when overrides are active) | |
| ipv4-arp | The total number of IPv4 ARP hosts limit |
| ipv4-dhcp | The total number of IPv4 DHCP hosts limit |
| ipv4-ppp | The total number of IPv4 PPP hosts limit |
| ipv4-overall | The total number of IPv4 hosts limit |
| ipv6-pd-ipoe-dhcp | The total number of IPv6 IPoE DHCP Prefix Delegation hosts (IA-PD) limit |
| ipv6-pd-ppp-dhcp | The total number of IPv6 PPPoE DHCP Prefix Delegation hosts (IA-PD) limit |
| ipv6-pd-overall | The total number of IPv6 DHCP Prefix Delegation hosts (IA-PD) limit |
| ipv6-wan-ipoe-dhcp | The total number of IPv6 IPoE DHCP WAN hosts (IA-NA) limit |
| ipv6-wan-ipoe-slaac | The total number of IPv6 IPoE SLAAC WAN hosts limit |

| Field | Description |
|--|---|
| ipv6-wan-ppp-dhcp | The total number of IPv6 PPPoE DHCP WAN hosts (IA-NA) limit |
| ipv6-wan-ppp-slaac | The total number of IPv6 PPPoE SLAAC WAN hosts limit |
| ipv6-wan-overall | The total number of IPv6 WAN hosts limit |
| ipv6-overall | The total number of IPv6 hosts limit |
| lac-overall | The total number of L2TP LAC hosts limit |
| overall | The total number of subscriber hosts limit |
| Subscriber Session Limit Overrides and SLA Profile Instance Session Limit Overrides: (only shown when overrides are active) | |
| ipoe | The total number of IPoE sessions limit |
| ppoe-local | The total number of PPPoE local terminated sessions (PTA) limit |
| ppoe-lac | The total number of PPPoE L2TP LAC sessions limit |
| ppoe-overall | The total number of PPPoE sessions limit |
| l2tp-lns | The total number of L2TP LNS sessions limit |
| l2tp-lts | The total number of L2TP LTS sessions limit |
| l2tp-overall | The total number of L2TP sessions limit |
| overall | The total number of subscriber sessions limit |
| Number of hosts | The total number of hosts matching the search criteria |
| MC-Stdbby | The number of SAPs defined on this service on a port which is in multi-chassis standby mode |

host

Syntax

host [**sap** *sap-id*] [**wholesaler** *service-id*] [**port** *port-id*] [**inter-dest-id** *intermediate-destination-id*] [**detail**]

host [**sap** *sap-id*] [**wholesaler** *service-id*] [**port** *port-id*] **no-inter-dest-id** [**detail**]

host summary

host [**detail**] **wholesaler** *service-id* (**VPRN only**)

Context

[\[Tree\]](#) (show>service>id host)

Full Context

show service id host

Description

This command displays static host information configured on this service.

Parameters

sap-id

Displays SAP information for the specified SAP ID.

intermediate-destination-id

Specifies the intermediate destination identifier which is encoded in the identification strings up to 32 characters.

summary

Displays summary host information.

wholesaler service-id

Specifies the VPRN service ID of the wholesaler. When specified in this context, SAP, SDP, interface, IP address and MAC parameters are ignored.

Values

| | |
|--------------------|-----------------------|
| <i>service-id:</i> | 1 to 2147483647 |
| <i>svc-name:</i> | 64 characters maximum |

Platforms

All

host

Syntax

host mac *ieee-address* ip *ip-address*

Context

[\[Tree\]](#) (show>subscr-mgmt>vrgw>brg>gateway host)

Full Context

show subscriber-mgmt vrgw brg gateway host

Description

This command lists pool information about a specific host in the BRG.

Parameters

ieee-address

Specifies the MAC address identifying a specific host.

ip-address

Displays only the prefixes associated with this host.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host

Syntax

host [*ipv6-address*]

Context

[\[Tree\]](#) (show>router>mld>statistics host)

Full Context

show router mld statistics host

Description

This command displays MLD host statistics information.

Parameters

ipv6-address

Displays information associated with the specified IPv6 address.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host

Syntax

host all

host ipv6-address *ipv6-prefix*

host mac *ieee-address*

host sap *sap-id*

Context

[\[Tree\]](#) (clear>service>id>slaac host)

Full Context

clear service id slaac host

Description

This command clears SLAAC host data.

Parameters

ieee-address

Specifies the MAC address.

ipv6-prefix

Specifies the IPv6 prefix and length.

sap-id

Specifies the SAP ID.

all

Clears all SLAAC host data.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host

Syntax

```
host [ip-address]
```

Context

[\[Tree\]](#) (show>router>igmp>statistics host)

Full Context

```
show router igmp statistics host
```

Description

This command displays IGMP statistics for hosts.

Parameters

ip-address

Specifies the host IP address.

Values a.b.c.d

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

12.6 host-connectivity-verify

host-connectivity-verify

Syntax

host-connectivity-verify statistics [**sap sap-id**]

Context

[\[Tree\]](#) (show>service>id host-connectivity-verify)

Full Context

show service id host-connectivity-verify

Description

This command displays host connectivity check statistics.

Parameters

statistics

Displays host connectivity verification data

sap-id

Specifies the physical port identifier portion of the SAP definition

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following is an example of service host connectivity information.

Sample Output

```
A:ALA-48>show>service>id# host-connectivity-verify statistics sap 1/1/9:0
=====
Host connectivity check statistics
=====
Svc  SapId/      DestIp      Last        Time        Oper
Id   SdpId       Address     Response    Expired     State
-----
10001/2/3:01.144.145.1                Up
=====
A:ALA-48>show>service>id#
```

[Table 172: Show Service Id Host Connectivity Verify Fields](#) describes show service-id host connectivity verification output fields.

Table 172: Show Service Id Host Connectivity Verify Fields

| Label | Description |
|----------------|--|
| Svc Id | The service identifier. |
| SapId/Sdpld | The SAP and SDP identifiers. |
| DestIp Address | The destination IP address. |
| Last Response | The time when the last response was received. |
| Time Expired | Displays whether the interval value has expired. |
| Oper State | Displays the current operational state of the service. |

12.7 host-lockout-policy

host-lockout-policy

Syntax

host-lockout-policy [**policy** *host-lockout-policy-name*] *lockout-state*

host-lockout-policy sap *sap-id* [**circuit-id** *circuit-id*] [**mac** *ieee-address*] [**remote-id** *remote-id*] [*lockout-state*]

Context

[Tree] (clear>subscr-mgmt host-lockout-policy)

Full Context

clear subscriber-mgmt host-lockout-policy

Description

This command removes host lockout contexts from the system.

Parameters

sap-id

Specifies to clear information for hosts in a specific lockout state.

Values

| | |
|-------|---|
| null | <i>port-id</i> <i>bundle-id</i> <i>bpgrp-id</i> <i>lag-id</i> <i>aps-id</i> <i>eth-sat-id</i> |
| dot1q | <i>port-id</i> <i>bundle-id</i> <i>bpgrp-id</i> <i>lag-id</i> <i>aps-id</i> <i>pw-id</i> <i>eth-sat-id</i> : <i>[qtag1</i> <i>cp-conn-prof-id</i>] |

| | | |

| | <i>tag</i> | 0 to 4094 |
| eth-sat-id | esat-id/slot/port | |
| | esat | keyword |
| | <i>id</i> | 1 to 20 |
| pxc-id | pxc-id.sub-port | |
| | pxc | keyword |
| | <i>id</i> | 1 to 64 |
| | <i>sub-port</i> | a, b |

circuit-id

Specifies the circuit ID, up to 253 characters.

ieee-address

Specifies the MAC address, up to 30 characters.

remote-id

Specifies the remote ID, up to 253 characters.

lockout-state

Specifies to clear information for hosts in a specific lockout state.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host-lockout-policy

Syntax

host-lockout-policy

host-lockout-policy *policy-name* **association**

host-lockout-policy *policy-name*

host-lockout-policy *policy-name* *lockout-state* **sap** *sap-id* [**summary**]

host-lockout-policy *policy-name* *lockout-state* [**circuit-id** *circuit-id*] [**sap** *sap-id*] [**summary**]

host-lockout-policy *policy-name* *lockout-state* [**mac** *ieee-address*] [**sap** *sap-id*] [**summary**]

host-lockout-policy *policy-name* *lockout-state* [**remote-id** *remote-id*] [**sap** *sap-id*] [**summary**]

Context

[\[Tree\]](#) (show>subscr-mgmt host-lockout-policy)

Full Context

show subscriber-mgmt host-lockout-policy

Description

This command displays host lockout policy information.

Parameters

policy-name

Specifies a specific subscriber host lockout policy name up to 32 characters.

association

Specifies to display the association of the host lockout policy.

lockout-state

Specifies to display information for hosts in a specific lockout state.

Values all, active, graceful

sap *sap-id*

Specifies to display SAP ID information.

circuit-id *circuit-id*

Specifies to display circuit ID information. The *circuit-id* is up to 256 characters .

mac *ieee-address*

Specifies to display MAC address information up to 30 characters.

remote-id *remote-id*

Specifies to display remote ID information, up to 256 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following is an example of subscriber management host lockout policy information.

Sample Output

[Table 173: Host Lockout Policy Field Descriptions](#) describes subscriber management host lockout policy output fields.

Table 173: Host Lockout Policy Field Descriptions

| Field | Description |
|-------------------|---|
| Lockout Policy | The subscriber Host Lockout Policy name |
| Last Mgmt Change | The sysUpTime at the time of the most recent management-initiated change to this policy |
| Lockout Time Min | The minimum lockout-time for this host lockout policy |
| Lockout Time Max | The maximum lockout-time for this host lockout policy |
| Description | The user-provided description of this subscriber Host Lockout Policy |
| Max Lockout Hosts | The maximum number of lockouts for this host |

| Field | Description |
|--------------------|---|
| Last Mgmt Change | The sysUpTime at the time of the most recent management-initiated change to this policy |
| Lockout time min | The minimum lockout-time for this Host Lockout Policy |
| Lockout time max | The maximum lockout-time for this Host Lockout Policy |
| Lockout reset time | The lockout reset time for this Host Lockout Policy |
| Max lockout hosts | The maximum number of locked out hosts for this Host Lockout Policy |
| Host key | The method for host matching |

12.8 host-lookup

host-lookup

Syntax

host-lookup [**mac** *ieee-address*] [**remote-id** *remote-id-ascii*] [**sap-id** *sap-id*] [**service-id** *service-id*] [**string** *vso-string*] [**system-id** *system-id*] [**option60** *option-60-ascii*] [**circuit-id** *circuit-id-ascii*] [**circuit-id-hex** *circuit-id-hex*] [**option60-hex** *option60-hex*] [**remote-id-hex** *remote-id-hex*] [**derived-id** *derived-id*] [**ip-prefix** *ip-prefix/ip-prefix-length*]

Context

[\[Tree\]](#) (tools>perform>subscr-mgmt>loc-user-db>ipoe host-lookup)

Full Context

tools perform subscriber-mgmt local-user-db ipoe host-lookup

Description

This command performs a lookup in the local user database. This command looks up the host with the match-list configured in the local user database.

Parameters

ieee-address

Specifies the 48-bit MAC address for the static ARP in the form aa:bb:cc:dd:ee:ff or aa-bb-cc-dd-ee-ff where aa, bb, cc, dd, ee, and ff are hexadecimal numbers. Allowed values are any non-broadcast, non-multicast MAC and non-IEEE reserved MAC addresses.

remote-id

Specifies the information which goes into the remote-id sub-option in the DHCP relay packet, up to 255 characters.

sap-id

Specifies a SAP identifier to be used.

service-id

Specifies an existing subscriber service ID.

Values 1 to 2147483647

vso-string

Specifies a Vendor Specific Option (VSO) string.

system-id

Specifies the system ID.

Values up to 255 characters maximum

hex-string

Specifies the content of option 60 for this lookup.

Values 0x0 to 0xFFFFFFFF (maximum 64 hex nibbles)

circuit-id

Specifies the circuit ID from the Option 82.

circuit-id-hex

Specifies the circuit ID in hexadecimal format from the Option 82.

Values 0x0 to 0xFFFFFFFF (maximum 254 hex nibbles)

sap-id

Specifies a SAP ID, up to 255 characters maximum.

option-60-ascii

Specifies the Vendor-Identifying Vendor Option to match against. Option 60 is encoded as Type - Length - Value and must be formatted in ASCII.

option-60-hex

Specifies the Vendor-Identifying Vendor Option to match against. Option 60 is encoded as Type - Length - Value and must be formatted in HEX.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host-lookup

Syntax

host-lookup [**circuit-id** *circuit-id*] [**circuit-id-hex** *circuit-id-hex*] [**derived-id** *derived-id*] [**mac** *ieee-address*] [**remote-id** *remote-id*] [**remote-id-hex** *remote-id-hex*] [**sap-id** *sap-id*] [**service-name** *service-name*] [**user-name** *user-name*]

Context

[Tree] (tools>perform>subscr-mgmt>loc-user-db>ppp host-lookup)

Full Context

tools perform subscriber-mgmt local-user-db ppp host-lookup

Description

This command performs a lookup in the local user database.

Parameters

ieee-address

Specifies the 48-bit MAC address for the static ARP in the form aa:bb:cc:dd:ee:ff or aa-bb-cc-dd-ee-ff where aa, bb, cc, dd, ee, and ff are hexadecimal numbers. Allowed values are any non-broadcast, non-multicast MAC and non-IEEE reserved MAC addresses.

remote-id

Specifies the information that goes into the remote-id sub-option in the DHCP relay packet, up to 255 characters.

user-name

Specifies a user name, up to 128 characters.

service-name

Specifies a PPP service name, up to 255 characters.

circuit-id

Specifies the circuit ID from the Option 82.

circuit-id-hex

Specifies the circuit ID in hexadecimal format from the Option 82.

Values 0x0 to 0xFFFFFFFF (maximum 254 hex nibbles)

derived-id derived-id

Specifies an ASCII string that uniquely identifies a host and is derived by a Python script from packet content available during a DHCP transaction.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host-lookup

Syntax

host-lookup [**circuit-id** *circuit-id*] [**circuit-id-hex** *circuit-id-hex*] [**derived-id** *derived-id*] [**mac** *ieee-address*] [**remote-id** *remote-id*] [**remote-id-hex** *remote-id-hex*] [**sap-id** *sap-id*] [**service-name** *service-name*] [**user-name** *user-name*]

Context

[\[Tree\]](#) (tools>perform>subscr-mgmt>loc-user-db>ppp host-lookup)

Full Context

tools perform subscriber-mgmt local-user-db ppp host-lookup

Description

This command performs a lookup in the local user database.

Parameters

circuit-id circuit-id

Specifies the circuit ID from the Option 82.

circuit-id-hex

Specifies the circuit ID in hexadecimal format from the Option 82.

Values 0x0 to 0xFFFFFFFF (maximum 254 hex nibbles)

derived-id

Specifies an ASCII string that uniquely identifies a host, and is derived by a Python script from packet content available during a DHCP transaction.

remote-id

Specifies that information that goes into the remote-id sub-option in the DHCP relay packet, up to 255 characters.

remote-id-hex

Specifies the remote ID in hexadecimal format.

Values 0x0 to 0xFFFFFFFF (maximum 510hex nibbles)

sap-id

Specifies a SAP ID, up to 255 characters.

service-name

Specifies a PPP service name up to 253 characters.

user-name

Specifies a user name up to 128 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

12.9 host-tracking

host-tracking

Syntax

host-tracking [**subscriber** *sub-ident-string*]
host-tracking [**subscriber** *sub-ident-string*] **detail**
host-tracking [**subscriber** *sub-ident-string*] **summary**
host-tracking [**subscriber** *sub-ident-string*] **statistics**

Context

[\[Tree\]](#) (show>service>active-subscribers host-tracking)

Full Context

show service active-subscribers host-tracking

Description

This command displays active subscriber host tracking information.

Parameters

sub-ident-string

Displays subscriber ID of the active subscriber, up to 32 characters.

detail

Displays detailed host tracking information for the specified subscriber ID.

summary

Displays summarized host tracking information for the specified subscriber ID.

statistics

Displays statistical host tracking information for the specified subscriber ID.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

host-tracking

Syntax

host-tracking [**statistics**]
host-tracking sap *sap-id* [**host** *ip-address*] [**statistics**]

Context

[\[Tree\]](#) (clear>service>id host-tracking)

Full Context

clear service id host-tracking

Description

This command clears host tracking data.

Parameters

sap-id

Specifies a SAP for which to clear host tracking data.

ip-address

Specifies the IP address of a host for which to clear tracking data.

Values a.b.c.d

statistics

Clears statistics.

Platforms

All

host-tracking

Syntax

host-tracking

Context

[\[Tree\]](#) (clear>subscr-mgmt host-tracking)

Full Context

clear subscriber-mgmt host-tracking

Description

Commands in this context clear host tracking data.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

12.10 host-tracking-policy

Output

The following is an example of OSPF hostname database information. [Table 175: Host Output Fields](#) displays field descriptions.

Table 175: Host Output Fields

| Label | Description |
|------------|--------------|
| Nbr Rtr Id | The OSPF ID. |

| Label | Description |
|----------------------------------|--|
| hostname | The OSPF hostname. |
| No. of OSPF RTR id/ hostnames | The total number of OSPF router IDs and hostnames. |

Sample Output

```
*A:router-B# show router ospf hostname
=====
Rtr Base OSPFv2 Instance 0 hostnames
=====
Nbr Rtr Id      hostname
-----
10.20.0.3      router-A
10.20.1.3      router-B
10.20.2.3      -
10.20.3.3      router-D
-----
No. of OSPF Rtr id/hostnames: 4
```

show router igmp hosts

Description

This command displays IGMP hosts information.

Parameters

grp-address

Specifies the group IP address.

service-id

Specifies the service ID.

Values service-id: 1 to 2148278386
 svc-name: up to 64 characters.

ip-int-name

Specifies an IP interface name, up to 32 characters.

ip-address

Specifies an IP address.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of IGMP host information.

Sample Output

```
*B:Dut-C# show router igmp hosts

12.13 hosts-logging-out

hosts-logging-out

Syntax

```
hosts-logging-out [portal name] [ host ip-address] [circuit-id circuit-id] [remote-id remote-id] [sap sap-id] [mac ieee-address] [session] [all-portals] [all-hosts] [all-sessions]
```

Context

[\[Tree\]](#) (clear>router>wpp hosts-logging-out)

Full Context

```
clear router wpp hosts-logging-out
```

Description

This command clears WPP hosts that are logging out.

Parameters

name

Specifies the portal name, up to 32 characters.

ip-address

Specifies the IP address.

Values a.b.c.d

circuit-id

Specifies the circuit ID, up to 256 characters.

remote-id

Specifies the remote ID, up to 256 characters.

sap-id

Specifies the SAP ID.

ieee-address

Specifies the MAC address, up to 30 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

12.16 hs-pools

hs-pools

Syntax

hs-pools *card-slot-number* **fp** *forwarding-plane* **egress**

hs-pools **port** *port-id* **egress**

hs-pools port *port-id* **egress network-queues**

hs-pools port *port-id* **egress queue-group** *queue-group-name* [**instance** *instance-id*]

hs-pools port *port-id* **egress sap** *sap-id*

hs-pools port *port-id* **egress subscriber** *sub-ident-string*

Context

[\[Tree\]](#) (show hs-pools)

Full Context

show hs-pools

Description

This command shows the egress pool information relating to an HSQ IOM.

The **card** and **fp** output shows the total buffer allocation, the number of allocated buffers, the available buffer allocation, and the buffer high-water marks for the system pools and the hierarchy of user-provisioned root and mid pools on the specified card and FP. The output includes the applied slope policy and the related instantaneous slope drop probabilities (as a percentage) for the user-provisioned pools.

The port output adds the port class pool information to the above hierarchy of user-provisioned pools for the specified port. The queue information for network queues, queue group instances, SAPs, or subscribers on the specified port is included when the associated parameter is added.

Parameters

card-slot-number

Displays information for the specified card slot.

Values Depending on the chassis model, IOM slots are numbered from 1 to 10.

forwarding-plane

Displays information for the specified forwarding plane.

Values 1

port-id

Displays information about the specified physical port ID in the slot/mda/port format.

network-queues

Displays information about the egress network queues on the specified port.

queue-group-name

Displays information about the specified queue group name, up to 32 characters.

instance-id

Displays information about the specified queue group instance.

Values 1 to 65535

sap-id

Displays information about the specified SAP, up to 64 characters, on the specified port.

sub-ident-string

Displays information about the specified subscriber, up to 64 characters, on the specified port.

Platforms

7750 SR-7/12/12e

Output

The following output is an example of HS pool information.

Sample Output

```
*A:PE4# show hs-pools port 1/1/2 egress sap 1/1/2:1

12.18 hs-scheduler-hierarchy

hs-scheduler-hierarchy

Syntax

hs-scheduler-hierarchy port *port-id* [**hs-secondary-shaper** *shaper-name*] [**interval** *time-in-seconds*]

hs-scheduler-hierarchy port *port-id* [**interval** *time-in-seconds*] **hs-secondary-shapers**

hs-scheduler-hierarchy port *port-id* [**interval** *time-in-seconds*] **queue-group** *queue-group-name*
instance *instance-id* {**access** | **network**}

hs-scheduler-hierarchy sap *sap-id* **egress** [**interval** *time-in-seconds*]

hs-scheduler-hierarchy subscriber *sub-ident* **egress** [**interval** *time-in-seconds*]

Context

[\[Tree\]](#) (show>qos hs-scheduler-hierarchy)

Full Context

show qos hs-scheduler-hierarchy

Description

This command displays the egress HS scheduler hierarchy for the HS scheduler policy applied to the related port. The output includes the current maximum rate and each scheduling class rate on the port. The parameters allow for the current rates for the scheduling classes for all HS secondary shapers or a specific HS secondary shaper, or for the queue rates in a specified access or network queue group instance, SAP or subscriber to be included in the output.

Parameters

port-id

Specifies the physical port ID in the slot/mda/port format.

shaper-name

Displays information about the specified HS secondary name, up to 32 characters, and includes the scheduling class rates for the HS secondary shaper on the port.

time-in-seconds

Displays the time interval used to calculate the rates, in seconds.

Values 1 to 5

hs-secondary-shapers

Displays information about scheduling class rates for all HS secondary shapers on the port.

queue-group-name

Displays information about the specified queue group name on the port, up to 32 characters.

instance-id

Displays information about the specified queue group instance.

Values 1 to 65535

sap-id

Displays information about the queue rates for the specified SAP, up to 64 characters, on the specified port.

sub-ident

Displays information about the specified subscriber, up to 64 characters, on the specified port.

Platforms

7750 SR-7/12/12e

Output

The following output is an example of HS scheduler hierarchy information.

Sample Output

Displays the entities associated with all HS scheduler policies or the specified HS pool policy.

detail

Displays the policy information, including policy associations, of all HS scheduler policies or the specified HS scheduler policy.

Platforms

7750 SR-7/12/12e

Output

The following output is an example of HS scheduler policy information.

Sample Output

```
*A:PE# show qos hs-scheduler-policy
=====
```

```

12.20 hs-secondary-shaper

hs-secondary-shaper

Syntax

hs-secondary-shaper *secondary-shaper-name* [**statistics** | **associations**]

Context

[\[Tree\]](#) (show>port hs-secondary-shaper)

Full Context

show port hs-secondary-shaper

Description

This command displays port HS secondary shaper information.

Parameters

secondary-shaper-name

Specifies the secondary shaper name, up to 32 characters.

statistics

Displays the statistics related to the port HS secondary shaper.

association

Displays the associations related to the port HS secondary shaper.

Platforms

7750 SR-7/12/12e

12.21 http-client

http-client

Syntax

http-client any

http-client [*ip-address/prefix-length*]

http-client [*ipv6-address/prefix-length*]

Context

[\[Tree\]](#) (tools>dump>router>web-rd http-client)

Full Context

tools dump router web-rd http-client

Description

Commands in this context dump the HTTP client hash table.

Parameters

any

Specifies all HTTP clients.

ip-address/prefix-length

Dumps HTTP clients only matching the specified IP address and prefix length.

Values

| | |
|----------------|---------|
| ip-address: | a.b.c.d |
| prefix-length: | 0 to 32 |

ipv6-address/prefix-length

Dumps HTTP clients only matching the specified IPv6 address and prefix length.

Values

| | |
|----------------|-------------------------------------|
| ipv6-address: | x:x:x:x:x:x:x (eight 16-bit pieces) |
| | x:x:x:x:x:d.d.d.d |
| | x: [0 to FFFF]H |
| | d: [0 to 255]D |
| prefix-length: | 0 to 128 |

Platforms

All

Output

The following output is an example of HTTP client information.

Sample Output

```
*A:Dut-F# tools dump router web-rd http-client any

```

12.22 http-enrich

http-enrich

Syntax

`http-enrich`

Context

[\[Tree\]](#) (show>app-assure http-enrich)

Full Context

show application-assurance http-enrich

Description

This command displays HTTP enrichment static definitions.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-enrich

Syntax

`http-enrich enrichment-name`

Context

[\[Tree\]](#) (show>app-assure>group http-enrich)

Full Context

show application-assurance group http-enrich

Description

This command displays HTTP enrichment information.

Parameters

enrichment-name

Specifies the name of the HTTP enrichment policy, up to 32 characters.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following is an example of the output for the **http-enrich** command and [Table 176: Show HTTP Enrichment Output Fields](#) describes the output fields.

Sample Output HTTP Enrichment

```

12.24 http-host-recorder

http-host-recorder

Syntax

http-host-recorder detail [*isa mda-id/esa-vm-id*] *url file-url*

http-host-recorder status [*isa mda-id*]

http-host-recorder top *granularity* [*max-count max-count*] [*isa mda-id*]

Context

[\[Tree\]](#) (tools>dump>app-assure>group http-host-recorder)

Full Context

tools dump application-assurance group http-host-recorder

Description

This command configures the dump of application-assurance http-host-recorder information. The http-host-recorder is configured using debug commands.

Parameters

detail

Saves the http host values recorded by the tool into a file.

status

.Displays the current status of the http-host-recorder with current-time, start-time, stop-time, sample-rates, filters, buffer as well as number of bytes and flows recorded for the specified AA ISA.

top

.Displays by bytes or flows the top values recorded by the tool.

isa mda-id /esa-vm-id

Specifies the AA ISA.

Values slot 1 to 10, mda 1 to 2

url *file-url*

Specifies the URL for the file to direct the http-host-recorder output to.

Values

| | |
|---------------------|--|
| local-url: | <cflash-id>/[[<file-path>] |
| | 200 chars max, including cflash-id |
| | directory length 99 chars max each |
| remote-url: | [[ftp:// tftp://]<login>:<pswd>@<remote-locn>]/[[<file-path>] |
| | 255 chars max |
| | directory length 99 chars max each |
| remote-locn: | <hostname> <ipv4-address> <ipv6-address>] |
| | ipv4-address a.b.c.d |
| | ipv6-address x:x:x:x:x:x[-interface] |
| | x:x:x:x:x:d.d.d.d[-interface] |
| | x - [0..FFFF]H |
| | d - [0..255]D |
| | interface 32 chars max, for link local addresses |
| | cflash-id flash slot ID |

granularity

Specifies if the output is sorted by bytes or flows.

Values bytes, flows

max-count *max-count*

Specifies the maximum count of flows to display.

Values 1 to 25

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

12.25 http-notification

http-notification

Syntax

`http-notification`

Context

[\[Tree\]](#) (show>app-assure http-notification)

Full Context

show application-assurance http-notification

Description

This command displays HTTP notification static definitions.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-notification

Syntax

`http-notification http-notification-name [summary]`

Context

[\[Tree\]](#) (show>app-assure>group http-notification)

Full Context

show application-assurance group http-notification

Description

This command displays information about the configured http-notification policy with associated raw statistics:

- Template: Template Id in use

- Script URL: URL address of the script used in the notification message
- Admin Status: Up / Down
- AQP Referenced: Yes/No
- Notified: Total number of notifications sent
- Notification criteria selection not matched: Number of HTTP request not matching the selection criteria for in browser notification

Parameters

http-notification-name

Displays the name of the http-notification policy.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following is an example show output for the **http-notification** command.

Sample Output

```
A:7750# show application-assurance group 1 http-notification "in-browser-notification"
=====
Application Assurance Group 1 HTTP Notification "in-browser-notification"
=====
Description  : IBN Demo ALU Message
Template     : 1 - Javascript-url with subId and optional Http-Url-Param
Script URL   : http://10.1.1.1/In-Browser-Notification/script.js

12.26 http-redirect

http-redirect

Syntax

http-redirect

Context

[\[Tree\]](#) (show>app-assure http-redirect)

Full Context

show application-assurance http-redirect

Description

This command displays HTTP redirect static definitions.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

http-redirect

Syntax

http-redirect *redirect-name* [**detail**]

Context

[\[Tree\]](#) (show>app-assure>group http-redirect)

Full Context

show application-assurance group http-redirect

Description

This command displays application assurance http-redirect statistics and status information.

Parameters

redirect-name

Specifies the name of the http-redirect policy.

detail

Displays detailed information.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following table describes the show command output fields:

Table 177: Show HTTP Redirect Output Fields

| Label | Description |
|----------|---|
| Template | Specifies HTTP redirect template id information. Each HTTP redirect template returns a specific HTTP redirect message |

| Label | Description |
|------------------|--|
| | such as HTTP 302 or Javascript and can optionally use macro substitution. |
| Redirect URL | Specifies the address the subscriber will be redirected to. |
| Captive Redirect | Specifies Yes if captive redirect is used and No if captive redirect is not used. |
| Redirect HTTPS | Specifies Yes if redirect https is used and No if redirect https is not used. |
| VLAN ID | Specifies the AA interface VLAN id used for captive redirect. |
| Admin Status | Specifies the administrative status (Up/Down) of the HTTP redirect policy. |
| AQP Ref | Specifies Yes if the HTTP redirect policy is referenced in AQP, and No if it is not. |

Sample Output

```
*A:7750# show application-assurance group 1 http-redirect "redirect-portal"

=====
Application Assurance Group 1 HTTP Redirect redirect-portal

12.27 http-redirect-policy

http-redirect-policy

Syntax

http-redirect-policy *name*

Context

[\[Tree\]](#) (show>subscr-mgmt http-redirect-policy)

Full Context

show subscriber-mgmt http-redirect-policy

Description

This command displays HTTP redirect policy information.

Parameters

name

Specifies the HTTP redirect policy name, up to 32 characters.

Platforms

7750 SR, 7750 SR-e, 7750 SR-s, VSR

12.28 hunt

hunt

Syntax

hunt [**brief**]

Context

[\[Tree\]](#) (show>router>bgp>routes hunt)

Full Context

show router bgp routes hunt

Description

This command displays detailed information about the BGP routes, including information about the advertised routes (RIB-OUT).

hunt is a parameter of the **show router bgp routes** command. Depending on the parameters that are used to issue the command, the output can display a narrower or wider set of routes, including routes belonging to other address families. See the **show router bgp routes** command description for syntax variants, parameter descriptions and values, and output examples.

Parameters

brief

Displays summary information about the BGP routes.

Platforms

All

12.29 hw-agg-shaper-scheduler-policy

hw-agg-shaper-scheduler-policy

Syntax

hw-agg-shaper-scheduler-policy [*hw-agg-shaper-scheduler-policy-name*] [**association**]

Context

[\[Tree\]](#) (show>qos hw-agg-shaper-scheduler-policy)

Full Context

show qos hw-agg-shaper-scheduler-policy

Description

This command displays hardware aggregate shaper scheduler policy information.

Parameters

hw-agg-shaper-scheduler-policy-name

Specifies the hardware aggregate shaper scheduler policy name, up to 64 characters.

association

Displays hardware aggregate shaper scheduler policy associations.

Platforms

7750 SR-1, 7750 SR-s

| Total | The total number of all messages |
| Error | The number of error messages |
| Destination Unreachable | The number of message that did not reach the destination |
| Redirect | The number of packet redirects |
| Echo Request | The number of echo requests |
| Echo Reply | The number of echo replies |
| TTL Expired | The number of messages that exceeded the time to live threshold |
| Source Quench | The number of source quench requests (deprecated) |
| Timestamp Request | The number of timestamp requests (deprecated); ICMP timestamp requests are counted and dropped on ingress |
| Timestamp Reply | The number of timestamp replies (deprecated); sending ICMP timestamp replies is not supported, so this counter will always be 0 |

| Label | Description |
|----------------------|--|
| Address Mask Request | The number of address mask requests (deprecated) |
| Address Mask Reply | The number of address mask replies (deprecated) |
| Parameter Problem | The number of packets with a parameter problem in the IP header |
| Discarded | The number of messages that exceed the configured interface ICMP rate or have an expired TTL |

icmp

Syntax

icmp

Context

[\[Tree\]](#) (show>test-oam icmp)

Full Context

show test-oam icmp

Description

Commands in this context show ping-templates or ping-template detail.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

icmp

Syntax

icmp all

icmp global

icmp interface *interface-name*

Context

[\[Tree\]](#) (clear>router icmp)

Full Context

clear router icmp

Description

This command clears ICMP statistics.

Parameters

all

Clears all statistics.

global

Clears global router statistics.

interface-name

Clears ICMP statistics for the specified interface, up to 32 characters.

Platforms

All

icmp

Syntax

icmp

Context

[\[Tree\]](#) (tools>perform>test-oam icmp)

Full Context

tools perform test-oam icmp

Description

Commands in this context perform test OAM ICMP functions.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

13.3 icmp-redirect-route

icmp-redirect-route

Syntax

icmp-redirect-route {all | ip-address}

Context

[\[Tree\]](#) (clear>router icmp-redirect-route)

Full Context

clear router icmp-redirect-route

Description

This command deletes routes created as a result of ICMP redirects received on the management interface.

Parameters

all

Clears all routes.

ip-address

Clears the routes associated with the specified IP address.

Values a.b.c.d

Platforms

All

13.4 icmp-stats

icmp-stats

Syntax

icmp-stats

icmp-stats interface {*ip-int-name* | *ip-address* | *ipv6-address*}

Context

[\[Tree\]](#) (tools>dump>router icmp-stats)

Full Context

tools dump router icmp-stats

Description

Commands in this context dump ICMP statistics information.

Parameters

ip-int-name

Specifies the interface information associated with the specified IP interface name, up to 32 characters.

ip-address

Specifies the IPv4 address.

Values a.b.c.d

ipv6-address

Specifies the IPv6 address.

Values x:x:x:x:x:x:x (eight 16-bit pieces)
 x:x:x:x:x:d.d.d.d
 x: [0 to FFFF]H
 d: [0 to 255]D

Platforms

All

Output

The following output is an example of ICMP statistics information.

Sample Output

```

13.5 icmp6

icmp6

Syntax

icmp6

Context

[\[Tree\]](#) (show>router icmp6)

Full Context

show router icmp6

Description

This command displays Internet Control Message Protocol Version 6 (ICMPv6) statistics. ICMP generates error messages (for example, ICMP destination unreachable messages) to report errors during processing and other diagnostic functions. ICMPv6 packets can be used in the neighbor discovery protocol and path MTU discovery.

Platforms

All

Output

The following output is an example of router ICMPv6 statistics, and [Table 179: ICMPv6 Fields](#) describes the fields.

Sample Output

```

A:SR-3# show router icmp6
=====
Global ICMPv6 Stats
  
```

```

Table 179: ICMPv6 Fields

| Label | Description |
|-------------------------|--|
| Total | The total number of all messages |
| Destination Unreachable | The number of message that did not reach the destination |
| Time Exceeded | The number of messages that exceeded the time threshold |
| Echo Request | The number of echo requests |
| Router Solicits | The number of times the local router was solicited |

| Label | Description |
|-------------------------|---|
| Neighbor Solicits | The number of times the neighbor router was solicited |
| Errors | The number of error messages |
| Redirects | The number of packet redirects |
| Pkt Too big | The number of packets that exceed appropriate size |
| Echo Reply | The number of echo replies |
| Router Advertisements | The number of times the router advertised its location |
| Neighbor Advertisements | The number of times the neighbor router advertised its location |
| Parameter Problem | The number of packets with a parameter problem in the IP header |
| Discarded | The number of ICMPv6 messages that exceed the configured interface ICMPv6 rate or have an expired TTL |

icmp6

Syntax

icmp6 all

icmp6 global

icmp6 interface *interface-name*

Context

[\[Tree\]](#) (clear>router icmp6)

Full Context

clear router icmp6

Description

This command clears ICMPv6 statistics.

Parameters

all

Clears all statistics.

global

Clears global router statistics.

interface-name

Clears ICMPv6 statistics for the specified interface, up to 32 characters.

Platforms

All

13.6 icmp6-redirect-route

icmp6-redirect-route

Syntax

icmp6-redirect-route {all | *ipv6-address*}

Context

[Tree] (clear>router icmp6-redirect-route)

Full Context

clear router icmp6-redirect-route

Description

This command deletes routes created as a result of ICMPv6 redirects received on the management interface.

Parameters

all

Clears all routes.

ipv6-address

Clears the routes associated with the specified IPv6 address.

Values x:x:x:x:x:x:x (eight 16-bit pieces)

Platforms

All

13.7 icport

icport

Syntax

icport [down] [degraded]

Context

[\[Tree\]](#) (show>sfm icport)

Full Context

show sfm icport

Description

This command displays SFM interconnect port information.

Parameters

down

Displays interconnect ports that are not operational.

degraded

Displays interconnect ports that are associated with fabric degradation.

Platforms

7950 XRS

13.8 id

id

Syntax

id service-id

id service-id mac-notification

id service-id macsec

id service-id mvrp vlan [detail]

id service-id vpls-group [vpls-group-id]

id service-id vpls-group vpls-group-id non-template-saps

Context

[\[Tree\]](#) (show>service id)

Full Context

show service id

Description

This command displays information for a particular service ID.

Platforms

All

id

Syntax

id service-id

Context

[\[Tree\]](#) (clear>service id)

[\[Tree\]](#) (clear>service>statistics id)

Full Context

clear service id

clear service statistics id

Description

This command clears the identification for a specific service.

Parameters

service-id

The ID that uniquely identifies a service.

Values service-id: 1 to 214748364
svc-name: A string up to 64 characters.

Platforms

All

id

Syntax

id service-id

Context

[\[Tree\]](#) (tools>perform>service id)

[\[Tree\]](#) (tools>dump>service id)

Full Context

tools perform service id

tools dump service id

Description

This command specifies a service for which service debugging tools are enabled.

Parameters

service-id

Specifies the service ID.

Values 1 to 2148278386, *svc-name*: 64 chars max

Platforms

All

id

Syntax

id *service-id*

Context

[\[Tree\]](#) (clear>video id)

Full Context

clear video id

Description

This command clears video information pertaining to the specified service ID.

Parameters

service service-id

Specifies the service ID to clear.

Values 1 to 2148278317
svc-name — a string up to 64 characters.

Platforms

7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

id

Syntax

id *service-id*

Context

[\[Tree\]](#) (clear>video>statistics id)

Full Context

clear video statistics id

Description

This command clears video statistics for a particular service.

Parameters

service *service-id*

Specifies the service ID to clear statistics.

Values 1 to 2148278317

svc-name — a string up to 64 characters.

Platforms

7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

id

Syntax

id *service-id*

Context

[\[Tree\]](#) (monitor>service id)

Full Context

monitor service id

Description

This command displays statistics for a specific service, specified by the *service-id*, at the configured interval until the configured count is reached.

The first screen displays the current statistics related to the *service-id*. The subsequent statistical information listed for each interval is displayed as a delta to the previous display. When the keyword **rate** is specified, the rate-per-second for each statistic is displayed instead of the delta.

Monitor commands are similar to **show** commands but only statistical information displays. Monitor commands display the selected statistics according to the configured number of times at the interval specified.

Parameters

service-id

Specifies the unique service identification number which identifies the service in the service domain.

Platforms

All

13.9 idle-only-msap

idle-only-msap

Syntax

idle-only-msap *msap-policy-name*

Context

[\[Tree\]](#) (clear>subscr-mgmt idle-only-msap)

Full Context

clear subscriber-mgmt idle-only-msap

Description

This command removes all idle MSAPs associated with the MSAP policy. This command only removes idle MSAPs without active subscribers. This command is considered safer than the **clear>subscr-mgmt>msap-policy** *msap-policy-name* **idle-only** command because in that command, the parameter **idle-only** is optional. Not specifying **idle-only** deletes MSAPs with active subscribers.

Parameters

msap-policy-name

Specifies the MSAP policy for which all associated idle MSAPs are cleared.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

13.10 if-attribute

if-attribute

Syntax

if-attribute

Context

[\[Tree\]](#) (show>router if-attribute)

Full Context

show router if-attribute

Description

Commands in this context display interface attribute related information.

Platforms

All

13.11 if-policy

if-policy

Syntax

if-policy [*if-policy-name*]

if-policy *if-policy-name* **users**

Context

[\[Tree\]](#) (show>router>mcac if-policy)

Full Context

show router mcac if-policy

Description

This command displays information about MCAC interface policies. Display options are:

- no parameters: displays summary of configured MCAC interface policies in the system
- *if-policy-name*: if an existing interface policy name is specified, the configuration and operational details for the specified policy are displayed
- *if-policy-name* **users**: if **user** options is specified with the existing MCAC interface policy, then all instances where a given MCAC interface policy is used are listed

Platforms

ignore-sap-port-state

Syntax

ignore-sap-port-state

Context

[\[Tree\]](#) (tools>dump>service>id>interface ignore-sap-port-state)

Full Context

tools dump service id interface ignore-sap-port-state

Description

This command displays all service interfaces that have accepted an **ignore-sap-port-state start** command.

Run this command without a *service-id* to display a complete list of interfaces that have accepted an **ignore-sap-port-state start** command. The command can be run within a specific *service-id* context for a list of all interfaces for the specified service that have accepted the **ignore-sap-port-state start** command. The *ip-int-name* parameter may be optionally configured to display results only for the specified interface. If the command is run against a specific interface that has not accepted an **ignore-sap-port-state start** command, the display command will display a message indicating that no action has been started for the interface.

ignore-sap-port-state

Syntax

ignore-sap-port-state {start | stop}

Context

[\[Tree\]](#) (tools>perform>service>id>interface ignore-sap-port-state)

Full Context

tools perform service id interface ignore-sap-port-state

Description

This command enables bypassing of the Ethernet operational state check, which would otherwise be part of the Ethernet SAP operational state checking function. All other checks are performed as normal.

This command may be run against IES and VPRN service IP interfaces directly configured over an Ethernet SAP. When the command is run against an operational Ethernet SAP, the command enters a pending state, waiting for a non-operational change. Network interfaces have no SAP association and do not support this feature. When using **subscriber-interface** and **group-interface**, the command is only applicable to the **group-interface** associated with the SAP. R-VPLS does not have Ethernet SAPs directly configured under the interface, and is not supported.

This command is meant to allow service validation and reachability testing when a physical Ethernet port has not been connected. The command may be run for a non-operational SAP that is cabled. However, if the SAP transitions to an operational state, ingress and egress packet processing may still occur.

This command configuration does not survive a system restart.

Parameters

start

Enables port state bypass mode for the interface. If the Ethernet port SAP is already operational, there is no immediate effect of the command, and the Ignore Port state under the **show service id all** command will show "pending". However, if the interface Ethernet port transitions to a non-operational state, the command then bypasses this port state and executes the remainder of the operational checks, and the flag for the Ignore Port state transitions to "active". When this command is in effect, the SAP represents the state of the SAP ignoring the port state.

stop

Disables port state bypass mode for the interface attached to the SAP.

```

Context

[\[Tree\]](#) (show>isa>stats>ipsec-stats ike-exchange-failure-rate)

Full Context

```
show isa statistics ipsec-stats ike-exchange-failure-rate
```

Description

This command displays IKE exchange failure rate statistics of the specified scope.

This command supports following scopes:

- per system
- per ISA
- per tunnel group
- per IPsec GW

The rate includes the following reasons:

- authentication failure
- non-proposal chosen
- internal address assignment failure
- invalid traffic selector (TS)
- invalid key exchange (KE)
- DPD timeout
- Others

The start time value indicates the starting timestamp of measurement. The sampling duration indicates the duration of the measurement.

If a record has non-zero value, the system also shows the timestamp and local or remote tunnel endpoint for the first and last occurrence in the sampling duration.

Parameters

name

Displays information about the specified IPsec GW name up to 32 characters in length.

tunnel-type

Displays information about the specified the tunnel type.

Values all, sl2l, dl2l, ra

reason

Displays information for the cause of the failure.

Values auth-failure, non-proposal-chosen, internal-addr-assignment-failure,
invalid-ts, invalid-ke, dpd-timeout, other

system

Displays information about the system.

mda

Displays information about the specified ISA ID.

Values slot/mda

tunnel-group-id

Displays information about the specified tunnel group ID.

Values 1 to 16

name

Displays information about the specified IPsec GW name up to 32 characters in length.

count

Displays information for the number of statistics intervals to be displayed (starting with the most recent).

Values 1 to 96

minutes

Displays information about the specified period covered by the statistics to be displayed (starting with the most recent).

Values 1 to 1440

current

Displays information about the current statistic value. The values of count and minutes are ignored by the system once this parameter is specified.

show-oid

Displays information about the Object Identifier (OID) of the current statistical value.

esa-vm

Displays the ID of the configured ESA and ESA VM.

Values

| | | |
|---------|---------------------|---------|
| esa-vm: | <i>esa-id/vm-id</i> | |
| | <i>esa-id</i> | 1 to 16 |
| | <i>vm-id</i> | 1 to 4 |

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following is an example output of the **show isa stats ipsec-stats ike-exchange-failure-rate** command.

Sample Output

13.17 ike-initiate

ike-initiate

Syntax

ike-initiate tunnel-group-id *ipsec-group-id*

ike-initiate tunnel-name *ipsec-tunnel-name*

Context

[\[Tree\]](#) (tools>perform>ipsec ike-initiate)

Full Context

tools perform ipsec ike-initiate

Description

This command initiates tunnel setup for the specified LAN-to-LAN tunnel or for all static LAN-to-LAN tunnels in the specified tunnel group. This command initiates tunnel setup regardless of the configuration of the **ipsec-responder-only** command under the specified tunnel group.

The command only initiates tunnel setup when the tunnel group is in the MC-IPsec master state, or if MC-IPsec is not enabled for the tunnel group. If MC-IPsec is enabled and the tunnel group is not in the master state, the system will abort tunnel setup if MIMP goes down or if mastership changes during the tunnel setup.

Operationally up tunnels are not affected by this command. The system will not try to initiate a tunnel setup if the tunnel's operation flags are not clear.

The system does not automatically retry tunnel setup if a tunnel setup fails.

Parameters

ipsec-group-id

Specifies the ID of the tunnel group where all static LAN-to-LAN tunnels are initiated.

ipsec-tunnel-name

Specifies the name of the IPsec tunnel to be initiated.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Full Context

tools dump ipsec stats ike-stats

Description

This command dumps various internal IKE statistics for the specified scope:

- per ISA
- per static LAN-to-LAN tunnel
- per dynamic tunnel

The start time indicates the time of the last reset.

Parameters

name

Dumps information about the name of the IPsec GW, up to 32 characters.

ip-address:port

Dumps information about the IP address and port of the peer for dynamic tunneling.

mda

Dumps information about the specified ISA.

Values slot/mda

ipsec-tunnel-name

Dumps the name of the static LAN-to-LAN tunnel, up to 32 characters.

esa-vm

Displays the ID of the configured ESA and ESA VM.

| Values | | |
|---------------|---------------------|---------|
| esa-vm: | <i>esa-id/vm-id</i> | |
| | <i>esa-id</i> | 1 to 16 |
| | <i>vm-id</i> | 1 to 4 |

Description

This command clears various internal IKE statistics for the specified scope:

- per ISA
- per static LAN-to-LAN tunnel
- per dynamic tunnel

The start time indicates the time of the last reset.

Parameters

name

Clears information about the name of the IPsec GW up to 32 characters.

ip-address:port

Clears information about the IP address and port of the peer for dynamic tunneling.

mda

Clears information about the specified ISA.

Values slot/mda

ipsec-tunnel-name

Clears the name of the static LAN-to-LAN tunnel up to 32 characters.

esa-vm

Displays the ID of the configured ESA and ESA VM.

| Values | esa-vm: | esa-id/vm-id | |
|---------------|---------|--------------|---------|
| | | esa-id | 1 to 16 |
| | | vm-id | 1 to 4 |

Context

[\[Tree\]](#) (show>isa>stats>ipsec-stats ikev2-msg-drop)

Full Context

show isa statistics ipsec-stats ikev2-msg-drop

Description

This command displays the early drop counter for received IKEv2 messages on the specified ISA. These counters reflect the number of packets dropped early in the process when ISA is congested.

Parameters

message-type

Specifies the exchange type of the packet to display.

Values ike-sa-init, ike-auth, create-child-and-info

mda

Specifies the slot and MDA in the format *slot/mda*.

Values *slot* — 1 to 10
mda — 1 or 2

show-oid

Displays the SNMP object ID of the counter.

esa-vm

Displays the ID of the configured ESA and ESA VM.

Table 181: Output Fields: show multilink-bundle bundle-ima

| Label | Description |
|-------------|---|
| BundleId | Displays the bundle ID number. |
| Type | Specifies the type of this multilink bundle. mlppp — Indicates that the bundle is of type MLPPP. ima — Indicates that the bundle is of type IMA group. |
| Admin State | ima — Indicates that the bundle is of type IMA group. Down — The bundle is administratively down. |
| Oper State | Up — The bundle is operationally up. Down — The bundle is operationally down. |
| Port State | Displays the state level of the port. None — Indicates that the port is either in its initial creation state or is just about to be deleted. Ghost — No member links are configured as part of this bundle. Down — All member links are in "none", "ghost", or "down" state. linkUp — At least one member link is in port state "link up" but the bundle protocol is not yet operationally up (due to bundle protocol still coming up. For example, due to insufficient number of member links in "link up" state yet or to bundle being shut down. Up — Indicates that the bundle is ready to pass some kinds of traffic as the bundle protocol has come up (at least "minimum links" member links are in the port state up and the bundle protocol is up). |
| Min Links | Displays the minimum number of links that must be active for a bundle to be active. If the number of links drop below the given |

| Label | Description |
|--------------------|--|
| Minimum Links | minimum then the multilink bundle will transition to an operation down state). |
| Total/Active Links | Displays the total number of active links for the bundle. |

13.27 inband-tunnel

inband-tunnel

Syntax

inband-tunnel [type {rx | tx}] [prefix *prefix*] [tunnel-id *tunnel-id*]

inband-tunnel [prefix *prefix*] [tunnel-id *tunnel-id*] leaf

Context

[\[Tree\]](#) (show>router>bier inband-tunnel)

Full Context

show router bier inband-tunnel

Description

This command shows the BIER tunnels.

Parameters

type

Specifies the type of tunnel.

Values tx, rx

prefix

Specifies the BFR prefix of the tunnel in IP address form.

tunnel-id

Specifies the tunnel ID.

Values 0 to 4294967295

leaf

Specifies that the tunnel leaves are displayed.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following is an example of a BIER in-band tunnel configuration. [Table 182: BIER In-band Tunnel Fields](#) provides BIER in-band tunnel descriptions.

Sample Output

```
*A:Dut-B# /show router bier inband-tunnel
=====
BIER Tunnels
=====
Tunnel-id      Type      Oper      No. Of Leaves
BFR Prefix    Bfr-ID    Mpls Label  Sub-domain
-----
73748         rx        In service  0
10.20.1.4     4         0          0
=====
BIER Tunnel entries : 1
=====
```

Table 182: BIER In-band Tunnel Fields

| Label | Description |
|---------------|-------------------------------------|
| Tunnel-id | The tunnel ID |
| Type | The tunnel type - Tx or Rx |
| Oper | The operational state of the tunnel |
| No. Of Leaves | The number of leafs in the tunnel |
| BFR Prefix | The BFR prefix of the tunnel |
| Bfr-IFD | The BFR ID of the tunnel |

| Label | Description |
|------------|---|
| MPLS Label | The MPLS Label of the tunnel |
| Sub-domain | The sub-domain associated with the tunnel |

13.28 incl-mcast

incl-mcast

Syntax

```
incl-mcast [hunt | detail] [rd rd] [originator-ip originator-ip] [next-hop next-hop] [community comm-id]
[tag tag] [aspath-regex reg-exp]
```

Context

[\[Tree\]](#) (show>router>bgp>routes>evpn incl-mcast)

Full Context

```
show router bgp routes evpn incl-mcast
```

Description

This command displays BGP-EVPN inclusive multicast routes.

Parameters

hunt

Displays entries for the specified route.

detail

Displays detailed information.

rd

Displays information for the route distinguisher.

Values *ip-addr:comm-val | 2byte-asnumber:ext-comm-val | 4byte-asnumber:comm-val*

originator-ip

Specifies the IPv4 or IPv6 originator address.

Values

| | |
|---------------|-------------------------------------|
| ipv4-address: | a.b.c.d |
| ipv6-address: | x:x:x:x:x:x:x (eight 16-bit pieces) |
| | x:x:x:x:x:d.d.d.d |
| | x: [0 to FFFF]H |

d: [0 to 255]D

next-hop

Specifies the IPv4 or IPv6 BGP next-hop address.

| | | |
|---------------|---------------|-------------------------------------|
| Values | ipv4-address: | a.b.c.d |
| | ipv6-address: | x:x:x:x:x:x:x (eight 16-bit pieces) |
| | | x:x:x:x:x:d.d.d.d |
| | | x: [0 to FFFF]H |
| | | d: [0 to 255]D |

comm-id

Specifies community ID, up to 72 characters.

Values [as-num:comm-val | ext-comm | well-known-comm]

where:

- *as-num* — 0 to 65535
- *comm-val* — 0 to 65535
- *ext-comm* — the extended community, defined as the following:
type:{ *ip-address:comm-val1* | *as-number1:comm-val2* | *as-number2:comm-val1* }
 where:
 - *as-number1* — 0 to 65535
 - *comm-val1* — 0 to 65535
 - **type** — target, origin
 - *ip-address* — a.b.c.d
 - *comm-val2* — 0 to 4294967295
 - *as-number2* — 0 to 4294967295
- *well-known-comm* — **null** | **no-export** | **no-export-subconfed** | **no-advertise** |

tag

Specifies the inclusive multicast route tag.

Values 0to 4294967295 | MAX-ET

reg-exp

Displays routes matching the specified regular expression, up to 80 characters.

Table 183: System Information Field Descriptions

| Label | Description |
|-------------------------|--|
| System Name | The configured system name |
| System Type | The system is administratively configured to function as a Nokia SR OS Ethernet Service Switch (ESS) or not. |
| Chassis Topology | Indicates the inter-chassis topology mode in which the system is operating. It indicates how multiple chassis are arranged and operate together as a single system. A value of 'standalone' indicates that the system is comprised of a single physical router chassis. A value of 'extended' (for a 7950 XRS based system) indicates that two router chassis are connected together in a 'back-to-back' topology with no additional switch fabric chassis. An extended chassis topology is comprised of two XRS-20 chassis and is also known as an XRS-40 system. |
| System Version | The software product release version number for the software image currently running |
| Crypto Module Version | Version of the SR OS cryptographic module |
| System Contact | A text string that describes the system contact information |
| System Location | A text string that describes the system location |
| System Coordinates | A text string that describes the system coordinates |
| System Active Slot | Slot of the active CPM |
| System Up Time | The time since the last boot |
| Configuration Mode Cfg | Configured setting of the management interface configuration mode. The configuration mode affects the management interfaces (such as classic CLI and model-driven interfaces) that can be used to configure the router. |
| Configuration Mode Oper | Current management interface configuration mode that is operational in the router. The configuration mode affects the management interfaces (such as classic CLI and model-driven interfaces) that can be used to configure the router. |
| Last Mode Changed | The date and time at which the operational management interface configuration mode last changed |
| SNMP Port | The port number used by this node to receive SNMP request messages and to send replies |
| SNMP Engine ID | The SNMP engineID to uniquely identify the SNMPv3 node |

| Label | Description |
|-------------------------|--|
| SNMP Engine Boots | The number of times the SNMP engine has rebooted with the current SNMP Engine ID |
| SNMP Max Message Size | The maximum SNMP packet size generated by this node |
| SNMP Admin State | Enabled — SNMP is administratively enabled and running. Disabled — SNMP is administratively shutdown and not running. |
| SNMP Oper State | Enabled — SNMP is operationally enabled. Disabled — SNMP is operationally disabled. |
| SNMP Failure Reason | Additional information about general failure of the SNMP engine to be ready for normal operation |
| SNMP Index Boot Status | Persistent — System indexes are saved between reboots. Not Persistent — System indexes are not saved between reboots. |
| Tel/Tel6/SSH/FTP Admin | Displays the administrative state of the Telnet, SSH, and FTP sessions |
| Tel/Tel6/SSH/FTP Oper | Displays the operational state of the Telnet, SSH, and FTP sessions |
| BOF Source | The location of the BOF |
| Image Source | Primary — Indicates that the directory location for runtime image file was loaded from the primary source. Secondary — Indicates that the directory location for runtime image file was loaded from the secondary source. Tertiary — Indicates that the directory location for runtime image file was loaded from the tertiary source. |
| Config Source | Primary — Indicates that the directory location for configuration file was loaded from the primary source. Secondary — Indicates that the directory location for configuration file was loaded from the secondary source. Tertiary — Indicates that the directory location for configuration file was loaded from the tertiary source. |
| Last Booted Config File | The URL and filename of the last loaded configuration file |
| Last Boot Cfg Version | The date and time of the last boot |
| Last Boot Config Header | The header information, such as image version, date built, date generated |

| Label | Description |
|-------------------------|---|
| Last Boot Index Version | The version of the persistence index file read when this card was last rebooted |
| Last Boot Index Header | The header of the persistence index file read when this card was last rebooted. |
| Last Saved Config | The location and filename of the last saved configuration file |
| Time Last Saved | The date and time of the last time configuration file was saved |
| Changes Since Last Save | Yes — There are unsaved configuration file changes. No — There are no unsaved configuration file changes. |
| Max Cfg/BOF Backup Rev | The maximum number of backup revisions maintained for a configuration file. This value also applies to the number of revisions maintained for the BOF file. |
| Cfg-OK Script | URL — The location and name of the CLI script file executed following successful completion of the bootup configuration file execution. |
| Cfg-OK Script Status | Successful/Failed — The results from the execution of the CLI script file specified in the Cfg-OK Script location. Not used — No CLI script file was executed. |
| Cfg-Fail Script | URL — The location and name of the CLI script file executed following a failed bootup configuration file execution. Not used — No CLI script file was executed. |
| Cfg-Fail Script Status | Successful/Failed — The results from the execution of the CLI script file specified in the Cfg-Fail Script location. Not used — No CLI script file was executed. |
| IPv4 autoconfiguration | Indicates whether the IPv4 DHCP-based router autoconfigure functionality is enabled or disabled |
| IPv6 autoconfiguration | Indicates whether the IPv6 DHCP-based router autoconfigure functionality is enabled or disabled |
| Management IP Addr | The management IPv4 address and mask |
| Management IP Addr | The management IPv6 address and mask |
| Primary DNS Server | The IP address of the primary DNS server |
| Secondary DNS Server | The IP address of the secondary DNS server |

| Label | Description |
|-------------------------|---|
| Tertiary DNS Server | The IP address of the tertiary DNS server |
| DNS Domain | The DNS domain name of the node |
| DNS Resolve Preference | ipv4-only — Dns-names are queried for A-records only. ipv6-first — Dns-server will be queried for AAAA-records first and a successful reply is not received, the dns-server is queried for A-records. |
| DNSSEC AD Validation | Indicates whether the presence of the AD-bit is validated in responses from DNS servers |
| DNSSEC Response Control | fall-through — Permit DNS responses that do not pass DNSSEC validation fail — Reject DNS Responses that do not pass DNSSEC validation |
| BOF Static Routes | To — The static route destination. Next Hop — The next hop IP address used to reach the destination. Metric — Displays the priority of this static route versus other static routes. None — No static routes are configured. |
| ATM Location ID | N/A — Ignore. ATM functionality is not supported. |
| ATM OAM Retry Up | N/A — Ignore. ATM functionality is not supported. |
| ATM OAM Retry Down | N/A — Ignore. ATM functionality is not supported. |
| ATM OAM Loopback Period | N/A — Ignore. ATM functionality is not supported. |
| ICMP Vendor Enhancement | Indicates whether vendor specific extensions to ICMP are enabled or disabled |
| Eth QinQ Untagged SAP | False — The new-qinq-untagged-sap flag is disabled. True — The new-qinq-untagged-sap flag is enabled. |
| EFM OAM Grace Tx Enable | True — Sending of EFM OAM grace period messages is enabled. False — Sending of EFM OAM grace period messages is disabled. |
| EFM OAM Dying Gasp Rst | Indicates whether EFM OAM dying gasp messages on reset are enabled or disabled. |

13.30 ingress-label

ingress-label

Syntax

ingress-label *ingress-label1* [*ingress-label2*]

Context

[\[Tree\]](#) (show>service ingress-label)

Full Context

show service ingress-label

Description

This command displays service information using the range of ingress labels.

If only the mandatory *ingress-label1* parameter is specified, only services using the specified label are displayed.

If both *ingress-label1* and *ingress-label2* parameters are specified, the services using the range of labels X where *ingress-label1* <= X <= *ingress-label2* are displayed.

Use the **show router vprn-service-id ldp bindings** command to display dynamic labels.

Parameters

ingress-label1

Displays the starting ingress label value for which to display services using the label range. If only *ingress-label1* is specified, services only using *ingress-label1* are displayed.

Values 0, 2048 to 131071

ingress-label2

Displays the ending ingress label value for which to display services using the label range.

Values 2048 to 131071

Default The *ingress-label1* value.

Platforms

All

Output

The following output is an example of service ingress label information.

Sample Output

```
A:ALA-12# show service ingress label 0

Description

Display services using the range of ingress labels.

If only the mandatory *start-label* parameter is specified, only services using the specified label are displayed.

If both *start-label* and *end-label* parameters are specified, the services using the range of labels X where *start-label* <= X <= *end-label* are displayed.

Use the **show router ldp bindings** command to display dynamic labels.

Parameters

start-label

The starting ingress label value for the label range. If only *start-label* is specified, services only using *start-label* are displayed.

Values 0, 2048 to 131071

end-label

The ending ingress label value for the label range

Default The *start-label* value.

Values 2049 to 131071

Platforms

All

Output

The following output displays an example of service ingress label information.

Sample Output

```
*A:ALA-12# show service ingress-label 0

Table 185: [Show Service Ingress-Label Fields](#) describes show service ingress-label output fields.

Table 185: Show Service Ingress-Label Fields

| Label | Description |
|--------------------------|---|
| Svc ID | The service identifier. |
| SDP Id | The SDP identifier. |
| Type | Indicates whether the SDP is spoke or mesh. |
| I.Lbl | The ingress label used by the far-end device to send packets to this device in this service by the SDP. |
| E.Lbl | The egress label used by this device to send packets to the far-end device in this service by the SDP. |
| Number of Bindings Found | The number of SDP bindings within the label range specified. |

ingress-label

Syntax

ingress-label *start-label* [*end-label*]

Context

[\[Tree\]](#) (show>service ingress-label)

Full Context

show service ingress-label

Description

This command displays services using the range of ingress labels. If only the mandatory *start-label* parameter is specified, only services using the specified label are displayed.

If both *start-label* and *end-label* parameters are specified, the services using the range of labels X where *start-label* <= X <= *end-label* are displayed.

For 7750 only, use the **show router vprn-service-id ldp bindings** command to display dynamic labels.

Parameters

start-label

The starting ingress label value for which to display services using the label range. If only *start-label* is specified, services only using *start-label* are displayed.

Values 0, 2048 to 131071

end-label

The ending ingress label value for which to display services using the label range.

Values 2049 to 131071

Default The *start-label* value.

Platforms

All

Output

The following output is an example of ingress label information, and [Table 186: Show Service Ingress-Label Field Descriptions](#) describes the output fields.

Sample Output

```
*A:ALA-12# show service ingress-label 0

13.31 ingress-statistics

ingress-statistics

Syntax

ingress-statistics color *color* [**end-point** {*ipv4-address* | *ipv6-address*}]

Context

[\[Tree\]](#) (show>router>segment-routing>sr-policies ingress-statistics)

Full Context

show router segment-routing sr-policies ingress-statistics

Description

This command displays the ingress traffic statistics of the SR policy specified by its color and end-point.

Parameters

color

Displays the color that is configured for this SR policy.

Values 0 to 4294967295

ipv4-address | *ipv6-address*

Displays the IPv4 or IPv6 address expressed in dotted decimal notation.

Values ipv4-address:

- a.b.c.d

ipv6-address:

- x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:d.d.d.d
- x: [0 to FFFF]H
- d: [0 to 255]D

Platforms

All

Output

The following output is an example of ingress traffic statistics of the SR policy, and [Table 188: Show Ingress Statistics Field Descriptions](#) describes the output fields.

Sample Output Show Router Segment Route Policy Ingress Statistics

```
show router segment-routing sr-policies ingress-statistics color 10 end-point 3ffe::a14:102
=====
SR-Policies Ingress Statistics
=====

Ingress Statistics:

Color           : 10                Endpoint Addr   : 3ffe::a14:102
TunnelId        : 917520            BSID            : 100008

=====
```

Table 188: Show Ingress Statistics Field Descriptions

| Label | Description |
|---------------|--|
| Color | Indicates the color of the SR policy. |
| Endpoint Addr | Indicates the end-point address of the SR policy. |
| TunnelId | Indicates the tunnel identifier of the SR policy. |
| BSID | Indicates the binding SID value. |
| Pkt Count | Indicates the count of packets for the corresponding segment list. |
| Octet Count | Indicates the count of octets for the corresponding segment list. |

ingress-statistics

Syntax

ingress-statistics color color [end-point {ipv4-address | ipv6-address}]

Context

[Tree] (clear>router>segment-routing>sr-policies ingress-statistics)

Full Context

clear router segment-routing sr-policies ingress-statistics

Description

This command clears the ingress traffic statistics of the SR policy specified by its color and end-point.

Parameters

color

Displays the color that is configured for this SR policy.

Values 0 to 4294967295

ipv4-address | *ipv6-address*

Displays the IPv4 or IPv6 address expressed in dotted decimal notation.

Values ipv4-address:

- a.b.c.d

ipv6-address:

- x:x:x:x:x:x:x (eight 16-bit pieces)

[\[Tree\]](#) (monitor>router>seg-rt>sr-policies ingress-statistics)

Full Context

monitor router segment-routing sr-policies ingress-statistics

Description

This command monitors SR policy ingress statistics.

Parameters

ip-address | *ipv6-address*

Displays the IPv4 or IPv6 address expressed in dotted decimal notation.

Values ipv4-address:

- a.b.c.d
- ipv6-address:
- x:x:x:x:x:x:x (eight 16-bit pieces)
 - x:x:x:x:x:d.d.d.d
 - x: [0 to FFFF]H
 - d: [0 to 255]D

seconds

Configures the interval for each display in seconds.

Values 3 to 60

repeat

Configures how many times the command is repeated.

Values 1 to 999

Table 191: Show VRRP Instance Output Fields

| Label | Description |
|----------------|---|
| Interface name | The name of the IP interface |
| VR ID | The virtual router ID for the IP interface |
| Own Owner | Yes — specifies that the virtual router instance as owning the virtual router IP addresses |
| | No — indicates that the virtual router instance is operating as a non-owner |
| Adm | Up — indicates that the administrative state of the VRRP instance is up |
| | Down — indicates that the administrative state of the VRRP instance is down |
| Opr | Up — indicates that the operational state of the VRRP instance is up |
| | Down — indicates that the operational state of the VRRP instance is down |
| State | <ul style="list-style-type: none"> When owner, backup defines the IP addresses that are advertised within VRRP advertisement messages |

| Label | Description |
|----------------|---|
| | <ul style="list-style-type: none"> When non-owner, backup actually creates an IP interface IP address used for routing IP packets and communicating with the system when the access commands are defined (ntp-reply, ping-reply, telnet-reply, and ssh-reply) |
| Pol Id | The value that uniquely identifies a priority control policy |
| Base Priority | The <i>base-priority</i> value used to derive the in-use priority of the virtual router instance as modified by any optional VRRP priority control policy |
| InUse Priority | The current in-use priority associated with the VRRP virtual router instance |
| Msg Int | The administrative advertisement message timer used by the master virtual router instance to send VRRP advertisement messages and to derive the master down timer as backup |
| Inh Int | Yes — when the VRRP instance is a non-owner and is operating as a backup and the master-int-inherit command is enabled, the master down timer is indirectly derived from the value in the advertisement interval field of the VRRP message received from the current master |
| | No — when the VRRP instance is operating as a backup and the master-int-inherit command is <i>not</i> enabled, the configured advertisement interval is matched against the value in the advertisement interval field of the VRRP message received from the current master; if the two values do not match then the VRRP advertisement is discarded; if the VRRP instance is operating as a master, this value has no effect |
| Backup Addr | The backup virtual router IP address |
| BFD | Indicates BFD is enabled |
| VRRP State | Specifies whether the VRRP instance is operating in a master or backup state |
| Policy ID | <p>The VRRP priority control policy associated with the VRRP virtual router instance</p> <p>A value of 0 indicates that no control policy is associated with the virtual router instance</p> |
| Preempt Mode | Yes — the preempt mode is enabled on the virtual router instance where it will preempt a VRRP master with a lower priority |
| | No — the preempt mode is disabled and prevents the non-owner virtual router instance from preempting another, less desirable virtual router |

| Label | Description |
|----------------------|--|
| Ping Reply | Yes — a non-owner master is enabled to reply to ICMP Echo requests directed to the virtual router instance IP addresses Ping Reply is valid only if the VRRP virtual router instance associated with this entry is a non-owner A non-owner backup virtual router never responds to such ICMP echo requests irrespective if Ping Reply is enabled |
| | No — ICMP echo requests to the virtual router instance IP addresses are discarded |
| Telnet Reply | Yes — non-owner masters can to reply to TCP port 23 Telnet requests directed at the virtual router instances IP addresses |
| | No — telnet requests to the virtual router instance IP addresses are discarded |
| SSH Reply | Yes — non-owner masters can to reply to SSH requests directed at the virtual router instances IP addresses |
| | No — all SSH request messages destined to the non-owner virtual router instance IP addresses are discarded |
| Primary IP of Master | The IP address of the VRRP master |
| Primary IP | The IP address of the VRRP owner |
| Up Time | The date and time when the operational state of the event last changed |
| Virt MAC Addr | The virtual MAC address used in ARP responses when the VRRP virtual router instance is operating as a master |
| Auth Type | Specifies the VRRP authentication Type 0 (no authentication), Type 1 (simple password), or Type 2 (MD5) for the virtual router |
| Addr List Mismatch | Specifies whether a trap was generated when the IP address list received in the advertisement messages received from the current master did not match the configured IP address list This is an edge triggered notification; a second trap will not be generated for a packet from the same master until this event has been cleared |
| Master Priority | The priority of the virtual router instance which is the current master |
| Master Since | The date and time when operational state of the virtual router changed to master For a backup virtual router, this value specifies the date and time when it received the first VRRP advertisement message from the virtual router which is the current master |

| Label | Description |
|-------------------|--|
| OperGroup | The operational group name associated with the VRRP interface, if configured |
| Monitor OperGroup | The monitor operational group associated with the VRRP |

instance

Syntax

instance [ipv4 | ipv6]

Context

[\[Tree\]](#) (clear>router>ldp instance)

Full Context

clear router ldp instance

Description

This command resets the LDP instance.

Syntax

instance

Context

[\[Tree\]](#) (tools>dump>router>ldp instance)

Full Context

tools dump router ldp instance

Description

This command dumps information for the LDP instance.

Platforms

All

instance

Syntax

```
instance interface interface-name vr-id virtual-router-id [ipv6] [interval seconds] [repeat repeat] [{  
  absolute | rate}]
```

Context

[\[Tree\]](#) (monitor>router>vrrp instance)

Full Context

monitor router vrrp instance

Description

Monitor statistics for a VRRP instance.

Parameters

interface-name

Specifies the name of the existing IP interface on which VRRP is configured.

virtual-router-id

Specifies the virtual router ID for the existing IP interface, expressed as a decimal integer.

ipv6

Monitors IPv6 instances.

seconds

Configures the interval for each display in seconds.

Values 3 to 60

Default 5 seconds

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

When the **absolute** keyword is specified, the raw statistics are displayed, without processing. No calculations are performed on the delta or rate statistics.

rate

When the **rate** keyword is specified, the rate-per-second for each statistic is displayed instead of the delta.

Platforms

All

Output

The following output is an example of VRRP instance information.

Sample Output

```
*A:ALA-A# monitor router vrrp instance interface n2 vr-id 1

7950 XRS

13.37 interface

interface

Syntax

```
interface subscriber-interface [id srrp-id]
```

Context

[\[Tree\]](#) (clear>router>srrp interface)

Full Context

```
clear router srrp interface
```

Description

This command clears and resets SRRP interface instances.

Parameters

subscriber-interface

Specifies an existing subscriber interface name up to 32 characters.

srrp-id

Specifies an existing SRRP ID.

Values 1 to 4294967295

Platforms

All

interface

Syntax

```
interface [[[ip-address | ip-int-name] [interface-type] [detail] [family]]] summary]
```

Context

[\[Tree\]](#) (show>service>id interface)

Full Context

```
show service id interface
```

Description

This command displays information for the IP interfaces associated with the service.

If no optional parameters are specified, a summary of all IP interfaces associated to the service are displayed.

Parameters

ip-address

Specifies the IP address of the interface for which to display information.

Values 1.0.0.0 — 223.255.255.255

ip-int-name

Specifies the IP interface name for which to display information, 32 characters.

family

Specifies the family to display.

Values ipv4, ipv6

interface-type

Specifies the interface type.

Values subscriber, group, redundant

detail

Displays detailed IP interface information.

Default IP interface summary output

summary

Displays a summary.

Platforms

All

Output

The following output is an example of IP interface information, and [Table 192: Show Service-ID Interface Field Descriptions](#) describes the output fields.

Sample Output

```
A:cses-V96# /show service id 1 interface
- interface [{"<ip-address|ip-int-name>"] [interface-type] [detail]
  [family]] | summary]
<ip-int-name|ip-ad*> : ip-int-name      - 32 chars max
                    ipv4-address     - a.b.c.d
                    ipv6-address     - x:x:x:x:x:x:x      (eight 16-bit
                    pieces)
                    x:x:x:x:x:d.d.d.d
                    x - [0..FFFF]H
                    d - [0..255]D
<detail>           : keyword - adds details to the display
<family>           : ipv4|ipv6
<interface-type>  : subscriber|group|redundant
<summary>         : keyword - displays summary
```

Sample Output

```

Table 192: Show Service-ID Interface Field Descriptions

| Label | Description |
|-------------------|---|
| Interface-Name | The name used to refer to the interface. |
| Type | Specifies the interface type. |
| IP-Address | Specifies the IP address/IP subnet/broadcast address of the interface. |
| Adm | The desired state of the interface. |
| Opr | The operating state of the interface. |
| Interface | |
| If Name | The name used to refer to the interface. |
| Admin State | The desired state of the interface. |
| Oper State | The operating state of the interface. |
| IP Addr/mask | Specifies the IP address/IP subnet/broadcast address of the interface. |
| Ignore Port State | <p>Indicates whether or not the tools perform service id service-id interface ip-int-name ignore-sap port-state command has been executed for a service interface directly connected to a SAP:</p> <p>none — The command has not been executed for or accepted by the interface.</p> <p>active — The command has been executed and accepted, and the port state check is currently being bypassed for the interface.</p> <p>pending — The command has been executed and accepted, but the port state for the interface is already operational.</p> |

| Label | Description |
|-------------------------------------|--|
| Details | |
| If Index | The index corresponding to this interface. The primary index is 1. For example, all interfaces are defined in the Base virtual router context. |
| If Type | Specifies the interface type. |
| Port Id | Specifies the SAP's port ID. |
| SNTP B.Cast | Specifies whether SNTP broadcast client mode is enabled or disabled. |
| Arp Timeout | Specifies the timeout for an ARP entry learned on the interface. |
| MAC Address | Specifies the 48-bit IEEE 802.3 MAC address. |
| ICMP Mask Reply | Specifies whether ICMP mask reply is enabled or disabled. |
| Cflowd | Specifies whether cflowd collection and analysis on the interface is enabled or disabled. |
| ICMP Details | |
| Redirects | Specifies the rate for ICMP redirect messages. |
| Unreachables | Specifies the rate for ICMP unreachable messages. |
| TTL Expired | Specifies the rate for ICMP TTL messages. |
| Admin State (DHCPv6 Lease Split) | DHCPv6 lease split admin state (subscriber and group interfaces only) |
| Valid LT | DHCPv6 lease split valid lifetime (subscriber and group interfaces only) |

interface

Syntax

interface [*ip-int-name* | *ip-address*] [**group**] [*grp-ip-address*] [**detail**]

Context

[\[Tree\]](#) (show>router>igmp interface)

Full Context

show router igmp interface

Description

This command displays IGMP interface information.

Parameters

ip-int-name

Displays information associated with the specified IP interface name.

ip-address

Displays information associated with the specified IP address.

group grp-ip-address

Displays IP multicast group address information for the specified group IP address.

detail

Displays detailed IP interface information along with the source group information learned on that interface.

Platforms

All

Output

The following output is an example of IGMP interface information. [Table 193: IGMP Fields](#) provides IGMP field descriptions.

Sample Output

```

Table 193: IGMP Fields

| Label | Description |
|---------------------------------------|--|
| Interface | The interfaces that participate in the IGMP protocol. |
| Adm Admin Status | The administrative state for the IGMP protocol on this interface. |
| Oper Oper Status | The current operational state of IGMP protocol on the interface. |
| Querier | The address of the IGMP querier on the IP subnet to which the interface is attached. |
| Querier Up Time | The time since the querier was last elected as querier. |
| Querier Expiry Timer | The time remaining before the querier ages out. If the querier is the local interface address, the value will be zero. |
| Cfg/Opr Version Admin/Oper version | Cfg — The configured version of IGMP running on this interface. For IGMP to function correctly, all routers on a LAN must be configured to run the same version of IGMP on that LAN. Opr — The operational version of IGMP running on this interface. If the cfg value is 3 but all of the routers in the local subnet of this interface use IGMP version v1 or v2, the operational version will be v1 or v2. |
| Num Groups | The number of multicast groups which have been learned by the router on the interface. |
| Policy | The policy that is to be applied on the interface. |
| Group Address | The IP multicast group address for which this entry contains information. |

| Label | Description |
|---------------|---|
| Up Time | The time since this source group entry got created. |
| Last Reporter | The IP address of the source of the last membership report received for this IP Multicast group address on this interface. If no membership report has been received, this object has the value 0.0.0.0. |
| Mode | The mode is based on the type of membership report(s) received on the interface for the group. In the 'include' mode, reception of packets sent to the specified multicast address is requested only from those IP source addresses listed in the source-list parameter of the IGMP membership report. In 'exclude' mode, reception of packets sent to the given multicast address is requested from all IP source addresses except those listed in the source-list parameter. |
| V1 Host Timer | The time remaining until the local router will assume that there are no longer any IGMP version 1 members on the IP subnet attached to this interface. Upon hearing any IGMPv1 Membership Report, this value is reset to the group membership timer. While this time remaining is non-zero, the local router ignores any IGMPv2 Leave messages for this group that it receives on this interface. |
| V2 Host Timer | The time remaining until the local router will assume that there are no longer any IGMP version 2 members on the IP subnet attached to this interface. Upon hearing any IGMPv2 Membership Report, this value is reset to the group membership timer. While this time remaining is non-zero, the local router ignores any IGMPv3 Leave messages for this group that it receives on this interface. |
| Type | Indicates how this group entry was learned. If this group entry was learned by IGMP, it will be set to "dynamic". For statically configured groups, the value will be set to 'static'. |
| Compat Mode | Used in order for routers to be compatible with older version routers. IGMPv3 hosts must operate in version 1 and version 2 compatibility modes. IGMPv3 hosts must keep state per local interface regarding the compatibility mode of each attached network. A host's compatibility mode is determined from the Host Compatibility Mode variable which can be in one of three states: IGMPv1, IGMPv2 or IGMPv3. This variable is kept per interface and is dependent on the version of General Queries heard on that interface as well as the Older Version Querier Present timers for the interface. |

interface

Syntax

interface

Context

[\[Tree\]](#) (show>service>id>spb interface)

Full Context

show service id spb interface

Description

This command displays SPB interfaces.

Platforms

All

Output

The following output is an example of service SPB interface information.

Sample Output

```
*A:Dut-A# show service id 100001 spb interface

interface

Syntax

interface [{ip-int-name | ip-address}] [**urpf-stats**] [**statistics**] [**hold-time**]

interface [{ip-int-name | ip-address}] **policy-accounting** [class] [index]

interface {ip-int-name | ip-address} **mac** [ieee-address]

Context

[\[Tree\]](#) (clear>router interface)

Full Context

clear router interface

Description

This command clears IP interface statistics.

If no IP interface is specified either by IP interface name or IP address, the command will perform the clear operation on all IP interfaces.

Parameters

ip-int-name | *ip-address*

Specifies IP interface name or IP interface address.

Values ip-int-name: 32 chars max
ip-address: a.b.c.d

Default all IP interfaces

urpf-stats

Resets the statistics associated with uRPF failures.

statistics

Resets the IP interface traffic statistics.

hold-time

Clears the IP interface activation hold time.

policy-accounting

Clears the accounting statistics.

class

Specifies whether to clear source class counters or destination class counters.

Values source-class, dest-class

index

Specifies the source or destination class index.

Values 1 to 255

ieee-address

Specifies the MAC address.

Values xx:xx:xx:xx:xx:xx or xx-xx-xx-xx-xx-xx

Platforms

All

interface

Syntax

interface *interface-name* [**vrid** *virtual-router-id*]

interface *interface-name* **vrid** *virtual-router-id* **ipv6**

Context

[\[Tree\]](#) (clear>router>vrrp interface)

Full Context

clear router vrrp interface

Description

This command resets VRRP protocol instances on an IP interface.

Parameters

interface-name

Specifies the IP interface to reset the VRRP protocol instances.

virtual-router-id

Resets the VRRP protocol instance for the specified VRID on the IP interface.

Default All VRIDs on the IP interface.

Values 1 to 255

ipv6

Clears IPv6 information for the specified interface.

Platforms

All

interface

Syntax

interface *ip-int-name*

Context

[\[Tree\]](#) (tools>dump>service>id interface)

[\[Tree\]](#) (tools>perform>service>id interface)

Full Context

tools dump service id interface

tools perform service id interface

Description

This command specifies an IP interface for which service debugging tools are enabled.

Parameters

ip-int-name

Specifies the name of the IP interface, up to 32 characters.

Platforms

All

interface

Syntax

interface [{{{*ip-address* | *ip-int-name*}}] [**detail**] [**family**] | **summary** | **exclude-services**]]

interface {*ip-address* | *ip-int-name*} **eth-cfm** [**detail**]

interface {*ip-address* | *ip-int-name*} **mac** [*ieee-address*]

interface {*ip-address* | *ip-int-name*} **statistics**

interface {*ip-address* | *ip-int-name*} **dist-cpu-protection** [**detail**]

interface {*ip-address* | *ip-int-name*} **policy-accounting** [**class** [*index*]]

interface description

interface global-if-index *global-if-index* [**family**] [**detail**]

interface global-if-index *global-if-index* **statistics**

Context

[\[Tree\]](#) (show>router interface)

Full Context

show router interface

Description

This command displays the router IP interface table sorted by interface index.

Parameters

ip-address

Displays the interface information associated with the specified IP address.

Values

| | |
|--------------|-----------------------------------|
| ipv4-address | a.b.c.d (host bits must be 0) |
| ipv6-address | x:x:x:x:x:x (eight 16-bit pieces) |
| | x:x:x:x:x:d.d.d.d |
| | where: |
| | x: [0 to FFFF]H |

d: [0 to 255]D

ip-int-name

Displays the interface information associated with the specified IP interface name, up to 32 characters.

detail

Displays detailed IP interface information. For **dist-cpu-protection**, **detail** includes the adapted operational rate parameters in the CLI output. The adapted Oper. parameters are only applicable if the policer is instantiated (for example, if the associated forwarding plane is operational, or for an interface if there is a physical port configured for the interface, or if the dynamic policers are allocated), otherwise values of 0 kb/s, and so on, are displayed. and includes the adapted operational rate parameters in the CLI output. The adapted Oper. parameters are only applicable if the policer is instantiated (for example, if the associated forwarding plane is operational, or for an interface if there is a physical port configured for the interface, or if the dynamic policers are allocated), otherwise values of 0 kb/s, and so on, are displayed.

family

Specifies the router IP interface family to display.

Values **ipv4** — Displays only those peers that have the IPv4 family enabled.
 ipv6 — Displays the peers that are IPv6-capable.

summary

Displays summary IP interface information for the router.

exclude-services

Displays IP interface information, excluding IP interfaces configured for customer services. Only core network IP interfaces are displayed.

eth-cfm

Displays Ethernet CFM information.

mac

Displays information associated with the MAC address.

ieee-address

Displays the information associated with the specified IEEE address. The address is in the xx-xx-xx-xx-xx-xx or xx:xx:xx:xx:xx:xx format.

statistics

Displays packet statistics for an interface on the router.

Note:

The **show router interface statistics** command also shows the MPLS statistics that are shown in using the **show router mpls interface statistics** command. This allows the operator to see MPLS statistics from interfaces that are not added to MPLS, such as a carrier's network interfaces. [Sample Output](#) for an example of the MPLS fields that are displayed. These fields are displayed regardless of the state of MPLS.

dist-cpu-protection

Displays the distributed CPU protection parameters and status at the interface level.

class

Indicates whether to display accounting policy statistics for the source or destination class.

Values source-class, dest-class

index

Specifies an integer value for the accounting source or destination class index.

Values 1 to 255

description

Displays all interfaces in all routing contexts.

global-if-index

Specifies the global interface index value.

Values 1 to 262144

Platforms

All

Output

Standard IP Interface Output—The following output is an example of standard IP interface information, and [Table 194: Standard IP Interface Field Descriptions](#) describes the fields.

Table 194: Standard IP Interface Field Descriptions

| Label | Description |
|---------------------------|---|
| Interface-Name IF Name | The IP interface name |
| Type | n/a — no IP address has been assigned to the IP interface, so the IP address type is not applicable Pri — the IP address for the IP interface is the Primary address on the IP interface Sec — the IP address for the IP interface is a secondary address on the IP interface |

| Label | Description |
|--------------------|--|
| IP-Address | The IP address and subnet mask length of the IP interface n/a — indicates no IP address has been assigned to the IP interface |
| Adm Admin State | Down — the IP interface is administratively disabled Up — the IP interface is administratively enabled |
| Opr Oper State | Down — the IP interface is operationally disabled Up — the IP interface is operationally disabled |
| Mode | Network — the IP interface is a network/core IP interface Service — the IP interface is a service IP interface |
| Port/SAP Id | The physical network port or the SAP identifier associated with the IP interface |
| MACSec | Lists the MACsec settings for the IP interface |
| Class | Specifies the source or destination class index |
| Policer | The policer ID |
| Rx Fwd Packets | The number of received forwarded packets |
| Rx Fwd Bytes | The number of received forwarded bytes |
| Drop Packets | The number of dropped packets |
| Drop Bytes | The number of dropped bytes |
| Fwd Packets | The number of forwarded packets |
| Fwd Bytes | The number of forwarded bytes |

Table 195: Detailed IP Interface Field Descriptions

| Label | Description |
|------------------|---|
| If Name | The IP interface name |
| Admin State | Down — the IP interface is administratively disabled Up — the IP interface is administratively enabled |
| Oper (v4/v6) | Down — the IP interface is operationally disabled Up — the IP interface is operationally enabled |
| IP Addr/mask | The IP address and subnet mask length of the IP interface Not Assigned — indicates no IP address has been assigned to the IP interface |
| IPv6 Addr | The IPv6 address of the interface |
| If Index | The interface index of the IP router interface |
| Virt If Index | The virtual interface index of the IP router interface |
| Last Oper Change | The last change in operational status |
| Global If Index | The global interface index of the IP router interface |
| Sap ID | The SAP identifier |
| TOS Marking | The ToS byte value in the logged packet |
| If Type | Network — the IP interface is a network/core IP interface Service — the IP interface is a service IP interface |

| Label | Description |
|----------------------------------|---|
| SNTP B.cast | Displays if the broadcast-client global parameter is configured |
| IES ID | The IES identifier |
| QoS Policy | The QoS policy ID associated with the IP interface |
| MAC Address | The MAC address of the interface |
| Arp Timeout | The ARP timeout for the interface, in seconds, which is the time an ARP entry is maintained in the ARP cache without being refreshed |
| ICMP Mask Reply | False — the IP interface will not reply to a received ICMP mask request True — the IP interface will reply to a received ICMP mask request |
| Arp Populate | Displays whether ARP is enabled or disabled |
| Host Conn Verify | The host connectivity verification |
| LdpSyncTimer | Specifies the IGP/LDP sync timer value |
| uRPF Chk | Specifies whether unicast RPF (uRPF) Check is enabled on this interface |
| uRPF Iv6 Chk | Specifies whether unicast RPF (uRPF) Check IPv6 is enabled on this interface |
| PTP HW Assist | Specifies whether the PTP Hardware Assist function is enabled on this interface |
| cflowd | Specifies the type of cflowd analysis that is applied to the interface acl — ACL cflowd analysis is applied to the interface interface — interface cflowd analysis is applied to the interface none — no cflowd analysis is applied to the interface |
| Inter-AS selective ILM untrusted | Specifies whether the inter-AS selective ILM untrusted function is enabled on this interface |
| Untrusted default forwarding | Specifies whether the untrusted default forwarding function is enabled on this interface |

Statistics IP Interface Output — The following output is an example of router IP interface statistics when **enable-interface-statistics** is enabled, and [Table 196: Statistics IP Interface Fields](#) describes the fields.

Sample Output

```

Table 199: Show Distributed CPU Protection Policer Output Fields

| Label | Description |
|-----------------------------------|---|
| Distributed CPU Protection Policy | Displays the DCP policy assigned to the object. |
| Policer-Name | Displays the configured name of the static policer |
| Card/FP | Displays the card and FP identifier. FP identifies the instance of the FP (FastPath) chipset. Some cards have a single FP (for example, IOM3-XP-3) and some cards can contain multiple FPs (for example, an XCM can house multiple FPs via its two XMAS). |
| Policer-State | Displays the state of the policer with the following potential values: <i>Exceed</i> - The policer has been detected as nonconforming to the associated DCP policy parameters (packets exceeded) |

| Label | Description |
|--------------------|--|
| | <p>the configured rate and the DCP polling process identified this occurrence)</p> <p><i>Conform</i> - The policer has been detected as conforming to the associated DCP policy parameters (rate)</p> <p><i>not-applicable</i> - newly-created policers or policers that are not currently instantiated. This includes policers configured on line cards that are not in service.</p> |
| Protocols Mapped | <p>Displays a list of protocols that are configured to map to the particular policer.</p> |
| Oper. xyz fields | <p>The actual hardware may not be able to perfectly rate limit to the exact configured rate parameters in a DCP policy. In this case the configured rate parameters will be adapted to the closest supported rate. These adapted operational values are displayed in CLI when the detail keyword is included in the show command. The adapted Oper. parameters are only applicable if the policer is instantiated (for example, if the associated forwarding plane is operational, or for an interface if there is a physical port configured for the interface, or if the dynamic policers are allocated), otherwise values of 0 kb/s, and so on, are displayed.</p> <p><i>Oper. Kbps</i> - Displays the adapted "kilobits-per-second" value for DCP "kbps" rates</p> <p><i>Oper. MBS</i> - Displays the adapted "mbs size" value for DCP "kbps" rates</p> <p><i>Oper. Depth</i> - Displays the calculated policer bucket depth in packets (for DCP "packets" rates) or in bytes (for DCP "kbps" rates)</p> <p><i>Oper. Packets</i> - Displays the adapted "ppi" value for DCP "packets" rates</p> <p><i>Oper. Within</i> - Displays the adapted "within seconds" value for DCP "packets" rates</p> <p><i>Oper. Init. Delay</i> - Displays the adapted "initial-delay packets" value for DCP "packets" rates</p> |
| Exceed-Count | <p>Displays the count of packets exceeding the policing parameters since the given policer was previously declared as conforming or newly-instantiated. This counter has the same behavior as the exceed counter in the DCP the log events – they are baselined (reset) when the policer transitions to conforming.</p> |
| Detec. Time Remain | <p>Displays the remaining time in the detection-time countdown during which a policer in the exceed state is being monitored to see if it conforms again.</p> |

| Label | Description |
|---------------------|---|
| Hold-Down Remain | Displays the remaining time in the hold-down countdown during which a policer is treating all packets as exceeding. |
| All Dyn-Plcr Alloc. | Indicates that all the dynamic enforcement policers have been allocated and instantiated for a given local-monitor. |
| Dyn-Policer Alloc. | Indicates that a dynamic policer has been instantiated. |

interface

Syntax

interface [*ip-int-name*] [**detail**] [*family*]

interface resource-failures [*family*]

Context

[\[Tree\]](#) (show>router>ldp interface)

Full Context

show router ldp interface

Description

This command displays configuration information about LDP interfaces.

Parameters

ip-int-name

The name of an existing interface. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.

detail

Displays detailed information.

family

Displays either IPv4 or IPv6 active LDP information.

resource-failures

Displays which interfaces are in overload.

Platforms

All

Output

LDP Interface Output

[Table 200: LDP Interface Output Fields](#) describes the LDP interface output fields.

Table 200: LDP Interface Output Fields

| Label | Description |
|--------------|--|
| Interface | Specifies the interface associated with the LDP instance. |
| Adm | Up — The LDP is administratively enabled. Down — The LDP is administratively disabled. |
| Opr | Up — The LDP is operationally enabled. Down — The LDP is operationally disabled. |
| Hello Factor | The value by which the hello timeout should be divided to give the hello time, for example, the time interval (in s), between LDP hello messages. LDP uses hello messages to discover neighbors and to detect loss of connectivity with its neighbors. |
| Hold Time | The hello time, also known as hold time. It is the time interval (in s), that LDP waits before declaring a neighbor to be down. Hello timeout is local to the system and is sent in the hello messages to a neighbor. |
| KA Factor | The value by which the keepalive timeout should be divided to give the keepalive time, for example, the time interval (in s), between LDP keepalive messages. LDP keepalive messages are sent to keep the LDP session from timing out when no other LDP traffic is being sent between the neighbors. |
| KA Timeout | The time interval (in s), that LDP waits before tearing down a session. If no LDP messages are exchanged during this time interval, the LDP session is torn down. Generally the value is configured to be 3 times the keepalive time (the time interval between successive LDP keepalive messages). |

Sample Output

```

interface

Syntax

interface [*ip-int-name*] [**statistics**] [**ipv4** | **ipv6**]

Context

[\[Tree\]](#) (clear>router>ldp interface)

Full Context

clear router ldp interface

Description

This command restarts or clears statistics for LDP interfaces.

Parameters

ip-int-name

The name of an existing interface. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.

family

Specifies to clear IPv4 or IPv6 information.

Platforms

All

Output

Sample Output

```
*A:Dut-A# clear router ldp interface "ip-10.10.1.1" ipv4
*A:Dut-A#

*A:Dut-A# clear router ldp interface "ip-10.10.1.1" ipv6
*A:Dut-A#
```

interface

Syntax

interface *ip-int-name*

Context

[\[Tree\]](#) (tools>dump>router>ldp interface)

Full Context

tools dump router ldp interface

Description

This command dumps information for an LDP interface.

Parameters

ip-int-name

Specifies the name of an existing router.

Platforms

All

interface

Syntax

interface [*ip-int-name* | *ip-address*] [**label-map** *label*]

interface [*ip-int-name* | *ip-address*] **statistics** [**aux-stats**]

Context

[\[Tree\]](#) (show>router>mpls interface)

Full Context

show router mpls interface

Description

This command displays MPLS interface information.

Parameters

ip-int-name

Specifies the name of the network IP interface. An interface name cannot be in the form of an IP address. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.

ip-address

Specifies the system or network interface IP address.

label-map label

Specifies the MPLS label on which to match.

Values 32 to 1048575

statistics

Displays the MPLS interface name and the number of packets and octets sent and received on an MPLS interface.

aux-stats

Displays auxiliary MPLS statistics next to the default MPLS statistics.

Platforms

All

Output

The following output is an example of MPLS interface information.

[Table 201: MPLS Interface Output Fields](#) describes MPLS interface output fields.

Table 201: MPLS Interface Output Fields

| Label | Description |
|-------------|---|
| Interface | The interface name. |
| Port-id | The port ID. |
| Adm | Specifies the administrative state of the interface. |
| Opr | Specifies the operational state of the interface. |
| Te-metric | Specifies the traffic engineering metric used on the interface. |
| Srlg Groups | Specifies the shared risk loss group (SRLG) name(s). |
| Interfaces | The total number of interfaces. |
| Transmitted | Displays the number of packets and octets transmitted from the interface. |
| Received | Displays the number of packets and octets received. |
| In Label | Specifies the ingress label. |
| In I/F | Specifies the ingress interface. |
| Out Label | Specifies the egress label. |
| Out I/F | Specifies the egress interface. |
| Next Hop | Specifies the next hop IP address for the static LSP. |
| Type | Specifies whether the label value is statically or dynamically assigned. |

Sample Output

interface

Syntax

```
interface [ip-int-name | ip-address] statistics [ detail]
```

Context

[\[Tree\]](#) (show>router>rsvp interface)

Full Context

```
show router rsvp interface
```

Description

This command shows RSVP interfaces.

Parameters

ip-int-name

Specifies the network IP interface. An interface name cannot be in the form of an IP address. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.

ip-address

Specifies the system or network interface IP address.

statistics

Displays the RSVP interface name and counts of various RSVP packets sent and received on the interface.

detail

Displays detailed information.

Platforms

All

Output

The following output is an example of RSVP interface information.

[Table 202: RSVP Interface Output Fields](#) describes RSVP interface output fields.

Table 202: RSVP Interface Output Fields

| Label | Description |
|-----------------|---|
| Interface | The name of the IP interface. |
| Total Sessions | The total number of RSVP sessions on this interface. This count includes sessions that are active as well as sessions that have been signaled but a response has not yet been received. |
| Active Sessions | The total number of active RSVP sessions on this interface. |
| Total BW (Mbps) | The amount of bandwidth in Mb/s available to be reserved for the RSVP protocol on the interface. |
| Resv BW (Mbps) | The amount of bandwidth in Mb/s reserved on this interface. A value of zero (0) indicates that no bandwidth is reserved. |
| Adm | Down — The RSVP interface is administratively disabled. Up — The RSVP interface is administratively enabled. |
| Bfd | Yes — BFD is enabled on the RSVP interface. No — BFD is disabled on the RSVP interface. |
| Opr | Down — The RSVP interface is operationally down. Up — The RSVP interface is operationally up. |
| Port ID | Specifies the physical port bound to the interface. |
| Active Resvs | The total number of active RSVP sessions that have reserved bandwidth. |
| Subscription | Specifies the percentage of the link bandwidth that RSVP can use for reservation. When the value is zero (0), no new sessions are permitted on this interface. |
| Port Speed | Specifies the speed for the interface. |

| Label | Description |
|-------------------|--|
| Unreserved BW | Specifies the amount of unreserved bandwidth. |
| Reserved BW | Specifies the amount of bandwidth in Mb/s reserved by the RSVP session on this interface. A value of zero (0) indicates that no bandwidth is reserved. |
| Total BW | Specifies the amount of bandwidth in Mb/s available to be reserved for the RSVP protocol on this interface. |
| Aggregate | Aggregate messages are used to pack multiple RSVP messages into a single packet to reduce the network overhead. When the value is true, RSVP negotiates with each neighbor and gets consensus before sending aggregate messages. |
| Hello Interval | Specifies the length of time (in s) between the hello packets that the router sends on the interface. This value must be the same for all routers attached to a common network. When the value is zero (0), the sending of hello messages is disabled. |
| Refresh Time | Specifies the interval between the successive Path and Resv refresh messages. RSVP declares the session down after it misses $((\text{keep-multiplier} + 0.5) * 1.5 * \text{refresh-time})$ consecutive refresh messages. |
| Hello Timeouts | The total number of hello messages that timed out on this RSVP interface. |
| Neighbors | The IP address of the RSVP neighbor. |
| Sent | The total number of error free RSVP packets that have been transmitted on the RSVP interface. |
| Recd | The total number of error free RSVP packets received on the RSVP interface. |
| Total Packets | The total number of RSVP packets, including errors, received on the RSVP interface. |
| Bad Packets | The total number of RSVP packets with errors transmitted on the RSVP interface. |
| Paths | The total number of RSVP PATH messages received on the RSVP interface. |
| Path Errors | The total number of RSVP PATH ERROR messages transmitted on the RSVP interface. |
| Path Tears | The total number of RSVP PATH TEAR messages received on the RSVP interface. |
| Resvs | The total number of RSVP RESV messages received on the RSVP interface. |
| Resv Confirms | The total number of RSVP RESV CONFIRM messages received on the RSVP interface. |
| Resv Errors | Total RSVP RESV ERROR messages received on RSVP interface. |
| Resv Tears | Total RSVP RESV TEAR messages received on RSVP interface. |
| Refresh Summaries | Total RSVP RESV summary refresh messages received on interface. |

| Label | Description |
|--------------------|--|
| Refresh Acks | Total RSVP RESV acknowledgment messages received when refresh reduction is enabled on the RSVP interface. |
| Bundle Packets | Total RSVP RESV bundled packets received on the RSVP interface. |
| Hellos | Total RSVP RESV HELLO REQ messages received on the interface. |
| DBw Multiplier | Displays the configured dark bandwidth multiplier. |
| DBw Up Threshold | Displays the configured dark bandwidth up threshold (per interface or inherited). |
| DBw Down Threshold | Displays the configured dark bandwidth down threshold (per interface or inherited). |
| DBw Sample Index | Displays the index of the dark bandwidth current sample. |
| DBw Last Sample | Displays the latest sampled value of the dark bandwidth. |
| Latest Cal DBw | Displays the latest value of the calculated dark bandwidth (calculated over average interval = sample-interval × sample-multiplier). The value indicated here has already been multiplied by the dbw-multiplier. |
| Advertised MRLB | Displays the value of the latest advertised Maximum Reservable Link Bandwidth. |

Sample Output

```

```

interface

Syntax

```
interface ip-int-name [statistics | aux-stats]
```

Context

```
[Tree] (clear>router>mpls interface)
```

Full Context

```
clear router mpls interface
```

Description

This command resets or clears statistics for MPLS interfaces.

Parameters

ip-int-name

Specifies an existing IP interface. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.

statistics

Clears only packet and octet counters, and only these of the default MPLS statistics.

aux-stats

Clears only packet and octet counters, and only these of the default auxiliary MPLS statistics.

Platforms

All

interface

Syntax

```
interface [ip-int-name] [statistics]
```

Context

[\[Tree\]](#) (clear>router>rsvp interface)

Full Context

```
clear router rsvp interface
```

Description

This command resets or clears statistics for an RSVP interface.

Parameters

ip-int-name

Specifies the IP interface to clear. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.

statistics

Clears only statistics.

Platforms

All

interface

Syntax

interface [**service** *service-id*] [**interface** *ip-int-name*] [**stats** { **rt-server** | **fcc-server**}]

interface [**service** *service-id*] [**interface** *ip-int-name*] **summary**

Context

[Tree] (show>video interface)

Full Context

show video interface

Description

This command displays video interface information.

Parameters

service *service-id*

Displays video interface information pertaining to the specified service ID.

Values 1 to 2148278317

svc-name — a string up to 64 characters.

interface *ip-int-name*

Displays video interface information pertaining to the specified interface.

stats

Displays video interface statistics.

Values **rt-server** — Displays video interface statistics for the RET server.

fcc-server — Displays video interface statistics for the FCC server.

Platforms

7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

Output

The following is an example output for this command.

Sample Output

```
*A:Dut-C# show video interface

interface

Syntax

interface *ip-int-name* [**address** *ip-address*] [**rt-client**] [**rt-server**] [**fcc-server**] [**ad-insert**]

Context

[\[Tree\]](#) (clear>video>statistics>id interface)

Full Context

clear video statistics id interface

Description

This command clears video statistics for a particular channel.

Parameters

ip-int-name

Clears statistics for the specified interface.

address *ip-address*

Clears statistics for the specified IP address.

rt-client

Clears all RET client related statistics.

rt-server

Clears all RET server related statistics.

fcc-server

Clears all FCC server related statistics.

ad-insert

Clears all ad insert related statistics.

grp-address

Clears statistics for the specified channel group address.

source *srcAddr*

Clears statistics for the specified source address.

Platforms

7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

interface

Syntax

interface [*ip-int-name* | *ipv6-address*] [**group**] [*grp-ipv6-address*] [**detail**]

Context

[\[Tree\]](#) (show>router>mld interface)

Full Context

show router mld interface

Description

This command displays MLD interface information.

Parameters

ip-int-name

Displays the information associated with the specified IPv6 interface name.

ipv6-address

Displays the information associated with the specified IPv6 address.

group *grp-ipv6-address*

Displays IPv6 multicast group address for which this entry contains information.

detail

Displays detailed IPv6 interface information along with the source group information learned on that interface.

Platforms

All

Output

The following is an example of MLD interface information. [Table 203: MLD Fields](#) displays MLD field descriptions.

Sample Output

```
*A:Dut-A# show router mld interface
=====

*A:Dut-A#
```

Table 203: MLD Fields

| Label | Description |
|---------------------------------------|---|
| Interface | The interfaces that participate in the MLD protocol. |
| Adm Admin Status | The administrative state for the MLD protocol on this interface. |
| Oper Oper Status | The current operational state of MLD protocol on the interface. |
| Querier | The address of the MLD querier on the IP subnet to which the interface is attached. |
| Querier Up Time | The time since the querier was last elected as querier. |
| Querier Expiry Timer | The time remaining before the querier ages out. If the querier is the local interface address, the value will be zero. |
| Cfg/Opr Version Admin/Oper version | Cfg — The configured version of MLD running on this interface. For MLD to function correctly, all routers on a LAN must be configured to run the same version of MLD on that LAN. Opr — The operational version of MLD running on this interface. |
| Num Groups | The number of multicast groups which have been learned by the router on the interface. |
| Policy | The policy that is to be applied on the interface. |

| Label | Description |
|---------------|---|
| Group Address | The IP multicast group address for which this entry contains information. |

interface

Syntax

interface [*ip-int-name* | *mt-int-name* | *ip-address*] [**group** *grp-ip-address* | **source** *ip-address* [**type** {**starstarrp** | **starg** | **sg**}] [**detail**] [*family*]

Context

[\[Tree\]](#) (show>router>pim interface)

Full Context

show router pim interface

Description

This command displays PIM interface information and the (S,G)/(*,G)/(*, *, rp) state of the interface.

Parameters

ip-int-name

Displays interface information associated with the specified IP interface name.

mt-int-name

Displays Multicast Tunnel (MT) interface information for a VPRN.

Values <*vprn-id*>-mt-<*grp-ip-address*>

ip-address

Displays interface information associated with the specified IP address.

group *grp-ip-address*

Displays the IP multicast group address information for which this entry contains information.

source *ip-address*

Displays information about the source address for which this entry contains information.

If the type is **starg**, the value of this object is zero.

If the type is **starstarrp**, the value of this object is the address of the RP.

type

Displays information for the specified entry type.

Values **starstarrp**, **starg**, **sg**

detail

Displays detailed interface information.

family

Displays family information for the interface.

Values ipv4, ipv6

Platforms

All

Output

The following is an example of a PIM interface configuration. [Table 204: PIM Interface Fields](#) provides PIM interface field descriptions.

Sample Output

```
ALA-1# show router pim interface

Table 204: PIM Interface Fields

| Label | Description |
|---------------------|--|
| Admin State | The administrative state for PIM protocol on this interface |
| Oper State | The current operational state of PIM protocol on this interface |
| DR | The designated router on this PIM interface |
| DR Priority | The priority value sent in PIM Hello messages and that is used by routers to elect the designated router (DR). |
| Hello Intvl | The frequency at which PIM Hello messages are transmitted on this interface |
| OperGroup | The OperGroup name associated with the PIM interface |
| OprGrp Active oper | The OperGroup operation (add, set, subtract) to the DR priority |
| Cfg OprGrp Priority | The configured OperGroup DR priority |

interface

Syntax

interface [*ip-int-name*]

Context

[Tree] (show>cflowd interface)

Full Context

show cflowd interface

Description

Displays the administrative and operational status of the interfaces with cflowd enabled.

Parameters

ip-int-name

Displays information only for the IP interface with the specified name.

Default all interfaces with cflowd enabled

Platforms

All

Output

The following output is an example of cflowd interface information, and [Table 205: Show cflowd Interface Output Fields](#) describes the output fields.

Table 205: Show cflowd Interface Output Fields

| Label | Description |
|--------------|---|
| Interface | Displays the physical port identifier |
| IPv4 Address | Displays the primary IPv4 address for the associated IP interface |
| IPv6 Address | Displays the primary IPv6 address for the associated IP interface |
| Router | Displays the virtual router index (Base = 0) |
| IF Index | Displays the Global IP interface index |
| Mode | Displays the cflowd sampling type and direction intf — Interface based sampling acl — ACL based sampling ingr — Ingress sampling egr — Egress sampling both — Both ingress and egress sampling |
| Admin | Displays the administrative state of the interface |
| Opr-IPv4 | Displays the operational state for IPv4 sampling |
| Opr-IPv6 | Displays the operational state for IPv6 sampling |

Sample Output

```

B:sr-002# show cflowd interface [ip-addr | ip-int-name]

show router bfd interface

Description

This command displays interface information.

Parameters

interface-name

Specifies the interface name.

family

Specifies whether IPv4 or IPv6 routes are displayed.

detail

Displays detailed interface information.

summary

Displays summary interface information for the router.

Platforms

All

Output

The following output is an example of BFD interface information, and [Table 206: BFD Interface Fields](#) describes the fields.

Sample Output

```
*A:Dut-B# show router bfd interface

Context

[\[Tree\]](#) (show>router>isis interface)

Full Context

show router isis interface

Description

This command displays IS-IS interface information. When no *ip-addr* or the *ip-int-name* is specified, all interfaces are listed.

Parameters

ip-address

Only displays the interface information associated with the specified IP address.

- Values**
- ipv4-address
 - a.b.c.d (host bits must be 0)
 - ipv6-address
 - x:x:x:x:x:x:x (eight 16-bit pieces)
 - x:x:x:x:x:d.d.d.d
 - x: [0 to FFFF]H
 - d: [0 to 255]D

ip-int-name

Only displays the interface information associated with the specified IP interface name.

detail

All output is displayed in the detailed format.

Platforms

All

Output

The following outputs are examples of IS-IS interface information, and [Table 208: IS-IS Interface Output Fields](#) describes the output fields.

Sample Output

|------------------|--|
| Interface | The interface name |
| Level Capability | Specifies the interface level (1, 2, or 1 and 2) |
| Circuit Id | Specifies the circuit identifier |
| Oper State | Up — The interface is operationally up Down — The interface is operationally down |
| Metric | Interface metric for Level 1 and Level 2, if none are set to 0 |
| Type | p2p — The operational interface type is point-to-point bcst — The operational interface type is broadcast |

interface

Syntax

```

interface [ip-int-name | ip-address ][ detail]
interface [area area-id] [detail]
interface [ip-int-name | ip-address] database [ detail]
  
```

Context

[\[Tree\]](#) (show>router>ospf interface)

Full Context

```
show router ospf interface
```

Description

This command displays the details of the OSPF interface identifiable by the IP address or IP interface name. When neither is specified, all in-service interfaces are displayed.

The **detail** option generates large volumes of data. Nokia recommends using the **detail** keyword only when requesting a specific interface.

Parameters

ip-int-name

Displays only the interface identified by this interface name, up to a maximum of 32 characters.

ip-address

Displays only the interface identified by this IPv4 address.

Values ipv4-address:
 • a.b.c.d

area area-id

Displays all interfaces configured in this area.

Values ip-address — a.b.c.d
 area — 0 to 4294967295

detail

Displays detailed information for the interface.

database

Displays database information for the interface.

Platforms

All

Output

The following outputs are examples of OSPF interface information, and the associated tables describe the output fields.

Sample Output

```
*A:Dut-C# show router ospf interface "system"
=====
Rtr Base OSPFv2 Instance 0 Interface "system"
=====
If Name          Area Id          Designated Rtr  Bkup Desig Rtr  Adm Oper

Table 209: OSPF Interface Output Fields

| Label | Description |
|-----------|--|
| If Name | The interface name. |
| Area Id | A 32-bit integer uniquely identifying the area to which this interface is connected. Area ID 0.0.0.0 is used for the OSPF backbone. |
| D Rtr Id | The IP Interface address of the router identified as the Designated Router for the network in which this interface is configured. Set to 0.0.0.0 if there is no Designated router. |
| BD Rtr Id | The IP Interface address of the router identified as the Backup Designated Router for the network in which this interface is configured. Set to 0.0.0.0 if there is no Backup Designated router. |
| Adm | Dn — OSPF on this interface is administratively shut down. |
| | Up — OSPF on this interface is administratively enabled. |
| Opr | Down — This is the initial interface state. In this state, the lower-level protocols have indicated that the interface is unusable. |
| | Wait — The router is trying to determine the identity of the (Backup) Designated router for the network. |

| Label | Description |
|------------------------|---|
| | <p>PToP — The interface is operational, and connects either to a physical point-to-point network or to a virtual link.</p> <p>DR — This router is the Designated Router for this network.</p> <p>BDR — This router is the backup Designated Router for this network.</p> <p>ODR — The interface is operational and part of a broadcast or NBMA network on which another router has been selected to be the Designated Router.</p> |
| No. of OSPF Interfaces | The number of interfaces listed. |

Table 210: Detailed OSPF Interface Output Fields

| Label | Description |
|-----------------|--|
| Interface | The IP address of this OSPF interface. |
| IP Address | The IP address and mask of this OSPF interface. |
| Interface Name | The interface name. |
| Area Id | A 32-bit integer uniquely identifying the area to which this interface is connected. Area ID 0.0.0.0 is used for the OSPF backbone. |
| Priority | The priority of this interface. Used in multi-access networks, this field is used in the designated router election algorithm. |
| Hello Intrvl | The length of time, in seconds, between the Hello packets that the router sends on the interface. This value must be the same for all routers attached to a common network. |
| Rtr Dead Intrvl | The number of seconds that a router's Hello packets have not been seen before its neighbors declare the router down. This should be some multiple of the Hello interval. This value must be the same for all routers attached to a common network. |
| Retrans Intrvl | The number of seconds between link-state advertisement retransmissions, for adjacencies belonging to this interface. This value is also used when retransmitting database description and link-state request packets. |
| Poll Intrvl | The larger time interval, in seconds, between the Hello packets sent to an inactive non-broadcast multi-access neighbor. |
| Metric | The metric to be advertised for this interface. |
| Advert Subnet | False — When a point-to-point interface is configured as false, then the subnet is not advertised and the endpoints are advertised as host routes. True — When a point-to-point interface is configured to true, then the subnet is advertised. |
| Transit Delay | The estimated number of seconds it takes to transmit a link state update packet over this interface. |

| Label | Description |
|--------------|--|
| Auth Type | <p>Identifies the authentication procedure to be used for the packet.</p> <p>None — Routing exchanges over the network/subnet are not authenticated.</p> <p>Simple — A 64-bit field is configured on a per-network basis. All packets sent on a particular network must have this configured value in their OSPF header 64-bit authentication field. This essentially serves as a “clear” 64-bit password.</p> <p>MD5 — A shared secret key is configured in all routers attached to a common network/subnet. For each OSPF protocol packet, the key is used to generate/verify a “message digest” that is appended to the end of the OSPF packet.</p> |
| Passive | <p>False — This interfaces operates as a normal OSPF interface with regard to adjacency forming and network/link behavior.</p> <p>True — No OSPF HELLOs will be sent out on this interface and the router advertises this interface as a stub network/link in its router LSAs.</p> |
| MTU | <p>The desired size of the largest packet which can be sent/received on this OSPF interface, specified in octets. This size does include the underlying IP header length, but not the underlying layer headers/trailers.</p> |
| Admin Status | <p>Disabled — OSPF on this interface is administratively shut down.</p> <p>Enabled — OSPF on this interface is administratively enabled.</p> |
| Oper State | <p>Down — This is the initial interface state. In this state, the lower-level protocols have indicated that the interface is unusable.</p> <p>Waiting — The router is trying to determine the identity of the (Backup) Designated router for the network.</p> <p>Point To Point — The interface is operational, and connects either to a physical point-to-point network or to a virtual link.</p> <p>Designated Rtr — This router is the Designated Router for this network.</p> <p>Other Desig Rtr — The interface is operational and part of a broadcast or NBMA network on which another router has been selected to be the Designated Router.</p> <p>Backup Desig Rtr — This router is the Backup Designated Router for this network.</p> |
| DR-Id | <p>The IP Interface address of the router identified as the Designated Router for the network in which this interface is configured. Set to 0.0.0.0 if there is no Designated router.</p> |
| BDR-Id | <p>The IP Interface address of the router identified as the Backup Designated Router for the network in which this interface is</p> |

| Label | Description |
|----------------|--|
| | configured. Set to 0.0.0.0 if there is no Backup Designated router. |
| IF Type | Broadcast — LANs, such as Ethernet. Non-Broadcast — X.25, Frame Relay and similar technologies. Point-To-Point — Point-to-point links. |
| Network Type | Stub — OSPF has not established a neighbor relationship with any other OSPF router on this network as such only traffic sourced or destined to this network is routed to this network. |
| | Transit — OSPF has established at least one neighbor relationship with any other OSPF router on this network as such traffic enroute to other networks may be routed via this network. |
| Oper MTU | The operational size of the largest packet which can be sent or received on this OSPF interface, specified in octets. This size does include the underlying IP header length, but not the underlying layer headers/trailers. |
| Last Enabled | The time that this interface was last enabled to run OSPF on this interface. |
| Nbr Count | The number of OSPF neighbors on the network for this interface. |
| If Events | The number of times this OSPF interface has changed its state, or an error has occurred since this interface was last enabled. |
| Tot Rx Packets | The total number of OSPF packets received on this interface since this interface was last enabled. |
| Tot Tx Packets | The total number of OSPF packets transmitted on this interface since this interface was last enabled. |
| Rx Hellos | The total number of OSPF Hello packets received on this interface since this interface was last enabled. |
| Tx Hellos | The total number of OSPF Hello packets transmitted on this interface since this interface was last enabled. |
| Rx DBDs | The total number of OSPF database description packets received on this interface since this interface was last enabled. |
| Tx DBDs | The total number of OSPF database description packets transmitted on this interface since this interface was last enabled. |
| Rx LSRs | The total number of Link State Requests (LSRs) received on this interface since this interface was last enabled. |

| Label | Description |
|----------------|---|
| Tx LSRs | The total number of Link State Requests (LSRs) transmitted on this interface since this interface was last enabled. |
| Rx LSUs | The total number of Link State Updates (LSUs) received on this interface since this interface was last enabled. |
| Tx LSUs | The total number of Link State Updates (LSUs) transmitted on this interface since this interface was last enabled. |
| Rx LS Acks | The total number of Link State Acknowledgments received on this interface since this interface was last enabled. |
| Tx LS Acks | The total number of Link State Acknowledgments transmitted on this interface since this interface was last enabled. |
| Retransmits | The total number of OSPF Retransmits sent on this interface since this interface was last enabled. |
| Discards | The total number of OSPF packets discarded on this interface since this interface was last enabled. |
| Bad Networks | The total number of OSPF packets received with invalid network or mask since this interface was last enabled. |
| Bad Virt Links | The total number of OSPF packets received on this interface that are destined to a virtual link that does not exist since this interface was last enabled. |
| Bad Areas | The total number of OSPF packets received with an area mismatch since this interface was last enabled. |
| Bad Dest Addr | The total number of OSPF packets received with the incorrect IP destination address since this interface was last enabled. |
| Bad Auth Types | The total number of OSPF packets received with an invalid authorization type since this interface was last enabled. |
| Auth Failures | The total number of OSPF packets received with an invalid authorization key since this interface was last enabled. |
| Bad Neighbors | The total number of OSPF packets received where the neighbor information does not match the information this router has for the neighbor since this interface was last enabled. |
| Bad Pkt Types | The total number of OSPF packets received with an invalid OSPF packet type since this interface was last enabled. |
| Bad Lengths | The total number of OSPF packets received on this interface with a total length not equal to the length given in the packet itself since this interface was last enabled. |

| Label | Description |
|-----------------|--|
| Bad Hello int. | The total number of OSPF packets received where the hello interval given in packet was not equal to that configured on this interface since this interface was last enabled. |
| Bad Dead Int. | The total number of OSPF packets received where the dead interval given in the packet was not equal to that configured on this interface since this interface was last enabled. |
| Bad Options | The total number of OSPF packets received with an option that does not match those configured for this interface or area since this interface was last enabled. |
| Bad Versions | The total number of OSPF packets received with bad OSPF version numbers since this interface was last enabled. |
| Te Metric | Indicates the TE metric configured for this interface. This metric is flooded out in the TE metric sub-tlv in the OSPF TE LSAs. Depending on the configuration, either the TE metric value or the native OSPF metric value is used in CSPF computations. |
| Te State | Indicates the MPLS interface TE status from OSPF standpoint. |
| Admin Groups | Indicates the bit-map inherited from MPLS interface that identifies the admin groups to which this interface belongs. |
| Ldp Sync | Specifies whether the IGP-LDP synchronization feature is enabled or disabled on all interfaces participating in the OSPF routing protocol. |
| Ldp Sync Wait | Indicates the time to wait for the LDP adjacency to come up. |
| Ldp Timer State | Indicates the state of the LDP sync time left on the OSPF interface. |
| Ldp Tm Left | Indicates the time left before OSPF reverts back to advertising normal metric for this interface. |
| Tx Failures | Transmitted OSPF packets that are dropped due to resource shortage. |

interface

Syntax

interface [*ip-int-name* | *ip-address* | *ipv6-address*] [**detail**]

interface [*area area-id*] [**detail**]

interface [*ip-int-name* | *ip-address*]| *ipv6-address* **database** [**detail**]

Context

[\[Tree\]](#) (show>router>ospf3 interface)

Full Context

show router ospf3 interface

Description

This command displays the details of the OSPFv3 interface identified by the IP address or IP interface name. When neither is specified, all in-service interfaces are displayed.

The **detail** option generates large volumes of data. Nokia recommends using the **detail** keyword only when requesting a specific interface.

Parameters

ip-int-name

Displays only the interface identified by this interface name, up to a maximum of 32 characters.

ip-address

Displays only the interface identified by this IPv4 or IPv6 address.

Values ipv4-address:

- a.b.c.d

ipv6-address:

- x:x:x:x:x:x (eight 16-bit pieces)
- x:x:x:x:x:d.d.d
- x: [0 to FFFF]H
- d: [0 to 255]D

area *area-id*

Displays all interfaces configured in this area.

Values ip-address — a.b.c.d
 area — 0 to 4294967295

detail

Displays detailed information for the interface.

database

Displays database information for the interface.

Platforms

All

Output

The following output is an example of an OSPFv3 interface information, and [Table 211: Detailed OSPFv3 Interface Output Fields](#) describes the output fields.

Sample Output (OSPFv3 Detailed)

Table 211: Detailed OSPFv3 Interface Output Fields

| Label | Description |
|-----------------|--|
| IP Address | The IP address and mask of this OSPF interface. |
| Area Id | A 32-bit integer uniquely identifying the area to which this interface is connected. Area ID 0.0.0.0 is used for the OSPF backbone. |
| Priority | The priority of this interface. Used in multi-access networks, this field is used in the designated router election algorithm. |
| Hello Intrvl | The interval of time, in seconds, between the Hello packets that the router sends on the interface. This value must be the same for all routers attached to a common network. |
| Rtr Dead Intrvl | The number of seconds that a router's Hello packets have not been seen before its neighbors declare the router down. This should be some multiple of the hello interval. This value must be the same for all routers attached to a common network. |
| Retrans Intrvl | The number of seconds between link-state advertisement retransmissions, for adjacencies belonging to this interface. This value is also used when retransmitting database description and link-state request packets. |
| Poll Intrvl | The larger time interval, in seconds, between the Hello packets sent to an inactive non-broadcast multi-access neighbor. |
| Advert Subnet | False — When a point-to-point interface is configured as false, the subnet is not advertised and the endpoints are advertised as host routes. |

| Label | Description |
|---------------|---|
| | True — When a point-to-point interface is configured to true, then the subnet is advertised. |
| Transit Delay | The estimated number of seconds it takes to transmit a link state update packet over this interface. |
| Passive | False — This interfaces operates as a normal OSPF interface with regard to adjacency forming and network/link behavior. True — No OSPF Hello messages sent out on this interface and the router advertises this interface as a stub network/link in its router LSAs. |
| MTU | The desired size of the largest packet, specified in octets, which can be sent or received on this OSPF interface. This size includes the underlying IP header length, but not the underlying layer headers and trailers. |
| Admin Status | Disabled — OSPF on this interface is administratively shut down. |
| | Enabled — OSPF on this interface is administratively enabled. |
| Oper State | Down — This is the initial interface state. In this state, the lower-level protocols have indicated that the interface is unusable. |
| | Waiting — The router is trying to determine the identity of the (Backup) Designated router for the network. |
| | Point To Point — The interface is operational, and connects either to a physical point-to-point network or to a virtual link. |
| | Designated Rtr — This router is the Designated router for this network. |
| | Other Desig Rtr — The interface is operational and part of a broadcast or NBMA network on which another router has been selected to be the Designated router. |
| | Backup Desig Rtr — This router is the Backup Designated router for this network. |
| IF Type | Broadcast — LANs, such as Ethernet. |
| | Non-Broadcast — X.25, Frame Relay and similar technologies. |
| | Point-To-Point — Point-to-point links. |
| Network Type | Stub — OSPF has not established a neighbor relationship with any other OSPF router on this network as such only traffic sourced or destined to this network is routed to this network. |
| | Transit — OSPF has established at least one neighbor relationship with any other OSPF router on this network as such traffic enroute to other networks may be routed via this network. |

| Label | Description |
|----------------|---|
| Oper MTU | The operational size of the largest packet, in octets, which can be sent or received on this OSPF interface. This size includes the underlying IP header length, but not the underlying layer headers and trailers. |
| Last Enabled | The time that this interface was last enabled to run OSPF on this interface. |
| Nbr Count | The number of OSPF neighbors on the network for this interface. |
| If Events | The number of times this OSPF interface has changed its state, or an error has occurred since this interface was last enabled. |
| Tot Rx Packets | The total number of OSPF packets received on this interface since this interface was last enabled. |
| Tot Tx Packets | The total number of OSPF packets transmitted on this interface since this interface was last enabled. |
| Rx Hellos | The total number of OSPF Hello packets received on this interface since this interface was last enabled. |
| Tx Hellos | The total number of OSPF Hello packets transmitted on this interface since this interface was last enabled. |
| Rx DBDs | The total number of OSPF database description packets received on this interface since this interface was last enabled. |
| Tx DBDs | The total number of OSPF database description packets transmitted on this interface since this interface was last enabled. |
| Rx LSRs | The total number of Link State Requests (LSRs) received on this interface since this interface was last enabled. |
| Tx LSRs | The total number of LSRs transmitted on this interface since this interface was last enabled. |
| Rx LSUs | The total number of Link State Updates (LSUs) received on this interface since this interface was last enabled. |
| Tx LSUs | The total number of LSUs transmitted on this interface since this interface was last enabled. |
| Rx LS Acks | The total number of Link State Acknowledgments (LSAs) received on this interface since this interface was last enabled. |
| Tx LS Acks | The total number of LSAs transmitted on this interface since this interface was last enabled. |
| Retransmits | The total number of OSPF retransmits sent on this interface since this interface was last enabled. |

| Label | Description |
|----------------|---|
| Discards | The total number of OSPF packets discarded on this interface since this interface was last enabled. |
| Bad Networks | The total number of OSPF packets received with invalid network or mask since this interface was last enabled. |
| Bad Virt Links | The total number of OSPF packets received on this interface that are destined to a virtual link that does not exist since this interface was last enabled. |
| Bad Areas | The total number of OSPF packets received with an area mismatch since this interface was last enabled. |
| Bad Dest Addr | The total number of OSPF packets received with the incorrect IP destination address since this interface was last enabled. |
| Bad Auth Types | The total number of OSPF packets received with an invalid authorization type since this interface was last enabled. |
| Auth Failures | The total number of OSPF packets received with an invalid authorization key since this interface was last enabled. |
| Bad Neighbors | The total number of OSPF packets received where the neighbor information does not match the information this router has for the neighbor since this interface was last enabled. |
| Bad Pkt Types | The total number of OSPF packets received with an invalid OSPF packet type since this interface was last enabled. |
| Bad Lengths | The total number of OSPF packets received on this interface with a total length not equal to the length given in the packet itself since this interface was last enabled. |
| Bad Hello Int. | The total number of OSPF packets received where the hello interval given in packet was not equal to that configured on this interface since this interface was last enabled. |
| Bad Dead Int. | The total number of OSPF packets received where the dead interval given in the packet was not equal to that configured on this interface since this interface was last enabled. |
| Bad Options | The total number of OSPF packets received with an option that does not match those configured for this interface or area since this interface was last enabled. |
| Bad Versions | The total number of OSPF packets received with bad OSPF version numbers since this interface was last enabled. |
| Te State | Indicates the MPLS interface TE status from OSPF standpoint. |
| Admin Groups | Indicates the bit-map inherited from MPLS interface that identifies the admin groups to which this interface belongs. |

| Label | Description |
|-----------------|--|
| Ldp Sync | Specifies whether the IGP-LDP synchronization feature is enabled or disabled on all interfaces participating in the OSPF routing protocol. |
| Ldp Sync Wait | Indicates the time to wait for the LDP adjacency to come up. |
| Ldp Timer State | Indicates the state of the LDP sync time left on the OSPF interface. |
| Ldp Tm Left | Indicates the time left before OSPF reverts back to advertising normal metric for this interface. |
| Tx Failures | Transmitted OSPFv3 packets that are dropped due to resource shortage. |

Sample Output

```

interface

Syntax

interface *interface-name* [**detail** | **aggregate** | **sample**]

Context

[\[Tree\]](#) (show>test-oam>link-measurement interface)

Full Context

show test-oam link-measurement interface

Description

This command displays the link measurement operational information, reporting, and recorded results for a specific interface.

Parameters

interface-name

Specifies the interface name, up to 32 characters, for which link measurement information is displayed.

detail

Optional keyword to display complete link measurement operational information, reporting, and results.

aggregate

Optional keyword to display operational information, reporting and aggregate sample window results.

sample

Optional keyword to display operational information, reporting, and sample window results.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Output

The following output is an example of link measurement information for a specific interface, and the following table describes the output fields.

Sample Output

```

show test-oam link-measurement interface "int-PE-1-PE-2"

Table 212: Output Fields: Link Measurement Interface

| Label | Description |
|---|--|
| Interface Link Measurement Information | |
| Template Name | The name of the link measurement template |
| Oper State | The operational state of the test configured under the interface Up — assigned link-measurement template, and a test protocol is enabled; UDP port available, and internal resources are available Down — one or more requirements for the Up state is not met |
| Protocol | The active protocol encapsulating the test packet IPv4 or IPv6 |
| Oper Source Address | The source address of the test packet |
| Source Auto-Assigned | The source address is automatically determined No — the source is configured or cannot be automatically determined Yes — the source is automatically determined |
| Oper Destination Address | The destination address of the test packet (IPv4 or IPv6) |
| Destination Auto-Assigned | The destination address is automatically determined. No — the destination is configured or cannot be automatically determined Yes — the destination is automatically determined |
| Failure Condition(s) | The requirements not met causing an Oper Down state |
| Detectable Tx Errors | The error condition detected that may prevent the test packet from being sent |
| Reporting | |

| Label | Description |
|---|--|
| Reporting Enabled | The current value should be compared to a threshold and possibly reported Yes — at least one threshold in either window is configured No — none of the thresholds in either window is configured |
| Delay Measurement Last Reported | The value of the last measurement reported to the routing engine |
| Timestamp | The end timestamp (UTC) of the last reported delay measurement |
| Trigger By | The window and threshold type that was exceeded triggering the reporting. Only one will be reported if multiple are triggered in the same window. |
| Aggregate Sample Window Delay Measurement Detail | |
| Count | The number of sample windows included in the aggregate sample window |
| Sample Window Delay Measurement Detail | |
| Rcv/Snt | The number of response test packets received (Rcv) and sent (Snt) |
| Err | The number of errors included in the sample window. This is the total of duplicates, zero, and negative valued measurements. The negative error count is incremented if either direction is negative, regardless of the unidirectional-measurement configuration method. A negative measurement in either direction calls into question the validity of both directions. Errors are included in the receive count, but do not count toward integrity. * — value exceeds column width; value more than 999 |
| Common Table Labels | |
| Currently Reporting | The configured value of the delay measurement to consider (Min, Max, Avg) |
| End Timestamp (UTC) | The time at which the window closed |
| State | The state of the window InProgress — currently executing Completed — closed via normal execution Terminated — preempted by some action; closed and not considered for report |

| Label | Description |
|----------|--|
| | SwReported — new delay reported from this sample window AswReported — new delay reported from this aggregate sample window (only applicable to Aggregate Sample Windows) |
| Min (us) | The minimum delay value recorded in this window, in units microseconds N/A — not applicable or in calculable, when no responses are received, or all are in error * — value exceeds column width; value in excess of 9999999 |
| Max (us) | The maximum delay value recorded in this window, in units microseconds N/A — not applicable or in calculable, when no responses are received, or all are in error * — value exceeds column width; value in excess of 9999999 |
| Avg (us) | The average delay value recorded in this window, in units microseconds N/A — not applicable or in calculable, when no responses are received, or all are in error * — value exceeds column width; value in excess of 9999999 |
| I | The window has integrity and should be considered Y — yes, achieved integrity N — no, did not meet configured integrity percentage |
| Results | The metric considered for reporting in this window N/A — not applicable or in calculable, when no responses are received, or all are in * — value exceeds column width; value more than 9999999 |

interface

Syntax

interface *interface* [*interface*] [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**] [**aux-stats**]

Context

[Tree] (monitor>router>mpls interface)

Full Context

monitor router mpls interface

Description

This command displays statistics for MPLS interfaces at the configured interval until the configured count is reached.

The first screen displays the current statistics related to the MPLS interface(s). The subsequent statistical information listed for each interval is displayed as a delta to the previous display. When the keyword **rate** is specified, the rate-per-second for each statistic is displayed instead of the delta.

Monitor commands are similar to **show** commands but only statistical information displays. Monitor commands display the selected statistics according to the configured number of times at the interval specified.

Parameters

interface

Specifies the IP address of the interface (*ip-address*) or interface name (*ip-int-name*). Up to five interfaces can be specified. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.

Values *ip-int-name, ip-address*

seconds

Configures the interval for each display, in seconds.

Values 11 to 60

Default 11 seconds

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

aux-stats

Displays auxiliary MPLS statistics next to the default MPLS statistics.

Platforms

All

Output

The following output is an example of MPLS interface information.

Sample Output

```

[\[Tree\]](#) (monitor>router>ospf interface)

Full Context

monitor router ospf3 interface

monitor router ospf interface

Description

This command displays statistics for OSPF interfaces at the configured interval until the configured count is reached.

The first screen displays the current statistics related to the OSPF interface(s). The subsequent statistical information listed for each interval is displayed as a delta to the previous display.

When the keyword **rate** is specified, the rate-per-second for each statistic is displayed instead of the delta.

Monitor commands are similar to **show** commands but only statistical information displays. Monitor commands display the selected statistics according to the configured number of times at the interval specified.

Parameters

interface

Specifies the IP address of the interface (*ip-address*) or interface name (*ip-int-name*). Up to five interfaces can be specified. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.

Values *ip-int-address, ip-address*

seconds

Configures the interval for each display, in seconds.

Values 3 to 60

Default 10

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

=====
A:ALA-12>monitor>router>ospf#

interface

Syntax

interface *interface* [*interface*] [*interval seconds*] [*repeat repeat*] [*absolute | rate*]

Context

[Tree] (monitor>router>rsvp interface)

Full Context

monitor router rsvp interface

Description

This command displays statistics for RSVP interfaces at the configured interval until the configured count is reached.

The first screen displays the current statistics related to the RSVP interface(s). The subsequent statistical information listed for each interval is displayed as a delta to the previous display. When the keyword **rate** is specified, the rate-per-second for each statistic is displayed instead of the delta.

Monitor commands are similar to **show** commands but only statistical information displays. Monitor commands display the selected statistics according to the configured number of times at the interval specified.

Parameters

interface

Specifies the IP address of the interface (*ip-address*) or interface name (*ip-int-name*). Up to five interfaces can be specified. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.

Values *ip-int-name, ip-address*

seconds

Configures the interval for each display, in seconds.

Values 3 to 60

Default 10

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

Platforms

All

13.38 interface-connection

interface-connection

Syntax

interface-connection [*interval seconds*] [*repeat repeat*] [*absolute*| *rate*]

Context

[\[Tree\]](#) (monitor>port>atm interface-connection)

Full Context

monitor port atm interface-connection

Description

This command monitors ATM interface connection statistics.

Parameters

seconds

Configures the interval for each display in seconds.

Values 3 to 60

Default 10

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, 7950 XRS

interface-connection

Syntax

interface-connection [*detail*]

Context

[\[Tree\]](#) (show>port>atm interface-connection)

Full Context

show port atm interface-connection

Description

This command displays ATM port interface connection information.

Parameters

detail

Displays detailed information.

Platforms

7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, 7950 XRS

13.39 interface-group-handler

interface-group-handler

Syntax

interface-group-handler [*index*]

Context

[\[Tree\]](#) (show interface-group-handler)

Full Context

show interface-group-handler

Description

This command displays Interface Group Handler (IGH) information.

If no command line options are specified, a summary listing of all IGHs is displayed.

Parameters

index

Specifies the index.

Values 1 to 100

Platforms

All

Output

The following output is an example of Interface Group Handler information, and [Table 213: Output Fields: show interface-group-handler](#) describes the output fields.

Sample Output: show interface-group-handler

```

Table 213: Output Fields: show interface-group-handler

| Field | Description |
|-------------------|---|
| IGH Index | A value between 1 and 100 that identifies the specific interface group handler. |
| Admin State | Up — The interface group handler is administratively up. Down — The interface group handler administratively down. |
| Number of Members | Identifies the number of ports or channels in the group, up to a maximum of 8. |
| Threshold | Indicates the minimum number of active links that must be present for the interface group handler to be active. |

13.40 interface-id-mapping

interface-id-mapping

Syntax

interface-id-mapping

Context

[\[Tree\]](#) (show>router>dhcp6>local-dhcp-server interface-id-mapping)

Full Context

show router dhcp6 local-dhcp-server interface-id-mapping

Description

This command displays information about the DHCPv6 server that uses a unique /64 prefix per interface-ID options combination.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following output is an example of interface ID mapping information.

Sample Output

```
show router 600 dhcp6 local-dhcp-server "d6" interface-id-mapping
```

```
=====
Interface-ID Mappings for DHCPv6 server d6
=====
```

```

Mapped Prefix      : 2001:AAAA::/64

LDRA Interface ID  : (Not Specified)
Active Leases      : 2001:AAAA::1 (stable)
=====
1 prefix found
=====

```

[Table 214: Interface ID Mapping Field Descriptions](#) describes interface ID mapping field descriptions.

Table 214: Interface ID Mapping Field Descriptions

| Field | Description |
|-----------------------|---|
| Mapped Prefix | The mapped prefix |
| Relay Interface ID | The value of the Interface-ID Option assigned by the DHCPv6 Relay Agent |
| LDRA Interface ID | The value of the Interface-ID Option assigned by the Lightweight DHCPv6 Relay Agent |
| Active Leases | The number of active leases |
| No. of prefixes found | The total number of prefixes found. |

13.41 interface-statistics

interface-statistics

Syntax

interface-statistics service *service-id* all

interface-statistics service *service-id* group-interface *grp-if*

interface-statistics service *service-id* subscriber-interface *sub-if*

Context

[\[Tree\]](#) (clear>subscr-mgmt interface-statistics)

Full Context

clear subscriber-mgmt interface-statistics

Description

This command clears subscriber interface statistics.

Parameters

service-id

Specifies the service ID of the service

Values 1 to 214748364
svc-name: up to 64 characters

grp-id

Specifies the group interface name, up to 32 characters

sub-id

Specifies the subscriber interface, up to 32 characters

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

interface-statistics

Syntax

interface-statistics service *service-id* all

interface-statistics service *service-id* group-interface *grp-if*

Context

[\[Tree\]](#) (show>filter ip)

Full Context

show filter ip

Description

This command displays IPv4 filter information.

When **effective-action** is specified, this command displays what effectively happens to a packet that matches the criteria associated with the IPv4 filter policy.

Parameters

filter-type

Specifies the type of filter to display.

Values config, flowspec, host-common, openflow, vsd

inactive

Displays all, or optionally inactive embeddings. If *ip-filter-id* is specified, displays embeddings for the IP filter ID.

ip-filter-id

Specifies the IPv4 filter policy for which to display information. Values can be expressed in different formats; the following shows decimal integer format.

Values 1 to 65535

detail

Displays detailed information.

associations

Appends, to the detailed filter policy output, information about where the specified filter policy is applied.

entry-type

Specifies the type of filter entry to display.

Values fixed, radius-insert, credit-control-insert, flow-spec, embedded, radius-shared, pcc-rule

counters

Displays counter information for the specified filter ID. Egress counters count the packets without Layer 2 encapsulation. Ingress counters count the packets with Layer 2 encapsulation.

entry-id

Specifies the filter policy entry (of the specified filter policy) for which to display information.

Values 1 to 2097151

effective-action

Displays the action that the system will effectively apply to the packet.

ingress

Filters the output and only displays the information for filter policies applied on ingress.

egress

Filters the output and only displays the information for filter policies applied on egress.

router

Filters the output and only displays the information for that specific service ("Base" instance).

service-id

Filters the output and only displays the information for the specified service. The specified value must correspond to an existing service in which the filter has been applied.

Platforms

All

Output

Show Filter (no policy specified) — The following is a sample output of IPv4 filter information when no policy is specified. [Table 215: Show IP Filter Output Fields - no policy specified](#) describes the command output fields.

Sample Output

```
A:ALA-49# show filter ip
=====
```

```

Configured IP Filters                                     Total:    2

Table 217: Show IP Filter Policy Output Fields

| Label | Description |
|-----------|--|
| Filter Id | The IPv4 filter policy ID |
| Applied | No — the filter policy ID has not been applied |
| | Yes — the filter policy ID is applied |
| Scope | Template — the filter policy is of type template |
| | Exclusive — the filter policy is of type exclusive |
| Type | Normal — the filter policy is of type normal |
| | src-mac — the filter policy is of type src-mac |
| | Packet-length — the filter policy is of type packet-length |

| Label | Description |
|-----------------------|--|
| Def. Action | Forward — the default action for the filter ID for packets that do not match the filter entries is to forward |
| | Drop — the default action for the filter ID for packets that do not match the filter entries is to drop |
| System filter | Indicates if the filter has been chained to a system filter |
| Radius Ins Pt | Indicates the RADIUS insertion point, if any |
| CrCtl. Ins Pt | Indicates the Credit Control insertion point, if any |
| RadSh. Ins Pt | Indicates the RADIUS shared insertion point, if any |
| PccRI. Ins Pt | Indicates the PCC rule insertion point, if any |
| Entries | The number of entries configured in this filter ID |
| Description | The IPv4 filter policy entry description string |
| Filter Match Criteria | IP — Indicates the filter is an IPv4 filter policy |
| Entry | The filter entry ID; if the filter entry ID indicates the entry is (Inactive), then the filter entry is incomplete as no action has been specified |
| Description | The IPv4 filter policy entry description string |
| Log Id | The filter log ID |
| Src. IP | The source IPv4 address and prefix length match criterion; "0.0.0.0/0" indicates no criterion specified for the filter entry |
| Src. Port | The source TCP, UDP, or SCTP port number, port range, or port match list |
| Dest. IP | The destination IPv4 address and prefix length match criterion; "0.0.0.0/0" indicates no criterion specified for the filter entry |
| Dest. Port | The destination TCP, UDP, or SCTP port number, port range, or port match list |
| Protocol | The protocol for the match criteria; undefined indicates no protocol specified |
| Dscp | The DiffServ Code Point (DSCP) name |
| ICMP Type | The ICMP type match criterion; undefined indicates no ICMP type specified |
| ICMP Code | The ICMP code field in the ICMP header of an IPv4 packet |

| Label | Description |
|-----------------|--|
| Fragment | False — Indicates if the filter is configured to match on all non-fragmented packets |
| | True — Indicates if the filter is configured to match on all fragmented packets |
| | First-Only — Indicates if the filter is configured to match the first fragment of a fragmented packet |
| | Non-First-Only — Indicates if the filter is configured to match a fragment of a fragmented packet, but not the first fragment |
| | Off — fragments are not a matching criteria. All fragments and non-fragments implicitly match |
| Src Route Opt | Indicates if the source route option has been set |
| Sampling | Off — specifies that traffic sampling is disabled |
| | On—specifies that traffic matching the associated IPv4 filter entry is sampled |
| Int. Sampling | Off — interface traffic sampling is disabled |
| | On — interface traffic sampling is enabled |
| IP-Option | Specifies matching packets with a specific IPv4 option or a range of IPv4 options in the IPv4 header for IPv4 filter match criteria |
| Multiple Option | Off — the option fields are not checked |
| | On — packets containing one or more option fields in the IPv4 header will be used as IPv4 filter match criteria |
| Tcp-flag | <p>Specifies the list of TCP flags selected:</p> <ul style="list-style-type: none"> • match true is represented with the TCP flag value • match false is represented with an exclamation mark before the flag value <p>TCP flags not selected as match criteria are not displayed</p> <p>Example:</p> <p>Matching "tcp-ack true" and "tcp-rst false" is represented in the show command as Tcp-flag : Ack !Rst</p> |
| Option-present | Off — specifies not to search for packets that contain the option field or have an option field of zero |
| | On — matches packets that contain the option field or have an option field of zero be used as IPv4 filter match criteria |
| Egress PBR | Indicates if the egress-pbr flag is set for this entry |

| Label | Description |
|-------------------|--|
| Primary Action | Indicates the configured action, if any; indented sub-labels in the show output provide configured parameters for this action |
| Secondary Action | Indicates the configured secondary action, if any; indented sub-labels in the show output provide configured parameters for this action |
| PBR Target Status | The status of the target of the primary or secondary action based on simple checks |
| Extended Action | Indicates the configured extended action, if any |
| PBR Down Action | Indicates the action to take when the target is down; packets that match the entry criteria will be subject to the PBR Down Action in case the target of the main action is down |
| Downloaded Action | The action downloaded by CPM to IOM |
| Dest. Stickiness | Indicates whether stickiness is configured |
| Hold Remain | The stickiness timer |
| Ing. Matches | The number of ingress filter matches/hits for the filter entry |
| Egr. Matches | The number of egress filter matches/hits for the filter entry |

Show Filter Associations — The following is a sample output of IPv4 filter information when the **associations** keyword is specified. [Table 218: Filter IP Associations Output Fields](#) describes the command output fields.

Sample Output

```
A:ALA-49# show filter ip 1 associations

| Description | The IPv4 filter policy description |
| Entry | The filter entry ID; if the filter entry ID indicates the entry is (Inactive), then the filter entry is incomplete as no action has been specified |
| Stickiness | No — stickiness is not configured |
| | Yes — stickiness is configured |
| PBR Dwn Act Override | Indicates whether or not the action to take when the PBR target is down has been overridden |

| Label | Description |
|---|--|
| PBR Down Action | Indicates the action to take when the target is down; packets that match the entry criteria will be subject to the PBR Down Action in case the target of the main action is down |
| Configuration | Section of the output providing information on the configured parameters |
| Primary Action | The configured action, if any; indented sub-labels in the show output provide configured parameters for this action |
| Secondary Action | The configured secondary action, if any; indented sub-labels in the show output provide configured parameters for this action |
| Status/Target status based on extended checks | Section of the output providing information on the operational status of certain parameters |
| Primary Action | The status of the target of the primary action, if any configured, based on extended checks |
| Secondary Action | The status of the target of the secondary action, if any configured, based on extended checks |
| Downloaded Action | The action downloaded by the CPM to the IOM |
| Stickiness Timer | The status of the stickiness timer, if any |
| Effective Action based on application context | Section of the output providing the effective action, in the context of services, that a packet matching the criteria will be subject to |
| Service Id | The service ID on which the filter policy ID is applied; the output also provides a list of service points where the filter has been applied |
| Type | The service type in which the service has been applied |
| Ingress/Egress | The direction in which the service has been applied |
| Effective Action | The effective action that the packet will be subject to |
| Extended Action | Indicates the configured extended action, if any |

ip

Syntax

ip *ip-filter-id* [**entry** *entry-id*] [**{ingress | egress}**]

Context

[Tree] (clear>filter ip)

Full Context

```
clear filter ip
```

Description

Clears the counters associated with the entries of the specified IPv4 filter policy.

By default, the counters associated with each entry of the specified filter policy are all cleared. The scope of which counters are cleared can be narrowed using the command line parameters.

Default

Clears all counters associated with each entry of the specified IPv4 filter policy.

Parameters

ip-filter-id

The IPv4 filter policy ID for which to clear the entry counters. Values can be expressed in different formats. The following shows decimal integer format.

Values 1 to 65535

entry-id

Specifies that only the counters associated with the specified filter policy entry are cleared.

Values 1 to 2097151

ingress

Specifies to only clear the ingress counters.

egress

Specifies to only clear the egress counters.

Platforms

All

```
ip
```

Syntax

```
ip ip-filter-id

ip

Syntax

ip entry *entry-id* [*interval seconds*] [*repeat repeat*] [*absolute* | *rate*]

Context

[\[Tree\]](#) (monitor>cpm-filter ip)

Full Context

monitor cpm-filter ip

Description

This command displays monitor command statistics for IP filter entries.

Parameters

entry-id

Displays information on the specified filter entry ID for the specified filter ID only.

Values 1 to 2048

seconds

Configures the interval for each display in seconds.

Values 3 to 60

Default 10 seconds

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

ip

Syntax

ip *ip-filter-id* **entry** *entry-id* [**interval** *seconds*] [**repeat** *repeat*] [**absolute** | **rate**]

Context

[Tree] (monitor>filter ip)

Full Context

monitor filter ip

Description

This command enables IP filter monitoring. The statistical information for the specified IP filter entry displays at the configured interval until the configured count is reached.

The first screen displays the current statistics related to the specified IP filter. The subsequent statistical information listed for each interval is displayed as a delta to the previous display.

When the keyword **rate** is specified, the rate-per-second for each statistic is displayed instead of the delta.

Monitor commands are similar to **show** commands but only statistical information displays. Monitor commands display the selected statistics according to the configured number of times at the interval specified.

Parameters

ip-filter-id

Displays detailed information for the specified filter ID and its filter entries.

Values [1 to 65535] | fSpec-[0 to 2147483647] | [1 to 65535 to 8192] | [1 to 65535:P1 to 4096] | _tmnx_tms_egr- *mda-id*-F | _tmnx_tms-ing-*mda-id*-F | _tmx_ofs_ofs-name | _tmnx_vsd_[1 to 65535] | name: 64 chars max

entry-id

Displays information on the specified filter entry ID for the specified filter ID only.

Values [1 to 65535], fSpec-[0 to 2147483647]-[1 to 65353]

seconds

Configures the interval for each display in seconds.

Values 3 to 60

Default 10 seconds

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

Platforms

monitor management-access-filter ip

Description

This command monitors statistics for the MAF IP filter entry.

Parameters

entry-id

Specifies an existing IP MAF entry ID.

Values 1 to 9999

seconds

Configures the interval for each display in seconds.

Values 3 to 60

Default 10

repeat

Configures how many times the command is repeated.

Values 1 to 999

Default 10

absolute

Displays raw statistics, without processing. No calculations are performed on the delta or rate statistics.

rate

Displays rate-per-second for each statistic instead of the delta.

Context

[Tree] (show>filter ip-exception)

Full Context

show filter ip-exception

Description

This command shows IPv4 exception information.

Parameters

filter-id

Specifies the IPv4 exception filter.

Values 1 to 65535

associations

Displays associations applicable to the specified IPv4 exception.

counters

Displays counters for the specified IPv4 exception.

entry *entry-id*

Specifies an integer that identifies the entry.

Values 1 to 2097151

Platforms

VSR

Output

The following output is an example of IPv4 exception filter information, and [Table 221: IPv4 Exception Output Fields](#) describes the fields.

Sample Output

```
*A:Dut-C>config>filter>ip-except>entry$ show filter ip-exception 1

Table 221: IPv4 Exception Output Fields

| Label | Description |
|-----------------------|--|
| Filter-Id | The filter ID. |
| Scope | Template — The filter policy is of type Template. Exclusive — The filter policy is of type Exclusive. |
| Applied | No — The IPv6 exception filter has not been applied. Yes — The IPv6 exception filter is applied. |
| Entries | The number of entries. |
| Description | The description of the specified filter, if specified. |
| Filter Name | The filter name. |
| Filter Match Criteria | IP — Indicates the filter is an IPv4 filter policy. |
| Entry | The number of active or inactive entries. |
| Description | The IPv4 filter policy entry description string. |
| Src. IP | The source IP address of the logged packet. |
| Src. Port | The source port of the logged packet. |

| Label | Description |
|--------------|---|
| Dst. IP | The destination IP address of the logged packet. |
| Dst. Port | The destination port of the logged packet. |
| Protocol | The protocol for the match criteria; undefined indicates no protocol specified. |
| ICMP Type | The ICMP type match criterion. Undefined indicates no ICMP type specified. |
| Ing. Matches | The number of packets matched on ingress. |
| Egr. Matches | The number of packets matched on egress. |

ip-exception

Syntax

ip-exception *filter-id* [**entry** *entry-id*] [{**ingress** | **egress**}]

Context

[Tree] (clear>filter ip-exception)

Full Context

clear filter ip-exception

Description

This command clears the counters associated with the entries of the specified IP exception filter policy.

Parameters

filter-id

Specifies the filter policy ID for which to clear the entry counters.

Values 1 to 65535

entry-id

Specifies that only the counters associated with the specified filter policy entry are cleared.

Values 1 to 2097151

ingress

Specifies to only clear the ingress counters.

egress

Specifies to only clear the egress counters.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

13.45 ip-filter

Table 222: Show CPM IP Filter Output Fields

| Label | Description |
|-------------|---|
| Entry-Id | Displays information about the specified management access filter entry |
| Dropped | Displays the number of dropped events. |
| Forwarded | Displays the number of forwarded events. |
| Description | Displays the CPM filter description. |
| Log ID | Displays the log ID where matched packets will be logged. |
| Src IP | Displays the source IP address(/netmask or prefix-list) |
| Dest. IP | Displays the destination IP address(/netmask). |
| Src Port | Displays the source port number (range). |
| Dest. Port | Displays the destination port number (range). |
| Protocol | Displays the Protocol field in the IP header. |

| Label | Description |
|----------------|---|
| Dscp | Displays the DSCP field in the IP header. |
| Fragment | Displays the 3-bit fragment flags or 13-bit fragment offset field. |
| ICMP Type | Displays the ICMP type field in the ICMP header. |
| ICMP Code | Displays the ICMP code field in the ICMP header. |
| TCP-syn | Displays the SYN flag in the TCP header. |
| TCP-ack | Displays the ACK flag in the TCP header. |
| Match action | When the criteria matches, displays drop or forward packet. |
| Next Hop | In case match action is forward, indicates destination of the matched packet. |
| Dropped pkts | Indicates number of matched dropped packets. |
| Forwarded pkts | Indicates number of matched forwarded packets. |

ip-filter

Syntax

ip-filter [*entry entry-id*]

Context

[\[Tree\]](#) (show>system>security>mgmt-access-filter ip-filter)

Full Context

show system security management-access-filter ip-filter

Description

This command displays management-access IP filters.

Parameters

entry-id

Displays information for the specified entry.

Values 1 to 9999

Platforms

All

Output

The following output is an example of MAF IP filter information and [Table 223: Show Management Access Filter Output Fields](#) describes the management access filter output fields.

Sample Output

Table 223: Show Management Access Filter Output Fields

| Label | Description |
|---------------|--|
| Def. action | Permit — Specifies that packets not matching the configured selection criteria in any of the filter entries are permitted. Deny — Specifies that packets not matching the configured selection criteria in any of the filter entries are denied and that a ICMP host unreachable message will be issued. Deny-host-unreachable — Specifies that packets not matching the configured selection criteria in the filter entries are denied. |
| Entry | The entry ID in a policy or filter table. |
| Description | A text string describing the filter. |
| Src IP | The source IP address or prefix list used for management access filter match criteria. |
| Src interface | The interface name for the next hop to which the packet should be forwarded if it hits this filter entry. |
| Dest port | The destination port. |
| Matches | The number of times a management packet has matched this filter entry. |
| Protocol | The IP protocol to match. |

| Label | Description |
|--------|--|
| Action | The action to take for packets that match this filter entry. |

ip-filter

Syntax

ip-filter [*entry entry-id*]

Context

[\[Tree\]](#) (clear>cpm-filter ip-filter)

Full Context

clear cpm-filter ip-filter

Description

This command clears IP filter statistics.

Parameters

entry-id

Specifies a particular CPM IP filter entry.

Values 1 to 2048

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

13.47 ip-prefix

ip-prefix

Syntax

ip-prefix [hunt | detail] [rd rd] [prefix ip-prefix/ip-prefix-length] [community comm-id] [tag tag] [next-hop next-hop] [aspath-regex reg-exp]

Context

[\[Tree\]](#) (show>router>bgp>routes>evpn ip-prefix)

Full Context

show router bgp routes evpn ip-prefix

Description

This command displays BGP-EVPN IPv4 prefix routes.

Parameters

hunt

Displays entries for the specified route.

detail

Displays detailed information.

rd

Displays information for the route distinguisher.

Values *ip-addr:comm-val | 2byte-asnumber:ext-comm-val | 4byte-asnumber:comm-val*

ip-prefix/ip-prefix-length

Specifies the IPv4 address and mask length.

Values

| | |
|-------------|---------|
| ip-address: | a.b.c.d |
| mask: | 0 to 32 |

comm-id

Specifies the community ID, up to 72 characters.

Values *[as-num:comm-val | ext-comm | well-known-comm]*

where:

- *as-num* — 0 to 65535
- *comm-val* — 0 to 65535
- *ext-comm* — the extended community, defined as the following:
type:{ ip-address:comm-val1 | as-number1:comm-val2 | as-number2:comm-val1}
 where:
 - *as-number1* — 0 to 65535
 - *comm-val1* — 0 to 65535
 - **type** — target, origin
 - *ip-address* — a.b.c.d
 - *comm-val2* — 0 to 4294967295

- *as-number2* — 0 to 4294967295
- *well-known-comm* — **null** | **no-export** | **no-export-subconfed** | **no-advertise** |

tag

Specifies the IPv4 prefix route tag.

Values 0to 4294967295 | MAX-ET

next-hop

Specifies the IPv4 or IPv6 BGP next-hop address.

Values

| | |
|---------------|-------------------------------------|
| ipv4-address: | a.b.c.d |
| ipv6-address: | x:x:x:x:x:x:x (eight 16-bit pieces) |
| | x:x:x:x:x:d.d.d.d |
| | x: [0 to FFFF]H |
| | d: [0 to 255]D |

reg-exp

Displays routes matching the specified regular expression, up to 80 characters.

Platforms

ip-prefix-list

Syntax

ip-prefix-list

ip-prefix-list *prefix-list-name* [**association**]

Context

[Tree] (show>qos>match-list ip-prefix-list)

Full Context

show qos match-list ip-prefix-list

Description

Displays the list of configured IPv4 QoS prefix lists or the details of a specific IPv4 QoS prefix list together with the SAP and network QoS policies in which it is used and the entry number within that policy.

Parameters

prefix-list-name

Specifies an IPv4 prefix list which contains IPv4 address prefixes to be matched.

Values A string of up to 32 characters of printable ASCII characters. If special characters are used, the string must be enclosed within double quotes.

association

Displays the QoS policy and entry number in which the specified prefix list is used.

Platforms

All

Output

The following output is an example of ip-prefix-list information

Sample Output

```
*A:PE# show qos match-list ip-prefix-list

Commands in this context display IP over Ethernet (IPoE) call trace information.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

13.51 ipoe-session

ipoe-session

Syntax

ipoe-session

Context

[\[Tree\]](#) (tools>dump>router ipoe-session)

Full Context

tools dump router ipoe-session

Description

Commands in this context dump information about IPoE session-related tools in the specified routing instance.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

13.52 ipoe-session-policy

ipoe-session-policy

Syntax

ipoe-session-policy *ipoe-session-policy-name* [association]

ipoe-session-policy

Context

[Tree] (show>subscr-mgmt ipoe-session-policy)

Full Context

show subscriber-mgmt ipoe-session-policy

Description

This command displays IPoE session policy information.

Parameters

ipoe-session-policy-name

Specifies the IPoE session policy name up to 32 characters.

association

Displays the interface and captures SAPs that reference the IPoE session policy.

Platforms

7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Output

The following is an example of IPoE session policy information.

Sample Output

```
show subscriber-mgmt ipoe-session-policy "ipoe-policy-1"
=====
IPoE Session Policy "ipoe-policy-1"
=====
Description           : IPoE policy
Last Mgmt Change      : 02/28/2015 11:51:25
Session Key           : sap-mac
Session Timeout       : unlimited
=====

show subscriber-mgmt ipoe-session-policy "ipoe-policy-1" association
=====
IPoE Session Policy "ipoe-policy-1"
=====
-----
IPoE Interface Associations
-----
Service-Id : 1000 (IES)
- group-int-1-1
Service-Id : 2000 (VPRN)
- group-int-1-1
```

```
-----
Capture SAP Associations
-----
Service-Id : 10 (VPLS)
- 1/1/4:*. *
=====
```

[Table 224: IPoE Session Policy Field Descriptions](#) describes subscriber management IPoE session policy output fields.

Table 224: IPoE Session Policy Field Descriptions

| Field | Description |
|-----------------------------|--|
| Description | The user-provided description of this IPoE policy |
| Last Mgmt Change | The sysUpTime at the time of the last modification |
| Session Key | The session key to be used for this IPoE session to group subscriber hosts |
| Session Timeout | The session timeout period to be used for this IPoE session |
| IPoE Interface Associations | The service ID and interface name of the associated interfaces |
| Capture SAP Associations | The service ID and SAP ID of the associated capture SAPS |

13.53 ipsec

13.54 ipsec-domain

ipsec-domain

Syntax

ipsec-domain [*ipsec-domain-id*]

Context

[\[Tree\]](#) (show>redundancy>multi-chassis ipsec-domain)

Full Context

show redundancy multi-chassis ipsec-domain

Description

This command displays information about an IPsec domain.

Parameters

ipsec-domain-id

Displays information IPsec domain ID.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following is an example of IPsec domain information. [Table 225: IPsec Domain Field Descriptions](#) describes the output fields

Sample Output

```

show>redundancy>multi-chassis# ipsec-domain 1
=====
Multi-Chassis IPsec Domain: 1
=====
Designated Role      : active           Priority           : 250

=====

```

Table 225: IPsec Domain Field Descriptions

| Label | Description |
|---------------------------------|--|
| Designated Role | The designated role, active or standby. |
| Priority | The priority. |
| Tunnel Group | The tunnel group ID. |
| Revertive | The revertive value. true means that revertive is configured. false means that revertive is not configured. |
| Admin State | The administrative state. |
| Protection Status | Displays nominal or notReady. notReady means the system is not ready for a switchover. There could be a major traffic impact if switchover happens in the case of notReady. nominal means the tunnel-group is in a better situation to switchover than notReady. However, there still might be a traffic impact. |
| Router Id | The router ID. |
| Current Active | The router ID of the active router. |
| Activity State | The activity state. |
| Adjacencies | |
| Peer | The IP address of the peer. |
| Router-Id | The router ID. |
| Oper State | The operational state of the peer. |
| Remote Activity State | The activity state of the peer. |
| Remote Designated Role | The designated role of the peer. |
| Domain Adjacency Entries found | The total number of domain peer entries found. |
| Multi-Chassis Tunnel Statistics | |
| Static | The number of static multi-chassis tunnels. |
| Dynamic | The number of dynamic multi-chassis tunnels. |

| Label | Description |
|-----------------|--|
| Installed | The number of tunnels that have been successfully installed. |
| Installing | The number of tunnels that are being installed. |
| Awaiting Config | The number of synchronized tunnels that do not have a corresponding configuration ready. |
| Failed | The number of tunnels that failed to be installed. |

13.55 ipsec-interface

ipsec-interface

Syntax

ipsec-interface

ipsec-interface *ip-int-name* [**group** *grp-ipv6-address*]

ipsec-interface *gateway-name gw-name* [**remote-address** *ip-address* | *ipv6-address*] [**port** *port-id*] [**sa-id** *sa-id*]

ipsec-interface *static-tunnel-name tunnel-name* [**sa-id** *sa-id*]

Context

[\[Tree\]](#) (show>router>mld ipsec-interface)

Full Context

show router mld ipsec-interface

Description

This command displays information about the MLD states over IPsec tunnels.

Parameters

ip-int-name

Specifies the dynamic name for the MLD-enabled child_SA.

grp-ipv6-address

Displays IPv6 multicast group address for which this entry contains information.

Values *ipv6-address* - x:x:x:x:x:x:x (eight 16-bit pieces)
 x:x:x:x:x:d.d.d.d
 x - [0..FFFF]H
 d - [0..255]D

- multicast group IPv6 address

gw-name

Specifies the IPsec gateway name, up to 32 characters.

ip-address

Displays the information associated with the specified IP address.

ipv6-address

Displays the information associated with the specified IPv6 address.

port-id

Specifies the peer's UDP port.

Values 0 to 4294967295

sa-id

Specifies the child_SA ID.

Values 0 to 4294967295

tunnel-name

Specifies the IPsec static tunnel name up to 32 characters.

Platforms

All

Output

The following output displays an example of MLD IPsec interface information. The interface name in the output is the dynamic name for an MLD-enabled child_sa. There is a corresponding MLD interface name in the **show>ipsec>gateway name tunnel tunnel** output

Sample Output

```
*A:DUT-A# show router 40 mld ipsec-interface "ipsec-if-1583392"
=====
mld ipsec dynamic tunnel interfaces detail
=====
name          : ipsec_gw_1040_1
remote-address: 3ffe::900:1
port          : 500
index         : 1583392
version       : 2
querier up    : 11384
next query    : 56
querier       : fe80::6e:9c56:9651:5829

=====
```

13.56 ipsec-stats

ipsec-stats

Syntax

ipsec-stats

Context

[\[Tree\]](#) (show>isa>stats ipsec-stats)

Full Context

show isa statistics ipsec-stats

Description

Commands in this context display IPsec tunnel statistics.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

13.57 ipsec-transport-mode-profile

ipsec-transport-mode-profile

Syntax

ipsec-transport-mode-profile [*name*]

ipsec-transport-mode-profile *name* **association**

Context

[\[Tree\]](#) (show>ipsec ipsec-transport-mode-profile)

Full Context

show ipsec ipsec-transport-mode-profile

Description

This command displays IPsec transport mode profile information. If a name is specified, the command displays details about the named **ipsec-transport-mode-profile**, otherwise, a list of configured IPsec transport mode profiles is displayed.

Parameters

name

Displays information about the specified IPsec transport mode profile, up to 32 characters.

association

Displays a list of IP tunnels that reference the specified **ipsec-transport-mode-profile name**.

Platforms

7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Output

The following is an example of IPsec transport mode profile information. [Table 226: ipsec-transport-mode-profile Field Descriptions](#) describes the fields.

Sample Output

```
A:v70# show ipsec ipsec-transport-mode-profile "test"
