Reference	<b>configure</b> <a href="#">qos</a> <a href="#">queue-group-templates</a> <a href="#">egress</a> <a href="#">queue-group</a> <i>string</i>
Introduced	20.10.R1
Platforms	All

### **instance** *number*

Synopsis	Instance of port queue group
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">port-redirect-group</a> <a href="#">instance</a> <i>number</i>
Tree	<a href="#">instance</a>
Range	1 to 65535
Introduced	20.10.R1
Platforms	All

### **scheduler-policy**

Synopsis	Enter the <b>scheduler-policy</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a>
Tree	<a href="#">scheduler-policy</a>
Introduced	20.10.R1
Platforms	All

### **overrides**

Synopsis	Enter the <b>overrides</b> context
----------	------------------------------------

Context	<b>configure service ipipe string sap string egress qos scheduler-policy overrides</b>
Tree	<b>overrides</b>
Introduced	20.10.R1
Platforms	All

### **scheduler** [**scheduler-name**] *string*

Synopsis	Enter the <b>scheduler</b> list instance
Context	<b>configure service ipipe string sap string egress qos scheduler-policy overrides scheduler string</b>
Tree	<b>scheduler</b>
Introduced	20.10.R1
Platforms	All

### **[scheduler-name]** *string*

Synopsis	Scheduler name
Context	<b>configure service ipipe string sap string egress qos scheduler-policy overrides scheduler string</b>
Tree	<b>scheduler</b>
Description	<p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context will not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error will occur, the command will not execute, and the context will not change.</p>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	All

## parent

Synopsis	Enter the <b>parent</b> context
Context	<b>configure service ipipe</b> <i>string sap string egress qos scheduler-policy overrides scheduler string parent</i>
Tree	<b>parent</b>
Introduced	20.10.R1
Platforms	All

## cir-weight *number*

Synopsis	Weight used at the within-CIR port priority level
Context	<b>configure service ipipe</b> <i>string sap string egress qos scheduler-policy overrides scheduler string parent cir-weight number</i>
Tree	<b>cir-weight</b>
Range	0 to 100
Introduced	20.10.R1
Platforms	All

## weight *number*

Synopsis	Relative weight of the scheduler to feed the queue
Context	<b>configure service ipipe</b> <i>string sap string egress qos scheduler-policy overrides scheduler string parent weight number</i>
Tree	<b>weight</b>
Range	0 to 100
Introduced	20.10.R1
Platforms	All

## rate

Synopsis	Enter the <b>rate</b> context
Context	<b>configure service ipipe</b> <i>string sap string egress qos scheduler-policy overrides scheduler string rate</i>
Tree	<b>rate</b>
Introduced	20.10.R1
Platforms	All

### **cir** (*number* | *keyword*)

Synopsis	CIR at which the queue it to operate
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <i>string</i> <a href="#">rate</a> <b>cir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cir</a>
Range	0 to 6400000000
Units	kilobps
Options	sum, max
Introduced	20.10.R1
Platforms	All

### **pir** (*number* | *keyword*)

Synopsis	PIR at which the queue is to operate
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <i>string</i> <a href="#">rate</a> <b>pir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">pir</a>
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	20.10.R1
Platforms	All

### **policy-name** *reference*

Synopsis	Scheduler policy name
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">policy-name</a> <i>reference</i>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">scheduler-policy</a> <i>string</i>
Introduced	20.10.R1
Platforms	All

## endpoint *reference*

Synopsis	Endpoint name
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">endpoint</a> <i>reference</i>
Tree	<a href="#">endpoint</a>
Reference	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">endpoint</a> <i>string</i>
Introduced	20.10.R1
Platforms	All

## ingress

Synopsis	Enter the <b>ingress</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a>
Tree	<a href="#">ingress</a>
Introduced	20.10.R1
Platforms	All

## filter

Synopsis	Enter the <b>filter</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">filter</a>
Tree	<a href="#">filter</a>
Introduced	20.10.R1
Platforms	All

## ip *reference*

Synopsis	IPv4 filter policy name
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">filter</a> <a href="#">ip</a> <i>reference</i>
Tree	<a href="#">ip</a>
Reference	<b>configure</b> <a href="#">filter</a> <a href="#">ip-filter</a> <i>string</i>
Introduced	20.10.R1
Platforms	All

## ipv6 reference

Synopsis	IPv6 filter policy name
Context	<b>configure</b> <a href="#">service ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress filter ipv6</a> <i>reference</i>
Tree	<a href="#">ipv6</a>
Reference	<b>configure</b> <a href="#">filter ipv6-filter</a> <i>string</i>
Introduced	20.10.R1
Platforms	All

## qos

Synopsis	Enter the <b>qos</b> context
Context	<b>configure</b> <a href="#">service ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress qos</a>
Tree	<a href="#">qos</a>
Introduced	20.10.R1
Platforms	All

## match-qinq-dot1p keyword

Synopsis	Ingress match QinQ Dot1p
Context	<b>configure</b> <a href="#">service ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress qos match-qinq-dot1p</a> <i>keyword</i>
Tree	<a href="#">match-qinq-dot1p</a>
Options	top, bottom
Introduced	20.10.R1
Platforms	All

## policer-control-policy

Synopsis	Enter the <b>policer-control-policy</b> context
Context	<b>configure</b> <a href="#">service ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress qos policer-control-policy</a>
Tree	<a href="#">policer-control-policy</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## overrides

Synopsis	Enable the <b>overrides</b> context
Context	<b>configure service ipipe string sap string ingress qos policer-control-policy overrides</b>
Tree	<a href="#">overrides</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## root

Synopsis	Enter the <b>root</b> context
Context	<b>configure service ipipe string sap string ingress qos policer-control-policy overrides root</b>
Tree	<a href="#">root</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## max-rate (*number* | *keyword*)

Synopsis	Maximum frame-based bandwidth limit
Context	<b>configure service ipipe string sap string ingress qos policer-control-policy overrides root max-rate (<i>number</i>   <i>keyword</i>)</b>
Tree	<a href="#">max-rate</a>
Range	1 to 6400000000
Options	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## priority-mbs-thresholds

Synopsis	Enter the <b>priority-mbs-thresholds</b> context
Context	<b>configure service ipipe string sap string ingress qos policer-control-policy overrides root priority-mbs-thresholds</b>
Tree	<a href="#">priority-mbs-thresholds</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **min-thresh-separation** (*number* | *keyword*)

Synopsis	Minimum amount of separation buffer space
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a> <a href="#">priority-mbs-thresholds</a> <a href="#">min-thresh-separation</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">min-thresh-separation</a>
Range	0 to 16777216
Units	bytes
Options	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **priority** [[priority-level](#)] *number*

Synopsis	Enter the <b>priority</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a> <a href="#">priority-mbs-thresholds</a> <a href="#">priority</a> <i>number</i>
Tree	<a href="#">priority</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **[priority-level]** *number*

Synopsis	Priority level
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a> <a href="#">priority-mbs-thresholds</a> <a href="#">priority</a> <i>number</i>
Tree	<a href="#">priority</a>
Range	1 to 8
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **mbs-contribution** (*number* | *keyword*)

Synopsis	Minimum amount of cumulative buffer space allowed
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a> <a href="#">priority-mbs-thresholds</a> <a href="#">priority</a> <i>number</i> <a href="#">mbs-contribution</a> ( <i>number</i>   <i>keyword</i> )

Tree	<a href="#">mbs-contribution</a>
Range	0 to 16777216
Units	bytes
Options	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **policy-name** *reference*

Synopsis	Policer control policy name
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">policy-name</a> <i>reference</i>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">policer-control-policy</a> <i>string</i>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **sap-ingress**

Synopsis	Enter the <b>sap-ingress</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a>
Tree	<a href="#">sap-ingress</a>
Introduced	20.10.R1
Platforms	All

### **fp-redirect-group**

Synopsis	Enter the <b>fp-redirect-group</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">fp-redirect-group</a>
Tree	<a href="#">fp-redirect-group</a>
Introduced	20.10.R1
Platforms	All

### **group-name** *reference*

Synopsis	Queue group template name created on forwarding plane
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">fp-redirect-group</a> <a href="#">group-name</a> <i>reference</i>
Tree	<a href="#">group-name</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">queue-group-templates</a> <a href="#">ingress</a> <a href="#">queue-group</a> <i>string</i>
Introduced	20.10.R1
Platforms	All

### **instance** *number*

Synopsis	Queue group instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">fp-redirect-group</a> <a href="#">instance</a> <i>number</i>
Tree	<a href="#">instance</a>
Range	1 to 65535
Introduced	20.10.R1
Platforms	All

### **overrides**

Synopsis	Enter the <b>overrides</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a>
Tree	<a href="#">overrides</a>
Introduced	20.10.R1
Platforms	All

### **policer** [[policer-id](#)] *reference*

Synopsis	Enter the <b>policer</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">policer</a> <i>reference</i>
Tree	<a href="#">policer</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### [**policer-id**] *reference*

Synopsis	Policer unique ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">policer</a> <i>reference</i>
Tree	<a href="#">policer</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">sap-ingress</a> <i>string</i> <a href="#">policer</a> <i>number</i>
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **cbs** (*number* | *keyword*)

Synopsis	CBS
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">policer</a> <i>reference</i> <a href="#">cbs</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cbs</a>
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **mbs** (*number* | *keyword*)

Synopsis	MBS
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">policer</a> <i>reference</i> <a href="#">mbs</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">mbs</a>
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **packet-byte-offset** *number*

Synopsis	Packet size modification for policing information
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <a href="#">packet-byte-offset</a> <i>number</i>
Tree	<a href="#">packet-byte-offset</a>
Range	-32 to 31
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **percent-rate**

Synopsis	Enter the <b>percent-rate</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <a href="#">percent-rate</a>
Tree	<a href="#">percent-rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **cir** *decimal-number*

Synopsis	CIR percent rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <a href="#">percent-rate</a> <a href="#">cir</a> <i>decimal-number</i>
Tree	<a href="#">cir</a>
Range	0.00 to 100.00
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **pir** *decimal-number*

Synopsis	PIR percent rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <a href="#">percent-rate</a> <a href="#">pir</a> <i>decimal-number</i>
Tree	<a href="#">pir</a>
Range	0.01 to 100.00

Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## rate

Synopsis Enter the **rate** context  
Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [ingress](#) [qos](#) [sap-ingress](#) [overrides](#) [policer](#)  
*reference* **rate**  
Tree [rate](#)  
Notes The following elements are part of a choice: **percent-rate** or **rate**.  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## cir (*number* | *keyword*)

Synopsis CIR rate  
Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [ingress](#) [qos](#) [sap-ingress](#) [overrides](#) [policer](#)  
*reference* **rate** **cir** (*number* | *keyword*)  
Tree [cir](#)  
Range 0 to 6400000000  
Units kilobps  
Options max  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## pir (*number* | *keyword*)

Synopsis PIR rate  
Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [ingress](#) [qos](#) [sap-ingress](#) [overrides](#) [policer](#)  
*reference* **rate** **pir** (*number* | *keyword*)  
Tree [pir](#)  
Range 1 to 6400000000  
Units kilobps  
Options max  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **stat-mode** *keyword*

Synopsis	Mode of statistics collected by the policer
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">policer</a> <i>reference</i> <a href="#">stat-mode</a> <i>keyword</i>
Tree	<a href="#">stat-mode</a>
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-priority-no-cir, offered-profile-cir, offered-priority-cir, offered-limited-profile-cir, offered-profile-capped-cir, offered-limited-capped-cir
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **queue** [[queue-id](#)] *reference*

Synopsis	Enter the <b>queue</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i>
Tree	<a href="#">queue</a>
Introduced	20.10.R1
Platforms	All

### [[queue-id](#)] *reference*

Synopsis	Policer unique ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i>
Tree	<a href="#">queue</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">sap-ingress</a> <i>string</i> <a href="#">queue</a> <i>number</i>
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	All

### **adaptation-rule**

Synopsis	Enter the <b>adaptation-rule</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i> <a href="#">adaptation-rule</a>

Tree	<a href="#">adaptation-rule</a>
Introduced	20.10.R1
Platforms	All

### **cir** keyword

Synopsis	Constraint used when deriving the operational CIR value
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">adaptation-rule</a> <a href="#">cir</a> <a href="#">keyword</a>
Tree	<a href="#">cir</a>
Options	max, min, closest
Introduced	20.10.R1
Platforms	All

### **pir** keyword

Synopsis	Constraint used when deriving the operational PIR value
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">adaptation-rule</a> <a href="#">pir</a> <a href="#">keyword</a>

Range	0 to 6400000000
Units	kilobps
Options	max
Introduced	20.10.R1
Platforms	All

### **pir** (*number* | *keyword*)

Synopsis	PIR rate
----------	----------

Context	<b>configure service ipipe</b> <i>string sap string ingress qos sap-ingress overrides queue reference rate pir</i> ( <i>number   keyword</i> )
Tree	<a href="#">pir</a>
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	20.10.R1
Platforms	All

### **policy-name** *reference*

Synopsis	Policy ID
Context	<b>configure service ipipe</b> <i>string sap string ingress qos sap-ingress policy-name reference</i>
Tree	<a href="#">policy-name</a>
Reference	<b>configure qos sap-ingress</b> <i>string</i>
Introduced	20.10.R1
Platforms	All

### **queuing-type** *keyword*

Synopsis	Queuing type
Context	<b>configure service ipipe</b> <i>string sap string ingress qos sap-ingress queuing-type keyword</i>
Tree	<a href="#">queuing-type</a>
Options	shared, multipoint-shared
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, VSR

### **scheduler-policy**

Synopsis	Enter the <b>scheduler-policy</b> context
Context	<b>configure service ipipe</b> <i>string sap string ingress qos scheduler-policy</i>
Tree	<a href="#">scheduler-policy</a>
Introduced	20.10.R1
Platforms	All

## overrides

Synopsis	Enter the <b>overrides</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a>
Tree	<a href="#">overrides</a>
Introduced	20.10.R1
Platforms	All

## **scheduler** [[scheduler-name](#)] *string*

Synopsis	Enter the <b>scheduler</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <i>string</i>
Tree	<a href="#">scheduler</a>
Introduced	20.10.R1
Platforms	All

## [[scheduler-name](#)] *string*

Synopsis	Scheduler name
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <i>string</i>
Tree	<a href="#">scheduler</a>
Description	<p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context will not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error will occur, the command will not execute, and the context will not change.</p>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	20.10.R1

Platforms All

## parent

Synopsis Enter the **parent** context

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **use-broadcast-mac** *boolean*

Synopsis	Allow broadcast MAC on SAP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">use-broadcast-mac</a> <i>boolean</i>
Tree	<a href="#">use-broadcast-mac</a>

Default	false
Introduced	20.10.R1
Platforms	All

### **service-id** *number*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Service ID
Context	<b>configure service ipipe</b> <i>string service-id number</i>
Tree	<a href="#">service-id</a>
Range	1 to 2147483647
Introduced	20.10.R1
Platforms	All

### **service-mtu** *number*

Synopsis	MTU size
Context	<b>configure service ipipe</b> <i>string service-mtu number</i>
Tree	<a href="#">service-mtu</a>
Description	This command configures the Maximum Transmission Unit (MTU) value (payload) for the service. The system uses the value to validate the operational state of the SAP and SDP binding within the service. The value overrides the default MTU for the service type.

The service MTU and a SAP's service delineation encapsulation overhead (4 bytes for a dot1q tag) are used to derive the required MTU of the physical port or channel on which the SAP was created. If the required payload is larger than the port or channel MTU, the SAP is placed in an inoperative state. If the required MTU is equal to or less than the port or channel MTU, the SAP transitions to the operative state.

When binding an SDP to a service, the service MTU is compared to the path MTU associated with the SDP. The path MTU can be administratively defined in the context of the SDP. The default or administrative path MTU can be dynamically reduced due to the MTU capabilities discovered by the tunneling mechanism of the SDP or the egress interface MTU capabilities based on the next hop in the tunnel path. If the service MTU is larger than the path MTU, the SDP binding for the service is placed in an inoperative state. If the service MTU is equal to or less than the path MTU, the SDP binding is placed in an operational state.

If a service MTU, port or channel MTU, or path MTU is dynamically or administratively modified, all associated SAP and SDP binding operational states are automatically reevaluated.

Binding operational states are automatically reevaluated.

For I-VPLS and Epipe bound to a B-VPLS, the service MTU must be at least 18 bytes smaller than the B-VPLS service MTU to accommodate the PBB header.

Because this connects a Layer 2 to a Layer 3 service, adjust the service MTU under the Epipe service. The MTU that is advertised from the Epipe side is service MTU minus EtherHeaderSize.

In the **configure service epipe spoke-sdp** context, the **adv-service-mtu** command can be used to override the configured MTU value used in T-LDP signaling to the far-end of an Epipe spoke-sdp. The **adv-service-mtu** command is also used to validate the value signaled by the far-end PE.

Range	1 to 9194
Introduced	20.10.R1
Platforms	All

### **spoke-sdp** [**sdp-bind-id**] *string*

Synopsis	Enter the <b>spoke-sdp</b> list instance
Context	<b>configure service ipipe string spoke-sdp string</b>

Synopsis	Use control word as part of packet encapsulation
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <b>control-word</b> <i>boolean</i>
Tree	<a href="#">control-word</a>
Default	false
Introduced	20.10.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <b>description</b> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	20.10.R1
Platforms	All

### **egress**

Synopsis	Enter the <b>egress</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <b>egress</b>
Tree	<a href="#">egress</a>
Introduced	20.10.R1
Platforms	All

### **filter**

Synopsis	Enter the <b>filter</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <b>egress</b> <b>filter</b>
Tree	<a href="#">filter</a>

Introduced 20.10.R1  
Platforms All

### **ip reference**

Synopsis IPv4 filter policy name  
Context **configure** [service ipipe](#) *string* [spoke-sdp](#) *string* [egress filter ip reference](#)  
Tree [ip](#)  
Reference **configure** [filter ip-filter](#) *string*  
Introduced 20.10.R1  
Platforms All

### **ipv6 reference**

Synopsis IPv6 filter policy name  
Context **configure** [service ipipe](#) *string* [spoke-sdp](#) *string* [egress filter ipv6 reference](#)  
Tree [ipv6](#)  
Reference **configure** [filter ipv6-filter](#) *string*  
Introduced 20.10.R1  
Platforms All

### **qos**

Synopsis Enter the **qos** context  
Context **configure** [service ipipe](#) *string* [spoke-sdp](#) *string* [egress qos](#)  
Tree [qos](#)  
Introduced 20.10.R1  
Platforms All

### **network**

Synopsis Enter the **network** context  
Context **configure** [service ipipe](#) *string* [spoke-sdp](#) *string* [egress qos network](#)  
Tree [network](#)  
Introduced 20.10.R1

Platforms All

### **policy-name** *reference*

Synopsis Network policy ID

Context **configure** [service ipipe](#) *string* [spoke-sdp](#) *string* [egress qos network](#) [policy-name](#) *reference*

Tree [policy-name](#)

Reference **configure** [qos network](#) *string*

Introduced 20.10.R1

Platforms All

### **port-redirect-group**

Synopsis Enter the **port-redirect-group** context

Context **configure** [service ipipe](#) *string* [spoke-sdp](#) *string* [egress qos network](#) [port-redirect-group](#)

Tree [port-redirect-group](#)

Introduced 20.10.R1

Platforms All

### **group-name** *reference*

Synopsis Name of the egress port queue group

Context **configure** [service ipipe](#) *string* [spoke-sdp](#) *string* [egress qos network](#) [port-redirect-group](#) [group-name](#) *reference*

Tree [group-name](#)

Reference **configure** [qos queue-group-templates](#) [egress queue-group](#) *string*

Introduced 20.10.R1

Platforms All

### **instance** *number*

Synopsis Queue-group instance ID

Context **configure** [service ipipe](#) *string* [spoke-sdp](#) *string* [egress qos network](#) [port-redirect-group](#) [instance](#) *number*

Tree [instance](#)

Range	1 to 65535
Introduced	20.10.R1
Platforms	All

### **vc-label** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Egress MPLS VC label to send packets to the far end
Context	<b>configure</b> <i>service ipipe string spoke-sdp string egress vc-label number</i>
Tree	<i>vc-label</i>
Range	16 to 1048575
Introduced	20.10.R1
Platforms	All

### **endpoint**

Synopsis	Enter the <b>endpoint</b> context
Context	<b>configure</b> <i>service ipipe string spoke-sdp string endpoint</i>
Tree	<i>endpoint</i>
Introduced	20.10.R1
Platforms	All

### **name** *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Endpoint name to which SDP bind is attached
Context	<b>configure</b> <i>service ipipe string spoke-sdp string endpoint name reference</i>
Tree	<i>name</i>
Reference	<b>configure</b> <i>service ipipe string endpoint string</i>
Introduced	20.10.R1

Platforms All

### **precedence** (*number* | *keyword*)

Synopsis Precedence when multiple SDP binds are on one endpoint

Context **configure** [service](#) [ipipe](#) *string* [spoke-sdp](#) *string* [endpoint](#) [precedence](#) (*number* | *keyword*)

Tree [precedence](#)

Range 1 to 4

Default 4

Options primary

Introduced 20.10.R1

Platforms All

### **entropy-label**

Synopsis Enable the use of entropy labels for spoke SDPs

Context **configure** [service](#) [ipipe](#) *string* [spoke-sdp](#) *string* [entropy-label](#)

Tree [entropy-label](#)

Notes The following elements are part of a choice: **entropy-label** or **hash-label**.

Introduced 20.10.R1

Platforms All

### **hash-label**

Synopsis Enable the **hash-label** context

Context **configure** [service](#) [ipipe](#) *string* [spoke-sdp](#) *string* [hash-label](#)

Tree [hash-label](#)

Notes The following elements are part of a choice: **entropy-label** or **hash-label**.

Introduced 20.10.R1

Platforms All

### **signal-capability**

Synopsis Enable the signaling of the hash label between PE nodes

Context	<b>configure service ipipe</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>hash-label</b> <b>signal-capability</b>
Tree	<a href="#">signal-capability</a>
Introduced	20.10.R1
Platforms	All

## ingress

Synopsis	Enter the <b>ingress</b> context
Context	<b>configure service ipipe</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>ingress</b>
Tree	<a href="#">ingress</a>
Introduced	20.10.R1
Platforms	All

## filter

Synopsis	Enter the <b>filter</b> context
Context	<b>configure service ipipe</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>ingress filter</b>
Tree	<a href="#">filter</a>
Introduced	20.10.R1
Platforms	All

## ip reference

Synopsis	IPv4 filter policy name
Context	<b>configure service ipipe</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>ingress filter ip reference</b>
Tree	<a href="#">ip</a>
Reference	<b>configure filter ip-filter</b> <i>string</i>
Introduced	20.10.R1
Platforms	All

## ipv6 reference

Synopsis	IPv6 filter policy name
Context	<b>configure service ipipe</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>ingress filter ipv6 reference</b>
Tree	<a href="#">ipv6</a>

Reference	<b>configure</b> <a href="#">filter ipv6-filter</a> <i>string</i>
Introduced	20.10.R1
Platforms	All

## qos

Synopsis	Enter the <b>qos</b> context
Context	<b>configure</b> <a href="#">service ipipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">ingress qos</a>
Tree	<a href="#">qos</a>
Introduced	20.10.R1
Platforms	All

## network

Synopsis	Enter the <b>network</b> context
Context	<b>configure</b> <a href="#">service ipipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">ingress qos network</a>
Tree	<a href="#">network</a>
Introduced	20.10.R1
Platforms	All

## fp-redirect-group

Synopsis	Enter the <b>fp-redirect-group</b> context
Context	<b>configure</b> <a href="#">service ipipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">ingress qos network fp-redirect-group</a>
Tree	<a href="#">fp-redirect-group</a>
Introduced	20.10.R1
Platforms	All

## group-name *reference*

Synopsis	Name of the forwarding plane queue group template
Context	<b>configure</b> <a href="#">service ipipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">ingress qos network fp-redirect-group</a> <a href="#">group-name</a> <i>reference</i>
Tree	<a href="#">group-name</a>
Reference	<b>configure</b> <a href="#">qos queue-group-templates</a> <a href="#">ingress queue-group</a> <i>string</i>

Introduced 20.10.R1  
Platforms All

### **instance** *number*

Synopsis Instance of the forwarding-plane ingress Queue Group for this SDP binding  
Context **configure** [service](#) [ipipe](#) *string* [spoke-sdp](#) *string* [ingress](#) [qos](#) [network](#) [fp-redirect-group](#) [instance](#) *number*  
Tree [instance](#)  
Range 1 to 65535  
Introduced 20.10.R1  
Platforms All

### **policy-name** *reference*

Synopsis Network policy ID  
Context **configure** [service](#) [ipipe](#) *string* [spoke-sdp](#) *string* [ingress](#) [qos](#) [network](#) [policy-name](#) *reference*  
Tree [policy-name](#)  
Reference **configure** [qos](#) [network](#) *string*  
Introduced 20.10.R1  
Platforms All

### **vc-label** *number*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Ingress MPLS VC label to send packets to the far end  
Context **configure** [service](#) [ipipe](#) *string* [spoke-sdp](#) *string* [ingress](#) [vc-label](#) *number*  
Tree [vc-label](#)  
Range 1 to 1048575  
Introduced 20.10.R1  
Platforms All

## transit-policy

Synopsis	Enable the <b>transit-policy</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">transit-policy</a>
Tree	<a href="#">transit-policy</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## prefix *reference*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IP prefix policy ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">transit-policy</a> <a href="#">prefix</a> <i>reference</i>
Tree	<a href="#">prefix</a>
Reference	<b>configure</b> <a href="#">application-assurance</a> <a href="#">group</a> <i>number</i> <a href="#">partition</a> <i>number</i> <a href="#">transit-prefix-policy</a> <i>number</i>
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## vc-switching *boolean*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Use PW switching signaling for spoke SDPs in service
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">vc-switching</a> <i>boolean</i>
Tree	<a href="#">vc-switching</a>
Default	false
Introduced	20.10.R1
Platforms	All

## **vpn-id** *number*

### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VPN identifier for the service
Context	<b>configure service ipipe</b> <i>string vpn-id number</i>
Tree	<a href="#">vpn-id</a>
Range	1 to 2147483647
Introduced	20.10.R1
Platforms	All

## **mac-list** [[name](#)] *string*

Synopsis	Enter the <b>mac-list</b> list instance
Context	<b>configure service mac-list</b> <i>string</i>
Tree	<a href="#">mac-list</a>
Description	Commands in this context specify the MAC addresses to be included in a MAC list to be used with the Auto-Learn MAC Protect (ALMP) functionality. The list is used to exclude certain MAC addresses from protection, for example, on SAPs or spoke SDPs configured with ALMP where certain MAC addresses (such as VRRP virtual MAC addresses) must be able to move to other objects.
Introduced	20.5.R1
Platforms	All

## **[name]** *string*

Synopsis	MAC list name
Context	<b>configure service mac-list</b> <i>string</i>
Tree	<a href="#">mac-list</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	20.5.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service</a> <a href="#">mac-list</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	20.5.R1
Platforms	All

### **mac** [[address](#)] *string*

Synopsis	Enter the <b>mac</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">mac-list</a> <i>string</i> <a href="#">mac</a> <i>string</i>
Tree	<a href="#">mac</a>
Introduced	20.5.R1
Platforms	All

### **[address]** *string*

Synopsis	MAC address
Context	<b>configure</b> <a href="#">service</a> <a href="#">mac-list</a> <i>string</i> <a href="#">mac</a> <i>string</i>
Tree	<a href="#">mac</a>
Notes	This element is part of a list key.
Introduced	20.5.R1
Platforms	All

### **mask** *string*

Synopsis	Mask for the MAC address
Context	<b>configure</b> <a href="#">service</a> <a href="#">mac-list</a> <i>string</i> <a href="#">mac</a> <i>string</i> <a href="#">mask</a> <i>string</i>
Tree	<a href="#">mask</a>
Default	ff:ff:ff:ff:ff:ff
Introduced	20.5.R1
Platforms	All

## md-auto-id

Synopsis	Enter the <b>md-auto-id</b> context
Context	<b>configure service md-auto-id</b>
Tree	<b>md-auto-id</b>
Introduced	16.0.R1
Platforms	All

## customer-id-range

Synopsis	Enable the <b>customer-id-range</b> context
Context	<b>configure service md-auto-id customer-id-range</b>
Tree	<b>customer-id-range</b>
Introduced	16.0.R1
Platforms	All

## end number

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Upper bound of the ID range
Context	<b>configure service md-auto-id customer-id-range end number</b>
Tree	<b>end</b>
Range	2 to 2147483647
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

## start number

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Lower bound of the ID range
----------	-----------------------------

Context	<b>configure service md-auto-id customer-id-range start</b> <i>number</i>
Tree	<a href="#">start</a>
Range	2 to 2147483647
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

## **pw-template-id-range**

Synopsis	Enable the <b>pw-template-id-range</b> context
Context	<b>configure service md-auto-id pw-template-id-range</b>
Tree	<a href="#">pw-template-id-range</a>
Introduced	16.0.R1
Platforms	All

## **end number**

### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Upper bound of the PW template ID range
Context	<b>configure service md-auto-id pw-template-id-range end</b> <i>number</i>
Tree	<a href="#">end</a>
Range	1 to 2147483647
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

## **start number**

### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Lower bound of the PW template ID range
----------	---

Context	<b>configure service md-auto-id pw-template-id-range start</b> <i>number</i>
Tree	<a href="#">start</a>
Range	1 to 2147483647
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

## service-id-range

Synopsis	Enable the <b>service-id-range</b> context
Context	<b>configure service md-auto-id service-id-range</b>
Tree	<a href="#">service-id-range</a>
Introduced	16.0.R1
Platforms	All

## end *number*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Upper bound of the service ID range
Context	<b>configure service md-auto-id service-id-range end</b> <i>number</i>
Tree	<a href="#">end</a>
Range	1 to 2147483647
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

## start *number*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Lower bound of the service ID range
----------	-------------------------------------

Context	<b>configure service md-auto-id service-id-range start</b> <i>number</i>
Tree	<a href="#">start</a>
Range	1 to 2147483647
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

## mrp

Synopsis	Enter the <b>mrp</b> context
Context	<b>configure service mrp</b>
Tree	<a href="#">mrp</a>
Introduced	20.10.R1
Platforms	All

## policy [[policy-name](#)] *string*

Synopsis	Enter the <b>policy</b> list instance
Context	<b>configure service mrp policy</b> <i>string</i>
Tree	<a href="#">policy</a>
Introduced	20.10.R1
Platforms	All

## [[policy-name](#)] *string*

Synopsis	Specify the policy name associated with the MRP
Context	<b>configure service mrp policy</b> <i>string</i>
Tree	<a href="#">policy</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	All

### **default-action** *keyword*

Synopsis	Action for packets not matching any MRP policy entries
Context	<b>configure service mrp policy</b> <i>string default-action keyword</i>
Tree	<a href="#">default-action</a>
Default	allow
Options	block, allow
Introduced	20.10.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure service mrp policy</b> <i>string description string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	20.10.R1
Platforms	All

### **entry** [[entry-id](#)] *number*

Synopsis	Enter the <b>entry</b> list instance
Context	<b>configure service mrp policy</b> <i>string entry number</i>
Tree	<a href="#">entry</a>
Introduced	20.10.R1
Platforms	All

### [[entry-id](#)] *number*

Synopsis	Specify an id for the MRP policy entry
Context	<b>configure service mrp policy</b> <i>string entry number</i>
Tree	<a href="#">entry</a>
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	All

### **action** *keyword*

Synopsis	Action applied for matching packets
Context	<b>configure</b> <a href="#">service</a> <a href="#">mrp</a> <a href="#">policy</a> <i>string</i> <a href="#">entry</a> <i>number</i> <a href="#">action</a> <i>keyword</i>
Tree	<a href="#">action</a>
Options	block, allow, end-station
Introduced	20.10.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service</a> <a href="#">mrp</a> <a href="#">policy</a> <i>string</i> <a href="#">entry</a> <i>number</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	20.10.R1
Platforms	All

### **match**

Synopsis	Enter the <b>match</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">mrp</a> <a href="#">policy</a> <i>string</i> <a href="#">entry</a> <i>number</i> <a href="#">match</a>
Tree	<a href="#">match</a>
Introduced	20.10.R1
Platforms	All

### **isid** [[value](#)] *number*

Synopsis	Enter the <b>isid</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">mrp</a> <a href="#">policy</a> <i>string</i> <a href="#">entry</a> <i>number</i> <a href="#">match</a> <a href="#">isid</a> <i>number</i>
Tree	<a href="#">isid</a>
Introduced	20.10.R1
Platforms	All

### **[value] number**

Synopsis	Lowest service instance ID to match the entry
Context	<b>configure service mrp policy</b> <i>string entry number match isid number</i>
Tree	<a href="#">isid</a>
Range	0 to 16777215
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	All

### **higher-value number**

Synopsis	Highest service instance ID to match the entry
Context	<b>configure service mrp policy</b> <i>string entry number match isid number higher-value number</i>
Tree	<a href="#">higher-value</a>
Range	0 to 16777215
Introduced	20.10.R1
Platforms	All

### **scope keyword**

Synopsis	Specify the scope of the mrp-policy definition
Context	<b>configure service mrp policy</b> <i>string scope keyword</i>
Tree	<a href="#">scope</a>
Default	template
Options	exclusive, template
Introduced	20.10.R1
Platforms	All

### **nat**

Synopsis	Enter the <b>nat</b> context
Context	<b>configure service nat</b>
Tree	<a href="#">nat</a>
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **classifier** [name] *string*

Synopsis Enter the **classifier** list instance  
Context **configure service nat classifier** *string*  
Tree **classifier**  
Max. Instances 8  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[name]** *string*

Synopsis NAT classifier name  
Context **configure service nat classifier** *string*  
Tree **classifier**  
String Length 1 to 32  
Notes This element is part of a list key.  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **default**

Synopsis Enter the **default** context  
Context **configure service nat classifier** *string* **default**  
Tree **default**  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **action**

Synopsis Enter the **action** context  
Context **configure service nat classifier** *string* **default** **action**  
Tree **action**

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## destination-nat

Synopsis	Enable the <b>destination-nat</b> context
Context	<b>configure service nat classifier <i>string</i> default action destination-nat</b>
Tree	<a href="#">destination-nat</a>
Notes	The following elements are part of a choice: ( <b>destination-nat</b> , <b>dnat</b> , and <b>dnat-ip-address</b> ) or <b>forward</b> .
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ip-address *string*

Synopsis	Substitute destination IP address of matching packets
Context	<b>configure service nat classifier <i>string</i> default action destination-nat ip-address <i>string</i></b>
Tree	<a href="#">ip-address</a>
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## forward

### WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Forward mode of operation
Context	<b>configure service nat classifier <i>string</i> default action forward</b>
Tree	<a href="#">forward</a>
Notes	The following elements are part of a choice: ( <b>destination-nat</b> , <b>dnat</b> , and <b>dnat-ip-address</b> ) or <b>forward</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **dnat-ip-address** *string*

### **WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Default destination IP address for matching entries with dNAT action
Context	<b>configure service nat classifier</b> <i>string</i> <b>default dnat-ip-address</b> <i>string</i>
Tree	<a href="#">dnat-ip-address</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **description** *string*

Synopsis	Text description
Context	<b>configure service nat classifier</b> <i>string</i> <b>description</b> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **entry** [*id*] *number*

Synopsis	Enter the <b>entry</b> list instance
Context	<b>configure service nat classifier</b> <i>string</i> <b>entry</b> <i>number</i>
Tree	<a href="#">entry</a>
Max. Instances	32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **[id]** *number*

Synopsis	Classifier rule entry ID
Context	<b>configure service nat classifier</b> <i>string</i> <b>entry</b> <i>number</i>
Tree	<a href="#">entry</a>
Range	1 to 1000
Notes	This element is part of a list key.

Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## action

Synopsis Enter the **action** context  
Context **configure service nat classifier string entry number action**  
Tree **action**  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## destination-nat

Synopsis Enable the **destination-nat** context  
Context **configure service nat classifier string entry number action destination-nat**  
Tree **destination-nat**  
Notes The following elements are part of a choice: (**destination-nat**, **dnat**, and **dnat-ip-address**) or **forward**.  
Introduced 21.2.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ip-address *string*

Synopsis Replacement destination IP address for packets  
Context **configure service nat classifier string entry number action destination-nat ip-address string**  
Tree **ip-address**  
Introduced 21.2.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## forward

### WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis Forward mode of operation

Context	<b>configure service nat classifier</b> <i>string entry number action forward</i>
Tree	<b>forward</b>
Notes	The following elements are part of a choice: ( <b>destination-nat</b> , <b>dnat</b> , and <b>dnat-ip-address</b> ) or <b>forward</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **description** *string*

Synopsis	Text description
Context	<b>configure service nat classifier</b> <i>string entry number description string</i>
Tree	<b>description</b>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **match**

Synopsis	Enter the <b>match</b> context
Context	<b>configure service nat classifier</b> <i>string entry number match</i>
Tree	<b>match</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **dst-port-range**

Synopsis	Enter the <b>dst-port-range</b> context
Context	<b>configure service nat classifier</b> <i>string entry number match dst-port-range</i>
Tree	<b>dst-port-range</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## end number

### WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Upper bound of the port range
Context	<b>configure</b> <a href="#">service nat classifier</a> <i>string</i> <a href="#">entry number match dst-port-range</a> <a href="#">end number</a>
Tree	<a href="#">end</a>
Range	0   1 to 65535
Default	65535
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## start number

### WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Lower bound of the port range
Context	<b>configure</b> <a href="#">service nat classifier</a> <i>string</i> <a href="#">entry number match dst-port-range</a> <a href="#">start number</a>
Tree	<a href="#">start</a>
Range	0   1 to 65535
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## foreign-ip-address *string*

### WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Foreign IP address as the match criterion
Context	<b>configure</b> <a href="#">service nat classifier</a> <i>string</i> <a href="#">entry number match foreign-ip-address</a> <i>string</i>
Tree	<a href="#">foreign-ip-address</a>
Introduced	19.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **protocol** *keyword*

### **WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	IP protocol to match
Context	<b>configure</b> <a href="#">service nat classifier</a> <i>string</i> <a href="#">entry number match protocol</a> <i>keyword</i>
Tree	<a href="#">protocol</a>
Default	udp
Options	tcp, udp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **deterministic-script**

Synopsis	Enter the <b>deterministic-script</b> context
Context	<b>configure</b> <a href="#">service nat deterministic-script</a>
Tree	<a href="#">deterministic-script</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **location** *string*

Synopsis	Remote location where Python script is exported
Context	<b>configure</b> <a href="#">service nat deterministic-script location</a> <i>string</i>
Tree	<a href="#">location</a>
String Length	1 to 180
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **firewall-policy** [[name](#)] *string*

Synopsis	Enter the <b>firewall-policy</b> list instance
Context	<b>configure</b> <a href="#">service nat firewall-policy</a> <i>string</i>
Tree	<a href="#">firewall-policy</a>
Description	Commands in this context configure the attributes of the firewall policy, for use in contexts where basic protection from outside attack vectors is required.

Firewall policies cannot be deleted if they are in use.

Max. Instances	2048
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[name]** *string*

Synopsis	Firewall policy name
Context	<b>configure</b> <a href="#">service nat firewall-policy</a> <i>string</i>
Tree	<a href="#">firewall-policy</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **alg**

Synopsis	Enter the <b>alg</b> context
Context	<b>configure</b> <a href="#">service nat firewall-policy</a> <i>string</i> <b>alg</b>
Tree	<a href="#">alg</a>
Description	Commands in this context configure the Application Layer Gateway (ALG) attributes of the policy.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ftp** *boolean*

Synopsis	Use FTP ALG for the policy
Context	<b>configure</b> <a href="#">service nat firewall-policy</a> <i>string</i> <b>alg ftp</b> <i>boolean</i>
Tree	<a href="#">ftp</a>
Default	true
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **rtsp boolean**

Synopsis	Use RTSP ALG for the policy
Context	<b>configure service nat firewall-policy string alg rtsp boolean</b>
Tree	<b>rtsp</b>
Description	When configured to <b>true</b> , Real-Time Streaming Protocol (RTSP) ALG is used for the policy.
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **sip boolean**

Synopsis	Use SIP ALG for the policy
Context	<b>configure service nat firewall-policy string alg sip boolean</b>
Tree	<b>sip</b>
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **description string**

Synopsis	Text description
Context	<b>configure service nat firewall-policy string description string</b>
Tree	<b>description</b>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **domain**

Synopsis	Enter the <b>domain</b> context
Context	<b>configure service nat firewall-policy string domain</b>
Tree	<b>domain</b>
Description	Commands in this context configure the attributes of the domain for the firewall policy. All associated traffic must be part of the prefixes specified by this domain.

Notes	The following elements are part of a choice: <b>domain</b> or <b>I2-outside</b> .
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **name** *string*

Synopsis	Firewall domain name
Context	<b>configure service nat firewall-policy string domain name string</b>
Tree	<b>name</b>
String Length	1 to 32
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **router-instance** *string*

Synopsis	Router or VPRN service name
Context	<b>configure service nat firewall-policy string domain router-instance string</b>
Tree	<b>router-instance</b>
Description	This command specifies the router instance or VPRN service for this domain. All associated traffic must be part of the prefixes specified by this domain.
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **filtering** *keyword*

Synopsis	Filtering method for inbound traffic for the policy
Context	<b>configure service nat firewall-policy string filtering keyword</b>
Tree	<b>filtering</b>
Default	endpoint-independent
Options	endpoint-independent, address-and-port-dependent
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **I2-outside**

Synopsis	Use Layer 2 outside service address location
Context	<b>configure service nat firewall-policy string I2-outside</b>
Tree	<a href="#">I2-outside</a>
Description	This command specifies Layer 2 outside service address location for the NAT policy instead of Layer 3 outside service.
Notes	The following elements are part of a choice: <b>domain</b> or <b>I2-outside</b> .
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **port-limits**

Synopsis	Enter the <b>port-limits</b> context
Context	<b>configure service nat firewall-policy string port-limits</b>
Tree	<a href="#">port-limits</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **forwarding number**

Synopsis	Maximum number of port forwarding entries
Context	<b>configure service nat firewall-policy string port-limits forwarding number</b>
Tree	<a href="#">forwarding</a>
Range	1 to 64
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **priority-sessions**

Synopsis	Enter the <b>priority-sessions</b> context
Context	<b>configure service nat firewall-policy string priority-sessions</b>
Tree	<a href="#">priority-sessions</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## fc

Synopsis	Enter the <b>fc</b> context
Context	<b>configure service nat firewall-policy string priority-sessions fc</b>
Tree	<b>fc</b>
Description	Commands in this context specify which Forwarding Class (FC) options have prioritized sessions.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## af boolean

Synopsis	Prioritize traffic from AF forwarding classes
Context	<b>configure service nat firewall-policy string priority-sessions fc af boolean</b>
Tree	<b>af</b>
Description	When configured to <b>true</b> , traffic from Assured Forwarding (AF) FC sessions is prioritized. When configured to <b>false</b> , AF traffic is not prioritized.
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## be boolean

Synopsis	Prioritize traffic from BE forwarding classes
Context	<b>configure service nat firewall-policy string priority-sessions fc be boolean</b>
Tree	<b>be</b>
Description	When configured to <b>true</b> , traffic from Best Effort (BE) FC sessions is prioritized. When configured to <b>false</b> , BE traffic is not prioritized.
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ef boolean

Synopsis	Prioritize traffic from EF forwarding classes
Context	<b>configure service nat firewall-policy string priority-sessions fc ef boolean</b>

Tree	<a href="#">ef</a>
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **h1** *boolean*

Synopsis	Prioritize traffic from H1 forwarding classes
Context	<b>configure</b> <a href="#">service nat firewall-policy</a> <i>string</i> <a href="#">priority-sessions</a> <a href="#">fc h1</a> <i>boolean</i>
Tree	<a href="#">h1</a>
Description	When configured to <b>true</b> , traffic from H1 sessions is prioritized. When configured to false, H1 traffic is not prioritized.
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **h2** *boolean*

Synopsis	Prioritize traffic from H2 forwarding classes
Context	<b>configure</b> <a href="#">service nat firewall-policy</a> <i>string</i> <a href="#">priority-sessions</a> <a href="#">fc h2</a> <i>boolean</i>
Tree	<a href="#">h2</a>
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **l1** *boolean*

Synopsis	Prioritize traffic from L1 forwarding classes
Context	<b>configure</b> <a href="#">service nat firewall-policy</a> <i>string</i> <a href="#">priority-sessions</a> <a href="#">fc l1</a> <i>boolean</i>
Tree	<a href="#">l1</a>
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ***l2 boolean***

Synopsis	Prioritize traffic from L2 forwarding classes
Context	<b>configure service nat firewall-policy string priority-sessions fc l2 boolean</b>
Tree	<a href="#">l2</a>
Description	When configured to <b>true</b> , traffic from L2 sessions is prioritized. When configured to false, L2 traffic is not prioritized.
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ***nc boolean***

Synopsis	Prioritize traffic from NC forwarding classes
Context	<b>configure service nat firewall-policy string priority-sessions fc nc boolean</b>
Tree	<a href="#">nc</a>
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **session-limits**

Synopsis	Enter the <b>session-limits</b> context
Context	<b>configure service nat firewall-policy string session-limits</b>
Tree	<a href="#">session-limits</a>
Description	Commands in this context configure session-limit attributes for the policy.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ***max number***

Synopsis	Maximum number of sessions per subscriber
Context	<b>configure service nat firewall-policy string session-limits max number</b>
Tree	<a href="#">max</a>
Range	1 to 65535
Default	65535

Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **reserved** *number*

Synopsis	Number of sessions reserved for prioritized sessions
Context	<b>configure service nat firewall-policy string session-limits reserved number</b>
Tree	<a href="#">reserved</a>
Description	This command configures the number of sessions per block that are reserved for prioritized sessions.
Range	1 to 65534
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **watermarks**

Synopsis	Enable the <b>watermarks</b> context
Context	<b>configure service nat firewall-policy string session-limits watermarks</b>
Tree	<a href="#">watermarks</a>
Description	This command configures watermarks for NAT resources.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **high** *number*

Synopsis	High watermark percentage
Context	<b>configure service nat firewall-policy string session-limits watermarks high number</b>
Tree	<a href="#">high</a>
Description	This command configures the high threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **low number**

Synopsis	Low watermark percentage
Context	<b>configure service nat firewall-policy string session-limits watermarks low number</b>
Tree	<b>low</b>
Description	This command configures the low threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **tcp**

Synopsis	Enter the <b>tcp</b> context
Context	<b>configure service nat firewall-policy string tcp</b>
Tree	<b>tcp</b>
Description	Commands in this context configure the transmission control protocol (TCP) attributes of the policy.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **mss-adjust number**

Synopsis	TCP MSS adjustment value
Context	<b>configure service nat firewall-policy string tcp mss-adjust number</b>
Tree	<b>mss-adjust</b>
Description	This command configures the value to use to adjust the TCP Maximum Segment Size (MSS) option, if not already present or the present value is higher.
Range	160 to 10240
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## timeouts

Synopsis	Enter the <b>timeouts</b> context
Context	<b>configure service nat firewall-policy string timeouts</b>
Tree	<a href="#">timeouts</a>
Description	Commands in this context configure the attributes of session idle timeouts for the policy.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## icmp6-query *number*

Synopsis	Timeout applied to an ICMPv6 Query session
Context	<b>configure service nat firewall-policy string timeouts icmp6-query number</b>
Tree	<a href="#">icmp6-query</a>
Range	60 to 240
Default	60
Units	seconds
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## sip *number*

Synopsis	SIP inactive media timeout
Context	<b>configure service nat firewall-policy string timeouts sip number</b>
Tree	<a href="#">sip</a>
Range	10 to 7200
Default	120
Units	seconds
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## tcp

Synopsis	Enter the <b>tcp</b> context
Context	<b>configure service nat firewall-policy string timeouts tcp</b>
Tree	<a href="#">tcp</a>

Description	Commands in this context configure TCP timeout attributes.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **established** *number*

Synopsis	Idle timeout for TCP session in established state
Context	<b>configure service nat firewall-policy string timeouts tcp established number</b>
Tree	<b>established</b>
Range	60 to 86400
Default	7440
Units	seconds
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **rst** *number*

Synopsis	Suspend time for TCP connection ports closed by RST
Context	<b>configure service nat firewall-policy string timeouts tcp rst number</b>
Tree	<b>rst</b>
Description	This command configures the suspend time for outside TCP ports that are used in translations for TCP connections, when they are closed by TCP Reset (RST). After the timer expires, the outside ports can be reused for new TCP translations.
Range	0 to 240
Default	0
Units	seconds
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **syn** *number*

Synopsis	TCP session timeout when synchronizing initial sequence
Context	<b>configure service nat firewall-policy string timeouts tcp syn number</b>
Tree	<b>syn</b>
Range	6 to 86400

Default	15
Units	seconds
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **time-wait** *number*

Synopsis	Timeout applied to a TCP session in the time-wait state
Context	<b>configure</b> <a href="#">service nat firewall-policy</a> <i>string</i> <a href="#">timeouts tcp time-wait</a> <i>number</i>
Tree	<a href="#">time-wait</a>
Range	0 to 240
Default	0
Units	seconds
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **transitory** *number*

Synopsis	Idle timeout for TCP session in transitory state
Context	<b>configure</b> <a href="#">service nat firewall-policy</a> <i>string</i> <a href="#">timeouts tcp transitory</a> <i>number</i>
Tree	<a href="#">transitory</a>
Range	60 to 86400
Default	240
Units	seconds
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **udp**

Synopsis	Enter the <b>udp</b> context
Context	<b>configure</b> <a href="#">service nat firewall-policy</a> <i>string</i> <a href="#">timeouts udp</a>
Tree	<a href="#">udp</a>
Description	Commands in this context configure the User Datagram Protocol (UDP) mapping timeout attributes.
Introduced	16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **dns number**

Synopsis Timeout applied to UDP session with destination port 53  
Context **configure service nat firewall-policy string timeouts udp dns number**  
Tree **dns**  
Range 15 to 86400  
Default 15  
Units seconds  
Introduced 16.0.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **initial number**

Synopsis UDP mapping timeout applied to new sessions  
Context **configure service nat firewall-policy string timeouts udp initial number**  
Tree **initial**  
Range 10 to 300  
Default 15  
Units seconds  
Introduced 16.0.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **normal number**

Synopsis UDP mapping timeout  
Context **configure service nat firewall-policy string timeouts udp normal number**  
Tree **normal**  
Range 60 to 86400  
Default 300  
Units seconds  
Introduced 16.0.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## unknown-protocol *number*

### WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Timeout for flows with an unknown protocol
Context	<b>configure</b> <a href="#">service nat firewall-policy</a> <i>string</i> <a href="#">timeouts unknown-protocol</a> <i>number</i>
Tree	<a href="#">unknown-protocol</a>
Range	60 to 86400
Default	300
Units	seconds
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## udp

Synopsis	Enter the <b>udp</b> context
Context	<b>configure</b> <a href="#">service nat firewall-policy</a> <i>string</i> <a href="#">udp</a>
Tree	<a href="#">udp</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## inbound-refresh *boolean*

Synopsis	Extend UDP session timeout on inbound traffic
Context	<b>configure</b> <a href="#">service nat firewall-policy</a> <i>string</i> <a href="#">udp inbound-refresh</a> <i>boolean</i>
Tree	<a href="#">inbound-refresh</a>
Description	When configured to <b>true</b> , this command extends the UDP session timeout on inbound traffic. When configured to <b>false</b> , the UDP session timeout is not extended.
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## unknown-protocols

Synopsis	Enter the <b>unknown-protocols</b> context
Context	<b>configure service nat firewall-policy string unknown-protocols</b>
Tree	<a href="#">unknown-protocols</a>
Description	Commands in this context configure the treatment of flows of unknown Layer 4 protocols that cannot be natively handled by the system.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## all

Synopsis	Allow all protocols to create unknown flows
Context	<b>configure service nat firewall-policy string unknown-protocols all</b>
Tree	<a href="#">all</a>
Description	This command specifies that all protocols are permitted to create unknown flows. Protocol or IPv6 extension header values that are explicitly supported by SR OS will not be treated as unknown protocols.
Notes	The following elements are part of a choice: <b>all</b> or <b>protocol</b> .
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## protocol *number*

Synopsis	IANA number of protocol allowed to create unknown flow
Context	<b>configure service nat firewall-policy string unknown-protocols protocol <i>number</i></b>
Tree	<a href="#">protocol</a>
Description	This command specifies the Internet Assigned Numbers Authority (IANA) number of a protocol that is permitted to create unknown flows. Protocol or IPv6 extension header values that are explicitly supported by SR OS can be configured but will not be treated as unknown protocols.
Range	0 to 255
Max. Instances	8
Notes	The following elements are part of a choice: <b>all</b> or <b>protocol</b> .
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## map-t

Synopsis	Enter the <b>map-t</b> context
Context	<b>configure service nat map-t</b>
Tree	<a href="#">map-t</a>
Introduced	16.0.R4
Platforms	VSR

## domain [[name](#)] *string*

Synopsis	Enter the <b>domain</b> list instance
Context	<b>configure service nat map-t domain <i>string</i></b>
Tree	<a href="#">domain</a>
Max. Instances	63
Introduced	16.0.R4
Platforms	VSR

## [\[name\]](#) *string*

Synopsis	MAP domain name
Context	<b>configure service nat map-t domain <i>string</i></b>
Tree	<a href="#">domain</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	VSR

## admin-state *keyword*

Synopsis	Administrative state of the MAP domain
Context	<b>configure service nat map-t domain <i>string</i> admin-state <i>keyword</i></b>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable

Introduced 16.0.R4  
Platforms VSR

### **description** *string*

Synopsis Text description  
Context **configure** [service nat map-t domain string](#) [description string](#)  
Tree [description](#)  
String Length 1 to 80  
Introduced 16.0.R4  
Platforms VSR

### **dmr-prefix** *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis The Default Mapping Rule prefix  
Context **configure** [service nat map-t domain string](#) [dmr-prefix string](#)  
Tree [dmr-prefix](#)  
Introduced 16.0.R4  
Platforms VSR

### **ip-fragmentation**

Synopsis Enter the **ip-fragmentation** context  
Context **configure** [service nat map-t domain string](#) [ip-fragmentation](#)  
Tree [ip-fragmentation](#)  
Introduced 16.0.R4  
Platforms VSR

### **v6-frag-header** *boolean*

Synopsis Enable insertion of fragmentation header in IPv6 packet  
Context **configure** [service nat map-t domain string](#) [ip-fragmentation v6-frag-header](#) *boolean*

Tree	<a href="#">v6-frag-header</a>
Default	false
Introduced	16.0.R4
Platforms	VSR

### **mapping-rule** [[rule-name](#)] *string*

Synopsis	Enter the <b>mapping-rule</b> list instance
Context	<b>configure</b> <a href="#">service nat map-t domain</a> <i>string</i> <a href="#">mapping-rule</a> <i>string</i>
Tree	<a href="#">mapping-rule</a>
Max. Instances	16383
Introduced	16.0.R4
Platforms	VSR

### **[rule-name]** *string*

Synopsis	The name that identifies this mapping rule
Context	<b>configure</b> <a href="#">service nat map-t domain</a> <i>string</i> <a href="#">mapping-rule</a> <i>string</i>
Tree	<a href="#">mapping-rule</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	VSR

### **admin-state** *keyword*

Synopsis	Administrative state of the MAP rule
Context	<b>configure</b> <a href="#">service nat map-t domain</a> <i>string</i> <a href="#">mapping-rule</a> <i>string</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R4
Platforms	VSR

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service nat map-t domain</a> <i>string</i> <a href="#">mapping-rule</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R4
Platforms	VSR

### **ea-length** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	The length of the EA bits field in the End-user IPv6 prefix part of the IPv6 Map Address
Context	<b>configure</b> <a href="#">service nat map-t domain</a> <i>string</i> <a href="#">mapping-rule</a> <i>string</i> <a href="#">ea-length</a> <i>number</i>
Tree	<a href="#">ea-length</a>
Range	0 to 48
Default	0
Introduced	16.0.R4
Platforms	VSR

### **ipv4-prefix** *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	The IPv4 prefix
Context	<b>configure</b> <a href="#">service nat map-t domain</a> <i>string</i> <a href="#">mapping-rule</a> <i>string</i> <a href="#">ipv4-prefix</a> <i>string</i>
Tree	<a href="#">ipv4-prefix</a>
Introduced	16.0.R4
Platforms	VSR

## **psid-offset** *number*

### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	The offset of the Port Set ID (PSID) within a 16 bits wide port space
Context	<b>configure</b> <a href="#">service nat map-t domain</a> <i>string</i> <a href="#">mapping-rule</a> <i>string</i> <a href="#">psid-offset</a> <i>number</i>
Tree	<a href="#">psid-offset</a>
Range	0 to 16
Default	6
Introduced	16.0.R4
Platforms	VSR

## **rule-prefix** *string*

### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	The IPv6 prefix
Context	<b>configure</b> <a href="#">service nat map-t domain</a> <i>string</i> <a href="#">mapping-rule</a> <i>string</i> <a href="#">rule-prefix</a> <i>string</i>
Tree	<a href="#">rule-prefix</a>
Introduced	16.0.R4
Platforms	VSR

## **mtu** *number*

Synopsis	Configure the MTU
Context	<b>configure</b> <a href="#">service nat map-t domain</a> <i>string</i> <a href="#">mtu</a> <i>number</i>
Tree	<a href="#">mtu</a>
Range	160 to 8686
Default	8686
Introduced	16.0.R4
Platforms	VSR

### **tcp-mss-adjust** *number*

Synopsis	The value to adjust the TCP Maximum Segment Size (MSS) option
Context	<b>configure</b> <a href="#">service nat map-t domain</a> <i>string</i> <b>tcp-mss-adjust</b> <i>number</i>
Tree	<a href="#">tcp-mss-adjust</a>
Range	0   160 to 8626
Default	0
Introduced	16.0.R4
Platforms	VSR

### **nat-policy** [[name](#)] *string*

Synopsis	Enter the <b>nat-policy</b> list instance
Context	<b>configure</b> <a href="#">service nat nat-policy</a> <i>string</i>
Tree	<a href="#">nat-policy</a>
Max. Instances	4096
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### [[name](#)] *string*

Synopsis	NAT policy name
Context	<b>configure</b> <a href="#">service nat nat-policy</a> <i>string</i>
Tree	<a href="#">nat-policy</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **alg**

Synopsis	Enter the <b>alg</b> context
Context	<b>configure</b> <a href="#">service nat nat-policy</a> <i>string</i> <b>alg</b>
Tree	<a href="#">alg</a>

Description	Commands in this context configure the Application Layer Gateway (ALG) attributes of the policy.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ftp boolean**

Synopsis	Use FTP ALG for the policy
Context	<b>configure</b> <a href="#">service nat nat-policy</a> <i>string alg ftp boolean</i>
Tree	<a href="#">ftp</a>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **pptp boolean**

Synopsis	Use PPTP ALG for the policy
Context	<b>configure</b> <a href="#">service nat nat-policy</a> <i>string alg pptp boolean</i>
Tree	<a href="#">pptp</a>
Description	<p>When configured to <b>true</b>, the policy uses Point-to-Point Tunneling Protocol (PPTP) ALG.</p> <p>PPTP sessions can only be initiated from NAT inside.</p> <p>GRE traffic is allowed through NAT only if the corresponding mapping exists.</p> <p>There can be seven calls (GRE tunnels) per control session.</p> <p>When configured to <b>false</b>, PPTP ALG is not used.</p>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **rtsp boolean**

Synopsis	Use RTSP ALG for the policy
Context	<b>configure</b> <a href="#">service nat nat-policy</a> <i>string alg rtsp boolean</i>
Tree	<a href="#">rtsp</a>
Description	When configured to <b>true</b> , Real-Time Streaming Protocol (RTSP) ALG is used for the policy.

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **sip** *boolean*

Synopsis	Use SIP ALG for the policy
Context	<b>configure</b> <a href="#">service nat nat-policy</a> <i>string</i> <a href="#">alg sip</a> <i>boolean</i>
Tree	<a href="#">sip</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **block-limit** *number*

Synopsis	Maximum number of port blocks per subscriber
Context	<b>configure</b> <a href="#">service nat nat-policy</a> <i>string</i> <a href="#">block-limit</a> <i>number</i>
Tree	<a href="#">block-limit</a>
Range	1 to 40
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service nat nat-policy</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **dnat**

Synopsis	Enter the <b>dnat</b> context
----------	-------------------------------

Context	<b>configure service nat nat-policy string dnat</b>
Tree	<b>dnat</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## classifier reference

### WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	NAT classifier
Context	<b>configure service nat nat-policy string dnat classifier reference</b>
Tree	<b>classifier</b>
Description	When configured within the NAT policy, this command references a NAT classifier that activates DNAT functionality. The configuration uses a filter-like approach to identify the traffic that is subjected to DNAT. It is required for translation of the destination IP address.
Reference	<b>configure service nat classifier string</b>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## dnat-only

Synopsis	Enable the <b>dnat-only</b> context
Context	<b>configure service nat nat-policy string dnat-only</b>
Tree	<b>dnat-only</b>
Description	Commands in this context configure the attributes of DNAT-only. When DNAT-only is configured, no source or port NAT (SNAPT) is performed. Only the destination IP address (going from inside to outside) is translated; the source IP address and port are not translated.
Notes	The following elements are part of a choice: <b>dnat-only</b> , <b>I2-outside</b> , or <b>pool</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## nat-group *reference*

**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	NAT group
Context	<b>configure</b> <a href="#">service nat nat-policy</a> <i>string</i> <a href="#">dnat-only nat-group</a> <i>reference</i>
Tree	<a href="#">nat-group</a>
Description	This command configures the NAT group in which DNAT translation takes place for the outside routing context.
Reference	<b>configure</b> <a href="#">isa nat-group</a> <i>number</i>
Notes	The following elements are part of a mandatory choice: <b>nat-group</b> or <b>wlan-gw-group</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## router-instance *string*

**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Router name or VPRN service name
Context	<b>configure</b> <a href="#">service nat nat-policy</a> <i>string</i> <a href="#">dnat-only router-instance</a> <i>string</i>
Tree	<a href="#">router-instance</a>
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## wlan-gw-group *reference*

**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	WLAN GW group used for NAT
Context	<b>configure</b> <a href="#">service nat nat-policy</a> <i>string</i> <a href="#">dnat-only wlan-gw-group</a> <i>reference</i>
Tree	<a href="#">wlan-gw-group</a>
Description	This command configures the NAT WLAN Gateway (GW) group in which DNAT translation takes place for the outside routing context.
Reference	<b>configure</b> <a href="#">isa wlan-gw-group</a> <i>number</i>
Notes	The following elements are part of a mandatory choice: <b>nat-group</b> or <b>wlan-gw-group</b> .
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **filtering** *keyword*

Synopsis	Filtering method for inbound traffic for the policy
Context	<b>configure</b> <a href="#">service nat nat-policy</a> <i>string</i> <a href="#">filtering</a> <i>keyword</i>
Tree	<a href="#">filtering</a>
Default	endpoint-independent
Options	endpoint-independent, address-and-port-dependent
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **flow-log-policy**

Synopsis	Enter the <b>flow-log-policy</b> context
Context	<b>configure</b> <a href="#">service nat nat-policy</a> <i>string</i> <a href="#">flow-log-policy</a>
Tree	<a href="#">flow-log-policy</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ipfix** *reference*

Synopsis	IPFIX export policy
Context	<b>configure</b> <a href="#">service nat nat-policy</a> <i>string</i> <a href="#">flow-log-policy ipfix</a> <i>reference</i>

Tree	<a href="#">ipfix</a>
Description	This command specifies an IP flow information export policy for the flow-log policy.
Reference	<b>configure service ipfix export-policy</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **syslog** *reference*

Synopsis	Syslog export policy name
Context	<b>configure service nat nat-policy</b> <i>string</i> <a href="#">flow-log-policy</a> <a href="#">syslog</a> <i>reference</i>
Tree	<a href="#">syslog</a>
Description	This command configures a syslog export policy with a set of transport parameters used to transmit NAT flow records in syslog format to an external collector node. The policy name is referenced from the NAT policy applied to an inside routing context.
Reference	<b>configure service nat syslog export-policy</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **I2-outside**

Synopsis	Use Layer 2 outside service address location
Context	<b>configure service nat nat-policy</b> <i>string</i> <a href="#">I2-outside</a>
Tree	<a href="#">I2-outside</a>
Description	This command specifies Layer 2 outside service address location for the NAT policy instead of Layer 3 outside service.
Notes	The following elements are part of a choice: <b>dnat-only</b> , <b>I2-outside</b> , or <b>pool</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **pool**

Synopsis	Enter the <b>pool</b> context
Context	<b>configure service nat nat-policy</b> <i>string</i> <a href="#">pool</a>
Tree	<a href="#">pool</a>
Notes	The following elements are part of a choice: <b>dnat-only</b> , <b>I2-outside</b> , or <b>pool</b> .

Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **name** *string*

**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis NAT pool name  
Context **configure** *service nat nat-policy string pool name string*  
Tree *name*  
String Length 1 to 32  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **router-instance** *string*

**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis Router or VPRN service name  
Context **configure** *service nat nat-policy string pool router-instance string*  
Tree *router-instance*  
Introduced 16.0.R4  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **port-forwarding-range-end** *number*

Synopsis End of the port forwarding range  
Context **configure** *service nat nat-policy string port-forwarding-range-end number*  
Tree *port-forwarding-range-end*  
Description This command specifies the end of the port range available for port forwarding. The start of the range is always equal to one.  
  
The number of ports that can be configured is half of the available block =>  $64512 / 2 = 32256$ . In combination with the configured value for **port-forwarding-range-end**, the formulas are:  
  
 $\text{max port-reservation blocks} = 65535 - \text{port-forwarding-range-end}$

$\text{max port-reservation ports} = (65535 - \text{port-forwarding-range-end}) / 2$

If **port-reservation** is already configured, the following applies for the maximum port-forwarding-range-end:

$\text{max port-forwarding-range-end} = 65535 - \text{port-reservation blocks}$   
 $\text{max port-forwarding-range-end} = 65535 - (\text{port-reservation ports} * 2)$

Range	1023 to 65535
Default	1023
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### port-limits

Synopsis	Enter the <b>port-limits</b> context
Context	<b>configure service nat nat-policy string port-limits</b>
Tree	<a href="#">port-limits</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### forwarding *number*

Synopsis	Maximum number of port forwarding entries
Context	<b>configure service nat nat-policy string port-limits forwarding number</b>
Tree	<a href="#">forwarding</a>
Range	1 to 64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### reserved *number*

Synopsis	Number of ports reserved for prioritized sessions
Context	<b>configure service nat nat-policy string port-limits reserved number</b>
Tree	<a href="#">reserved</a>
Description	This command configures the number of ports per block that are reserved for prioritized sessions.
Range	1 to 65534
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## watermarks

Synopsis Enable the **watermarks** context  
Context **configure service nat nat-policy string port-limits watermarks**  
Tree **watermarks**  
Description This command configures watermarks for NAT resources.  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## high number

Synopsis High watermark percentage  
Context **configure service nat nat-policy string port-limits watermarks high number**  
Tree **high**  
Description This command configures the high threshold value as a percentage of the total port-block space in a NAT pool.  
Range 0 to 100  
Units percent  
Notes This element is mandatory.  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## low number

Synopsis Low watermark percentage  
Context **configure service nat nat-policy string port-limits watermarks low number**  
Tree **low**  
Description This command configures the low threshold value as a percentage of the total port-block space in a NAT pool.  
Range 0 to 100  
Units percent  
Notes This element is mandatory.  
Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## priority-sessions

Synopsis Enter the **priority-sessions** context  
Context **configure service nat nat-policy string priority-sessions**  
Tree [priority-sessions](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## fc

Synopsis Enter the **fc** context  
Context **configure service nat nat-policy string priority-sessions fc**  
Tree [fc](#)  
Description Commands in this context specify which Forwarding Class (FC) options have prioritized sessions.  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## af boolean

Synopsis Prioritize traffic from AF forwarding classes  
Context **configure service nat nat-policy string priority-sessions fc af boolean**  
Tree [af](#)  
Description When configured to **true**, traffic from Assured Forwarding (AF) FC sessions is prioritized. When configured to **false**, AF traffic is not prioritized.  
Default false  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## be boolean

Synopsis Prioritize traffic from BE forwarding classes  
Context **configure service nat nat-policy string priority-sessions fc be boolean**  
Tree [be](#)

Description	When configured to <b>true</b> , traffic from Best Effort (BE) FC sessions is prioritized. When configured to <b>false</b> , BE traffic is not prioritized.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ef boolean**

Synopsis	Prioritize traffic from EF forwarding classes
Context	<b>configure service nat nat-policy</b> <i>string</i> <b>priority-sessions fc ef boolean</b>
Tree	<b>ef</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **h1 boolean**

Synopsis	Prioritize traffic from H1 forwarding classes
Context	<b>configure service nat nat-policy</b> <i>string</i> <b>priority-sessions fc h1 boolean</b>
Tree	<b>h1</b>
Description	When configured to <b>true</b> , traffic from H1 sessions is prioritized. When configured to false, H1 traffic is not prioritized.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **h2 boolean**

Synopsis	Prioritize traffic from H2 forwarding classes
Context	<b>configure service nat nat-policy</b> <i>string</i> <b>priority-sessions fc h2 boolean</b>
Tree	<b>h2</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## I1 *boolean*

Synopsis	Prioritize traffic from L1 forwarding classes
Context	<b>configure</b> <a href="#">service nat nat-policy</a> <i>string</i> <a href="#">priority-sessions fc l1</a> <i>boolean</i>
Tree	<a href="#">l1</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## I2 *boolean*

Synopsis	Prioritize traffic from L2 forwarding classes
Context	<b>configure</b> <a href="#">service nat nat-policy</a> <i>string</i> <a href="#">priority-sessions fc l2</a> <i>boolean</i>
Tree	<a href="#">l2</a>
Description	When configured to <b>true</b> , traffic from L2 sessions is prioritized. When configured to false, L2 traffic is not prioritized.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## nc *boolean*

Synopsis	Prioritize traffic from NC forwarding classes
Context	<b>configure</b> <a href="#">service nat nat-policy</a> <i>string</i> <a href="#">priority-sessions fc nc</a> <i>boolean</i>
Tree	<a href="#">nc</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## session-limits

Synopsis	Enter the <b>session-limits</b> context
Context	<b>configure</b> <a href="#">service nat nat-policy</a> <i>string</i> <a href="#">session-limits</a>
Tree	<a href="#">session-limits</a>
Description	Commands in this context configure session-limit attributes for the policy.
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **max number**

Synopsis Maximum number of sessions per subscriber  
Context **configure service nat nat-policy string session-limits max number**  
Tree **max**  
Range 1 to 65535  
Default 65535  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **reserved number**

Synopsis Number of sessions reserved for prioritized sessions  
Context **configure service nat nat-policy string session-limits reserved number**  
Tree **reserved**  
Description This command configures the number of sessions per block that are reserved for prioritized sessions.  
Range 1 to 65534  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **watermarks**

Synopsis Enable the **watermarks** context  
Context **configure service nat nat-policy string session-limits watermarks**  
Tree **watermarks**  
Description This command configures watermarks for NAT resources.  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **high number**

Synopsis High watermark percentage

Context	<b>configure service nat nat-policy</b> <i>string session-limits watermarks high number</i>
Tree	<a href="#">high</a>
Description	This command configures the high threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **low number**

Synopsis	Low watermark percentage
Context	<b>configure service nat nat-policy</b> <i>string session-limits watermarks low number</i>
Tree	<a href="#">low</a>
Description	This command configures the low threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **tcp**

Synopsis	Enter the <b>tcp</b> context
Context	<b>configure service nat nat-policy</b> <i>string tcp</i>
Tree	<a href="#">tcp</a>
Description	Commands in this context configure the transmission control protocol (TCP) attributes of the policy.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **mss-adjust** *number*

Synopsis	TCP MSS adjustment value
Context	<b>configure</b> <a href="#">service nat nat-policy</a> <i>string</i> <a href="#">tcp mss-adjust</a> <i>number</i>
Tree	<a href="#">mss-adjust</a>
Description	This command configures the value to use to adjust the TCP Maximum Segment Size (MSS) option, if not already present or the present value is higher.
Range	160 to 10240
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **reset-unknown** *boolean*

Synopsis	Generate TCP reset for packets from unknown flows
Context	<b>configure</b> <a href="#">service nat nat-policy</a> <i>string</i> <a href="#">tcp reset-unknown</a> <i>boolean</i>
Tree	<a href="#">reset-unknown</a>
Description	When configured to <b>true</b> , TCP packets are dropped and a TCP reset is generated if the NAT inside receives a TCP packet without the SYN flag set for an unknown flow. When configured to <b>false</b> , no TCP reset is generated.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **timeouts**

Synopsis	Enter the <b>timeouts</b> context
Context	<b>configure</b> <a href="#">service nat nat-policy</a> <i>string</i> <a href="#">timeouts</a>
Tree	<a href="#">timeouts</a>
Description	Commands in this context configure the attributes of session idle timeouts for the policy.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **icmp-query** *number*

Synopsis	Timeout applied to an ICMP Query session
Context	<b>configure</b> <a href="#">service nat nat-policy</a> <i>string</i> <a href="#">timeouts icmp-query</a> <i>number</i>

Tree	<a href="#">icmp-query</a>
Range	60 to 240
Default	60
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **sip number**

Synopsis	SIP inactive media timeout
Context	<b>configure</b> <a href="#">service nat nat-policy</a> <i>string</i> <a href="#">timeouts sip number</a>
Tree	<a href="#">sip</a>
Range	10 to 7200
Default	120
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **subscriber-retention number**

Synopsis	IP address hold time after host and port blocks expire
Context	<b>configure</b> <a href="#">service nat nat-policy</a> <i>string</i> <a href="#">timeouts subscriber-retention number</a>
Tree	<a href="#">subscriber-retention</a>
Description	This command configures the time to keep a NAT subscriber and its associated IP address after all hosts and associated port blocks expire. If a NAT subscriber host appears before the retention timeout elapses, it is given the same outside IP address.
Range	0 to 1440
Default	0
Units	minutes
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **tcp**

Synopsis	Enter the <b>tcp</b> context
----------	------------------------------

Context	<b>configure service nat nat-policy string timeouts tcp</b>
Tree	<b>tcp</b>
Description	Commands in this context configure TCP timeout attributes.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **established number**

Synopsis	Idle timeout for TCP session in established state
Context	<b>configure service nat nat-policy string timeouts tcp established number</b>
Tree	<b>established</b>
Range	60 to 86400
Default	7440
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **rst number**

Synopsis	Suspend time for TCP connection ports closed by RST
Context	<b>configure service nat nat-policy string timeouts tcp rst number</b>
Tree	<b>rst</b>
Description	This command configures the suspend time for outside TCP ports that are used in translations for TCP connections, when they are closed by TCP Reset (RST). After the timer expires, the outside ports can be reused for new TCP translations.
Range	0 to 240
Default	0
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **syn number**

Synopsis	TCP session timeout when synchronizing initial sequence
Context	<b>configure service nat nat-policy string timeouts tcp syn number</b>

Tree	<a href="#">syn</a>
Range	6 to 86400
Default	15
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **time-wait** *number*

Synopsis	Timeout applied to a TCP session in the time-wait state
Context	<b>configure</b> <a href="#">service nat nat-policy</a> <i>string</i> <a href="#">timeouts tcp time-wait</a> <i>number</i>
Tree	<a href="#">time-wait</a>
Range	0 to 240
Default	0
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **transitory** *number*

Synopsis	Idle timeout for TCP session in transitory state
Context	<b>configure</b> <a href="#">service nat nat-policy</a> <i>string</i> <a href="#">timeouts tcp transitory</a> <i>number</i>
Tree	<a href="#">transitory</a>
Range	60 to 86400
Default	240
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **udp**

Synopsis	Enter the <b>udp</b> context
Context	<b>configure</b> <a href="#">service nat nat-policy</a> <i>string</i> <a href="#">timeouts udp</a>
Tree	<a href="#">udp</a>

Description	Commands in this context configure the User Datagram Protocol (UDP) mapping timeout attributes.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **dns number**

Synopsis	Timeout applied to UDP session with destination port 53
Context	<b>configure</b> <a href="#">service nat nat-policy</a> <i>string</i> <a href="#">timeouts udp dns number</a>
Tree	<a href="#">dns</a>
Range	15 to 86400
Default	15
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **initial number**

Synopsis	UDP mapping timeout applied to new sessions
Context	<b>configure</b> <a href="#">service nat nat-policy</a> <i>string</i> <a href="#">timeouts udp initial number</a>
Tree	<a href="#">initial</a>
Range	10 to 300
Default	15
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **normal number**

Synopsis	UDP mapping timeout
Context	<b>configure</b> <a href="#">service nat nat-policy</a> <i>string</i> <a href="#">timeouts udp normal number</a>
Tree	<a href="#">normal</a>
Range	60 to 86400
Default	300
Units	seconds

Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## udp

Synopsis Enter the **udp** context  
Context **configure service nat nat-policy string udp**  
Tree [udp](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## inbound-refresh *boolean*

Synopsis Extend UDP session timeout on inbound traffic  
Context **configure service nat nat-policy string udp inbound-refresh boolean**  
Tree [inbound-refresh](#)  
Description When configured to **true**, this command extends the UDP session timeout on inbound traffic.  
When configured to **false**, the UDP session timeout is not extended.  
Default false  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## pcp-server-policy [*name*] *string*

Synopsis Enter the **pcp-server-policy** list instance  
Context **configure service nat pcp-server-policy string**  
Tree [pcp-server-policy](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## [*name*] *string*

Synopsis PCP server policy name  
Context **configure service nat pcp-server-policy string**

Tree	<a href="#">pcp-server-policy</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service nat pcp-server-policy</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **lifetime**

Synopsis	Enter the <b>lifetime</b> context
Context	<b>configure</b> <a href="#">service nat pcp-server-policy</a> <i>string</i> <a href="#">lifetime</a>
Tree	<a href="#">lifetime</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **maximum** *number*

Synopsis	Maximum lifetime of explicit mappings made by the PCP servers
Context	<b>configure</b> <a href="#">service nat pcp-server-policy</a> <i>string</i> <a href="#">lifetime</a> <a href="#">maximum</a> <i>number</i>
Tree	<a href="#">maximum</a>
Range	61 to 86400
Default	86400
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **minimum** *number*

Synopsis	Minimum lifetime of explicit mappings made by the PCP servers
Context	<b>configure service nat pcp-server-policy</b> <i>string lifetime minimum number</i>
Tree	<b>minimum</b>
Range	60 to 86399
Default	120
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **max-description-size** *number*

Synopsis	Maximum length of mapping descriptions made by the PCP servers
Context	<b>configure service nat pcp-server-policy</b> <i>string max-description-size number</i>
Tree	<b>max-description-size</b>
Range	1 to 64
Default	64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **opcode**

Synopsis	Enter the <b>opcode</b> context
Context	<b>configure service nat pcp-server-policy</b> <i>string opcode</i>
Tree	<b>opcode</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **announce** *boolean*

Synopsis	Process the announce PCP requests
Context	<b>configure service nat pcp-server-policy</b> <i>string opcode announce boolean</i>
Tree	<b>announce</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **get** *boolean*

Synopsis	Process the get PCP requests
Context	<b>configure</b> <a href="#">service nat pcp-server-policy</a> <i>string</i> <a href="#">opcode get</a> <i>boolean</i>
Tree	<a href="#">get</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **map** *boolean*

Synopsis	Process the map PCP requests
Context	<b>configure</b> <a href="#">service nat pcp-server-policy</a> <i>string</i> <a href="#">opcode map</a> <i>boolean</i>
Tree	<a href="#">map</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **option**

Synopsis	Enter the <b>option</b> context
Context	<b>configure</b> <a href="#">service nat pcp-server-policy</a> <i>string</i> <a href="#">option</a>
Tree	<a href="#">option</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **description** *boolean*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service nat pcp-server-policy</a> <i>string</i> <a href="#">option description</a> <i>boolean</i>
Tree	<a href="#">description</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **next** *boolean*

Synopsis	Process the PCP requests that contain the next option
Context	<b>configure</b> <a href="#">service nat pcp-server-policy</a> <i>string</i> <a href="#">option next</a> <i>boolean</i>
Tree	<a href="#">next</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **port-reservation** *boolean*

Synopsis	Process the PCP requests that contain the prefer failure option
Context	<b>configure</b> <a href="#">service nat pcp-server-policy</a> <i>string</i> <a href="#">option port-reservation</a> <i>boolean</i>
Tree	<a href="#">port-reservation</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **port-set** *boolean*

Synopsis	Support the PORT_SET option in PCP MAP requests
Context	<b>configure</b> <a href="#">service nat pcp-server-policy</a> <i>string</i> <a href="#">option port-set</a> <i>boolean</i>
Tree	<a href="#">port-set</a>
Description	<p>When configured to <b>true</b>, the PCP MAP option optimizes PCP performance for applications that require multiple sets of port forwards. A range of consecutive port forwards can be requested by the PCP client with a single PCP request.</p> <p>When configured to <b>false</b>, the default behavior is applied, where a plain MAP option is used to allocate a single port in a single request.</p>
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **prefer-failure** *boolean*

Synopsis	Process the PCP requests that contain the port reservation option
Context	<b>configure</b> <a href="#">service nat pcp-server-policy</a> <i>string</i> <a href="#">option prefer-failure</a> <i>boolean</i>

Tree	<a href="#">prefer-failure</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **third-party** *boolean*

Synopsis	Process the PCP requests that contain the third party option
Context	<b>configure</b> <a href="#">service nat pcp-server-policy</a> <i>string</i> <a href="#">option third-party</a> <i>boolean</i>
Tree	<a href="#">third-party</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **reuse-external-ip-address** *boolean*

Synopsis	Reuse external IP address for NAT subscriber
Context	<b>configure</b> <a href="#">service nat pcp-server-policy</a> <i>string</i> <a href="#">reuse-external-ip-address</a> <i>boolean</i>
Tree	<a href="#">reuse-external-ip-address</a>
Description	<p>When configured to <b>true</b>, the system reuses the external IP address assigned to a subscriber when the requested well-known port or external IP mapping is not available.</p> <p>When configured to <b>false</b>, a request for a well-known port is allocated as requested on a different external IP address if the port is already allocated to another subscriber sharing the same external IP address. The existing external IP address is initially allocated to the subscriber as a result of the initial traffic flow.</p> <p>This configuration flag can be set dynamically but the flag affects only PCP port forwards that are created after the flag has been set.</p>
Default	false
Introduced	19.10.R3
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **version**

Synopsis	Enter the <b>version</b> context
Context	<b>configure</b> <a href="#">service nat pcp-server-policy</a> <i>string</i> <a href="#">version</a>
Tree	<a href="#">version</a>
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **maximum** *number*

Synopsis Maximum protocol version supported by the PCP servers  
Context **configure** [service nat pcp-server-policy](#) *string version maximum number*  
Tree [maximum](#)  
Range 1 to 255  
Default 1  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **minimum** *number*

Synopsis Minimum protocol version supported by the PCP servers  
Context **configure** [service nat pcp-server-policy](#) *string version minimum number*  
Tree [minimum](#)  
Range 1 to 255  
Default 1  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **prefix-list** [[name](#)] *string*

Synopsis Enter the **prefix-list** list instance  
Context **configure** [service nat prefix-list](#) *string*  
Tree [prefix-list](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### [[name](#)] *string*

Synopsis NAT prefix list name  
Context **configure** [service nat prefix-list](#) *string*  
Tree [prefix-list](#)

String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **application** *keyword*

**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Prefix list for the application
Context	<b>configure</b> <a href="#">service</a> <a href="#">nat</a> <a href="#">prefix-list</a> <i>string</i> <a href="#">application</a> <i>keyword</i>
Tree	<a href="#">application</a>
Default	I2-aware-dest-to-policy
Options	I2-aware-dest-to-policy, dnat-only-subscribers
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **prefix** [[ip-prefix](#)] *string*

Synopsis	Enter the <b>prefix</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">nat</a> <a href="#">prefix-list</a> <i>string</i> <a href="#">prefix</a> <i>string</i>
Tree	<a href="#">prefix</a>
Max. Instances	1024
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[ip-prefix]** *string*

Synopsis	NAT prefix
Context	<b>configure</b> <a href="#">service</a> <a href="#">nat</a> <a href="#">prefix-list</a> <i>string</i> <a href="#">prefix</a> <i>string</i>
Tree	<a href="#">prefix</a>

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## nat-policy *reference*

### WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	NAT policy for LSN
Context	<b>configure</b> <a href="#">service nat prefix-list</a> <i>string prefix string nat-policy reference</i>
Tree	<a href="#">nat-policy</a>
Reference	<b>configure</b> <a href="#">service nat nat-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## syslog

Synopsis	Enter the <b>syslog</b> context
Context	<b>configure</b> <a href="#">service nat syslog</a>
Tree	<a href="#">syslog</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## export-policy [[name](#)] *string*

Synopsis	Enter the <b>export-policy</b> list instance
Context	<b>configure</b> <a href="#">service nat syslog export-policy</a> <i>string</i>
Tree	<a href="#">export-policy</a>
Max. Instances	8
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[name]** *string*

Synopsis Syslog export policy name  
Context **configure** [service nat syslog export-policy](#) *string*  
Tree [export-policy](#)  
String Length 1 to 32  
Notes This element is part of a list key.  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **collector** [router-instance](#) *string* [ip-address](#) *string*

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## description *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service nat syslog export-policy</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## facility *keyword*

Synopsis	Facility number in the PRI part of the NAT SYSLOG messages
Context	<b>configure</b> <a href="#">service nat syslog export-policy</a> <i>string</i> <a href="#">facility</a> <i>keyword</i>
Tree	<a href="#">facility</a>
Default	local0
Options	kernel, user, mail, systemd, auth, syslogd, printer, netnews, uucp, cron, authpriv, ftp, ntp, logaudit, logalert, cron2, local0, local1, local2, local3, local4, local5, local6, local7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## include

Synopsis	Enter the <b>include</b> context
Context	<b>configure</b> <a href="#">service nat syslog export-policy</a> <i>string</i> <a href="#">include</a>

Tree [include](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **destination-ip** *boolean*

Synopsis Include the translated destination IP address  
Context **configure** [service nat syslog export-policy](#) *string* [include destination-ip](#) *boolean*  
Tree [destination-ip](#)  
Default false  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **foreign-ip** *boolean*

Synopsis Include the original destination IPv4 address  
Context **configure** [service nat syslog export-policy](#) *string* [include foreign-ip](#) *boolean*  
Tree [foreign-ip](#)  
Default false  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **foreign-port** *boolean*

Synopsis Include the original destination port  
Context **configure** [service nat syslog export-policy](#) *string* [include foreign-port](#) *boolean*  
Tree [foreign-port](#)  
Default false  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **nat-policy-name** *boolean*

Synopsis Include the NAT policy name in the flow log  
Context **configure** [service nat syslog export-policy](#) *string* [include nat-policy-name](#) *boolean*

Tree	<a href="#">nat-policy-name</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **sub-id** *boolean*

Synopsis	Subscriber ID in subscriber aware NAT
Context	<b>configure</b> <a href="#">service nat syslog export-policy</a> <i>string include sub-id boolean</i>
Tree	<a href="#">sub-id</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **log-prefix** *string*

Synopsis	Optional prefix text in the MSG part of the NAT syslog messages
Context	<b>configure</b> <a href="#">service nat syslog export-policy</a> <i>string log-prefix string</i>
Tree	<a href="#">log-prefix</a>
String Length	1 to 32
Default	TMNX
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **max-tx-delay** *number*

Synopsis	Maximum time a syslog message delays in the output buffer to aggregate multiple events
Context	<b>configure</b> <a href="#">service nat syslog export-policy</a> <i>string max-tx-delay number</i>
Tree	<a href="#">max-tx-delay</a>
Range	0 to 100
Default	3
Units	deciseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **mtu** *number*

Synopsis	Maximum transmission unit
Context	<b>configure service nat syslog export-policy</b> <i>string</i> <b>mtu</b> <i>number</i>
Tree	<b>mtu</b>
Range	512 to 9000
Default	1500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **rate-limit** *number*

Synopsis	Frame limit
Context	<b>configure service nat syslog export-policy</b> <i>string</i> <b>rate-limit</b> <i>number</i>
Tree	<b>rate-limit</b>
Range	10 to 2147483647
Units	packets per second
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **severity-level** *keyword*

Synopsis	Severity level in the PRI part of the syslog messages
Context	<b>configure service nat syslog export-policy</b> <i>string</i> <b>severity-level</b> <i>keyword</i>
Tree	<b>severity-level</b>
Default	info
Options	emergency, alert, critical, error, warning, notice, info, debug
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **up-nat-policy** [*name*] *string*

Synopsis	Enter the <b>up-nat-policy</b> list instance
Context	<b>configure service nat up-nat-policy</b> <i>string</i>
Tree	<b>up-nat-policy</b>

Max. Instances	32
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[name]** *string*

Synopsis	UP NAT policy name
Context	<b>configure service nat up-nat-policy</b> <i>string</i>
Tree	<a href="#">up-nat-policy</a>
Description	This command specifies the UP NAT policy name. The name default has a special meaning representing the default UP NAT policy template. The system uses the default template when the BNG CPF does not receive a more specific name when the subscriber is instantiated.
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **alg**

Synopsis	Enter the <b>alg</b> context
Context	<b>configure service nat up-nat-policy</b> <i>string</i> <b>alg</b>
Tree	<a href="#">alg</a>
Description	Commands in this context configure the Application Layer Gateway (ALG) attributes of the policy.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ftp** *boolean*

Synopsis	Use FTP ALG for the policy
Context	<b>configure service nat up-nat-policy</b> <i>string</i> <b>alg ftp</b> <i>boolean</i>
Tree	<a href="#">ftp</a>
Default	true
Introduced	20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **pptp** *boolean*

Synopsis Use PPTP ALG for the policy

Context **configure** **service nat up-nat-policy** *string alg pptp boolean*

Tree [pptp](#)

Description When configured to **true**, the policy uses Point-to-Point Tunneling Protocol (PPTP) ALG.

PPTP sessions can only be initiated from NAT inside.

GRE traffic is allowed through NAT only if the corresponding mapping exists.

There can be seven calls (GRE tunnels) per control session.

When configured to **false**, PPTP ALG is not used.

Default false

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **rtsp** *boolean*

Synopsis Use RTSP ALG for the policy

Context **configure** **service nat up-nat-policy** *string alg rtsp boolean*

Tree [rtsp](#)

Description When configured to **true**, Real-Time Streaming Protocol (RTSP) ALG is used for the policy.

Default false

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **sip** *boolean*

Synopsis Use SIP ALG for the policy

Context **configure** **service nat up-nat-policy** *string alg sip boolean*

Tree [sip](#)

Default false

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## default-host

Synopsis Enable the **default-host** context  
Context **configure service nat up-nat-policy string default-host**  
Tree [default-host](#)  
Introduced 22.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## inside-router-instance *string*

Synopsis Router instance of the DMZ  
Context **configure service nat up-nat-policy string default-host inside-router-instance string**  
Tree [inside-router-instance](#)  
Introduced 22.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ip-address *string*

Synopsis IP address of the default DMZ host  
Context **configure service nat up-nat-policy string default-host ip-address string**  
Tree [ip-address](#)  
Introduced 22.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## rate-limit *number*

Synopsis Unknown traffic rate limit sent to the default DMZ host  
Context **configure service nat up-nat-policy string default-host rate-limit number**  
Tree [rate-limit](#)  
Range 1 to 10000  
Default 10  
Introduced 22.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service nat up-nat-policy</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **filtering** *keyword*

Synopsis	Filtering method for inbound traffic for the policy
Context	<b>configure</b> <a href="#">service nat up-nat-policy</a> <i>string</i> <a href="#">filtering</a> <i>keyword</i>
Tree	<a href="#">filtering</a>
Default	endpoint-independent
Options	endpoint-independent, address-and-port-dependent
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **flow-log-policy**

Synopsis	Enter the <b>flow-log-policy</b> context
Context	<b>configure</b> <a href="#">service nat up-nat-policy</a> <i>string</i> <a href="#">flow-log-policy</a>
Tree	<a href="#">flow-log-policy</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ipfix** *reference*

Synopsis	IPFIX export policy
Context	<b>configure</b> <a href="#">service nat up-nat-policy</a> <i>string</i> <a href="#">flow-log-policy</a> <a href="#">ipfix</a> <i>reference</i>
Tree	<a href="#">ipfix</a>
Description	This command specifies an IP flow information export policy for the flow-log policy.
Reference	<b>configure</b> <a href="#">service ipfix export-policy</a> <i>string</i>
Introduced	20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **icmp-echo-reply** *boolean*

Synopsis Enable replies to ICMP Echo Request messages  
Context **configure** [service nat up-nat-policy](#) *string* **icmp-echo-reply** *boolean*  
Tree [icmp-echo-reply](#)  
Default false  
Introduced 21.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **port-limits**

Synopsis Enter the **port-limits** context  
Context **configure** [service nat up-nat-policy](#) *string* **port-limits**  
Tree [port-limits](#)  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **reserved** *number*

Synopsis Number of ports reserved for prioritized sessions  
Context **configure** [service nat up-nat-policy](#) *string* **port-limits reserved** *number*  
Tree [reserved](#)  
Description This command configures the number of ports per block that are reserved for prioritized sessions.  
Range 1 to 65534  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **watermarks**

Synopsis Enable the **watermarks** context  
Context **configure** [service nat up-nat-policy](#) *string* **port-limits watermarks**  
Tree [watermarks](#)

Description	This command configures watermarks for NAT resources.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **high number**

Synopsis	High watermark percentage
Context	<b>configure service nat up-nat-policy</b> <i>string</i> <b>port-limits watermarks high number</b>
Tree	<a href="#">high</a>
Description	This command configures the high threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **low number**

Synopsis	Low watermark percentage
Context	<b>configure service nat up-nat-policy</b> <i>string</i> <b>port-limits watermarks low number</b>
Tree	<a href="#">low</a>
Description	This command configures the low threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **priority-sessions**

Synopsis	Enter the <b>priority-sessions</b> context
Context	<b>configure service nat up-nat-policy</b> <i>string</i> <b>priority-sessions</b>
Tree	<a href="#">priority-sessions</a>

Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## fc

Synopsis Enter the **fc** context  
Context **configure service nat up-nat-policy string priority-sessions fc**  
Tree **fc**  
Description Commands in this context specify which Forwarding Class (FC) options have prioritized sessions.  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## af boolean

Synopsis Prioritize traffic from AF forwarding classes  
Context **configure service nat up-nat-policy string priority-sessions fc af boolean**  
Tree **af**  
Description When configured to **true**, traffic from Assured Forwarding (AF) FC sessions is prioritized. When configured to **false**, AF traffic is not prioritized.  
Default false  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## be boolean

Synopsis Prioritize traffic from BE forwarding classes  
Context **configure service nat up-nat-policy string priority-sessions fc be boolean**  
Tree **be**  
Description When configured to **true**, traffic from Best Effort (BE) FC sessions is prioritized. When configured to **false**, BE traffic is not prioritized.  
Default false  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ef** *boolean*

Synopsis	Prioritize traffic from EF forwarding classes
Context	<b>configure</b> <a href="#">service nat up-nat-policy</a> <i>string</i> <a href="#">priority-sessions fc ef</a> <i>boolean</i>
Tree	<a href="#">ef</a>
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **h1** *boolean*

Synopsis	Prioritize traffic from H1 forwarding classes
Context	<b>configure</b> <a href="#">service nat up-nat-policy</a> <i>string</i> <a href="#">priority-sessions fc h1</a> <i>boolean</i>
Tree	<a href="#">h1</a>
Description	When configured to <b>true</b> , traffic from H1 sessions is prioritized. When configured to false, H1 traffic is not prioritized.
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **h2** *boolean*

Synopsis	Prioritize traffic from H2 forwarding classes
Context	<b>configure</b> <a href="#">service nat up-nat-policy</a> <i>string</i> <a href="#">priority-sessions fc h2</a> <i>boolean</i>
Tree	<a href="#">h2</a>
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **l1** *boolean*

Synopsis	Prioritize traffic from L1 forwarding classes
Context	<b>configure</b> <a href="#">service nat up-nat-policy</a> <i>string</i> <a href="#">priority-sessions fc l1</a> <i>boolean</i>
Tree	<a href="#">l1</a>
Default	false
Introduced	20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ***l2 boolean***

Synopsis Prioritize traffic from L2 forwarding classes  
Context **configure service nat up-nat-policy** *string* **priority-sessions fc l2 boolean**  
Tree [l2](#)  
Description When configured to **true**, traffic from L2 sessions is prioritized. When configured to false, L2 traffic is not prioritized.  
Default false  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ***nc boolean***

Synopsis Prioritize traffic from NC forwarding classes  
Context **configure service nat up-nat-policy** *string* **priority-sessions fc nc boolean**  
Tree [nc](#)  
Default false  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **session-limits**

Synopsis Enter the **session-limits** context  
Context **configure service nat up-nat-policy** *string* **session-limits**  
Tree [session-limits](#)  
Description Commands in this context configure session-limit attributes for the policy.  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ***max number***

Synopsis Maximum number of sessions per subscriber  
Context **configure service nat up-nat-policy** *string* **session-limits max number**

Tree	<a href="#">max</a>
Range	1 to 65535
Default	65535
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **reserved number**

Synopsis	Number of sessions reserved for prioritized sessions
Context	<b>configure service nat up-nat-policy</b> <i>string</i> <a href="#">session-limits reserved number</a>
Tree	<a href="#">reserved</a>
Description	This command configures the number of sessions per block that are reserved for prioritized sessions.
Range	1 to 65534
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **watermarks**

Synopsis	Enable the <b>watermarks</b> context
Context	<b>configure service nat up-nat-policy</b> <i>string</i> <a href="#">session-limits watermarks</a>
Tree	<a href="#">watermarks</a>
Description	This command configures watermarks for NAT resources.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **high number**

Synopsis	High watermark percentage
Context	<b>configure service nat up-nat-policy</b> <i>string</i> <a href="#">session-limits watermarks high number</a>
Tree	<a href="#">high</a>
Description	This command configures the high threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent

Notes	This element is mandatory.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **low number**

Synopsis	Low watermark percentage
Context	<b>configure service nat up-nat-policy</b> <i>string session-limits watermarks low number</i>
Tree	<a href="#">low</a>
Description	This command configures the low threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **tcp**

Synopsis	Enter the <b>tcp</b> context
Context	<b>configure service nat up-nat-policy</b> <i>string tcp</i>
Tree	<a href="#">tcp</a>
Description	Commands in this context configure the transmission control protocol (TCP) attributes of the policy.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **mss-adjust number**

Synopsis	TCP MSS adjustment value
Context	<b>configure service nat up-nat-policy</b> <i>string tcp mss-adjust number</i>
Tree	<a href="#">mss-adjust</a>
Description	This command configures the value to use to adjust the TCP Maximum Segment Size (MSS) option, if not already present or the present value is higher.
Range	160 to 10240

Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **reset-unknown** *boolean*

Synopsis Generate TCP reset for packets from unknown flows  
Context **configure** [service nat up-nat-policy](#) *string* [tcp reset-unknown](#) *boolean*  
Tree [reset-unknown](#)  
Description When configured to **true**, TCP packets are dropped and a TCP reset is generated if the NAT inside receives a TCP packet without the SYN flag set for an unknown flow.  
When configured to **false**, no TCP reset is generated.  
Default false  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **timeouts**

Synopsis Enter the **timeouts** context  
Context **configure** [service nat up-nat-policy](#) *string* [timeouts](#)  
Tree [timeouts](#)  
Description Commands in this context configure the attributes of session idle timeouts for the policy.  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **icmp-query** *number*

Synopsis Timeout applied to an ICMP Query session  
Context **configure** [service nat up-nat-policy](#) *string* [timeouts icmp-query](#) *number*  
Tree [icmp-query](#)  
Range 60 to 240  
Default 60  
Units seconds  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **sip number**

Synopsis	SIP inactive media timeout
Context	<b>configure service nat up-nat-policy</b> <i>string timeouts sip number</i>
Tree	<a href="#">sip</a>
Range	10 to 7200
Default	120
Units	seconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **subscriber-retention number**

Synopsis	IP address hold time after host and port blocks expire
Context	<b>configure service nat up-nat-policy</b> <i>string timeouts subscriber-retention number</i>
Tree	<a href="#">subscriber-retention</a>
Description	This command configures the time to keep a NAT subscriber and its associated IP address after all hosts and associated port blocks expire. If a NAT subscriber host appears before the retention timeout elapses, it is given the same outside IP address.
Range	0 to 1440
Default	0
Units	minutes
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **tcp**

Synopsis	Enter the <b>tcp</b> context
Context	<b>configure service nat up-nat-policy</b> <i>string timeouts tcp</i>
Tree	<a href="#">tcp</a>
Description	Commands in this context configure TCP timeout attributes.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **established** *number*

Synopsis	Idle timeout for TCP session in established state
Context	<b>configure</b> <a href="#">service nat up-nat-policy</a> <i>string</i> <a href="#">timeouts tcp established</a> <i>number</i>
Tree	<a href="#">established</a>
Range	60 to 86400
Default	7440
Units	seconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **rst** *number*

Synopsis	Suspend time for TCP connection ports closed by RST
Context	<b>configure</b> <a href="#">service nat up-nat-policy</a> <i>string</i> <a href="#">timeouts tcp rst</a> <i>number</i>
Tree	<a href="#">rst</a>
Description	This command configures the suspend time for outside TCP ports that are used in translations for TCP connections, when they are closed by TCP Reset (RST). After the timer expires, the outside ports can be reused for new TCP translations.
Range	0 to 240
Default	0
Units	seconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **syn** *number*

Synopsis	TCP session timeout when synchronizing initial sequence
Context	<b>configure</b> <a href="#">service nat up-nat-policy</a> <i>string</i> <a href="#">timeouts tcp syn</a> <i>number</i>
Tree	<a href="#">syn</a>
Range	6 to 86400
Default	15
Units	seconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **time-wait** *number*

Synopsis	Timeout applied to a TCP session in the time-wait state
Context	<b>configure</b> <a href="#">service nat up-nat-policy</a> <i>string</i> <a href="#">timeouts tcp time-wait</a> <i>number</i>
Tree	<a href="#">time-wait</a>
Range	0 to 240
Default	0
Units	seconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **transitory** *number*

Synopsis	Idle timeout for TCP session in transitory state
Context	<b>configure</b> <a href="#">service nat up-nat-policy</a> <i>string</i> <a href="#">timeouts tcp transitory</a> <i>number</i>
Tree	<a href="#">transitory</a>
Range	60 to 86400
Default	240
Units	seconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **udp**

Synopsis	Enter the <b>udp</b> context
Context	<b>configure</b> <a href="#">service nat up-nat-policy</a> <i>string</i> <a href="#">timeouts udp</a>
Tree	<a href="#">udp</a>
Description	Commands in this context configure the User Datagram Protocol (UDP) mapping timeout attributes.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **dns** *number*

Synopsis	Timeout applied to UDP session with destination port 53
----------	---

Context	<b>configure service nat up-nat-policy</b> <i>string timeouts udp dns number</i>
Tree	<b>dns</b>
Range	15 to 86400
Default	15
Units	seconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **initial number**

Synopsis	UDP mapping timeout applied to new sessions
Context	<b>configure service nat up-nat-policy</b> <i>string timeouts udp initial number</i>
Tree	<b>initial</b>
Range	10 to 300
Default	15
Units	seconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **normal number**

Synopsis	UDP mapping timeout
Context	<b>configure service nat up-nat-policy</b> <i>string timeouts udp normal number</i>
Tree	<b>normal</b>
Range	60 to 86400
Default	300
Units	seconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **udp**

Synopsis	Enter the <b>udp</b> context
Context	<b>configure service nat up-nat-policy</b> <i>string udp</i>
Tree	<b>udp</b>

Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **inbound-refresh** *boolean*

Synopsis Extend UDP session timeout on inbound traffic  
Context **configure** *service nat up-nat-policy string udp inbound-refresh boolean*  
Tree [inbound-refresh](#)  
Description When configured to **true**, this command extends the UDP session timeout on inbound traffic.  
When configured to **false**, the UDP session timeout is not extended.  
Default false  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **oper-group** [*name*] *string*

Synopsis Enter the **oper-group** list instance  
Context **configure** *service oper-group string*  
Tree [oper-group](#)  
Max. Instances 32768  
Introduced 16.0.R1  
Platforms All

### [*name*] *string*

Synopsis Operational group name  
Context **configure** *service oper-group string*  
Tree [oper-group](#)  
String Length 1 to 32  
Notes This element is part of a list key.  
Introduced 16.0.R1  
Platforms All

## bfd-liveness

Synopsis	Enable the <b>bfd-liveness</b> context
Context	<b>configure</b> <a href="#">service oper-group</a> <i>string</i> <b>bfd-liveness</b>
Tree	<a href="#">bfd-liveness</a>
Introduced	16.0.R1
Platforms	All

## dest-ip *string*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Destination address for BFD
Context	<b>configure</b> <a href="#">service oper-group</a> <i>string</i> <b>bfd-liveness</b> <a href="#">dest-ip</a> <i>string</i>
Tree	<a href="#">dest-ip</a>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

## interface-name *string*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Source interface name
Context	<b>configure</b> <a href="#">service oper-group</a> <i>string</i> <b>bfd-liveness</b> <a href="#">interface-name</a> <i>string</i>
Tree	<a href="#">interface-name</a>
String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

## router-instance *string*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Routing context used for route lookup
Context	<b>configure</b> <a href="#">service oper-group</a> <i>string</i> <a href="#">bfd-liveness router-instance</a> <i>string</i>
Tree	<a href="#">router-instance</a>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

## hold-time

Synopsis	Enter the <b>hold-time</b> context
Context	<b>configure</b> <a href="#">service oper-group</a> <i>string</i> <b>hold-time</b>
Tree	<a href="#">hold-time</a>
Introduced	16.0.R1
Platforms	All

## down *number*

Synopsis	Oper group hold down time
Context	<b>configure</b> <a href="#">service oper-group</a> <i>string</i> <b>hold-time</b> <b>down</b> <i>number</i>
Tree	<a href="#">down</a>
Range	1 to 3600
Units	seconds
Introduced	16.0.R3
Platforms	All

## up *number*

Synopsis	Oper group hold up time
Context	<b>configure</b> <a href="#">service oper-group</a> <i>string</i> <b>hold-time</b> <b>up</b> <i>number</i>
Tree	<a href="#">up</a>
Range	0 to 3600

Default	4
Units	seconds
Introduced	16.0.R3
Platforms	All

## **pbb**

Synopsis	Enter the <b>pbb</b> context
Context	<b>configure service pbb</b>
Tree	<b>pbb</b>
Introduced	16.0.R1
Platforms	All

## **mac [name] string**

Synopsis	Enter the <b>mac</b> list instance
Context	<b>configure service pbb mac string</b>
Tree	<b>mac</b>
Introduced	16.0.R1
Platforms	All

## **[name] string**

Synopsis	MAC name for the MAC address
Context	<b>configure service pbb mac string</b>
Tree	<b>mac</b>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## **address string**

Synopsis	IEEE address assigned to the MAC name
Context	<b>configure service pbb mac string address string</b>

Tree	<a href="#">address</a>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

## mac-notification

Synopsis	Enter the <b>mac-notification</b> context
Context	<b>configure</b> <a href="#">service pbb mac-notification</a>
Tree	<a href="#">mac-notification</a>
Introduced	16.0.R1
Platforms	All

## count *number*

Synopsis	MAC notification messages count
Context	<b>configure</b> <a href="#">service pbb mac-notification count <i>number</i></a>
Tree	<a href="#">count</a>
Range	1 to 10
Default	3
Introduced	16.0.R1
Platforms	All

## interval *number*

Synopsis	Interval for MAC-notification messages
Context	<b>configure</b> <a href="#">service pbb mac-notification interval <i>number</i></a>
Tree	<a href="#">interval</a>
Range	1 to 100
Default	1
Units	deciseconds
Introduced	16.0.R1
Platforms	All

## source-bmac

Synopsis	Enter the <b>source-bmac</b> context
Context	<b>configure service pbb source-bmac</b>
Tree	<a href="#">source-bmac</a>
Introduced	16.0.R1
Platforms	All

## address *string*

Synopsis	Source B-VPLS MAC address to use with PBB
Context	<b>configure service pbb source-bmac address <i>string</i></b>
Tree	<a href="#">address</a>
Introduced	16.0.R1
Platforms	All

## evpn-etree-leaf-address *string*

Synopsis	Source Backbone VPLS MAC address to use with Provider Backbone Bridging (PBB)
Context	<b>configure service pbb source-bmac evpn-etree-leaf-address <i>string</i></b>
Tree	<a href="#">evpn-etree-leaf-address</a>
Introduced	16.0.R1
Platforms	All

## proxy-arp-nd

Synopsis	Enter the <b>proxy-arp-nd</b> context
Context	<b>configure service proxy-arp-nd</b>
Tree	<a href="#">proxy-arp-nd</a>
Introduced	16.0.R1
Platforms	All

## mac-list

Synopsis	Enter the <b>mac-list</b> context
Context	<b>configure service proxy-arp-nd mac-list</b>

Tree	<a href="#">mac-list</a>
Introduced	16.0.R1
Platforms	All

### **list** [[list-name](#)] *string*

Synopsis	Enter the <b>list</b> list instance
Context	<b>configure</b> <a href="#">service proxy-arp-nd mac-list list</a> <i>string</i>
Tree	<a href="#">list</a>
Introduced	16.0.R1
Platforms	All

### **[list-name]** *string*

Synopsis	Specify name for mac list
Context	<b>configure</b> <a href="#">service proxy-arp-nd mac-list list</a> <i>string</i>
Tree	<a href="#">list</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **mac** [[address](#)] *string*

Synopsis	Add a list entry for <b>mac</b>
Context	<b>configure</b> <a href="#">service proxy-arp-nd mac-list list</a> <i>string</i> <b>mac</b> <i>string</i>
Tree	<a href="#">mac</a>
Max. Instances	10
Introduced	16.0.R1
Platforms	All

### **[address]** *string*

Synopsis	MAC address to be added to the list
----------	-------------------------------------

Context	<b>configure service proxy-arp-nd mac-list list</b> <i>string mac string</i>
Tree	<a href="#">mac</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **pw-template** [[pw-template-name](#)] *string*

Synopsis	Enter the <b>pw-template</b> list instance
Context	<b>configure service pw-template</b> <i>string</i>
Tree	<a href="#">pw-template</a>
Max. Instances	2048
Introduced	16.0.R1
Platforms	All

### **[pw-template-name]** *string*

Synopsis	SDP template name
Context	<b>configure service pw-template</b> <i>string</i>
Tree	<a href="#">pw-template</a>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **accounting-policy** *number*

Synopsis	Accounting policy
Context	<b>configure service pw-template</b> <i>string accounting-policy number</i>
Tree	<a href="#">accounting-policy</a>
Range	1 to 99
Introduced	16.0.R1
Platforms	All

### **allow-fragmentation** *boolean*

Synopsis	Allow packets to be sent without setting DF bit
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">allow-fragmentation</a> <i>boolean</i>
Tree	<a href="#">allow-fragmentation</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **auto-gre-sdp** *boolean*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Use a GRE tunnel to automatically create an SDP
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">auto-gre-sdp</a> <i>boolean</i>
Tree	<a href="#">auto-gre-sdp</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **block-on-peer-fault** *boolean*

Synopsis	Enable block traffic on peer fault
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">block-on-peer-fault</a> <i>boolean</i>
Tree	<a href="#">block-on-peer-fault</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **collect-stats** *boolean*

Synopsis	Collect statistics
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">collect-stats</a> <i>boolean</i>
Tree	<a href="#">collect-stats</a>

Default	false
Introduced	16.0.R1
Platforms	All

### **control-word** *boolean*

Synopsis	Enable/Disable the use of ControlWord
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <b>control-word</b> <i>boolean</i>
Tree	<a href="#">control-word</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **egress**

Synopsis	Enter the <b>egress</b> context
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <b>egress</b>
Tree	<a href="#">egress</a>
Introduced	16.0.R1
Platforms	All

### **filter**

Synopsis	Enter the <b>filter</b> context
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <b>egress</b> <b>filter</b>
Tree	<a href="#">filter</a>
Introduced	16.0.R1
Platforms	All

### **ip** *string*

Synopsis	IPv4 filter policy name
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <b>egress</b> <b>filter</b> <b>ip</b> <i>string</i>
Tree	<a href="#">ip</a>
String Length	1 to 64

Introduced 16.0.R1  
Platforms All

### **ipv6 string**

Synopsis IPv6 filter policy name  
Context **configure service pw-template string egress filter ipv6 string**  
Tree [ipv6](#)  
String Length 1 to 64  
Introduced 16.0.R1  
Platforms All

### **mac string**

Synopsis MAC filter policy name  
Context **configure service pw-template string egress filter mac string**  
Tree [mac](#)  
String Length 1 to 64  
Introduced 16.0.R1  
Platforms All

### **mfib-allowed-mda-destinations**

Synopsis Enter the **mfib-allowed-mda-destinations** context  
Context **configure service pw-template string egress mfib-allowed-mda-destinations**  
Tree [mfib-allowed-mda-destinations](#)  
Introduced 16.0.R1  
Platforms All

### **mda [mda-id] string**

Synopsis Add a list entry for **mda**  
Context **configure service pw-template string egress mfib-allowed-mda-destinations mda string**  
Tree [mda](#)  
Introduced 16.0.R1

Platforms All

### **[mda-id]** *string*

Synopsis MFIB allowed MDA destination  
Context **configure** [service pw-template](#) *string* [egress mfib-allowed-mda-destinations](#) [mda](#) *string*  
Tree [mda](#)  
Notes This element is part of a list key.  
Introduced 16.0.R1  
Platforms All

### **qos**

Synopsis Enter the **qos** context  
Context **configure** [service pw-template](#) *string* [egress qos](#)  
Tree [qos](#)  
Introduced 16.0.R1  
Platforms All

### **network**

Synopsis Enter the **network** context  
Context **configure** [service pw-template](#) *string* [egress qos network](#)  
Tree [network](#)  
Introduced 16.0.R1  
Platforms All

### **policy-name** *string*

Synopsis Network policy ID  
Context **configure** [service pw-template](#) *string* [egress qos network](#) [policy-name](#) *string*  
Tree [policy-name](#)  
String Length 1 to 64  
Introduced 16.0.R1  
Platforms All

## port-redirect-group

Synopsis	Enter the <b>port-redirect-group</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">pw-template</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">network</a> <a href="#">port-redirect-group</a>
Tree	<a href="#">port-redirect-group</a>
Introduced	16.0.R1
Platforms	All

## group-name *string*

Synopsis	Name of the egress port queue group template
Context	<b>configure</b> <a href="#">service</a> <a href="#">pw-template</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">network</a> <a href="#">port-redirect-group</a> <a href="#">group-name</a> <i>string</i>
Tree	<a href="#">group-name</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

## instance *number*

Synopsis	Instance for FP ingress queue group
Context	<b>configure</b> <a href="#">service</a> <a href="#">pw-template</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">network</a> <a href="#">port-redirect-group</a> <a href="#">instance</a> <i>number</i>
Tree	<a href="#">instance</a>
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

## encryption-keygroup

Synopsis	Enter the <b>encryption-keygroup</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">pw-template</a> <i>string</i> <a href="#">encryption-keygroup</a>
Tree	<a href="#">encryption-keygroup</a>
Introduced	19.10.R1
Platforms	VSR

### **inbound number**

Synopsis	Keygroup identifier in the inbound direction
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">encryption-keygroup inbound number</a>
Tree	<a href="#">inbound</a>
Range	1 to 127
Introduced	19.10.R1
Platforms	VSR

### **outbound number**

Synopsis	Keygroup identifier in the outbound direction
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">encryption-keygroup outbound number</a>
Tree	<a href="#">outbound</a>
Range	1 to 127
Introduced	19.10.R1
Platforms	VSR

### **entropy-label**

Synopsis	Enable the use of an entropy label
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">entropy-label</a>
Tree	<a href="#">entropy-label</a>
Notes	The following elements are part of a choice: <b>entropy-label</b> or <b>hash-label</b> .
Introduced	16.0.R1
Platforms	All

### **fdb**

Synopsis	Enter the <b>fdb</b> context
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">fdb</a>
Tree	<a href="#">fdb</a>
Introduced	16.0.R1
Platforms	All

### **auto-learn-mac-protect** *boolean*

Synopsis	Enable automatic update of MAC protect list
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">fdb auto-learn-mac-protect</a> <i>boolean</i>
Tree	<a href="#">auto-learn-mac-protect</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **auto-learn-mac-protect-exclude-list** *string*

Synopsis	Name of the MAC protect exclusion list
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">fdb auto-learn-mac-protect-exclude-list</a> <i>string</i>
Tree	<a href="#">auto-learn-mac-protect-exclude-list</a>
Description	<p>This command configures the name of a MAC protect exclusion list.</p> <p>Dynamically-learned MAC Source Addresses (SA) are protected if they are learned on an object with ALMP configured and no exclusion list is associated with the object, or if the MAC SA does not match any entry in an associated exclusion list.</p> <p>An exclusion list can be used in multiple objects of a service. If a list is empty, ALMP does not exclude any learned MAC SAs from protection on the object.</p>
String Length	1 to 32
Introduced	20.5.R1
Platforms	All

### **discard-unknown-source** *boolean*

Synopsis	Discard frames with unknown source
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">fdb discard-unknown-source</a> <i>boolean</i>
Tree	<a href="#">discard-unknown-source</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **limit-mac-move** *keyword*

Synopsis	MAC move limit
----------	----------------

Context	<b>configure service pw-template</b> <i>string</i> <b>fdb limit-mac-move</b> <i>keyword</i>
Tree	<a href="#">limit-mac-move</a>
Default	blockable
Options	blockable, non-blockable
Introduced	16.0.R1
Platforms	All

## mac-learning

Synopsis	Enter the <b>mac-learning</b> context
Context	<b>configure service pw-template</b> <i>string</i> <b>fdb mac-learning</b>
Tree	<a href="#">mac-learning</a>
Introduced	16.0.R1
Platforms	All

## aging *boolean*

Synopsis	Enable aging of MAC addresses
Context	<b>configure service pw-template</b> <i>string</i> <b>fdb mac-learning aging</b> <i>boolean</i>
Tree	<a href="#">aging</a>
Default	true
Introduced	16.0.R1
Platforms	All

## learning *boolean*

Synopsis	Enable learning of new MAC addresses
Context	<b>configure service pw-template</b> <i>string</i> <b>fdb mac-learning learning</b> <i>boolean</i>
Tree	<a href="#">learning</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **mac-pinning** *boolean*

Synopsis	Enable MAC address pinning on this spoke SDP
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">fdb mac-pinning</a> <i>boolean</i>
Tree	<a href="#">mac-pinning</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **maximum-mac-addresses** *number*

Synopsis	Maximum number of MAC entries in the FDB
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">fdb maximum-mac-addresses</a> <i>number</i>
Tree	<a href="#">maximum-mac-addresses</a>
Range	1 to 511999
Introduced	16.0.R1
Platforms	All

### **protected-src-mac-violation-action** *keyword*

Synopsis	Action for protected source MAC restriction
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">fdb protected-src-mac-violation-action</a> <i>keyword</i>
Tree	<a href="#">protected-src-mac-violation-action</a>
Options	sdp-bind-oper-down, alarm-only, discard
Introduced	16.0.R1
Platforms	All

### **force-vc-forwarding** *keyword*

Synopsis	VC forwarding action
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">force-vc-forwarding</a> <i>keyword</i>
Tree	<a href="#">force-vc-forwarding</a>
Options	vlan, qinq-c-tag-c-tag, qinq-s-tag-c-tag
Introduced	16.0.R1
Platforms	All

## hash-label

Synopsis	Enable the <b>hash-label</b> context
Context	<b>configure</b> <a href="#">service pw-template string hash-label</a>
Tree	<a href="#">hash-label</a>
Notes	The following elements are part of a choice: <b>entropy-label</b> or <b>hash-label</b> .
Introduced	16.0.R1
Platforms	All

## signal-capability

Synopsis	Hash label capability that is signaled to the remote PE
Context	<b>configure</b> <a href="#">service pw-template string hash-label signal-capability</a>
Tree	<a href="#">signal-capability</a>
Introduced	16.0.R1
Platforms	All

## igmp-snooping

Synopsis	Enter the <b>igmp-snooping</b> context
Context	<b>configure</b> <a href="#">service pw-template string igmp-snooping</a>
Tree	<a href="#">igmp-snooping</a>
Introduced	16.0.R1
Platforms	All

## fast-leave *boolean*

Synopsis	Allow IGMP fast leave processing
Context	<b>configure</b> <a href="#">service pw-template string igmp-snooping fast-leave boolean</a>
Tree	<a href="#">fast-leave</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **import-policy** *string*

Synopsis	Import policy that filters IGMP packets
Context	<b>configure</b> <a href="#">service</a> <a href="#">pw-template</a> <i>string</i> <a href="#">igmp-snooping</a> <a href="#">import-policy</a> <i>string</i>
Tree	<a href="#">import-policy</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

### **maximum-number-groups** *number*

Synopsis	Maximum multicast groups
Context	<b>configure</b> <a href="#">service</a> <a href="#">pw-template</a> <i>string</i> <a href="#">igmp-snooping</a> <a href="#">maximum-number-groups</a> <i>number</i>
Tree	<a href="#">maximum-number-groups</a>
Range	1 to 1000
Introduced	16.0.R1
Platforms	All

### **query-interval** *number*

Synopsis	Time between two consecutive host-query messages
Context	<b>configure</b> <a href="#">service</a> <a href="#">pw-template</a> <i>string</i> <a href="#">igmp-snooping</a> <a href="#">query-interval</a> <i>number</i>
Tree	<a href="#">query-interval</a>
Range	2 to 1024
Default	125
Units	seconds
Introduced	16.0.R1
Platforms	All

### **query-last-member-interval** *number*

Synopsis	Time between group-specific query messages
Context	<b>configure</b> <a href="#">service</a> <a href="#">pw-template</a> <i>string</i> <a href="#">igmp-snooping</a> <a href="#">query-last-member-interval</a> <i>number</i>
Tree	<a href="#">query-last-member-interval</a>
Range	1 to 50

Default	10
Units	deciseconds
Introduced	16.0.R1
Platforms	All

### **query-response-interval** *number*

Synopsis	Time to wait for a response to the host-query messages
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">igmp-snooping query-response-interval</a> <i>number</i>
Tree	<a href="#">query-response-interval</a>
Range	1 to 1023
Default	10
Units	seconds
Introduced	16.0.R1
Platforms	All

### **robust-count** *number*

Synopsis	Number of retries after expected message loss
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">igmp-snooping robust-count</a> <i>number</i>
Tree	<a href="#">robust-count</a>
Range	2 to 7
Default	2
Introduced	16.0.R1
Platforms	All

### **send-queries** *boolean*

Synopsis	Generate IGMP general queries
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">igmp-snooping send-queries</a> <i>boolean</i>
Tree	<a href="#">send-queries</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **version keyword**

Synopsis	IGMP version
Context	<b>configure service pw-template string igmp-snooping version keyword</b>
Tree	<a href="#">version</a>
Default	3
Options	1, 2, 3
Introduced	16.0.R1
Platforms	All

### **ingress**

Synopsis	Enter the <b>ingress</b> context
Context	<b>configure service pw-template string ingress</b>
Tree	<a href="#">ingress</a>
Introduced	16.0.R1
Platforms	All

### **filter**

Synopsis	Enter the <b>filter</b> context
Context	<b>configure service pw-template string ingress filter</b>
Tree	<a href="#">filter</a>
Introduced	16.0.R1
Platforms	All

### **ip string**

Synopsis	IPv4 filter policy name
Context	<b>configure service pw-template string ingress filter ip string</b>
Tree	<a href="#">ip</a>
String Length	1 to 64
Introduced	16.0.R1
Platforms	All

### **ipv6 string**

Synopsis	IPv6 filter policy name
Context	<b>configure</b> <a href="#">service pw-template string</a> <a href="#">ingress filter ipv6 string</a>
Tree	<a href="#">ipv6</a>
String Length	1 to 64
Introduced	16.0.R1
Platforms	All

### **mac string**

Synopsis	MAC filter policy name
Context	<b>configure</b> <a href="#">service pw-template string</a> <a href="#">ingress filter mac string</a>
Tree	<a href="#">mac</a>
String Length	1 to 64
Introduced	16.0.R1
Platforms	All

### **qos**

Synopsis	Enter the <b>qos</b> context
Context	<b>configure</b> <a href="#">service pw-template string</a> <a href="#">ingress qos</a>
Tree	<a href="#">qos</a>
Introduced	16.0.R1
Platforms	All

### **network**

Synopsis	Enter the <b>network</b> context
Context	<b>configure</b> <a href="#">service pw-template string</a> <a href="#">ingress qos network</a>
Tree	<a href="#">network</a>
Introduced	16.0.R1
Platforms	All

## **fp-redirect-group**

Synopsis	Enter the <b>fp-redirect-group</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">pw-template</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">network</a> <a href="#">fp-redirect-group</a>
Tree	<a href="#">fp-redirect-group</a>
Introduced	16.0.R1
Platforms	All

## **group-name** *string*

Synopsis	Name of the forwarding plane queue group template
Context	<b>configure</b> <a href="#">service</a> <a href="#">pw-template</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">network</a> <a href="#">fp-redirect-group</a> <a href="#">group-name</a> <i>string</i>
Tree	<a href="#">group-name</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

## **instance** *number*

Synopsis	Instance for FP ingress queue group
Context	<b>configure</b> <a href="#">service</a> <a href="#">pw-template</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">network</a> <a href="#">fp-redirect-group</a> <a href="#">instance</a> <i>number</i>
Tree	<a href="#">instance</a>
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

## **policy-name** *string*

Synopsis	Network policy ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">pw-template</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">network</a> <a href="#">policy-name</a> <i>string</i>
Tree	<a href="#">policy-name</a>
String Length	1 to 64
Introduced	16.0.R1
Platforms	All

## **l2pt**

Synopsis	Enter the <b>l2pt</b> context
Context	<b>configure</b> <a href="#">service pw-template string l2pt</a>
Tree	<a href="#">l2pt</a>
Introduced	16.0.R1
Platforms	All

## **termination**

Synopsis	Enable the <b>termination</b> context
Context	<b>configure</b> <a href="#">service pw-template string l2pt termination</a>
Tree	<a href="#">termination</a>
Introduced	16.0.R1
Platforms	All

## **protocols**

Synopsis	Enter the <b>protocols</b> context
Context	<b>configure</b> <a href="#">service pw-template string l2pt termination protocols</a>
Tree	<a href="#">protocols</a>
Introduced	16.0.R1
Platforms	All

## **cdp boolean**

Synopsis	Enable Cisco discovery protocol
Context	<b>configure</b> <a href="#">service pw-template string l2pt termination protocols cdp boolean</a>
Tree	<a href="#">cdp</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **ntp boolean**

Synopsis	Enable dynamic trunking protocol
Context	<b>configure service pw-template string l2pt termination protocols ntp boolean</b>
Tree	<a href="#">ntp</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **pagp boolean**

Synopsis	Enable port aggregation protocol
Context	<b>configure service pw-template string l2pt termination protocols pagp boolean</b>
Tree	<a href="#">pagp</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **stp boolean**

Synopsis	Enable all spanning tree protocols
Context	<b>configure service pw-template string l2pt termination protocols stp boolean</b>
Tree	<a href="#">stp</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **udld boolean**

Synopsis	Enable unidirectional link detection
Context	<b>configure service pw-template string l2pt termination protocols udld boolean</b>
Tree	<a href="#">udld</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **vtp** *boolean*

Synopsis	Enable virtual trunk protocol
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">l2pt termination protocols</a> <a href="#">vtp</a> <i>boolean</i>
Tree	<a href="#">vtp</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **provisioned-sdp** *keyword*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Provisioned SDP type
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">provisioned-sdp</a> <i>keyword</i>
Tree	<a href="#">provisioned-sdp</a>
Options	use, prefer
Introduced	16.0.R1
Platforms	All

### **pw-template-id** *number*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	PW Template Id
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">pw-template-id</a> <i>number</i>
Tree	<a href="#">pw-template-id</a>
Range	1 to 2147483647
Introduced	16.0.R1
Platforms	All

### **sdp-exclude** [group-name] *reference*

Synopsis	Add a list entry for <b>sdp-exclude</b>
Context	<b>configure service pw-template string sdp-exclude reference</b>
Tree	<a href="#">sdp-exclude</a>
Introduced	16.0.R1
Platforms	All

### [group-name] *reference*

Synopsis	SDP group name
Context	<b>configure service pw-template string sdp-exclude reference</b>
Tree	<a href="#">sdp-exclude</a>
Reference	<b>configure service sdp-group group-name string</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **sdp-include** [group-name] *reference*

Synopsis	Add a list entry for <b>sdp-include</b>
Context	<b>configure service pw-template string sdp-include reference</b>
Tree	<a href="#">sdp-include</a>
Introduced	16.0.R1
Platforms	All

### [group-name] *reference*

Synopsis	SDP group name
Context	<b>configure service pw-template string sdp-include reference</b>
Tree	<a href="#">sdp-include</a>
Reference	<b>configure service sdp-group group-name string</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## split-horizon-group

Synopsis	Enter the <b>split-horizon-group</b> context
Context	<b>configure</b> <a href="#">service pw-template string split-horizon-group</a>
Tree	<a href="#">split-horizon-group</a>
Introduced	16.0.R1
Platforms	All

## description *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service pw-template string split-horizon-group description string</a>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

## fdb

Synopsis	Enter the <b>fdb</b> context
Context	<b>configure</b> <a href="#">service pw-template string split-horizon-group fdb</a>
Tree	<a href="#">fdb</a>
Introduced	16.0.R1
Platforms	All

## saps

Synopsis	Enter the <b>saps</b> context
Context	<b>configure</b> <a href="#">service pw-template string split-horizon-group fdb saps</a>
Tree	<a href="#">saps</a>
Introduced	16.0.R1
Platforms	All

### **auto-learn-mac-protect** *boolean*

Synopsis	Enable automatic update of MAC protect list
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">split-horizon-group fdb saps</a> <a href="#">auto-learn-mac-protect</a> <i>boolean</i>
Tree	<a href="#">auto-learn-mac-protect</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **discard-unprotected-dest-mac** *boolean*

Synopsis	Enable/disable unprotected dest MAC restriction
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">split-horizon-group fdb saps</a> <a href="#">discard-unprotected-dest-mac</a> <i>boolean</i>
Tree	<a href="#">discard-unprotected-dest-mac</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **protected-src-mac-violation-action** *keyword*

Synopsis	Action for protected source MAC restriction
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">split-horizon-group fdb saps</a> <a href="#">protected-src-mac-violation-action</a> <i>keyword</i>
Tree	<a href="#">protected-src-mac-violation-action</a>
Options	sap-oper-down, alarm-only, discard
Introduced	16.0.R1
Platforms	All

### **name** *string*

Synopsis	Split horizon group name to which the SDP belongs
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">split-horizon-group name</a> <i>string</i>
Tree	<a href="#">name</a>
String Length	1 to 32
Introduced	16.0.R1

Platforms All

## stp

Synopsis Enter the **stp** context  
Context **configure service pw-template string stp**  
Tree **stp**  
Introduced 16.0.R4  
Platforms All

## admin-state *keyword*

Synopsis Administrative state of STP  
Context **configure service pw-template string stp admin-state keyword**  
Tree **admin-state**  
Options enable, disable  
Introduced 16.0.R4  
Platforms All

## auto-edge *boolean*

Synopsis Enable automatic detection of edge port characteristics  
Context **configure service pw-template string stp auto-edge boolean**  
Tree **auto-edge**  
Default true  
Introduced 16.0.R4  
Platforms All

## edge-port *boolean*

Synopsis Designate SAP or SDP as an edge port  
Context **configure service pw-template string stp edge-port boolean**  
Tree **edge-port**  
Default false  
Introduced 16.0.R4

Platforms All

### **link-type** *keyword*

Synopsis Configure STP link-type  
Context **configure** [service pw-template](#) *string* **stp link-type** *keyword*  
Tree [link-type](#)  
Default pt-pt  
Options pt-pt, shared  
Introduced 16.0.R4  
Platforms All

### **path-cost** *number*

Synopsis Configure path-cost  
Context **configure** [service pw-template](#) *string* **stp path-cost** *number*  
Tree [path-cost](#)  
Range 1 to 200000000  
Default 10  
Introduced 16.0.R4  
Platforms All

### **priority** *number*

Synopsis Configure STP priority  
Context **configure** [service pw-template](#) *string* **stp priority** *number*  
Tree [priority](#)  
Range 0 to 255  
Default 128  
Introduced 16.0.R4  
Platforms All

### **root-guard** *boolean*

Synopsis Enable/disable STP root-guard

Context	<b>configure service pw-template</b> <i>string stp root-guard boolean</i>
Tree	<a href="#">root-guard</a>
Default	false
Introduced	16.0.R4
Platforms	All

### **vc-type** *keyword*

Synopsis	Virtual circuit type associated with the SDP bind
Context	<b>configure service pw-template</b> <i>string vc-type keyword</i>
Tree	<a href="#">vc-type</a>
Default	ether
Options	ether, vlan
Introduced	16.0.R1
Platforms	All

### **vlan-vc-tag** *number*

Synopsis	VLAN VC tag
Context	<b>configure service pw-template</b> <i>string vlan-vc-tag number</i>
Tree	<a href="#">vlan-vc-tag</a>
Range	0 to 4094
Introduced	16.0.R1
Platforms	All

### **sdp** [[sdp-id](#)] *number*

Synopsis	Enter the <b>sdp</b> list instance
Context	<b>configure service sdp</b> <i>number</i>
Tree	<a href="#">sdp</a>
Introduced	16.0.R1
Platforms	All

### **[sdp-id] number**

Synopsis	Service Distribution Point (SDP) identifier
Context	<b>configure service sdp number</b>
Tree	<a href="#">sdp</a>
Range	1 to 32767
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **accounting-policy reference**

Synopsis	Accounting policy associated with an SDP
Context	<b>configure service sdp number accounting-policy reference</b>
Tree	<a href="#">accounting-policy</a>
Description	This command associates an accounting policy with an SDP. When unconfigured, there is no accounting policy applied to the SDP.
Reference	<b>configure log accounting-policy number</b>
Introduced	16.0.R1
Platforms	All

### **admin-state keyword**

Synopsis	Administrative state of the SDP
Context	<b>configure service sdp number admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **adv-mtu-override boolean**

Synopsis	Override the advertised VC-type MTU using the SDP ID
Context	<b>configure service sdp number adv-mtu-override boolean</b>
Tree	<a href="#">adv-mtu-override</a>

Default	false
Introduced	16.0.R1
Platforms	All

### **allow-fragmentation** *boolean*

Synopsis	Allow packets to be sent without setting DF bit
Context	<b>configure</b> <a href="#">service sdp number</a> <b>allow-fragmentation</b> <i>boolean</i>
Tree	<a href="#">allow-fragmentation</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **bgp-tunnel** *boolean*

Synopsis	Allow use of BGP route tunnels to reach far-end nodes
Context	<b>configure</b> <a href="#">service sdp number</a> <b>bgp-tunnel</b> <i>boolean</i>
Tree	<a href="#">bgp-tunnel</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **booking-factor** *number*

Synopsis	Percentage of SDP max available bandwidth for VLL CAC
Context	<b>configure</b> <a href="#">service sdp number</a> <b>booking-factor</b> <i>number</i>
Tree	<a href="#">booking-factor</a>
Range	0 to 1000
Default	100
Introduced	16.0.R1
Platforms	All

### **class-forwarding**

Synopsis	Enable the <b>class-forwarding</b> context
----------	--

Context	<b>configure service sdp number class-forwarding</b>
Tree	<b>class-forwarding</b>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of class-based forwarding
Context	<b>configure service sdp number class-forwarding admin-state keyword</b>
Tree	<b>admin-state</b>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **default-lsp** *reference*

Synopsis	Default LSP for class-based forwarding on the SDP
Context	<b>configure service sdp number class-forwarding default-lsp reference</b>
Tree	<b>default-lsp</b>
Reference	<b>configure service sdp number lsp string</b>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **enforce-diffserv-lsp-fc** *boolean*

Synopsis	Enable RSVP validation of FC support by the LSP
Context	<b>configure service sdp number class-forwarding enforce-diffserv-lsp-fc boolean</b>
Tree	<b>enforce-diffserv-lsp-fc</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **fc** [**fc-name**] *keyword*

Synopsis	Enter the <b>fc</b> list instance
Context	<b>configure service sdp number class-forwarding fc keyword</b>
Tree	<b>fc</b>
Introduced	16.0.R1
Platforms	All

### **[fc-name]** *keyword*

Synopsis	Forwarding class to LSP mapping
Context	<b>configure service sdp number class-forwarding fc keyword</b>
Tree	<b>fc</b>
Options	be, l2, af, l1, h2, ef, h1, nc
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **lsp** *reference*

Synopsis	LSP name used to forward service packets
Context	<b>configure service sdp number class-forwarding fc keyword lsp reference</b>
Tree	<b>lsp</b>
Reference	<b>configure service sdp number lsp string</b>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **multicast-lsp** *reference*

Synopsis	LSP to forward all multicast traffic
Context	<b>configure service sdp number class-forwarding multicast-lsp reference</b>
Tree	<b>multicast-lsp</b>
Reference	<b>configure service sdp number lsp string</b>
Introduced	16.0.R1

Platforms All

### **collect-stats** *boolean*

Synopsis Collect accounting statistics for this SDP  
Context **configure service sdp number collect-stats boolean**  
Tree [collect-stats](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **delivery-type** *keyword*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Delivery type used by the SDP  
Context **configure service sdp number delivery-type keyword**  
Tree [delivery-type](#)  
Options gre, mpls, l2tpv3, gre-eth-bridged  
Introduced 16.0.R1  
Platforms All

### **description** *string*

Synopsis Text description  
Context **configure service sdp number description string**  
Tree [description](#)  
String Length 1 to 80  
Introduced 16.0.R1  
Platforms All

### **far-end**

Synopsis Enter the **far-end** context

Context	<b>configure service sdp number far-end</b>
Tree	<a href="#">far-end</a>
Introduced	16.0.R1
Platforms	All

## **ip-address** (*ipv4-address-no-zone | ipv6-address-no-zone*)

### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IP address of the far end destination router
Context	<b>configure service sdp number far-end ip-address</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> )
Tree	<a href="#">ip-address</a>
Introduced	16.0.R3
Platforms	All

## **keep-alive**

Synopsis	Enter the <b>keep-alive</b> context
Context	<b>configure service sdp number keep-alive</b>
Tree	<a href="#">keep-alive</a>
Introduced	16.0.R1
Platforms	All

## **admin-state** *keyword*

Synopsis	Administrative state of keepalive mechanism for the SDP
Context	<b>configure service sdp number keep-alive admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

## hello-time *number*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time period between SDP keepalive messages
Context	<b>configure</b> <a href="#">service sdp</a> <i>number</i> <a href="#">keep-alive</a> <a href="#">hello-time</a> <i>number</i>
Tree	<a href="#">hello-time</a>
Range	1 to 3600
Default	10
Units	seconds
Introduced	16.0.R1
Platforms	All

## hold-down-time *number*

Synopsis	Minimum time the SDP remains in the down state
Context	<b>configure</b> <a href="#">service sdp</a> <i>number</i> <a href="#">keep-alive</a> <a href="#">hold-down-time</a> <i>number</i>
Tree	<a href="#">hold-down-time</a>
Range	0 to 3600
Default	10
Units	seconds
Introduced	16.0.R1
Platforms	All

## maximum-drop-count *number*

Synopsis	Maximum failed request attempts when SDP is down
Context	<b>configure</b> <a href="#">service sdp</a> <i>number</i> <a href="#">keep-alive</a> <a href="#">maximum-drop-count</a> <i>number</i>
Tree	<a href="#">maximum-drop-count</a>
Range	1 to 5
Default	3
Introduced	16.0.R1
Platforms	All

### **message-length** *number*

Synopsis	Length of the keepalive request messages transmitted
Context	<b>configure service sdp number keep-alive message-length number</b>
Tree	<a href="#">message-length</a>
Range	40 to 9198
Introduced	16.0.R1
Platforms	All

### **timeout** *number*

Synopsis	Time SDP waits before tearing down the session
Context	<b>configure service sdp number keep-alive timeout number</b>
Tree	<a href="#">timeout</a>
Range	1 to 10
Default	5
Units	seconds
Introduced	16.0.R1
Platforms	All

### **ldp** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable LDP-signaled LSPs
Context	<b>configure service sdp number ldp boolean</b>
Tree	<a href="#">ldp</a>
Default	false
Introduced	16.0.R1
Platforms	All

## **local-end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local end address of tunnel defined by the SDP
Context	<b>configure service sdp number local-end</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>local-end</b>
Introduced	16.0.R1
Platforms	All

## **lsp** [*lsp-name*] *string*

Synopsis	Add a list entry for <b>lsp</b>
Context	<b>configure service sdp number lsp string</b>
Tree	<b>lsp</b>
Max. Instances	16
Introduced	16.0.R1
Platforms	All

## **[lsp-name]** *string*

Synopsis	LSP name to associate with the SDP
Context	<b>configure service sdp number lsp string</b>
Tree	<b>lsp</b>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## **metric** *number*

Synopsis	Metric used in tunnel table manager for decision making
Context	<b>configure service sdp number metric number</b>
Tree	<b>metric</b>

Range	1 to 65535
Introduced	16.0.R1
Platforms	All

### **mixed-lsp-mode**

Synopsis	Enable the <b>mixed-lsp-mode</b> context
Context	<b>configure service sdp number mixed-lsp-mode</b>
Tree	<a href="#">mixed-lsp-mode</a>
Introduced	16.0.R1
Platforms	All

### **revert-time** (*number* | *keyword*)

Synopsis	Delay before SDP can revert to higher priority LSP type
Context	<b>configure service sdp number mixed-lsp-mode revert-time</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">revert-time</a>
Range	1 to 600
Default	immediate
Units	seconds
Options	never, immediate
Introduced	16.0.R1
Platforms	All

### **network-domain** *reference*

Synopsis	Network domain name associated with the SDP
Context	<b>configure service sdp number network-domain reference</b>
Tree	<a href="#">network-domain</a>
Reference	<b>configure router string network-domains network-domain string</b>
Introduced	16.0.R1
Platforms	All

### **path-mtu** *number*

Synopsis	Maximum Transmission Unit (MTU) the SDP can transmit
Context	<b>configure</b> <a href="#">service sdp</a> <i>number</i> <a href="#">path-mtu</a> <i>number</i>
Tree	<a href="#">path-mtu</a>
Range	576 to 9782
Units	bytes
Introduced	16.0.R1
Platforms	All

### **pbb-etype** *string*

Synopsis	Ethertype used for PBB
Context	<b>configure</b> <a href="#">service sdp</a> <i>number</i> <a href="#">pbb-etype</a> <i>string</i>
Tree	<a href="#">pbb-etype</a>
String Length	5 to 6
Default	0x88E7
Introduced	16.0.R1
Platforms	All

### **pw-port**

Synopsis	Enter the <b>pw-port</b> context
Context	<b>configure</b> <a href="#">service sdp</a> <i>number</i> <a href="#">pw-port</a>
Tree	<a href="#">pw-port</a>
Introduced	16.0.R4
Platforms	All

### **binding-port** *string*

Synopsis	Binding port
Context	<b>configure</b> <a href="#">service sdp</a> <i>number</i> <a href="#">pw-port</a> <a href="#">binding-port</a> <i>string</i>
Tree	<a href="#">binding-port</a>
Introduced	16.0.R4
Platforms	All

## **sdp-group** [*group-name*] *reference*

Synopsis	Add a list entry for <b>sdp-group</b>
Context	<b>configure</b> <a href="#">service sdp</a> <i>number</i> <a href="#">sdp-group</a> <i>reference</i>
Tree	<a href="#">sdp-group</a>
Introduced	16.0.R1
Platforms	All

## [*group-name*] *reference*

Synopsis	SDP administrative group name
Context	<b>configure</b> <a href="#">service sdp</a> <i>number</i> <a href="#">sdp-group</a> <i>reference</i>
Tree	<a href="#">sdp-group</a>
Reference	<b>configure</b> <a href="#">service sdp-group</a> <i>group-name</i> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## **signaling** *keyword*

### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Signaling protocol used to obtain pseudowire labels
Context	<b>configure</b> <a href="#">service sdp</a> <i>number</i> <a href="#">signaling</a> <i>keyword</i>
Tree	<a href="#">signaling</a>
Description	This command specifies the signaling protocol used to obtain the ingress and egress pseudowire labels in frames transmitted and received on the SDP. The signaling value can only be changed while the administrative status of the SDP is down. Additionally, the signaling can only be changed on an SDP if the SDP is not in use by BGP-AD or BGP-VPLS. BGP signaling can only be enabled if the SDP does not already have pseudowires signaled over it. Also, BGP signaling is not supported with mixed mode LSP SDPs.

**Note:** If the **tldp** option is selected as the mechanism for exchanging service labels over an MPLS or GRE SDP and the T-LDP session is automatically established, an explicit T-LDP session that is subsequently configured takes precedence over the automatic T-LDP session. However, if the explicit, manually-configured session is then removed, the system does not revert to the automatic session and the automatic session is

also deleted. To address this, recreate the T-LDP session by using the **admin-state** command to administratively disable and then enable the SDP.

Options	off, tldp, bgp
Introduced	16.0.R1
Platforms	All

### source-bmac-lsb

Synopsis	Enter the <b>source-bmac-lsb</b> context
Context	<b>configure service sdp number source-bmac-lsb</b>
Tree	<a href="#">source-bmac-lsb</a>
Introduced	16.0.R1
Platforms	All

### control-pw-vc-id *number*

Synopsis	VC ID of the control pseudowire
Context	<b>configure service sdp number source-bmac-lsb control-pw-vc-id <i>number</i></b>
Tree	<a href="#">control-pw-vc-id</a>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### value *string*

Synopsis	16 least significant bits of virtual backbone MAC
Context	<b>configure service sdp number source-bmac-lsb value <i>string</i></b>
Tree	<a href="#">value</a>
Introduced	16.0.R1
Platforms	All

### sr-isis *boolean*

Synopsis	Enable Segment Routing for IS-IS
Context	<b>configure service sdp number sr-isis <i>boolean</i></b>
Tree	<a href="#">sr-isis</a>

Default	false
Introduced	16.0.R1
Platforms	All

### **sr-ospf** *boolean*

Synopsis	Enable an MPLS SDP of LSP type OSPF Segment Routing
Context	<b>configure</b> <a href="#">service sdp</a> <i>number sr-ospf boolean</i>
Tree	<a href="#">sr-ospf</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **tunnel-far-end** (*ipv4-address-no-zone | ipv6-address-no-zone*)

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	System address of the far-end router for the SDP
Context	<b>configure</b> <a href="#">service sdp</a> <i>number tunnel-far-end (ipv4-address-no-zone   ipv6-address-no-zone)</i>
Tree	<a href="#">tunnel-far-end</a>
Introduced	16.0.R1
Platforms	All

### **vlan-vc-etype** *string*

Synopsis	VLAN VC Ethertype
Context	<b>configure</b> <a href="#">service sdp</a> <i>number vlan-vc-etype string</i>
Tree	<a href="#">vlan-vc-etype</a>
String Length	5 to 6
Default	0x8100
Introduced	16.0.R1
Platforms	All

### **weighted-ecmp** *boolean*

Synopsis	Allow weighted load-balancing on an SDP
Context	<b>configure</b> <a href="#">service sdp number</a> <b>weighted-ecmp</b> <i>boolean</i>
Tree	<a href="#">weighted-ecmp</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **sdp-group**

Synopsis	Enter the <b>sdp-group</b> context
Context	<b>configure</b> <a href="#">service sdp-group</a>
Tree	<a href="#">sdp-group</a>
Introduced	16.0.R1
Platforms	All

### **group-name** [[group-name](#)] *string*

Synopsis	Enter the <b>group-name</b> list instance
Context	<b>configure</b> <a href="#">service sdp-group group-name</a> <i>string</i>
Tree	<a href="#">group-name</a>
Introduced	16.0.R1
Platforms	All

### [[group-name](#)] *string*

Synopsis	SDP administrative group name
Context	<b>configure</b> <a href="#">service sdp-group group-name</a> <i>string</i>
Tree	<a href="#">group-name</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## value *number*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Unique group value associated with the SDP admin group
Context	<b>configure service sdp-group group-name string value number</b>
Tree	<b>value</b>
Range	0 to 31
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

## system

Synopsis	Enter the <b>system</b> context
Context	<b>configure service system</b>
Tree	<b>system</b>
Introduced	16.0.R1
Platforms	All

## bgp

Synopsis	Enter the <b>bgp</b> context
Context	<b>configure service system bgp</b>
Tree	<b>bgp</b>
Introduced	16.0.R1
Platforms	All

## evpn

Synopsis	Enter the <b>evpn</b> context
Context	<b>configure service system bgp evpn</b>
Tree	<b>evpn</b>
Introduced	16.0.R1

Platforms All

### ad-per-es-route

Synopsis Enter the **ad-per-es-route** context  
 Context **configure service system bgp evpn ad-per-es-route**  
 Tree [ad-per-es-route](#)  
 Introduced 16.0.R1  
 Platforms All

### extended-evi-range *boolean*

Synopsis Reserve extended RD comm-values for AD per-ES routes  
 Context **configure service system bgp evpn ad-per-es-route extended-evi-range *boolean***  
 Tree [extended-evi-range](#)  
 Description When configured to **true**, the system reserves the Route Distinguisher (RD) comm-values 1 to 65535 out of the type 1 RD that is used for AD per-ES routes. If **ad-per-es-route route-target-type** is also configured to **evi-route-target-set**, the system can pack the maximum number of EVI route targets in the AD per-ES routes  
 When configured to **false**, this command only reserves comm-values 1 to 512.  
 Default false  
 Introduced 21.10.R1  
 Platforms All

### route-distinguisher-ip-address *string*

Synopsis IP address for route distinguisher for EVPN AD-ES routes  
 Context **configure service system bgp evpn ad-per-es-route route-distinguisher-ip-address *string***  
 Tree [route-distinguisher-ip-address](#)  
 Introduced 16.0.R1  
 Platforms All

### route-target-type *keyword*

Synopsis Method for the AD per-ES routes advertisement

Context	<b>configure service system bgp evpn ad-per-es-route route-target-type</b> <i>keyword</i>
Tree	<a href="#">route-target-type</a>
Default	evi-route-target
Options	evi-route-target, evi-route-target-set
Introduced	16.0.R1
Platforms	All

### **ethernet-segment** [[ethernet-segment-name](#)] *string*

Synopsis	Enter the <b>ethernet-segment</b> list instance
Context	<b>configure service system bgp evpn ethernet-segment</b> <i>string</i>
Tree	<a href="#">ethernet-segment</a>
Max. Instances	4095
Introduced	16.0.R1
Platforms	All

### **[ethernet-segment-name]** *string*

Synopsis	Specify name for Ethernet segment
Context	<b>configure service system bgp evpn ethernet-segment</b> <i>string</i>
Tree	<a href="#">ethernet-segment</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **ac-df-capability** *keyword*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	AC-influenced DF election capability
Context	<b>configure service system bgp evpn ethernet-segment</b> <i>string</i> <b>ac-df-capability</b> <i>keyword</i>
Tree	<a href="#">ac-df-capability</a>

Description	<p>This command configures the Attachment Circuit-influenced (AC-influenced) designated forwarder (DF) election capability (AC-DF) into the DF election for the Ethernet Segment (ES).</p> <p>AC-DF supports EVPN Auto-Discovery per EVI/ES (AD per EVI/ES) routes for a specific PE, to ensure the PE is included in the candidate DF election list.</p> <p>When AC-DF is excluded on a specific ES, the presence or absence of the AD per EVI/ES routes from the ES peers does not modify the candidate DF election list for the ES. Excluding the AC-DF is recommended in ESs that use an operational group monitored by the access LAG to signal the standby LACP or to power-off.</p>
Default	include
Options	include, exclude
Introduced	21.5.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the Ethernet segment instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp evpn ethernet-segment</a> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **association**

Synopsis	Enter the <b>association</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp evpn ethernet-segment</a> <i>string</i> <b>association</b>
Tree	<a href="#">association</a>
Introduced	16.0.R1
Platforms	All

### **lag** [[lag-name](#)] *reference*

Synopsis	Enter the <b>lag</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp evpn ethernet-segment</a> <i>string</i> <a href="#">association</a> <b>lag</b> <i>reference</i>
Tree	<a href="#">lag</a>

Max. Instances	1
Notes	The following elements are part of a choice: <b>lag</b> , <b>network-interconnect-vxlan</b> , <b>port</b> , <b>pw-port</b> , <b>sdp</b> , or <b>vprn-next-hop</b> .
Introduced	16.0.R1
Platforms	All

### [lag-name] *reference*

Synopsis	LAG multi-homed with the Ethernet segment entry
Context	<b>configure service system bgp evpn ethernet-segment</b> <i>string association lag reference</i>
Tree	<a href="#">lag</a>
Reference	<b>configure lag</b> <i>string</i>
Notes	This element is part of a list key.
Introduced	21.2.R1
Platforms	All

### virtual-ranges

Synopsis	Enter the <b>virtual-ranges</b> context
Context	<b>configure service system bgp evpn ethernet-segment</b> <i>string association lag reference virtual-ranges</i>
Tree	<a href="#">virtual-ranges</a>
Introduced	16.0.R4
Platforms	All

### dot1q

Synopsis	Enter the <b>dot1q</b> context
Context	<b>configure service system bgp evpn ethernet-segment</b> <i>string association lag reference virtual-ranges dot1q</i>
Tree	<a href="#">dot1q</a>
Introduced	16.0.R4
Platforms	All

### **q-tag** [**start**] (*number* | *keyword*)

Synopsis	Enter the <b>q-tag</b> list instance
Context	<b>configure service system bgp evpn ethernet-segment</b> <i>string association lag reference virtual-ranges dot1q q-tag</i> ( <i>number</i>   <i>keyword</i> )
Tree	<b>q-tag</b>
Max. Instances	8
Introduced	16.0.R4
Platforms	All

### **[start]** (*number* | *keyword*)

Synopsis	Lower bound of the q-tag VLAN ID range
Context	<b>configure service system bgp evpn ethernet-segment</b> <i>string association lag reference virtual-ranges dot1q q-tag</i> ( <i>number</i>   <i>keyword</i> )
Tree	<b>q-tag</b>
Range	0 to 4094
Options	tag-*
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

### **end** (*number* | *keyword*)

Synopsis	Upper bound of the q-tag VLAN ID range
Context	<b>configure service system bgp evpn ethernet-segment</b> <i>string association lag reference virtual-ranges dot1q q-tag</i> ( <i>number</i>   <i>keyword</i> ) <b>end</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>end</b>
Range	0 to 4094
Options	tag-*
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

## qinq

Synopsis	Enter the <b>qinq</b> context
Context	<b>configure service system bgp evpn ethernet-segment</b> <i>string association lag reference virtual-ranges qinq</i>
Tree	<a href="#">qinq</a>
Introduced	16.0.R4
Platforms	All

## s-tag [**start**] (*number | keyword*)

Synopsis	Enter the <b>s-tag</b> list instance
Context	<b>configure service system bgp evpn ethernet-segment</b> <i>string association lag reference virtual-ranges qinq s-tag (number   keyword)</i>
Tree	<a href="#">s-tag</a>
Max. Instances	8
Introduced	16.0.R4
Platforms	All

## [**start**] (*number | keyword*)

Synopsis	Lower bound of the s-tag VLAN ID range
Context	<b>configure service system bgp evpn ethernet-segment</b> <i>string association lag reference virtual-ranges qinq s-tag (number   keyword)</i>
Tree	<a href="#">s-tag</a>
Range	0 to 4094
Options	tag-*
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

## **end** (*number | keyword*)

Synopsis	Upper bound of the s-tag VLAN ID range
Context	<b>configure service system bgp evpn ethernet-segment</b> <i>string association lag reference virtual-ranges qinq s-tag (number   keyword) end (number   keyword)</i>

Tree	<a href="#">end</a>
Range	0 to 4094
Options	tag-*
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **s-tag-c-tag** [[s-tag](#)] (*number* | *keyword*) [c-tag-start](#) (*number* | *keyword*)

Synopsis	Enter the <b>s-tag-c-tag</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp</a> <a href="#">evpn</a> <a href="#">ethernet-segment</a> <i>string</i> <a href="#">association</a> <a href="#">lag</a> <a href="#">reference</a> <a href="#">virtual-ranges</a> <a href="#">qinq</a> <a href="#">s-tag-c-tag</a> ( <i>number</i>   <i>keyword</i> ) <a href="#">c-tag-start</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">s-tag-c-tag</a>
Max. Instances	8
Introduced	16.0.R4
Platforms	All

### **[s-tag]** (*number* | *keyword*)

Synopsis	Starting value of the qinq s-tag range associated with a virtual ethernet segment
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp</a> <a href="#">evpn</a> <a href="#">ethernet-segment</a> <i>string</i> <a href="#">association</a> <a href="#">lag</a> <a href="#">reference</a> <a href="#">virtual-ranges</a> <a href="#">qinq</a> <a href="#">s-tag-c-tag</a> ( <i>number</i>   <i>keyword</i> ) <a href="#">c-tag-start</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">s-tag-c-tag</a>
Range	0 to 4094
Options	tag-*, null
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

### **c-tag-start** (*number* | *keyword*)

Synopsis	Starting value of the qinq c-tag range
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp</a> <a href="#">evpn</a> <a href="#">ethernet-segment</a> <i>string</i> <a href="#">association</a> <a href="#">lag</a> <a href="#">reference</a> <a href="#">virtual-ranges</a> <a href="#">qinq</a> <a href="#">s-tag-c-tag</a> ( <i>number</i>   <i>keyword</i> ) <a href="#">c-tag-start</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">s-tag-c-tag</a>

Range	0 to 4094
Options	tag-*, null
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

### **c-tag-end** (*number* | *keyword*)

Synopsis	End value of the qinq c-tag range
Context	<b>configure</b> <b>service</b> <b>system</b> <b>bgp</b> <b>evpn</b> <b>ethernet-segment</b> <i>string</i> <b>association</b> <b>lag</b> <b>reference</b> <b>virtual-ranges</b> <b>qinq</b> <b>s-tag-c-tag</b> ( <i>number</i>   <i>keyword</i> ) <b>c-tag-start</b> ( <i>number</i>   <i>keyword</i> ) <b>c-tag-end</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>c-tag-end</b>
Range	0 to 4094
Options	tag-*, null
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **network-interconnect-vxlan** [**network-interconnect-vxlan-id**] *number*

Synopsis	Enter the <b>network-interconnect-vxlan</b> list instance
Context	<b>configure</b> <b>service</b> <b>system</b> <b>bgp</b> <b>evpn</b> <b>ethernet-segment</b> <i>string</i> <b>association</b> <b>network-interconnect-vxlan</b> <i>number</i>
Tree	<b>network-interconnect-vxlan</b>
Max. Instances	1
Notes	The following elements are part of a choice: <b>lag</b> , <b>network-interconnect-vxlan</b> , <b>port</b> , <b>pw-port</b> , <b>sdp</b> , or <b>vprn-next-hop</b> .
Introduced	16.0.R1
Platforms	All

### **[network-interconnect-vxlan-id]** *number*

Synopsis	VXLAN instance ID associated with the virtual ES
Context	<b>configure</b> <b>service</b> <b>system</b> <b>bgp</b> <b>evpn</b> <b>ethernet-segment</b> <i>string</i> <b>association</b> <b>network-interconnect-vxlan</b> <i>number</i>

Tree	<a href="#">network-interconnect-vxlan</a>
Range	1
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

## virtual-ranges

Synopsis	Enter the <b>virtual-ranges</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp</a> <a href="#">evpn</a> <a href="#">ethernet-segment</a> <i>string</i> <a href="#">association</a> <a href="#">network-interconnect-vxlan</a> <i>number</i> <b>virtual-ranges</b>
Tree	<a href="#">virtual-ranges</a>
Introduced	16.0.R4
Platforms	All

## service-id [[start](#)] *number*

Synopsis	Enter the <b>service-id</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp</a> <a href="#">evpn</a> <a href="#">ethernet-segment</a> <i>string</i> <a href="#">association</a> <a href="#">network-interconnect-vxlan</a> <i>number</i> <a href="#">virtual-ranges</a> <b>service-id</b> <i>number</i>
Tree	<a href="#">service-id</a>
Max. Instances	8
Introduced	16.0.R4
Platforms	All

## [[start](#)] *number*

Synopsis	Lower bound of the service ID range
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp</a> <a href="#">evpn</a> <a href="#">ethernet-segment</a> <i>string</i> <a href="#">association</a> <a href="#">network-interconnect-vxlan</a> <i>number</i> <a href="#">virtual-ranges</a> <b>service-id</b> <i>number</i>
Tree	<a href="#">service-id</a>
Range	1 to 2147483647
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

## **end number**

Synopsis	Upper bound of the service ID range
Context	<b>configure service system bgp evpn ethernet-segment</b> <i>string association network-interconnect-vxlan number virtual-ranges service-id number end number</i>
Tree	<b>end</b>
Range	1 to 2147483647
Notes	This element is mandatory.
Introduced	16.0.R4

Context	<b>configure service system bgp evpn ethernet-segment</b> <i>string</i> <b>association pw-port reference virtual-ranges dot1q q-tag</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>q-tag</b>
Range	0 to 4094
Options	tag-*
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

### **end** (*number* | *keyword*)

Synopsis	Upper bound of the q-tag VLAN ID range
Context	<b>configure service system bgp evpn ethernet-segment</b> <i>string</i> <b>association pw-port reference virtual-ranges dot1q q-tag</b> ( <i>number</i>   <i>keyword</i> ) <b>end</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>end</b>
Range	0 to 4094
Options	tag-*
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **qinq**

Synopsis	Enter the <b>qinq</b> context
Context	<b>configure service system bgp evpn ethernet-segment</b> <i>string</i> <b>association pw-port reference virtual-ranges qinq</b>
Tree	<b>qinq</b>
Introduced	16.0.R4
Platforms	All

### **s-tag** [**start**] (*number* | *keyword*)

Synopsis	Enter the <b>s-tag</b> list instance
Context	<b>configure service system bgp evpn ethernet-segment</b> <i>string</i> <b>association pw-port reference virtual-ranges qinq s-tag</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>s-tag</b>

Max. Instances	8
Introduced	16.0.R4
Platforms	All

### **[start]** (*number* | *keyword*)

Synopsis	Lower bound of the s-tag VLAN ID range
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp evpn ethernet-segment</a> <i>string</i> <a href="#">association</a> <a href="#">pw-port</a> <a href="#">reference</a> <a href="#">virtual-ranges</a> <a href="#">qinq s-tag</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">s-tag</a>
Range	0 to 4094
Options	tag-*
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

### **end** (*number* | *keyword*)

Synopsis	Upper bound of the s-tag VLAN ID range
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp evpn ethernet-segment</a> <i>string</i> <a href="#">association</a> <a href="#">pw-port</a> <a href="#">reference</a> <a href="#">virtual-ranges</a> <a href="#">qinq s-tag</a> ( <i>number</i>   <i>keyword</i> ) <b>end</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">end</a>
Range	0 to 4094
Options	tag-*
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **s-tag-c-tag** [[s-tag](#)] (*number* | *keyword*) [c-tag-start](#) (*number* | *keyword*)

Synopsis	Enter the <b>s-tag-c-tag</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp evpn ethernet-segment</a> <i>string</i> <a href="#">association</a> <a href="#">pw-port</a> <a href="#">reference</a> <a href="#">virtual-ranges</a> <a href="#">qinq s-tag-c-tag</a> ( <i>number</i>   <i>keyword</i> ) <a href="#">c-tag-start</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">s-tag-c-tag</a>

Max. Instances	8
Introduced	16.0.R4
Platforms	All

### **[s-tag]** (*number | keyword*)

Synopsis	Starting value of the qinq s-tag range associated with a virtual ethernet segment
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp</a> <a href="#">evpn</a> <a href="#">ethernet-segment</a> <i>string</i> <a href="#">association</a> <a href="#">pw-port</a> <a href="#">reference</a> <a href="#">virtual-ranges</a> <a href="#">qinq</a> <a href="#">s-tag-c-tag</a> ( <i>number   keyword</i> ) <a href="#">c-tag-start</a> ( <i>number   keyword</i> )
Tree	<a href="#">s-tag-c-tag</a>
Range	0 to 4094
Options	tag-*, null
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

### **c-tag-start** (*number | keyword*)

Synopsis	Starting value of the qinq c-tag range
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp</a> <a href="#">evpn</a> <a href="#">ethernet-segment</a> <i>string</i> <a href="#">association</a> <a href="#">pw-port</a> <a href="#">reference</a> <a href="#">virtual-ranges</a> <a href="#">qinq</a> <a href="#">s-tag-c-tag</a> ( <i>number   keyword</i> ) <a href="#">c-tag-start</a> ( <i>number   keyword</i> )
Tree	<a href="#">s-tag-c-tag</a>
Range	0 to 4094
Options	tag-*, null
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

### **c-tag-end** (*number | keyword*)

Synopsis	End value of the qinq c-tag range
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp</a> <a href="#">evpn</a> <a href="#">ethernet-segment</a> <i>string</i> <a href="#">association</a> <a href="#">pw-port</a> <a href="#">reference</a> <a href="#">virtual-ranges</a> <a href="#">qinq</a> <a href="#">s-tag-c-tag</a> ( <i>number   keyword</i> ) <a href="#">c-tag-start</a> ( <i>number   keyword</i> ) <a href="#">c-tag-end</a> ( <i>number   keyword</i> )

Tree	<a href="#">c-tag-end</a>
Range	0 to 4094
Options	tag-*, null
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **sdp** [[sdp-id](#)] *reference*

Synopsis	Enter the <b>sdp</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp</a> <a href="#">evpn</a> <a href="#">ethernet-segment</a> <i>string</i> <a href="#">association</a> <a href="#">sdp</a> <i>reference</i>
Tree	<a href="#">sdp</a>
Max. Instances	1
Notes	The following elements are part of a choice: <b>lag</b> , <b>network-interconnect-vxlan</b> , <b>port</b> , <b>pw-port</b> , <b>sdp</b> , or <b>vprn-next-hop</b> .
Introduced	16.0.R1
Platforms	All

### **[sdp-id]** *reference*

Synopsis	Sdp multi-homed with this Ethernet segment entry
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp</a> <a href="#">evpn</a> <a href="#">ethernet-segment</a> <i>string</i> <a href="#">association</a> <a href="#">sdp</a> <i>reference</i>

### **vprn-next-hop** [[ip-address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the <b>vprn-next-hop</b> list instance
Context	<b>configure service system bgp evpn ethernet-segment</b> <i>string</i> <b>association vprn-next-hop</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">vprn-next-hop</a>
Description	Commands in this list instance are used to associate an IPv4 or IPv6 address to an Ethernet segment. A virtual Ethernet segment using this VPRN next-hop association represents a Layer 3 Ethernet segment as described in <i>draft-sajassi-bess-evpn-ip-aliasing</i> . This IP address must be installed in the route table of the VPRN service identified by the EVI so that the Auto-Discovery per-ES or EVI routes for the ES are advertised. Only one VPRN next hop is supported per Ethernet segment.
Max. Instances	1
Notes	The following elements are part of a choice: <b>lag</b> , <b>network-interconnect-vxlan</b> , <b>port</b> , <b>pw-port</b> , <b>sdp</b> , or <b>vprn-next-hop</b> .
Introduced	22.10.R1
Platforms	All

### **[ip-address]** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	VPRN next-hop address
Context	<b>configure service system bgp evpn ethernet-segment</b> <i>string</i> <b>association vprn-next-hop</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">vprn-next-hop</a>
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	All

### **virtual-ranges**

Synopsis	Enter the <b>virtual-ranges</b> context
Context	<b>configure service system bgp evpn ethernet-segment</b> <i>string</i> <b>association vprn-next-hop</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>virtual-ranges</b>
Tree	<a href="#">virtual-ranges</a>
Introduced	22.10.R1
Platforms	All

## **evi** [**start**] *number*

Synopsis	Add a list entry for <b>evi</b>
Context	<b>configure service system bgp evpn ethernet-segment</b> <i>string</i> <b>association vprn-next-hop</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>virtual-ranges evi number</b>
Tree	<b>evi</b>
Max. Instances	1
Introduced	22.10.R1
Platforms	All

## [**start**] *number*

Synopsis	EVI range start information
Context	<b>configure service system bgp evpn ethernet-segment</b> <i>string</i> <b>association vprn-next-hop</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>virtual-ranges evi number</b>
Tree	<b>evi</b>
Range	1 to 16777215
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	All

## **auto-esi** *keyword*

### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	EVPN Ethernet segment auto-ESI type
Context	<b>configure service system bgp evpn ethernet-segment</b> <i>string</i> <b>auto-esi keyword</b>
Tree	<b>auto-esi</b>
Description	This command configures the auto-ESI type to use in the Ethernet segment (ES).When <b>type-1</b> is configured, a manual ESI cannot be configured and the ESI is automatically derived in accordance with the RFC 7432 ESI type 1 definition.When configured to <b>none</b> , a manual ESI must be configured.
Default	none
Options	none, type-1

Introduced 21.5.R1  
Platforms All

## df-election

Synopsis Enter the **df-election** context

Introduced	16.0.R1
Platforms	All

### **mode** *keyword*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Method used to elect the DF
Context	<b>configure service system bgp evpn ethernet-segment</b> <i>string</i> <b>df-election manual</b> <i>preference mode keyword</i>
Tree	<i>mode</i>
Default	revertive
Options	revertive, non-revertive
Introduced	16.0.R1
Platforms	All

### **value** *number*

Synopsis	Preference that is used to elect the designated forwarder
Context	<b>configure service system bgp evpn ethernet-segment</b> <i>string</i> <b>df-election manual</b> <i>preference value number</i>
Tree	<i>value</i>
Range	0 to 65535
Default	32767
Introduced	16.0.R1
Platforms	All

### **service-carving-mode** *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Mode of service carving enabled per EVPN associated with this Ethernet segment entry
Context	<b>configure service system bgp evpn ethernet-segment</b> <i>string</i> <b>df-election service-carving-</b> <i>mode keyword</i>
Tree	<i>service-carving-mode</i>
Default	auto
Options	auto, manual, off
Introduced	16.0.R1
Platforms	All

## esi string

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Ethernet segment identifier
Context	<b>configure service system bgp evpn ethernet-segment string esi string</b>
Tree	<a href="#">esi</a>
Introduced	16.0.R1
Platforms	All

## multi-homing-mode keyword

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Multi-homing mode of the Ethernet segment
Context	<b>configure service system bgp evpn ethernet-segment string multi-homing-mode keyword</b>
Tree	<a href="#">multi-homing-mode</a>
Default	none
Options	none, single-active, single-active-no-esi-label, all-active
Introduced	16.0.R1
Platforms	All

## oper-group reference

Synopsis	Operational group ID
Context	<b>configure service system bgp evpn ethernet-segment string oper-group reference</b>
Tree	<a href="#">oper-group</a>
Reference	<b>configure service oper-group string</b>
Introduced	19.10.R1
Platforms	All

## **orig-ip** (*ipv4-address-no-zone | ipv6-address-no-zone*)

### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Originating IP address advertised in the ES route
Context	<b>configure service system bgp evpn ethernet-segment</b> <i>string orig-ip (ipv4-address-no-zone   ipv6-address-no-zone)</i>
Tree	<a href="#">orig-ip</a>
Introduced	16.0.R4
Platforms	All

## **pbb**

Synopsis	Enter the <b>pbb</b> context
Context	<b>configure service system bgp evpn ethernet-segment</b> <i>string pbb</i>
Tree	<a href="#">pbb</a>
Introduced	16.0.R1
Platforms	All

## **es-bmac-table-size** *number*

Synopsis	Size of virtual backbone mac table for this ethernet segment
Context	<b>configure service system bgp evpn ethernet-segment</b> <i>string pbb es-bmac-table-size number</i>
Tree	<a href="#">es-bmac-table-size</a>
Range	1 to 511999
Default	8
Introduced	16.0.R1
Platforms	All

## **source-bmac-lsb** *string*

### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Least significant bytes of the B-MAC for packet source
Context	<b>configure service system bgp evpn ethernet-segment</b> <i>string pbb source-bmac-lsb string</i>
Tree	<a href="#">source-bmac-lsb</a>
Introduced	16.0.R1
Platforms	All

### **route-next-hop** (*ipv4-address-no-zone | ipv6-address-no-zone*)

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Next-hop IP address for ES and AD per ES routes
Context	<b>configure service system bgp evpn ethernet-segment</b> <i>string route-next-hop (ipv4-address-no-zone   ipv6-address-no-zone)</i>
Tree	<a href="#">route-next-hop</a>
Introduced	16.0.R4
Platforms	All

### **type** *keyword*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Ethernet Segment type
Context	<b>configure service system bgp evpn ethernet-segment</b> <i>string type keyword</i>
Tree	<a href="#">type</a>
Default	none
Options	none, virtual
Introduced	16.0.R1
Platforms	All

### **etree-leaf-label** *boolean*

Synopsis	Enable E-Tree leaf label for PE
Context	<b>configure service system bgp evpn etree-leaf-label</b> <i>boolean</i>

Tree	<a href="#">etree-leaf-label</a>
Description	<p>When configured to <b>true</b>, this command enables EVPN Ethernet-Tree (E-Tree) VPLS services on the router (not B-VPLS), allocates an E-Tree leaf label for the Provider Edge (PE) device, and configures the ILM entry. This command ensures that in-flight traffic can perform an ILM entry lookup at any time, and avoids discards when administratively enabling or disabling services, or reduces the timing window so that it does not occur during normal operation or configuration. The value for the E-Tree leaf label is set via the <b>etree-leaf-label-value</b> command.</p> <p>When configured to <b>false</b>, PE leaf labels are not supported. The <b>bgp-evpn mpls admin-state</b> command in the configure service epipe context cannot be administratively enabled if this command is set to false.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **etree-leaf-label-value** (*number* | *keyword*)

Synopsis	Global E-tree leaf label for PE in EVPN E-Tree services
Context	<b>configure service system bgp evpn etree-leaf-label-value</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">etree-leaf-label-value</a>
Range	32 to 524526
Default	dynamic
Options	dynamic
Introduced	21.7.R1
Platforms	All

### **ip-prefix-routes**

Synopsis	Enter the <b>ip-prefix-routes</b> context
Context	<b>configure service system bgp evpn ip-prefix-routes</b>
Tree	<a href="#">ip-prefix-routes</a>
Introduced	21.2.R1
Platforms	All

### **d-path-length-ignore** *boolean*

Synopsis	Ignore D-PATH length for BGP path selection of EVPN-IFF
Context	<b>configure service system bgp evpn ip-prefix-routes d-path-length-ignore</b> <i>boolean</i>

Tree	<a href="#">d-path-length-ignore</a>
Default	false
Introduced	21.10.R1
Platforms	All

### **iff-attribute-uniform-propagation** *boolean*

Synopsis	Enable uniform propagation of BGP attributes
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp</a> <a href="#">evpn</a> <a href="#">ip-prefix-routes</a> <a href="#">iff-attribute-uniform-propagation</a> <i>boolean</i>
Tree	<a href="#">iff-attribute-uniform-propagation</a>
Description	<p>When configured to <b>true</b>, this command enables the uniform propagation of BGP attributes for EVPN-IFF (Interfaceful) routes. EVPN-IFF is used in R-VPLS services with <b>bgp-evpn ip-route-advertisement</b>. When enabled, the received EVPN-IFF routes for the R-VPLS can be propagated with the original BGP path attributes into EVPN-IFL, IPVPN, EVPN-IFF (in other R-VPLS services) or BGP IP routes advertised for the attached VPRN. The command also enables the attribute propagation in the opposite direction, for example, from EVPN-IFL/IPVPN/IP/EVPN-IFF routes into EVPN-IFF routes.</p> <p>The propagation follows the uniform mode defined in draft-ietf-bess-evpn-ipvpn-interworking.</p> <p>When configured to <b>false</b>, this command re-originates the BGP Path Attributes when propagating EVPN-IFF routes into other Inter-Subnet Forwarding families.</p>
Default	false
Introduced	21.2.R1
Platforms	All

### **iff-bgp-path-selection** *boolean*

Synopsis	Enable BGP path selection for EVPN-IFF routes
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp</a> <a href="#">evpn</a> <a href="#">ip-prefix-routes</a> <a href="#">iff-bgp-path-selection</a> <i>boolean</i>
Tree	<a href="#">iff-bgp-path-selection</a>
Description	<p>When configured to <b>true</b>, this command enables the EVPN-IFF routes to be ordered and selected in a similar manner as IPVPN or EVPN-IFL routes, that is, based on the regular BGP path selection process.</p> <p>When configured to <b>false</b>, this command makes the system order EVPN-IFF routes based on their {RVPLS Iindex, RD, Ethernet Tag}. For example, if two EVPN-IFF routes are received for the same prefix on the same R-VPLS and with different RDs (Route Distinguishers), the route with the lowest RD is selected.</p>
Default	false

Introduced	21.2.R1
Platforms	All

### **multicast-leave-sync-propagation** *number*

Synopsis	Multicast leave group synchronization delay
Context	<b>configure service system bgp evpn multicast-leave-sync-propagation</b> <i>number</i>
Tree	<a href="#">multicast-leave-sync-propagation</a>
Description	<p>This command configures the additional amount of time that the system waits before removing a multicast state that was synchronized in an Ethernet Segment via Multicast Join or Leave Synch routes. This value represents a delta corresponding to the time it takes for a BGP advertisement to propagate to ES peers.</p> <p>The node triggering the route computes the maximum response time as the product of the locally configured values, Last Member Query Count and Last Member Query Interval, and adds the delta value to the maximum response time. The query count value is configured in the <b>configure services vrpn igmp robust-count</b> command. The query interval value is taken from the <b>configure service vpls sap igmp-snooping last-member-query-interval</b> or the <b>configure service vpls spoke-sdp igmp-snooping last-member-query-interval</b> configuration, depending on the Ethernet Segment.</p> <p>Increasing the maximum response time by this value can help minimize the churn of removing and recreating the state on the node.</p> <p>This value should be configured consistently in all ES peers.</p>
Range	0 to 300
Default	5
Units	seconds
Introduced	20.7.R1
Platforms	All

### **route-distinguisher** *string*

Synopsis	Route distinguisher for ES routes
Context	<b>configure service system bgp evpn route-distinguisher</b> <i>string</i>
Tree	<a href="#">route-distinguisher</a>
Introduced	16.0.R1
Platforms	All

## bgp-auto-rd-range

Synopsis	Enter the <b>bgp-auto-rd-range</b> context
Context	<b>configure service system bgp-auto-rd-range</b>
Tree	<a href="#">bgp-auto-rd-range</a>
Introduced	16.0.R1
Platforms	All

## community-value

Synopsis	Enter the <b>community-value</b> context
Context	<b>configure service system bgp-auto-rd-range community-value</b>
Tree	<a href="#">community-value</a>
Introduced	16.0.R1
Platforms	All

## end number

Synopsis	Upper bound of BGP route distinguisher community range
Context	<b>configure service system bgp-auto-rd-range community-value end number</b>
Tree	<a href="#">end</a>
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

## start number

Synopsis	Lower bound of BGP route distinguisher community range
Context	<b>configure service system bgp-auto-rd-range community-value start number</b>
Tree	<a href="#">start</a>
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

### **ip-address** *string*

Synopsis	IP address used for selecting the route distinguisher
Context	<b>configure service system bgp-auto-rd-range ip-address</b> <i>string</i>
Tree	<a href="#">ip-address</a>
Introduced	16.0.R1
Platforms	All

### **extended-default-qinq-sap-lookup** *boolean*

Synopsis	Control the forwarding of the packets
Context	<b>configure service system extended-default-qinq-sap-lookup</b> <i>boolean</i>
Tree	<a href="#">extended-default-qinq-sap-lookup</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, VSR

### **fdb**

Synopsis	Enter the <b>fdb</b> context
Context	<b>configure service system fdb</b>
Tree	<a href="#">fdb</a>
Introduced	16.0.R1
Platforms	All

### **table-size** *number*

Synopsis	Maximum FDB entries in the system
Context	<b>configure service system fdb table-size</b> <i>number</i>
Tree	<a href="#">table-size</a>
Range	4095 to 2047999
Introduced	16.0.R1
Platforms	All

### **gre-eth-bridged**

Synopsis	Enter the <b>gre-eth-bridged</b> context
----------	--

Context	<b>configure service system gre-eth-bridged</b>
Tree	<a href="#">gre-eth-bridged</a>
Introduced	16.0.R1
Platforms	All

### **tunnel-termination** [[ip-address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the <b>tunnel-termination</b> list instance
Context	<b>configure service system gre-eth-bridged tunnel-termination</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">tunnel-termination</a>
Introduced	16.0.R1
Platforms	All

### **[ip-address]** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Tunnel end-point IP address in the SR OS node
Context	<b>configure service system gre-eth-bridged tunnel-termination</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">tunnel-termination</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **fpe-id** *reference*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	FPE ID
Context	<b>configure service system gre-eth-bridged tunnel-termination</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <a href="#">fpe-id</a> <i>reference</i>
Tree	<a href="#">fpe-id</a>
Reference	<b>configure fwd-path-ext fpe</b> <i>number</i>
Notes	This element is mandatory.

Introduced 16.0.R1  
Platforms All

### **pw-port-list**

Synopsis Enter the **pw-port-list** context  
Context **configure service system pw-port-list**  
Tree [pw-port-list](#)  
Introduced 16.0.R6  
Platforms VSR

### **port [port-id] string**

Synopsis Add a list entry for **port**  
Context **configure service system pw-port-list port string**  
Tree [port](#)  
Introduced 16.0.R6  
Platforms VSR

### **[port-id] string**

Synopsis Port ID  
Context **configure service system pw-port-list port string**  
Tree [port](#)  
Notes This element is part of a list key.  
Introduced 16.0.R6  
Platforms VSR

### **vpn-gre-source-ip string**

Synopsis VPN GRE source ip-address  
Context **configure service system vpn-gre-source-ip string**  
Tree [vpn-gre-source-ip](#)  
Introduced 16.0.R4  
Platforms All

## vxlan

Synopsis	Enter the <b>vxlan</b> context
Context	<b>configure service system vxlan</b>
Tree	<a href="#">vxlan</a>
Introduced	16.0.R1
Platforms	All

## assisted-replication

Synopsis	Enter the <b>assisted-replication</b> context
Context	<b>configure service system vxlan assisted-replication</b>
Tree	<a href="#">assisted-replication</a>
Introduced	16.0.R1
Platforms	All

## ip-address *string*

Synopsis	IP address for assisted replication in the router
Context	<b>configure service system vxlan assisted-replication ip-address <i>string</i></b>
Tree	<a href="#">ip-address</a>
Introduced	16.0.R1
Platforms	All

## tunnel-termination [[ip-address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the <b>tunnel-termination</b> list instance
Context	<b>configure service system vxlan tunnel-termination (<i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i>)</b>
Tree	<a href="#">tunnel-termination</a>
Introduced	16.0.R1
Platforms	All

## [[ip-address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Non-system IP address that terminates the VXLAN
----------	---

Context	<b>configure service system vxlan tunnel-termination</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> )
Tree	<a href="#">tunnel-termination</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## fpe-id reference

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	FPE id for this entry
Context	<b>configure service system vxlan tunnel-termination</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <a href="#">fpe-id reference</a>
Tree	<a href="#">fpe-id</a>
Reference	<b>configure fwd-path-ext fpe</b> <i>number</i>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

## template

Synopsis	Enter the <b>template</b> context
Context	<b>configure service template</b>
Tree	<a href="#">template</a>
Introduced	16.0.R1
Platforms	All

## epipe-sap-template [[name](#)] *string*

Synopsis	Enter the <b>epipe-sap-template</b> list instance
Context	<b>configure service template epipe-sap-template</b> <i>string</i>
Tree	<a href="#">epipe-sap-template</a>
Introduced	16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### [name] *string*

Synopsis SAP template name  
Context **configure service template epipe-sap-template** *string*  
Tree [epipe-sap-template](#)  
String Length 1 to 32  
Notes This element is part of a list key.  
Introduced 16.0.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **egress**

Synopsis Enter the **egress** context  
Context **configure service template epipe-sap-template** *string* **egress**  
Tree [egress](#)  
Introduced 16.0.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **filter**

Synopsis Enter the **filter** context  
Context **configure service template epipe-sap-template** *string* **egress filter**  
Tree [filter](#)  
Introduced 16.0.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ip reference**

Synopsis IPv4 filter policy name  
Context **configure service template epipe-sap-template** *string* **egress filter ip** *reference*  
Tree [ip](#)  
Reference **configure filter ip-filter** *string*  
Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ipv6 reference**

Synopsis IPv6 filter policy name  
Context **configure** [service template epipe-sap-template](#) *string* [egress filter ipv6 reference](#)  
Tree [ipv6](#)  
Reference **configure** [filter ipv6-filter](#) *string*  
Introduced 16.0.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **mac reference**

Synopsis MAC filter policy name  
Context **configure** [service template epipe-sap-template](#) *string* [egress filter mac reference](#)  
Tree [mac](#)  
Reference **configure** [filter mac-filter](#) *string*  
Introduced 16.0.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **qos**

Synopsis Enter the **qos** context  
Context **configure** [service template epipe-sap-template](#) *string* [egress qos](#)  
Tree [qos](#)  
Introduced 16.0.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **policy-name reference**

Synopsis SAP egress QoS policy name to apply to the SAP  
Context **configure** [service template epipe-sap-template](#) *string* [egress qos policy-name reference](#)  
Tree [policy-name](#)  
Reference **configure** [qos sap-egress](#) *string*  
Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ingress

Synopsis Enter the **ingress** context  
Context **configure** [service template epipe-sap-template](#) *string* **ingress**  
Tree [ingress](#)  
Introduced 16.0.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## filter

Synopsis Enter the **filter** context  
Context **configure** [service template epipe-sap-template](#) *string* **ingress filter**  
Tree [filter](#)  
Introduced 16.0.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ip reference

Synopsis IPv4 filter policy name  
Context **configure** [service template epipe-sap-template](#) *string* **ingress filter ip reference**  
Tree [ip](#)  
Reference **configure** [filter ip-filter](#) *string*  
Introduced 16.0.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ipv6 reference

Synopsis IPv6 filter policy name  
Context **configure** [service template epipe-sap-template](#) *string* **ingress filter ipv6 reference**  
Tree [ipv6](#)  
Reference **configure** [filter ipv6-filter](#) *string*  
Introduced 16.0.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### mac reference

Synopsis	MAC filter policy name
Context	<b>configure</b> <a href="#">service</a> <a href="#">template</a> <a href="#">epipe-sap-template</a> <i>string</i> <a href="#">ingress</a> <a href="#">filter</a> <a href="#">mac</a> <i>reference</i>
Tree	<a href="#">mac</a>
Reference	<b>configure</b> <a href="#">filter</a> <a href="#">mac-filter</a> <i>string</i>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### qos

Synopsis	Enter the <b>qos</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">template</a> <a href="#">epipe-sap-template</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a>
Tree	<a href="#">qos</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### policy-name reference

Synopsis	SAP ingress QoS policy name to apply to the SAP
Context	<b>configure</b> <a href="#">service</a> <a href="#">template</a> <a href="#">epipe-sap-template</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">policy-name</a> <i>reference</i>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">sap-ingress</a> <i>string</i>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### queuing-type keyword

Synopsis	Queuing type
Context	<b>configure</b> <a href="#">service</a> <a href="#">template</a> <a href="#">epipe-sap-template</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">queuing-type</a> <i>keyword</i>
Tree	<a href="#">queuing-type</a>
Options	shared, multipoint-shared
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## upnp

Synopsis	Enter the <b>upnp</b> context
Context	<b>configure service upnp</b>
Tree	<b>upnp</b>
Description	Commands in this context configure Universal Plug 'n Play (UPnP) for the service.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## policy [name] string

Synopsis	Enter the <b>policy</b> list instance
Context	<b>configure service upnp policy string</b>
Tree	<b>policy</b>
Description	Commands in this context configure the attributes of the UPnP policy.
Max. Instances	255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## [name] string

Synopsis	UPnP policy name
Context	<b>configure service upnp policy string</b>
Tree	<b>policy</b>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## description string

Synopsis	Text description
Context	<b>configure service upnp policy string description string</b>
Tree	<b>description</b>

String Length 1 to 80  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **mapping-limit** *number*

Synopsis Maximum number of UPnP mappings per subscriber  
Context **configure service upnp policy** *string mapping-limit number*  
Tree [mapping-limit](#)  
Range 1 to 256  
Default 256  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **port** *number*

Synopsis HTTP TCP port to which the UPnP IGD listens  
Context **configure service upnp policy** *string port number*  
Tree [port](#)  
Range 1 to 65535  
Default 5000  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **strict-mode** *boolean*

Synopsis Enable UPnP strict mode  
Context **configure service upnp policy** *string strict-mode boolean*  
Tree [strict-mode](#)  
Description When configured to **true**, this command enables UPnP strict mode, in which the system only allows changes to an existing UPnP mapping if the request comes from the same UPnP client.  
Default false  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **vpls** [[service-name](#)] *string*

Synopsis	Enter the <b>vpls</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i>
Tree	<a href="#">vpls</a>
Introduced	16.0.R1
Platforms	All

### **[service-name]** *string*

Synopsis	Administrative service name
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i>
Tree	<a href="#">vpls</a>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the service
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **bgp** [[bgp-instance](#)] *number*

Synopsis	Enter the <b>bgp</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">bgp</a> <i>number</i>
Tree	<a href="#">bgp</a>
Introduced	16.0.R1
Platforms	All

### **[bgp-instance] number**

Synopsis	BGP instance
Context	<b>configure service vpls string bgp number</b>
Tree	<a href="#">bgp</a>
Range	1 to 2
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **adv-service-mtu number**

Synopsis	Advertised service MTU value
Context	<b>configure service vpls string bgp number adv-service-mtu number</b>
Tree	<a href="#">adv-service-mtu</a>
Description	This command configures the MTU signaled value used in the BGP for the service. When configured, the router uses the value for signaling and for validation with the received MTU instead of the service MTU. However, the value does not affect the locally enforced value, which is still based on the service MTU.
Range	0 to 9782
Introduced	22.2.R1
Platforms	All

### **pw-template-binding [pw-template-name] reference**

Synopsis	Enter the <b>pw-template-binding</b> list instance
Context	<b>configure service vpls string bgp number pw-template-binding reference</b>
Tree	<a href="#">pw-template-binding</a>
Max. Instances	100
Introduced	16.0.R1
Platforms	All

### **[pw-template-name] reference**

Synopsis	Policy name
----------	-------------

Context	<b>configure service vpls string</b> <a href="#">bgp number pw-template-binding reference</a>
Tree	<a href="#">pw-template-binding</a>
Reference	<b>configure service pw-template string</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **bfd-liveness** *boolean*

Synopsis	Enable BFD
Context	<b>configure service vpls string</b> <a href="#">bgp number pw-template-binding reference</a> <b>bfd-liveness boolean</b>
Tree	<a href="#">bfd-liveness</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **bfd-template** *reference*

Synopsis	BFD template name for PW-Template binding
Context	<b>configure service vpls string</b> <a href="#">bgp number pw-template-binding reference</a> <b>bfd-template reference</b>
Tree	<a href="#">bfd-template</a>
Reference	<b>configure bfd bfd-template string</b>
Introduced	16.0.R1
Platforms	All

### **import-rt** *string*

Synopsis	Import route-target communities
Context	<b>configure service vpls string</b> <a href="#">bgp number pw-template-binding reference</a> <b>import-rt string</b>
Tree	<a href="#">import-rt</a>
String Length	10 to 28
Max. Instances	5
Introduced	16.0.R1

Platforms All

### **monitor-oper-group** *reference*

Synopsis Operational group to monitor

Context **configure** [service vpls string](#) [bgp number](#) [pw-template-binding reference](#) [monitor-oper-group reference](#)

Tree [monitor-oper-group](#)

Reference **configure** [service oper-group string](#)

Notes The following elements are part of a choice: **monitor-oper-group** or **oper-group**.

Introduced 16.0.R1

Platforms All

### **oper-group** *reference*

Synopsis Operational group

Context **configure** [service vpls string](#) [bgp number](#) [pw-template-binding reference](#) [oper-group reference](#)

Tree [oper-group](#)

Reference **configure** [service oper-group string](#)

Notes The following elements are part of a choice: **monitor-oper-group** or **oper-group**.

Introduced 16.0.R1

Platforms All

### **split-horizon-group** *string*

Synopsis Split horizon group

Context **configure** [service vpls string](#) [bgp number](#) [pw-template-binding reference](#) [split-horizon-group string](#)

Tree [split-horizon-group](#)

String Length 1 to 32

Introduced 16.0.R1

Platforms All

### **route-distinguisher** (*keyword* | *vpn-route-distinguisher*)

Synopsis	High-order 6 bytes that are used as string to compose VSI-ID for use in NLRI
Context	<b>configure service vpls string bgp number route-distinguisher</b> ( <i>keyword</i>   <i>vpn-route-distinguisher</i> )
Tree	<a href="#">route-distinguisher</a>
Options	auto-rd
Introduced	16.0.R1
Platforms	All

### **route-target**

Synopsis	Enter the <b>route-target</b> context
Context	<b>configure service vpls string bgp number route-target</b>
Tree	<a href="#">route-target</a>
Introduced	16.0.R1
Platforms	All

### **export** *string*

Synopsis	Extended community name for default import policy
Context	<b>configure service vpls string bgp number route-target export</b> <i>string</i>
Tree	<a href="#">export</a>
String Length	10 to 28
Introduced	16.0.R1
Platforms	All

### **import** *string*

Synopsis	Extended community name for default import policy
Context	<b>configure service vpls string bgp number route-target import</b> <i>string</i>
Tree	<a href="#">import</a>
String Length	10 to 28
Introduced	16.0.R1
Platforms	All

### **vsi-export** *reference*

Synopsis	VSI export policies
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">bgp</a> <i>number</i> <a href="#">vsi-export</a> <i>reference</i>
Tree	<a href="#">vsi-export</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **vsi-import** *reference*

Synopsis	VSI import policies
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">bgp</a> <i>number</i> <a href="#">vsi-import</a> <i>reference</i>
Tree	<a href="#">vsi-import</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **bgp-ad**

Synopsis	Enable the <b>bgp-ad</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">bgp-ad</a>
Tree	<a href="#">bgp-ad</a>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of BGP Auto-Discovery
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">bgp-ad</a> <a href="#">admin-state</a> <i>keyword</i>

Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **vpls-id** *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	VPLS identifier as a 8-byte route distinguisher
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">bgp-ad vpls-id</a> <i>string</i>
Tree	<a href="#">vpls-id</a>
Introduced	16.0.R1
Platforms	All

### **vsi-id-prefix** *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	VSI prefix value
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">bgp-ad vsi-id-prefix</a> <i>string</i>
Tree	<a href="#">vsi-id-prefix</a>
Introduced	16.0.R1
Platforms	All

### **bgp-evpn**

Synopsis	Enable the <b>bgp-evpn</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">bgp-evpn</a>
Tree	<a href="#">bgp-evpn</a>
Introduced	16.0.R1
Platforms	All

### **accept-ivpls-evpn-flush** *boolean*

Synopsis	Accept and process non-zero ethernet-tag MAC routes
Context	<b>configure service vpls string</b> <code>bgp-evpn accept-ivpls-evpn-flush</code> <i>boolean</i>
Tree	<code>accept-ivpls-evpn-flush</code>
Default	false
Introduced	16.0.R1
Platforms	All

### **evi** *number*

Synopsis	EVPN ID
Context	<b>configure service vpls string</b> <code>bgp-evpn evi</code> <i>number</i>
Tree	<code>evi</code>
Description	<p>This command configures a 2-byte EVPN instance (EVI) unique in the system. It is used for the service-carving algorithm for multi-homing and auto-deriving route target and route distinguishers.</p> <p>If not specified, the EVPN ID value is zero and no route distinguisher or route targets are auto-derived from it.</p> <p>If the EVI ID value is specified and no other <b>route-distinguisher</b> or <b>route-target</b> is configured in the service, the following rules apply:</p> <ul style="list-style-type: none"> <li>• the route distinguisher is derived from <code>&lt;system_ip&gt;:evi</code></li> <li>• the route target is derived from <code>&lt;autonomous-system&gt;:evi</code></li> </ul> <p>If VSI import and export policies are configured, the route target must be configured in the policies and those values take precedence over the auto-derived route targets. If <b>bgp-ad vpls-id</b> and <b>bgp-evpn evi</b> are both configured on the same service, the VPLS ID auto-derived route target or route distinguisher takes precedence over the values auto-derived from the EVI. Use the <b>show service id bgp</b> command to display the operational route target for a service.</p>
Range	1 to 16777215
Introduced	16.0.R1
Platforms	All

### **incl-mcast-orig-ip** *string*

Synopsis	Originating IP address
Context	<b>configure service vpls string</b> <code>bgp-evpn incl-mcast-orig-ip</code> <i>string</i>
Tree	<code>incl-mcast-orig-ip</code>

Introduced 16.0.R1  
Platforms All

## **isid-route-target**

Synopsis Enter the **isid-route-target** context  
Context **configure service vpls string bgp-evpn isid-route-target**  
Tree [isid-route-target](#)  
Introduced 16.0.R1  
Platforms All

## **range [start] number**

Synopsis Enter the **range** list instance  
Context **configure service vpls string bgp-evpn isid-route-target range number**  
Tree [range](#)  
Max. Instances 8192  
Introduced 16.0.R1  
Platforms All

## **[start] number**

Synopsis Lower bound of the ISID range  
Context **configure service vpls string bgp-evpn isid-route-target range number**  
Tree [range](#)  
Range 1 to 16777215  
Notes This element is part of a list key.  
Introduced 16.0.R1  
Platforms All

## **end number**

Synopsis Upper bound of the ISID range  
Context **configure service vpls string bgp-evpn isid-route-target range number end number**

Tree	<a href="#">end</a>
Range	1 to 16777215
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **route-target** *string*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Route for the ISID range
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn isid-route-target range</a> <i>number</i> <a href="#">route-target string</a>
Tree	<a href="#">route-target</a>
String Length	10 to 28
Introduced	16.0.R1
Platforms	All

### **type** *keyword*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Method used to support the PBB-EVPN ISID-based route target advertisement
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn isid-route-target range</a> <i>number</i> <a href="#">type keyword</a>
Tree	<a href="#">type</a>
Default	auto
Options	auto, configured
Introduced	16.0.R1
Platforms	All

### **mac-duplication**

Synopsis	Enter the <b>mac-duplication</b> context
----------	--

Context	<b>configure service vpls string</b> <a href="#">bgp-evpn mac-duplication</a>
Tree	<a href="#">mac-duplication</a>
Introduced	16.0.R1
Platforms	All

### **blackhole** *boolean*

Synopsis	Enable black hole dup MAC configuration
Context	<b>configure service vpls string</b> <a href="#">bgp-evpn mac-duplication blackhole</a> <i>boolean</i>
Tree	<a href="#">blackhole</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **detect**

Synopsis	Enter the <b>detect</b> context
Context	<b>configure service vpls string</b> <a href="#">bgp-evpn mac-duplication detect</a>
Tree	<a href="#">detect</a>
Introduced	16.0.R1
Platforms	All

### **num-moves** *number*

Synopsis	BGP EVPN MAC duplication detection number of moves
Context	<b>configure service vpls string</b> <a href="#">bgp-evpn mac-duplication detect num-moves</a> <i>number</i>
Tree	<a href="#">num-moves</a>
Range	3 to 10
Default	5
Introduced	16.0.R1
Platforms	All

### **window** *number*

Synopsis	BGP EVPN MAC duplication detection window
----------	---

Context	<b>configure service vpls string</b> bgp-evpn mac-duplication detect window number
Tree	window
Range	1 to 15
Default	3
Units	minutes
Introduced	16.0.R1
Platforms	All

### **retry** (*number* | *keyword*)

Synopsis	BGP EVPN MAC duplication retry
Context	<b>configure service vpls string</b> bgp-evpn mac-duplication retry ( <i>number</i>   <i>keyword</i> )
Tree	retry
Range	2 to 60
Default	9
Units	minutes
Options	never
Introduced	16.0.R1
Platforms	All

### **mpls** [*bgp-instance*] *number*

Synopsis	Enter the <b>mpls</b> list instance
Context	<b>configure service vpls string</b> bgp-evpn mpls number
Tree	mpls
Introduced	16.0.R1
Platforms	All

### **[bgp-instance]** *number*

Synopsis	BGP instance
Context	<b>configure service vpls string</b> bgp-evpn mpls number
Tree	mpls
Range	1 to 2
Notes	This element is part of a list key.

Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of BGP EVPN MPLS
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn mpls number</a> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **auto-bind-tunnel**

Synopsis	Enter the <b>auto-bind-tunnel</b> context
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn mpls number</a> <b>auto-bind-tunnel</b>
Tree	<a href="#">auto-bind-tunnel</a>
Introduced	16.0.R1
Platforms	All

### **allow-flex-algo-fallback** *boolean*

Synopsis	Enable flexible algorithm fallback
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn mpls number</a> <b>auto-bind-tunnel</b> <b>allow-flex-algo-fallback</b> <i>boolean</i>
Tree	<a href="#">allow-flex-algo-fallback</a>
Description	<p>When configured to <b>true</b>, a BGP router with a Flex-Algorithm action configured (via the <b>configure policy-options policy-statement entry action flex-algo</b> command) can resolve to a tunnel with algorithm 0 if no target Flex-Algorithm tunnel is available.</p> <p>When configured to <b>false</b>, the BGP router can resolve only to the intended Flex-Algorithm tunnel, which may cause traffic loss if no corresponding Flex-Algorithm tunnel is available.</p>
Default	false
Introduced	20.10.R1
Platforms	All

### **ecmp** *number*

Synopsis	Maximum ECMP routes information
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">bgp-evpn</a> <a href="#">mpls</a> <a href="#">number</a> <a href="#">auto-bind-tunnel</a> <a href="#">ecmp</a> <i>number</i>
Tree	<a href="#">ecmp</a>
Range	1 to 32
Default	1
Introduced	19.10.R1
Platforms	All

### **enforce-strict-tunnel-tagging** *boolean*

Synopsis	Enable/disable enforcement of strict tunnel tagging
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">bgp-evpn</a> <a href="#">mpls</a> <a href="#">number</a> <a href="#">auto-bind-tunnel</a> <a href="#">enforce-strict-tunnel-tagging</a> <i>boolean</i>
Tree	<a href="#">enforce-strict-tunnel-tagging</a>
Default	false
Introduced	16.0.R4
Platforms	All

### **resolution** *keyword*

Synopsis	Resolution method for tunnel selection
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">bgp-evpn</a> <a href="#">mpls</a> <a href="#">number</a> <a href="#">auto-bind-tunnel</a> <a href="#">resolution</a> <i>keyword</i>
Tree	<a href="#">resolution</a>
Default	none
Options	none, filter, any
Introduced	16.0.R1
Platforms	All

### **resolution-filter**

Synopsis	Enter the <b>resolution-filter</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">bgp-evpn</a> <a href="#">mpls</a> <a href="#">number</a> <a href="#">auto-bind-tunnel</a> <a href="#">resolution-filter</a>
Tree	<a href="#">resolution-filter</a>

Introduced 16.0.R1  
Platforms All

### **bgp *boolean***

Synopsis Use BGP tunneling for next-hop resolution

Context **configure** [service vpls string](#) [bgp-evpn mpls number](#) [auto-bind-tunnel](#) [resolution-filter](#)  
[bgp boolean](#)

Tree [bgp](#)

Description When configured to **true**, BGP searches the BGP LSP for the address of the BGP next hop.  
When configured to **false**, BGP tunneling is not used and inter-area or inter-as prefixes are not resolved.

Default false

Introduced 16.0.R1

Platforms All

### **ldp *boolean***

Synopsis Use LDP tunneling for next-hop resolution

Context **configure** [service vpls string](#) [bgp-evpn mpls number](#) [auto-bind-tunnel](#) [resolution-filter](#)  
[ldp boolean](#)

Tree [ldp](#)

Description When configured to **true**, BGP searches for an LDP LSP with a FEC prefix corresponding to the address of the BGP next hop.  
When configured to **false**, LDP tunneling is not used for next-hop resolution.

Default false

Introduced 16.0.R1

Platforms All

### **mpls-fwd-policy *boolean***

Synopsis Use MPLS forwarding policy for next-hop resolution

Context **configure** [service vpls string](#) [bgp-evpn mpls number](#) [auto-bind-tunnel](#) [resolution-filter](#)  
[mpls-fwd-policy boolean](#)

Tree [mpls-fwd-policy](#)

Description	When configured to <b>true</b> , BGP uses the MPLS forwarding policy to determine the address of the BGP next hop. When configured to <b>false</b> , the MPLS forwarding policy is not used for next-hop resolution.
Default	false
Introduced	19.5.R1
Platforms	All

### **rib-api** *boolean*

Synopsis	Use RIB API gRPC service for next-hop resolution
Context	<b>configure</b> <i>service vpls string bgp-evpn mpls number auto-bind-tunnel resolution-filter rib-api boolean</i>
Tree	<i>rib-api</i>
Description	When configured to <b>true</b> , BGP uses tunnels programmed using the RIB API gRPC service to resolve the next hops of routes imported into the EVPN service. When configured to <b>false</b> , the RIB API service tunnels are not used for next-hop resolution.
Default	false
Introduced	19.5.R1
Platforms	All

### **rsvp** *boolean*

Synopsis	Use RSVP tunneling for next-hop resolution
Context	<b>configure</b> <i>service vpls string bgp-evpn mpls number auto-bind-tunnel resolution-filter rsvp boolean</i>
Tree	<i>rsvp</i>
Description	When configured to <b>true</b> , BGP searches the best metric RSVP LSP to determine the address of the BGP next hop. This address can correspond to the system interface or to another loopback interface used by the BGP instance on the remote node. The LSP metric is provided by MPLS in the tunnel table. In the case of multiple RSVP LSPs with the same lowest metric, BGP selects the LSP with the lowest tunnel ID. When configured to <b>false</b> , the RSVP LSP is not used for next-hop resolution.
Default	false
Introduced	16.0.R1
Platforms	All

### **sr-isis** *boolean*

Synopsis	Use IS-IS SR tunneling for next-hop resolution
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn mpls number</a> <a href="#">auto-bind-tunnel</a> <a href="#">resolution-filter sr-isis</a> <i>boolean</i>
Tree	<a href="#">sr-isis</a>
Description	<p>When configured to <b>true</b>, BGP uses an IS-IS tunnel type to determine the address of the BGP next hop.</p> <p>The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered IS-IS instance.</p> <p>When configured to <b>false</b>, IS-IS tunneling is not used for next-hop resolution.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **sr-ospf** *boolean*

Synopsis	Use OSPF SR tunneling for next-hop resolution
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn mpls number</a> <a href="#">auto-bind-tunnel</a> <a href="#">resolution-filter sr-ospf</a> <i>boolean</i>
Tree	<a href="#">sr-ospf</a>
Description	<p>When configured to <b>true</b>, BGP uses an OSPF tunnel type to determine the address of the BGP next hop.</p> <p>The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered OSPF instance.</p> <p>When configured to <b>false</b>, OSPF tunneling is not used for next-hop resolution.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **sr-ospf3** *boolean*

Synopsis	Use OSPFv3 SR tunneling for next-hop resolution
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn mpls number</a> <a href="#">auto-bind-tunnel</a> <a href="#">resolution-filter sr-ospf3</a> <i>boolean</i>
Tree	<a href="#">sr-ospf3</a>
Description	When configured to <b>true</b> , BGP uses an OSPF3 tunnel type to determine the address of the BGP next hop.

The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered OPSF3 instance.

When configured to **false**, OSPF3 tunneling is not used for next-hop resolution.

Default	false
Introduced	19.10.R1
Platforms	All

### **sr-policy** *boolean*

Synopsis	Use SR policies for next-hop resolution
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn mpls number</a> <a href="#">auto-bind-tunnel resolution-filter sr-policy</a> <i>boolean</i>
Tree	<a href="#">sr-policy</a>
Description	When configured to <b>true</b> , this command instructs BGP to use an SR policy to determine the address of the BGP next hop. The SR policy search criteria includes a non-null endpoint and color value that matches the BGP next hop and color extended community value, respectively, of the EVPN route.  When configured to <b>false</b> , SR policies are not used for next-hop resolution.
Default	false
Introduced	19.5.R1
Platforms	All

### **sr-te** *boolean*

Synopsis	Use SR-TE tunneling for next-hop resolution
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn mpls number</a> <a href="#">auto-bind-tunnel resolution-filter sr-te</a> <i>boolean</i>
Tree	<a href="#">sr-te</a>
Description	When configured to <b>true</b> , BGP uses an SR-TE tunnel type to determine the address of the BGP next hop.  The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered tunnel ID.  When configured to <b>false</b> , SR-TE tunneling is not used for next-hop resolution.
Default	false
Introduced	16.0.R1
Platforms	All

### udp *boolean*

Synopsis	Use MPLS over UDP tunneling for next-hop resolution
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn mpls number</a> <a href="#">auto-bind-tunnel resolution-filter</a> <a href="#">udp</a> <i>boolean</i>
Tree	<a href="#">udp</a>
Description	When configured to <b>true</b> , BGP uses an MPLS over UDP tunnel type to determine the address of the BGP next hop.  When configured to <b>false</b> , MPLS over UDP tunneling is not used for next-hop resolution.
Default	false
Introduced	16.0.R1
Platforms	All

### weighted-ecmp *boolean*

Synopsis	Allow weighted load balancing
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn mpls number</a> <a href="#">auto-bind-tunnel</a> <a href="#">weighted-ecmp</a> <i>boolean</i>
Tree	<a href="#">weighted-ecmp</a>
Description	When configured to <b>true</b> , this router enables weighted ECMP for packets using tunnels that a VPLS or Epipe automatically binds to. Packets are sprayed across LSPs in the ECMP according to the outcome of the hash algorithm and the configured load balancing weight of each LSP.  When configured to <b>false</b> , this command disables weighted ECMP for next-hop tunnel selection.
Default	false
Introduced	22.7.R1
Platforms	All

### control-word *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Allow use of the CW bit in the label message
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn mpls number</a> <a href="#">control-word</a> <i>boolean</i>
Tree	<a href="#">control-word</a>
Default	false

Introduced	16.0.R1
Platforms	All

### **default-route-tag** *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Default route tag
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn mpls number</a> <b>default-route-tag</b> <i>string</i>
Tree	<a href="#">default-route-tag</a>
Description	<p>This command configures a route tag that is used when sending a route to the BGP application (for the corresponding service and BGP instance). If the corresponding BGP instance is enabled, the command cannot be changed.</p> <p>When used for BGP EVPN contexts, only one route tag can be passed to BGP for matching on export policies. In case of a conflict with other route tags pushed by EVPN, the default route tag has the least priority.</p> <p>The following are examples of the conflict priority handling:</p> <ul style="list-style-type: none"><li>• If a service is configured with both <b>default-route-tag</b> <i>X</i> and <b>proxy-arp evpn-route-tag</b> <i>Y</i>, the EVPN uses route tag <i>Y</i> when sending EVPN proxy-arp routes to the BGP RIB for advertisement.</li><li>• If a given IP-prefix route is tagged in the route-table with tag <i>A</i> and the R-VPLS, in which the route is advertised, uses <i>B</i> as the <b>default-route-tag</b>, then EVPN keeps tag <i>A</i> when sending the route to the BGP RIB.</li></ul> <p>The <b>default-route-tag</b> configuration is only supported on EVPN and IP-VPN service routes. The route tag for ES and AD per-ES routes is always zero.</p>
Introduced	16.0.R4
Platforms	All

### **dynamic-egress-label-limit** *boolean*

Synopsis	Enables dynamic egress label limit
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn mpls number</a> <b>dynamic-egress-label-limit</b> <i>boolean</i>
Tree	<a href="#">dynamic-egress-label-limit</a>
Description	<p>When configured to <b>true</b>, this command relaxes the egress MPLS label limit check when resolving BGP next hops in the tunnel table.</p> <p>For VPRN services, the OAM label is never computed and, therefore, one more egress label is allowed.</p>

For EVPN (Epipe and VPLS) services, the system only computes the control word and ESI label if they are used. For the control word, the system reduces the egress label limit by one label if the control word is configured in the service. When configured, the ESI label is not counted for Epipes or VPLS services without an ES.

When configured to **false** this command, for EVPN, Epipe, and VPLS services, always accounts for the ESI label and control word.

Default	false
Introduced	22.2.R1
Platforms	All

### **ecmp number**

Synopsis	Maximum ECMP routes information
Context	<b>configure service vpls string bgp-evpn mpls number ecmp number</b>
Tree	<a href="#">ecmp</a>
Range	1 to 32
Default	1
Introduced	16.0.R1
Platforms	All

### **entropy-label boolean**

Synopsis	Allow use of entropy labels for spoke SDPs
Context	<b>configure service vpls string bgp-evpn mpls number entropy-label boolean</b>
Tree	<a href="#">entropy-label</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **evi-three-byte-auto-rt boolean**

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Auto-derive the BGP EVPN route target
Context	<b>configure service vpls string bgp-evpn mpls number evi-three-byte-auto-rt boolean</b>

Tree	<a href="#">evi-three-byte-auto-rt</a>
Description	<p>When configured to <b>true</b>, the BGP-EVPN instance import and export route target is auto-derived as described in RFC 8365 (Global-Administrator:A/Type/D-ID/Service-ID).</p> <p>Where:</p> <ul style="list-style-type: none"> <li>• Global Administrator – is the configured 2-octet AS number; if the configured ASN exceeds the 2 byte limit, the low order 16-bit value is taken</li> <li>• A=0 (for auto-derivation)</li> <li>• Type=4 (EVI-based route-target)</li> <li>• D-ID= [1..2] – encodes the BGP instance, which allows the auto-derivation of different route-targets in multi-instance services; the value is inherited from the corresponding BGP instance</li> <li>• Service ID=3-octet EVI</li> </ul> <p>When configured to <b>false</b>, route target derivation is not allowed.</p>
Default	false
Introduced	21.10.R1
Platforms	All

## **fdb**

Synopsis	Enter the <b>fdb</b> context
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn mpls number</a> <a href="#">fdb</a>
Tree	<a href="#">fdb</a>
Introduced	16.0.R1
Platforms	All

## **protected-src-mac-violation-action keyword**

Synopsis	Relearn request for a protected MAC is received action
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn mpls number</a> <a href="#">fdb</a> <a href="#">protected-src-mac-violation-action</a> <a href="#">keyword</a>
Tree	<a href="#">protected-src-mac-violation-action</a>
Options	discard
Introduced	16.0.R1
Platforms	All

### **force-vc-forwarding** *keyword*

Synopsis	VC forwarding action
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">bgp-evpn mpls</a> <i>number</i> <b>force-vc-forwarding</b> <i>keyword</i>
Tree	<a href="#">force-vc-forwarding</a>
Options	vlan, qinq-c-tag-c-tag, qinq-s-tag-c-tag
Introduced	16.0.R1
Platforms	All

### **ingress-replication-bum-label** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Use the same label as the one advertised for unicast traffic
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">bgp-evpn mpls</a> <i>number</i> <b>ingress-replication-bum-label</b> <i>boolean</i>
Tree	<a href="#">ingress-replication-bum-label</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **mh-mode** *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Multihoming mode
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">bgp-evpn mpls</a> <i>number</i> <b>mh-mode</b> <i>keyword</i>
Tree	<a href="#">mh-mode</a>
Description	This command configures each BGP-EVPN instance to behave as either network or access.  You can only configure one network instance for the service. If the service has a provider tunnel enabled, it requires a network instance.
Default	network
Options	access, network

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **oper-group** *reference*

Synopsis	Operational group ID
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn mpls number</a> <a href="#">oper-group reference</a>
Tree	<a href="#">oper-group</a>
Reference	<b>configure</b> <a href="#">service oper-group string</a>
Introduced	19.10.R1
Platforms	All

### **route-next-hop**

Synopsis	Enter the <b>route-next-hop</b> context
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn mpls number</a> <a href="#">route-next-hop</a>
Tree	<a href="#">route-next-hop</a>
Description	Commands in this context configure the next hop of the EVPN routes.
Introduced	19.10.R1
Platforms	All

### **ip-address** (*ipv4-address-no-zone | ipv6-address-no-zone*)

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IP address of the next-hop for the service EVPN route
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn mpls number</a> <a href="#">route-next-hop ip-address</a> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> )
Tree	<a href="#">ip-address</a>
Notes	The following elements are part of a choice: <b>ip-address</b> , <b>system-ipv4</b> , or <b>system-ipv6</b> .
Introduced	19.10.R1
Platforms	All

## system-ipv4

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	System IPv4 address for service EVPN route next hop
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">bgp-evpn</a> <a href="#">mpls</a> <a href="#">number</a> <a href="#">route-next-hop</a> <a href="#">system-ipv4</a>
Tree	<a href="#">system-ipv4</a>
Notes	The following elements are part of a choice: <b>ip-address</b> , <b>system-ipv4</b> , or <b>system-ipv6</b> .
Introduced	19.10.R1
Platforms	All

## system-ipv6

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	System IPv6 address for service EVPN route next hop
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">bgp-evpn</a> <a href="#">mpls</a> <a href="#">number</a> <a href="#">route-next-hop</a> <a href="#">system-ipv6</a>
Tree	<a href="#">system-ipv6</a>
Notes	The following elements are part of a choice: <b>ip-address</b> , <b>system-ipv4</b> , or <b>system-ipv6</b> .
Introduced	19.10.R1
Platforms	All

## send-tunnel-encap

Synopsis	Enter the <b>send-tunnel-encap</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">bgp-evpn</a> <a href="#">mpls</a> <a href="#">number</a> <a href="#">send-tunnel-encap</a>
Tree	<a href="#">send-tunnel-encap</a>
Introduced	16.0.R1
Platforms	All

## **mpls *boolean***

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable MPLS encapsulation
Context	<b>configure</b> <i>service vpls string bgp-evpn mpls number send-tunnel-encap mpls boolean</i>
Tree	<i>mpls</i>
Default	true
Introduced	16.0.R1
Platforms	All

## **mpls-over-udp *boolean***

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable MPLS over UDP encapsulation
Context	<b>configure</b> <i>service vpls string bgp-evpn mpls number send-tunnel-encap mpls-over-udp boolean</i>
Tree	<i>mpls-over-udp</i>
Default	false
Introduced	16.0.R1
Platforms	All

## **split-horizon-group *reference***

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Split horizon group
Context	<b>configure</b> <i>service vpls string bgp-evpn mpls number split-horizon-group reference</i>
Tree	<i>split-horizon-group</i>
Description	This command configures the value of split-horizon group for all BGP-EVPN segment routing v6 instances.
Reference	<b>configure</b> <i>service vpls string split-horizon-group string</i>

Introduced 16.0.R1  
Platforms All

## routes

Synopsis Enter the **routes** context  
Context **configure** [service vpls string](#) [bgp-evpn routes](#)  
Tree [routes](#)  
Introduced 16.0.R1  
Platforms All

## incl-mcast

Synopsis Enter the **incl-mcast** context  
Context **configure** [service vpls string](#) [bgp-evpn routes incl-mcast](#)  
Tree [incl-mcast](#)  
Introduced 16.0.R1

### **advertise** *boolean*

Synopsis Status for the IP prefix routes advertisement  
 Context **configure** *service vpls string bgp-evpn routes ip-prefix advertise boolean*  
 Tree [advertise](#)  
 Default false  
 Introduced 16.0.R1  
 Platforms All

### **domain-id** *string*

Synopsis Domain ID of received BGP route before readvertisement  
 Context **configure** *service vpls string bgp-evpn routes ip-prefix domain-id string*  
 Tree [domain-id](#)  
 Description This command specifies the domain ID. The domain ID identifies the network from which the BGP route was received before the RTM advertises it to a different neighbor. The domain ID is part of a domain, represented as domain-id:isf\_safi\_type in the D-PATH attribute, as described in *draft-ietf-bess-evpn-ipvpn-interworking*. Gateway routers modify the D-PATH attribute. A gateway is a PE where a VPRN is instantiated. The VPRN in this case advertises or receives routes from multiple BGP owners (for example, EVPN-IFL and BGP-IPVPN) or multiple instances of the same owner (for example, VPRN with two BGP-IPVPN instances).  
 Gateways use the D-PATH attribute to detect loops (for received routes where the D-PATH contains a local domain ID) and to make BGP best-path selection decisions based on the D-PATH length (shorter D-PATH is preferred).  
 In the following example, suppose a gateway receives prefix P in an EVPN-IFL instance with the following D-PATH from neighbor N:  
 Seg Len=1 / 65000:1:128  
 If the router imports the route in VPRN-1, BGP-EVPN SRv6 instance with domain 65000:2, it readvertises it to its BGP-IPVPN MPLS instance as follows:  
 Seg Len=2 / 65000:2:70 / 65000:1:128  
 That is, the gateway prepends the local domain ID and family to the D-PATH before readvertising the route into a different instance.  
 Introduced 21.10.R1  
 Platforms All

### **include-direct-interface-host** *boolean*

## evi-three-byte-auto-rt *boolean*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Auto-derive the BGP EVPN route target
Context	<b>configure service vpls string bgp-evpn segment-routing-v6 number evi-three-byte-auto-rt boolean</b>
Tree	<a href="#">evi-three-byte-auto-rt</a>
Description	<p>When configured to <b>true</b>, the BGP-EVPN instance import and export route target is auto-derived as described in RFC 8365 (Global-Administrator:A/Type/D-ID/Service-ID).</p> <p>Where:</p> <ul style="list-style-type: none"> <li>• Global Administrator – is the configured 2-octet AS number; if the configured ASN exceeds the 2 byte limit, the low order 16-bit value is taken</li> <li>• A=0 (for auto-derivation)</li> <li>• Type=4 (EVI-based route-target)</li> <li>• D-ID= [1..2] – encodes the BGP instance, which allows the auto-derivation of different route-targets in multi-instance services; the value is inherited from the corresponding BGP instance</li> <li>• Service ID=3-octet EVI</li> </ul> <p>When configured to <b>false</b>, route target derivation is not allowed.</p>
Default	false
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## fdb

Synopsis	Enter the <b>fdb</b> context
Context	<b>configure service vpls string bgp-evpn segment-routing-v6 number fdb</b>
Tree	<a href="#">fdb</a>
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## protected-src-mac-violation-action *keyword*

Synopsis	Relearn request for a protected MAC is received action
Context	<b>configure service vpls string bgp-evpn segment-routing-v6 number fdb protected-src-mac-violation-action keyword</b>

Tree	<a href="#">protected-src-mac-violation-action</a>
Options	discard
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **force-vc-forwarding** *keyword*

Synopsis	Datapath forwarding to force vlan-vc-type
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn segment-routing-v6 number</a> <b>force-vc-forwarding</b> <i>keyword</i>
Tree	<a href="#">force-vc-forwarding</a>
Description	<p>This command allows the system to preserve the VLAN ID and 802.1p bits of the service-delimiting qtag in a new tag added in the customer frame before sending it to the EVPN destinations.</p> <p>This command may be used in conjunction with the <b>sap ingress vlan-translation</b> command. If so used, the configured translated VLAN ID is the VLAN ID sent to the EVPN destinations as opposed to the service-delimiting tag VLAN ID. If the ingress SAP/SDP binding is 'null'-encapsulated, the output VLAN ID and pbits is zero.</p>
Options	vlan, qinq-c-tag-c-tag, qinq-s-tag-c-tag
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **mh-mode** *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Multihoming mode
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn segment-routing-v6 number</a> <b>mh-mode</b> <i>keyword</i>
Tree	<a href="#">mh-mode</a>
Default	network
Options	access, network
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## oper-group *reference*

Synopsis	Operational group
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn segment-routing-v6 number</a> <a href="#">oper-group reference</a>
Tree	<a href="#">oper-group</a>
Description	<p>This command adds the BGP EVPN SRv6 instance or an Ethernet Segment (ES) as a member of the operational group.</p> <p>When configured on a BGP EVPN instance, the operational group is up when it is either empty (meaning that the operational group has no members) or at least an EVPN destination is created under the EVPN instance added as member. When configured, no other SAP, SDP binding, or BGP EVPN instance can be added to the same operational group within the same or different service.</p> <p>The operational group will be down when it is applied on a BGP EVPN instance as well as:</p> <ul style="list-style-type: none"><li>• the service is <b>admin-state disable</b></li><li>• the BGP EVPN MPLS and VXLAN are <b>admin-state disable</b></li><li>• all the EVPN destinations in the instance are removed</li></ul> <p>When configured on an ES, the state of the operational group depends on the state of the SAPs contained in the ES. The operational group transitions to up if at least one SAP in the ES is up. The operational group goes down when all the associated SAPs are operationally down. The ES operational group should be monitored on the LAG associated to the ES, along with single-active multi-homing, so that the NDF state can be signaled to the CE by LAG standby signaling.</p>
Reference	<b>configure</b> <a href="#">service oper-group string</a>
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## resolution *keyword*

Synopsis	Resolution options for routes
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn segment-routing-v6 number</a> <a href="#">resolution keyword</a>
Tree	<a href="#">resolution</a>
Default	route-table
Options	route-table, tunnel-table, fallback-tunnel-to-route-table
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## route-next-hop

Synopsis	Enter the <b>route-next-hop</b> context
Context	<b>configure service vpls string bgp-evpn segment-routing-v6 number route-next-hop</b>
Tree	<a href="#">route-next-hop</a>
Description	Commands in this context configure the next hop of the EVPN routes.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **evi-three-byte-auto-rt** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Auto-derive the BGP EVPN route target

Context **configure** *service vpls string bgp-evpn vxlan number evi-three-byte-auto-rt boolean*

Tree *evi-three-byte-auto-rt*

Description When configured to **true**, the BGP-EVPN instance import and export route target is auto-derived as described in RFC 8365 (Global-Administrator:A/Type/D-ID/Service-ID).  
Where:

- Global Administrator – is the configured 2-octet AS number; if the configured ASN exceeds the 2 byte limit, the low order 16-bit value is taken
- A=0 (for auto-derivation)
- Type=4 (EVI-based route-target)
- D-ID= [1..2] – encodes the BGP instance, which allows the auto-derivation of different route-targets in multi-instance services; the value is inherited from the corresponding BGP instance
- Service ID=3-octet EVI

When configured to **false**, route target derivation is not allowed.

Default false

Introduced 21.10.R1

Platforms All

Introduced	19.5.R1
Platforms	All

### **send-incl-mcast-ir-on-ndf boolean**

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Allow IMET-IR on NDF
Context	<b>configure service vpls string bgp-evpn vxlan number send-incl-mcast-ir-on-ndf boolean</b>
Tree	<a href="#">send-incl-mcast-ir-on-ndf</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **send-tunnel-encap boolean**

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Send VXLAN value in encapsulation extended community
Context	<b>configure service vpls string bgp-evpn vxlan number send-tunnel-encap boolean</b>
Tree	<a href="#">send-tunnel-encap</a>
Description	When configured to <b>true</b> , this command sends the VXLAN value in the encapsulation that is advertised with the EVPN routes for the service. The encapsulation is encoded in RFC5512-based tunnel encapsulation extended communities. When configured to <b>false</b> , no encapsulation extended community is sent.
Default	true
Introduced	16.0.R1
Platforms	All

## vxlan-instance *reference*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VXLAN instance
Context	<b>configure service vpls string</b> <a href="#">bgp-evpn vxlan number vxlan-instance reference</a>
Tree	<a href="#">vxlan-instance</a>
Reference	<b>configure service vpls string</b> <a href="#">vxlan instance number</a>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

## bgp-mh-site [[site-name](#)] *string*

Synopsis	Enter the <b>bgp-mh-site</b> list instance
Context	<b>configure service vpls string</b> <a href="#">bgp-mh-site string</a>
Tree	<a href="#">bgp-mh-site</a>
Introduced	16.0.R1
Platforms	All

## [[site-name](#)] *string*

Synopsis	Name for the specific site
Context	<b>configure service vpls string</b> <a href="#">bgp-mh-site string</a>
Tree	<a href="#">bgp-mh-site</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## activation-timer *number*

Synopsis	Time that the local sites are in standby status, waiting for BGP updates
Context	<b>configure service vpls string</b> <a href="#">bgp-mh-site string activation-timer number</a>

Tree	<a href="#">activation-timer</a>
Range	0 to 100
Units	seconds
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the VPLS BGP multi-homing site
Context	<b>configure</b> <a href="#">service vpls string bgp-mh-site string admin-state keyword</a>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **boot-timer** *number*

Synopsis	Wait time after reboot to run the DF election algorithm
Context	<b>configure</b> <a href="#">service vpls string bgp-mh-site string boot-timer number</a>
Tree	<a href="#">boot-timer</a>
Range	0 to 600
Units	seconds
Introduced	16.0.R1
Platforms	All

### **failed-threshold** (*number | keyword*)

Synopsis	Threshold for the site to be declared down
Context	<b>configure</b> <a href="#">service vpls string bgp-mh-site string failed-threshold (number   keyword)</a>
Tree	<a href="#">failed-threshold</a>
Range	1 to 1000
Default	all
Options	all
Introduced	16.0.R1

Platforms All

### **id number**

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Site ID  
 Context **configure service vpls string bgp-mh-site string id number**  
 Tree [id](#)  
 Range 1 to 65535  
 Introduced 16.0.R1  
 Platforms All

### **mesh-sdp-binds**

Synopsis Specify if a mesh-sdp-binding is associated with this site  
 Context **configure service vpls string bgp-mh-site string mesh-sdp-binds**  
 Tree [mesh-sdp-binds](#)  
 Notes The following elements are part of a choice: **mesh-sdp-binds**, **sap**, **shg-name**, or **spoke-sdp**.  
 Introduced 16.0.R1  
 Platforms All

### **min-down-timer number**

Synopsis Minimum downtime for BGP multi-homing site after transition from up to down  
 Context **configure service vpls string bgp-mh-site string min-down-timer number**  
 Tree [min-down-timer](#)  
 Range 0 to 100  
 Units seconds  
 Introduced 16.0.R1  
 Platforms All

## monitor-oper-group *reference*

Synopsis	Operational group to monitor
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-mh-site string</a> <a href="#">monitor-oper-group reference</a>
Tree	<a href="#">monitor-oper-group</a>
Reference	<b>configure</b> <a href="#">service oper-group string</a>
Introduced	16.0.R1
Platforms	All

## sap *string*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	SAP to be associated with this site
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-mh-site string</a> <a href="#">sap string</a>
Tree	<a href="#">sap</a>
String Length	1 to 45
Notes	The following elements are part of a choice: <b>mesh-sdp-binds</b> , <b>sap</b> , <b>shg-name</b> , or <b>spoke-sdp</b> .
Introduced	16.0.R1
Platforms	All

## shg-name *string*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	SHG name to be associated with the site
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-mh-site string</a> <a href="#">shg-name string</a>
Tree	<a href="#">shg-name</a>
String Length	1 to 32
Notes	The following elements are part of a choice: <b>mesh-sdp-binds</b> , <b>sap</b> , <b>shg-name</b> , or <b>spoke-sdp</b> .
Introduced	16.0.R1

Platforms All

### **spoke-sdp** *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis SDP to be associated with this site

Context **configure** [service vpls string](#) [bgp-mh-site string](#) [spoke-sdp string](#)

Tree [spoke-sdp](#)

String Length 3 to 16

Notes The following elements are part of a choice: **mesh-sdp-binds**, **sap**, **shg-name**, or **spoke-sdp**.

Introduced 16.0.R1

Platforms All

### **bgp-vpls**

Synopsis Enable the **bgp-vpls** context

Context **configure** [service vpls string](#) [bgp-vpls](#)

Tree [bgp-vpls](#)

Introduced 16.0.R1

Platforms All

### **admin-state** *keyword*

Synopsis Administrative state of the BGP-VPLS instance

Context **configure** [service vpls string](#) [bgp-vpls](#) [admin-state](#) *keyword*

Tree [admin-state](#)

Default disable

Options enable, disable

Introduced 16.0.R1

Platforms All

### **maximum-ve-id** *number*

Synopsis	Maximum vpls-edge id for BGP-VPLS
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">bgp-vpls</a> <a href="#">maximum-ve-id</a> <i>number</i>
Tree	<a href="#">maximum-ve-id</a>
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

### **ve**

Synopsis	Enter the <b>ve</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">bgp-vpls</a> <a href="#">ve</a>
Tree	<a href="#">ve</a>
Introduced	16.0.R1
Platforms	All

### **id** *number*

Synopsis	VPLS edge ID
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">bgp-vpls</a> <a href="#">ve</a> <a href="#">id</a> <i>number</i>
Tree	<a href="#">id</a>
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

### **name** *string*

Synopsis	VPLS Edge instance name
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">bgp-vpls</a> <a href="#">ve</a> <a href="#">name</a> <i>string</i>
Tree	<a href="#">name</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

### **capture-sap** [*sap-id*] *string*

Synopsis	Enter the <b>capture-sap</b> list instance
Context	<b>configure service vpls string capture-sap string</b>
Tree	<a href="#">capture-sap</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[sap-id]** *string*

Synopsis	SAP identifier
Context	<b>configure service vpls string capture-sap string</b>
Tree	<a href="#">capture-sap</a>
String Length	1 to 45
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of the SAP
Context	<b>configure service vpls string capture-sap string admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Default	enable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **allow-dot1q-msaps** *boolean*

Synopsis	Enable support for triggering managed SAP creation
Context	<b>configure service vpls string capture-sap string allow-dot1q-msaps boolean</b>
Tree	<a href="#">allow-dot1q-msaps</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **bandwidth** *number*

Synopsis	SAP bandwidth
Context	<b>configure</b> <a href="#">service vpls string capture-sap string bandwidth number</a>
Tree	<a href="#">bandwidth</a>
Range	1 to 6400000000
Units	kilobps
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **cpu-protection**

Synopsis	Enter the <b>cpu-protection</b> context
Context	<b>configure</b> <a href="#">service vpls string capture-sap string cpu-protection</a>
Tree	<a href="#">cpu-protection</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s

### **mac-monitoring**

Synopsis	Monitor MAC for CPU protection
Context	<b>configure</b> <a href="#">service vpls string capture-sap string cpu-protection mac-monitoring</a>
Tree	<a href="#">mac-monitoring</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s

### **policy-id** *reference*

Synopsis	CPM protection policy
Context	<b>configure</b> <a href="#">service vpls string capture-sap string cpu-protection policy-id reference</a>
Tree	<a href="#">policy-id</a>
Reference	<b>configure</b> <a href="#">system security cpu-protection policy number</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service vpls string capture-sap string description string</a>
Tree	<a href="#">description</a>
String Length	1 to 160
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **dhcp**

Synopsis	Enter the <b>dhcp</b> context
Context	<b>configure</b> <a href="#">service vpls string capture-sap string dhcp</a>
Tree	<a href="#">dhcp</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **python-policy** *reference*

Synopsis	Python policy
Context	<b>configure</b> <a href="#">service vpls string capture-sap string dhcp python-policy reference</a>
Tree	<a href="#">python-policy</a>
Reference	<b>configure</b> <a href="#">python python-policy string</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **user-db** *reference*

Synopsis	Local user database
Context	<b>configure</b> <a href="#">service vpls string capture-sap string dhcp user-db reference</a>
Tree	<a href="#">user-db</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt local-user-db string</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## dhcp6

Synopsis	Enter the <b>dhcp6</b> context
Context	<b>configure service vpls string capture-sap string dhcp6</b>
Tree	<b>dhcp6</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## python-policy *reference*

Synopsis	Python policy
Context	<b>configure service vpls string capture-sap string dhcp6 python-policy reference</b>
Tree	<b>python-policy</b>
Reference	<b>configure python python-policy string</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## user-db *reference*

Synopsis	Local user database
Context	<b>configure service vpls string capture-sap string dhcp6 user-db reference</b>
Tree	<b>user-db</b>
Reference	<b>configure subscriber-mgmt local-user-db string</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## dist-cpu-protection *reference*

Synopsis	Distributed CPU protection policy for SAP
Context	<b>configure service vpls string capture-sap string dist-cpu-protection reference</b>
Tree	<b>dist-cpu-protection</b>
Reference	<b>configure system security dist-cpu-protection policy string</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## host-lockout-policy *reference*

Synopsis	Host lockout policy
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">capture-sap string</a> <a href="#">host-lockout-policy reference</a>
Tree	<a href="#">host-lockout-policy</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">host-lockout-policy string</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ingress

Synopsis	Enter the <b>ingress</b> context
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">capture-sap string</a> <a href="#">ingress</a>
Tree	<a href="#">ingress</a>
Introduced	19.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## filter

Synopsis	Enter the <b>filter</b> context
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">capture-sap string</a> <a href="#">ingress filter</a>
Tree	<a href="#">filter</a>
Introduced	19.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## mac *reference*

Synopsis	MAC filter policy name
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">capture-sap string</a> <a href="#">ingress filter mac reference</a>
Tree	<a href="#">mac</a>
Reference	<b>configure</b> <a href="#">filter mac-filter string</a>
Introduced	19.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ipoe-session

Synopsis	Enter the <b>ipoe-session</b> context
Context	<b>configure service vpls string capture-sap string ipoe-session</b>
Tree	<a href="#">ipoe-session</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## admin-state *keyword*

Synopsis	Administrative state of IPoE session management
Context	<b>configure service vpls string capture-sap string ipoe-session admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## description *string*

Synopsis	Text description
Context	<b>configure service vpls string capture-sap string ipoe-session description string</b>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ipoe-session-policy *reference*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPoE Session policy to be used for new sessions
Context	<b>configure service vpls string capture-sap string ipoe-session ipoe-session-policy reference</b>
Tree	<a href="#">ipoe-session-policy</a>
Reference	<b>configure subscriber-mgmt ipoe-session-policy string</b>

Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **user-db** *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Local user database that is used to (pre-)authenticate new sessions  
Context **configure** [service vpls](#) *string* [capture-sap](#) *string* [ipoe-session](#) [user-db](#) *reference*

String Length 1 to 32  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **policy** *reference*

Synopsis MSAP policy

Context	<b>configure</b> <a href="#">service vpls string capture-sap string msap-defaults policy reference</a>
Tree	<a href="#">policy</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt msap-policy string</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **service-name** *string*

Synopsis	Administrative service name
Context	<b>configure</b> <a href="#">service vpls string capture-sap string msap-defaults service-name string</a>
Tree	<a href="#">service-name</a>
String Length	1 to 64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **nasreq-auth-policy** *reference*

Synopsis	Diameter NASREQ application policy to use for authentication
Context	<b>configure</b> <a href="#">service vpls string capture-sap string nasreq-auth-policy reference</a>
Tree	<a href="#">nasreq-auth-policy</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt diameter-nasreq-policy string</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **pfcp**

Synopsis	Enter the <b>pfcp</b> context
Context	<b>configure</b> <a href="#">service vpls string capture-sap string pfcp</a>
Tree	<a href="#">pfcp</a>
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **association** *reference*

Synopsis	Association used for PFCP messages on the capture SAP
----------	---

Context	<b>configure service vpls string capture-sap string pfcf association reference</b>
Tree	<b>association</b>
Description	This command links the capture SAP to a PFCF association. This enables CUPS for the capture SAP and any trigger packets are forwarded to the BNG CUPS CPF.
Reference	<b>configure subscriber-mgmt pfcf association string</b>
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **I2-access-id-alias string**

Synopsis	String used as Layer 2 access ID for the capture SAP
Context	<b>configure service vpls string capture-sap string pfcf I2-access-id-alias string</b>
Tree	<b>I2-access-id-alias</b>
Description	This command defines a Layer 2 access ID alias for the capture SAP. It replaces the default underlying port-based or LAG-based Layer 2 access ID. Different capture SAPs on the same underlying port or LAG can have different Layer 2 access ID aliases.
String Length	1 to 32
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **up-resiliency**

Synopsis	Enter the <b>up-resiliency</b> context
Context	<b>configure service vpls string capture-sap string pfcf up-resiliency</b>
Tree	<b>up-resiliency</b>
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **monitor-oper-group [oper-group] reference**

Synopsis	Enter the <b>monitor-oper-group</b> list instance
Context	<b>configure service vpls string capture-sap string pfcf up-resiliency monitor-oper-group reference</b>
Tree	<b>monitor-oper-group</b>
Description	Commands in this context define parameters to derive the service health based on monitored operational groups. The BNG UPF sends the health value to the BNG CPF.

The BNG CPF uses the value to determine the need for a BNG UPF status change (active or standby).

**Note:**

The following is only applicable for the **configure service vpls capture-sap** context. If the configured groups are not the same for all capture SAPs sharing the same underlying port or LAG, the configuration of a Layer 2 access ID alias is required, or else the system chooses arbitrarily one set of configured groups.

Max. Instances	4
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**[oper-group] reference**

Synopsis	Operational group name
Context	<b>configure service vpls string capture-sap string pfc up-resiliency monitor-oper-group reference</b>
Tree	<a href="#">monitor-oper-group</a>
Reference	<b>configure service oper-group string</b>
Notes	This element is part of a list key.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**health-drop number**

Synopsis	Number subtracted from the health value per failure
Context	<b>configure service vpls string capture-sap string pfc up-resiliency monitor-oper-group reference health-drop number</b>
Tree	<a href="#">health-drop</a>
Description	This command defines how the failure of an operational group member affects the health value. The base health value is 255; the value decreases with the defined number per member failure to a minimum of 0.
Range	1 to 255
Default	1
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## pppoe

Synopsis	Enter the <b>pppoe</b> context
Context	<b>configure service vpls string capture-sap string pppoe</b>
Tree	<a href="#">pppoe</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## policy reference

Synopsis	PPP policy
Context	<b>configure service vpls string capture-sap string pppoe policy reference</b>
Tree	<a href="#">policy</a>
Reference	<b>configure subscriber-mgmt ppp-policy string</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## python-policy reference

Synopsis	Python policy
Context	<b>configure service vpls string capture-sap string pppoe python-policy reference</b>
Tree	<a href="#">python-policy</a>
Reference	<b>configure python python-policy string</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## user-db reference

Synopsis	Local user database
Context	<b>configure service vpls string capture-sap string pppoe user-db reference</b>
Tree	<a href="#">user-db</a>
Reference	<b>configure subscriber-mgmt local-user-db string</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## radius-auth-policy *reference*

Synopsis	RADIUS authentication policy
Context	<b>configure</b> <a href="#">service vpls string capture-sap string radius-auth-policy reference</a>
Tree	<a href="#">radius-auth-policy</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt radius-authentication-policy string</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## router-solicit

Synopsis	Enter the <b>router-solicit</b> context
Context	<b>configure</b> <a href="#">service vpls string capture-sap string router-solicit</a>
Tree	<a href="#">router-solicit</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## user-db *reference*

Synopsis	Local user database
Context	<b>configure</b> <a href="#">service vpls string capture-sap string router-solicit user-db reference</a>
Tree	<a href="#">user-db</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt local-user-db string</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## track-srrp *number*

Synopsis	SRRP instance that this capture SAP tracks
Context	<b>configure</b> <a href="#">service vpls string capture-sap string track-srrp number</a>
Tree	<a href="#">track-srrp</a>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## trigger-packet

Synopsis	Enter the <b>trigger-packet</b> context
Context	<b>configure service vpls string capture-sap string trigger-packet</b>
Tree	<b>trigger-packet</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## arp *boolean*

Synopsis	ARP packet
Context	<b>configure service vpls string capture-sap string trigger-packet arp boolean</b>
Tree	<b>arp</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## data *boolean*

Synopsis	Data packet
Context	<b>configure service vpls string capture-sap string trigger-packet data boolean</b>
Tree	<b>data</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## dhcp *boolean*

Synopsis	DHCP packet
Context	<b>configure service vpls string capture-sap string trigger-packet dhcp boolean</b>
Tree	<b>dhcp</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **dhcp6** *boolean*

Synopsis	DHCP6 packet
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">capture-sap</a> <i>string</i> <a href="#">trigger-packet</a> <a href="#">dhcp6</a> <i>boolean</i>
Tree	<a href="#">dhcp6</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **pppoe** *boolean*

Synopsis	PPPoE packet
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">capture-sap</a> <i>string</i> <a href="#">trigger-packet</a> <a href="#">pppoe</a> <i>boolean</i>
Tree	<a href="#">pppoe</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **rtr-solicit** *boolean*

Synopsis	Router-solicit packet
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">capture-sap</a> <i>string</i> <a href="#">trigger-packet</a> <a href="#">rtr-solicit</a> <i>boolean</i>
Tree	<a href="#">rtr-solicit</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **customer** *reference*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Service customer ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">customer</a> <i>reference</i>
Tree	<a href="#">customer</a>
Reference	<b>configure</b> <a href="#">service</a> <a href="#">customer</a> <i>string</i>

Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **endpoint** [[name](#)] *string*

Synopsis	Enter the <b>endpoint</b> list instance
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">endpoint</a> <i>string</i>
Tree	<a href="#">endpoint</a>
Max. Instances	10
Introduced	16.0.R1
Platforms	All

### **[name]** *string*

Synopsis	Service endpoint name
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">endpoint</a> <i>string</i>
Tree	<a href="#">endpoint</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **block-on-mesh-failure** *boolean*

Synopsis	Enable blocking after the endpoints are in a down state
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">endpoint</a> <i>string</i> <b>block-on-mesh-failure</b> <i>boolean</i>
Tree	<a href="#">block-on-mesh-failure</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">endpoint</a> <i>string</i> <b>description</b> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **fdb**

Synopsis	Enter the <b>fdb</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">endpoint</a> <i>string</i> <b>fdb</b>
Tree	<a href="#">fdb</a>
Introduced	16.0.R1
Platforms	All

### **auto-learn-mac-protect** *boolean*

Synopsis	Populate automatically MAC protect list with MAC addresses learned on SDP with this endpoint
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">endpoint</a> <i>string</i> <b>fdb</b> <b>auto-learn-mac-protect</b> <i>boolean</i>
Tree	<a href="#">auto-learn-mac-protect</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **mac-pinning** *boolean*

Synopsis	Activate MAC address pinning on this endpoint
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">endpoint</a> <i>string</i> <a href="#">fdb mac-pinning</a> <i>boolean</i>
Tree	<a href="#">mac-pinning</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **maximum-mac-addresses** *number*

Synopsis	Maximum learned and static entries for this end point
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">endpoint</a> <i>string</i> <a href="#">fdb maximum-mac-addresses</a> <i>number</i>
Tree	<a href="#">maximum-mac-addresses</a>
Range	1 to 511999
Introduced	16.0.R1
Platforms	All

### **protected-src-mac-violation-action** *keyword*

Synopsis	Action when a relearn request for a protected MAC is received on the SDP
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">endpoint</a> <i>string</i> <a href="#">fdb protected-src-mac-violation-action</a> <i>keyword</i>
Tree	<a href="#">protected-src-mac-violation-action</a>
Options	sdp-bind-oper-down, alarm-only, discard
Introduced	16.0.R1
Platforms	All

### **ignore-standby-signaling** *boolean*

Synopsis	Ignore standby-bit received from TLDP peers when performing internal tasks
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">endpoint</a> <i>string</i> <a href="#">ignore-standby-signaling</a> <i>boolean</i>
Tree	<a href="#">ignore-standby-signaling</a>
Default	false
Introduced	16.0.R1
Platforms	All

## **mc-endpoint** [**mc-ep-id**] *number*

Synopsis	Enter the <b>mc-endpoint</b> list instance
Context	<b>configure service vpls string endpoint string mc-endpoint number</b>
Tree	<b>mc-endpoint</b>
Max. Instances	1
Introduced	22.10.R1
Platforms	All

## **[mc-ep-id]** *number*

Synopsis	MC-EP ID
Context	<b>configure service vpls string endpoint string mc-endpoint number</b>
Tree	<b>mc-endpoint</b>
Description	This command configures the identifier associated with the MC-EP. The ID must be the same on both MC-EP peers.
Range	1 to 4294967295
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	All

## **mc-ep-peer**

Synopsis	Enter the <b>mc-ep-peer</b> context
Context	<b>configure service vpls string endpoint string mc-endpoint number mc-ep-peer</b>
Tree	<b>mc-ep-peer</b>
Introduced	22.10.R1
Platforms	All

## **name** *string*

Synopsis	Name of the MC-EP peer
Context	<b>configure service vpls string endpoint string mc-endpoint number mc-ep-peer name string</b>
Tree	<b>name</b>

String Length	1 to 32
Notes	The following elements are part of a choice: <b>name</b> or <b>peer-address</b> .
Introduced	22.10.R1
Platforms	All

### **peer-address** *reference*

Synopsis	IP address of the MC-EP peer
Context	<b>configure</b> <b>service vpls</b> <i>string</i> <b>endpoint</b> <i>string</i> <b>mc-endpoint</b> <i>number</i> <b>mc-ep-peer</b> <b>peer-address</b> <i>reference</i>
Tree	<b>peer-address</b>
Reference	<b>configure</b> <b>redundancy multi-chassis peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Notes	The following elements are part of a choice: <b>name</b> or <b>peer-address</b> .
Introduced	22.10.R1
Platforms	All

### **revert-time** (*number* | *keyword*)

Synopsis	Time to wait before reverting back to the primary spoke-sdp defined on this service endpoint
Context	<b>configure</b> <b>service vpls</b> <i>string</i> <b>endpoint</b> <i>string</i> <b>revert-time</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>revert-time</b>
Range	1 to 600
Default	immediate
Units	seconds
Options	never, immediate
Introduced	16.0.R1
Platforms	All

### **suppress-standby-signaling** *boolean*

Synopsis	Do not send pseudowire standby bit to TLDP peer when specified spoke SDP is selected as standby
Context	<b>configure</b> <b>service vpls</b> <i>string</i> <b>endpoint</b> <i>string</i> <b>suppress-standby-signaling</b> <i>boolean</i>
Tree	<b>suppress-standby-signaling</b>

Default	true
Introduced	16.0.R1
Platforms	All

## **eth-cfm**

Synopsis	Enter the <b>eth-cfm</b> context
Context	<b>configure service vpls string eth-cfm</b>
Tree	<b>eth-cfm</b>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## **mep md-admin-name reference ma-admin-name reference mep-id number**

Synopsis	Enter the <b>mep</b> list instance
Context	<b>configure service vpls string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number</b>
Tree	<b>mep</b>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## **md-admin-name reference**

Synopsis	Maintenance Domain (MD) name
Context	<b>configure service vpls string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number</b>
Tree	<b>mep</b>
Reference	<b>configure eth-cfm domain string</b>
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## **ma-admin-name reference**

Synopsis	Maintenance Association (MA) name
----------	-----------------------------------

Context	<b>configure service vpls string eth-cfm mep md-admin-name</b> <i>reference ma-admin-name reference mep-id number</i>
Tree	<a href="#">mep</a>
Reference	<b>configure eth-cfm domain string association string</b>
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mep-id number**

Synopsis	Maintenance Endpoint (MEP) ID
Context	<b>configure service vpls string eth-cfm mep md-admin-name</b> <i>reference ma-admin-name reference mep-id number</i>
Tree	<a href="#">mep</a>
Range	1 to 8191
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **admin-state keyword**

Synopsis	Administrative state of the MEP
Context	<b>configure service vpls string eth-cfm mep md-admin-name</b> <i>reference ma-admin-name reference mep-id number admin-state keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **alarm-notification**

Synopsis	Enter the <b>alarm-notification</b> context
Context	<b>configure service vpls string eth-cfm mep md-admin-name</b> <i>reference ma-admin-name reference mep-id number alarm-notification</i>
Tree	<a href="#">alarm-notification</a>

Description	<p>Commands in this context configure the Fault Notification Generator (FNG) time values to raise an alarm or reset the CCM defect alarm.</p> <p>Use these timers for network management processes. The timers are not tied into delaying the notification to the fault management system on the network element and do not affect fault propagation mechanisms.</p>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fng-alarm-time** *number*

Synopsis	Time that must expire before an FNG alarm is raised
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">eth-cfm mep md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">alarm-notification fng-alarm-time</a> <i>number</i>
Tree	<a href="#">fng-alarm-time</a>
Range	250   500   1000
Units	centiseconds
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fng-reset-time** *number*

Synopsis	Time that must expire before an FNG alarm is reset
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">eth-cfm mep md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">alarm-notification fng-reset-time</a> <i>number</i>
Tree	<a href="#">fng-reset-time</a>
Range	250   500   1000
Units	centiseconds
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm** *boolean*

Synopsis	Generate CCM messages
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">eth-cfm mep md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">ccm</a> <i>boolean</i>
Tree	<a href="#">ccm</a>
Default	false

Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm-ltm-priority** *number*

Synopsis	Priority of CCM and LTM messages transmitted by the MEP
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">eth-cfm mep md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>ccm-ltm-priority</b> <i>number</i>
Tree	<a href="#">ccm-ltm-priority</a>
Range	0 to 7
Default	7
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm-padding-size** *number*

Synopsis	Number of octets of padding to insert in CCM packets
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">eth-cfm mep md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>ccm-padding-size</b> <i>number</i>
Tree	<a href="#">ccm-padding-size</a>
Description	This command sets the byte size of the optional Data TLV to be included in the ETH-CC PDU.  This command increases the size of the ETH-CC PDU by the configured value. The base size of the ETH-CC PDU, including the Interface Status TLV and Port Status TLV, is 83 bytes not including the Layer 2 encapsulation. CCM padding is not supported when the CCM interval (configured through <b>configure eth-cfm domain association ccm-interval</b> ) is less than 1 second.
Range	3 to 1500
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **cfm-vlan-tag** *string*

Synopsis	VLAN tags to apply to CFM PDUs for egress processing
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">eth-cfm mep md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>cfm-vlan-tag</b> <i>string</i>
Tree	<a href="#">cfm-vlan-tag</a>
String Length	1 to 9

Introduced 21.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **description** *string*

Synopsis Text description  
Context **configure** [service](#) [vpls](#) [string](#) [eth-cfm](#) [mep](#) [md-admin-name](#) [reference](#) [ma-admin-name](#) [reference](#) [mep-id](#) [number](#) [description](#) [string](#)  
Tree [description](#)  
String Length 1 to 80  
Introduced 16.0.R4  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **eth-test**

Synopsis Enable the **eth-test** context  
Context **configure** [service](#) [vpls](#) [string](#) [eth-cfm](#) [mep](#) [md-admin-name](#) [reference](#) [ma-admin-name](#) [reference](#) [mep-id](#) [number](#) [eth-test](#)  
Tree [eth-test](#)  
Description Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the **oam eth-cfm eth-test** command.  
Introduced 16.0.R4  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **bit-error-threshold** *number*

Synopsis Lowest priority defect allowed to generate fault alarm  
Context **configure** [service](#) [vpls](#) [string](#) [eth-cfm](#) [mep](#) [md-admin-name](#) [reference](#) [ma-admin-name](#) [reference](#) [mep-id](#) [number](#) [eth-test](#) [bit-error-threshold](#) [number](#)  
Tree [bit-error-threshold](#)  
Range 0 to 11840  
Default 1  
Units bit errors  
Introduced 16.0.R4  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## test-pattern

Synopsis	Enter the <b>test-pattern</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">eth-test</a> <a href="#">test-pattern</a>
Tree	<a href="#">test-pattern</a>
Description	Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## crc-tlv *boolean*

Synopsis	Generate a CRC checksum
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">eth-test</a> <a href="#">test-pattern</a> <a href="#">crc-tlv</a> <i>boolean</i>
Tree	<a href="#">crc-tlv</a>
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## pattern *keyword*

Synopsis	Test pattern for Ethernet Test frames
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">eth-test</a> <a href="#">test-pattern</a> <a href="#">pattern</a> <i>keyword</i>
Tree	<a href="#">pattern</a>
Description	This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.
Default	all-zeros
Options	all-zeros, all-ones
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## grace

Synopsis	Enter the <b>grace</b> context
Context	<b>configure service vpls string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace</b>
Tree	<a href="#">grace</a>
Description	Commands in this context configure the Nokia ETH-CFM Grace function and the ITU-T Y.1731 Ethernet Expected Default (ETH-ED) function.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## eth-ed

Synopsis	Enter the <b>eth-ed</b> context
Context	<b>configure service vpls string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed</b>
Tree	<a href="#">eth-ed</a>
Description	Commands in this context configure the ITU-T Y.1731 ETH-ED function.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## max-rx-defect-window *number*

Synopsis	Maximum received ETH-ED expected defect window duration
Context	<b>configure service vpls string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed max-rx-defect-window <i>number</i></b>
Tree	<a href="#">max-rx-defect-window</a>
Range	1 to 86400
Units	seconds
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## priority *number*

Synopsis	Transmission priority for ETH-ED PDUs
Context	<b>configure service vpls string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed priority <i>number</i></b>

Tree	<a href="#">priority</a>
Range	0 to 7
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **rx-eth-ed** *boolean*

Synopsis	Receive and process ETH-ED ITU-T Y.1731 PDUs on the MEP
Context	<b>configure</b> <a href="#">service vpls string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed rx-eth-ed</a> <i>boolean</i>
Tree	<a href="#">rx-eth-ed</a>
Description	This command enables the reception and processing of the ITU-T Y.1731 ETH-ED PDU on the MEP.
Default	true
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **tx-eth-ed** *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	<b>configure</b> <a href="#">service vpls string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed tx-eth-ed</a> <i>boolean</i>
Tree	<a href="#">tx-eth-ed</a>
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **eth-vsm-grace**

Synopsis	Enter the <b>eth-vsm-grace</b> context
Context	<b>configure</b> <a href="#">service vpls string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace</a>
Tree	<a href="#">eth-vsm-grace</a>
Description	Commands in this context configure the Nokia ETH-CFM Grace function.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**rx-eth-vsm-grace** *boolean*

Synopsis	Receive and process Nokia ETH-CFM Grace PDU on the MEP
Context	<b>configure</b> <a href="#">service vpls string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace rx-eth-vsm-grace</a> <i>boolean</i>
Tree	<a href="#">rx-eth-vsm-grace</a>
Description	When configured to <b>true</b> , the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.  When configured to <b>false</b> , the router disables the Nokia Grace function.
Default	true
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**tx-eth-vsm-grace** *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	<b>configure</b> <a href="#">service vpls string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace tx-eth-vsm-grace</a> <i>boolean</i>
Tree	<a href="#">tx-eth-vsm-grace</a>
Description	When configured to <b>true</b> , the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.  The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.  The operator must configure the <b>configure system eth-cfm grace</b> command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).  When configured to <b>false</b> , the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.
Default	true
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**low-priority-defect** *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
----------	--

Context	<b>configure service vpls string eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id number low-priority-defect keyword</b>
Tree	<a href="#">low-priority-defect</a>
Default	mac-rem-err-xcon
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mac-address** *string*

Synopsis	MAC address of the MEP
Context	<b>configure service vpls string eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id number mac-address</b> <i>string</i>
Tree	<a href="#">mac-address</a>
Description	This command specifies the MAC address of the MEP.  When unconfigured, the MAC address of the port (if the MEP is on a SAP) or the MAC address of a bridge (if the MEP is on a spoke) is used.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **one-way-delay-threshold** *number*

Synopsis	Threshold time limit for the one-way delay test
Context	<b>configure service vpls string eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id number one-way-delay-threshold</b> <i>number</i>
Tree	<a href="#">one-way-delay-threshold</a>
Range	0 to 600
Default	3
Units	seconds
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## **etree boolean**

### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Use VPLS service as an E-Tree VPLS
Context	<b>configure service vpls string etree boolean</b>
Tree	<b>etree</b>
Default	false
Introduced	16.0.R1
Platforms	All

## **fdb**

Synopsis	Enter the <b>fdb</b> context
Context	<b>configure service vpls string fdb</b>
Tree	<b>fdb</b>
Introduced	16.0.R1
Platforms	All

## **discard-unknown boolean**

Synopsis	Discard packets with unknown destination MAC addresses
Context	<b>configure service vpls string fdb discard-unknown boolean</b>
Tree	<b>discard-unknown</b>
Default	false
Introduced	16.0.R1
Platforms	All

## **mac-learning**

Synopsis	Enter the <b>mac-learning</b> context
Context	<b>configure service vpls string fdb mac-learning</b>
Tree	<b>mac-learning</b>
Introduced	16.0.R1
Platforms	All

### **aging** *boolean*

Synopsis	Enable aging of MAC addresses
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">fdb mac-learning</a> <a href="#">aging</a> <i>boolean</i>
Tree	<a href="#">aging</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **learning** *boolean*

Synopsis	Enable learning of new MAC addresses
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">fdb mac-learning</a> <a href="#">learning</a> <i>boolean</i>
Tree	<a href="#">learning</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **local-age-time** *number*

Synopsis	Aging time for locally learned MAC addresses
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">fdb mac-learning</a> <a href="#">local-age-time</a> <i>number</i>
Tree	<a href="#">local-age-time</a>
Range	60 to 86400
Default	300
Introduced	16.0.R1
Platforms	All

### **remote-age-time** *number*

Synopsis	Aging time for locally learned MAC addresses
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">fdb mac-learning</a> <a href="#">remote-age-time</a> <i>number</i>
Tree	<a href="#">remote-age-time</a>
Range	60 to 86400
Default	900

Introduced 16.0.R1  
Platforms All

### **mac-move**

Synopsis Enter the **mac-move** context  
Context **configure service vpls string fdb mac-move**  
Tree [mac-move](#)  
Introduced 16.0.R1  
Platforms All

### **admin-state** *keyword*

Synopsis Administrative state of MAC move  
Context **configure service vpls string fdb mac-move admin-state keyword**  
Tree [admin-state](#)  
Default disable  
Options enable, disable  
Introduced 16.0.R1  
Platforms All

### **hold-down-time** *number*

Synopsis Wait time before re-enabling disabled SAP  
Context **configure service vpls string fdb mac-move hold-down-time number**  
Tree [hold-down-time](#)  
Range 0 to 600  
Default 10  
Units seconds  
Introduced 19.7.R1  
Platforms All

### **move-frequency** *number*

Synopsis Maximum rate MACs can be re-learned in the VPLS service

Context	<b>configure service vpls string fdb mac-move move-frequency number</b>
Tree	<a href="#">move-frequency</a>
Range	1 to 10
Default	2
Introduced	16.0.R1
Platforms	All

### **primary-cumulative-factor** *number*

Synopsis	Factor for MAC-relearn periods for MAC-relearn rate
Context	<b>configure service vpls string fdb mac-move primary-cumulative-factor number</b>
Tree	<a href="#">primary-cumulative-factor</a>
Range	3 to 10
Default	3
Introduced	19.7.R1
Platforms	All

### **retry-count** (*number | keyword*)

Synopsis	Number of retries for re-enabling the SAP or SDP
Context	<b>configure service vpls string fdb mac-move retry-count (number   keyword)</b>
Tree	<a href="#">retry-count</a>
Range	1 to 255
Default	3
Options	unlimited
Introduced	16.0.R1
Platforms	All

### **sap** [[sap-id](#)] *reference*

Synopsis	Enter the <b>sap</b> list instance
Context	<b>configure service vpls string fdb mac-move sap reference</b>
Tree	<a href="#">sap</a>
Introduced	19.7.R1
Platforms	All

### [sap-id] *reference*

Synopsis	SAP identifier
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">fdb mac-move sap</a> <i>reference</i>
Tree	<a href="#">sap</a>
Reference	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	All

### level *keyword*

Synopsis	Primary or secondary port level
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">fdb mac-move sap</a> <i>reference</i> <a href="#">level</a> <i>keyword</i>
Tree	<a href="#">level</a>
Options	primary, secondary
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	All

### secondary-cumulative-factor *number*

Synopsis	Number of periods to measure mac-relearn rate
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">fdb mac-move secondary-cumulative-factor</a> <i>number</i>
Tree	<a href="#">secondary-cumulative-factor</a>
Range	2 to 9
Default	2
Introduced	19.7.R1
Platforms	All

### spoke-sdp [[sdp-bind-id](#)] *reference*

Synopsis	Enter the <b>spoke-sdp</b> list instance
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">fdb mac-move spoke-sdp</a> <i>reference</i>
Tree	<a href="#">spoke-sdp</a>

Introduced 19.7.R1  
Platforms All

### **[sdp-bind-id] reference**

Synopsis SDP binding ID  
Context **configure** [service](#) [vpls](#) [string](#) [fdb](#) [mac-move](#) [spoke-sdp](#) [reference](#)  
Tree [spoke-sdp](#)  
Reference **configure** [service](#) [vpls](#) [string](#) [spoke-sdp](#) [string](#)  
Notes This element is part of a list key.  
Introduced 19.7.R1  
Platforms All

### **level keyword**

Synopsis Primary or secondary port level  
Context **configure** [service](#) [vpls](#) [string](#) [fdb](#) [mac-move](#) [spoke-sdp](#) [reference](#) [level](#) [keyword](#)  
Tree [level](#)  
Options primary, secondary  
Notes This element is mandatory.  
Introduced 19.7.R1  
Platforms All

### **mac-subnet-length number**

Synopsis Number of bits performing MAC learning or MAC switching  
Context **configure** [service](#) [vpls](#) [string](#) [fdb](#) [mac-subnet-length](#) [number](#)  
Tree [mac-subnet-length](#)  
Range 24 to 48  
Default 48  
Introduced 16.0.R1  
Platforms All

### **selective-learning** *boolean*

Synopsis	Allocate FDB entries on selectively learned line cards
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">fdb selective-learning</a> <i>boolean</i>
Tree	<a href="#">selective-learning</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **static-mac**

Synopsis	Enter the <b>static-mac</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">fdb static-mac</a>
Tree	<a href="#">static-mac</a>
Introduced	16.0.R1
Platforms	All

### **mac** [[mac-address](#)] *string*

Synopsis	Enter the <b>mac</b> list instance
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">fdb static-mac</a> <a href="#">mac</a> <i>string</i>
Tree	<a href="#">mac</a>
Introduced	16.0.R1
Platforms	All

### [[mac-address](#)] *string*

Synopsis	Static MAC address to SAP/SDP-binding or black-hole
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">fdb static-mac</a> <a href="#">mac</a> <i>string</i>
Tree	<a href="#">mac</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## blackhole

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Create a static FDB entry for the MAC address to black-hole traffic
Context	<b>configure service vpls string fdb static-mac mac string blackhole</b>
Tree	<b>blackhole</b>
Notes	The following elements are part of a mandatory choice: <b>blackhole</b> , <b>endpoint</b> , <b>mesh-sdp</b> , <b>sap</b> , or <b>spoke-sdp</b> .
Introduced	16.0.R1
Platforms	All

## endpoint *reference*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Endpoint associated with this MAC
Context	<b>configure service vpls string fdb static-mac mac string endpoint reference</b>
Tree	<b>endpoint</b>
Reference	<b>configure service vpls string endpoint string</b>
Notes	The following elements are part of a mandatory choice: <b>blackhole</b> , <b>endpoint</b> , <b>mesh-sdp</b> , <b>sap</b> , or <b>spoke-sdp</b> .
Introduced	16.0.R1
Platforms	All

## mesh-sdp *reference*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Mesh SDP bind associated with this MAC
Context	<b>configure service vpls string fdb static-mac mac string mesh-sdp reference</b>
Tree	<b>mesh-sdp</b>

Reference	<b>configure service vpls string mesh-sdp string</b>
Notes	The following elements are part of a mandatory choice: <b>blackhole</b> , <b>endpoint</b> , <b>mesh-sdp</b> , <b>sap</b> , or <b>spoke-sdp</b> .
Introduced	16.0.R1
Platforms	All

### **monitor** *keyword*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Entity to be monitored to decide whether this entry can be installed in the FDB
Context	<b>configure service vpls string fdb static-mac mac string monitor keyword</b>
Tree	<b>monitor</b>
Default	none
Options	none, forward-status
Introduced	16.0.R1
Platforms	All

### **sap** *reference*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	SAP associated with this MAC
Context	<b>configure service vpls string fdb static-mac mac string sap reference</b>
Tree	<b>sap</b>
Reference	<b>configure service vpls string sap string</b>
Notes	The following elements are part of a mandatory choice: <b>blackhole</b> , <b>endpoint</b> , <b>mesh-sdp</b> , <b>sap</b> , or <b>spoke-sdp</b> .
Introduced	16.0.R1
Platforms	All

## spoke-sdp *reference*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Spoke SDP bind associated with this MAC
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">fdb static-mac</a> <i>mac</i> <i>string</i> <a href="#">spoke-sdp</a> <i>reference</i>
Tree	<a href="#">spoke-sdp</a>
Reference	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i>
Notes	The following elements are part of a mandatory choice: <b>blackhole</b> , <b>endpoint</b> , <b>mesh-sdp</b> , <b>sap</b> , or <b>spoke-sdp</b> .
Introduced	16.0.R1
Platforms	All

## table

Synopsis	Enter the <b>table</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">fdb</a> <i>table</i>
Tree	<a href="#">table</a>
Introduced	16.0.R1
Platforms	All

## high-wmark *number*

Synopsis	High watermark for the FDB table
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">fdb</a> <i>table</i> <a href="#">high-wmark</a> <i>number</i>
Tree	<a href="#">high-wmark</a>
Range	0 to 100
Default	95
Introduced	16.0.R1
Platforms	All

## low-wmark *number*

Synopsis	Low watermark for the FDB table
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">fdb</a> <i>table</i> <a href="#">low-wmark</a> <i>number</i>

Tree	<a href="#">low-wmark</a>
Range	0 to 100
Default	90
Introduced	16.0.R1
Platforms	All

### **size number**

Synopsis	Maximum MAC entries in the FDB
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">fdb table</a> <a href="#">size</a> <i>number</i>
Tree	<a href="#">size</a>
Range	1 to 511999
Default	250
Introduced	16.0.R1
Platforms	All

### **gsmp**

Synopsis	Enter the <b>gsmp</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">gsmp</a>
Tree	<a href="#">gsmp</a>
Introduced	16.0.R1
Platforms	All

### **admin-state keyword**

Synopsis	Administrative state of GSMP
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">gsmp</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

## **group** [name] *string*

Synopsis	Enter the <b>group</b> list instance
Context	<b>configure service vpls string gsmp group string</b>
Tree	<b>group</b>
Max. Instances	1024
Introduced	16.0.R1
Platforms	All

## [name] *string*

Synopsis	GSMP group name
Context	<b>configure service vpls string gsmp group string</b>
Tree	<b>group</b>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## **admin-state** *keyword*

Synopsis	Administrative state of the GSMP group
Context	<b>configure service vpls string gsmp group string admin-state keyword</b>
Tree	<b>admin-state</b>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

## **ancp**

Synopsis	Enter the <b>ancp</b> context
Context	<b>configure service vpls string gsmp group string ancp</b>
Tree	<b>ancp</b>
Introduced	16.0.R1

Platforms All

### **dynamic-topology-discovery** *boolean*

Synopsis Enable the ANCP dynamic topology discovery capability

Context **configure** [service vpls string](#) [gsmp group string](#) [ancp dynamic-topology-discovery boolean](#)

Tree [dynamic-topology-discovery](#)

Default true

Introduced 16.0.R1

Platforms All

### **oam** *boolean*

Synopsis Enable GSMP ANCP OAM capability at startup of GSMP connection

Context **configure** [service vpls string](#) [gsmp group string](#) [ancp oam boolean](#)

Tree [oam](#)

Default false

Introduced 16.0.R1

Platforms All

### **description** *string*

Synopsis Text description

Context **configure** [service vpls string](#) [gsmp group string](#) [description string](#)

Tree [description](#)

String Length 1 to 80

Introduced 16.0.R1

Platforms All

### **hold-multiplier** *number*

Synopsis Hold-multiplier for the GSMP connections in this group

Context **configure** [service vpls string](#) [gsmp group string](#) [hold-multiplier number](#)

Tree [hold-multiplier](#)

Range 1 to 100

Default	3
Introduced	16.0.R1
Platforms	All

### **idle-filter** *boolean*

Synopsis	Filter ANCP messages from IDLE DSL lines
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">gsmp group</a> <i>string</i> <b>idle-filter</b> <i>boolean</i>
Tree	<a href="#">idle-filter</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **keepalive** *number*

Synopsis	Keepalive value for the GSMP connections in this group
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">gsmp group</a> <i>string</i> <b>keepalive</b> <i>number</i>
Tree	<a href="#">keepalive</a>
Range	1 to 25
Default	10
Units	seconds
Introduced	16.0.R1
Platforms	All

### **neighbor** [[remote-address](#)] *string*

Synopsis	Enter the <b>neighbor</b> list instance
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">gsmp group</a> <i>string</i> <b>neighbor</b> <i>string</i>
Tree	<a href="#">neighbor</a>
Introduced	16.0.R1
Platforms	All

### **[remote-address]** *string*

Synopsis	GSMP neighbor remote IP address
----------	---------------------------------

Context	<b>configure service vpls string gsmp group string neighbor string</b>
Tree	<b>neighbor</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **admin-state keyword**

Synopsis	Administrative state of the GSMP neighbor
Context	<b>configure service vpls string gsmp group string neighbor string admin-state keyword</b>
Tree	<b>admin-state</b>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **description string**

Synopsis	Text description
Context	<b>configure service vpls string gsmp group string neighbor string description string</b>
Tree	<b>description</b>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **local-address string**

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Restrict connections to this local address only within the service running ANCP
Context	<b>configure service vpls string gsmp group string neighbor string local-address string</b>
Tree	<b>local-address</b>
Introduced	16.0.R1
Platforms	All

## priority-marking

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>priority-marking</b> context
Context	<b>configure service vpls string</b> <b>gsmg group string</b> <b>neighbor string</b> <b>priority-marking</b>
Tree	<b>priority-marking</b>
Introduced	16.0.R1
Platforms	All

## dscp keyword

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	DSCP that is used while remarking the in profile packets
Context	<b>configure service vpls string</b> <b>gsmg group string</b> <b>neighbor string</b> <b>priority-marking dscp keyword</b>
Tree	<b>dscp</b>
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Notes	The following elements are part of a choice: <b>dscp</b> or <b>prec</b> .
Introduced	16.0.R1
Platforms	All

## prec number

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Precedence priority marking
----------	-----------------------------

Context	<b>configure service vpls string gsmp group string neighbor string priority-marking prec number</b>
Tree	<a href="#">prec</a>
Range	0 to 7
Notes	The following elements are part of a choice: <b>dscp</b> or <b>prec</b> .
Introduced	16.0.R1
Platforms	All

### **persistence** *boolean*

Synopsis	Store DSL line information when the GSMP connection terminates
Context	<b>configure service vpls string gsmp group string persistence boolean</b>
Tree	<a href="#">persistence</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **igmp-host-tracking**

Synopsis	Enter the <b>igmp-host-tracking</b> context
Context	<b>configure service vpls string igmp-host-tracking</b>
Tree	<a href="#">igmp-host-tracking</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of IGMP host tracking
Context	<b>configure service vpls string igmp-host-tracking admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **expiry-time** *number*

Synopsis	Time that the system continues to track inactive hosts
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">igmp-host-tracking</a> <a href="#">expiry-time</a> <i>number</i>
Tree	<a href="#">expiry-time</a>
Range	1 to 65535
Default	260
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **igmp-snooping**

Synopsis	Enter the <b>igmp-snooping</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">igmp-snooping</a>
Tree	<a href="#">igmp-snooping</a>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of snooping
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">igmp-snooping</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **evpn-proxy**

Synopsis	Enter the <b>evpn-proxy</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">igmp-snooping</a> <a href="#">evpn-proxy</a>
Tree	<a href="#">evpn-proxy</a>
Introduced	20.10.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of EVPN proxy
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">igmp-snooping</a> <a href="#">evpn-proxy</a> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	20.10.R1
Platforms	All

### **mvr**

Synopsis	Enter the <b>mvr</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">igmp-snooping</a> <b>mvr</b>
Tree	<a href="#">mvr</a>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of MVR
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">igmp-snooping</a> <b>mvr</b> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">igmp-snooping</a> <b>mvr</b> <b>description</b> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1

Platforms All

### **group-policy** *string*

Synopsis Policy that applies MVR  
Context **configure** [service vpls string igmp-snooping mvr group-policy string](#)  
Tree [group-policy](#)  
String Length 1 to 32  
Introduced 16.0.R1  
Platforms All

### **query-interval** *number*

Synopsis Time between two consecutive host-query messages  
Context **configure** [service vpls string igmp-snooping query-interval number](#)  
Tree [query-interval](#)  
Range 1 to 65535  
Default 125  
Units seconds  
Introduced 16.0.R1  
Platforms All

### **query-source-address** (*keyword | ipv4-address*)

Synopsis Source address for IGMP queries  
Context **configure** [service vpls string igmp-snooping query-source-address \(keyword | ipv4-address\)](#)  
Tree [query-source-address](#)  
Default system  
Options system  
Introduced 16.0.R1  
Platforms All

### **report-source-address** *string*

Synopsis Source IP address used when generating IGMP reports

Context	<b>configure service vpls string igmp-snooping report-source-address string</b>
Tree	<a href="#">report-source-address</a>
Introduced	16.0.R1
Platforms	All

### **robust-count** *number*

Synopsis	Number of retries after expected message loss
Context	<b>configure service vpls string igmp-snooping robust-count number</b>
Tree	<a href="#">robust-count</a>
Range	1 to 255
Default	2
Introduced	16.0.R1
Platforms	All

### **ignore-l2vpn-mtu-mismatch** *boolean*

Synopsis	Ignore the L2 VPN MTU mismatch with local service MTU
Context	<b>configure service vpls string ignore-l2vpn-mtu-mismatch boolean</b>
Tree	<a href="#">ignore-l2vpn-mtu-mismatch</a>
Description	<p>When configured to <b>true</b>, the router does not check the value of the Layer 2 MTU in the Layer2 Info Extended Community received in a BGP update message against the local service MTU or locally signaled MTU. It may, therefore, bring up the BGP VPLS service regardless of any MTU mismatch.</p> <p>When configured to <b>false</b>, an MTU mismatch prevents the system from bringing up a BGP-VPLS service.</p>
Default	false
Introduced	22.2.R1
Platforms	All

### **interface** [[interface-name](#)] *string*

Synopsis	Enter the <b>interface</b> list instance
Context	<b>configure service vpls string interface string</b>
Tree	<a href="#">interface</a>
Introduced	16.0.R1

Platforms All

### **[interface-name]** *string*

Synopsis IP interface name  
Context **configure** [service](#) [vpls](#) *string* **interface** *string*  
Tree [interface](#)  
String Length 1 to 32  
Notes This element is part of a list key.  
Introduced 16.0.R1  
Platforms All

### **admin-state** *keyword*

Synopsis Administrative state of the interface  
Context **configure** [service](#) [vpls](#) *string* **interface** *string* **admin-state** *keyword*  
Tree [admin-state](#)  
Default enable  
Options enable, disable  
Introduced 16.0.R1  
Platforms All

### **description** *string*

Synopsis Text description  
Context **configure** [service](#) [vpls](#) *string* **interface** *string* **description** *string*  
Tree [description](#)  
String Length 1 to 255  
Introduced 16.0.R1  
Platforms All

### **hold-time**

Synopsis Enter the **hold-time** context  
Context **configure** [service](#) [vpls](#) *string* **interface** *string* **hold-time**

Tree	<a href="#">hold-time</a>
Introduced	16.0.R1
Platforms	All

## ipv4

Synopsis	Enter the <b>ipv4</b> context
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">interface string</a> <a href="#">hold-time ipv4</a>
Tree	<a href="#">ipv4</a>
Introduced	16.0.R1
Platforms	All

## down

Synopsis	Enter the <b>down</b> context
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">interface string</a> <a href="#">hold-time ipv4 down</a>
Tree	<a href="#">down</a>
Description	Commands in this context configure the down hold timer, which specifies the delay before activating the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface up, unless an operator configures the <b>init-only</b> command.
Introduced	16.0.R1
Platforms	All

## init-only *boolean*

Synopsis	Apply delay only at interface configuration or reboot
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">interface string</a> <a href="#">hold-time ipv4 down</a> <a href="#">init-only boolean</a>
Tree	<a href="#">init-only</a>
Description	This command applies a delay only when the IP interface is first configured or after a system reboot.
Default	false
Introduced	16.0.R1
Platforms	All

### **seconds** *number*

Synopsis	Down hold time for the IP interface
Context	<b>configure service vpls</b> <i>string</i> <b>interface</b> <i>string</i> <b>hold-time ipv4 down seconds</b> <i>number</i>
Tree	<b>seconds</b>
Range	1 to 1200
Units	seconds
Introduced	16.0.R1
Platforms	All

### **up**

Synopsis	Enter the <b>up</b> context
Context	<b>configure service vpls</b> <i>string</i> <b>interface</b> <i>string</i> <b>hold-time ipv4 up</b>
Tree	<b>up</b>
Description	Commands in this context configure the up hold timer, which specifies the delay before deactivation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface down.
Introduced	16.0.R1
Platforms	All

### **seconds** *number*

Synopsis	Up hold time for the IP interface
Context	<b>configure service vpls</b> <i>string</i> <b>interface</b> <i>string</i> <b>hold-time ipv4 up seconds</b> <i>number</i>
Tree	<b>seconds</b>
Range	1 to 1200
Units	seconds
Introduced	16.0.R1
Platforms	All

### **ipv4**

Synopsis	Enter the <b>ipv4</b> context
Context	<b>configure service vpls</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b>
Tree	<b>ipv4</b>

Introduced 16.0.R1  
Platforms All

## neighbor-discovery

Synopsis Enter the **neighbor-discovery** context  
Context **configure** [service vpls string](#) [interface string](#) [ipv4 neighbor-discovery](#)  
Tree [neighbor-discovery](#)  
Introduced 16.0.R1  
Platforms All

## static-neighbor [ipv4-address] string

Synopsis Enter the **static-neighbor** list instance  
Context **configure** [service vpls string](#) [interface string](#) [ipv4 neighbor-discovery static-neighbor string](#)  
Tree [static-neighbor](#)  
Introduced 16.0.R1  
Platforms All

## [ipv4-address] string

Synopsis IPv4 address that corresponds to the physical address  
Context **configure** [service vpls string](#) [interface string](#) [ipv4 neighbor-discovery static-neighbor string](#)  
Tree [static-neighbor](#)  
Notes This element is part of a list key.  
Introduced 16.0.R1  
Platforms All

## mac-address string

Synopsis MAC address for the static neighbor  
Context **configure** [service vpls string](#) [interface string](#) [ipv4 neighbor-discovery static-neighbor string mac-address string](#)  
Tree [mac-address](#)

Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **timeout** *number*

Synopsis	ARP timeout value to determine how long an ARP entry remains in the ARP cache
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 neighbor-discovery</a> <a href="#">timeout</a> <i>number</i>
Tree	<a href="#">timeout</a>
Range	0 to 65535
Default	14400
Units	seconds
Introduced	16.0.R1
Platforms	All

### **primary**

Synopsis	Enable the <b>primary</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 primary</a>
Tree	<a href="#">primary</a>
Introduced	16.0.R1
Platforms	All

### **address** *string*

Synopsis	IP address of the interface
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 primary</a> <a href="#">address</a> <i>string</i>
Tree	<a href="#">address</a>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **prefix-length** *number*

Synopsis	IPv4 address prefix length
----------	----------------------------

Context	<b>configure service vpls string interface string ipv4 primary prefix-length number</b>
Tree	<b>prefix-length</b>
Range	0 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **mac string**

Synopsis	MAC address for the interface
Context	<b>configure service vpls string interface string mac string</b>
Tree	<b>mac</b>
Introduced	16.0.R1
Platforms	All

### **isid-policy**

Synopsis	Enter the <b>isid-policy</b> context
Context	<b>configure service vpls string isid-policy</b>
Tree	<b>isid-policy</b>
Introduced	19.10.R1
Platforms	All

### **entry [range-entry-id] number**

Synopsis	Enter the <b>entry</b> list instance
Context	<b>configure service vpls string isid-policy entry number</b>
Tree	<b>entry</b>
Introduced	19.10.R1
Platforms	All

### **[range-entry-id] number**

Synopsis	ISID policy entry ID
Context	<b>configure service vpls string isid-policy entry number</b>

Tree	<a href="#">entry</a>
Range	1 to 8191
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	All

### **advertise-local** *boolean*

Synopsis	Advertise locally-defined I-VPLS ISIDs or static ISIDs
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">isid-policy</a> <a href="#">entry</a> <i>number</i> <a href="#">advertise-local</a> <i>boolean</i>
Tree	<a href="#">advertise-local</a>
Default	true
Introduced	19.10.R1
Platforms	All

### **range**

Synopsis	Enter the <b>range</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">isid-policy</a> <a href="#">entry</a> <i>number</i> <a href="#">range</a>
Tree	<a href="#">range</a>
Introduced	19.10.R1
Platforms	All

### **end** *number*

Synopsis	Upper bound of the ISID range
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">isid-policy</a> <a href="#">entry</a> <i>number</i> <a href="#">range</a> <a href="#">end</a> <i>number</i>
Tree	<a href="#">end</a>
Range	1 to 16777215
Introduced	19.10.R1
Platforms	All

### **start** *number*

Synopsis	Lower bound of the ISID range
----------	-------------------------------

Context	<b>configure service vpls string isid-policy entry number range start number</b>
Tree	<b>start</b>
Range	1 to 16777215
Introduced	19.10.R1
Platforms	All

### **use-def-mcast** *boolean*

Synopsis	Use default multicast tree to propagate ISIS range
Context	<b>configure service vpls string isid-policy entry number use-def-mcast boolean</b>
Tree	<b>use-def-mcast</b>
Default	false
Introduced	19.10.R1
Platforms	All

### **load-balancing**

Synopsis	Enter the <b>load-balancing</b> context
Context	<b>configure service vpls string load-balancing</b>
Tree	<b>load-balancing</b>
Introduced	16.0.R1
Platforms	All

### **lbl-eth-or-ip-l4-teid** *boolean*

Synopsis	Enable hashing of MPLS ethernet and IP packets on SAPs
Context	<b>configure service vpls string load-balancing lbl-eth-or-ip-l4-teid boolean</b>
Tree	<b>lbl-eth-or-ip-l4-teid</b>
Description	When configured to <b>true</b> , this command enables hashing of MPLS Ethernet and MPLS IP packets received on the Epipe and VPLS service SAP using the MPLS labels, the inner IP addresses, the port numbers, and the GTP TEID field, if read by the system. This capability is supported on line cards that are FP4-based and later.
Default	false
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **per-service-hashing** *boolean*

Synopsis	Enable per-service hashing for Ethernet services
Context	<b>configure service vpls string load-balancing per-service-hashing boolean</b>
Tree	<a href="#">per-service-hashing</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **spi-load-balancing** *boolean*

Synopsis	Allow use of SPI (Security Parameter Index) in hashing for ESP/AH encrypted IPv4/IPv6 traffic
Context	<b>configure service vpls string load-balancing spi-load-balancing boolean</b>
Tree	<a href="#">spi-load-balancing</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **teid-load-balancing** *boolean*

Synopsis	Include TEID in hashing algorithm for GTP-U/C encapsulated traffic
Context	<b>configure service vpls string load-balancing teid-load-balancing boolean</b>
Tree	<a href="#">teid-load-balancing</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **m-vpls** *boolean*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Specify whether this is a management VPLS
Context	<b>configure service vpls string m-vpls boolean</b>

Tree	<a href="#">m-vpls</a>
Default	false
Introduced	16.0.R1
Platforms	All

## **mac-flush**

Synopsis	Enter the <b>mac-flush</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <b>mac-flush</b>
Tree	<a href="#">mac-flush</a>
Introduced	16.0.R1
Platforms	All

## **tldp**

Synopsis	Enter the <b>tldp</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <b>mac-flush tldp</b>
Tree	<a href="#">tldp</a>
Introduced	16.0.R1
Platforms	All

## **propagate** *boolean*

Synopsis	Propagate MAC flush messages received from the T-LDP
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <b>mac-flush tldp propagate</b> <i>boolean</i>
Tree	<a href="#">propagate</a>
Default	false
Introduced	16.0.R1
Platforms	All

## **send-on-failure** *boolean*

Synopsis	Send MAC withdraw message on SAP/Spoke-SDP failure
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <b>mac-flush tldp send-on-failure</b> <i>boolean</i>
Tree	<a href="#">send-on-failure</a>

Default	false
Introduced	16.0.R1
Platforms	All

## **mac-protect**

Synopsis	Enter the <b>mac-protect</b> context
Context	<b>configure service vpls string mac-protect</b>
Tree	<b>mac-protect</b>
Introduced	19.10.R1
Platforms	All

## **mac [mac-address] string**

Synopsis	Add a list entry for <b>mac</b>
Context	<b>configure service vpls string mac-protect mac string</b>
Tree	<b>mac</b>
Introduced	19.10.R1
Platforms	All

## **[mac-address] string**

Synopsis	Protected MAC address
Context	<b>configure service vpls string mac-protect mac string</b>
Tree	<b>mac</b>
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	All

## **mcast-ipv6-snooping-scope keyword**

Synopsis	IPv6 multicast snooping scope
Context	<b>configure service vpls string mcast-ipv6-snooping-scope keyword</b>
Tree	<b>mcast-ipv6-snooping-scope</b>
Default	mac-based

Options	sg-based, mac-based
Introduced	16.0.R1
Platforms	All

### **mcr-default-gtw**

Synopsis	Enter the <b>mcr-default-gtw</b> context
Context	<b>configure service vpls string mcr-default-gtw</b>
Tree	<b>mcr-default-gtw</b>
Introduced	16.0.R1
Platforms	All

### **ip string**

Synopsis	Multi-chassis ring default gateway IP address
Context	<b>configure service vpls string mcr-default-gtw ip string</b>
Tree	<b>ip</b>
Introduced	16.0.R1
Platforms	All

### **mac string**

Synopsis	Multi-chassis ring default gateway MAC address
Context	<b>configure service vpls string mcr-default-gtw mac string</b>
Tree	<b>mac</b>
Default	00:00:00:00:00:00
Introduced	16.0.R1
Platforms	All

### **mesh-sdp [sdp-bind-id] string**

Synopsis	Enter the <b>mesh-sdp</b> list instance
Context	<b>configure service vpls string mesh-sdp string</b>
Tree	<b>mesh-sdp</b>
Introduced	16.0.R1

Platforms All

### **[sdp-bind-id]** *string*

Synopsis SDP binding ID  
Context **configure** [service vpls string mesh-sdp string](#)  
Tree [mesh-sdp](#)  
String Length 3 to 16  
Notes This element is part of a list key.  
Introduced 16.0.R1  
Platforms All

### **accounting-policy** *reference*

Synopsis Policy to collect accounting statistics  
Context **configure** [service vpls string mesh-sdp string accounting-policy reference](#)  
Tree [accounting-policy](#)  
Reference **configure** [log accounting-policy number](#)  
Introduced 16.0.R1  
Platforms All

### **admin-state** *keyword*

Synopsis Administrative state of the SDP binding to the service  
Context **configure** [service vpls string mesh-sdp string admin-state keyword](#)  
Tree [admin-state](#)  
Default enable  
Options enable, disable  
Introduced 16.0.R1  
Platforms All

### **bfd**

Synopsis Enter the **bfd** context  
Context **configure** [service vpls string mesh-sdp string bfd](#)

Tree	<a href="#">bfd</a>
Introduced	21.2.R1
Platforms	All

### **bfd-liveness**

Synopsis	Enable the <b>bfd-liveness</b> context
Context	<b>configure</b> <a href="#">service vpls string mesh-sdp string bfd bfd-liveness</a>
Tree	<a href="#">bfd-liveness</a>
Introduced	21.2.R1
Platforms	All

### **encap** *keyword*

Synopsis	BFD encapsulation used on the SDP binding
Context	<b>configure</b> <a href="#">service vpls string mesh-sdp string bfd bfd-liveness encap keyword</a>
Tree	<a href="#">encap</a>
Default	ipv4
Options	ipv4
Introduced	21.2.R1
Platforms	All

### **bfd-template** *reference*

Synopsis	BFD template associated with the SDP binding
Context	<b>configure</b> <a href="#">service vpls string mesh-sdp string bfd bfd-template reference</a>
Tree	<a href="#">bfd-template</a>
Description	This command configures a named BFD template to be used by VCCV BFD on PWs belonging to the VLL service. The template specifies parameters, such as the minimum transmit and receive control packet timer intervals, used by the BFD session. Template parameters are configured under the <b>configure router bfd</b> context.
Reference	<b>configure</b> <a href="#">bfd bfd-template string</a>
Introduced	21.2.R1
Platforms	All

### **collect-stats** *boolean*

Synopsis	Allow agent to collect accounting statistics
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">collect-stats</a> <i>boolean</i>
Tree	<a href="#">collect-stats</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **control-word** *boolean*

Synopsis	Use the control word as preferred
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">control-word</a> <i>boolean</i>
Tree	<a href="#">control-word</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **cpu-protection**

Synopsis	Enter the <b>cpu-protection</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">cpu-protection</a>
Tree	<a href="#">cpu-protection</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

### **eth-cfm-monitoring**

Synopsis	Enable the <b>eth-cfm-monitoring</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">cpu-protection</a> <a href="#">eth-cfm-monitoring</a>
Tree	<a href="#">eth-cfm-monitoring</a>
Notes	The following elements are part of a choice: <b>eth-cfm-monitoring</b> or <b>mac-monitoring</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## aggregate

Synopsis	Apply rate limit to the sum of per-peer packet rates
Context	<b>configure</b> <a href="#">service vpls string mesh-sdp string cpu-protection eth-cfm-monitoring aggregate</a>
Tree	<a href="#">aggregate</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## car

Synopsis	Ignore Ethernet CFM packets when enforcing overall rate
Context	<b>configure</b> <a href="#">service vpls string mesh-sdp string cpu-protection eth-cfm-monitoring car</a>
Tree	<a href="#">car</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## mac-monitoring

Synopsis	Monitor MAC for CPU protection
Context	<b>configure</b> <a href="#">service vpls string mesh-sdp string cpu-protection mac-monitoring</a>
Tree	<a href="#">mac-monitoring</a>
Notes	The following elements are part of a choice: <b>eth-cfm-monitoring</b> or <b>mac-monitoring</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## policy-id *reference*

Synopsis	CPM protection policy
Context	<b>configure</b> <a href="#">service vpls string mesh-sdp string cpu-protection policy-id reference</a>
Tree	<a href="#">policy-id</a>
Reference	<b>configure</b> <a href="#">system security cpu-protection policy number</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **dhcp**

Synopsis	Enter the <b>dhcp</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">dhcp</a>
Tree	<a href="#">dhcp</a>
Introduced	16.0.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">dhcp</a> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **snoop** *boolean*

Synopsis	Allow DHCP snooping of DHCP messages on the SAP or SDP
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">dhcp</a> <a href="#">snoop</a> <i>boolean</i>
Tree	<a href="#">snoop</a>
Default	false
Introduced	16.0.R1
Platforms	All

## egress

Synopsis	Enter the <b>egress</b> context
Context	<b>configure service vpls string mesh-sdp string egress</b>
Tree	<b>egress</b>
Introduced	16.0.R1
Platforms	All

## filter

Synopsis	Enter the <b>filter</b> context
Context	<b>configure service vpls string mesh-sdp string egress filter</b>
Tree	<b>filter</b>
Introduced	16.0.R1
Platforms	All

## ip reference

Synopsis	IPv4 filter policy name
Context	<b>configure service vpls string mesh-sdp string egress filter ip reference</b>
Tree	<b>ip</b>
Reference	<b>configure filter ip-filter string</b>
Introduced	16.0.R1
Platforms	All

## ipv6 reference

Synopsis	IPv6 filter policy name
Context	<b>configure service vpls string mesh-sdp string egress filter ipv6 reference</b>
Tree	<b>ipv6</b>

Tree	<a href="#">eth-cfm</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## collect-lmm-fc-stats

Synopsis	Enter the <b>collect-lmm-fc-stats</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">mesh-sdp</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">collect-lmm-fc-stats</a>
Tree	<a href="#">collect-lmm-fc-stats</a>
Description	<p>Commands in this context configure per forwarding class (FC) LMM information collection.</p> <p>The commands <b>fc-in-profile</b> and <b>fc</b> in this context are mutually exclusive. The commands apply to either profile-aware or profile-unaware FCs respectively.</p> <p>This command and the <b>collect-lmm-stats</b> command are mutually exclusive when there is entity resource contention.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## fc keyword

Synopsis	Forwarding class name for profile-unaware counter
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">mesh-sdp</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">collect-lmm-fc-stats</a> <b>fc</b> <i>keyword</i>
Tree	<a href="#">fc</a>
Description	This command configures individual counters for the specified FCs without regard for profile. The system includes all countable packets that match a configured FC, regardless of profile, in this counter.

An FC specified as part of this command and for this specific context cannot be specified as a profile-aware FC using the **fc-in-profile** command under the **collect-lmm-fc-stats** context.

When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.

Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fc-in-profile** *keyword*

Synopsis	Forwarding class name for profile-aware counter
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">collect-lmm-fc-stats</a> <b>fc-in-profile</b> <i>keyword</i>
Tree	<a href="#">fc-in-profile</a>
Description	<p>This command configures individual counters for the specified FCs with regard to profile. The system includes all countable packets that match a configured FC and that are deemed to be in-profile in this counter.</p> <p>An FC specified as part of this command and for this specific context cannot be specified as a profile-unaware FC using the <b>fc</b> command under the <b>collect-lmm-fc-stats</b> context.</p> <p>When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.</p>
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **collect-lmm-stats** *boolean*

Synopsis	Collect statistics for loss measurement message tests
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">collect-lmm-stats</a> <i>boolean</i>
Tree	<a href="#">collect-lmm-stats</a>
Description	When configured to <b>true</b> , the router instantiates the statistical counter to transmit and receive packets for the LAG facility MEP bindings.

The **show eth-cfm collect-lmm-stats** command displays entities that have been enabled to collect transit and receive counters.

When configured to **false**, the router does not instantiate the counter and the LMM PDU associated with the MEP does not populate the counters in the packet.

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mep** *md-admin-name* *reference* *ma-admin-name* *reference* *mep-id* *number*

Synopsis	Enter the <b>mep</b> list instance
Context	<b>configure</b> <i>service vpls string mesh-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number</i>
Tree	<b>mep</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **md-admin-name** *reference*

Synopsis	Maintenance Domain (MD) name
Context	<b>configure</b> <i>service vpls string mesh-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number</i>
Tree	<b>mep</b>
Reference	<b>configure</b> <i>eth-cfm domain string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ma-admin-name** *reference*

Synopsis	Maintenance Association (MA) name
Context	<b>configure</b> <i>service vpls string mesh-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number</i>
Tree	<b>mep</b>
Reference	<b>configure</b> <i>eth-cfm domain string association string</i>
Notes	This element is part of a list key.

Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mep-id** *number*

Synopsis Maintenance Endpoint (MEP) ID  
Context **configure** [service vpls](#) *string* [mesh-sdp](#) *string* [eth-cfm mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* **mep-id** *number*

Options	all-def, mac-rem-err-xcon
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **priority** *number*

Synopsis	Priority of the AIS messages generated by the node
Context	<b>configure service vpls</b> <i>string</i> <b>mesh-sdp</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>ais</b> <b>priority</b> <i>number</i>
Tree	<a href="#">priority</a>
Range	0 to 7
Default	7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **alarm-notification**

Synopsis	Enter the <b>alarm-notification</b> context
Context	<b>configure service vpls</b> <i>string</i> <b>mesh-sdp</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>alarm-notification</b>
Tree	<a href="#">alarm-notification</a>
Description	<p>Commands in this context configure the Fault Notification Generator (FNG) time values to raise an alarm or reset the CCM defect alarm.</p> <p>Use these timers for network management processes. The timers are not tied into delaying the notification to the fault management system on the network element and do not affect fault propagation mechanisms.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fng-alarm-time** *number*

Synopsis	Time that must expire before an FNG alarm is raised
----------	---

Context	<b>configure service vpls string mesh-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number alarm-notification fng-alarm-time number</b>
Tree	<a href="#">fng-alarm-time</a>
Range	250   500   1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fng-reset-time number**

Synopsis	Time that must expire before an FNG alarm is reset
Context	<b>configure service vpls string mesh-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number alarm-notification fng-reset-time number</b>
Tree	<a href="#">fng-reset-time</a>
Range	250   500   1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm boolean**

Synopsis	Generate CCM messages
Context	<b>configure service vpls string mesh-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm boolean</b>
Tree	<a href="#">ccm</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm-ltm-priority number**

Synopsis	Priority of CCM and LTM messages transmitted by the MEP
Context	<b>configure service vpls string mesh-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm-ltm-priority number</b>
Tree	<a href="#">ccm-ltm-priority</a>
Range	0 to 7

Default	7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm-padding-size** *number*

Synopsis	Number of octets of padding to insert in CCM packets
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>ccm-padding-size</b> <i>number</i>
Tree	<a href="#">ccm-padding-size</a>
Description	This command sets the byte size of the optional Data TLV to be included in the ETH-CC PDU.  This command increases the size of the ETH-CC PDU by the configured value. The base size of the ETH-CC PDU, including the Interface Status TLV and Port Status TLV, is 83 bytes not including the Layer 2 encapsulation. CCM padding is not supported when the CCM interval (configured through <b>configure eth-cfm domain association ccm-interval</b> ) is less than 1 second.
Range	3 to 1500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **cfm-vlan-tag** *string*

Synopsis	VLAN tags to apply to CFM PDUs for egress processing
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>cfm-vlan-tag</b> <i>string</i>
Tree	<a href="#">cfm-vlan-tag</a>
String Length	1 to 9
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **csf**

Synopsis	Enable the <b>csf</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>csf</b>
Tree	<a href="#">csf</a>
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **multiplier** *decimal-number*

Synopsis Multiplication factor used to clear the CSF condition

Context **configure service vpls string mesh-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number csf multiplier decimal-number**

Tree [multiplier](#)

Range 0.0 | 2.0 to 30.0

Default 3.5

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **description** *string*

Synopsis Text description

Context **configure service vpls string mesh-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number description string**

Tree [description](#)

String Length 1 to 80

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **direction** *keyword*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Direction the MEP faces

Context **configure service vpls string mesh-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number direction keyword**

Tree [direction](#)

Default down

Options down, up

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## eth-test

Synopsis	Enable the <b>eth-test</b> context
Context	<b>configure</b> <a href="#">service vpls string mesh-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test</a>
Tree	<a href="#">eth-test</a>
Description	Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the <b>oam eth-cfm eth-test</b> command.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## bit-error-threshold *number*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	<b>configure</b> <a href="#">service vpls string mesh-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test bit-error-threshold number</a>
Tree	<a href="#">bit-error-threshold</a>
Range	0 to 11840
Default	1
Units	bit errors
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## test-pattern

Synopsis	Enter the <b>test-pattern</b> context
Context	<b>configure</b> <a href="#">service vpls string mesh-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test test-pattern</a>
Tree	<a href="#">test-pattern</a>
Description	Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **crc-tlv** *boolean*

Synopsis	Generate a CRC checksum
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">eth-test</a> <a href="#">test-pattern</a> <b>crc-tlv</b> <i>boolean</i>
Tree	<a href="#">crc-tlv</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **pattern** *keyword*

Synopsis	Test pattern for Ethernet Test frames
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">eth-test</a> <a href="#">test-pattern</a> <b>pattern</b> <i>keyword</i>
Tree	<a href="#">pattern</a>
Description	This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.
Default	all-zeros
Options	all-zeros, all-ones
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fault-propagation** *keyword*

Synopsis	Fault propagation for the MEP
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>fault-propagation</b> <i>keyword</i>
Tree	<a href="#">fault-propagation</a>
Options	use-if-status-tlv, suspend-ccm
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **grace**

Synopsis	Enter the <b>grace</b> context
----------	--------------------------------

Context	<b>configure service vpls</b> <i>string</i> <b>mesh-sdp</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>grace</b>
Tree	<b>grace</b>
Description	Commands in this context configure the Nokia ETH-CFM Grace function and the ITU-T Y.1731 Ethernet Expected Default (ETH-ED) function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## **eth-ed**

Synopsis	Enter the <b>eth-ed</b> context
Context	<b>configure service vpls</b> <i>string</i> <b>mesh-sdp</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>grace eth-ed</b>
Tree	<b>eth-ed</b>
Description	Commands in this context configure the ITU-T Y.1731 ETH-ED function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## **max-rx-defect-window** *number*

Synopsis	Maximum received ETH-ED expected defect window duration
Context	<b>configure service vpls</b> <i>string</i> <b>mesh-sdp</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>grace eth-ed max-rx-defect-window</b> <i>number</i>
Tree	<b>max-rx-defect-window</b>
Range	1 to 86400
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## **priority** *number*

Synopsis	Transmission priority for ETH-ED PDUs
Context	<b>configure service vpls</b> <i>string</i> <b>mesh-sdp</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>grace eth-ed priority</b> <i>number</i>
Tree	<b>priority</b>
Range	0 to 7

Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **rx-eth-ed** *boolean*

Synopsis Receive and process ETH-ED ITU-T Y.1731 PDUs on the MEP  
Context **configure** [service vpls](#) *string* [mesh-sdp](#) *string* [eth-cfm mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* [grace eth-ed rx-eth-ed](#) *boolean*  
Tree [rx-eth-ed](#)  
Description This command enables the reception and processing of the ITU-T Y.1731 ETH-ED PDU on the MEP.  
Default true  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **tx-eth-ed** *boolean*

Synopsis Transmit ETH-ED PDUs from the MEP  
Context **configure** [service vpls](#) *string* [mesh-sdp](#) *string* [eth-cfm mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* [grace eth-ed tx-eth-ed](#) *boolean*  
Tree [tx-eth-ed](#)  
Default false  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **eth-vsm-grace**

Synopsis Enter the **eth-vsm-grace** context  
Context **configure** [service vpls](#) *string* [mesh-sdp](#) *string* [eth-cfm mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* [grace eth-vsm-grace](#)  
Tree [eth-vsm-grace](#)  
Description Commands in this context configure the Nokia ETH-CFM Grace function.  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **rx-eth-vsm-grace** *boolean*

Synopsis	Receive and process Nokia ETH-CFM Grace PDU on the MEP
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">grace eth-vsm-grace rx-eth-vsm-grace</a> <i>boolean</i>
Tree	<a href="#">rx-eth-vsm-grace</a>
Description	When configured to <b>true</b> , the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.  When configured to <b>false</b> , the router disables the Nokia Grace function.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **tx-eth-vsm-grace** *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">grace eth-vsm-grace tx-eth-vsm-grace</a> <i>boolean</i>
Tree	<a href="#">tx-eth-vsm-grace</a>
Description	When configured to <b>true</b> , the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.  The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.  The operator must configure the <b>configure system eth-cfm grace</b> command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).  When configured to <b>false</b> , the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **lbm-svc-act-responder** *boolean*

Synopsis	Process service activation streams in ETH-CFM LBM
----------	---

Context	<b>configure service vpls</b> <i>string</i> <b>mesh-sdp</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>lbm-svc-act-responder</b> <i>boolean</i>
Tree	<a href="#">lbm-svc-act-responder</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **low-priority-defect** *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	<b>configure service vpls</b> <i>string</i> <b>mesh-sdp</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>low-priority-defect</b> <i>keyword</i>
Tree	<a href="#">low-priority-defect</a>
Default	mac-rem-err-xcon
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mac-address** *string*

Synopsis	MAC address of the MEP
Context	<b>configure service vpls</b> <i>string</i> <b>mesh-sdp</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>mac-address</b> <i>string</i>
Tree	<a href="#">mac-address</a>
Description	This command specifies the MAC address of the MEP. When unconfigured, the MAC address of the port (if the MEP is on a SAP) or the MAC address of a bridge (if the MEP is on a spoke) is used.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **one-way-delay-threshold** *number*

Synopsis	Threshold time limit for the one-way delay test
Context	<b>configure service vpls</b> <i>string</i> <b>mesh-sdp</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>one-way-delay-threshold</b> <i>number</i>
Tree	<a href="#">one-way-delay-threshold</a>
Range	0 to 600
Default	3

Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### primary-vlan *boolean*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	MEP provisioned using MA primary VLAN ID
Context	<b>configure</b> <i>service vpls string mesh-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number primary-vlan boolean</i>
Tree	<a href="#">primary-vlan</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### mip *primary-vlan (number | keyword)*

Synopsis	Enter the <b>mip</b> list instance
Context	<b>configure</b> <i>service vpls string mesh-sdp string eth-cfm mip primary-vlan (number   keyword)</i>
Tree	<a href="#">mip</a>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### primary-vlan *(number | keyword)*

Synopsis	VLAN ID to which the MIP is attached
Context	<b>configure</b> <i>service vpls string mesh-sdp string eth-cfm mip primary-vlan (number   keyword)</i>
Tree	<a href="#">mip</a>
Description	This command provides an option for linking a MIP with a Primary VLAN number or none. When the <b>none</b> option is provided, the MIP does not include the primary vlan.
Range	1 to 4094
Options	none

Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **cfm-vlan-tag** *string*

Synopsis	VLAN tags to apply to CFM PDUs for egress processing
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">eth-cfm mip primary-vlan</a> ( <i>number</i>   <i>keyword</i> ) <b>cfm-vlan-tag</b> <i>string</i>
Tree	<a href="#">cfm-vlan-tag</a>
Description	This command allows the CFM function to include additional VLAN tags to the CFM packet that are carried to the egress and treated as service delimited. Typically, this function is used to influence the VLAN carried over a binding that uses the vc-type vlan or the binding forces the use of one or more VLAN tag that results in a mismatch between the service data arriving at the binding and the locally generated ETH-CFM PDUs arriving at the same egress. When this command is included under the MEP or MIP configuration, the tags used as part of the configuration typically match the SAP service delimited configuration.
String Length	1 to 9
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mac-address** *string*

Synopsis	MAC address of the MIP
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">eth-cfm mip primary-vlan</a> ( <i>number</i>   <i>keyword</i> ) <b>mac-address</b> <i>string</i>
Tree	<a href="#">mac-address</a>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **squelch-ingress-ctag-levels** *number*

Synopsis	Squelch levels using additional VLAN C-Tag space
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">eth-cfm squelch-ingress-ctag-levels</a> <i>number</i>
Tree	<a href="#">squelch-ingress-ctag-levels</a>
Description	This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation

of the SAP or SDP binding plus an additional VLAN, up to a maximum tag length of two tags. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.

The list of levels must be a complete contiguous list from 0 up to the highest level to be dropped.

Range	0 to 7
Max. Instances	8
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **squelch-ingress-levels** *number*

Synopsis	Levels for which ETH-CFM packets are silently discarded
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">squelch-ingress-levels</a> <i>number</i>
Tree	<a href="#">squelch-ingress-levels</a>
Description	This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.

The list of levels must be a complete contiguous list from 0 up to the highest level that will be dropped.

Range	0 to 7
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **vmep-filter** *boolean*

Synopsis	Suppress eth-cfm PDUs based on level lower than or equal to configured Virtual MEP
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">vmep-filter</a> <i>boolean</i>
Tree	<a href="#">vmep-filter</a>
Default	false
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **etree-leaf** *boolean*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Enable etree leaf access-circuit status  
Context **configure** *service vpls string mesh-sdp string etree-leaf boolean*  
Tree *etree-leaf*  
Default false  
Introduced 16.0.R1  
Platforms All

### **etree-root-leaf-tag** *boolean*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Status for E-tree root leaf tag  
Context **configure** *service vpls string mesh-sdp string etree-root-leaf-tag boolean*  
Tree *etree-root-leaf-tag*  
Default false  
Introduced 16.0.R1  
Platforms All

### **fdb**

Synopsis Enter the **fdb** context  
Context **configure** *service vpls string mesh-sdp string fdb*  
Tree *fdb*  
Introduced 16.0.R1  
Platforms All

### **auto-learn-mac-protect** *boolean*

Synopsis	Enable automatic population of the MAC protect list
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">fdb</a> <b>auto-learn-mac-protect</b> <i>boolean</i>
Tree	<a href="#">auto-learn-mac-protect</a>
Default	false
Introduced	16.0.R4
Platforms	All

### **auto-learn-mac-protect-exclude-list** *reference*

Synopsis	Referenced MAC protect exclusion list name
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">fdb</a> <b>auto-learn-mac-protect-exclude-list</b> <i>reference</i>
Tree	<a href="#">auto-learn-mac-protect-exclude-list</a>
Description	<p>This command references the name of a MAC protect exclusion list.</p> <p>Dynamically-learned MAC Source Addresses (SA) are protected if they are learned on an object with ALMP configured and no exclusion list is associated with the object, or if the MAC SA does not match any entry in an associated exclusion list.</p> <p>An exclusion list can be used in multiple objects of a service. If a list is empty, ALMP does not exclude any learned MAC SAs from protection on the object.</p>
Reference	<b>configure</b> <a href="#">service mac-list</a> <i>string</i>
Introduced	20.5.R1
Platforms	All

### **mac-pinning** *boolean*

Synopsis	MAC address pinning in active status
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">fdb</a> <b>mac-pinning</b> <i>boolean</i>
Tree	<a href="#">mac-pinning</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **protected-src-mac-violation-action** *keyword*

Synopsis	Action to take whenever a relearn request for a protected MAC is received
----------	---

Context	<b>configure service vpls string mesh-sdp string fdb protected-src-mac-violation-action keyword</b>
Tree	<a href="#">protected-src-mac-violation-action</a>
Options	sdp-bind-oper-down, alarm-only, discard
Introduced	16.0.R4
Platforms	All

### **force-vc-forwarding keyword**

Synopsis	VC forwarding action
Context	<b>configure service vpls string mesh-sdp string force-vc-forwarding keyword</b>
Tree	<a href="#">force-vc-forwarding</a>
Options	vlan, qinq-c-tag-c-tag, qinq-s-tag-c-tag
Introduced	16.0.R1
Platforms	All

### **hash-label**

Synopsis	Enable the <b>hash-label</b> context
Context	<b>configure service vpls string mesh-sdp string hash-label</b>
Tree	<a href="#">hash-label</a>
Notes	The following elements are part of a choice: <b>entropy-label</b> or <b>hash-label</b> .
Introduced	16.0.R1
Platforms	All

### **signal-capability**

Synopsis	Enable the signaling of the hash label between PE nodes
Context	<b>configure service vpls string mesh-sdp string hash-label signal-capability</b>
Tree	<a href="#">signal-capability</a>
Introduced	16.0.R1
Platforms	All

## igmp-snooping

Synopsis	Enter the <b>igmp-snooping</b> context
Context	<b>configure service vpls string mesh-sdp string igmp-snooping</b>
Tree	<a href="#">igmp-snooping</a>
Introduced	16.0.R1
Platforms	All

## fast-leave *boolean*

Synopsis	Allow IGMP fast leave processing
Context	<b>configure service vpls string mesh-sdp string igmp-snooping fast-leave boolean</b>
Tree	<a href="#">fast-leave</a>
Default	false
Introduced	16.0.R1
Platforms	All

## import-policy *reference*

Synopsis	Import policy that filters IGMP packets
Context	<b>configure service vpls string mesh-sdp string igmp-snooping import-policy reference</b>
Tree	<a href="#">import-policy</a>
Reference	<b>configure policy-options policy-statement string</b>
Introduced	16.0.R1

Introduced	16.0.R1
Platforms	All

## policy reference

Synopsis	Multicast CAC policy name
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">igmp-snooping mcac</a> <a href="#">policy reference</a>
Tree	<a href="#">policy</a>
Description	<p>This command configures the name of the global channel bandwidth definition policy that is used for (H)MCAC and HQoS adjustment.</p> <p>Within the scope of HQoS adjustment, the channel definition policy under the group interface is used if redirection is unconfigured. In this case, the HQoS adjustment can be applied to IPoE subscribers in per-SAP replication mode.</p> <p>If redirection is configured, the channel bandwidth definition policy applied under the Layer 3 redirected interface is in effect.</p> <p>Hierarchical MCAC (HMCAC) is supported on two levels simultaneously:</p> <ul style="list-style-type: none"><li>• subscriber level and redirected interface when redirection is configured</li><li>• subscriber level and group-interface level when redirection is unconfigured</li></ul> <p>In HMCAC, the subscriber is checked against its bandwidth limits first, then against the bandwidth limits of the redirected or group interface. If redirection is configured but the policy is referenced only under the group interface, no admission control is executed (HMCAC or MCAC).</p>
Reference	<b>configure</b> <a href="#">mcac policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

## mrouter-port *boolean*

Synopsis	Operate port as a multicast router port
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">igmp-snooping mrouter-port</a> <i>boolean</i>
Tree	<a href="#">mrouter-port</a>
Default	false
Introduced	16.0.R1
Platforms	All

## query-interval *number*

Synopsis	Time between two consecutive host-query messages
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">igmp-snooping query-interval</a> <i>number</i>
Tree	<a href="#">query-interval</a>
Range	2 to 1024

Default	125
Units	seconds
Introduced	16.0.R1
Platforms	All

### **query-last-member-interval** *number*

Synopsis	Time between group-specific query messages
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">mesh-sdp string</a> <a href="#">igmp-snooping query-last-member-interval</a> <i>number</i>
Tree	<a href="#">query-last-member-interval</a>
Range	1 to 50
Default	10
Units	deciseconds
Introduced	16.0.R1
Platforms	All

### **query-response-interval** *number*

Synopsis	Time to wait for a response to the host-query messages
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">mesh-sdp string</a> <a href="#">igmp-snooping query-response-interval</a> <i>number</i>
Tree	<a href="#">query-response-interval</a>
Range	1 to 1023
Default	10
Units	seconds
Introduced	16.0.R1
Platforms	All

### **robust-count** *number*

Synopsis	Number of retries after expected message loss
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">mesh-sdp string</a> <a href="#">igmp-snooping robust-count</a> <i>number</i>
Tree	<a href="#">robust-count</a>
Range	2 to 7
Default	2

Introduced 16.0.R1  
Platforms All

### **router-alert-check** *boolean*

Synopsis Enable IP router alert check option  
Context **configure** [service vpls string mesh-sdp string igmp-snooping router-alert-check boolean](#)  
Tree [router-alert-check](#)  
Default true  
Introduced 16.0.R1  
Platforms All

### **send-queries** *boolean*

Synopsis Generate IGMP general queries  
Context **configure** [service vpls string mesh-sdp string igmp-snooping send-queries boolean](#)  
Tree [send-queries](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **static**

Synopsis Enter the **static** context  
Context **configure** [service vpls string mesh-sdp string igmp-snooping static](#)  
Tree [static](#)  
Introduced 16.0.R1  
Platforms All

### **group** [[group-address](#)] *string*

Synopsis Enter the **group** list instance  
Context **configure** [service vpls string mesh-sdp string igmp-snooping static group string](#)  
Tree [group](#)  
Introduced 16.0.R1

Platforms All

### **[group-address]** *string*

Synopsis Group address of static IGMP multicast channel

Context **configure** *service vpls string mesh-sdp string igmp-snooping static group string*

Tree *group*

Description This command configures an address that receives data on an interface. The IP address must be unique for each static group.

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms All

### **source** [*source-address*] *string*

Synopsis Add a list entry for **source**

Context **configure** *service vpls string mesh-sdp string igmp-snooping static group string source string*

Tree *source*

Notes The following elements are part of a mandatory choice: **source** or **starg**.

Introduced 16.0.R1

Platforms All

### **[source-address]** *string*

Synopsis Source IP address of multicast channel sending data

Context **configure** *service vpls string mesh-sdp string igmp-snooping static group string source string*

Tree *source*

Notes This element is part of a list key.

Introduced 16.0.R2

Platforms All

### **starg**

Synopsis any source address (\*,G)

Context	<b>configure service vpls string mesh-sdp string igmp-snooping static group string starg</b>
Tree	<b>starg</b>
Notes	The following elements are part of a mandatory choice: <b>source</b> or <b>starg</b> .
Introduced	16.0.R2
Platforms	All

### **version keyword**

Synopsis	IGMP protocol version
Context	<b>configure service vpls string mesh-sdp string igmp-snooping version keyword</b>
Tree	<b>version</b>
Default	3
Options	1, 2, 3
Introduced	16.0.R1
Platforms	All

### **ingress**

Synopsis	Enter the <b>ingress</b> context
Context	<b>configure service vpls string mesh-sdp string ingress</b>
Tree	<b>ingress</b>
Introduced	16.0.R1
Platforms	All

### **filter**

Synopsis	Enter the <b>filter</b> context
Context	<b>configure service vpls string mesh-sdp string ingress filter</b>
Tree	<b>filter</b>
Introduced	16.0.R1
Platforms	All

### **ip reference**

Synopsis	IPv4 filter policy name
----------	-------------------------

Context	<b>configure service vpls string mesh-sdp string ingress filter ip reference</b>
Tree	<b>ip</b>
Reference	<b>configure filter ip-filter string</b>
Introduced	16.0.R1
Platforms	All

### **ipv6 reference**

Synopsis	IPv6 filter policy name
Context	<b>configure service vpls string mesh-sdp string ingress filter ipv6 reference</b>
Tree	<b>ipv6</b>
Reference	<b>configure filter ipv6-filter string</b>
Introduced	16.0.R1
Platforms	All

### **mac reference**

Synopsis	MAC filter policy name
Context	<b>configure service vpls string mesh-sdp string ingress filter mac reference</b>
Tree	<b>mac</b>
Reference	<b>configure filter mac-filter string</b>
Introduced	16.0.R1
Platforms	All

### **qos**

Synopsis	Enter the <b>qos</b> context
Context	<b>configure service vpls string mesh-sdp string ingress qos</b>
Tree	<b>qos</b>
Introduced	16.0.R1
Platforms	All

### **network**

Synopsis	Enter the <b>network</b> context
----------	----------------------------------

Context	<b>configure service vpls string mesh-sdp string ingress qos network</b>
Tree	<b>network</b>
Introduced	16.0.R1
Platforms	All

### **fp-redirect-group**

Synopsis	Enter the <b>fp-redirect-group</b> context
Context	<b>configure service vpls string mesh-sdp string ingress qos network fp-redirect-group</b>
Tree	<b>fp-redirect-group</b>
Introduced	16.0.R1
Platforms	All

### **group-name** *reference*

Synopsis	Name of the forwarding plane queue group template
Context	<b>configure service vpls string mesh-sdp string ingress qos network fp-redirect-group group-name reference</b>
Tree	<b>group-name</b>
Reference	<b>configure qos queue-group-templates ingress queue-group string</b>
Introduced	16.0.R1
Platforms	All

### **instance** *number*

Synopsis	Instance of the forwarding-plane ingress Queue Group for this SDP binding
Context	<b>configure service vpls string mesh-sdp string ingress qos network fp-redirect-group instance number</b>
Tree	<b>instance</b>
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

### **policy-name** *reference*

Synopsis	Network policy ID
----------	-------------------

Context	<b>configure service vpls string mesh-sdp string ingress qos network policy-name reference</b>
Tree	<a href="#">policy-name</a>
Reference	<b>configure qos network string</b>
Introduced	16.0.R1
Platforms	All

### **vc-label number**

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Ingress MPLS VC label to send packets to the far end
Context	<b>configure service vpls string mesh-sdp string ingress vc-label number</b>
Tree	<a href="#">vc-label</a>
Range	1 to 1048575
Introduced	16.0.R1
Platforms	All

### **mld-snooping**

Synopsis	Enter the <b>mld-snooping</b> context
Context	<b>configure service vpls string mesh-sdp string mld-snooping</b>
Tree	<a href="#">mld-snooping</a>
Introduced	16.0.R1
Platforms	All

### **fast-leave boolean**

Synopsis	Allow IGMP fast leave processing
Context	<b>configure service vpls string mesh-sdp string mld-snooping fast-leave boolean</b>
Tree	<a href="#">fast-leave</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **import-policy** *reference*

Synopsis	Import policy that filters IGMP packets
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">mld-snooping</a> <a href="#">import-policy</a> <i>reference</i>
Tree	<a href="#">import-policy</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **maximum-number-groups** *number*

Synopsis	Maximum groups allowed
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">mld-snooping</a> <a href="#">maximum-number-groups</a> <i>number</i>
Tree	<a href="#">maximum-number-groups</a>
Range	1 to 16000
Introduced	16.0.R1
Platforms	All

### **mrouter-port** *boolean*

Synopsis	Operate port as a multicast router port
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">mld-snooping</a> <a href="#">mrouter-port</a> <i>boolean</i>
Tree	<a href="#">mrouter-port</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **query-interval** *number*

Synopsis	Time between two consecutive host-query messages
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">mld-snooping</a> <a href="#">query-interval</a> <i>number</i>
Tree	<a href="#">query-interval</a>
Range	2 to 1024
Default	125

Units	seconds
Introduced	16.0.R1
Platforms	All

### **query-last-member-interval** *number*

Synopsis	Time between group-specific query messages
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">mld-snooping</a> <a href="#">query-last-member-interval</a> <i>number</i>
Tree	<a href="#">query-last-member-interval</a>
Range	1 to 50
Default	10
Units	deciseconds
Introduced	16.0.R1
Platforms	All

### **query-response-interval** *number*

Synopsis	Time to wait for a response to the host-query messages
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">mld-snooping</a> <a href="#">query-response-interval</a> <i>number</i>
Tree	<a href="#">query-response-interval</a>
Range	1 to 1023
Default	10
Units	seconds
Introduced	16.0.R1
Platforms	All

### **robust-count** *number*

Synopsis	Number of retries after expected message loss
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">mld-snooping</a> <a href="#">robust-count</a> <i>number</i>
Tree	<a href="#">robust-count</a>
Range	2 to 7
Default	2
Introduced	16.0.R1

Platforms All

### **router-alert-check** *boolean*

Synopsis Enable IP router alert check option  
Context **configure** [service vpls](#) *string* [mesh-sdp](#) *string* [mld-snooping](#) **router-alert-check** *boolean*  
Tree [router-alert-check](#)  
Default true  
Introduced 16.0.R1  
Platforms All

### **send-queries** *boolean*

Synopsis Generate IGMP general queries  
Context **configure** [service vpls](#) *string* [mesh-sdp](#) *string* [mld-snooping](#) **send-queries** *boolean*  
Tree [send-queries](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **static**

Synopsis Enter the **static** context  
Context **configure** [service vpls](#) *string* [mesh-sdp](#) *string* [mld-snooping](#) **static**  
Tree [static](#)  
Introduced 16.0.R1  
Platforms All

### **group** [[group-address](#)] *string*

Synopsis Enter the **group** list instance  
Context **configure** [service vpls](#) *string* [mesh-sdp](#) *string* [mld-snooping](#) **static** **group** *string*  
Tree [group](#)  
Introduced 16.0.R1  
Platforms All

### [group-address] *string*

Synopsis	Group address of multicast channel
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">mld-snooping</a> <a href="#">static</a> <a href="#">group</a> <i>string</i>
Tree	<a href="#">group</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **source** [[source-address](#)] *string*

Synopsis	Add a list entry for <b>source</b>
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">mld-snooping</a> <a href="#">static</a> <a href="#">group</a> <i>string</i> <b>source</b> <i>string</i>
Tree	<a href="#">source</a>
Notes	The following elements are part of a mandatory choice: <b>source</b> or <b>starg</b> .
Introduced	16.0.R1
Platforms	All

### [[source-address](#)] *string*

Synopsis	Source IP address
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">mld-snooping</a> <a href="#">static</a> <a href="#">group</a> <i>string</i> <a href="#">source</a> <i>string</i>
Tree	<a href="#">source</a>
Notes	This element is part of a list key.
Introduced	16.0.R2
Platforms	All

### **starg**

Synopsis	any source address (*,G)
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">mld-snooping</a> <a href="#">static</a> <a href="#">group</a> <i>string</i> <b>starg</b>
Tree	<a href="#">starg</a>
Notes	The following elements are part of a mandatory choice: <b>source</b> or <b>starg</b> .

Introduced 16.0.R2  
Platforms All

### **version** *keyword*

Synopsis Version of MLD running on the SAP or SDP  
Context **configure** [service vpls](#) *string* [mesh-sdp](#) *string* [mld-snooping](#) **version** *keyword*  
Tree [version](#)  
Default 2  
Options 1, 2  
Introduced 16.0.R1  
Platforms All

### **mrp**

Synopsis Enter the **mrp** context  
Context **configure** [service vpls](#) *string* [mesh-sdp](#) *string* **mrp**  
Tree [mrp](#)  
Introduced 20.10.R1  
Platforms All

### **join-time** *number*

Synopsis Maximum rate for attribute join messages sent on SDP  
Context **configure** [service vpls](#) *string* [mesh-sdp](#) *string* **mrp** [join-time](#) *number*  
Tree [join-time](#)  
Range 1 to 10  
Default 2  
Units deciseconds  
Introduced 20.10.R1  
Platforms All

### **leave-all-time** *number*

Synopsis Frequency of LeaveAll PDUs by LeaveAll state machine

Context	<b>configure service vpls string mesh-sdp string mrp leave-all-time number</b>
Tree	<a href="#">leave-all-time</a>
Range	60 to 300
Default	100
Units	deciseconds
Introduced	20.10.R1
Platforms	All

### **leave-time number**

Synopsis	Time in LV state before transition to MT state
Context	<b>configure service vpls string mesh-sdp string mrp leave-time number</b>
Tree	<a href="#">leave-time</a>
Range	30 to 60
Default	30
Units	deciseconds
Introduced	20.10.R1
Platforms	All

### **periodic-time number**

Synopsis	Frequency of periodic events generated by state machine
Context	<b>configure service vpls string mesh-sdp string mrp periodic-time number</b>
Tree	<a href="#">periodic-time</a>
Range	10 to 100
Default	10
Units	deciseconds
Introduced	20.10.R1
Platforms	All

### **periodic-timer boolean**

Synopsis	Enable the Periodic Transmission Timer
Context	<b>configure service vpls string mesh-sdp string mrp periodic-timer boolean</b>
Tree	<a href="#">periodic-timer</a>

Default	false
Introduced	20.10.R1
Platforms	All

### **policy reference**

Synopsis	MRP policy to control Group B-MAC attributes
Context	<b>configure</b> <a href="#">service vpls string mesh-sdp string mrp policy reference</a>
Tree	<a href="#">policy</a>
Reference	<b>configure</b> <a href="#">service mrp policy string</a>
Introduced	20.10.R1
Platforms	All

### **pbb**

Synopsis	Enter the <b>pbb</b> context
Context	<b>configure</b> <a href="#">service vpls string mesh-sdp string pbb</a>
Tree	<a href="#">pbb</a>
Introduced	20.10.R1
Platforms	All

### **fault-propagation**

Synopsis	Enter the <b>fault-propagation</b> context
Context	<b>configure</b> <a href="#">service vpls string mesh-sdp string pbb fault-propagation</a>
Tree	<a href="#">fault-propagation</a>
Introduced	20.10.R1
Platforms	All

### **backbone-mac-address** [[address](#)] *string*

Synopsis	Add a list entry for <b>backbone-mac-address</b>
Context	<b>configure</b> <a href="#">service vpls string mesh-sdp string pbb fault-propagation backbone-mac-address string</a>
Tree	<a href="#">backbone-mac-address</a>

Introduced 20.10.R1  
Platforms All

### **[address]** *string*

Synopsis Backbone MAC address  
Context **configure** [service vpls string](#) [mesh-sdp string](#) [pbb fault-propagation backbone-mac-address string](#)  
Tree [backbone-mac-address](#)  
Notes This element is part of a list key.  
Introduced 20.10.R1  
Platforms All

### **backbone-mac-name** [\[name\]](#) *reference*

Synopsis Add a list entry for **backbone-mac-name**  
Context **configure** [service vpls string](#) [mesh-sdp string](#) [pbb fault-propagation backbone-mac-name reference](#)  
Tree [backbone-mac-name](#)  
Introduced 20.10.R1  
Platforms All

### **[name]** *reference*

Synopsis Backbone MAC address name  
Context **configure** [service vpls string](#) [mesh-sdp string](#) [pbb fault-propagation backbone-mac-name reference](#)  
Tree [backbone-mac-name](#)  
Reference **configure** [service pbb mac string](#)  
Notes This element is part of a list key.  
Introduced 20.10.R1  
Platforms All

## **vc-type** *keyword*

### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Type of virtual circuit (VC) associated with the SDP binding; VPLS not supported
Context	<b>configure service vpls string mesh-sdp string vc-type keyword</b>
Tree	<b>vc-type</b>
Default	ether
Options	ether, vlan
Introduced	16.0.R1
Platforms	All

## **vlan-vc-tag** *number*

Synopsis	SDP bind VC tag
Context	<b>configure service vpls string mesh-sdp string vlan-vc-tag number</b>
Tree	<b>vlan-vc-tag</b>
Range	0 to 4094
Introduced	16.0.R1
Platforms	All

## **mfib**

Synopsis	Enter the <b>mfib</b> context
Context	<b>configure service vpls string mfib</b>
Tree	<b>mfib</b>
Introduced	16.0.R1
Platforms	All

## **table**

Synopsis	Enter the <b>table</b> context
Context	<b>configure service vpls string mfib table</b>
Tree	<b>table</b>
Introduced	16.0.R1

Platforms All

### **high-wmark** *number*

Synopsis High watermark for the MFIB table  
Context **configure service vpls string mfib table high-wmark number**  
Tree [high-wmark](#)  
Range 0 to 100  
Default 95  
Introduced 16.0.R1  
Platforms All

### **low-wmark** *number*

Synopsis Low watermark for the MFIB table  
Context **configure service vpls string mfib table low-wmark number**  
Tree [low-wmark](#)  
Range 0 to 100  
Default 90  
Introduced 16.0.R1  
Platforms All

### **size** *number*

Synopsis Maximum SG entries in the MFIB  
Context **configure service vpls string mfib table size number**  
Tree [size](#)  
Range 1 to 40959  
Introduced 16.0.R1  
Platforms All

### **mld-snooping**

Synopsis Enter the **mld-snooping** context  
Context **configure service vpls string mld-snooping**

Tree	<a href="#">mld-snooping</a>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of snooping
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mld-snooping</a> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **evpn-proxy**

Synopsis	Enter the <b>evpn-proxy</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mld-snooping</a> <b>evpn-proxy</b>
Tree	<a href="#">evpn-proxy</a>
Introduced	20.10.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of EVPN proxy
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mld-snooping</a> <b>evpn-proxy</b> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	20.10.R1
Platforms	All

### **mvr**

Synopsis	Enter the <b>mvr</b> context
----------	------------------------------

Context	<b>configure service vpls string mld-snooping mvr</b>
Tree	<b>mvr</b>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of MVR
Context	<b>configure service vpls string mld-snooping mvr admin-state keyword</b>
Tree	<b>admin-state</b>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure service vpls string mld-snooping mvr description string</b>
Tree	<b>description</b>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **group-policy** *string*

Synopsis	Policy that applies MVR
Context	<b>configure service vpls string mld-snooping mvr group-policy string</b>
Tree	<b>group-policy</b>
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

### **query-interval** *number*

Synopsis	Time between two consecutive host-query messages
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mld-snooping query-interval</a> <i>number</i>
Tree	<a href="#">query-interval</a>
Range	1 to 65535
Default	125
Units	seconds
Introduced	16.0.R1
Platforms	All

### **query-source-address** (*keyword* | *ipv6-address*)

Synopsis	Source IP address used in MLD queries
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mld-snooping query-source-address</a> ( <i>keyword</i>   <i>ipv6-address</i> )
Tree	<a href="#">query-source-address</a>
Default	system
Options	system
Introduced	16.0.R1
Platforms	All

### **report-source-address** *string*

Synopsis	Source IP address used when generating MLD reports
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mld-snooping report-source-address</a> <i>string</i>
Tree	<a href="#">report-source-address</a>
Introduced	16.0.R1
Platforms	All

### **robust-count** *number*

Synopsis	Number of retries after expected message loss
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mld-snooping robust-count</a> <i>number</i>
Tree	<a href="#">robust-count</a>
Range	1 to 255

Default	2
Introduced	16.0.R1
Platforms	All

## mrp

Synopsis	Enter the <b>mrp</b> context
Context	<b>configure</b> <a href="#">service vpls string mrp</a>
Tree	<a href="#">mrp</a>
Introduced	20.10.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of MRP
Context	<b>configure</b> <a href="#">service vpls string mrp admin-state keyword</a>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	20.10.R1
Platforms	All

## mmp

Synopsis	Enter the <b>mmp</b> context
Context	<b>configure</b> <a href="#">service vpls string mmp mmp</a>
Tree	<a href="#">mmp</a>
Introduced	20.10.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of MMP
Context	<b>configure</b> <a href="#">service vpls string mmp mmp admin-state keyword</a>
Tree	<a href="#">admin-state</a>

Options	enable, disable
Introduced	20.10.R1
Platforms	All

### **attribute-table**

Synopsis	Enter the <b>attribute-table</b> context
Context	<b>configure service vpls string mrp mmp attribute-table</b>
Tree	<a href="#">attribute-table</a>
Introduced	20.10.R1
Platforms	All

### **high-wmark *number***

Synopsis	High watermark for the MMRP attribute table
Context	<b>configure service vpls string mrp mmp attribute-table high-wmark <i>number</i></b>
Tree	<a href="#">high-wmark</a>
Range	0 to 100
Default	95
Introduced	20.10.R1
Platforms	All

### **low-wmark *number***

Synopsis	Low watermark for the MMRP attribute table
Context	<b>configure service vpls string mrp mmp attribute-table low-wmark <i>number</i></b>
Tree	<a href="#">low-wmark</a>
Range	0 to 100
Default	90
Introduced	20.10.R1
Platforms	All

### **size *number***

Synopsis	Maximum number of attributes accepted by B-VPLS
----------	---

Context	<b>configure service vpls string mrp mmp attribute-table size number</b>
Tree	<b>size</b>
Range	1 to 8192
Default	2048
Introduced	20.10.R1
Platforms	All

### **end-station-only** *boolean*

Synopsis	Prevent generation or processing of MMRP messages
Context	<b>configure service vpls string mrp mmp end-station-only boolean</b>
Tree	<b>end-station-only</b>
Default	false
Introduced	20.10.R1
Platforms	All

### **flood-time** *number*

Synopsis	Time when traffic is flooded after status change
Context	<b>configure service vpls string mrp mmp flood-time number</b>
Tree	<b>flood-time</b>
Range	3 to 600
Introduced	20.10.R1
Platforms	All

### **multicast-info-policy** *reference*

Synopsis	Multicast information policy
Context	<b>configure service vpls string multicast-info-policy reference</b>
Tree	<b>multicast-info-policy</b>
Reference	<b>configure multicast-management multicast-info-policy string</b>
Introduced	16.0.R1
Platforms	All

## **pbb**

Synopsis	Enter the <b>pbb</b> context
Context	<b>configure service vpls string pbb</b>
Tree	<a href="#">pbb</a>
Introduced	16.0.R1
Platforms	All

## **backbone-vpls** [[backbone-vpls-service-name](#)] *reference*

Synopsis	Enter the <b>backbone-vpls</b> list instance
Context	<b>configure service vpls string pbb backbone-vpls reference</b>
Tree	<a href="#">backbone-vpls</a>
Max. Instances	1
Introduced	16.0.R1
Platforms	All

## **[backbone-vpls-service-name]** *reference*

Synopsis	Service name
Context	<b>configure service vpls string pbb backbone-vpls reference</b>
Tree	<a href="#">backbone-vpls</a>
Reference	<b>configure service vpls string</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## **fdb**

Synopsis	Enter the <b>fdb</b> context
Context	<b>configure service vpls string pbb backbone-vpls reference fdb</b>
Tree	<a href="#">fdb</a>
Introduced	20.2.R1
Platforms	All

### **protected-src-mac-violation-action** *keyword*

Synopsis	Action taken upon a relearn request for protected MAC
Context	<b>configure</b> <a href="#">service vpls string pbb backbone-vpls reference</a> <a href="#">fdb protected-src-mac-violation-action</a> <i>keyword</i>
Tree	<a href="#">protected-src-mac-violation-action</a>
Options	discard
Introduced	20.5.R1
Platforms	All

### **igmp-snooping**

Synopsis	Enter the <b>igmp-snooping</b> context
Context	<b>configure</b> <a href="#">service vpls string pbb backbone-vpls reference</a> <a href="#">igmp-snooping</a>
Tree	<a href="#">igmp-snooping</a>
Introduced	16.0.R1
Platforms	All

### **mrouter-destination** [[mac-reference](#)] *reference*

Synopsis	Add a list entry for <b>mrouter-destination</b>
Context	<b>configure</b> <a href="#">service vpls string pbb backbone-vpls reference</a> <a href="#">igmp-snooping mrouter-destination</a> <i>reference</i>
Tree	<a href="#">mrouter-destination</a>
Introduced	16.0.R1
Platforms	All

### **[mac-reference]** *reference*

Synopsis	Mac name reference
Context	<b>configure</b> <a href="#">service vpls string pbb backbone-vpls reference</a> <a href="#">igmp-snooping mrouter-destination</a> <i>reference</i>
Tree	<a href="#">mrouter-destination</a>
Reference	<b>configure</b> <a href="#">service pbb mac</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1

Platforms All

### **isid** *number*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Backbone VPLS ISID  
Context **configure** *service vpls string pbb backbone-vpls reference isid number*  
Tree [isid](#)  
Range 0 to 16777215  
Notes This element is mandatory.  
Introduced 16.0.R1  
Platforms All

### **mesh-sdp** [[sdp-bind-id](#)] *reference*

Synopsis Enter the **mesh-sdp** list instance  
Context **configure** *service vpls string pbb backbone-vpls reference mesh-sdp reference*  
Tree [mesh-sdp](#)  
Introduced 16.0.R1  
Platforms All

### **[sdp-bind-id]** *reference*

Synopsis Backbone VPLS SDP Binding ID  
Context **configure** *service vpls string pbb backbone-vpls reference mesh-sdp reference*  
Tree [mesh-sdp](#)  
Reference **configure** *service vpls string mesh-sdp string*  
Notes This element is part of a list key.  
Introduced 16.0.R1  
Platforms All

## igmp-snooping

Synopsis	Enter the <b>igmp-snooping</b> context
Context	<b>configure service vpls string pbb backbone-vpls reference mesh-sdp reference igmp-snooping</b>
Tree	<a href="#">igmp-snooping</a>
Introduced	16.0.R1
Platforms	All

## mrouter-port *boolean*

Synopsis	Operate port as a multicast router port
Context	<b>configure service vpls string pbb backbone-vpls reference mesh-sdp reference igmp-snooping mrouter-port boolean</b>
Tree	<a href="#">mrouter-port</a>
Default	false
Introduced	16.0.R1
Platforms	All

## mld-snooping

Synopsis	Enter the <b>mld-snooping</b> context
Context	<b>configure service vpls string pbb backbone-vpls reference mesh-sdp reference mld-snooping</b>
Tree	<a href="#">mld-snooping</a>
Introduced	16.0.R1
Platforms	All

## mrouter-port *boolean*

Synopsis	Operate port as a multicast router port
Context	<b>configure service vpls string pbb backbone-vpls reference mesh-sdp reference mld-snooping mrouter-port boolean</b>
Tree	<a href="#">mrouter-port</a>
Default	false
Introduced	16.0.R1
Platforms	All

## mld-snooping

Synopsis	Enter the <b>mld-snooping</b> context
Context	<b>configure service vpls string pbb backbone-vpls reference mld-snooping</b>
Tree	<b>mld-snooping</b>
Introduced	16.0.R1
Platforms	All

## mrouter-destination [[mac-reference](#)] *reference*

Synopsis	Add a list entry for <b>mrouter-destination</b>
Context	<b>configure service vpls string pbb backbone-vpls reference mld-snooping mrouter-destination reference</b>
Tree	<b>mrouter-destination</b>
Introduced	16.0.R1
Platforms	All

## [[mac-reference](#)] *reference*

Synopsis	Mac name reference
Context	<b>configure service vpls string pbb backbone-vpls reference mld-snooping mrouter-destination reference</b>
Tree	<b>mrouter-destination</b>
Reference	<b>configure service pbb mac string</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## sap [[sap-id](#)] *reference*

Synopsis	Enter the <b>sap</b> list instance
Context	<b>configure service vpls string pbb backbone-vpls reference sap reference</b>
Tree	<b>sap</b>
Introduced	16.0.R1
Platforms	All

### [sap-id] *reference*

Synopsis	Backbone VPLS SAP
Context	<b>configure</b> <a href="#">service vpls string pbb backbone-vpls reference sap reference</a>
Tree	<a href="#">sap</a>
Reference	<b>configure</b> <a href="#">service vpls string sap string</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### igmp-snooping

Synopsis	Enter the <b>igmp-snooping</b> context
Context	<b>configure</b> <a href="#">service vpls string pbb backbone-vpls reference sap reference igmp-snooping</a>
Tree	<a href="#">igmp-snooping</a>
Introduced	16.0.R1
Platforms	All

### mrouter-port *boolean*

Synopsis	Operate port as a multicast router port
Context	<b>configure</b> <a href="#">service vpls string pbb backbone-vpls reference sap reference igmp-snooping mrouter-port boolean</a>
Tree	<a href="#">mrouter-port</a>
Default	false
Introduced	16.0.R1
Platforms	All

### mld-snooping

Synopsis	Enter the <b>mld-snooping</b> context
Context	<b>configure</b> <a href="#">service vpls string pbb backbone-vpls reference sap reference mld-snooping</a>
Tree	<a href="#">mld-snooping</a>
Introduced	16.0.R1

Platforms All

### **mrouter-port** *boolean*

Synopsis Operate port as a multicast router port

Context **configure** [service vpls string pbb backbone-vpls reference sap reference mld-snooping mrouter-port boolean](#)

Tree [mrouter-port](#)

Default false

Introduced 16.0.R1

Platforms All

### **spoke-sdp** [[sdp-bind-id](#)] *reference*

Synopsis Enter the **spoke-sdp** list instance

Context **configure** [service vpls string pbb backbone-vpls reference spoke-sdp reference](#)

Tree [spoke-sdp](#)

Introduced 16.0.R1

Platforms All

### **[sdp-bind-id]** *reference*

Synopsis Backbone VPLS SDP Binding ID

Context **configure** [service vpls string pbb backbone-vpls reference spoke-sdp reference](#)

Tree [spoke-sdp](#)

Reference **configure** [service vpls string spoke-sdp string](#)

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms All

### **igmp-snooping**

Synopsis Enter the **igmp-snooping** context

Context **configure** [service vpls string pbb backbone-vpls reference spoke-sdp reference igmp-snooping](#)

Tree [igmp-snooping](#)

Introduced 16.0.R1  
Platforms All

### **mrouter-port** *boolean*

Synopsis Operate port as a multicast router port  
Context **configure** [service](#) [vpls](#) [string](#) [pbb](#) [backbone-vpls](#) [reference](#) [spoke-sdp](#) [reference](#) [igmp-snooping](#) [mrouter-port](#) *boolean*  
Tree [mrouter-port](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **mld-snooping**

Synopsis Enter the **mld-snooping** context  
Context **configure** [service](#) [vpls](#) [string](#) [pbb](#) [backbone-vpls](#) [reference](#) [spoke-sdp](#) [reference](#) [mld-snooping](#)  
Tree [mld-snooping](#)  
Introduced 16.0.R1  
Platforms All

### **mrouter-port** *boolean*

Synopsis Operate port as a multicast router port  
Context **configure** [service](#) [vpls](#) [string](#) [pbb](#) [backbone-vpls](#) [reference](#) [spoke-sdp](#) [reference](#) [mld-snooping](#) [mrouter-port](#) *boolean*  
Tree [mrouter-port](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **force-qtag-forwarding** *boolean*

Synopsis Add an IEEE 802.1q tag after C-MAC addresses PBB header  
Context **configure** [service](#) [vpls](#) [string](#) [pbb](#) [force-qtag-forwarding](#) *boolean*

Tree	<a href="#">force-qtag-forwarding</a>
Default	false
Introduced	16.0.R1
Platforms	All

## **i-vpls-mac-flush**

Synopsis	Enter the <b>i-vpls-mac-flush</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <a href="#">string pbb</a> <a href="#">i-vpls-mac-flush</a>
Tree	<a href="#">i-vpls-mac-flush</a>
Introduced	16.0.R1
Platforms	All

## **bgp-evpn**

Synopsis	Enter the <b>bgp-evpn</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <a href="#">string pbb</a> <a href="#">i-vpls-mac-flush</a> <a href="#">bgp-evpn</a>
Tree	<a href="#">bgp-evpn</a>
Introduced	16.0.R1
Platforms	All

## **send-to-bvpls** *boolean*

Synopsis	Send b-VPLS EVPN flush
Context	<b>configure</b> <a href="#">service vpls</a> <a href="#">string pbb</a> <a href="#">i-vpls-mac-flush</a> <a href="#">bgp-evpn</a> <a href="#">send-to-bvpls</a> <i>boolean</i>
Tree	<a href="#">send-to-bvpls</a>
Default	false
Introduced	16.0.R1
Platforms	All

## **tldp**

Synopsis	Enter the <b>tldp</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <a href="#">string pbb</a> <a href="#">i-vpls-mac-flush</a> <a href="#">tldp</a>
Tree	<a href="#">tldp</a>

Introduced 16.0.R1  
Platforms All

### **propagate-from-bvpls** *boolean*

Synopsis Propagate MAC flush message from B-VPLS into local I-VPLS  
Context **configure service vpls string pbb i-vpls-mac-flush tldp propagate-from-bvpls** *boolean*  
Tree [propagate-from-bvpls](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **send-on-bvpls-failure** *boolean*

Synopsis Send negative flush message (flush-all-from-me) on B-VPLS failure  
Context **configure service vpls string pbb i-vpls-mac-flush tldp send-on-bvpls-failure** *boolean*  
Tree [send-on-bvpls-failure](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **send-to-bvpls**

Synopsis Enter the **send-to-bvpls** context  
Context **configure service vpls string pbb i-vpls-mac-flush tldp send-to-bvpls**  
Tree [send-to-bvpls](#)  
Introduced 16.0.R1  
Platforms All

### **all-but-mine** *boolean*

Synopsis Generate LDP MAC withdraw message to b-VPLS  
Context **configure service vpls string pbb i-vpls-mac-flush tldp send-to-bvpls all-but-mine** *boolean*  
Tree [all-but-mine](#)  
Default false

Introduced 16.0.R1  
Platforms All

### **all-from-me** *boolean*

Synopsis Generate LDP MAC withdraw all from me message to b-VPLS  
Context **configure service vpls string pbb i-vpls-mac-flush tldp send-to-bvpls all-from-me boolean**  
Tree [all-from-me](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **mac-notification**

Synopsis Enter the **mac-notification** context  
Context **configure service vpls string pbb mac-notification**  
Tree [mac-notification](#)  
Introduced 16.0.R1  
Platforms All

### **admin-state** *keyword*

Synopsis Administrative state of MAC notification messages  
Context **configure service vpls string pbb mac-notification admin-state keyword**  
Tree [admin-state](#)  
Default disable  
Options enable, disable  
Introduced 16.0.R1  
Platforms All

### **count** *number*

Synopsis MAC notification messages count  
Context **configure service vpls string pbb mac-notification count number**  
Tree [count](#)

Range	1 to 10
Introduced	16.0.R1
Platforms	All

### **interval** *number*

Synopsis	Interval for MAC notification messages
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">pbb</a> <a href="#">mac-notification</a> <b>interval</b> <i>number</i>
Tree	<a href="#">interval</a>
Range	1 to 100
Units	deciseconds
Introduced	16.0.R1
Platforms	All

### **renotify** (*number* | *keyword*)

Synopsis	Re-notify interval for MAC-notification messages
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">pbb</a> <a href="#">mac-notification</a> <b>renotify</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">renotify</a>
Range	240 to 840
Default	none
Units	seconds
Options	none
Introduced	16.0.R1
Platforms	All

### **source-bmac**

Synopsis	Enter the <b>source-bmac</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">pbb</a> <b>source-bmac</b>
Tree	<a href="#">source-bmac</a>
Introduced	16.0.R1
Platforms	All

### **address string**

Synopsis	Base source B-MAC address for the B-VPLS
Context	<b>configure service vpls string pbb source-bmac address string</b>
Tree	<a href="#">address</a>
Introduced	16.0.R1
Platforms	All

### **use-es-bmac-lsb boolean**

Synopsis	Use LSB from Ethernet-segment backbone MAC
Context	<b>configure service vpls string pbb source-bmac use-es-bmac-lsb boolean</b>
Tree	<a href="#">use-es-bmac-lsb</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **use-mclag-bmac-lsb boolean**

Synopsis	Use MC LAG backbone MAC LSB
Context	<b>configure service vpls string pbb source-bmac use-mclag-bmac-lsb boolean</b>
Tree	<a href="#">use-mclag-bmac-lsb</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **pbb-type keyword**

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	PBB VPLS type
Context	<b>configure service vpls string pbb-type keyword</b>
Tree	<a href="#">pbb-type</a>
Options	b-vpls, i-vpls
Introduced	16.0.R1

Platforms All

### **pim-snooping**

Synopsis Enable the **pim-snooping** context  
Context **configure service vpls string pim-snooping**  
Tree [pim-snooping](#)  
Introduced 16.0.R1  
Platforms All

### **group-policy string**

Synopsis Group policy name  
Context **configure service vpls string pim-snooping group-policy string**  
Tree [group-policy](#)  
String Length 1 to 255  
Max. Instances 5  
Notes This element is ordered by the user.  
Introduced 16.0.R1  
Platforms All

### **hold-time number**

Synopsis Duration that allows the PIM-snooping switch to snoop all the PIM states in the VPLS  
Context **configure service vpls string pim-snooping hold-time number**  
Tree [hold-time](#)  
Range 0 to 300  
Default 90  
Units seconds  
Introduced 16.0.R1  
Platforms All

## ipv4

Synopsis	Enter the <b>ipv4</b> context
Context	<b>configure service vpls string pim-snooping ipv4</b>
Tree	<a href="#">ipv4</a>
Introduced	16.0.R1
Platforms	All

### **admin-state keyword**

Synopsis	Administrative state of snooping for multicast traffic
Context	<b>configure service vpls string pim-snooping ipv4 admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Introduced	16.0.R1
Platforms	All

## ipv6

Synopsis	Enter the <b>ipv6</b> context
Context	<b>configure service vpls string pim-snooping ipv6</b>
Tree	<a href="#">ipv6</a>
Introduced	16.0.R1
Platforms	All

### **admin-state keyword**

Synopsis	Administrative state of snooping for multicast traffic
Context	<b>configure service vpls string pim-snooping ipv6 admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Introduced	16.0.R1
Platforms	All

## provider-tunnel

Synopsis	Enable the <b>provider-tunnel</b> context
Context	<b>configure</b> <a href="#">service vpls string provider-tunnel</a>
Tree	<a href="#">provider-tunnel</a>
Introduced	19.7.R1
Platforms	All

## inclusive

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>inclusive</b> context
Context	<b>configure</b> <a href="#">service vpls string provider-tunnel inclusive</a>
Tree	<a href="#">inclusive</a>
Introduced	19.7.R1
Platforms	All

## admin-state *keyword*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of P2MP LSP as the I-PMSI
Context	<b>configure</b> <a href="#">service vpls string provider-tunnel inclusive admin-state keyword</a>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	19.7.R1
Platforms	All

## **data-delay-interval** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	I-PMSI data delay timer
Context	<b>configure service vpls string provider-tunnel inclusive data-delay-interval number</b>
Tree	<a href="#">data-delay-interval</a>
Range	3 to 180
Default	15
Units	seconds
Introduced	19.7.R1
Platforms	All

## **mldp**

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable/Disable MLDP
Context	<b>configure service vpls string provider-tunnel inclusive mldp</b>
Tree	<a href="#">mldp</a>
Notes	The following elements are part of a choice: <b>mldp</b> or <b>rsvp</b> .
Introduced	19.7.R1
Platforms	All

## **owner** *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Configure provider-tunnel owner
Context	<b>configure service vpls string provider-tunnel inclusive owner keyword</b>
Tree	<a href="#">owner</a>
Options	bgp-ad, bgp-vpls, bgp-evpn-mpls

Introduced 19.7.R1  
Platforms All

### **root-and-leaf** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Configure whether the provider tunnel acts as a leaf or both a root and leaf  
Context **configure** [service vpls](#) *string* [provider-tunnel](#) [inclusive](#) **root-and-leaf** *boolean*  
Tree [root-and-leaf](#)  
Default false  
Introduced 19.7.R1  
Platforms All

### **rsvp**

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enable the **rsvp** context  
Context **configure** [service vpls](#) *string* [provider-tunnel](#) [inclusive](#) **rsvp**  
Tree [rsvp](#)  
Notes The following elements are part of a choice: **mldp** or **rsvp**.  
Introduced 19.7.R1  
Platforms All

### **lsp-template** *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Configure LSP template name  
Context **configure** [service vpls](#) *string* [provider-tunnel](#) [inclusive](#) **rsvp** **lsp-template** *reference*

Tree	<a href="#">lsp-template</a>
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls</a> <a href="#">lsp-template</a> <i>string</i>
Introduced	19.7.R1
Platforms	All

## proxy-arp

Synopsis	Enable the <b>proxy-arp</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">proxy-arp</a>
Tree	<a href="#">proxy-arp</a>
Introduced	16.0.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of the proxy
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">proxy-arp</a> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

## age-time (*number* | *keyword*)

Synopsis	Aging timer for proxy entries, where entries are flushed upon timer expiry
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">proxy-arp</a> <b>age-time</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">age-time</a>
Range	60 to 86400
Default	never
Units	seconds
Options	never
Introduced	16.0.R1
Platforms	All

## duplicate-detect

Synopsis	Enter the <b>duplicate-detect</b> context
Context	<b>configure service vpls string proxy-arp duplicate-detect</b>
Tree	<a href="#">duplicate-detect</a>
Introduced	16.0.R1
Platforms	All

## anti-spoof-mac *string*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	MAC address to replace the proxy-ARP/ND offending entry's MAC
Context	<b>configure service vpls string proxy-arp duplicate-detect anti-spoof-mac string</b>
Tree	<a href="#">anti-spoof-mac</a>
Introduced	16.0.R1
Platforms	All

## hold-down-time (*number* | *keyword*)

Synopsis	Hold down time for a duplicate entry
Context	<b>configure service vpls string proxy-arp duplicate-detect hold-down-time (<i>number</i>   <i>keyword</i>)</b>
Tree	<a href="#">hold-down-time</a>
Range	2 to 60
Default	9
Units	minutes
Options	max
Introduced	16.0.R1
Platforms	All

## num-moves *number*

Synopsis	Number of moves required to declare a duplicate entry
----------	---

Context	<b>configure service vpls string proxy-arp duplicate-detect num-moves number</b>
Tree	<a href="#">num-moves</a>
Range	3 to 10
Default	5
Introduced	16.0.R1
Platforms	All

### **static-blackhole boolean**

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Consider anti-spoof MAC as black-hole static MAC in FDB
Context	<b>configure service vpls string proxy-arp duplicate-detect static-blackhole boolean</b>
Tree	<a href="#">static-blackhole</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **window number**

Synopsis	Time to monitor the MAC address in the anti-spoofing mechanism
Context	<b>configure service vpls string proxy-arp duplicate-detect window number</b>
Tree	<a href="#">window</a>
Range	1 to 15
Default	3
Units	minutes
Introduced	16.0.R1
Platforms	All

### **dynamic-arp**

Synopsis	Enter the <b>dynamic-arp</b> context
Context	<b>configure service vpls string proxy-arp dynamic-arp</b>
Tree	<a href="#">dynamic-arp</a>

Introduced 16.0.R1  
Platforms All

### **ip-address** [[ipv4-address](#)] *string*

Synopsis Enter the **ip-address** list instance  
Context **configure** [service vpls string proxy-arp dynamic-arp ip-address string](#)  
Tree [ip-address](#)  
Introduced 16.0.R1  
Platforms All

### **[ipv4-address]** *string*

Synopsis Proxy ARP IPv4 address  
Context **configure** [service vpls string proxy-arp dynamic-arp ip-address string](#)  
Tree [ip-address](#)  
Notes This element is part of a list key.  
Introduced 16.0.R1  
Platforms All

### **mac-list** *reference*

Synopsis MAC list for the dynamic entry  
Context **configure** [service vpls string proxy-arp dynamic-arp ip-address string mac-list reference](#)  
Tree [mac-list](#)  
Reference **configure** [service proxy-arp-nd mac-list list string](#)  
Introduced 16.0.R1  
Platforms All

### **resolve-retry-time** *number*

Synopsis Frequency at which the resolve messages are sent  
Context **configure** [service vpls string proxy-arp dynamic-arp ip-address string resolve-retry-time number](#)  
Tree [resolve-retry-time](#)

Range	1 to 60
Default	5
Units	minutes
Introduced	16.0.R1
Platforms	All

### **dynamic-populate** *boolean*

Synopsis	Populate proxy ARP entries from snooped GARP/ARP/ND messages on SAPs/SDP-bindings
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">proxy-arp</a> <b>dynamic-populate</b> <i>boolean</i>
Tree	<a href="#">dynamic-populate</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **evpn**

Synopsis	Enter the <b>evpn</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">proxy-arp</a> <b>evpn</b>
Tree	<a href="#">evpn</a>
Introduced	16.0.R1
Platforms	All

### **flood**

Synopsis	Enter the <b>flood</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">proxy-arp</a> <b>evpn</b> <b>flood</b>
Tree	<a href="#">flood</a>
Introduced	16.0.R1
Platforms	All

### **gratuitous-arp** *boolean*

Synopsis	Flood GARP-requests/GARP-replies to the EVPN
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">proxy-arp</a> <b>evpn</b> <b>flood</b> <b>gratuitous-arp</b> <i>boolean</i>

Tree	<a href="#">gratuitous-arp</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **unknown-arp-req** *boolean*

Synopsis	Flood ARP-requests (with source squelching) if there is no active proxy-ARP entry for requested IP
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">proxy-arp</a> <a href="#">evpn</a> <a href="#">flood</a> <a href="#">unknown-arp-req</a> <i>boolean</i>
Tree	<a href="#">unknown-arp-req</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **route-tag** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Route tag used on export policies to match MAC/IP routes generated by proxy-ARP or proxy-ND module
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">proxy-arp</a> <a href="#">evpn</a> <a href="#">route-tag</a> <i>number</i>
Tree	<a href="#">route-tag</a>
Range	0   1 to 255
Default	0
Introduced	16.0.R1
Platforms	All

### **process-arp-probes** *boolean*

Synopsis	Enable replies to DAD ARP probes
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">proxy-arp</a> <a href="#">process-arp-probes</a> <i>boolean</i>
Tree	<a href="#">process-arp-probes</a>
Default	true

Introduced 22.7.R1  
Platforms All

### **send-refresh** (*number* | *keyword*)

Synopsis Time at which to send a refresh message  
Context **configure** [service vpls string proxy-arp send-refresh](#) (*number* | *keyword*)  
Tree [send-refresh](#)  
Range 120 to 86400  
Default never  
Options never  
Introduced 16.0.R1  
Platforms All

### **static-arp**

Synopsis Enter the **static-arp** context  
Context **configure** [service vpls string proxy-arp static-arp](#)  
Tree [static-arp](#)  
Introduced 16.0.R1  
Platforms All

### **ip-address** [[ipv4-address](#)] *string*

Synopsis Enter the **ip-address** list instance  
Context **configure** [service vpls string proxy-arp static-arp ip-address string](#)  
Tree [ip-address](#)  
Introduced 16.0.R1  
Platforms All

### **[ipv4-address]** *string*

Synopsis Proxy ARP IPv4 address  
Context **configure** [service vpls string proxy-arp static-arp ip-address string](#)  
Tree [ip-address](#)

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **mac string**

Synopsis	Proxy ARP MAC address for static entry
Context	<b>configure service vpls string proxy-arp static-arp ip-address string mac string</b>
Tree	<b>mac</b>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **table-size number**

Synopsis	Maximum number of learned and static entries allowed in the proxy table of this service
Context	<b>configure service vpls string proxy-arp table-size number</b>
Tree	<b>table-size</b>
Range	1 to 16383
Default	250
Introduced	16.0.R1
Platforms	All

### **proxy-nd**

Synopsis	Enable the <b>proxy-nd</b> context
Context	<b>configure service vpls string proxy-nd</b>
Tree	<b>proxy-nd</b>
Introduced	16.0.R1
Platforms	All

### **admin-state keyword**

Synopsis	Administrative state of the proxy
Context	<b>configure service vpls string proxy-nd admin-state keyword</b>

Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **age-time** (*number* | *keyword*)

Synopsis	Aging timer for proxy entries, where entries are flushed upon timer expiry
Context	<b>configure</b> <a href="#">service vpls string proxy-nd age-time</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">age-time</a>
Range	60 to 86400
Default	never
Units	seconds
Options	never
Introduced	16.0.R1
Platforms	All

### **duplicate-detect**

Synopsis	Enter the <b>duplicate-detect</b> context
Context	<b>configure</b> <a href="#">service vpls string proxy-nd duplicate-detect</a>
Tree	<a href="#">duplicate-detect</a>
Introduced	16.0.R1
Platforms	All

### **anti-spoof-mac** *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	MAC address to replace the proxy-ARP/ND offending entry's MAC
Context	<b>configure</b> <a href="#">service vpls string proxy-nd duplicate-detect anti-spoof-mac string</a>
Tree	<a href="#">anti-spoof-mac</a>
Introduced	16.0.R1

Platforms All

### **hold-down-time** (*number* | *keyword*)

Synopsis Hold down time for a duplicate entry

Context **configure** *service vpls string proxy-nd duplicate-detect hold-down-time* (*number* | *keyword*)

Tree [hold-down-time](#)

Range 2 to 60

Default 9

Units minutes

Options max

Introduced 16.0.R1

Platforms All

### **num-moves** *number*

Synopsis Number of moves required to declare a duplicate entry

Context **configure** *service vpls string proxy-nd duplicate-detect num-moves number*

Tree [num-moves](#)

Range 3 to 10

Default 5

Introduced 16.0.R1

Platforms All

### **static-blackhole** *boolean*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Consider anti-spoof MAC as black-hole static MAC in FDB

Context **configure** *service vpls string proxy-nd duplicate-detect static-blackhole boolean*

Tree [static-blackhole](#)

Default false

Introduced 16.0.R1

Platforms All

### **window** *number*

Synopsis Time to monitor the MAC address in the anti-spoofing mechanism  
Context **configure** [service vpls](#) *string* [proxy-nd duplicate-detect](#) **window** *number*  
Tree [window](#)  
Range 1 to 15  
Default 3  
Units minutes  
Introduced 16.0.R1  
Platforms All

### **dynamic-neighbor**

Synopsis Enter the **dynamic-neighbor** context  
Context **configure** [service vpls](#) *string* [proxy-nd dynamic-neighbor](#)  
Tree [dynamic-neighbor](#)  
Introduced 16.0.R1  
Platforms All

### **ip-address** [[ipv6-address](#)] *string*

Synopsis Enter the **ip-address** list instance  
Context **configure** [service vpls](#) *string* [proxy-nd dynamic-neighbor ip-address](#) *string*  
Tree [ip-address](#)  
Introduced 16.0.R1  
Platforms All

### **[ipv6-address]** *string*

Synopsis Proxy ND IPv6 address  
Context **configure** [service vpls](#) *string* [proxy-nd dynamic-neighbor ip-address](#) *string*  
Tree [ip-address](#)  
Notes This element is part of a list key.

Introduced 16.0.R1  
Platforms All

### **mac-list** *reference*

Synopsis MAC list for the dynamic entry  
Context **configure** [service](#) [vpls](#) *string* [proxy-nd](#) [dynamic-neighbor](#) [ip-address](#) *string* **mac-list** *reference*  
Tree [mac-list](#)  
Reference **configure** [service](#) [proxy-arp-nd](#) [mac-list](#) *list* *string*  
Introduced 16.0.R1  
Platforms All

### **resolve-retry-time** *number*

Synopsis Frequency at which the resolve messages are sent  
Context **configure** [service](#) [vpls](#) *string* [proxy-nd](#) [dynamic-neighbor](#) [ip-address](#) *string* **resolve-retry-time** *number*  
Tree [resolve-retry-time](#)  
Range 1 to 60  
Default 5  
Units minutes  
Introduced 16.0.R1  
Platforms All

### **dynamic-populate** *boolean*

Synopsis Populate proxy ARP entries from snooped GARP/ARP/ND messages on SAPs/SDP-bindings  
Context **configure** [service](#) [vpls](#) *string* [proxy-nd](#) **dynamic-populate** *boolean*  
Tree [dynamic-populate](#)  
Default false  
Introduced 16.0.R1  
Platforms All

## evpn

Synopsis	Enter the <b>evpn</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">proxy-nd evpn</a>
Tree	<a href="#">evpn</a>
Introduced	16.0.R1
Platforms	All

## advertise-neighbor-type *keyword*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Advertisement type of static or dynamic entries in the EVPN
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">proxy-nd evpn</a> <a href="#">advertise-neighbor-type</a> <i>keyword</i>
Tree	<a href="#">advertise-neighbor-type</a>
Default	router
Options	router, host
Introduced	16.0.R1
Platforms	All

## flood

Synopsis	Enter the <b>flood</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">proxy-nd evpn</a> <a href="#">flood</a>
Tree	<a href="#">flood</a>
Introduced	16.0.R1
Platforms	All

## unknown-neighbor-advertise-host *boolean*

Synopsis	Flood host unsolicited Neighbor Advertisement (NA) replies to EVPN
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">proxy-nd evpn</a> <a href="#">flood</a> <a href="#">unknown-neighbor-advertise-host</a> <i>boolean</i>
Tree	<a href="#">unknown-neighbor-advertise-host</a>
Default	true

Introduced 16.0.R1  
Platforms All

### **unknown-neighbor-advertise-router** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Flood router unsolicited Neighbor Advertisement (NA) replies to EVPN  
Context **configure** [service vpls](#) [string proxy-nd evpn flood](#) [unknown-neighbor-advertise-router](#) *boolean*  
Tree [unknown-neighbor-advertise-router](#)  
Default true  
Introduced 16.0.R1  
Platforms All

### **unknown-neighbor-solicitation** *boolean*

Synopsis Flood unsolicited Neighbor Solicitation messages (with source squelching) into EVPN network  
Context **configure** [service vpls](#) [string proxy-nd evpn flood](#) [unknown-neighbor-solicitation](#) *boolean*  
Tree [unknown-neighbor-solicitation](#)  
Default true  
Introduced 16.0.R1  
Platforms All

### **route-tag** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Route tag used on export policies to match MAC/IP routes generated by proxy-ARP or proxy-ND module  
Context **configure** [service vpls](#) [string proxy-nd evpn](#) [route-tag](#) *number*  
Tree [route-tag](#)

Range	0   1 to 255
Default	0
Introduced	16.0.R1
Platforms	All

### **process-dad-neighbor-solicitations** *boolean*

Synopsis	Enable replies to DAD neighbor solicitations
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">proxy-nd process-dad-neighbor-solicitations</a> <i>boolean</i>
Tree	<a href="#">process-dad-neighbor-solicitations</a>
Default	true
Introduced	22.7.R1
Platforms	All

### **send-refresh** (*number* | *keyword*)

Synopsis	Time at which to send a refresh message
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">proxy-nd send-refresh</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">send-refresh</a>
Range	120 to 86400
Default	never
Options	never
Introduced	16.0.R1
Platforms	All

### **static-neighbor**

Synopsis	Enter the <b>static-neighbor</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">proxy-nd static-neighbor</a>
Tree	<a href="#">static-neighbor</a>
Introduced	16.0.R1
Platforms	All

### **ip-address** [ipv6-address] *string*

Synopsis	Enter the <b>ip-address</b> list instance
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">proxy-nd</a> <a href="#">static-neighbor</a> <a href="#">ip-address</a> <i>string</i>
Tree	<a href="#">ip-address</a>
Introduced	16.0.R1
Platforms	All

### **[ipv6-address]** *string*

Synopsis	Proxy ND IPv6 address
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">proxy-nd</a> <a href="#">static-neighbor</a> <a href="#">ip-address</a> <i>string</i>
Tree	<a href="#">ip-address</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **mac** *string*

Synopsis	Proxy ARP MAC address for static entry
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">proxy-nd</a> <a href="#">static-neighbor</a> <a href="#">ip-address</a> <i>string</i> <a href="#">mac</a> <i>string</i>
Tree	<a href="#">mac</a>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **type** *keyword*

Synopsis	Entry type
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">proxy-nd</a> <a href="#">static-neighbor</a> <a href="#">ip-address</a> <i>string</i> <a href="#">type</a> <i>keyword</i>
Tree	<a href="#">type</a>
Default	router
Options	host, router
Introduced	16.0.R1
Platforms	All

### **table-size** *number*

Synopsis	Maximum number of learned and static entries allowed in the proxy table of this service
Context	<b>configure service vpls string proxy-nd table-size number</b>
Tree	<a href="#">table-size</a>
Range	1 to 16383
Default	250
Introduced	16.0.R1
Platforms	All

### **routed-vpls**

Synopsis	Enable the <b>routed-vpls</b> context
Context	<b>configure service vpls string routed-vpls</b>
Tree	<a href="#">routed-vpls</a>
Introduced	16.0.R1
Platforms	All

### **evpn-mpls-ecmp** *boolean*

Synopsis	Enable ECMP behavior on R-VPLS services
Context	<b>configure service vpls string routed-vpls evpn-mpls-ecmp boolean</b>
Tree	<a href="#">evpn-mpls-ecmp</a>
Default	false
Introduced	19.10.R1
Platforms	All

### **multicast**

Synopsis	Enter the <b>multicast</b> context
Context	<b>configure service vpls string routed-vpls multicast</b>
Tree	<a href="#">multicast</a>
Introduced	16.0.R1
Platforms	All

## evpn-gateway

Synopsis	Enable the <b>evpn-gateway</b> context
Context	<b>configure</b> <a href="#">service vpls string routed-vpls multicast evpn-gateway</a>
Tree	<a href="#">evpn-gateway</a>
Introduced	21.10.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of the multicast EVPN gateway
Context	<b>configure</b> <a href="#">service vpls string routed-vpls multicast evpn-gateway admin-state keyword</a>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	21.10.R1
Platforms	All

## advertise *keyword*

### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Type of the multicast EVPN gateway
Context	<b>configure</b> <a href="#">service vpls string routed-vpls multicast evpn-gateway advertise keyword</a>
Tree	<a href="#">advertise</a>
Description	This command configures EVPN OISM to advertise the type of OISM gateway function in the Inclusive Multicast Ethernet Tag routes.
Default	mvpn-pim
Options	mvpn-pim, mvpn-only, pim-only
Introduced	21.10.R1
Platforms	All

## dr-activation-timer *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	DR activation timer for the EVPN gateway
Context	<b>configure</b> <b>service vpls</b> <i>string</i> <b>routed-vpls multicast evpn-gateway dr-activation-timer</b> <i>number</i>
Tree	<b>dr-activation-timer</b>
Description	This command configures the the designated router (DR) activation timer for the EVPN gateway.  After the DR activation timer expires, each provider edge router (PE) runs the MEG or PEG DR election. The timer allows the PE to collect Inclusive Multicast Ethernet Tag routes from other MEG or PEG gateways and avoids running the DR election multiple times.
Range	0 to 100
Default	3
Units	seconds
Introduced	21.10.R1
Platforms	All

## non-dr-attract-traffic *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Multicast traffic attraction option on non-DR router GW
Context	<b>configure</b> <b>service vpls</b> <i>string</i> <b>routed-vpls multicast evpn-gateway non-dr-attract-traffic</b> <i>keyword</i>
Tree	<b>non-dr-attract-traffic</b>
Default	from-pim-mvpn
Options	none, from-evpn, from-pim-mvpn, from-evpn-pim-mvpn
Introduced	21.10.R1
Platforms	All

### **ip-multicast-ecmp** *boolean*

Synopsis	ECMP behaviour for multicast traffic on bgp-evpn mpls and vxlan
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">routed-vpls</a> <a href="#">multicast</a> <a href="#">ip-multicast-ecmp</a> <i>boolean</i>
Tree	<a href="#">ip-multicast-ecmp</a>
Default	false
Introduced	19.10.R1
Platforms	All

### **ipv4**

Synopsis	Enter the <b>ipv4</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">routed-vpls</a> <a href="#">multicast</a> <a href="#">ipv4</a>
Tree	<a href="#">ipv4</a>
Introduced	16.0.R1
Platforms	All

### **forward-to-ip-interface** *boolean*

Synopsis	Forward IPv4 multicast from RVPLS to L3 interface
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">routed-vpls</a> <a href="#">multicast</a> <a href="#">ipv4</a> <a href="#">forward-to-ip-interface</a> <i>boolean</i>
Tree	<a href="#">forward-to-ip-interface</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **igmp-snooping**

Synopsis	Enter the <b>igmp-snooping</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">routed-vpls</a> <a href="#">multicast</a> <a href="#">ipv4</a> <a href="#">igmp-snooping</a>
Tree	<a href="#">igmp-snooping</a>
Introduced	16.0.R1
Platforms	All

### **mrouter-port** *boolean*

Synopsis	Operate VPLS L3 interface as a multicast router port
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">routed-vpls</a> <a href="#">multicast</a> <a href="#">ipv4</a> <a href="#">igmp-snooping</a> <a href="#">mrouter-port</a> <i>boolean</i>
Tree	<a href="#">mrouter-port</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **ipv6**

Synopsis	Enter the <b>ipv6</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">routed-vpls</a> <a href="#">multicast</a> <a href="#">ipv6</a>
Tree	<a href="#">ipv6</a>
Introduced	16.0.R1
Platforms	All

### **forward-to-ip-interface** *boolean*

Synopsis	Forward IPv6 multicast from RVPLS to L3 interface
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">routed-vpls</a> <a href="#">multicast</a> <a href="#">ipv6</a> <a href="#">forward-to-ip-interface</a> <i>boolean</i>
Tree	<a href="#">forward-to-ip-interface</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **mld-snooping**

Synopsis	Enter the <b>mld-snooping</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">routed-vpls</a> <a href="#">multicast</a> <a href="#">ipv6</a> <a href="#">mld-snooping</a>
Tree	<a href="#">mld-snooping</a>
Introduced	16.0.R1
Platforms	All

### **mrouter-port** *boolean*

Synopsis	Operate VPLS L3 interface as a multicast router port
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">routed-vpls</a> <a href="#">multicast</a> <a href="#">ipv6</a> <a href="#">mld-snooping</a> <b>mrouter-port</b> <i>boolean</i>
Tree	<a href="#">mrouter-port</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **vxlan-ipv4-tep-ecmp** *boolean*

Synopsis	Use ECMP on VXLAN IPv4 destinations for R-VPLS services
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">routed-vpls</a> <b>vxlan-ipv4-tep-ecmp</b> <i>boolean</i>
Tree	<a href="#">vxlan-ipv4-tep-ecmp</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **sap** [[sap-id](#)] *string*

Synopsis	Enter the <b>sap</b> list instance
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <b>sap</b> <i>string</i>
Tree	<a href="#">sap</a>
Introduced	16.0.R1
Platforms	All

### [**sap-id**] *string*

Synopsis	SAP identifier
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <b>sap</b> <i>string</i>
Tree	<a href="#">sap</a>
String Length	1 to 45
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **accounting-policy** *reference*

Synopsis	Accounting policy
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">accounting-policy</a> <i>reference</i>
Tree	<a href="#">accounting-policy</a>
Reference	<b>configure</b> <a href="#">log accounting-policy</a> <i>number</i>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the SAP
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	enable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **anti-spoof** *keyword*

Synopsis	Type of anti-spoof filtering
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">anti-spoof</a> <i>keyword</i>
Tree	<a href="#">anti-spoof</a>
Options	source-ip-addr, source-mac-addr, source-ip-and-mac-addr, next-hop-ip-and-mac-addr
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **app-profile** *reference*

Synopsis	Application profile name
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">app-profile</a> <i>reference</i>
Tree	<a href="#">app-profile</a>
Reference	<b>configure</b> <a href="#">application-assurance</a> <i>group</i> <i>number</i> <a href="#">partition</a> <i>number</i> <a href="#">policy</a> <a href="#">app-profile</a> <i>string</i>
Introduced	16.0.R2

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## arp-host

Synopsis Enter the **arp-host** context  
Context **configure service vpls string sap string arp-host**  
Tree **arp-host**  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## admin-state *keyword*

Synopsis Administrative state of ARP hosts  
Context **configure service vpls string sap string arp-host admin-state keyword**  
Tree **admin-state**  
Options enable, disable  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## host-limit *number*

Synopsis Maximum number of ARP triggered hosts  
Context **configure service vpls string sap string arp-host host-limit number**  
Tree **host-limit**  
Range 1 to 131071  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## min-auth-interval *number*

Synopsis Minimum authentication interval  
Context **configure service vpls string sap string arp-host min-auth-interval number**  
Tree **min-auth-interval**  
Range 1 to 6000  
Default 15

Units	minutes
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **arp-reply-agent** *keyword*

Synopsis	Enable arp-reply-agent function
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <b>arp-reply-agent</b> <i>keyword</i>
Tree	<a href="#">arp-reply-agent</a>
Options	true, with-subscr-ident
Introduced	16.0.R1
Platforms	All

### **bandwidth** *number*

Synopsis	SAP bandwidth
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <b>bandwidth</b> <i>number</i>
Tree	<a href="#">bandwidth</a>
Range	1 to 6400000000
Units	kilobps
Introduced	16.0.R1
Platforms	All

### **bgp-vpls-mh-veid** *number*

Synopsis	BGP-VPLS multi-homing VE-ID
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <b>bgp-vpls-mh-veid</b> <i>number</i>
Tree	<a href="#">bgp-vpls-mh-veid</a>
Description	<p>This command specifies a VE ID that is configured on SAPs that are part of an EVPN single-active Ethernet Segment. The configuration of this command allows the advertisement of L2VPN routes that indicate the state of multi-homed SAPs to the remote BGP-VPLS PEs, which can trigger a MAC flush operation on the service to avoid traffic from being blackholed when a failure occurs in the active PE.</p> <p>When unconfigured from the SAP, L2VPN routes are withdrawn, which causes MAC flush processing on the remote BGP-VPLS.</p>
Range	1 to 65535
Introduced	20.5.R1

Platforms All

### **bpdu-translation** *keyword*

Synopsis Bpdu translation on this SAP  
Context **configure** [service vpls string sap string bpdu-translation keyword](#)  
Tree [bpdu-translation](#)  
Options auto, pvst, stp, pvst-rw, auto-rw  
Introduced 16.0.R1  
Platforms All

Synopsis Calling station ID  
Context **configure** [service vpls string sap string calling-station-id string](#)  
Tree [calling-station-id](#)  
String Length 1 to 64  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **cflowd** *boolean*

Synopsis Enable Cflowd collection and analysis on this SAP  
Context **configure** [service vpls string sap string cflowd boolean](#)  
Tree [cflowd](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **collect-stats** *boolean*

Synopsis Collect accounting statistics  
Context **configure** [service vpls string sap string collect-stats boolean](#)  
Tree [collect-stats](#)  
Default false

Introduced 16.0.R1  
Platforms All

## cpu-protection

Synopsis Enter the **cpu-protection** context  
Context **configure service vpls string sap string cpu-protection**  
Tree [cpu-protection](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## eth-cfm-monitoring

Synopsis Enable the **eth-cfm-monitoring** context  
Context **configure service vpls string sap string cpu-protection eth-cfm-monitoring**  
Tree [eth-cfm-monitoring](#)  
Notes The following elements are part of a choice: **eth-cfm-monitoring** or **mac-monitoring**.  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## aggregate

Synopsis Apply rate limit to the sum of per-peer packet rates  
Context **configure service vpls string sap string cpu-protection eth-cfm-monitoring aggregate**  
Tree [aggregate](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## car

Synopsis Ignore Ethernet CFM packets when enforcing overall rate  
Context **configure service vpls string sap string cpu-protection eth-cfm-monitoring car**  
Tree [car](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## mac-monitoring

Synopsis	Monitor MAC for CPU protection
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">cpu-protection</a> <a href="#">mac-monitoring</a>
Tree	<a href="#">mac-monitoring</a>
Notes	The following elements are part of a choice: <b>eth-cfm-monitoring</b> or <b>mac-monitoring</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## policy-id *reference*

Tree	<a href="#">description</a>
String Length	1 to 160
Introduced	16.0.R1
Platforms	All

## dhcp

Synopsis	Enter the <b>dhcp</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">dhcp</a>
Tree	<a href="#">dhcp</a>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of DHCP
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">dhcp</a> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">dhcp</a> <b>description</b> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **lease-populate**

Synopsis	Enter the <b>lease-populate</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">dhcp</a> <b>lease-populate</b>
Tree	<a href="#">lease-populate</a>
Introduced	16.0.R1
Platforms	All

### **max-leases** *number*

Synopsis	Maximum number of DHCPv4 leases
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">dhcp</a> <a href="#">lease-populate</a> <b>max-leases</b> <i>number</i>
Tree	<a href="#">max-leases</a>
Range	0 to 131071
Introduced	16.0.R1
Platforms	All

## option-82

Synopsis	Enter the <b>option-82</b> context
Context	<b>configure service vpls string sap string dhcp option-82</b>
Tree	<a href="#">option-82</a>
Description	Commands in this context configure the processing required when the router receives a DHCP request that already has an Option 82 field in the packet.
Introduced	16.0.R1
Platforms	All

## action *keyword*

Synopsis	Action to take with received DHCP Option 82
Context	<b>configure service vpls string sap string dhcp option-82 action <i>keyword</i></b>
Tree	<a href="#">action</a>
Default	keep
Options	replace, drop, keep
Introduced	16.0.R1
Platforms	All

## circuit-id

Synopsis	Enter the <b>circuit-id</b> context
Context	<b>configure service vpls string sap string dhcp option-82 circuit-id</b>
Tree	<a href="#">circuit-id</a>
Introduced	16.0.R1
Platforms	All

## ascii-tuple

Synopsis	Use the ASCII-encoded tuple for the circuit ID
Context	<b>configure service vpls string sap string dhcp option-82 circuit-id ascii-tuple</b>
Tree	<a href="#">ascii-tuple</a>
Notes	This element is the default part of a choice.

The following elements are part of a choice: **ascii-tuple**, **hex-string**, **none**, or **vlan-ascii-tuple**.

Introduced 16.0.R1  
Platforms All

### hex-string *string*

Synopsis User-defined hexadecimal value of the option  
Context **configure service vpls string sap string dhcp option-82 circuit-id hex-string string**  
Tree [hex-string](#)  
String Length 1 to 66  
Notes The following elements are part of a choice: **ascii-tuple**, **hex-string**, **none**, or **vlan-ascii-tuple**.  
Introduced 16.0.R1  
Platforms All

### none

Synopsis Do not include the circuit ID  
Context **configure service vpls string sap string dhcp option-82 circuit-id none**  
Tree [none](#)  
Notes The following elements are part of a choice: **ascii-tuple**, **hex-string**, **none**, or **vlan-ascii-tuple**.  
Introduced 16.0.R1  
Platforms All

### vlan-ascii-tuple

Synopsis Include the VLAN ID and dot1p bits in the ASCII tuple  
Context **configure service vpls string sap string dhcp option-82 circuit-id vlan-ascii-tuple**  
Tree [vlan-ascii-tuple](#)  
Description When configured, the router includes the VLAN ID and dot1p bits with the ASCII-tuple information. This only occurs on dot1q and QinQ-encapsulated ports. When the Option 82 bits are stripped, dot1p bits are copied to the Ethernet header of the outgoing packet.  
When unconfigured, the router leaves the circuit ID sub-option of the DHCP packet empty.

Notes	The following elements are part of a choice: <b>ascii-tuple</b> , <b>hex-string</b> , <b>none</b> , or <b>vlan-ascii-tuple</b> .
Introduced	16.0.R1
Platforms	All

## remote-id

Synopsis	Enter the <b>remote-id</b> context
Context	<b>configure</b> <a href="#">service vpls string sap string dhcp option-82 remote-id</a>
Tree	<a href="#">remote-id</a>
Description	Commands in this context configure the remote IP sub-option of the DHCP packet with the identity of the remote host end (typically the DHCP client).
Introduced	16.0.R1
Platforms	All

## ascii-string *string*

Synopsis	User-defined ASCII string for the remote ID
Context	<b>configure</b> <a href="#">service vpls string sap string dhcp option-82 remote-id ascii-string string</a>
Tree	<a href="#">ascii-string</a>
String Length	1 to 32
Notes	The following elements are part of a choice: <b>ascii-string</b> , <b>hex-string</b> , <b>mac</b> , or <b>none</b> .
Introduced	16.0.R1
Platforms	All

## hex-string *string*

Synopsis	Option as a hexadecimal string
Context	<b>configure</b> <a href="#">service vpls string sap string dhcp option-82 remote-id hex-string string</a>
Tree	<a href="#">hex-string</a>
String Length	1 to 66
Notes	The following elements are part of a choice: <b>ascii-string</b> , <b>hex-string</b> , <b>mac</b> , or <b>none</b> .
Introduced	16.0.R1
Platforms	All

## mac

Synopsis	Use the MAC address for the remote ID
Context	<b>configure service vpls string sap string dhcp option-82 remote-id mac</b>
Tree	<b>mac</b>
Notes	The following elements are part of a choice: <b>ascii-string</b> , <b>hex-string</b> , <b>mac</b> , or <b>none</b> .
Introduced	16.0.R1
Platforms	All

## none

Synopsis	Do not include the remote ID
Context	<b>configure service vpls string sap string dhcp option-82 remote-id none</b>
Tree	<b>none</b>
Notes	This element is the default part of a choice. The following elements are part of a choice: <b>ascii-string</b> , <b>hex-string</b> , <b>mac</b> , or <b>none</b> .
Introduced	16.0.R1
Platforms	All

## vendor-specific-option

Synopsis	Enter the <b>vendor-specific-option</b> context
Context	<b>configure service vpls string sap string dhcp option-82 vendor-specific-option</b>
Tree	<b>vendor-specific-option</b>
Description	Commands in this context configure the Nokia Vendor-Specific Option (VSO) of the DHCP packet.
Introduced	16.0.R1
Platforms	All

## client-mac-address *boolean*

Synopsis	Send the MAC address in the VSO
Context	<b>configure service vpls string sap string dhcp option-82 vendor-specific-option client-mac-address <i>boolean</i></b>
Tree	<b>client-mac-address</b>
Default	false

Introduced 16.0.R1  
Platforms All

### **sap-id** *boolean*

Synopsis Send SAP ID in the sub-option of the DHCP relay packet  
Context **configure** [service vpls string sap string dhcp option-82 vendor-specific-option sap-id](#)  
*boolean*  
Tree [sap-id](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **service-id** *boolean*

Synopsis Send the service ID in the Vendor Specific Option  
Context **configure** [service vpls string sap string dhcp option-82 vendor-specific-option service-id](#)  
*boolean*  
Tree [service-id](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **string** *string*

Synopsis User-defined ASCII string for the VSO  
Context **configure** [service vpls string sap string dhcp option-82 vendor-specific-option string](#)  
*string*  
Tree [string](#)  
String Length 1 to 32  
Introduced 16.0.R1  
Platforms All

### **system-id** *boolean*

Synopsis Send the system ID in the VSO

Context	<b>configure service vpls string sap string dhcp option-82 vendor-specific-option system-id boolean</b>
Tree	<a href="#">system-id</a>
Default	false
Introduced	16.0.R1
Platforms	All

## proxy-server

Synopsis	Enter the <b>proxy-server</b> context
Context	<b>configure service vpls string sap string dhcp proxy-server</b>
Tree	<a href="#">proxy-server</a>
Introduced	16.0.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of the DHCP proxy server
Context	<b>configure service vpls string sap string dhcp proxy-server admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

## emulated-server *string*

Synopsis	IP address used as DHCP server address in SAP context
Context	<b>configure service vpls string sap string dhcp proxy-server emulated-server string</b>
Tree	<a href="#">emulated-server</a>
Introduced	16.0.R1
Platforms	All

## lease-time

Synopsis	Enter the <b>lease-time</b> context
----------	-------------------------------------

Context	<b>configure service vpls string sap string dhcp proxy-server lease-time</b>
Tree	<b>lease-time</b>
Introduced	16.0.R1
Platforms	All

### **radius-override boolean**

Synopsis	Use lease time information provided by RADIUS server
Context	<b>configure service vpls string sap string dhcp proxy-server lease-time radius-override boolean</b>
Tree	<b>radius-override</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **value number**

Synopsis	DHCP lease time
Context	<b>configure service vpls string sap string dhcp proxy-server lease-time value number</b>
Tree	<b>value</b>
Range	300 to 315446399
Units	seconds
Introduced	16.0.R1
Platforms	All

### **snoop boolean**

Synopsis	Enable DHCP snooping on the SAP
Context	<b>configure service vpls string sap string dhcp snoop boolean</b>
Tree	<b>snoop</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **dist-cpu-protection** *reference*

Synopsis	Distributed CPU protection policy for SAP
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">dist-cpu-protection</a> <i>reference</i>
Tree	<a href="#">dist-cpu-protection</a>
Reference	<b>configure</b> <a href="#">system security</a> <a href="#">dist-cpu-protection</a> <a href="#">policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **egress**

Synopsis	Enter the <b>egress</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a>
Tree	<a href="#">egress</a>
Introduced	16.0.R1
Platforms	All

### **agg-rate**

Synopsis	Enter the <b>agg-rate</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">agg-rate</a>
Tree	<a href="#">agg-rate</a>
Notes	This element is the default part of a choice. The following elements are part of a choice: <b>agg-rate</b> or <b>percent-agg-rate</b> .
Introduced	16.0.R1
Platforms	All

### **adaptation-rule** *keyword*

Synopsis	Adaptation rule to compute the operational PIR value when an aggregate shaper is used
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">agg-rate</a> <a href="#">adaptation-rule</a> <i>keyword</i>
Tree	<a href="#">adaptation-rule</a>
Default	closest
Options	max, min, closest
Introduced	22.10.R1
Platforms	7750 SR-1, 7750 SR-s

### **burst-limit** (*number* | *keyword*)

Synopsis	Shaping burst size when an aggregate shaper is used
Context	<b>configure</b> <a href="#">service vpls string sap string egress agg-rate burst-limit</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">burst-limit</a>
Range	1 to 14000000
Default	auto
Units	bytes
Options	auto
Introduced	22.10.R1
Platforms	7750 SR-1, 7750 SR-s

### **limit-unused-bandwidth** *boolean*

Synopsis	Enable aggregate rate overrun protection
Context	<b>configure</b> <a href="#">service vpls string sap string egress agg-rate limit-unused-bandwidth</a> <i>boolean</i>
Tree	<a href="#">limit-unused-bandwidth</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **queue-frame-based-accounting** *boolean*

Synopsis	Enable frame-based accounting on all policers and queues associated with context
Context	<b>configure</b> <a href="#">service vpls string sap string egress agg-rate queue-frame-based-accounting</a> <i>boolean</i>
Tree	<a href="#">queue-frame-based-accounting</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **rate** *number*

Synopsis	Enforced aggregate rate for all queues
Context	<b>configure</b> <a href="#">service vpls string sap string egress agg-rate rate</a> <i>number</i>

Tree	<a href="#">rate</a>
Range	1 to 6400000000
Units	kilobps
Introduced	16.0.R1
Platforms	All

### **dest-mac-rewrite** *string*

Synopsis	Destination MAC overwrite for unicast
Context	<b>configure</b> <a href="#">service vpls string sap string egress dest-mac-rewrite string</a>
Tree	<a href="#">dest-mac-rewrite</a>
Introduced	16.0.R5
Platforms	All

### **filter**

Synopsis	Enter the <b>filter</b> context
Context	<b>configure</b> <a href="#">service vpls string sap string egress filter</a>
Tree	<a href="#">filter</a>
Introduced	16.0.R1
Platforms	All

### **ip reference**

Synopsis	IPv4 filter policy name
Context	<b>configure</b> <a href="#">service vpls string sap string egress filter ip reference</a>
Tree	<a href="#">ip</a>
Reference	<b>configure</b> <a href="#">filter ip-filter string</a>
Introduced	16.0.R1
Platforms	All

### **ipv6 reference**

Synopsis	IPv6 filter policy name
Context	<b>configure</b> <a href="#">service vpls string sap string egress filter ipv6 reference</a>

Tree	<a href="#">ipv6</a>
Reference	<b>configure filter</b> <a href="#">ipv6-filter</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### mac reference

Synopsis	MAC filter policy name
Context	<b>configure service vpls</b> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress filter mac</a> <i>reference</i>
Tree	<a href="#">mac</a>
Reference	<b>configure filter</b> <a href="#">mac-filter</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### qos

Synopsis	Enter the <b>qos</b> context
Context	<b>configure service vpls</b> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos</a>
Tree	<a href="#">qos</a>
Introduced	16.0.R1
Platforms	All

### policer-control-policy

Synopsis	Enter the <b>policer-control-policy</b> context
Context	<b>configure service vpls</b> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos</a> <a href="#">policer-control-policy</a>
Tree	<a href="#">policer-control-policy</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### overrides

Synopsis	Enable the <b>overrides</b> context
Context	<b>configure service vpls</b> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a>
Tree	<a href="#">overrides</a>

Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## root

Synopsis Enter the **root** context  
Context **configure** [service](#) [vpls](#) [string](#) [sap](#) [string](#) [egress](#) [qos](#) [policer-control-policy](#) [overrides](#) [root](#)

Context **configure** [service vpls string sap string egress qos sap-egress overrides hs-wrr-group reference](#)  
Tree [hs-wrr-group](#)  
Introduced 16.0.R1  
Platforms 7750 SR-7/12/12e

### [[group-id](#)] *reference*

Synopsis HS WRR group identifier  
Context **configure** [service vpls string sap string egress qos sap-egress overrides hs-wrr-group reference](#)  
Tree [hs-wrr-group](#)  
Reference **configure** [qos sap-egress string hs-wrr-group number](#)  
Notes This element is part of a list key.  
Introduced 16.0.R1  
Platforms 7750 SR-7/12/12e

### **hs-class-weight** *number*

Synopsis Class weight override of the WRR group

Context	<b>configure service vpls string sap string egress qos sap-egress overrides hs-wrr-group reference hs-class-weight number</b>
Tree	<b>hs-class-weight</b>
Range	1   2   4   8
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **percent-rate** *decimal-number*

Synopsis	Percent rate override applied to the HS WRR group
Context	<b>configure service vpls string sap string egress qos sap-egress overrides hs-wrr-group reference percent-rate decimal-number</b>
Tree	<b>percent-rate</b>
Range	0.01 to 100.00
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **rate** (*number* | *keyword*)

Synopsis	Scheduling rate override applied to the HS WRR group
Context	<b>configure service vpls string sap string egress qos sap-egress overrides hs-wrr-group reference rate (number   keyword)</b>
Tree	<b>rate</b>
Range	1 to 2000000000
Units	kilobps
Options	max
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **policer** [**policer-id**] *reference*

Synopsis	Enter the <b>policer</b> list instance
Context	<b>configure service vpls string sap string egress qos sap-egress overrides policer reference</b>

Tree	<a href="#">policer</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **[policer-id] reference**

Synopsis	Policer unique ID
Context	<b>configure service vpls string sap string egress qos sap-egress overrides policer reference</b>
Tree	<a href="#">policer</a>
Reference	<b>configure qos sap-egress string policer number</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **cbs (number | keyword)**

Synopsis	CBS
Context	<b>configure service vpls string sap string egress qos sap-egress overrides policer reference cbs (number   keyword)</b>
Tree	<a href="#">cbs</a>
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **mbs (number | keyword)**

Synopsis	MBS
Context	<b>configure service vpls string sap string egress qos sap-egress overrides policer reference mbs (number   keyword)</b>
Tree	<a href="#">mbs</a>
Range	0 to 268435456
Units	bytes
Options	auto

Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **packet-byte-offset** *number*

Synopsis Packet size modification for policing information  
Context **configure** [service vpls string sap string egress qos sap-egress overrides policer reference packet-byte-offset number](#)  
Tree [packet-byte-offset](#)  
Range -64 to 31  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **percent-rate**

Synopsis Enter the **percent-rate** context  
Context **configure** [service vpls string sap string egress qos sap-egress overrides policer reference percent-rate](#)  
Tree [percent-rate](#)  
Notes The following elements are part of a choice: **percent-rate** or **rate**.  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **cir** *decimal-number*

Synopsis CIR percent rate  
Context **configure** [service vpls string sap string egress qos sap-egress overrides policer reference percent-rate cir decimal-number](#)  
Tree [cir](#)  
Range 0.00 to 100.00  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **pir** *decimal-number*

Synopsis PIR percent rate

Context	<b>configure service vpls string sap string egress qos sap-egress overrides policer reference percent-rate pir decimal-number</b>
Tree	<a href="#">pir</a>
Range	0.01 to 100.00
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## rate

Synopsis	Enter the <b>rate</b> context
Context	<b>configure service vpls string sap string egress qos sap-egress overrides policer reference rate</b>
Tree	<a href="#">rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## cir (*number* | *keyword*)

Synopsis	CIR rate
Context	<b>configure service vpls string sap string egress qos sap-egress overrides policer reference rate cir (<i>number</i>   <i>keyword</i>)</b>
Tree	<a href="#">cir</a>
Range	0 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## pir (*number* | *keyword*)

Synopsis	PIR rate
Context	<b>configure service vpls string sap string egress qos sap-egress overrides policer reference rate pir (<i>number</i>   <i>keyword</i>)</b>
Tree	<a href="#">pir</a>
Range	1 to 6400000000

Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **stat-mode** *keyword*

Synopsis	Mode of statistics collected by the policer
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos</a> <a href="#">sap-egress overrides</a> <a href="#">policer reference</a> <b>stat-mode</b> <i>keyword</i>
Tree	<a href="#">stat-mode</a>
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-profile-cir, offered-limited-capped-cir, offered-profile-capped-cir, offered-total-cir-exceed, offered-four-profile-no-cir, offered-total-cir-four-profile
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **queue** [[queue-id](#)] *reference*

Synopsis	Enter the <b>queue</b> list instance
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos</a> <a href="#">sap-egress overrides</a> <a href="#">queue reference</a>
Tree	<a href="#">queue</a>
Introduced	16.0.R1
Platforms	All

### **[queue-id]** *reference*

Synopsis	Policer unique ID
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos</a> <a href="#">sap-egress overrides</a> <a href="#">queue reference</a>
Tree	<a href="#">queue</a>
Reference	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">queue</a> <i>number</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## adaptation-rule

Synopsis	Enter the <b>adaptation-rule</b> context
Context	<b>configure service vpls string sap string egress qos sap-egress overrides queue reference adaptation-rule</b>
Tree	<b>adaptation-rule</b>
Introduced	16.0.R1
Platforms	All

## cir keyword

Synopsis	Constraint used when deriving the operational CIR value
Context	<b>configure service vpls string sap string egress qos sap-egress overrides queue reference adaptation-rule cir keyword</b>
Tree	<b>cir</b>
Options	max, min, closest
Introduced	16.0.R1
Platforms	All

## pir keyword

Synopsis	Constraint used when deriving the operational PIR value
Context	<b>configure service vpls string sap string egress qos sap-egress overrides queue reference adaptation-rule pir keyword</b>
Tree	<b>pir</b>
Options	max, min, closest
Introduced	16.0.R1
Platforms	All

## avg-frame-overhead decimal-number

Synopsis	Average packet-to-frame encapsulation overhead
Context	<b>configure service vpls string sap string egress qos sap-egress overrides queue reference avg-frame-overhead decimal-number</b>
Tree	<b>avg-frame-overhead</b>
Range	0.00 to 100.00

Introduced 16.0.R1  
Platforms All

### **burst-limit** (*number* | *keyword*)

Synopsis Explicit shaping burst size for the queue  
Context **configure** [service](#) [vpls](#) [string](#) [sap](#) [string](#) [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#)  
*reference* [burst-limit](#) (*number* | *keyword*)  
Tree [burst-limit](#)  
Range 1 to 14000000  
Units bytes  
Options auto  
Introduced 16.0.R1  
Platforms All

### **cbs** (*number* | *keyword*)

Synopsis CBS  
Context **configure** [service](#) [vpls](#) [string](#) [sap](#) [string](#) [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#)  
*reference* [cbs](#) (*number* | *keyword*)  
Tree [cbs](#)  
Range 0 to 1048576  
Units kilobytes  
Options auto  
Introduced 16.0.R1  
Platforms All

### **drop-tail**

Synopsis Enter the **drop-tail** context  
Context **configure** [service](#) [vpls](#) [string](#) [sap](#) [string](#) [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#)  
*reference* [drop-tail](#)  
Tree [drop-tail](#)  
Introduced 16.0.R1  
Platforms All

## low

Synopsis	Enter the <b>low</b> context
Context	<b>configure service vpls string sap string egress qos sap-egress overrides queue reference drop-tail low</b>
Tree	<a href="#">low</a>
Introduced	16.0.R1
Platforms	All

## percent-reduction-from-mbs (*number | keyword*)

Synopsis	Percentage reduction from the MBS for a queue drop tail
Context	<b>configure service vpls string sap string egress qos sap-egress overrides queue reference drop-tail low percent-reduction-from-mbs (<i>number   keyword</i>)</b>
Tree	<a href="#">percent-reduction-from-mbs</a>
Range	0 to 100
Options	auto
Introduced	16.0.R1
Platforms	All

## hs-class-weight *number*

Synopsis	Class weight override for the queue
Context	<b>configure service vpls string sap string egress qos sap-egress overrides queue reference hs-class-weight <i>number</i></b>
Tree	<a href="#">hs-class-weight</a>
Range	1   2   4   8
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

## hs-wred-queue

Synopsis	Enter the <b>hs-wred-queue</b> context
Context	<b>configure service vpls string sap string egress qos sap-egress overrides queue reference hs-wred-queue</b>
Tree	<a href="#">hs-wred-queue</a>

Introduced 16.0.R1  
Platforms 7750 SR-7/12/12e

### **policy reference**

Synopsis Slope policy applied to the HSQ queue group queue  
Context **configure** [service vpls string sap string egress qos sap-egress overrides queue reference hs-wred-queue policy reference](#)  
Tree [policy](#)  
Reference **configure** [qos slope-policy string](#)  
Introduced 16.0.R1  
Platforms 7750 SR-7/12/12e

### **hs-wrr-weight number**

Synopsis Weighted Round Robin (WRR) weight to parent with this queue into the scheduler  
Context **configure** [service vpls string sap string egress qos sap-egress overrides queue reference hs-wrr-weight number](#)  
Tree [hs-wrr-weight](#)  
Range 1 to 127  
Default 1  
Introduced 16.0.R1  
Platforms 7750 SR-7/12/12e

### **mbs (number | keyword)**

Synopsis MBS  
Context **configure** [service vpls string sap string egress qos sap-egress overrides queue reference mbs \(number | keyword\)](#)  
Tree [mbs](#)  
Range 0 to 1073741824  
Units bytes  
Options auto  
Introduced 16.0.R1  
Platforms All

## monitor-queue-depth

Synopsis	Enable the <b>monitor-queue-depth</b> context
Context	<b>configure</b> <a href="#">service vpls string sap string egress qos sap-egress overrides queue reference monitor-queue-depth</a>
Tree	<a href="#">monitor-queue-depth</a>
Introduced	20.10.R1
Platforms	All

## fast-polling *boolean*

Synopsis	Enable fast polling of the queue depth
Context	<b>configure</b> <a href="#">service vpls string sap string egress qos sap-egress overrides queue reference monitor-queue-depth fast-polling boolean</a>
Tree	<a href="#">fast-polling</a>
Description	When configured to <b>true</b> , this command enables fast polling of the queue depth. Faster polling allows a more accurate view of the actual depth. When configured to <b>false</b> , fast queue polling is not enabled.
Default	false
Introduced	20.10.R1
Platforms	All

## violation-threshold *decimal-number*

Synopsis	Threshold for queue depth before violation is raised
Context	<b>configure</b> <a href="#">service vpls string sap string egress qos sap-egress overrides queue reference monitor-queue-depth violation-threshold decimal-number</a>
Tree	<a href="#">violation-threshold</a>
Description	This command specifies the threshold for the queue MBS. When the queue depth exceeds the threshold value, a violation is registered.
Range	0.01 to 99.99
Introduced	20.10.R1
Platforms	All

## parent

Synopsis	Enter the <b>parent</b> context
Context	<b>configure</b> <a href="#">service vpls string sap string egress qos sap-egress overrides queue reference parent</a>
Tree	<a href="#">parent</a>
Introduced	16.0.R1
Platforms	All

## cir-weight *number*

Synopsis	CIR parameter that overrides parent for queue group
Context	<b>configure</b> <a href="#">service vpls string sap string egress qos sap-egress overrides queue reference parent cir-weight number</a>
Tree	<a href="#">cir-weight</a>
Range	0 to 100
Introduced	16.0.R1
Platforms	All

## weight *number*

Synopsis	PIR parameter that overrides parent for queue group
Context	<b>configure</b> <a href="#">service vpls string sap string egress qos sap-egress overrides queue reference parent weight number</a>
Tree	<a href="#">weight</a>
Range	0 to 100
Introduced	16.0.R1
Platforms	All

## percent-rate

Synopsis	Enter the <b>percent-rate</b> context
Context	<b>configure</b> <a href="#">service vpls string sap string egress qos sap-egress overrides queue reference percent-rate</a>
Tree	<a href="#">percent-rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1

Platforms All

### **cir** *decimal-number*

Synopsis CIR percent rate  
Context **configure** [service vpls string sap string egress qos sap-egress overrides queue reference percent-rate cir decimal-number](#)  
Tree [cir](#)  
Range 0.00 to 100.00  
Introduced 16.0.R1  
Platforms All

### **pir** *decimal-number*

Synopsis PIR percent rate  
Context **configure** [service vpls string sap string egress qos sap-egress overrides queue reference percent-rate pir decimal-number](#)  
Tree [pir](#)  
Range 0.01 to 100.00  
Introduced 16.0.R1  
Platforms All

### **rate**

Synopsis Enter the **rate** context  
Context **configure** [service vpls string sap string egress qos sap-egress overrides queue reference rate](#)  
Tree [rate](#)  
Notes The following elements are part of a choice: **percent-rate** or **rate**.  
Introduced 16.0.R1  
Platforms All

### **cir** (*number* | *keyword*)

Synopsis CIR rate

Context	<b>configure service vpls string sap string egress qos sap-egress overrides queue reference rate cir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cir</a>
Range	0 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	All

### **pir** (*number* | *keyword*)

Synopsis	PIR rate
Context	<b>configure service vpls string sap string egress qos sap-egress overrides queue reference rate pir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">pir</a>
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	All

### **policy-name** *reference*

Synopsis	Policy ID to associate with SAP for mirrored service
Context	<b>configure service vpls string sap string egress qos sap-egress policy-name</b> <i>reference</i>
Tree	<a href="#">policy-name</a>
Reference	<b>configure qos sap-egress</b> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **port-redirect-group**

Synopsis	Enter the <b>port-redirect-group</b> context
Context	<b>configure service vpls string sap string egress qos sap-egress port-redirect-group</b>
Tree	<a href="#">port-redirect-group</a>

Introduced 16.0.R1  
Platforms All

### **group-name** *reference*

Synopsis Name of the queue group redirect list policy  
Context **configure** [service vpls string sap string egress qos sap-egress port-redirect-group group-name reference](#)  
Tree [group-name](#)  
Reference **configure** [qos queue-group-templates egress queue-group string](#)  
Introduced 16.0.R1  
Platforms All

### **instance** *number*

Synopsis Instance of port queue group  
Context **configure** [service vpls string sap string egress qos sap-egress port-redirect-group instance number](#)  
Tree [instance](#)  
Range 1 to 65535  
Introduced 16.0.R1  
Platforms All

### **scheduler-policy**

Synopsis Enter the **scheduler-policy** context  
Context **configure** [service vpls string sap string egress qos scheduler-policy](#)  
Tree [scheduler-policy](#)  
Introduced 16.0.R1  
Platforms All

### **overrides**

Synopsis Enter the **overrides** context  
Context **configure** [service vpls string sap string egress qos scheduler-policy overrides](#)  
Tree [overrides](#)

Introduced 16.0.R1  
Platforms All

### **scheduler** [**scheduler-name**] *string*

Synopsis Enter the **scheduler** list instance  
Context **configure service vpls string sap string egress qos scheduler-policy overrides scheduler string**  
Tree **scheduler**  
Introduced 16.0.R1  
Platforms All

### **[scheduler-name]** *string*

Synopsis Scheduler name  
Context **configure service vpls string sap string egress qos scheduler-policy overrides scheduler string**  
Tree **scheduler**  
Description This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.  
  
If the scheduler name exists within the policy on a different tier, an error occurs and the current context will not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.  
  
If the provided scheduler name is invalid, a name syntax error will occur, the command will not execute, and the context will not change.  
  
String Length 1 to 32  
Notes This element is part of a list key.  
Introduced 16.0.R1  
Platforms All

### **parent**

Synopsis Enter the **parent** context

Context	<b>configure service vpls string sap string egress qos scheduler-policy overrides scheduler string parent</b>
Tree	<b>parent</b>
Introduced	16.0.R1
Platforms	All

### **cir-weight number**

Synopsis	Weight used at the within-CIR port priority level
Context	<b>configure service vpls string sap string egress qos scheduler-policy overrides scheduler string parent cir-weight number</b>
Tree	<b>cir-weight</b>
Range	0 to 100
Introduced	16.0.R1
Platforms	All

### **weight number**

Synopsis	Relative weight of the scheduler to feed the queue
Context	<b>configure service vpls string sap string egress qos scheduler-policy overrides scheduler string parent weight number</b>
Tree	<b>weight</b>
Range	0 to 100
Introduced	16.0.R1
Platforms	All

### **rate**

Synopsis	Enter the <b>rate</b> context
Context	<b>configure service vpls string sap string egress qos scheduler-policy overrides scheduler string rate</b>
Tree	<b>rate</b>
Introduced	16.0.R1
Platforms	All

### **cir** (*number* | *keyword*)

Synopsis	CIR at which the queue it to operate
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos scheduler-policy overrides scheduler</a> <i>string</i> <b>rate</b> <b>cir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cir</a>
Range	0 to 6400000000
Units	kilobps
Options	sum, max
Introduced	16.0.R1
Platforms	All

### **pir** (*number* | *keyword*)

Synopsis	PIR at which the queue is to operate
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos scheduler-policy overrides scheduler</a> <i>string</i> <b>rate</b> <b>pir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">pir</a>
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	All

### **policy-name** *reference*

Synopsis	Scheduler policy name
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos scheduler-policy</a> <b>policy-name</b> <i>reference</i>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos scheduler-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **eth-cfm**

Synopsis	Enter the <b>eth-cfm</b> context
----------	----------------------------------

Context	<b>configure service vpls string sap string eth-cfm</b>
Tree	<b>eth-cfm</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### collect-lmm-fc-stats

Synopsis	Enter the <b>collect-lmm-fc-stats</b> context
Context	<b>configure service vpls string sap string eth-cfm collect-lmm-fc-stats</b>
Tree	<b>collect-lmm-fc-stats</b>
Description	<p>Commands in this context configure per forwarding class (FC) LMM information collection.</p> <p>The commands <b>fc-in-profile</b> and <b>fc</b> in this context are mutually exclusive. The commands apply to either profile-aware or profile-unaware FCs respectively.</p> <p>This command and the <b>collect-lmm-stats</b> command are mutually exclusive when there is entity resource contention.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### fc keyword

Synopsis	Forwarding class name for profile-unaware counter
Context	<b>configure service vpls string sap string eth-cfm collect-lmm-fc-stats fc keyword</b>
Tree	<b>fc</b>
Description	<p>This command configures individual counters for the specified FCs without regard for profile. The system includes all countable packets that match a configured FC, regardless of profile, in this counter.</p> <p>An FC specified as part of this command and for this specific context cannot be specified as a profile-aware FC using the <b>fc-in-profile</b> command under the <b>collect-lmm-fc-stats</b> context.</p> <p>When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.</p>
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fc-in-profile** *keyword*

Synopsis	Forwarding class name for profile-aware counter
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm collect-lmm-fc-stats</a> <a href="#">fc-in-profile</a> <i>keyword</i>
Tree	<a href="#">fc-in-profile</a>
Description	<p>This command configures individual counters for the specified FCs with regard to profile. The system includes all countable packets that match a configured FC and that are deemed to be in-profile in this counter.</p> <p>An FC specified as part of this command and for this specific context cannot be specified as a profile-unaware FC using the <b>fc</b> command under the <b>collect-lmm-fc-stats</b> context.</p> <p>When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.</p>
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **collect-lmm-stats** *boolean*

Synopsis	Collect statistics for loss measurement message tests
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm collect-lmm-stats</a> <i>boolean</i>
Tree	<a href="#">collect-lmm-stats</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mep** [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number*

Synopsis	Enter the <b>mep</b> list instance
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i>
Tree	<a href="#">mep</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **md-admin-name** *reference*

Synopsis	Maintenance Domain (MD) name
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i>
Tree	<a href="#">mep</a>
Reference	<b>configure</b> <a href="#">eth-cfm domain</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ma-admin-name** *reference*

Synopsis	Maintenance Association (MA) name
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i>
Tree	<a href="#">mep</a>
Reference	<b>configure</b> <a href="#">eth-cfm domain</a> <i>string</i> <a href="#">association</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mep-id** *number*

Synopsis	Maintenance Endpoint (MEP) ID
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i>
Tree	<a href="#">mep</a>
Range	1 to 8191
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **admin-state** *keyword*

Synopsis	Administrative state of the MEP
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ais**

Synopsis	Enable the <b>ais</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>ais</b>
Tree	<a href="#">ais</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **client-meg-level** *number*

Synopsis	Client MEG level for AIS message generation
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>ais</b> <b>client-meg-level</b> <i>number</i>
Tree	<a href="#">client-meg-level</a>
Range	1 to 7
Max.	7
Instances	
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **interface-support** *boolean*

Synopsis	Enable generation of AIS PDUs based on endpoint state
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>ais</b> <b>interface-support</b> <i>boolean</i>

Tree	<a href="#">interface-support</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **interval** *number*

Synopsis	Transmission interval for AIS messages
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">ais</a> <a href="#">interval</a> <i>number</i>
Tree	<a href="#">interval</a>
Range	1   60
Default	1
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **low-priority-defect** *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">ais</a> <a href="#">low-priority-defect</a> <i>keyword</i>
Tree	<a href="#">low-priority-defect</a>
Default	all-def
Options	all-def, mac-rem-err-xcon
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **priority** *number*

Synopsis	Priority of the AIS messages generated by the node
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">ais</a> <a href="#">priority</a> <i>number</i>
Tree	<a href="#">priority</a>
Range	0 to 7
Default	7

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## alarm-notification

Synopsis	Enter the <b>alarm-notification</b> context
Context	<b>configure</b> <a href="#">service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number alarm-notification</a>
Tree	<a href="#">alarm-notification</a>
Description	Commands in this context configure the Fault Notification Generator (FNG) time values to raise an alarm or reset the CCM defect alarm.  Use these timers for network management processes. The timers are not tied into delaying the notification to the fault management system on the network element and do not affect fault propagation mechanisms.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## fng-alarm-time *number*

Synopsis	Time that must expire before an FNG alarm is raised
Context	<b>configure</b> <a href="#">service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number alarm-notification fng-alarm-time number</a>
Tree	<a href="#">fng-alarm-time</a>
Range	250   500   1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## fng-reset-time *number*

Synopsis	Time that must expire before an FNG alarm is reset
Context	<b>configure</b> <a href="#">service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number alarm-notification fng-reset-time number</a>
Tree	<a href="#">fng-reset-time</a>
Range	250   500   1000
Units	centiseconds
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm boolean**

Synopsis Generate CCM messages

Context **configure service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm boolean**

Tree **ccm**

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm-ltm-priority number**

Synopsis Priority of CCM and LTM messages transmitted by the MEP

Context **configure service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm-ltm-priority number**

Tree **ccm-ltm-priority**

Range 0 to 7

Default 7

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm-padding-size number**

Synopsis Number of octets of padding to insert in CCM packets

Context **configure service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm-padding-size number**

Tree **ccm-padding-size**

Description This command sets the byte size of the optional Data TLV to be included in the ETH-CC PDU.

This command increases the size of the ETH-CC PDU by the configured value. The base size of the ETH-CC PDU, including the Interface Status TLV and Port Status TLV, is 83 bytes not including the Layer 2 encapsulation. CCM padding is not supported when the CCM interval (configured through **configure eth-cfm domain association ccm-interval**) is less than 1 second.

Range 3 to 1500

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **cfm-vlan-tag** *string*

Synopsis VLAN tags to apply to CFM PDUs for egress processing

Context **configure service vpls** *string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number cfm-vlan-tag string*

Tree [cfm-vlan-tag](#)

String Length 1 to 9

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **csf**

Synopsis Enable the **csf** context

Context **configure service vpls** *string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number csf*

Tree [csf](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **multiplier** *decimal-number*

Synopsis Multiplication factor used to clear the CSF condition

Context **configure service vpls** *string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number csf multiplier decimal-number*

Tree [multiplier](#)

Range 0.0 | 2.0 to 30.0

Default 3.5

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **description** *string*

Synopsis Text description

Context **configure service vpls** *string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number description string*

Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **direction** *keyword*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Direction the MEP faces
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm mep md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">direction</a> <i>keyword</i>
Tree	<a href="#">direction</a>
Default	down
Options	down, up
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **eth-test**

Synopsis	Enable the <b>eth-test</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm mep md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">eth-test</a>
Tree	<a href="#">eth-test</a>
Description	Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the <b>oam eth-cfm eth-test</b> command.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **bit-error-threshold** *number*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm mep md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">eth-test</a> <a href="#">bit-error-threshold</a> <i>number</i>

Tree	<a href="#">bit-error-threshold</a>
Range	0 to 11840
Default	1
Units	bit errors
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## test-pattern

Synopsis	Enter the <b>test-pattern</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <a href="#">string sap</a> <a href="#">string eth-cfm mep md-admin-name</a> <a href="#">reference ma-admin-name</a> <a href="#">reference mep-id</a> <a href="#">number eth-test</a> <b>test-pattern</b>
Tree	<a href="#">test-pattern</a>
Description	Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## crc-tlv *boolean*

Synopsis	Generate a CRC checksum
Context	<b>configure</b> <a href="#">service vpls</a> <a href="#">string sap</a> <a href="#">string eth-cfm mep md-admin-name</a> <a href="#">reference ma-admin-name</a> <a href="#">reference mep-id</a> <a href="#">number eth-test test-pattern</a> <b>crc-tlv</b> <i>boolean</i>
Tree	<a href="#">crc-tlv</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## pattern *keyword*

Synopsis	Test pattern for Ethernet Test frames
Context	<b>configure</b> <a href="#">service vpls</a> <a href="#">string sap</a> <a href="#">string eth-cfm mep md-admin-name</a> <a href="#">reference ma-admin-name</a> <a href="#">reference mep-id</a> <a href="#">number eth-test test-pattern</a> <b>pattern</b> <i>keyword</i>
Tree	<a href="#">pattern</a>
Description	This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.

Default	all-zeros
Options	all-zeros, all-ones
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fault-propagation** *keyword*

Synopsis	Fault propagation for the MEP
Context	<b>configure</b> <b>service vpls</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>fault-propagation</b> <i>keyword</i>
Tree	<b>fault-propagation</b>
Options	use-if-status-tlv, suspend-ccm
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **grace**

Synopsis	Enter the <b>grace</b> context
Context	<b>configure</b> <b>service vpls</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>grace</b>
Tree	<b>grace</b>
Description	Commands in this context configure the Nokia ETH-CFM Grace function and the ITU-T Y.1731 Ethernet Expected Default (ETH-ED) function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **eth-ed**

Synopsis	Enter the <b>eth-ed</b> context
Context	<b>configure</b> <b>service vpls</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>grace</b> <b>eth-ed</b>
Tree	<b>eth-ed</b>
Description	Commands in this context configure the ITU-T Y.1731 ETH-ED function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **max-rx-defect-window** *number*

Synopsis	Maximum received ETH-ED expected defect window duration
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">grace</a> <a href="#">eth-ed</a> <a href="#">max-rx-defect-window</a> <i>number</i>
Tree	<a href="#">max-rx-defect-window</a>
Range	1 to 86400
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **priority** *number*

Synopsis	Transmission priority for ETH-ED PDUs
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">grace</a> <a href="#">eth-ed</a> <a href="#">priority</a> <i>number</i>
Tree	<a href="#">priority</a>
Range	0 to 7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **rx-eth-ed** *boolean*

Synopsis	Receive and process ETH-ED ITU-T Y.1731 PDUs on the MEP
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">grace</a> <a href="#">eth-ed</a> <a href="#">rx-eth-ed</a> <i>boolean</i>
Tree	<a href="#">rx-eth-ed</a>
Description	This command enables the reception and processing of the ITU-T Y.1731 ETH-ED PDU on the MEP.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **tx-eth-ed** *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
----------	-----------------------------------

Context	<b>configure service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed tx-eth-ed boolean</b>
Tree	<a href="#">tx-eth-ed</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## eth-vsm-grace

Synopsis	Enter the <b>eth-vsm-grace</b> context
Context	<b>configure service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace</b>
Tree	<a href="#">eth-vsm-grace</a>
Description	Commands in this context configure the Nokia ETH-CFM Grace function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## rx-eth-vsm-grace *boolean*

Synopsis	Receive and process Nokia ETH-CFM Grace PDU on the MEP
Context	<b>configure service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace rx-eth-vsm-grace boolean</b>
Tree	<a href="#">rx-eth-vsm-grace</a>
Description	When configured to <b>true</b> , the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.  When configured to <b>false</b> , the router disables the Nokia Grace function.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## tx-eth-vsm-grace *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	<b>configure service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace tx-eth-vsm-grace boolean</b>
Tree	<a href="#">tx-eth-vsm-grace</a>

Description	<p>When configured to <b>true</b>, the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.</p> <p>The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.</p> <p>The operator must configure the <b>configure system eth-cfm grace</b> command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).</p> <p>When configured to <b>false</b>, the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.</p>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **lbm-svc-act-responder** *boolean*

Synopsis	Process service activation streams in ETH-CFM LBM
Context	<b>configure service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number lbm-svc-act-responder boolean</b>
Tree	<a href="#">lbm-svc-act-responder</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **low-priority-defect** *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	<b>configure service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number low-priority-defect keyword</b>
Tree	<a href="#">low-priority-defect</a>
Default	mac-rem-err-xcon
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mac-address** *string*

Synopsis	MAC address of the MEP
----------	------------------------

Context	<b>configure service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number mac-address string</b>
Tree	<b>mac-address</b>
Description	This command specifies the MAC address of the MEP. When unconfigured, the MAC address of the port (if the MEP is on a SAP) or the MAC address of a bridge (if the MEP is on a spoke) is used.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **one-way-delay-threshold** *number*

Synopsis	Threshold time limit for the one-way delay test
Context	<b>configure service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number one-way-delay-threshold number</b>
Tree	<b>one-way-delay-threshold</b>
Range	0 to 600
Default	3
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **primary-vlan** *boolean*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	MEP provisioned using MA primary VLAN ID
Context	<b>configure service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number primary-vlan boolean</b>
Tree	<b>primary-vlan</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mip primary-vlan** (*number* | *keyword*)

Synopsis	Enter the <b>mip</b> list instance
Context	<b>configure service vpls</b> <i>string sap string eth-cfm mip primary-vlan</i> ( <i>number</i>   <i>keyword</i> )
Tree	<b>mip</b>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **primary-vlan** (*number* | *keyword*)

Synopsis	VLAN ID to which the MIP is attached
Context	<b>configure service vpls</b> <i>string sap string eth-cfm mip primary-vlan</i> ( <i>number</i>   <i>keyword</i> )
Tree	<b>mip</b>
Description	This command provides an option for linking a MIP with a Primary VLAN number or none. When the <b>none</b> option is provided, the MIP does not include the primary vlan.
Range	1 to 4094
Options	none
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **cfm-vlan-tag** *string*

Synopsis	VLAN tags to apply to CFM PDUs for egress processing
Context	<b>configure service vpls</b> <i>string sap string eth-cfm mip primary-vlan</i> ( <i>number</i>   <i>keyword</i> ) <b>cfm-vlan-tag</b> <i>string</i>
Tree	<b>cfm-vlan-tag</b>
Description	This command allows the CFM function to include additional VLAN tags to the CFM packet that are carried to the egress and treated as service delimited. Typically, this function is used to influence the VLAN carried over a binding that uses the vc-type vlan or the binding forces the use of one or more VLAN tag that results in a mismatch between the service data arriving at the binding and the locally generated ETH-CFM PDUs arriving at the same egress. When this command is included under the MEP or MIP configuration, the tags used as part of the configuration typically match the SAP service delimited configuration.
String Length	1 to 9
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mac-address** *string*

Synopsis	MAC address of the MIP
Context	<b>configure</b> <b>service vpls</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm mip primary-vlan</b> ( <i>number</i>   <i>keyword</i> ) <b>mac-address</b> <i>string</i>
Tree	<b>mac-address</b>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **squelch-ingress-ctag-levels** *number*

Synopsis	Squelch levels using additional VLAN C-Tag space
Context	<b>configure</b> <b>service vpls</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm squelch-ingress-ctag-levels</b> <i>number</i>
Tree	<b>squelch-ingress-ctag-levels</b>
Description	This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding plus an additional VLAN, up to a maximum tag length of two tags. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.  The list of levels must be a complete contiguous list from 0 up to the highest level to be dropped.
Range	0 to 7
Max.	8
Instances	
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **squelch-ingress-levels** *number*

Synopsis	Levels for which ETH-CFM packets are silently discarded
Context	<b>configure</b> <b>service vpls</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm squelch-ingress-levels</b> <i>number</i>
Tree	<b>squelch-ingress-levels</b>
Description	This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM

criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.

The list of levels must be a complete contiguous list from 0 up to the highest level that will be dropped.

Range	0 to 7
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **vmep-filter** *boolean*

Synopsis	Suppress eth-cfm PDUs based on level lower than or equal to configured Virtual MEP
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm vmep-filter</a> <i>boolean</i>
Tree	<a href="#">vmep-filter</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **eth-ring** *number*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Ethernet ring operation
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-ring</a> <i>number</i>
Tree	<a href="#">eth-ring</a>
Range	1 to 128
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **etree-leaf** *boolean*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Enable etree leaf access-circuit status
Context	<b>configure</b> <i>service vpls string sap string etree-leaf boolean</i>
Tree	<i>etree-leaf</i>
Default	false
Introduced	16.0.R1
Platforms	All

### **etree-root-leaf-tag**

Synopsis	Enable the <b>etree-root-leaf-tag</b> context
Context	<b>configure</b> <i>service vpls string sap string etree-root-leaf-tag</i>
Tree	<i>etree-root-leaf-tag</i>
Introduced	16.0.R1
Platforms	All

### **leaf number**

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Leaf tag value
Context	<b>configure</b> <i>service vpls string sap string etree-root-leaf-tag leaf number</i>
Tree	<i>leaf</i>
Range	1 to 4094
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **fdb**

Synopsis	Enter the <b>fdb</b> context
Context	<b>configure</b> <i>service vpls string sap string fdb</i>
Tree	<i>fdb</i>
Introduced	16.0.R1
Platforms	All

**auto-learn-mac-protect** *boolean*

Synopsis	Enable automatic update of MAC protect list
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">fdb</a> <b>auto-learn-mac-protect</b> <i>boolean</i>
Tree	<a href="#">auto-learn-mac-protect</a>
Default	false
Introduced	16.0.R1
Platforms	All

**auto-learn-mac-protect-exclude-list** *reference*

Synopsis	Referenced MAC protect exclusion list
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">fdb</a> <b>auto-learn-mac-protect-exclude-list</b> <i>reference</i>
Tree	<a href="#">auto-learn-mac-protect-exclude-list</a>
Description	<p>This command references the name of a MAC protect exclusion list.</p> <p>Dynamically-learned MAC Source Addresses (SA) are protected if they are learned on an object with ALMP configured and no exclusion list is associated with the object, or if the MAC SA does not match any entry in an associated exclusion list.</p> <p>An exclusion list can be used in multiple objects of a service. If a list is empty, ALMP does not exclude any learned MAC SAs from protection on the object.</p>
Reference	<b>configure</b> <a href="#">service</a> <a href="#">mac-list</a> <i>string</i>
Introduced	20.5.R1
Platforms	All

**discard-unknown-source** *boolean*

Synopsis	Discard frames with unknown source
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">fdb</a> <b>discard-unknown-source</b> <i>boolean</i>
Tree	<a href="#">discard-unknown-source</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **discard-unprotected-dest-mac** *boolean*

Synopsis	Discard packet with unprotected destination MAC address
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">fdb</a> <a href="#">discard-unprotected-dest-mac</a> <i>boolean</i>
Tree	<a href="#">discard-unprotected-dest-mac</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **limit-mac-move** *keyword*

Synopsis	MAC move
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">fdb</a> <a href="#">limit-mac-move</a> <i>keyword</i>
Tree	<a href="#">limit-mac-move</a>
Default	blockable
Options	blockable, non-blockable
Introduced	16.0.R1
Platforms	All

### **mac-learning**

Synopsis	Enter the <b>mac-learning</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">fdb</a> <a href="#">mac-learning</a>
Tree	<a href="#">mac-learning</a>
Introduced	16.0.R1
Platforms	All

### **aging** *boolean*

Synopsis	Enable aging of MAC addresses
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">fdb</a> <a href="#">mac-learning</a> <a href="#">aging</a> <i>boolean</i>
Tree	<a href="#">aging</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **learning** *boolean*

Synopsis	Enable learning of new MAC addresses
Context	<b>configure</b> <a href="#">service vpls string sap string fdb mac-learning learning</a> <i>boolean</i>
Tree	<a href="#">learning</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **mac-pinning** *boolean*

Synopsis	Enable MAC address pinning on this SAP
Context	<b>configure</b> <a href="#">service vpls string sap string fdb mac-pinning</a> <i>boolean</i>
Tree	<a href="#">mac-pinning</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **maximum-mac-addresses** *number*

Synopsis	Maximum number of MAC entries in the FDB
Context	<b>configure</b> <a href="#">service vpls string sap string fdb maximum-mac-addresses</a> <i>number</i>
Tree	<a href="#">maximum-mac-addresses</a>
Range	1 to 511999
Introduced	16.0.R1
Platforms	All

### **protected-src-mac-violation-action** *keyword*

Synopsis	Action to take whenever a relearn request for a protected MAC is received
Context	<b>configure</b> <a href="#">service vpls string sap string fdb protected-src-mac-violation-action</a> <i>keyword</i>
Tree	<a href="#">protected-src-mac-violation-action</a>
Options	sap-oper-down, alarm-only, discard
Introduced	16.0.R1
Platforms	All

### **host-admin-state** *keyword*

Synopsis	Administrative state of the hosts
Context	<b>configure service vpls</b> <i>string sap string host-admin-state keyword</i>
Tree	<a href="#">host-admin-state</a>
Default	enable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **host-lockout-policy** *reference*

Synopsis	Host lockout policy
Context	<b>configure service vpls</b> <i>string sap string host-lockout-policy reference</i>
Tree	<a href="#">host-lockout-policy</a>
Reference	<b>configure subscriber-mgmt</b> <i>host-lockout-policy string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **i-vpls-mac-flush**

Synopsis	Enter the <b>i-vpls-mac-flush</b> context
Context	<b>configure service vpls</b> <i>string sap string i-vpls-mac-flush</i>
Tree	<a href="#">i-vpls-mac-flush</a>
Introduced	16.0.R1
Platforms	All

### **bgp-evpn**

Synopsis	Enter the <b>bgp-evpn</b> context
Context	<b>configure service vpls</b> <i>string sap string i-vpls-mac-flush bgp-evpn</i>
Tree	<a href="#">bgp-evpn</a>
Introduced	16.0.R1
Platforms	All

### **send-to-bvpls** *boolean*

Synopsis	Send B-VPLS EVPN flush
Context	<b>configure</b> <a href="#">service vpls string sap string i-vpls-mac-flush bgp-evpn send-to-bvpls boolean</a>
Tree	<a href="#">send-to-bvpls</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **igmp-host-tracking**

Synopsis	Enter the <b>igmp-host-tracking</b> context
Context	<b>configure</b> <a href="#">service vpls string sap string igmp-host-tracking</a>
Tree	<a href="#">igmp-host-tracking</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **expiry-time** *number*

Synopsis	Time that the system continues to track inactive hosts
Context	<b>configure</b> <a href="#">service vpls string sap string igmp-host-tracking expiry-time number</a>
Tree	<a href="#">expiry-time</a>
Range	1 to 65535
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **import-policy** *reference*

Synopsis	Import policy that filters IGMP packets
Context	<b>configure</b> <a href="#">service vpls string sap string igmp-host-tracking import-policy reference</a>
Tree	<a href="#">import-policy</a>
Reference	<b>configure</b> <a href="#">policy-options policy-statement string</a>
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **maximum-number-group-sources** *number*

Synopsis Maximum number of multicast groups to be tracked per group  
Context **configure** [service vpls string sap string igmp-host-tracking](#) [maximum-number-group-sources number](#)  
Tree [maximum-number-group-sources](#)  
Range 1 to 32000  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **maximum-number-groups** *number*

Synopsis Maximum number of multicast groups to be tracked  
Context **configure** [service vpls string sap string igmp-host-tracking](#) [maximum-number-groups number](#)  
Tree [maximum-number-groups](#)  
Range 1 to 16000  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **maximum-number-sources** *number*

Synopsis Maximum number of multicast sources to be tracked  
Context **configure** [service vpls string sap string igmp-host-tracking](#) [maximum-number-sources number](#)  
Tree [maximum-number-sources](#)  
Range 1 to 1000  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **router-alert-check** *boolean*

Synopsis Enable IGMP router alert check option  
Context **configure** [service vpls string sap string igmp-host-tracking](#) [router-alert-check boolean](#)

Tree	<a href="#">router-alert-check</a>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **igmp-snooping**

Synopsis	Enter the <b>igmp-snooping</b> context
Context	<b>configure</b> <a href="#">service vpls string sap string igmp-snooping</a>
Tree	<a href="#">igmp-snooping</a>
Introduced	16.0.R1
Platforms	All

## **fast-leave** *boolean*

Synopsis	Allow IGMP fast leave processing
Context	<b>configure</b> <a href="#">service vpls string sap string igmp-snooping fast-leave boolean</a>
Tree	<a href="#">fast-leave</a>
Default	false
Introduced	16.0.R1
Platforms	All

## **import-policy** *reference*

Synopsis	Import policy that filters IGMP packets
Context	<b>configure</b> <a href="#">service vpls string sap string igmp-snooping import-policy reference</a>
Tree	<a href="#">import-policy</a>
Reference	<b>configure</b> <a href="#">policy-options policy-statement string</a>
Introduced	16.0.R1
Platforms	All

## **maximum-number-group-sources** *number*

Synopsis	Maximum group source combinations
----------	-----------------------------------

Context	<b>configure service vpls string sap string igmp-snooping maximum-number-group-sources number</b>
Tree	<a href="#">maximum-number-group-sources</a>
Range	1 to 32000
Introduced	16.0.R1
Platforms	All

### **maximum-number-groups number**

Synopsis	Maximum groups allowed
Context	<b>configure service vpls string sap string igmp-snooping maximum-number-groups number</b>
Tree	<a href="#">maximum-number-groups</a>
Range	1 to 16000
Introduced	16.0.R1
Platforms	All

### **maximum-number-sources number**

Synopsis	Maximum sources that are allowed per group
Context	<b>configure service vpls string sap string igmp-snooping maximum-number-sources number</b>
Tree	<a href="#">maximum-number-sources</a>
Range	1 to 1000
Introduced	16.0.R1
Platforms	All

### **mcac**

Synopsis	Enter the <b>mcac</b> context
Context	<b>configure service vpls string sap string igmp-snooping mcac</b>
Tree	<a href="#">mcac</a>
Introduced	16.0.R1
Platforms	All

## bandwidth

Synopsis	Enter the <b>bandwidth</b> context
Context	<b>configure service vpls string sap string igmp-snooping mcac bandwidth</b>
Tree	<b>bandwidth</b>
Introduced	16.0.R1
Platforms	All

## mandatory (*number* | *keyword*)

Synopsis	Pre-reserved bandwidth for all mandatory channels
Context	<b>configure service vpls string sap string igmp-snooping mcac bandwidth mandatory (<i>number</i>   <i>keyword</i>)</b>
Tree	<b>mandatory</b>
Range	0 to 2147483647
Default	unlimited
Options	unlimited
Introduced	16.0.R1
Platforms	All

## total (*number* | *keyword*)

Synopsis	Maximum allowed bandwidth
Context	<b>configure service vpls string sap string igmp-snooping mcac bandwidth total (<i>number</i>   <i>keyword</i>)</b>
Tree	<b>total</b>
Range	0 to 2147483647
Default	unlimited
Options	unlimited
Introduced	16.0.R1
Platforms	All

## interface-policy *reference*

Synopsis	Name of multicast CAC interface policy
Context	<b>configure service vpls string sap string igmp-snooping mcac interface-policy <i>reference</i></b>

Tree	<a href="#">interface-policy</a>
Reference	<b>configure mcac interface-policy</b> <i>string</i>
Introduced	16.0.R1
Platforms	All

## **mc-constraints**

Synopsis	Enter the <b>mc-constraints</b> context
Context	<b>configure service vpls</b> <i>string sap string igmp-snooping mcac mc-constraints</i>
Tree	<a href="#">mc-constraints</a>
Introduced	16.0.R1
Platforms	All

## **level** [[level-id](#)] *number*

Synopsis	Enter the <b>level</b> list instance
Context	<b>configure service vpls</b> <i>string sap string igmp-snooping mcac mc-constraints level number</i>
Tree	<a href="#">level</a>
Introduced	16.0.R1
Platforms	All

## **[level-id]** *number*

Synopsis	Bandwidth level ID for an MCAC constraint
Context	<b>configure service vpls</b> <i>string sap string igmp-snooping mcac mc-constraints level number</i>
Tree	<a href="#">level</a>
Range	1 to 8
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## **bandwidth** *number*

Synopsis	Bandwidth available for this level
----------	------------------------------------

Context	<b>configure service vpls string sap string igmp-snooping mcac mc-constraints level number bandwidth number</b>
Tree	<a href="#">bandwidth</a>
Range	0 to 2147483647
Units	kilobps
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **number-down** [[number-lag-port-down](#)] *number*

Synopsis	Enter the <b>number-down</b> list instance
Context	<b>configure service vpls string sap string igmp-snooping mcac mc-constraints number-down number</b>
Tree	<a href="#">number-down</a>
Introduced	16.0.R1
Platforms	All

### **[number-lag-port-down]** *number*

Synopsis	Number of ports that are down in this LAG link
Context	<b>configure service vpls string sap string igmp-snooping mcac mc-constraints number-down number</b>
Tree	<a href="#">number-down</a>
Range	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **level** *number*

Synopsis	Level ID to associate with number of down LAG ports
Context	<b>configure service vpls string sap string igmp-snooping mcac mc-constraints number-down number level number</b>
Tree	<a href="#">level</a>

Description	This command specifies the bandwidth for a given level. Level 1 has the highest priority and level 8 has the lowest priority.
Range	1 to 8
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **use-lag-port-weight** *boolean*

Synopsis	Use LAG port weight in calculating MCAC constraints
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">igmp-snooping mcac mc-constraints use-lag-port-weight</a> <i>boolean</i>
Tree	<a href="#">use-lag-port-weight</a>
Description	When configured to <b>true</b> , port weight is used when determining available bandwidth per level when LAG ports go down or come up. This command is required for proper operation on mixed port-speed LAGs and can also be used for unmixed port-speed LAGs.
Default	false
Introduced	16.0.R1
Platforms	All

### **policy** *reference*

Synopsis	Multicast CAC policy name
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">igmp-snooping mcac policy</a> <i>reference</i>
Tree	<a href="#">policy</a>
Description	<p>This command configures the name of the global channel bandwidth definition policy that is used for (H)MCAC and HQoS adjustment.</p> <p>Within the scope of HQoS adjustment, the channel definition policy under the group interface is used if redirection is unconfigured. In this case, the HQoS adjustment can be applied to IPoE subscribers in per-SAP replication mode.</p> <p>If redirection is configured, the channel bandwidth definition policy applied under the Layer 3 redirected interface is in effect.</p> <p>Hierarchical MCAC (HMCAC) is supported on two levels simultaneously:</p> <ul style="list-style-type: none"><li>• subscriber level and redirected interface when redirection is configured</li><li>• subscriber level and group-interface level when redirection is unconfigured</li></ul> <p>In HMCAC, the subscriber is checked against its bandwidth limits first, then against the bandwidth limits of the redirected or group interface. If redirection is configured but the</p>

policy is referenced only under the group interface, no admission control is executed (HMCAC or MCAC).

Reference	<b>configure mcac policy string</b>
Introduced	16.0.R1
Platforms	All

### **mrouter-port** *boolean*

Synopsis	Operate port as a multicast router port
Context	<b>configure service vpls string sap string igmp-snooping mrouter-port boolean</b>
Tree	<b>mrouter-port</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **mvr**

Synopsis	Enter the <b>mvr</b> context
Context	<b>configure service vpls string sap string igmp-snooping mvr</b>
Tree	<b>mvr</b>
Introduced	16.0.R1
Platforms	All

### **from-vpls** *reference*

Synopsis	MVR VPLS from which the multicast channels are taken
Context	<b>configure service vpls string sap string igmp-snooping mvr from-vpls reference</b>
Tree	<b>from-vpls</b>
Reference	<b>configure service vpls string</b>
Introduced	16.0.R1
Platforms	All

### **to-sap** *string*

Synopsis	Multicast channels copied to SAP
----------	----------------------------------

Context	<b>configure service vpls string sap string igmp-snooping mvr to-sap string</b>
Tree	<b>to-sap</b>
String Length	1 to 45
Introduced	16.0.R1
Platforms	All

### **query-interval** *number*

Synopsis	Time between two consecutive host-query messages
Context	<b>configure service vpls string sap string igmp-snooping query-interval number</b>
Tree	<b>query-interval</b>
Range	2 to 1024
Default	125
Units	seconds
Introduced	16.0.R1
Platforms	All

### **query-last-member-interval** *number*

Synopsis	Time between group-specific query messages
Context	<b>configure service vpls string sap string igmp-snooping query-last-member-interval number</b>
Tree	<b>query-last-member-interval</b>
Range	1 to 50
Default	10
Units	deciseconds
Introduced	16.0.R1
Platforms	All

### **query-response-interval** *number*

Synopsis	Time to wait for a response to the host-query messages
Context	<b>configure service vpls string sap string igmp-snooping query-response-interval number</b>
Tree	<b>query-response-interval</b>
Range	1 to 1023

Default	10
Units	seconds
Introduced	16.0.R1
Platforms	All

### **robust-count** *number*

Synopsis	Number of retries after expected message loss
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">igmp-snooping</a> <b>robust-count</b> <i>number</i>
Tree	<a href="#">robust-count</a>
Range	2 to 7
Default	2
Introduced	16.0.R1
Platforms	All

### **router-alert-check** *boolean*

Synopsis	Enable IP router alert check option
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">igmp-snooping</a> <b>router-alert-check</b> <i>boolean</i>
Tree	<a href="#">router-alert-check</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **send-queries** *boolean*

Synopsis	Generate IGMP general queries
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">igmp-snooping</a> <b>send-queries</b> <i>boolean</i>
Tree	<a href="#">send-queries</a>
Default	false
Introduced	16.0.R1
Platforms	All

## static

Synopsis	Enter the <b>static</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">igmp-snooping</a> <a href="#">static</a>
Tree	<a href="#">static</a>
Introduced	16.0.R1
Platforms	All

## group [[group-address](#)] *string*

Synopsis	Enter the <b>group</b> list instance
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">igmp-snooping</a> <a href="#">static</a> <a href="#">group</a> <i>string</i>
Tree	<a href="#">group</a>
Introduced	16.0.R1
Platforms	All

## [[group-address](#)] *string*

Synopsis	Group address of static IGMP multicast channel
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">igmp-snooping</a> <a href="#">static</a> <a href="#">group</a> <i>string</i>
Tree	<a href="#">group</a>
Description	This command configures an address that receives data on an interface. The IP address must be unique for each static group.
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## source [[source-address](#)] *string*

Synopsis	Add a list entry for <b>source</b>
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">igmp-snooping</a> <a href="#">static</a> <a href="#">group</a> <i>string</i> <a href="#">source</a> <i>string</i>
Tree	<a href="#">source</a>
Notes	The following elements are part of a mandatory choice: <b>source</b> or <b>starg</b> .
Introduced	16.0.R1
Platforms	All

### **[source-address]** *string*

Synopsis	Source IP address of multicast channel sending data
Context	<b>configure service vpls string sap string igmp-snooping static group string source string</b>
Tree	<b>source</b>
Notes	This element is part of a list key.
Introduced	16.0.R2
Platforms	All

### **starg**

Synopsis	any source address (*,G)
Context	<b>configure service vpls string sap string igmp-snooping static group string starg</b>
Tree	<b>starg</b>
Notes	The following elements are part of a mandatory choice: <b>source</b> or <b>starg</b> .
Introduced	16.0.R2
Platforms	All

### **version** *keyword*

Synopsis	IGMP protocol version
Context	<b>configure service vpls string sap string igmp-snooping version keyword</b>
Tree	<b>version</b>
Default	3
Options	1, 2, 3
Introduced	16.0.R1
Platforms	All

### **ingress**

Synopsis	Enter the <b>ingress</b> context
Context	<b>configure service vpls string sap string ingress</b>
Tree	<b>ingress</b>
Introduced	16.0.R1
Platforms	All

## filter

Synopsis	Enter the <b>filter</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress filter</a>
Tree	<a href="#">filter</a>
Introduced	16.0.R1
Platforms	All

## ip reference

Synopsis	IPv4 filter policy name
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress filter</a> <a href="#">ip reference</a>
Tree	<a href="#">ip</a>
Reference	<b>configure</b> <a href="#">filter ip-filter</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

## ipv6 reference

Synopsis	IPv6 filter policy name
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress filter</a> <a href="#">ipv6 reference</a>
Tree	<a href="#">ipv6</a>
Reference	<b>configure</b> <a href="#">filter ipv6-filter</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

## mac reference

Synopsis	MAC filter policy name
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress filter</a> <a href="#">mac reference</a>
Tree	<a href="#">mac</a>
Reference	<b>configure</b> <a href="#">filter mac-filter</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

## qos

Synopsis	Enter the <b>qos</b> context
Context	<b>configure service vpls string sap string ingress qos</b>
Tree	<b>qos</b>
Introduced	16.0.R1
Platforms	All

## match-qinq-dot1p *keyword*

Synopsis	Ingress match QinQ Dot1p
Context	<b>configure service vpls string sap string ingress qos match-qinq-dot1p keyword</b>
Tree	<b>match-qinq-dot1p</b>
Options	top, bottom
Introduced	16.0.R1
Platforms	All

## policer-control-policy

Synopsis	Enter the <b>policer-control-policy</b> context
Context	<b>configure service vpls string sap string ingress qos policer-control-policy</b>
Tree	<b>policer-control-policy</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## overrides

Synopsis	Enable the <b>overrides</b> context
Context	<b>configure service vpls string sap string ingress qos policer-control-policy overrides</b>
Tree	<b>overrides</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## root

Synopsis	Enter the <b>root</b> context
Context	<b>configure service vpls string sap string ingress qos policer-control-policy overrides root</b>
Tree	<b>root</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## max-rate (*number* | *keyword*)

Synopsis	Maximum frame-based bandwidth limit
Context	<b>configure service vpls string sap string ingress qos policer-control-policy overrides root max-rate (<i>number</i>   <i>keyword</i>)</b>
Tree	<b>max-rate</b>
Range	1 to 6400000000
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## priority-mbs-thresholds

Synopsis	Enter the <b>priority-mbs-thresholds</b> context
Context	<b>configure service vpls string sap string ingress qos policer-control-policy overrides root priority-mbs-thresholds</b>
Tree	<b>priority-mbs-thresholds</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## min-thresh-separation (*number* | *keyword*)

Synopsis	Minimum amount of separation buffer space
Context	<b>configure service vpls string sap string ingress qos policer-control-policy overrides root priority-mbs-thresholds min-thresh-separation (<i>number</i>   <i>keyword</i>)</b>
Tree	<b>min-thresh-separation</b>
Range	0 to 16777216
Units	bytes
Options	auto

Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **priority** [*priority-level*] *number*

Synopsis Enter the **priority** list instance  
Context **configure** [service](#) [vpls](#) *string* [sap](#) *string* [ingress](#) [qos](#) [policer-control-policy](#) [overrides](#) [root](#)  
[priority-mbs-thresholds](#) **priority** *number*  
Tree [priority](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **[priority-level]** *number*

Synopsis Priority level  
Context **configure** [service](#) [vpls](#) *string* [sap](#) *string* [ingress](#) [qos](#) [policer-control-policy](#) [overrides](#) [root](#)  
[priority-mbs-thresholds](#) **priority** *number*  
Tree [priority](#)  
Range 1 to 8  
Notes This element is part of a list key.  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **mbs-contribution** (*number* | *keyword*)

Synopsis Minimum amount of cumulative buffer space allowed  
Context **configure** [service](#) [vpls](#) *string* [sap](#) *string* [ingress](#) [qos](#) [policer-control-policy](#) [overrides](#) [root](#)  
[priority-mbs-thresholds](#) **priority** *number* **mbs-contribution** (*number* | *keyword*)  
Tree [mbs-contribution](#)  
Range 0 to 16777216  
Units bytes  
Options auto  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **policy-name** *reference*

Synopsis	Policer control policy name
Context	<b>configure</b> <a href="#">service vpls string sap string ingress qos policer-control-policy policy-name reference</a>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos policer-control-policy string</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **sap-ingress**

Synopsis	Enter the <b>sap-ingress</b> context
Context	<b>configure</b> <a href="#">service vpls string sap string ingress qos sap-ingress</a>
Tree	<a href="#">sap-ingress</a>
Introduced	16.0.R1
Platforms	All

### **fp-redirect-group**

Synopsis	Enter the <b>fp-redirect-group</b> context
Context	<b>configure</b> <a href="#">service vpls string sap string ingress qos sap-ingress fp-redirect-group</a>
Tree	<a href="#">fp-redirect-group</a>
Introduced	16.0.R1
Platforms	All

### **group-name** *reference*

Synopsis	Queue group template name created on forwarding plane
Context	<b>configure</b> <a href="#">service vpls string sap string ingress qos sap-ingress fp-redirect-group group-name reference</a>
Tree	<a href="#">group-name</a>
Reference	<b>configure</b> <a href="#">qos queue-group-templates ingress queue-group string</a>
Introduced	16.0.R1
Platforms	All

### **instance** *number*

Synopsis	Queue group instance
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress qos sap-ingress fp-redirect-group</a> <a href="#">instance</a> <i>number</i>
Tree	<a href="#">instance</a>
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

### **overrides**

Synopsis	Enter the <b>overrides</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress qos sap-ingress overrides</a>
Tree	<a href="#">overrides</a>
Introduced	16.0.R1
Platforms	All

### **ip-criteria**

Synopsis	Enter the <b>ip-criteria</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress qos sap-ingress overrides ip-criteria</a>
Tree	<a href="#">ip-criteria</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **activate-entry-tag** *number*

Synopsis	Tag ID activated for IPv4 criteria
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress qos sap-ingress overrides ip-criteria</a> <a href="#">activate-entry-tag</a> <i>number</i>
Tree	<a href="#">activate-entry-tag</a>
Range	1 to 255
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## ipv6-criteria

Synopsis	Enter the <b>ipv6-criteria</b> context
Context	<b>configure service vpls string sap string ingress qos sap-ingress overrides ipv6-criteria</b>
Tree	<a href="#">ipv6-criteria</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## activate-entry-tag *number*

Synopsis	Tag ID activated for IPv6 criteria
Context	<b>configure service vpls string sap string ingress qos sap-ingress overrides ipv6-criteria activate-entry-tag number</b>
Tree	<a href="#">activate-entry-tag</a>
Range	1 to 255
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## policer [*policer-id*] *reference*

Synopsis	Enter the <b>policer</b> list instance
Context	<b>configure service vpls string sap string ingress qos sap-ingress overrides policer reference</b>
Tree	<a href="#">policer</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## [*policer-id*] *reference*

Synopsis	Policer unique ID
Context	<b>configure service vpls string sap string ingress qos sap-ingress overrides policer reference</b>
Tree	<a href="#">policer</a>
Reference	<b>configure qos sap-ingress string policer number</b>
Notes	This element is part of a list key.
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **cbs** (*number* | *keyword*)

Synopsis CBS

Context **configure** [service vpls](#) *string* [sap](#) *string* [ingress qos](#) [sap-ingress overrides](#) [policer](#)  
*reference* [cbs](#) (*number* | *keyword*)

Tree [cbs](#)

Range 0 to 268435456

Units bytes

Options auto

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **mbs** (*number* | *keyword*)

Synopsis MBS

Context **configure** [service vpls](#) *string* [sap](#) *string* [ingress qos](#) [sap-ingress overrides](#) [policer](#)  
*reference* [mbs](#) (*number* | *keyword*)

Tree [mbs](#)

Range 0 to 268435456

Units bytes

Options auto

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **packet-byte-offset** *number*

Synopsis Packet size modification for policing information

Context **configure** [service vpls](#) *string* [sap](#) *string* [ingress qos](#) [sap-ingress overrides](#) [policer](#)  
*reference* [packet-byte-offset](#) *number*

Tree [packet-byte-offset](#)

Range -32 to 31

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## percent-rate

Synopsis	Enter the <b>percent-rate</b> context
Context	<b>configure</b> <a href="#">service vpls string sap string ingress qos sap-ingress overrides policer reference percent-rate</a>
Tree	<a href="#">percent-rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## cir decimal-number

Synopsis	CIR percent rate
Context	<b>configure</b> <a href="#">service vpls string sap string ingress qos sap-ingress overrides policer reference percent-rate cir decimal-number</a>
Tree	<a href="#">cir</a>
Range	0.00 to 100.00
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## pir decimal-number

Synopsis	PIR percent rate
Context	<b>configure</b> <a href="#">service vpls string sap string ingress qos sap-ingress overrides policer reference percent-rate pir decimal-number</a>
Tree	<a href="#">pir</a>
Range	0.01 to 100.00
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## rate

Synopsis	Enter the <b>rate</b> context
Context	<b>configure</b> <a href="#">service vpls string sap string ingress qos sap-ingress overrides policer reference rate</a>
Tree	<a href="#">rate</a>

Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **cir** (*number* | *keyword*)

Synopsis	CIR rate
Context	<b>configure</b> <a href="#">service vpls string sap string ingress qos sap-ingress overrides policer reference rate</a> <b>cir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cir</a>
Range	0 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **pir** (*number* | *keyword*)

Synopsis	PIR rate
Context	<b>configure</b> <a href="#">service vpls string sap string ingress qos sap-ingress overrides policer reference rate</a> <b>pir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">pir</a>
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **stat-mode** *keyword*

Synopsis	Mode of statistics collected by the policer
Context	<b>configure</b> <a href="#">service vpls string sap string ingress qos sap-ingress overrides policer reference</a> <b>stat-mode</b> <i>keyword</i>
Tree	<a href="#">stat-mode</a>

Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-priority-no-cir, offered-profile-cir, offered-priority-cir, offered-limited-profile-cir, offered-profile-capped-cir, offered-limited-capped-cir
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **queue** [queue-id] *reference*

Synopsis	Enter the <b>queue</b> list instance
Context	<b>configure</b> <a href="#">service vpls string sap string ingress qos sap-ingress overrides queue reference</a>
Tree	<a href="#">queue</a>
Introduced	16.0.R1
Platforms	All

### **[queue-id]** *reference*

Synopsis	Policer unique ID
Context	<b>configure</b> <a href="#">service vpls string sap string ingress qos sap-ingress overrides queue reference</a>
Tree	<a href="#">queue</a>
Reference	<b>configure</b> <a href="#">qos sap-ingress string queue number</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **adaptation-rule**

Synopsis	Enter the <b>adaptation-rule</b> context
Context	<b>configure</b> <a href="#">service vpls string sap string ingress qos sap-ingress overrides queue reference adaptation-rule</a>
Tree	<a href="#">adaptation-rule</a>
Introduced	16.0.R1
Platforms	All

### **cir keyword**

Synopsis	Constraint used when deriving the operational CIR value
Context	<b>configure</b> <a href="#">service vpls string sap string ingress qos sap-ingress overrides queue reference adaptation-rule cir keyword</a>
Tree	<a href="#">cir</a>
Options	max, min, closest
Introduced	16.0.R1
Platforms	All

### **pir keyword**

Synopsis	Constraint used when deriving the operational PIR value
Context	<b>configure</b> <a href="#">service vpls string sap string ingress qos sap-ingress overrides queue reference adaptation-rule pir keyword</a>
Tree	<a href="#">pir</a>
Options	max, min, closest
Introduced	16.0.R1
Platforms	All

### **cbs (number | keyword)**

Synopsis	CBS
Context	<b>configure</b> <a href="#">service vpls string sap string ingress qos sap-ingress overrides queue reference cbs (number   keyword)</a>
Tree	<a href="#">cbs</a>
Range	0 to 1048576
Units	kilobytes
Options	auto
Introduced	16.0.R1
Platforms	All

### **drop-tail**

Synopsis	Enter the <b>drop-tail</b> context
Context	<b>configure</b> <a href="#">service vpls string sap string ingress qos sap-ingress overrides queue reference drop-tail</a>

Tree	<a href="#">drop-tail</a>
Introduced	16.0.R1
Platforms	All

## low

Synopsis	Enter the <b>low</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">drop-tail</a> <b>low</b>
Tree	<a href="#">low</a>
Introduced	16.0.R1
Platforms	All

## percent-reduction-from-mbs (*number* | *keyword*)

Synopsis	Percentage reduction from the MBS for a queue drop tail
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">drop-tail</a> <a href="#">low</a> <a href="#">percent-reduction-from-mbs</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">percent-reduction-from-mbs</a>
Range	0 to 100
Options	auto
Introduced	16.0.R1
Platforms	All

## mbs (*number* | *keyword*)

Synopsis	MBS
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">mbs</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">mbs</a>
Range	0 to 1073741824
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	All

## monitor-queue-depth

Synopsis	Enable the <b>monitor-queue-depth</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <b>monitor-queue-depth</b>
Tree	<a href="#">monitor-queue-depth</a>
Introduced	21.7.R1
Platforms	All

## fast-polling *boolean*

Synopsis	Enable fast polling of the queue depth
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">monitor-queue-depth</a> <b>fast-polling</b> <i>boolean</i>
Tree	<a href="#">fast-polling</a>
Default	false
Introduced	21.7.R1
Platforms	All

## parent

Synopsis	Enter the <b>parent</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <b>parent</b>
Tree	<a href="#">parent</a>
Introduced	16.0.R1
Platforms	All

## cir-weight *number*

Synopsis	CIR parameter that overrides parent for queue group
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">parent</a> <b>cir-weight</b> <i>number</i>
Tree	<a href="#">cir-weight</a>
Range	0 to 100
Introduced	16.0.R1

Platforms All

### **weight** *number*

Synopsis PIR parameter that overrides parent for queue group

Context **configure** [service vpls string sap string ingress qos sap-ingress overrides queue reference](#) [parent weight number](#)

Tree [weight](#)

Range 0 to 100

Introduced 16.0.R1

Platforms All

### **percent-rate**

Synopsis Enter the **percent-rate** context

Context **configure** [service vpls string sap string ingress qos sap-ingress overrides queue reference](#) [percent-rate](#)

Tree [percent-rate](#)

Notes The following elements are part of a choice: **percent-rate** or **rate**.

Introduced 16.0.R1

Platforms All

### **cir** *decimal-number*

Synopsis CIR percent rate

Context **configure** [service vpls string sap string ingress qos sap-ingress overrides queue reference](#) [percent-rate cir decimal-number](#)

Tree [cir](#)

Range 0.00 to 100.00

Introduced 16.0.R1

Platforms All

### **pir** *decimal-number*

Synopsis PIR percent rate

Context	<b>configure service vpls string sap string ingress qos sap-ingress overrides queue reference percent-rate pir decimal-number</b>
Tree	<a href="#">pir</a>
Range	0.01 to 100.00
Introduced	16.0.R1
Platforms	All

## rate

Synopsis	Enter the <b>rate</b> context
Context	<b>configure service vpls string sap string ingress qos sap-ingress overrides queue reference rate</b>
Tree	<a href="#">rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	All

## cir (*number* | *keyword*)

Synopsis	CIR rate
Context	<b>configure service vpls string sap string ingress qos sap-ingress overrides queue reference rate cir (<i>number</i>   <i>keyword</i>)</b>
Tree	<a href="#">cir</a>
Range	0 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	All

## pir (*number* | *keyword*)

Synopsis	PIR rate
Context	<b>configure service vpls string sap string ingress qos sap-ingress overrides queue reference rate pir (<i>number</i>   <i>keyword</i>)</b>
Tree	<a href="#">pir</a>
Range	1 to 6400000000

Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	All

### **policy-name** *reference*

Synopsis	Policy ID
Context	<b>configure</b> <a href="#">service vpls string sap string ingress qos sap-ingress policy-name reference</a>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos sap-ingress string</a>
Introduced	16.0.R1
Platforms	All

### **queuing-type** *keyword*

Synopsis	Queuing type
Context	<b>configure</b> <a href="#">service vpls string sap string ingress qos sap-ingress queuing-type keyword</a>
Tree	<a href="#">queuing-type</a>
Options	shared, multipoint-shared
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, VSR

### **scheduler-policy**

Synopsis	Enter the <b>scheduler-policy</b> context
Context	<b>configure</b> <a href="#">service vpls string sap string ingress qos scheduler-policy</a>
Tree	<a href="#">scheduler-policy</a>
Introduced	16.0.R1
Platforms	All

### **overrides**

Synopsis	Enter the <b>overrides</b> context
Context	<b>configure</b> <a href="#">service vpls string sap string ingress qos scheduler-policy overrides</a>

Tree	<a href="#">overrides</a>
Introduced	16.0.R1
Platforms	All

### **scheduler** [[scheduler-name](#)] *string*

Synopsis	Enter the <b>scheduler</b> list instance
Context	<b>configure</b> <a href="#">service vpls string sap string ingress qos scheduler-policy overrides scheduler string</a>
Tree	<a href="#">scheduler</a>
Introduced	16.0.R1
Platforms	All

### **[scheduler-name]** *string*

Synopsis	Scheduler name
Context	<b>configure</b> <a href="#">service vpls string sap string ingress qos scheduler-policy overrides scheduler string</a>
Tree	<a href="#">scheduler</a>
Description	<p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (<b>#</b>, <b>\$</b>, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context will not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error will occur, the command will not execute, and the context will not change.</p>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## parent

Synopsis	Enter the <b>parent</b> context
Context	<b>configure service vpls string sap string ingress qos scheduler-policy overrides scheduler string parent</b>
Tree	<b>parent</b>
Introduced	16.0.R1
Platforms	All

## cir-weight *number*

Synopsis	Weight used at the within-CIR port priority level
Context	<b>configure service vpls string sap string ingress qos scheduler-policy overrides scheduler string parent cir-weight number</b>
Tree	<b>cir-weight</b>
Range	0 to 100
Introduced	16.0.R1
Platforms	All

## weight *number*

Synopsis	Relative weight of the scheduler to feed the queue
Context	<b>configure service vpls string sap string ingress qos scheduler-policy overrides scheduler string parent weight number</b>
Tree	<b>weight</b>
Range	0 to 100
Introduced	16.0.R1
Platforms	All

## rate

Synopsis	Enter the <b>rate</b> context
Context	<b>configure service vpls string sap string ingress qos scheduler-policy overrides scheduler string rate</b>
Tree	<b>rate</b>
Introduced	16.0.R1
Platforms	All

### **cir** (*number* | *keyword*)

Synopsis	CIR at which the queue it to operate
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <a href="#">string</a> <a href="#">rate</a> <b>cir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cir</a>
Range	0 to 6400000000
Units	kilobps
Options	sum, max
Introduced	16.0.R1
Platforms	All

### **pir** (*number* | *keyword*)

Synopsis	PIR at which the queue is to operate
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <a href="#">string</a> <a href="#">rate</a> <b>pir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">pir</a>
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	All

### **policy-name** *reference*

Synopsis	Scheduler policy name
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">policy-name</a> <a href="#">reference</a>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">string</a>
Introduced	16.0.R1
Platforms	All

## qtag-manipulation

Synopsis	Enter the <b>qtag-manipulation</b> context
Context	<b>configure service vpls string sap string ingress qtag-manipulation</b>
Tree	<b>qtag-manipulation</b>
Introduced	16.0.R1
Platforms	All

## c-tag (*number | keyword*)

Synopsis	Inner ingress vlan translation for two service delimiting vlan values
Context	<b>configure service vpls string sap string ingress qtag-manipulation c-tag (<i>number   keyword</i>)</b>
Tree	<b>c-tag</b>
Range	0 to 4094
Options	tag-*
Notes	The following elements are part of a choice: <b>push-dot1q-vlan</b> or ( <b>c-tag</b> and <b>s-tag</b> ).
Introduced	22.10.R1
Platforms	All

## push-dot1q-vlan (*number | keyword*)

Synopsis	VLAN translation information
Context	<b>configure service vpls string sap string ingress qtag-manipulation push-dot1q-vlan (<i>number   keyword</i>)</b>
Tree	<b>push-dot1q-vlan</b>
Range	0 to 4094
Options	use-sap-svlan
Notes	The following elements are part of a choice: <b>push-dot1q-vlan</b> or ( <b>c-tag</b> and <b>s-tag</b> ).
Introduced	16.0.R1
Platforms	All

## s-tag *number*

Synopsis	Outer ingress VLAN translation for two service delimiting VLAN values
Context	<b>configure service vpls string sap string ingress qtag-manipulation s-tag <i>number</i></b>

Tree	<a href="#">s-tag</a>
Range	0 to 4094
Notes	The following elements are part of a choice: <b>push-dot1q-vlan</b> or ( <b>c-tag</b> and <b>s-tag</b> ).
Introduced	22.10.R1
Platforms	All

## **l2pt**

Synopsis	Enter the <b>l2pt</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <a href="#">string sap</a> <a href="#">string l2pt</a>
Tree	<a href="#">l2pt</a>
Introduced	16.0.R1
Platforms	All

## **force-boundary**

Synopsis	Enable the <b>force-boundary</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <a href="#">string sap</a> <a href="#">string l2pt</a> <a href="#">force-boundary</a>
Tree	<a href="#">force-boundary</a>
Introduced	16.0.R1
Platforms	All

## **protocols**

Synopsis	Enter the <b>protocols</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <a href="#">string sap</a> <a href="#">string l2pt</a> <a href="#">force-boundary</a> <a href="#">protocols</a>
Tree	<a href="#">protocols</a>
Introduced	16.0.R1
Platforms	All

## **cdp boolean**

Synopsis	Enable Cisco discovery protocol
Context	<b>configure</b> <a href="#">service vpls</a> <a href="#">string sap</a> <a href="#">string l2pt</a> <a href="#">force-boundary</a> <a href="#">protocols</a> <a href="#">cdp</a> <a href="#">boolean</a>
Tree	<a href="#">cdp</a>

Default	false
Introduced	16.0.R1
Platforms	All

### **ntp boolean**

Synopsis	Enable dynamic trunking protocol
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">l2pt</a> <a href="#">force-boundary</a> <a href="#">protocols</a> <a href="#">ntp</a> <a href="#">boolean</a>
Tree	<a href="#">ntp</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **pagp boolean**

Synopsis	Enable port aggregation protocol
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">l2pt</a> <a href="#">force-boundary</a> <a href="#">protocols</a> <a href="#">pagp</a> <a href="#">boolean</a>
Tree	<a href="#">pagp</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **stp boolean**

Synopsis	Enable all spanning tree protocols
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">l2pt</a> <a href="#">force-boundary</a> <a href="#">protocols</a> <a href="#">stp</a> <a href="#">boolean</a>
Tree	<a href="#">stp</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **udld boolean**

Synopsis	Enable unidirectional link detection
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">l2pt</a> <a href="#">force-boundary</a> <a href="#">protocols</a> <a href="#">udld</a> <a href="#">boolean</a>

Tree	<a href="#">udld</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **vtp boolean**

Synopsis	Enable virtual trunk protocol
Context	<b>configure</b> <a href="#">service vpls</a> <a href="#">string sap</a> <a href="#">string l2pt</a> <a href="#">force-boundary protocols vtp</a> <a href="#">boolean</a>
Tree	<a href="#">vtp</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **termination**

Synopsis	Enable the <b>termination</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <a href="#">string sap</a> <a href="#">string l2pt</a> <a href="#">termination</a>
Tree	<a href="#">termination</a>
Introduced	16.0.R1
Platforms	All

### **protocols**

Synopsis	Enter the <b>protocols</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <a href="#">string sap</a> <a href="#">string l2pt</a> <a href="#">termination protocols</a>
Tree	<a href="#">protocols</a>
Introduced	16.0.R1
Platforms	All

### **cdp boolean**

Synopsis	Enable Cisco discovery protocol
Context	<b>configure</b> <a href="#">service vpls</a> <a href="#">string sap</a> <a href="#">string l2pt</a> <a href="#">termination protocols cdp</a> <a href="#">boolean</a>
Tree	<a href="#">cdp</a>

Default	false
Introduced	16.0.R1
Platforms	All

### **ntp boolean**

Synopsis	Enable dynamic trunking protocol
Context	<b>configure</b> <a href="#">service vpls string sap string l2pt termination protocols ntp boolean</a>
Tree	<a href="#">ntp</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **pagp boolean**

Synopsis	Enable port aggregation protocol
Context	<b>configure</b> <a href="#">service vpls string sap string l2pt termination protocols pagp boolean</a>
Tree	<a href="#">pagp</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **stp boolean**

Synopsis	Enable all spanning tree protocols
Context	<b>configure</b> <a href="#">service vpls string sap string l2pt termination protocols stp boolean</a>
Tree	<a href="#">stp</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **udld boolean**

Synopsis	Enable unidirectional link detection
Context	<b>configure</b> <a href="#">service vpls string sap string l2pt termination protocols udld boolean</a>

Tree	<a href="#">udld</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **vtp** *boolean*

Synopsis	Enable virtual trunk protocol
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">l2tp</a> <a href="#">termination</a> <a href="#">protocols</a> <a href="#">vtp</a> <i>boolean</i>
Tree	<a href="#">vtp</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **l2tpv3-session**

Synopsis	Enable the <b>l2tpv3-session</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">l2tpv3-session</a>
Tree	<a href="#">l2tpv3-session</a>
Introduced	16.0.R4
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the session for the service
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">l2tpv3-session</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R4
Platforms	All

## pseudo-wire

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>pseudo-wire</b> context
Context	<b>configure service vpls string sap string l2tpv3-session pseudo-wire</b>
Tree	<b>pseudo-wire</b>
Introduced	16.0.R4
Platforms	All

## ethernet

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the Ethernet PW-type for the L2TPv3 session
Context	<b>configure service vpls string sap string l2tpv3-session pseudo-wire ethernet</b>
Tree	<b>ethernet</b>
Notes	The following elements are part of a choice: <b>ethernet</b> or <b>ethernet-vlan-id</b> .
Introduced	16.0.R4
Platforms	All

## ethernet-vlan-id *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Ethernet-VLAN PW-type ID for the L2TPv3 session
Context	<b>configure service vpls string sap string l2tpv3-session pseudo-wire ethernet-vlan-id number</b>
Tree	<b>ethernet-vlan-id</b>
Range	0 to 4095
Notes	The following elements are part of a choice: <b>ethernet</b> or <b>ethernet-vlan-id</b> .
Introduced	16.0.R4

Platforms All

## router

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enter the **router** context  
Context **configure service vpls string sap string l2tpv3-session router**  
Tree **router**  
Introduced 16.0.R4  
Platforms All

## group *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Tunnel group name  
Context **configure service vpls string sap string l2tpv3-session router group string**  
Tree **group**  
String Length 1 to 32  
Introduced 16.0.R4  
Platforms All

## router-instance *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Router name used to identify the router instance  
Context **configure service vpls string sap string l2tpv3-session router router-instance string**  
Tree **router-instance**  
String Length 1 to 64  
Introduced 16.0.R4

Platforms All

### **vc-id** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis VC ID for the L2TPv3 session  
Context **configure service vpls string sap string l2tpv3-session vc-id number**  
Tree **vc-id**  
Range 1 to 4294967295  
Introduced 16.0.R4  
Platforms All

### **lag**

Synopsis Enter the **lag** context  
Context **configure service vpls string sap string lag**  
Tree **lag**  
Introduced 16.0.R1  
Platforms All

### **link-map-profile** *number*

Synopsis LAG link map profile for a SAP or network interface  
Context **configure service vpls string sap string lag link-map-profile number**  
Tree **link-map-profile**  
Description This command assigns a preconfigured LAG link map profile to a SAP or network interface configured on a LAG or a PW port that exists on a LAG. After an operator assigns a LAG link map profile, the system rehashes the SAP or network interface egress traffic over the LAG as required by the new configuration.  
  
If the LAG link map profile for a SAP or network interface is deleted, the system reverts back to per-flow hashing.  
  
Range 1 to 64  
Introduced 16.0.R1  
Platforms All

## per-link-hash

Synopsis	Enter the <b>per-link-hash</b> context
Context	<b>configure service vpls string sap string lag per-link-hash</b>
Tree	<b>per-link-hash</b>
Introduced	16.0.R1
Platforms	All

## class number

Synopsis	Class used on LAG egress using weighted per-link-hash
Context	<b>configure service vpls string sap string lag per-link-hash class number</b>
Tree	<b>class</b>
Range	1 to 3
Default	1
Introduced	16.0.R1
Platforms	All

## weight number

Synopsis	Weight used on LAG egress using weighted per-link-hash
Context	<b>configure service vpls string sap string lag per-link-hash weight number</b>
Tree	<b>weight</b>
Range	1 to 1024
Default	1
Introduced	16.0.R1
Platforms	All

## managed-vlan-list

Synopsis	Enter the <b>managed-vlan-list</b> context
Context	<b>configure service vpls string sap string managed-vlan-list</b>
Tree	<b>managed-vlan-list</b>
Introduced	19.10.R1
Platforms	All

### **range** [vlan-range] *string*

Synopsis	Add a list entry for <b>range</b>
Context	<b>configure service vpls string sap string managed-vlan-list range string</b>
Tree	<b>range</b>
Introduced	19.10.R1
Platforms	All

### **[vlan-range]** *string*

Synopsis	Range of VLANs associated with the M-VPLS SAP
Context	<b>configure service vpls string sap string managed-vlan-list range string</b>
Tree	<b>range</b>
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	All

### **mc-ring**

Synopsis	Enable the <b>mc-ring</b> context
Context	<b>configure service vpls string sap string mc-ring</b>
Tree	<b>mc-ring</b>
Introduced	16.0.R1
Platforms	All

### **ring-node** *string*

Synopsis	Name for the ring node associated with this SAP
Context	<b>configure service vpls string sap string mc-ring ring-node string</b>
Tree	<b>ring-node</b>
String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

## **mld-snooping**

Synopsis	Enter the <b>mld-snooping</b> context
Context	<b>configure service vpls string sap string mld-snooping</b>
Tree	<b>mld-snooping</b>
Introduced	16.0.R1
Platforms	All

## **fast-leave boolean**

Synopsis	Allow IGMP fast leave processing
Context	<b>configure service vpls string sap string mld-snooping fast-leave boolean</b>
Tree	<b>fast-leave</b>
Default	false
Introduced	16.0.R1
Platforms	All

## **import-policy reference**

Synopsis	Import policy that filters IGMP packets
Context	<b>configure service vpls string sap string mld-snooping import-policy reference</b>
Tree	<b>import-policy</b>
Reference	<b>configure policy-options policy-statement string</b>
Introduced	16.0.R1
Platforms	All

## **maximum-number-groups number**

Synopsis	Maximum groups allowed
Context	<b>configure service vpls string sap string mld-snooping maximum-number-groups number</b>
Tree	<b>maximum-number-groups</b>
Range	1 to 16000
Introduced	16.0.R1
Platforms	All

### **mrouter-port** *boolean*

Synopsis	Operate port as a multicast router port
Context	<b>configure</b> <a href="#">service vpls string sap string mld-snooping mrouter-port</a> <i>boolean</i>
Tree	<a href="#">mrouter-port</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **mvr**

Synopsis	Enter the <b>mvr</b> context
Context	<b>configure</b> <a href="#">service vpls string sap string mld-snooping mvr</a>
Tree	<a href="#">mvr</a>
Introduced	16.0.R1
Platforms	All

### **from-vpls** *reference*

Synopsis	MVR VPLS from which the multicast channels are taken
Context	<b>configure</b> <a href="#">service vpls string sap string mld-snooping mvr from-vpls</a> <i>reference</i>
Tree	<a href="#">from-vpls</a>
Reference	<b>configure</b> <a href="#">service vpls string</a>
Introduced	16.0.R1
Platforms	All

### **to-sap** *string*

Synopsis	SAP to which the multicast channels are copied
Context	<b>configure</b> <a href="#">service vpls string sap string mld-snooping mvr to-sap</a> <i>string</i>
Tree	<a href="#">to-sap</a>
String Length	1 to 45
Introduced	16.0.R1
Platforms	All

### **query-interval** *number*

Synopsis	Time between two consecutive host-query messages
Context	<b>configure</b> <a href="#">service vpls string sap string mld-snooping query-interval number</a>
Tree	<a href="#">query-interval</a>
Range	2 to 1024
Default	125
Units	seconds
Introduced	16.0.R1
Platforms	All

### **query-last-member-interval** *number*

Synopsis	Time between group-specific query messages
Context	<b>configure</b> <a href="#">service vpls string sap string mld-snooping query-last-member-interval number</a>
Tree	<a href="#">query-last-member-interval</a>
Range	1 to 50
Default	10
Units	deciseconds
Introduced	16.0.R1
Platforms	All

### **query-response-interval** *number*

Synopsis	Time to wait for a response to the host-query messages
Context	<b>configure</b> <a href="#">service vpls string sap string mld-snooping query-response-interval number</a>
Tree	<a href="#">query-response-interval</a>
Range	1 to 1023
Default	10
Units	seconds
Introduced	16.0.R1
Platforms	All

### **robust-count** *number*

Synopsis	Number of retries after expected message loss
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">mld-snooping</a> <b>robust-count</b> <i>number</i>
Tree	<a href="#">robust-count</a>
Range	2 to 7
Default	2
Introduced	16.0.R1
Platforms	All

### **router-alert-check** *boolean*

Synopsis	Enable IP router alert check option
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">mld-snooping</a> <b>router-alert-check</b> <i>boolean</i>
Tree	<a href="#">router-alert-check</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **send-queries** *boolean*

Synopsis	Generate IGMP general queries
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">mld-snooping</a> <b>send-queries</b> <i>boolean</i>
Tree	<a href="#">send-queries</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **static**

Synopsis	Enter the <b>static</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">mld-snooping</a> <b>static</b>
Tree	<a href="#">static</a>
Introduced	16.0.R1
Platforms	All

### **group** [[group-address](#)] *string*

Synopsis	Enter the <b>group</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">mld-snooping</a> <a href="#">static</a> <a href="#">group</a> <i>string</i>
Tree	<a href="#">group</a>
Introduced	16.0.R1
Platforms	All

### **[group-address]** *string*

Synopsis	Group address of multicast channel
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">mld-snooping</a> <a href="#">static</a> <a href="#">group</a> <i>string</i>
Tree	<a href="#">group</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **source** [[source-address](#)] *string*

Synopsis	Add a list entry for <b>source</b>
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">mld-snooping</a> <a href="#">static</a> <a href="#">group</a> <i>string</i> <a href="#">source</a> <i>string</i>
Tree	<a href="#">source</a>
Notes	The following elements are part of a mandatory choice: <b>source</b> or <b>starg</b> .
Introduced	16.0.R1
Platforms	All

### **[source-address]** *string*

Synopsis	Source IP address
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">mld-snooping</a> <a href="#">static</a> <a href="#">group</a> <i>string</i> <a href="#">source</a> <i>string</i>
Tree	<a href="#">source</a>
Notes	This element is part of a list key.
Introduced	16.0.R2
Platforms	All

## starg

Synopsis	any source address (*,G)
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">mld-snooping</a> <a href="#">static</a> <a href="#">group</a> <i>string</i> <b>starg</b>
Tree	<a href="#">starg</a>
Notes	The following elements are part of a mandatory choice: <b>source</b> or <b>starg</b> .
Introduced	16.0.R2
Platforms	All

## version *keyword*

Synopsis	Version of MLD running on the SAP or SDP
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">mld-snooping</a> <a href="#">version</a> <i>keyword</i>
Tree	<a href="#">version</a>
Default	2
Options	1, 2
Introduced	16.0.R1
Platforms	All

## monitor-oper-group *reference*

Synopsis	Monitor operational group
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">monitor-oper-group</a> <i>reference</i>
Tree	<a href="#">monitor-oper-group</a>
Reference	<b>configure</b> <a href="#">service</a> <a href="#">oper-group</a> <i>string</i>
Notes	The following elements are part of a choice: <b>monitor-oper-group</b> or <b>oper-group</b> .
Introduced	16.0.R1
Platforms	All

## mrp

Synopsis	Enter the <b>mrp</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <b>mrp</b>
Tree	<a href="#">mrp</a>
Introduced	20.10.R1

Platforms All

### **join-time** *number*

Synopsis Interval between transmit opportunities  
Context **configure** [service vpls string sap string mrp join-time number](#)  
Tree [join-time](#)  
Range 1 to 10  
Default 2  
Introduced 20.10.R1  
Platforms All

### **leave-all-time** *number*

Synopsis Frequency that LeaveAll PDUs are generated  
Context **configure** [service vpls string sap string mrp leave-all-time number](#)  
Tree [leave-all-time](#)  
Range 60 to 300  
Default 100  
Introduced 20.10.R1  
Platforms All

### **leave-time** *number*

Synopsis Time in leave state before transitioning to MT state  
Context **configure** [service vpls string sap string mrp leave-time number](#)  
Tree [leave-time](#)  
Range 30 to 60  
Default 30  
Introduced 20.10.R1  
Platforms All

### **periodic-time** *number*

Synopsis Frequency of periodic events generation

Context	<b>configure service vpls string sap string mrp periodic-time number</b>
Tree	<a href="#">periodic-time</a>
Range	10 to 100
Default	10
Introduced	20.10.R1
Platforms	All

### **periodic-timer** *boolean*

Synopsis	Enable the periodic transmission timer
Context	<b>configure service vpls string sap string mrp periodic-timer boolean</b>
Tree	<a href="#">periodic-timer</a>
Default	false
Introduced	20.10.R1
Platforms	All

### **policy** *reference*

Synopsis	MMRP policy name
Context	<b>configure service vpls string sap string mrp policy reference</b>
Tree	<a href="#">policy</a>
Reference	<b>configure service mrp policy string</b>
Introduced	20.10.R1
Platforms	All

### **multi-service-site** *reference*

Synopsis	Multi service site name
Context	<b>configure service vpls string sap string multi-service-site reference</b>
Tree	<a href="#">multi-service-site</a>
Reference	<b>configure service customer string multi-service-site string</b>
Introduced	16.0.R1
Platforms	All

## **oper-group** *reference*

Synopsis	Operational group
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">oper-group</a> <i>reference</i>
Tree	<a href="#">oper-group</a>
Reference	<b>configure</b> <a href="#">service</a> <a href="#">oper-group</a> <i>string</i>
Notes	The following elements are part of a choice: <b>monitor-oper-group</b> or <b>oper-group</b> .
Introduced	16.0.R1
Platforms	All

## **pbb**

Synopsis	Enter the <b>pbb</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">pbb</a>
Tree	<a href="#">pbb</a>
Introduced	20.10.R1
Platforms	All

## **fault-propagation**

Synopsis	Enter the <b>fault-propagation</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">pbb</a> <a href="#">fault-propagation</a>
Tree	<a href="#">fault-propagation</a>
Introduced	20.10.R1
Platforms	All

## **backbone-mac-address** [[address](#)] *string*

Synopsis	Add a list entry for <b>backbone-mac-address</b>
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">pbb</a> <a href="#">fault-propagation</a> <a href="#">backbone-mac-address</a> <i>string</i>
Tree	<a href="#">backbone-mac-address</a>
Introduced	20.10.R1
Platforms	All

### **[address]** *string*

Synopsis	Backbone MAC address
Context	<b>configure</b> <a href="#">service vpls string sap string pbb fault-propagation backbone-mac-address string</a>
Tree	<a href="#">backbone-mac-address</a>
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	All

### **backbone-mac-name** [[name](#)] *reference*

Synopsis	Add a list entry for <b>backbone-mac-name</b>
Context	<b>configure</b> <a href="#">service vpls string sap string pbb fault-propagation backbone-mac-name reference</a>
Tree	<a href="#">backbone-mac-name</a>
Introduced	20.10.R1
Platforms	All

### **[name]** *reference*

Synopsis	Backbone MAC address name
Context	<b>configure</b> <a href="#">service vpls string sap string pbb fault-propagation backbone-mac-name reference</a>
Tree	<a href="#">backbone-mac-name</a>
Reference	<b>configure</b> <a href="#">service pbb mac string</a>
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	All

### **pim-snooping**

Synopsis	Enter the <b>pim-snooping</b> context
Context	<b>configure</b> <a href="#">service vpls string sap string pim-snooping</a>
Tree	<a href="#">pim-snooping</a>
Introduced	16.0.R1

Platforms All

### **maximum-number-groups** *number*

Synopsis Maximum groups for this interface  
Context **configure** [service vpls](#) *string* [sap](#) *string* [pim-snooping](#) [maximum-number-groups](#) *number*  
Tree [maximum-number-groups](#)  
Range 1 to 16000  
Introduced 16.0.R1  
Platforms All

### **process-cpm-traffic-on-sap-down** *boolean*

Synopsis Process CPM traffic on SAP down event  
Context **configure** [service vpls](#) *string* [sap](#) *string* [process-cpm-traffic-on-sap-down](#) *boolean*  
Tree [process-cpm-traffic-on-sap-down](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **radius-auth-policy** *reference*

Synopsis RADIUS authentication policy  
Context **configure** [service vpls](#) *string* [sap](#) *string* [radius-auth-policy](#) *reference*  
Tree [radius-auth-policy](#)  
Reference **configure** [subscriber-mgmt](#) [radius-authentication-policy](#) *string*  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **shcv-policy-ipv4** *reference*

Synopsis Subscriber host connectivity verification policy for IPv4  
Context **configure** [service vpls](#) *string* [sap](#) *string* [shcv-policy-ipv4](#) *reference*  
Tree [shcv-policy-ipv4](#)  
Reference **configure** [subscriber-mgmt](#) [shcv-policy](#) *string*

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **spb**

Synopsis	Enable the <b>spb</b> context
Context	<b>configure service vpls string sap string spb</b>
Tree	<b>spb</b>
Introduced	21.10.R1
Platforms	All

## **admin-state keyword**

Synopsis	Admin state
Context	<b>configure service vpls string sap string spb admin-state keyword</b>
Tree	<b>admin-state</b>
Default	disable
Options	enable, disable
Introduced	21.10.R1
Platforms	All

## **level [id] number**

Synopsis	Enter the <b>level</b> list instance
Context	<b>configure service vpls string sap string spb level number</b>
Tree	<b>level</b>
Introduced	21.10.R1
Platforms	All

## **[id] number**

Synopsis	Level identifier
Context	<b>configure service vpls string sap string spb level number</b>
Tree	<b>level</b>
Range	1

Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	All

### **hello-interval** *number*

Synopsis	Hello interval
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">spb level</a> <i>number</i> <a href="#">hello-interval</a> <i>number</i>
Tree	<a href="#">hello-interval</a>
Range	1 to 20000
Default	9
Units	seconds
Introduced	21.10.R1
Platforms	All

### **hello-multiplier** *number*

Synopsis	Hello multiplier
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">spb level</a> <i>number</i> <a href="#">hello-multiplier</a> <i>number</i>
Tree	<a href="#">hello-multiplier</a>
Range	2 to 100
Default	3
Introduced	21.10.R1
Platforms	All

### **metric** *number*

Synopsis	Metric
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">spb level</a> <i>number</i> <a href="#">metric</a> <i>number</i>
Tree	<a href="#">metric</a>
Range	0 to 16777215
Default	0
Introduced	21.10.R1
Platforms	All

### **lsp-pacing-interval** *number*

Synopsis	Lsp pacing interval
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">spb</a> <a href="#">lsp-pacing-interval</a> <i>number</i>
Tree	<a href="#">lsp-pacing-interval</a>
Range	0 to 65535
Default	100
Units	milliseconds
Introduced	21.10.R1
Platforms	All

### **retransmit-interval** *number*

Synopsis	Retransmit interval
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">spb</a> <a href="#">retransmit-interval</a> <i>number</i>
Tree	<a href="#">retransmit-interval</a>
Range	1 to 65535
Default	5
Units	seconds
Introduced	21.10.R1
Platforms	All

### **split-horizon-group** *reference*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Split horizon group
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">split-horizon-group</a> <i>reference</i>
Tree	<a href="#">split-horizon-group</a>
Reference	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">split-horizon-group</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

## **static-host**

Synopsis	Enter the <b>static-host</b> context
Context	<b>configure service vpls string sap string static-host</b>
Tree	<b>static-host</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **ipv4 [ip] string mac string**

Synopsis	Enter the <b>ipv4</b> list instance
Context	<b>configure service vpls string sap string static-host ipv4 string mac string</b>
Tree	<b>ipv4</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **[ip] string**

Synopsis	IP address
Context	<b>configure service vpls string sap string static-host ipv4 string mac string</b>
Tree	<b>ipv4</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **mac string**

Synopsis	MAC address
Context	<b>configure service vpls string sap string static-host ipv4 string mac string</b>
Tree	<b>ipv4</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of the static host
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host ipv4</a> <i>string</i> <a href="#">mac</a> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ancp-string** *string*

Synopsis	ANCP string
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host ipv4</a> <i>string</i> <a href="#">mac</a> <i>string</i> <b>ancp-string</b> <i>string</i>
Tree	<a href="#">ancp-string</a>
String Length	1 to 63
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **app-profile**

Synopsis	Enter the <b>app-profile</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host ipv4</a> <i>string</i> <a href="#">mac</a> <i>string</i> <b>app-profile</b>
Tree	<a href="#">app-profile</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **profile** *reference*

Synopsis	Application profile used by the static host
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host ipv4</a> <i>string</i> <a href="#">mac</a> <i>string</i> <b>app-profile</b> <i>profile reference</i>
Tree	<a href="#">profile</a>
Reference	<b>configure</b> <a href="#">application-assurance</a> <i>group</i> <i>number</i> <a href="#">partition</a> <i>number</i> <a href="#">policy</a> <b>app-profile</b> <i>string</i>
Introduced	21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **int-dest-id** *string*

Synopsis Intermediate destination ID  
Context **configure** [service](#) [vpls](#) *string* [sap](#) *string* [static-host](#) [ipv4](#) *string* [mac](#) *string* **int-dest-id** *string*  
Tree [int-dest-id](#)  
String Length 1 to 32  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **shcv**

Synopsis Enter the **shcv** context  
Context **configure** [service](#) [vpls](#) *string* [sap](#) *string* [static-host](#) [ipv4](#) *string* [mac](#) *string* **shcv**  
Tree [shcv](#)  
Introduced 16.0.R4  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sla-profile** *reference*

Synopsis SLA profile name  
Context **configure** [service](#) [vpls](#) *string* [sap](#) *string* [static-host](#) [ipv4](#) *string* [mac](#) *string* **sla-profile** *reference*  
Tree [sla-profile](#)  
Reference **configure** [subscriber-mgmt](#) [sla-profile](#) *string*  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sub-profile** *reference*

Synopsis Sub-profile name  
Context **configure** [service](#) [vpls](#) *string* [sap](#) *string* [static-host](#) [ipv4](#) *string* [mac](#) *string* **sub-profile** *reference*  
Tree [sub-profile](#)

Reference **configure subscriber-mgmt sub-profile** *string*  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## subscriber-id

Synopsis Enter the **subscriber-id** context  
Context **configure service vpls** *string sap string static-host ipv4 string mac string subscriber-id*  
Tree **subscriber-id**  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## string *string*

Synopsis Subscriber identification  
Context **configure service vpls** *string sap string static-host ipv4 string mac string subscriber-id string string*  
Tree **string**  
String Length 1 to 64  
Notes The following elements are part of a choice: **string** or **use-sap-id**.  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## use-sap-id

Synopsis Use the SAP id as subscriber ID  
Context **configure service vpls** *string sap string static-host ipv4 string mac string subscriber-id use-sap-id*  
Tree **use-sap-id**  
Notes The following elements are part of a choice: **string** or **use-sap-id**.  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## static-isid

Synopsis Enter the **static-isid** context

Context	<b>configure service vpls string sap string static-isid</b>
Tree	<b>static-isid</b>
Introduced	19.10.R1
Platforms	All

### **range [range-id] number**

Synopsis	Enter the <b>range</b> list instance
Context	<b>configure service vpls string sap string static-isid range number</b>
Tree	<b>range</b>
Introduced	19.10.R1
Platforms	All

### **[range-id] number**

Synopsis	Range ID for static ISID
Context	<b>configure service vpls string sap string static-isid range number</b>
Tree	<b>range</b>
Range	1 to 8191
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	All

### **end number**

Synopsis	Upper bound of the ISID range
Context	<b>configure service vpls string sap string static-isid range number end number</b>
Tree	<b>end</b>
Range	1 to 16777215
Introduced	19.10.R1
Platforms	All

### **start number**

Synopsis	Lower bound of the ISID range
----------	-------------------------------

Context	<b>configure service vpls string sap string static-isid range number start number</b>
Tree	<b>start</b>
Range	1 to 16777215
Introduced	19.10.R1
Platforms	All

## **stp**

Synopsis	Enter the <b>stp</b> context
Context	<b>configure service vpls string sap string stp</b>
Tree	<b>stp</b>
Introduced	16.0.R4
Platforms	All

## **admin-state keyword**

Synopsis	Administrative state of STP
Context	<b>configure service vpls string sap string stp admin-state keyword</b>
Tree	<b>admin-state</b>
Options	enable, disable
Introduced	16.0.R4
Platforms	All

## **auto-edge boolean**

Synopsis	Enable automatic detection of edge port characteristics
Context	<b>configure service vpls string sap string stp auto-edge boolean</b>
Tree	<b>auto-edge</b>
Default	true
Introduced	16.0.R4
Platforms	All

## **edge-port boolean**

Synopsis	Designate SAP or SDP as an edge port
----------	--------------------------------------

Context	<b>configure service vpls string sap string stp edge-port boolean</b>
Tree	<b>edge-port</b>
Default	false
Introduced	16.0.R4
Platforms	All

### **link-type keyword**

Synopsis	Configure STP link-type
Context	<b>configure service vpls string sap string stp link-type keyword</b>
Tree	<b>link-type</b>
Default	pt-pt
Options	pt-pt, shared
Introduced	16.0.R4
Platforms	All

### **mst-instance [mst-inst-number] number**

Synopsis	Enter the <b>mst-instance</b> list instance
Context	<b>configure service vpls string sap string stp mst-instance number</b>
Tree	<b>mst-instance</b>
Introduced	19.10.R1
Platforms	All

### **[mst-inst-number] number**

Synopsis	Multiple Spanning Tree Instance number
Context	<b>configure service vpls string sap string stp mst-instance number</b>
Tree	<b>mst-instance</b>
Range	1 to 4094
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	All

### **mst-path-cost** *number*

Synopsis	MSTI path cost
Context	<b>configure</b> <i>service vpls string sap string stp mst-instance number mst-path-cost number</i>
Tree	<i>mst-path-cost</i>
Range	1 to 200000000
Default	10
Introduced	19.10.R1
Platforms	All

### **mst-port-priority** *number*

Synopsis	MSTI port priority
Context	<b>configure</b> <i>service vpls string sap string stp mst-instance number mst-port-priority number</i>
Tree	<i>mst-port-priority</i>
Range	0   16   32   48   64   80   96   112   128   144   160   176   192   208   224   240
Default	128
Introduced	19.10.R1
Platforms	All

### **path-cost** *number*

Synopsis	Configure path-cost
Context	<b>configure</b> <i>service vpls string sap string stp path-cost number</i>
Tree	<i>path-cost</i>
Range	1 to 200000000
Default	10
Introduced	16.0.R4
Platforms	All

### **port-num** *number*

Synopsis	Configure virtual port number
Context	<b>configure</b> <i>service vpls string sap string stp port-num number</i>
Tree	<i>port-num</i>

Range	1 to 2047
Introduced	16.0.R4
Platforms	All

### **priority** *number*

Synopsis	Configure STP priority
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">stp</a> <a href="#">priority</a> <i>number</i>
Tree	<a href="#">priority</a>
Range	0 to 255
Default	128
Introduced	16.0.R4
Platforms	All

### **root-guard** *boolean*

Synopsis	Enable/disable STP root-guard
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">stp</a> <a href="#">root-guard</a> <i>boolean</i>
Tree	<a href="#">root-guard</a>
Default	false
Introduced	16.0.R4
Platforms	All

### **sub-sla-mgmt**

Synopsis	Enter the <b>sub-sla-mgmt</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">sub-sla-mgmt</a>
Tree	<a href="#">sub-sla-mgmt</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of SAP subscriber management
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">sub-sla-mgmt</a> <a href="#">admin-state</a> <i>keyword</i>

Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## defaults

Synopsis	Enter the <b>defaults</b> context
Context	<b>configure</b> <a href="#">service vpls string sap string sub-sla-mgmt defaults</a>
Tree	<a href="#">defaults</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## app-profile *reference*

Synopsis	Default application profile name for this SAP
Context	<b>configure</b> <a href="#">service vpls string sap string sub-sla-mgmt defaults app-profile reference</a>
Tree	<a href="#">app-profile</a>
Reference	<b>configure</b> <a href="#">application-assurance group number partition number policy app-profile string</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## int-dest-id

Synopsis	Enter the <b>int-dest-id</b> context
Context	<b>configure</b> <a href="#">service vpls string sap string sub-sla-mgmt defaults int-dest-id</a>
Tree	<a href="#">int-dest-id</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## string *string*

Synopsis	Use the configured string
Context	<b>configure</b> <a href="#">service vpls string sap string sub-sla-mgmt defaults int-dest-id string string</a>

Tree	<a href="#">string</a>
String Length	1 to 32
Notes	The following elements are part of a choice: <b>string</b> or <b>top-q-tag</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **top-q-tag**

Synopsis	Use the top Q-tag of this SAP
Context	<b>configure</b> <a href="#">service vpls</a> <a href="#">string sap</a> <a href="#">string</a> <a href="#">sub-sla-mgmt</a> <a href="#">defaults</a> <a href="#">int-dest-id</a> <a href="#">top-q-tag</a>
Tree	<a href="#">top-q-tag</a>
Notes	The following elements are part of a choice: <b>string</b> or <b>top-q-tag</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sla-profile** *reference*

Synopsis	Default SLA profile for hosts on this SAP
Context	<b>configure</b> <a href="#">service vpls</a> <a href="#">string sap</a> <a href="#">string</a> <a href="#">sub-sla-mgmt</a> <a href="#">defaults</a> <a href="#">sla-profile</a> <i>reference</i>
Tree	<a href="#">sla-profile</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">sla-profile</a> <a href="#">string</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sub-profile** *reference*

Synopsis	Default subscriber profile used for subscribers on this SAP
Context	<b>configure</b> <a href="#">service vpls</a> <a href="#">string sap</a> <a href="#">string</a> <a href="#">sub-sla-mgmt</a> <a href="#">defaults</a> <a href="#">sub-profile</a> <i>reference</i>
Tree	<a href="#">sub-profile</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">sub-profile</a> <a href="#">string</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## subscriber-id

Synopsis	Enter the <b>subscriber-id</b> context
Context	<b>configure service vpls string sap string sub-sla-mgmt defaults subscriber-id</b>
Tree	<b>subscriber-id</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## auto-id

Synopsis	Use auto-generated subscriber identification string
Context	<b>configure service vpls string sap string sub-sla-mgmt defaults subscriber-id auto-id</b>
Tree	<b>auto-id</b>
Notes	The following elements are part of a choice: <b>auto-id</b> , <b>sap-id</b> , or <b>string</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## sap-id

Synopsis	Use SAP ID as default subscriber identification string
Context	<b>configure service vpls string sap string sub-sla-mgmt defaults subscriber-id sap-id</b>
Tree	<b>sap-id</b>
Notes	The following elements are part of a choice: <b>auto-id</b> , <b>sap-id</b> , or <b>string</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## string *string*

Synopsis	Default subscriber identification string for the SAP
Context	<b>configure service vpls string sap string sub-sla-mgmt defaults subscriber-id string string</b>
Tree	<b>string</b>
String Length	1 to 64
Notes	The following elements are part of a choice: <b>auto-id</b> , <b>sap-id</b> , or <b>string</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **mac-da-hashing** *boolean*

Synopsis	Use destination MAC address instead of subscriber ID to select egress LAG link
Context	<b>configure</b> <a href="#">service vpls string sap string sub-sla-mgmt mac-da-hashing boolean</a>
Tree	<a href="#">mac-da-hashing</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **single-sub-parameters**

Synopsis	Enter the <b>single-sub-parameters</b> context
Context	<b>configure</b> <a href="#">service vpls string sap string sub-sla-mgmt single-sub-parameters</a>
Tree	<a href="#">single-sub-parameters</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **non-sub-traffic**

Synopsis	Enable the <b>non-sub-traffic</b> context
Context	<b>configure</b> <a href="#">service vpls string sap string sub-sla-mgmt single-sub-parameters non-sub-traffic</a>
Tree	<a href="#">non-sub-traffic</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **app-profile** *reference*

Synopsis	Application profile name for all non-subscriber traffic
Context	<b>configure</b> <a href="#">service vpls string sap string sub-sla-mgmt single-sub-parameters non-sub-traffic app-profile reference</a>
Tree	<a href="#">app-profile</a>
Reference	<b>configure</b> <a href="#">application-assurance group number partition number policy app-profile string</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **sla-profile** *reference*

Synopsis	SLA profile applicable for all non-subscriber traffic
Context	<b>configure</b> <a href="#">service vpls string sap string sub-sla-mgmt single-sub-parameters non-sub-traffic sla-profile reference</a>
Tree	<a href="#">sla-profile</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt sla-profile string</a>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sub-profile** *reference*

Synopsis	Subscriber ID profile applied for all non-subscriber traffic
Context	<b>configure</b> <a href="#">service vpls string sap string sub-sla-mgmt single-sub-parameters non-sub-traffic sub-profile reference</a>
Tree	<a href="#">sub-profile</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt sub-profile string</a>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **subscriber-id** *string*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Subscriber ID applied for all non-subscriber traffic
Context	<b>configure</b> <a href="#">service vpls string sap string sub-sla-mgmt single-sub-parameters non-sub-traffic subscriber-id string</a>
Tree	<a href="#">subscriber-id</a>
String Length	1 to 64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **profiled-traffic-only** *boolean*

Synopsis	Include all traffic in subscriber profile
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">sub-sla-mgmt</a> <a href="#">single-sub-parameters</a> <a href="#">profiled-traffic-only</a> <i>boolean</i>
Tree	<a href="#">profiled-traffic-only</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sub-ident-policy** *reference*

Synopsis	Subscriber identification policy used on this SAP
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">sub-sla-mgmt</a> <a href="#">sub-ident-policy</a> <i>reference</i>
Tree	<a href="#">sub-ident-policy</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">sub-ident-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **subscriber-limit** (*keyword* | *number*)

Synopsis	Maximum number of subscribers on this SAP
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">sub-sla-mgmt</a> <a href="#">subscriber-limit</a> ( <i>keyword</i>   <i>number</i> )
Tree	<a href="#">subscriber-limit</a>
Range	1 to 131071
Default	1
Options	no-limit
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **transit-policy**

Synopsis	Enable the <b>transit-policy</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">transit-policy</a>
Tree	<a href="#">transit-policy</a>

Introduced 21.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### ip reference

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis IP transit policy ID  
Context **configure** service vpls string sap string transit-policy ip reference  
Tree ip  
Reference **configure** application-assurance group number partition number transit-ip-policy number  
Notes The following elements are part of a mandatory choice: **ip** or **prefix**.  
Introduced 21.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### prefix reference

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis IP prefix policy ID  
Context **configure** service vpls string sap string transit-policy prefix reference  
Tree prefix  
Reference **configure** application-assurance group number partition number transit-prefix-policy number  
Notes The following elements are part of a mandatory choice: **ip** or **prefix**.  
Introduced 21.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### segment-routing-v6 [instance] number

Synopsis Enter the **segment-routing-v6** list instance  
Context **configure** service vpls string segment-routing-v6 number

Tree	<a href="#">segment-routing-v6</a>
Max. Instances	1
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **[instance]** *number*

Synopsis	Segment routing v6 instance
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">segment-routing-v6</a> <i>number</i>
Tree	<a href="#">segment-routing-v6</a>
Range	1
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **locator** [[locator-name](#)] *reference*

Synopsis	Enter the <b>locator</b> list instance
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">segment-routing-v6</a> <i>number</i> <a href="#">locator</a> <i>reference</i>
Tree	<a href="#">locator</a>
Max. Instances	1
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **[locator-name]** *reference*

Synopsis	SRv6 locator name
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">segment-routing-v6</a> <i>number</i> <a href="#">locator</a> <i>reference</i>
Tree	<a href="#">locator</a>
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">locator</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## function

Synopsis	Enter the <b>function</b> context
Context	<b>configure service vpls string segment-routing-v6 number locator reference function</b>
Tree	<b>function</b>
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## end-dt2m

Synopsis	Enable the <b>end-dt2m</b> context
Context	<b>configure service vpls string segment-routing-v6 number locator reference function end-dt2m</b>
Tree	<b>end-dt2m</b>
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## value *number*

Synopsis	SRv6 function value
Context	<b>configure service vpls string segment-routing-v6 number locator reference function end-dt2m value <i>number</i></b>
Tree	<b>value</b>
Description	This command assigns the optional static function value for the routes in the VPRN, VPLS, or Epipe instance.  When unconfigured, the system allocates a value dynamically.
Range	1 to 1048575
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## end-dt2u

Synopsis	Enable the <b>end-dt2u</b> context
Context	<b>configure service vpls string segment-routing-v6 number locator reference function end-dt2u</b>
Tree	<b>end-dt2u</b>

Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **value number**

Synopsis	SRv6 function value
Context	<b>configure service vpls string segment-routing-v6 number locator reference function end-dt2u value number</b>
Tree	<b>value</b>
Description	This command assigns the optional static function value for the routes in the VPRN, VPLS, or Epipe instance.  When unconfigured, the system allocates a value dynamically.
Range	1 to 1048575
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **micro-segment-locator [locator-name] reference**

Synopsis	Enter the <b>micro-segment-locator</b> list instance
Context	<b>configure service vpls string segment-routing-v6 number micro-segment-locator reference</b>
Tree	<b>micro-segment-locator</b>
Max. Instances	1
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **[locator-name] reference**

Synopsis	Micro-segment SRv6 locator name
Context	<b>configure service vpls string segment-routing-v6 number micro-segment-locator reference</b>
Tree	<b>micro-segment-locator</b>
Description	This command associates a pre-defined micro-segment SRv6 locator (defined in the <b>configure router segment-routing segment-routing-v6</b> context) with the SRv6 instance in the service. The same micro-segment locator can be referenced in multiple BGP instances used by IPVPN or EVPN.

Reference	<b>configure</b> <i>router string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment-locator</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## function

Synopsis	Enter the <b>function</b> context
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">segment-routing-v6</a> <i>number</i> <a href="#">micro-segment-locator</a> <i>reference</i> <b>function</b>
Tree	<a href="#">function</a>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## udt2m

Synopsis	Enable the <b>udt2m</b> context
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">segment-routing-v6</a> <i>number</i> <a href="#">micro-segment-locator</a> <i>reference</i> <a href="#">function</a> <b>udt2m</b>
Tree	<a href="#">udt2m</a>
Description	Commands in this context configure the SRv6 uDT2M behavior and the function value that is associated to the SRv6 instance in the service. When configured, decapsulation and table lookup for IPv6 prefixes occurs in the VPLS service.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## value *number*

Synopsis	SRv6 function value
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">segment-routing-v6</a> <i>number</i> <a href="#">micro-segment-locator</a> <i>reference</i> <a href="#">function</a> <a href="#">udt2m</a> <i>value</i> <i>number</i>
Tree	<a href="#">value</a>
Description	This command assigns the optional static function value for the routes in the VPRN, VPLS, or Epipe instance.  When unconfigured, the system allocates a value dynamically.
Range	1 to 1048575

Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## udt2u

Synopsis	Enable the <b>udt2u</b> context
Context	<b>configure service vpls string segment-routing-v6 number micro-segment-locator reference function udt2u</b>
Tree	<b>udt2u</b>
Description	Commands in this context configure the SRv6 uDT2U behavior and the function value that is associated to the SRv6 instance in the service. When configured, decapsulation and table lookup for IPv6 prefixes occurs in the VPLS service.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## value number

Synopsis	SRv6 function value
Context	<b>configure service vpls string segment-routing-v6 number micro-segment-locator reference function udt2u value number</b>
Tree	<b>value</b>
Description	This command assigns the optional static function value for the routes in the VPRN, VPLS, or Epipe instance.  When unconfigured, the system allocates a value dynamically.
Range	1 to 1048575
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## service-id number

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Service ID
Context	<b>configure service vpls string service-id number</b>
Tree	<b>service-id</b>

Range	1 to 2147483647
Introduced	16.0.R1
Platforms	All

### **service-mtu** *number*

Synopsis	MTU size
Context	<b>configure</b> <i>service vpls string</i> <b>service-mtu</b> <i>number</i>
Tree	<b>service-mtu</b>

**Description** This command configures the Maximum Transmission Unit (MTU) value (payload) for the service. The system uses the value to validate the operational state of the SAP and SDP binding within the service. The value overrides the default MTU for the service type.

The service MTU and a SAP's service delineation encapsulation overhead (4 bytes for a dot1q tag) are used to derive the required MTU of the physical port or channel on which the SAP was created. If the required payload is larger than the port or channel MTU, the SAP is placed in an inoperative state. If the required MTU is equal to or less than the port or channel MTU, the SAP transitions to the operative state.

When binding an SDP to a service, the service MTU is compared to the path MTU associated with the SDP. The path MTU can be administratively defined in the context of the SDP. The default or administrative path MTU can be dynamically reduced due to the MTU capabilities discovered by the tunneling mechanism of the SDP or the egress interface MTU capabilities based on the next hop in the tunnel path. If the service MTU is larger than the path MTU, the SDP binding for the service is placed in an inoperative state. If the service MTU is equal to or less than the path MTU, the SDP binding is placed in an operational state.

If a service MTU, port or channel MTU, or path MTU is dynamically or administratively modified, all associated SAP and SDP binding operational states are automatically reevaluated.

Binding operational states are automatically reevaluated.

For I-VPLS and Epipes bound to a B-VPLS, the service MTU must be at least 18 bytes smaller than the B-VPLS service MTU to accommodate the PBB header.

Because this connects a Layer 2 to a Layer 3 service, adjust the service MTU under the Epipe service. The MTU that is advertised from the Epipe side is service MTU minus EtherHeaderSize.

In the **configure service epipe spoke-sdp** context, the **adv-service-mtu** command can be used to override the configured MTU value used in T-LDP signaling to the far-end of an Epipe spoke-sdp. The **adv-service-mtu** command is also used to validate the value signaled by the far-end PE.

Range	1 to 9782
Introduced	16.0.R1
Platforms	All

### shcv-policy-ipv4 *reference*

Synopsis	Subscriber host connectivity verification policy for IPv4
Context	<b>configure</b> <a href="#">service vpls string shcv-policy-ipv4 reference</a>
Tree	<a href="#">shcv-policy-ipv4</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt shcv-policy string</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### spb

Platforms	All

### **lsp-lifetime** *number*

Synopsis	Time LSP is considered valid by other routers
Context	<b>configure</b> <a href="#">service vpls string spb lsp-lifetime number</a>
Tree	<a href="#">lsp-lifetime</a>
Range	350 to 65535
Default	1200
Introduced	21.10.R1
Platforms	All

### **lsp-refresh-interval**

Synopsis	Enter the <b>lsp-refresh-interval</b> context
Context	<b>configure</b> <a href="#">service vpls string spb lsp-refresh-interval</a>
Tree	<a href="#">lsp-refresh-interval</a>
Introduced	21.10.R1
Platforms	All

### **half-lifetime** *boolean*

Synopsis	Refresh LSP interval at half the LSP lifetime
Context	<b>configure</b> <a href="#">service vpls string spb lsp-refresh-interval half-lifetime boolean</a>
Tree	<a href="#">half-lifetime</a>
Default	true
Introduced	21.10.R1

Platforms All

### **interval** *number*

Synopsis Specify the interval at which LSPs are refreshed  
Context **configure** [service vpls](#) *string* [spb](#) [lsp-refresh-interval](#) *interval* *number*  
Tree [interval](#)  
Range 150 to 65535  
Default 600  
Introduced 21.10.R1  
Platforms All

### **overload**

Synopsis Enable the **overload** context  
Context **configure** [service vpls](#) *string* [spb](#) [overload](#)  
Tree [overload](#)  
Introduced 21.10.R1  
Platforms All

### **timeout** *number*

Synopsis Time the router operates in overloaded state  
Context **configure** [service vpls](#) *string* [spb](#) [overload](#) [timeout](#) *number*  
Tree [timeout](#)  
Range 0 | 60 to 1800  
Default 0  
Units seconds  
Introduced 21.10.R1  
Platforms All

### **overload-on-boot**

Synopsis Enable the **overload-on-boot** context  
Context **configure** [service vpls](#) *string* [spb](#) [overload-on-boot](#)

Tree	<a href="#">overload-on-boot</a>
Introduced	21.10.R1
Platforms	All

### **timeout** *number*

Synopsis	Time the router operates in overloaded state
Context	<b>configure</b> <a href="#">service vpls string spb overload-on-boot timeout number</a>
Tree	<a href="#">timeout</a>
Range	0   60 to 1800
Default	0
Units	seconds
Introduced	21.10.R1
Platforms	All

### **timers**

Synopsis	Enter the <b>timers</b> context
Context	<b>configure</b> <a href="#">service vpls string spb timers</a>
Tree	<a href="#">timers</a>
Introduced	21.10.R1
Platforms	All

### **lsp-wait**

Synopsis	Enable the <b>lsp-wait</b> context
Context	<b>configure</b> <a href="#">service vpls string spb timers lsp-wait</a>
Tree	<a href="#">lsp-wait</a>
Introduced	21.10.R1
Platforms	All

### **initial-wait** *number*

Synopsis	Initial wait
Context	<b>configure</b> <a href="#">service vpls string spb timers lsp-wait initial-wait number</a>

Tree	<a href="#">initial-wait</a>
Range	10 to 100000
Default	10
Units	milliseconds
Introduced	21.10.R1
Platforms	All

### **max-wait** *number*

Synopsis	Max wait time
Context	<b>configure</b> <a href="#">service vpls string spb timers lsp-wait max-wait number</a>
Tree	<a href="#">max-wait</a>
Range	10 to 120000
Default	5000
Units	milliseconds
Introduced	21.10.R1
Platforms	All

### **second-wait** *number*

Synopsis	Second wait
Context	<b>configure</b> <a href="#">service vpls string spb timers lsp-wait second-wait number</a>
Tree	<a href="#">second-wait</a>
Range	10 to 100000
Default	1000
Units	milliseconds
Introduced	21.10.R1
Platforms	All

### **spf-wait**

Synopsis	Enable the <b>spf-wait</b> context
Context	<b>configure</b> <a href="#">service vpls string spb timers spf-wait</a>
Tree	<a href="#">spf-wait</a>
Introduced	21.10.R1

Platforms All

### **initial-wait** *number*

Synopsis Initial wait  
Context **configure** [service vpls](#) *string* [spb timers spf-wait](#) **initial-wait** *number*  
Tree [initial-wait](#)  
Range 10 to 100000  
Default 1000  
Units milliseconds  
Introduced 21.10.R1  
Platforms All

### **max-wait** *number*

Synopsis Max wait time  
Context **configure** [service vpls](#) *string* [spb timers spf-wait](#) **max-wait** *number*  
Tree [max-wait](#)  
Range 10 to 120000  
Default 10000  
Units milliseconds  
Introduced 21.10.R1  
Platforms All

### **second-wait** *number*

Synopsis Second wait  
Context **configure** [service vpls](#) *string* [spb timers spf-wait](#) **second-wait** *number*  
Tree [second-wait](#)  
Range 10 to 100000  
Default 1000  
Units milliseconds  
Introduced 21.10.R1  
Platforms All

## **spbm-control-vpls**

Synopsis	Enter the <b>spbm-control-vpls</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spbm-control-vpls</a>
Tree	<a href="#">spbm-control-vpls</a>
Introduced	21.10.R1
Platforms	All

## **fid** *number*

Synopsis	SPB control vpls FID
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spbm-control-vpls</a> <b>fid</b> <i>number</i>
Tree	<a href="#">fid</a>
Range	1 to 4095
Introduced	21.10.R1
Platforms	All

## **service-name** *string*

Synopsis	SPB control vpls service
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spbm-control-vpls</a> <b>service-name</b> <i>string</i>
Tree	<a href="#">service-name</a>
String Length	1 to 64
Introduced	21.10.R1
Platforms	All

## **split-horizon-group** [[shg-name](#)] *string*

Synopsis	Enter the <b>split-horizon-group</b> list instance
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">split-horizon-group</a> <i>string</i>
Tree	<a href="#">split-horizon-group</a>
Introduced	16.0.R1
Platforms	All

### [shg-name] *string*

Synopsis	SHG name to which the SDP belongs
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">split-horizon-group string</a>
Tree	<a href="#">split-horizon-group</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### description *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">split-horizon-group string</a> <a href="#">description string</a>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### fdb

Synopsis	Enter the <b>fdb</b> context
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">split-horizon-group string</a> <a href="#">fdb</a>
Tree	<a href="#">fdb</a>
Introduced	16.0.R1
Platforms	All

### saps

Synopsis	Enter the <b>saps</b> context
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">split-horizon-group string</a> <a href="#">fdb saps</a>
Tree	<a href="#">saps</a>
Introduced	16.0.R1
Platforms	All

**auto-learn-mac-protect *boolean***

Synopsis	Populate automatically MAC protect list with MAC addresses learned on SDP with split horizon group
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">split-horizon-group</a> <i>string</i> <a href="#">fdb saps</a> <a href="#">auto-learn-mac-protect</a> <i>boolean</i>
Tree	<a href="#">auto-learn-mac-protect</a>
Default	false
Introduced	16.0.R1
Platforms	All

**auto-learn-mac-protect-exclude-list *reference***

Synopsis	Referenced MAC protect exclusion list name
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">split-horizon-group</a> <i>string</i> <a href="#">fdb saps</a> <a href="#">auto-learn-mac-protect-exclude-list</a> <i>reference</i>
Tree	<a href="#">auto-learn-mac-protect-exclude-list</a>
Description	<p>This command references the name of a MAC protect exclusion list.</p> <p>Dynamically-learned MAC Source Addresses (SA) are protected if they are learned on an object with ALMP configured and no exclusion list is associated with the object, or if the MAC SA does not match any entry in an associated exclusion list.</p> <p>An exclusion list can be used in multiple objects of a service. If a list is empty, ALMP does not exclude any learned MAC SAs from protection on the object.</p>
Reference	<b>configure</b> <a href="#">service mac-list</a> <i>string</i>
Introduced	20.5.R1
Platforms	All

**discard-unprotected-dest-mac *boolean***

Synopsis	Discard packet with unprotected destination MAC address
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">split-horizon-group</a> <i>string</i> <a href="#">fdb saps</a> <a href="#">discard-unprotected-dest-mac</a> <i>boolean</i>
Tree	<a href="#">discard-unprotected-dest-mac</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **protected-src-mac-violation-action** *keyword*

Synopsis	Action to take whenever a relearn request for a protected MAC is received
Context	<b>configure service vpls</b> <i>string</i> <b>split-horizon-group</b> <i>string</i> <b>fdb saps protected-src-mac-violation-action</b> <i>keyword</i>
Tree	<b>protected-src-mac-violation-action</b>
Options	sap-oper-down, alarm-only, discard
Introduced	16.0.R1
Platforms	All

### **residential** *boolean*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Define as a residential split horizon group
Context	<b>configure service vpls</b> <i>string</i> <b>split-horizon-group</b> <i>string</i> <b>residential</b> <i>boolean</i>
Tree	<b>residential</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **spoke-sdp** [**sdp-bind-id**] *string*

Synopsis	Enter the <b>spoke-sdp</b> list instance
Context	<b>configure service vpls</b> <i>string</i> <b>spoke-sdp</b> <i>string</i>
Tree	<b>spoke-sdp</b>
Introduced	16.0.R1
Platforms	All

### **[sdp-bind-id]** *string*

Synopsis	SDP binding ID
Context	<b>configure service vpls</b> <i>string</i> <b>spoke-sdp</b> <i>string</i>
Tree	<b>spoke-sdp</b>
String Length	3 to 16

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **accounting-policy** *reference*

Synopsis	Policy to collect accounting statistics
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">accounting-policy</a> <i>reference</i>
Tree	<a href="#">accounting-policy</a>
Reference	<b>configure</b> <a href="#">log accounting-policy</a> <i>number</i>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the SDP binding to the service
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	enable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **app-profile** *reference*

Synopsis	ISA-AA application profile name for this SDP
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">app-profile</a> <i>reference</i>
Tree	<a href="#">app-profile</a>
Reference	<b>configure</b> <a href="#">application-assurance group</a> <i>number</i> <a href="#">partition</a> <i>number</i> <a href="#">policy app-profile</a> <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **bfd**

Synopsis	Enter the <b>bfd</b> context
----------	------------------------------

Context	<b>configure service vpls string spoke-sdp string bfd</b>
Tree	<a href="#">bfd</a>
Introduced	21.2.R1
Platforms	All

### **bfd-liveness**

Synopsis	Enable the <b>bfd-liveness</b> context
Context	<b>configure service vpls string spoke-sdp string bfd bfd-liveness</b>
Tree	<a href="#">bfd-liveness</a>
Introduced	21.2.R1
Platforms	All

### **encap keyword**

Synopsis	BFD encapsulation used on the SDP binding
Context	<b>configure service vpls string spoke-sdp string bfd bfd-liveness encap keyword</b>
Tree	<a href="#">encap</a>
Default	ipv4
Options	ipv4
Introduced	21.2.R1
Platforms	All

### **bfd-template reference**

Synopsis	BFD template associated with the SDP binding
Context	<b>configure service vpls string spoke-sdp string bfd bfd-template reference</b>
Tree	<a href="#">bfd-template</a>
Description	This command configures a named BFD template to be used by VCCV BFD on PWs belonging to the VLL service. The template specifies parameters, such as the minimum transmit and receive control packet timer intervals, used by the BFD session. Template parameters are configured under the <b>configure router bfd</b> context.
Reference	<b>configure bfd bfd-template string</b>
Introduced	21.2.R1
Platforms	All

### **failure-action** *keyword*

Synopsis	VCCV BFD action taken on the SDP binding
Context	<b>configure service vpls string spoke-sdp string bfd failure-action keyword</b>
Tree	<a href="#">failure-action</a>
Description	This command configures a named BFD template to be used by VCCV BFD on PWs belonging to the VLL service. The template specifies parameters, such as the minimum transmit and receive control packet timer intervals, used by the BFD session. Template parameters are configured under the <b>configure router bfd</b> context.
Default	none
Options	none, down
Introduced	21.2.R1
Platforms	All

### **wait-for-up-timer** *number*

Synopsis	Time waited for BFD up status
Context	<b>configure service vpls string spoke-sdp string bfd wait-for-up-timer number</b>
Tree	<a href="#">wait-for-up-timer</a>
Description	This command configures the time interval that is used to wait for a BFD session to come up.  This command is triggered when a spoke-SDP is first administratively enabled and a VCCV BFD session transitions from up to down. The command is required to allow time for BFD sessions to come up, and for BFD to settle before selecting the active spoke-SDP for use in a redundant set. In the case where a VCCV BFD session is bouncing, the timer prevents excessive flapping of the operational state of a spoke-SDP.
Range	1 to 60
Units	seconds
Introduced	21.2.R1
Platforms	All

### **block-on-mesh-failure** *boolean*

Synopsis	Enable blocking after all SDPs are operationally down
Context	<b>configure service vpls string spoke-sdp string block-on-mesh-failure boolean</b>
Tree	<a href="#">block-on-mesh-failure</a>
Default	false

Introduced 16.0.R1  
Platforms All

### **bpdu-translation** *keyword*

Synopsis BPDU format  
Context **configure** [service vpls](#) *string* [spoke-sdp](#) *string* [bpdu-translation](#) *keyword*  
Tree [bpdu-translation](#)  
Options auto, pvst, stp, pvst-rw, auto-rw  
Introduced 16.0.R1  
Platforms All

### **collect-stats** *boolean*

Synopsis Allow agent to collect accounting statistics  
Context **configure** [service vpls](#) *string* [spoke-sdp](#) *string* [collect-stats](#) *boolean*  
Tree [collect-stats](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **control-word** *boolean*

Synopsis Use the control word as preferred  
Context **configure** [service vpls](#) *string* [spoke-sdp](#) *string* [control-word](#) *boolean*  
Tree [control-word](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **cpu-protection**

Synopsis Enter the **cpu-protection** context  
Context **configure** [service vpls](#) *string* [spoke-sdp](#) *string* [cpu-protection](#)  
Tree [cpu-protection](#)

Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## eth-cfm-monitoring

Synopsis Enable the **eth-cfm-monitoring** context  
Context **configure** [service vpls string spoke-sdp string cpu-protection eth-cfm-monitoring](#)  
Tree [eth-cfm-monitoring](#)  
Notes The following elements are part of a choice: **eth-cfm-monitoring** or **mac-monitoring**.  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## aggregate

Synopsis Apply rate limit to the sum of per-peer packet rates  
Context **configure** [service vpls string spoke-sdp string cpu-protection eth-cfm-monitoring aggregate](#)  
Tree [aggregate](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## car

Synopsis Ignore Ethernet CFM packets when enforcing overall rate  
Context **configure** [service vpls string spoke-sdp string cpu-protection eth-cfm-monitoring car](#)  
Tree [car](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## mac-monitoring

Synopsis Monitor MAC for CPU protection  
Context **configure** [service vpls string spoke-sdp string cpu-protection mac-monitoring](#)  
Tree [mac-monitoring](#)  
Notes The following elements are part of a choice: **eth-cfm-monitoring** or **mac-monitoring**.

Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

### **policy-id** *reference*

Synopsis CPM protection policy  
Context **configure** [service vpls string spoke-sdp string](#) [cpu-protection policy-id reference](#)  
Tree [policy-id](#)  
Reference **configure** [system security cpu-protection policy number](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

### **description** *string*

Synopsis Text description  
Context **configure** [service vpls string spoke-sdp string](#) [description string](#)  
Tree [description](#)  
String Length 1 to 80  
Introduced 16.0.R1  
Platforms All

### **dhcp**

Introduced 16.0.R1  
Platforms All

## instance *number*

Synopsis Queue-group instance ID  
Context **configure service vpls string spoke-sdp string egress qos network port-redirect-group instance number**  
Tree [instance](#)  
Range 1 to 65535  
Introduced 16.0.R1  
Platforms All

## vc-label *number*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Egress MPLS VC label to send packets to the far end

Context	<b>configure service vpls string spoke-sdp string egress vc-label number</b>
Tree	<b>vc-label</b>
Range	16 to 1048575
Introduced	16.0.R1
Platforms	All

## endpoint

Synopsis	Enter the <b>endpoint</b> context
Context	<b>configure service vpls string spoke-sdp string endpoint</b>
Tree	<b>endpoint</b>
Introduced	16.0.R1
Platforms	All

## name *reference*

### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Name of service endpoint to which SDP bind is attached
Context	<b>configure service vpls string spoke-sdp string endpoint name reference</b>
Tree	<b>name</b>
Reference	<b>configure service vpls string endpoint string</b>
Introduced	16.0.R1
Platforms	All

## precedence (*number | keyword*)

Synopsis	Precedence of this SDP bind when there are multiple SDP binds attached to one service endpoint
Context	<b>configure service vpls string spoke-sdp string endpoint precedence (number   keyword)</b>
Tree	<b>precedence</b>
Range	1 to 4
Default	4
Options	primary

Introduced	16.0.R1
Platforms	All

## entropy-label

Synopsis	Enable the use of entropy labels for spoke SDPs
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">entropy-label</a>
Tree	<a href="#">entropy-label</a>
Notes	The following elements are part of a choice: <b>entropy-label</b> or <b>hash-label</b> .
Introduced	16.0.R1
Platforms	All

## eth-cfm

Synopsis	Enter the <b>eth-cfm</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a>
Tree	<a href="#">eth-cfm</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## collect-lmm-fc-stats

Synopsis	Enter the <b>collect-lmm-fc-stats</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">collect-lmm-fc-stats</a>
Tree	<a href="#">collect-lmm-fc-stats</a>
Description	Commands in this context configure per forwarding class (FC) LMM information collection.  The commands <b>fc-in-profile</b> and <b>fc</b> in this context are mutually exclusive. The commands apply to either profile-aware or profile-unaware FCs respectively.  This command and the <b>collect-lmm-stats</b> command are mutually exclusive when there is entity resource contention.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fc** keyword

Synopsis	Forwarding class name for profile-unaware counter
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm collect-lmm-fc-stats</a> <a href="#">fc</a> <i>keyword</i>
Tree	<a href="#">fc</a>
Description	<p>This command configures individual counters for the specified FCs without regard for profile. The system includes all countable packets that match a configured FC, regardless of profile, in this counter.</p> <p>An FC specified as part of this command and for this specific context cannot be specified as a profile-aware FC using the <b>fc-in-profile</b> command under the <b>collect-lmm-fc-stats</b> context.</p> <p>When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.</p>
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fc-in-profile** keyword

Synopsis	Forwarding class name for profile-aware counter
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm collect-lmm-fc-stats</a> <a href="#">fc-in-profile</a> <i>keyword</i>
Tree	<a href="#">fc-in-profile</a>
Description	<p>This command configures individual counters for the specified FCs with regard to profile. The system includes all countable packets that match a configured FC and that are deemed to be in-profile in this counter.</p> <p>An FC specified as part of this command and for this specific context cannot be specified as a profile-unaware FC using the <b>fc</b> command under the <b>collect-lmm-fc-stats</b> context.</p> <p>When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.</p>
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **collect-lmm-stats** *boolean*

Synopsis	Collect statistics for loss measurement message tests
Context	<b>configure</b> <i>service vpls</i> <i>string spoke-sdp</i> <i>string eth-cfm</i> <b>collect-lmm-stats</b> <i>boolean</i>
Tree	<b>collect-lmm-stats</b>
Description	<p>When configured to <b>true</b>, the router instantiates the statistical counter to transmit and receive packets for the LAG facility MEP bindings.</p> <p>The <b>show eth-cfm collect-lmm-stats</b> command displays entities that have been enabled to collect transit and receive counters.</p> <p>When configured to <b>false</b>, the router does not instantiate the counter and the LMM PDU associated with the MEP does not populate the counters in the packet.</p>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mep** *md-admin-name* *reference* *ma-admin-name* *reference* **mep-id** *number*

Synopsis	Enter the <b>mep</b> list instance
Context	<b>configure</b> <i>service vpls</i> <i>string spoke-sdp</i> <i>string eth-cfm</i> <b>mep</b> <i>md-admin-name</i> <i>reference</i> <i>ma-admin-name</i> <i>reference</i> <b>mep-id</b> <i>number</i>
Tree	<b>mep</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **md-admin-name** *reference*

Synopsis	Maintenance Domain (MD) name
Context	<b>configure</b> <i>service vpls</i> <i>string spoke-sdp</i> <i>string eth-cfm</i> <b>mep</b> <i>md-admin-name</i> <i>reference</i> <i>ma-admin-name</i> <i>reference</i> <b>mep-id</b> <i>number</i>
Tree	<b>mep</b>
Reference	<b>configure</b> <i>eth-cfm</i> <b>domain</b> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ma-admin-name** *reference*

Synopsis	Maintenance Association (MA) name
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i>
Tree	<a href="#">mep</a>
Reference	<b>configure</b> <a href="#">eth-cfm domain</a> <i>string</i> <a href="#">association</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mep-id** *number*

Synopsis	Maintenance Endpoint (MEP) ID
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i>
Tree	<a href="#">mep</a>
Range	1 to 8191
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **admin-state** *keyword*

Synopsis	Administrative state of the MEP
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ais**

Synopsis	Enable the <b>ais</b> context
----------	-------------------------------

Context	<b>configure service vpls</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ais</i>
Tree	<a href="#">ais</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **client-meg-level** *number*

Synopsis	Client MEG level for AIS message generation
Context	<b>configure service vpls</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ais client-meg-level number</i>
Tree	<a href="#">client-meg-level</a>
Range	1 to 7
Max. Instances	7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **interface-support** *boolean*

Synopsis	Enable generation of AIS PDUs based on endpoint state
Context	<b>configure service vpls</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ais interface-support boolean</i>
Tree	<a href="#">interface-support</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **interval** *number*

Synopsis	Transmission interval for AIS messages
Context	<b>configure service vpls</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ais interval number</i>
Tree	<a href="#">interval</a>
Range	1   60
Default	1
Units	seconds

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **low-priority-defect** *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>ais</b> <b>low-priority-defect</b> <i>keyword</i>
Tree	<a href="#">low-priority-defect</a>
Default	all-def
Options	all-def, mac-rem-err-xcon
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **priority** *number*

Synopsis	Priority of the AIS messages generated by the node
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>ais</b> <b>priority</b> <i>number</i>
Tree	<a href="#">priority</a>
Range	0 to 7
Default	7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **alarm-notification**

Synopsis	Enter the <b>alarm-notification</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>alarm-notification</b>
Tree	<a href="#">alarm-notification</a>
Description	<p>Commands in this context configure the Fault Notification Generator (FNG) time values to raise an alarm or reset the CCM defect alarm.</p> <p>Use these timers for network management processes. The timers are not tied into delaying the notification to the fault management system on the network element and do not affect fault propagation mechanisms.</p>
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fng-alarm-time** *number*

Synopsis Time that must expire before an FNG alarm is raised

Context **configure** **service vpls** *string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number alarm-notification fng-alarm-time number*

Tree [fng-alarm-time](#)

Range 250 | 500 | 1000

Units centiseconds

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fng-reset-time** *number*

Synopsis Time that must expire before an FNG alarm is reset

Context **configure** **service vpls** *string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number alarm-notification fng-reset-time number*

Tree [fng-reset-time](#)

Range 250 | 500 | 1000

Units centiseconds

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm** *boolean*

Synopsis Generate CCM messages

Context **configure** **service vpls** *string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm boolean*

Tree [ccm](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm-ltm-priority** *number*

Synopsis	Priority of CCM and LTM messages transmitted by the MEP
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>ccm-ltm-priority</b> <i>number</i>
Tree	<a href="#">ccm-ltm-priority</a>
Range	0 to 7
Default	7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm-padding-size** *number*

Synopsis	Number of octets of padding to insert in CCM packets
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>ccm-padding-size</b> <i>number</i>
Tree	<a href="#">ccm-padding-size</a>
Description	This command sets the byte size of the optional Data TLV to be included in the ETH-CC PDU.  This command increases the size of the ETH-CC PDU by the configured value. The base size of the ETH-CC PDU, including the Interface Status TLV and Port Status TLV, is 83 bytes not including the Layer 2 encapsulation. CCM padding is not supported when the CCM interval (configured through <b>configure eth-cfm domain association ccm-interval</b> ) is less than 1 second.
Range	3 to 1500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **cfm-vlan-tag** *string*

Synopsis	VLAN tags to apply to CFM PDUs for egress processing
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>cfm-vlan-tag</b> <i>string</i>
Tree	<a href="#">cfm-vlan-tag</a>
String Length	1 to 9
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## csf

Synopsis	Enable the <b>csf</b> context
Context	<b>configure service vpls</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number csf</i>
Tree	<a href="#">csf</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## multiplier *decimal-number*

Synopsis	Multiplication factor used to clear the CSF condition
Context	<b>configure service vpls</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number csf multiplier decimal-number</i>
Tree	<a href="#">multiplier</a>
Range	0.0   2.0 to 30.0
Default	3.5
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## description *string*

Synopsis	Text description
Context	<b>configure service vpls</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number description string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## direction *keyword*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Direction the MEP faces
----------	-------------------------

Context	<b>configure service vpls string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number direction keyword</b>
Tree	<a href="#">direction</a>
Default	down
Options	down, up
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## eth-test

Synopsis	Enable the <b>eth-test</b> context
Context	<b>configure service vpls string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test</b>
Tree	<a href="#">eth-test</a>
Description	Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the <b>oam eth-cfm eth-test</b> command.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## bit-error-threshold *number*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	<b>configure service vpls string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test bit-error-threshold number</b>
Tree	<a href="#">bit-error-threshold</a>
Range	0 to 11840
Default	1
Units	bit errors
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## test-pattern

Synopsis	Enter the <b>test-pattern</b> context
Context	<b>configure service vpls string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test test-pattern</b>

Tree	<a href="#">test-pattern</a>
Description	Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **crc-tlv** *boolean*

Synopsis	Generate a CRC checksum
Context	<b>configure</b> <a href="#">service vpls</a> <a href="#">string spoke-sdp</a> <a href="#">string eth-cfm mep</a> <a href="#">md-admin-name</a> <a href="#">reference ma-admin-name</a> <a href="#">reference mep-id</a> <a href="#">number eth-test</a> <a href="#">test-pattern</a> <b>crc-tlv</b> <i>boolean</i>
Tree	<a href="#">crc-tlv</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **pattern** *keyword*

Synopsis	Test pattern for Ethernet Test frames
Context	<b>configure</b> <a href="#">service vpls</a> <a href="#">string spoke-sdp</a> <a href="#">string eth-cfm mep</a> <a href="#">md-admin-name</a> <a href="#">reference ma-admin-name</a> <a href="#">reference mep-id</a> <a href="#">number eth-test</a> <a href="#">test-pattern</a> <b>pattern</b> <i>keyword</i>
Tree	<a href="#">pattern</a>
Description	This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.
Default	all-zeros
Options	all-zeros, all-ones
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fault-propagation** *keyword*

Synopsis	Fault propagation for the MEP
Context	<b>configure</b> <a href="#">service vpls</a> <a href="#">string spoke-sdp</a> <a href="#">string eth-cfm mep</a> <a href="#">md-admin-name</a> <a href="#">reference ma-admin-name</a> <a href="#">reference mep-id</a> <a href="#">number</a> <b>fault-propagation</b> <i>keyword</i>
Tree	<a href="#">fault-propagation</a>
Options	use-if-status-tlv, suspend-ccm

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## grace

Synopsis	Enter the <b>grace</b> context
Context	<b>configure service vpls string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace</b>
Tree	<a href="#">grace</a>
Description	Commands in this context configure the Nokia ETH-CFM Grace function and the ITU-T Y.1731 Ethernet Expected Default (ETH-ED) function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## eth-ed

Synopsis	Enter the <b>eth-ed</b> context
Context	<b>configure service vpls string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed</b>
Tree	<a href="#">eth-ed</a>
Description	Commands in this context configure the ITU-T Y.1731 ETH-ED function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## max-rx-defect-window *number*

Synopsis	Maximum received ETH-ED expected defect window duration
Context	<b>configure service vpls string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed max-rx-defect-window number</b>
Tree	<a href="#">max-rx-defect-window</a>
Range	1 to 86400
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **priority number**

Synopsis	Transmission priority for ETH-ED PDUs
Context	<b>configure service vpls string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed priority number</b>
Tree	<a href="#">priority</a>
Range	0 to 7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **rx-eth-ed boolean**

Synopsis	Receive and process ETH-ED ITU-T Y.1731 PDUs on the MEP
Context	<b>configure service vpls string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed rx-eth-ed boolean</b>
Tree	<a href="#">rx-eth-ed</a>
Description	This command enables the reception and processing of the ITU-T Y.1731 ETH-ED PDU on the MEP.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **tx-eth-ed boolean**

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	<b>configure service vpls string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed tx-eth-ed boolean</b>
Tree	<a href="#">tx-eth-ed</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **eth-vsm-grace**

Synopsis	Enter the <b>eth-vsm-grace</b> context
Context	<b>configure service vpls string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace</b>

Tree	<a href="#">eth-vsm-grace</a>
Description	Commands in this context configure the Nokia ETH-CFM Grace function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **rx-eth-vsm-grace** *boolean*

Synopsis	Receive and process Nokia ETH-CFM Grace PDU on the MEP
Context	<b>configure</b> <a href="#">service vpls</a> <a href="#">string spoke-sdp</a> <a href="#">string eth-cfm mep</a> <a href="#">md-admin-name reference</a> <a href="#">ma-admin-name reference</a> <a href="#">mep-id number</a> <a href="#">grace eth-vsm-grace rx-eth-vsm-grace</a> <a href="#">boolean</a>
Tree	<a href="#">rx-eth-vsm-grace</a>
Description	When configured to <b>true</b> , the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.  When configured to <b>false</b> , the router disables the Nokia Grace function.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **tx-eth-vsm-grace** *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	<b>configure</b> <a href="#">service vpls</a> <a href="#">string spoke-sdp</a> <a href="#">string eth-cfm mep</a> <a href="#">md-admin-name reference</a> <a href="#">ma-admin-name reference</a> <a href="#">mep-id number</a> <a href="#">grace eth-vsm-grace tx-eth-vsm-grace</a> <a href="#">boolean</a>
Tree	<a href="#">tx-eth-vsm-grace</a>
Description	When configured to <b>true</b> , the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.  The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.  The operator must configure the <b>configure system eth-cfm grace</b> command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).  When configured to <b>false</b> , the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.
Default	true
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **lbm-svc-act-responder** *boolean*

Synopsis Process service activation streams in ETH-CFM LBM

Context **configure** [service](#) [vpls](#) *string* [spoke-sdp](#) *string* [eth-cfm](#) [mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* **lbm-svc-act-responder** *boolean*

Tree [lbm-svc-act-responder](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **low-priority-defect** *keyword*

Synopsis Lowest priority defect allowed to generate fault alarm

Context **configure** [service](#) [vpls](#) *string* [spoke-sdp](#) *string* [eth-cfm](#) [mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* **low-priority-defect** *keyword*

Tree [low-priority-defect](#)

Default mac-rem-err-xcon

Options all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mac-address** *string*

Synopsis MAC address of the MEP

Context **configure** [service](#) [vpls](#) *string* [spoke-sdp](#) *string* [eth-cfm](#) [mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* **mac-address** *string*

Tree [mac-address](#)

Description This command specifies the MAC address of the MEP.  
When unconfigured, the MAC address of the port (if the MEP is on a SAP) or the MAC address of a bridge (if the MEP is on a spoke) is used.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **one-way-delay-threshold** *number*

Synopsis	Threshold time limit for the one-way delay test
Context	<b>configure</b> <b>service vpls</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>one-way-delay-threshold</b> <i>number</i>
Tree	<b>one-way-delay-threshold</b>
Range	0 to 600
Default	3
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **primary-vlan** *boolean*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	MEP provisioned using MA primary VLAN ID
Context	<b>configure</b> <b>service vpls</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>primary-vlan</b> <i>boolean</i>
Tree	<b>primary-vlan</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mip primary-vlan** (*number* | *keyword*)

Synopsis	Enter the <b>mip</b> list instance
Context	<b>configure</b> <b>service vpls</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm mip</b> <b>primary-vlan</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>mip</b>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **primary-vlan** (*number* | *keyword*)

Synopsis	VLAN ID to which the MIP is attached
----------	--------------------------------------

Context	<b>configure service vpls string spoke-sdp string eth-cfm mip primary-vlan</b> ( <i>number   keyword</i> )
Tree	<a href="#">mip</a>
Description	This command provides an option for linking a MIP with a Primary VLAN number or none. When the <b>none</b> option is provided, the MIP does not include the primary vlan.
Range	1 to 4094
Options	none
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **cfm-vlan-tag string**

Synopsis	VLAN tags to apply to CFM PDUs for egress processing
Context	<b>configure service vpls string spoke-sdp string eth-cfm mip primary-vlan</b> ( <i>number   keyword</i> ) <b>cfm-vlan-tag string</b>
Tree	<a href="#">cfm-vlan-tag</a>
Description	This command allows the CFM function to include additional VLAN tags to the CFM packet that are carried to the egress and treated as service delimited. Typically, this function is used to influence the VLAN carried over a binding that uses the vc-type vlan or the binding forces the use of one or more VLAN tag that results in a mismatch between the service data arriving at the binding and the locally generated ETH-CFM PDUs arriving at the same egress. When this command is included under the MEP or MIP configuration, the tags used as part of the configuration typically match the SAP service delimited configuration.
String Length	1 to 9
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mac-address string**

Synopsis	MAC address of the MIP
Context	<b>configure service vpls string spoke-sdp string eth-cfm mip primary-vlan</b> ( <i>number   keyword</i> ) <b>mac-address string</b>
Tree	<a href="#">mac-address</a>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **squelch-ingress-ctag-levels** *number*

Synopsis	Squelch levels using additional VLAN C-Tag space
Context	<b>configure</b> <b>service vpls</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm</b> <b>squelch-ingress-ctag-levels</b> <i>number</i>
Tree	<b>squelch-ingress-ctag-levels</b>
Description	<p>This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding plus an additional VLAN, up to a maximum tag length of two tags. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.</p> <p>The list of levels must be a complete contiguous list from 0 up to the highest level to be dropped.</p>
Range	0 to 7
Max. Instances	8
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **squelch-ingress-levels** *number*

Synopsis	Levels for which ETH-CFM packets are silently discarded
Context	<b>configure</b> <b>service vpls</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm</b> <b>squelch-ingress-levels</b> <i>number</i>
Tree	<b>squelch-ingress-levels</b>
Description	<p>This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.</p> <p>The list of levels must be a complete contiguous list from 0 up to the highest level that will be dropped.</p>
Range	0 to 7
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **vmep-filter** *boolean*

Synopsis	Suppress eth-cfm PDUs based on level lower than or equal to configured Virtual MEP
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">vmep-filter</a> <i>boolean</i>
Tree	<a href="#">vmep-filter</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **etree-leaf** *boolean*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Enable etree leaf access-circuit status
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">etree-leaf</a> <i>boolean</i>
Tree	<a href="#">etree-leaf</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **etree-root-leaf-tag** *boolean*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	E-tree root leaf tag status
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">etree-root-leaf-tag</a> <i>boolean</i>
Tree	<a href="#">etree-root-leaf-tag</a>
Default	false
Introduced	16.0.R1
Platforms	All

## **fdb**

Synopsis	Enter the <b>fdb</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <b>fdb</b>
Tree	<a href="#">fdb</a>
Introduced	16.0.R1
Platforms	All

## **auto-learn-mac-protect** *boolean*

Synopsis	Populate automatically MAC protect list with source MAC addresses learned on SDP
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <b>fdb</b> <b>auto-learn-mac-protect</b> <i>boolean</i>
Tree	<a href="#">auto-learn-mac-protect</a>
Default	false
Introduced	16.0.R1
Platforms	All

## **auto-learn-mac-protect-exclude-list** *reference*

Synopsis	Referenced MAC protect exclusion list name
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <b>fdb</b> <b>auto-learn-mac-protect-exclude-list</b> <i>reference</i>
Tree	<a href="#">auto-learn-mac-protect-exclude-list</a>
Description	<p>This command references the name of a MAC protect exclusion list.</p> <p>Dynamically-learned MAC Source Addresses (SA) are protected if they are learned on an object with ALMP configured and no exclusion list is associated with the object, or if the MAC SA does not match any entry in an associated exclusion list.</p> <p>An exclusion list can be used in multiple objects of a service. If a list is empty, ALMP does not exclude any learned MAC SAs from protection on the object.</p>
Reference	<b>configure</b> <a href="#">service mac-list</a> <i>string</i>
Introduced	20.5.R1
Platforms	All

## **discard-unknown-source** *boolean*

Synopsis	Discard packets with unknown destination MAC addresses
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <b>fdb</b> <b>discard-unknown-source</b> <i>boolean</i>

Tree	<a href="#">discard-unknown-source</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **limit-mac-move** *keyword*

Synopsis	MAC move
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">fdb</a> <b>limit-mac-move</b> <i>keyword</i>
Tree	<a href="#">limit-mac-move</a>
Default	blockable
Options	blockable, non-blockable
Introduced	16.0.R1
Platforms	All

### **mac-learning**

Synopsis	Enter the <b>mac-learning</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">fdb</a> <b>mac-learning</b>
Tree	<a href="#">mac-learning</a>
Introduced	16.0.R1
Platforms	All

### **aging** *boolean*

Synopsis	Enable aging of MAC addresses
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">fdb</a> <b>mac-learning</b> <b>aging</b> <i>boolean</i>
Tree	<a href="#">aging</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **learning** *boolean*

Synopsis	Enable learning of new MAC addresses
----------	--------------------------------------

Context	<b>configure service vpls string spoke-sdp string fdb mac-learning learning boolean</b>
Tree	<a href="#">learning</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **mac-pinning boolean**

Synopsis	MAC address pinning in active status
Context	<b>configure service vpls string spoke-sdp string fdb mac-pinning boolean</b>
Tree	<a href="#">mac-pinning</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **maximum-mac-addresses number**

Synopsis	Maximum MAC entries in the FDB from this SDP
Context	<b>configure service vpls string spoke-sdp string fdb maximum-mac-addresses number</b>
Tree	<a href="#">maximum-mac-addresses</a>
Range	1 to 511999
Introduced	16.0.R1
Platforms	All

### **protected-src-mac-violation-action keyword**

Synopsis	Action when a relearn request for a protected MAC is received on the SDP
Context	<b>configure service vpls string spoke-sdp string fdb protected-src-mac-violation-action keyword</b>
Tree	<a href="#">protected-src-mac-violation-action</a>
Options	sdp-bind-oper-down, alarm-only, discard
Introduced	16.0.R1
Platforms	All

### **force-vc-forwarding** *keyword*

Synopsis	VC forwarding action
Context	<b>configure service vpls</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>force-vc-forwarding</b> <i>keyword</i>
Tree	<a href="#">force-vc-forwarding</a>
Options	vlan, qinq-c-tag-c-tag, qinq-s-tag-c-tag
Introduced	16.0.R1
Platforms	All

### **hash-label**

Synopsis	Enable the <b>hash-label</b> context
Context	<b>configure service vpls</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>hash-label</b>
Tree	<a href="#">hash-label</a>
Notes	The following elements are part of a choice: <b>entropy-label</b> or <b>hash-label</b> .
Introduced	16.0.R1
Platforms	All

### **signal-capability**

Synopsis	Enable the signaling of the hash label between PE nodes
Context	<b>configure service vpls</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>hash-label</b> <b>signal-capability</b>
Tree	<a href="#">signal-capability</a>
Introduced	16.0.R1
Platforms	All

### **i-vpls-mac-flush**

Synopsis	Enter the <b>i-vpls-mac-flush</b> context
Context	<b>configure service vpls</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>i-vpls-mac-flush</b>
Tree	<a href="#">i-vpls-mac-flush</a>
Introduced	16.0.R1
Platforms	All

## bgp-evpn

Synopsis	Enter the <b>bgp-evpn</b> context
Context	<b>configure service vpls string spoke-sdp string i-vpls-mac-flush bgp-evpn</b>
Tree	<a href="#">bgp-evpn</a>
Introduced	16.0.R1
Platforms	All

## send-to-bvpls *boolean*

Synopsis	Send B-VPLS EVPN flush
Context	<b>configure service vpls string spoke-sdp string i-vpls-mac-flush bgp-evpn send-to-bvpls boolean</b>
Tree	<a href="#">send-to-bvpls</a>
Default	true
Introduced	16.0.R1
Platforms	All

## igmp-snooping

Synopsis	Enter the <b>igmp-snooping</b> context
Context	<b>configure service vpls string spoke-sdp string igmp-snooping</b>
Tree	<a href="#">igmp-snooping</a>
Introduced	16.0.R1
Platforms	All

## fast-leave *boolean*

Synopsis	Allow IGMP fast leave processing
Context	<b>configure service vpls string spoke-sdp string igmp-snooping fast-leave boolean</b>
Tree	<a href="#">fast-leave</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **import-policy** *reference*

Synopsis	Import policy that filters IGMP packets
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">igmp-snooping</a> <a href="#">import-policy</a> <i>reference</i>
Tree	<a href="#">import-policy</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **maximum-number-group-sources** *number*

Synopsis	Maximum group source combinations
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">igmp-snooping</a> <a href="#">maximum-number-group-sources</a> <i>number</i>
Tree	<a href="#">maximum-number-group-sources</a>
Range	1 to 32000
Introduced	16.0.R1
Platforms	All

### **maximum-number-groups** *number*

Synopsis	Maximum groups allowed
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">igmp-snooping</a> <a href="#">maximum-number-groups</a> <i>number</i>
Tree	<a href="#">maximum-number-groups</a>
Range	1 to 16000
Introduced	16.0.R1
Platforms	All

### **maximum-number-sources** *number*

Synopsis	Maximum sources that are allowed per group
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">igmp-snooping</a> <a href="#">maximum-number-sources</a> <i>number</i>
Tree	<a href="#">maximum-number-sources</a>
Range	1 to 1000
Introduced	16.0.R1

Platforms All

## mcac

Synopsis Enter the **mcac** context  
Context **configure service vpls string spoke-sdp string igmp-snooping mcac**  
Tree **mcac**  
Introduced 16.0.R1  
Platforms All

## bandwidth

Synopsis Enter the **bandwidth** context  
Context **configure service vpls string spoke-sdp string igmp-snooping mcac bandwidth**  
Tree **bandwidth**  
Introduced 16.0.R1  
Platforms All

## mandatory (*number* | *keyword*)

Synopsis Pre-reserved bandwidth for all mandatory channels  
Context **configure service vpls string spoke-sdp string igmp-snooping mcac bandwidth mandatory (*number* | *keyword*)**  
Tree **mandatory**  
Range 0 to 2147483647  
Default unlimited  
Options unlimited  
Introduced 16.0.R1  
Platforms All

## total (*number* | *keyword*)

Synopsis Maximum allowed bandwidth  
Context **configure service vpls string spoke-sdp string igmp-snooping mcac bandwidth total (*number* | *keyword*)**  
Tree **total**

Range	0 to 2147483647
Default	unlimited
Options	unlimited
Introduced	16.0.R1
Platforms	All

### **interface-policy** *reference*

Synopsis	Name of multicast CAC interface policy
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">spoke-sdp string</a> <a href="#">igmp-snooping mcac interface-policy reference</a>
Tree	<a href="#">interface-policy</a>
Reference	<b>configure</b> <a href="#">mcac interface-policy string</a>
Introduced	16.0.R1
Platforms	All

### **policy** *reference*

Synopsis	Multicast CAC policy name
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">spoke-sdp string</a> <a href="#">igmp-snooping mcac policy reference</a>
Tree	<a href="#">policy</a>
Description	<p>This command configures the name of the global channel bandwidth definition policy that is used for (H)MCAC and HQoS adjustment.</p> <p>Within the scope of HQoS adjustment, the channel definition policy under the group interface is used if redirection is unconfigured. In this case, the HQoS adjustment can be applied to IPoE subscribers in per-SAP replication mode.</p> <p>If redirection is configured, the channel bandwidth definition policy applied under the Layer 3 redirected interface is in effect.</p> <p>Hierarchical MCAC (HMCAC) is supported on two levels simultaneously:</p> <ul style="list-style-type: none"> <li>• subscriber level and redirected interface when redirection is configured</li> <li>• subscriber level and group-interface level when redirection is unconfigured</li> </ul> <p>In HMCAC, the subscriber is checked against its bandwidth limits first, then against the bandwidth limits of the redirected or group interface. If redirection is configured but the policy is referenced only under the group interface, no admission control is executed (HMCAC or MCAC).</p>
Reference	<b>configure</b> <a href="#">mcac policy string</a>
Introduced	16.0.R1

Platforms All

### **mrouter-port** *boolean*

Synopsis Operate port as a multicast router port  
Context **configure** [service vpls](#) *string* [spoke-sdp](#) *string* [igmp-snooping](#) [mrouter-port](#) *boolean*  
Tree [mrouter-port](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **query-interval** *number*

Synopsis Time between two consecutive host-query messages  
Context **configure** [service vpls](#) *string* [spoke-sdp](#) *string* [igmp-snooping](#) [query-interval](#) *number*  
Tree [query-interval](#)  
Range 2 to 1024  
Default 125  
Units seconds  
Introduced 16.0.R1  
Platforms All

### **query-last-member-interval** *number*

Synopsis Time between group-specific query messages  
Context **configure** [service vpls](#) *string* [spoke-sdp](#) *string* [igmp-snooping](#) [query-last-member-interval](#) *number*  
Tree [query-last-member-interval](#)  
Range 1 to 50  
Default 10  
Units deciseconds  
Introduced 16.0.R1  
Platforms All

### **query-response-interval** *number*

Synopsis	Time to wait for a response to the host-query messages
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">igmp-snooping</a> <a href="#">query-response-interval</a> <i>number</i>
Tree	<a href="#">query-response-interval</a>
Range	1 to 1023
Default	10
Units	seconds
Introduced	16.0.R1
Platforms	All

### **robust-count** *number*

Synopsis	Number of retries after expected message loss
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">igmp-snooping</a> <a href="#">robust-count</a> <i>number</i>
Tree	<a href="#">robust-count</a>
Range	2 to 7
Default	2
Introduced	16.0.R1
Platforms	All

### **router-alert-check** *boolean*

Synopsis	Enable IP router alert check option
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">igmp-snooping</a> <a href="#">router-alert-check</a> <i>boolean</i>
Tree	<a href="#">router-alert-check</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **send-queries** *boolean*

Synopsis	Generate IGMP general queries
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">igmp-snooping</a> <a href="#">send-queries</a> <i>boolean</i>

Tree	<a href="#">send-queries</a>
Default	false
Introduced	16.0.R1
Platforms	All

## static

Synopsis	Enter the <b>static</b> context
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">spoke-sdp string</a> <a href="#">igmp-snooping static</a>
Tree	<a href="#">static</a>
Introduced	16.0.R1
Platforms	All

## group [[group-address](#)] *string*

Synopsis	Enter the <b>group</b> list instance
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">spoke-sdp string</a> <a href="#">igmp-snooping static group string</a>
Tree	<a href="#">group</a>
Introduced	16.0.R1
Platforms	All

## [[group-address](#)] *string*

Synopsis	Group address of static IGMP multicast channel
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">spoke-sdp string</a> <a href="#">igmp-snooping static group string</a>
Tree	<a href="#">group</a>
Description	This command configures an address that receives data on an interface. The IP address must be unique for each static group.
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## source [[source-address](#)] *string*

Synopsis	Add a list entry for <b>source</b>
----------	------------------------------------

Context	<b>configure service vpls string spoke-sdp string igmp-snooping static group string source string</b>
Tree	<b>source</b>
Notes	The following elements are part of a mandatory choice: <b>source</b> or <b>starg</b> .
Introduced	16.0.R1
Platforms	All

### **[source-address] string**

Synopsis	Source IP address of multicast channel sending data
Context	<b>configure service vpls string spoke-sdp string igmp-snooping static group string source string</b>
Tree	<b>source</b>
Notes	This element is part of a list key.
Introduced	16.0.R2
Platforms	All

### **starg**

Synopsis	any source address (*,G)
Context	<b>configure service vpls string spoke-sdp string igmp-snooping static group string starg</b>
Tree	<b>starg</b>
Notes	The following elements are part of a mandatory choice: <b>source</b> or <b>starg</b> .
Introduced	16.0.R2
Platforms	All

### **version keyword**

Synopsis	IGMP protocol version
Context	<b>configure service vpls string spoke-sdp string igmp-snooping version keyword</b>
Tree	<b>version</b>
Default	3
Options	1, 2, 3
Introduced	16.0.R1
Platforms	All

### **ignore-standby-signaling** *boolean*

Synopsis	Ignore standby-bit received from TLDP peers when performing internal tasks
Context	<b>configure</b> <a href="#">service vpls string spoke-sdp string ignore-standby-signaling boolean</a>
Tree	<a href="#">ignore-standby-signaling</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **ingress**

Synopsis	Enter the <b>ingress</b> context
Context	<b>configure</b> <a href="#">service vpls string spoke-sdp string ingress</a>
Tree	<a href="#">ingress</a>
Introduced	16.0.R1
Platforms	All

### **filter**

Synopsis	Enter the <b>filter</b> context
Context	<b>configure</b> <a href="#">service vpls string spoke-sdp string ingress filter</a>
Tree	<a href="#">filter</a>
Introduced	16.0.R1
Platforms	All

### **ip reference**

Synopsis	IPv4 filter policy name
Context	<b>configure</b> <a href="#">service vpls string spoke-sdp string ingress filter ip reference</a>
Tree	<a href="#">ip</a>
Reference	<b>configure</b> <a href="#">filter ip-filter string</a>
Introduced	16.0.R1
Platforms	All

## ipv6 reference

Synopsis	IPv6 filter policy name
Context	<b>configure service vpls</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>ingress filter ipv6 reference</b>
Tree	<b>ipv6</b>
Reference	<b>configure filter ipv6-filter</b> <i>string</i>
Introduced	16.0.R1
Platforms	All

## mac reference

Synopsis	MAC filter policy name
Context	<b>configure service vpls</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>ingress filter mac reference</b>
Tree	<b>mac</b>
Reference	<b>configure filter mac-filter</b> <i>string</i>
Introduced	16.0.R1
Platforms	All

## qos

Synopsis	Enter the <b>qos</b> context
Context	<b>configure service vpls</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>ingress qos</b>
Tree	<b>qos</b>
Introduced	16.0.R1
Platforms	All

## network

Synopsis	Enter the <b>network</b> context
Context	<b>configure service vpls</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>ingress qos network</b>
Tree	<b>network</b>
Introduced	16.0.R1
Platforms	All

## fp-redirect-group

Synopsis	Enter the <b>fp-redirect-group</b> context
Context	<b>configure</b> <a href="#">service vpls string spoke-sdp string ingress qos network fp-redirect-group</a>
Tree	<a href="#">fp-redirect-group</a>
Introduced	16.0.R1
Platforms	All

## group-name *reference*

Synopsis	Name of the forwarding plane queue group template
Context	<b>configure</b> <a href="#">service vpls string spoke-sdp string ingress qos network fp-redirect-group group-name reference</a>
Tree	<a href="#">group-name</a>
Reference	<b>configure</b> <a href="#">qos queue-group-templates ingress queue-group string</a>
Introduced	16.0.R1
Platforms	All

## instance *number*

Synopsis	Instance of the forwarding-plane ingress Queue Group for this SDP binding
Context	<b>configure</b> <a href="#">service vpls string spoke-sdp string ingress qos network fp-redirect-group instance number</a>
Tree	<a href="#">instance</a>
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

## policy-name *reference*

Synopsis	Network policy ID
Context	<b>configure</b> <a href="#">service vpls string spoke-sdp string ingress qos network policy-name reference</a>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos network string</a>
Introduced	16.0.R1

Platforms All

### **vc-label** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis      Ingress MPLS VC label to send packets to the far end  
Context      **configure service vpls string spoke-sdp string ingress vc-label number**  
Tree          [vc-label](#)  
Range        1 to 1048575  
Introduced   16.0.R1  
Platforms    All

### **l2pt**

Synopsis      Enter the **l2pt** context  
Context      **configure service vpls string spoke-sdp string l2pt**  
Tree          [l2pt](#)  
Introduced   16.0.R1  
Platforms    All

### **termination**

Synopsis      Enable the **termination** context  
Context      **configure service vpls string spoke-sdp string l2pt termination**  
Tree          [termination](#)  
Introduced   16.0.R1  
Platforms    All

### **protocols**

Synopsis      Enter the **protocols** context  
Context      **configure service vpls string spoke-sdp string l2pt termination protocols**  
Tree          [protocols](#)

Introduced 16.0.R1  
Platforms All

### **cdp boolean**

Synopsis Enable Cisco discovery protocol  
Context **configure service vpls string spoke-sdp string l2pt termination protocols cdp boolean**  
Tree [cdp](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **dtp boolean**

Synopsis Enable dynamic trunking protocol  
Context **configure service vpls string spoke-sdp string l2pt termination protocols dtp boolean**  
Tree [dtp](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **pagp boolean**

Synopsis Enable port aggregation protocol  
Context **configure service vpls string spoke-sdp string l2pt termination protocols pagp boolean**  
Tree [pagp](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **stp boolean**

Synopsis Enable all spanning tree protocols  
Context **configure service vpls string spoke-sdp string l2pt termination protocols stp boolean**  
Tree [stp](#)

Default	true
Introduced	16.0.R1
Platforms	All

### **udld** *boolean*

Synopsis	Enable unidirectional link detection
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">l2pt termination protocols</a> <a href="#">udld</a> <i>boolean</i>
Tree	<a href="#">udld</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **vtp** *boolean*

Synopsis	Enable virtual trunk protocol
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">l2pt termination protocols</a> <a href="#">vtp</a> <i>boolean</i>
Tree	<a href="#">vtp</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **mld-snooping**

Synopsis	Enter the <b>mld-snooping</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">mld-snooping</a>
Tree	<a href="#">mld-snooping</a>
Introduced	16.0.R1
Platforms	All

### **fast-leave** *boolean*

Synopsis	Allow IGMP fast leave processing
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">mld-snooping</a> <a href="#">fast-leave</a> <i>boolean</i>
Tree	<a href="#">fast-leave</a>

Default	false
Introduced	16.0.R1
Platforms	All

### **import-policy** *reference*

Synopsis	Import policy that filters IGMP packets
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">mld-snooping</a> <a href="#">import-policy</a> <i>reference</i>
Tree	<a href="#">import-policy</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **maximum-number-groups** *number*

Synopsis	Maximum groups allowed
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">mld-snooping</a> <a href="#">maximum-number-groups</a> <i>number</i>
Tree	<a href="#">maximum-number-groups</a>
Range	1 to 16000
Introduced	16.0.R1
Platforms	All

### **mrouter-port** *boolean*

Synopsis	Operate port as a multicast router port
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">mld-snooping</a> <a href="#">mrouter-port</a> <i>boolean</i>
Tree	<a href="#">mrouter-port</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **query-interval** *number*

Synopsis	Time between two consecutive host-query messages
----------	--

Context	<b>configure service vpls string spoke-sdp string mld-snooping query-interval number</b>
Tree	<a href="#">query-interval</a>
Range	2 to 1024
Default	125
Units	seconds
Introduced	16.0.R1
Platforms	All

### **query-last-member-interval number**

Synopsis	Time between group-specific query messages
Context	<b>configure service vpls string spoke-sdp string mld-snooping query-last-member-interval number</b>
Tree	<a href="#">query-last-member-interval</a>
Range	1 to 50
Default	10
Units	deciseconds
Introduced	16.0.R1
Platforms	All

### **query-response-interval number**

Synopsis	Time to wait for a response to the host-query messages
Context	<b>configure service vpls string spoke-sdp string mld-snooping query-response-interval number</b>
Tree	<a href="#">query-response-interval</a>
Range	1 to 1023
Default	10
Units	seconds
Introduced	16.0.R1
Platforms	All

### **robust-count number**

Synopsis	Number of retries after expected message loss
Context	<b>configure service vpls string spoke-sdp string mld-snooping robust-count number</b>

Tree	<a href="#">robust-count</a>
Range	2 to 7
Default	2
Introduced	16.0.R1
Platforms	All

### **router-alert-check** *boolean*

Synopsis	Enable IP router alert check option
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">mld-snooping</a> <b>router-alert-check</b> <i>boolean</i>
Tree	<a href="#">router-alert-check</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **send-queries** *boolean*

Synopsis	Generate IGMP general queries
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">mld-snooping</a> <b>send-queries</b> <i>boolean</i>
Tree	<a href="#">send-queries</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **static**

Synopsis	Enter the <b>static</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">mld-snooping</a> <b>static</b>
Tree	<a href="#">static</a>
Introduced	16.0.R1
Platforms	All

### **group** [[group-address](#)] *string*

Synopsis	Enter the <b>group</b> list instance
----------	--------------------------------------

Context	<b>configure service vpls string spoke-sdp string mld-snooping static group string</b>
Tree	<b>group</b>
Introduced	16.0.R1
Platforms	All

### **[group-address] string**

Synopsis	Group address of multicast channel
Context	<b>configure service vpls string spoke-sdp string mld-snooping static group string</b>
Tree	<b>group</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **source [source-address] string**

Synopsis	Add a list entry for <b>source</b>
Context	<b>configure service vpls string spoke-sdp string mld-snooping static group string source string</b>
Tree	<b>source</b>
Notes	The following elements are part of a mandatory choice: <b>source</b> or <b>starg</b> .
Introduced	16.0.R1
Platforms	All

### **[source-address] string**

Synopsis	Source IP address
Context	<b>configure service vpls string spoke-sdp string mld-snooping static group string source string</b>
Tree	<b>source</b>
Notes	This element is part of a list key.
Introduced	16.0.R2
Platforms	All

## starg

Synopsis	any source address (*,G)
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">mld-snooping static group</a> <i>string</i> <b>starg</b>
Tree	<a href="#">starg</a>
Notes	The following elements are part of a mandatory choice: <b>source</b> or <b>starg</b> .
Introduced	16.0.R2
Platforms	All

## version keyword

Synopsis	Version of MLD running on the SAP or SDP
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">mld-snooping</a> <i>version</i> <b>keyword</b>
Tree	<a href="#">version</a>
Default	2
Options	1, 2
Introduced	16.0.R1
Platforms	All

## monitor-oper-group reference

Synopsis	Operational group identifier that affect the state of this SDP bind
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">monitor-oper-group</a> <i>reference</i>
Tree	<a href="#">monitor-oper-group</a>
Reference	<b>configure</b> <a href="#">service oper-group</a> <i>string</i>
Notes	The following elements are part of a choice: <b>monitor-oper-group</b> or <b>oper-group</b> .
Introduced	16.0.R1
Platforms	All

## mrp

Synopsis	Enter the <b>mrp</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <b>mrp</b>
Tree	<a href="#">mrp</a>
Introduced	20.10.R1

Platforms All

### **join-time** *number*

Synopsis Maximum rate for attribute join messages sent on SDP  
Context **configure** [service vpls](#) *string* [spoke-sdp](#) *string* [mrp](#) [join-time](#) *number*  
Tree [join-time](#)  
Range 1 to 10  
Default 2  
Units deciseconds  
Introduced 20.10.R1  
Platforms All

### **leave-all-time** *number*

Synopsis Frequency of LeaveAll PDUs by LeaveAll state machine  
Context **configure** [service vpls](#) *string* [spoke-sdp](#) *string* [mrp](#) [leave-all-time](#) *number*  
Tree [leave-all-time](#)  
Range 60 to 300  
Default 100  
Units deciseconds  
Introduced 20.10.R1  
Platforms All

### **leave-time** *number*

Synopsis Time in LV state before transition to MT state  
Context **configure** [service vpls](#) *string* [spoke-sdp](#) *string* [mrp](#) [leave-time](#) *number*  
Tree [leave-time](#)  
Range 30 to 60  
Default 30  
Units deciseconds  
Introduced 20.10.R1  
Platforms All

### **periodic-time** *number*

Synopsis	Frequency of periodic events generated by state machine
Context	<b>configure</b> <a href="#">service vpls string spoke-sdp string mrp periodic-time number</a>
Tree	<a href="#">periodic-time</a>
Range	10 to 100
Default	10
Units	deciseconds
Introduced	20.10.R1
Platforms	All

### **periodic-timer** *boolean*

Synopsis	Enable the Periodic Transmission Timer
Context	<b>configure</b> <a href="#">service vpls string spoke-sdp string mrp periodic-timer boolean</a>
Tree	<a href="#">periodic-timer</a>
Default	false
Introduced	20.10.R1
Platforms	All

### **policy** *reference*

Synopsis	MRP policy to control Group B-MAC attributes
Context	<b>configure</b> <a href="#">service vpls string spoke-sdp string mrp policy reference</a>
Tree	<a href="#">policy</a>
Reference	<b>configure</b> <a href="#">service mrp policy string</a>
Introduced	20.10.R1
Platforms	All

### **oper-group** *reference*

Synopsis	Operational group identifier
Context	<b>configure</b> <a href="#">service vpls string spoke-sdp string oper-group reference</a>
Tree	<a href="#">oper-group</a>
Reference	<b>configure</b> <a href="#">service oper-group string</a>

Notes	The following elements are part of a choice: <b>monitor-oper-group</b> or <b>oper-group</b> .
Introduced	16.0.R1
Platforms	All

## **pbb**

Synopsis	Enter the <b>pbb</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <b>pbb</b>
Tree	<a href="#">pbb</a>
Introduced	20.10.R1
Platforms	All

## **fault-propagation**

Synopsis	Enter the <b>fault-propagation</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <b>pbb</b> <b>fault-propagation</b>
Tree	<a href="#">fault-propagation</a>
Introduced	20.10.R1
Platforms	All

## **backbone-mac-address** [[address](#)] *string*

Synopsis	Add a list entry for <b>backbone-mac-address</b>
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <b>pbb</b> <b>fault-propagation</b> <b>backbone-mac-address</b> <i>string</i>
Tree	<a href="#">backbone-mac-address</a>
Introduced	20.10.R1
Platforms	All

## **[address]** *string*

Synopsis	Backbone MAC address
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <b>pbb</b> <b>fault-propagation</b> <b>backbone-mac-address</b> <i>string</i>
Tree	<a href="#">backbone-mac-address</a>
Notes	This element is part of a list key.

Introduced 20.10.R1  
Platforms All

### **backbone-mac-name** [*name*] *reference*

Synopsis Add a list entry for **backbone-mac-name**  
Context **configure** [service vpls string spoke-sdp string pbb fault-propagation backbone-mac-name reference](#)  
Tree [backbone-mac-name](#)  
Introduced 20.10.R1  
Platforms All

### **[name]** *reference*

Synopsis Backbone MAC address name  
Context **configure** [service vpls string spoke-sdp string pbb fault-propagation backbone-mac-name reference](#)  
Tree [backbone-mac-name](#)  
Reference **configure** [service pbb mac string](#)  
Notes This element is part of a list key.  
Introduced 20.10.R1  
Platforms All

### **pim-snooping**

Synopsis Enter the **pim-snooping** context  
Context **configure** [service vpls string spoke-sdp string pim-snooping](#)  
Tree [pim-snooping](#)  
Introduced 16.0.R1  
Platforms All

### **maximum-number-groups** *number*

Synopsis Maximum groups for this interface  
Context **configure** [service vpls string spoke-sdp string pim-snooping maximum-number-groups number](#)

Tree	<a href="#">maximum-number-groups</a>
Range	1 to 16000
Introduced	16.0.R1
Platforms	All

### **pw-status**

Synopsis	Enter the <b>pw-status</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">pw-status</a>
Tree	<a href="#">pw-status</a>
Introduced	16.0.R1
Platforms	All

### **signaling** *boolean*

Synopsis	Enable the use of pseudowire status signaling
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">pw-status</a> <a href="#">signaling</a> <i>boolean</i>
Tree	<a href="#">signaling</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **spb**

Synopsis	Enable the <b>spb</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">spb</a>
Tree	<a href="#">spb</a>
Introduced	21.10.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Admin state
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">spb</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>

Default	disable
Options	enable, disable
Introduced	21.10.R1
Platforms	All

### **level** [*id*] *number*

Synopsis	Enter the <b>level</b> list instance
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">spb</a> <a href="#">level</a> <i>number</i>
Tree	<a href="#">level</a>
Introduced	21.10.R1
Platforms	All

### **[id]** *number*

Synopsis	Level identifier
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">spb</a> <a href="#">level</a> <i>number</i>
Tree	<a href="#">level</a>
Range	1
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	All

### **hello-interval** *number*

Synopsis	Hello interval
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">spb</a> <a href="#">level</a> <i>number</i> <a href="#">hello-interval</a> <i>number</i>
Tree	<a href="#">hello-interval</a>
Range	1 to 20000
Default	9
Units	seconds
Introduced	21.10.R1
Platforms	All

### **hello-multiplier** *number*

Synopsis	Hello multiplier
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">spb level</a> <i>number</i> <a href="#">hello-multiplier</a> <i>number</i>
Tree	<a href="#">hello-multiplier</a>
Range	2 to 100
Default	3
Introduced	21.10.R1
Platforms	All

### **metric** *number*

Synopsis	Metric
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">spb level</a> <i>number</i> <a href="#">metric</a> <i>number</i>
Tree	<a href="#">metric</a>
Range	0 to 16777215
Default	0
Introduced	21.10.R1
Platforms	All

### **lsp-pacing-interval** *number*

Synopsis	Lsp pacing interval
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">spb</a> <a href="#">lsp-pacing-interval</a> <i>number</i>
Tree	<a href="#">lsp-pacing-interval</a>
Range	0 to 65535
Default	100
Units	milliseconds
Introduced	21.10.R1
Platforms	All

### **retransmit-interval** *number*

Synopsis	Retransmit interval
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">spb</a> <a href="#">retransmit-interval</a> <i>number</i>
Tree	<a href="#">retransmit-interval</a>

Range	1 to 65535
Default	5
Units	seconds
Introduced	21.10.R1
Platforms	All

### **split-horizon-group** *reference*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Name of the split horizon group where the spoke SDP bind belongs to
Context	<b>configure service vpls string spoke-sdp string split-horizon-group reference</b>
Tree	<a href="#">split-horizon-group</a>
Reference	<b>configure service vpls string split-horizon-group string</b>
Introduced	16.0.R1
Platforms	All

### **static-isid**

Synopsis	Enter the <b>static-isid</b> context
Context	<b>configure service vpls string spoke-sdp string static-isid</b>
Tree	<a href="#">static-isid</a>
Introduced	19.10.R1
Platforms	All

### **range** [[range-id](#)] *number*

Synopsis	Enter the <b>range</b> list instance
Context	<b>configure service vpls string spoke-sdp string static-isid range number</b>
Tree	<a href="#">range</a>
Introduced	19.10.R1
Platforms	All

### **[range-id] number**

Synopsis	Range ID for static ISID
Context	<b>configure service vpls</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>static-isid range</b> <i>number</i>
Tree	<b>range</b>
Range	1 to 8191
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	All

### **end number**

Synopsis	Upper bound of the ISID range
Context	<b>configure service vpls</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>static-isid range</b> <i>number</i> <b>end</b> <i>number</i>
Tree	<b>end</b>
Range	1 to 16777215
Introduced	19.10.R1
Platforms	All

### **start number**

Synopsis	Lower bound of the ISID range
Context	<b>configure service vpls</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>static-isid range</b> <i>number</i> <b>start</b> <i>number</i>
Tree	<b>start</b>
Range	1 to 16777215
Introduced	19.10.R1
Platforms	All

### **stp**

Synopsis	Enter the <b>stp</b> context
Context	<b>configure service vpls</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>stp</b>
Tree	<b>stp</b>
Introduced	16.0.R4
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of STP
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">stp</a> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Introduced	16.0.R4
Platforms	All

### **auto-edge** *boolean*

Synopsis	Enable automatic detection of edge port characteristics
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">stp</a> <b>auto-edge</b> <i>boolean</i>
Tree	<a href="#">auto-edge</a>
Default	true
Introduced	16.0.R4
Platforms	All

### **edge-port** *boolean*

Synopsis	Designate SAP or SDP as an edge port
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">stp</a> <b>edge-port</b> <i>boolean</i>
Tree	<a href="#">edge-port</a>
Default	false
Introduced	16.0.R4
Platforms	All

### **link-type** *keyword*

Synopsis	Configure STP link-type
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">stp</a> <b>link-type</b> <i>keyword</i>
Tree	<a href="#">link-type</a>
Default	pt-pt
Options	pt-pt, shared
Introduced	16.0.R4

Platforms All

### **path-cost** *number*

Synopsis Configure path-cost  
Context **configure** *service vpls string spoke-sdp string stp path-cost number*  
Tree [path-cost](#)  
Range 1 to 200000000  
Default 10  
Introduced 16.0.R4  
Platforms All

### **port-num** *number*

Synopsis Virtual port number  
Context **configure** *service vpls string spoke-sdp string stp port-num number*  
Tree [port-num](#)  
Range 1 to 2047  
Introduced 16.0.R4  
Platforms All

### **priority** *number*

Synopsis Configure STP priority  
Context **configure** *service vpls string spoke-sdp string stp priority number*  
Tree [priority](#)  
Range 0 to 255  
Default 128  
Introduced 16.0.R4  
Platforms All

### **root-guard** *boolean*

Synopsis Enable/disable STP root-guard  
Context **configure** *service vpls string spoke-sdp string stp root-guard boolean*

Tree	<a href="#">root-guard</a>
Default	false
Introduced	16.0.R4
Platforms	All

## transit-policy

Synopsis	Enable the <b>transit-policy</b> context
Context	<b>configure</b> <a href="#">service vpls string spoke-sdp string transit-policy</a>
Tree	<a href="#">transit-policy</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## prefix *reference*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IP prefix policy ID
Context	<b>configure</b> <a href="#">service vpls string spoke-sdp string transit-policy prefix reference</a>
Tree	<a href="#">prefix</a>
Reference	<b>configure</b> <a href="#">application-assurance group number partition number transit-prefix-policy number</a>
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## vc-type *keyword*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Type of virtual circuit (VC) associated with the SDP binding; VPLS not supported
Context	<b>configure</b> <a href="#">service vpls string spoke-sdp string vc-type keyword</a>
Tree	<a href="#">vc-type</a>

Default	ether
Options	ether, vlan
Introduced	16.0.R1
Platforms	All

### **vlan-vc-tag** *number*

Synopsis	SDP bind VC tag
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <b>vlan-vc-tag</b> <i>number</i>
Tree	<a href="#">vlan-vc-tag</a>
Range	0 to 4094
Introduced	16.0.R1
Platforms	All

### **stp**

Synopsis	Enter the <b>stp</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <b>stp</b>
Tree	<a href="#">stp</a>
Introduced	16.0.R4
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of STP
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <b>stp</b> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R4
Platforms	All

### **forward-delay** *number*

Synopsis	Configure forward-delay
----------	-------------------------

Context	<b>configure service vpls string stp forward-delay number</b>
Tree	<b>forward-delay</b>
Range	4 to 30
Default	15
Introduced	16.0.R4
Platforms	All

### **hello-time number**

Synopsis	Configure hello-time
Context	<b>configure service vpls string stp hello-time number</b>
Tree	<b>hello-time</b>
Range	1 to 10
Default	2
Introduced	16.0.R4
Platforms	All

### **hold-count number**

Synopsis	Configure BPDU transmit hold count
Context	<b>configure service vpls string stp hold-count number</b>
Tree	<b>hold-count</b>
Range	1 to 20
Default	6
Introduced	16.0.R4
Platforms	All

### **maximum-age number**

Synopsis	Configure maximum STP information age
Context	<b>configure service vpls string stp maximum-age number</b>
Tree	<b>maximum-age</b>
Range	6 to 40
Default	20
Introduced	16.0.R4

Platforms All

### **mode** *keyword*

Synopsis Configure protocol version  
Context **configure** *service vpls string stp mode keyword*  
Tree *mode*  
Default rstp  
Options rstp, comp-dot1w, dot1w, mstp, pmstp  
Introduced 16.0.R4  
Platforms All

### **mst-instance** [*mst-inst-number*] *number*

Synopsis Enter the **mst-instance** list instance  
Context **configure** *service vpls string stp mst-instance number*  
Tree *mst-instance*  
Introduced 19.10.R1  
Platforms All

### [*mst-inst-number*] *number*

Synopsis Multiple Spanning Tree Instance number  
Context **configure** *service vpls string stp mst-instance number*  
Tree *mst-instance*  
Range 1 to 4094  
Notes This element is part of a list key.  
Introduced 19.10.R1  
Platforms All

### **mst-priority** *number*

Synopsis Priority of multiple spanning tree instance  
Context **configure** *service vpls string stp mst-instance number mst-priority number*  
Tree *mst-priority*

Range	0   4096   8192   12288   16384   20480   24576   28672   32768   36864   40960   45056   49152   53248   57344   61440
Default	32768
Introduced	19.10.R1
Platforms	All

### **vlan-range** [*range*] *string*

Synopsis	Add a list entry for <b>vlan-range</b>
Context	<b>configure</b> <b>service vpls</b> <i>string</i> <b>stp mst-instance</b> <i>number</i> <b>vlan-range</b> <i>string</i>
Tree	<b>vlan-range</b>
Introduced	19.10.R1
Platforms	All

### **[range]** *string*

Synopsis	Range of VLANs associated with the M-VPLS SAP
Context	<b>configure</b> <b>service vpls</b> <i>string</i> <b>stp mst-instance</b> <i>number</i> <b>vlan-range</b> <i>string</i>
Tree	<b>vlan-range</b>
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	All

### **mst-maximum-hops** *number*

Synopsis	Maximum number of hops in an MSTP region
Context	<b>configure</b> <b>service vpls</b> <i>string</i> <b>stp mst-maximum-hops</b> <i>number</i>
Tree	<b>mst-maximum-hops</b>
Range	1 to 40
Default	20
Introduced	19.10.R1
Platforms	All

### **mst-name** *string*

Synopsis	MST region name
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">stp</a> <b>mst-name</b> <i>string</i>
Tree	<a href="#">mst-name</a>
String Length	1 to 32
Introduced	19.10.R1
Platforms	All

### **mst-revision** *number*

Synopsis	MST configuration revision
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">stp</a> <b>mst-revision</b> <i>number</i>
Tree	<a href="#">mst-revision</a>
Range	0 to 65535
Introduced	19.10.R1
Platforms	All

### **priority** *number*

Synopsis	STP bridge priority
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">stp</a> <b>priority</b> <i>number</i>
Tree	<a href="#">priority</a>
Range	0 to 65535
Default	32768
Introduced	16.0.R4
Platforms	All

### **temp-flooding** *number*

Synopsis	Temporary flooding
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <b>temp-flooding</b> <i>number</i>
Tree	<a href="#">temp-flooding</a>
Range	3 to 600
Units	seconds
Introduced	16.0.R1

Platforms All

### **vpn-id** *number*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis VPN identifier for the service  
Context **configure service vpls string vpn-id number**  
Tree **vpn-id**  
Range 1 to 2147483647  
Introduced 16.0.R1  
Platforms All

### **vxlan**

Synopsis Enter the **vxlan** context  
Context **configure service vpls string vxlan**  
Tree **vxlan**  
Introduced 16.0.R1  
Platforms All

### **instance** [**vxlan-instance**] *number*

Synopsis Enter the **instance** list instance  
Context **configure service vpls string vxlan instance number**  
Tree **instance**  
Introduced 16.0.R1  
Platforms All

### **[vxlan-instance]** *number*

Synopsis VXLAN instance  
Context **configure service vpls string vxlan instance number**  
Tree **instance**

Range	1 to 2
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## assisted-replication

Synopsis	Enter the <b>assisted-replication</b> context
Context	<b>configure service vpls string vxlan instance number assisted-replication</b>
Tree	<a href="#">assisted-replication</a>
Introduced	16.0.R1
Platforms	All

## leaf

Synopsis	Enable the <b>leaf</b> context
Context	<b>configure service vpls string vxlan instance number assisted-replication leaf</b>
Tree	<a href="#">leaf</a>
Notes	The following elements are part of a choice: <b>leaf</b> or <b>replicator</b> .
Introduced	16.0.R1
Platforms	All

## acttime *number*

Synopsis	Time for the leaf to wait before sending traffic to a new replicator
Context	<b>configure service vpls string vxlan instance number assisted-replication leaf acttime number</b>
Tree	<a href="#">acttime</a>
Range	1 to 255
Units	seconds
Introduced	16.0.R1
Platforms	All

## replicator

Synopsis	AR role as replicator
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">vxlan</a> <i>instance</i> <i>number</i> <a href="#">assisted-replication replicator</a>
Tree	<a href="#">replicator</a>
Notes	The following elements are part of a choice: <b>leaf</b> or <b>replicator</b> .
Introduced	16.0.R1
Platforms	All

## **egress-vtep** [[ip-address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Add a list entry for <b>egress-vtep</b>
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">vxlan</a> <i>instance</i> <i>number</i> <a href="#">egress-vtep</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">egress-vtep</a>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## [[ip-address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	VTEP IP address used when originating VXLAN packets
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">vxlan</a> <i>instance</i> <i>number</i> <a href="#">egress-vtep</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">egress-vtep</a>
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## fdb

Synopsis	Enter the <b>fdb</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">vxlan</a> <i>instance</i> <i>number</i> <a href="#">fdb</a>
Tree	<a href="#">fdb</a>
Introduced	16.0.R1
Platforms	All

### **discard-unknown-source** *boolean*

Synopsis	Discard frames with unknown source
Context	<b>configure</b> <a href="#">service vpls</a> <i>string vxlan instance number</i> <a href="#">fdb discard-unknown-source</a> <i>boolean</i>
Tree	<a href="#">discard-unknown-source</a>
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mac-learning**

Synopsis	Enter the <b>mac-learning</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string vxlan instance number</i> <a href="#">fdb mac-learning</a>
Tree	<a href="#">mac-learning</a>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **aging** *boolean*

Synopsis	Enable/disable aging of MAC addresses
Context	<b>configure</b> <a href="#">service vpls</a> <i>string vxlan instance number</i> <a href="#">fdb mac-learning aging</a> <i>boolean</i>
Tree	<a href="#">aging</a>
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **learning** *boolean*

Synopsis	Enable learning of new MAC addresses
Context	<b>configure</b> <a href="#">service vpls</a> <i>string vxlan instance number</i> <a href="#">fdb mac-learning learning</a> <i>boolean</i>
Tree	<a href="#">learning</a>
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **maximum-mac-addresses** *number*

Synopsis	Maximum number of MAC entries in the FDB from this vxlan instance
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">vxlan instance</a> <i>number</i> <a href="#">fdb maximum-mac-addresses</a> <i>number</i>
Tree	<a href="#">maximum-mac-addresses</a>
Range	1 to 511999
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **protected-src-mac-violation-action** *keyword*

Synopsis	Action when a relearn request for a protected MAC is received
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">vxlan instance</a> <i>number</i> <a href="#">fdb protected-src-mac-violation-action</a> <i>keyword</i>
Tree	<a href="#">protected-src-mac-violation-action</a>
Options	discard
Introduced	16.0.R1
Platforms	All

### **igmp-snooping**

Synopsis	Enter the <b>igmp-snooping</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">vxlan instance</a> <i>number</i> <a href="#">igmp-snooping</a>
Tree	<a href="#">igmp-snooping</a>
Introduced	16.0.R5
Platforms	All

### **mrouter-port** *boolean*

Synopsis	Enable VXLAN binds as multicast router ports
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">vxlan instance</a> <i>number</i> <a href="#">igmp-snooping mrouter-port</a> <i>boolean</i>
Tree	<a href="#">mrouter-port</a>
Default	false
Introduced	16.0.R5
Platforms	All

## mld-snooping

Synopsis	Enter the <b>mld-snooping</b> context
Context	<b>configure service vpls string vxlan instance number mld-snooping</b>
Tree	<a href="#">mld-snooping</a>
Introduced	16.0.R5
Platforms	All

## mrouter-port *boolean*

Synopsis	Enable VXLAN binds as multicast router ports
Context	<b>configure service vpls string vxlan instance number mld-snooping mrouter-port boolean</b>
Tree	<a href="#">mrouter-port</a>
Default	false
Introduced	16.0.R5
Platforms	All

## network

Synopsis	Enter the <b>network</b> context
Context	<b>configure service vpls string vxlan instance number network</b>
Tree	<a href="#">network</a>
Introduced	16.0.R1
Platforms	All

## ingress

Synopsis	Enter the <b>ingress</b> context
Context	<b>configure service vpls string vxlan instance number network ingress</b>
Tree	<a href="#">ingress</a>
Introduced	16.0.R1
Platforms	All

## qos

Synopsis	Enter the <b>qos</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string vxlan instance number network ingress qos</i>
Tree	<a href="#">qos</a>
Introduced	16.0.R1
Platforms	All

## network

Synopsis	Enter the <b>network</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string vxlan instance number network ingress qos network</i>
Tree	<a href="#">network</a>
Introduced	16.0.R1
Platforms	All

## fp-redirect-group

Synopsis	Enter the <b>fp-redirect-group</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string vxlan instance number network ingress qos network fp-redirect-group</i>
Tree	<a href="#">fp-redirect-group</a>
Introduced	16.0.R1
Platforms	All

## group-name *reference*

Synopsis	Name of the forwarding plane queue group template
Context	<b>configure</b> <a href="#">service vpls</a> <i>string vxlan instance number network ingress qos network fp-redirect-group group-name reference</i>
Tree	<a href="#">group-name</a>
Reference	<b>configure</b> <a href="#">qos queue-group-templates ingress queue-group</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **instance** *number*

Synopsis	Instance of the forwarding-plane ingress Queue Group for this SDP binding
Context	<b>configure</b> <a href="#">service vpls</a> <i>string vxlan instance number</i> <a href="#">network ingress qos network fp-redirect-group instance number</a>
Tree	<a href="#">instance</a>
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

### **policy-name** *reference*

Synopsis	Ingress network policy name applied to this SDP binding
Context	<b>configure</b> <a href="#">service vpls</a> <i>string vxlan instance number</i> <a href="#">network ingress qos network policy-name reference</a>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos network</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **rx-discard-on-ndf** *keyword*

Synopsis	Received multicast traffic type discarded on NDF
Context	<b>configure</b> <a href="#">service vpls</a> <i>string vxlan instance number</i> <a href="#">rx-discard-on-ndf keyword</a>
Tree	<a href="#">rx-discard-on-ndf</a>
Default	bm
Options	bm, bum, none
Introduced	16.0.R4
Platforms	All

### **source-vtep-security** *boolean*

Synopsis	Enable/disable source vtep security
Context	<b>configure</b> <a href="#">service vpls</a> <i>string vxlan instance number</i> <a href="#">source-vtep-security boolean</a>
Tree	<a href="#">source-vtep-security</a>
Default	false

Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **vni number**

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VNI of the VXLAN
Context	<b>configure</b> <a href="#">service vpls</a> <i>string vxlan instance number vni number</i>
Tree	<a href="#">vni</a>
Range	1 to 16777215
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **source-vtep** (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Vxlan source virtual tunnel endpoint information
Context	<b>configure</b> <a href="#">service vpls</a> <i>string vxlan source-vtep (ipv4-address-no-zone   ipv6-address-no-zone)</i>
Tree	<a href="#">source-vtep</a>
Introduced	16.0.R1
Platforms	All

### **wlan-gw**

Synopsis	Enter the <b>wlan-gw</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string wlan-gw</i>
Tree	<a href="#">wlan-gw</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of WLAN-GW
Context	<b>configure</b> <b>service vpls</b> <i>string</i> <b>wlan-gw</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <b>service vpls</b> <i>string</i> <b>wlan-gw</b> <b>description</b> <i>string</i>
Tree	<b>description</b>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **vprn** [**service-name**] *string*

Synopsis	Enter the <b>vprn</b> list instance
Context	<b>configure</b> <b>service vprn</b> <i>string</i>
Tree	<b>vprn</b>
Introduced	16.0.R1
Platforms	All

### [**service-name**] *string*

Synopsis	Administrative service name
Context	<b>configure</b> <b>service vprn</b> <i>string</i>
Tree	<b>vprn</b>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **aa-interface** [*interface-name*] *string*

Synopsis	Enter the <b>aa-interface</b> list instance
Context	<b>configure service vprn string aa-interface string</b>
Tree	<a href="#">aa-interface</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[interface-name]** *string*

Synopsis	Interface name
Context	<b>configure service vprn string aa-interface string</b>
Tree	<a href="#">aa-interface</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of the interface
Context	<b>configure service vprn string aa-interface string admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Default	enable
Options	enable, disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **description** *string*

Synopsis	Text description
Context	<b>configure service vprn string aa-interface string description string</b>
Tree	<a href="#">description</a>
String Length	1 to 255
Introduced	21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ip-mtu** *number*

Synopsis IP MTU applied to outgoing packets  
Context **configure service vprn** *string aa-interface string ip-mtu number*  
Tree [ip-mtu](#)  
Range 512 to 9786  
Units bytes  
Introduced 21.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ipv4**

Synopsis Enter the **ipv4** context  
Context **configure service vprn** *string aa-interface string ipv4*  
Tree [ipv4](#)  
Introduced 21.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **primary**

Synopsis Enable the **primary** context  
Context **configure service vprn** *string aa-interface string ipv4 primary*  
Tree [primary](#)  
Introduced 21.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **address** *string*

Synopsis Primary IPv4 address assigned to the interface  
Context **configure service vprn** *string aa-interface string ipv4 primary address string*  
Tree [address](#)  
Notes This element is mandatory.  
Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **prefix-length** *number*

Synopsis IPv4 address prefix length  
Context **configure service vprn** *string aa-interface string ipv4 primary prefix-length number*  
Tree [prefix-length](#)  
Range 0 to 32  
Notes This element is mandatory.  
Introduced 21.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **sap** [[sap-id](#)] *string*

Synopsis Enter the **sap** list instance  
Context **configure service vprn** *string aa-interface string sap string*  
Tree [sap](#)  
Max. Instances 1  
Introduced 21.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[sap-id]** *string*

Synopsis SAP ID  
Context **configure service vprn** *string aa-interface string sap string*  
Tree [sap](#)  
String Length 1 to 45  
Notes This element is part of a list key.  
Introduced 21.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis Administrative state of the SAP

Context	<b>configure service vprn</b> <i>string aa-interface string sap string admin-state keyword</i>
Tree	<b>admin-state</b>
Default	enable
Options	enable, disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **description** *string*

Synopsis	Text description
Context	<b>configure service vprn</b> <i>string aa-interface string sap string description string</i>
Tree	<b>description</b>
String Length	1 to 160
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **egress**

Synopsis	Enter the <b>egress</b> context
Context	<b>configure service vprn</b> <i>string aa-interface string sap string egress</i>
Tree	<b>egress</b>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **filter**

Synopsis	Enter the <b>filter</b> context
Context	<b>configure service vprn</b> <i>string aa-interface string sap string egress filter</i>
Tree	<b>filter</b>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ip reference**

Synopsis	IPv4 filter policy name
----------	-------------------------

Context	<b>configure service vprn</b> <i>string aa-interface string sap string egress filter ip reference</i>
Tree	<a href="#">ip</a>
Reference	<b>configure filter ip-filter</b> <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## qos

Synopsis	Enter the <b>qos</b> context
Context	<b>configure service vprn</b> <i>string aa-interface string sap string egress qos</i>
Tree	<a href="#">qos</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## sap-egress

Synopsis	Enter the <b>sap-egress</b> context
Context	<b>configure service vprn</b> <i>string aa-interface string sap string egress qos sap-egress</i>
Tree	<a href="#">sap-egress</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## policy-name *reference*

Synopsis	Policy ID to associate with SAP for mirrored service
Context	<b>configure service vprn</b> <i>string aa-interface string sap string egress qos sap-egress policy-name reference</i>
Tree	<a href="#">policy-name</a>
Reference	<b>configure qos sap-egress</b> <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## fwd-wholesale

Synopsis	Enter the <b>fwd-wholesale</b> context
----------	--

Context	<b>configure service vprn</b> <i>string aa-interface string sap string fwd-wholesale</i>
Tree	<a href="#">fwd-wholesale</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **pppoe-service** *reference*

Synopsis	PPPoE service name
Context	<b>configure service vprn</b> <i>string aa-interface string sap string fwd-wholesale pppoe-service reference</i>
Tree	<a href="#">pppoe-service</a>
Reference	<b>configure service epipe</b> <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ingress**

Synopsis	Enter the <b>ingress</b> context
Context	<b>configure service vprn</b> <i>string aa-interface string sap string ingress</i>
Tree	<a href="#">ingress</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **qos**

Synopsis	Enter the <b>qos</b> context
Context	<b>configure service vprn</b> <i>string aa-interface string sap string ingress qos</i>
Tree	<a href="#">qos</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **sap-ingress**

Synopsis	Enter the <b>sap-ingress</b> context
Context	<b>configure service vprn</b> <i>string aa-interface string sap string ingress qos sap-ingress</i>

Tree [sap-ingress](#)  
Introduced 21.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## overrides

Synopsis Enter the **overrides** context  
Context **configure service vprn string aa-interface string sap string ingress qos sap-ingress overrides**  
Tree [overrides](#)  
Introduced 21.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## policy-name *reference*

Synopsis Policy ID  
Context **configure service vprn string aa-interface string sap string ingress qos sap-ingress policy-name reference**  
Tree [policy-name](#)  
Reference **configure qos sap-ingress string**  
Introduced 21.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## lag

Synopsis Enter the **lag** context  
Context **configure service vprn string aa-interface string sap string lag**  
Tree [lag](#)  
Introduced 21.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## aaa

Synopsis Enter the **aaa** context  
Context **configure service vprn string aaa**  
Tree [aaa](#)

Introduced 16.0.R4  
Platforms All

### **remote-servers**

Synopsis Enter the **remote-servers** context  
Context **configure service vprn string aaa remote-servers**  
Tree [remote-servers](#)  
Introduced 16.0.R4  
Platforms All

### **radius**

Synopsis Enable the **radius** context  
Context **configure service vprn string aaa remote-servers radius**  
Tree [radius](#)  
Introduced 16.0.R4  
Platforms All

### **access-algorithm keyword**

Synopsis Algorithm used to access the set of RADIUS servers  
Context **configure service vprn string aaa remote-servers radius access-algorithm keyword**  
Tree [access-algorithm](#)  
Default direct  
Options direct, round-robin  
Introduced 16.0.R4  
Platforms All

### **accounting boolean**

Synopsis Enable RADIUS command accounting  
Context **configure service vprn string aaa remote-servers radius accounting boolean**  
Tree [accounting](#)  
Default false

Introduced 16.0.R4  
Platforms All

### **accounting-port** *number*

Synopsis Port number on RADIUS server for accounting requests  
Context **configure** [service vprn](#) *string* [aaa remote-servers radius accounting-port](#) *number*  
Tree [accounting-port](#)  
Range 1 to 65535  
Default 1813  
Introduced 16.0.R4  
Platforms All

### **admin-state** *keyword*

Synopsis Administrative state of the authentication server  
Context **configure** [service vprn](#) *string* [aaa remote-servers radius admin-state](#) *keyword*  
Tree [admin-state](#)  
Default enable  
Options enable, disable  
Introduced 16.0.R4  
Platforms All

### **authorization** *boolean*

Synopsis Enable RADIUS authorization  
Context **configure** [service vprn](#) *string* [aaa remote-servers radius authorization](#) *boolean*  
Tree [authorization](#)  
Default false  
Introduced 16.0.R4  
Platforms All

### **interactive-authentication** *boolean*

Synopsis Enable RADIUS interactive authentication

Context	<b>configure service vprn string aaa remote-servers radius interactive-authentication boolean</b>
Tree	<a href="#">interactive-authentication</a>
Default	false
Introduced	16.0.R4
Platforms	All

### **port number**

Synopsis	UDP port number on which to contact RADIUS server
Context	<b>configure service vprn string aaa remote-servers radius port number</b>
Tree	<a href="#">port</a>
Range	1 to 65535
Default	1812
Introduced	16.0.R4
Platforms	All

### **server [index] number**

Synopsis	Enter the <b>server</b> list instance
Context	<b>configure service vprn string aaa remote-servers radius server number</b>
Tree	<a href="#">server</a>
Max. Instances	5
Introduced	16.0.R4
Platforms	All

### **[index] number**

Synopsis	RADIUS server ID
Context	<b>configure service vprn string aaa remote-servers radius server number</b>
Tree	<a href="#">server</a>
Range	1 to 5
Notes	This element is part of a list key.
Introduced	16.0.R4

Platforms All

### **address** (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis IP address of the RADIUS server

Context **configure service vprn string aaa remote-servers radius server number address** (*ipv4-address-no-zone | ipv6-address-no-zone*)

Tree [address](#)

Notes This element is mandatory.

Introduced 16.0.R4

Platforms All

### **authenticator** *keyword*

Synopsis Authenticator hash algorithm for the RADIUS server

Context **configure service vprn string aaa remote-servers radius server number authenticator keyword**

Tree [authenticator](#)

Description This command specifies the hash algorithm used to authenticate RADIUS Access-Request, Access-Accept, Access-Reject, Access-Challenge, Accounting-Request, and Accounting-Response packets.

Default md5

Options md5, sm3

Introduced 22.10.R1

Platforms All

### **secret** *string*

Synopsis Secret key to access the RADIUS server

Context **configure service vprn string aaa remote-servers radius server number secret string**

Tree [secret](#)

String Length 1 to 115

Introduced 16.0.R4

Platforms All

### **tls-client-profile** *reference*

Synopsis	TLS client profile for the RADIUS server
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">aaa remote-servers radius server</a> <i>number</i> <a href="#">tls-client-profile reference</a>
Tree	<a href="#">tls-client-profile</a>
Description	This command specifies the TLS client profile used to encrypt RADIUS communication. When configured, RADIUS messages are sent using TLS.
Reference	<b>configure</b> <a href="#">system security tls</a> <a href="#">client-tls-profile</a> <i>string</i>
Introduced	21.10.R1
Platforms	All

### **server-retry** *number*

Synopsis	Number of attempts to retry contacting RADIUS server
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">aaa remote-servers radius server-retry</a> <i>number</i>
Tree	<a href="#">server-retry</a>
Range	1 to 10
Default	3
Introduced	16.0.R4
Platforms	All

### **server-timeout** *number*

Synopsis	Time to wait for a response from the RADIUS server
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">aaa remote-servers radius server-timeout</a> <i>number</i>
Tree	<a href="#">server-timeout</a>
Range	1 to 90
Default	3
Units	seconds
Introduced	16.0.R4
Platforms	All

### **use-default-template** *boolean*

Synopsis	Apply the RADIUS default user template to RADIUS user
----------	---

Context	<b>configure service vprn</b> <i>string</i> <b>aaa remote-servers radius use-default-template</b> <i>boolean</i>
Tree	<a href="#">use-default-template</a>
Default	false
Introduced	16.0.R4
Platforms	All

## **tacplus**

Synopsis	Enable the <b>tacplus</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>aaa remote-servers tacplus</b>
Tree	<a href="#">tacplus</a>
Introduced	16.0.R4
Platforms	All

## **accounting**

Synopsis	Enable the <b>accounting</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>aaa remote-servers tacplus accounting</b>
Tree	<a href="#">accounting</a>
Introduced	16.0.R4
Platforms	All

## **record-type** *keyword*

Synopsis	Type of accounting record packet sent to TACACS+ server
Context	<b>configure service vprn</b> <i>string</i> <b>aaa remote-servers tacplus accounting record-type</b> <i>keyword</i>
Tree	<a href="#">record-type</a>
Default	stop-only
Options	start-stop, stop-only
Introduced	16.0.R4
Platforms	All

## **admin-state** *keyword*

Synopsis	Administrative state of the TACACS+ protocol
----------	--

Context	<b>configure service vprn</b> <i>string</i> <a href="#">aaa remote-servers tacplus admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	enable
Options	enable, disable
Introduced	16.0.R4
Platforms	All

## authorization

Synopsis	Enable the <b>authorization</b> context
Context	<b>configure service vprn</b> <i>string</i> <a href="#">aaa remote-servers tacplus authorization</a>
Tree	<a href="#">authorization</a>
Introduced	16.0.R4
Platforms	All

## request-format

Synopsis	Enter the <b>request-format</b> context
Context	<b>configure service vprn</b> <i>string</i> <a href="#">aaa remote-servers tacplus authorization request-format</a>
Tree	<a href="#">request-format</a>
Description	Commands in this context configure access operations that are sent to the TACACS+ server during authorization.
Introduced	21.10.R3
Platforms	All

## access-operation-cmd *keyword*

Synopsis	Access operations sent in authorization requests
Context	<b>configure service vprn</b> <i>string</i> <a href="#">aaa remote-servers tacplus authorization request-format access-operation-cmd</a> <i>keyword</i>
Tree	<a href="#">access-operation-cmd</a>
Description	This command sends an operation argument in authorization requests.  In model-driven interfaces, this command configures the system to send the operation in the cmd argument, and the path in the cmd-args argument, in TACACS+ authorization requests. This command does not apply to authorization requests in classic interfaces.
Options	delete

Max. Instances	1
Introduced	21.10.R3
Platforms	All

### **use-priv-lvl** *boolean*

Synopsis	Allow privilege level mapping
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">aaa remote-servers tacplus authorization use-priv-lvl</a> <i>boolean</i>
Tree	<a href="#">use-priv-lvl</a>
Description	<p>When configured to <b>true</b>, this command automatically performs a single authorization request to the TACACS+ server for cmd* (all commands) immediately after login, and then uses the local profile associated (via the <b>priv-lvl-map</b>) with the priv-lvl returned by the TACACS+ server for all subsequent authorization (except <b>enable-admin</b>). After the initial authorization for cmd*, no further authorization requests are sent to the TACACS+ server (except <b>enable-admin</b>).</p> <p>When configured to <b>false</b>, each command is sent to the TACACS+ server for authorization (this is true regardless of whether the <b>tacplus use-default-template</b> setting is enabled).</p>
Default	false
Introduced	16.0.R4
Platforms	All

### **interactive-authentication** *boolean*

Synopsis	Allows TACACS+ interactive authentication
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">aaa remote-servers tacplus interactive-authentication</a> <i>boolean</i>
Tree	<a href="#">interactive-authentication</a>
Default	false
Introduced	16.0.R4
Platforms	All

### **priv-lvl-map**

Synopsis	Enter the <b>priv-lvl-map</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">aaa remote-servers tacplus priv-lvl-map</a>

Tree	<a href="#">priv-lvl-map</a>
Introduced	16.0.R4
Platforms	All

### **priv-lvl** [[level](#)] *number*

Synopsis	Enter the <b>priv-lvl</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">aaa</a> <a href="#">remote-servers</a> <a href="#">tacplus</a> <a href="#">priv-lvl-map</a> <a href="#">priv-lvl</a> <i>number</i>
Tree	<a href="#">priv-lvl</a>
Introduced	16.0.R4
Platforms	All

### **[level]** *number*

Synopsis	Privilege level for the mapping
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">aaa</a> <a href="#">remote-servers</a> <a href="#">tacplus</a> <a href="#">priv-lvl-map</a> <a href="#">priv-lvl</a> <i>number</i>
Tree	<a href="#">priv-lvl</a>
Range	0 to 15
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

### **user-profile-name** *reference*

Synopsis	User profile for the mapping
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">aaa</a> <a href="#">remote-servers</a> <a href="#">tacplus</a> <a href="#">priv-lvl-map</a> <a href="#">priv-lvl</a> <i>number</i> <a href="#">user-profile-name</a> <i>reference</i>
Tree	<a href="#">user-profile-name</a>
Reference	<b>configure</b> <a href="#">system</a> <a href="#">security</a> <a href="#">aaa</a> <a href="#">local-profiles</a> <a href="#">profile</a> <i>string</i>
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **server** [*index*] *number*

Synopsis	Enter the <b>server</b> list instance
Context	<b>configure service vprn</b> <i>string</i> <b>aaa remote-servers tacplus server</b> <i>number</i>
Tree	<b>server</b>
Max. Instances	5
Introduced	16.0.R4
Platforms	All

### [*index*] *number*

Synopsis	TACACS+ server ID
Context	<b>configure service vprn</b> <i>string</i> <b>aaa remote-servers tacplus server</b> <i>number</i>
Tree	<b>server</b>
Range	1 to 5
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

### **address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the TACACS+ server
Context	<b>configure service vprn</b> <i>string</i> <b>aaa remote-servers tacplus server</b> <i>number</i> <b>address</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>address</b>
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **port** *number*

Synopsis	TCP port ID on which to contact TACACS+ server
Context	<b>configure service vprn</b> <i>string</i> <b>aaa remote-servers tacplus server</b> <i>number</i> <b>port</b> <i>number</i>
Tree	<b>port</b>
Range	0   1 to 65535

Default	49
Introduced	16.0.R4
Platforms	All

### **secret** *string*

Synopsis	Secret key to access the TACACS+ server
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">aaa remote-servers tacplus server</a> <i>number</i> <b>secret</b> <i>string</i>
Tree	<a href="#">secret</a>
String Length	1 to 199
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **server-timeout** *number*

Synopsis	Time to wait for a response from the TACACS+ server
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">aaa remote-servers tacplus server-timeout</a> <i>number</i>
Tree	<a href="#">server-timeout</a>
Range	1 to 90
Default	3
Units	seconds
Introduced	16.0.R4
Platforms	All

### **use-default-template** *boolean*

Synopsis	Apply TACACS+ default user-template to TACACS+ user
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">aaa remote-servers tacplus use-default-template</a> <i>boolean</i>
Tree	<a href="#">use-default-template</a>
Default	true
Introduced	16.0.R4
Platforms	All

## **aarp-interface** [*interface-name*] *string*

Synopsis	Enter the <b>aarp-interface</b> list instance
Context	<b>configure service vprn string aarp-interface string</b>
Tree	<a href="#">aarp-interface</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **[interface-name]** *string*

Synopsis	Interface name
Context	<b>configure service vprn string aarp-interface string</b>
Tree	<a href="#">aarp-interface</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **admin-state** *keyword*

Synopsis	Administrative state of the interface
Context	<b>configure service vprn string aarp-interface string admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Default	enable
Options	enable, disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **description** *string*

Synopsis	Text description
Context	<b>configure service vprn string aarp-interface string description string</b>
Tree	<a href="#">description</a>
String Length	1 to 255
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ip-mtu** *number*

Synopsis	IP MTU applied to outgoing packets
Context	<b>configure service vprn</b> <i>string aarp-interface string ip-mtu number</i>
Tree	<b>ip-mtu</b>
Range	512 to 9786
Units	bytes
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **spoke-sdp** [**sdp-bind-id**] *string*

Synopsis	Enter the <b>spoke-sdp</b> list instance
Context	<b>configure service vprn</b> <i>string aarp-interface string spoke-sdp string</i>
Tree	<b>spoke-sdp</b>
Max. Instances	1
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[sdp-bind-id]** *string*

Synopsis	SDP binding ID
Context	<b>configure service vprn</b> <i>string aarp-interface string spoke-sdp string</i>
Tree	<b>spoke-sdp</b>
String Length	3 to 16
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **aarp**

Synopsis	Enable the <b>aarp</b> context
Context	<b>configure service vprn</b> <i>string aarp-interface string spoke-sdp string aarp</i>
Tree	<b>aarp</b>

Introduced 21.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **id reference**

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis AARP instance ID  
Context **configure service vpn** *string aarp-interface string spoke-sdp string aarp id reference*  
Tree [id](#)  
Reference **configure application-assurance aarp** *number*  
Notes This element is mandatory.  
Introduced 21.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **type keyword**

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Role of the spoke SDP referenced by the AARP  
Context **configure service vpn** *string aarp-interface string spoke-sdp string aarp type keyword*  
Tree [type](#)  
Options subscriber-side-shunt, network-side-shunt  
Notes This element is mandatory.  
Introduced 21.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **admin-state keyword**

Synopsis Administrative state of this service SDP binding  
Context **configure service vpn** *string aarp-interface string spoke-sdp string admin-state keyword*  
Tree [admin-state](#)

Default	enable
Options	enable, disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">aarp-interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <b>description</b> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **egress**

Synopsis	Enter the <b>egress</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">aarp-interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <b>egress</b>
Tree	<a href="#">egress</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **filter**

Synopsis	Enter the <b>filter</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">aarp-interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <b>egress</b> <b>filter</b>
Tree	<a href="#">filter</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ip** *reference*

Synopsis	IP filter identifier
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">aarp-interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <b>egress</b> <b>filter</b> <b>ip</b> <i>reference</i>
Tree	<a href="#">ip</a>

Reference	<b>configure filter ip-filter</b> <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **vc-label** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Static MPLS VC label to send packets to far-end device
Context	<b>configure service vprn</b> <i>string aarp-interface string spoke-sdp string egress vc-label number</i>
Tree	<b>vc-label</b>
Range	16 to 1048575
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ingress**

Synopsis	Enter the <b>ingress</b> context
Context	<b>configure service vprn</b> <i>string aarp-interface string spoke-sdp string ingress</i>
Tree	<b>ingress</b>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **filter**

Synopsis	Enter the <b>filter</b> context
Context	<b>configure service vprn</b> <i>string aarp-interface string spoke-sdp string ingress filter</i>
Tree	<b>filter</b>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ip reference

Synopsis	IP filter ID
Context	<b>configure service vprn</b> <i>string aarp-interface string spoke-sdp string ingress filter ip reference</i>
Tree	<a href="#">ip</a>
Reference	<b>configure filter ip-filter</b> <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## vc-label number

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	VC ingress value that indicates a specific connection
Context	<b>configure service vprn</b> <i>string aarp-interface string spoke-sdp string ingress vc-label number</i>
Tree	<a href="#">vc-label</a>
Range	1 to 1048575
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## admin-state keyword

Synopsis	Administrative state of the service
Context	<b>configure service vprn</b> <i>string admin-state keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

## aggregates

Synopsis	Enter the <b>aggregates</b> context
----------	-------------------------------------

Context	<b>configure service vprn string aggregates</b>
Tree	<a href="#">aggregates</a>
Introduced	16.0.R1
Platforms	All

### **aggregate** [[ip-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Enter the <b>aggregate</b> list instance
Context	<b>configure service vprn string aggregates aggregate</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
Tree	<a href="#">aggregate</a>
Introduced	16.0.R1
Platforms	All

### **[ip-prefix]** (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Destination IP address prefix of the aggregate route
Context	<b>configure service vprn string aggregates aggregate</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
Tree	<a href="#">aggregate</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **aggregator**

Synopsis	Enter the <b>aggregator</b> context
Context	<b>configure service vprn string aggregates aggregate</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>aggregator</b>
Tree	<a href="#">aggregator</a>
Introduced	16.0.R1
Platforms	All

### **address string**

Synopsis	Aggregator IP address
Context	<b>configure service vprn string aggregates aggregate</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>aggregator address string</b>

Tree	<a href="#">address</a>
Introduced	16.0.R1
Platforms	All

### **as-number** *number*

Synopsis	Aggregator AS number
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">aggregates</a> <a href="#">aggregate</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">aggregator</a> <a href="#">as-number</a> <i>number</i>
Tree	<a href="#">as-number</a>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **as-set** *boolean*

Synopsis	Use AS_SET path segment type for the aggregate route
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">aggregates</a> <a href="#">aggregate</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">as-set</a> <i>boolean</i>
Tree	<a href="#">as-set</a>
Description	<p>When configured to <b>true</b>, the AS_PATH attribute of the aggregate contains an AS_SET containing all AS numbers from the contributing routes. This can increase the amount of churn due to best-path changes.</p> <p>When configured to <b>false</b>, the AS_PATH attribute contains no AS_SET and will be originated by the ESR.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **blackhole**

Synopsis	Enable the <b>blackhole</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">aggregates</a> <a href="#">aggregate</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">blackhole</a>
Tree	<a href="#">blackhole</a>
Notes	The following elements are part of a choice: <b>blackhole</b> or <b>indirect</b> .
Introduced	16.0.R1

Platforms All

### **generate-icmp** *boolean*

Synopsis Send ICMP unreachable messages for aggregate routes

Context **configure** **service vprn** *string* **aggregates aggregate** (*ipv4-prefix* | *ipv6-prefix*) **blackhole generate-icmp** *boolean*

Tree **generate-icmp**

Description When configured to **true**, ICMP unreachable messages are sent when packets match an aggregate route in the FIB with a black-hole next-hop.  
When configured to **false**, ICMP unreachable messages are not generated.

Default false

Introduced 16.0.R2

Platforms All

### **community** *string*

Synopsis Community name that is added to the aggregate route

Context **configure** **service vprn** *string* **aggregates aggregate** (*ipv4-prefix* | *ipv6-prefix*) **community** *string*

Tree **community**

Description This command associates a BGP community with the aggregate route. The community name can be matched in route policies and is automatically added to BGP routes exported from the aggregate route.

String Length 1 to 72

Max. Instances 12

Notes This element is ordered by the user.

Introduced 16.0.R1

Platforms All

### **description** *string*

Synopsis Text description

Context **configure** **service vprn** *string* **aggregates aggregate** (*ipv4-prefix* | *ipv6-prefix*) **description** *string*

Tree **description**

String Length 1 to 80  
Introduced 16.0.R1  
Platforms All

### **discard-component-communities** *boolean*

Synopsis Advertise aggregate with aggregate route community set  
Context **configure service vprn string aggregates aggregate** (*ipv4-prefix | ipv6-prefix*) **discard-component-communities** *boolean*  
Tree [discard-component-communities](#)  
Default false  
Introduced 19.7.R1  
Platforms All

### **indirect** (*ipv4-address-no-zone | ipv6-address-no-zone*)

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Address of the indirect next hop  
Context **configure service vprn string aggregates aggregate** (*ipv4-prefix | ipv6-prefix*) **indirect** (*ipv4-address-no-zone | ipv6-address-no-zone*)  
Tree [indirect](#)  
Description This command programs aggregate routes into the forwarding table with an indirect next hop. If a packet matches the aggregate route but not a contributing route, it is forwarded toward the indirect next hop rather than being discarded.  
Notes The following elements are part of a choice: **blackhole** or **indirect**.  
Introduced 16.0.R1  
Platforms All

### **local-preference** *number*

Synopsis Local preference used when aggregate route is exported  
Context **configure service vprn string aggregates aggregate** (*ipv4-prefix | ipv6-prefix*) **local-preference** *number*  
Tree [local-preference](#)

Description	This command configures the local preference value to use when the aggregate route is exported rather than using any of the local preference values assigned for any of the contributing routes.
Range	0 to 4294967295
Introduced	16.0.R1
Platforms	All

### **policy reference**

Synopsis	Policy name for the aggregated route
Context	<b>configure service vprn string aggregates aggregate (ipv4-prefix   ipv6-prefix) policy reference</b>
Tree	<b>policy</b>
Description	<p>This command associates an aggregate route with a policy reference. The aggregated route is activated only when there is at least one eligible active route in the sub-trees below it that is accepted by the policy evaluation. There is no evaluation into any sub-tree that starts with another active aggregate route. Eligible routes exclude host routes and LDP shortcut routes.</p> <p>If an aggregate route has no policy, or the reference is to an empty policy, this configuration is treated as equivalent to a policy with one rule that accepts all routes.</p>
Reference	<b>configure policy-options policy-statement string</b>
Introduced	20.10.R1
Platforms	All

### **summary-only boolean**

Synopsis	Advertise the aggregate route only
Context	<b>configure service vprn string aggregates aggregate (ipv4-prefix   ipv6-prefix) summary-only boolean</b>
Tree	<b>summary-only</b>
Description	<p>When configured to <b>true</b>, the router suppresses the advertisement of more specific component routes for the aggregate.</p> <p>When configured to <b>false</b>, the router advertises both the aggregate route and its contributing routes.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **tunnel-group** *number*

Synopsis	Tunnel group from which to associate the MC IPsec state
Context	<b>configure</b> <b>service vpn</b> <i>string</i> <b>aggregates aggregate</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>tunnel-group</b> <i>number</i>
Tree	<b>tunnel-group</b>
Description	This command adds the MC-IPsec state of the specific tunnel-group to the aggregate route.
Range	1 to 64
Introduced	20.7.R1
Platforms	All

### **allow-export-bgp-vpn** *boolean*

Synopsis	Include BGP-VPN routes for export
Context	<b>configure</b> <b>service vpn</b> <i>string</i> <b>allow-export-bgp-vpn</b> <i>boolean</i>
Tree	<b>allow-export-bgp-vpn</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **autonomous-system** *number*

Synopsis	AS number advertised to peers for this router
Context	<b>configure</b> <b>service vpn</b> <i>string</i> <b>autonomous-system</b> <i>number</i>
Tree	<b>autonomous-system</b>
Description	This command configures the autonomous system (AS) number for the router. This value must be set before BGP can be activated.  If the AS number is changed on a router with an active BGP instance, the new AS number is not used until the BGP instance is restarted.
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

## bgp

Synopsis	Enable the <b>bgp</b> context
Context	<b>configure service vprn string bgp</b>
Tree	<a href="#">bgp</a>
Introduced	16.0.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of the BGP instance
Context	<b>configure service vprn string bgp admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Default	enable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

## advertise-inactive *boolean*

Synopsis	Advertise inactive BGP routes to peers
Context	<b>configure service vprn string bgp advertise-inactive boolean</b>
Tree	<a href="#">advertise-inactive</a>
Description	When configured to <b>true</b> , this command allows any inactive BGP route to be advertised, even though it is not the used route.  When configured to <b>false</b> , the advertisement of inactive BGP routes to other BGP peers is disabled.
Default	false
Introduced	16.0.R1
Platforms	All

## advertise-ipv6-next-hops

Synopsis	Enter the <b>advertise-ipv6-next-hops</b> context
Context	<b>configure service vprn string bgp advertise-ipv6-next-hops</b>
Tree	<a href="#">advertise-ipv6-next-hops</a>

Introduced 19.5.R1  
Platforms All

### **ipv4** *boolean*

Synopsis Enable IPv4 routes to be advertised  
Context **configure** *service vprn string bgp advertise-ipv6-next-hops ipv4 boolean*  
Tree [ipv4](#)  
Default false  
Introduced 19.5.R1  
Platforms All

### **aggregator-id-zero** *boolean*

Synopsis Set router ID in the BGP AGGREGATOR attribute to 0  
Context **configure** *service vprn string bgp aggregator-id-zero boolean*  
Tree [aggregator-id-zero](#)  
Description When configured to **true**, the router ID in the BGP AGGREGATOR path attribute is set to 0 when BGP aggregates routes. This prevents different routers within an AS from creating aggregate routes for the same prefix with different path attributes.  
When configured to **false**, the AS number and router ID are added to the AGGREGATOR path attribute.  
Default false  
Introduced 16.0.R1  
Platforms All

### **asn-4-byte** *boolean*

Synopsis Advertise support for 4-byte ASNs  
Context **configure** *service vprn string bgp asn-4-byte boolean*  
Tree [asn-4-byte](#)  
Default true  
Introduced 16.0.R1  
Platforms All

### authentication-key *string*

Synopsis	BGP authentication key for all peers
Context	<b>configure service vprn string bgp authentication-key string</b>
Tree	<a href="#">authentication-key</a>
Description	This command configures the authentication key used to protect all sessions. The stored format of the authentication key is based on the <b>configure system security hash-control management-interface md-cli hash-algorithm</b> setting.
String Length	1 to 370
Introduced	16.0.R1
Platforms	All

### authentication-keychain *reference*

Synopsis	TCP authentication keychain for the session
Context	<b>configure service vprn string bgp authentication-keychain reference</b>
Tree	<a href="#">authentication-keychain</a>
Description	This command associates the keychain to be used to authenticate the BGP session. The keychain allows the rollover of authentication keys during the lifetime of a session.
Reference	<b>configure system security keychains keychain string</b>
Introduced	16.0.R3
Platforms	All

### backup-path

Synopsis	Enter the <b>backup-path</b> context
Context	<b>configure service vprn string bgp backup-path</b>
Tree	<a href="#">backup-path</a>
Description	<p>Commands in this context enable the use of a backup path for specified BGP-learned prefixes belonging to the base router. Multiple paths must be received for a prefix in order to take advantage of this feature. When a prefix has a backup path and its primary paths fail, the affected traffic is rapidly diverted to the backup path without waiting for control plane re-convergence to occur. When many prefixes share the same primary paths and in some cases, the same backup path, the time to divert failover traffic to the backup path is independent of the number of prefixes.</p> <p>By default, IPv4 and IPv6 prefixes do not have a backup path installed in the IOM.</p>
Introduced	16.0.R1
Platforms	All

### **ipv4** *boolean*

Synopsis	Enable support for unlabeled unicast IPv4 routes
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">bgp</a> <a href="#">backup-path</a> <a href="#">ipv4</a> <i>boolean</i>
Tree	<a href="#">ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **ipv6** *boolean*

Synopsis	Enable support for unlabeled unicast IPv6 routes
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">bgp</a> <a href="#">backup-path</a> <a href="#">ipv6</a> <i>boolean</i>
Tree	<a href="#">ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **label-ipv4** *boolean*

Synopsis	Enable support for labeled-unicast IPv4 routes
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">bgp</a> <a href="#">backup-path</a> <a href="#">label-ipv4</a> <i>boolean</i>
Tree	<a href="#">label-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **label-ipv6** *boolean*

Synopsis	Enable support for labeled unicast IPv6 routes
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">bgp</a> <a href="#">backup-path</a> <a href="#">label-ipv6</a> <i>boolean</i>
Tree	<a href="#">label-ipv6</a>
Default	false
Introduced	22.2.R1
Platforms	All

## best-path-selection

Synopsis	Enter the <b>best-path-selection</b> context
Context	<b>configure service vprn string bgp best-path-selection</b>
Tree	<a href="#">best-path-selection</a>
Introduced	16.0.R1
Platforms	All

## always-compare-med

Synopsis	Enter the <b>always-compare-med</b> context
Context	<b>configure service vprn string bgp best-path-selection always-compare-med</b>
Tree	<a href="#">always-compare-med</a>
Description	Commands in this context determine how the BGP decision process is affected by the MED path attribute.
Introduced	16.0.R1
Platforms	All

## med-value *keyword*

Synopsis	Action for a missing MED attribute
Context	<b>configure service vprn string bgp best-path-selection always-compare-med med-value keyword</b>
Tree	<a href="#">med-value</a>
Default	off
Options	off, missing-med-zero, missing-med-infinity, on
Introduced	16.0.R1
Platforms	All

## strict-as *boolean*

Synopsis	Compare MED only for routes from same neighbor AS
Context	<b>configure service vprn string bgp best-path-selection always-compare-med strict-as boolean</b>
Tree	<a href="#">strict-as</a>

Description	When configured to <b>true</b> , the route selection process can compare the MED path attribute between routes only if they come from the same neighbor AS. When configured to <b>false</b> , the route selection process can compare the MED path attribute between routes even if they come from different neighbor ASs.
Default	true
Introduced	16.0.R1
Platforms	All

### as-path-ignore

Synopsis	Enter the <b>as-path-ignore</b> context
Context	<b>configure service vprn string bgp best-path-selection as-path-ignore</b>
Tree	<a href="#">as-path-ignore</a>
Description	Commands in this context determine whether the AS path length is considered in the selection process for routes of the specified address families.
Introduced	16.0.R1
Platforms	All

### ipv4 boolean

Synopsis	Ignore AS path length for unlabeled unicast IPv4 routes
Context	<b>configure service vprn string bgp best-path-selection as-path-ignore ipv4 boolean</b>
Tree	<a href="#">ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

### ipv6 boolean

Synopsis	Ignore AS path length for unlabeled unicast IPv6 routes
Context	<b>configure service vprn string bgp best-path-selection as-path-ignore ipv6 boolean</b>
Tree	<a href="#">ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **label-ipv4** *boolean*

Synopsis	Ignore AS path length for labeled-unicast IPv4 routes
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp best-path-selection as-path-ignore</a> <a href="#">label-ipv4</a> <i>boolean</i>
Tree	<a href="#">label-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **label-ipv6** *boolean*

Synopsis	Ignore AS path length for labeled unicast IPv6 routes
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp best-path-selection as-path-ignore</a> <a href="#">label-ipv6</a> <i>boolean</i>
Tree	<a href="#">label-ipv6</a>
Default	false
Introduced	22.2.R1
Platforms	All

### **compare-origin-validation-state** *boolean*

Synopsis	Allow comparison of origin validation states
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp best-path-selection compare-origin-validation-state</a> <i>boolean</i>
Tree	<a href="#">compare-origin-validation-state</a>
Default	false
Introduced	19.7.R1
Platforms	All

### **d-path-length-ignore** *boolean*

Synopsis	Enable D-PATH length ignore
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp best-path-selection d-path-length-ignore</a> <i>boolean</i>
Tree	<a href="#">d-path-length-ignore</a>
Description	When configured to <b>true</b> , this command, enables the router to ignore the D-PATH domain segment length during best-path selection.

At the base router level (or VPRN BGP level for PE-CE routers), this command allows BGP to ignore the D-PATH domain segment length for best-path selection purposes. BGP ignores the D-PATH length when comparing two VPN routes or two IFL routes within the same RD. However, these VPN/IFL routes are processed in the main-BGP instance.

At the VPRN router level, this command allows the VPRN RTM to ignore the D-PATH domain segment length for best-path selection purposes (for routes in VPRN). The user can control whether the RTM considers the D-PATH length when comparing two VPN routes with different RDs.

Best-path selection for EVPN-IFF routes against other owners (for example, EVPN-IFL or IPVPN) still relies on RTM preference. When EVPN-IFF RTM preference matches the RTM preference of another BGP owner, the existing RTM selection applies and D-PATH is not considered, irrespective of the **d-path-length-ignore** configuration.

When configured to **false**, this command disables the ability to ignore the D-PATH domain segment length.

Default	false
Introduced	21.10.R1
Platforms	All

### **deterministic-med** *boolean*

Synopsis	Group paths based on AS before MED attribute comparison
Context	<b>configure service vprn string bgp best-path-selection deterministic-med boolean</b>
Tree	<a href="#">deterministic-med</a>
Description	<p>When configured to <b>true</b>, BGP groups paths from the same AS that are equal up to the MED attribute comparison and then compares the best path from each group to select the overall best path. This process ensures that the best-path selection process is deterministic in all cases.</p> <p>When configured to <b>false</b>, paths are not grouped and the overall best-path selection can depend on the order of route arrival.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **ebgp-ibgp-equal**

Synopsis	Enter the <b>ebgp-ibgp-equal</b> context
Context	<b>configure service vprn string bgp best-path-selection ebgp-ibgp-equal</b>
Tree	<a href="#">ebgp-ibgp-equal</a>

Description	<p>Commands in this context allow BGP to ignore the difference between EBGP and IBGP routes in selecting the best path and eligible multipaths (if multipath and ECMP are enabled) for the specified address families. The result is a form of EIBGP load-balancing in a multipath scenario. This behavior can be applied selectively to certain address families.</p> <p>By default, the BGP decision process prefers an EBGP learned route over an IBGP learned route.</p>
Introduced	16.0.R1
Platforms	All

### **ipv4 *boolean***

Synopsis	Consider EBGP and IBGP IPv4 routes equal
Context	<b>configure service vprn string bgp best-path-selection ebgp-ibgp-equal ipv4 <i>boolean</i></b>
Tree	<a href="#">ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **ipv6 *boolean***

Synopsis	Consider EBGP and IBGP IPv6 routes equal
Context	<b>configure service vprn string bgp best-path-selection ebgp-ibgp-equal ipv6 <i>boolean</i></b>
Tree	<a href="#">ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **label-ipv4 *boolean***

Synopsis	Consider EBGP and IBGP label-IPv4 routes equal
Context	<b>configure service vprn string bgp best-path-selection ebgp-ibgp-equal label-ipv4 <i>boolean</i></b>
Tree	<a href="#">label-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

### label-ipv6 *boolean*

Synopsis	Consider EBGP and IBGP label-IPv6 routes equal
Context	<b>configure</b> <a href="#">service vprn string bgp best-path-selection ebgp-ibgp-equal label-ipv6 boolean</a>
Tree	<a href="#">label-ipv6</a>
Default	false
Introduced	22.2.R1
Platforms	All

### ignore-nh-metric *boolean*

Synopsis	Ignore next-hop distance in best path selection
Context	<b>configure</b> <a href="#">service vprn string bgp best-path-selection ignore-nh-metric boolean</a>
Tree	<a href="#">ignore-nh-metric</a>
Description	<p>When configured to <b>true</b>, BGP ignores the resolved distance to the BGP next hop in its route selection process.</p> <p>When configured to <b>false</b>, BGP factors the distance to the next hop into its decision process when it compares two BGP routes with the same NLRI learned from base router BGP peers (in the <b>router</b> context) or IP prefix learned from VPRN BGP peers (in the <b>vprn</b> context).</p>
Default	false
Introduced	16.0.R1
Platforms	All

### ignore-router-id

Synopsis	Enable the <b>ignore-router-id</b> context
Context	<b>configure</b> <a href="#">service vprn string bgp best-path-selection ignore-router-id</a>
Tree	<a href="#">ignore-router-id</a>
Description	<p>Commands in this context determine whether the BGP selection process ignores the BGP identifier (router ID) comparison of two EBGP paths from different EBGP peers when determining the best path for the specified address families.</p> <p>By default, BGP selects the path with the lower router ID when it compares two paths from EBGP peers.</p>
Introduced	16.0.R1
Platforms	All

**origin-invalid-unusable** *boolean*

Synopsis	Ignore routes with invalid origin validation state
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp best-path-selection</a> <a href="#">origin-invalid-unusable</a> <i>boolean</i>
Tree	<a href="#">origin-invalid-unusable</a>
Default	false
Introduced	19.7.R1
Platforms	All

**bfd-liveness** *boolean*

Synopsis	Enable BFD
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp bfd-liveness</a> <i>boolean</i>
Tree	<a href="#">bfd-liveness</a>
Description	When configured to <b>true</b> , BFD is enabled on all BGP sessions, subject to the association of those BGP sessions with IP interfaces that have BFD configurations. When configured to <b>false</b> , BFD is not enabled globally for all BGP sessions.
Default	false
Introduced	16.0.R1
Platforms	All

**client-reflect** *boolean*

Synopsis	Allow client reflection of routes by route reflector
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp client-reflect</a> <i>boolean</i>
Tree	<a href="#">client-reflect</a>
Description	When configured to <b>true</b> , routes received from neighbors considered to be RR clients are reflected to other peers as expected. When configured to <b>false</b> , routes received from neighbors considered to be RR clients are not reflected to other clients.
Default	true
Introduced	16.0.R1
Platforms	All

## cluster

Synopsis	Enter the <b>cluster</b> context
Context	<b>configure service vprn string bgp cluster</b>
Tree	<b>cluster</b>
Introduced	16.0.R1
Platforms	All

## cluster-id *string*

Synopsis	Route reflector cluster ID
Context	<b>configure service vprn string bgp cluster cluster-id string</b>
Tree	<b>cluster-id</b>
Description	The command specifies the cluster ID to associate with the routing instance, effectively making all IBGP peers of the routing instance RR clients.
Introduced	16.0.R1
Platforms	All

## connect-retry *number*

Synopsis	BGP connect retry timer value
Context	<b>configure service vprn string bgp connect-retry number</b>
Tree	<b>connect-retry</b>
Description	This command configures the BGP connect retry timer. When the timer expires, BGP tries to reconnect to the configured peer.
Range	1 to 65535
Default	120
Introduced	16.0.R1
Platforms	All

## convergence

Synopsis	Enter the <b>convergence</b> context
Context	<b>configure service vprn string bgp convergence</b>
Tree	<b>convergence</b>
Introduced	19.7.R1

Platforms All

### **family** [family-type] keyword

Synopsis Enter the **family** list instance  
Context **configure** service vprn string bgp convergence family keyword  
Tree family  
Introduced 19.7.R1  
Platforms All

### **[family-type]** keyword

Synopsis Address family for which convergence selection applies  
Context **configure** service vprn string bgp convergence family keyword  
Tree family  
Options ipv4, ipv6  
Notes This element is part of a list key.  
Introduced 19.7.R1  
Platforms All

### **max-wait-to-advertise** number

Synopsis Maximum wait time before advertising routes  
Context **configure** service vprn string bgp convergence family keyword max-wait-to-advertise number  
Tree max-wait-to-advertise  
Range 0 to 3600  
Default 0  
Introduced 19.7.R1  
Platforms All

### **min-wait-to-advertise** number

Synopsis Minimum wait time before advertising routes  
Context **configure** service vprn string bgp convergence min-wait-to-advertise number

Tree	<a href="#">min-wait-to-advertise</a>
Range	0 to 3600
Default	0
Introduced	19.7.R1
Platforms	All

## damp-peer-oscillations

Synopsis	Enable the <b>damp-peer-oscillations</b> context
Context	<b>configure</b> <a href="#">service vprn string bgp damp-peer-oscillations</a>
Tree	<a href="#">damp-peer-oscillations</a>
Description	Commands in this context specify how long a BGP peer session remains in the idle state after an error causes the session to reset. In the idle state, BGP does not initiate or respond to attempts to establish a new session. Repeated errors that occur a short time after each session reset cause longer and longer hold times in the idle state.
Introduced	16.0.R1
Platforms	All

## error-interval *number*

Synopsis	Time after a reset that the session must be error-free
Context	<b>configure</b> <a href="#">service vprn string bgp damp-peer-oscillations error-interval number</a>
Tree	<a href="#">error-interval</a>
Description	This command sets the interval of time after a reset, during which the session must be error-free in order to reset the penalty counter and return the idle hold time to the initial wait time.
Range	0 to 2048
Default	30
Introduced	16.0.R1
Platforms	All

## idle-hold-time

Synopsis	Enter the <b>idle-hold-time</b> context
Context	<b>configure</b> <a href="#">service vprn string bgp damp-peer-oscillations idle-hold-time</a>
Tree	<a href="#">idle-hold-time</a>

Introduced 16.0.R1  
Platforms All

### **initial-wait** *number*

Context **configure** [service vprn](#) *string* [bgp damp-peer-oscillations](#) [idle-hold-time](#) [initial-wait](#) *number*  
Tree [initial-wait](#)  
Range 0 to 2048  
Default 0  
Introduced 16.0.R1  
Platforms All

### **max-wait** *number*

Synopsis Maximum session idle time after repeated instability  
Context **configure** [service vprn](#) *string* [bgp damp-peer-oscillations](#) [idle-hold-time](#) [max-wait](#) *number*  
Tree [max-wait](#)  
Range 1 to 2048  
Default 60  
Introduced 16.0.R1  
Platforms All

### **second-wait** *number*

Synopsis Time that doubles after each session failure  
Context **configure** [service vprn](#) *string* [bgp damp-peer-oscillations](#) [idle-hold-time](#) [second-wait](#) *number*  
Tree [second-wait](#)  
Description This command defines the hold time that doubles after each repeated session failure that occurs in a short span of time.  
Range 1 to 2048  
Default 5  
Introduced 16.0.R1

Platforms All

### **damping** *boolean*

**Synopsis** Use BGP route damping to reduce route flap

**Context** **configure** *service vprn string bgp damping boolean*

**Tree** *damping*

**Description** When configured to **true**, this command enables route damping to reduce the number of update messages sent between BGP peers and reduce the load on peers without affecting the route convergence time for stable routes.

Route damping is controlled by profiles set in route policies. If no profile is specified in the route policy, the default damping profile is used with the following parameters:

- Half-life: 15 minutes
- Max-suppress: 60 minutes
- Suppress-threshold: 3000
- Reuse-threshold: 750

When configured to **false**, BGP route damping for learned routes is disabled.

**Default** false

**Introduced** 16.0.R1

**Platforms** All

Synopsis	Text description
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **domain-id** *string*

Synopsis	Domain ID of received BGP route before readvertisement
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp domain-id</a> <i>string</i>
Tree	<a href="#">domain-id</a>

**Description** This command specifies the domain ID. The domain ID identifies the network from which the BGP route was received before the RTM advertises it to a different neighbor. The domain ID is part of a domain, represented as domain-id:isf\_safi\_type in the D-PATH attribute, as described in *draft-ietf-bess-evpn-ipvpn-interworking*. Gateway routers modify the D-PATH attribute. A gateway is a PE where a VPRN is instantiated. The VPRN in this case advertises or receives routes from multiple BGP owners (for example, EVPN-IFL and BGP-IPVPN) or multiple instances of the same owner (for example, VPRN with two BGP-IPVPN instances).

Gateways use the D-PATH attribute to detect loops (for received routes where the D-PATH contains a local domain ID) and to make BGP best-path selection decisions based on the D-PATH length (shorter D-PATH is preferred).

In the following example, suppose a gateway receives prefix P in an EVPN-IFL instance with the following D-PATH from neighbor N:

```
Seg Len=1 / 65000:1:128
```

If the router imports the route in VPRN-1, BGP-EVPN SRv6 instance with domain 65000:2, it readvertises it to its BGP-IPVPN MPLS instance as follows:

```
Seg Len=2 / 65000:2:70 / 65000:1:128
```

That is, the gateway prepends the local domain ID and family to the D-PATH before readvertising the route into a different instance.

Introduced 21.10.R1  
Platforms All

### **dynamic-neighbor-limit** *number*

Synopsis Max dynamic BGP sessions to accept from remote peers  
Context **configure service vprn string bgp dynamic-neighbor-limit number**  
Tree [dynamic-neighbor-limit](#)  
Description This command configures the maximum number of dynamic BGP sessions to accept from remote peers associated with the entire BGP instance. If accepting a new dynamic session causes the instance limit to be exceeded, the new session attempt is rejected and a Notification message is sent back to the remote peer.  
Range 1 to 8192  
Introduced 16.0.R1  
Platforms All

Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp family mcast-ipv6</a> <i>boolean</i>
Tree	<a href="#">mcast-ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **fast-external-failover** *boolean*

Synopsis	Drop external BGP session immediately when link fails
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp fast-external-failover</a> <i>boolean</i>
Tree	<a href="#">fast-external-failover</a>
Description	When configured to <b>true</b> , the router drops an external BGP session to a single-hop neighbor immediately when the local interface goes down. When configured to <b>false</b> , the BGP session remains up until the hold time expires.
Default	true
Introduced	16.0.R1
Platforms	All

## flowspec

Synopsis	Enter the <b>flowspec</b> context
Context	<b>configure service vprn string bgp flowspec</b>
Tree	<b>flowspec</b>
Introduced	16.0.R1
Platforms	All

## validate-dest-prefix *boolean*

Synopsis	Validate destination prefix in FlowSpec-IPv4/IPv6 route
Context	<b>configure service vprn string bgp flowspec validate-dest-prefix boolean</b>
Tree	<b>validate-dest-prefix</b>
Description	<p>When configured to <b>true</b>, this command enables validation of received IPv4 and IPv6 FlowSpec routes that contain a destination-prefix subcomponent.</p> <p>A FlowSpec route with a destination-prefix subcomponent is considered invalid if both of the following are true:</p> <ul style="list-style-type: none"> <li>• it was originated outside the local AS of the receiving BGP router</li> <li>• the neighbor AS of the FlowSpec route does not match the neighbor AS of the best match BGP (unicast) route for the destination prefix or the neighbor AS of any longer match BGP (unicast) route for the destination prefix</li> </ul> <p>An invalid route is retained in the BGP but it is not used for filtering traffic or propagated to other BGP routers.</p> <p>When configured to <b>false</b>, destination-prefix validation is disabled.</p>
Default	false
Introduced	16.0.R1
Platforms	All

## validate-redirect-ip *boolean*

Synopsis	Validate the redirect-to-IPv4 action in FlowSpec route
Context	<b>configure service vprn string bgp flowspec validate-redirect-ip boolean</b>
Tree	<b>validate-redirect-ip</b>
Description	<p>When configured to <b>true</b>, this command enables procedures to validate the redirect-to-IPv4 action attached to FlowSpec-IPv4 routes that are received by the BGP instance.</p> <p>A FlowSpec-IPv4 route is considered invalid and is not installed as a filter rule if the FlowSpec-IPv4 route is deemed to have originated from a different AS than the IP route that resolves the redirection IPv4 address. The originating AS of a FlowSpec route is determined from its AS path.</p>

When configured to **false**, the validation check is disabled.

Default	false
Introduced	16.0.R1
Platforms	All

## graceful-restart

Synopsis	Enable the <b>graceful-restart</b> context
Context	<b>configure</b> <a href="#">service vprn string bgp graceful-restart</a>
Tree	<a href="#">graceful-restart</a>
Introduced	16.0.R1
Platforms	All

## gr-notification *boolean*

Synopsis	Perform Graceful Restart procedures
Context	<b>configure</b> <a href="#">service vprn string bgp graceful-restart gr-notification boolean</a>
Tree	<a href="#">gr-notification</a>
Description	When configured to <b>true</b> , the Graceful Restart capability sent by the router indicates support for NOTIFICATION messages. If the peer also supports this capability, the session is restarted gracefully (while preserving forwarding) if either peer sends a NOTIFICATION message due to some type of event or error.  When configured to <b>false</b> , NOTIFICATION messages are not supported.
Default	false
Introduced	16.0.R1
Platforms	All

## long-lived

Synopsis	Enable the <b>long-lived</b> context
Context	<b>configure</b> <a href="#">service vprn string bgp graceful-restart long-lived</a>
Tree	<a href="#">long-lived</a>
Introduced	16.0.R1
Platforms	All

Range 0 to 16777215  
Introduced 16.0.R1  
Platforms All

### **forwarding-bits-set** *keyword*

Synopsis BGP LLGR forwarding-bit behavior for address family  
Context **configure** **service vprn** *string* **bgp graceful-restart long-lived forwarding-bits-set** *keyword*  
Tree **forwarding-bits-set**  
Description This command determines the setting of the F bit in the GR and LLGR capabilities advertised by the router. When the F bit is set for an address family, it indicates that the advertising router is able to preserve forwarding state for the routes of that address family across the last restart. When the session is re-established after a restart and the F bit is not set, all stale routes from the peer are immediately removed for the corresponding address family.  
  
This command allows the F bit to be set for all address families or only for non-forwarding address families (L2-VPN, route target, flow-IPv4, and flow-IPv6).  
  
Default none

Options	none, all, non-fwd
Introduced	16.0.R1
Platforms	All

### **helper-override-restart-time** *number*

Synopsis	Locally-configured override for restart time
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp graceful-restart long-lived helper-override-restart-time</a> <i>number</i>
Tree	<a href="#">helper-override-restart-time</a>
Description	This command overrides the restart time advertised by a peer (in its GR capability) with a locally-configured value. This override applies only to AFI/SAFI that were included in the GR capability of the peer. The restart-time is always zero for AFI/SAFI not included in the GR capability. This command is useful if the local router wants to force the LLGR phase to begin after a set time for all protected AFI/SAFI.
Range	0 to 4095
Introduced	16.0.R1
Platforms	All

### **helper-override-stale-time** *number*

Synopsis	Locally-configured stale routes override time
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp graceful-restart long-lived helper-override-stale-time</a> <i>number</i>
Tree	<a href="#">helper-override-stale-time</a>
Description	This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability.  This command applies to all AFI/SAFI in the advertised LLGR capability except for any AFI/SAFI with a family-specific override.
Range	0 to 16777215
Introduced	16.0.R1
Platforms	All

### **without-no-export** *boolean*

Synopsis	Advertise LLGR stale routes to non-LLGR peers
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp graceful-restart long-lived without-no-export</a> <i>boolean</i>

Tree	<a href="#">without-no-export</a>
Description	<p>When configured to <b>true</b>, LLGR stale routes can be advertised to any peer (EBGP or IBGP) that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0.</p> <p>When configured to <b>false</b>, LLGR stale routes are not advertised to any EBGP peer that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0 and a NO_EXPORT standard community is automatically added to the routes.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **restart-time** *number*

Synopsis	Restart time advertised by GR capability
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp graceful-restart</a> <a href="#">restart-time</a> <i>number</i>
Tree	<a href="#">restart-time</a>
Range	0 to 4095
Default	120
Introduced	16.0.R1
Platforms	All

### **stale-routes-time** *number*

Synopsis	Maximum time to maintain routes after graceful restart
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp graceful-restart</a> <a href="#">stale-routes-time</a> <i>number</i>
Tree	<a href="#">stale-routes-time</a>
Range	1 to 3600
Default	360
Introduced	16.0.R1
Platforms	All

### **group** [[group-name](#)] *string*

Synopsis	Enter the <b>group</b> list instance
----------	--------------------------------------

Context	<b>configure service vprn string bgp group string</b>
Tree	<b>group</b>
Introduced	16.0.R1
Platforms	All

### **[group-name] string**

Synopsis	BGP peer group name
Context	<b>configure service vprn string bgp group string</b>
Tree	<b>group</b>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **admin-state keyword**

Synopsis	Administrative state of the BGP group
Context	<b>configure service vprn string bgp group string admin-state keyword</b>
Tree	<b>admin-state</b>
Default	enable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **advertise-inactive boolean**

Synopsis	Advertise an inactive BGP route to peers
Context	<b>configure service vprn string bgp group string advertise-inactive boolean</b>
Tree	<b>advertise-inactive</b>
Description	<p>When configured to <b>true</b>, this command allows an inactive BGP route to be advertised, even though it is not the most preferred route. The effect of the command on advertised unlabeled, labeled, and multicast IPv4 and IPv6 routes depends on several factors.</p> <ul style="list-style-type: none"> <li>• If the active route for the IP prefix is a BGP route, that route is advertised.</li> </ul>

- If the active route is a non-BGP route and there are valid inactive BGP routes to the same destination, the best valid inactive route is advertised unless the active non-BGP route is matched and accepted by an export policy applied to the session.
- If the active route is a non-BGP route and there are no valid BGP routes to the same destination, no route is advertised unless the active non-BGP route is matched and accepted by an export policy applied to the session.

When unconfigured, the command inherits the value of the global-level setting (**true** or **false**). The command cannot be explicitly configured to **false**.

When this command inherits a value of **false**, the advertisement of inactive BGP routes to other BGP peers is disabled.

Introduced	16.0.R1
Platforms	All

### advertise-ipv6-next-hops

Synopsis	Enable the <b>advertise-ipv6-next-hops</b> context
Context	<b>configure service vprn string bgp group string advertise-ipv6-next-hops</b>
Tree	<a href="#">advertise-ipv6-next-hops</a>
Introduced	19.5.R1
Platforms	All

### ipv4 *boolean*

Synopsis	Enable IPv4 routes to be advertised
Context	<b>configure service vprn string bgp group string advertise-ipv6-next-hops ipv4 boolean</b>
Tree	<a href="#">ipv4</a>
Default	false
Introduced	19.5.R1
Platforms	All

### aggregator-id-zero *boolean*

Synopsis	Set router ID in the BGP AGGREGATOR attribute to zero
Context	<b>configure service vprn string bgp group string aggregator-id-zero boolean</b>
Tree	<a href="#">aggregator-id-zero</a>
Introduced	16.0.R1
Platforms	All

### **as-override** *boolean*

Synopsis	Replace the peer's ASN with the local ASN in AS Path
Context	<b>configure</b> <i>service vprn string</i> <i>bgp group string</i> <b>as-override</b> <i>boolean</i>
Tree	<a href="#">as-override</a>
Description	<p>When configured to <b>true</b>, the advertising router's local AS replaces all occurrences of the peer AS in the AS_PATH attribute.</p> <p>This command should be used with caution, as it breaks BGP's loop detection mechanism.</p> <p>When configured to <b>false</b>, no AS override is performed.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **asn-4-byte** *boolean*

Synopsis	Advertise the use of 4-byte ASNs
Context	<b>configure</b> <i>service vprn string</i> <i>bgp group string</i> <b>asn-4-byte</b> <i>boolean</i>
Tree	<a href="#">asn-4-byte</a>
Description	<p>When this command inherits a value of <b>true</b>, the use of 4-byte ASNs is supported.</p> <p>When unconfigured, the command inherits the value of the global-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>true</b>.</p> <p>When configured to <b>false</b>, this command disables the use of 4-byte ASNs.</p>
Introduced	16.0.R1
Platforms	All

### **authentication-key** *string*

Synopsis	BGP authentication key for peers in the group
Context	<b>configure</b> <i>service vprn string</i> <i>bgp group string</i> <b>authentication-key</b> <i>string</i>
Tree	<a href="#">authentication-key</a>
Description	This command configures the authentication key that must be configured on both peers. The stored format of the authentication key is based on the <b>configure system security hash-control management-interface md-cli hash-algorithm</b> setting.
String Length	1 to 370
Introduced	16.0.R1

Platforms All

### **authentication-keychain** *reference*

Synopsis TCP authentication keychain for the session

Context **configure** [service vpn](#) *string* [bgp group](#) *string* [authentication-keychain](#) *reference*

Tree [authentication-keychain](#)

Description This command associates the keychain to be used to authenticate the BGP session. The keychain allows the rollover of authentication keys during the lifetime of a session.

Reference **configure** [system security keychains keychain](#) *string*

Introduced 16.0.R3

Platforms All

### **bfd-liveness** *boolean*

Synopsis Enable BFD

Context **configure** [service vpn](#) *string* [bgp group](#) *string* [bfd-liveness](#) *boolean*

Tree [bfd-liveness](#)

Description When configured to **true**, BFD is enabled on a given protocol interface where the state of the protocol interface is tied to the state of the BFD session between the local node and the remote node.

When unconfigured, the command inherits the value of the global-level setting (**true** or **false**). The command cannot be explicitly configured to **false**.

When this command inherits a value of **false**, BFD is removed from the associated protocol adjacency.

Introduced 16.0.R1

Platforms All

### **capability-negotiation** *boolean*

Synopsis Enable capability negotiation

Context **configure** [service vpn](#) *string* [bgp group](#) *string* [capability-negotiation](#) *boolean*

Tree [capability-negotiation](#)

Description When configured to **true**, this command enables the exchange of capabilities.

When configured to **false** and the peering is flapped, new capabilities are not negotiated and strictly IPv4 exchanges are supported with the peer.

Default true

Introduced 16.0.R1  
Platforms All

### **client-reflect** *boolean*

Synopsis Allow cluster RR to advertise routes to its clients  
Context **configure** [service vprn](#) *string* [bgp group](#) *string* **client-reflect** *boolean*  
Tree [client-reflect](#)  
Description When unconfigured, this command inherits the value of the global-level setting (**true** or **false**). The command cannot be explicitly configured to **true**.  
When the command inherits a value of **true**, client reflection of routes is enabled.  
When configured to **false**, this command disables client reflection of routes.  
Introduced 16.0.R1  
Platforms All

### **cluster**

Synopsis Enter the **cluster** context  
Context **configure** [service vprn](#) *string* [bgp group](#) *string* **cluster**

Introduced 16.0.R1  
Platforms All

### **connect-retry** *number*

Synopsis BGP connect retry timer value  
Context **configure** [service vprn](#) *string* [bgp group](#) *string* **connect-retry** *number*  
Tree [connect-retry](#)

Range	1 to 65535
Introduced	16.0.R1
Platforms	All

## damp-peer-oscillations

Synopsis	Enable the <b>damp-peer-oscillations</b> context
Context	<b>configure</b> <a href="#">service vprn string bgp group string damp-peer-oscillations</a>
Tree	<a href="#">damp-peer-oscillations</a>
Description	Commands in this context specify how long a BGP peer session remains in the idle state after an error causes the session to reset. In the idle state, BGP does not initiate or respond to attempts to establish a new session. Repeated errors that occur a short time after each session reset cause longer and longer hold times in the idle state.  When unconfigured, command settings are inherited from the global-level configuration.
Introduced	16.0.R1
Platforms	All

## error-interval *number*

Synopsis	Time after a reset that the session must be error-free
Context	<b>configure</b> <a href="#">service vprn string bgp group string damp-peer-oscillations error-interval number</a>
Tree	<a href="#">error-interval</a>
Description	This command sets the interval of time after a reset, during which the session must be error-free in order to reset the penalty counter and return the idle hold time to the initial wait time.
Range	0 to 2048
Default	30
Introduced	16.0.R1
Platforms	All

## idle-hold-time

Synopsis	Enter the <b>idle-hold-time</b> context
Context	<b>configure</b> <a href="#">service vprn string bgp group string damp-peer-oscillations idle-hold-time</a>
Tree	<a href="#">idle-hold-time</a>
Introduced	16.0.R1

Platforms All

### **initial-wait** *number*

Synopsis Time session remains in idle state after stabilization

Context **configure** **service vprn** *string* **bgp group** *string* **damp-peer-oscillations** **idle-hold-time**  
**initial-wait** *number*

Tree **initial-wait**

Range 0 to 2048

Default 0

Introduced 16.0.R1

Platforms All

### **max-wait** *number*

Synopsis Maximum session idle time after repeated instability

Context **configure** **service vprn** *string* **bgp group** *string* **damp-peer-oscillations** **idle-hold-time**  
**max-wait** *number*

Tree **max-wait**

Range 1 to 2048

Default 60

Introduced 16.0.R1

Platforms All

### **second-wait** *number*

Synopsis Time that doubles after each repeated session failure

Context **configure** **service vprn** *string* **bgp group** *string* **damp-peer-oscillations** **idle-hold-time**  
**second-wait** *number*

Tree **second-wait**

Description This command defines the hold time that doubles after each repeated session failure that occurs in a short span of time.

Range 1 to 2048

Default 5

Introduced 16.0.R1

Platforms All

### **damping** *boolean*

Synopsis	Use BGP route damping to reduce route flap
Context	<b>configure</b> <i>service vprn string bgp group string damping boolean</i>
Tree	<a href="#">damping</a>
Introduced	16.0.R1
Platforms	All

### **default-label-preference**

Synopsis	Enter the <b>default-label-preference</b> context
Context	<b>configure</b> <i>service vprn string bgp group string default-label-preference</i>
Tree	<a href="#">default-label-preference</a>
Introduced	19.5.R1
Platforms	All

### **ebgp** *number*

Synopsis	Default preference for EBGp
Context	<b>configure</b> <i>service vprn string bgp group string default-label-preference ebgp number</i>
Tree	<a href="#">ebgp</a>
Range	0 to 255
Introduced	19.5.R1
Platforms	All

### **ibgp** *number*

Synopsis	Default preference for IBGP
Context	<b>configure</b> <i>service vprn string bgp group string default-label-preference ibgp number</i>
Tree	<a href="#">ibgp</a>
Range	0 to 255
Introduced	19.5.R1
Platforms	All

## default-preference

Synopsis	Enter the <b>default-preference</b> context

Tree	<a href="#">ebgp</a>
Range	0 to 255
Introduced	19.5.R1
Platforms	All

## ibgp number

Synopsis	Default preference for IBGP
Context	<b>configure service vprn string bgp group string default-preference ibgp number</b>
Tree	<a href="#">ibgp</a>
Range	0 to 255
Introduced	19.5.R1
Platforms	All

## description string

Synopsis	Text description
Context	<b>configure service vprn string bgp group string description string</b>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

## dynamic-neighbor

Synopsis	Enter the <b>dynamic-neighbor</b> context
Context	<b>configure service vprn string bgp group string dynamic-neighbor</b>
Tree	<a href="#">dynamic-neighbor</a>
Description	Commands in this context configure dynamic BGP sessions for a peer group.
Introduced	16.0.R1
Platforms	All

## interface [[interface-name](#)] *reference*

Synopsis	Enter the <b>interface</b> list instance
Context	<b>configure service vprn string bgp group string dynamic-neighbor interface reference</b>
Tree	<a href="#">interface</a>
Description	<p>Commands in this context configure an unnumbered VPRN access IP interface for dynamic neighbors.</p> <p>If this interface connects to a network with other BGP routers, sessions with the other routers can be set up automatically without explicitly configuring them as BGP neighbors. The interface must be IPv6 enabled, but because the interface is considered unnumbered, it does not require an IPv4 address or a global-unicast IPv6 address. The sessions are set up using IPv6 link-local addresses.</p> <p>The BGP unnumbered feature supports all address families that allow IPv6 link-local BGP next-hop addresses. This includes IPv4 with the use of RFC 8950 extensions.</p> <p>When an interface is added to the list of dynamic-neighbor interfaces, an outgoing connection attempt is initiated toward any directly connected router on the interface that announces itself using an ICMPv6 router advertisement message. The session attempt is unsuccessful if the peer type is not EBGP, the reported AS number of the peer does not match one of the allowed values, or the maximum session limit of the interface would be exceeded.</p>
Introduced	22.10.R1
Platforms	All

## [\[interface-name\]](#) *reference*

Synopsis	Name of the dynamic neighbor interface
Context	<b>configure service vprn string bgp group string dynamic-neighbor interface reference</b>
Tree	<a href="#">interface</a>
Reference	<b>configure service vprn string interface string</b>
Notes	This element is part of a list key.

Introduced	22.10.R1
Platforms	All

### **allowed-peer-as** *string*

Synopsis	Allowed peer AS value or range of acceptable values
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">dynamic-neighbor interface</a> <i>reference</i> <a href="#">allowed-peer-as</a> <i>string</i>
Tree	<a href="#">allowed-peer-as</a>
Description	This command specifies a singular allowed peer AS value or a range of acceptable values in the format <i>n1..n2</i> .  All values greater than or equal to <i>n1</i> and less than or equal to <i>n2</i> are acceptable. For example, if the acceptable peer AS numbers are 65001 to 65005 (range) and 62100 (singular value), configure this command to use a value of [65001..65005 62100].
Max. Instances	32
Notes	This element is ordered by the user.
Introduced	22.10.R1
Platforms	All

### **max-sessions** *number*

Synopsis	Maximum number of dynamic sessions allowed
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">dynamic-neighbor interface</a> <i>reference</i> <a href="#">max-sessions</a> <i>number</i>
Tree	<a href="#">max-sessions</a>
Description	This command specifies the maximum number of dynamic sessions that are allowed to be set up on the interface as a result of accepting sessions from link-local addresses or initiating sessions by receiving IPv6 router advertisements.
Range	1 to 255
Default	1
Introduced	22.10.R1
Platforms	All

### **match**

Synopsis	Enter the <b>match</b> context
----------	--------------------------------

Context	<b>configure service vprn</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>dynamic-neighbor match</b>
Tree	<b>match</b>
Introduced	19.5.R1
Platforms	All

### **prefix** [**ip-prefix**] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Enter the <b>prefix</b> list instance
Context	<b>configure service vprn</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>dynamic-neighbor match prefix</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
Tree	<b>prefix</b>
Introduced	19.5.R1
Platforms	All

### **[ip-prefix]** (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Dynamic peer prefix for the group
Context	<b>configure service vprn</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>dynamic-neighbor match prefix</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
Tree	<b>prefix</b>
Notes	This element is part of a list key.
Introduced	19.5.R1
Platforms	All

### **allowed-peer-as** *string*

Synopsis	Allowed peer AS value or range of acceptable values
Context	<b>configure service vprn</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>dynamic-neighbor match prefix</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>allowed-peer-as</b> <i>string</i>
Tree	<b>allowed-peer-as</b>
Description	This command specifies a singular allowed peer AS value or a range of acceptable values in the format <i>n1..n2</i> .  All values greater than or equal to <i>n1</i> and less than or equal to <i>n2</i> are acceptable. For example, if the acceptable peer AS numbers are 65001 to 65005 (range) and 62100 (singular value), configure this command to use a value of [65001..65005 62100].
Max. Instances	32

Notes	This element is ordered by the user.
Introduced	19.5.R1
Platforms	All

### **dynamic-neighbor-limit** *number*

Synopsis	Maximum dynamic BGP sessions to accept from remote peer
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>dynamic-neighbor-limit</b> <i>number</i>
Tree	<b>dynamic-neighbor-limit</b>
Description	<p>This command configures the maximum number of dynamic BGP sessions that are accepted from remote peers associated with a specific peer group. If accepting a new dynamic session causes the group limit to be exceeded, the new session attempt is rejected and a Notification message is sent back to the remote peer.</p> <p>When unconfigured, the setting is inherited from the BGP global-level configuration.</p>
Range	1 to 8192
Introduced	16.0.R1
Platforms	All

### **ebgp-default-reject-policy**

Synopsis	Enable the <b>ebgp-default-reject-policy</b> context
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>ebgp-default-reject-policy</b>
Tree	<b>ebgp-default-reject-policy</b>
Introduced	19.5.R1
Platforms	All

### **export** *boolean*

Synopsis	Enable default reject export policy for external peers
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>ebgp-default-reject-policy</b> <b>export</b> <i>boolean</i>
Tree	<b>export</b>
Default	true
Introduced	19.5.R1
Platforms	All

## import *boolean*

Synopsis	Enable default reject import policy for external peers
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">ebgp-default-reject-policy</a> <a href="#">import</a> <i>boolean</i>
Tree	<a href="#">import</a>
Default	true
Introduced	19.5.R1
Platforms	All

## enforce-first-as *boolean*

Synopsis	Enforce the configured peer AS value in received routes
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">enforce-first-as</a> <i>boolean</i>
Tree	<a href="#">enforce-first-as</a>
Introduced	16.0.R1
Platforms	All

## error-handling

Synopsis	Enter the <b>error-handling</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">error-handling</a>
Tree	<a href="#">error-handling</a>
Introduced	16.0.R1
Platforms	All

## update-fault-tolerance *boolean*

Synopsis	Tolerate non-critical errors in UPDATE messages
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">error-handling</a> <a href="#">update-fault-tolerance</a> <i>boolean</i>
Tree	<a href="#">update-fault-tolerance</a>
Description	<p>When configured to <b>true</b>, non-critical errors are handled with treat-as-withdraw, attribute-discard, and other non-disruptive approaches that do not cause a session reset. Critical errors still trigger a session reset.</p> <p>When unconfigured, the command inherits the value of the global-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>false</b>.</p> <p>When this command inherits a value of <b>false</b>, all errors trigger a session reset.</p>

Introduced 16.0.R1  
Platforms All

### evpn-link-bandwidth

Synopsis	Advertise support for the label-IPv4 address family
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">family label-ipv4</a> <i>boolean</i>
Tree	<a href="#">label-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **mcast-ipv4** *boolean*

Synopsis	Advertise support for the MCAST-IPv4 address family
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">family mcast-ipv4</a> <i>boolean</i>
Tree	<a href="#">mcast-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **mcast-ipv6** *boolean*

Synopsis	Advertise support for the MCAST-IPv6 address family
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">family mcast-ipv6</a> <i>boolean</i>
Tree	<a href="#">mcast-ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **fast-external-failover** *boolean*

Synopsis	Drop external BGP session immediately when link fails
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">fast-external-failover</a> <i>boolean</i>

Tree	<a href="#">fast-external-failover</a>
Description	<p>When this command inherits a value of <b>true</b>, the router drops an external BGP session on a single-hop route immediately when the local interface goes down.</p> <p>When unconfigured, the command inherits the value of the global-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>true</b>.</p> <p>When configured to <b>false</b>, the BGP session remains up until the hold time expires.</p>
Introduced	16.0.R1
Platforms	All

## graceful-restart

Synopsis	Enable the <b>graceful-restart</b> context
Context	<b>configure</b> <a href="#">service vprn string bgp group string graceful-restart</a>
Tree	<a href="#">graceful-restart</a>
Introduced	16.0.R1
Platforms	All

## gr-notification *boolean*

Synopsis	Perform graceful restart procedures after NOTIFICATION
Context	<b>configure</b> <a href="#">service vprn string bgp group string graceful-restart gr-notification boolean</a>
Tree	<a href="#">gr-notification</a>
Description	<p>When configured to <b>true</b>, the Graceful Restart capability sent by the router indicates support for NOTIFICATION messages. If the peer also supports this capability, the session is restarted gracefully (while preserving forwarding) if either peer sends a NOTIFICATION message due to some type of event or error.</p> <p>When configured to <b>false</b>, NOTIFICATION messages are not supported.</p>
Default	false
Introduced	16.0.R1
Platforms	All

## long-lived

Synopsis	Enable the <b>long-lived</b> context

Synopsis Address family type for LLGR  
Context **configure** [service vprn](#) *string* [bgp group](#) *string* [graceful-restart long-lived family](#) *keyword*  
Tree [family](#)

Options	ipv4, ipv6, flow-ipv4, flow-ipv6, label-ipv4
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **advertised-stale-time** *number*

Synopsis	LLGR stale routes time for family override
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>graceful-restart long-lived family</b> <i>keyword</i> <b>advertised-stale-time</b> <i>number</i>
Tree	<b>advertised-stale-time</b>
Description	This command configures the long-lived stale routes time that is advertised by the router in its LLGR capability.  This command applies to all AFI/SAFI in the advertised LLGR capability with a family-specific override.
Range	0 to 16777215
Default	86400
Introduced	16.0.R1
Platforms	All

### **helper-override-stale-time** *number*

Synopsis	Locally-configured stale routes override time
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>graceful-restart long-lived family</b> <i>keyword</i> <b>helper-override-stale-time</b> <i>number</i>
Tree	<b>helper-override-stale-time</b>
Description	This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability. This is a family-specific override value.
Range	0 to 16777216
Default	16777216
Introduced	16.0.R1
Platforms	All

### **forwarding-bits-set** *keyword*

Synopsis	BGP LLGR forwarding-bit behavior for address family
----------	---

Context	<b>configure service vpn</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>graceful-restart long-lived forwarding-bits-set</b> <i>keyword</i>
Tree	<b>forwarding-bits-set</b>
Description	<p>This command determines the setting of the F bit in the GR and LLGR capabilities advertised by the router. When the F bit is set for an address family, it indicates that the advertising router is able to preserve forwarding state for the routes of that address family across the last restart. When the session is re-established after a restart and the F bit is not set, all stale routes from the peer are immediately removed for the corresponding address family.</p> <p>This command allows the F bit to be set for all address families or only for non-forwarding address families (L2-VPN, route target, flow-IPv4, and flow-IPv6).</p>
Default	none
Options	none, all, non-fwd
Introduced	16.0.R1
Platforms	All

### **helper-override-restart-time** *number*

Synopsis	Locally-configured override for restart time
Context	<b>configure service vpn</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>graceful-restart long-lived helper-override-restart-time</b> <i>number</i>
Tree	<b>helper-override-restart-time</b>
Description	<p>This command overrides the restart time advertised by a peer (in its GR capability) with a locally-configured value. This override applies only to AFI/SAFI that were included in the GR capability of the peer. The restart-time is always zero for AFI/SAFI not included in the GR capability. This command is useful if the local router wants to force the LLGR phase to begin after a set time for all protected AFI/SAFI.</p>
Range	0 to 4095
Introduced	16.0.R1
Platforms	All

### **helper-override-stale-time** *number*

Synopsis	Locally-configured stale routes override time
Context	<b>configure service vpn</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>graceful-restart long-lived helper-override-stale-time</b> <i>number</i>
Tree	<b>helper-override-stale-time</b>
Description	<p>This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability.</p>

This command applies to all AFI/SAFI in the advertised LLGR capability except for any AFI/SAFI with a family-specific override.

Range	0 to 16777215
Introduced	16.0.R1
Platforms	All

### **without-no-export** *boolean*

Synopsis	Advertise LLGR stale routes to non-LLGR peers
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">graceful-restart long-lived</a> <a href="#">without-no-export</a> <i>boolean</i>
Tree	<a href="#">without-no-export</a>
Description	<p>When configured to <b>true</b>, LLGR stale routes can be advertised to any peer (EBGP or IBGP) that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0.</p> <p>When configured to <b>false</b>, LLGR stale routes are not advertised to any EBGP peer that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0 and a NO_EXPORT standard community is automatically added to the routes.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **restart-time** *number*

Synopsis	Restart time advertised by GR capability
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">graceful-restart</a> <a href="#">restart-time</a> <i>number</i>
Tree	<a href="#">restart-time</a>
Range	0 to 4095
Default	300
Introduced	16.0.R1
Platforms	All

### **stale-routes-time** *number*

Synopsis	Maximum time to maintain routes after graceful restart
----------	--

Context	<b>configure service vprn</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>graceful-restart stale-routes-time</b> <i>number</i>
Tree	<b>stale-routes-time</b>
Range	1 to 3600
Default	360
Introduced	16.0.R1
Platforms	All

### **hold-time**

Synopsis	Enter the <b>hold-time</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>hold-time</b>
Tree	<b>hold-time</b>
Introduced	16.0.R1
Platforms	All

### **minimum-hold-time** *number*

Synopsis	Minimum hold time between successive messages
Context	<b>configure service vprn</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>hold-time minimum-hold-time</b> <i>number</i>
Tree	<b>minimum-hold-time</b>
Description	This command specifies the minimum hold time that is accepted for the session. If a peer proposes a hold time lower than this value, the session attempt is rejected. When unconfigured, the command value is inherited from the BGP global-level setting.
Range	0   3 to 65536
Default	0
Introduced	16.0.R1
Platforms	All

### **seconds** *number*

Synopsis	Maximum time BGP waits between successive messages
Context	<b>configure service vprn</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>hold-time seconds</b> <i>number</i>
Tree	<b>seconds</b>
Description	This command configures the maximum time BGP waits between successive messages (either keepalive or update) from its peer before closing the connection.

Although the implementation allows setting the keepalive timer at the BGP group level times separately, the configured keepalive timer is overridden by this value under the following circumstances.

- If the specified hold time is less than the configured keepalive time, the operational keepalive time is set to a third of the hold-time; the configured keepalive time is not changed.
- If the hold time is set to zero, the operational value of the keepalive time is set to zero; the configured keepalive time is not changed. The connection with the peer is up permanently and no keepalive packets are sent to the peer.

When unconfigured, the command setting is inherited from the BGP global-level configuration.

Range	0   3 to 65535
Introduced	16.0.R1
Platforms	All

## import

Synopsis	Enable the <b>import</b> context
Context	<b>configure service vprn string bgp group string import</b>
Tree	<b>import</b>
Introduced	16.0.R1
Platforms	All

## policy (*policy-expr-string* | *string*)

Synopsis	Route policy name
Context	<b>configure service vprn string bgp group string import policy (<i>policy-expr-string</i>   <i>string</i>)</b>
Tree	<b>policy</b>
String Length	1 to 255
Max. Instances	15
Min. Instances	1
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **initial-send-delay-zero** *boolean*

Synopsis	Send BGP updates as soon as the session comes up
Context	<b>configure</b> <i>service vprn string bgp group string initial-send-delay-zero boolean</i>
Tree	<i>initial-send-delay-zero</i>
Description	<p>When configured to <b>true</b>, BGP updates are sent as soon as the session comes up.</p> <p>When unconfigured, the command inherits the value of the global-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>false</b>.</p> <p>When this command inherits a value of <b>false</b>, BGP waits to send UPDATE messages for the minimum route advertisement time after a session is established.</p>
Introduced	16.0.R1
Platforms	All

### **keepalive** *number*

Synopsis	Time after which the BGP KEEPALIVE message is sent
Context	<b>configure</b> <i>service vprn string bgp group string keepalive number</i>
Tree	<i>keepalive</i>
Description	<p>This command configures the BGP keepalive timer value. A keepalive message is sent every time this timer expires.</p> <p>This value is generally one-third of the hold time interval configured in the <b>hold-time seconds</b> context. Although the implementation allows this keepalive value and the hold time interval to be independently set, under the following circumstances, the configured keepalive value is overridden by the hold time interval value:</p> <ul style="list-style-type: none"> <li>• If the specified keepalive value is greater than the configured hold time, the specified keepalive value is ignored and the timer value is set to one third of the current hold time value.</li> <li>• If the specified hold time interval is less than the configured keepalive value, the keepalive value is reset to one third of the specified hold time interval.</li> <li>• If the hold time interval is set to zero, the configured keepalive value is ignored. This means that the connection with the peer is up permanently and no keepalive packets are sent to the peer.</li> </ul> <p>When unconfigured, the command inherits the BGP global-level setting.</p>
Range	0 to 21845
Introduced	16.0.R1
Platforms	All

## label-preference *number*

Synopsis	Route preference for routes from labeled-unicast peers
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">bgp group string</a> <a href="#">label-preference number</a>
Tree	<a href="#">label-preference</a>
Range	1 to 255
Introduced	16.0.R1
Platforms	All

## link-bandwidth

Synopsis	Enter the <b>link-bandwidth</b> context
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">bgp group string</a> <a href="#">link-bandwidth</a>
Tree	<a href="#">link-bandwidth</a>
Description	Commands in this context specify the handling of the Link Bandwidth Extended Community attached to specific BGP routes.  When all used multipaths of an IP prefix correspond to BGP routes with a Link Bandwidth EC, the datapath is programmed to use weighted ECMP across the BGP next hops in proportion to the bandwidth values.
Introduced	16.0.R3
Platforms	All

## accept-from-ebgp

Synopsis	Enter the <b>accept-from-ebgp</b> context
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">bgp group string</a> <a href="#">link-bandwidth accept-from-ebgp</a>
Tree	<a href="#">accept-from-ebgp</a>
Introduced	16.0.R4
Platforms	All

## ipv4 *boolean*

Synopsis	Support Link Bandwidth EC in IPv4 routes
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">bgp group string</a> <a href="#">link-bandwidth accept-from-ebgp</a> <a href="#">ipv4 boolean</a>
Tree	<a href="#">ipv4</a>
Default	false

Introduced 16.0.R4  
Platforms All

### **ipv6** *boolean*

Synopsis Support Link Bandwidth EC in IPv6 routes

Synopsis	Support Link Bandwidth EC in IPv6 routes
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>link-bandwidth send-to-ebgp</b> <b>ipv6</b> <i>boolean</i>
Tree	<b>ipv6</b>
Default	false
Introduced	16.0.R4
Platforms	All

### **label-ipv4** *boolean*

Synopsis	Support Link Bandwidth EC in label-IPv4 routes
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>link-bandwidth send-to-ebgp</b> <b>label-ipv4</b> <i>boolean</i>
Tree	<b>label-ipv4</b>
Default	false
Introduced	16.0.R4
Platforms	All

### **local-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone* | *interface-name*)

Synopsis	Local IP address used when communicating with BGP peers
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>local-address</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i>   <i>interface-name</i> )
Tree	<b>local-address</b>
String Length	1 to 32

Introduced	16.0.R1
Platforms	All

### **local-as**

Synopsis	Enter the <b>local-as</b> context
Context	<b>configure service vprn string bgp group string local-as</b>
Tree	<a href="#">local-as</a>
Introduced	16.0.R1
Platforms	All

### **as-number number**

Synopsis	Local (or virtual) BGP AS number
Context	<b>configure service vprn string bgp group string local-as as-number number</b>
Tree	<a href="#">as-number</a>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **prepend-global-as boolean**

Synopsis	Prepend global ASN when advertising routes to BGP peer
Context	<b>configure service vprn string bgp group string local-as prepend-global-as boolean</b>
Tree	<a href="#">prepend-global-as</a>
Description	When configured to <b>true</b> , the global ASN is added to the AS_PATH attribute in outbound routes sent to the peer. When configured to <b>false</b> , the global ASN is not included in the AS_PATH attribute.
Default	true
Introduced	16.0.R1
Platforms	All

### **private boolean**

Synopsis	Hide the local ASN in sent paths learned from peering
----------	---

Context	<b>configure service vprn</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>local-as private</b> <i>boolean</i>
Tree	<b>private</b>
Description	When configured to <b>true</b> , the local AS number is only advertised to peers that use the local ASN for establishing BGP peering sessions. When configured to <b>false</b> , the local ASN is advertised to all peers, including those that can use the global ASN for establishing BGP peering sessions.
Default	false
Introduced	16.0.R1
Platforms	All

### **local-preference** *number*

Synopsis	Default local preference if not in incoming routes
Context	<b>configure service vprn</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>local-preference</b> <i>number</i>
Tree	<b>local-preference</b>
Range	0 to 4294967295
Introduced	16.0.R1
Platforms	All

### **loop-detect** *keyword*

Synopsis	Strategy for loop detection in the AS path
Context	<b>configure service vprn</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>loop-detect</b> <i>keyword</i>
Tree	<b>loop-detect</b>
Options	drop-peer, ignore-loop, off, discard-route
Introduced	16.0.R1
Platforms	All

### **loop-detect-threshold** *number*

Synopsis	Threshold for the global ASN in a received AS path
Context	<b>configure service vprn</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>loop-detect-threshold</b> <i>number</i>
Tree	<b>loop-detect-threshold</b>
Range	0 to 15
Introduced	16.0.R6

Platforms All

### **med-out** (*number* | *keyword*)

Synopsis Default MED attribute value to advertise to peers  
Context **configure** [service vprn](#) *string* [bgp group](#) *string* **med-out** (*number* | *keyword*)  
Tree [med-out](#)  
Max. Range 0 to 4294967295  
Options igp-cost  
Introduced 16.0.R1  
Platforms All

### **min-route-advertisement** *number*

Synopsis Minimum time before a prefix can be advertised to peer  
Context **configure** [service vprn](#) *string* [bgp group](#) *string* **min-route-advertisement** *number*  
Tree [min-route-advertisement](#)  
Range 1 to 255  
Introduced 16.0.R1  
Platforms All

### **monitor**

Synopsis Enable the **monitor** context  
Context **configure** [service vprn](#) *string* [bgp group](#) *string* **monitor**  
Tree [monitor](#)  
Introduced 16.0.R1  
Platforms All

### **admin-state** *keyword*

Synopsis Administrative state of BMP monitoring  
Context **configure** [service vprn](#) *string* [bgp group](#) *string* **monitor** **admin-state** *keyword*  
Tree [admin-state](#)  
Default disable

Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **all-stations** *boolean*

Synopsis	Send BMP messages to all configured stations
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">bgp group string</a> <a href="#">monitor all-stations boolean</a>
Tree	<a href="#">all-stations</a>
Description	When configured to <b>true</b> , this command specifies that BMP messages are to be sent to all configured BMP monitoring stations.  When configured to <b>false</b> , the command is not used to indicate the stations which can receive BMP messages. The <b>station</b> command (at the same context level) identifies the BMP stations for which BMP messages are to be sent.
Default	false
Introduced	16.0.R1
Platforms	All

### **route-monitoring**

Synopsis	Enter the <b>route-monitoring</b> context
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">bgp group string</a> <a href="#">monitor route-monitoring</a>
Tree	<a href="#">route-monitoring</a>
Introduced	16.0.R1
Platforms	All

### **post-policy** *boolean*

Synopsis	Allow post-policy route-monitoring messages to be sent
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">bgp group string</a> <a href="#">monitor route-monitoring post-policy boolean</a>
Tree	<a href="#">post-policy</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **pre-policy** *boolean*

Synopsis	Allow pre-policy route-monitoring messages to be sent
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">monitor route-monitoring pre-policy</a> <i>boolean</i>
Tree	<a href="#">pre-policy</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **station** [[station-name](#)] *reference*

Synopsis	Add a list entry for <b>station</b>
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">monitor station</a> <i>reference</i>
Tree	<a href="#">station</a>
Max. Instances	8
Introduced	16.0.R1
Platforms	All

### [[station-name](#)] *reference*

Synopsis	BMP monitoring station
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">monitor station</a> <i>reference</i>
Tree	<a href="#">station</a>
Reference	<b>configure</b> <a href="#">bmp station</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **multihop** *number*

Synopsis	TTL in IP packet headers for EBGp peers multi-hops away
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">multihop</a> <i>number</i>
Tree	<a href="#">multihop</a>
Range	1 to 255

Introduced 16.0.R1  
Platforms All

### **multipath-eligible** *boolean*

Synopsis Allow routes from group peers in multipath eligibility  
Context **configure** [service vprn](#) *string* [bgp group](#) *string* [multipath-eligible](#) *boolean*  
Tree [multipath-eligible](#)  
Default false  
Introduced 19.5.R1  
Platforms All

### **next-hop-self** *boolean*

Synopsis Advertise routes with local address as next-hop address  
Context **configure** [service vprn](#) *string* [bgp group](#) *string* [next-hop-self](#) *boolean*  
Tree [next-hop-self](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **origin-validation**

Synopsis Enter the **origin-validation** context  
Context **configure** [service vprn](#) *string* [bgp group](#) *string* [origin-validation](#)  
Tree [origin-validation](#)  
Introduced 19.7.R1  
Platforms All

### **ipv4** *boolean*

Synopsis Enable/disable family type ipv4.  
Context **configure** [service vprn](#) *string* [bgp group](#) *string* [origin-validation](#) [ipv4](#) *boolean*  
Tree [ipv4](#)  
Default false

Introduced 19.7.R1  
Platforms All

### **ipv6** *boolean*

Synopsis Enable support for unlabeled unicast IPv6 routes  
Context **configure** [service vprn](#) *string* [bgp group](#) *string* [origin-validation](#) [ipv6](#) *boolean*  
Tree [ipv6](#)  
Default false  
Introduced 19.7.R1  
Platforms All

### **label-ipv4** *boolean*

Synopsis Enable support for labeled-unicast IPv4 routes  
Context **configure** [service vprn](#) *string* [bgp group](#) *string* [origin-validation](#) [label-ipv4](#) *boolean*  
Tree [label-ipv4](#)  
Default false  
Introduced 19.7.R1  
Platforms All

### **passive** *boolean*

Synopsis Enable passive mode for BGP communication  
Context **configure** [service vprn](#) *string* [bgp group](#) *string* [passive](#) *boolean*  
Tree [passive](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **path-mtu-discovery** *boolean*

Synopsis Enable Path MTU Discovery  
Context **configure** [service vprn](#) *string* [bgp group](#) *string* [path-mtu-discovery](#) *boolean*  
Tree [path-mtu-discovery](#)

Description	<p>When configured to <b>true</b>, Path MTU Discovery (PMTUD) is enabled for the associated TCP connections.</p> <p>When set to true, PMTUD is activated toward an IPv4 BGP neighbor and the Don't Fragment (DF) bit is set in the IP header of all IPv4 packets sent to the peer. If any device along the path toward the peer cannot forward the packet because the IP MTU of the interface is smaller than the IP packet size, this device drops the packet and sends an ICMP or ICMPv6 error message encoding the interface MTU. When the router receives the ICMP or ICMPv6 message, it lowers the TCP maximum segment size limit from the previous value so that the IP MTU constraint can be accommodated.</p> <p>When PMTUD is configured to <b>false</b> and there is no TCP MSS configuration that can be associated with a BGP neighbor (in either the BGP configuration or the first hop IP interface configuration), the router advertises a value of only 1024 bytes as the TCP MSS option value, limiting received TCP segments to that size.</p>
Introduced	16.0.R1
Platforms	All

### **peer-as** *number*

Synopsis	Peer AS number
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>peer-as</b> <i>number</i>
Tree	<a href="#">peer-as</a>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **peer-ip-tracking** *boolean*

Synopsis	Enable BGP peer tracking
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>peer-ip-tracking</b> <i>boolean</i>
Tree	<a href="#">peer-ip-tracking</a>
Description	<p>When configured to <b>true</b>, this command enables BGP peer tracking.</p> <p>Peer tracking should be used with caution. Peer tracking can tear a session down even if the loss of connectivity turns out to be short-lived (for example, while the IGP protocol is re-converging). Next-hop tracking, which is always enabled, handles temporary connectivity issues more effectively.</p> <p>When unconfigured, the command inherits the value of the global-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>false</b>.</p> <p>When this command inherits a value of <b>false</b>, peer tracking is disabled.</p>
Introduced	16.0.R1

Platforms All

### **preference** *number*

Synopsis Route preference for routes learned from all peers  
Context **configure** [service vprn](#) *string* [bgp group](#) *string* [preference](#) *number*  
Tree [preference](#)  
Range 1 to 255  
Introduced 16.0.R1  
Platforms All

### **prefix-limit** [[family](#)] *keyword*

Synopsis Enter the **prefix-limit** list instance  
Context **configure** [service vprn](#) *string* [bgp group](#) *string* [prefix-limit](#) *keyword*  
Tree [prefix-limit](#)  
Introduced 16.0.R1  
Platforms All

### **[family]** *keyword*

Synopsis Address family to which the limit applies  
Context **configure** [service vprn](#) *string* [bgp group](#) *string* [prefix-limit](#) *keyword*  
Tree [prefix-limit](#)  
Options ipv4, ipv6, mcast-ipv4, flow-ipv4, flow-ipv6, mcast-ipv6, label-ipv4  
Notes This element is part of a list key.  
Introduced 16.0.R1  
Platforms All

### **idle-timeout** *number*

Synopsis Time BGP peering remains idle before reconnecting  
Context **configure** [service vprn](#) *string* [bgp group](#) *string* [prefix-limit](#) *keyword* [idle-timeout](#) *number*  
Tree [idle-timeout](#)  
Range 1 to 1024

Introduced 16.0.R1  
Platforms All

### **log-only** *boolean*

Synopsis Send warning message at threshold instead of take-down  
Context **configure** *service vprn string bgp group string prefix-limit keyword log-only boolean*  
Tree [log-only](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **maximum** *number*

Synopsis Maximum number of routes to be learned from a peer  
Context **configure** *service vprn string bgp group string prefix-limit keyword maximum number*  
Tree [maximum](#)  
Description This command configures the maximum number of BGP routes that can be received from a peer before administrative action is taken.  
Range 1 to 4294967295  
Notes This element is mandatory.  
Introduced 16.0.R2  
Platforms All

### **post-import** *boolean*

Synopsis Apply limit only to routes accepted by import policies  
Context **configure** *service vprn string bgp group string prefix-limit keyword post-import boolean*  
Tree [post-import](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **threshold** *number*

Synopsis	Percentage threshold that triggers a warning message
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">prefix-limit</a> <i>keyword</i> <b>threshold</b> <i>number</i>
Tree	<a href="#">threshold</a>
Range	1 to 100
Default	90
Introduced	16.0.R1
Platforms	All

### **remove-private**

Synopsis	Enable the <b>remove-private</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <b>remove-private</b>
Tree	<a href="#">remove-private</a>
Introduced	16.0.R1
Platforms	All

### **limited** *boolean*

Synopsis	Remove private ASNs up to first public ASN encountered
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <b>remove-private</b> <a href="#">limited</a> <i>boolean</i>
Tree	<a href="#">limited</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **replace** *boolean*

Synopsis	Replace private ASN with global ASN before advertising
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <b>remove-private</b> <a href="#">replace</a> <i>boolean</i>
Tree	<a href="#">replace</a>
Default	false
Introduced	19.10.R1
Platforms	All

**skip-peer-as** *boolean*

Synopsis	Keep private ASN if it is the same as the BGP peer ASN
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">bgp group string</a> <a href="#">remove-private skip-peer-as boolean</a>
Tree	<a href="#">skip-peer-as</a>
Default	false
Introduced	16.0.R1
Platforms	All

**send-communities**

Synopsis	Enter the <b>send-communities</b> context
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">bgp group string</a> <a href="#">send-communities</a>
Tree	<a href="#">send-communities</a>
Introduced	16.0.R1
Platforms	All

**extended** *boolean*

Synopsis	Advertise the Extended Communities attribute to peers
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">bgp group string</a> <a href="#">send-communities extended boolean</a>
Tree	<a href="#">extended</a>
Description	<p>When unconfigured, this command inherits the value of the global-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>true</b>.</p> <p>When this command inherits a value of <b>true</b>, BGP extended communities are sent to peers in the Extended Communities attribute.</p> <p>When configured to <b>false</b>, all extended communities are removed from all routes advertised to BGP peers.</p>
Introduced	16.0.R1
Platforms	All

**large** *boolean*

Synopsis	Advertise the Large Communities attribute to peers
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">bgp group string</a> <a href="#">send-communities large boolean</a>
Tree	<a href="#">large</a>

Description	<p>When unconfigured, this command inherits the value of the global-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>true</b>.</p> <p>When this command inherits a value of <b>true</b>, BGP large communities are sent to peers in the Large Communities attribute.</p> <p>When configured to <b>false</b>, all large communities are removed from all routes advertised to BGP peers.</p>
Introduced	16.0.R1
Platforms	All

### **standard** *boolean*

Synopsis	Advertise the Communities attribute to peers
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">send-communities</a> <b>standard</b> <i>boolean</i>
Tree	<a href="#">standard</a>
Description	<p>When unconfigured, this command inherits the value of the global-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>true</b>.</p> <p>When this command inherits a value of <b>true</b>, BGP standard communities are sent to peers in the Communities attribute.</p> <p>When configured to <b>false</b>, all standard communities are removed from all routes advertised to BGP peers.</p>
Introduced	16.0.R1
Platforms	All

### **send-default**

Synopsis	Enable the <b>send-default</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">send-default</a>
Tree	<a href="#">send-default</a>
Introduced	19.7.R1
Platforms	All

### **export-policy** *reference*

Synopsis	Export policy name
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">send-default</a> <a href="#">export-policy</a> <i>reference</i>
Tree	<a href="#">export-policy</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>

Introduced 19.7.R1  
Platforms All

### **ipv4** *boolean*

Synopsis Generate and advertise an IPv4 default route (0/0)  
Context **configure service vprn** *string* **bgp group** *string* **send-default ipv4** *boolean*  
Tree [ipv4](#)  
Default false  
Introduced 19.7.R1  
Platforms All

### **ipv6** *boolean*

Synopsis Generate and advertise an IPv6 default route (::/0)  
Context **configure service vprn** *string* **bgp group** *string* **send-default ipv6** *boolean*  
Tree [ipv6](#)  
Default false  
Introduced 19.7.R1  
Platforms All

### **split-horizon** *boolean*

Synopsis Prevent routes being reflected back to best-route peer  
Context **configure service vprn** *string* **bgp group** *string* **split-horizon** *boolean*  
Tree [split-horizon](#)  
Description When configured to **true**, this command enables the use of split-horizon.  
This command prevents routes from being reflected back to a peer that sends the best route. It applies to routes of all address families and to any type of sending peer; confed-EBGP, EBGP and IBGP.  
Enabling the split-horizon functionality may have a detrimental impact on peer and route scaling and should only be used when absolutely necessary.  
When unconfigured, the command inherits the value of the global-level setting (**true** or **false**). The command cannot be explicitly configured to **false**.  
When this command inherits a value of **false**, the use of split-horizon is disabled.  
Introduced 16.0.R1

Platforms All

### **static-group** *boolean*

Synopsis Use group for static peers  
Context **configure** [service vprn](#) *string* [bgp group](#) *string* **static-group** *boolean*  
Tree [static-group](#)  
Default true  
Introduced 16.0.R1  
Platforms All

### **tcp-mss** (*number* | *keyword*)

Synopsis TCP maximum segment size override  
Context **configure** [service vprn](#) *string* [bgp group](#) *string* **tcp-mss** (*number* | *keyword*)  
Tree [tcp-mss](#)  
Description This command configures an override for the TCP maximum segment size to use with a specific peer or set of peers (depending on the scope of the command).  
The configured value controls two properties of the TCP connection as follows:  
TCP MSS option - The router advertises the TCP MSS option value in the TCP SYN packet it sends as part of the 3-way handshake. The advertised value may be lower than the configured value, depending on the IP MTU of the first hop IP interface. The peers must abide by this value when sending TCP segments to the local router.  
TCP maximum segment size - The actual transmitted size may be lower than the configured value, depending on the TCP MSS option value signaled by the peers, the effect of path MTU discovery, or other factors.  
Range 384 to 9746  
Options ip-stack  
Introduced 21.2.R1  
Platforms All

### **third-party-nexthop** *boolean*

Synopsis Apply third-party next-hop processing to EBGp peers  
Context **configure** [service vprn](#) *string* [bgp group](#) *string* **third-party-nexthop** *boolean*  
Tree [third-party-nexthop](#)

Description	<p>When configured to <b>true</b>, this command enables the router to send third-party next hop to EBGP peers in the same subnet as the source peer. The address family of the transport must match the address family of the route.</p> <p>When an IPv4 or IPv6 route is received from one EBGP peer and advertised to another EBGP peer in the same IP subnet, the BGP next hop is left unchanged.</p> <p>When unconfigured, the command inherits the value of the global-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>false</b>.</p> <p>When this command inherits a value of <b>false</b>, third-party next-hop processing is disabled and the next hop carries the IP address of the interface used to establish the TCP connection to the peer.</p>
Introduced	16.0.R1
Platforms	All

### **t**tl-security *number*

Synopsis	Minimum TTL value for an incoming BGP packet
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <b>t</b> tl-security <i>number</i>
Tree	<a href="#">ttl-security</a>
Description	This command configures the minimum TTL value that BGP will accept from an incoming packet. A packet with a TTL value less than the minimum configured TTL value is discarded.
Range	1 to 255
Introduced	16.0.R1
Platforms	All

### **t**ype *keyword*

Synopsis	BGP peer type
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <b>t</b> ype <i>keyword</i>
Tree	<a href="#">type</a>
Default	no-type
Options	no-type, internal, external
Introduced	16.0.R1
Platforms	All

### **h**old-time

Synopsis	Enter the <b>hold-time</b> context
----------	------------------------------------

Context	<b>configure service vprn string bgp hold-time</b>
Tree	<b>hold-time</b>
Introduced	16.0.R1
Platforms	All

### **minimum-hold-time** *number*

Synopsis	Minimum hold time between successive messages
Context	<b>configure service vprn string bgp hold-time minimum-hold-time number</b>
Tree	<b>minimum-hold-time</b>
Description	This command specifies the minimum hold time that is accepted for the session. If a peer proposes a hold time lower than this value, the session attempt is rejected.
Range	0   3 to 65535
Default	0
Introduced	16.0.R1
Platforms	All

### **seconds** *number*

Synopsis	Maximum time BGP waits between successive messages
Context	<b>configure service vprn string bgp hold-time seconds number</b>
Tree	<b>seconds</b>
Description	<p>This command configures the maximum time BGP waits between successive messages (either keepalive or update) from its peer before closing the connection.</p> <p>Although the implementation allows setting the keepalive timer at the BGP global level times separately, the configured keepalive timer is overridden by this value under the following circumstances.</p> <ul style="list-style-type: none"> <li>• If the specified hold time is less than the configured keepalive time, the operational keepalive time is set to a third of the hold-time; the configured keepalive time is not changed.</li> <li>• If the hold time is set to zero, the operational value of the keepalive time is set to zero; the configured keepalive time is not changed. The connection with the peer is up permanently and no keepalive packets are sent to the peer.</li> </ul>
Range	0   3 to 65535
Default	90
Introduced	16.0.R1
Platforms	All

### **ibgp-multipath** *boolean*

Synopsis	Enable IBGP multipath load balancing
Context	<b>configure</b> <i>service vprn string bgp ibgp-multipath boolean</i>
Tree	<a href="#">ibgp-multipath</a>
Description	When configured to <b>true</b> , this command enables IBGP multipath load balancing when adding BGP routes to the route table if the route resolving the BGP next hop offers multiple next hops.  When configured to <b>false</b> , this command disables IBGP multipath load balancing.
Default	false
Introduced	16.0.R1
Platforms	All

### **import**

Synopsis	Enable the <b>import</b> context
Context	<b>configure</b> <i>service vprn string bgp import</i>
Tree	<a href="#">import</a>
Introduced	16.0.R1
Platforms	All

### **policy** (*policy-expr-string | string*)

Synopsis	Import policy name
Context	<b>configure</b> <i>service vprn string bgp import policy (policy-expr-string   string)</i>
Tree	<a href="#">policy</a>
String Length	1 to 255
Max. Instances	15
Min. Instances	1
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **initial-send-delay-zero** *boolean*

Synopsis	Send BGP updates as soon as session comes up
Context	<b>configure service vprn</b> <i>string</i> <b>bgp initial-send-delay-zero</b> <i>boolean</i>
Tree	<a href="#">initial-send-delay-zero</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **keepalive** *number*

Synopsis	Time after which the BGP KEEPALIVE message is sent
Context	<b>configure service vprn</b> <i>string</i> <b>bgp keepalive</b> <i>number</i>
Tree	<a href="#">keepalive</a>
Range	0 to 21845
Default	30
Introduced	16.0.R1
Platforms	All

### **label-preference** *number*

Synopsis	Route preference for routes from labeled-unicast peers
Context	<b>configure service vprn</b> <i>string</i> <b>bgp label-preference</b> <i>number</i>
Tree	<a href="#">label-preference</a>
Range	1 to 255
Default	170
Introduced	16.0.R1
Platforms	All

### **local-as**

Synopsis	Enter the <b>local-as</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>bgp local-as</b>
Tree	<a href="#">local-as</a>
Introduced	16.0.R1
Platforms	All

**as-number** *number*

Synopsis	Local (or virtual) BGP AS number
Context	<b>configure service vprn</b> <i>string</i> <b>bgp local-as as-number</b> <i>number</i>
Tree	<b>as-number</b>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

**prepend-global-as** *boolean*

Synopsis	Prepend global AS when advertising routes to BGP peer
Context	<b>configure service vprn</b> <i>string</i> <b>bgp local-as prepend-global-as</b> <i>boolean</i>
Tree	<b>prepend-global-as</b>
Description	When configured to <b>true</b> , the global ASN is added to the AS_PATH attribute in outbound routes sent to the peer.  When configured to <b>false</b> , the global ASN is hidden in paths announced to the EBGPeer.
Default	true
Introduced	16.0.R1
Platforms	All

**private** *boolean*

Synopsis	Hide the local ASN in sent paths learned from peering
Context	<b>configure service vprn</b> <i>string</i> <b>bgp local-as private</b> <i>boolean</i>
Tree	<b>private</b>
Description	When configured to <b>true</b> , the local ASN is hidden in paths learned from the peering.  When configured to <b>false</b> , the local ASN is advertised to all peers, including those that can use the global ASN for establishing BGP peering sessions.
Default	false
Introduced	16.0.R1
Platforms	All

### **local-preference** *number*

Synopsis	Default local preference if not in incoming routes
Context	<b>configure service vprn</b> <i>string</i> <b>bgp local-preference</b> <i>number</i>
Tree	<a href="#">local-preference</a>
Max. Range	0 to 4294967295
Default	100
Introduced	16.0.R1
Platforms	All

### **loop-detect** *keyword*

Synopsis	Strategy for loop detection in the AS path
Context	<b>configure service vprn</b> <i>string</i> <b>bgp loop-detect</b> <i>keyword</i>
Tree	<a href="#">loop-detect</a>
Default	ignore-loop
Options	drop-peer, ignore-loop, off, discard-route
Introduced	16.0.R1
Platforms	All

### **loop-detect-threshold** *number*

Synopsis	Threshold for the global ASN in a received AS path
Context	<b>configure service vprn</b> <i>string</i> <b>bgp loop-detect-threshold</b> <i>number</i>
Tree	<a href="#">loop-detect-threshold</a>
Range	0 to 15
Default	0
Introduced	16.0.R6
Platforms	All

### **med-out** (*number* | *keyword*)

Synopsis	Default MED attribute value to advertise to peers
Context	<b>configure service vprn</b> <i>string</i> <b>bgp med-out</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">med-out</a>
Max. Range	0 to 4294967295

Options	igp-cost
Introduced	16.0.R1
Platforms	All

### **min-route-advertisement** *number*

Synopsis	Minimum time before a prefix can be advertised to peer
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp min-route-advertisement</a> <i>number</i>
Tree	<a href="#">min-route-advertisement</a>
Range	1 to 255
Default	30
Introduced	16.0.R1
Platforms	All

### **monitor**

Synopsis	Enable the <b>monitor</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp monitor</a>
Tree	<a href="#">monitor</a>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of BMP monitoring
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp monitor</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **all-stations** *boolean*

Synopsis	Send BMP messages to all configured stations
----------	--

Context	<b>configure service vprn string bgp monitor all-stations boolean</b>
Tree	<a href="#">all-stations</a>
Description	When configured to <b>true</b> , this command specifies that BMP messages are to be sent to all configured BMP monitoring stations.  When configured to <b>false</b> , the command is not used to indicate the stations which can receive BMP messages. The <b>station</b> command (at the same context level) identifies the BMP stations for which BMP messages are to be sent.
Default	false
Introduced	16.0.R1
Platforms	All

### route-monitoring

Synopsis	Enter the <b>route-monitoring</b> context
Context	<b>configure service vprn string bgp monitor route-monitoring</b>
Tree	<a href="#">route-monitoring</a>
Introduced	16.0.R1
Platforms	All

### post-policy boolean

Synopsis	Allow post-policy route-monitoring messages to be sent
Context	<b>configure service vprn string bgp monitor route-monitoring post-policy boolean</b>
Tree	<a href="#">post-policy</a>
Default	false
Introduced	16.0.R1
Platforms	All

### pre-policy boolean

Synopsis	Allow pre-policy route-monitoring messages to be sent
Context	<b>configure service vprn string bgp monitor route-monitoring pre-policy boolean</b>
Tree	<a href="#">pre-policy</a>
Default	false
Introduced	16.0.R1
Platforms	All

## **station** [[station-name](#)] *reference*

Synopsis	Add a list entry for <b>station</b>
Context	<b>configure service vprn string bgp monitor station reference</b>
Tree	<a href="#">station</a>
Max. Instances	8
Introduced	16.0.R1
Platforms	All

## **[station-name]** *reference*

Synopsis	BMP monitoring station
Context	<b>configure service vprn string bgp monitor station reference</b>
Tree	<a href="#">station</a>
Reference	<b>configure bmp station string</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## **multihop** *number*

Synopsis	TTL in IP packet headers for EBGP peers multi-hops away
Context	<b>configure service vprn string bgp multihop number</b>
Tree	<a href="#">multihop</a>
Description	This command configures the Time to Live (TTL) value entered in the IP header of packets sent to an EBGP peer multiple hops away. This command applies only to EBGP.
Range	1 to 255
Introduced	16.0.R1
Platforms	All

## **multipath**

Synopsis	Enter the <b>multipath</b> context
Context	<b>configure service vprn string bgp multipath</b>

Tree	<a href="#">multipath</a>
Introduced	16.0.R1
Platforms	All

### **ebgp number**

Synopsis	Maximum multipaths per prefix for EBGp learned routes
Context	<b>configure</b> <a href="#">service vprn string bgp multipath ebgp number</a>
Tree	<a href="#">ebgp</a>
Range	1 to 64
Introduced	16.0.R1
Platforms	All

### **family [family-type] keyword**

Synopsis	Enter the <b>family</b> list instance
Context	<b>configure</b> <a href="#">service vprn string bgp multipath family keyword</a>
Tree	<a href="#">family</a>
Description	<p>Commands in this context set ECMP multipath parameters that apply only to the specified label unicast address family.</p> <p>When multipath is enabled, traffic to the destination is load-shared across a set of paths (BGP routes) that the BGP decision process considers equal to the best path. The distribution of traffic over the multiple paths may or may not be equal. The distribution is based on weights derived from the Link Bandwidth Extended Community.</p> <p>For more information about the criteria a non-best route must meet to qualify as a multipath, see “BGP route installation in the route table” in the <i>7450 ESS 7750 SR 7950 XRS VSR Unicast Routing Protocols User Guide</i>.</p>
Introduced	19.5.R1
Platforms	All

### **[family-type] keyword**

Synopsis	Address family type for the multipath selection
Context	<b>configure</b> <a href="#">service vprn string bgp multipath family keyword</a>
Tree	<a href="#">family</a>
Options	ipv4, ipv6, label-ipv4, label-ipv6
Notes	This element is part of a list key.

Introduced	19.5.R1
Platforms	All

### **ebgp** *number*

Synopsis	Maximum multipaths when best path is EBGp learned route
Context	<b>configure</b> <i>service vprn string bgp multipath family keyword ebgp number</i>
Tree	<a href="#">ebgp</a>
Description	This command configures the maximum number of multipaths per prefix or NLRI when the best path is an EBGp learned route. The limit configured using this command overrides the limit configured in the <b>max-paths</b> command. If the best path is an EBGp learned route, and this command is set to 1, multipaths are disabled.
Range	1 to 64
Introduced	19.5.R1
Platforms	All

### **ibgp** *number*

Synopsis	Maximum multipaths when best path is IBGP learned route
Context	<b>configure</b> <i>service vprn string bgp multipath family keyword ibgp number</i>
Tree	<a href="#">ibgp</a>
Description	This command configures the maximum number of multipaths per prefix or NLRI when the best path is an IBGP learned route. The limit configured using this command overrides the limit configured in the <b>max-paths</b> command. If the best path is an IBGP learned route and this command is set to 1, multipaths are disabled.
Range	1 to 64
Introduced	19.5.R1
Platforms	All

### **max-paths** *number*

Synopsis	Maximum number of multipaths per prefix or NLRI
Context	<b>configure</b> <i>service vprn string bgp multipath family keyword max-paths number</i>
Tree	<a href="#">max-paths</a>
Description	This command configures the maximum number of multipaths per prefix or NLRI for the IP family option specified using the <b>family</b> command. Consider the following when configuring this command:

- If the best path is an EBGP-learned route and the **ebgp** command is configured, the limit configured in the **ebgp** command overrides the limit configured in this command.
- If the best path is an IBGP-learned route and the **ibgp** command is configured, the limit configured in the **ibgp** command overrides the limit configured in this command.
- If the best path is an EBGP-learned route and the **ebgp** command is not configured, and this command is configured to 1, multipaths are disabled.
- If the best path is an IBGP-learned route and the **ibgp** command is not configured, and this command is configured to 1, multipaths are disabled.

Range	1 to 64
Introduced	19.5.R1
Platforms	All

### **restrict** *keyword*

Synopsis	AS path restriction for the non-best path
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>bgp multipath family</b> <i>keyword</i> <b>restrict</b> <i>keyword</i>
Tree	<b>restrict</b>
Default	same-as-path-length
Options	same-as-path-length, same-neighbor-as, exact-as-path
Introduced	19.5.R1
Platforms	All

### **unequal-cost** *boolean*

Synopsis	Ignore differences in the next-hop cost for multipath
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>bgp multipath family</b> <i>keyword</i> <b>unequal-cost</b> <i>boolean</i>
Tree	<b>unequal-cost</b>
Description	When configured to <b>true</b> , BGP ignores differences in the next-hop cost when determining eligible multipaths.
Default	false
Introduced	19.5.R1
Platforms	All

### **ibgp** *number*

Synopsis	Maximum multipaths per prefix for IBGP learned routes
----------	---

Context	<b>configure service vprn string bgp multipath ibgp number</b>
Tree	<b>ibgp</b>
Range	1 to 64
Introduced	16.0.R1
Platforms	All

### **max-paths** *number*

Synopsis	Maximum multipaths per prefix
Context	<b>configure service vprn string bgp multipath max-paths number</b>
Tree	<b>max-paths</b>
Range	1 to 64
Default	1
Introduced	16.0.R1
Platforms	All

### **restrict** *keyword*

Synopsis	AS path restriction for the non-best path
Context	<b>configure service vprn string bgp multipath restrict keyword</b>
Tree	<b>restrict</b>
Default	same-as-path-length
Options	same-as-path-length, same-neighbor-as, exact-as-path
Introduced	16.0.R1
Platforms	All

### **unequal-cost** *boolean*

Synopsis	Ignore differences in the next-hop cost for multipath
Context	<b>configure service vprn string bgp multipath unequal-cost boolean</b>
Tree	<b>unequal-cost</b>
Default	false
Introduced	19.5.R1
Platforms	All

## **neighbor** [ip-address] (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

Synopsis	Enter the <b>neighbor</b> list instance
Context	<b>configure service vprn string bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> )
Tree	<b>neighbor</b>
Introduced	16.0.R1
Platforms	All

## **[ip-address]** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

Synopsis	IP address of the BGP peer router
Context	<b>configure service vprn string bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> )
Tree	<b>neighbor</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## **admin-state** *keyword*

Synopsis	Administrative state of the BGP neighbor
Context	<b>configure service vprn string bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Default	enable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

## **advertise-inactive** *boolean*

Synopsis	Advertise an inactive BGP route to peers
Context	<b>configure service vprn string bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>advertise-inactive</b> <i>boolean</i>
Tree	<b>advertise-inactive</b>

Description	<p>When configured to <b>true</b>, this command allows an inactive BGP route to be advertised, even though it is not the most preferred route. The effect of the command on advertised unlabeled, labeled, and multicast IPv4 and IPv6 routes depends on several factors.</p> <ul style="list-style-type: none"> <li>• If the active route for the IP prefix is a BGP route, that route is advertised.</li> <li>• If the active route is a non-BGP route and there are valid inactive BGP routes to the same destination, the best valid inactive route is advertised unless the active non-BGP route is matched and accepted by an export policy applied to the session.</li> <li>• If the active route is a non-BGP route and there are no valid BGP routes to the same destination, no route is advertised unless the active non-BGP route is matched and accepted by an export policy applied to the session.</li> </ul> <p>When unconfigured, the command inherits the value of the group-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>false</b>.</p> <p>When this command inherits a value of <b>false</b>, the advertisement of inactive BGP routes to other BGP peers is disabled.</p>
Introduced	16.0.R1
Platforms	All

### advertise-ipv6-next-hops

Synopsis	Enable the <b>advertise-ipv6-next-hops</b> context
Context	<b>configure</b> <i>service vprn string bgp neighbor (ipv4-address-with-zone   ipv6-address-with-zone) advertise-ipv6-next-hops</i>
Tree	<i>advertise-ipv6-next-hops</i>
Introduced	19.5.R1
Platforms	All

### ipv4 *boolean*

Synopsis	Enable IPv4 routes to be advertised
Context	<b>configure</b> <i>service vprn string bgp neighbor (ipv4-address-with-zone   ipv6-address-with-zone) advertise-ipv6-next-hops ipv4 boolean</i>
Tree	<i>ipv4</i>
Default	false
Introduced	19.5.R1
Platforms	All

### **aggregator-id-zero** *boolean*

Synopsis	Set router ID in the BGP AGGREGATOR attribute to zero
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>aggregator-id-zero</b> <i>boolean</i>
Tree	<a href="#">aggregator-id-zero</a>
Introduced	16.0.R1
Platforms	All

### **as-override** *boolean*

Synopsis	Replace the peer ASN with the local ASN in AS Path
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>as-override</b> <i>boolean</i>
Tree	<a href="#">as-override</a>
Description	<p>When configured to <b>true</b>, the advertising router's local AS replaces all occurrences of the peer AS in the AS_PATH attribute.</p> <p>This command should be used with caution, as it breaks BGP's loop detection mechanism.</p> <p>When unconfigured, the command inherits the value of the group-level setting (<b>true</b> or <b>false</b>). This command cannot be explicitly configured to <b>false</b>.</p> <p>When the command inherits a value of <b>false</b>, no AS override is performed.</p>
Introduced	16.0.R1
Platforms	All

### **asn-4-byte** *boolean*

Synopsis	Advertise the use of 4-byte ASNs
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>asn-4-byte</b> <i>boolean</i>
Tree	<a href="#">asn-4-byte</a>
Introduced	16.0.R1
Platforms	All

### **authentication-key** *string*

Synopsis	BGP authentication key
----------	------------------------

Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>authentication-key</b> <i>string</i>
Tree	<a href="#">authentication-key</a>
String Length	1 to 370
Introduced	16.0.R1
Platforms	All

### **authentication-keychain** *reference*

Synopsis	TCP authentication keychain for the session
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>authentication-keychain</b> <i>reference</i>
Tree	<a href="#">authentication-keychain</a>
Description	This command associates the keychain to be used to authenticate the BGP session. The keychain allows the rollover of authentication keys during the lifetime of a session.
Reference	<b>configure system security keychains</b> <b>keychain</b> <i>string</i>
Introduced	16.0.R3
Platforms	All

### **bfd-liveness** *boolean*

Synopsis	Enable BFD
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>bfd-liveness</b> <i>boolean</i>
Tree	<a href="#">bfd-liveness</a>
Description	<p>When configured to <b>true</b>, BFD is enabled on a given protocol interface where the state of the protocol interface is tied to the state of the BFD session between the local node and the remote node.</p> <p>When unconfigured, the command inherits the value of the group-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>false</b>.</p> <p>When this command inherits a value of <b>false</b>, BFD is removed from the associated protocol adjacency.</p>
Introduced	16.0.R1
Platforms	All

### **capability-negotiation** *boolean*

Synopsis	Enable capability negotiation
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>capability-negotiation</b> <i>boolean</i>
Tree	<a href="#">capability-negotiation</a>
Introduced	16.0.R1
Platforms	All

### **client-reflect** *boolean*

Synopsis	Allow cluster RR to advertise routes to its clients
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>client-reflect</b> <i>boolean</i>
Tree	<a href="#">client-reflect</a>
Introduced	16.0.R1
Platforms	All

### **cluster**

Synopsis	Enter the <b>cluster</b> context
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>cluster</b>
Tree	<a href="#">cluster</a>
Introduced	16.0.R1
Platforms	All

### **cluster-id** *string*

Synopsis	Route reflector cluster ID
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>cluster</b> <b>cluster-id</b> <i>string</i>
Tree	<a href="#">cluster-id</a>
Introduced	16.0.R1
Platforms	All

### **connect-retry** *number*

Synopsis	BGP connect retry timer value
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>connect-retry</b> <i>number</i>
Tree	<a href="#">connect-retry</a>
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

### **damp-peer-oscillations**

Synopsis	Enable the <b>damp-peer-oscillations</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>damp-peer-oscillations</b>
Tree	<a href="#">damp-peer-oscillations</a>
Introduced	16.0.R1
Platforms	All

### **error-interval** *number*

Synopsis	Time after a reset that the session must be error-free
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>damp-peer-oscillations</b> <b>error-interval</b> <i>number</i>
Tree	<a href="#">error-interval</a>
Description	This command sets the interval of time after a reset, during which the session must be error-free in order to reset the penalty counter and return the idle hold time to the initial wait time.
Range	0 to 2048
Default	30
Introduced	16.0.R1
Platforms	All

### **idle-hold-time**

Synopsis	Enter the <b>idle-hold-time</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>damp-peer-oscillations</b> <b>idle-hold-time</b>

Tree	<a href="#">idle-hold-time</a>
Introduced	16.0.R1
Platforms	All

### **initial-wait** *number*

Synopsis	Time session remains in idle state after stabilization
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>damp-peer-oscillations</b> <b>idle-hold-time</b> <b>initial-wait</b> <i>number</i>
Tree	<a href="#">initial-wait</a>
Range	0 to 2048
Default	0
Introduced	16.0.R1
Platforms	All

### **max-wait** *number*

Synopsis	Maximum session idle time after repeated instability
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>damp-peer-oscillations</b> <b>idle-hold-time</b> <b>max-wait</b> <i>number</i>
Tree	<a href="#">max-wait</a>
Range	1 to 2048
Default	60
Introduced	16.0.R1
Platforms	All

### **second-wait** *number*

Synopsis	Time that doubles after each repeated session failure
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>damp-peer-oscillations</b> <b>idle-hold-time</b> <b>second-wait</b> <i>number</i>
Tree	<a href="#">second-wait</a>
Description	This command defines the hold time that doubles after each repeated session failure that occurs in a short span of time.
Range	1 to 2048
Default	5

Introduced 16.0.R1  
Platforms All

### **damping** *boolean*

Synopsis Use BGP route damping to reduce route flap  
Context **configure service vprn** *string* **bgp neighbor** (*ipv4-address-with-zone | ipv6-address-with-zone*) **damping** *boolean*  
Tree **damping**  
Introduced 16.0.R1  
Platforms All

### **default-label-preference**

Synopsis Enter the **default-label-preference** context  
Context **configure service vprn** *string* **bgp neighbor** (*ipv4-address-with-zone | ipv6-address-with-zone*) **default-label-preference**  
Tree **default-label-preference**  
Introduced 19.5.R1  
Platforms All

### **ebgp** *number*

Synopsis Default preference for EBGp  
Context **configure service vprn** *string* **bgp neighbor** (*ipv4-address-with-zone | ipv6-address-with-zone*) **default-label-preference ebgp** *number*  
Tree **ebgp**  
Range 0 to 255  
Introduced 19.5.R1  
Platforms All

### **ibgp** *number*

Synopsis Default preference for IBGP  
Context **configure service vprn** *string* **bgp neighbor** (*ipv4-address-with-zone | ipv6-address-with-zone*) **default-label-preference ibgp** *number*  
Tree **ibgp**

Range	0 to 255
Introduced	19.5.R1
Platforms	All

### **default-preference**

Synopsis	Enter the <b>default-preference</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>default-preference</b>
Tree	<a href="#">default-preference</a>
Introduced	19.5.R1
Platforms	All

### **ebgp number**

Synopsis	Default preference for EBGp
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>default-preference ebgp number</b>
Tree	<a href="#">ebgp</a>
Range	0 to 255
Introduced	19.5.R1
Platforms	All

### **ibgp number**

Synopsis	Default preference for IBGP
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>default-preference ibgp number</b>
Tree	<a href="#">ibgp</a>
Range	0 to 255
Introduced	19.5.R1
Platforms	All

### **description string**

Synopsis	Text description
----------	------------------

Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>description</b> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **ebgp-default-reject-policy**

Synopsis	Enable the <b>ebgp-default-reject-policy</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>ebgp-default-reject-policy</b>
Tree	<a href="#">ebgp-default-reject-policy</a>
Introduced	19.5.R1
Platforms	All

### **export** *boolean*

Synopsis	Enable default reject export policy for external peers
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>ebgp-default-reject-policy export</b> <i>boolean</i>
Tree	<a href="#">export</a>
Default	true
Introduced	19.5.R1
Platforms	All

### **import** *boolean*

Synopsis	Enable default reject import policy for external peers
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>ebgp-default-reject-policy import</b> <i>boolean</i>
Tree	<a href="#">import</a>
Default	true
Introduced	19.5.R1
Platforms	All

## **enforce-first-as** *boolean*

Synopsis	Enforce the configured peer AS value in received routes
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>enforce-first-as</b> <i>boolean</i>
Tree	<a href="#">enforce-first-as</a>
Description	<p>When configured to <b>true</b> for an EBGp session, all routes received from an EBGp peer are checked to ensure that the most recent ASN in the AS_PATH attribute of each route matches the configured AS of the session. If there is not a match, the session is reset (if the <b>update-fault-tolerance</b> command in the <b>error-handling</b> context is set to <b>false</b>) or the session is left up but the route is treated as withdrawn (if <b>update-fault-tolerance</b> is set to <b>true</b>).</p> <p>This command does not flap an established session because it applies only to routes received after the command is issued.</p> <p>When unconfigured, the command inherits the value of the group-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>false</b>.</p> <p>When this command inherits a value of <b>false</b>, received routes are not checked for compliance with the rule.</p>
Introduced	16.0.R1
Platforms	All

## **error-handling**

Synopsis	Enter the <b>error-handling</b> context
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>error-handling</b>
Tree	<a href="#">error-handling</a>
Introduced	16.0.R1
Platforms	All

## **update-fault-tolerance** *boolean*

Synopsis	Tolerate non-critical errors in UPDATE messages
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>error-handling</b> <b>update-fault-tolerance</b> <i>boolean</i>
Tree	<a href="#">update-fault-tolerance</a>
Description	When configured to <b>true</b> , non-critical errors are handled with treat-as-withdraw, attribute-discard, and other non-disruptive approaches that do not cause a session reset. Critical errors still trigger a session reset.

When unconfigured, the command inherits the value of the group-level setting (**true** or **false**). The command cannot be explicitly configured to **false**.

When this command inherits a value of **false**, all errors trigger a session reset.

Introduced	16.0.R1
Platforms	All

## evpn-link-bandwidth

Synopsis	Enter the <b>evpn-link-bandwidth</b> context
Context	<b>configure service vprn string bgp neighbor (ipv4-address-with-zone   ipv6-address-with-zone) evpn-link-bandwidth</b>
Tree	<a href="#">evpn-link-bandwidth</a>
Introduced	22.7.R1
Platforms	All

## add-to-received-bgp *number*

Synopsis	Weight added to received PE-CE BGP routes
Context	<b>configure service vprn string bgp neighbor (ipv4-address-with-zone   ipv6-address-with-zone) evpn-link-bandwidth add-to-received-bgp number</b>
Tree	<a href="#">add-to-received-bgp</a>
Description	<p>This command configures the weight value added to all BGP PE-CE routes for the purpose of weighted ECMP if EVPN-IFL and BGP PE-CE routes are combined into the same ECMP set.</p> <p>For the load-balancing between EVPN-IFL and BGP PE-CE routes the <b>configure service vprn bgp eibgp-loadbalance</b> command must already be configured in the system.</p>
Range	1 to 128
Introduced	22.7.R1
Platforms	All

## export

Synopsis	Enable the <b>export</b> context
Context	<b>configure service vprn string bgp neighbor (ipv4-address-with-zone   ipv6-address-with-zone) export</b>
Tree	<a href="#">export</a>
Introduced	16.0.R1

Platforms All

### **policy** (*policy-expr-string* | *string*)

Synopsis Export policy name

Context **configure service vprn** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **export policy** (*policy-expr-string* | *string*)

Tree	<a href="#">mcast-ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **fast-external-failover** *boolean*

Synopsis	Drop external BGP session immediately when link fails
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">fast-external-failover</a> <i>boolean</i>
Tree	<a href="#">fast-external-failover</a>
Description	<p>When this command inherits a value of <b>true</b>, the router drops an external BGP session on a single-hop route immediately when the local interface goes down.</p> <p>When unconfigured, the command inherits the value of the group-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>true</b>.</p> <p>When configured to <b>false</b>, the BGP session remains up until the hold time expires.</p>
Introduced	16.0.R1
Platforms	All

### **graceful-restart**

Synopsis	Enable the <b>graceful-restart</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">graceful-restart</a>
Tree	<a href="#">graceful-restart</a>
Introduced	16.0.R1
Platforms	All

### **gr-notification** *boolean*

Synopsis	Perform graceful restart procedures after NOTIFICATION
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">graceful-restart</a> <a href="#">gr-notification</a> <i>boolean</i>
Tree	<a href="#">gr-notification</a>
Description	When configured to <b>true</b> , the Graceful Restart capability sent by the router indicates support for NOTIFICATION messages. If the peer also supports this capability, the session is restarted gracefully (while preserving forwarding) if either peer sends a NOTIFICATION message due to some type of event or error.

When configured to **false**, NOTIFICATION messages are not supported.

Default	false
Introduced	16.0.R1
Platforms	All

## long-lived

Synopsis	Enable the <b>long-lived</b> context
Context	<b>configure service vprn string bgp neighbor</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>graceful-restart long-lived</b>
Tree	<a href="#">long-lived</a>
Introduced	16.0.R1
Platforms	All

## advertise-stale-to-all-neighbors *boolean*

Synopsis	Advertise stale routes to all BGP peers
Context	<b>configure service vprn string bgp neighbor</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>graceful-restart long-lived advertise-stale-to-all-neighbors boolean</b>
Tree	<a href="#">advertise-stale-to-all-neighbors</a>
Default	false
Introduced	16.0.R1
Platforms	All

## advertised-stale-time *number*

Synopsis	Advertised long-lived stale time for LLGR routes
Context	<b>configure service vprn string bgp neighbor</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>graceful-restart long-lived advertised-stale-time number</b>
Tree	<a href="#">advertised-stale-time</a>
Range	0 to 16777215
Default	86400
Introduced	16.0.R1
Platforms	All

### **family** [*family-type*] *keyword*

Synopsis	Enter the <b>family</b> list instance
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>graceful-restart long-lived family keyword</b>
Tree	<b>family</b>
Introduced	16.0.R1
Platforms	All

### **[family-type]** *keyword*

Synopsis	Address family type for LLGR
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>graceful-restart long-lived family keyword</b>
Tree	<b>family</b>
Options	ipv4, ipv6, flow-ipv4, flow-ipv6, label-ipv4
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **advertised-stale-time** *number*

Synopsis	LLGR stale routes time for family override
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>graceful-restart long-lived family keyword advertised-stale-time number</b>
Tree	<b>advertised-stale-time</b>
Description	This command configures the long-lived stale routes time that is advertised by the router in its LLGR capability.  This command applies to all AFI/SAFI in the advertised LLGR capability with a family-specific override.
Range	0 to 16777215
Default	86400
Introduced	16.0.R1
Platforms	All

### helper-override-stale-time *number*

Synopsis	Locally-configured stale routes override time
Context	<b>configure service vpn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>graceful-restart long-lived family</b> <i>keyword</i> <b>helper-override-stale-time</b> <i>number</i>
Tree	<a href="#">helper-override-stale-time</a>
Description	This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability. This is a family-specific override value.
Range	0 to 16777216
Default	16777216
Introduced	16.0.R1
Platforms	All

### forwarding-bits-set *keyword*

Synopsis	BGP LLGR forwarding-bit behavior for address family
Context	<b>configure service vpn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>graceful-restart long-lived forwarding-bits-set</b> <i>keyword</i>
Tree	<a href="#">forwarding-bits-set</a>
Description	<p>This command determines the setting of the F bit in the GR and LLGR capabilities advertised by the router. When the F bit is set for an address family, it indicates that the advertising router is able to preserve forwarding state for the routes of that address family across the last restart. When the session is re-established after a restart and the F bit is not set, all stale routes from the peer are immediately removed for the corresponding address family.</p> <p>This command allows the F bit to be set for all address families or only for non-forwarding address families (L2-VPN, route target, flow-IPv4, and flow-IPv6).</p>
Default	none
Options	none, all, non-fwd
Introduced	16.0.R1
Platforms	All

### helper-override-restart-time *number*

Synopsis	Locally-configured override for restart time
Context	<b>configure service vpn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>graceful-restart long-lived helper-override-restart-time</b> <i>number</i>
Tree	<a href="#">helper-override-restart-time</a>

Description	This command overrides the restart time advertised by a peer (in its GR capability) with a locally-configured value. This override applies only to AFI/SAFI that were included in the GR capability of the peer. The restart-time is always zero for AFI/SAFI not included in the GR capability. This command is useful if the local router wants to force the LLGR phase to begin after a set time for all protected AFI/SAFI.
Range	0 to 4095
Introduced	16.0.R1
Platforms	All

### helper-override-stale-time *number*

Synopsis	Locally-configured stale routes override time
Context	<b>configure service vprn string bgp neighbor</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>graceful-restart long-lived helper-override-stale-time number</b>
Tree	<a href="#">helper-override-stale-time</a>
Description	<p>This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability.</p> <p>This command applies to all AFI/SAFI in the advertised LLGR capability except for any AFI/SAFI with a family-specific override.</p>
Range	0 to 16777215
Introduced	16.0.R1
Platforms	All

### without-no-export *boolean*

Synopsis	Advertise LLGR stale routes to non-LLGR peers
Context	<b>configure service vprn string bgp neighbor</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>graceful-restart long-lived without-no-export boolean</b>
Tree	<a href="#">without-no-export</a>
Description	<p>When configured to <b>true</b>, LLGR stale routes can be advertised to any peer (EBGP or IBGP) that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0.</p> <p>When configured to <b>false</b>, LLGR stale routes are not advertised to any EBGP peer that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0 and a NO_EXPORT standard community is automatically added to the routes.</p>
Default	false

Introduced 16.0.R1

## hold-time

Synopsis	Enter the <b>hold-time</b> context
Context	<b>configure service vprn string bgp neighbor</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>hold-time</b>
Tree	<b>hold-time</b>
Introduced	16.0.R1
Platforms	All

## minimum-hold-time *number*

Synopsis	Minimum time BGP waits between successive messages
Context	<b>configure service vprn string bgp neighbor</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>hold-time minimum-hold-time number</b>
Tree	<b>minimum-hold-time</b>
Range	0   3 to 65536
Default	0
Introduced	16.0.R1
Platforms	All

## seconds *number*

Synopsis	Maximum hold time between successive messages
Context	<b>configure service vprn string bgp neighbor</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>hold-time seconds number</b>
Tree	<b>seconds</b>
Description	<p>The BGP hold time specifies the maximum time BGP waits between successive messages (either keepalive or update) from its peer, before closing the connection.</p> <p>Even though the implementation allows setting the keepalive timer at the BGP neighbor level times separately, the configured keepalive timer is overridden by this value under the following circumstances:</p> <ul style="list-style-type: none"><li>• If the specified hold time is less than the configured keepalive time, then the operational keepalive time is set to a third of the hold-time; the configured keepalive time is not changed.</li></ul>

- If the hold time is set to zero, the operational value of the keepalive time is set to zero; the configured keepalive time is not changed. This means that the connection with the peer is up permanently and no keepalive packets are sent to the peer.

When unconfigured, the command setting is inherited from the BGP group-level configuration.

Range	0   3 to 65535
Introduced	16.0.R1
Platforms	All

## import

Synopsis	Enable the <b>import</b> context
Context	<b>configure service vprn string bgp neighbor (ipv4-address-with-zone   ipv6-address-with-zone) import</b>
Tree	<b>import</b>
Introduced	16.0.R1
Platforms	All

## policy (*policy-expr-string | string*)

Synopsis	Route policy name
Context	<b>configure service vprn string bgp neighbor (ipv4-address-with-zone   ipv6-address-with-zone) import policy (policy-expr-string   string)</b>
Tree	<b>policy</b>
String Length	1 to 255
Max. Instances	15
Min. Instances	1
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

## initial-send-delay-zero *boolean*

Synopsis	Send BGP updates as soon as the session comes up
Context	<b>configure service vprn string bgp neighbor (ipv4-address-with-zone   ipv6-address-with-zone) initial-send-delay-zero boolean</b>

Tree	<a href="#">initial-send-delay-zero</a>
Description	<p>When configured to <b>true</b>, BGP updates are sent as soon as the session comes up.</p> <p>When unconfigured, the command inherits the value of the group-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>false</b>.</p> <p>When this command inherits a value of <b>false</b>, BGP waits to send UPDATE messages for the minimum route advertisement time after a session is established.</p>
Introduced	16.0.R1
Platforms	All

### **keepalive** *number*

Synopsis	Time after which the BGP KEEPALIVE message is sent
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>keepalive</b> <i>number</i>
Tree	<a href="#">keepalive</a>
Range	0 to 21845
Introduced	16.0.R1
Platforms	All

### **label-preference** *number*

Synopsis	Route preference for routes from labeled-unicast peers
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>label-preference</b> <i>number</i>

Introduced 16.0.R1

Platforms All

### **as-number** *number*

Synopsis Local (or virtual) BGP AS number

Context **configure service vprn** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **local-as as-number** *number*

Tree [as-number](#)

Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **prepend-global-as** *boolean*

Synopsis	Prepend global ASN when advertising routes to BGP peer
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>local-as prepend-global-as</b> <i>boolean</i>
Tree	<a href="#">prepend-global-as</a>
Description	When configured to <b>true</b> , the global ASN is added to the AS_PATH attribute in outbound routes sent to the peer. When configured to <b>false</b> , the global ASN is not included in the AS_PATH attribute.
Default	true
Introduced	16.0.R1
Platforms	All

### **private** *boolean*

Synopsis	Hide the local ASN in sent paths learned from peering
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>local-as private</b> <i>boolean</i>
Tree	<a href="#">private</a>
Description	When configured to <b>true</b> , the local AS number is only advertised to peers that use the local ASN for establishing BGP peering sessions. When configured to <b>false</b> , the local ASN is advertised to all peers, including those that can use the global ASN for establishing BGP peering sessions.
Default	false
Introduced	16.0.R1
Platforms	All

### **local-preference** *number*

Synopsis	Default local preference if not in incoming routes
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>local-preference</b> <i>number</i>
Tree	<a href="#">local-preference</a>

Range	0 to 4294967295
Introduced	16.0.R1
Platforms	All

### **loop-detect** *keyword*

Synopsis	Strategy for loop detection in the AS path
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>loop-detect</b> <i>keyword</i>
Tree	<a href="#">loop-detect</a>
Options	drop-peer, ignore-loop, off, discard-route
Introduced	16.0.R1
Platforms	All

### **loop-detect-threshold** *number*

Synopsis	Threshold for the global ASN in a received AS path
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>loop-detect-threshold</b> <i>number</i>
Tree	<a href="#">loop-detect-threshold</a>
Range	0 to 15
Introduced	16.0.R6
Platforms	All

### **med-out** (*number* | *keyword*)

Synopsis	Default MED attribute value to advertise to peers
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>med-out</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">med-out</a>
Max. Range	0 to 4294967295
Options	igp-cost
Introduced	16.0.R1
Platforms	All

### **min-route-advertisement** *number*

Synopsis	Minimum interval between successive prefix updates
Context	<b>configure service vprn string bgp neighbor</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>min-route-advertisement number</b>
Tree	<a href="#">min-route-advertisement</a>
Range	1 to 255
Introduced	16.0.R1
Platforms	All

### **monitor**

Synopsis	Enable the <b>monitor</b> context
Context	<b>configure service vprn string bgp neighbor</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>monitor</b>
Tree	<a href="#">monitor</a>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of BMP monitoring
Context	<b>configure service vprn string bgp neighbor</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>monitor admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **all-stations** *boolean*

Synopsis	Send BMP messages to all configured stations
Context	<b>configure service vprn string bgp neighbor</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>monitor all-stations boolean</b>
Tree	<a href="#">all-stations</a>
Description	When configured to <b>true</b> , this command specifies that BMP messages are to be sent to all configured BMP monitoring stations.

When configured to **false**, the command is not used to indicate the stations which can receive BMP messages. The **station** command (at the same context level) identifies the BMP stations for which BMP messages are to be sent.

Default	false
Introduced	16.0.R1
Platforms	All

## route-monitoring

Synopsis	Enter the <b>route-monitoring</b> context
Context	<b>configure service vprn string bgp neighbor</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>monitor route-monitoring</b>
Tree	<b>route-monitoring</b>
Introduced	16.0.R1
Platforms	All

## post-policy *boolean*

Synopsis	Allow post-policy route-monitoring messages to be sent
Context	<b>configure service vprn string bgp neighbor</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>monitor route-monitoring post-policy <i>boolean</i></b>
Tree	<b>post-policy</b>
Default	false
Introduced	16.0.R1
Platforms	All

## pre-policy *boolean*

Synopsis	Allow pre-policy route-monitoring messages to be sent
Context	<b>configure service vprn string bgp neighbor</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>monitor route-monitoring pre-policy <i>boolean</i></b>
Tree	<b>pre-policy</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **station** [*station-name*] *reference*

Synopsis	Add a list entry for <b>station</b>
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>monitor station</b> <i>reference</i>
Tree	<b>station</b>
Max. Instances	8
Introduced	16.0.R1
Platforms	All

### **[station-name]** *reference*

Synopsis	BMP monitoring station
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>monitor station</b> <i>reference</i>
Tree	<b>station</b>
Reference	<b>configure bmp station</b> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **multihop** *number*

Synopsis	TTL in IP packet headers for EBGp peers multi-hops away
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>multihop</b> <i>number</i>
Tree	<b>multihop</b>
Range	1 to 255
Introduced	16.0.R1
Platforms	All

### **multipath-eligible** *boolean*

Synopsis	Allow routes from this peer in multipath eligibility
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>multipath-eligible</b> <i>boolean</i>

Tree	<a href="#">multipath-eligible</a>
Introduced	19.5.R1
Platforms	All

### **next-hop-self** *boolean*

Synopsis	Advertise routes with local address as next-hop address
Context	<b>configure service vpn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>next-hop-self</b> <i>boolean</i>
Tree	<a href="#">next-hop-self</a>
Description	<p>When configured to <b>true</b>, this command configures BGP to advertise routes to members of a group using a local address of the BGP instance as the BGP next-hop address.</p> <p>Note that this command is set without exception, regardless of the route source (EBGP or IBGP) or its family. When used with VPN-IPv4 and VPN-IPv6 routes, the <b>configure router bgp rr-vpn-forwarding</b> command should also be configured.</p> <p>When unconfigured, the command inherits the value of the group-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>false</b>.</p> <p>When this command inherits a value of <b>false</b>, protocol standard behavior is applied to determine whether to set <b>next-hop-self</b> in advertised routes.</p>
Introduced	16.0.R1
Platforms	All

### **origin-validation**

Synopsis	Enable the <b>origin-validation</b> context
Context	<b>configure service vpn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>origin-validation</b>
Tree	<a href="#">origin-validation</a>
Introduced	19.7.R1
Platforms	All

### **ipv4** *boolean*

Synopsis	Enable/disable family type ipv4.
Context	<b>configure service vpn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>origin-validation</b> <b>ipv4</b> <i>boolean</i>
Tree	<a href="#">ipv4</a>
Default	false

Introduced 19.7.R1  
Platforms All

### **ipv6** *boolean*

Synopsis Enable support for unlabeled unicast IPv6 routes  
Context **configure** **service vprn** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **origin-validation** **ipv6** *boolean*  
Tree [ipv6](#)  
Default false  
Introduced 19.7.R1  
Platforms All

### **label-ipv4** *boolean*

Synopsis Enable support for labeled-unicast IPv4 routes  
Context **configure** **service vprn** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **origin-validation** **label-ipv4** *boolean*  
Tree [label-ipv4](#)  
Default false  
Introduced 19.7.R1  
Platforms All

### **passive** *boolean*

Synopsis Use passive mode for BGP communication  
Context **configure** **service vprn** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **passive** *boolean*  
Tree [passive](#)  
Introduced 16.0.R1  
Platforms All

### **path-mtu-discovery** *boolean*

Synopsis Enable path MTU discovery  
Context **configure** **service vprn** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **path-mtu-discovery** *boolean*

Tree	<a href="#">path-mtu-discovery</a>
Description	<p>When configured to <b>true</b>, Path MTU Discovery (PMTUD) is enabled for the associated TCP connections.</p> <p>When set to <b>true</b>, PMTUD is activated toward an IPv4 BGP neighbor and the Don't Fragment (DF) bit is set in the IP header of all IPv4 packets sent to the peer. If any device along the path toward the peer cannot forward the packet because the IP MTU of the interface is smaller than the IP packet size, this device drops the packet and sends an ICMP or ICMPv6 error message encoding the interface MTU. When the router receives the ICMP or ICMPv6 message, it lowers the TCP maximum segment size limit from the previous value so that the IP MTU constraint can be accommodated.</p> <p>When PMTUD is configured to <b>false</b> and there is no TCP MSS configuration that can be associated with a BGP neighbor (in either the BGP configuration or the first hop IP interface configuration), the router advertises a value of only 1024 bytes as the TCP MSS option value, limiting received TCP segments to that size.</p>
Introduced	16.0.R1
Platforms	All

### **peer-as** *number*

Synopsis	Peer AS number
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">peer-as</a> <i>number</i>
Tree	<a href="#">peer-as</a>
Description	<p>This command configures the autonomous system number for the peer. The peer AS number must be configured for each configured peer.</p> <p>For EBGP peers, the peer AS number configured must be different from the autonomous system number configured for this router under the global level since the peer will be in a different autonomous system than this router.</p> <p>For IBGP peers, the peer AS number must be the same as the autonomous system number of this router configured under the global level.</p>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **peer-creation-type** *keyword*

Synopsis	Peer creation type
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">peer-creation-type</a> <i>keyword</i>
Tree	<a href="#">peer-creation-type</a>

Default	static
Options	static, dynamic, dynamic-if-remote, dynamic-if-local
Introduced	16.0.R1
Platforms	All

### **peer-ip-tracking** *boolean*

Synopsis	Enable BGP peer tracking
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>peer-ip-tracking</b> <i>boolean</i>
Tree	<a href="#">peer-ip-tracking</a>
Description	<p>When configured to <b>true</b>, this command enables BGP peer tracking.</p> <p>Peer tracking should be used with caution. Peer tracking can tear a session down even if the loss of connectivity turns out to be short-lived (for example, while the IGP protocol is re-converging). Next-hop tracking, which is always enabled, handles temporary connectivity issues more effectively.</p> <p>When unconfigured, the command inherits the value of the group-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>false</b>.</p> <p>When this command inherits a value of <b>false</b>, peer tracking is disabled.</p>
Introduced	16.0.R1
Platforms	All

### **preference** *number*

Synopsis	Route preference for routes learned from all peers
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>preference</b> <i>number</i>
Tree	<a href="#">preference</a>
Description	<p>This command configures the route preference for routes learned from the configured peers.</p> <p>The lower the preference value, the higher the chance of the route being the active route. The router assigns BGP routes the highest default preference as compared to routes that are direct, static or learned via MPLS or OSPF.</p> <p>When unconfigured, the command setting is inherited from the group-level configuration.</p>
Range	1 to 255
Introduced	16.0.R1
Platforms	All

### **prefix-limit** [*family*] *keyword*

Synopsis	Enter the <b>prefix-limit</b> list instance
Context	<b>configure service vprn string bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>prefix-limit keyword</b>
Tree	<a href="#">prefix-limit</a>
Introduced	16.0.R1
Platforms	All

### **[family]** *keyword*

Synopsis	Address family to which the limit applies
Context	<b>configure service vprn string bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>prefix-limit keyword</b>
Tree	<a href="#">prefix-limit</a>
Options	ipv4, ipv6, mcast-ipv4, flow-ipv4, flow-ipv6, mcast-ipv6, label-ipv4
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **idle-timeout** *number*

Synopsis	Time which BGP peering remains idle before reconnecting
Context	<b>configure service vprn string bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>prefix-limit keyword idle-timeout number</b>
Tree	<a href="#">idle-timeout</a>
Description	This command defines the idle time after an administrative take-down before BGP re-establishes a session and reconnects to a peer.  When unconfigured, the command inherits the value from the group-level configuration.
Range	1 to 1024
Introduced	16.0.R1
Platforms	All

### **log-only** *boolean*

Synopsis	Send warning message at threshold instead of take-down
----------	--

Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>prefix-limit</b> <i>keyword</i> <b>log-only</b> <i>boolean</i>
Tree	<b>log-only</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **maximum** *number*

Synopsis	Maximum number of routes to be learned from a peer
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>prefix-limit</b> <i>keyword</i> <b>maximum</b> <i>number</i>
Tree	<b>maximum</b>
Description	This command configures the maximum number of BGP routes than can be received from a peer before administrative action is taken.
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	16.0.R2
Platforms	All

### **post-import** *boolean*

Synopsis	Apply limit only to routes accepted by import policies
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>prefix-limit</b> <i>keyword</i> <b>post-import</b> <i>boolean</i>
Tree	<b>post-import</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **threshold** *number*

Synopsis	Percentage threshold that triggers a warning message
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>prefix-limit</b> <i>keyword</i> <b>threshold</b> <i>number</i>
Tree	<b>threshold</b>

Range	1 to 100
Default	90
Introduced	16.0.R1
Platforms	All

## **remove-private**

Synopsis	Enable the <b>remove-private</b> context
Context	<b>configure service vprn string bgp neighbor</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>remove-private</b>
Tree	<b>remove-private</b>
Introduced	16.0.R1
Platforms	All

## **limited boolean**

Synopsis	Remove private ASNs up to first public ASN encountered
Context	<b>configure service vprn string bgp neighbor</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>remove-private limited boolean</b>
Tree	<b>limited</b>
Default	false
Introduced	16.0.R1
Platforms	All

## **replace boolean**

Synopsis	Replace private ASN with global ASN before advertising
Context	<b>configure service vprn string bgp neighbor</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>remove-private replace boolean</b>
Tree	<b>replace</b>
Default	false
Introduced	19.10.R1
Platforms	All

### **skip-peer-as** *boolean*

Synopsis	Keep private ASN if it is the same as the BGP peer ASN
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>remove-private</b> <b>skip-peer-as</b> <i>boolean</i>
Tree	<a href="#">skip-peer-as</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **send-communities**

Synopsis	Enter the <b>send-communities</b> context
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>send-communities</b>
Tree	<a href="#">send-communities</a>
Introduced	16.0.R1
Platforms	All

### **extended** *boolean*

Synopsis	Advertise the Extended Communities attribute to peers
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>send-communities</b> <b>extended</b> <i>boolean</i>
Tree	<a href="#">extended</a>
Description	<p>When unconfigured, this command inherits the value of the group-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>true</b>.</p> <p>When this command inherits a value of <b>true</b>, BGP extended communities are sent to peers in the Extended Communities attribute.</p> <p>When configured to <b>false</b>, all extended communities are removed from all routes advertised to BGP peers.</p>
Introduced	16.0.R1
Platforms	All

### **large** *boolean*

Synopsis	Advertise the Large Communities attribute to peers
----------	--

Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>send-communities large</b> <i>boolean</i>
Tree	<b>large</b>
Description	<p>When unconfigured, this command inherits the value of the group-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>true</b>.</p> <p>When this command inherits a value of <b>true</b>, BGP large communities are sent to peers in the Large Communities attribute.</p> <p>When configured to <b>false</b>, all large communities are removed from all routes advertised to BGP peers.</p>
Introduced	16.0.R1
Platforms	All

### **standard** *boolean*

Synopsis	Advertise the Communities attribute to peers
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>send-communities standard</b> <i>boolean</i>
Tree	<b>standard</b>
Description	<p>When unconfigured, this command inherits the value of the group-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>true</b>.</p> <p>When this command inherits a value of <b>true</b>, BGP standard communities are sent to peers in the Communities attribute.</p> <p>When configured to <b>false</b>, all standard communities are removed from all routes advertised to BGP peers.</p>
Introduced	16.0.R1
Platforms	All

### **send-default**

Synopsis	Enable the <b>send-default</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>send-default</b>
Tree	<b>send-default</b>
Introduced	19.7.R1
Platforms	All

## **export-policy** *reference*

Synopsis	Export policy name
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">send-default</a> <a href="#">export-policy reference</a>
Tree	<a href="#">export-policy</a>
Reference	<b>configure</b> <a href="#">policy-options policy-statement</a> <i>string</i>
Introduced	19.7.R1
Platforms	All

## **ipv4** *boolean*

Synopsis	Enable IPv4 family type
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">send-default</a> <a href="#">ipv4 boolean</a>
Tree	<a href="#">ipv4</a>
Default	false
Introduced	19.7.R1
Platforms	All

## **ipv6** *boolean*

Synopsis	Enable IPv6 family type
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">send-default</a> <a href="#">ipv6 boolean</a>
Tree	<a href="#">ipv6</a>
Default	false
Introduced	19.7.R1
Platforms	All

## **split-horizon** *boolean*

Synopsis	Prevent routes being reflected back to best-route peer
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">split-horizon boolean</a>
Tree	<a href="#">split-horizon</a>
Description	When configured to <b>true</b> , this command enables the use of split-horizon.

This command prevents routes from being reflected back to a peer that sends the best route. It applies to routes of all address families and to any type of sending peer; confed-EBGP, EBGp and IBGP.

Enabling the split-horizon functionality may have a detrimental impact on peer and route scaling and should only be used when absolutely necessary.

When unconfigured, the command inherits the value of the group-level setting (**true** or **false**). The command cannot be explicitly configured to **false**.

When this command inherits a value of **false**, the use of split-horizon is disabled.

Introduced 16.0.R1  
Platforms All

### **tcp-mss** (*number* | *keyword*)

Synopsis TCP maximum segment size override

Context **configure service vprn string bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **tcp-mss** (*number* | *keyword*)

Tree [tcp-mss](#)

Description This command configures an override for the TCP maximum segment size to use with a specific peer or set of peers (depending on the scope of the command).  
The configured value controls two properties of the TCP connection as follows:  
TCP MSS option - The router advertises the TCP MSS option value in the TCP SYN packet it sends as part of the 3-way handshake. The advertised value may be lower than the configured value, depending on the IP MTU of the first hop IP interface. The peers must abide by this value when sending TCP segments to the local router.  
TCP maximum segment size - The actual transmitted size may be lower than the configured value, depending on the TCP MSS option value signaled by the peers, the effect of path MTU discovery, or other factors.

Range 384 to 9746

Options ip-stack

Introduced 21.2.R1

Platforms All

### **third-party-nexthop** *boolean*

Synopsis Apply third-party next-hop processing to EBGp peers

Context **configure service vprn string bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **third-party-nexthop** *boolean*

Tree [third-party-nexthop](#)

Introduced 16.0.R1

Platforms All

### **ttl-security** *number*

Synopsis Minimum TTL value for an incoming BGP packet

Context **configure service vprn** *string* **bgp neighbor** (*ipv4-address-with-zone | ipv6-address-with-zone*) **ttl-security** *number*

Tree **ttl-security**

Description This command configures the minimum TTL value that BGP will accept from an incoming packet. A packet with a TTL value less than the minimum configured TTL value is discarded.

When unconfigured, the command inherits the value of the group-level setting.

Range 1 to 255

Introduced 16.0.R1

Platforms All

### **type** *keyword*

Synopsis BGP peer type

Context **configure service vprn** *string* **bgp neighbor** (*ipv4-address-with-zone | ipv6-address-with-zone*) **type** *keyword*

Tree **type**

Options no-type, internal, external

Introduced 16.0.R1

Platforms All

### **next-hop-resolution**

Synopsis Enter the **next-hop-resolution** context

Context **configure service vprn** *string* **bgp next-hop-resolution**

Tree **next-hop-resolution**

Introduced 16.0.R1

Platforms All

## policy reference

Synopsis	Policy that filters routes for BGP next-hop resolution
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp next-hop-resolution</a> <a href="#">policy reference</a>
Tree	<a href="#">policy</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

## use-bgp-routes *boolean*

Synopsis	Use BGP routes to resolve BGP next hops
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp next-hop-resolution</a> <a href="#">use-bgp-routes</a> <i>boolean</i>
Tree	<a href="#">use-bgp-routes</a>
Description	<p>When configured to <b>true</b>, BGP routes resolve BGP next hops. When this command is enabled, any unlabeled IPv4 or IPv6 BGP route received from a VPRN BGP peer becomes resolvable by up to four other BGP routes in order to resolve the route to a VPRN IP interface. A VPRN BGP route is not resolvable by another VPRN BGP route or by a BGP-VPN route.</p> <p>This command also allows unlabeled IPv4 or IPv6 BGP routes leaked from the GRT with unresolved next hops (in the GRT) to be resolvable by BGP-VPN routes (of the VPRN).</p> <p>When configured to <b>false</b>, BGP next hops are not resolved.</p>
Default	false
Introduced	19.10.R1
Platforms	All

## path-mtu-discovery *boolean*

Synopsis	Enable Path MTU Discovery
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp path-mtu-discovery</a> <i>boolean</i>
Tree	<a href="#">path-mtu-discovery</a>
Description	<p>When configured to <b>true</b>, Path MTU Discovery (PMTUD) is enabled for the associated TCP connections.</p> <p>When set to <b>true</b>, PMTUD is activated toward an IPv4 BGP neighbor and the Don't Fragment (DF) bit is set in the IP header of all IPv4 packets sent to the peer. If any device along the path toward the peer cannot forward the packet because the IP MTU of the interface is smaller than the IP packet size, this device drops the packet and sends an ICMP or ICMPv6 error message encoding the interface MTU. When the router receives the ICMP or ICMPv6 message, it lowers the TCP maximum segment size limit from the previous value so that the IP MTU constraint can be accommodated.</p>

When PMTUD is configured to **false** and there is no TCP MSS configuration that can be associated with a BGP neighbor (in either the BGP configuration or the first hop IP interface configuration), the router advertises a value of only 1024 bytes as the TCP MSS option value, limiting received TCP segments to that size.

Default	false
Introduced	16.0.R1
Platforms	All

### **peer-ip-tracking** *boolean*

Synopsis	Enable BGP peer tracking
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp peer-ip-tracking</a> <i>boolean</i>
Tree	<a href="#">peer-ip-tracking</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **peer-tracking-policy** *reference*

Synopsis	Policy for BGP peer tracking on router instance
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp peer-tracking-policy</a> <i>reference</i>
Tree	<a href="#">peer-tracking-policy</a>
Description	<p>This command specifies the name of a policy statement to use with the BGP peer-tracking function on BGP sessions where peer tracking is enabled.</p> <p>When unconfigured, the default peer-tracking policy allows any type of route to match the neighbor IP address except aggregate routes and LDP shortcut routes.</p> <p>Peer tracking should be used with caution. The peer-tracking policy should only permit one of direct-interface or direct routes to be advertised to a BGP peer. Advertising both routes causes the best route to oscillate.</p>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **preference** *number*

Synopsis	Route preference for routes learned from all peers
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp preference</a> <i>number</i>

Tree	<a href="#">preference</a>
Description	This command configures the route preference for routes learned from the configured peers.  The lower the preference value, the higher the chance of the route being the active route. The router assigns BGP routes the highest default preference as compared to routes that are direct, static or learned via MPLS or OSPF.
Range	1 to 255
Default	170
Introduced	16.0.R1
Platforms	All

### **rapid-withdrawal** *boolean*

Synopsis	Send BGP withdrawal UPDATE messages immediately
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp rapid-withdrawal</a> <i>boolean</i>
Tree	<a href="#">rapid-withdrawal</a>
Description	When configured to <b>true</b> , UPDATE messages containing withdrawn NLRI are sent immediately to a peer without waiting for the MRAI timer to expire. UPDATE messages containing reachable NLRI continue to wait for the MRAI timer to expire, or for a rapid update trigger.  When configured to <b>false</b> , withdrawal processing continues with the normal behavior.
Default	false
Introduced	16.0.R1
Platforms	All

### **remove-private**

**policy-name** *reference*

Synopsis	Name of policy that controls route importation into RIB
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">bgp</a> <a href="#">rib-management</a> <a href="#">ipv6</a> <a href="#">route-table-import</a> <a href="#">policy-name</a> <i>reference</i>
Tree	<a href="#">policy-name</a>
Description	This command specifies the name of a policy that controls the importation of active routes from the IP route table into one of the BGP RIBs.  When this command is configured, routes dropped or rejected by the policy are not installed in the associated RIB. Rejected routes cannot be advertised to BGP peers associated with the RIB, but they can still be used to resolve BGP next hops of routes in that RIB. If the active route for a prefix is rejected by the policy, the best BGP route for that prefix in the BGP RIB can be advertised to peers as though it is used.

Aggregate routes are always imported into each RIB, independent of the specified policy.

Route modifications specified in the actions of the policy are ignored and have no effect on the imported routes.

When unconfigured, or if the command refers to an empty policy, all non-BGP routes from the IP route table are imported into the applicable RIB.

Reference	<b>configure policy-options policy-statement string</b>
Introduced	16.0.R1
Platforms	All

## label-ipv6

Synopsis	Enter the <b>label-ipv6</b> context
Context	<b>configure service vprn string</b> <a href="#">bgp rib-management label-ipv6</a>
Tree	<a href="#">label-ipv6</a>
Introduced	22.2.R1
Platforms	All

## leak-import

Synopsis	Enter the <b>leak-import</b> context
Context	<b>configure service vprn string</b> <a href="#">bgp rib-management label-ipv6 leak-import</a>
Tree	<a href="#">leak-import</a>
Introduced	22.2.R1
Platforms	All

## policy (*policy-expr-string* | *string*)

Synopsis	Leak import policy name
Context	<b>configure service vprn string</b> <a href="#">bgp rib-management label-ipv6 leak-import policy</a> ( <i>policy-expr-string</i>   <i>string</i> )
Tree	<a href="#">policy</a>
Description	This command specifies one or more leak import policies.  Policy names are limited to 64 characters except for the first policy. Only one object can be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT).
String Length	1 to 255
Max. Instances	15
Notes	This element is ordered by the user.
Introduced	22.2.R1
Platforms	All

## router-id *string*

Synopsis	Router ID for the BGP instance in the AS
Context	<b>configure service vprn string</b> <a href="#">bgp router-id string</a>

Tree	<a href="#">router-id</a>
Description	<p>This command specifies the router ID to be used with the BGP instance.</p> <p>Changing the BGP router ID on an active BGP instance causes the BGP instance to restart with the new router ID.</p> <p>When an SR OS is configured with an IPv6-only BOF and no IPv4 system interface address, explicitly-defined IPv4 router IDs are required for BGP as there is no mechanism to derive the router ID from an IPv6 system interface address.</p>
Introduced	16.0.R1
Platforms	All

### **send-communities**

Synopsis	Enter the <b>send-communities</b> context
Context	<b>configure service vprn string bgp send-communities</b>
Tree	<a href="#">send-communities</a>
Introduced	16.0.R1
Platforms	All

### **extended boolean**

Synopsis	Advertise the Extended Communities attribute to peers
Context	<b>configure service vprn string bgp send-communities extended boolean</b>
Tree	<a href="#">extended</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **large boolean**

Synopsis	Advertise the Large Communities attribute to peers
Context	<b>configure service vprn string bgp send-communities large boolean</b>
Tree	<a href="#">large</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **standard** *boolean*

Synopsis	Advertise the Communities attribute to peers
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp send-communities</a> <b>standard</b> <i>boolean</i>
Tree	<a href="#">standard</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **send-default**

Synopsis	Enter the <b>send-default</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp send-default</a>
Tree	<a href="#">send-default</a>
Introduced	19.7.R1
Platforms	All

### **export-policy** *reference*

Synopsis	Export policy name
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp send-default export-policy</a> <i>reference</i>
Tree	<a href="#">export-policy</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Introduced	19.7.R1
Platforms	All

### **ipv4** *boolean*

Synopsis	Enable IPv4 family type
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp send-default ipv4</a> <i>boolean</i>
Tree	<a href="#">ipv4</a>
Default	false
Introduced	19.7.R1
Platforms	All

### **ipv6** *boolean*

Synopsis	Enable IPv6 family type
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">bgp</a> <a href="#">send-default</a> <a href="#">ipv6</a> <i>boolean</i>
Tree	<a href="#">ipv6</a>
Default	false
Introduced	19.7.R1
Platforms	All

### **split-horizon** *boolean*

Synopsis	Prevent routes being reflected back to best-route peer
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">bgp</a> <a href="#">split-horizon</a> <i>boolean</i>
Tree	<a href="#">split-horizon</a>
Description	<p>When configured to <b>true</b>, this command enables the use of split-horizon.</p> <p>This command prevents routes from being reflected back to a peer that sends the best route. It applies to routes of all address families and to any type of sending peer; confed-EBGP, EBGP and IBGP.</p> <p>Enabling the split-horizon functionality may have a detrimental impact on peer and route scaling and should only be used when absolutely necessary.</p> <p>When configured to <b>false</b>, the use of split-horizon is disabled.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **tcp-mss** *number*

Synopsis	TCP maximum segment size override
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">bgp</a> <a href="#">tcp-mss</a> <i>number</i>
Tree	<a href="#">tcp-mss</a>
Description	<p>This command configures an override for the TCP maximum segment size to use with a specific peer or set of peers (depending on the scope of the command).</p> <p>The configured value controls two properties of the TCP connection as follows:</p> <p>TCP MSS option - The router advertises the TCP MSS option value in the TCP SYN packet it sends as part of the 3-way handshake. The advertised value may be lower than the configured value, depending on the IP MTU of the first hop IP interface. The peers must abide by this value when sending TCP segments to the local router.</p>

TCP maximum segment size - The actual transmitted size may be lower than the configured value, depending on the TCP MSS option value signaled by the peers, the effect of path MTU discovery, or other factors.

Range	384 to 9746
Introduced	21.2.R1
Platforms	All

### **third-party-nexthop** *boolean*

Synopsis	Apply third-party next-hop processing to EBGP peers
Context	<b>configure</b> <i>service vprn string bgp third-party-nexthop boolean</i>
Tree	<i>third-party-nexthop</i>
Description	<p>When configured to <b>true</b>, this command enables the router to send third-party next hop to EBGP peers in the same subnet as the source peer. The address family of the transport must match the address family of the route.</p> <p>When an IPv4 or IPv6 route is received from one EBGP peer and advertised to another EBGP peer in the same IP subnet, the BGP next hop is left unchanged.</p> <p>When configured to <b>false</b>, third-party next-hop processing is disabled and the next hop carries the IP address of the interface used to establish the TCP connection to the peer.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **bgp-evpn**

Synopsis	Enter the <b>bgp-evpn</b> context
Context	<b>configure</b> <i>service vprn string bgp-evpn</i>
Tree	<i>bgp-evpn</i>
Introduced	20.10.R1
Platforms	All

### **mpls** [*bgp-instance*] *number*

Synopsis	Enter the <b>mpls</b> list instance
Context	<b>configure</b> <i>service vprn string bgp-evpn mpls number</i>
Tree	<i>mpls</i>
Introduced	20.10.R1

Platforms All

### **[bgp-instance] number**

Synopsis BGP instance ID  
Context **configure service vprn string bgp-evpn mpls number**  
Tree [mpls](#)  
Range 1  
Notes This element is part of a list key.  
Introduced 20.10.R1  
Platforms All

### **admin-state keyword**

Synopsis Administrative state of BGP-EVPN MPLS  
Context **configure service vprn string bgp-evpn mpls number admin-state keyword**  
Tree [admin-state](#)  
Default disable  
Options enable, disable  
Introduced 20.10.R1  
Platforms All

### **auto-bind-tunnel**

Synopsis Enter the **auto-bind-tunnel** context  
Context **configure service vprn string bgp-evpn mpls number auto-bind-tunnel**  
Tree [auto-bind-tunnel](#)  
Description Commands in this context configure the automatic binding parameters of a BGP-EVPN service using tunnels to MP-BGP peers.  
Introduced 20.10.R1  
Platforms All

### **allow-flex-algo-fallback boolean**

Synopsis Enable flexible algorithm fallback

Context	<b>configure service vprn</b> <i>string</i> <b>bgp-evpn mpls</b> <i>number</i> <b>auto-bind-tunnel allow-flex-algo-fallback</b> <i>boolean</i>
Tree	<a href="#">allow-flex-algo-fallback</a>
Description	When configured to <b>true</b> , a BGP router with a Flex-Algorithm action configured (via the <b>configure policy-options policy-statement entry action flex-algo</b> command) can resolve to a tunnel with algorithm 0 if no target Flex-Algorithm tunnel is available.  When configured to <b>false</b> , the BGP router can resolve only to the intended Flex-Algorithm tunnel, which may cause traffic loss if no corresponding Flex-Algorithm tunnel is available.
Default	false
Introduced	20.10.R3
Platforms	All

### **ecmp** *number*

Synopsis	Maximum ECMP routes allowed
Context	<b>configure service vprn</b> <i>string</i> <b>bgp-evpn mpls</b> <i>number</i> <b>auto-bind-tunnel ecmp</b> <i>number</i>
Tree	<a href="#">ecmp</a>
Range	1 to 32
Default	1
Introduced	20.10.R1
Platforms	All

### **enforce-strict-tunnel-tagging** *boolean*

Synopsis	Allow enforcement of strict tunnel tagging
Context	<b>configure service vprn</b> <i>string</i> <b>bgp-evpn mpls</b> <i>number</i> <b>auto-bind-tunnel enforce-strict-tunnel-tagging</b> <i>boolean</i>
Tree	<a href="#">enforce-strict-tunnel-tagging</a>
Default	false
Introduced	20.10.R1
Platforms	All

### **resolution** *keyword*

Synopsis	Resolution method for tunnel selection
----------	--

Context	<b>configure service vprn string bgp-evpn mpls number auto-bind-tunnel resolution keyword</b>
Tree	<a href="#">resolution</a>
Default	none
Options	none, filter, any
Introduced	20.10.R1
Platforms	All

### resolution-filter

Synopsis	Enter the <b>resolution-filter</b> context
Context	<b>configure service vprn string bgp-evpn mpls number auto-bind-tunnel resolution-filter</b>
Tree	<a href="#">resolution-filter</a>
Description	Commands in this context configure the subset of tunnel types that can be used in the resolution of BGP-EVPN routes within the automatic binding of the BGP-EVPN MPLS service to tunnels to MP-BGP peers.
Introduced	20.10.R1
Platforms	All

### bgp boolean

Synopsis	Use BGP tunneling for next-hop resolution
Context	<b>configure service vprn string bgp-evpn mpls number auto-bind-tunnel resolution-filter bgp boolean</b>
Tree	<a href="#">bgp</a>
Description	When configured to <b>true</b> , BGP searches the BGP LSP for the address of the BGP next hop.  When configured to <b>false</b> , BGP tunneling is not used and inter-area or inter-as prefixes are not resolved.
Default	false
Introduced	20.10.R1
Platforms	All

### ldp boolean

Synopsis	Use LDP tunneling for next-hop resolution
----------	---

Context	<b>configure service vprn string bgp-evpn mpls number auto-bind-tunnel resolution-filter ldp boolean</b>
Tree	<b>ldp</b>
Description	When configured to <b>true</b> , BGP searches for an LDP LSP with a FEC prefix corresponding to the address of the BGP next hop. When configured to <b>false</b> , LDP tunneling is not used for next-hop resolution.
Default	false
Introduced	20.10.R1
Platforms	All

### **mpls-fwd-policy boolean**

Synopsis	Use MPLS forwarding policy for next-hop resolution
Context	<b>configure service vprn string bgp-evpn mpls number auto-bind-tunnel resolution-filter mpls-fwd-policy boolean</b>
Tree	<b>mpls-fwd-policy</b>
Description	When configured to <b>true</b> , BGP uses the MPLS forwarding policy to determine the address of the BGP next hop. When configured to <b>false</b> , the MPLS forwarding policy is not used for next-hop resolution.
Default	false
Introduced	20.10.R1
Platforms	All

### **rib-api boolean**

Synopsis	Use RIB API gRPC service for next-hop resolution
Context	<b>configure service vprn string bgp-evpn mpls number auto-bind-tunnel resolution-filter rib-api boolean</b>
Tree	<b>rib-api</b>
Description	When configured to <b>true</b> , BGP uses tunnels programmed using the RIB API gRPC service to resolve the next hops of routes imported into the EVPN service. When configured to <b>false</b> , the RIB API service tunnels are not used for next-hop resolution.
Default	false
Introduced	20.10.R1
Platforms	All

### **rsvp boolean**

Synopsis	Use RSVP tunneling for next-hop resolution
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>bgp-evpn mpls</b> <i>number</i> <b>auto-bind-tunnel resolution-filter</b> <b>rsvp</b> <i>boolean</i>
Tree	<b>rsvp</b>
Description	When configured to <b>true</b> , BGP searches the best metric RSVP LSP to determine the address of the BGP next hop. This address can correspond to the system interface or to another loopback interface used by the BGP instance on the remote node. The LSP metric is provided by MPLS in the tunnel table. In the case of multiple RSVP LSPs with the same lowest metric, BGP selects the LSP with the lowest tunnel ID.  When configured to <b>false</b> , the RSVP LSP is not used for next-hop resolution.
Default	false
Introduced	20.10.R1
Platforms	All

### **sr-isis boolean**

Synopsis	Use IS-IS SR tunneling for next-hop resolution
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>bgp-evpn mpls</b> <i>number</i> <b>auto-bind-tunnel resolution-filter</b> <b>sr-isis</b> <i>boolean</i>
Tree	<b>sr-isis</b>
Description	When configured to <b>true</b> , BGP uses an IS-IS tunnel type to determine the address of the BGP next hop.  The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered IS-IS instance.  When configured to <b>false</b> , IS-IS tunneling is not used for next-hop resolution.
Default	false
Introduced	20.10.R1
Platforms	All

### **sr-ospf boolean**

Synopsis	Use OSPF SR tunneling for next-hop resolution
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>bgp-evpn mpls</b> <i>number</i> <b>auto-bind-tunnel resolution-filter</b> <b>sr-ospf</b> <i>boolean</i>
Tree	<b>sr-ospf</b>

Description	When configured to <b>true</b> , BGP uses an OSPF tunnel type to determine the address of the BGP next hop.  The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered OSPF instance.  When configured to <b>false</b> , OSPF tunneling is not used for next-hop resolution.
Default	false
Introduced	20.10.R1
Platforms	All

### **sr-ospf3** *boolean*

Synopsis	Use OSPFv3 SR tunneling for next-hop resolution
Context	<b>configure</b> <b>service</b> <b>vpn</b> <i>string</i> <b>bgp-evpn</b> <b>mpls</b> <i>number</i> <b>auto-bind-tunnel</b> <b>resolution-filter</b> <b>sr-ospf3</b> <i>boolean</i>
Tree	<b>sr-ospf3</b>
Description	When configured to <b>true</b> , BGP uses an OSPF3 tunnel type to determine the address of the BGP next hop.  The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered OSPF3 instance.  When configured to <b>false</b> , OSPF3 tunneling is not used for next-hop resolution.
Default	false
Introduced	20.10.R1
Platforms	All

### **sr-policy** *boolean*

Synopsis	Use SR policies for next-hop resolution
Context	<b>configure</b> <b>service</b> <b>vpn</b> <i>string</i> <b>bgp-evpn</b> <b>mpls</b> <i>number</i> <b>auto-bind-tunnel</b> <b>resolution-filter</b> <b>sr-policy</b> <i>boolean</i>
Tree	<b>sr-policy</b>
Description	When configured to <b>true</b> , this command instructs BGP to use an SR policy to determine the address of the BGP next hop. The SR policy search criteria includes a non-null endpoint and color value that matches the BGP next hop and color extended community value, respectively, of the EVPN route.  When configured to <b>false</b> , SR policies are not used for next-hop resolution.
Default	false
Introduced	20.10.R1

Platforms All

### **sr-te** *boolean*

Synopsis Use SR-TE tunneling for next-hop resolution

Context **configure** *service vprn string bgp-evpn mpls number auto-bind-tunnel resolution-filter sr-te boolean*

Tree *sr-te*

Description When configured to **true**, BGP uses an SR-TE tunnel type to determine the address of the BGP next hop.

The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered tunnel ID.

When configured to **false**, SR-TE tunneling is not used for next-hop resolution.

Default false

Introduced 20.10.R1

Platforms All

### **udp** *boolean*

Synopsis Use MPLS over UDP tunneling for next-hop resolution

Context **configure** *service vprn string bgp-evpn mpls number auto-bind-tunnel resolution-filter udp boolean*

Tree *udp*

Description When configured to **true**, BGP uses an MPLS over UDP tunnel type to determine the address of the BGP next hop.

When configured to **false**, MPLS over UDP tunneling is not used for next-hop resolution.

Default false

Introduced 20.10.R1

Platforms All

### **default-route-tag** *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Default route tag

Context	<b>configure service vprn string bgp-evpn mpls number default-route-tag string</b>
Tree	<b>default-route-tag</b>
Description	<p>This command configures a route tag that is used when sending a route to the BGP application (for the corresponding service and BGP instance). If the corresponding BGP instance is enabled, the command cannot be changed.</p> <p>When used for BGP EVPN contexts, only one route tag can be passed to BGP for matching on export policies. In case of a conflict with other route tags pushed by EVPN, the default route tag has the least priority.</p> <p>The following are examples of the conflict priority handling:</p> <ul style="list-style-type: none"><li>• If a service is configured with both <b>default-route-tag X</b> and <b>proxy-arp evpn-route-tag Y</b>, the EVPN uses route tag Y when sending EVPN proxy-arp routes to the BGP RIB for advertisement.</li><li>• If a given IP-prefix route is tagged in the route-table with tag A and the R-VPLS, in which the route is advertised, uses B as the <b>default-route-tag</b>, then EVPN keeps tag A when sending the route to the BGP RIB.</li></ul> <p>The <b>default-route-tag</b> configuration is only supported on EVPN and IP-VPN service routes. The route tag for ES and AD per-ES routes is always zero.</p>
Introduced	20.10.R1
Platforms	All

## domain-id string

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Domain ID of received BGP route before readvertisement
Context	<b>configure service vprn string bgp-evpn mpls number domain-id string</b>
Tree	<b>domain-id</b>
Description	<p>This command specifies the domain ID. The domain ID identifies the network from which the BGP route was received before the RTM advertises it to a different neighbor. The domain ID is part of a domain, represented as domain-id:isf_safi_type in the D-PATH attribute, as described in <i>draft-ietf-bess-evpn-ipvpn-interworking</i>. Gateway routers modify the D-PATH attribute. A gateway is a PE where a VPRN is instantiated. The VPRN in this case advertises or receives routes from multiple BGP owners (for example, EVPN-IFL and BGP-IPVPN) or multiple instances of the same owner (for example, VPRN with two BGP-IPVPN instances).</p> <p>Gateways use the D-PATH attribute to detect loops (for received routes where the D-PATH contains a local domain ID) and to make BGP best-path selection decisions based on the D-PATH length (shorter D-PATH is preferred).</p> <p>In the following example, suppose a gateway receives prefix P in an EVPN-IFL instance with the following D-PATH from neighbor N:</p>

Seg Len=1 / 65000:1:128

If the router imports the route in VPRN-1, BGP-EVPN SRv6 instance with domain 65000:2, it readvertises it to its BGP-IPVPN MPLS instance as follows:

Seg Len=2 / 65000:2:70 / 65000:1:128

That is, the gateway prepends the local domain ID and family to the D-PATH before readvertising the route into a different instance.

Introduced 21.10.R1  
Platforms All

### dynamic-egress-label-limit *boolean*

Synopsis Enables dynamic egress label limit

Context **configure service vprn string bgp-evpn mpls number dynamic-egress-label-limit boolean**

Tree [dynamic-egress-label-limit](#)

Description When configured to **true**, this command relaxes the egress MPLS label limit check when resolving BGP next hops in the tunnel table.

For VPRN services, the OAM label is never computed and, therefore, one more egress label is allowed.

For EVPN (Epipe and VPLS) services, the system only computes the control word and ESI label if they are used. For the control word, the system reduces the egress label limit by one label if the control word is configured in the service. When configured, the ESI label is not counted for Epipes or VPLS services without an ES.

When configured to **false** this command, for EVPN, Epipe, and VPLS services, always accounts for the ESI label and control word.

Default false

Introduced 22.2.R1

Platforms All

### evi *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis EVPN instance ID

Context **configure service vprn string bgp-evpn mpls number evi number**

Tree [evi](#)

Description	This command configures the EVI that identifies the BGP EVPN instance in a VPRN (for the EVPN-IFL model) that is associated with the Layer 3 Ethernet segment. This configuration is required on the PEs attached to the Ethernet segment and on the remote PEs that need to create ES destinations to the MH Layer 3 Ethernet segment.
Range	1 to 16777215
Introduced	22.10.R1
Platforms	All

### evpn-link-bandwidth

Synopsis	Enter the <b>evpn-link-bandwidth</b> context
Context	<b>configure service vprn string bgp-evpn mpls number evpn-link-bandwidth</b>
Tree	<a href="#">evpn-link-bandwidth</a>
Introduced	22.7.R1
Platforms	All

### advertise

Synopsis	Enable the <b>advertise</b> context
Context	<b>configure service vprn string bgp-evpn mpls number evpn-link-bandwidth advertise</b>
Tree	<a href="#">advertise</a>
Introduced	22.7.R1
Platforms	All

### max-dynamic-weight *number*

Synopsis	Maximum dynamic weight of the route
Context	<b>configure service vprn string bgp-evpn mpls number evpn-link-bandwidth advertise max-dynamic-weight number</b>
Tree	<a href="#">max-dynamic-weight</a>
Description	This command configures the maximum weight advertised in the EVPN link bandwidth extended community for the advertised EVPN IP-Prefix routes for the service. If weight dynamic is configured, the actual advertised weight is the minimum of the number of BGP PE-CE paths for the prefix and the configured maximum weight.
Range	1 to 128
Default	128
Introduced	22.7.R1

Platforms All

### **weight** (*number* | *keyword*)

Synopsis	Weight of the route
Context	<b>configure service vprn</b> <i>string</i> <b>bgp-evpn mpls</b> <i>number</i> <b>evpn-link-bandwidth advertise weight</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>weight</b>
Description	<p>This command configures the weight advertised in the EVPN link bandwidth extended community for the advertised EVPN IP-Prefix routes for the service.</p> <p>If set to <b>dynamic</b>, the weight is dynamically set based on the number of BGP PE-CE paths for the IP-Prefix that is advertised in an EVPN IP-Prefix route.</p>
Range	1 to 128
Default	dynamic
Options	dynamic
Introduced	22.7.R1
Platforms	All

### **weighted-ecmp** *boolean*

Synopsis	Enable weighted ECMP
Context	<b>configure service vprn</b> <i>string</i> <b>bgp-evpn mpls</b> <i>number</i> <b>evpn-link-bandwidth weighted-ecmp</b> <i>boolean</i>
Tree	<b>weighted-ecmp</b>
Description	<p>When configured to <b>true</b>, the router supports the processing of the EVPN link bandwidth extended community when installing an ECMP set for an EVPN IP-Prefix route in the VPRN route table.</p> <p>Flows to an IP Prefix received with a weight and a zero ESI value are sprayed according to the weight. If the EVPN IP-Prefix route received with the weight has a non-zero ESI, the weight is divided into the number of PEs attached to the Ethernet Segment (and rounded up if the result is not an integer).</p> <p>The command also enables the weighted ECMP functionality for BGP CEs that are configured with an <b>evpn-link-bandwidth add-to-received-bgp</b> weight.</p> <p>When configured to <b>false</b>, the router disables the processing of the EVPN link bandwidth extended community.</p>
Default	false
Introduced	22.7.R1
Platforms	All

## **route-distinguisher** (*string* | *keyword*)

Synopsis	Route distinguisher
Context	<b>configure</b> <a href="#">service vpn</a> <i>string</i> <a href="#">bgp-evpn mpls</a> <i>number</i> <b>route-distinguisher</b> ( <i>string</i>   <i>keyword</i> )
Tree	<a href="#">route-distinguisher</a>
Description	This command specifies a unique route distinguisher (RD) to be associated with each routing instance to identify which VPN the route belongs to.
Options	auto-rd
Introduced	20.10.R1
Platforms	All

## **send-tunnel-encap**

Synopsis	Enter the <b>send-tunnel-encap</b> context
Context	<b>configure</b> <a href="#">service vpn</a> <i>string</i> <a href="#">bgp-evpn mpls</a> <i>number</i> <b>send-tunnel-encap</b>
Tree	<a href="#">send-tunnel-encap</a>
Introduced	20.10.R1
Platforms	All

## **mpls** *boolean*

### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable MPLS encapsulation
Context	<b>configure</b> <a href="#">service vpn</a> <i>string</i> <a href="#">bgp-evpn mpls</a> <i>number</i> <a href="#">send-tunnel-encap mpls</a> <i>boolean</i>
Tree	<a href="#">mpls</a>
Default	true
Introduced	20.10.R1
Platforms	All

## mpls-over-udp *boolean*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable MPLS over UDP encapsulation
Context	<b>configure</b> <a href="#">service vprn string bgp-evpn mpls number send-tunnel-encap mpls-over-udp boolean</a>
Tree	<a href="#">mpls-over-udp</a>
Default	false
Introduced	20.10.R1

## vrf-export

Synopsis	Enable the <b>vrf-export</b> context
Context	<b>configure</b> <a href="#">service vprn string bgp-evpn mpls number vrf-export</a>
Tree	<a href="#">vrf-export</a>
Introduced	20.10.R1
Platforms	All

## policy (*policy-expr-string* | *string*)

Synopsis	Policy name
Context	<b>configure</b> <a href="#">service vprn string bgp-evpn mpls number vrf-export policy (policy-expr-string   string)</a>
Tree	<a href="#">policy</a>
Description	<p>This command configures VRF route policies that control routes between local VRFs and other VRFs on the same or remote PE routers (using MP-BGP).</p> <p>Each referenced object is either a policy logical expression or the name of a single policy.</p> <p>Only one referenced object can be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT). The objects are evaluated in the specified order to determine whether to accept or reject the route.</p> <p>Only the first policy can have the maximum length and the rest can be up to 64 characters.</p> <p>Aggregate routes are not advertised using MP-BGP protocols to the other MP-BGP peers.</p>

String Length	1 to 255
Max. Instances	15
Min. Instances	1
Notes	This element is ordered by the user.
Introduced	20.10.R1
Platforms	All

## vrf-import

Synopsis	Enable the <b>vrf-import</b> context
Context	<b>configure service vprn string bgp-evpn mpls number vrf-import</b>
Tree	<a href="#">vrf-import</a>
Introduced	20.10.R1
Platforms	All

## policy (*policy-expr-string* | *string*)

Synopsis	Policy name
Context	<b>configure service vprn string bgp-evpn mpls number vrf-import policy (<i>policy-expr-string</i>   <i>string</i>)</b>
Tree	<a href="#">policy</a>
Description	<p>This command configures VRF route policies that control routes between local VRFs and other VRFs on the same or remote PE routers (using MP-BGP).</p> <p>Each referenced object is either a policy logical expression or the name of a single policy.</p> <p>Only one referenced object can be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT). The objects are evaluated in the specified order to determine whether to accept or reject the route.</p> <p>Only the first policy can have the maximum length and the rest can be up to 64 characters.</p> <p>Aggregate routes are not advertised using MP-BGP protocols to the other MP-BGP peers.</p>
String Length	1 to 255
Max. Instances	15

Min. Instances	1
Notes	This element is ordered by the user.
Introduced	20.10.R1
Platforms	All

## **vrf-target**

Synopsis	Enter the <b>vrf-target</b> context
Context	<b>configure service vprn string bgp-evpn mpls number vrf-target</b>
Tree	<b>vrf-target</b>
Description	<p>Commands in this context configure the route target that is added to advertised routes or compared against received routes from other VRFs on the same or remote PE routers (via MP-BGP).</p> <p>BGP-VPN and EVPN-IFL routes imported using a VRF target configuration use the BGP preference value of 170 when imported from remote PE routers, or retain the protocol preference value of the exported route when imported from other VRFs in the same router.</p> <p>Configured VRF import or export policies override the VRF target policy.</p>
Introduced	20.10.R1
Platforms	All

## **community string**

Synopsis	Extended BGP community
Context	<b>configure service vprn string bgp-evpn mpls number vrf-target community string</b>
Tree	<b>community</b>
Description	This command configures an extended BGP community in the form type:x:y. Type can only be target and x and y are 16-bit integers.
String Length	10 to 28
Notes	The following elements are part of a choice: <b>community</b> or ( <b>export-community</b> and <b>import-community</b> ).
Introduced	20.10.R1
Platforms	All

### **export-community** *string*

Synopsis	Communities sent to remote PE neighbors
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp-evpn mpls</a> <i>number</i> <a href="#">vrf-target</a> <b>export-community</b> <i>string</i>
Tree	<a href="#">export-community</a>
String Length	10 to 28
Notes	The following elements are part of a choice: <b>community</b> or ( <b>export-community</b> and <b>import-community</b> ).
Introduced	20.10.R1
Platforms	All

### **import-community** *string*

Synopsis	Communities accepted from remote PE neighbors
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp-evpn mpls</a> <i>number</i> <a href="#">vrf-target</a> <b>import-community</b> <i>string</i>
Tree	<a href="#">import-community</a>
String Length	10 to 28
Notes	The following elements are part of a choice: <b>community</b> or ( <b>export-community</b> and <b>import-community</b> ).
Introduced	20.10.R1
Platforms	All

### **segment-routing-v6** [[bgp-instance](#)] *number*

Synopsis	Enter the <b>segment-routing-v6</b> list instance
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp-evpn</a> <b>segment-routing-v6</b> <i>number</i>
Tree	<a href="#">segment-routing-v6</a>
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **[bgp-instance]** *number*

Synopsis	BGP instance
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp-evpn</a> <b>segment-routing-v6</b> <i>number</i>
Tree	<a href="#">segment-routing-v6</a>
Range	1

Notes	This element is part of a list key.
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of segment routing over IPv6
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>bgp-evpn</b> <b>segment-routing-v6</b> <i>number</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Default	disable
Options	enable, disable
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **default-route-tag** *string*

Synopsis	Default route tag
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>bgp-evpn</b> <b>segment-routing-v6</b> <i>number</i> <b>default-route-tag</b> <i>string</i>
Tree	<b>default-route-tag</b>
Description	<p>This command configures a route tag that is used when sending a route to the BGP application (for the corresponding service and BGP instance). If the corresponding BGP instance is enabled, the command cannot be changed.</p> <p>When used for BGP EVPN contexts, only one route tag can be passed to BGP for matching on export policies. In case of a conflict with other route tags pushed by EVPN, the default route tag has the least priority.</p> <p>The following are examples of the conflict priority handling:</p> <ul style="list-style-type: none"><li>• If a service is configured with both <b>default-route-tag</b> <i>X</i> and <b>proxy-arp evpn-route-tag</b> <i>Y</i>, the EVPN uses route tag <i>Y</i> when sending EVPN proxy-arp routes to the BGP RIB for advertisement.</li><li>• If a given IP-prefix route is tagged in the route-table with tag <i>A</i> and the R-VPLS, in which the route is advertised, uses <i>B</i> as the <b>default-route-tag</b>, then EVPN keeps tag <i>A</i> when sending the route to the BGP RIB.</li></ul> <p>The <b>default-route-tag</b> configuration is only supported on EVPN and IP-VPN service routes. The route tag for ES and AD per-ES routes is always zero.</p>
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## domain-id string

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Domain ID of received BGP route before readvertisement
Context	<b>configure service vprn string bgp-evpn segment-routing-v6 number domain-id string</b>
Tree	<b>domain-id</b>
Description	<p>This command specifies the domain ID. The domain ID identifies the network from which the BGP route was received before the RTM advertises it to a different neighbor. The domain ID is part of a domain, represented as domain-id:isf_safi_type in the D-PATH attribute, as described in <i>draft-ietf-bess-evpn-ipvpn-interworking</i>. Gateway routers modify the D-PATH attribute. A gateway is a PE where a VPRN is instantiated. The VPRN in this case advertises or receives routes from multiple BGP owners (for example, EVPN-IFL and BGP-IPVPN) or multiple instances of the same owner (for example, VPRN with two BGP-IPVPN instances).</p> <p>Gateways use the D-PATH attribute to detect loops (for received routes where the D-PATH contains a local domain ID) and to make BGP best-path selection decisions based on the D-PATH length (shorter D-PATH is preferred).</p> <p>In the following example, suppose a gateway receives prefix P in an EVPN-IFL instance with the following D-PATH from neighbor N:</p> <p>Seg Len=1 / 65000:1:128</p> <p>If the router imports the route in VPRN-1, BGP-EVPN SRv6 instance with domain 65000:2, it readvertises it to its BGP-IPVPN MPLS instance as follows:</p> <p>Seg Len=2 / 65000:2:70 / 65000:1:128</p> <p>That is, the gateway prepends the local domain ID and family to the D-PATH before readvertising the route into a different instance.</p>
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## evi number

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	EVI information
Context	<b>configure service vprn string bgp-evpn segment-routing-v6 number evi number</b>
Tree	<b>evi</b>

Description	This command configures the EVI that identifies the BGP EVPN instance in a VPRN (for the EVPN-IFL model) or an R-VPLS (for the EVPN-IFF model) that is associated with the Layer 3 Ethernet segment. This configuration is required on the PEs attached to the Ethernet segment and on the remote PEs that need to create ES destinations to the MH Layer 3 Ethernet segment.
Range	1 to 16777215
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **resolution** *keyword*

Synopsis	Resolution options for routes
Context	<b>configure service vprn</b> <i>string</i> <b>bgp-evpn segment-routing-v6</b> <i>number</i> <b>resolution</b> <i>keyword</i>
Tree	<b>resolution</b>
Default	route-table
Options	route-table, tunnel-table, fallback-tunnel-to-route-table
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **route-distinguisher** (*string* | *keyword*)

Synopsis	Route distinguisher
Context	<b>configure service vprn</b> <i>string</i> <b>bgp-evpn segment-routing-v6</b> <i>number</i> <b>route-distinguisher</b> ( <i>string</i>   <i>keyword</i> )
Tree	<b>route-distinguisher</b>
Description	This command specifies a unique route distinguisher (RD) to be associated with each routing instance to identify the VPN to which the route belongs.  Alternatively, the system can automatically generate an RD based on the BGP automatic RD range configured at the <b>configure service system</b> level.
Options	auto-rd
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **source-address** *string*

Synopsis	Source IPv6 address
----------	---------------------

Context	<b>configure service vprn</b> <i>string</i> <b>bgp-evpn segment-routing-v6</b> <i>number</i> <b>source-address</b> <i>string</i>
Tree	<b>source-address</b>
Description	<p>When configured, this command specifies the source IPv6 address used in the SA field of the outer IPv6 header of the SRv6 encapsulated packet.</p> <p>When not configured, the source IPv6 address is inherited from the configuration of the global default address in the <b>router "base" segment-routing segment-routing-v6 source-address</b> context.</p> <p>A source IPv6 address must be configured in this context or in the base router context. The system does not check if the address entered is a valid local address.</p>
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## srv6

Synopsis	Enter the <b>srv6</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>bgp-evpn segment-routing-v6</b> <i>number</i> <b>srv6</b>
Tree	<b>srv6</b>
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## default-locator *string*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Default route locator
Context	<b>configure service vprn</b> <i>string</i> <b>bgp-evpn segment-routing-v6</b> <i>number</i> <b>srv6 default-locator</b> <i>string</i>
Tree	<b>default-locator</b>
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## instance *reference*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Segment Routing IPv6 instance
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp-evpn segment-routing-v6</a> <i>number</i> <a href="#">srv6</a> <i>instance reference</i>
Tree	<a href="#">instance</a>
Reference	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">segment-routing-v6</a> <i>number</i>
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## vrf-export

Synopsis	Enable the <b>vrf-export</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp-evpn segment-routing-v6</a> <i>number</i> <a href="#">vrf-export</a>
Tree	<a href="#">vrf-export</a>
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## policy (*policy-expr-string* | *string*)

Synopsis	Policy name
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp-evpn segment-routing-v6</a> <i>number</i> <a href="#">vrf-export</a> <a href="#">policy (policy-expr-string   string)</a>
Tree	<a href="#">policy</a>
Description	<p>This command configures VRF route policies that control routes between local VRFs and other VRFs on the same or remote PE routers (using MP-BGP).</p> <p>Each referenced object is either a policy logical expression or the name of a single policy.</p> <p>Only one referenced object can be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT). The objects are evaluated in the specified order to determine whether to accept or reject the route.</p> <p>Only the first policy can have the maximum length and the rest can be up to 64 characters.</p> <p>Aggregate routes are not advertised using MP-BGP protocols to the other MP-BGP peers.</p>

String Length	1 to 255
Max. Instances	15
Min. Instances	1
Notes	This element is ordered by the user.
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## vrf-import

Synopsis	Enable the <b>vrf-import</b> context
Context	<b>configure service vprn string bgp-evpn segment-routing-v6 number vrf-import</b>
Tree	<a href="#">vrf-import</a>
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## policy (*policy-expr-string* | *string*)

Synopsis	Policy name
Context	<b>configure service vprn string bgp-evpn segment-routing-v6 number vrf-import policy</b> ( <i>policy-expr-string</i>   <i>string</i> )
Tree	<a href="#">policy</a>
Description	<p>This command configures VRF route policies that control routes between local VRFs and other VRFs on the same or remote PE routers (using MP-BGP).</p> <p>Each referenced object is either a policy logical expression or the name of a single policy.</p> <p>Only one referenced object can be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT). The objects are evaluated in the specified order to determine whether to accept or reject the route.</p> <p>Only the first policy can have the maximum length and the rest can be up to 64 characters.</p> <p>Aggregate routes are not advertised using MP-BGP protocols to the other MP-BGP peers.</p>
String Length	1 to 255
Max. Instances	15

Min. Instances	1
Notes	This element is ordered by the user.
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## vrf-target

Synopsis	Enter the <b>vrf-target</b> context
Context	<b>configure service vprn string bgp-evpn segment-routing-v6 number vrf-target</b>
Tree	<b>vrf-target</b>
Description	<p>Commands in this context configure the route target that is added to advertised routes or compared against received routes from other VRFs on the same or remote PE routers (via MP-BGP).</p> <p>BGP-VPN and EVPN-IFL routes imported using a VRF target configuration use the BGP preference value of 170 when imported from remote PE routers, or retain the protocol preference value of the exported route when imported from other VRFs in the same router.</p> <p>Configured VRF import or export policies override the VRF target policy.</p>
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## community string

Synopsis	Extended BGP community
Context	<b>configure service vprn string bgp-evpn segment-routing-v6 number vrf-target community string</b>
Tree	<b>community</b>
Description	This command configures an extended BGP community in the form type:x:y. Type can only be target and x and y are 16-bit integers.
String Length	10 to 28
Notes	The following elements are part of a choice: <b>community</b> or ( <b>export-community</b> and <b>import-community</b> ).
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **export-community** *string*

Synopsis	Communities sent to remote PE neighbors
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp-evpn segment-routing-v6</a> <i>number</i> <a href="#">vrf-target</a> <b>export-community</b> <i>string</i>
Tree	<a href="#">export-community</a>
String Length	10 to 28
Notes	The following elements are part of a choice: <b>community</b> or ( <b>export-community</b> and <b>import-community</b> ).
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **import-community** *string*

Synopsis	Communities accepted from remote PE neighbors
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp-evpn segment-routing-v6</a> <i>number</i> <a href="#">vrf-target</a> <b>import-community</b> <i>string</i>
Tree	<a href="#">import-community</a>
String Length	10 to 28
Notes	The following elements are part of a choice: <b>community</b> or ( <b>export-community</b> and <b>import-community</b> ).
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **bgp-ipvpn**

Synopsis	Enter the <b>bgp-ipvpn</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <b>bgp-ipvpn</b>
Tree	<a href="#">bgp-ipvpn</a>
Introduced	21.2.R1
Platforms	All

### **mpls**

Synopsis	Enter the <b>mpls</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <b>bgp-ipvpn</b> <b>mpls</b>
Tree	<a href="#">mpls</a>

Introduced	21.2.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of BGP-IPVPN MPLS
Context	<b>configure service vpn</b> <i>string</i> <b>bgp-ipvpn mpls admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	21.2.R1
Platforms	All

### **auto-bind-tunnel**

Synopsis	Enter the <b>auto-bind-tunnel</b> context
Context	<b>configure service vpn</b> <i>string</i> <b>bgp-ipvpn mpls auto-bind-tunnel</b>
Tree	<a href="#">auto-bind-tunnel</a>
Description	Commands in this context configure the automatic binding parameters of a BGP-IPVPN service using tunnels to MP-BGP peers.
Introduced	21.2.R1
Platforms	All

### **allow-flex-algo-fallback** *boolean*

Synopsis	Enable flexible algorithm fallback
Context	<b>configure service vpn</b> <i>string</i> <b>bgp-ipvpn mpls auto-bind-tunnel allow-flex-algo-fallback</b> <i>boolean</i>
Tree	<a href="#">allow-flex-algo-fallback</a>
Description	<p>When configured to <b>true</b>, a BGP router with a Flex-Algorithm action configured (via the <b>configure policy-options policy-statement entry action flex-algo</b> command) can resolve to a tunnel with algorithm 0 if no target Flex-Algorithm tunnel is available.</p> <p>When configured to <b>false</b>, the BGP router can resolve only to the intended Flex-Algorithm tunnel, which may cause traffic loss if no corresponding Flex-Algorithm tunnel is available.</p>
Default	false
Introduced	21.2.R1

Platforms All

### **ecmp** *number*

Synopsis Maximum ECMP routes allowed

Context **configure** [service vprn](#) *string* [bgp-ipvpn](#) [mpls](#) [auto-bind-tunnel](#) **ecmp** *number*

Tree [ecmp](#)

Description This command configures the maximum number of tunnels that can be used as ECMP next hops for the VPRN. This value overrides the ECMP value configured at the **configure service vprn** context level.

Range 1 to 32

Default 1

Introduced 21.2.R1

Platforms All

### **enforce-strict-tunnel-tagging** *boolean*

Synopsis Allow enforcement of strict tunnel tagging

Context **configure** [service vprn](#) *string* [bgp-ipvpn](#) [mpls](#) [auto-bind-tunnel](#) **enforce-strict-tunnel-tagging** *boolean*

Tree [enforce-strict-tunnel-tagging](#)

Description When configured to **true**, the system must only consider LSPs marked with an administrative tag for next-hop resolution.

When configured to **false**, tagged RSVP and SR-TE LSPs are considered first. The system then uses untagged LSPs of other types.

Default false

Introduced 21.2.R1

Platforms All

### **resolution** *keyword*

Synopsis Resolution method for tunnel selection

Context **configure** [service vprn](#) *string* [bgp-ipvpn](#) [mpls](#) [auto-bind-tunnel](#) **resolution** *keyword*

Tree [resolution](#)

Default none

Options none, filter, any

Introduced 21.2.R1  
Platforms All

### resolution-filter

Synopsis Enter the **resolution-filter** context  
Context **configure service vprn string bgp-ipvpn mpls auto-bind-tunnel resolution-filter**  
Tree [resolution-filter](#)  
Description Commands in this context configure the subset of tunnel types that can be used in the resolution of BGP-IPVPN routes within the automatic binding of the BGP-IPVPN MPLS service to tunnels to MP-BGP peers.  
Introduced 21.2.R1  
Platforms All

### bgp boolean

Synopsis Use BGP tunneling for next-hop resolution  
Context **configure service vprn string bgp-ipvpn mpls auto-bind-tunnel resolution-filter bgp boolean**  
Tree [bgp](#)  
Description When configured to **true**, BGP searches the BGP LSP for the address of the BGP next hop.  
When configured to **false**, BGP tunneling is not used and inter-area or inter-as prefixes are not resolved.  
Default true  
Introduced 21.2.R1  
Platforms All

### gre boolean

Synopsis Use GRE tunneling for next-hop resolution  
Context **configure service vprn string bgp-ipvpn mpls auto-bind-tunnel resolution-filter gre boolean**  
Tree [gre](#)  
Description When configured to **true**, this command enables setting the tunnel type for the auto bind tunnel.

When configured to **false**, this command disables setting the tunnel type for the auto bind tunnel.

Default	false
Introduced	21.2.R1
Platforms	All

### **ldp boolean**

Synopsis	Use LDP tunneling for next-hop resolution
Context	<b>configure service vpn string bgp-ipvpn mpls auto-bind-tunnel resolution-filter ldp boolean</b>
Tree	<a href="#">ldp</a>
Description	When configured to <b>true</b> , BGP searches for an LDP LSP with a FEC prefix corresponding to the address of the BGP next hop. When configured to <b>false</b> , LDP tunneling is not used for next-hop resolution.
Default	false
Introduced	21.2.R1
Platforms	All

### **mpls-fwd-policy boolean**

Synopsis	Use MPLS forwarding policy for next-hop resolution
Context	<b>configure service vpn string bgp-ipvpn mpls auto-bind-tunnel resolution-filter mpls-fwd-policy boolean</b>
Tree	<a href="#">mpls-fwd-policy</a>
Description	When configured to <b>true</b> , BGP uses the MPLS forwarding policy to determine the address of the BGP next hop. When configured to <b>false</b> , the MPLS forwarding policy is not used for next-hop resolution.
Default	false
Introduced	21.2.R1
Platforms	All

### **rib-api boolean**

Synopsis	Use RIB API gRPC service for next-hop resolution
----------	--

Context	<b>configure service vprn</b> <i>string</i> <a href="#">bgp-ipvpn</a> <a href="#">mpls</a> <a href="#">auto-bind-tunnel</a> <a href="#">resolution-filter</a> <a href="#">rib-api</a> <i>boolean</i>
Tree	<a href="#">rib-api</a>
Description	When configured to <b>true</b> , BGP uses tunnels programmed using the RIB API gRPC service to resolve the next hops of routes imported into the EVPN service. When configured to <b>false</b> , the RIB API service tunnels are not used for next-hop resolution.
Default	false
Introduced	21.2.R1
Platforms	All

### **rsvp** *boolean*

Synopsis	Use RSVP tunneling for next-hop resolution
Context	<b>configure service vprn</b> <i>string</i> <a href="#">bgp-ipvpn</a> <a href="#">mpls</a> <a href="#">auto-bind-tunnel</a> <a href="#">resolution-filter</a> <a href="#">rsvp</a> <i>boolean</i>
Tree	<a href="#">rsvp</a>
Description	When configured to <b>true</b> , BGP searches the best metric RSVP LSP to determine the address of the BGP next hop. This address can correspond to the system interface or to another loopback interface used by the BGP instance on the remote node. The LSP metric is provided by MPLS in the tunnel table. In the case of multiple RSVP LSPs with the same lowest metric, BGP selects the LSP with the lowest tunnel ID. When configured to <b>false</b> , the RSVP LSP is not used for next-hop resolution.
Default	false
Introduced	21.2.R1
Platforms	All

### **sr-isis** *boolean*

Synopsis	Use IS-IS SR tunneling for next-hop resolution
Context	<b>configure service vprn</b> <i>string</i> <a href="#">bgp-ipvpn</a> <a href="#">mpls</a> <a href="#">auto-bind-tunnel</a> <a href="#">resolution-filter</a> <a href="#">sr-isis</a> <i>boolean</i>
Tree	<a href="#">sr-isis</a>
Description	When configured to <b>true</b> , BGP uses an IS-IS tunnel type to determine the address of the BGP next hop. The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered IS-IS instance. When configured to <b>false</b> , IS-IS tunneling is not used for next-hop resolution.

Default	false
Introduced	21.2.R1
Platforms	All

### **sr-ospf boolean**

Synopsis	Use OSPF SR tunneling for next-hop resolution
Context	<b>configure service vprn string bgp-ipvpn mpls auto-bind-tunnel resolution-filter sr-ospf boolean</b>
Tree	<a href="#">sr-ospf</a>
Description	<p>When configured to <b>true</b>, BGP uses an OSPF tunnel type to determine the address of the BGP next hop.</p> <p>The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered OSPF instance.</p> <p>When configured to <b>false</b>, OSPF tunneling is not used for next-hop resolution.</p>
Default	false
Introduced	21.2.R1
Platforms	All

### **sr-ospf3 boolean**

Synopsis	Use OSPFv3 SR tunneling for next-hop resolution
Context	<b>configure service vprn string bgp-ipvpn mpls auto-bind-tunnel resolution-filter sr-ospf3 boolean</b>
Tree	<a href="#">sr-ospf3</a>
Description	<p>When configured to <b>true</b>, BGP uses an OSPFv3 tunnel type to determine the address of the BGP next hop.</p> <p>The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered OSPFv3 instance.</p> <p>When configured to <b>false</b>, OSPFv3 tunneling is not used for next-hop resolution.</p>
Default	false
Introduced	21.2.R1
Platforms	All

### **sr-policy boolean**

Synopsis	Use SR policies for next-hop resolution
----------	---

Context	<b>configure service vprn string</b> <i>bgp-ipvprn mpls auto-bind-tunnel resolution-filter sr-policy boolean</i>
Tree	<a href="#">sr-policy</a>
Description	When configured to <b>true</b> , SR policies are used to determine the address of the BGP next hop.  The SR policy search criteria includes a non-null endpoint and color value that matches the BGP next hop and color extended community value, respectively, of the EVPN route.  When configured to <b>false</b> , SR policies are not used for next-hop resolution.
Default	false
Introduced	21.2.R1
Platforms	All

### **sr-te boolean**

Synopsis	Use SR-TE tunneling for next-hop resolution
Context	<b>configure service vprn string</b> <i>bgp-ipvprn mpls auto-bind-tunnel resolution-filter sr-te boolean</i>
Tree	<a href="#">sr-te</a>
Description	When configured to <b>true</b> , BGP uses an SR-TE tunnel type to determine the address of the BGP next hop.  The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered tunnel ID.  When configured to <b>false</b> , SR-TE tunneling is not used for next-hop resolution.
Default	false
Introduced	21.2.R1
Platforms	All

### **udp boolean**

Synopsis	Use MPLS over UDP tunneling for next-hop resolution
Context	<b>configure service vprn string</b> <i>bgp-ipvprn mpls auto-bind-tunnel resolution-filter udp boolean</i>
Tree	<a href="#">udp</a>
Description	When configured to <b>true</b> , BGP uses an MPLS over UDP tunnel type to determine the address of the BGP next hop.  When configured to <b>false</b> , MPLS over UDP tunneling is not used for next-hop resolution.
Default	false

Introduced 21.2.R1  
Platforms All

### **weighted-ecmp** *boolean*

Synopsis Allow weighted load-balancing

Context **configure** [service vprn](#) *string* [bgp-ipvpn mpls auto-bind-tunnel](#) [weighted-ecmp](#) *boolean*

Tree [weighted-ecmp](#)

Description When configured to **true**, this command enables weighted ECMP for packets using tunnels that a VPRN automatically binds to. Packets are sprayed across LSPs in the ECMP according to the outcome of the hash algorithm and the configured load balancing weight of each LSP.

When configured to **false**, this command disables weighted ECMP for next-hop tunnel selection.

Default false

Introduced 21.2.R1

Platforms All

### **domain-id** *string*

Synopsis Domain ID of received BGP route before readvertisement

Context **configure** [service vprn](#) *string* [bgp-ipvpn mpls domain-id](#) *string*

Tree [domain-id](#)

Description This command specifies the domain ID. The domain ID identifies the network from which the BGP route was received before the RTM advertises it to a different neighbor. The domain ID is part of a domain, represented as domain-id:isf\_safi\_type in the D-PATH attribute, as described in *draft-ietf-bess-evpn-ipvpn-interworking*. Gateway routers modify the D-PATH attribute. A gateway is a PE where a VPRN is instantiated. The VPRN in this case advertises or receives routes from multiple BGP owners (for example, EVPN-IFL and BGP-IPVPN) or multiple instances of the same owner (for example, VPRN with two BGP-IPVPN instances).

Gateways use the D-PATH attribute to detect loops (for received routes where the D-PATH contains a local domain ID) and to make BGP best-path selection decisions based on the D-PATH length (shorter D-PATH is preferred).

In the following example, suppose a gateway receives prefix P in an EVPN-IFL instance with the following D-PATH from neighbor N:

Seg Len=1 / 65000:1:128

If the router imports the route in VPRN-1, BGP-EVPN SRv6 instance with domain 65000:2, it readvertises it to its BGP-IPVPN MPLS instance as follows:

Seg Len=2 / 65000:2:70 / 65000:1:128

That is, the gateway prepends the local domain ID and family to the D-PATH before readvertising the route into a different instance.

Introduced	21.10.R1
Platforms	All

### **dynamic-egress-label-limit** *boolean*

Synopsis	Enables dynamic egress label limit
Context	<b>configure</b> <a href="#">service vpn</a> <i>string</i> <a href="#">bgp-ipvpn</a> <a href="#">mpls</a> <b>dynamic-egress-label-limit</b> <i>boolean</i>
Tree	<a href="#">dynamic-egress-label-limit</a>
Description	<p>When configured to <b>true</b>, this command relaxes the egress MPLS label limit check when resolving BGP next hops in the tunnel table.</p> <p>For VPRN services, the OAM label is never computed and, therefore, one more egress label is allowed.</p> <p>For EVPN (Epipe and VPLS) services, the system only computes the control word and ESI label if they are used. For the control word, the system reduces the egress label limit by one label if the control word is configured in the service. When configured, the ESI label is not counted for Epipes or VPLS services without an ES.</p> <p>When configured to <b>false</b> this command, for EVPN, Epipe, and VPLS services, always accounts for the ESI label and control word.</p>
Default	false
Introduced	22.2.R1
Platforms	All

### **route-distinguisher** (*string* | *keyword*)

Synopsis	Route distinguisher
Context	<b>configure</b> <a href="#">service vpn</a> <i>string</i> <a href="#">bgp-ipvpn</a> <a href="#">mpls</a> <b>route-distinguisher</b> ( <i>string</i>   <i>keyword</i> )
Tree	<a href="#">route-distinguisher</a>
Description	This command specifies a unique route distinguisher (RD) to be associated with each routing instance to identify which VPN the route belongs to.
Options	auto-rd
Introduced	21.2.R1
Platforms	All

## default-route-tag *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Default route tag
Context	<b>configure</b> <i>service vprn string bgp-ipvpn segment-routing-v6 number default-route-tag string</i>
Tree	<i>default-route-tag</i>
Description	<p>This command configures a route tag that is used when sending a route to the BGP application (for the corresponding service and BGP instance). If the corresponding BGP instance is enabled, the command cannot be changed.</p> <p>When used for BGP EVPN contexts, only one route tag can be passed to BGP for matching on export policies. In case of a conflict with other route tags pushed by EVPN, the default route tag has the least priority.</p> <p>The following are examples of the conflict priority handling:</p> <ul style="list-style-type: none"> <li>• If a service is configured with both <b>default-route-tag X</b> and <b>proxy-arp evpn-route-tag Y</b>, the EVPN uses route tag Y when sending EVPN proxy-arp routes to the BGP RIB for advertisement.</li> <li>• If a given IP-prefix route is tagged in the route-table with tag A and the R-VPLS, in which the route is advertised, uses B as the <b>default-route-tag</b>, then EVPN keeps tag A when sending the route to the BGP RIB.</li> </ul> <p>The <b>default-route-tag</b> configuration is only supported on EVPN and IP-VPN service routes. The route tag for ES and AD per-ES routes is always zero.</p>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## domain-id *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Domain ID of received BGP route before readvertisement
Context	<b>configure</b> <i>service vprn string bgp-ipvpn segment-routing-v6 number domain-id string</i>
Tree	<i>domain-id</i>
Description	<p>This command specifies the domain ID. The domain ID identifies the network from which the BGP route was received before the RTM advertises it to a different neighbor. The domain ID is part of a domain, represented as domain-id:isf_safi_type in the D-PATH attribute, as described in <i>draft-ietf-bess-evpn-ipvpn-interworking</i>. Gateway routers modify the D-PATH attribute. A gateway is a PE where a VPRN is instantiated. The</p>

VPRN in this case advertises or receives routes from multiple BGP owners (for example, EVPN-IFL and BGP-IPVPN) or multiple instances of the same owner (for example, VPRN with two BGP-IPVPN instances).

Gateways use the D-PATH attribute to detect loops (for received routes where the D-PATH contains a local domain ID) and to make BGP best-path selection decisions based on the D-PATH length (shorter D-PATH is preferred).

In the following example, suppose a gateway receives prefix P in an EVPN-IFL instance with the following D-PATH from neighbor N:

Seg Len=1 / 65000:1:128

If the router imports the route in VPRN-1, BGP-EVPN SRv6 instance with domain 65000:2, it readvertises it to its BGP-IPVPN MPLS instance as follows:

Seg Len=2 / 65000:2:70 / 65000:1:128

That is, the gateway prepends the local domain ID and family to the D-PATH before readvertising the route into a different instance.

Introduced	21.10.R1

Tree [policy](#)

Description This command configures VRF route policies that control routes between local VRFs and other VRFs on the same or remote PE routers (using MP-BGP).

Each referenced object is either a policy logical expression or the name of a single policy.

Only one referenced object can be a policy logical expression consisting of policy names (enclosed in square brackets) and logical operators (AND, OR, NOT). The objects are evaluated in the specified order to determine whether to accept or reject the route.

Only the first policy can have the maximum length and the rest can be up to 64 characters.

Aggregate routes are not advertised using MP-BGP protocols to the other MP-BGP peers.

## customer *reference*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Service customer ID
Context	<b>configure service vprn</b> <i>string</i> <b>customer</b> <i>reference</i>
Tree	<b>customer</b>
Reference	<b>configure service customer</b> <i>string</i>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

## d-path-length-ignore *boolean*

Synopsis	Enable D-PATH length ignore
Context	<b>configure service vprn</b> <i>string</i> <b>d-path-length-ignore</b> <i>boolean</i>
Tree	<b>d-path-length-ignore</b>
Description	<p>When configured to <b>true</b>, this command makes the VPRN RTM ignore the D-PATH domain segment length for best path selection purposes (for routes in the VPRN). This allows the user to control whether the RTM considers the D-PATH length when comparing two VPN routes with different RDs.</p> <p>When configured to <b>false</b>, this command does not ignore the D-PATH domain segment length.</p>
Default	false
Introduced	21.10.R1
Platforms	All

## description *string*

Synopsis	Text description
Context	<b>configure service vprn</b> <i>string</i> <b>description</b> <i>string</i>

Context	<b>configure service vprn string dhcp-server</b>
Tree	<b>dhcp-server</b>
Introduced	16.0.R1
Platforms	All

## dhcpv4 [name] string

Synopsis	Enter the <b>dhcpv4</b> list instance
Context	<b>configure service vprn string dhcp-server dhcpv4 string</b>
Tree	<b>dhcpv4</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## [name] string

Synopsis	DHCP server name
Context	<b>configure service vprn string dhcp-server dhcpv4 string</b>
Tree	<b>dhcpv4</b>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## admin-state keyword

Synopsis	Administrative state of the DHCP server
Context	<b>configure service vprn string dhcp-server dhcpv4 string admin-state keyword</b>
Tree	<b>admin-state</b>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">dhcp-server dhcpv4</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **failover**

Synopsis	Enter the <b>failover</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">dhcp-server dhcpv4</a> <i>string</i> <a href="#">failover</a>
Tree	<a href="#">failover</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of the failover mechanism
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">dhcp-server dhcpv4</a> <i>string</i> <a href="#">failover</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ignore-mclt-on-takeover** *boolean*

Synopsis	Ignore maximum client lead during takeover from partner
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">dhcp-server dhcpv4</a> <i>string</i> <a href="#">failover</a> <a href="#">ignore-mclt-on-takeover</a> <i>boolean</i>
Tree	<a href="#">ignore-mclt-on-takeover</a>
Description	When configured to <b>true</b> , the remote IP address range can be taken over immediately when the intercommunication link enters the PARTNER-DOWN state, without having to wait for the MCLT to expire.

When configured to **false**, the DHCP lease time for new clients is restricted to the MCLT during a failure. For existing clients, the lease time is gradually reduced over time to the MCLT by consecutive DHCP renewals.

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### maximum-client-lead-time *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum time that DHCP server can extend client's lease
Context	<b>configure service vprn string dhcp-server dhcpv4 string failover maximum-client-lead-time number</b>
Tree	<a href="#">maximum-client-lead-time</a>
Description	This command configures the maximum client lead time (MCLT), which is the maximum time that a DHCP server can extend the client's lease time beyond the lease time currently known by the DHCP partner node. In dual-homed environments, the initial lease time for all DHCP clients is restricted to the MCLT by default. Consecutive DHCP renewals can extend the lease time beyond the MCLT.
Range	600 to 86399
Default	600
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### partner-down-delay *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Delay to prevent lease duplication during link failure
Context	<b>configure service vprn string dhcp-server dhcpv4 string failover partner-down-delay number</b>
Tree	<a href="#">partner-down-delay</a>
Description	This command configures the interval before a failed intercommunication link transitions from the COMM-INT state to the PARTNER-DOWN state. This delay prevents IP lease

duplication during link failure by not allowing new IP addresses to be assigned from the remote IP address range. This timer is intended to provide the operator with enough time to remedy the failed situation and avoid duplication of IP addresses and prefixes during the failure.

Range	0 to 86399
Default	86399
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **peer** [[address](#)] *reference*

Synopsis	Enter the <b>peer</b> list instance
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">dhcp-server dhcpv4</a> <i>string</i> <a href="#">failover peer</a> <i>reference</i>
Tree	<a href="#">peer</a>
Max. Instances	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[address]** *reference*

Synopsis	IP address of the failover peer
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">dhcp-server dhcpv4</a> <i>string</i> <a href="#">failover peer</a> <i>reference</i>
Tree	<a href="#">peer</a>
Reference	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> )
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sync-tag** *string*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tag that identifies synchronizing server or pool pairs
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <a href="#">string</a> <a href="#">dhcp-server</a> <a href="#">dhcpv4</a> <a href="#">string</a> <a href="#">failover</a> <a href="#">peer</a> <a href="#">reference</a> <a href="#">sync-tag</a> <a href="#">string</a>
Tree	<a href="#">sync-tag</a>
String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **startup-wait-time** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time between initialization and assuming active role
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <a href="#">string</a> <a href="#">dhcp-server</a> <a href="#">dhcpv4</a> <a href="#">string</a> <a href="#">failover</a> <a href="#">startup-wait-time</a> <a href="#">number</a>
Tree	<a href="#">startup-wait-time</a>
Description	This command configures a delay that avoids transient issues during the initialization process. During startup wait time, each failover peer waits after the initialization process before assuming the active role for the prefix designated as local or remote.
Range	60 to 3600
Default	120
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **force-renews** *boolean*

Synopsis	Send FORCERENEW messages to force renewals of leases
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <a href="#">string</a> <a href="#">dhcp-server</a> <a href="#">dhcpv4</a> <a href="#">string</a> <a href="#">force-renews</a> <a href="#">boolean</a>
Tree	<a href="#">force-renews</a>
Description	When configured to <b>true</b> , FORCERENEW messages are enabled for DHCP.
Default	false
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## lease-hold

Synopsis Enter the **lease-hold** context

Context **configure service vpn string dhcp-server dhcpv4 string lease-hold**

Tree [lease-hold](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## additional-scenarios

Synopsis Enter the **additional-scenarios** context

Context **configure service vpn string dhcp-server dhcpv4 string lease-hold additional-scenarios**

Tree [additional-scenarios](#)

Description Commands in this context configure additional types of leases or triggers that cause the system to hold up leases.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## internal-lease-ipsec *boolean*

Synopsis Apply the lease hold timer to local IPsec clients

Context **configure service vpn string dhcp-server dhcpv4 string lease-hold additional-scenarios internal-lease-ipsec boolean**

Tree [internal-lease-ipsec](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## solicited-release *boolean*

Synopsis Apply lease hold timer for solicited releases

Context **configure service vpn string dhcp-server dhcpv4 string lease-hold additional-scenarios solicited-release boolean**

Tree [solicited-release](#)

Description	This command enables the server to hold up a lease even for a solicited release, for example, when the server receives a normal DHCP release message.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **time** *number*

Synopsis	Lease hold time
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">dhcp-server dhcpv4</a> <i>string</i> <a href="#">lease-hold time</a> <i>number</i>
Tree	<a href="#">time</a>
Range	1 to 631152000
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **pool** [[pool-name](#)] *string*

Synopsis	Enter the <b>pool</b> list instance
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">dhcp-server dhcpv4</a> <i>string</i> <a href="#">pool</a> <i>string</i>
Tree	<a href="#">pool</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[pool-name]** *string*

Synopsis	DHCP server pool name
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">dhcp-server dhcpv4</a> <i>string</i> <a href="#">pool</a> <i>string</i>
Tree	<a href="#">pool</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">dhcp-server dhcpv4</a> <i>string</i> <a href="#">pool</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **failover**

Synopsis	Enter the <b>failover</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">dhcp-server dhcpv4</a> <i>string</i> <a href="#">pool</a> <i>string</i> <a href="#">failover</a>
Tree	<a href="#">failover</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of the failover mechanism
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">dhcp-server dhcpv4</a> <i>string</i> <a href="#">pool</a> <i>string</i> <a href="#">failover</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ignore-mclt-on-takeover** *boolean*

Synopsis	Ignore maximum client lead during takeover from partner
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">dhcp-server dhcpv4</a> <i>string</i> <a href="#">pool</a> <i>string</i> <a href="#">failover</a> <a href="#">ignore-mclt-on-takeover</a> <i>boolean</i>
Tree	<a href="#">ignore-mclt-on-takeover</a>
Description	When configured to <b>true</b> , the remote IP address range can be taken over immediately when the intercommunication link enters the PARTNER-DOWN state, without having to wait for the MCLT to expire.

When configured to **false**, the DHCP lease time for new clients is restricted to the MCLT during a failure. For existing clients, the lease time is gradually reduced over time to the MCLT by consecutive DHCP renewals.

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### maximum-client-lead-time *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum time that DHCP server can extend client's lease
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv4</b> <i>string</i> <b>pool</b> <i>string</i> <b>failover</b> <b>maximum-client-lead-time</b> <i>number</i>
Tree	<b>maximum-client-lead-time</b>
Description	This command configures the maximum client lead time (MCLT), which is the maximum time that a DHCP server can extend the client's lease time beyond the lease time currently known by the DHCP partner node. In dual-homed environments, the initial lease time for all DHCP clients is restricted to the MCLT by default. Consecutive DHCP renewals can extend the lease time beyond the MCLT.
Range	600 to 86399
Default	600
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### partner-down-delay *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Delay to prevent lease duplication during link failure
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv4</b> <i>string</i> <b>pool</b> <i>string</i> <b>failover</b> <b>partner-down-delay</b> <i>number</i>
Tree	<b>partner-down-delay</b>
Description	This command configures the interval before a failed intercommunication link transitions from the COMM-INT state to the PARTNER-DOWN state. This delay prevents IP lease

duplication during link failure by not allowing new IP addresses to be assigned from the remote IP address range. This timer is intended to provide the operator with enough time to remedy the failed situation and avoid duplication of IP addresses and prefixes during the failure.

Range	0 to 86399
Default	86399
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **peer** [[address](#)] *reference*

Synopsis	Enter the <b>peer</b> list instance
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">dhcp-server dhcpv4</a> <i>string</i> <a href="#">pool</a> <i>string</i> <a href="#">failover peer</a> <i>reference</i>
Tree	<a href="#">peer</a>
Max. Instances	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[address]** *reference*

Synopsis	IP address of the failover peer
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">dhcp-server dhcpv4</a> <i>string</i> <a href="#">pool</a> <i>string</i> <a href="#">failover peer</a> <i>reference</i>
Tree	<a href="#">peer</a>
Reference	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## sync-tag *string*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tag that identifies synchronizing server or pool pairs
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">dhcp-server dhcpv4</a> <i>string</i> <a href="#">pool</a> <i>string</i> <a href="#">failover peer reference</a> <a href="#">sync-tag</a> <i>string</i>
Tree	<a href="#">sync-tag</a>
String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## startup-wait-time *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time between initialization and assuming active role
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">dhcp-server dhcpv4</a> <i>string</i> <a href="#">pool</a> <i>string</i> <a href="#">failover</a> <a href="#">startup-wait-time</a> <i>number</i>
Tree	<a href="#">startup-wait-time</a>
Description	This command configures a delay that avoids transient issues during the initialization process. During startup wait time, each failover peer waits after the initialization process before assuming the active role for the prefix designated as local or remote.
Range	60 to 3600
Default	120
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## max-lease-time *number*

Synopsis	Maximum lease time
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">dhcp-server dhcpv4</a> <i>string</i> <a href="#">pool</a> <i>string</i> <a href="#">max-lease-time</a> <i>number</i>

Tree	<a href="#">max-lease-time</a>
Range	10 to 315446399
Default	864000
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **min-lease-time** *number*

Synopsis	Minimum lease time
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">dhcp-server dhcpv4</a> <i>string</i> <a href="#">pool</a> <i>string</i> <a href="#">min-lease-time</a> <i>number</i>
Tree	<a href="#">min-lease-time</a>
Range	10 to 315446399
Default	600
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **minimum-free**

Synopsis	Enter the <b>minimum-free</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">dhcp-server dhcpv4</a> <i>string</i> <a href="#">pool</a> <i>string</i> <a href="#">minimum-free</a>
Tree	<a href="#">minimum-free</a>
Description	Commands in this context specify the minimum number of free addresses in this pool.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **absolute** *number*

Synopsis	Minimum number of free addresses in this pool or subnet
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">dhcp-server dhcpv4</a> <i>string</i> <a href="#">pool</a> <i>string</i> <a href="#">minimum-free</a> <a href="#">absolute</a> <i>number</i>
Tree	<a href="#">absolute</a>
Range	0 to 255

Default	1
Notes	This element is the default part of a choice. The following elements are part of a choice: <b>absolute</b> or <b>percent</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **event-when-depleted** *boolean*

Synopsis	Generate notification when addresses are depleted
Context	<b>configure service vprn</b> <i>string dhcp-server dhcpv4 string pool string minimum-free event-when-depleted</i> <i>boolean</i>
Tree	<a href="#">event-when-depleted</a>
Description	When configured to <b>true</b> , a system-generated event is generated when all available addresses in the pool or subnet of a local DHCP server are depleted. When configured to <b>false</b> , no action is taken when all available addresses in the pool or subnet of a local DHCP server are depleted.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **percent** *number*

Synopsis	Minimum free addresses as a percentage
Context	<b>configure service vprn</b> <i>string dhcp-server dhcpv4 string pool string minimum-free percent</i> <i>number</i>
Tree	<a href="#">percent</a>
Range	0 to 100
Default	1
Notes	The following elements are part of a choice: <b>absolute</b> or <b>percent</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **nak-non-matching-subnet** *boolean*

Synopsis	Send NAK if no match for request address pool range
----------	---

Context	<b>configure service vprn</b> <i>string</i> <b>dhcp-server dhcpv4</b> <i>string</i> <b>pool</b> <i>string</i> <b>nak-non-matching-subnet</b> <i>boolean</i>
Tree	<b>nak-non-matching-subnet</b>
Description	When configured to <b>true</b> , a NAK response when the local DHCPv4 server receives a DHCP request with option 50 (the client is trying to request a previously allocated message). If the address-allocation algorithm uses a pool that does not contain the requested address, the system returns the DHCP NAK.  When configured to <b>false</b> or unconfigured, the system drops the DHCP packet.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **offer-time** *number*

Synopsis	Time interval during which a DHCP offer remains valid
Context	<b>configure service vprn</b> <i>string</i> <b>dhcp-server dhcpv4</b> <i>string</i> <b>pool</b> <i>string</i> <b>offer-time</b> <i>number</i>
Tree	<b>offer-time</b>
Range	10 to 600
Default	60
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **options**

Synopsis	Enter the <b>options</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>dhcp-server dhcpv4</b> <i>string</i> <b>pool</b> <i>string</i> <b>options</b>
Tree	<b>options</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **option** [*number*] (*number* | *keyword*)

Synopsis	Enter the <b>option</b> list instance
Context	<b>configure service vprn</b> <i>string</i> <b>dhcp-server dhcpv4</b> <i>string</i> <b>pool</b> <i>string</i> <b>options option</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>option</b>

Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[number]** (*number* | *keyword*)

Synopsis DHCP option to send identification strings to client  
Context **configure** [service](#) [vprn](#) *string* [dhcp-server](#) [dhcpv4](#) *string* [pool](#) *string* [options](#) [option](#) (*number* | *keyword*)  
Tree [option](#)  
Range 1 to 254  
Options subnet-mask, default-router, dns-server, domain-name, netbios-name-server, netbios-node-type, lease-time, lease-renew-time, lease-rebind-time  
Notes This element is part of a list key.  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ascii-string** *string*

Synopsis DHCP option specified as an ASCII string  
Context **configure** [service](#) [vprn](#) *string* [dhcp-server](#) [dhcpv4](#) *string* [pool](#) *string* [options](#) [option](#) (*number* | *keyword*) [ascii-string](#) *string*  
Tree [ascii-string](#)  
String Length 1 to 127  
Notes The following elements are part of a mandatory choice: **ascii-string**, **duration**, **empty**, **hex-string**, **ipv4-address**, or **netbios-node-type**.  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **duration** *number*

Synopsis DHCP option as time duration  
Context **configure** [service](#) [vprn](#) *string* [dhcp-server](#) [dhcpv4](#) *string* [pool](#) *string* [options](#) [option](#) (*number* | *keyword*) [duration](#) *number*  
Tree [duration](#)  
Range 10 to 315446399  
Units seconds

Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , <b>ipv4-address</b> , or <b>netbios-node-type</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## empty

Synopsis	Empty DHCP option.
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv4</b> <i>string</i> <b>pool</b> <i>string</i> <b>options</b> <i>option</i> ( <i>number</i>   <i>keyword</i> ) <b>empty</b>
Tree	<b>empty</b>
Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , <b>ipv4-address</b> , or <b>netbios-node-type</b> .
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## hex-string *string*

Synopsis	DHCP option specified as hexadecimal string
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv4</b> <i>string</i> <b>pool</b> <i>string</i> <b>options</b> <i>option</i> ( <i>number</i>   <i>keyword</i> ) <b>hex-string</b> <i>string</i>
Tree	<b>hex-string</b>
String Length	1 to 256
Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , <b>ipv4-address</b> , or <b>netbios-node-type</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ipv4-address *string*

Synopsis	DHCP option as a list of IPv4 addresses
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv4</b> <i>string</i> <b>pool</b> <i>string</i> <b>options</b> <i>option</i> ( <i>number</i>   <i>keyword</i> ) <b>ipv4-address</b> <i>string</i>
Tree	<b>ipv4-address</b>
Max. Instances	4

Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , <b>ipv4-address</b> , or <b>netbios-node-type</b> . This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **netbios-node-type** *keyword*

Synopsis	DHCP option as NetBIOS node type
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv4</a> <i>string</i> <a href="#">pool</a> <i>string</i> <a href="#">options</a> <a href="#">option</a> ( <i>number</i>   <i>keyword</i> ) <b>netbios-node-type</b> <i>keyword</i>
Tree	<a href="#">netbios-node-type</a>
Options	b-node, p-node, m-node, h-node
Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , <b>ipv4-address</b> , or <b>netbios-node-type</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **subnet** [[ipv4-prefix](#)] *string*

Synopsis	Enter the <b>subnet</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv4</a> <i>string</i> <a href="#">pool</a> <i>string</i> <b>subnet</b> <i>string</i>
Tree	<a href="#">subnet</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[[ipv4-prefix](#)]** *string*

Synopsis	IPv4 prefix for the subnet
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv4</a> <i>string</i> <a href="#">pool</a> <i>string</i> <b>subnet</b> <i>string</i>
Tree	<a href="#">subnet</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **address-range** *[start] string end string*

Synopsis	Enter the <b>address-range</b> list instance
Context	<b>configure service vprn string dhcp-server dhcpv4 string pool string subnet string address-range string end string</b>
Tree	<b>address-range</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[start] string**

Synopsis	Lower bound of the IP address range
Context	<b>configure service vprn string dhcp-server dhcpv4 string pool string subnet string address-range string end string</b>
Tree	<b>address-range</b>
Description	This command specifies the start of a range of IP addresses that are excluded from the pool of IP addresses in this subnet.
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **end string**

Synopsis	Upper bound of the IP address range
Context	<b>configure service vprn string dhcp-server dhcpv4 string pool string subnet string address-range string end string</b>
Tree	<b>address-range</b>
Description	This command specifies the end of a range of IP addresses that are excluded from the pool of IP addresses in this subnet.
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## failover-control-type *keyword*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Failover control type for this range
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv4</a> <i>string</i> <a href="#">pool</a> <i>string</i> <a href="#">subnet</a> <i>string</i> <a href="#">address-range</a> <i>string</i> <a href="#">end</a> <i>string</i> <b>failover-control-type</b> <i>keyword</i>
Tree	<a href="#">failover-control-type</a>
Default	local
Options	local, remote, access-driven
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## drain *boolean*

Synopsis	Prevent new lease assignment from this subnet
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv4</a> <i>string</i> <a href="#">pool</a> <i>string</i> <a href="#">subnet</a> <i>string</i> <b>drain</b> <i>boolean</i>
Tree	<a href="#">drain</a>
Description	When configured to <b>true</b> , new leases cannot be assigned and existing leases are kept up until they are released. When configured to <b>false</b> , the subnet is active and new leases can be assigned.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## exclude-addresses [[start](#)] *string* [end](#) *string*

Synopsis	Add a list entry for <b>exclude-addresses</b>
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv4</a> <i>string</i> <a href="#">pool</a> <i>string</i> <a href="#">subnet</a> <i>string</i> <b>exclude-addresses</b> <i>string</i> <a href="#">end</a> <i>string</i>
Tree	<a href="#">exclude-addresses</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[start]** *string*

Synopsis	Lower bound of the IP address range
Context	<b>configure service vprn</b> <i>string dhcp-server dhcpv4 string pool string subnet string exclude-addresses string end string</i>
Tree	<b>exclude-addresses</b>
Description	This command specifies the start of a range of IP addresses that are excluded from the pool of IP addresses in this subnet.
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **end** *string*

Synopsis	Upper bound of the IP address range
Context	<b>configure service vprn</b> <i>string dhcp-server dhcpv4 string pool string subnet string exclude-addresses string end string</i>
Tree	<b>exclude-addresses</b>
Description	This command specifies the end of a range of IP addresses that are excluded from the pool of IP addresses in this subnet.
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **maximum-declined** *number*

Synopsis	Maximum number of declined addresses allowed
Context	<b>configure service vprn</b> <i>string dhcp-server dhcpv4 string pool string subnet string maximum-declined number</i>
Tree	<b>maximum-declined</b>
Max. Range	0 to 4294967295
Default	64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## minimum-free

Synopsis	Enter the <b>minimum-free</b> context
Context	<b>configure service vprn string dhcp-server dhcpv4 string pool string subnet string minimum-free</b>
Tree	<b>minimum-free</b>
Description	Commands in this context specify the minimum number of free addresses in this pool.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## absolute number

Synopsis	Minimum number of free addresses in this pool or subnet
Context	<b>configure service vprn string dhcp-server dhcpv4 string pool string subnet string minimum-free absolute number</b>
Tree	<b>absolute</b>
Range	0 to 255
Default	1
Notes	This element is the default part of a choice. The following elements are part of a choice: <b>absolute</b> or <b>percent</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## event-when-depleted boolean

Synopsis	Generate notification when addresses are depleted
Context	<b>configure service vprn string dhcp-server dhcpv4 string pool string subnet string minimum-free event-when-depleted boolean</b>
Tree	<b>event-when-depleted</b>
Description	When configured to <b>true</b> , a system-generated event is generated when all available addresses in the pool or subnet of a local DHCP server are depleted. When configured to <b>false</b> , no action is taken when all available addresses in the pool or subnet of a local DHCP server are depleted.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **percent** *number*

Synopsis	Minimum free addresses as a percentage
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv4</a> <i>string</i> <a href="#">pool</a> <i>string</i> <a href="#">subnet</a> <i>string</i> <a href="#">minimum-free</a> <a href="#">percent</a> <i>number</i>
Tree	<a href="#">percent</a>
Range	0 to 100
Default	1
Notes	The following elements are part of a choice: <b>absolute</b> or <b>percent</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **options**

Synopsis	Enter the <b>options</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv4</a> <i>string</i> <a href="#">pool</a> <i>string</i> <a href="#">subnet</a> <i>string</i> <a href="#">options</a>
Tree	<a href="#">options</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **option** [[number](#)] (*number* | *keyword*)

Synopsis	Enter the <b>option</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv4</a> <i>string</i> <a href="#">pool</a> <i>string</i> <a href="#">subnet</a> <i>string</i> <a href="#">options</a> <a href="#">option</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">option</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **[number]** (*number* | *keyword*)

Synopsis	DHCP option to send identification strings to client
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv4</a> <i>string</i> <a href="#">pool</a> <i>string</i> <a href="#">subnet</a> <i>string</i> <a href="#">options</a> <a href="#">option</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">option</a>
Range	1 to 254

Options	subnet-mask, default-router, dns-server, domain-name, netbios-name-server, netbios-node-type, lease-time, lease-renew-time, lease-rebind-time
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ascii-string** *string*

Synopsis	DHCP option specified as an ASCII string
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv4</a> <i>string</i> <a href="#">pool</a> <i>string</i> <a href="#">subnet</a> <i>string</i> <a href="#">options</a> <a href="#">option</a> ( <i>number</i>   <i>keyword</i> ) <b>ascii-string</b> <i>string</i>
Tree	<a href="#">ascii-string</a>
String Length	1 to 127
Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , <b>ipv4-address</b> , or <b>netbios-node-type</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **duration** *number*

Synopsis	DHCP option as time duration
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv4</a> <i>string</i> <a href="#">pool</a> <i>string</i> <a href="#">subnet</a> <i>string</i> <a href="#">options</a> <a href="#">option</a> ( <i>number</i>   <i>keyword</i> ) <b>duration</b> <i>number</i>
Tree	<a href="#">duration</a>
Range	10 to 315446399
Units	seconds
Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , <b>ipv4-address</b> , or <b>netbios-node-type</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **empty**

Synopsis	Empty DHCP option
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv4</a> <i>string</i> <a href="#">pool</a> <i>string</i> <a href="#">subnet</a> <i>string</i> <a href="#">options</a> <a href="#">option</a> ( <i>number</i>   <i>keyword</i> ) <b>empty</b>
Tree	<a href="#">empty</a>

Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , <b>ipv4-address</b> , or <b>netbios-node-type</b> .
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **hex-string** *string*

Synopsis	DHCP option specified as hexadecimal string
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv4</b> <i>string</i> <b>pool</b> <i>string</i> <b>subnet</b> <i>string</i> <b>options</b> <i>option</i> ( <i>number</i>   <i>keyword</i> ) <b>hex-string</b> <i>string</i>
Tree	<b>hex-string</b>
String Length	1 to 256
Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , <b>ipv4-address</b> , or <b>netbios-node-type</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ipv4-address** *string*

Synopsis	DHCP option as a list of IPv4 addresses
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv4</b> <i>string</i> <b>pool</b> <i>string</i> <b>subnet</b> <i>string</i> <b>options</b> <i>option</i> ( <i>number</i>   <i>keyword</i> ) <b>ipv4-address</b> <i>string</i>
Tree	<b>ipv4-address</b>
Max. Instances	4
Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , <b>ipv4-address</b> , or <b>netbios-node-type</b> . This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **netbios-node-type** *keyword*

Synopsis	DHCP option as NetBIOS node type
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv4</b> <i>string</i> <b>pool</b> <i>string</i> <b>subnet</b> <i>string</i> <b>options</b> <i>option</i> ( <i>number</i>   <i>keyword</i> ) <b>netbios-node-type</b> <i>keyword</i>
Tree	<b>netbios-node-type</b>

Options	b-node, p-node, m-node, h-node
Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , <b>ipv4-address</b> , or <b>netbios-node-type</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## pool-selection

Synopsis	Enter the <b>pool-selection</b> context
Context	<b>configure service vpn string dhcp-server dhcpv4 string pool-selection</b>
Tree	<a href="#">pool-selection</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## use-gi-address

Synopsis	Enable the <b>use-gi-address</b> context
Context	<b>configure service vpn string dhcp-server dhcpv4 string pool-selection use-gi-address</b>
Tree	<a href="#">use-gi-address</a>
Description	<p>Commands in this context configure gateway interface (GI) address matching. When configured, the pool can be used for address matching even if a subnet is not found. If the local user database name is not used, addresses are provided only by GI. If a user must be blocked from getting an address, the server maps to a local user database and configures the user with no address.</p> <p>A pool can include multiple subnets. Since the GI is shared by multiple subnets in a subscriber interface, the pool can provide IP addresses from any of the subnets included when the GI is matched to one of its subnets. This allows a pool to be created that represents a sub-net.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## scope keyword

Synopsis	GI address-matching scope
Context	<b>configure service vpn string dhcp-server dhcpv4 string pool-selection use-gi-address scope keyword</b>
Tree	<a href="#">scope</a>
Default	subnet

Options	subnet, pool
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **use-pool-from-client**

Synopsis	Enable the <b>use-pool-from-client</b> context
Context	<b>configure service vprn string dhcp-server dhcpv4 string pool-selection use-pool-from-client</b>
Tree	<a href="#">use-pool-from-client</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **delimiter string**

Synopsis	Delimiter to combine primary and secondary pool names
Context	<b>configure service vprn string dhcp-server dhcpv4 string pool-selection use-pool-from-client delimiter string</b>
Tree	<a href="#">delimiter</a>
Description	This command configures a single ASCII character that separates the pool names in DHCP vendor-specific option 82, which identifies the address pool to be used for this client.
String Length	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **user-db reference**

Synopsis	Local user database for authentication
Context	<b>configure service vprn string dhcp-server dhcpv4 string user-db reference</b>
Tree	<a href="#">user-db</a>
Reference	<b>configure subscriber-mgmt local-user-db string</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **user-identification** *keyword*

### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	User identification method for the DHCP server
Context	<b>configure service vprn</b> <i>string dhcp-server dhcpv4 string user-identification keyword</i>
Tree	<a href="#">user-identification</a>
Options	mac-circuit-id, duid, interface-id, interface-id-link-local, client-id, mac, circuit-id, remote-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **dhcpv6** [*name*] *string*

Synopsis	Enter the <b>dhcpv6</b> list instance
Context	<b>configure service vprn</b> <i>string dhcp-server dhcpv6 string</i>
Tree	<a href="#">dhcpv6</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **[name]** *string*

Synopsis	DHCP server name
Context	<b>configure service vprn</b> <i>string dhcp-server dhcpv6 string</i>
Tree	<a href="#">dhcpv6</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **admin-state** *keyword*

Synopsis	Administrative state of the DHCP server
Context	<b>configure service vprn</b> <i>string dhcp-server dhcpv6 string admin-state keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable

Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### auto-provisioned *boolean*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Auto-provision the pools of this server
Context	<b>configure service vprn string dhcp-server dhcpv6 string auto-provisioned boolean</b>
Tree	<a href="#">auto-provisioned</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### defaults

Synopsis	Enter the <b>defaults</b> context
Context	<b>configure service vprn string dhcp-server dhcpv6 string defaults</b>
Tree	<a href="#">defaults</a>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### options

Synopsis	Enter the <b>options</b> context
Context	<b>configure service vprn string dhcp-server dhcpv6 string defaults options</b>
Tree	<a href="#">options</a>
Introduced	16.0.R4

### option [[number](#)] (*number | keyword*)

Synopsis	Enter the <b>option</b> list instance
----------	---------------------------------------

Context	<b>configure service vprn string dhcp-server dhcpv6 string defaults options option</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">option</a>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[number]** (*number* | *keyword*)

Synopsis	DHCP option to send as identification string
Context	<b>configure service vprn string dhcp-server dhcpv6 string defaults options option</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">option</a>
Range	1 to 65535
Options	dns-server, domain-name
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ascii-string** *string*

Synopsis	DHCP option specified as an ASCII string
Context	<b>configure service vprn string dhcp-server dhcpv6 string defaults options option</b> ( <i>number</i>   <i>keyword</i> ) <a href="#">ascii-string string</a>
Tree	<a href="#">ascii-string</a>
String Length	1 to 127
Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>domain-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , or <b>ipv6-address</b> .
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **domain-string** *string*

Synopsis	DHCP option specified as a domain name
Context	<b>configure service vprn string dhcp-server dhcpv6 string defaults options option</b> ( <i>number</i>   <i>keyword</i> ) <a href="#">domain-string string</a>
Tree	<a href="#">domain-string</a>

String Length	1 to 127
Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>domain-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , or <b>ipv6-address</b> .
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **duration** *number*

Synopsis	DHCP option specified as time
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv6</a> <i>string</i> <a href="#">defaults</a> <a href="#">options</a> <a href="#">option</a> ( <i>number</i>   <i>keyword</i> ) <b>duration</b> <i>number</i>
Tree	<a href="#">duration</a>
Range	10 to 315446399
Units	seconds
Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>domain-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , or <b>ipv6-address</b> .
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **empty**

Synopsis	Empty DHCP option
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv6</a> <i>string</i> <a href="#">defaults</a> <a href="#">options</a> <a href="#">option</a> ( <i>number</i>   <i>keyword</i> ) <b>empty</b>
Tree	<a href="#">empty</a>
Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>domain-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , or <b>ipv6-address</b> .
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **hex-string** *string*

Synopsis	DHCP option specified as hexadecimal string
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv6</a> <i>string</i> <a href="#">defaults</a> <a href="#">options</a> <a href="#">option</a> ( <i>number</i>   <i>keyword</i> ) <b>hex-string</b> <i>string</i>
Tree	<a href="#">hex-string</a>
String Length	1 to 256

Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>domain-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , or <b>ipv6-address</b> .
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ipv6-address** *string*

Synopsis	DHCP option specified as a list of IPv6 addresses
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>defaults</b> <b>options</b> <b>option</b> ( <i>number</i>   <i>keyword</i> ) <b>ipv6-address</b> <i>string</i>
Tree	<a href="#">ipv6-address</a>
Max. Instances	4
Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>domain-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , or <b>ipv6-address</b> . This element is ordered by the user.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **preferred-lifetime** *number*

Synopsis	Time this lease remains preferred
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>defaults</b> <b>preferred-lifetime</b> <i>number</i>
Tree	<a href="#">preferred-lifetime</a>
Description	This command configures the preferred lifetime of the IPv6 lease address or prefix. When the preferred lifetime expires, any derived addresses are deprecated. The preferred lifetime must be less than or equal to the valid lifetime.  Each address or prefix assigned to the client has associated preferred and valid lifetimes specified by the address assignment authority (such as the DHCP server, RADIUS, or ESM). To request an extension of the lifetimes assigned to an address, the client sends a renew message to the addressing authority. The authority sends a reply message to the client with the new lifetimes, allowing the client to continue to use the address/prefix without interruption. The lifetimes are transmitted from the addressing authority to the client in the identity association (IA) option at the top level of the message (not the address or prefix level).
Range	300 to 315446399
Default	3600
Units	seconds

Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **rebind-time** *number*

Synopsis	Rebind time for the lease
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>defaults</b> <b>rebind-time</b> <i>number</i>
Tree	<b>rebind-time</b>
Description	<p>This command configures the rebind time, known as T2, at which the client contacts the addressing authority to extend the lifetimes of its leases.</p> <p>The IP addressing authority (such as the DHCP server, RADIUS, or ESM) controls the time for extending lifetimes on assigned addresses/prefixes through the T1 and T2 parameters assigned to an identity association (IA). At renew time, T1, the client initiates a renew or reply message exchange to extend the lifetimes of any addresses in the IA. The client includes an IA option with all addresses or prefixes currently assigned to the IA in its renew message.</p> <p>Recommended values for T1 and T2 are 0.5 and 0.8 times the shortest preferred lifetime of the addresses or prefixes in the IA that the addressing authority is willing to extend, respectively. The configured rebind timer value should always be less than or equal to the rebind timer. The T1 and T2 values are carried in the IPV6 address option in the IA.</p>
Range	0 to 1209600
Default	2880
Units	seconds
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **renew-time** *number*

Synopsis	Renew time for the lease
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>dhcp-server</b> <b>dhcpv6</b> <i>string</i> <b>defaults</b> <b>renew-time</b> <i>number</i>
Tree	<b>renew-time</b>
Description	<p>This command configures the renew time, known as T1, at which the client makes a transition to the lease-renewal state.</p> <p>The IP addressing authority (such as the DHCP server, RADIUS, or ESM) controls the time for extending lifetimes on assigned addresses/prefixes through the T1 and T2 parameters assigned to an identity association (IA). At renew time, T1, the client initiates a renew/reply message exchange to extend the lifetimes of any addresses in the IA. The client includes an IA option with all addresses/prefixes currently assigned to the IA in its renew message.</p>

Recommended values for T1 and T2 are 0.5 and 0.8 times the shortest preferred lifetime of the addresses or prefixes in the IA that the addressing authority is willing to extend, respectively. The configured renew timer value should always be shorter than or equal to the rebind timer. The T1 and T2 values are carried in the IPV6 address option in the IA.

Range	0 to 604800
Default	1800
Units	seconds
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **valid-lifetime** *number*

Synopsis	Time for the lease to remain valid
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>dhcp-server dhcpv6</b> <i>string</i> <b>defaults valid-lifetime</b> <i>number</i>
Tree	<b>valid-lifetime</b>
Description	<p>This command configures a valid lifetime for a DHCPv6 lease address or prefix. The valid lifetime is the length of time an address and prefix remains in the valid state. The valid lifetime must be greater than or equal to the preferred lifetime. When the valid lifetime expires, the address and prefix becomes invalid and must not be used in communications. RFC 2461 recommends a default value of 30 days.</p> <p>Each address and prefix assigned to the client has associated preferred and valid lifetimes specified by the address assignment authority (such as the DHCP server, RADIUS, or ESM). To request an extension of the lifetimes assigned to an address, the client sends a renew message to the addressing authority. The authority sends a reply message to the client with the new lifetimes, allowing the client to continue to use the address and prefix without interruption. The lifetimes are transmitted from the addressing authority to the client in the identity association (IA) option at the top level of the message (not the address or prefix level).</p>
Range	300 to 315446399
Default	86400
Units	seconds
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>dhcp-server dhcpv6</b> <i>string</i> <b>description</b> <i>string</i>
Tree	<b>description</b>

String Length 1 to 80  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## failover

Synopsis Enter the **failover** context  
Context **configure service vprn string dhcp-server dhcpv6 string failover**  
Tree **failover**  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## admin-state *keyword*

Synopsis Administrative state of the failover mechanism  
Context **configure service vprn string dhcp-server dhcpv6 string failover admin-state keyword**  
Tree **admin-state**  
Default disable  
Options enable, disable  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ignore-mclt-on-takeover *boolean*

Synopsis Ignore maximum client lead during takeover from partner  
Context **configure service vprn string dhcp-server dhcpv6 string failover ignore-mclt-on-takeover boolean**  
Tree **ignore-mclt-on-takeover**  
Description When configured to **true**, the remote IP address range can be taken over immediately when the intercommunication link enters the PARTNER-DOWN state, without having to wait for the MCLT to expire.  
When configured to **false**, the DHCP lease time for new clients is restricted to the MCLT during a failure. For existing clients, the lease time is gradually reduced over time to the MCLT by consecutive DHCP renewals.  
Default false  
Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### maximum-client-lead-time *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum time that DHCP server can extend client's lease
Context	<b>configure service vprn string dhcp-server dhcpv6 string failover maximum-client-lead-time number</b>
Tree	<a href="#">maximum-client-lead-time</a>
Description	This command configures the maximum client lead time (MCLT), which is the maximum time that a DHCP server can extend the client's lease time beyond the lease time currently known by the DHCP partner node. In dual-homed environments, the initial lease time for all DHCP clients is restricted to the MCLT by default. Consecutive DHCP renewals can extend the lease time beyond the MCLT.
Range	600 to 86399
Default	600
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### partner-down-delay *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Delay to prevent lease duplication during link failure
Context	<b>configure service vprn string dhcp-server dhcpv6 string failover partner-down-delay number</b>
Tree	<a href="#">partner-down-delay</a>
Description	This command configures the interval before a failed intercommunication link transitions from the COMM-INT state to the PARTNER-DOWN state. This delay prevents IP lease duplication during link failure by not allowing new IP addresses to be assigned from the remote IP address range. This timer is intended to provide the operator with enough time to remedy the failed situation and avoid duplication of IP addresses and prefixes during the failure.
Range	0 to 86399

Default	86399
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **peer** [[address](#)] *reference*

Synopsis	Enter the <b>peer</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv6</a> <i>string</i> <a href="#">failover</a> <a href="#">peer</a> <i>reference</i>
Tree	<a href="#">peer</a>
Max. Instances	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[address]** *reference*

Synopsis	IP address of the failover peer
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv6</a> <i>string</i> <a href="#">failover</a> <a href="#">peer</a> <i>reference</i>
Tree	<a href="#">peer</a>
Reference	<b>configure</b> <a href="#">redundancy</a> <a href="#">multi-chassis</a> <a href="#">peer</a> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> )
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sync-tag** *string*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tag that identifies synchronizing server or pool pairs
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv6</a> <i>string</i> <a href="#">failover</a> <a href="#">peer</a> <i>reference</i> <a href="#">sync-tag</a> <i>string</i>
Tree	<a href="#">sync-tag</a>
String Length	1 to 32

Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **startup-wait-time** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time between initialization and assuming active role
Context	<b>configure service vprn</b> <i>string</i> <b>dhcp-server dhcpv6</b> <i>string</i> <b>failover startup-wait-time</b> <i>number</i>
Tree	<a href="#">startup-wait-time</a>
Description	This command configures a delay that avoids transient issues during the initialization process. During startup wait time, each failover peer waits after the initialization process before assuming the active role for the prefix designated as local or remote.
Range	60 to 3600
Default	120
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ignore-rapid-commit** *boolean*

Synopsis	Ignore Rapid Commit option
Context	<b>configure service vprn</b> <i>string</i> <b>dhcp-server dhcpv6</b> <i>string</i> <b>ignore-rapid-commit</b> <i>boolean</i>
Tree	<a href="#">ignore-rapid-commit</a>
Description	When configured to <b>true</b> , the server ignores the Rapid Commit option sent by the client and uses the regular message exchange.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## interface-id-mapping *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Map hosts within interface-to-prefix combinations
Context	<b>configure service vprn string dhcp-server dhcpv6 string interface-id-mapping boolean</b>
Tree	<a href="#">interface-id-mapping</a>
Description	When configured to <b>true</b> , this command specifies an interface-mapping method that uses a combination of unique /64 prefixes and interface IDs. A /64 prefix is allocated to each interface ID, and all clients with the same interface ID are assigned an address from the prefix. This method is used for bridging clients in the same local loop and SAP, so that sharing the prefix allows communication to stay local. For SLAAC-based assignment, downstream neighbor discovery is automatically enabled to resolve the assigned address.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## lease-hold

Synopsis	Enter the <b>lease-hold</b> context
Context	<b>configure service vprn string dhcp-server dhcpv6 string lease-hold</b>
Tree	<a href="#">lease-hold</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## additional-scenarios

Synopsis	Enter the <b>additional-scenarios</b> context
Context	<b>configure service vprn string dhcp-server dhcpv6 string lease-hold additional-scenarios</b>
Tree	<a href="#">additional-scenarios</a>
Description	Commands in this context configure additional types of leases or triggers that cause the system to hold up leases.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **internal-lease-ipsec** *boolean*

Synopsis	Apply the lease hold timer to local IPsec clients
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">dhcp-server dhcpv6</a> <i>string</i> <a href="#">lease-hold</a> <a href="#">additional-scenarios</a> <a href="#">internal-lease-ipsec</a> <i>boolean</i>
Tree	<a href="#">internal-lease-ipsec</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **solicited-release** *boolean*

Synopsis	Apply lease hold timer for solicited releases
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">dhcp-server dhcpv6</a> <i>string</i> <a href="#">lease-hold</a> <a href="#">additional-scenarios</a> <a href="#">solicited-release</a> <i>boolean</i>
Tree	<a href="#">solicited-release</a>
Description	This command enables the server to hold up a lease even for a solicited release, for example, when the server receives a normal DHCP release message.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **time** *number*

Synopsis	Lease hold time
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">dhcp-server dhcpv6</a> <i>string</i> <a href="#">lease-hold</a> <a href="#">time</a> <i>number</i>
Tree	<a href="#">time</a>
Range	1 to 631152000
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **lease-query** *boolean*

Synopsis	Handle and reply to lease query messages
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">dhcp-server dhcpv6</a> <i>string</i> <a href="#">lease-query</a> <i>boolean</i>
Tree	<a href="#">lease-query</a>

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **pool** [*pool-name*] *string*

Synopsis	Enter the <b>pool</b> list instance
Context	<b>configure</b> <i>service vprn string dhcp-server dhcpv6 string pool string</i>
Tree	<i>pool</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[pool-name]** *string*

Synopsis	DHCP server pool name
Context	<b>configure</b> <i>service vprn string dhcp-server dhcpv6 string pool string</i>
Tree	<i>pool</i>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **delegated-prefix**

Synopsis	Enter the <b>delegated-prefix</b> context
Context	<b>configure</b> <i>service vprn string dhcp-server dhcpv6 string pool string delegated-prefix</i>
Tree	<i>delegated-prefix</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **length** *number*

Synopsis	Prefix length for pool if unspecified by client
Context	<b>configure</b> <i>service vprn string dhcp-server dhcpv6 string pool string delegated-prefix length number</i>

Tree	<a href="#">length</a>

Notes This element is part of a list key.  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **failover**

Synopsis Enter the **failover** context  
Context **configure service vprn string dhcp-server dhcpv6 string pool string failover**  
Tree **failover**  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis Administrative state of the failover mechanism  
Context **configure service vprn string dhcp-server dhcpv6 string pool string failover admin-state keyword**  
Tree **admin-state**  
Default disable  
Options enable, disable

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ignore-mclt-on-takeover** *boolean*

Synopsis	Ignore maximum client lead during takeover from partner
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">dhcp-server dhcpv6</a> <i>string</i> <a href="#">pool</a> <i>string</i> <a href="#">failover ignore-mclt-on-takeover</a> <i>boolean</i>
Tree	<a href="#">ignore-mclt-on-takeover</a>
Description	<p>When configured to <b>true</b>, the remote IP address range can be taken over immediately when the intercommunication link enters the PARTNER-DOWN state, without having to wait for the MCLT to expire.</p> <p>When configured to <b>false</b>, the DHCP lease time for new clients is restricted to the MCLT during a failure. For existing clients, the lease time is gradually reduced over time to the MCLT by consecutive DHCP renewals.</p>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **maximum-client-lead-time** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum time that DHCP server can extend client's lease
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">dhcp-server dhcpv6</a> <i>string</i> <a href="#">pool</a> <i>string</i> <a href="#">failover maximum-client-lead-time</a> <i>number</i>
Tree	<a href="#">maximum-client-lead-time</a>
Description	This command configures the maximum client lead time (MCLT), which is the maximum time that a DHCP server can extend the client's lease time beyond the lease time currently known by the DHCP partner node. In dual-homed environments, the initial lease time for all DHCP clients is restricted to the MCLT by default. Consecutive DHCP renewals can extend the lease time beyond the MCLT.
Range	600 to 86399
Default	600
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## partner-down-delay *number*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Delay to prevent lease duplication during link failure
Context	<b>configure</b> <i>service vprn string dhcp-server dhcpv6 string pool string failover partner-down-delay number</i>
Tree	<i>partner-down-delay</i>
Description	This command configures the interval before a failed intercommunication link transitions from the COMM-INT state to the PARTNER-DOWN state. This delay prevents IP lease duplication during link failure by not allowing new IP addresses to be assigned from the remote IP address range. This timer is intended to provide the operator with enough time to remedy the failed situation and avoid duplication of IP addresses and prefixes during the failure.
Range	0 to 86399
Default	86399
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## peer [*address*] *reference*

Synopsis	Enter the <b>peer</b> list instance
Context	<b>configure</b> <i>service vprn string dhcp-server dhcpv6 string pool string failover peer reference</i>
Tree	<i>peer</i>
Max. Instances	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## [*address*] *reference*

Synopsis	IP address of the failover peer
Context	<b>configure</b> <i>service vprn string dhcp-server dhcpv6 string pool string failover peer reference</i>

Tree	<a href="#">peer</a>
Reference	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> )
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sync-tag** *string*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tag that identifies synchronizing server or pool pairs
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">dhcp-server dhcpv6</a> <i>string</i> <a href="#">pool</a> <i>string</i> <a href="#">failover peer</a> <i>reference</i> <a href="#">sync-tag</a> <i>string</i>
Tree	<a href="#">sync-tag</a>
String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **startup-wait-time** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time between initialization and assuming active role
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">dhcp-server dhcpv6</a> <i>string</i> <a href="#">pool</a> <i>string</i> <a href="#">failover</a> <a href="#">startup-wait-time</a> <i>number</i>
Tree	<a href="#">startup-wait-time</a>
Description	This command configures a delay that avoids transient issues during the initialization process. During startup wait time, each failover peer waits after the initialization process before assuming the active role for the prefix designated as local or remote.
Range	60 to 3600
Default	120
Units	seconds

Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **preferred-lifetime number**

Synopsis	Time this lease remains preferred
----------	-----------------------------------

Context	<b>configure service vprn</b> <i>string</i> <b>dhcp-server dhcpv6</b> <i>string</i> <b>pool</b> <i>string</i> <b>prefix</b> <i>string</i> <b>preferred-lifetime</b> <i>number</i>
Tree	<b>preferred-lifetime</b>
Description	<p>This command configures the preferred lifetime of the IPv6 lease address or prefix. When the preferred lifetime expires, any derived addresses are deprecated. The preferred lifetime must be less than or equal to the valid lifetime.</p> <p>Each address or prefix assigned to the client has associated preferred and valid lifetimes specified by the address assignment authority (such as the DHCP server, RADIUS, or ESM). To request an extension of the lifetimes assigned to an address, the client sends a renew message to the addressing authority. The authority sends a reply message to the client with the new lifetimes, allowing the client to continue to use the address/prefix without interruption. The lifetimes are transmitted from the addressing authority to the client in the identity association (IA) option at the top level of the message (not the address or prefix level).</p>
Range	300 to 315446399
Default	3600
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **prefix-length-threshold** [**prefix-length**] *number*

## pd boolean

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Allocate IA-PD prefixes from this prefix pool
Context	<b>configure service vprn string dhcp-server dhcpv6 string pool string prefix string prefix-type pd boolean</b>
Tree	<b>pd</b>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## wan-host boolean

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Allocate IA-NA or SLAAC prefixes from this prefix pool
Context	<b>configure service vprn string dhcp-server dhcpv6 string pool string prefix string prefix-type wan-host boolean</b>
Tree	<b>wan-host</b>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**rebind-time number**

Synopsis	Rebind time for the lease
Context	<b>configure service vprn string dhcp-server dhcpv6 string pool string prefix string rebind-time number</b>
Tree	<b>rebind-time</b>
Description	<p>This command configures the rebind time, known as T2, at which the client contacts the addressing authority to extend the lifetimes of its leases.</p> <p>The IP addressing authority (such as the DHCP server, RADIUS, or ESM) controls the time for extending lifetimes on assigned addresses/prefixes through the T1 and T2 parameters assigned to an identity association (IA). At renew time, T1, the client initiates a renew or reply message exchange to extend the lifetimes of any addresses in the IA. The client includes an IA option with all addresses or prefixes currently assigned to the IA in its renew message.</p> <p>Recommended values for T1 and T2 are 0.5 and 0.8 times the shortest preferred lifetime of the addresses or prefixes in the IA that the addressing authority is willing to extend, respectively. The configured rebind timer value should always be less than or equal to the rebind timer. The T1 and T2 values are carried in the IPV6 address option in the IA.</p>
Range	0 to 1209600
Default	2880
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**renew-time number**

Synopsis	Renew time for the lease
Context	<b>configure service vprn string dhcp-server dhcpv6 string pool string prefix string renew-time number</b>
Tree	<b>renew-time</b>
Description	<p>This command configures the renew time, known as T1, at which the client makes a transition to the lease-renewal state.</p> <p>The IP addressing authority (such as the DHCP server, RADIUS, or ESM) controls the time for extending lifetimes on assigned addresses/prefixes through the T1 and T2 parameters assigned to an identity association (IA). At renew time, T1, the client initiates a renew/reply message exchange to extend the lifetimes of any addresses in the IA. The client includes an IA option with all addresses/prefixes currently assigned to the IA in its renew message.</p> <p>Recommended values for T1 and T2 are 0.5 and 0.8 times the shortest preferred lifetime of the addresses or prefixes in the IA that the addressing authority is willing to extend, respectively. The configured renew timer value should always be shorter than or</p>

	equal to the rebind timer. The T1 and T2 values are carried in the IPV6 address option in the IA.
Range	0 to 604800
Default	1800
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **valid-lifetime** *number*

Synopsis	Time for the lease to remain valid
Context	<b>configure</b> <i>service vprn string dhcp-server dhcpv6 string pool string prefix string valid-lifetime number</i>
Tree	<i>valid-lifetime</i>
Description	<p>This command configures a valid lifetime for a DHCPv6 lease address or prefix. The valid lifetime is the length of time an address and prefix remains in the valid state. The valid lifetime must be greater than or equal to the preferred lifetime. When the valid lifetime expires, the address and prefix becomes invalid and must not be used in communications. RFC 2461 recommends a default value of 30 days.</p> <p>Each address and prefix assigned to the client has associated preferred and valid lifetimes specified by the address assignment authority (such as the DHCP server, RADIUS, or ESM). To request an extension of the lifetimes assigned to an address, the client sends a renew message to the addressing authority. The authority sends a reply message to the client with the new lifetimes, allowing the client to continue to use the address and prefix without interruption. The lifetimes are transmitted from the addressing authority to the client in the identity association (IA) option at the top level of the message (not the address or prefix level).</p>
Range	300 to 315446399
Default	86400
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **prefix-length-threshold** [*prefix-length*] *number*

Synopsis	Enter the <b>prefix-length-threshold</b> list instance
Context	<b>configure</b> <i>service vprn string dhcp-server dhcpv6 string pool string prefix-length-threshold number</i>
Tree	<i>prefix-length-threshold</i>

Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[prefix-length]** *number*

Synopsis	Delegated prefix length for pool thresholds
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>dhcp-server dhcpv6</b> <i>string</i> <b>pool</b> <i>string</i> <b>prefix-length-threshold</b> <i>number</i>
Tree	<b>prefix-length-threshold</b>
Range	1 to 128
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **event-when-depleted** *boolean*

Synopsis	Generate a notification when this pool is depleted
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>dhcp-server dhcpv6</b> <i>string</i> <b>pool</b> <i>string</i> <b>prefix-length-threshold</b> <i>number</i> <b>event-when-depleted</b> <i>boolean</i>
Tree	<b>event-when-depleted</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **minimum-free-percent** *number*

Synopsis	Percentage of free prefixes for this prefix length
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>dhcp-server dhcpv6</b> <i>string</i> <b>pool</b> <i>string</i> <b>prefix-length-threshold</b> <i>number</i> <b>minimum-free-percent</b> <i>number</i>
Tree	<b>minimum-free-percent</b>
Range	0 to 100
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## pool-selection

Synopsis	Enter the <b>pool-selection</b> context
Context	<b>configure service vprn string dhcp-server dhcpv6 string pool-selection</b>
Tree	<a href="#">pool-selection</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## use-link-address

Synopsis	Enable the <b>use-link-address</b> context
Context	<b>configure service vprn string dhcp-server dhcpv6 string pool-selection use-link-address</b>
Tree	<a href="#">use-link-address</a>
Description	This command configures the local pool selection for DHCPv6 address or prefix assignment to use the link address. When configured, the selected pool contains a prefix covering the link address.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## scope *keyword*

Synopsis	Scope of the IP address selection
Context	<b>configure service vprn string dhcp-server dhcpv6 string pool-selection use-link-address scope keyword</b>
Tree	<a href="#">scope</a>
Default	subnet
Options	subnet, pool
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## use-pool-from-client

Synopsis	Enable the <b>use-pool-from-client</b> context
Context	<b>configure service vprn string dhcp-server dhcpv6 string pool-selection use-pool-from-client</b>
Tree	<a href="#">use-pool-from-client</a>

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **delimiter** *string*

Synopsis	Delimiter to combine primary and secondary pool names
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">dhcp-server dhcpv6</a> <i>string</i> <a href="#">pool-selection use-pool-from-client</a> <b>delimiter</b> <i>string</i>
Tree	<a href="#">delimiter</a>
Description	This command configures a single ASCII character that separates the pool names in DHCP vendor-specific option 82, which identifies the address pool to be used for this client.
String Length	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **server-id**

Synopsis	Enter the <b>server-id</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">dhcp-server dhcpv6</a> <i>string</i> <b>server-id</b>
Tree	<a href="#">server-id</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **duid-enterprise**

Synopsis	Enter the <b>duid-enterprise</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">dhcp-server dhcpv6</a> <i>string</i> <a href="#">server-id</a> <b>duid-enterprise</b>
Tree	<a href="#">duid-enterprise</a>
Notes	The following elements are part of a choice: <b>duid-enterprise</b> or <b>duid-link-local</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ascii-string** *string*

Synopsis	DUID enterprise server ID specified as an ASCII string
----------	--

Context	<b>configure service vprn string dhcp-server dhcpv6 string server-id duid-enterprise ascii-string string</b>
Tree	<a href="#">ascii-string</a>
String Length	1 to 58
Notes	The following elements are part of a choice: <b>ascii-string</b> or <b>hex-string</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **hex-string string**

Synopsis	DUID enterprise server ID specified as a hex string
Context	<b>configure service vprn string dhcp-server dhcpv6 string server-id duid-enterprise hex-string string</b>
Tree	<a href="#">hex-string</a>
String Length	1 to 118
Notes	The following elements are part of a choice: <b>ascii-string</b> or <b>hex-string</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **duid-link-local**

Synopsis	Derive DUID server ID from a system link-layer address
Context	<b>configure service vprn string dhcp-server dhcpv6 string server-id duid-link-local</b>
Tree	<a href="#">duid-link-local</a>
Notes	This element is the default part of a choice. The following elements are part of a choice: <b>duid-enterprise</b> or <b>duid-link-local</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **user-identification keyword**

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	User identification method for the DHCP server
----------	--

Context	<b>configure service vprn string dhcp-server dhcpv6 string user-identification keyword</b>
Tree	<b>user-identification</b>
Options	mac-circuit-id, duid, interface-id, interface-id-link-local, client-id, mac, circuit-id, remote-id
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## dns

Synopsis	Enable the <b>dns</b> context
Context	<b>configure service vprn string dns</b>
Tree	<b>dns</b>
Introduced	16.0.R1
Platforms	All

## **admin-state keyword**

Synopsis	Administrative state of DNS
Context	<b>configure service vprn string dns admin-state keyword</b>
Tree	<b>admin-state</b>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

## **default-domain string**

Synopsis	Domain name added in DNS retries
Context	<b>configure service vprn string dns default-domain string</b>
Tree	<b>default-domain</b>
Description	This command configures the DNS domain name to be added in DNS retries when a DNS query is not replied or an empty DNS reply is received.  The name can contain only alphabetical characters (A-Z), numeric characters (0-9), the minus sign (-), and the period (.).
String Length	1 to 255
Introduced	20.2.R1

Platforms All

### **ipv4-source-address** (*keyword* | *ipv4-unicast-address*)

Synopsis Source address to contact an IPv4 DNS server

Context **configure service vprn** *string dns ipv4-source-address* (*keyword* | *ipv4-unicast-address*)

Tree [ipv4-source-address](#)

Default use-interface-ip

Options use-interface-ip

Introduced 16.0.R1

Platforms All

### **ipv6-source-address** (*keyword* | *ipv6-unicast-address*)

Synopsis Source address to contact an IPv6 DNS server

Context **configure service vprn** *string dns ipv6-source-address* (*keyword* | *ipv6-unicast-address*)

Tree [ipv6-source-address](#)

Default use-interface-ip

Options use-interface-ip

Introduced 16.0.R1

Platforms All

### **server** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis DNS server used for DNS name resolution

Context **configure service vprn** *string dns server* (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Tree [server](#)

Max. Instances 3

Notes This element is ordered by the user.

Introduced 16.0.R1

Platforms All

### **ecmp number**

Synopsis	Maximum equal-cost routes for routing table instance
Context	<b>configure service vprn string ecmp number</b>
Tree	<a href="#">ecmp</a>
Description	<p>This command configures ECMP and defines the number of routes for path sharing. For example, the value 2 means that two equal-cost routes are used for cost sharing.</p> <p>ECMP can be used only for routes learned with the same preference and the same protocol.</p> <p>When more ECMP routes are available at the best preference than the number specified with this command, the lowest next-hop IP-address algorithm is used to select the routes.</p> <p>If this command is configured to 1, ECMP path sharing is disabled.</p>
Range	1 to 64
Default	1
Introduced	16.0.R1
Platforms	All

### **ecmp-unequal-cost boolean**

Synopsis	Enable ECMP unequal cost capability
Context	<b>configure service vprn string ecmp-unequal-cost boolean</b>
Tree	<a href="#">ecmp-unequal-cost</a>
Default	false
Introduced	19.7.R1
Platforms	All

### **entropy-label boolean**

Synopsis	Use entropy label
Context	<b>configure service vprn string entropy-label boolean</b>
Tree	<a href="#">entropy-label</a>
Description	<p>When configured to <b>true</b>, this command enables the use of entropy labels.</p> <p>The entropy label and indicator (EL/ELI) are inserted on relevant packets. Applicable packets are those for which at least one LSP in the stack at the far end has advertised the entropy-label capability. These LSPs are in LDP or RSVP tunnels used by an IGP or BGP shortcut. If the tunnel is of type RSVP, the entropy-label capability must also be enabled under the <b>configure router mpls</b> or <b>configure router mpls lsp</b> context.</p>

This command also results in other traffic that is forwarded over an LDP or RSVP LSP for which this router is the LER, and for which there is no explicit service endpoint on this router, to have the EL/ELI enabled, subject to the LSP far-end advertising entropy-label-capability. An example of such traffic includes packets arriving on a stitched LDP LSP forwarded over an RSVP LSP.

The entropy label and the hash label features are mutually exclusive. The entropy label cannot be configured on a spoke SDP or service where the hash label feature has already been configured.

When configured to **false**, this command disables the use of entropy labels.

Default	false
Introduced	16.0.R1
Platforms	All

## eth-cfm

Synopsis	Enter the <b>eth-cfm</b> context
Context	<b>configure service vprn string eth-cfm</b>
Tree	<b>eth-cfm</b>
Introduced	19.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## export-inactive-bgp *boolean*

Synopsis	Export preferred BGP route even if inactive
Context	<b>configure service vprn string export-inactive-bgp boolean</b>
Tree	<b>export-inactive-bgp</b>
Description	<p>When configured to <b>true</b>, the preferred BGP route learned by a VPRN is exported as the VPN-IP route even if it is inactive in the route table because a preferred BGP VPRN route from another PE is present. This overrides the default state in which the VPRN cannot export an inactive BGP route. For the BGP route to be exported, the VRF export policy must accept it. This command applies to both MPLS VPN and SRv6 VPN routes. In SRv6 VPN routes the advertised instruction is an End.DT, while in MPLS VPN routes the advertised label is a per-next-hop label. This “best-external” type of route advertisement is useful in active/standby multi-homing scenarios because it ensures that all PEs know about the backup path provided by the standby PE.</p> <p>When configured to <b>false</b>, the preferred BGP route is not exported if it is inactive.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **fib-priority** *keyword*

Synopsis	FIB priority for VPRN BGP routes
Context	<b>configure service vprn</b> <i>string fib-priority keyword</i>
Tree	<a href="#">fib-priority</a>
Default	standard
Options	standard, high
Introduced	16.0.R1
Platforms	All

### **firewall**

Synopsis	Enter the <b>firewall</b> context
Context	<b>configure service vprn</b> <i>string firewall</i>
Tree	<a href="#">firewall</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **domain** [[name](#)] *string*

Synopsis	Enter the <b>domain</b> list instance
Context	<b>configure service vprn</b> <i>string firewall domain string</i>
Tree	<a href="#">domain</a>
Max. Instances	1024
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[name]** *string*

Synopsis	Firewall domain name
Context	<b>configure service vprn</b> <i>string firewall domain string</i>
Tree	<a href="#">domain</a>
String Length	1 to 32
Notes	This element is part of a list key.

Introduced 16.0.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis Administrative state of the firewall domain  
Context **configure service vpn** *string* **firewall domain** *string* **admin-state** *keyword*  
Tree **admin-state**  
Default disable  
Options enable, disable  
Introduced 16.0.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **dhcpv6-server**

Synopsis Enter the **dhcpv6-server** context  
Context **configure service vpn** *string* **firewall domain** *string* **dhcpv6-server**  
Tree **dhcpv6-server**  
Introduced 16.0.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **name** *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis DHCPv6 server name  
Context **configure service vpn** *string* **firewall domain** *string* **dhcpv6-server name** *string*  
Tree **name**  
String Length 1 to 32  
Introduced 16.0.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## router-instance *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Router name
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">firewall domain</a> <i>string</i> <a href="#">dhcpv6-server</a> <a href="#">router-instance</a> <i>string</i>
Tree	<a href="#">router-instance</a>
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## nat-group *reference*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	NAT group for this domain
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">firewall domain</a> <i>string</i> <a href="#">nat-group</a> <i>reference</i>
Tree	<a href="#">nat-group</a>
Reference	<b>configure</b> <a href="#">isa nat-group</a> <i>number</i>
Notes	The following elements are part of a mandatory choice: <b>nat-group</b> or <b>wlan-gw-group</b> .
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## prefix [[ip-prefix](#)] *string*

Synopsis	Enter the <b>prefix</b> list instance
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">firewall domain</a> <i>string</i> <a href="#">prefix</a> <i>string</i>
Tree	<a href="#">prefix</a>
Max. Instances	4096
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### [ip-prefix] *string*

Synopsis	IP prefix and prefix length for the domain firewall
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">firewall</a> <a href="#">domain</a> <i>string</i> <a href="#">prefix</a> <i>string</i>
Tree	<a href="#">prefix</a>
Description	This command configures a prefix for which firewall functionality applies within the domain. Prefixes cannot be shared or duplicated across multiple domains in the same routing context. A domain can contain multiple prefixes.
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### description *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">firewall</a> <a href="#">domain</a> <i>string</i> <a href="#">prefix</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### wlan-gw-group *reference*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	WLAN GW group used for NAT
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">firewall</a> <a href="#">domain</a> <i>string</i> <a href="#">wlan-gw-group</a> <i>reference</i>
Tree	<a href="#">wlan-gw-group</a>
Reference	<b>configure</b> <a href="#">isa</a> <a href="#">wlan-gw-group</a> <i>number</i>
Notes	The following elements are part of a mandatory choice: <b>nat-group</b> or <b>wlan-gw-group</b> .
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## flowspec

Synopsis	Enter the <b>flowspec</b> context
Context	<b>configure service vprn string flowspec</b>
Tree	<b>flowspec</b>
Introduced	16.0.R1
Platforms	All

## filter-cam-type *keyword*

Synopsis	Filter policy type for FlowSpec embedding
Context	<b>configure service vprn string flowspec filter-cam-type keyword</b>
Tree	<b>filter-cam-type</b>
Description	This command specifies the filter type that is required to embed FlowSpec entries. The filter type defines the match criteria that are available in the filter policy.
Default	normal
Options	normal, packet-length
Introduced	20.7.R1
Platforms	All

## ip-filter-max-size *number*

Synopsis	Maximum number of flowspec rule entries in IPv4 filter
Context	<b>configure service vprn string flowspec ip-filter-max-size number</b>
Tree	<b>ip-filter-max-size</b>
Description	<p>This command configures the maximum number of IPv4 flowspec routes, or rules, that can be entered in the auto-created embedded filter, fSpec-X. Flowspec filter entries embedded in a filter policy in this routing instance will use filter entries from the range between the embedding offset and (offset + ip-filter-max-size – 1).</p> <p>The sum of the maximum-size value and the highest offset in any IPv4 filter that embeds IPv4 flowspec rules from this routing instance (excluding filters that embed at offset 262143) must not exceed 262143.</p> <p>The maximum size can be adjusted up or down at any time. If the current number of IPv4 flowspec rules is greater than the new maximum, the extra rules are removed immediately but retained in the BGP RIB. If the limit is increased, new rules are programmed only as they are received in new BGP updates.</p>
Range	0 to 262143
Default	512

Introduced	16.0.R1
Platforms	All

### **ipv6-filter-max-size** *number*

Synopsis	Maximum number of flowspec rule entries in IPv6 filter
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>flowspec</b> <b>ipv6-filter-max-size</b> <i>number</i>
Tree	<a href="#">ipv6-filter-max-size</a>
Description	<p>This command configures the maximum number of IPv6 flowspec routes or rules that can be embedded into an ingress IPv6 filter policy for a specified routing instance. Flowspec filter entries embedded in a filter policy in this routing instance will use filter entries from the range between the embedding offset and (offset + ip-filter-max-size – 1).</p> <p>The sum of the maximum-size value and the highest offset in any IPv6 filter that embeds IPv6 flowspec rules from this routing instance (excluding filters that embed at offset 262143) must not exceed 262143.</p> <p>The maximum size can be adjusted up or down at any time. If the current number of IPv6 flowspec rules is greater than the new maximum, the extra rules are removed immediately but retained in the BGP RIB. If the limit is increased, new rules are programmed only as they are received in new BGP updates.</p>
Range	0 to 262143
Default	512
Introduced	16.0.R1
Platforms	All

### **grt-leaking**

Synopsis	Enter the <b>grt-leaking</b> context
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>grt-leaking</b>
Tree	<a href="#">grt-leaking</a>
Introduced	16.0.R1
Platforms	All

### **allow-local-management** *boolean*

Synopsis	Enable management traffic
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>grt-leaking</b> <b>allow-local-management</b> <i>boolean</i>
Tree	<a href="#">allow-local-management</a>

Description	When configured to <b>true</b> , this command enables the support of specific management protocols over VPRN interfaces that terminate on Base routing context IPv4 and IPv6 interface addresses, including Base loopback and system addresses.  This command does not control the support for management protocols terminating on VPRN interfaces directly.
Default	false
Introduced	16.0.R1
Platforms	All

### **export-grt**

Synopsis	Enter the <b>export-grt</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">grt-leaking</a> <a href="#">export-grt</a>
Tree	<a href="#">export-grt</a>
Introduced	16.0.R1
Platforms	All

### **policy-name** (*policy-expr-string* | *string*)

Synopsis	Route policy name or policy logical expression
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">grt-leaking</a> <a href="#">export-grt</a> <a href="#">policy-name</a> ( <i>policy-expr-string</i>   <i>string</i> )
Tree	<a href="#">policy-name</a>
String Length	1 to 255
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **export-limit** *number*

Synopsis	Maximum number of routes exported from VRF to GRT
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">grt-leaking</a> <a href="#">export-limit</a> <i>number</i>
Tree	<a href="#">export-limit</a>
Range	0 to 1000

Default	5
Introduced	16.0.R1
Platforms	All

### **export-v6-limit** *number*

Synopsis	Maximum number of IPv6 routes exported from VPRN to GRT
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">grt-leaking</a> <a href="#">export-v6-limit</a> <i>number</i>
Tree	<a href="#">export-v6-limit</a>
Range	0 to 1000
Default	5
Introduced	16.0.R1
Platforms	All

### **grt-lookup** *boolean*

Synopsis	Enable global route table lookup
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">grt-leaking</a> <a href="#">grt-lookup</a> <i>boolean</i>
Tree	<a href="#">grt-lookup</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **import-grt**

Synopsis	Enter the <b>import-grt</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">grt-leaking</a> <a href="#">import-grt</a>
Tree	<a href="#">import-grt</a>
Introduced	16.0.R4
Platforms	All

### **policy-name** (*policy-expr-string* | *string*)

Synopsis	Route policy name or policy logical expression
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">grt-leaking</a> <a href="#">import-grt</a> <a href="#">policy-name</a> ( <i>policy-expr-string</i>   <i>string</i> )

Tree	<a href="#">policy-name</a>
String Length	1 to 255
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R4
Platforms	All

## gsmp

Synopsis	Enter the <b>gsmp</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <a href="#">string</a> <b>gsmp</b>
Tree	<a href="#">gsmp</a>
Introduced	16.0.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of GSMP
Context	<b>configure</b> <a href="#">service vprn</a> <a href="#">string</a> <b>gsmp</b> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

## group [[name](#)] *string*

Synopsis	Enter the <b>group</b> list instance
Context	<b>configure</b> <a href="#">service vprn</a> <a href="#">string</a> <b>gsmp</b> <b>group</b> <i>string</i>
Tree	<a href="#">group</a>
Max. Instances	1024
Introduced	16.0.R1
Platforms	All

### **[name]** *string*

Synopsis	GSMP group name
Context	<b>configure service vprn</b> <i>string gsmp group string</i>
Tree	<a href="#">group</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the GSMP group
Context	<b>configure service vprn</b> <i>string gsmp group string admin-state keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **ancp**

Synopsis	Enter the <b>ancp</b> context
Context	<b>configure service vprn</b> <i>string gsmp group string ancp</i>
Tree	<a href="#">ancp</a>
Introduced	16.0.R1
Platforms	All

### **dynamic-topology-discovery** *boolean*

Synopsis	Enable the ANCP dynamic topology discovery capability
Context	<b>configure service vprn</b> <i>string gsmp group string ancp dynamic-topology-discovery boolean</i>
Tree	<a href="#">dynamic-topology-discovery</a>
Default	true

Introduced 16.0.R1  
Platforms All

### **oam** *boolean*

Synopsis Enable GSMP ANCP OAM capability at startup of GSMP connection  
Context **configure** *service vprn string gsmp group string ancp oam boolean*  
Tree *oam*  
Default false  
Introduced 16.0.R1  
Platforms All

### **description** *string*

Synopsis Text description  
Context **configure** *service vprn string gsmp group string description string*  
Tree *description*  
String Length 1 to 80  
Introduced 16.0.R1  
Platforms All

### **hold-multiplier** *number*

Synopsis Hold-multiplier for the GSMP connections in this group  
Context **configure** *service vprn string gsmp group string hold-multiplier number*  
Tree *hold-multiplier*  
Range 1 to 100  
Default 3  
Introduced 16.0.R1  
Platforms All

### **idle-filter** *boolean*

Synopsis Filter ANCP messages from IDLE DSL lines  
Context **configure** *service vprn string gsmp group string idle-filter boolean*

Tree	<a href="#">idle-filter</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **keepalive** *number*

Synopsis	Keepalive value for the GSMP connections in this group
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">gsmp group</a> <i>string</i> <a href="#">keepalive</a> <i>number</i>
Tree	<a href="#">keepalive</a>
Range	1 to 25
Default	10
Units	seconds
Introduced	16.0.R1
Platforms	All

### **neighbor** [[remote-address](#)] *string*

Synopsis	Enter the <b>neighbor</b> list instance
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">gsmp group</a> <i>string</i> <a href="#">neighbor</a> <i>string</i>
Tree	<a href="#">neighbor</a>
Introduced	16.0.R1
Platforms	All

### **[remote-address]** *string*

Synopsis	GSMP neighbor remote IP address
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">gsmp group</a> <i>string</i> <a href="#">neighbor</a> <i>string</i>
Tree	<a href="#">neighbor</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the GSMP neighbor
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>gsmg</b> <b>group</b> <i>string</i> <b>neighbor</b> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>gsmg</b> <b>group</b> <i>string</i> <b>neighbor</b> <i>string</i> <b>description</b> <i>string</i>
Tree	<b>description</b>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **local-address** *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Restrict connections to this local address only within the service running ANCP
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>gsmg</b> <b>group</b> <i>string</i> <b>neighbor</b> <i>string</i> <b>local-address</b> <i>string</i>
Tree	<b>local-address</b>
Introduced	16.0.R1
Platforms	All

### **priority-marking**

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>priority-marking</b> context
----------	---

Context	<b>configure service vprn</b> <i>string</i> <b>gsmp group</b> <i>string</i> <b>neighbor</b> <i>string</i> <b>priority-marking</b>
Tree	<b>priority-marking</b>
Introduced	16.0.R1
Platforms	All

### **dscp** *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	DSCP that is used while remarking the in profile packets
Context	<b>configure service vprn</b> <i>string</i> <b>gsmp group</b> <i>string</i> <b>neighbor</b> <i>string</i> <b>priority-marking dscp</b> <i>keyword</i>
Tree	<b>dscp</b>
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Notes	The following elements are part of a choice: <b>dscp</b> or <b>prec</b> .
Introduced	16.0.R1
Platforms	All

### **prec** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Precedence priority marking
Context	<b>configure service vprn</b> <i>string</i> <b>gsmp group</b> <i>string</i> <b>neighbor</b> <i>string</i> <b>priority-marking prec</b> <i>number</i>
Tree	<b>prec</b>
Range	0 to 7
Notes	The following elements are part of a choice: <b>dscp</b> or <b>prec</b> .
Introduced	16.0.R1
Platforms	All

### **persistence** *boolean*

Synopsis	Store DSL line information when the GSMP connection terminates
Context	<b>configure service vprn</b> <i>string</i> <b>gsmpp group</b> <i>string</i> <b>persistence</b> <i>boolean</i>
Tree	<a href="#">persistence</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **gtp**

Synopsis	Enter the <b>gtp</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>gtp</b>
Tree	<a href="#">gtp</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **s11**

Synopsis	Enter the <b>s11</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>gtp s11</b>
Tree	<a href="#">s11</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **interface** [[interface-name](#)] *reference*

Synopsis	Enter the <b>interface</b> list instance
Context	<b>configure service vprn</b> <i>string</i> <b>gtp s11 interface</b> <i>reference</i>
Tree	<a href="#">interface</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[interface-name] reference**

Synopsis	Interface name
Context	<b>configure service vprn string gtp s11 interface reference</b>
Tree	<a href="#">interface</a>
Reference	<b>configure service vprn string interface string</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **apn-policy reference**

Synopsis	Access Point Name (APN) policy for the S11 interface
Context	<b>configure service vprn string gtp s11 interface reference apn-policy reference</b>
Tree	<a href="#">apn-policy</a>
Reference	<b>configure subscriber-mgmt gtp apn-policy string</b>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **peer-profile-map**

Synopsis	Enter the <b>peer-profile-map</b> context
Context	<b>configure service vprn string gtp s11 peer-profile-map</b>
Tree	<a href="#">peer-profile-map</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **prefix [peer-prefix] (ipv4-prefix | ipv6-prefix)**

Synopsis	Enter the <b>prefix</b> list instance
Context	<b>configure service vprn string gtp s11 peer-profile-map prefix (ipv4-prefix   ipv6-prefix)</b>
Tree	<a href="#">prefix</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[peer-prefix]** (*ipv4-prefix | ipv6-prefix*)

Synopsis	IP prefix and prefix length of the subnet
Context	<b>configure service vprn string gtp s11 peer-profile-map prefix</b> ( <i>ipv4-prefix   ipv6-prefix</i> )
Tree	<a href="#">prefix</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **peer-profile** *reference*

Synopsis	Peer profile used for peers in this prefix
Context	<b>configure service vprn string gtp s11 peer-profile-map prefix</b> ( <i>ipv4-prefix   ipv6-prefix</i> ) <a href="#">peer-profile reference</a>
Tree	<a href="#">peer-profile</a>
Reference	<b>configure subscriber-mgmt gtp peer-profile string</b>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **upf-data-endpoint**

Synopsis	Enable the <b>upf-data-endpoint</b> context
Context	<b>configure service vprn string gtp upf-data-endpoint</b>
Tree	<a href="#">upf-data-endpoint</a>
Description	Commands in this context configure a GTP-U service endpoint used by BNG CUPS FWA sessions.
Introduced	21.2.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **fpe** *reference*

Synopsis	FPE used to encapsulate and decapsulate GTP-U traffic
Context	<b>configure service vprn string gtp upf-data-endpoint fpe reference</b>
Tree	<a href="#">fpe</a>
Reference	<b>configure fwd-path-ext fpe number</b>

Notes	This element is mandatory.
Introduced	21.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **interface** *reference*

Synopsis	Interface on which the GTP-U packets terminate
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">gtp upf-data-endpoint</a> <a href="#">interface</a> <i>reference</i>
Tree	<a href="#">interface</a>
Reference	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i>
Notes	This element is mandatory.
Introduced	21.2.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **uplink**

Synopsis	Enable the <b>uplink</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">gtp uplink</a>
Tree	<a href="#">uplink</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **apn** *string*

Synopsis	Network Identifier part of APN
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">gtp uplink</a> <a href="#">apn</a> <i>string</i>
Tree	<a href="#">apn</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **pdn-type** *keyword*

Synopsis	Default 3GPP PDN in GTP
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">gtp uplink</a> <a href="#">pdn-type</a> <i>keyword</i>

Tree	<a href="#">pdn-type</a>
Default	ipv4
Options	ipv4, ipv6, ipv4v6
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## peer-profile-map

Synopsis	Enter the <b>peer-profile-map</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">gtp</a> <a href="#">uplink</a> <a href="#">peer-profile-map</a>
Tree	<a href="#">peer-profile-map</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## prefix [[peer-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Enter the <b>prefix</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">gtp</a> <a href="#">uplink</a> <a href="#">peer-profile-map</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
Tree	<a href="#">prefix</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## [[peer-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	IP prefix and prefix length of the subnet
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">gtp</a> <a href="#">uplink</a> <a href="#">peer-profile-map</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
Tree	<a href="#">prefix</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## peer-profile *reference*

Synopsis	Peer profile name
----------	-------------------

Context	<b>configure service vprn</b> <i>string</i> <b>gtp uplink peer-profile-map prefix</b> ( <i>ipv4-prefix   ipv6-prefix</i> ) <b>peer-profile</b> <i>reference</i>
Tree	<a href="#">peer-profile</a>
Reference	<b>configure subscriber-mgmt gtp peer-profile</b> <i>string</i>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **hash-label** *boolean*

Synopsis	Include hash label
Context	<b>configure service vprn</b> <i>string</i> <b>hash-label</b> <i>boolean</i>
Tree	<a href="#">hash-label</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **igmp**

Synopsis	Enable the <b>igmp</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>igmp</b>
Tree	<a href="#">igmp</a>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of IGMP
Context	<b>configure service vprn</b> <i>string</i> <b>igmp admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	enable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **forwarding-group-interface forwarding-service *string* group-interface-name *reference***

Synopsis	Enter the <b>forwarding-group-interface</b> list instance
Context	<b>configure service vprn <i>string</i> igmp forwarding-group-interface forwarding-service <i>string</i> group-interface-name <i>reference</i></b>
Tree	<b>forwarding-group-interface</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **forwarding-service *string***

Synopsis	Forwarding service for a subscriber interface in a retailer context
Context	<b>configure service vprn <i>string</i> igmp forwarding-group-interface forwarding-service <i>string</i> group-interface-name <i>reference</i></b>
Tree	<b>forwarding-group-interface</b>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **group-interface-name *reference***

Synopsis	Group interface name
Context	<b>configure service vprn <i>string</i> igmp forwarding-group-interface forwarding-service <i>string</i> group-interface-name <i>reference</i></b>
Tree	<b>forwarding-group-interface</b>
Reference	<b>configure service vprn <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i></b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state *keyword***

Synopsis	Administrative state of IGMP
Context	<b>configure service vprn <i>string</i> igmp forwarding-group-interface forwarding-service <i>string</i> group-interface-name <i>reference</i> admin-state <i>keyword</i></b>

Tree	<a href="#">admin-state</a>
Default	enable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **import-policy** *reference*

Synopsis	Import policy that filters IGMP packets
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">igmp forwarding-group-interface forwarding-service</a> <i>string</i> <a href="#">group-interface-name</a> <i>reference</i> <a href="#">import-policy</a> <i>reference</i>
Tree	<a href="#">import-policy</a>
Description	This command configures the IGMP import policy, or filter, for an interface subscriber or a group interface. An IGMP filter is also known as a black or white list, and it is defined as a router policy option.  When redirection is applied, only the import policy from the subscriber is in effect. The import policy under the group interface is applicable only for IGMP states received directly on the SAP (AN in IGMP proxy mode).
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **maximum-number-group-sources** *number*

Synopsis	Maximum number of group sources for this interface
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">igmp forwarding-group-interface forwarding-service</a> <i>string</i> <a href="#">group-interface-name</a> <i>reference</i> <a href="#">maximum-number-group-sources</a> <i>number</i>
Tree	<a href="#">maximum-number-group-sources</a>
Description	This command configures the maximum number of group sources for which IGMP or MLD can have local receiver information based on received IGMP or MLD reports on this interface. When this configuration is changed dynamically to a lower value than the currently accepted number of group sources, the group sources that are already accepted are not deleted. Only new group sources are not allowed.
Range	1 to 32000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **maximum-number-groups** *number*

Synopsis	Maximum number of groups for this interface
Context	<b>configure</b> <a href="#">service vprn string igmp forwarding-group-interface forwarding-service string group-interface-name reference maximum-number-groups number</a>
Tree	<a href="#">maximum-number-groups</a>
Range	1 to 16000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **maximum-number-sources** *number*

Synopsis	Maximum number of sources that are allowed per group
Context	<b>configure</b> <a href="#">service vprn string igmp forwarding-group-interface forwarding-service string group-interface-name reference maximum-number-sources number</a>
Tree	<a href="#">maximum-number-sources</a>
Range	1 to 1000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **mcac**

Synopsis	Enter the <b>mcac</b> context
Context	<b>configure</b> <a href="#">service vprn string igmp forwarding-group-interface forwarding-service string group-interface-name reference mcac</a>
Tree	<a href="#">mcac</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **bandwidth**

Synopsis	Enter the <b>bandwidth</b> context
Context	<b>configure</b> <a href="#">service vprn string igmp forwarding-group-interface forwarding-service string group-interface-name reference mcac bandwidth</a>
Tree	<a href="#">bandwidth</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **mandatory** (*number* | *keyword*)

Synopsis	Pre-reserved bandwidth for all mandatory channels
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>igmp</b> <b>forwarding-group-interface</b> <b>forwarding-service</b> <i>string</i> <b>group-interface-name</b> <i>reference</i> <b>mcac</b> <b>bandwidth</b> <b>mandatory</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>mandatory</b>
Range	0 to 2147483647
Default	unlimited
Options	unlimited
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **total** (*number* | *keyword*)

Synopsis	Maximum allowed bandwidth
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>igmp</b> <b>forwarding-group-interface</b> <b>forwarding-service</b> <i>string</i> <b>group-interface-name</b> <i>reference</i> <b>mcac</b> <b>bandwidth</b> <b>total</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>total</b>
Range	0 to 2147483647
Default	unlimited
Options	unlimited
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **interface-policy** *reference*

Synopsis	Name of multicast CAC interface policy
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>igmp</b> <b>forwarding-group-interface</b> <b>forwarding-service</b> <i>string</i> <b>group-interface-name</b> <i>reference</i> <b>mcac</b> <b>interface-policy</b> <i>reference</i>
Tree	<b>interface-policy</b>
Reference	<b>configure</b> <b>mcac</b> <b>interface-policy</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## policy reference

Synopsis	Multicast CAC policy name
Context	<b>configure service vprn</b> <i>string</i> <b>igmp forwarding-group-interface forwarding-service</b> <i>string</i> <b>group-interface-name</b> <i>reference</i> <b>mcac policy</b> <i>reference</i>
Tree	<b>policy</b>
Description	<p>This command configures the name of the global channel bandwidth definition policy that is used for (H)MCAC and HQoS adjustment.</p> <p>Within the scope of HQoS adjustment, the channel definition policy under the group interface is used if redirection is unconfigured. In this case, the HQoS adjustment can be applied to IPoE subscribers in per-SAP replication mode.</p> <p>If redirection is configured, the channel bandwidth definition policy applied under the Layer 3 redirected interface is in effect.</p> <p>Hierarchical MCAC (HMCAC) is supported on two levels simultaneously:</p> <ul style="list-style-type: none"> <li>• subscriber level and redirected interface when redirection is configured</li> <li>• subscriber level and group-interface level when redirection is unconfigured</li> </ul> <p>In HMCAC, the subscriber is checked against its bandwidth limits first, then against the bandwidth limits of the redirected or group interface. If redirection is configured but the policy is referenced only under the group interface, no admission control is executed (HMCAC or MCAC).</p>
Reference	<b>configure mcac policy</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## query-interval *number*

Synopsis	Time between two consecutive host-query messages
Context	<b>configure service vprn</b> <i>string</i> <b>igmp forwarding-group-interface forwarding-service</b> <i>string</i> <b>group-interface-name</b> <i>reference</i> <b>query-interval</b> <i>number</i>
Tree	<b>query-interval</b>
Range	2 to 1024
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## query-last-member-interval *number*

Synopsis	Time between group-specific query messages
Context	<b>configure service vprn</b> <i>string</i> <b>igmp forwarding-group-interface forwarding-service</b> <i>string</i> <b>group-interface-name</b> <i>reference</i> <b>query-last-member-interval</b> <i>number</i>

Tree	<a href="#">query-last-member-interval</a>
Range	1 to 1023
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **query-response-interval** *number*

Synopsis	Time to wait for a response to the host-query messages
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">igmp forwarding-group-interface forwarding-service</a> <i>string</i> <a href="#">group-interface-name</a> <i>reference</i> <a href="#">query-response-interval</a> <i>number</i>
Tree	<a href="#">query-response-interval</a>
Range	1 to 1023
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **query-source-address** *string*

Synopsis	Source address for IGMP queries
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">igmp forwarding-group-interface forwarding-service</a> <i>string</i> <a href="#">group-interface-name</a> <i>reference</i> <a href="#">query-source-address</a> <i>string</i>
Tree	<a href="#">query-source-address</a>
Description	This command configures the query source IP address for the group interface. This IP address overrides the source IP address configured at the router level.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **router-alert-check** *boolean*

Synopsis	Enable router alert checking for IGMP or MLD messages
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">igmp forwarding-group-interface forwarding-service</a> <i>string</i> <a href="#">group-interface-name</a> <i>reference</i> <a href="#">router-alert-check</a> <i>boolean</i>
Tree	<a href="#">router-alert-check</a>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sub-hosts-only** *boolean*

Synopsis	Allow IGMP traffic from known hosts only
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>igmp forwarding-group-interface forwarding-service</b> <i>string</i> <b>group-interface-name</b> <i>reference</i> <b>sub-hosts-only</b> <i>boolean</i>
Tree	<b>sub-hosts-only</b>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **subnet-check** *boolean*

Synopsis	Allow subnet checking
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>igmp forwarding-group-interface forwarding-service</b> <i>string</i> <b>group-interface-name</b> <i>reference</i> <b>subnet-check</b> <i>boolean</i>
Tree	<b>subnet-check</b>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **version** *keyword*

Synopsis	IGMP protocol version
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>igmp forwarding-group-interface forwarding-service</b> <i>string</i> <b>group-interface-name</b> <i>reference</i> <b>version</b> <i>keyword</i>
Tree	<b>version</b>
Default	3
Options	1, 2, 3
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **group-if-query-source-address** *string*

Synopsis	Default query-source address for all group interfaces
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>igmp group-if-query-source-address</b> <i>string</i>
Tree	<b>group-if-query-source-address</b>
Introduced	16.0.R1

Platforms All

### **group-interface** [\[group-interface-name\]](#) *reference*

Synopsis Enter the **group-interface** list instance  
Context **configure service vprn string igmp group-interface reference**  
Tree [group-interface](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[group-interface-name]** *reference*

Synopsis Group interface name  
Context **configure service vprn string igmp group-interface reference**  
Tree [group-interface](#)  
Reference **configure service vprn string subscriber-interface string group-interface string**  
Notes This element is part of a list key.  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis Administrative state of IGMP  
Context **configure service vprn string igmp group-interface reference admin-state keyword**  
Tree [admin-state](#)  
Default enable  
Options enable, disable  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **import-policy** *reference*

Synopsis Import policy that filters IGMP packets  
Context **configure service vprn string igmp group-interface reference import-policy reference**  
Tree [import-policy](#)

Description	<p>This command configures the IGMP import policy, or filter, for an interface subscriber or a group interface. An IGMP filter is also known as a black or white list, and it is defined as a router policy option.</p> <p>When redirection is applied, only the import policy from the subscriber is in effect. The import policy under the group interface is applicable only for IGMP states received directly on the SAP (AN in IGMP proxy mode).</p>
Reference	<b>configure</b> <a href="#">policy-options policy-statement string</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **maximum-number-group-sources** *number*

Synopsis	Maximum number of group sources for this interface
Context	<b>configure</b> <a href="#">service vprn string igmp group-interface reference</a> <a href="#">maximum-number-group-sources number</a>
Tree	<a href="#">maximum-number-group-sources</a>
Description	This command configures the maximum number of group sources for which IGMP or MLD can have local receiver information based on received IGMP or MLD reports on this interface. When this configuration is changed dynamically to a lower value than the currently accepted number of group sources, the group sources that are already accepted are not deleted. Only new group sources are not allowed.
Range	1 to 32000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **maximum-number-groups** *number*

Synopsis	Maximum number of groups for this interface
Context	<b>configure</b> <a href="#">service vprn string igmp group-interface reference</a> <a href="#">maximum-number-groups number</a>
Tree	<a href="#">maximum-number-groups</a>
Range	1 to 16000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **maximum-number-sources** *number*

Synopsis	Maximum number of sources that are allowed per group
----------	--

Context	<b>configure service vprn string igmp group-interface reference maximum-number-sources number</b>
Tree	<a href="#">maximum-number-sources</a>
Range	1 to 1000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **mcac**

Synopsis	Enter the <b>mcac</b> context
Context	<b>configure service vprn string igmp group-interface reference mcac</b>
Tree	<a href="#">mcac</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **bandwidth**

Synopsis	Enter the <b>bandwidth</b> context
Context	<b>configure service vprn string igmp group-interface reference mcac bandwidth</b>
Tree	<a href="#">bandwidth</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **mandatory** (*number | keyword*)

Synopsis	Pre-reserved bandwidth for all mandatory channels
Context	<b>configure service vprn string igmp group-interface reference mcac bandwidth mandatory (number   keyword)</b>
Tree	<a href="#">mandatory</a>
Range	0 to 2147483647
Default	unlimited
Options	unlimited
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**total** (*number* | *keyword*)

Synopsis	Maximum allowed bandwidth
Context	<b>configure service vprn</b> <i>string</i> <b>igmp group-interface</b> <i>reference</i> <b>mcac bandwidth total</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>total</b>
Range	0 to 2147483647
Default	unlimited
Options	unlimited
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**interface-policy** *reference*

Synopsis	Name of multicast CAC interface policy
Context	<b>configure service vprn</b> <i>string</i> <b>igmp group-interface</b> <i>reference</i> <b>mcac interface-policy</b> <i>reference</i>
Tree	<b>interface-policy</b>
Reference	<b>configure mcac interface-policy</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**policy** *reference*

Synopsis	Multicast CAC policy name
Context	<b>configure service vprn</b> <i>string</i> <b>igmp group-interface</b> <i>reference</i> <b>mcac policy</b> <i>reference</i>
Tree	<b>policy</b>
Description	<p>This command configures the name of the global channel bandwidth definition policy that is used for (H)MCAC and HQoS adjustment.</p> <p>Within the scope of HQoS adjustment, the channel definition policy under the group interface is used if redirection is unconfigured. In this case, the HQoS adjustment can be applied to IPoE subscribers in per-SAP replication mode.</p> <p>If redirection is configured, the channel bandwidth definition policy applied under the Layer 3 redirected interface is in effect.</p> <p>Hierarchical MCAC (HMCAC) is supported on two levels simultaneously:</p> <ul style="list-style-type: none"><li>• subscriber level and redirected interface when redirection is configured</li><li>• subscriber level and group-interface level when redirection is unconfigured</li></ul>

In HMCAC, the subscriber is checked against its bandwidth limits first, then against the bandwidth limits of the redirected or group interface. If redirection is configured but the policy is referenced only under the group interface, no admission control is executed (HMCAC or MCAC).

Reference	<b>configure mcac policy</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **query-interval** *number*

Synopsis	Time between two consecutive host-query messages
Context	<b>configure service vprn</b> <i>string</i> <b>igmp group-interface</b> <i>reference</i> <b>query-interval</b> <i>number</i>
Tree	<b>query-interval</b>
Range	2 to 1024
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **query-last-member-interval** *number*

Synopsis	Time between group-specific query messages
Context	<b>configure service vprn</b> <i>string</i> <b>igmp group-interface</b> <i>reference</i> <b>query-last-member-interval</b> <i>number</i>
Tree	<b>query-last-member-interval</b>
Range	1 to 1023
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **query-response-interval** *number*

Synopsis	Time to wait for a response to the host-query messages
Context	<b>configure service vprn</b> <i>string</i> <b>igmp group-interface</b> <i>reference</i> <b>query-response-interval</b> <i>number</i>
Tree	<b>query-response-interval</b>
Range	1 to 1023
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **query-source-address** *string*

Synopsis	Source address for IGMP queries
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">igmp group-interface</a> <i>reference</i> <a href="#">query-source-address</a> <i>string</i>
Tree	<a href="#">query-source-address</a>
Description	This command configures the query source IP address for the group interface. This IP address overrides the source IP address configured at the router level.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **router-alert-check** *boolean*

Synopsis	Enable router alert checking for IGMP or MLD messages
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">igmp group-interface</a> <i>reference</i> <a href="#">router-alert-check</a> <i>boolean</i>
Tree	<a href="#">router-alert-check</a>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sub-hosts-only** *boolean*

Synopsis	Allow IGMP traffic from known hosts only
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">igmp group-interface</a> <i>reference</i> <a href="#">sub-hosts-only</a> <i>boolean</i>
Tree	<a href="#">sub-hosts-only</a>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **subnet-check** *boolean*

Synopsis	Allow subnet checking
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">igmp group-interface</a> <i>reference</i> <a href="#">subnet-check</a> <i>boolean</i>
Tree	<a href="#">subnet-check</a>
Default	true
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **version** *keyword*

Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">igmp interface</a> <i>string</i> <a href="#">static group</a> <i>string</i>
Tree	<a href="#">group</a>
Description	This command configures an address that receives data on an interface. The IP address must be unique for each static group.
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **source** [[source-address](#)] *string*

Synopsis	Add a list entry for <b>source</b>
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">igmp interface</a> <i>string</i> <a href="#">static group</a> <i>string</i> <a href="#">source</a> <i>string</i>
Tree	<a href="#">source</a>
Notes	The following elements are part of a mandatory choice: <b>source</b> or <b>starg</b> .
Introduced	16.0.R1
Platforms	All

### [[source-address](#)] *string*

Synopsis	Source IP address of multicast channel sending data
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">igmp interface</a> <i>string</i> <a href="#">static group</a> <i>string</i> <a href="#">source</a> <i>string</i>
Tree	<a href="#">source</a>
Notes	This element is part of a list key.
Introduced	16.0.R2
Platforms	All

### **starg**

Synopsis	any source address (*,G)
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">igmp interface</a> <i>string</i> <a href="#">static group</a> <i>string</i> <a href="#">starg</a>
Tree	<a href="#">starg</a>
Notes	The following elements are part of a mandatory choice: <b>source</b> or <b>starg</b> .

Introduced 16.0.R2  
Platforms All

### **group-range** *start string end string step string*

Synopsis Enter the **group-range** list instance  
Context **configure service vprn string igmp interface string static group-range start string end string step string**  
Tree **group-range**  
Introduced 16.0.R1  
Platforms All

### **start string**

Synopsis IP address for the start of the static group range  
Context **configure service vprn string igmp interface string static group-range start string end string step string**  
Tree **group-range**  
Notes This element is part of a list key.  
Introduced 16.0.R1  
Platforms All

### **end string**

Synopsis IP address for the end of the static group range  
Context **configure service vprn string igmp interface string static group-range start string end string step string**  
Tree **group-range**  
Notes This element is part of a list key.  
Introduced 16.0.R1  
Platforms All

### **step string**

Synopsis Step interval in the group-range address

Context	<b>configure service vprn string igmp interface string static group-range start string end string step string</b>
Tree	<b>group-range</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **source** [**source-address**] *string*

Synopsis	Add a list entry for <b>source</b>
Context	<b>configure service vprn string igmp interface string static group-range start string end string step string source string</b>
Tree	<b>source</b>
Notes	The following elements are part of a mandatory choice: <b>source</b> or <b>starg</b> .
Introduced	16.0.R1
Platforms	All

### **[source-address]** *string*

Synopsis	Source IP address of multicast channel sending data
Context	<b>configure service vprn string igmp interface string static group-range start string end string step string source string</b>
Tree	<b>source</b>
Notes	This element is part of a list key.
Introduced	16.0.R2
Platforms	All

### **starg**

Synopsis	any source address (*,G)
Context	<b>configure service vprn string igmp interface string static group-range start string end string step string starg</b>
Tree	<b>starg</b>
Notes	The following elements are part of a mandatory choice: <b>source</b> or <b>starg</b> .
Introduced	16.0.R2
Platforms	All

### **subnet-check** *boolean*

Synopsis	Allow subnet checking
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>igmp interface</b> <i>string</i> <b>subnet-check</b> <i>boolean</i>
Tree	<b>subnet-check</b>
Default	true
Introduced	16.0.R1
Platforms	All

### **version** *keyword*

Synopsis	IGMP protocol version
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>igmp interface</b> <i>string</i> <b>version</b> <i>keyword</i>
Tree	<b>version</b>
Default	3
Options	1, 2, 3
Introduced	16.0.R1
Platforms	All

### **query-interval** *number*

Synopsis	Time between two consecutive host-query messages
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>igmp query-interval</b> <i>number</i>
Tree	<b>query-interval</b>
Description	This command configures the timing of the host-query messages that solicit group membership information. The messages are sent to the all-systems multicast group address, 224.0.0.1.
Range	2 to 1024
Default	125
Units	seconds
Introduced	16.0.R1
Platforms	All

### **query-last-member-interval** *number*

Synopsis	Time between group-specific query messages
----------	--

Context	<b>configure service vprn string igmp query-last-member-interval number</b>
Tree	<a href="#">query-last-member-interval</a>
Description	This command configures the timing of the query-message interval, defining the interval for leave-group messages among others. The lower the interval that is configured, the faster the detection of the loss of the last member of a group.
Range	1 to 1023
Default	1
Units	seconds
Introduced	16.0.R1
Platforms	All

### **query-response-interval number**

Synopsis	Time to wait for a response to the host-query messages
Context	<b>configure service vprn string igmp query-response-interval number</b>
Tree	<a href="#">query-response-interval</a>
Range	1 to 1023
Default	10
Units	seconds
Introduced	16.0.R1
Platforms	All

### **robust-count number**

Synopsis	Number of retries after expected message loss
Context	<b>configure service vprn string igmp robust-count number</b>
Tree	<a href="#">robust-count</a>
Description	This command configures the level of expected packet loss on a subnet. If a subnet anticipates losses, the robust-count can be increased.
Range	2 to 10
Default	2
Introduced	16.0.R1
Platforms	All

## ssm-translate

Synopsis	Enter the <b>ssm-translate</b> context
Context	<b>configure service vprn string igmp ssm-translate</b>
Tree	<b>ssm-translate</b>
Introduced	16.0.R1
Platforms	All

## group-range **start string end string**

Synopsis	Enter the <b>group-range</b> list instance
Context	<b>configure service vprn string igmp ssm-translate group-range start string end string</b>
Tree	<b>group-range</b>
Introduced	16.0.R1
Platforms	All

## start *string*

Synopsis	Lower bound of the IP address group range
Context	<b>configure service vprn string igmp ssm-translate group-range start string end string</b>
Tree	<b>group-range</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## end *string*

Synopsis	Upper bound of the IP address group range
Context	<b>configure service vprn string igmp ssm-translate group-range start string end string</b>
Tree	<b>group-range</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **source** [[source-address](#)] *string*

Synopsis	Add a list entry for <b>source</b>
Context	<b>configure service vprn</b> <i>string</i> <a href="#">igmp ssm-translate group-range start string end string</a> <a href="#">source string</a>
Tree	<a href="#">source</a>
Min. Instances	1
Introduced	16.0.R1
Platforms	All

### **[source-address]** *string*

Synopsis	Source IP address of multicast channel sending data
Context	<b>configure service vprn</b> <i>string</i> <a href="#">igmp ssm-translate group-range start string end string</a> <a href="#">source string</a>
Tree	<a href="#">source</a>
Notes	This element is part of a list key.
Introduced	16.0.R2
Platforms	All

### **igmp-host-tracking**

Synopsis	Enter the <b>igmp-host-tracking</b> context
Context	<b>configure service vprn</b> <i>string</i> <a href="#">igmp-host-tracking</a>
Tree	<a href="#">igmp-host-tracking</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of IGMP host tracking
Context	<b>configure service vprn</b> <i>string</i> <a href="#">igmp-host-tracking admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **expiry-time** *number*

Synopsis Time that the system continues to track inactive hosts  
Context **configure service vprn** *string igmp-host-tracking expiry-time number*  
Tree [expiry-time](#)  
Range 1 to 65535  
Default 260  
Units seconds  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ignore-nh-metric** *boolean*

Synopsis Ignore next hop metric  
Context **configure service vprn** *string ignore-nh-metric boolean*  
Tree [ignore-nh-metric](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **interface** [[interface-name](#)] *string*

Synopsis Enter the **interface** list instance  
Context **configure service vprn** *string interface string*  
Tree [interface](#)  
Introduced 16.0.R1  
Platforms All

### **[interface-name]** *string*

Synopsis Interface name  
Context **configure service vprn** *string interface string*  
Tree [interface](#)

String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the interface
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	enable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **cflowd-parameters**

Synopsis	Enter the <b>cflowd-parameters</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <b>cflowd-parameters</b>
Tree	<a href="#">cflowd-parameters</a>
Introduced	16.0.R1
Platforms	All

### **sampling** [[sampling-type](#)] *keyword*

Synopsis	Enter the <b>sampling</b> list instance
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">cflowd-parameters</a> <b>sampling</b> <i>keyword</i>
Tree	<a href="#">sampling</a>
Introduced	16.0.R1
Platforms	All

### [[sampling-type](#)] *keyword*

Synopsis	Traffic sampling type
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">cflowd-parameters</a> <b>sampling</b> <i>keyword</i>

Tree	<a href="#">sampling</a>
Description	This command configures the type of traffic to be sampled on the associated IP interface.
Options	unicast, multicast, both
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **direction** *keyword*

Synopsis	Direction of traffic for cflowd sampling
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">cflowd-parameters</a> <a href="#">sampling</a> <i>keyword</i> <a href="#">direction</a> <i>keyword</i>
Tree	<a href="#">direction</a>
Description	This command configures the direction in which sampling occurs on the associated IP interfaces.
Default	ingress-only
Options	ingress-only, egress-only, both
Introduced	16.0.R1
Platforms	All

### **sample-profile** (*keyword* | *number*)

Synopsis	Sample profile ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">cflowd-parameters</a> <a href="#">sampling</a> <i>keyword</i> <a href="#">sample-profile</a> ( <i>keyword</i>   <i>number</i> )
Tree	<a href="#">sample-profile</a>
Description	This command defines the sampling rate profile associated with this interface.
Max. Range	0 to 4294967295
Options	1
Introduced	19.5.R1
Platforms	All

### **type** *keyword*

Synopsis	Type of cflowd analysis
----------	-------------------------

Context	<b>configure service vprn string interface string cflowd-parameters sampling keyword type keyword</b>
Tree	<b>type</b>
Description	This command configures the cflowd sampling type on the associated IP interface.
Options	acl, interface
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **cpu-protection reference**

Synopsis	CPU protection policy
Context	<b>configure service vprn string interface string cpu-protection reference</b>
Tree	<b>cpu-protection</b>
Reference	<b>configure system security cpu-protection policy number</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

### **description string**

Synopsis	Text description
Context	<b>configure service vprn string interface string description string</b>
Tree	<b>description</b>
String Length	1 to 255
Introduced	16.0.R1
Platforms	All

### **dynamic-tunnel-redundant-nexthop string**

Synopsis	Redundant next-hop address for the dynamic IPsec tunnel
Context	<b>configure service vprn string interface string dynamic-tunnel-redundant-nexthop string</b>
Tree	<b>dynamic-tunnel-redundant-nexthop</b>
Description	This command specifies the redundant next-hop address on a public or private IPsec interface (with public or private tunnel SAP) for a dynamic IPsec tunnel. The next-hop address is used by a standby node to shunt traffic to a master if it receives the address. The next-hop address is resolved in the routing table of a corresponding service.

Notes	The following elements are part of a choice: <b>multi-chassis-shunting-profile</b> or ( <b>dynamic-tunnel-redundant-nexthop</b> and <b>static-tunnel-redundant-nexthop</b> ).
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## hold-time

Synopsis	Enter the <b>hold-time</b> context
Context	<b>configure</b> <i>service vprn string interface string hold-time</i>
Tree	<i>hold-time</i>
Introduced	16.0.R1
Platforms	All

## ipv4

Synopsis	Enter the <b>ipv4</b> context
Context	<b>configure</b> <i>service vprn string interface string hold-time ipv4</i>
Tree	<i>ipv4</i>
Introduced	16.0.R1
Platforms	All

## down

Synopsis	Enter the <b>down</b> context
Context	<b>configure</b> <i>service vprn string interface string hold-time ipv4 down</i>
Tree	<i>down</i>
Description	Commands in this context configure the down hold timer, which specifies the delay before activating the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface up, unless an operator configures the <b>init-only</b> command.
Introduced	16.0.R1
Platforms	All

## init-only *boolean*

Synopsis	Apply delay only at interface configuration or reboot
----------	---

Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>hold-time ipv4 down init-only</b> <i>boolean</i>
Tree	<b>init-only</b>
Description	This command applies a delay only when the IP interface is first configured or after a system reboot.
Default	false
Introduced	16.0.R1
Platforms	All

### **seconds** *number*

Synopsis	Down hold time for the IP interface
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>hold-time ipv4 down</b> <b>seconds</b> <i>number</i>
Tree	<b>seconds</b>
Range	1 to 1200
Units	seconds
Introduced	16.0.R1
Platforms	All

### **up**

Synopsis	Enter the <b>up</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>hold-time ipv4 up</b>
Tree	<b>up</b>
Description	Commands in this context configure the up hold timer, which specifies the delay before deactivation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface down.
Introduced	16.0.R1
Platforms	All

### **seconds** *number*

Synopsis	Up hold time for the IP interface
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>hold-time ipv4 up</b> <b>seconds</b> <i>number</i>
Tree	<b>seconds</b>
Range	1 to 1200
Units	seconds

Introduced 16.0.R1  
Platforms All

## ipv6

Synopsis Enter the **ipv6** context  
Context **configure service vprn string interface string hold-time ipv6**  
Tree **ipv6**  
Introduced 16.0.R1  
Platforms All

## down

Synopsis Enter the **down** context  
Context **configure service vprn string interface string hold-time ipv6 down**  
Tree **down**  
Description Commands in this context configure the down hold timer, which specifies the delay before activation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface up, unless an operator configures the **init-only** command.  
Introduced 16.0.R1  
Platforms All

## init-only *boolean*

Synopsis Apply delay only at interface configuration or reboot  
Context **configure service vprn string interface string hold-time ipv6 down init-only boolean**  
Tree **init-only**  
Description This command applies the delay only when when the IP interface is first configured or after a system reboot.  
Default false  
Introduced 16.0.R1  
Platforms All

### **seconds** *number*

Synopsis	Down hold time for the IP interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">hold-time</a> <a href="#">ipv6</a> <a href="#">down</a> <b>seconds</b> <i>number</i>
Tree	<a href="#">seconds</a>
Range	1 to 1200
Units	seconds
Introduced	16.0.R1
Platforms	All

### **up**

Synopsis	Enter the <b>up</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">hold-time</a> <a href="#">ipv6</a> <b>up</b>
Tree	<a href="#">up</a>
Description	Commands in this context configure the up hold timer, which specifies the delay before deactivation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface down.
Introduced	16.0.R1
Platforms	All

### **seconds** *number*

Synopsis	Up hold time for the IP interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">hold-time</a> <a href="#">ipv6</a> <a href="#">up</a> <b>seconds</b> <i>number</i>
Tree	<a href="#">seconds</a>
Range	1 to 1200
Units	seconds
Introduced	16.0.R1
Platforms	All

### **if-attribute**

Synopsis	Enter the <b>if-attribute</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <b>if-attribute</b>
Tree	<a href="#">if-attribute</a>

Introduced 16.0.R1  
Platforms All

### **admin-group** *reference*

Synopsis Administrative group name for the interface  
Context **configure** [service vprn string interface string if-attribute admin-group reference](#)  
Tree [admin-group](#)  
Reference **configure** [routing-options if-attribute admin-group string](#)  
Max. Instances 32  
Introduced 16.0.R1  
Platforms All

### **srlg-group** [[name](#)] *reference*

Synopsis Add a list entry for **srlg-group**  
Context **configure** [service vprn string interface string if-attribute srlg-group reference](#)  
Tree [srlg-group](#)  
Introduced 16.0.R1  
Platforms All

### **[name]** *reference*

Synopsis SRLG name  
Context **configure** [service vprn string interface string if-attribute srlg-group reference](#)  
Tree [srlg-group](#)  
Reference **configure** [routing-options if-attribute srlg-group string](#)  
Notes This element is part of a list key.  
Introduced 16.0.R1  
Platforms All

### **ingress**

Synopsis Enter the **ingress** context

Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ingress</b>
Tree	<b>ingress</b>
Introduced	19.7.R1
Platforms	All

### **destination-class-lookup** *boolean*

Synopsis	Enable BGP destination class lookup
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ingress destination-class-lookup</b> <i>boolean</i>
Tree	<b>destination-class-lookup</b>
Description	When configured to <b>true</b> , the router performs a destination class lookup. This command is supported on FP3-based cards and later and is used in combination with the <b>destination-class</b> match criterion for an IP filter policy to filter egress traffic based on BGP destination classes.  When configured to <b>false</b> , destination class lookup is not enabled.
Default	false
Introduced	20.7.R1
Platforms	All

### **policy-accounting** *reference*

Synopsis	Ingress policy accounting template name
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ingress policy-accounting</b> <i>reference</i>
Tree	<b>policy-accounting</b>
Reference	<b>configure routing-options policy-accounting policy-acct-template</b> <i>string</i>
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

### **ingress-stats** *boolean*

Synopsis	Collect ingress statistics
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ingress-stats</b> <i>boolean</i>
Tree	<b>ingress-stats</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **ip-mtu** *number*

Synopsis	IP MTU applied to outgoing packets
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ip-mtu</a> <i>number</i>
Tree	<a href="#">ip-mtu</a>
Range	512 to 9786
Units	bytes
Introduced	16.0.R1
Platforms	All

### **ipsec**

Synopsis	Enable the <b>ipsec</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec</a>
Tree	<a href="#">ipsec</a>
Introduced	22.7.R1
Platforms	VSR

### **admin-state** *keyword*

Synopsis	Administrative state of IPsec secured interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	22.7.R1
Platforms	VSR

### **ip-exception** *reference*

Synopsis	IP exception filter
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec</a> <a href="#">ip-exception</a> <i>reference</i>
Tree	<a href="#">ip-exception</a>
Description	This command configures the IP exception filter for the secured interface. All ingress traffic matching the specified filter bypasses IPsec processing.

Reference	<b>configure</b> <a href="#">filter ip-exception</a> <i>string</i>
Introduced	22.7.R1
Platforms	VSR

### **ipsec-tunnel** [[name](#)] *string*

Synopsis	Enter the <b>ipsec-tunnel</b> list instance
Context	<b>configure</b> <a href="#">service vpn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i>
Tree	<a href="#">ipsec-tunnel</a>
Description	Commands in this context configure IPsec tunnels used to secure traffic forwarded over the interface.
Introduced	22.7.R1
Platforms	VSR

### **[name]** *string*

Synopsis	IPsec tunnel name
Context	<b>configure</b> <a href="#">service vpn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i>
Tree	<a href="#">ipsec-tunnel</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	VSR

### **admin-state** *keyword*

Synopsis	Administrative state of the IPsec tunnel
Context	<b>configure</b> <a href="#">service vpn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	22.7.R1
Platforms	VSR

## bfd

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>bfd</b> context
Context	<b>configure service vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>bfd</b>
Tree	<b>bfd</b>
Introduced	22.7.R1
Platforms	VSR

## bfd-designate *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Designate IPsec tunnel to carry BFD traffic
Context	<b>configure service vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>bfd bfd-designate</b> <i>boolean</i>
Tree	<b>bfd-designate</b>
Default	false
Introduced	22.7.R1
Platforms	VSR

## bfd-liveness

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the <b>bfd-liveness</b> context
Context	<b>configure service vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>bfd bfd-liveness</b>
Tree	<b>bfd-liveness</b>
Description	Commands in this context configure a BFD session to provide a heart-beat mechanism for a specified IPsec tunnel. There can be only one BFD session assigned to any given IPsec tunnel, but there can be multiple IPsec tunnels using the same BFD session.

BFD controls the state of the association tunnel. If the BFD session goes down, the system brings down the associated non-designated IPsec tunnel.

Introduced 22.7.R1  
Platforms VSR

### **dest-ip** *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Destination address used for the BFD session  
Context **configure** *service vprn string interface string ipsec ipsec-tunnel string bfd bfd-liveness dest-ip string*  
Tree *dest-ip*  
Notes This element is mandatory.  
Introduced 22.7.R1  
Platforms VSR

### **interface** *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Name of the interface used by the BFD session  
Context **configure** *service vprn string interface string ipsec ipsec-tunnel string bfd bfd-liveness interface string*  
Tree *interface*  
String Length 1 to 32  
Notes This element is mandatory.  
Introduced 22.7.R1  
Platforms VSR

## **service-name** *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative service name
Context	<b>configure</b> <i>service vprn string interface string ipsec ipsec-tunnel string bfd bfd-liveness service-name string</i>
Tree	<i>service-name</i>
Description	This command configures the name of the service where BFD traffic is forwarded to.
String Length	1 to 64
Notes	This element is mandatory.
Introduced	22.7.R1
Platforms	VSR

## **clear-df-bit** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Reset the DF bit to 0 in all payload IP packets
Context	<b>configure</b> <i>service vprn string interface string ipsec ipsec-tunnel string clear-df-bit boolean</i>
Tree	<i>clear-df-bit</i>
Description	When configured to <b>true</b> , the DF bit is set to 0 in all payload IP packets associated with the IPsec tunnel, before any potential fragmentation occurs.
Default	false
Introduced	22.7.R1
Platforms	VSR

## **copy-traffic-class-upon-decapsulation** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable traffic class copy upon decapsulation
----------	--

Context	<b>configure service vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>copy-traffic-class-upon-decapsulation</b> <i>boolean</i>
Tree	<b>copy-traffic-class-upon-decapsulation</b>
Description	When configured to <b>true</b> , the system copies the traffic class from the outer tunnel IP packet header to the payload IP packet header in the decapsulating direction (public to private).
Default	false
Introduced	22.7.R1
Platforms	VSR

### **description** *string*

Synopsis	Text description
Context	<b>configure service vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>description</b> <i>string</i>
Tree	<b>description</b>
String Length	1 to 80
Introduced	22.7.R1
Platforms	VSR

### **encapsulated-ip-mtu** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum size of the encapsulated tunnel packet
Context	<b>configure service vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>encapsulated-ip-mtu</b> <i>number</i>
Tree	<b>encapsulated-ip-mtu</b>
Description	This command specifies the maximum size of the encapsulated tunnel packet to the IPsec tunnel, the IP tunnel, or the dynamic tunnels terminated on the IPsec Gateway. If the encapsulated IPv4 or IPv6 tunnel packet exceeds this value, the system fragments the packet.
Range	512 to 9000
Units	bytes
Introduced	22.7.R1
Platforms	VSR

## icmp-generation

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>icmp-generation</b> context
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">interface string</a> <a href="#">ipsec ipsec-tunnel string</a> <a href="#">icmp-generation</a>
Tree	<a href="#">icmp-generation</a>
Description	Commands in this context configure settings for ICMPv4 message generation.
Introduced	22.7.R1
Platforms	VSR

## frag-required

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>frag-required</b> context
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">interface string</a> <a href="#">ipsec ipsec-tunnel string</a> <a href="#">icmp-generation</a> <a href="#">frag-required</a>
Tree	<a href="#">frag-required</a>
Description	Commands in this context configure the attributes for sending generated ICMP Destination Unreachable "fragmentation needed and DF set" messages (type 3, code 4) back to the source, if the received size of the IPv4 packet on the private side exceeds the private MTU size.
Introduced	22.7.R1
Platforms	VSR

## admin-state *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of sending ICMP messages
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">interface string</a> <a href="#">ipsec ipsec-tunnel string</a> <a href="#">icmp-generation</a> <a href="#">frag-required</a> <a href="#">admin-state</a> <i>keyword</i>

Tree	<a href="#">admin-state</a>
Description	This command configures the administrative state of sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) messages to the source if the received size of the IPv4 packet on the private side exceeds the private MTU size.
Default	enable
Options	enable, disable
Introduced	22.7.R1
Platforms	VSR

### **interval** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Interval for sending ICMP messages
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec</a> <a href="#">ipsec-tunnel</a> <i>string</i> <a href="#">icmp-generation</a> <a href="#">frag-required</a> <a href="#">interval</a> <i>number</i>
Tree	<a href="#">interval</a>
Description	This command configures the interval for sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4).
Range	1 to 60
Default	10
Units	seconds
Introduced	22.7.R1
Platforms	VSR

### **message-count** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of ICMP messages that can be sent
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec</a> <a href="#">ipsec-tunnel</a> <i>string</i> <a href="#">icmp-generation</a> <a href="#">frag-required</a> <a href="#">message-count</a> <i>number</i>
Tree	<a href="#">message-count</a>

Description	This command configures the maximum number of ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) that can be sent during the configured interval.
Range	10 to 1000
Default	100
Introduced	22.7.R1
Platforms	VSR

## icmp6-generation

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>icmp6-generation</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <b>icmp6-generation</b>
Tree	<a href="#">icmp6-generation</a>
Description	Commands in this context configure settings for ICMPv6 message generation.
Introduced	22.7.R1
Platforms	VSR

## packet-too-big

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>packet-too-big</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">icmp6-generation</a> <b>packet-too-big</b>
Tree	<a href="#">packet-too-big</a>
Description	<p>Commands in this context configure the parameters to send ICMPv6 PTB (Packet Too Big) messages on the private side.</p> <p>The system sends PTB messages if a received IPv6 packet on the private side is greater than 1280 bytes and it exceeds the private MTU of the tunnel.</p> <p>The private MTU for the tunnel is configured via the <b>configure router interface ipsec ipsec-tunnel ip-mtu</b> command for the interface.</p>
Introduced	22.7.R1

Platforms VSR

### **admin-state** *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of Packet Too Big message sends
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>icmp6-generation</b> <b>packet-too-big</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Default	enable
Options	enable, disable
Introduced	22.7.R1
Platforms	VSR

### **interval** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Interval for sending Packet Too Big messages
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>icmp6-generation</b> <b>packet-too-big</b> <b>interval</b> <i>number</i>
Tree	<b>interval</b>
Range	1 to 60
Default	10
Units	seconds
Introduced	22.7.R1
Platforms	VSR

## message-count *number*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of ICMPv6 PTB messages that can be sent
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>icmp6-generation packet-too-big message-count</b> <i>number</i>
Tree	<b>message-count</b>
Description	This command configures the maximum number of PTB messages that can be sent during the configured interval.
Range	10 to 1000
Default	100
Introduced	22.7.R1
Platforms	VSR

## ip-mtu *number*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Private MTU of the IPsec tunnel
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>ip-mtu</b> <i>number</i>
Tree	<b>ip-mtu</b>
Description	This command specifies the private MTU of the IPsec tunnel. The private MTU is used to determine the need for fragmentation before encapsulation of the payload packet.
Range	512 to 9000
Units	bytes
Introduced	22.7.R1
Platforms	VSR

## key-exchange

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>key-exchange</b> context
Context	<b>configure service vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>key-exchange</b>
Tree	<b>key-exchange</b>
Introduced	22.7.R1
Platforms	VSR

## dynamic

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the <b>dynamic</b> context
Context	<b>configure service vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>key-exchange</b> <b>dynamic</b>
Tree	<b>dynamic</b>
Notes	The following elements are part of a choice: <b>dynamic</b> or <b>manual</b> .
Introduced	22.7.R1
Platforms	VSR

## auto-establish *boolean*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Attempt to establish automatic phase 1 exchange
Context	<b>configure service vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>key-exchange</b> <b>dynamic auto-establish</b> <i>boolean</i>
Tree	<b>auto-establish</b>
Default	false
Introduced	22.7.R1
Platforms	VSR

## cert

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>cert</b> context
Context	<b>configure service vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>key-exchange dynamic cert</b>
Tree	<b>cert</b>
Description	Commands in this context configure the attributes of the dynamic keying certificate.
Introduced	22.7.R1
Platforms	VSR

## cert-profile *reference*

Synopsis	Certificate profile name
Context	<b>configure service vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>key-exchange dynamic cert cert-profile</b> <i>reference</i>
Tree	<b>cert-profile</b>
Reference	<b>configure ipsec cert-profile</b> <i>string</i>
Introduced	22.7.R1
Platforms	VSR

## status-verify

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>status-verify</b> context
Context	<b>configure service vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>key-exchange dynamic cert status-verify</b>
Tree	<b>status-verify</b>
Description	Commands in this context configure attributes of Certificate Status Verification (CSV).
Introduced	22.7.R1
Platforms	VSR

### **default-result** *keyword*

Synopsis	Default result for Certificate Status Verification
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>key-exchange</b> <b>dynamic cert status-verify default-result</b> <i>keyword</i>
Tree	<b>default-result</b>
Description	This command specifies the default certificate revocation status result to use when all configured CSV methods fail to return a result.
Default	revoked
Options	revoked, good
Introduced	22.7.R1
Platforms	VSR

### **primary** *keyword*

Synopsis	Primary method of CSV to verify the revocation status
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>key-exchange</b> <b>dynamic cert status-verify primary</b> <i>keyword</i>
Tree	<b>primary</b>
Description	This command configures the primary method of Certificate Status Verification (CSV) that is used to verify the revocation status of the certificate of the peer.
Default	crI
Options	crI, ocsp
Introduced	22.7.R1
Platforms	VSR

### **secondary** *keyword*

Synopsis	Secondary method used to verify certificate revocation
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>key-exchange</b> <b>dynamic cert status-verify secondary</b> <i>keyword</i>
Tree	<b>secondary</b>
Description	This command specifies the secondary method of Certificate Status Verification (CSV) that is used to verify the revocation status of the peer certificate.
Default	none
Options	none, crI, ocsp

Introduced 22.7.R1  
Platforms VSR

### **trust-anchor-profile** *reference*

Synopsis Trust anchor profile name  
Context **configure** [service vprn string](#) [interface string](#) [ipsec ipsec-tunnel string](#) [key-exchange dynamic cert trust-anchor-profile reference](#)  
Tree [trust-anchor-profile](#)  
Reference **configure** [ipsec trust-anchor-profile string](#)  
Introduced 22.7.R1  
Platforms VSR

### **id**

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enter the **id** context  
Context **configure** [service vprn string](#) [interface string](#) [ipsec ipsec-tunnel string](#) [key-exchange dynamic id](#)  
Tree [id](#)  
Description Commands in this context specify the local ID used for IDi or IDr for IKEv2 negotiation. The default behavior depends on the local authentication method as follows:

- Psk: local tunnel IP address
- Cert-auth: subject of the local certificate

  
Introduced 22.7.R1  
Platforms VSR

### **fqdn** *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis FQDN used as the local ID IKE type

Context	<b>configure service vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>key-exchange</b> <b>dynamic id fqdn</b> <i>string</i>
Tree	<b>fqdn</b>
String Length	1 to 255
Notes	The following elements are part of a choice: <b>fqdn</b> , <b>ipv4</b> , or <b>ipv6</b> .
Introduced	22.7.R1
Platforms	VSR

### **ipv4** *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPv4 as the local ID type
Context	<b>configure service vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>key-exchange</b> <b>dynamic id ipv4</b> <i>string</i>
Tree	<b>ipv4</b>
Notes	The following elements are part of a choice: <b>fqdn</b> , <b>ipv4</b> , or <b>ipv6</b> .
Introduced	22.7.R1
Platforms	VSR

### **ipv6** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPv6 used as the local IKE ID type
Context	<b>configure service vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>key-exchange</b> <b>dynamic id ipv6</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>ipv6</b>
Notes	The following elements are part of a choice: <b>fqdn</b> , <b>ipv4</b> , or <b>ipv6</b> .
Introduced	22.7.R1
Platforms	VSR

## ike-policy *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IKE policy ID
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange dynamic ike-policy</a> <i>reference</i>
Tree	<a href="#">ike-policy</a>
Description	This command specifies the ID of the IKE policy used for IKE negotiation. The <b>ipsec-transport-mode-profile</b> configuration only supports IKEv2.
Reference	<b>configure</b> <a href="#">ipsec ike-policy</a> <i>number</i>
Introduced	22.7.R1
Platforms	VSR

## ipsec-transform *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPsec transform IDs used by the dynamic key
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange dynamic ipsec-transform</a> <i>reference</i>
Tree	<a href="#">ipsec-transform</a>
Description	This command specifies IPsec transform IDs used for CHILD_SA negotiation.
Reference	<b>configure</b> <a href="#">ipsec ipsec-transform</a> <i>number</i>
Max. Instances	4
Introduced	22.7.R1
Platforms	VSR

## pre-shared-key *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Pre-shared key for authentication
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec</a> <a href="#">ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange</a> <a href="#">dynamic</a> <a href="#">pre-shared-key</a> <i>string</i>
Tree	<a href="#">pre-shared-key</a>
String Length	1 to 115
Introduced	22.7.R1
Platforms	VSR

## manual

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the <b>manual</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec</a> <a href="#">ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange</a> <a href="#">manual</a>
Tree	<a href="#">manual</a>
Description	Commands in this context configure settings for manually configured security associations for the IPsec tunnel.
Notes	The following elements are part of a choice: <b>dynamic</b> or <b>manual</b> .
Introduced	22.7.R1
Platforms	VSR

## keys [[security-association](#)] *number* *direction* *keyword*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>keys</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec</a> <a href="#">ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange</a> <a href="#">manual</a> <a href="#">keys</a> <i>number</i> <i>direction</i> <i>keyword</i>
Tree	<a href="#">keys</a>
Description	Commands in this context configure the security association list for the tunnel.
Introduced	22.7.R1
Platforms	VSR

### [**security-association**] *number*

Synopsis	SA entry ID
Context	<b>configure</b> <b>service</b> <b>vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>key-exchange</b> <b>manual</b> <b>keys</b> <i>number</i> <b>direction</b> <i>keyword</i>
Tree	<b>keys</b>
Range	1 to 16
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	VSR

### **direction** *keyword*

Synopsis	Direction of the IPsec tunnel
Context	<b>configure</b> <b>service</b> <b>vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>key-exchange</b> <b>manual</b> <b>keys</b> <i>number</i> <b>direction</b> <i>keyword</i>
Tree	<b>keys</b>
Options	inbound, outbound
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	VSR

### **authentication-key** *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Key used for the authentication algorithm
Context	<b>configure</b> <b>service</b> <b>vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>key-exchange</b> <b>manual</b> <b>keys</b> <i>number</i> <b>direction</b> <i>keyword</i> <b>authentication-key</b> <i>string</i>
Tree	<b>authentication-key</b>
String Length	1 to 130

Introduced 22.7.R1  
Platforms VSR

### encryption-key *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Key used for the encryption algorithm  
Context **configure** [service vpn](#) *string* [interface](#) *string* [ipsec ipsec-tunnel](#) *string* [key-exchange manual keys](#) *number* [direction](#) *keyword* [encryption-key](#) *string*  
Tree [encryption-key](#)  
String Length 1 to 66  
Introduced 22.7.R1  
Platforms VSR

### ipsec-transform *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Transform entry used by manual SAs  
Context **configure** [service vpn](#) *string* [interface](#) *string* [ipsec ipsec-tunnel](#) *string* [key-exchange manual keys](#) *number* [direction](#) *keyword* [ipsec-transform](#) *reference*  
Tree [ipsec-transform](#)  
Reference **configure** [ipsec ipsec-transform](#) *number*  
Notes This element is mandatory.  
Introduced 22.7.R1  
Platforms VSR

## **spi number**

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	SPI of inbound and outbound packets
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>key-exchange</b> <b>manual</b> <b>keys</b> <i>number</i> <b>direction</b> <i>keyword</i> <b>spi</b> <i>number</i>
Tree	<b>spi</b>
Description	This command specifies the Security Parameter Index (SPI) used to look up the instruction to verify and decrypt the incoming IPsec packets when the direction is inbound. When the direction is outbound, the SPI is used in the encoding of the outgoing packets.  The remote node can use the SPI to look up the instruction to verify and decrypt the packet.
Range	256 to 16383
Notes	This element is mandatory.
Introduced	22.7.R1
Platforms	VSR

## **local-gateway-address-override** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local IPsec tunnel endpoint address
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>local-gateway-address-override</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>local-gateway-address-override</b>
Description	This command configures the local IPsec tunnel endpoint address. This overrides the default endpoint address, which is the interface address.
Introduced	22.7.R1
Platforms	VSR

## max-history-key-records

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>max-history-key-records</b> context
Context	<b>configure service vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>max-history-key-records</b>
Tree	<b>max-history-key-records</b>
Description	Commands in this context configure the settings for recording historical IPsec keys.
Introduced	22.7.R1
Platforms	VSR

## esp number

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of recent records
Context	<b>configure service vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>max-history-key-records esp</b> <i>number</i>
Tree	<b>esp</b>
Range	1 to 48
Introduced	22.7.R1
Platforms	VSR

## ike number

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of historical IKE key records
Context	<b>configure service vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>max-history-key-records ike</b> <i>number</i>
Tree	<b>ike</b>

Range	1 to 3
Introduced	22.7.R1
Platforms	VSR

### **pmtu-discovery-aging** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Aging out time of the learned path MTU
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>pmtu-discovery-aging</b> <i>number</i>
Tree	<b>pmtu-discovery-aging</b>
Description	This command configures the temporary public and private MTU expiration time. The temporary MTU is used for MTU propagation.
Range	900 to 3600
Default	900
Units	seconds
Introduced	22.7.R1
Platforms	VSR

### **private-sap** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Private SAP ID
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>private-sap</b> <i>number</i>
Tree	<b>private-sap</b>
Range	0 to 4094
Notes	This element is mandatory.

Introduced 22.7.R1  
Platforms VSR

### private-service *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Private service name  
Context **configure** [service vprn string](#) [interface string](#) [ipsec ipsec-tunnel string](#) [private-service string](#)  
Tree [private-service](#)  
Description This command configures the private service name.  
If unconfigured, the private service is the service where the secured interface resides.  
String Length 1 to 64  
Introduced 22.7.R1  
Platforms VSR

### private-tcp-mss-adjust *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis TCP maximum segment size (MSS) adjustment  
Context **configure** [service vprn string](#) [interface string](#) [ipsec ipsec-tunnel string](#) [private-tcp-mss-adjust number](#)  
Tree [private-tcp-mss-adjust](#)  
Description This command specifies the TCP MSS to adjust for the tunnel on the private side.  
When configured, the system may use the value to update the MSS option in the received TCP SYN packet on the private side.  
Range 512 to 9000  
Units bytes

Introduced 22.7.R1  
Platforms VSR

### **propagate-pmtu-v4** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enable propagation of the path MTU to IPv4 hosts

Context **configure** *service vprn string interface string ipsec ipsec-tunnel string propagate-pmtu-v4 boolean*

Tree [propagate-pmtu-v4](#)

Description When configured to **true**, the system propagates the path MTU learned from the public side to the private side (IPv4 hosts).

Default true

Introduced 22.7.R1

Platforms VSR

### **propagate-pmtu-v6** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enable propagation of the path MTU to IPv6 hosts

Context **configure** *service vprn string interface string ipsec ipsec-tunnel string propagate-pmtu-v6 boolean*

Tree [propagate-pmtu-v6](#)

Description When configured to **true**, the system propagates the path MTU learned from the public side to the private side (IPv6 hosts).

Default true

Introduced 22.7.R1

Platforms VSR

## public-tcp-mss-adjust (*number* | *keyword*)

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	TCP maximum segment size (MSS) on the public network
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>public-tcp-mss-adjust</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>public-tcp-mss-adjust</b>
Description	This command configures the MSS for the TCP traffic in an IPsec tunnel that is sent from the public network to the private network. The system may use this value to adjust or insert the MSS option in the TCP SYN packet.
Range	512 to 9000
Units	bytes
Options	auto
Introduced	22.7.R1
Platforms	VSR

## remote-gateway-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Remote IPsec tunnel endpoint address
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>remote-gateway-address</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>remote-gateway-address</b>
Introduced	22.7.R1
Platforms	VSR

## replay-window *number*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Anti-replay window size
----------	-------------------------

Context	<b>configure service vpn</b> <i>string interface string ipsec ipsec-tunnel string replay-window number</i>
Tree	<a href="#">replay-window</a>
Description	This command specifies the size of an IPsec anti-replay window. If unconfigured, IPsec anti-replay is disabled.
Range	32   64   128   256   512
Units	packets
Introduced	22.7.R1
Platforms	VSR

## security-policy

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>security-policy</b> context
Context	<b>configure service vpn</b> <i>string interface string ipsec ipsec-tunnel string security-policy</i>
Tree	<a href="#">security-policy</a>
Description	Commands in this context specify a security policy used by the tunnel.
Introduced	22.7.R1
Platforms	VSR

## id number

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Security policy ID for use by the tunnel
Context	<b>configure service vpn</b> <i>string interface string ipsec ipsec-tunnel string security-policy id number</i>
Tree	<a href="#">id</a>
Max. Range	0 to 4294967295
Introduced	22.7.R1
Platforms	VSR

## strict-match *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable strict match of the security policy entry
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">security-policy</a> <a href="#">strict-match</a> <i>boolean</i>
Tree	<a href="#">strict-match</a>
Description	<p>When configured to <b>true</b>, this command enables strict match of the security policy entry.</p> <p>When a CREATE_CHILD exchange request is received for a static IPsec tunnel, and this request is not a rekey request, ISA matches the received TSi and TSr with the configured security policy. This can be a match only when a received TS (in TSi or TSr) address range matches exactly with the subnet in a security policy entry.</p> <p>If there is no match, the setup fails, and TS_UNACCEPTABLE is sent.</p> <p>If there is a match, but there is an existing CHILD_SA for the matched security policy, the setup fails, and NO_PROPOSAL_CHOSEN is sent.</p> <p>If there is a match, and there is not a CHILD_SA for the matched entry, the subnet is sent in the matched security policy entry as TSi and TSr, and the CHILD_SA is created.</p>
Default	false
Introduced	22.7.R1
Platforms	VSR

## ipv6-exception *reference*

Synopsis	IPv6 filter exception used to bypass encryption
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipv6-exception</a> <i>reference</i>
Tree	<a href="#">ipv6-exception</a>
Description	<p>This command specifies the IPv6 filter exception for an IPsec-secured IPv6 interface. When an IPv6 filter exception is added, clear text packets that match the exception criteria in the IPv6 filter exception can ingress the interface, even when IPsec is enabled on the interface.</p>
Reference	<b>configure</b> <a href="#">filter ipv6-exception</a> <i>string</i>
Introduced	22.7.R1
Platforms	VSR

## public-sap *number*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Public SAP ID
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec public-sap</a> <i>number</i>
Tree	<a href="#">public-sap</a>
Range	0 to 4094
Notes	This element is mandatory.
Introduced	22.7.R1
Platforms	VSR

## tunnel-group *reference*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tunnel group ID
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec tunnel-group</a> <i>reference</i>
Tree	<a href="#">tunnel-group</a>
Reference	<b>configure isa tunnel-group</b> <i>number</i>
Notes	This element is mandatory.
Introduced	22.7.R1
Platforms	VSR

## ipv4

Synopsis	Enter the <b>ipv4</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a>
Tree	<a href="#">ipv4</a>
Introduced	16.0.R1
Platforms	All

## addresses

Synopsis	Enter the <b>addresses</b> context
Context	<b>configure service vprn string interface string ipv4 addresses</b>
Tree	<b>addresses</b>
Introduced	16.0.R1
Platforms	All

## address [ipv4-address] string

Synopsis	Enter the <b>address</b> list instance
Context	<b>configure service vprn string interface string ipv4 addresses address string</b>
Tree	<b>address</b>
Introduced	16.0.R1
Platforms	All

## [ipv4-address] string

Synopsis	IPv4 address for the interface
Context	<b>configure service vprn string interface string ipv4 addresses address string</b>
Tree	<b>address</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## prefix-length number

Synopsis	IPv4 address prefix length
Context	<b>configure service vprn string interface string ipv4 addresses address string prefix-length number</b>
Tree	<b>prefix-length</b>
Range	0 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **allow-directed-broadcasts** *boolean*

Synopsis	Forward directed broadcasts
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 allow-directed-broadcasts</b> <i>boolean</i>
Tree	<a href="#">allow-directed-broadcasts</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **bfd**

Synopsis	Enter the <b>bfd</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 bfd</b>
Tree	<a href="#">bfd</a>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of BFD sessions
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 bfd admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **echo-receive** *number*

Synopsis	Minimum echo interval over this interface
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 bfd echo-receive</b> <i>number</i>
Tree	<a href="#">echo-receive</a>
Range	100 to 100000
Units	milliseconds
Introduced	16.0.R1

Platforms All

### **multiplier** *number*

Synopsis Number of consecutive BFD messages missed from the peer

Context **configure** [service vprn](#) *string* [interface](#) *string* [ipv4 bfd multiplier](#) *number*

Tree [multiplier](#)

Description This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments.

Range 1 to 20

Default 3

Introduced 16.0.R1

Platforms All

### **receive** *number*

Synopsis BFD receive interval over this interface

Context **configure** [service vprn](#) *string* [interface](#) *string* [ipv4 bfd receive](#) *number*

Tree [receive](#)

Description This command specifies the receive interval for the BFD session.  
On the 7750 SR, this command can only be configured to a value less than 100 when the **type** command is configured to **cpm-np**.

Range 10 to 100000

Default 100

Units milliseconds

Introduced 16.0.R1

Platforms All

### **transmit-interval** *number*

Synopsis BFD transmit interval over this interface

Context **configure** [service vprn](#) *string* [interface](#) *string* [ipv4 bfd transmit-interval](#) *number*

Tree [transmit-interval](#)

Description This command configures the transmit intervals.

On the 7750 SR, this command can only be configured to a value less than 100 when the **type** command is configured to **cpm-np**.

Range	10 to 100000
Default	100
Units	milliseconds
Introduced	16.0.R1
Platforms	All

### **type** keyword

Synopsis	Local termination point for the BFD session
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">bfd</a> <a href="#">type</a> <i>keyword</i>
Tree	<a href="#">type</a>
Description	This command sets the local termination point for the BFD session to allow for fast timers down to 10 ms granularity.  The options to specify where the BFD session runs are: <ul style="list-style-type: none"> <li>• <b>auto</b> (default) – the system chooses and uses the line card CPU only for single-hop BFD sessions with timer intervals equal to or greater than 100ms. All others are placed on the <b>cpm-np</b>.</li> <li>• <b>cpm-np</b> – BFD session runs on the FP complex associated with the CPM. This is either the FP on the CPM or the one elected on smaller systems.</li> <li>• <b>fp</b> – BFD session runs on the line card CPU. This option can only be used for single-hop BFD sessions with timers equal to or greater than 100ms.</li> </ul>
Default	auto
Options	cpm-np, auto, fp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **dhcp**

Synopsis	Enter the <b>dhcp</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">dhcp</a>
Tree	<a href="#">dhcp</a>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of DHCP
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">dhcp</a> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">dhcp</a> <b>description</b> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **gi-address** *string*

Synopsis	GI address for the DHCP relay
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">dhcp</a> <b>gi-address</b> <i>string</i>
Tree	<a href="#">gi-address</a>
Description	<p>This command configures the GI address to distinguish between the different subscriber interfaces (and potentially group interfaces) defined when the router functions as a DHCP relay.</p> <p>By default, the GI address used in the relayed DHCP packet is the primary IP address of a normal IES interface. Specifying the GI address allows the user to choose a secondary address. For group interfaces, a GI address must be specified under the group interface DHCP context or subscriber interface DHCP context for DHCP to function.</p>
Introduced	16.0.R1
Platforms	All

### **lease-populate**

Synopsis	Enter the <b>lease-populate</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">dhcp</a> <b>lease-populate</b>

Tree	<a href="#">lease-populate</a>
Introduced	16.0.R1
Platforms	All

### **max-leases** *number*

Synopsis	Maximum number of DHCPv4 leases allowed
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">lease-populate</a> <b>max-leases</b> <i>number</i>
Tree	<a href="#">max-leases</a>
Range	0 to 511999
Introduced	16.0.R1
Platforms	All

### **option-82**

Synopsis	Enter the <b>option-82</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">dhcp</a> <b>option-82</b>
Tree	<a href="#">option-82</a>
Description	Commands in this context configure the processing required when the router receives a DHCP request that already has an Option 82 field in the packet.
Introduced	16.0.R1
Platforms	All

### **action** *keyword*

Synopsis	Action to take with received DHCP Option 82
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a> <b>action</b> <i>keyword</i>
Tree	<a href="#">action</a>
Default	keep
Options	replace, drop, keep
Introduced	16.0.R1
Platforms	All

## circuit-id

Synopsis	Enter the <b>circuit-id</b> context
Context	<b>configure service vprn string interface string ipv4 dhcp option-82 circuit-id</b>
Tree	<a href="#">circuit-id</a>
Introduced	16.0.R1
Platforms	All

## ascii-tuple

Synopsis	Use the ASCII-encoded tuple for the circuit ID
Context	<b>configure service vprn string interface string ipv4 dhcp option-82 circuit-id ascii-tuple</b>
Tree	<a href="#">ascii-tuple</a>
Notes	This element is the default part of a choice. The following elements are part of a choice: <b>ascii-tuple</b> , <b>ifindex</b> , <b>none</b> , <b>sap-id</b> , or <b>vlan-ascii-tuple</b> .
Introduced	16.0.R1
Platforms	All

## ifindex

Synopsis	Use the interface index for the circuit ID
Context	<b>configure service vprn string interface string ipv4 dhcp option-82 circuit-id ifindex</b>
Tree	<a href="#">ifindex</a>
Notes	The following elements are part of a choice: <b>ascii-tuple</b> , <b>ifindex</b> , <b>none</b> , <b>sap-id</b> , or <b>vlan-ascii-tuple</b> .
Introduced	16.0.R1
Platforms	All

## none

Synopsis	Do not include the circuit ID
Context	<b>configure service vprn string interface string ipv4 dhcp option-82 circuit-id none</b>
Tree	<a href="#">none</a>
Notes	The following elements are part of a choice: <b>ascii-tuple</b> , <b>ifindex</b> , <b>none</b> , <b>sap-id</b> , or <b>vlan-ascii-tuple</b> .
Introduced	16.0.R1

Platforms All

## sap-id

Synopsis Use the SAP ID

Context **configure** [service vprn string](#) [interface string](#) [ipv4 dhcp option-82 circuit-id sap-id](#)

Tree [sap-id](#)

Notes The following elements are part of a choice: **ascii-tuple**, **ifindex**, **none**, **sap-id**, or **vlan-ascii-tuple**.

Introduced 16.0.R1

Platforms All

## vlan-ascii-tuple

Synopsis Include the VLAN ID and dot1p bits in the ASCII tuple

Context **configure** [service vprn string](#) [interface string](#) [ipv4 dhcp option-82 circuit-id vlan-ascii-tuple](#)

Tree [vlan-ascii-tuple](#)

Description When configured, the router includes the VLAN ID and dot1p bits with the ASCII-tuple information. This only occurs on dot1q and QinQ-encapsulated ports. When the Option 82 bits are stripped, dot1p bits are copied to the Ethernet header of the outgoing packet.  
When unconfigured, the router leaves the circuit ID sub-option of the DHCP packet empty.

Notes The following elements are part of a choice: **ascii-tuple**, **ifindex**, **none**, **sap-id**, or **vlan-ascii-tuple**.

Introduced 16.0.R1

Platforms All

## remote-id

Synopsis Enter the **remote-id** context

Context **configure** [service vprn string](#) [interface string](#) [ipv4 dhcp option-82 remote-id](#)

Tree [remote-id](#)

Description Commands in this context configure the remote IP sub-option of the DHCP packet with the identity of the remote host end (typically the DHCP client).

Introduced 16.0.R1

Platforms All

### **ascii-string** *string*

Synopsis	User-defined ASCII string for the remote ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a> <a href="#">remote-id</a> <a href="#">ascii-string</a> <i>string</i>
Tree	<a href="#">ascii-string</a>
String Length	1 to 32
Notes	The following elements are part of a choice: <b>ascii-string</b> , <b>mac</b> , or <b>none</b> .
Introduced	16.0.R1
Platforms	All

### **mac**

Synopsis	Use the MAC address for the remote ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a> <a href="#">remote-id</a> <a href="#">mac</a>
Tree	<a href="#">mac</a>
Notes	The following elements are part of a choice: <b>ascii-string</b> , <b>mac</b> , or <b>none</b> .
Introduced	16.0.R1
Platforms	All

### **none**

Synopsis	Do not include the remote ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a> <a href="#">remote-id</a> <a href="#">none</a>
Tree	<a href="#">none</a>
Notes	This element is the default part of a choice. The following elements are part of a choice: <b>ascii-string</b> , <b>mac</b> , or <b>none</b> .
Introduced	16.0.R1
Platforms	All

### **vendor-specific-option**

Synopsis	Enter the <b>vendor-specific-option</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a> <a href="#">vendor-specific-option</a>
Tree	<a href="#">vendor-specific-option</a>

Description	Commands in this context configure the Nokia Vendor-Specific Option (VSO) of the DHCP packet.
Introduced	16.0.R1
Platforms	All

### **client-mac-address** *boolean*

Synopsis	Send the MAC address in the VSO
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 dhcp option-82 vendor-specific-option client-mac-address</a> <i>boolean</i>
Tree	<a href="#">client-mac-address</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **pool-name** *boolean*

Synopsis	Send the pool name in the VSO
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 dhcp option-82 vendor-specific-option pool-name</a> <i>boolean</i>
Tree	<a href="#">pool-name</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **sap-id** *boolean*

Synopsis	Send SAP ID in the sub-option of the DHCP relay packet
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 dhcp option-82 vendor-specific-option sap-id</a> <i>boolean</i>
Tree	<a href="#">sap-id</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **service-id** *boolean*

Synopsis	Send the service ID in the Vendor Specific Option
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a> <a href="#">vendor-specific-option</a> <b>service-id</b> <i>boolean</i>
Tree	<a href="#">service-id</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **string** *string*

Synopsis	User-defined ASCII string for the VSO
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a> <a href="#">vendor-specific-option</a> <b>string</b> <i>string</i>
Tree	<a href="#">string</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

### **system-id** *boolean*

Synopsis	Send the system ID in the VSO
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a> <a href="#">vendor-specific-option</a> <b>system-id</b> <i>boolean</i>
Tree	<a href="#">system-id</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **proxy-server**

Synopsis	Enter the <b>proxy-server</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">dhcp</a> <b>proxy-server</b>
Tree	<a href="#">proxy-server</a>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the DHCP proxy server
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">proxy-server</a> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **emulated-server** *string*

Synopsis	IP address used as the DHCP server address for the SAP
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">proxy-server</a> <b>emulated-server</b> <i>string</i>
Tree	<a href="#">emulated-server</a>
Description	This command configures the IP address which will be used as the DHCP server address in the context of the SAP. Typically, the configured address should be in the context of the subnet represented by the service.
Introduced	16.0.R1
Platforms	All

### **lease-time**

Synopsis	Enter the <b>lease-time</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">proxy-server</a> <b>lease-time</b>
Tree	<a href="#">lease-time</a>
Introduced	16.0.R1
Platforms	All

### **radius-override** *boolean*

Synopsis	Use lease time information provided by RADIUS server
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">proxy-server</a> <b>lease-time</b> <b>radius-override</b> <i>boolean</i>
Tree	<a href="#">radius-override</a>

Default	false
Introduced	16.0.R1
Platforms	All

### **value** *number*

Synopsis	DHCP lease time
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 dhcp proxy-server lease-time</a> <i>value number</i>
Tree	<a href="#">value</a>
Range	300 to 315446399
Units	seconds
Introduced	16.0.R1
Platforms	All

### **python-policy** *reference*

Synopsis	Python policy
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 dhcp python-policy</a> <i>reference</i>
Tree	<a href="#">python-policy</a>
Reference	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **relay-plain-bootp** *boolean*

Synopsis	Enable relaying of plain BOOTP packets
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 dhcp relay-plain-bootp</a> <i>boolean</i>
Tree	<a href="#">relay-plain-bootp</a>
Default	false
Introduced	16.0.R1
Platforms	All

## relay-proxy

Synopsis	Enable the <b>relay-proxy</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 dhcp relay-proxy</a>
Tree	<a href="#">relay-proxy</a>
Introduced	16.0.R1
Platforms	All

## release-update-src-ip *boolean*

Synopsis	Update the source IP address of a DHCP RELEASE message
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 dhcp relay-proxy release-update-src-ip</a> <i>boolean</i>
Tree	<a href="#">release-update-src-ip</a>
Default	false
Introduced	16.0.R1
Platforms	All

## siaddr-override *string*

Synopsis	DHCP server IP address for address hiding function
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 dhcp relay-proxy siaddr-override</a> <i>string</i>
Tree	<a href="#">siaddr-override</a>
Introduced	16.0.R1
Platforms	All

## release-include-gi-address *boolean*

Synopsis	Include gateway IP address in DHCP Release messages
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 dhcp release-include-gi-address</a> <i>boolean</i>
Tree	<a href="#">release-include-gi-address</a>
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **server string**

Synopsis	IP addresses for DHCP server requests
Context	<b>configure service vprn string interface string ipv4 dhcp server string</b>
Tree	<b>server</b>
Description	This command configures a list of servers that this interface forwards requests to.  The operator can enter the list of servers as either IP addresses or fully qualified domain names. The operator must specify at least one server specified for DHCP relay to work. If there are multiple servers, the system forwards the request to all the servers in the list.
Max. Instances	8
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **src-ip-addr keyword**

Synopsis	Type of source address to use for DHCP relay
Context	<b>configure service vprn string interface string ipv4 dhcp src-ip-addr keyword</b>
Tree	<b>src-ip-addr</b>
Default	auto
Options	auto, gi-address
Introduced	16.0.R1
Platforms	All

### **trusted boolean**

Synopsis	Relay untrusted packets
Context	<b>configure service vprn string interface string ipv4 dhcp trusted boolean</b>
Tree	<b>trusted</b>
Description	When configured to <b>true</b> , the router enables the trusted mode on the interface. When enabled, the relay agent changes the existing GI address (of the request) to the ingress interface, and forwards the request.  A DHCP request that contains a GI address of 0.0.0.0 and an Option 82 field in the packet is discarded unless it arrives on a trusted circuit.

This behavior only applies if the Relay Agent Information Option action is to keep the existing information. When the Option 82 field is replaced by the relay agent, the original Option 82 information is lost, and there is no reason to enable the trusted option.

Default	false
Introduced	16.0.R1
Platforms	All

### **use-arp** *boolean*

Synopsis	Use ARP to determine the destination hardware address
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">dhcp</a> <b>use-arp</b> <i>boolean</i>
Tree	<a href="#">use-arp</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **icmp**

Synopsis	Enter the <b>icmp</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <b>icmp</b>
Tree	<a href="#">icmp</a>
Introduced	16.0.R1
Platforms	All

### **mask-reply** *boolean*

Synopsis	Allow responses to ICMP mask requests on the interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">icmp</a> <b>mask-reply</b> <i>boolean</i>
Tree	<a href="#">mask-reply</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **param-problem**

Synopsis	Enter the <b>param-problem</b> context
----------	--

Context	<b>configure service vprn string interface string ipv4 icmp param-problem</b>
Tree	<b>param-problem</b>
Description	Commands in this context specify the settings for ICMP Parameter Problem messages generated by the interface.
Introduced	16.0.R1
Platforms	All

### **admin-state keyword**

Synopsis	Administrative state of sent Parameter Problem messages
Context	<b>configure service vprn string interface string ipv4 icmp param-problem admin-state keyword</b>
Tree	<b>admin-state</b>
Default	enable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **number number**

Synopsis	Maximum number of Parameter Problem messages to send
Context	<b>configure service vprn string interface string ipv4 icmp param-problem number number</b>
Tree	<b>number</b>
Range	10 to 1000
Default	100
Introduced	16.0.R1
Platforms	All

### **seconds number**

Synopsis	Time used to limit number of Parameter Problem messages
Context	<b>configure service vprn string interface string ipv4 icmp param-problem seconds number</b>
Tree	<b>seconds</b>
Range	1 to 60
Default	10

Units	seconds
Introduced	16.0.R1
Platforms	All

## redirects

Synopsis	Enter the <b>redirects</b> context
Context	<b>configure service vprn string interface string ipv4 icmp redirects</b>
Tree	<b>redirects</b>
Description	Commands in this context configure the settings for ICMP redirect messages generated by the interface.  The system sends ICMP redirect messages to alert the sending node that a more optimal route is available on another router on the same subnetwork.
Introduced	16.0.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of sending ICMP redirect messages
Context	<b>configure service vprn string interface string ipv4 icmp redirects admin-state keyword</b>
Tree	<b>admin-state</b>
Default	enable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

## number *number*

Synopsis	Maximum number of ICMP redirect messages to send
Context	<b>configure service vprn string interface string ipv4 icmp redirects number number</b>
Tree	<b>number</b>
Range	10 to 1000
Default	100
Introduced	16.0.R1
Platforms	All

### **seconds** *number*

Synopsis	Time used to limit the number of ICMP redirect messages
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 icmp redirects</a> <b>seconds</b> <i>number</i>
Tree	<a href="#">seconds</a>
Range	1 to 60
Default	10
Units	seconds
Introduced	16.0.R1
Platforms	All

### **ttl-expired**

Synopsis	Enter the <b>ttl-expired</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 icmp ttl-expired</a>
Tree	<a href="#">ttl-expired</a>
Description	Commands in this context configure the settings for ICMP TTL expired messages generated by the interface.
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of sending TTL expired messages
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 icmp ttl-expired admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	enable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **number** *number*

Synopsis	Maximum number of TTL expired messages to send
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 icmp ttl-expired number</a> <i>number</i>

Tree	<a href="#">number</a>
Range	10 to 2000
Default	100
Introduced	16.0.R1
Platforms	All

### **seconds** *number*

Synopsis	Time used to limit the number of TTL expired messages
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 icmp ttl-expired</a> <a href="#">seconds</a> <i>number</i>
Tree	<a href="#">seconds</a>
Range	1 to 60
Default	10
Units	seconds
Introduced	16.0.R1
Platforms	All

### **unreachables**

Synopsis	Enter the <b>unreachables</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 icmp unreachables</a>
Tree	<a href="#">unreachables</a>
Description	Commands in this context specify the settings for ICMP host and network destination unreachable messages generated by the interface.
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of sending unreachable messages
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 icmp unreachables</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	enable
Options	enable, disable

Introduced 16.0.R1  
Platforms All

### **number** *number*

Synopsis Maximum number of unreachable messages to send  
Context **configure** *service vprn string interface string ipv4 icmp unreachable* **number** *number*  
Tree **number**  
Range 10 to 2000  
Default 100  
Introduced 16.0.R1  
Platforms All

### **seconds** *number*

Synopsis Time to limit the number of ICMP unreachable messages  
Context **configure** *service vprn string interface string ipv4 icmp unreachable* **seconds** *number*  
Tree **seconds**  
Range 1 to 60  
Default 10  
Units seconds  
Introduced 16.0.R1  
Platforms All

### **ip-helper-address** *string*

Synopsis Gateway address  
Context **configure** *service vprn string interface string ipv4 ip-helper-address* *string*  
Tree **ip-helper-address**  
Introduced 16.0.R1  
Platforms All

### **local-dhcp-server** *reference*

Synopsis DHCP server for the interface

Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 local-dhcp-server</b> <i>reference</i>
Tree	<a href="#">local-dhcp-server</a>
Reference	<b>configure service vprn</b> <i>string</i> <b>dhcp-server dhcpv4</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## neighbor-discovery

Synopsis	Enter the <b>neighbor-discovery</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 neighbor-discovery</b>
Tree	<a href="#">neighbor-discovery</a>
Introduced	16.0.R1
Platforms	All

## host-route

Synopsis	Enter the <b>host-route</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 neighbor-discovery host-route</b>
Tree	<a href="#">host-route</a>
Introduced	19.10.R1
Platforms	All

## populate [[route-type](#)] *keyword*

Synopsis	Enter the <b>populate</b> list instance
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 neighbor-discovery host-route</b> <a href="#">populate</a> <i>keyword</i>
Tree	<a href="#">populate</a>
Introduced	19.10.R1
Platforms	All

## [\[route-type\]](#) *keyword*

Synopsis	Type of ARP or ND entries that generate host routes
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 neighbor-discovery host-route</b> <a href="#">populate</a> <i>keyword</i>

Tree	<a href="#">populate</a>
Options	static, dynamic, evpn
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	All

### route-tag *number*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tag value used with the host route from an ARP/ND entry
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a> <a href="#">host-route</a> <a href="#">populate</a> <i>keyword</i> <a href="#">route-tag</a> <i>number</i>
Tree	<a href="#">route-tag</a>
Description	This command specifies the route tag that is added in the route table for ARP or ND host routes. This tag can be matched on BGP VRF export and BGP peer export policies.
Range	1 to 255
Introduced	19.10.R1
Platforms	All

### learn-unsolicited *boolean*

Synopsis	Learn new entries from any received NA message
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a> <a href="#">learn-unsolicited</a> <i>boolean</i>
Tree	<a href="#">learn-unsolicited</a>
Description	<p>When configured to <b>true</b>, the router can learn neighbor entries from received unsolicited Neighbor Advertisement (NA) messages, with or without the solicited (S) flag set. The command can be enabled for global addresses, link-local addresses, or for both.</p> <p>When configured to <b>false</b>, the router follows standard behavior for learning neighbor entries.</p> <ul style="list-style-type: none"> <li>• If an unsolicited NA (regardless of the S flag) is received from a neighbor that is not yet in the Neighbor Discovery (ND) cache, the NA is ignored.</li> <li>• If an NS, RS, RA, or Redirect message with a Link Layer Address (MAC) is received from a neighbor that is not yet in the ND cache, a new neighbor entry is created in the cache to store the received Link Layer MAC. The neighbor is put in the STALE state.</li> </ul>

Default	false
Introduced	16.0.R1
Platforms	All

## limit

Synopsis	Enter the <b>limit</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 neighbor-discovery</a> <b>limit</b>
Tree	<a href="#">limit</a>
Introduced	16.0.R1
Platforms	All

## log-only *boolean*

Synopsis	Generate log entries only if limit is reached
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 neighbor-discovery</a> <b>limit</b> <a href="#">log-only</a> <i>boolean</i>
Tree	<a href="#">log-only</a>
Default	false
Introduced	16.0.R1
Platforms	All

## max-entries *number*

Synopsis	Maximum number of entries learned on an IP interface
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 neighbor-discovery</a> <b>limit</b> <a href="#">max-entries</a> <i>number</i>
Tree	<a href="#">max-entries</a>
Range	0 to 524288
Introduced	16.0.R1
Platforms	All

## threshold *number*

Synopsis	Threshold value that triggers a warning message
----------	---

Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 neighbor-discovery limit</b> <i>threshold number</i>
Tree	<a href="#">threshold</a>
Range	1 to 100
Default	90
Units	percent
Introduced	16.0.R1
Platforms	All

### **local-proxy-arp** *boolean*

Synopsis	Enable local proxy ARP on interface
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 neighbor-discovery local-proxy-arp</b> <i>boolean</i>
Tree	<a href="#">local-proxy-arp</a>
Description	When configured to <b>true</b> , the router enables local proxy ARP on the interface. When configured to <b>false</b> , the router does not respond to ARP requests for addresses on the same subnet.
Introduced	16.0.R1
Platforms	All

### **populate** *boolean*

Synopsis	Allow static and dynamic hosts to be populated in system ARP cache
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 neighbor-discovery populate</b> <i>boolean</i>
Tree	<a href="#">populate</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **proactive-refresh** *boolean*

Synopsis	Send a single refresh message before entry timeout
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 neighbor-discovery proactive-refresh</b> <i>boolean</i>
Tree	<a href="#">proactive-refresh</a>

Description	<p>When configured to <b>true</b>, the router always sends a refresh message 30 seconds before the timeout of the entry (a single refresh message with no retries).</p> <p>When configured to <b>false</b>, the router marks an entry as stale 30 seconds before age-out, and the router only sends an ARP request to refresh the entry if the IOM receives traffic that uses it. Then, the IOM asks the ARP application to send a refresh message. With ARP proactive refresh enabled, the ARP module sends a refresh message regardless of the IOM receiving traffic.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **proxy-arp-policy** *reference*

Synopsis	Proxy ARP policy name
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 neighbor-discovery proxy-arp-policy</a> <i>reference</i>
Tree	<a href="#">proxy-arp-policy</a>
Reference	<b>configure</b> <a href="#">policy-options policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **remote-proxy-arp** *boolean*

Synopsis	Enable remote proxy ARP on the interface
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 neighbor-discovery remote-proxy-arp</a> <i>boolean</i>
Tree	<a href="#">remote-proxy-arp</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **retry-timer** *number*

Synopsis	ARP retry interval
----------	--------------------

Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 neighbor-discovery</b> <b>retry-timer</b> <i>number</i>
Tree	<b>retry-timer</b>
Range	1 to 300
Default	50
Units	deciseconds
Introduced	16.0.R1
Platforms	All

### **static-neighbor** [**ipv4-address**] *string*

Synopsis	Enter the <b>static-neighbor</b> list instance
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 neighbor-discovery</b> <b>static-neighbor</b> <i>string</i>
Tree	<b>static-neighbor</b>
Introduced	16.0.R1
Platforms	All

### **[ipv4-address]** *string*

Synopsis	IPv4 address that corresponds to the physical address
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 neighbor-discovery</b> <b>static-neighbor</b> <i>string</i>
Tree	<b>static-neighbor</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **mac-address** *string*

Synopsis	MAC address for the static neighbor
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 neighbor-discovery</b> <b>static-neighbor</b> <i>string</i> <b>mac-address</b> <i>string</i>
Tree	<b>mac-address</b>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

## static-neighbor-unnumbered

Synopsis	Enable the <b>static-neighbor-unnumbered</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 neighbor-discovery static-neighbor-unnumbered</b>
Tree	<a href="#">static-neighbor-unnumbered</a>
Introduced	16.0.R1
Platforms	All

## mac-address *string*

Synopsis	MAC address for the static neighbor
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 neighbor-discovery static-neighbor-unnumbered mac-address</b> <i>string</i>
Tree	<a href="#">mac-address</a>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

## timeout *number*

Synopsis	Timeout for an ARP entry learned on the interface
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 neighbor-discovery timeout</b> <i>number</i>
Tree	<a href="#">timeout</a>
Description	This command configures the minimum time an ARP entry learned on the IP interface is stored in the ARP table. ARP entries are automatically refreshed when an ARP request or gratuitous ARP is seen by an IP host. Otherwise, the ARP entry is aged from the ARP table.
Range	0 to 65535
Default	14400
Units	seconds
Introduced	16.0.R1
Platforms	All

## **primary**

Synopsis	Enable the <b>primary</b> context
Context	<b>configure service vprn string interface string ipv4 primary</b>
Tree	<a href="#">primary</a>
Introduced	16.0.R1
Platforms	All

## **address string**

Synopsis	Primary IPv4 address assigned to the interface
Context	<b>configure service vprn string interface string ipv4 primary address string</b>
Tree	<a href="#">address</a>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

## **broadcast keyword**

Synopsis	Broadcast address format
Context	<b>configure service vprn string interface string ipv4 primary broadcast keyword</b>
Tree	<a href="#">broadcast</a>
Default	host-ones
Options	all-ones, host-ones
Introduced	16.0.R1
Platforms	All

## **prefix-length number**

Synopsis	IPv4 address prefix length
Context	<b>configure service vprn string interface string ipv4 primary prefix-length number</b>
Tree	<a href="#">prefix-length</a>
Range	0 to 32
Notes	This element is mandatory.
Introduced	16.0.R1

Platforms All

### **track-srrp** *number*

Synopsis SRRP instance whose state is tracked on this IP address  
 Context **configure** [service](#) [vprn](#) *string* [interface](#) *string* [ipv4](#) [primary](#) [track-srrp](#) *number*  
 Tree [track-srrp](#)  
 Range 1 to 4294967295  
 Introduced 16.0.R1  
 Platforms All

### **qos-route-lookup** *keyword*

Synopsis QoS Route lookup  
 Context **configure** [service](#) [vprn](#) *string* [interface](#) *string* [ipv4](#) [qos-route-lookup](#) *keyword*  
 Tree [qos-route-lookup](#)  
 Options destination, source  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **secondary** [[address](#)] *string*

Synopsis Enter the **secondary** list instance  
 Context **configure** [service](#) [vprn](#) *string* [interface](#) *string* [ipv4](#) [secondary](#) *string*  
 Tree [secondary](#)  
 Introduced 16.0.R1  
 Platforms All

### [[address](#)] *string*

Synopsis Secondary IPv4 address assigned to the interface  
 Context **configure** [service](#) [vprn](#) *string* [interface](#) *string* [ipv4](#) [secondary](#) *string*  
 Tree [secondary](#)  
 Notes This element is part of a list key.  
 Introduced 16.0.R1

Platforms All

### **broadcast** *keyword*

Synopsis Broadcast address format  
 Context **configure** *service vprn string interface string ipv4 secondary string broadcast keyword*  
 Tree [broadcast](#)  
 Default host-ones  
 Options all-ones, host-ones  
 Introduced 16.0.R1  
 Platforms All

### **igp-inhibit** *boolean*

Synopsis Disable the running IGP from recognizing secondary IP  
 Context **configure** *service vprn string interface string ipv4 secondary string igp-inhibit boolean*  
 Tree [igp-inhibit](#)  
 Description When configured to **true**, the running IGP does not recognize the secondary IP address as a local interface.  
 Default false  
 Introduced 16.0.R1  
 Platforms All

### **prefix-length** *number*

Synopsis IPv4 address prefix length  
 Context **configure** *service vprn string interface string ipv4 secondary string prefix-length number*  
 Tree [prefix-length](#)  
 Range 0 to 32  
 Notes This element is mandatory.  
 Introduced 16.0.R1  
 Platforms All

### **track-srrp** *number*

Synopsis	SRRP instance whose state is tracked on this IP address
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">secondary</a> <i>string</i> <b>track-srrp</b> <i>number</i>
Tree	<a href="#">track-srrp</a>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **tcp-mss** *number*

Synopsis	TCP maximum segment size for the interface
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <b>tcp-mss</b> <i>number</i>
Tree	<a href="#">tcp-mss</a>
Range	384 to 9746
Introduced	16.0.R1
Platforms	All

### **unnumbered**

Synopsis	Enter the <b>unnumbered</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <b>unnumbered</b>
Tree	<a href="#">unnumbered</a>
Introduced	16.0.R1
Platforms	All

### **ip-address** *string*

Synopsis	IP address for the interface
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <b>unnumbered</b> <b>ip-address</b> <i>string</i>
Tree	<a href="#">ip-address</a>
Notes	The following elements are part of a choice: <b>ip-address</b> or <b>ip-int-name</b> .
Introduced	16.0.R1
Platforms	All

### **ip-int-name** *string*

Synopsis	IP interface name
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">unnumbered</a> <b>ip-int-name</b> <i>string</i>
Tree	<a href="#">ip-int-name</a>
String Length	1 to 32
Notes	The following elements are part of a choice: <b>ip-address</b> or <b>ip-int-name</b> .
Introduced	16.0.R1
Platforms	All

### **urpf-check**

Synopsis	Enable the <b>urpf-check</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <b>urpf-check</b>
Tree	<a href="#">urpf-check</a>
Introduced	16.0.R1
Platforms	All

### **ignore-default** *boolean*

Synopsis	Ignore default route when performing a uRPF check
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">urpf-check</a> <b>ignore-default</b> <i>boolean</i>
Tree	<a href="#">ignore-default</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **mode** *keyword*

Synopsis	Unicast RPF check mode
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">urpf-check</a> <b>mode</b> <i>keyword</i>
Tree	<a href="#">mode</a>
Default	strict
Options	strict, loose, strict-no-ecmp
Introduced	16.0.R1
Platforms	All

### **vrrp** [*virtual-router-id*] *number*

Synopsis	Enter the <b>vrrp</b> list instance
Context	<b>configure</b> <i>service vprn string interface string ipv4 vrrp number</i>
Tree	<b>vrrp</b>
Introduced	16.0.R1
Platforms	All

### [*virtual-router-id*] *number*

Synopsis	Virtual Router Identifier (VRID) for the IP interface
Context	<b>configure</b> <i>service vprn string interface string ipv4 vrrp number</i>
Tree	<b>vrrp</b>
Range	1 to 255
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of VRRP
Context	<b>configure</b> <i>service vprn string interface string ipv4 vrrp number admin-state keyword</i>
Tree	<b>admin-state</b>
Description	<p>The command determines the administrative state of non-owner virtual router instances.</p> <p>Non-owner virtual router instances can be administratively disabled. This allows the termination of VRRP participation in the virtual router and stops all routing and other access capabilities with regards to the virtual router IP addresses. Disabling the virtual router instance provides a mechanism to maintain the virtual routers without causing false backup or master state changes.</p> <p>When <b>disabled</b>, no VRRP advertisement messages are generated and all received VRRP advertisement messages are silently discarded with no processing.</p> <p>Whenever the administrative or operational state of a virtual router instance transitions, a log message is generated.</p> <p>An owner virtual router context does not use this command. To administratively disable an owner virtual router instance, use the <b>admin-state</b> command within the parent IP interface node which administratively disables the IP interface.</p>
Default	enable

Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **authentication-key *string***

Synopsis	Password for simple text authentication
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 vrrp</b> <i>number</i> <b>authentication-key</b> <i>string</i>
Tree	<b>authentication-key</b>
Description	This command optionally assigns a simple text password authentication key to generate master VRRP advertisement messages and validate received VRRP advertisement messages.  If this command is re-executed with a different password key defined, the new key immediately replaces the old key. This command may be executed at any time.
String Length	1 to 38
Introduced	16.0.R1
Platforms	All

### **backup *string***

Synopsis	Virtual router IP addresses for the interface
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 vrrp</b> <i>number</i> <b>backup</b> <i>string</i>
Tree	<b>backup</b>
Description	This command associates virtual router IP addresses with those of the parental IP interface.  This command has two different functions based on whether it is being executed on an owner or non-owner virtual router instance.  Non-owner virtual router instances create a routable IP interface address that is operationally dependent on the virtual router instance mode (master or backup). This command, when executed on an owner virtual router instance, does not create a routable IP interface address; it simply defines the existing IP addresses of the parental IP interface that are advertised by the virtual router instance.  For owner virtual router instances, this command defines the IP addresses that are advertised within VRRP advertisement messages. This communicates the IP addresses that the master is advertising to backup virtual routers receiving the messages. The specified <i>unicast-ipv4-address</i> must be equal to one of the existing IP addresses in the parental IP interface (primary or secondary) or this command fails.
Max. Instances	16

Introduced 16.0.R1  
Platforms All

## bfd-liveness

Synopsis Enable the **bfd-liveness** context  
Context **configure** [service vprn string](#) [interface string](#) [ipv4 vrrp number](#) [bfd-liveness](#)  
Tree [bfd-liveness](#)  
Introduced 16.0.R1  
Platforms All

Synopsis VRRP initialization delay timer  
Context **configure** *service vprn string interface string ipv4 vrrp number init-delay number*  
Tree *init-delay*  
Range 1 to 65535  
Units seconds  
Introduced 16.0.R1  
Platforms All

### **mac** *string*

Synopsis Virtual MAC address to use in ARP responses  
Context **configure** *service vprn string interface string ipv4 vrrp number mac string*  
Tree *mac*  
Description This command sets an explicit MAC address for the virtual router instance that overrides the VRRP default derived from the VRID.  
  
Changing the default MAC address is useful when an existing HSRP or other non-VRRP default MAC is in use by the IP hosts that use the virtual router IP address. Many hosts do not monitor unessential ARPs and continue to use the cached non-VRRP MAC address after the virtual router becomes master of the host's gateway address.

Additionally, this command sets the MAC address used in ARP responses when the virtual router instance is master. Routing of IP packets with *unicast-mac-address* as the destination MAC is also enabled. The MAC must be the same for all virtual routers participating as a virtual router or indeterminate connectivity by the attached IP hosts results. All VRRP advertisement messages are transmitted with *unicast-mac-address* as the source MAC.

An operator can execute this command at any time and it takes effect immediately. When the virtual router MAC on a master virtual router instance changes, a gratuitous ARP is immediately sent with a VRRP advertisement message. If the virtual router instance is disabled or operating as a backup, the gratuitous ARP and VRRP advertisement messages are not sent.

Introduced 16.0.R1  
Platforms All

### **master-int-inherit** *boolean*

Synopsis Allow master instance to dictate the master down timer

Context **configure** *service vprn string interface string ipv4 vrrp number master-int-inherit boolean*

Tree [master-int-inherit](#)

Description When configured to **true**, the virtual router instance inherits the advertisement interval timer of the master VRRP router, which backup routers use to calculate the master down timer.

When configured to **false**, the locally configured message interval must match the master's VRRP advertisement message advertisement interval field value or the message is discarded.

Introduced 16.0.R1  
Platforms All

### **message-interval** *number*

Synopsis Interval for sending VRRP advertisement messages

Context **configure** *service vprn string interface string ipv4 vrrp number message-interval number*

Tree [message-interval](#)

Description This command configures the administrative advertisement message timer used by the master virtual router instance to send VRRP advertisement messages. The backup master down timer is derived from the value configured using this command.

The usage of this command varies for non-owner virtual router instances, depending on the state of the virtual router (master or backup) and the state of the **master-int-inherit** command:

- When a non-owner is operating as master for the virtual router, the system uses the configured value of this command as the operational advertisement timer, similar to an owner virtual router instance. The **master-int-inherit** command has no effect when operating as master.
- When a non-owner is in the backup state with **master-int-inherit** disabled, the system uses the configured value of this command to match the incoming advertisement interval field of the VRRP advertisement message. If the locally configured message interval does not match the advertisement interval field, the system discards the VRRP advertisement.
- When a non-owner is in the backup state with **master-int-inherit** enabled, the configured value of this command is ignored. The master down timer is indirectly derived from the advertisement interval field value of the incoming VRRP advertisement message.

Range	1 to 2559
Default	10
Units	deciseconds
Introduced	16.0.R1
Platforms	All

## monitor-oper-group *reference*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VRRP instance to follow a specified operational group
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>vrrp</b> <i>number</i> <b>monitor-oper-group</b> <i>reference</i>
Tree	<a href="#">monitor-oper-group</a>
Description	This command configures VRRP to associate with an operational group. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router, the operational group is up and the operational group is down for all other VRRP states.
Reference	<b>configure</b> <b>service</b> <a href="#">oper-group</a> <i>string</i>
Introduced	22.2.R1
Platforms	All

### ntp-reply *boolean*

Synopsis	Allow processing of NTP requests
Context	<b>configure</b> <a href="#">service vprn string interface string ipv4 vrrp number ntp-reply boolean</a>
Tree	<a href="#">ntp-reply</a>
Description	When configured to <b>true</b> , the router redirects NTP requests to the VRRP virtual IP address. This behavior only applies to the router acting as the master VRRP router. When configured to <b>false</b> , the router does not process NTP requests.
Default	false
Introduced	20.2.R1
Platforms	All

### oper-group *reference*

Synopsis	Operational group name associated with the VRRP
Context	<b>configure</b> <a href="#">service vprn string interface string ipv4 vrrp number oper-group reference</a>
Tree	<a href="#">oper-group</a>
Description	This command configures an operational group to associate with the VRRP. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router (MR), the operational group is up. The operational group is down for all other VRRP states.
Reference	<b>configure</b> <a href="#">service oper-group string</a>
Introduced	16.0.R1
Platforms	All

### owner *boolean*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Designate the virtual router instance as owner
Context	<b>configure</b> <a href="#">service vprn string interface string ipv4 vrrp number owner boolean</a>
Tree	<a href="#">owner</a>
Description	When configured to <b>true</b> , the router designates this virtual router instance as the owner of the virtual router IP addresses. Therefore, this virtual router becomes responsible for forwarding packets sent to the virtual router IP addresses. The owner also assumes the role of master virtual router.

When configured to **false**, this virtual router instance is designated as a non-owner.

Default	false
Introduced	16.0.R1
Platforms	All

### **passive** *boolean*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Suppress the processing of VRRP advertisement messages
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>vrrp</b> <i>number</i> <b>passive</b> <i>boolean</i>
Tree	<b>passive</b>
Description	<p>When configured to <b>true</b>, the router identifies this virtual router instance as passive; and therefore the owner of the virtual router IP addresses. A passive virtual router instance does not transmit or receive VRRP advertisement messages and is always in either the master state (if the interface is operationally up) or the init state (if the interface is operationally down).</p> <p>When configured to <b>false</b>, this virtual router instance is not identified as passive, meaning that it transmits and receives VRRP advertisement messages.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **ping-reply** *boolean*

Synopsis	Allow non-owner master to reply to ICMP echo requests
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>vrrp</b> <i>number</i> <b>ping-reply</b> <i>boolean</i>
Tree	<b>ping-reply</b>
Description	<p>When configured to <b>true</b>, the router allows the non-owner master to reply to ICMP echo requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the ping request. Ping must not have been disabled at the management security level (either on the parental IP interface or on the Ping source host address).</p> <p>When configured to <b>false</b>, ICMP echo requests sent to non-owner master virtual IP addresses are silently discarded.</p> <p>Non-owner backup virtual routers never respond to ICMP echo requests, regardless of the configuration of this command.</p>
Default	false

Introduced	16.0.R1
Platforms	All

### **policy reference**

Synopsis	VRRP priority control policy
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">interface string ipv4 vrrp number</a> <a href="#">policy reference</a>
Tree	<a href="#">policy</a>
Description	<p>This command configures a VRRP priority control policy to associate with the virtual router instance.</p> <p>VRRP priority control policies can override or adjust the base priority value of the virtual router instance, depending on events or conditions within the chassis.</p> <p>An operator can associate a policy with more than one virtual router instance. The priority events within the policy either override or diminish the base priority set with the <b>priority</b> command. As priority events clear in the policy, the in-use priority can eventually be restored to the base priority value.</p> <p>For non-owner virtual router instances, if this command is not executed, the base priority is used as the in-use priority.</p>
Reference	<b>configure</b> <a href="#">vrrp policy number</a>
Introduced	16.0.R1
Platforms	All

### **preempt boolean**

Synopsis	Allow the VRRP to override an existing non-owner master
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">interface string ipv4 vrrp number</a> <a href="#">preempt boolean</a>
Tree	<a href="#">preempt</a>
Description	<p>When configured to <b>true</b>, this virtual router instance overrides any non-owner master with an in-use message priority value less than the in-use priority value of this virtual router.</p> <p>When configured to <b>false</b>, this virtual router only becomes master if the master down timer expires before a VRRP advertisement message is received from another virtual router.</p>
Default	true
Introduced	16.0.R1
Platforms	All

### priority number

Synopsis	Base priority for the VRRP
Context	<b>configure</b> service vprn string interface string ipv4 vrrp number priority number
Tree	priority
Description	<p>This command configures the base router priority for the virtual router instance, which defines the selection order of the virtual router in the master election process.</p> <p>The in-use priority is derived from the base priority. However, the in-use priority is modified by optional VRRP priority control policies. An operator can use VRRP priority control policies to either override or adjust the base priority value depending on events or conditions within the chassis.</p>
Range	1 to 255
Introduced	16.0.R1
Platforms	All

### ssh-reply boolean

Synopsis	Allow the non-owner master to reply to SSH requests
Context	<b>configure</b> service vprn string interface string ipv4 vrrp number ssh-reply boolean
Tree	ssh-reply
Description	<p>When configured to <b>true</b>, the router allows the non-owner master to reply to SSH requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the SSH request. SSH cannot be disabled at the management security level (either on the parental IP interface or on the SSH source host address).</p> <p>When configure to <b>false</b>, SSH requests to non-owner master virtual IP addresses are silently discarded.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### standby-forwarding boolean

Synopsis	Allow standby router to forward traffic
Context	<b>configure</b> service vprn string interface string ipv4 vrrp number standby-forwarding boolean
Tree	standby-forwarding
Description	When configured to <b>true</b> , the standby router forwards all traffic.

When configured to **false**, the standby router cannot forward traffic sent to the MAC address of the virtual router. However, the standby router still forwards traffic sent to its own MAC address.

Default	false
Introduced	16.0.R1
Platforms	All

### **telnet-reply** *boolean*

Synopsis	Allow non-owner master to reply to Telnet requests
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 vrrp</a> <i>number</i> <b>telnet-reply</b> <i>boolean</i>
Tree	<a href="#">telnet-reply</a>
Description	<p>When configured to <b>true</b>, the router allows the non-owner master to reply to Telnet requests directed at the IP addresses of the virtual router instance. Any routed interface can receive Telnet requests. Telnet cannot be disabled at the management security level (either on the parental IP interface or on the Telnet source host address).</p> <p>When configured to <b>false</b>, the router silently discards Telnet requests sent to non-owner master virtual IP addresses.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **traceroute-reply** *boolean*

Synopsis	Allow non-owner master to reply to traceroute requests
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 vrrp</a> <i>number</i> <b>traceroute-reply</b> <i>boolean</i>
Tree	<a href="#">traceroute-reply</a>
Description	<p>When configured to <b>true</b>, the router allows a non-owner master to reply to traceroute requests directed to the IP addresses of the virtual router instance.</p> <p>When configured to <b>false</b>, the router silently discards traceroute requests sent to non-owner master virtual IP addresses.</p> <p>Traceroute must not have been disabled at the management security level (either on the parental IP interface or the source host address).</p>
Default	false
Introduced	16.0.R1
Platforms	All

## ipv6

Synopsis	Enable the <b>ipv6</b> context
Context	<b>configure service vprn string interface string ipv6</b>
Tree	<b>ipv6</b>
Introduced	16.0.R1
Platforms	All

## address [ipv6-address] string

Synopsis	Enter the <b>address</b> list instance

## [ipv6-address] string

Synopsis	IPv6 address assigned to the interface
Context	<b>configure service vprn string interface string ipv6 address string</b>
Tree	<b>address</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## duplicate-address-detection boolean

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Enable Duplicate Address Detection
Context	<b>configure service vprn string interface string ipv6 address string duplicate-address-detection boolean</b>
Tree	<b>duplicate-address-detection</b>
Description	When configured to <b>true</b> , the router enables Duplicate Address Detection (DAD).

When configured to **false**, the router disables DAD and sets the address to preferred, even if there is a duplicated address.

Default true

Introduced 16.0.R1

Platforms All

### **eui-64** *boolean*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Form IPv6 address from prefix and 64-bit interface ID

Context **configure** [service](#) [vprn](#) *string* [interface](#) *string* [ipv6](#) [address](#) *string* **eui-64** *boolean*

Tree [eui-64](#)

Description When configured to **true**, the router forms a complete IPv6 address from the supplied prefix and 64-bit interface identifier. The 64-bit interface identifier is derived from the MAC address on Ethernet interfaces. For interfaces without a MAC address, for example POS interfaces, use the base MAC address of the chassis.

Default false

Introduced 16.0.R1

Platforms All

### **prefix-length** *number*

Synopsis IPv6 address prefix length

Context **configure** [service](#) [vprn](#) *string* [interface](#) *string* [ipv6](#) [address](#) *string* **prefix-length** *number*

Tree [prefix-length](#)

Range 4 to 128

Notes This element is mandatory.

Introduced 16.0.R1

Platforms All

### **primary-preference** *number*

Synopsis Index assigned to the IPv6 address of the interface

Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 address</b> <i>string</i> <b>primary-preference</b> <i>number</i>
Tree	<b>primary-preference</b>
Description	<p>This command assigns a primary preference index to an IPv6 address of the interface to enforce the order in which the address is used by control plane protocols and applications that require a fixed address of the interface, such as LDP and Segment Routing. In cases where a fixed address is required when originating packets from the interface, the IPv6 address with the lowest primary preference index is selected. If the selected address is removed, the next IPv6 address with the next lowest primary preference index is selected.</p> <p>If this index is not specified for the IPv6 address, the system assigns the next available index value to the address. The address index space is unique across all addresses of a given interface.</p>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **track-srrp** *number*

Synopsis	SRRP ID whose state is tracked on this IP address
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 address</b> <i>string</i> <b>track-srrp</b> <i>number</i>
Tree	<b>track-srrp</b>
Range	1 to 4294967295
Introduced	16.0.R1

Tree	<b>bfd</b>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of BFD sessions
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 bfd admin-state</b> <i>keyword</i>

Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **echo-receive** *number*

Synopsis	Minimum echo interval over this interface
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 bfd echo-receive</a> <i>number</i>
Tree	<a href="#">echo-receive</a>
Range	100 to 100000
Units	milliseconds
Introduced	16.0.R1
Platforms	All

### **multiplier** *number*

Synopsis	Number of consecutive BFD messages missed from the peer
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 bfd multiplier</a> <i>number</i>
Tree	<a href="#">multiplier</a>
Description	This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments.
Range	1 to 20
Default	3
Introduced	16.0.R1
Platforms	All

### **receive** *number*

Synopsis	BFD receive interval over this interface
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 bfd receive</a> <i>number</i>
Tree	<a href="#">receive</a>
Description	This command specifies the receive interval for the BFD session.

On the 7750 SR, this command can only be configured to a value less than 100 when the **type** command is configured to **cpm-np**.

Range	10 to 100000
Default	100
Units	milliseconds
Introduced	16.0.R1
Platforms	All

### **transmit-interval** *number*

Synopsis	BFD transmit interval over this interface
Context	<b>configure service vprn string interface string ipv6 bfd transmit-interval number</b>
Tree	<b>transmit-interval</b>
Description	This command configures the transmit intervals.  On the 7750 SR, this command can only be configured to a value less than 100 when the <b>type</b> command is configured to <b>cpm-np</b> .
Range	10 to 100000
Default	100
Units	milliseconds
Introduced	16.0.R1
Platforms	All

### **type** *keyword*

Synopsis	Local termination point for the BFD session
Context	<b>configure service vprn string interface string ipv6 bfd type keyword</b>
Tree	<b>type</b>
Description	This command sets the local termination point for the BFD session to allow for fast timers down to 10 ms granularity.  The options to specify where the BFD session runs are: <ul style="list-style-type: none"> <li>• <b>auto</b> (default) – the system chooses and uses the line card CPU only for single-hop BFD sessions with timer intervals equal to or greater than 100ms. All others are placed on the <b>cpm-np</b>.</li> <li>• <b>cpm-np</b> – BFD session runs on the FP complex associated with the CPM. This is either the FP on the CPM or the one elected on smaller systems.</li> <li>• <b>fp</b> – BFD session runs on the line card CPU. This option can only be used for single-hop BFD sessions with timers equal to or greater than 100ms.</li> </ul>

Default	auto
Options	cpm-np, auto, fp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **na** *boolean*

Synopsis	Create route based on IA_NA prefix option in relay-reply message
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6</b> <b>dhcp6</b> <b>relay</b> <b>lease-populate</b> <b>route-populate</b> <b>na</b> <i>boolean</i>
Tree	<b>na</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **pd**

Synopsis	Enable the <b>pd</b> context
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6</b> <b>dhcp6</b> <b>relay</b> <b>lease-populate</b> <b>route-populate</b> <b>pd</b>
Tree	<b>pd</b>
Introduced	16.0.R1
Platforms	All

### **exclude** *boolean*

Synopsis	Create back hole route based on prefix exclude option in relay-reply message
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6</b> <b>dhcp6</b> <b>relay</b> <b>lease-populate</b> <b>route-populate</b> <b>pd</b> <b>exclude</b> <i>boolean</i>
Tree	<b>exclude</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **ta** *boolean*

Synopsis	Create route based on IA_TA prefix option in relay-reply message
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6</b> <b>dhcp6</b> <b>relay</b> <b>lease-populate</b> <b>route-populate</b> <b>ta</b> <i>boolean</i>
Tree	<b>ta</b>
Default	false
Introduced	16.0.R1

Platforms All

### **link-address** *string*

Synopsis Link address of the DHCPv6 relay messages  
Context **configure** [service vprn](#) *string* [interface](#) *string* [ipv6 dhcp6 relay link-address](#) *string*  
Tree [link-address](#)  
Introduced 16.0.R1  
Platforms All

### **neighbor-resolution** *boolean*

Synopsis Enable neighbor resolution via DHCPv6 relay  
Context **configure** [service vprn](#) *string* [interface](#) *string* [ipv6 dhcp6 relay neighbor-resolution](#) *boolean*  
Tree [neighbor-resolution](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **option**

Synopsis Enter the **option** context  
Context **configure** [service vprn](#) *string* [interface](#) *string* [ipv6 dhcp6 relay option](#)  
Tree [option](#)  
Introduced 16.0.R1  
Platforms All

### **interface-id**

Synopsis Enter the **interface-id** context  
Context **configure** [service vprn](#) *string* [interface](#) *string* [ipv6 dhcp6 relay option interface-id](#)  
Tree [interface-id](#)  
Introduced 16.0.R1  
Platforms All

## ascii-tuple

Synopsis	Use ASCII-encoded concatenated tuple
Context	<b>configure service vprn string interface string ipv6 dhcp6 relay option interface-id ascii-tuple</b>
Tree	<a href="#">ascii-tuple</a>
Notes	The following elements are part of a choice: <b>ascii-tuple</b> , <b>if-index</b> , <b>sap-id</b> , or <b>string</b> .
Introduced	16.0.R1
Platforms	All

## if-index

Synopsis	Use interface index in interface ID option in DHCPv6 relay packet
Context	<b>configure service vprn string interface string ipv6 dhcp6 relay option interface-id if-index</b>
Tree	<a href="#">if-index</a>
Notes	The following elements are part of a choice: <b>ascii-tuple</b> , <b>if-index</b> , <b>sap-id</b> , or <b>string</b> .
Introduced	16.0.R1
Platforms	All

## sap-id

Synopsis	Use SAP ID in interface ID option in DHCPv6 relay packet
Context	<b>configure service vprn string interface string ipv6 dhcp6 relay option interface-id sap-id</b>
Tree	<a href="#">sap-id</a>
Notes	The following elements are part of a choice: <b>ascii-tuple</b> , <b>if-index</b> , <b>sap-id</b> , or <b>string</b> .
Introduced	16.0.R1
Platforms	All

## string string

Synopsis	String for interface ID option in DHCPv6 relay packet
Context	<b>configure service vprn string interface string ipv6 dhcp6 relay option interface-id string string</b>
Tree	<a href="#">string</a>
String Length	1 to 80

Notes	The following elements are part of a choice: <b>ascii-tuple</b> , <b>if-index</b> , <b>sap-id</b> , or <b>string</b> .
Introduced	16.0.R1
Platforms	All

### **remote-id** *boolean*

Synopsis	Allow remote ID option to be sent in the DHCPv6 relay packet
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 dhcp6 relay option remote-id</a> <i>boolean</i>
Tree	<a href="#">remote-id</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **python-policy** *reference*

Synopsis	Python policy name
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 dhcp6 relay python-policy</a> <i>reference</i>
Tree	<a href="#">python-policy</a>
Reference	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **server** *string*

Synopsis	DHCPv6 server to which the DHCPv6 requests are forwarded
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 dhcp6 relay server</a> <i>string</i>
Tree	<a href="#">server</a>
Max. Instances	8
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **source-address** *string*

Synopsis	Source IPv6 address of the DHCPv6 relay messages
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 dhcp6 relay</a> <a href="#">source-address</a> <i>string</i>
Tree	<a href="#">source-address</a>
Introduced	16.0.R1
Platforms	All

### **user-db** *reference*

Synopsis	Local user database for authentication
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 dhcp6 relay</a> <a href="#">user-db</a> <i>reference</i>
Tree	<a href="#">user-db</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt local-user-db</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **server**

Synopsis	Enter the <b>server</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 dhcp6</a> <b>server</b>
Tree	<a href="#">server</a>
Introduced	16.0.R1
Platforms	All

### **max-nbr-of-leases** *number*

Synopsis	DHCPv6 leases allowed
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 dhcp6 server</a> <a href="#">max-nbr-of-leases</a> <i>number</i>
Tree	<a href="#">max-nbr-of-leases</a>
Range	0 to 8000
Default	8000
Introduced	16.0.R1
Platforms	All

## prefix-delegation

Synopsis	Enter the <b>prefix-delegation</b> context
Context	<b>configure service vprn string interface string ipv6 dhcp6 server prefix-delegation</b>
Tree	<a href="#">prefix-delegation</a>
Introduced	16.0.R1
Platforms	All

## admin-state keyword

Synopsis	Administrative state of the prefix delegation
Context	<b>configure service vprn string interface string ipv6 dhcp6 server prefix-delegation admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

## prefix [ipv6-prefix] string

Synopsis	Enter the <b>prefix</b> list instance
Context	<b>configure service vprn string interface string ipv6 dhcp6 server prefix-delegation prefix string</b>
Tree	<a href="#">prefix</a>
Introduced	16.0.R1
Platforms	All

## [ipv6-prefix] string

Synopsis	IPv6 address and prefix
Context	<b>configure service vprn string interface string ipv6 dhcp6 server prefix-delegation prefix string</b>
Tree	<a href="#">prefix</a>
Notes	This element is part of a list key.
Introduced	16.0.R1

Platforms All

### **client-id**

Synopsis Enter the **client-id** context

Context **configure service vprn string interface string ipv6 dhcp6 server prefix-delegation prefix string client-id**

Tree [client-id](#)

Introduced 16.0.R1

Platforms All

### **duid string**

Synopsis Requesting router ID

Context **configure service vprn string interface string ipv6 dhcp6 server prefix-delegation prefix string client-id duid string**

Tree [duid](#)

String Length 1 to 130

Introduced 16.0.R1

Platforms All

### **iaid number**

Synopsis IAID from the requesting router to match

Context **configure service vprn string interface string ipv6 dhcp6 server prefix-delegation prefix string client-id iaid number**

Tree [iaid](#)

Range 1 to 4294967295

Introduced 16.0.R1

Platforms All

### **preferred-lifetime (number | keyword)**

Synopsis Preferred lifetime of the prefix

Context **configure service vprn string interface string ipv6 dhcp6 server prefix-delegation prefix string preferred-lifetime (number | keyword)**

Tree [preferred-lifetime](#)

Range	1 to 4294967294
Default	604800
Units	seconds
Options	infinite
Introduced	16.0.R1
Platforms	All

### **valid-lifetime** (*number* | *keyword*)

Synopsis	Valid lifetime of the prefix
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">dhcp6</a> <a href="#">server</a> <a href="#">prefix-delegation</a> <a href="#">prefix</a> <i>string</i> <b>valid-lifetime</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">valid-lifetime</a>
Range	1 to 4294967294
Default	2592000
Units	seconds
Options	infinite
Introduced	16.0.R1
Platforms	All

### **duplicate-address-detection** *boolean*

Synopsis	Enable/disable Duplicate Address Detection
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">duplicate-address-detection</a> <i>boolean</i>
Tree	<a href="#">duplicate-address-detection</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **forward-ipv4-packets** *boolean*

Synopsis	Forward unencapsulated IPv4 packets
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">forward-ipv4-packets</a> <i>boolean</i>
Tree	<a href="#">forward-ipv4-packets</a>
Default	false

Introduced 19.5.R1  
Platforms All

## icmp6

Synopsis Enter the **icmp6** context  
Context **configure** [service](#) [vprn](#) *string* [interface](#) *string* [ipv6](#) [icmp6](#)  
Tree [icmp6](#)  
Introduced 16.0.R1  
Platforms All

## packet-too-big

Synopsis Enter the **packet-too-big** context  
Context **configure** [service](#) [vprn](#) *string* [interface](#) *string* [ipv6](#) [icmp6](#) [packet-too-big](#)  
Tree [packet-too-big](#)  
Description Commands in this context configure limiting the number of ICMPv6 Packet Too Big messages.  
Introduced 16.0.R1  
Platforms All

## admin-state *keyword*

Synopsis Administrative state of Packet Too Big message sends  
Context **configure** [service](#) [vprn](#) *string* [interface](#) *string* [ipv6](#) [icmp6](#) [packet-too-big](#) [admin-state](#) *keyword*  
Tree [admin-state](#)  
Default enable  
Options enable, disable  
Introduced 16.0.R1  
Platforms All

## number *number*

Synopsis Number of Packet Too big Messages issued per time frame  
Context **configure** [service](#) [vprn](#) *string* [interface](#) *string* [ipv6](#) [icmp6](#) [packet-too-big](#) [number](#) *number*

Tree	<a href="#">number</a>
Range	10 to 1000
Default	100
Introduced	16.0.R1
Platforms	All

### **seconds** *number*

Synopsis	Time used to limit Packet Too Big messages
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 icmp6 packet-too-big</a> <a href="#">seconds</a> <i>number</i>
Tree	<a href="#">seconds</a>
Range	1 to 60
Default	10
Introduced	16.0.R1
Platforms	All

### **param-problem**

Synopsis	Enter the <b>param-problem</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 icmp6 param-problem</a>
Tree	<a href="#">param-problem</a>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of Parameter Problem message sends
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 icmp6 param-problem</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	enable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **number** *number*

Synopsis	Number used to limit ICMPv6 Parameter Problem messages
Context	<b>configure</b> <a href="#">service vprn string interface string ipv6 icmp6 param-problem number</a> <i>number</i>
Tree	<a href="#">number</a>
Range	10 to 1000
Default	100
Introduced	16.0.R1
Platforms	All

### **seconds** *number*

Synopsis	Time used to limit ICMPv6 Parameter Problem messages
Context	<b>configure</b> <a href="#">service vprn string interface string ipv6 icmp6 param-problem seconds</a> <i>number</i>
Tree	<a href="#">seconds</a>
Range	1 to 60
Default	10
Introduced	16.0.R1
Platforms	All

### **redirects**

Synopsis	Enter the <b>redirects</b> context
Context	<b>configure</b> <a href="#">service vprn string interface string ipv6 icmp6 redirects</a>
Tree	<a href="#">redirects</a>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of Redirect message sends
Context	<b>configure</b> <a href="#">service vprn string interface string ipv6 icmp6 redirects admin-state keyword</a>
Tree	<a href="#">admin-state</a>
Default	enable

Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **number** *number*

Synopsis	Number to limit ICMPv6 Redirect messages per time frame
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">icmp6</a> <a href="#">redirects</a> <b>number</b> <i>number</i>
Tree	<a href="#">number</a>
Range	10 to 1000
Default	100
Introduced	16.0.R1
Platforms	All

### **seconds** *number*

Synopsis	Time used to limit ICMPv6 Redirect messages
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">icmp6</a> <a href="#">redirects</a> <b>seconds</b> <i>number</i>
Tree	<a href="#">seconds</a>
Range	1 to 60
Default	10
Introduced	16.0.R1
Platforms	All

### **time-exceeded**

Synopsis	Enter the <b>time-exceeded</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">icmp6</a> <b>time-exceeded</b>
Tree	<a href="#">time-exceeded</a>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of Time Exceeded message sends
----------	---

Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 icmp6 time-exceeded admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	enable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **number** *number*

Synopsis	Number to limit Time Exceeded messages per time frame
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 icmp6 time-exceeded number</b> <i>number</i>
Tree	<a href="#">number</a>
Range	10 to 2000
Default	100
Introduced	16.0.R1
Platforms	All

### **seconds** *number*

Synopsis	Time used to limit ICMPv6 Time Exceeded messages
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 icmp6 time-exceeded seconds</b> <i>number</i>
Tree	<a href="#">seconds</a>
Range	1 to 60
Default	10
Introduced	16.0.R1
Platforms	All

### **unreachables**

Synopsis	Enter the <b>unreachables</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 icmp6 unreachables</b>
Tree	<a href="#">unreachables</a>
Introduced	16.0.R1

Platforms All

### **admin-state** *keyword*

Synopsis Administrative state of Unreachable message sends  
 Context **configure** [service vprn](#) *string* [interface](#) *string* [ipv6 icmp6 unreachablees](#) **admin-state** *keyword*  
 Tree [admin-state](#)  
 Default enable  
 Options enable, disable  
 Introduced 16.0.R1  
 Platforms All

### **number** *number*

Synopsis Number to limit Unreachable messages per time frame  
 Context **configure** [service vprn](#) *string* [interface](#) *string* [ipv6 icmp6 unreachablees](#) **number** *number*  
 Tree [number](#)  
 Range 10 to 2000  
 Default 100  
 Introduced 16.0.R1  
 Platforms All

### **seconds** *number*

Synopsis Time used to limit ICMPv6 Unreachable messages  
 Context **configure** [service vprn](#) *string* [interface](#) *string* [ipv6 icmp6 unreachablees](#) **seconds** *number*  
 Tree [seconds](#)  
 Range 1 to 60  
 Default 10  
 Introduced 16.0.R1  
 Platforms All

### **link-local-address**

Synopsis Enter the **link-local-address** context

Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 link-local-address</b>
Tree	<b>link-local-address</b>
Introduced	16.0.R1
Platforms	All

### **address** *string*

Synopsis	IPv6 link-local address
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 link-local-address address</b> <i>string</i>
Tree	<b>address</b>
Introduced	16.0.R1
Platforms	All

### **duplicate-address-detection** *boolean*

Synopsis	Enable Duplicate Address Detection
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 link-local-address duplicate-address-detection</b> <i>boolean</i>
Tree	<b>duplicate-address-detection</b>
Description	When configured to <b>true</b> , the router enables Duplicate Address Detection (DAD) on the interface.  When configured to <b>false</b> , the router disables DAD and sets the address to preferred, even if there is a duplicated address.
Default	true
Introduced	16.0.R1
Platforms	All

### **local-dhcp-server** *reference*

Synopsis	DHCP server for the interface
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 local-dhcp-server</b> <i>reference</i>
Tree	<b>local-dhcp-server</b>
Reference	<b>configure service vprn</b> <i>string</i> <b>dhcp-server dhcpv6</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## neighbor-discovery

Synopsis	Enter the <b>neighbor-discovery</b> context
Context	<b>configure service vprn string interface string ipv6 neighbor-discovery</b>
Tree	<a href="#">neighbor-discovery</a>
Introduced	16.0.R1
Platforms	All

## host-route

Synopsis	Enter the <b>host-route</b> context
Context	<b>configure service vprn string interface string ipv6 neighbor-discovery host-route</b>
Tree	<a href="#">host-route</a>
Introduced	20.2.R1
Platforms	All

## populate [[route-type](#)] *keyword*

Synopsis	Enter the <b>populate</b> list instance
Context	<b>configure service vprn string interface string ipv6 neighbor-discovery host-route populate keyword</b>
Tree	<a href="#">populate</a>
Introduced	20.2.R1
Platforms	All

## [\[route-type\]](#) *keyword*

Synopsis	Type of ARP or ND entries that generate host routes
Context	<b>configure service vprn string interface string ipv6 neighbor-discovery host-route populate keyword</b>
Tree	<a href="#">populate</a>
Options	static, dynamic, evpn
Notes	This element is part of a list key.
Introduced	20.2.R1
Platforms	All

## route-tag *number*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tag value used with the host route from an ARP/ND entry
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6</b> <b>neighbor-discovery</b> <b>host-route</b> <b>populate</b> <i>keyword</i> <b>route-tag</b> <i>number</i>
Tree	<b>route-tag</b>
Description	This command specifies the route tag that is added in the route table for ARP or ND host routes. This tag can be matched on BGP VRF export and BGP peer export policies.
Range	1 to 255
Introduced	20.2.R1
Platforms	All

## learn-unsolicited *keyword*

Synopsis	Type of entries learned from unsolicited NA messages
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6</b> <b>neighbor-discovery</b> <b>learn-unsolicited</b> <i>keyword</i>
Tree	<b>learn-unsolicited</b>
Description	This command enables the ability to learn neighbor entries out of received unsolicited Neighbor Advertisement (NA) messages, with or without the solicited flag set.  When unconfigured, the router follows standard RFC 4861 behavior for learning of neighbor entries. The neighbor is put in the stale state. This is the standard RFC behavior.
Options	global, link-local, both
Introduced	16.0.R1
Platforms	All

## limit

Synopsis	Enter the <b>limit</b> context
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6</b> <b>neighbor-discovery</b> <b>limit</b>
Tree	<b>limit</b>
Introduced	16.0.R1

Platforms All

### **log-only** *boolean*

Synopsis Generate log entries when limit is reached

Context **configure** *service vprn string interface string ipv6 neighbor-discovery limit log-only boolean*

Tree [log-only](#)

Description When configured to **true**, the router sends the warning message at the specified threshold percentage or upon exceeding the specified limit. Entries that exceed the limit are learned.  
When configured to **false**, the router does not send the warning message.

Default false

Introduced 16.0.R1

Platforms All

### **max-entries** *number*

Synopsis Maximum number of entries learned on an IP interface

Context **configure** *service vprn string interface string ipv6 neighbor-discovery limit max-entries number*

Tree [max-entries](#)

Description This command configures the maximum number of entries that can be learned on an IP interface.  
When unconfigured, no maximum limit is imposed.

Range 0 to 102400

Introduced 16.0.R1

Platforms All

### **threshold** *number*

Synopsis Threshold percentage that triggers a warning message

Context **configure** *service vprn string interface string ipv6 neighbor-discovery limit threshold number*

Tree [threshold](#)

Range 1 to 100

Default 90

Units	percent
Introduced	16.0.R1
Platforms	All

### **local-proxy-nd** *boolean*

Synopsis	Enable local proxy neighbor discovery on the interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">neighbor-discovery</a> <a href="#">local-proxy-nd</a> <i>boolean</i>
Tree	<a href="#">local-proxy-nd</a>
Description	<p>When configured to <b>true</b>, the router enables local proxy neighbor discovery on the interface and replies to neighbor solicitation requests when both the hosts are on the same subnet. In this case, ICMP redirects are disabled.</p> <p>When configured to <b>false</b>, the router disables local proxy neighbor discovery on the interface and does not reply to neighbor solicitation requests if both the hosts are on the same subnet.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **proactive-refresh** *keyword*

Synopsis	Proactive refresh of neighbor entries
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">neighbor-discovery</a> <a href="#">proactive-refresh</a> <i>keyword</i>
Tree	<a href="#">proactive-refresh</a>
Description	This command enables a proactive refresh of the neighbor entries. After the stale timer expires, the router sends an NUD message to the host (regardless of the existence of traffic to the IP address on the IOM), so the entry can be refreshed or removed.
Options	global, link-local, both
Introduced	16.0.R1
Platforms	All

### **proxy-nd-policy** *reference*

Synopsis	Proxy Neighbor Discovery policy name for the interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">neighbor-discovery</a> <a href="#">proxy-nd-policy</a> <i>reference</i>

Tree	<a href="#">proxy-nd-policy</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **reachable-time** *number*

Synopsis	Neighbor reachability detection timer
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">neighbor-discovery</a> <a href="#">reachable-time</a> <i>number</i>
Tree	<a href="#">reachable-time</a>
Range	30 to 3600
Introduced	16.0.R1
Platforms	All

### **secure-nd**

Synopsis	Enter the <b>secure-nd</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">neighbor-discovery</a> <a href="#">secure-nd</a>
Tree	<a href="#">secure-nd</a>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of Secure Neighbor Discovery
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">neighbor-discovery</a> <a href="#">secure-nd</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **allow-unsecured-msgs** *boolean*

Synopsis	Accept unsecured messages
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6</b> <b>neighbor-discovery</b> <b>secure-nd</b> <b>allow-unsecured-msgs</b> <i>boolean</i>
Tree	<b>allow-unsecured-msgs</b>
Description	When configured to <b>true</b> , the router accepts unsecured messages. When Secure Neighbor Discovery (SeND) is enabled, only secure messages are accepted. When configured to <b>false</b> , the router disables the acceptance of unsecured messages.
Default	true
Introduced	16.0.R1
Platforms	All

### **public-key-min-bits** *number*

Synopsis	Minimum acceptable key length for public keys in CGA
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6</b> <b>neighbor-discovery</b> <b>secure-nd</b> <b>public-key-min-bits</b> <i>number</i>
Tree	<b>public-key-min-bits</b>
Range	512 to 1024
Default	1024
Introduced	16.0.R1
Platforms	All

### **security-parameter** *number*

Synopsis	Security parameter used in the generation of a CGA
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6</b> <b>neighbor-discovery</b> <b>secure-nd</b> <b>security-parameter</b> <i>number</i>
Tree	<b>security-parameter</b>
Range	0 to 1
Default	1
Introduced	16.0.R1
Platforms	All

### **stale-time** *number*

Synopsis	Time a Neighbor Discovery cache entry remains stale
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 neighbor-discovery</b> <b>stale-time</b> <i>number</i>
Tree	<b>stale-time</b>
Range	60 to 65535
Introduced	16.0.R1
Platforms	All

### **static-neighbor** [**ipv6-address**] *string*

Synopsis	Enter the <b>static-neighbor</b> list instance
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 neighbor-discovery</b> <b>static-neighbor</b> <i>string</i>
Tree	<b>static-neighbor</b>
Introduced	16.0.R1
Platforms	All

### **[ipv6-address]** *string*

Synopsis	IPv6 address corresponding to the physical address
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 neighbor-discovery</b> <b>static-neighbor</b> <i>string</i>
Tree	<b>static-neighbor</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **mac-address** *string*

Synopsis	MAC address for the static neighbor
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 neighbor-discovery</b> <b>static-neighbor</b> <i>string</i> <b>mac-address</b> <i>string</i>
Tree	<b>mac-address</b>
Notes	This element is mandatory.
Introduced	16.0.R1

Platforms All

### **qos-route-lookup** *keyword*

Synopsis QoS Route lookup  
Context **configure** [service](#) [vprn](#) *string* [interface](#) *string* [ipv6](#) [qos-route-lookup](#) *keyword*

### **mode** *keyword*

Synopsis Unicast RPF check mode  
Context **configure service vprn** *string interface string ipv6 urpf-check mode keyword*  
Tree **mode**  
Default strict  
Options strict, loose, strict-no-ecmp  
Introduced 16.0.R1  
Platforms All

### **vrrp** [**virtual-router-id**] *number*

Synopsis Enter the **vrrp** list instance  
Context **configure service vprn** *string interface string ipv6 vrrp number*  
Tree **vrrp**  
Max. Instances 4  
Introduced 16.0.R1  
Platforms All

### [**virtual-router-id**] *number*

Synopsis Virtual Router Identifier (VRID) for the IP interface  
Context **configure service vprn** *string interface string ipv6 vrrp number*  
Tree **vrrp**  
Range 1 to 255  
Notes This element is part of a list key.  
Introduced 16.0.R1  
Platforms All

### **admin-state** *keyword*

Synopsis Administrative state of VRRP

Context	<b>configure service vprn string interface string ipv6 vrrp number admin-state keyword</b>
Tree	<b>admin-state</b>
Description	<p>The command determines the administrative state of non-owner virtual router instances.</p> <p>Non-owner virtual router instances can be administratively disabled. This allows the termination of VRRP participation in the virtual router and stops all routing and other access capabilities with regards to the virtual router IP addresses. Disabling the virtual router instance provides a mechanism to maintain the virtual routers without causing false backup or master state changes.</p> <p>When <b>disabled</b>, no VRRP advertisement messages are generated and all received VRRP advertisement messages are silently discarded with no processing.</p> <p>Whenever the administrative or operational state of a virtual router instance transitions, a log message is generated.</p> <p>An owner virtual router context does not use this command. To administratively disable an owner virtual router instance, use the <b>admin-state</b> command within the parent IP interface node which administratively disables the IP interface.</p>
Default	enable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **backup string**

Synopsis	Virtual router IP addresses for the interface
Context	<b>configure service vprn string interface string ipv6 vrrp number backup string</b>
Tree	<b>backup</b>
Description	<p>This command associates router IPv6 virtual router IP addresses with those of the parental IP interface.</p> <p>This command has two different functions based on whether it is being executed on an owner or non-owner virtual router instance.</p> <p>Non-owner virtual router instance create a routable IP interface address that is operationally dependent on the virtual router instance mode (master or backup). This command, when executed on an owner virtual router instance, does not create a routable IP interface address; it simply defines the existing IP addresses of the parental IP interface that are advertised by the virtual router instance.</p> <p>For owner virtual router instances, this command defines the IP addresses that are advertised within VRRP advertisement messages. This communicates the IP addresses that the master is representing to backup virtual routers receiving the messages. The specified IPv6 address must be equal to one of the existing parental IP addresses in the parental IP interface (primary or secondary) or this command fails.</p>
Max. Instances	4

Introduced 16.0.R1  
Platforms All

## bfd-liveness

Synopsis Enable the **bfd-liveness** context  
Context **configure** [service](#) [vprn](#) *string* [interface](#) *string* [ipv6](#) [vrrp](#) *number* [bfd-liveness](#)

Context **configure** *service vprn string interface string ipv6 vrrp number init-delay number*  
Tree *init-delay*  
Range 1 to 65535  
Units seconds  
Introduced 16.0.R1  
Platforms All

### **mac** *string*

Synopsis Virtual MAC address to use in ARP responses  
Context **configure** *service vprn string interface string ipv6 vrrp number mac string*  
Tree *mac*  
Description This command sets an explicit MAC address for the virtual router instance that overrides the VRRP default derived from the VRID.  
  
Changing the default MAC address is useful when an existing HSRP or other non-VRRP default MAC is in use by the IP hosts that use the virtual router IP address. Many hosts do not monitor unessential ARPs and continue to use the cached non-VRRP MAC address after the virtual router becomes master of the host's gateway address.

Additionally, this command sets the MAC address used in ARP responses when the virtual router instance is master. Routing of IP packets with *unicast-mac-address* as the destination MAC is also enabled. The MAC must be the same for all virtual routers participating as a virtual router or indeterminate connectivity by the attached IP hosts results. All VRRP advertisement messages are transmitted with *unicast-mac-address* as the source MAC.

An operator can execute this command at any time and it takes effect immediately. When the virtual router MAC on a master virtual router instance changes, a gratuitous ARP is immediately sent with a VRRP advertisement message. If the virtual router instance is disabled or operating as a backup, the gratuitous ARP and VRRP advertisement messages are not sent.

Introduced 16.0.R1

Platforms All

### **master-int-inherit** *boolean*

Synopsis Allow master instance to dictate the master down timer

Context **configure** *service vprn string interface string ipv6 vrrp number master-int-inherit boolean*

Tree [master-int-inherit](#)

Description When configured to **true**, the virtual router instance inherits the advertisement interval timer of the master VRRP router, which backup routers use to calculate the master down timer.

When configured to **false**, the locally configured message interval must match the master's VRRP advertisement message advertisement interval field value or the message is discarded.

Introduced 16.0.R1

Platforms All

### **message-interval** *number*

Synopsis Interval for sending VRRP advertisement messages

Context **configure** *service vprn string interface string ipv6 vrrp number message-interval number*

Tree [message-interval](#)

Description This command configures the administrative advertisement message timer used by the master virtual router instance to send VRRP advertisement messages. The backup master down timer is derived from the value configured using this command.

The use of this command varies for non-owner virtual router instances, depending on the state of the virtual router (master or backup) and the state of the **master-int-inherit** command:

- When a non-owner is operating as master for the virtual router, the system uses the configured value of this command as the operational advertisement timer, similar to an owner virtual router instance. The **master-int-inherit** command has no effect when operating as the master.
- When a non-owner is in the backup state with **master-int-inherit** disabled, the system uses the configured value of this command to match the incoming advertisement interval field of the VRRP advertisement message. If the locally configured message interval does not match the advertisement interval field, the system discards the VRRP advertisement.
- When a non-owner is in the backup state with **master-int-inherit** enabled, the configured value of this command is ignored. The master down timer is indirectly derived from the advertisement interval field value of the incoming VRRP advertisement message.

Range	10 to 4095
Default	100
Units	centiseconds
Introduced	16.0.R1
Platforms	All

## monitor-oper-group *reference*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VRRP instance to follow a specified operational group
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6</b> <b>vrrp</b> <i>number</i> <b>monitor-oper-group</b> <i>reference</i>
Tree	<a href="#">monitor-oper-group</a>
Description	This command configures VRRP to associate with an operational group. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router, the operational group is up and the operational group is down for all other VRRP states.
Reference	<b>configure</b> <b>service</b> <a href="#">oper-group</a> <i>string</i>
Introduced	22.2.R1
Platforms	All

### ntp-reply *boolean*

Synopsis	Allow processing of NTP requests
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">vrrp</a> <i>number</i> <b>ntp-reply</b> <i>boolean</i>
Tree	<a href="#">ntp-reply</a>
Description	When configured to <b>true</b> , the router redirects NTP requests to the VRRP virtual IP address. This behavior only applies to the router acting as the master VRRP router. When configured to <b>false</b> , the router does not process NTP requests.
Default	false
Introduced	20.2.R1
Platforms	All

### oper-group *reference*

Synopsis	Operational group name associated with the VRRP
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">vrrp</a> <i>number</i> <b>oper-group</b> <i>reference</i>
Tree	<a href="#">oper-group</a>
Description	This command configures an operational group to associate with the VRRP. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router (MR), the operational group is up. The operational group is down for all other VRRP states.
Reference	<b>configure</b> <a href="#">service</a> <a href="#">oper-group</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### owner *boolean*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Designate the virtual router instance as owner
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">vrrp</a> <i>number</i> <b>owner</b> <i>boolean</i>
Tree	<a href="#">owner</a>
Description	When configured to <b>true</b> , the router designates this virtual router instance as the owner of the virtual router IP addresses. Therefore, this virtual router becomes responsible for forwarding packets sent to the virtual router IP addresses. The owner also assumes the role of master virtual router.

When configured to **false**, this virtual router instance is designated as a non-owner.

Default	false
Introduced	16.0.R1
Platforms	All

### **passive** *boolean*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Suppress the processing of VRRP advertisement messages
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6</b> <b>vrrp</b> <i>number</i> <b>passive</b> <i>boolean</i>
Tree	<b>passive</b>
Description	<p>When configured to <b>true</b>, the router identifies this virtual router instance as passive; and therefore the owner of the virtual router IP addresses. A passive virtual router instance does not transmit or receive VRRP advertisement messages and is always in either the master state (if the interface is operationally up) or the init state (if the interface is operationally down).</p> <p>When configured to <b>false</b>, this virtual router instance is not identified as passive, meaning that it transmits and receives VRRP advertisement messages.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **ping-reply** *boolean*

Synopsis	Allow non-owner master to reply to ICMP echo requests
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6</b> <b>vrrp</b> <i>number</i> <b>ping-reply</b> <i>boolean</i>
Tree	<b>ping-reply</b>
Description	<p>When configured to <b>true</b>, the router allows the non-owner master to reply to ICMP echo requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the ping request. Ping must not have been disabled at the management security level (either on the parental IP interface or on the Ping source host address).</p> <p>When configured to <b>false</b>, ICMP echo requests sent to non-owner master virtual IP addresses are silently discarded.</p> <p>Non-owner backup virtual routers never respond to ICMP echo requests, regardless of the configuration of this command.</p>
Default	false

Introduced	16.0.R1
Platforms	All

### **policy reference**

Synopsis	VRRP priority control policy
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">interface string</a> <a href="#">ipv6 vrrp number</a> <a href="#">policy reference</a>
Tree	<a href="#">policy</a>
Description	<p>This command configures a VRRP priority control policy to associate with the virtual router instance.</p> <p>VRRP priority control policies can override or adjust the base priority value of the virtual router instance, depending on events or conditions within the chassis.</p> <p>An operator can associate a policy with more than one virtual router instance. The priority events within the policy either override or diminish the base priority set with the <b>priority</b> command. As priority events clear in the policy, the in-use priority can eventually be restored to the base priority value.</p> <p>For non-owner virtual router instances, if this command is not executed, the base priority is used as the in-use priority.</p>
Reference	<b>configure</b> <a href="#">vrrp policy number</a>
Introduced	16.0.R1
Platforms	All

### **preempt boolean**

Synopsis	Allow the VRRP to override an existing non-owner master
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">interface string</a> <a href="#">ipv6 vrrp number</a> <a href="#">preempt boolean</a>
Tree	<a href="#">preempt</a>
Description	<p>When configured to <b>true</b>, this virtual router instance overrides any non-owner master with an in-use message priority value less than the in-use priority value of this virtual router.</p> <p>When configured to <b>false</b>, this virtual router only becomes master if the master down timer expires before a VRRP advertisement message is received from another virtual router.</p>
Default	true
Introduced	16.0.R1
Platforms	All

### **priority number**

Synopsis	Base priority for the VRRP
Context	<b>configure</b> <a href="#">service vprn string interface string ipv6 vrrp number priority number</a>
Tree	<a href="#">priority</a>
Description	This command configures the base router priority for the virtual router instance, which defines the selection order of the virtual router in the master election process.  The in-use priority is derived from the base priority. However, the in-use priority is modified by optional VRRP priority control policies. An operator can use VRRP priority control policies to either override or adjust the base priority value depending on events or conditions within the chassis.
Range	1 to 255
Introduced	16.0.R1
Platforms	All

### **standby-forwarding boolean**

Synopsis	Allow standby router to forward traffic
Context	<b>configure</b> <a href="#">service vprn string interface string ipv6 vrrp number standby-forwarding boolean</a>
Tree	<a href="#">standby-forwarding</a>
Description	When configured to <b>true</b> , the standby router forwards all traffic.  When configured to <b>false</b> , the standby router cannot forward traffic sent to the MAC address of the virtual router. However, the standby router still forwards traffic sent to its own MAC address.
Default	false
Introduced	16.0.R1
Platforms	All

### **telnet-reply boolean**

Synopsis	Allow non-owner master to reply to Telnet requests
Context	<b>configure</b> <a href="#">service vprn string interface string ipv6 vrrp number telnet-reply boolean</a>
Tree	<a href="#">telnet-reply</a>
Description	When configured to <b>true</b> , the router allows the non-owner master to reply to Telnet requests directed at the IP addresses of the virtual router instance. Any routed interface can receive Telnet requests. Telnet cannot be disabled at the management security level (either on the parental IP interface or on the Telnet source host address).

When configured to **false**, the router silently discards Telnet requests sent to non-owner master virtual IP addresses.

Default	false
Introduced	16.0.R1
Platforms	All

### **traceroute-reply** *boolean*

Synopsis	Allow non-owner master to reply to traceroute requests
Context	<b>configure</b> <a href="#">service vprn string interface string ipv6 vrrp number traceroute-reply boolean</a>
Tree	<a href="#">traceroute-reply</a>
Description	<p>When configured to <b>true</b>, the router allows a non-owner master to reply to traceroute requests directed to the IP addresses of the virtual router instance.</p> <p>When configured to <b>false</b>, the router silently discards traceroute requests sent to non-owner master virtual IP addresses.</p> <p>Traceroute must not have been disabled at the management security level (either on the parental IP interface or the source host address).</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **load-balancing**

Synopsis	Enter the <b>load-balancing</b> context
Context	<b>configure</b> <a href="#">service vprn string interface string load-balancing</a>
Tree	<a href="#">load-balancing</a>
Introduced	16.0.R1
Platforms	All

### **flow-label-load-balancing** *boolean*

Synopsis	Enable flow label load balancing
Context	<b>configure</b> <a href="#">service vprn string interface string load-balancing flow-label-load-balancing boolean</a>
Tree	<a href="#">flow-label-load-balancing</a>

Description	When configured to <b>true</b> , the router enables load balancing in ECMP and LAG based on the output of a hash performed on the triplet (SA, DA, flow label) in the header of an IPv6 packet received on an IES, VPRN, R-VPLS, CSC, or network interface. When configured to <b>false</b> , the router disables load balancing in ECMP and LAG.
Default	false
Introduced	21.5.R1
Platforms	All

### **ip-load-balancing** *keyword*

Synopsis	IP load-balancing algorithm
Context	<b>configure</b> <a href="#">service vprn string interface string load-balancing ip-load-balancing keyword</a>
Tree	<a href="#">ip-load-balancing</a>
Description	This command specifies whether to include the source address, destination address, or both in LAG or ECMP hash on IP interfaces. Additionally, when the <b>l4-load-balancing</b> command is enabled, this command also includes the source or destination port in the hash inputs.
Default	both
Options	both, destination, source, inner-ip
Introduced	16.0.R3
Platforms	All

### **spi-load-balancing** *boolean*

Synopsis	Enable SPI use in hashing
Context	<b>configure</b> <a href="#">service vprn string interface string load-balancing spi-load-balancing boolean</a>
Tree	<a href="#">spi-load-balancing</a>
Description	When configured to <b>true</b> , the router uses the Security Parameter Index (SPI) in hashing for ESP and AH encrypted IPv4 and IPv6 traffic. This is a per-interface setting.
Default	false
Introduced	16.0.R1
Platforms	All

### **teid-load-balancing** *boolean*

Synopsis	Enable use of TEID in hashing
Context	<b>configure</b> <a href="#">service vprn string interface string load-balancing teid-load-balancing boolean</a>

Tree	<a href="#">teid-load-balancing</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **loopback** *boolean*

Synopsis	Use interface as a loopback interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">loopback</a> <i>boolean</i>
Tree	<a href="#">loopback</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **mac** *string*

Synopsis	MAC address for the interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">mac</a> <i>string</i>
Tree	<a href="#">mac</a>
Introduced	16.0.R1
Platforms	All

### **mac-accounting** *boolean*

Synopsis	Enable MAC accounting functionality
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">mac-accounting</a> <i>boolean</i>
Tree	<a href="#">mac-accounting</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **monitor-oper-group** *reference*

Synopsis	Operational group to monitor
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">monitor-oper-group</a> <i>reference</i>

Tree	<a href="#">monitor-oper-group</a>
Reference	<b>configure</b> <a href="#">service oper-group</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **multi-chassis-shunting-profile** *reference*

Synopsis	Multi-chassis shunting profile name
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">multi-chassis-shunting-profile</a> <i>reference</i>
Tree	<a href="#">multi-chassis-shunting-profile</a>
Description	This command configures the name of a multi-chassis shunting profile to use on public or private tunnel interfaces.
Reference	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">ipsec multi-chassis-shunting-profile</a> <i>string</i>
Notes	The following elements are part of a choice: <b>multi-chassis-shunting-profile</b> or ( <b>dynamic-tunnel-redundant-nexthop</b> and <b>static-tunnel-redundant-nexthop</b> ).
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ping-template**

Synopsis	Enable the <b>ping-template</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ping-template</a>
Tree	<a href="#">ping-template</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **admin-state** *keyword*

Synopsis	Administrative state of the ping template
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ping-template</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## destination-address *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Ping template destination address
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ping-template destination-address</a> <i>string</i>
Tree	<a href="#">destination-address</a>
Description	<p>This command configures the address to where the ICMP echo requests are directed to test connectivity. The source of the ICMP echo request is the primary IPv4 address of the interface under which the ping-template is configured. The destination address must be on the same subnet as the source IP address. A configuration warning message displays if the primary IPv4 address and the destination are not on the same subnet, INFO: PIP #2092 Ping template misconfiguration - destination-address and primary IP address should fall in the same subnet.</p> <p>Unnumbered interfaces and loopback addresses are not supported.</p> <p>The config service ies vprn interface ping-template must be administratively disabled to remove or change the destination-address ip-address.</p>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## name *reference*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Ping template name
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ping-template name</a> <i>reference</i>
Tree	<a href="#">name</a>
Description	This command configures the name of the ping template to be assigned to the IP interface.
Reference	<b>configure</b> <a href="#">test-oam icmp ping-template</a> <i>string</i>
Notes	This element is mandatory.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## ptp-hw-assist

Synopsis	Enter the <b>ptp-hw-assist</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <b>ptp-hw-assist</b>
Tree	<a href="#">ptp-hw-assist</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## admin-state *keyword*

Synopsis	Administrative state of the PTP time stamping assist
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <b>ptp-hw-assist</b> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Description	<p>This command controls the administrative state of port-based time stamping assist of PTP packets at the physical interface. This capability is supported on specific hardware. The command may be blocked if not all hardware has the required level of support.</p> <p>Only one interface per physical port can have ptp-hw-assist enabled. This feature cannot be enabled if the physical port supporting the interface is configured as a PTP port.</p>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## radius-auth-policy *reference*

Synopsis	Authentication policy
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <b>radius-auth-policy</b> <i>reference</i>
Tree	<a href="#">radius-auth-policy</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt</a> <b>radius-authentication-policy</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## sap [[sap-id](#)] *string*

Synopsis	Enter the <b>sap</b> list instance
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <b>sap</b> <i>string</i>

Tree	<a href="#">sap</a>
Max. Instances	1
Introduced	16.0.R1
Platforms	All

### **[sap-id]** *string*

Synopsis	SAP ID
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i>
Tree	<a href="#">sap</a>
String Length	1 to 45
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **aarp**

Synopsis	Enable the <b>aarp</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">aarp</a>
Tree	<a href="#">aarp</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **id** *reference*

Synopsis	AARP instance ID
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">aarp</a> <i>id</i> <i>reference</i>
Tree	<a href="#">id</a>
Reference	<b>configure</b> <a href="#">application-assurance</a> <a href="#">aarp</a> <i>number</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **type** *keyword*

Synopsis	Role referenced by the AARP
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">aarp</a> <a href="#">type</a> <i>keyword</i>
Tree	<a href="#">type</a>
Options	dual-homed, dual-homed-secondary
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **accounting-policy** *reference*

Synopsis	Accounting policy
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">accounting-policy</a> <i>reference</i>
Tree	<a href="#">accounting-policy</a>
Reference	<b>configure</b> <a href="#">log</a> <a href="#">accounting-policy</a> <i>number</i>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the SAP
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	enable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **anti-spoof** *keyword*

Synopsis	Anti-spoof filtering
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">anti-spoof</a> <i>keyword</i>
Tree	<a href="#">anti-spoof</a>
Options	source-ip-addr, source-mac-addr, source-ip-and-mac-addr, next-hop-ip-and-mac-addr
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **app-profile** *reference*

Synopsis	Application profile name
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <b>app-profile</b> <i>reference</i>
Tree	<a href="#">app-profile</a>
Reference	<b>configure</b> <a href="#">application-assurance</a> <a href="#">group</a> <i>number</i> <a href="#">partition</a> <i>number</i> <a href="#">policy</a> <a href="#">app-profile</a> <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **bandwidth** *number*

Synopsis	SAP bandwidth
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <b>bandwidth</b> <i>number</i>
Tree	<a href="#">bandwidth</a>
Range	1 to 6400000000
Units	kilobps
Introduced	16.0.R1
Platforms	All

### **calling-station-id** *string*

Synopsis	Calling station ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <b>calling-station-id</b> <i>string</i>
Tree	<a href="#">calling-station-id</a>
String Length	1 to 64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **collect-stats** *boolean*

Synopsis	Collect accounting statistics
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <b>collect-stats</b> <i>boolean</i>
Tree	<a href="#">collect-stats</a>
Default	false
Introduced	16.0.R1

Platforms All

## cpu-protection

Synopsis Enter the **cpu-protection** context  
Context **configure** [service vprn string](#) [interface string](#) [sap string](#) **cpu-protection**  
Tree [cpu-protection](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## eth-cfm-monitoring

Synopsis Enable the **eth-cfm-monitoring** context  
Context **configure** [service vprn string](#) [interface string](#) [sap string](#) [cpu-protection](#) **eth-cfm-monitoring**  
Tree [eth-cfm-monitoring](#)  
Notes The following elements are part of a choice: **eth-cfm-monitoring**, **ip-src-monitoring**, or **mac-monitoring**.  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## aggregate

Synopsis Apply rate limit to the sum of per-peer packet rates  
Context **configure** [service vprn string](#) [interface string](#) [sap string](#) [cpu-protection](#) [eth-cfm-monitoring](#) **aggregate**  
Tree [aggregate](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## car

Synopsis Ignore Ethernet CFM packets when enforcing overall rate  
Context **configure** [service vprn string](#) [interface string](#) [sap string](#) [cpu-protection](#) [eth-cfm-monitoring](#) **car**  
Tree [car](#)

Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## ip-src-monitoring

Synopsis Enable IP source monitoring for CPU protection  
Context **configure** [service](#) [vpn](#) *string* [interface](#) *string* [sap](#) *string* [cpu-protection](#) [ip-src-monitoring](#)  
Tree [ip-src-monitoring](#)  
Notes The following elements are part of a choice: **eth-cfm-monitoring**, **ip-src-monitoring**, or **mac-monitoring**.  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## mac-monitoring

Synopsis Monitor MAC for CPU protection  
Context **configure** [service](#) [vpn](#) *string* [interface](#) *string* [sap](#) *string* [cpu-protection](#) [mac-monitoring](#)  
Tree [mac-monitoring](#)  
Notes The following elements are part of a choice: **eth-cfm-monitoring**, **ip-src-monitoring**, or **mac-monitoring**.  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## policy-id *reference*

Synopsis CPM protection policy  
Context **configure** [service](#) [vpn](#) *string* [interface](#) *string* [sap](#) *string* [cpu-protection](#) [policy-id](#) *reference*  
Tree [policy-id](#)  
Reference **configure** [system](#) [security](#) [cpu-protection](#) [policy](#) *number*  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## description *string*

Synopsis Text description

Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>description</b> <i>string</i>
Tree	<b>description</b>
String Length	1 to 160
Introduced	16.0.R1
Platforms	All

### **dist-cpu-protection** *reference*

Synopsis	Distributed CPU protection policy for SAP
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>dist-cpu-protection</b> <i>reference</i>
Tree	<b>dist-cpu-protection</b>
Reference	<b>configure system security dist-cpu-protection</b> <i>policy string</i>
Introduced	16.0.R1
Platforms	All

### **egress**

Synopsis	Enter the <b>egress</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress</b>
Tree	<b>egress</b>
Introduced	16.0.R1
Platforms	All

### **agg-rate**

Synopsis	Enter the <b>agg-rate</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress</b> <b>agg-rate</b>
Tree	<b>agg-rate</b>
Notes	This element is the default part of a choice. The following elements are part of a choice: <b>agg-rate</b> or <b>percent-agg-rate</b> .
Introduced	16.0.R1
Platforms	All

### **adaptation-rule** *keyword*

Synopsis	Adaptation rule to compute the operational PIR value when an aggregate shaper is used
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress agg-rate adaptation-rule</a> <i>keyword</i>
Tree	<a href="#">adaptation-rule</a>
Default	closest
Options	max, min, closest
Introduced	22.10.R1
Platforms	7750 SR-1, 7750 SR-s

### **burst-limit** (*number* | *keyword*)

Synopsis	Shaping burst size when an aggregate shaper is used
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress agg-rate burst-limit</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">burst-limit</a>
Range	1 to 14000000
Default	auto
Units	bytes
Options	auto
Introduced	22.10.R1
Platforms	7750 SR-1, 7750 SR-s

### **limit-unused-bandwidth** *boolean*

Synopsis	Enable aggregate rate overrun protection
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress agg-rate limit-unused-bandwidth</a> <i>boolean</i>
Tree	<a href="#">limit-unused-bandwidth</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **queue-frame-based-accounting** *boolean*

Synopsis	Enable frame-based accounting on all policers and queues associated with context
----------	--

Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress</b> <b>agg-rate</b> <b>queue-frame-based-accounting</b> <i>boolean</i>
Tree	<b>queue-frame-based-accounting</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **rate number**

Synopsis	Enforced aggregate rate for all queues
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress</b> <b>agg-rate</b> <b>rate</b> <i>number</i>
Tree	<b>rate</b>
Range	1 to 6400000000
Units	kilobps
Introduced	16.0.R1
Platforms	All

### **filter**

Synopsis	Enter the <b>filter</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress</b> <b>filter</b>
Tree	<b>filter</b>
Introduced	16.0.R1
Platforms	All

### **ip reference**

Synopsis	IPv4 filter policy name
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress</b> <b>filter</b> <b>ip</b> <i>reference</i>
Tree	<b>ip</b>
Reference	<b>configure filter ip-filter</b> <i>string</i>
Introduced	16.0.R1
Platforms	All

## ipv6 reference

Synopsis	IPv6 filter policy name
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress filter ipv6</a> <i>reference</i>
Tree	<a href="#">ipv6</a>
Reference	<b>configure</b> <a href="#">filter ipv6-filter</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

## qos

Synopsis	Enter the <b>qos</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos</a>
Tree	<a href="#">qos</a>
Introduced	16.0.R1
Platforms	All

## policer-control-policy

Synopsis	Enter the <b>policer-control-policy</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos policer-control-policy</a>
Tree	<a href="#">policer-control-policy</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## overrides

Synopsis	Enable the <b>overrides</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos policer-control-policy</a> <a href="#">overrides</a>
Tree	<a href="#">overrides</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## root

Synopsis	Enter the <b>root</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos policer-control-policy</b> <b>overrides root</b>
Tree	<b>root</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## max-rate (*number* | *keyword*)

Synopsis	Maximum frame-based bandwidth limit
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos policer-control-policy</b> <b>overrides root max-rate</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>max-rate</b>
Range	1 to 6400000000
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## priority-mbs-thresholds

Synopsis	Enter the <b>priority-mbs-thresholds</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos policer-control-policy</b> <b>overrides root priority-mbs-thresholds</b>
Tree	<b>priority-mbs-thresholds</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## min-thresh-separation (*number* | *keyword*)

Synopsis	Minimum amount of separation buffer space
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos policer-control-policy</b> <b>overrides root priority-mbs-thresholds min-thresh-separation</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>min-thresh-separation</b>
Range	0 to 16777216
Units	bytes

Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **priority** [[priority-level](#)] *number*

Synopsis	Enter the <b>priority</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a> <a href="#">priority-mbs-thresholds</a> <b>priority</b> <i>number</i>
Tree	<a href="#">priority</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **[priority-level]** *number*

Synopsis	Priority level
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a> <a href="#">priority-mbs-thresholds</a> <b>priority</b> <i>number</i>
Tree	<a href="#">priority</a>
Range	1 to 8
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **mbs-contribution** (*number* | *keyword*)

Synopsis	Minimum amount of cumulative buffer space allowed
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a> <a href="#">priority-mbs-thresholds</a> <b>priority</b> <i>number</i> <b>mbs-contribution</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">mbs-contribution</a>
Range	0 to 16777216
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **policy-name** *reference*

Synopsis	Policer control policy name
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos</a> <a href="#">policer-control-policy</a> <a href="#">policy-name</a> <i>reference</i>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">policer-control-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **qinq-mark-top-only** *boolean*

Synopsis	Mark top Q-tags
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos</a> <a href="#">qinq-mark-top-only</a> <i>boolean</i>
Tree	<a href="#">qinq-mark-top-only</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **sap-egress**

Synopsis	Enter the <b>sap-egress</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos</a> <a href="#">sap-egress</a>
Tree	<a href="#">sap-egress</a>
Introduced	16.0.R1
Platforms	All

### **overrides**

Synopsis	Enter the <b>overrides</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a>
Tree	<a href="#">overrides</a>
Introduced	16.0.R1
Platforms	All

### **hs-secondary-shaper** *string*

Synopsis	HS Secondary Shaper
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">hs-secondary-shaper</a> <i>string</i>
Tree	<a href="#">hs-secondary-shaper</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **hs-wrr-group** [[group-id](#)] *reference*

Synopsis	Enter the <b>hs-wrr-group</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">hs-wrr-group</a> <i>reference</i>
Tree	<a href="#">hs-wrr-group</a>
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### [[group-id](#)] *reference*

Synopsis	HS WRR group identifier
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">hs-wrr-group</a> <i>reference</i>
Tree	<a href="#">hs-wrr-group</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">sap-egress</a> <i>string</i> <a href="#">hs-wrr-group</a> <i>number</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **hs-class-weight** *number*

Synopsis	Class weight override of the WRR group
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">hs-wrr-group</a> <i>reference</i> <a href="#">hs-class-weight</a> <i>number</i>
Tree	<a href="#">hs-class-weight</a>

Range	1   2   4   8
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **percent-rate** *decimal-number*

Synopsis	Percent rate override applied to the HS WRR group
Context	<b>configure</b> <b>service</b> <b>vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress</b> <b>qos</b> <b>sap-egress</b> <b>overrides</b> <b>hs-wrr-group</b> <i>reference</i> <b>percent-rate</b> <i>decimal-number</i>
Tree	<b>percent-rate</b>
Range	0.01 to 100.00
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **rate** (*number* | *keyword*)

Synopsis	Scheduling rate override applied to the HS WRR group
Context	<b>configure</b> <b>service</b> <b>vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress</b> <b>qos</b> <b>sap-egress</b> <b>overrides</b> <b>hs-wrr-group</b> <i>reference</i> <b>rate</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>rate</b>
Range	1 to 2000000000
Units	kilobps
Options	max
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **policer** [**policer-id**] *reference*

Synopsis	Enter the <b>policer</b> list instance
Context	<b>configure</b> <b>service</b> <b>vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress</b> <b>qos</b> <b>sap-egress</b> <b>overrides</b> <b>policer</b> <i>reference</i>
Tree	<b>policer</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### [**policer-id**] *reference*

Synopsis	Policer unique ID
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos sap-egress</a> <a href="#">overrides policer</a> <i>reference</i>
Tree	<a href="#">policer</a>
Reference	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">policer</a> <i>number</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **cbs** (*number* | *keyword*)

Synopsis	CBS
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos sap-egress</a> <a href="#">overrides policer</a> <i>reference</i> <a href="#">cbs</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cbs</a>
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **mbs** (*number* | *keyword*)

Synopsis	MBS
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos sap-egress</a> <a href="#">overrides policer</a> <i>reference</i> <a href="#">mbs</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">mbs</a>
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **packet-byte-offset** *number*

Synopsis	Packet size modification for policing information
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <i>reference</i> <b>packet-byte-offset</b> <i>number</i>
Tree	<a href="#">packet-byte-offset</a>
Range	-64 to 31
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **percent-rate**

Synopsis	Enter the <b>percent-rate</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <i>reference</i> <b>percent-rate</b>
Tree	<a href="#">percent-rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **cir** *decimal-number*

Synopsis	CIR percent rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <i>reference</i> <b>percent-rate</b> <b>cir</b> <i>decimal-number</i>
Tree	<a href="#">cir</a>
Range	0.00 to 100.00
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **pir** *decimal-number*

Synopsis	PIR percent rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <i>reference</i> <b>percent-rate</b> <b>pir</b> <i>decimal-number</i>
Tree	<a href="#">pir</a>
Range	0.01 to 100.00

Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## rate

Synopsis Enter the **rate** context  
Context **configure** [service](#) [vprn](#) *string* [interface](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#)  
[overrides](#) [policer](#) *reference* **rate**  
Tree [rate](#)  
Notes The following elements are part of a choice: **percent-rate** or **rate**.  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## cir (*number* | *keyword*)

Synopsis CIR rate  
Context **configure** [service](#) [vprn](#) *string* [interface](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#)  
[overrides](#) [policer](#) *reference* **rate** **cir** (*number* | *keyword*)  
Tree [cir](#)  
Range 0 to 6400000000  
Units kilobps  
Options max  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## pir (*number* | *keyword*)

Synopsis PIR rate  
Context **configure** [service](#) [vprn](#) *string* [interface](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#)  
[overrides](#) [policer](#) *reference* **rate** **pir** (*number* | *keyword*)  
Tree [pir](#)  
Range 1 to 6400000000  
Units kilobps  
Options max  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **stat-mode** *keyword*

Synopsis	Mode of statistics collected by the policer
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <i>reference</i> <b>stat-mode</b> <i>keyword</i>
Tree	<a href="#">stat-mode</a>
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-profile-cir, offered-limited-capped-cir, offered-profile-capped-cir, offered-total-cir-exceed, offered-four-profile-no-cir, offered-total-cir-four-profile
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **queue** [[queue-id](#)] *reference*

Synopsis	Enter the <b>queue</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i>
Tree	<a href="#">queue</a>
Introduced	16.0.R1
Platforms	All

### [[queue-id](#)] *reference*

Synopsis	Policer unique ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i>
Tree	<a href="#">queue</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">sap-egress</a> <i>string</i> <a href="#">queue</a> <i>number</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **adaptation-rule**

Synopsis	Enter the <b>adaptation-rule</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i> <b>adaptation-rule</b>

Tree	<a href="#">adaptation-rule</a>
Introduced	16.0.R1
Platforms	All

### **cir** keyword

Synopsis	Constraint used when deriving the operational CIR value
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i> <a href="#">adaptation-rule</a> <a href="#">cir</a> <i>keyword</i>
Tree	<a href="#">cir</a>
Options	max, min, closest
Introduced	16.0.R1
Platforms	All

### **pir** keyword

Synopsis	Constraint used when deriving the operational PIR value
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i> <a href="#">adaptation-rule</a> <a href="#">pir</a> <i>keyword</i>
Tree	<a href="#">pir</a>
Options	max, min, closest
Introduced	16.0.R1
Platforms	All

### **avg-frame-overhead** *decimal-number*

Synopsis	Average packet-to-frame encapsulation overhead
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i> <a href="#">avg-frame-overhead</a> <i>decimal-number</i>
Tree	<a href="#">avg-frame-overhead</a>
Range	0.00 to 100.00
Introduced	16.0.R1
Platforms	All

### **burst-limit** (*number* | *keyword*)

Synopsis	Explicit shaping burst size for the queue
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i> <b>burst-limit</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">burst-limit</a>
Range	1 to 14000000
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	All

### **cbs** (*number* | *keyword*)

Synopsis	CBS
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i> <b>cbs</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cbs</a>
Range	0 to 1048576
Units	kilobytes
Options	auto
Introduced	16.0.R1
Platforms	All

### **drop-tail**

Synopsis	Enter the <b>drop-tail</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i> <b>drop-tail</b>
Tree	<a href="#">drop-tail</a>
Introduced	16.0.R1
Platforms	All

### **low**

Synopsis	Enter the <b>low</b> context
----------	------------------------------

Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos sap-egress</b> <b>overrides queue</b> <i>reference</i> <b>drop-tail low</b>
Tree	<a href="#">low</a>
Introduced	16.0.R1
Platforms	All

### **percent-reduction-from-mbs** (*number* | *keyword*)

Synopsis	Percentage reduction from the MBS for a queue drop tail
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos sap-egress</b> <b>overrides queue</b> <i>reference</i> <b>drop-tail low percent-reduction-from-mbs</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">percent-reduction-from-mbs</a>
Range	0 to 100
Options	auto
Introduced	16.0.R1
Platforms	All

### **hs-class-weight** *number*

Synopsis	Class weight override for the queue
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos sap-egress</b> <b>overrides queue</b> <i>reference</i> <b>hs-class-weight</b> <i>number</i>
Tree	<a href="#">hs-class-weight</a>
Range	1   2   4   8
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **hs-wred-queue**

Synopsis	Enter the <b>hs-wred-queue</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos sap-egress</b> <b>overrides queue</b> <i>reference</i> <b>hs-wred-queue</b>
Tree	<a href="#">hs-wred-queue</a>
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

## policy reference

Synopsis	Slope policy applied to the HSQ queue group queue
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">egress qos sap-egress overrides queue reference</a> <a href="#">hs-wred-queue policy reference</a>
Tree	<a href="#">policy</a>
Reference	<b>configure</b> <a href="#">qos slope-policy string</a>
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

## hs-wrr-weight *number*

Synopsis	Weighted Round Robin (WRR) weight to parent with this queue into the scheduler
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">egress qos sap-egress overrides queue reference</a> <a href="#">hs-wrr-weight number</a>
Tree	<a href="#">hs-wrr-weight</a>
Range	1 to 127
Default	1
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

## mbs (*number* | *keyword*)

Synopsis	MBS
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">egress qos sap-egress overrides queue reference</a> <a href="#">mbs (number   keyword)</a>
Tree	<a href="#">mbs</a>
Range	0 to 1073741824
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	All

## monitor-queue-depth

Synopsis	Enable the <b>monitor-queue-depth</b> context
----------	---

Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">interface string sap string egress qos sap-egress overrides queue reference</a> <a href="#">monitor-queue-depth</a>
Tree	<a href="#">monitor-queue-depth</a>
Introduced	20.10.R1
Platforms	All

### **fast-polling** *boolean*

Synopsis	Enable fast polling of the queue depth
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">interface string sap string egress qos sap-egress overrides queue reference</a> <a href="#">monitor-queue-depth fast-polling</a> <i>boolean</i>
Tree	<a href="#">fast-polling</a>
Description	When configured to <b>true</b> , this command enables fast polling of the queue depth. Faster polling allows a more accurate view of the actual depth. When configured to <b>false</b> , fast queue polling is not enabled.
Default	false
Introduced	20.10.R1
Platforms	All

### **violation-threshold** *decimal-number*

Synopsis	Threshold for queue depth before violation is raised
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">interface string sap string egress qos sap-egress overrides queue reference</a> <a href="#">monitor-queue-depth violation-threshold</a> <i>decimal-number</i>
Tree	<a href="#">violation-threshold</a>
Description	This command specifies the threshold for the queue MBS. When the queue depth exceeds the threshold value, a violation is registered.
Range	0.01 to 99.99
Introduced	20.10.R1
Platforms	All

### **parent**

Synopsis	Enter the <b>parent</b> context
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">interface string sap string egress qos sap-egress overrides queue reference</a> <a href="#">parent</a>
Tree	<a href="#">parent</a>

Introduced 16.0.R1  
Platforms All

### **cir-weight** *number*

Synopsis CIR parameter that overrides parent for queue group  
Context **configure** [service vprn string](#) [interface string sap string](#) [egress qos sap-egress overrides queue reference parent cir-weight number](#)  
Tree [cir-weight](#)  
Range 0 to 100  
Introduced 16.0.R1  
Platforms All

### **weight** *number*

Synopsis PIR parameter that overrides parent for queue group  
Context **configure** [service vprn string](#) [interface string sap string](#) [egress qos sap-egress overrides queue reference parent weight number](#)  
Tree [weight](#)  
Range 0 to 100  
Introduced 16.0.R1  
Platforms All

### **percent-rate**

Synopsis Enter the **percent-rate** context  
Context **configure** [service vprn string](#) [interface string sap string](#) [egress qos sap-egress overrides queue reference percent-rate](#)  
Tree [percent-rate](#)  
Notes The following elements are part of a choice: **percent-rate** or **rate**.  
Introduced 16.0.R1  
Platforms All

### **cir decimal-number**

Synopsis CIR percent rate

Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos sap-egress overrides queue reference percent-rate cir</b> <i>decimal-number</i>
Tree	<b>cir</b>
Range	0.00 to 100.00
Introduced	16.0.R1
Platforms	All

### **pir** *decimal-number*

Synopsis	PIR percent rate
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos sap-egress overrides queue reference percent-rate pir</b> <i>decimal-number</i>
Tree	<b>pir</b>
Range	0.01 to 100.00
Introduced	16.0.R1
Platforms	All

### **rate**

Synopsis	Enter the <b>rate</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos sap-egress overrides queue reference rate</b>
Tree	<b>rate</b>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	All

### **cir** (*number* | *keyword*)

Synopsis	CIR rate
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos sap-egress overrides queue reference rate cir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>cir</b>
Range	0 to 6400000000
Units	kilobps
Options	max

Introduced 16.0.R1  
Platforms All

### **pir** (*number* | *keyword*)

Synopsis PIR rate  
Context **configure** [service vprn string](#) [interface string](#) [sap string](#) [egress qos sap-egress overrides](#) [queue reference rate](#) **pir** (*number* | *keyword*)  
Tree [pir](#)  
Range 1 to 6400000000  
Units kilobps  
Options max  
Introduced 16.0.R1  
Platforms All

### **policy-name** *reference*

Synopsis Policy ID to associate with SAP for mirrored service  
Context **configure** [service vprn string](#) [interface string](#) [sap string](#) [egress qos sap-egress](#) [policy-name reference](#)  
Tree [policy-name](#)  
Reference **configure** [qos sap-egress string](#)  
Introduced 16.0.R1  
Platforms All

### **port-redirect-group**

Synopsis Enter the **port-redirect-group** context  
Context **configure** [service vprn string](#) [interface string](#) [sap string](#) [egress qos sap-egress](#) [port-redirect-group](#)  
Tree [port-redirect-group](#)  
Introduced 16.0.R1  
Platforms All

### **group-name** *reference*

Synopsis	Name of the queue group redirect list policy
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">interface string sap string</a> <a href="#">egress qos sap-egress port-redirect-group</a> <a href="#">group-name reference</a>
Tree	<a href="#">group-name</a>
Reference	<b>configure</b> <a href="#">qos queue-group-templates egress queue-group string</a>
Introduced	16.0.R1
Platforms	All

### **instance** *number*

Synopsis	Instance of port queue group
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">interface string sap string</a> <a href="#">egress qos sap-egress port-redirect-group</a> <a href="#">instance number</a>
Tree	<a href="#">instance</a>
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

### **scheduler-policy**

Synopsis	Enter the <b>scheduler-policy</b> context
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">interface string sap string</a> <a href="#">egress qos scheduler-policy</a>
Tree	<a href="#">scheduler-policy</a>
Introduced	16.0.R1
Platforms	All

### **overrides**

Synopsis	Enter the <b>overrides</b> context
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">interface string sap string</a> <a href="#">egress qos scheduler-policy overrides</a>
Tree	<a href="#">overrides</a>
Introduced	16.0.R1
Platforms	All

## **scheduler** [*scheduler-name*] *string*

Synopsis	Enter the <b>scheduler</b> list instance
Context	<b>configure</b> <i>service vprn string interface string sap string egress qos scheduler-policy overrides scheduler string</i>
Tree	<i>scheduler</i>
Introduced	16.0.R1
Platforms	All

## **[scheduler-name]** *string*

Synopsis	Scheduler name
Context	<b>configure</b> <i>service vprn string interface string sap string egress qos scheduler-policy overrides scheduler string</i>
Tree	<i>scheduler</i>
Description	<p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context will not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error will occur, the command will not execute, and the context will not change.</p>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## **parent**

Synopsis	Enter the <b>parent</b> context
Context	<b>configure</b> <i>service vprn string interface string sap string egress qos scheduler-policy overrides scheduler string parent</i>
Tree	<i>parent</i>

Introduced 16.0.R1  
Platforms All

### **cir-weight** *number*

Synopsis Weight used at the within-CIR port priority level  
Context **configure** [service](#) [vprn](#) *string* [interface](#) *string* [sap](#) *string* [egress](#) [qos](#) [scheduler-policy](#) [overrides](#) [scheduler](#) *string* [parent](#) [cir-weight](#) *number*  
Tree [cir-weight](#)  
Range 0 to 100  
Introduced 16.0.R1  
Platforms All

### **weight** *number*

Synopsis Relative weight of the scheduler to feed the queue  
Context **configure** [service](#) [vprn](#) *string* [interface](#) *string* [sap](#) *string* [egress](#) [qos](#) [scheduler-policy](#) [overrides](#) [scheduler](#) *string* [parent](#) [weight](#) *number*  
Tree [weight](#)  
Range 0 to 100  
Introduced 16.0.R1  
Platforms All

### **rate**

Synopsis Enter the **rate** context  
Context **configure** [service](#) [vprn](#) *string* [interface](#) *string* [sap](#) *string* [egress](#) [qos](#) [scheduler-policy](#) [overrides](#) [scheduler](#) *string* [rate](#)  
Tree [rate](#)  
Introduced 16.0.R1  
Platforms All

### **cir** (*number* | *keyword*)

Synopsis CIR at which the queue it to operate  
Context **configure** [service](#) [vprn](#) *string* [interface](#) *string* [sap](#) *string* [egress](#) [qos](#) [scheduler-policy](#) [overrides](#) [scheduler](#) *string* [rate](#) [cir](#) (*number* | *keyword*)

Tree	<a href="#">cir</a>
Range	0 to 6400000000
Units	kilobps
Options	sum, max
Introduced	16.0.R1
Platforms	All

### **pir** (*number* | *keyword*)

Synopsis	PIR at which the queue is to operate
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <i>string</i> <a href="#">rate</a> <b>pir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">pir</a>
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	All

### **policy-name** *reference*

Synopsis	Scheduler policy name
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">policy-name</a> <i>reference</i>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">scheduler-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **queue-group-redirect-list** *reference*

Synopsis	Assign queue-group redirect list
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">queue-group-redirect-list</a> <i>reference</i>
Tree	<a href="#">queue-group-redirect-list</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">queue-group-redirect-list</a> <i>string</i>

Introduced	16.0.R1
Platforms	All

## eth-cfm

Synopsis	Enter the <b>eth-cfm</b> context
Context	<b>configure service vprn string interface string sap string eth-cfm</b>
Tree	<b>eth-cfm</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## collect-lmm-fc-stats

Synopsis	Enter the <b>collect-lmm-fc-stats</b> context
Context	<b>configure service vprn string interface string sap string eth-cfm collect-lmm-fc-stats</b>
Tree	<b>collect-lmm-fc-stats</b>
Description	<p>Commands in this context configure per forwarding class (FC) LMM information collection.</p> <p>The commands <b>fc-in-profile</b> and <b>fc</b> in this context are mutually exclusive. The commands apply to either profile-aware or profile-unaware FCs respectively.</p> <p>This command and the <b>collect-lmm-stats</b> command are mutually exclusive when there is entity resource contention.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## fc keyword

Synopsis	Forwarding class name for profile-unaware counter
Context	<b>configure service vprn string interface string sap string eth-cfm collect-lmm-fc-stats fc keyword</b>
Tree	<b>fc</b>
Description	<p>This command configures individual counters for the specified FCs without regard for profile. The system includes all countable packets that match a configured FC, regardless of profile, in this counter.</p> <p>An FC specified as part of this command and for this specific context cannot be specified as a profile-aware FC using the <b>fc-in-profile</b> command under the <b>collect-lmm-fc-stats</b> context.</p>

When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.

Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fc-in-profile** *keyword*

Synopsis	Forwarding class name for profile-aware counter
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm collect-lmm-fc-stats fc-in-profile</b> <i>keyword</i>
Tree	<b>fc-in-profile</b>
Description	<p>This command configures individual counters for the specified FCs with regard to profile. The system includes all countable packets that match a configured FC and that are deemed to be in-profile in this counter.</p> <p>An FC specified as part of this command and for this specific context cannot be specified as a profile-unaware FC using the <b>fc</b> command under the <b>collect-lmm-fc-stats</b> context.</p> <p>When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.</p>
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **collect-lmm-stats** *boolean*

Synopsis	Collect statistics for loss measurement message tests
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm collect-lmm-stats</b> <i>boolean</i>
Tree	<b>collect-lmm-stats</b>
Description	<p>When configured to <b>true</b>, the router instantiates the statistical counter to transmit and receive packets for the LAG facility MEP bindings.</p> <p>The <b>show eth-cfm collect-lmm-stats</b> command displays entities that have been enabled to collect transit and receive counters.</p>

When configured to **false**, the router does not instantiate the counter and the LMM PDU associated with the MEP does not populate the counters in the packet.

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mep** *md-admin-name* *reference* *ma-admin-name* *reference* *mep-id* *number*

Synopsis	Enter the <b>mep</b> list instance
Context	<b>configure</b> <i>service vprn string interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number</i>
Tree	<i>mep</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **md-admin-name** *reference*

Synopsis	Maintenance Domain (MD) name
Context	<b>configure</b> <i>service vprn string interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number</i>
Tree	<i>mep</i>
Reference	<b>configure</b> <i>eth-cfm domain string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ma-admin-name** *reference*

Synopsis	Maintenance Association (MA) name
Context	<b>configure</b> <i>service vprn string interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number</i>
Tree	<i>mep</i>
Reference	<b>configure</b> <i>eth-cfm domain string association string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mep-id** *number*

Synopsis	Maintenance Endpoint (MEP) ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <i>number</i>
Tree	<a href="#">mep</a>
Range	1 to 8191
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **admin-state** *keyword*

Synopsis	Administrative state of the MEP
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <i>number</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ais** *boolean*

Synopsis	Enable the generation and the reception of AIS messages
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <i>number</i> <a href="#">ais</a> <i>boolean</i>
Tree	<a href="#">ais</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **alarm-notification**

Synopsis	Enter the <b>alarm-notification</b> context
----------	---

Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">alarm-notification</a>
Tree	<a href="#">alarm-notification</a>
Description	Commands in this context configure the Fault Notification Generator (FNG) time values to raise an alarm or reset the CCM defect alarm.  Use these timers for network management processes. The timers are not tied into delaying the notification to the fault management system on the network element and do not affect fault propagation mechanisms.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fng-alarm-time** *number*

Synopsis	Time that must expire before an FNG alarm is raised
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">alarm-notification</a> <a href="#">fng-alarm-time</a> <i>number</i>
Tree	<a href="#">fng-alarm-time</a>
Range	250   500   1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fng-reset-time** *number*

Synopsis	Time that must expire before an FNG alarm is reset
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">alarm-notification</a> <a href="#">fng-reset-time</a> <i>number</i>
Tree	<a href="#">fng-reset-time</a>
Range	250   500   1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm** *boolean*

Synopsis	Generate CCM messages
----------	-----------------------

Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>ccm</b> <i>boolean</i>
Tree	<b>ccm</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm-ltm-priority** *number*

Synopsis	Priority of CCM and LTM messages transmitted by the MEP
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>ccm-ltm-priority</b> <i>number</i>
Tree	<b>ccm-ltm-priority</b>
Range	0 to 7
Default	7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm-padding-size** *number*

Synopsis	Number of octets of padding to insert in CCM packets
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>ccm-padding-size</b> <i>number</i>
Tree	<b>ccm-padding-size</b>
Description	This command sets the byte size of the optional Data TLV to be included in the ETH-CC PDU.  This command increases the size of the ETH-CC PDU by the configured value. The base size of the ETH-CC PDU, including the Interface Status TLV and Port Status TLV, is 83 bytes not including the Layer 2 encapsulation. CCM padding is not supported when the CCM interval (configured through <b>configure eth-cfm domain association ccm-interval</b> ) is less than 1 second.
Range	3 to 1500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **csf**

Synopsis	Enable the <b>csf</b> context
----------	-------------------------------

Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>csf</b>
Tree	<b>csf</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **multiplier** *decimal-number*

Synopsis	Multiplication factor used to clear the CSF condition
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>csf multiplier</b> <i>decimal-number</i>
Tree	<b>multiplier</b>
Range	0.0   2.0 to 30.0
Default	3.5
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **description** *string*

Synopsis	Text description
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>description</b> <i>string</i>
Tree	<b>description</b>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **eth-test**

Synopsis	Enable the <b>eth-test</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>eth-test</b>
Tree	<b>eth-test</b>
Description	Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the <b>oam eth-cfm eth-test</b> command.
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **bit-error-threshold** *number*

Synopsis Lowest priority defect allowed to generate fault alarm

Context **configure** [service vprn](#) *string* [interface](#) *string* [sap](#) *string* [eth-cfm mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* [eth-test bit-error-threshold](#) *number*

Tree [bit-error-threshold](#)

Range 0 to 11840

Default 1

Units bit errors

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **test-pattern**

Synopsis Enter the **test-pattern** context

Context **configure** [service vprn](#) *string* [interface](#) *string* [sap](#) *string* [eth-cfm mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* [eth-test test-pattern](#)

Tree [test-pattern](#)

Description Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **crc-tlv** *boolean*

Synopsis Generate a CRC checksum

Context **configure** [service vprn](#) *string* [interface](#) *string* [sap](#) *string* [eth-cfm mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* [eth-test test-pattern](#) [crc-tlv](#) *boolean*

Tree [crc-tlv](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## pattern keyword

Synopsis	Test pattern for Ethernet Test frames
Context	<b>configure</b> <a href="#">service vprn string interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test test-pattern pattern keyword</a>
Tree	<a href="#">pattern</a>
Description	This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.
Default	all-zeros
Options	all-zeros, all-ones
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## fault-propagation keyword

Synopsis	Fault propagation for the MEP
Context	<b>configure</b> <a href="#">service vprn string interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number fault-propagation keyword</a>
Tree	<a href="#">fault-propagation</a>
Options	use-if-status-tlv, suspend-ccm
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## grace

Synopsis	Enter the <b>grace</b> context
Context	<b>configure</b> <a href="#">service vprn string interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace</a>
Tree	<a href="#">grace</a>
Description	Commands in this context configure the Nokia ETH-CFM Grace function and the ITU-T Y.1731 Ethernet Expected Default (ETH-ED) function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## eth-ed

Synopsis	Enter the <b>eth-ed</b> context
----------	---------------------------------

Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>grace eth-ed</b>
Tree	<b>eth-ed</b>
Description	Commands in this context configure the ITU-T Y.1731 ETH-ED function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **max-rx-defect-window** *number*

Synopsis	Maximum received ETH-ED expected defect window duration
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>grace eth-ed max-rx-defect-window</b> <i>number</i>
Tree	<b>max-rx-defect-window</b>
Range	1 to 86400
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **priority** *number*

Synopsis	Transmission priority for ETH-ED PDUs
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>grace eth-ed priority</b> <i>number</i>
Tree	<b>priority</b>
Range	0 to 7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **rx-eth-ed** *boolean*

Synopsis	Receive and process ETH-ED ITU-T Y.1731 PDUs on the MEP
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>grace eth-ed rx-eth-ed</b> <i>boolean</i>
Tree	<b>rx-eth-ed</b>
Description	This command enables the reception and processing of the ITU-T Y.1731 ETH-ED PDU on the MEP.

Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **tx-eth-ed** *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm mep md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">grace eth-ed tx-eth-ed</a> <i>boolean</i>
Tree	<a href="#">tx-eth-ed</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **eth-vsm-grace**

Synopsis	Enter the <b>eth-vsm-grace</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm mep md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">grace eth-vsm-grace</a>
Tree	<a href="#">eth-vsm-grace</a>
Description	Commands in this context configure the Nokia ETH-CFM Grace function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **rx-eth-vsm-grace** *boolean*

Synopsis	Receive and process Nokia ETH-CFM Grace PDU on the MEP
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm mep md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">grace eth-vsm-grace rx-eth-vsm-grace</a> <i>boolean</i>
Tree	<a href="#">rx-eth-vsm-grace</a>
Description	When configured to <b>true</b> , the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.  When configured to <b>false</b> , the router disables the Nokia Grace function.
Default	true
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **tx-eth-vsm-grace** *boolean*

Synopsis Transmit ETH-ED PDUs from the MEP

Context **configure** [service vprn](#) *string* [interface](#) *string* [sap](#) *string* [eth-cfm mep md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* [eth-vsm-grace tx-eth-vsm-grace](#) *boolean*

Tree [tx-eth-vsm-grace](#)

Description When configured to **true**, the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.

The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.

The operator must configure the **configure system eth-cfm grace** command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).

When configured to **false**, the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.

Default true

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **low-priority-defect** *keyword*

Synopsis Lowest priority defect allowed to generate fault alarm

Context **configure** [service vprn](#) *string* [interface](#) *string* [sap](#) *string* [eth-cfm mep md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* [low-priority-defect](#) *keyword*

Tree [low-priority-defect](#)

Default mac-rem-err-xcon

Options all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **one-way-delay-threshold** *number*

Synopsis Threshold time limit for the one-way delay test

Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm mep</b> <i>md-admin-name reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>one-way-delay-threshold</b> <i>number</i>
Tree	<a href="#">one-way-delay-threshold</a>
Range	0 to 600
Default	3
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **squelch-ingress-levels** *number*

Synopsis	Levels for which ETH-CFM packets are silently discarded
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm squelch-ingress-levels</b> <i>number</i>
Tree	<a href="#">squelch-ingress-levels</a>
Description	<p>This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.</p> <p>The list of levels must be a complete contiguous list from 0 up to the highest level that will be dropped.</p>
Range	0 to 7
Max.	8
Instances	
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fwd-wholesale**

Synopsis	Enter the <b>fwd-wholesale</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>fwd-wholesale</b>
Tree	<a href="#">fwd-wholesale</a>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### pppoe-service *reference*

Synopsis	PPPoE service name
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">fwd-wholesale</a> <a href="#">pppoe-service</a> <i>reference</i>

## **queue** [queue-id] *reference*

Synopsis	Enter the <b>queue</b> list instance
Context	<b>configure service vprn string interface string sap string ingress qos sap-ingress overrides queue reference</b>
Tree	<a href="#">queue</a>
Introduced	16.0.R1
Platforms	All

## [queue-id] *reference*

Synopsis	Policer unique ID
Context	<b>configure service vprn string interface string sap string ingress qos sap-ingress overrides queue reference</b>
Tree	<a href="#">queue</a>
Reference	<b>configure qos sap-ingress string queue number</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## **adaptation-rule**

Synopsis	Enter the <b>adaptation-rule</b> context
Context	<b>configure service vprn string interface string sap string ingress qos sap-ingress overrides queue reference adaptation-rule</b>
Tree	<a href="#">adaptation-rule</a>
Introduced	16.0.R1
Platforms	All

## **cir** *keyword*

Synopsis	Constraint used when deriving the operational CIR value
Context	<b>configure service vprn string interface string sap string ingress qos sap-ingress overrides queue reference adaptation-rule cir keyword</b>
Tree	<a href="#">cir</a>
Options	max, min, closest
Introduced	16.0.R1

Platforms All

### **pir** *keyword*

Synopsis Constraint used when deriving the operational PIR value

Context **configure** [service vprn string](#) [interface string](#) [sap string](#) [ingress qos sap-ingress](#)  
[overrides queue reference](#) [adaptation-rule](#) **pir** *keyword*

Tree [pir](#)

Options max, min, closest

Introduced 16.0.R1

Platforms All

### **cbs** (*number* | *keyword*)

Synopsis CBS

Context **configure** [service vprn string](#) [interface string](#) [sap string](#) [ingress qos sap-ingress](#)  
[overrides queue reference](#) **cbs** (*number* | *keyword*)

Tree [cbs](#)

Range 0 to 1048576

Units kilobytes

Options auto

Introduced 16.0.R1

Platforms All

### **drop-tail**

Synopsis Enter the **drop-tail** context

Context **configure** [service vprn string](#) [interface string](#) [sap string](#) [ingress qos sap-ingress](#)  
[overrides queue reference](#) **drop-tail**

Tree [drop-tail](#)

Introduced 16.0.R1

Platforms All

### **low**

Synopsis Enter the **low** context

Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ingress qos sap-ingress</b> <b>overrides queue</b> <i>reference</i> <b>drop-tail low</b>
Tree	<b>low</b>
Introduced	16.0.R1
Platforms	All

### **percent-reduction-from-mbs** (*number* | *keyword*)

Synopsis	Percentage reduction from the MBS for a queue drop tail
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ingress qos sap-ingress</b> <b>overrides queue</b> <i>reference</i> <b>drop-tail low percent-reduction-from-mbs</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>percent-reduction-from-mbs</b>
Range	0 to 100
Options	auto
Introduced	16.0.R1
Platforms	All

### **mbs** (*number* | *keyword*)

Synopsis	MBS
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ingress qos sap-ingress</b> <b>overrides queue</b> <i>reference</i> <b>mbs</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>mbs</b>
Range	0 to 1073741824
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	All

### **monitor-queue-depth**

Synopsis	Enable the <b>monitor-queue-depth</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ingress qos sap-ingress</b> <b>overrides queue</b> <i>reference</i> <b>monitor-queue-depth</b>
Tree	<b>monitor-queue-depth</b>
Introduced	21.7.R1

Platforms All

### **fast-polling** *boolean*

Synopsis Enable fast polling of the queue depth

Context **configure** [service vprn](#) *string* [interface](#) *string* [sap](#) *string* [ingress qos sap-ingress overrides queue](#) [reference monitor-queue-depth fast-polling](#) *boolean*

Tree [fast-polling](#)

Default false

Introduced 21.7.R1

Platforms All

### **parent**

Synopsis Enter the **parent** context

Context **configure** [service vprn](#) *string* [interface](#) *string* [sap](#) *string* [ingress qos sap-ingress overrides queue](#) [reference parent](#)

Tree [parent](#)

Introduced 16.0.R1

Platforms All

### **cir-weight** *number*

Synopsis CIR parameter that overrides parent for queue group

Context **configure** [service vprn](#) *string* [interface](#) *string* [sap](#) *string* [ingress qos sap-ingress overrides queue](#) [reference parent cir-weight](#) *number*

Tree [cir-weight](#)

Range 0 to 100

Introduced 16.0.R1

Platforms All

### **weight** *number*

Synopsis PIR parameter that overrides parent for queue group

Context **configure** [service vprn](#) *string* [interface](#) *string* [sap](#) *string* [ingress qos sap-ingress overrides queue](#) [reference parent weight](#) *number*

Tree [weight](#)

Range	0 to 100
Introduced	16.0.R1
Platforms	All

### **percent-rate**

Synopsis	Enter the <b>percent-rate</b> context
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">ingress qos sap-ingress</a> <a href="#">overrides queue reference percent-rate</a>
Tree	<a href="#">percent-rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	All

### **cir decimal-number**

Synopsis	CIR percent rate
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">ingress qos sap-ingress</a> <a href="#">overrides queue reference percent-rate cir decimal-number</a>
Tree	<a href="#">cir</a>
Range	0.00 to 100.00
Introduced	16.0.R1
Platforms	All

### **pir decimal-number**

Synopsis	PIR percent rate
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">ingress qos sap-ingress</a> <a href="#">overrides queue reference percent-rate pir decimal-number</a>
Tree	<a href="#">pir</a>
Range	0.01 to 100.00
Introduced	16.0.R1
Platforms	All

## rate

Synopsis	Enter the <b>rate</b> context
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">interface string sap string</a> <a href="#">ingress qos sap-ingress overrides queue reference</a> <b>rate</b>
Tree	<a href="#">rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	All

## **cir** (*number* | *keyword*)

Synopsis	CIR rate
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">interface string sap string</a> <a href="#">ingress qos sap-ingress overrides queue reference</a> <b>rate cir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cir</a>
Range	0 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	All

## **pir** (*number* | *keyword*)

Synopsis	PIR rate
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">interface string sap string</a> <a href="#">ingress qos sap-ingress overrides queue reference</a> <b>rate pir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">pir</a>
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	All

## **policy-name** *reference*

Synopsis	Policy ID
----------	-----------

Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ingress qos sap-ingress</b> <i>policy-name</i> <i>reference</i>
Tree	<a href="#">policy-name</a>
Reference	<b>configure qos sap-ingress</b> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **queuing-type** *keyword*

Synopsis	Queuing type
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ingress qos sap-ingress</b> <b>queuing-type</b> <i>keyword</i>
Tree	<a href="#">queuing-type</a>
Options	shared, multipoint-shared
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, VSR

### **scheduler-policy**

Synopsis	Enter the <b>scheduler-policy</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ingress qos scheduler-policy</b>
Tree	<a href="#">scheduler-policy</a>
Introduced	16.0.R1
Platforms	All

### **overrides**

Synopsis	Enter the <b>overrides</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ingress qos scheduler-policy</b> <b>overrides</b>
Tree	<a href="#">overrides</a>
Introduced	16.0.R1
Platforms	All

## **scheduler** [*scheduler-name*] *string*

Synopsis	Enter the <b>scheduler</b> list instance
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ingress qos scheduler-policy</b> <b>overrides scheduler</b> <i>string</i>
Tree	<b>scheduler</b>
Introduced	16.0.R1
Platforms	All

## **[scheduler-name]** *string*

Synopsis	Scheduler name
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ingress qos scheduler-policy</b> <b>overrides scheduler</b> <i>string</i>
Tree	<b>scheduler</b>
Description	<p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context will not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error will occur, the command will not execute, and the context will not change.</p>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## **parent**

Synopsis	Enter the <b>parent</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ingress qos scheduler-policy</b> <b>overrides scheduler</b> <i>string</i> <b>parent</b>
Tree	<b>parent</b>
Introduced	16.0.R1

Platforms All

### **cir-weight** *number*

Synopsis Weight used at the within-CIR port priority level

Context **configure** [service vprn](#) *string* [interface](#) *string* [sap](#) *string* [ingress qos scheduler-policy overrides scheduler](#) *string* [parent cir-weight](#) *number*

Tree [cir-weight](#)

Range 0 to 100

Introduced 16.0.R1

Platforms All

### **weight** *number*

Synopsis Relative weight of the scheduler to feed the queue

Context **configure** [service vprn](#) *string* [interface](#) *string* [sap](#) *string* [ingress qos scheduler-policy overrides scheduler](#) *string* [parent weight](#) *number*

Tree [weight](#)

Range 0 to 100

Introduced 16.0.R1

Platforms All

### **rate**

Synopsis Enter the **rate** context

Context **configure** [service vprn](#) *string* [interface](#) *string* [sap](#) *string* [ingress qos scheduler-policy overrides scheduler](#) *string* [rate](#)

Tree [rate](#)

Introduced 16.0.R1

Platforms All

### **cir** (*number* | *keyword*)

Synopsis CIR at which the queue it to operate

Context **configure** [service vprn](#) *string* [interface](#) *string* [sap](#) *string* [ingress qos scheduler-policy overrides scheduler](#) *string* [rate cir](#) (*number* | *keyword*)

Tree [cir](#)

Range	0 to 6400000000
Units	kilobps
Options	sum, max
Introduced	16.0.R1
Platforms	All

### **pir** (*number* | *keyword*)

Synopsis	PIR at which the queue is to operate
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress qos scheduler-policy overrides scheduler</a> <i>string</i> <b>rate</b> <b>pir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">pir</a>
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	All

### **policy-name** *reference*

Synopsis	Scheduler policy name
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress qos scheduler-policy policy-name</a> <i>reference</i>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos scheduler-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **queue-group-redirect-list** *reference*

Synopsis	Queue group redirect list
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress queue-group-redirect-list</a> <i>reference</i>
Tree	<a href="#">queue-group-redirect-list</a>
Reference	<b>configure</b> <a href="#">qos queue-group-redirect-list</a> <i>string</i>
Introduced	16.0.R1

Platforms All

### **ip-tunnel** [tunnel-name] *string*

Synopsis Enter the **ip-tunnel** list instance  
Context **configure** [service vprn](#) *string* [interface](#) *string* [sap](#) *string* [ip-tunnel](#) *string*  
Tree [ip-tunnel](#)  
Max. Instances 1  
Introduced 16.0.R1  
Platforms All

### **[tunnel-name]** *string*

Synopsis IP tunnel name  
Context **configure** [service vprn](#) *string* [interface](#) *string* [sap](#) *string* [ip-tunnel](#) *string*  
Tree [ip-tunnel](#)  
String Length 1 to 32  
Notes This element is part of a list key.  
Introduced 16.0.R1  
Platforms All

### **admin-state** *keyword*

Synopsis Administrative state of the IP tunnel  
Context **configure** [service vprn](#) *string* [interface](#) *string* [sap](#) *string* [ip-tunnel](#) *string* [admin-state](#) *keyword*  
Tree [admin-state](#)  
Default disable  
Options enable, disable  
Introduced 16.0.R1  
Platforms All

## backup-remote-ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Backup remote IP address that is applied to this tunnel
Context	<b>configure</b> <b>service</b> <b>vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>backup-remote-ip-address</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>backup-remote-ip-address</b>
Introduced	16.0.R1
Platforms	All

## clear-df-bit *boolean*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Clear the Do-not-Fragment bit
Context	<b>configure</b> <b>service</b> <b>vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>clear-df-bit</b> <i>boolean</i>
Tree	<b>clear-df-bit</b>
Description	When configured to <b>true</b> , the DF bit is cleared (set to 0) in all payload IP packets associated with the GRE or IPsec tunnel, before any potential fragmentation resulting from the ip-mtu command. This requires a modification of the header checksum. When configured to <b>false</b> , clearing of the DF bit is disabled.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## delivery-service *string*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Service to originate and terminate GRE packets
Context	<b>configure</b> <b>service</b> <b>vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>delivery-service</b> <i>string</i>

Tree	<a href="#">delivery-service</a>
Description	This command specifies the service used to originate and terminate the GRE encapsulated packets belonging to the GRE tunnel. The delivery service may be the same service that owns the private tunnel SAP associated with the GRE tunnel. The GRE tunnel does not come up until a valid delivery service is configured.
String Length	1 to 64
Introduced	16.0.R1
Platforms	All

### **description string**

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Text description
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ip-tunnel</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **dest-ip [dest-ip-address] (ipv4-address-no-zone | ipv6-address-no-zone)**

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Add a list entry for <b>dest-ip</b>
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ip-tunnel</a> <i>string</i> <a href="#">dest-ip</a> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> )
Tree	<a href="#">dest-ip</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[dest-ip-address] (ipv4-address-no-zone | ipv6-address-no-zone)**

Synopsis	IP address of the remote IP tunnel endpoint
----------	---

Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>dest-ip</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> )
Tree	<b>dest-ip</b>
Description	This command configures the IP address of the remote IP tunnel endpoint. If the remote IP address is not within the subnet of the IP interface associated with the tunnel, the tunnel fails to come up.
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **dscp** *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Differentiated Services Code Point (DSCP) name
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>dscp</b> <i>keyword</i>
Tree	<b>dscp</b>
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **encapsulated-ip-mtu** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum size of the encapsulated tunnel packet
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>encapsulated-ip-mtu</b> <i>number</i>
Tree	<b>encapsulated-ip-mtu</b>
Description	This command specifies the maximum size of the encapsulated tunnel packet for the IP tunnel. If the packet exceeds this value, the system fragments the packet.

Range	512 to 9000
Units	bytes
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## gre-header

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>gre-header</b> context
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">interface string sap string ip-tunnel string</a> <b>gre-header</b>
Tree	<a href="#">gre-header</a>
Introduced	16.0.R1
Platforms	All

## admin-state *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of the GRE header in the tunnel
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">interface string sap string ip-tunnel string</a> <a href="#">gre-header</a> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Introduced	16.0.R1
Platforms	All

## key

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>key</b> context
----------	------------------------------

Context	<b>configure service vprn string interface string sap string ip-tunnel string gre-header key</b>
Tree	<b>key</b>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of the keys in the GRE header
Context	<b>configure service vprn string interface string sap string ip-tunnel string gre-header key admin-state keyword</b>
Tree	<b>admin-state</b>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **receive number**

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Receive key of the GRE header
Context	<b>configure service vprn string interface string sap string ip-tunnel string gre-header key receive number</b>
Tree	<b>receive</b>
Max. Range	0 to 4294967295
Default	0
Introduced	16.0.R1
Platforms	All

## send number

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Send key of the GRE header
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ip-tunnel</a> <i>string</i> <a href="#">gre-header</a> <i>key</i> <a href="#">send</a> <i>number</i>
Tree	<a href="#">send</a>
Max. Range	0 to 4294967295
Default	0
Introduced	16.0.R1
Platforms	All

## icmp-generation

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>icmp-generation</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ip-tunnel</a> <i>string</i> <a href="#">icmp-generation</a>
Tree	<a href="#">icmp-generation</a>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## frag-required

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>frag-required</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ip-tunnel</a> <i>string</i> <a href="#">icmp-generation</a> <a href="#">frag-required</a>
Tree	<a href="#">frag-required</a>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **admin-state** *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Send fragmentation required messages
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>icmp-generation</b> <b>frag-required</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **interval** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum interval that the ICMP messages can be sent
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>icmp-generation</b> <b>frag-required</b> <b>interval</b> <i>number</i>
Tree	<b>interval</b>
Range	1 to 60
Default	10
Units	seconds
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **message-count** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of ICMP messages sent
----------	--------------------------------------

Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>icmp-generation</b> <b>frag-required message-count</b> <i>number</i>
Tree	<b>message-count</b>
Description	This command configures the maximum number of ICMP messages that can be sent during the period specified by the <b>interval</b> command.
Range	10 to 1000
Default	100
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## icmp6-generation

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>icmp6-generation</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>icmp6-generation</b>
Tree	<b>icmp6-generation</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## packet-too-big

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>packet-too-big</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>icmp6-generation packet-too-big</b>
Tree	<b>packet-too-big</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **admin-state** *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of sending Packet Too Big messages
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>icmp6-generation</b> <b>packet-too-big</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **number** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of PTB ICMPv6 messages that can be sent
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>icmp6-generation</b> <b>packet-too-big</b> <b>number</b> <i>number</i>
Tree	<b>number</b>
Description	This command configures the maximum number of ICMPv6 messages that can be sent during the configured interval.
Range	10 to 1000
Default	100
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **seconds** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum interval when PTB messages can be sent
----------	--

Context	<b>configure service vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>icmp6-generation</b> <b>packet-too-big</b> <i>seconds</i> <i>number</i>
Tree	<b>seconds</b>
Range	1 to 60
Default	10
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ip-mtu** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IP MTU for the interface
Context	<b>configure service vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>ip-mtu</b> <i>number</i>
Tree	<b>ip-mtu</b>
Description	This command specifies the IP MTU for the interface. If the DF bit is not set in the packet, IP packet fragmentation is performed, if necessary, based on this configured value.  When unconfigured, all IP packets, regardless of the packet size or DF bit setting, are allowed into the tunnel without fragmentation.
Range	512 to 9000
Units	bytes
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ipsec-transport-mode-profile** *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPsec transport mode profile name
Context	<b>configure service vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>ipsec-transport-mode-profile</b> <i>reference</i>
Tree	<b>ipsec-transport-mode-profile</b>

Reference	<b>configure ipsec ipsec-transport-mode-profile</b> <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## local-ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local IP address of this tunnel
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>local-ip-address</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>local-ip-address</b>
Description	This command specifies the local IP address to use for the IP tunnel. This configuration applies to the outer IP header of the encapsulated packets. The address must belong to one of the IP subnets associated with the public SAP interface of the tunnel group. The source IP address, the remote IP address, and the backup remote IP address of a tunnel must all belong to the same address family (IPv4 or IPv6).  When this command specifies an IPv6 address, it must be a global unicast address.
Introduced	16.0.R1
Platforms	All

## pmtu-discovery-aging *number*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time to age out the learned path MTU
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>pmtu-discovery-aging</b> <i>number</i>
Tree	<b>pmtu-discovery-aging</b>
Description	This command configures the temporary public MTU expiration time. The temporary public MTU is used for MTU propagation.
Range	900 to 3600
Default	900
Units	seconds

Introduced 21.5.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **private-tcp-mss-adjust** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis TCP Maximum Segment Size (MSS) on the private side  
Context **configure** *service vprn string interface string sap string ip-tunnel string private-tcp-mss-adjust number*  
Tree *private-tcp-mss-adjust*  
Description This command specifies the TCP MSS to adjust for tunnels on the private side. The value is used to adjust the TCP MSS option in the TCP SYN packet.  
Range 512 to 9000  
Units bytes  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **propagate-pmtu-v4** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enable propagation of the path MTU to IPv4 hosts  
Context **configure** *service vprn string interface string sap string ip-tunnel string propagate-pmtu-v4 boolean*  
Tree *propagate-pmtu-v4*  
Introduced 21.5.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## propagate-pmtu-v6 *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable propagation of path MTU to IPv6 hosts
Context	<b>configure</b> <i>service vprn string interface string sap string ip-tunnel string propagate-pmtu-v6 boolean</i>
Tree	<a href="#">propagate-pmtu-v6</a>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## public-tcp-mss-adjust (*number | keyword*)

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	TCP Maximum Segment Size (MSS) on the public side
Context	<b>configure</b> <i>service vprn string interface string sap string ip-tunnel string public-tcp-mss-adjust (number   keyword)</i>
Tree	<a href="#">public-tcp-mss-adjust</a>
Description	This command specifies the TCP MSS for TCP traffic sent from the public network to the private network. The value is used to adjust the TCP MSS option in the TCP SYN packet.
Range	512 to 9000
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## reassemble (*number | keyword*)

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum reassembly wait time
----------	------------------------------

Context	<b>configure service vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>reassemble</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>reassemble</b>
Description	This command configures the maximum time to wait to receive all fragments of a particular IPsec or GRE packet for reassembly.
Range	1 to 5000
Units	milliseconds
Options	use-tunnel-group-setting, none
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **remote-ip-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Remote IP address of the tunnel
Context	<b>configure service vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>remote-ip-address</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>remote-ip-address</b>
Introduced	16.0.R1
Platforms	All

### **ipsec-gateway** [**name**] *string*

Synopsis	Enter the <b>ipsec-gateway</b> list instance
Context	<b>configure service vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i>
Tree	<b>ipsec-gateway</b>
Max. Instances	1
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### [**name**] *string*

Synopsis	IPsec gateway name
----------	--------------------

Context	<b>configure service vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i>
Tree	<b>ipsec-gateway</b>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of the IPsec gateway
Context	<b>configure service vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Default	disable
Options	enable, disable
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **cert**

Synopsis	Enter the <b>cert</b> context
Context	<b>configure service vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>cert</b>
Tree	<b>cert</b>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **cert-profile** *reference*

Synopsis	Certificate profile name
Context	<b>configure service vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>cert</b> <b>cert-profile</b> <i>reference</i>
Tree	<b>cert-profile</b>
Reference	<b>configure ipsec cert-profile</b> <i>string</i>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## status-verify

Synopsis	Enter the <b>status-verify</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>cert status-verify</b>
Tree	<b>status-verify</b>
Description	Commands in this context configure certificate revocation status verification.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## default-result *keyword*

Synopsis	Default result of Certificate Status Verification (CSV)
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>cert status-verify default-result</b> <i>keyword</i>
Tree	<b>default-result</b>
Description	This command specifies the default result when both the primary and secondary methods fail to provide an answer.
Default	revoked
Options	revoked, good
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## primary *keyword*

Synopsis	Primary method of CSV to verify the revocation status
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>cert status-verify primary</b> <i>keyword</i>
Tree	<b>primary</b>
Default	crI
Options	crI, ocsp
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **secondary** *keyword*

Synopsis	Secondary method of CSV to verify the revocation status
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">cert status-verify</a> <b>secondary</b> <i>keyword</i>
Tree	<a href="#">secondary</a>
Default	none
Options	none, <a href="#">crl</a> , <a href="#">ocsp</a>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **trust-anchor-profile** *reference*

Synopsis	Trust anchor profile name
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">cert trust-anchor-profile</a> <i>reference</i>
Tree	<a href="#">trust-anchor-profile</a>
Reference	<b>configure</b> <a href="#">ipsec trust-anchor-profile</a> <i>string</i>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **client-db**

Synopsis	Enable the <b>client-db</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <b>client-db</b>
Tree	<a href="#">client-db</a>
Description	Commands in this context configure the IPsec client database. The client database is used to authenticate the IKEv2 dynamic LAN-to-LAN tunnel.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **fallback** *boolean*

Synopsis	Fall back to the default authentication policy
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">client-db</a> <b>fallback</b> <i>boolean</i>
Tree	<a href="#">fallback</a>

Description	When configured to <b>true</b> , this command specifies whether the IPsec gateway can fall back to the default authentication policy when the IPsec tunnel authentication request fails to match any clients in the IPsec database.  When configured to <b>false</b> and the client database lookup fails to return a matched result, the system fails the tunnel setup.
Default	true
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### name reference

Synopsis	Client database name
Context	<b>configure service vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>client-db</b> <i>name reference</i>
Tree	<b>name</b>
Reference	<b>configure ipsec client-db</b> <i>string</i>
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### default-secure-service

Synopsis	Enable the <b>default-secure-service</b> context
Context	<b>configure service vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>default-secure-service</b>
Tree	<b>default-secure-service</b>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### interface string

#### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Private IPsec tunnel interface name
Context	<b>configure service vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>default-secure-service interface</b> <i>string</i>

Tree	<a href="#">interface</a>
String Length	1 to 32
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **service-name** *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Default security service name
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">default-secure-service</a> <a href="#">service-name</a> <i>string</i>
Tree	<a href="#">service-name</a>
String Length	1 to 64
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **default-tunnel-template** *reference*

Synopsis	Default tunnel policy template for the gateway
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">default-tunnel-template</a> <i>reference</i>
Tree	<a href="#">default-tunnel-template</a>
Reference	<b>configure</b> <a href="#">ipsec tunnel-template</a> <i>number</i>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **dhcp-address-assignment**

Synopsis	Enter the <b>dhcp-address-assignment</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">dhcp-address-assignment</a>
Tree	<a href="#">dhcp-address-assignment</a>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## dhcpv4

Synopsis	Enable the <b>dhcpv4</b> context
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>dhcp-address-assignment dhcpv4</b>
Tree	<b>dhcpv4</b>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## admin-state *keyword*

Synopsis	Administrative state of the IPsec DHCPv4 server
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>dhcp-address-assignment dhcpv4 admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Default	disable
Options	enable, disable
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## gi-address *string*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Gateway IP address of DHCPv4 packets sent by the system
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>dhcp-address-assignment dhcpv4 gi-address</b> <i>string</i>
Tree	<b>gi-address</b>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## send-release *boolean*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Send DHCPv4 release message when IPsec tunnel removed
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>dhcp-address-assignment dhcpv4</b> <b>send-release</b> <i>boolean</i>
Tree	<b>send-release</b>
Default	true
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## server

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>server</b> context
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>dhcp-address-assignment dhcpv4</b> <b>server</b>
Tree	<b>server</b>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## address *string*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	DHCPv4 server addresses
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>dhcp-address-assignment dhcpv4</b> <b>server</b> <b>address</b> <i>string</i>
Tree	<b>address</b>
Description	This command specifies DHCPv4 server addresses for the DHCPv4-based address assignment. If multiple server addresses are specified, the first advertised DHCPv4 address received is chosen.

Max. Instances	8
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### router-instance *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Router instance used to reach the DHCPv4 server
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">dhcp-address-assignment dhcpv4 server router-instance</a> <i>string</i>
Tree	<a href="#">router-instance</a>
String Length	1 to 64
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### dhcpv6

Synopsis	Enable the <b>dhcpv6</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">dhcp-address-assignment dhcpv6</a>
Tree	<a href="#">dhcpv6</a>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### admin-state *keyword*

Synopsis	Administrative state of the DHCPv6 server
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">dhcp-address-assignment dhcpv6 admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	19.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### link-address *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Link address of the relayed DHCPv6 packets

Context **configure** *service vprn string interface string sap string ipsec-gateway string dhcp-address-assignment dhcpv6 link-address string*

Tree *link-address*

Introduced 19.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### send-release *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Send DHCPv6 release message when IPsec tunnel removed

Context **configure** *service vprn string interface string sap string ipsec-gateway string dhcp-address-assignment dhcpv6 send-release boolean*

Tree *send-release*

Default true

Introduced 19.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### server

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enter the **server** context

Context **configure** *service vprn string interface string sap string ipsec-gateway string dhcp-address-assignment dhcpv6 server*

Tree *server*

Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### address *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	DHCPv6 server addresses
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>dhcp-address-assignment dhcpv6 server address</b> <i>string</i>
Tree	<b>address</b>
Description	This command specifies DHCPv6 server addresses for the DHCPv6-based address assignment. If multiple server addresses are specified, the first advertised DHCPv6 address received is chosen.
Max. Instances	8
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### router-instance *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Router instance to reach the DHCPv6 server
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>dhcp-address-assignment dhcpv6 server router-instance</b> <i>string</i>
Tree	<b>router-instance</b>
String Length	1 to 64
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### ike-policy *reference*

Synopsis	IKE policy ID
----------	---------------

Context	<b>configure service vpn</b> <i>string interface string sap string ipsec-gateway string ike-policy reference</i>
Tree	<a href="#">ike-policy</a>
Reference	<b>configure ipsec ike-policy</b> <i>number</i>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## local

Synopsis	Enter the <b>local</b> context
Context	<b>configure service vpn</b> <i>string interface string sap string ipsec-gateway string local</i>
Tree	<a href="#">local</a>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## address-assignment

Synopsis	Enable the <b>address-assignment</b> context
Context	<b>configure service vpn</b> <i>string interface string sap string ipsec-gateway string local address-assignment</i>
Tree	<a href="#">address-assignment</a>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## admin-state *keyword*

Synopsis	Administrative state of local address assignments
Context	<b>configure service vpn</b> <i>string interface string sap string ipsec-gateway string local address-assignment admin-state keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ipv4

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the <b>ipv4</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>local address-assignment ipv4</b>
Tree	<b>ipv4</b>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## dhcp-server *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local DHCPv4 server name
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>local address-assignment ipv4 dhcp-server</b> <i>string</i>
Tree	<b>dhcp-server</b>
String Length	1 to 32
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## pool *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Name of the pool defined in the specified DHCPv4 server
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>local address-assignment ipv4 pool</b> <i>string</i>
Tree	<b>pool</b>
String Length	1 to 32

Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### router-instance *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Router instance ID for the local DHCPv4 server
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">local address-assignment ipv4</a> <a href="#">router-instance</a> <i>string</i>
Tree	<a href="#">router-instance</a>
String Length	1 to 64
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### secondary-pool *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Name of the secondary pool defined in the DHCPv4 server
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">local address-assignment ipv4</a> <a href="#">secondary-pool</a> <i>string</i>
Tree	<a href="#">secondary-pool</a>
String Length	1 to 32
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ipv6

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the <b>ipv6</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>local address-assignment ipv6</b>
Tree	<b>ipv6</b>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## dhcp-server *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local DHCPv6 server name
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>local address-assignment ipv6 dhcp-server</b> <i>string</i>
Tree	<b>dhcp-server</b>
String Length	1 to 32
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## pool *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Secondary pool name defined in the DHCPv6 server
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>local address-assignment ipv6 pool</b> <i>string</i>
Tree	<b>pool</b>
String Length	1 to 32

Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### router-instance *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Router instance ID hosting the DHCPv6 connection
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">local address-assignment ipv6 router-instance</a> <i>string</i>
Tree	<a href="#">router-instance</a>
String Length	1 to 64
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### gateway-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local gateway address of the IPsec gateway
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">local gateway-address</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">gateway-address</a>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### id

Synopsis	Enter the <b>id</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">local id</a>
Tree	<a href="#">id</a>

Description	Commands in this context specify the local ID used for the Identification Indicator (IDi) or Identification Responder (IDr) in the IKEv2 tunnel.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## auto

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Select ID based on authentication method in IKE policy
Context	<b>configure service vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>local id</b> <b>auto</b>
Tree	<b>auto</b>
Notes	This element is the default part of a choice. The following elements are part of a choice: <b>auto</b> , <b>fqdn</b> , <b>ipv4</b> , or <b>ipv6</b> .
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## fqdn *string*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	FQDN as the local ID type
Context	<b>configure service vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>local id</b> <b>fqdn</b> <i>string</i>
Tree	<b>fqdn</b>
String Length	1 to 255
Notes	The following elements are part of a choice: <b>auto</b> , <b>fqdn</b> , <b>ipv4</b> , or <b>ipv6</b> .
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ipv4 string

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPv4 address as the local ID type
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">local id</a> <a href="#">ipv4</a> <i>string</i>
Tree	<a href="#">ipv4</a>
Notes	The following elements are part of a choice: <b>auto</b> , <b>fqdn</b> , <b>ipv4</b> , or <b>ipv6</b> .
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ipv6 (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPv6 address as the local ID type
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">local id</a> <a href="#">ipv6</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">ipv6</a>
Notes	The following elements are part of a choice: <b>auto</b> , <b>fqdn</b> , <b>ipv4</b> , or <b>ipv6</b> .
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## max-history-key-records

Synopsis	Enter the <b>max-history-key-records</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">max-history-key-records</a>
Tree	<a href="#">max-history-key-records</a>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **esp number**

Synopsis	Maximum number of recent records
Context	<b>configure service vprn string interface string sap string ipsec-gateway string max-history-key-records esp number</b>
Tree	<b>esp</b>
Range	1 to 48
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ike number**

Synopsis	Maximum number of historical IKE keys recorded
Context	<b>configure service vprn string interface string sap string ipsec-gateway string max-history-key-records ike number</b>
Tree	<b>ike</b>
Range	1 to 3
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **pre-shared-key string**

Synopsis	Pre-shared key for the IPsec gateway
Context	<b>configure service vprn string interface string sap string ipsec-gateway string pre-shared-key string</b>
Tree	<b>pre-shared-key</b>
String Length	1 to 115
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **radius**

Synopsis	Enter the <b>radius</b> context
Context	<b>configure service vprn string interface string sap string ipsec-gateway string radius</b>
Tree	<b>radius</b>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### accounting-policy *reference*

Synopsis	RADIUS accounting policy
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">radius accounting-policy</a> <i>reference</i>
Tree	<a href="#">accounting-policy</a>
Reference	<b>configure</b> <a href="#">ipsec radius accounting-policy</a> <i>string</i>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### authentication-policy *reference*

Synopsis	RADIUS authentication policy
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">radius authentication-policy</a> <i>reference</i>
Tree	<a href="#">authentication-policy</a>
Reference	<b>configure</b> <a href="#">ipsec radius authentication-policy</a> <i>string</i>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### ts-list *reference*

Synopsis	TS list used for IKEv2 TS negotiation
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">ts-list</a> <i>reference</i>
Tree	<a href="#">ts-list</a>
Reference	<b>configure</b> <a href="#">ipsec ts-list</a> <i>string</i>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### ipsec-tunnel [[name](#)] *string*

Synopsis	Enter the <b>ipsec-tunnel</b> list instance
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-tunnel</a> <i>string</i>
Tree	<a href="#">ipsec-tunnel</a>
Introduced	19.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[name]** *string*

Synopsis IPsec tunnel name  
Context **configure** [service vprn](#) *string* [interface](#) *string* [sap](#) *string* [ipsec-tunnel](#) *string*  
Tree [ipsec-tunnel](#)  
String Length 1 to 32  
Notes This element is part of a list key.  
Introduced 19.7.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis Administrative state of the IPsec tunnel  
Context **configure** [service vprn](#) *string* [interface](#) *string* [sap](#) *string* [ipsec-tunnel](#) *string* **admin-state** *keyword*  
Tree [admin-state](#)  
Default disable  
Options enable, disable  
Introduced 19.7.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **bfd**

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enter the **bfd** context  
Context **configure** [service vprn](#) *string* [interface](#) *string* [sap](#) *string* [ipsec-tunnel](#) *string* **bfd**  
Tree [bfd](#)  
Introduced 19.7.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## bfd-designate *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Designate IPsec tunnel to carry BFD traffic
Context	<b>configure</b> <i>service vprn string interface string sap string ipsec-tunnel string bfd bfd-designate boolean</i>
Tree	<i>bfd-designate</i>
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## bfd-liveness

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the <b>bfd-liveness</b> context
Context	<b>configure</b> <i>service vprn string interface string sap string ipsec-tunnel string bfd bfd-liveness</i>
Tree	<i>bfd-liveness</i>
Description	Commands in this context configure a BFD session to provide a heart-beat mechanism for a specified IPsec tunnel. There can be only one BFD session assigned to any given IPsec tunnel, but there can be multiple IPsec tunnels using the same BFD session.  BFD controls the state of the association tunnel. If the BFD session goes down, the system brings down the associated non-designated IPsec tunnel.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## dest-ip *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Destination address used for the BFD session
----------	--

Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-tunnel</b> <i>string</i> <b>bfd bfd-liveness dest-ip</b> <i>string</i>
Tree	<b>dest-ip</b>
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **interface** *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Name of the interface used by the BFD session
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-tunnel</b> <i>string</i> <b>bfd bfd-liveness interface</b> <i>string</i>
Tree	<b>interface</b>
String Length	1 to 32
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **service-name** *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative service name
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-tunnel</b> <i>string</i> <b>bfd bfd-liveness service-name</b> <i>string</i>
Tree	<b>service-name</b>
Description	This command configures the name of the service where BFD traffic is forwarded to.
String Length	1 to 64
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## clear-df-bit *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Reset the DF bit to 0 in all payload IP packets
Context	<b>configure</b> <b>service vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-tunnel</b> <i>string</i> <b>clear-df-bit</b> <i>boolean</i>
Tree	<b>clear-df-bit</b>
Description	When configured to <b>true</b> , the DF bit is set to 0 in all payload IP packets associated with the IPsec tunnel, before any potential fragmentation occurs.
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## copy-traffic-class-upon-decapsulation *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable traffic class copy upon decapsulation
Context	<b>configure</b> <b>service vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-tunnel</b> <i>string</i> <b>copy-traffic-class-upon-decapsulation</b> <i>boolean</i>
Tree	<b>copy-traffic-class-upon-decapsulation</b>
Description	When configured to <b>true</b> , the system copies the traffic class from the outer tunnel IP packet header to the payload IP packet header in the decapsulating direction (public to private).
Default	false
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## description *string*

Synopsis	Text description
Context	<b>configure</b> <b>service vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-tunnel</b> <i>string</i> <b>description</b> <i>string</i>

Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **dest-ip** [[address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Add a list entry for <b>dest-ip</b>
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-tunnel</a> <i>string</i> <b>dest-ip</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">dest-ip</a>
Max. Instances	16
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[address]** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Private IP address of the remote IP tunnel endpoint
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-tunnel</a> <i>string</i> <b>dest-ip</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">dest-ip</a>
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **encapsulated-ip-mtu** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum size of the encapsulated tunnel packet
----------	--

Context	<b>configure service vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-tunnel</b> <i>string</i> <b>encapsulated-ip-mtu</b> <i>number</i>
Tree	<b>encapsulated-ip-mtu</b>
Description	This command specifies the maximum size of the encapsulated tunnel packet to the IPsec tunnel, the IP tunnel, or the dynamic tunnels terminated on the IPsec Gateway. If the encapsulated IPv4 or IPv6 tunnel packet exceeds this value, the system fragments the packet.
Range	512 to 9000
Units	bytes
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## icmp-generation

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>icmp-generation</b> context
Context	<b>configure service vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-tunnel</b> <i>string</i> <b>icmp-generation</b>
Tree	<b>icmp-generation</b>
Description	Commands in this context configure settings for ICMPv4 message generation.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## frag-required

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>frag-required</b> context
Context	<b>configure service vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-tunnel</b> <i>string</i> <b>icmp-generation frag-required</b>
Tree	<b>frag-required</b>
Description	Commands in this context configure the attributes for sending generated ICMP Destination Unreachable "fragmentation needed and DF set" messages (type 3, code 4)

back to the source, if the received size of the IPv4 packet on the private side exceeds the private MTU size.

Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of sending ICMP messages
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-tunnel</b> <i>string</i> <b>icmp-generation</b> <b>frag-required</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Description	This command configures the administrative state of sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) messages to the source if the received size of the IPv4 packet on the private side exceeds the private MTU size.
Default	enable
Options	enable, disable
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **interval** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Interval for sending ICMP messages
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-tunnel</b> <i>string</i> <b>icmp-generation</b> <b>frag-required</b> <b>interval</b> <i>number</i>
Tree	<b>interval</b>
Description	This command configures the interval for sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4).
Range	1 to 60
Default	10
Units	seconds

Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## message-count *number*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of ICMP messages that can be sent
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-tunnel</b> <i>string</i> <b>icmp-generation</b> <b>frag-required</b> <b>message-count</b> <i>number</i>
Tree	<b>message-count</b>
Description	This command configures the maximum number of ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) that can be sent during the configured interval.
Range	10 to 1000
Default	100
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## icmp6-generation

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>icmp6-generation</b> context
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-tunnel</b> <i>string</i> <b>icmp6-generation</b>
Tree	<b>icmp6-generation</b>
Description	Commands in this context configure settings for ICMPv6 message generation.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## packet-too-big

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>packet-too-big</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-tunnel</b> <i>string</i> <b>icmp6-generation packet-too-big</b>
Tree	<b>packet-too-big</b>
Description	<p>Commands in this context configure the parameters to send ICMPv6 PTB (Packet Too Big) messages on the private side.</p> <p>The system sends PTB messages if a received IPv6 packet on the private side is greater than 1280 bytes and it exceeds the private MTU of the tunnel.</p> <p>The private MTU for the tunnel is configured via the <b>configure router interface ipsec ipsec-tunnel ip-mtu</b> command for the interface.</p>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## admin-state *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of Packet Too Big message sends
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-tunnel</b> <i>string</i> <b>icmp6-generation packet-too-big admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Default	enable
Options	enable, disable
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## interval *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Interval for sending Packet Too Big messages
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-tunnel</b> <i>string</i> <b>icmp6-generation</b> <b>packet-too-big</b> <b>interval</b> <i>number</i>
Tree	<b>interval</b>
Range	1 to 60
Default	10
Units	seconds
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **message-count** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of ICMPv6 PTB messages that can be sent
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-tunnel</b> <i>string</i> <b>icmp6-generation</b> <b>packet-too-big</b> <b>message-count</b> <i>number</i>
Tree	<b>message-count</b>
Description	This command configures the maximum number of PTB messages that can be sent during the configured interval.
Range	10 to 1000
Default	100
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ip-mtu** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Private MTU of the IPsec tunnel
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-tunnel</b> <i>string</i> <b>ip-mtu</b> <i>number</i>
Tree	<b>ip-mtu</b>

Description	This command specifies the private MTU of the IPsec tunnel. The private MTU is used to determine the need for fragmentation before encapsulation of the payload packet.
Range	512 to 9000
Units	bytes
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## key-exchange

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>key-exchange</b> context
Context	<b>configure service vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-tunnel</b> <i>string</i> <b>key-exchange</b>
Tree	<b>key-exchange</b>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## dynamic

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the <b>dynamic</b> context
Context	<b>configure service vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-tunnel</b> <i>string</i> <b>key-exchange dynamic</b>
Tree	<b>dynamic</b>
Notes	The following elements are part of a choice: <b>dynamic</b> or <b>manual</b> .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## auto-establish *boolean*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Attempt to establish a phase 1 exchange automatically
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange</a> <a href="#">dynamic</a> <a href="#">auto-establish</a> <i>boolean</i>
Tree	<a href="#">auto-establish</a>
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## cert

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>cert</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange</a> <a href="#">dynamic</a> <a href="#">cert</a>
Tree	<a href="#">cert</a>
Description	Commands in this context configure the attributes of the dynamic keying certificate.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## cert-profile *reference*

Synopsis	Certificate profile name
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange</a> <a href="#">dynamic</a> <a href="#">cert</a> <a href="#">cert-profile</a> <i>reference</i>
Tree	<a href="#">cert-profile</a>
Reference	<b>configure</b> <a href="#">ipsec</a> <a href="#">cert-profile</a> <i>string</i>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## status-verify

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>status-verify</b> context
Context	<b>configure</b> <a href="#">service vpn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange</a> <a href="#">dynamic cert</a> <b>status-verify</b>
Tree	<a href="#">status-verify</a>
Description	Commands in this context configure attributes of Certificate Status Verification (CSV).
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## default-result *keyword*

Synopsis	Default result for Certificate Status Verification
Context	<b>configure</b> <a href="#">service vpn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange</a> <a href="#">dynamic cert</a> <b>status-verify</b> <b>default-result</b> <i>keyword</i>
Tree	<a href="#">default-result</a>
Description	This command specifies the default certificate revocation status result to use when all configured CSV methods fail to return a result.
Default	revoked
Options	revoked, good
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## primary *keyword*

Synopsis	Primary method of CSV to verify the revocation status
Context	<b>configure</b> <a href="#">service vpn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange</a> <a href="#">dynamic cert</a> <b>status-verify</b> <b>primary</b> <i>keyword</i>
Tree	<a href="#">primary</a>
Description	This command configures the primary method of Certificate Status Verification (CSV) that is used to verify the revocation status of the certificate of the peer.
Default	crl
Options	crl, ocsp

Introduced 19.7.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **secondary** *keyword*

Synopsis Secondary method used to verify certificate revocation  
Context **configure** [service vprn](#) *string* [interface](#) *string* [sap](#) *string* [ipsec-tunnel](#) *string* [key-exchange](#) [dynamic cert status-verify](#) **secondary** *keyword*  
Tree [secondary](#)  
Description This command specifies the secondary method of Certificate Status Verification (CSV) that is used to verify the revocation status of the peer certificate.  
Default none  
Options none, [crl](#), [ocsp](#)  
Introduced 19.7.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **trust-anchor-profile** *reference*

Synopsis Trust anchor profile name  
Context **configure** [service vprn](#) *string* [interface](#) *string* [sap](#) *string* [ipsec-tunnel](#) *string* [key-exchange](#) [dynamic cert](#) **trust-anchor-profile** *reference*  
Tree [trust-anchor-profile](#)  
Reference **configure** [ipsec](#) **trust-anchor-profile** *string*  
Introduced 19.7.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **id**

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enter the **id** context  
Context **configure** [service vprn](#) *string* [interface](#) *string* [sap](#) *string* [ipsec-tunnel](#) *string* [key-exchange](#) **dynamic id**  
Tree [id](#)  
Description Commands in this context specify the local ID used for IDi or IDr for IKEv2 negotiation.

The default behavior depends on the local authentication method as follows:

- Psk: local tunnel IP address
- Cert-auth: subject of the local certificate

Introduced 19.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### fqdn string

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis FQDN used as the local ID IKE type

Context **configure** service vprn string interface string sap string ipsec-tunnel string key-exchange dynamic id fqdn string

Tree fqdn

String Length 1 to 255

Notes The following elements are part of a choice: **fqdn**, **ipv4**, or **ipv6**.

Introduced 19.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### ipv4 string

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis IPv4 as the local ID type

Context **configure** service vprn string interface string sap string ipsec-tunnel string key-exchange dynamic id ipv4 string

Tree ipv4

Notes The following elements are part of a choice: **fqdn**, **ipv4**, or **ipv6**.

Introduced 19.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ipv6 (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPv6 used as the local IKE ID type
Context	<b>configure</b> <i>service vprn string interface string sap string ipsec-tunnel string key-exchange dynamic id ipv6 (ipv4-address-no-zone   ipv6-address-no-zone)</i>
Tree	<a href="#">ipv6</a>
Notes	The following elements are part of a choice: <b>fqdn</b> , <b>ipv4</b> , or <b>ipv6</b> .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ike-policy *reference*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IKE policy ID
Context	<b>configure</b> <i>service vprn string interface string sap string ipsec-tunnel string key-exchange dynamic ike-policy reference</i>
Tree	<a href="#">ike-policy</a>
Description	This command specifies the ID of the IKE policy used for IKE negotiation. The <b>ipsec-transport-mode-profile</b> configuration only supports IKEv2.
Reference	<b>configure</b> <a href="#">ipsec ike-policy</a> <i>number</i>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ipsec-transform *reference*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPsec transform IDs used by the dynamic key
Context	<b>configure</b> <i>service vprn string interface string sap string ipsec-tunnel string key-exchange dynamic ipsec-transform reference</i>

Tree	<a href="#">ipsec-transform</a>
Description	This command specifies IPsec transform IDs used for CHILD_SA negotiation.
Reference	<b>configure</b> <a href="#">ipsec ipsec-transform</a> <i>number</i>
Max. Instances	4
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### pre-shared-key *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Pre-shared key for authentication
Context	<b>configure</b> <a href="#">service vpn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange dynamic pre-shared-key</a> <i>string</i>
Tree	<a href="#">pre-shared-key</a>
String Length	1 to 115
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### manual

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the <b>manual</b> context
Context	<b>configure</b> <a href="#">service vpn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange manual</a>
Tree	<a href="#">manual</a>
Notes	The following elements are part of a choice: <b>dynamic</b> or <b>manual</b> .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **keys** [*security-association*] *number direction keyword*

### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>keys</b> list instance
Context	<b>configure service vpn</b> <i>string interface string sap string ipsec-tunnel string key-exchange manual keys number direction keyword</i>
Tree	<b>keys</b>
Description	Commands in this context configure the security association list for the tunnel.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **[security-association]** *number*

Synopsis	SA entry ID
Context	<b>configure service vpn</b> <i>string interface string sap string ipsec-tunnel string key-exchange manual keys number direction keyword</i>
Tree	<b>keys</b>
Range	1 to 16
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **direction** *keyword*

Synopsis	Direction of the IPsec tunnel
Context	<b>configure service vpn</b> <i>string interface string sap string ipsec-tunnel string key-exchange manual keys number direction keyword</i>
Tree	<b>keys</b>
Options	inbound, outbound
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## authentication-key *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Key used for the authentication algorithm
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-tunnel</b> <i>string</i> <b>key-exchange</b> <b>manual</b> <b>keys</b> <i>number</i> <b>direction</b> <i>keyword</i> <b>authentication-key</b> <i>string</i>
Tree	<b>authentication-key</b>
String Length	1 to 130
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## encryption-key *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Key used for the encryption algorithm
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-tunnel</b> <i>string</i> <b>key-exchange</b> <b>manual</b> <b>keys</b> <i>number</i> <b>direction</b> <i>keyword</i> <b>encryption-key</b> <i>string</i>
Tree	<b>encryption-key</b>
String Length	1 to 66
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ipsec-transform *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Transform entry used by manual SAs
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange</a> <a href="#">manual</a> <a href="#">keys</a> <i>number</i> <a href="#">direction</a> <i>keyword</i> <a href="#">ipsec-transform</a> <i>reference</i>
Tree	<a href="#">ipsec-transform</a>
Reference	<b>configure</b> <a href="#">ipsec</a> <a href="#">ipsec-transform</a> <i>number</i>
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## spi *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	SPI of inbound and outbound packets
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange</a> <a href="#">manual</a> <a href="#">keys</a> <i>number</i> <a href="#">direction</a> <i>keyword</i> <a href="#">spi</a> <i>number</i>
Tree	<a href="#">spi</a>
Description	This command specifies the Security Parameter Index (SPI) used to look up the instruction to verify and decrypt the incoming IPsec packets when the direction is inbound. When the direction is outbound, the SPI is used in the encoding of the outgoing packets.  The remote node can use the SPI to look up the instruction to verify and decrypt the packet.
Range	256 to 16383

Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## max-history-key-records

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>max-history-key-records</b> context
Context	<b>configure</b> <a href="#">service vpn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-tunnel</a> <i>string</i> <a href="#">max-history-key-records</a>
Tree	<a href="#">max-history-key-records</a>
Description	Commands in this context configure the settings for recording historical IPsec keys.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## esp number

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of recent records
Context	<b>configure</b> <a href="#">service vpn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-tunnel</a> <i>string</i> <a href="#">max-history-key-records</a> <a href="#">esp</a> <i>number</i>
Tree	<a href="#">esp</a>
Range	1 to 48
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ike number

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of historical IKE key records
Context	<b>configure</b> <b>service</b> <b>vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-tunnel</b> <i>string</i> <b>max-history-key-records</b> <b>ike</b> <i>number</i>
Tree	<b>ike</b>
Range	1 to 3
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **pmtu-discovery-aging** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Aging out time of the learned path MTU
Context	<b>configure</b> <b>service</b> <b>vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-tunnel</b> <i>string</i> <b>pmtu-discovery-aging</b> <i>number</i>
Tree	<b>pmtu-discovery-aging</b>
Description	This command configures the temporary public and private MTU expiration time. The temporary MTU is used for MTU propagation.
Range	900 to 3600
Default	900
Units	seconds
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **private-tcp-mss-adjust** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	TCP maximum segment size (MSS) adjustment
Context	<b>configure</b> <b>service</b> <b>vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-tunnel</b> <i>string</i> <b>private-tcp-mss-adjust</b> <i>number</i>
Tree	<b>private-tcp-mss-adjust</b>
Description	This command specifies the TCP MSS to adjust for the tunnel on the private side.

When configured, the system may use the value to update the MSS option in the received TCP SYN packet on the private side.

Range	512 to 9000
Units	bytes
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **propagate-pmtu-v4** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable propagation of the path MTU to IPv4 hosts
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-tunnel</b> <i>string</i> <b>propagate-pmtu-v4</b> <i>boolean</i>
Tree	<b>propagate-pmtu-v4</b>
Description	When configured to <b>true</b> , the system propagates the path MTU learned from the public side to the private side (IPv4 hosts).
Default	true
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **propagate-pmtu-v6** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable propagation of the path MTU to IPv6 hosts
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-tunnel</b> <i>string</i> <b>propagate-pmtu-v6</b> <i>boolean</i>
Tree	<b>propagate-pmtu-v6</b>
Description	When configured to <b>true</b> , the system propagates the path MTU learned from the public side to the private side (IPv6 hosts).
Default	true
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## public-tcp-mss-adjust (*number* | *keyword*)

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	TCP maximum segment size (MSS) on the public network
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-tunnel</b> <i>string</i> <b>public-tcp-mss-adjust</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>public-tcp-mss-adjust</b>
Description	This command configures the MSS for the TCP traffic in an IPsec tunnel that is sent from the public network to the private network. The system may use this value to adjust or insert the MSS option in the TCP SYN packet.
Range	512 to 9000
Units	bytes
Options	auto
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## replay-window *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Anti-replay window size
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-tunnel</b> <i>string</i> <b>replay-window</b> <i>number</i>
Tree	<b>replay-window</b>
Description	This command specifies the size of an IPsec anti-replay window. If unconfigured, IPsec anti-replay is disabled.
Range	32   64   128   256   512
Units	packets
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## security-policy

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>security-policy</b> context
Context	<b>configure service vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-tunnel</b> <i>string</i> <b>security-policy</b>
Tree	<b>security-policy</b>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## id reference

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPsec security policy ID
Context	<b>configure service vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-tunnel</b> <i>string</i> <b>security-policy id reference</b>
Tree	<b>id</b>
Reference	<b>configure service vpn</b> <i>string</i> <b>ipsec security-policy</b> <i>number</i>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## strict-match *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable strict match of the security policy entry
Context	<b>configure service vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-tunnel</b> <i>string</i> <b>security-policy strict-match</b> <i>boolean</i>
Tree	<b>strict-match</b>
Description	When configured to <b>true</b> , this command enables strict match of the security policy entry. When a CREATE_CHILD exchange request is received for a static IPsec tunnel, and this request is not a rekey request, ISA matches the received TSi and TSr with the

configured security policy. This can be a match only when a received TS (in TSi or TSr) address range matches exactly with the subnet in a security policy entry.

If there is no match, the setup fails, and TS\_UNACCEPTABLE is sent.

If there is a match, but there is an existing CHILD\_SA for the matched security policy, the setup fails, and NO\_PROPOSAL\_CHOSEN is sent.

If there is a match, and there is not a CHILD\_SA for the matched entry, the subnet is sent in the matched security policy entry as TSi and TSr, and the CHILD\_SA is created.

Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## tunnel-endpoint

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the <b>tunnel-endpoint</b> context
Context	<b>configure</b> <b>service vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-tunnel</b> <i>string</i> <b>tunnel-endpoint</b>
Tree	<b>tunnel-endpoint</b>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## delivery-service *string*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Delivery service name
Context	<b>configure</b> <b>service vpn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-tunnel</b> <i>string</i> <b>tunnel-endpoint</b> <b>delivery-service</b> <i>string</i>
Tree	<b>delivery-service</b>
String Length	1 to 64
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## local-gateway-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Address used for tunnel of the remote security gateway
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-tunnel</b> <i>string</i> <b>tunnel-endpoint</b> <b>local-gateway-address</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>local-gateway-address</b>
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## remote-ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Remote IP address of this tunnel.
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-tunnel</b> <i>string</i> <b>tunnel-endpoint</b> <b>remote-ip-address</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>remote-ip-address</b>
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## lag

Synopsis	Enter the <b>lag</b> context
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>lag</b>
Tree	<b>lag</b>
Introduced	16.0.R1
Platforms	All

### **link-map-profile** *number*

Synopsis	LAG link map profile for a SAP or network interface
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>lag</b> <b>link-map-profile</b> <i>number</i>
Tree	<b>link-map-profile</b>
Description	This command assigns a preconfigured LAG link map profile to a SAP or network interface configured on a LAG or a PW port that exists on a LAG. After an operator assigns a LAG link map profile, the system rehashes the SAP or network interface egress traffic over the LAG as required by the new configuration.  If the LAG link map profile for a SAP or network interface is deleted, the system reverts back to per-flow hashing.
Range	1 to 64
Introduced	16.0.R1
Platforms	All

### **per-link-hash**

Synopsis	Enter the <b>per-link-hash</b> context
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>lag</b> <b>per-link-hash</b>
Tree	<b>per-link-hash</b>
Introduced	16.0.R1
Platforms	All

### **class** *number*

Synopsis	Class used on LAG egress using weighted per-link-hash
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>lag</b> <b>per-link-hash</b> <b>class</b> <i>number</i>
Tree	<b>class</b>
Range	1 to 3
Default	1
Introduced	16.0.R1
Platforms	All

### **weight** *number*

Synopsis	Weight used on LAG egress using weighted per-link-hash
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>lag</b> <b>per-link-hash</b> <b>weight</b> <i>number</i>

Tree	<a href="#">weight</a>
Range	1 to 1024
Default	1
Introduced	16.0.R1
Platforms	All

### **multi-service-site** *reference*

Synopsis	Multi service site name
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">multi-service-site</a> <i>reference</i>
Tree	<a href="#">multi-service-site</a>
Reference	<b>configure</b> <a href="#">service</a> <a href="#">customer</a> <i>string</i> <a href="#">multi-service-site</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **static-host**

Synopsis	Enter the <b>static-host</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host</a>
Tree	<a href="#">static-host</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ipv4** [[ip](#)] *string* [mac](#) *string*

Synopsis	Enter the <b>ipv4</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host</a> <a href="#">ipv4</a> <i>string</i> <a href="#">mac</a> <i>string</i>
Tree	<a href="#">ipv4</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[ip]** *string*

Synopsis	IP address
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host</a> <a href="#">ipv4</a> <i>string</i> <a href="#">mac</a> <i>string</i>

Tree	<a href="#">ipv4</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **mac string**

Synopsis	MAC address
Context	<b>configure service vprn string interface string sap string static-host ipv4 string mac string</b>
Tree	<a href="#">ipv4</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state keyword**

Synopsis	Administrative state of the static host
Context	<b>configure service vprn string interface string sap string static-host ipv4 string mac string admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ancp-string string**

Synopsis	ANCP string
Context	<b>configure service vprn string interface string sap string static-host ipv4 string mac string ancp-string string</b>
Tree	<a href="#">ancp-string</a>
String Length	1 to 63
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## app-profile

Synopsis	Enter the <b>app-profile</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host ipv4</a> <i>string</i> <a href="#">mac</a> <i>string</i> <a href="#">app-profile</a>
Tree	<a href="#">app-profile</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## profile reference

Synopsis	Application profile used by the static host
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host ipv4</a> <i>string</i> <a href="#">mac</a> <i>string</i> <a href="#">app-profile</a> <a href="#">profile reference</a>

### **bfd-template** *reference*

Synopsis BFD template associated with the SDP binding  
Context **configure** [service vprn](#) *string* [interface](#) *string* [spoke-sdp](#) *string* [bfd bfd-template](#) *reference*  
Tree [bfd-template](#)  
Description This command configures a named BFD template to be used by VCCV BFD on PWs belonging to the VLL service. The template specifies parameters, such as the minimum transmit and receive control packet timer intervals, used by the BFD session. Template parameters are configured under the **configure router bfd** context.  
Reference **configure** [bfd bfd-template](#) *string*  
Introduced 21.2.R1  
Platforms All

### **failure-action** *keyword*

Synopsis VCCV BFD action taken on the SDP binding  
Context **configure** [service vprn](#) *string* [interface](#) *string* [spoke-sdp](#) *string* [bfd failure-action](#) *keyword*  
Tree [failure-action](#)  
Description This command configures a named BFD template to be used by VCCV BFD on PWs belonging to the VLL service. The template specifies parameters, such as the minimum transmit and receive control packet timer intervals, used by the BFD session. Template parameters are configured under the **configure router bfd** context.

Default	none
Options	none, down
Introduced	21.2.R1
Platforms	All

### **wait-for-up-timer** *number*

Synopsis	Time waited for BFD up status
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">bfd</a> <a href="#">wait-for-up-timer</a> <i>number</i>
Tree	<a href="#">wait-for-up-timer</a>
Description	This command configures the time interval that is used to wait for a BFD session to come up.  This command is triggered when a spoke-SDP is first administratively enabled and a VCCV BFD session transitions from up to down. The command is required to allow time for BFD sessions to come up, and for BFD to settle before selecting the active spoke-SDP for use in a redundant set. In the case where a VCCV BFD session is bouncing, the timer prevents excessive flapping of the operational state of a spoke-SDP.
Range	1 to 60
Units	seconds
Introduced	21.2.R1
Platforms	All

### **collect-stats** *boolean*

Synopsis	Allow agent to collect accounting statistics
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">collect-stats</a> <i>boolean</i>
Tree	<a href="#">collect-stats</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **control-word** *boolean*

Synopsis	Use the control word as preferred
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">control-word</a> <i>boolean</i>
Tree	<a href="#">control-word</a>

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## cpu-protection

Synopsis	Enter the <b>cpu-protection</b> context
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">interface string</a> <a href="#">spoke-sdp string</a> <a href="#">cpu-protection</a>
Tree	<a href="#">cpu-protection</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## eth-cfm-monitoring

Synopsis	Enable the <b>eth-cfm-monitoring</b> context
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">interface string</a> <a href="#">spoke-sdp string</a> <a href="#">cpu-protection</a> <a href="#">eth-cfm-monitoring</a>
Tree	<a href="#">eth-cfm-monitoring</a>
Notes	The following elements are part of a choice: <b>eth-cfm-monitoring</b> , <b>ip-src-monitoring</b> , or <b>mac-monitoring</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## aggregate

Synopsis	Apply rate limit to the sum of per-peer packet rates
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">interface string</a> <a href="#">spoke-sdp string</a> <a href="#">cpu-protection</a> <a href="#">eth-cfm-monitoring</a> <a href="#">aggregate</a>
Tree	<a href="#">aggregate</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## car

Synopsis	Ignore Ethernet CFM packets when enforcing overall rate
----------	---

Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>cpu-protection eth-cfm-monitoring car</b>
Tree	<b>car</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## ip-src-monitoring

Synopsis	Enable IP source monitoring for CPU protection
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>cpu-protection ip-src-monitoring</b>
Tree	<b>ip-src-monitoring</b>
Notes	The following elements are part of a choice: <b>eth-cfm-monitoring</b> , <b>ip-src-monitoring</b> , or <b>mac-monitoring</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## mac-monitoring

Synopsis	Monitor MAC for CPU protection
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>cpu-protection mac-monitoring</b>
Tree	<b>mac-monitoring</b>
Notes	The following elements are part of a choice: <b>eth-cfm-monitoring</b> , <b>ip-src-monitoring</b> , or <b>mac-monitoring</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## policy-id *reference*

Synopsis	CPM protection policy
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>cpu-protection policy-id</b> <i>reference</i>
Tree	<b>policy-id</b>
Reference	<b>configure system security cpu-protection policy</b> <i>number</i>
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

### **description** *string*

Synopsis Text description

Range	1 to 65535
Introduced	16.0.R1
Platforms	All

## vc-label *number*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Egress MPLS VC label to send packets to the far end
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">egress</a> <a href="#">vc-label</a> <i>number</i>

Tree	<a href="#">vc-label</a>
Range	16 to 1048575
Introduced	16.0.R1
Platforms	All

## entropy-label

Synopsis	Enable the use of entropy labels for spoke SDPs
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">entropy-label</a>
Tree	<a href="#">entropy-label</a>
Notes	The following elements are part of a choice: <b>entropy-label</b> or <b>hash-label</b> .
Introduced	16.0.R1
Platforms	All

## eth-cfm

Synopsis	Enter the <b>eth-cfm</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a>
Tree	<a href="#">eth-cfm</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## collect-lmm-fc-stats

Synopsis	Enter the <b>collect-lmm-fc-stats</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">collect-lmm-fc-stats</a>
Tree	<a href="#">collect-lmm-fc-stats</a>
Description	Commands in this context configure per forwarding class (FC) LMM information collection.  The commands <b>fc-in-profile</b> and <b>fc</b> in this context are mutually exclusive. The commands apply to either profile-aware or profile-unaware FCs respectively.  This command and the <b>collect-lmm-stats</b> command are mutually exclusive when there is entity resource contention.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**fc keyword**

Synopsis	Forwarding class name for profile-unaware counter
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm collect-lmm-fc-stats</b> <b>fc</b> <i>keyword</i>
Tree	<b>fc</b>
Description	<p>This command configures individual counters for the specified FCs without regard for profile. The system includes all countable packets that match a configured FC, regardless of profile, in this counter.</p> <p>An FC specified as part of this command and for this specific context cannot be specified as a profile-aware FC using the <b>fc-in-profile</b> command under the <b>collect-lmm-fc-stats</b> context.</p> <p>When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.</p>
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**fc-in-profile keyword**

Synopsis	Forwarding class name for profile-aware counter
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm collect-lmm-fc-stats</b> <b>fc-in-profile</b> <i>keyword</i>
Tree	<b>fc-in-profile</b>
Description	<p>This command configures individual counters for the specified FCs with regard to profile. The system includes all countable packets that match a configured FC and that are deemed to be in-profile in this counter.</p> <p>An FC specified as part of this command and for this specific context cannot be specified as a profile-unaware FC using the <b>fc</b> command under the <b>collect-lmm-fc-stats</b> context.</p> <p>When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.</p>
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **collect-lmm-stats** *boolean*

Synopsis	Collect statistics for loss measurement message tests
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">collect-lmm-stats</a> <i>boolean</i>
Tree	<a href="#">collect-lmm-stats</a>
Description	<p>When configured to <b>true</b>, the router instantiates the statistical counter to transmit and receive packets for the LAG facility MEP bindings.</p> <p>The <b>show eth-cfm collect-lmm-stats</b> command displays entities that have been enabled to collect transit and receive counters.</p> <p>When configured to <b>false</b>, the router does not instantiate the counter and the LMM PDU associated with the MEP does not populate the counters in the packet.</p>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mep** [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number*

Synopsis	Enter the <b>mep</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i>
Tree	<a href="#">mep</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **md-admin-name** *reference*

Synopsis	Maintenance Domain (MD) name
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i>
Tree	<a href="#">mep</a>
Reference	<b>configure</b> <a href="#">eth-cfm</a> <a href="#">domain</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ma-admin-name** *reference*

Synopsis	Maintenance Association (MA) name
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">interface string</a> <a href="#">spoke-sdp string</a> <a href="#">eth-cfm mep md-admin-name reference</a> <a href="#">ma-admin-name reference</a> <a href="#">mep-id number</a>
Tree	<a href="#">mep</a>
Reference	<b>configure</b> <a href="#">eth-cfm domain string</a> <a href="#">association string</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mep-id** *number*

Synopsis	Maintenance Endpoint (MEP) ID
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">interface string</a> <a href="#">spoke-sdp string</a> <a href="#">eth-cfm mep md-admin-name reference</a> <a href="#">ma-admin-name reference</a> <a href="#">mep-id number</a>
Tree	<a href="#">mep</a>
Range	1 to 8191
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **admin-state** *keyword*

Synopsis	Administrative state of the MEP
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">interface string</a> <a href="#">spoke-sdp string</a> <a href="#">eth-cfm mep md-admin-name reference</a> <a href="#">ma-admin-name reference</a> <a href="#">mep-id number</a> <a href="#">admin-state keyword</a>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ais** *boolean*

Synopsis	Enable the generation and the reception of AIS messages
----------	---

Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm</b> <b>mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>ais</b> <i>boolean</i>
Tree	<a href="#">ais</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## alarm-notification

Synopsis	Enter the <b>alarm-notification</b> context
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm</b> <b>mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>alarm-notification</b>
Tree	<a href="#">alarm-notification</a>
Description	<p>Commands in this context configure the Fault Notification Generator (FNG) time values to raise an alarm or reset the CCM defect alarm.</p> <p>Use these timers for network management processes. The timers are not tied into delaying the notification to the fault management system on the network element and do not affect fault propagation mechanisms.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## fng-alarm-time *number*

Synopsis	Time that must expire before an FNG alarm is raised
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm</b> <b>mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>alarm-notification</b> <b>fng-alarm-time</b> <i>number</i>
Tree	<a href="#">fng-alarm-time</a>
Range	250   500   1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## fng-reset-time *number*

Synopsis	Time that must expire before an FNG alarm is reset
----------	--

Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>alarm-notification fng-reset-time</b> <i>number</i>
Tree	<b>fng-reset-time</b>
Range	250   500   1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm boolean**

Synopsis	Generate CCM messages
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>ccm</b> <i>boolean</i>
Tree	<b>ccm</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm-ltm-priority number**

Synopsis	Priority of CCM and LTM messages transmitted by the MEP
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>ccm-ltm-priority</b> <i>number</i>
Tree	<b>ccm-ltm-priority</b>
Range	0 to 7
Default	7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm-padding-size number**

Synopsis	Number of octets of padding to insert in CCM packets
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>ccm-padding-size</b> <i>number</i>
Tree	<b>ccm-padding-size</b>

Description	This command sets the byte size of the optional Data TLV to be included in the ETH-CC PDU.  This command increases the size of the ETH-CC PDU by the configured value. The base size of the ETH-CC PDU, including the Interface Status TLV and Port Status TLV, is 83 bytes not including the Layer 2 encapsulation. CCM padding is not supported when the CCM interval (configured through <b>configure eth-cfm domain association ccm-interval</b> ) is less than 1 second.
Range	3 to 1500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## csf

Synopsis	Enable the <b>csf</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>csf</b>
Tree	<b>csf</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## multiplier *decimal-number*

Synopsis	Multiplication factor used to clear the CSF condition
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>csf multiplier</b> <i>decimal-number</i>
Tree	<b>multiplier</b>
Range	0.0   2.0 to 30.0
Default	3.5
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## description *string*

Synopsis	Text description
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>description</b> <i>string</i>
Tree	<b>description</b>

String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## eth-test

Synopsis	Enable the <b>eth-test</b> context
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">interface string</a> <a href="#">spoke-sdp string</a> <a href="#">eth-cfm mep md-admin-name reference</a> <a href="#">ma-admin-name reference</a> <a href="#">mep-id number</a> <b>eth-test</b>
Tree	<a href="#">eth-test</a>
Description	Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the <b>oam eth-cfm eth-test</b> command.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## bit-error-threshold *number*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">interface string</a> <a href="#">spoke-sdp string</a> <a href="#">eth-cfm mep md-admin-name reference</a> <a href="#">ma-admin-name reference</a> <a href="#">mep-id number</a> <a href="#">eth-test bit-error-threshold number</a>
Tree	<a href="#">bit-error-threshold</a>
Range	0 to 11840
Default	1
Units	bit errors
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## test-pattern

Synopsis	Enter the <b>test-pattern</b> context
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">interface string</a> <a href="#">spoke-sdp string</a> <a href="#">eth-cfm mep md-admin-name reference</a> <a href="#">ma-admin-name reference</a> <a href="#">mep-id number</a> <a href="#">eth-test test-pattern</a>
Tree	<a href="#">test-pattern</a>
Description	Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **crc-tlv** *boolean*

Synopsis	Generate a CRC checksum
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">eth-test</a> <a href="#">test-pattern</a> <b>crc-tlv</b> <i>boolean</i>
Tree	<a href="#">crc-tlv</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **pattern** *keyword*

Synopsis	Test pattern for Ethernet Test frames
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">eth-test</a> <a href="#">test-pattern</a> <b>pattern</b> <i>keyword</i>
Tree	<a href="#">pattern</a>
Description	This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.
Default	all-zeros
Options	all-zeros, all-ones
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fault-propagation** *keyword*

Synopsis	Fault propagation for the MEP
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>fault-propagation</b> <i>keyword</i>
Tree	<a href="#">fault-propagation</a>
Options	use-if-status-tlv, suspend-ccm
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## grace

Synopsis	Enter the <b>grace</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>grace</b>
Tree	<b>grace</b>
Description	Commands in this context configure the Nokia ETH-CFM Grace function and the ITU-T Y.1731 Ethernet Expected Default (ETH-ED) function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## eth-ed

Synopsis	Enter the <b>eth-ed</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>grace eth-ed</b>
Tree	<b>eth-ed</b>
Description	Commands in this context configure the ITU-T Y.1731 ETH-ED function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## max-rx-defect-window *number*

Synopsis	Maximum received ETH-ED expected defect window duration
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>grace eth-ed max-rx-defect-window</b> <i>number</i>
Tree	<b>max-rx-defect-window</b>
Range	1 to 86400
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## priority *number*

Synopsis	Transmission priority for ETH-ED PDUs
----------	---------------------------------------

Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>grace eth-ed priority</b> <i>number</i>
Tree	<a href="#">priority</a>
Range	0 to 7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **rx-eth-ed** *boolean*

Synopsis	Receive and process ETH-ED ITU-T Y.1731 PDUs on the MEP
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>grace eth-ed rx-eth-ed</b> <i>boolean</i>
Tree	<a href="#">rx-eth-ed</a>
Description	This command enables the reception and processing of the ITU-T Y.1731 ETH-ED PDU on the MEP.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **tx-eth-ed** *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>grace eth-ed tx-eth-ed</b> <i>boolean</i>
Tree	<a href="#">tx-eth-ed</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **eth-vsm-grace**

Synopsis	Enter the <b>eth-vsm-grace</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>grace eth-vsm-grace</b>
Tree	<a href="#">eth-vsm-grace</a>

Description	Commands in this context configure the Nokia ETH-CFM Grace function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **rx-eth-vsm-grace** *boolean*

Synopsis	Receive and process Nokia ETH-CFM Grace PDU on the MEP
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm</b> <b>mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>grace</b> <b>eth-vsm-grace</b> <b>rx-eth-vsm-grace</b> <i>boolean</i>
Tree	<b>rx-eth-vsm-grace</b>
Description	When configured to <b>true</b> , the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.  When configured to <b>false</b> , the router disables the Nokia Grace function.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **tx-eth-vsm-grace** *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm</b> <b>mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>grace</b> <b>eth-vsm-grace</b> <b>tx-eth-vsm-grace</b> <i>boolean</i>
Tree	<b>tx-eth-vsm-grace</b>
Description	When configured to <b>true</b> , the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.  The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.  The operator must configure the <b>configure system eth-cfm grace</b> command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).  When configured to <b>false</b> , the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.
Default	true
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **low-priority-defect** *keyword*

Synopsis Lowest priority defect allowed to generate fault alarm

Context **configure** [service vprn](#) *string* [interface](#) *string* [spoke-sdp](#) *string* [eth-cfm mep md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* **low-priority-defect** *keyword*

Tree [low-priority-defect](#)

Default mac-rem-err-xcon

Options all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **one-way-delay-threshold** *number*

Synopsis Threshold time limit for the one-way delay test

Context **configure** [service vprn](#) *string* [interface](#) *string* [spoke-sdp](#) *string* [eth-cfm mep md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* **one-way-delay-threshold** *number*

Tree [one-way-delay-threshold](#)

Range 0 to 600

Default 3

Units seconds

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **squelch-ingress-levels** *number*

Synopsis Levels for which ETH-CFM packets are silently discarded

Context **configure** [service vprn](#) *string* [interface](#) *string* [spoke-sdp](#) *string* [eth-cfm squelch-ingress-levels](#) *number*

Tree [squelch-ingress-levels](#)

Description This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.

The list of levels must be a complete contiguous list from 0 up to the highest level that will be dropped.

Range	0 to 7
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## hash-label

Synopsis	Enable the <b>hash-label</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <b>hash-label</b>
Tree	<a href="#">hash-label</a>
Notes	The following elements are part of a choice: <b>entropy-label</b> or <b>hash-label</b> .
Introduced	16.0.R1
Platforms	All

## signal-capability

Synopsis	Enable the signaling of the hash label between PE nodes
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">hash-label</a> <b>signal-capability</b>
Tree	<a href="#">signal-capability</a>
Introduced	16.0.R1
Platforms	All

## ingress

Synopsis	Enter the <b>ingress</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <b>ingress</b>
Tree	<a href="#">ingress</a>
Introduced	16.0.R1
Platforms	All

## filter

Synopsis	Enter the <b>filter</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>ingress filter</b>
Tree	<b>filter</b>
Introduced	16.0.R1
Platforms	All

## ip reference

Synopsis	IPv4 filter policy name
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>ingress filter ip reference</b>
Tree	<b>ip</b>
Reference	<b>configure filter ip-filter</b> <i>string</i>
Introduced	16.0.R1
Platforms	All

## ipv6 reference

Synopsis	IPv6 filter policy name
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>ingress filter ipv6 reference</b>
Tree	<b>ipv6</b>
Reference	<b>configure filter ipv6-filter</b> <i>string</i>
Introduced	16.0.R1

## advertise [[route-type](#)] *keyword*

Synopsis	Enter the <b>advertise</b> list instance
Context	<b>configure service vprn</b> <i>string interface string vpls string evpn arp advertise keyword</i>
Tree	<a href="#">advertise</a>
Description	Commands in this context specify the configuration to allow ARP or ND entries that are installed in the ARP or ND cache to be advertised in EVPN MAC/IP routes.  The <b>learn-dynamic</b> command must be set to <b>false</b> when using this functionality.
Introduced	19.10.R1
Platforms	All

### [route-type] keyword

Synopsis	Type of ARP or ND entries that generate host routes
Context	<b>configure</b> service vprn string interface string vpls string evpn arp advertise keyword
Tree	advertise
Description	This command specifies the type of ARP or ND entries that are installed in the ARP or ND cache into EVPN MAC/IP routes.
Options	static, dynamic
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	All

### route-tag number

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tag value used with the host route from an ARP/ND entry
Context	<b>configure</b> service vprn string interface string vpls string evpn arp advertise keyword route-tag number
Tree	route-tag
Description	This command specifies the route tag that is added separately to dynamic or static ARP or ND entries that are advertised in EVPN MAC/IP routes. This tag can be matched on BGP vsi-export (in the R-VPLS) and BGP peer export policies.
Range	0 to 255
Introduced	19.10.R1
Platforms	All

### flood-garp-and-unknown-req boolean

Synopsis	Allow CPM originated ARP frames to flood R-VPLS service
Context	<b>configure</b> service vprn string interface string vpls string evpn arp flood-garp-and-unknown-req boolean
Tree	flood-garp-and-unknown-req
Description	When configured to <b>true</b> , the system allows CPM-originated ARP frames to be flooded in the R-VPLS service. Any frames that are data path flooded such as the ARP messages received on a SAP, are flooded irrespective of this command.

When configured to **false**, CPM-originated ARP flooding is suppressed.

Default	true
Introduced	19.10.R1
Platforms	All

### **learn-dynamic** *boolean*

Synopsis	Process ARP or ND messages on EVPN tunnels
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">vpls</a> <i>string</i> <a href="#">evpn arp</a> <b>learn-dynamic</b> <i>boolean</i>
Tree	<a href="#">learn-dynamic</a>
Default	true
Introduced	19.10.R1
Platforms	All

### **nd**

Synopsis	Enter the <b>nd</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">vpls</a> <i>string</i> <a href="#">evpn nd</a>
Tree	<a href="#">nd</a>
Introduced	20.5.R1
Platforms	All

### **advertise** [[route-type](#)] *keyword*

Synopsis	Enter the <b>advertise</b> list instance
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">vpls</a> <i>string</i> <a href="#">evpn nd</a> <b>advertise</b> <i>keyword</i>
Tree	<a href="#">advertise</a>
Description	Commands in this context specify the configuration to allow ARP or ND entries that are installed in the ARP or ND cache to be advertised in EVPN MAC/IP routes. The <b>learn-dynamic</b> command must be set to <b>false</b> when using this functionality.
Introduced	20.5.R1
Platforms	All

### [[route-type](#)] *keyword*

Synopsis	Type of ARP or ND entries that generate host routes
----------	---

Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>vpls</b> <i>string</i> <b>evpn nd advertise</b> <i>keyword</i>
Tree	<b>advertise</b>
Description	This command specifies the type of ARP or ND entries that are installed in the ARP or ND cache into EVPN MAC/IP routes.
Options	static, dynamic
Notes	This element is part of a list key.
Introduced	20.5.R1
Platforms	All

### **route-tag** *number*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tag value used with the host route from an ARP/ND entry
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>vpls</b> <i>string</i> <b>evpn nd advertise</b> <i>keyword</i> <b>route-tag</b> <i>number</i>
Tree	<b>route-tag</b>
Description	This command specifies the route tag that is added separately to dynamic or static ARP or ND entries that are advertised in EVPN MAC/IP routes. This tag can be matched on BGP vsi-export (in the R-VPLS) and BGP peer export policies.
Range	0 to 255
Introduced	20.5.R1
Platforms	All

### **learn-dynamic** *boolean*

Synopsis	Process ARP or ND messages on EVPN tunnels
Context	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i> <b>vpls</b> <i>string</i> <b>evpn nd learn-dynamic</b> <i>boolean</i>
Tree	<b>learn-dynamic</b>
Default	true
Introduced	20.5.R1
Platforms	All

## evpn-tunnel

Synopsis	Enable the <b>evpn-tunnel</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">vpls</a> <i>string</i> <a href="#">evpn-tunnel</a>
Tree	<a href="#">evpn-tunnel</a>
Introduced	16.0.R1
Platforms	All

## allow-bfd *boolean*

Synopsis	Allow BFD on the EVPN tunnel
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">vpls</a> <i>string</i> <a href="#">evpn-tunnel</a> <a href="#">allow-bfd</a> <i>boolean</i>
Tree	<a href="#">allow-bfd</a>
Default	false
Introduced	22.5.R1
Platforms	All

## ipv6-gateway-address *keyword*

Synopsis	Type of IPv6 gateway address
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">vpls</a> <i>string</i> <a href="#">evpn-tunnel</a> <a href="#">ipv6-gateway-address</a> <i>keyword</i>
Tree	<a href="#">ipv6-gateway-address</a>
Default	ip
Options	ip, mac
Introduced	16.0.R4
Platforms	All

## supplementary-broadcast-domain *boolean*

Synopsis	Use the EVPN tunnel as a Supplementary Broadcast Domain
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">vpls</a> <i>string</i> <a href="#">evpn-tunnel</a> <a href="#">supplementary-broadcast-domain</a> <i>boolean</i>
Tree	<a href="#">supplementary-broadcast-domain</a>
Description	When configured to <b>true</b> , this command allows the EVPN tunnel to be used as a Supplementary Broadcast Domain (SBD). The SBD is used in EVPN OISM to advertise the SMET routes and to receive the multicast traffic on egress PEs that are not attached to the source R-VPLS service.

When configured to **false**, this command disables EVPN tunnel use as an SBD.

Default	false
Introduced	19.10.R1
Platforms	All

## ingress

Synopsis	Enter the <b>ingress</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">vpls</a> <i>string</i> <a href="#">ingress</a>
Tree	<a href="#">ingress</a>
Introduced	16.0.R1
Platforms	All

## routed-override-filter

Synopsis	Enter the <b>routed-override-filter</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">vpls</a> <i>string</i> <a href="#">ingress</a> <a href="#">routed-override-filter</a>
Tree	<a href="#">routed-override-filter</a>
Introduced	16.0.R1
Platforms	All

## ip reference

Synopsis	IPv4 filter policy name
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">vpls</a> <i>string</i> <a href="#">ingress</a> <a href="#">routed-override-filter</a> <a href="#">ip</a> <i>reference</i>
Tree	<a href="#">ip</a>
Reference	<b>configure</b> <a href="#">filter</a> <a href="#">ip-filter</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

## ipv6 reference

Synopsis	IPv6 filter policy name
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">vpls</a> <i>string</i> <a href="#">ingress</a> <a href="#">routed-override-filter</a> <a href="#">ipv6</a> <i>reference</i>

Tree	<a href="#">ipv6</a>
Reference	<b>configure filter</b> <a href="#">ipv6-filter</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **ip-mirror-interface** [\[interface-name\]](#) *string*

Synopsis	Enter the <b>ip-mirror-interface</b> list instance
Context	<b>configure service vpn</b> <i>string</i> <a href="#">ip-mirror-interface</a> <i>string</i>
Tree	<a href="#">ip-mirror-interface</a>
Introduced	16.0.R1
Platforms	All

### **[interface-name]** *string*

Synopsis	Interface name
Context	<b>configure service vpn</b> <i>string</i> <a href="#">ip-mirror-interface</a> <i>string</i>
Tree	<a href="#">ip-mirror-interface</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the interface
Context	<b>configure service vpn</b> <i>string</i> <a href="#">ip-mirror-interface</a> <i>string</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	enable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">ip-mirror-interface</a> <i>string</i> <b>description</b> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 255
Introduced	16.0.R1
Platforms	All

### **spoke-sdp** [[sdp-bind-id](#)] *string*

Synopsis	Enter the <b>spoke-sdp</b> list instance
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">ip-mirror-interface</a> <i>string</i> <b>spoke-sdp</b> <i>string</i>
Tree	<a href="#">spoke-sdp</a>
Max. Instances	1
Introduced	16.0.R1
Platforms	All

### **[sdp-bind-id]** *string*

Synopsis	SDP binding ID
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">ip-mirror-interface</a> <i>string</i> <b>spoke-sdp</b> <i>string</i>
Tree	<a href="#">spoke-sdp</a>
String Length	3 to 16
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the SDP binding to the service
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">ip-mirror-interface</a> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	enable

Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">ip-mirror-interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <b>description</b> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **ingress**

Synopsis	Enter the <b>ingress</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">ip-mirror-interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <b>ingress</b>
Tree	<a href="#">ingress</a>
Introduced	16.0.R1
Platforms	All

### **filter**

Synopsis	Enter the <b>filter</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">ip-mirror-interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">ingress</a> <b>filter</b>
Tree	<a href="#">filter</a>
Introduced	16.0.R1
Platforms	All

### **ip** *reference*

Synopsis	IPv4 filter policy name
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">ip-mirror-interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">ingress</a> <a href="#">filter</a> <b>ip</b> <i>reference</i>
Tree	<a href="#">ip</a>

Reference	<b>configure filter ip-filter string</b>
Introduced	16.0.R1
Platforms	All

### **vc-label number**

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Spoke SDP ingress VC label
Context	<b>configure service vprn string ip-mirror-interface string spoke-sdp string ingress vc-label number</b>
Tree	<b>vc-label</b>
Range	1 to 1048575
Introduced	16.0.R1
Platforms	All

### **ipsec**

Synopsis	Enter the <b>ipsec</b> context
Context	<b>configure service vprn string ipsec</b>
Tree	<b>ipsec</b>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **allow-reverse-route-override-type keyword**

Synopsis	System behavior for new reverse route
Context	<b>configure service vprn string ipsec allow-reverse-route-override-type keyword</b>
Tree	<b>allow-reverse-route-override-type</b>
Description	This command specifies the system behavior when a new reverse route overlaps with an existing reverse route.  When unconfigured, the system does not allow a new dynamic LAN-to-LAN tunnel that terminates in the private VPRN service to be created with an overlapping reverse route.
Options	same-idi, any-idi
Introduced	20.2.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **multi-chassis-shunt-interface** *[name] reference*

Synopsis Enter the **multi-chassis-shunt-interface** list instance  
Context **configure service vprn string ipsec multi-chassis-shunt-interface reference**  
Tree [multi-chassis-shunt-interface](#)  
Introduced 22.5.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[name] reference**

Synopsis Multi-chassis shunt interface name  
Context **configure service vprn string ipsec multi-chassis-shunt-interface reference**  
Tree [multi-chassis-shunt-interface](#)  
Reference **configure service vprn string interface string**  
Notes This element is part of a list key.  
Introduced 22.5.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **next-hop**

Synopsis Enter the **next-hop** context  
Context **configure service vprn string ipsec multi-chassis-shunt-interface reference next-hop**  
Tree [next-hop](#)  
Description Commands in this context configure the next hop for shunting over the interface.  
Introduced 22.5.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **address** (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis Next hop address  
Context **configure service vprn string ipsec multi-chassis-shunt-interface reference next-hop address (ipv4-address-no-zone | ipv6-address-no-zone)**  
Tree [address](#)

Description	This command configures the next-hop address for the shunting interface.
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **multi-chassis-shunting-profile** [[name](#)] *string*

Synopsis	Enter the <b>multi-chassis-shunting-profile</b> list instance
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">ipsec multi-chassis-shunting-profile</a> <i>string</i>
Tree	<a href="#">multi-chassis-shunting-profile</a>
Max. Instances	64
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[name]** *string*

Synopsis	Multi-chassis shunting profile name
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">ipsec multi-chassis-shunting-profile</a> <i>string</i>
Tree	<a href="#">multi-chassis-shunting-profile</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **peer** [[ip-address](#)] *reference*

Synopsis	Enter the <b>peer</b> list instance
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">ipsec multi-chassis-shunting-profile</a> <i>string</i> <a href="#">peer</a> <i>reference</i>
Tree	<a href="#">peer</a>
Max. Instances	3
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[ip-address] reference**

Synopsis	Peer address
Context	<b>configure service vpn</b> <i>string</i> <b>ipsec multi-chassis-shunting-profile</b> <i>string</i> <b>peer</b> <i>reference</i>
Tree	<b>peer</b>
Reference	<b>configure redundancy multi-chassis peer</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> )
Notes	This element is part of a list key.
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **multi-chassis-shunt-interface reference**

Synopsis	Multi-chassis shunt interface
Context	<b>configure service vpn</b> <i>string</i> <b>ipsec multi-chassis-shunting-profile</b> <i>string</i> <b>peer</b> <i>reference</i> <b>multi-chassis-shunt-interface</b> <i>reference</i>
Tree	<b>multi-chassis-shunt-interface</b>
Reference	<b>configure service vpn</b> <i>string</i> <b>ipsec multi-chassis-shunt-interface</b> <i>reference</i>
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **security-policy [id] number**

Synopsis	Enter the <b>security-policy</b> list instance
Context	<b>configure service vpn</b> <i>string</i> <b>ipsec security-policy</b> <i>number</i>
Tree	<b>security-policy</b>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[id] number**

Synopsis	IPsec security policy ID
Context	<b>configure service vpn</b> <i>string</i> <b>ipsec security-policy</b> <i>number</i>
Tree	<b>security-policy</b>
Range	1 to 32768
Notes	This element is part of a list key.

Introduced 19.7.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **entry** [entry-id] *number*

Synopsis Enter the **entry** list instance  
Context **configure service vpn string ipsec security-policy number entry number**  
Tree **entry**  
Introduced 19.7.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[entry-id]** *number*

Synopsis IPsec security policy entry ID  
Context **configure service vpn string ipsec security-policy number entry number**  
Tree **entry**  
Range 1 to 16  
Notes This element is part of a list key.  
Introduced 19.7.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **local-ip**

Synopsis Enter the **local-ip** context  
Context **configure service vpn string ipsec security-policy number entry number local-ip**  
Tree **local-ip**  
Description Commands in this context configure the local (from the VPN) IPv4 prefix/mask for the policy entry.  
The system evaluates the local IP as the source IP when traffic is examined in the direction of the flows from private to public and as the destination IP when traffic flows from public to private.  
Introduced 19.7.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **address string**

Synopsis	Destination IPv4 address of the aggregate route
Context	<b>configure service vpn string ipsec security-policy number entry number local-ip address string</b>
Tree	<b>address</b>
Notes	The following elements are part of a choice: <b>address</b> or <b>any</b> .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **any boolean**

Synopsis	Use any IP address
Context	<b>configure service vpn string ipsec security-policy number entry number local-ip any boolean</b>
Tree	<b>any</b>
Default	false
Notes	This element is the default part of a choice. The following elements are part of a choice: <b>address</b> or <b>any</b> .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **local-ipv6**

Synopsis	Enter the <b>local-ipv6</b> context
Context	<b>configure service vpn string ipsec security-policy number entry number local-ipv6</b>
Tree	<b>local-ipv6</b>
Description	Commands in this context configure the local (from the VPN) IPv6 prefix/mask for the policy entry.  The system evaluates the local IP as the source IP when traffic is examined in the direction of the flows from private to public and as the destination IP when traffic flows from public to private.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **address string**

Synopsis	Destination IPv6 address of the aggregate route
Context	<b>configure service vprn string ipsec security-policy number entry number local-ipv6 address string</b>
Tree	<b>address</b>
Notes	The following elements are part of a choice: <b>address</b> or <b>any</b> .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **any boolean**

Synopsis	Use any IP address
Context	<b>configure service vprn string ipsec security-policy number entry number local-ipv6 any boolean</b>
Tree	<b>any</b>
Default	false
Notes	This element is the default part of a choice. The following elements are part of a choice: <b>address</b> or <b>any</b> .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **remote-ip**

Synopsis	Enter the <b>remote-ip</b> context
Context	<b>configure service vprn string ipsec security-policy number entry number remote-ip</b>
Tree	<b>remote-ip</b>
Description	Commands in this context configure the remote (from the tunnel) IP prefix/mask for the policy entry. The system evaluates the remote IP as the source IP when traffic flows public to private and as the destination IP when traffic flows from private to public.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **address string**

Synopsis	Destination IPv4 address of the aggregate route
----------	---

Context	<b>configure service vpn</b> <i>string</i> <b>ipsec security-policy number entry number remote-ip address</b> <i>string</i>
Tree	<b>address</b>
Notes	The following elements are part of a choice: <b>address</b> or <b>any</b> .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **any** *boolean*

Synopsis	Use any IP address
Context	<b>configure service vpn</b> <i>string</i> <b>ipsec security-policy number entry number remote-ip any</b> <i>boolean</i>
Tree	<b>any</b>
Default	false
Notes	This element is the default part of a choice. The following elements are part of a choice: <b>address</b> or <b>any</b> .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **remote-ipv6**

Synopsis	Enter the <b>remote-ipv6</b> context
Context	<b>configure service vpn</b> <i>string</i> <b>ipsec security-policy number entry number remote-ipv6</b>
Tree	<b>remote-ipv6</b>
Description	Commands in this context configure the remote (from the tunnel) IPv6 prefix/mask for the policy entry.  The system evaluates the remote IP as the source IP when traffic flows from public to private and as the destination IP when traffic flows from private to public.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **address** *string*

Synopsis	Destination IPv6 address of the aggregate route
Context	<b>configure service vpn</b> <i>string</i> <b>ipsec security-policy number entry number remote-ipv6 address</b> <i>string</i>

Tree	<a href="#">address</a>
Notes	The following elements are part of a choice: <b>address</b> or <b>any</b> .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **any** *boolean*

Synopsis	Use any IP address
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">ipsec security-policy</a> <i>number</i> <a href="#">entry</a> <i>number</i> <a href="#">remote-ipv6</a> <a href="#">any</a> <i>boolean</i>
Tree	<a href="#">any</a>
Default	false
Notes	This element is the default part of a choice. The following elements are part of a choice: <b>address</b> or <b>any</b> .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ipv6**

Synopsis	Enter the <b>ipv6</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">ipv6</a>
Tree	<a href="#">ipv6</a>
Introduced	16.0.R1
Platforms	All

### **neighbor-discovery**

Synopsis	Enter the <b>neighbor-discovery</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">ipv6 neighbor-discovery</a>
Tree	<a href="#">neighbor-discovery</a>
Introduced	16.0.R1
Platforms	All

### **reachable-time** *number*

Synopsis	Neighbor reachability detection timer
Context	<b>configure service vprn</b> <i>string ipv6 neighbor-discovery reachable-time number</i>
Tree	<a href="#">reachable-time</a>
Range	30 to 3600
Default	30
Introduced	16.0.R1
Platforms	All

### **stale-time** *number*

Synopsis	Neighbor discovery cache entry stale time
Context	<b>configure service vprn</b> <i>string ipv6 neighbor-discovery stale-time number</i>
Tree	<a href="#">stale-time</a>
Range	60 to 65535
Default	14400
Introduced	16.0.R1
Platforms	All

### **router-advertisement**

Synopsis	Enter the <b>router-advertisement</b> context
Context	<b>configure service vprn</b> <i>string ipv6 router-advertisement</i>
Tree	<a href="#">router-advertisement</a>
Introduced	16.0.R1
Platforms	All

### **dns-options**

Synopsis	Enable the <b>dns-options</b> context
Context	<b>configure service vprn</b> <i>string ipv6 router-advertisement dns-options</i>
Tree	<a href="#">dns-options</a>
Introduced	16.0.R1
Platforms	All

### **rdnss-lifetime** (*keyword | number*)

Synopsis	Maximum time over which the RDNSS address is valid
Context	<b>configure service vprn</b> <i>string ipv6 router-advertisement dns-options rdnss-lifetime</i> ( <i>keyword   number</i> )
Tree	<a href="#">rdnss-lifetime</a>
Description	This command specifies the maximum time that the RDNSS address is used for name resolution by the client.
Range	0   4 to 3600
Default	infinite
Units	seconds
Options	infinite
Introduced	16.0.R1
Platforms	All

### **server** *string*

Synopsis	RAs that are forwarded to IPv6 DNS servers
Context	<b>configure service vprn</b> <i>string ipv6 router-advertisement dns-options server</i> <i>string</i>
Tree	<a href="#">server</a>
Max. Instances	4
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **interface** [[ip-int-name](#)] *reference*

Synopsis	Enter the <b>interface</b> list instance
Context	<b>configure service vprn</b> <i>string ipv6 router-advertisement interface</i> <i>reference</i>
Tree	<a href="#">interface</a>
Introduced	16.0.R1
Platforms	All

### [ip-int-name] *reference*

Synopsis	VPRN interface name
Context	<b>configure service vprn</b> <i>string</i> <b>ipv6 router-advertisement interface</b> <i>reference</i>
Tree	<b>interface</b>
Reference	<b>configure service vprn</b> <i>string</i> <b>interface</b> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### admin-state *keyword*

Synopsis	Administrative state of router advertisement
Context	<b>configure service vprn</b> <i>string</i> <b>ipv6 router-advertisement interface</b> <i>reference</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### current-hop-limit *number*

Synopsis	Hop limit advertised in RA messages
Context	<b>configure service vprn</b> <i>string</i> <b>ipv6 router-advertisement interface</b> <i>reference</i> <b>current-hop-limit</b> <i>number</i>
Tree	<b>current-hop-limit</b>
Range	0 to 255
Default	64
Introduced	16.0.R1
Platforms	All

### dns-options

Synopsis	Enable the <b>dns-options</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>ipv6 router-advertisement interface</b> <i>reference</i> <b>dns-options</b>

Tree	<a href="#">dns-options</a>
Introduced	16.0.R1
Platforms	All

### **include-rdnss** *boolean*

Synopsis	Include the RDNSS option in the RA
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">ipv6 router-advertisement interface</a> <i>reference</i> <a href="#">dns-options include-rdnss</a> <i>boolean</i>
Tree	<a href="#">include-rdnss</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **rdnss-lifetime** (*number* | *keyword*)

Synopsis	Maximum time over which the RDNSS address 25 is valid
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">ipv6 router-advertisement interface</a> <i>reference</i> <a href="#">dns-options rdnss-lifetime</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">rdnss-lifetime</a>
Range	0   4 to 3600
Units	seconds
Options	infinite
Introduced	16.0.R1
Platforms	All

### **server** *string*

Synopsis	RAs that are forwarded to IPv6 DNS servers
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">ipv6 router-advertisement interface</a> <i>reference</i> <a href="#">dns-options server</a> <i>string</i>
Tree	<a href="#">server</a>
Max. Instances	4
Notes	This element is ordered by the user.
Introduced	16.0.R1

Platforms All

### **managed-configuration** *boolean*

Synopsis Set the managed address configuration flag

Context **configure service vprn** *string* **ipv6 router-advertisement interface** *reference* **managed-configuration** *boolean*

Tree [managed-configuration](#)

Default false

Introduced 16.0.R1

Platforms All

### **max-advertisement-interval** *number*

Synopsis Maximum time between sending advertisement messages

Context **configure service vprn** *string* **ipv6 router-advertisement interface** *reference* **max-advertisement-interval** *number*

Tree [max-advertisement-interval](#)

Range 4 to 1800

Default 600

Units seconds

Introduced 16.0.R1

Platforms All

### **min-advertisement-interval** *number*

Synopsis Minimum interval between router advertisement messages

Context **configure service vprn** *string* **ipv6 router-advertisement interface** *reference* **min-advertisement-interval** *number*

Tree [min-advertisement-interval](#)

Range 3 to 1350

Default 200

Units seconds

Introduced 16.0.R1

Platforms All

### **mtu number**

Synopsis	MTU for sending packets to the router
Context	<b>configure service vprn string ipv6 router-advertisement interface reference mtu number</b>
Tree	<a href="#">mtu</a>
Range	1280 to 9800
Introduced	16.0.R1
Platforms	All

### **other-stateful-configuration boolean**

Synopsis	Set the other configuration flag
Context	<b>configure service vprn string ipv6 router-advertisement interface reference other-stateful-configuration boolean</b>
Tree	<a href="#">other-stateful-configuration</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **prefix [ipv6-prefix] string**

Synopsis	Enter the <b>prefix</b> list instance
Context	<b>configure service vprn string ipv6 router-advertisement interface reference prefix string</b>
Tree	<a href="#">prefix</a>
Max. Instances	254
Introduced	16.0.R1
Platforms	All

### **[ipv6-prefix] string**

Synopsis	IPv6 address prefix
Context	<b>configure service vprn string ipv6 router-advertisement interface reference prefix string</b>
Tree	<a href="#">prefix</a>
Notes	This element is part of a list key.
Introduced	16.0.R1

Platforms All

### **autonomous** *boolean*

Synopsis Set the autonomous flag value  
Context **configure service vprn** *string* **ipv6 router-advertisement interface reference prefix** *string*  
**autonomous** *boolean*  
Tree **autonomous**  
Default true  
Introduced 16.0.R1  
Platforms All

### **on-link** *boolean*

Synopsis Use prefix for on-link determination  
Context **configure service vprn** *string* **ipv6 router-advertisement interface reference prefix** *string*  
**on-link** *boolean*  
Tree **on-link**  
Default true  
Introduced 16.0.R1  
Platforms All

### **preferred-lifetime** (*keyword | number*)

Synopsis Remaining time that the prefix remains preferred  
Context **configure service vprn** *string* **ipv6 router-advertisement interface reference prefix** *string*  
**preferred-lifetime** (*keyword | number*)  
Tree **preferred-lifetime**  
Range 0 to 4294967294  
Default 604800  
Units seconds  
Options infinite  
Introduced 16.0.R1  
Platforms All

### **valid-lifetime** (*keyword | number*)

Synopsis	Remaining time in which the prefix is still valid
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>ipv6</b> <b>router-advertisement</b> <b>interface</b> <i>reference</i> <b>prefix</b> <i>string</i> <b>valid-lifetime</b> ( <i>keyword   number</i> )
Tree	<b>valid-lifetime</b>
Range	0 to 4294967294
Default	2592000
Units	seconds
Options	infinite
Introduced	16.0.R1
Platforms	All

### **reachable-time** *number*

Synopsis	Time the router is reachable by other hosts or nodes
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>ipv6</b> <b>router-advertisement</b> <b>interface</b> <i>reference</i> <b>reachable-time</b> <i>number</i>
Tree	<b>reachable-time</b>
Range	0 to 3600000
Default	0
Units	milliseconds
Introduced	16.0.R1
Platforms	All

### **retransmit-time** *number*

Synopsis	Time to advertise neighbor advertisement messages
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>ipv6</b> <b>router-advertisement</b> <b>interface</b> <i>reference</i> <b>retransmit-time</b> <i>number</i>
Tree	<b>retransmit-time</b>
Range	0 to 1800000
Default	0
Units	milliseconds
Introduced	16.0.R1
Platforms	All

### **router-lifetime** *number*

Synopsis	Lifetime value in neighbor advertisement messages
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">ipv6</a> <a href="#">router-advertisement</a> <a href="#">interface</a> <i>reference</i> <a href="#">router-lifetime</a> <i>number</i>
Tree	<a href="#">router-lifetime</a>
Range	0   4 to 9000
Default	1800
Units	seconds
Introduced	16.0.R1
Platforms	All

### **use-virtual-mac** *boolean*

Synopsis	Use VRRP virtual MAC address for advertisement message
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">ipv6</a> <a href="#">router-advertisement</a> <a href="#">interface</a> <i>reference</i> <a href="#">use-virtual-mac</a> <i>boolean</i>
Tree	<a href="#">use-virtual-mac</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **isis** [[isis-instance](#)] *number*

Synopsis	Enter the <b>isis</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">isis</a> <i>number</i>
Tree	<a href="#">isis</a>
Introduced	16.0.R1
Platforms	All

### **[isis-instance]** *number*

Synopsis	Instance ID for the IS-IS instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">isis</a> <i>number</i>
Tree	<a href="#">isis</a>
Range	0 to 127

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the IS-IS instance
Context	<b>configure service vprn string isis number admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **advertise-passive-only** *boolean*

Synopsis	Advertise prefixes that belong to passive interfaces
Context	<b>configure service vprn string isis number advertise-passive-only boolean</b>
Tree	<a href="#">advertise-passive-only</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **advertise-router-capability** *keyword*

Synopsis	Router capabilities advertisement to neighbors
Context	<b>configure service vprn string isis number advertise-router-capability keyword</b>
Tree	<a href="#">advertise-router-capability</a>
Options	area, as
Introduced	16.0.R1
Platforms	All

### **all-l1isis** *string*

Synopsis	Destination MAC address for all L1 IS-IS routers
----------	--

Context	<b>configure service vprn string isis number all-l1isis string</b>
Tree	<b>all-l1isis</b>
Default	01:80:C2:00:00:14
Introduced	16.0.R1
Platforms	All

### **all-l2isis string**

Synopsis	Destination MAC address for all L2 IS-IS routers
Context	<b>configure service vprn string isis number all-l2isis string</b>
Tree	<b>all-l2isis</b>
Default	01:80:C2:00:00:15
Introduced	16.0.R1
Platforms	All

### **area-address string**

Synopsis	Area address portion of the NSAP address
Context	<b>configure service vprn string isis number area-address string</b>
Tree	<b>area-address</b>
String Length	2 to 38
Max. Instances	3
Introduced	16.0.R1
Platforms	All

### **authentication-check boolean**

Synopsis	Perform authentication check to reject mismatch PDUs
Context	<b>configure service vprn string isis number authentication-check boolean</b>
Tree	<b>authentication-check</b>
Default	true
Introduced	16.0.R1
Platforms	All

### **authentication-key** *string*

Synopsis	Authentication key to verify PDUs sent from neighbors
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">isis number</a> <a href="#">authentication-key</a> <i>string</i>
Tree	<a href="#">authentication-key</a>
String Length	1 to 366
Introduced	16.0.R1
Platforms	All

### **authentication-keychain** *reference*

Synopsis	Keychain used to sign and authenticate
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">isis number</a> <a href="#">authentication-keychain</a> <i>reference</i>
Tree	<a href="#">authentication-keychain</a>
Reference	<b>configure</b> <a href="#">system security</a> <a href="#">keychains</a> <a href="#">keychain</a> <i>string</i>
Introduced	16.0.R3
Platforms	All

### **authentication-type** *keyword*

Synopsis	Authentication type
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">isis number</a> <a href="#">authentication-type</a> <i>keyword</i>
Tree	<a href="#">authentication-type</a>
Options	password, message-digest
Introduced	16.0.R1
Platforms	All

### **csnp-authentication** *boolean*

Synopsis	Authenticate individual IS-IS packets of the CSNP type
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">isis number</a> <a href="#">csnp-authentication</a> <i>boolean</i>
Tree	<a href="#">csnp-authentication</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **default-route-tag** *number*

Synopsis	Route tag for the default route
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">isis</a> <i>number</i> <b>default-route-tag</b> <i>number</i>
Tree	<a href="#">default-route-tag</a>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **export-limit**

Synopsis	Enable the <b>export-limit</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">isis</a> <i>number</i> <b>export-limit</b>
Tree	<a href="#">export-limit</a>
Introduced	16.0.R1
Platforms	All

### **log-percent** *number*

Synopsis	Export limit before warning and SNMP notification sent
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">isis</a> <i>number</i> <b>export-limit</b> <b>log-percent</b> <i>number</i>
Tree	<a href="#">log-percent</a>
Range	1 to 100
Introduced	16.0.R1
Platforms	All

### **number** *number*

Synopsis	Maximum routes or prefixes exported from route table
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">isis</a> <i>number</i> <b>export-limit</b> <b>number</b> <i>number</i>
Tree	<a href="#">number</a>
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

## **export-policy** *reference*

Synopsis	Export policies that determine exported routes
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">export-policy</a> <i>reference</i>
Tree	<a href="#">export-policy</a>
Description	<p>This command configures export routing policies for the routes exported from the routing table to IS-IS.</p> <p>If the export policy is undefined, the system does not export non IS-IS routes from the routing table manager to IS-IS.</p> <p>If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.</p> <p>If the <b>aggregate</b> command is also configured in the <b>configure router</b> context, the aggregation is applied before the export policy is applied.</p> <p>Routing policies are created in the <b>configure router policy-options</b> context.</p>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

## **graceful-restart**

Synopsis	Enable the <b>graceful-restart</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">graceful-restart</a>
Tree	<a href="#">graceful-restart</a>
Introduced	16.0.R1
Platforms	All

## **helper-mode** *boolean*

Synopsis	Enable the Graceful Restart helper for IS-IS
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">graceful-restart</a> <a href="#">helper-mode</a> <i>boolean</i>
Tree	<a href="#">helper-mode</a>
Default	true
Introduced	16.0.R1

Platforms All

### **hello-authentication** *boolean*

Synopsis Authenticate Hello type IS-IS protocol packets  
Context **configure service vprn string isis number hello-authentication boolean**  
Tree [hello-authentication](#)  
Default true  
Introduced 16.0.R1  
Platforms All

### **hello-padding** *keyword*

Synopsis IS-IS Hello message padding  
Context **configure service vprn string isis number hello-padding keyword**  
Tree [hello-padding](#)  
Options adaptive, loose, strict, none  
Introduced 16.0.R1  
Platforms All

### **ignore-attached-bit** *boolean*

Synopsis Ignore attached bit on received Layer 1 LSPs  
Context **configure service vprn string isis number ignore-attached-bit boolean**  
Tree [ignore-attached-bit](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **ignore-lsp-errors** *boolean*

Synopsis Ignore LSP packets with errors  
Context **configure service vprn string isis number ignore-lsp-errors boolean**  
Tree [ignore-lsp-errors](#)  
Default false

Introduced 16.0.R1  
Platforms All

### **ignore-narrow-metric** *boolean*

Synopsis Ignore links with narrow metrics  
Context **configure service vprn string isis number ignore-narrow-metric boolean**  
Tree [ignore-narrow-metric](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **iid-tlv** *boolean*

Synopsis Use IID TLVs with IS-IS multi-instance  
Context **configure service vprn string isis number iid-tlv boolean**  
Tree [iid-tlv](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **import-policy** *reference*

Synopsis Import policy names for routes from IGP to route table  
Context **configure service vprn string isis number import-policy reference**  
Tree [import-policy](#)  
Reference **configure policy-options policy-statement string**  
Max. Instances 5  
Notes This element is ordered by the user.  
Introduced 16.0.R1  
Platforms All

### **interface** [interface-name] string

Synopsis	Enter the <b>interface</b> list instance
Context	<b>configure service vprn string isis number interface string</b>
Tree	<b>interface</b>
Introduced	16.0.R1
Platforms	All

### **[interface-name]** string

Synopsis	IP interface name
Context	<b>configure service vprn string isis number interface string</b>
Tree	<b>interface</b>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **admin-state** keyword

Synopsis	Administrative state of the IS-IS interface
Context	<b>configure service vprn string isis number interface string admin-state keyword</b>
Tree	<b>admin-state</b>
Default	enable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **bfd-liveness**

Synopsis	Enter the <b>bfd-liveness</b> context
Context	<b>configure service vprn string isis number interface string bfd-liveness</b>
Tree	<b>bfd-liveness</b>
Description	Commands in this context enable the use of bidirectional forwarding (BFD) to control IPv4 and IPv6 adjacencies. Enabling BFD on an IPv4 or IPv6 protocol interface ties the protocol interface state to the BFD session state between the local and remote nodes. BFD must be enabled on the applicable IP interface.

Introduced 16.0.R1  
Platforms All

## ipv4

Synopsis Enable the **ipv4** context  
Context **configure service vprn string isis number interface string bfd-liveness ipv4**  
Tree [ipv4](#)  
Introduced 16.0.R1  
Platforms All

## include-bfd-tlv *boolean*

Synopsis Enable IS-IS BFD TLVs on the interface  
Context **configure service vprn string isis number interface string bfd-liveness ipv4 include-bfd-tlv *boolean***  
Tree [include-bfd-tlv](#)  
Default false  
Introduced 16.0.R1  
Platforms All

## ipv6

Synopsis Enable the **ipv6** context  
Context **configure service vprn string isis number interface string bfd-liveness ipv6**  
Tree [ipv6](#)  
Introduced 16.0.R1  
Platforms All

## include-bfd-tlv *boolean*

Synopsis Enable IS-IS BFD TLVs on the interface  
Context **configure service vprn string isis number interface string bfd-liveness ipv6 include-bfd-tlv *boolean***  
Tree [include-bfd-tlv](#)  
Default false

Introduced 16.0.R1  
Platforms All

### **csnp-interval** *number*

Synopsis Time interval between successive CSN PDUs sent  
Context **configure** *service vprn string isis number interface string csnp-interval number*  
Tree [csnp-interval](#)  
Range 1 to 65535  
Default 10  
Units seconds  
Introduced 16.0.R1  
Platforms All

### **default-instance** *boolean*

Synopsis Allow non-MI capable router to establish an adjacency  
Context **configure** *service vprn string isis number interface string default-instance boolean*  
Tree [default-instance](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **hello-authentication** *boolean*

Synopsis Authenticate Hello type IS-IS protocol packets  
Context **configure** *service vprn string isis number interface string hello-authentication boolean*  
Tree [hello-authentication](#)  
Default true  
Introduced 16.0.R1  
Platforms All

### **hello-authentication-key** *string*

Synopsis Authentication key or hash string for Hello PDUs

Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">hello-authentication-key</a> <i>string</i>
Tree	<a href="#">hello-authentication-key</a>
String Length	1 to 366
Introduced	16.0.R1
Platforms	All

### **hello-authentication-keychain** *reference*

Synopsis	Authentication keychain to use for the session
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">hello-authentication-keychain</a> <i>reference</i>
Tree	<a href="#">hello-authentication-keychain</a>
Reference	<b>configure</b> <a href="#">system</a> <a href="#">security</a> <a href="#">keychains</a> <a href="#">keychain</a> <i>string</i>
Introduced	16.0.R3
Platforms	All

### **hello-authentication-type** *keyword*

Synopsis	Hello authentication type
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">hello-authentication-type</a> <i>keyword</i>
Tree	<a href="#">hello-authentication-type</a>
Options	password, message-digest
Introduced	16.0.R1
Platforms	All

### **hello-padding** *keyword*

Synopsis	Padding on IS-IS Hello packets
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">hello-padding</a> <i>keyword</i>
Tree	<a href="#">hello-padding</a>
Options	adaptive, loose, strict, none
Introduced	16.0.R1
Platforms	All

### **interface-type** *keyword*

Synopsis	Interface type to broadcast, point-to-point, or to be default
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">interface-type</a> <i>keyword</i>
Tree	<a href="#">interface-type</a>
Options	point-to-point, broadcast
Introduced	16.0.R1
Platforms	All

### **ipv4-multicast** *boolean*

Synopsis	Enable IPv4 multicast routing for the interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4-multicast</a> <i>boolean</i>
Tree	<a href="#">ipv4-multicast</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **ipv6-unicast** *boolean*

Synopsis	Enable IPv6 unicast routing for the interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6-unicast</a> <i>boolean</i>
Tree	<a href="#">ipv6-unicast</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **level** [[level-number](#)] *keyword*

Synopsis	Enter the <b>level</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">level</a> <i>keyword</i>
Tree	<a href="#">level</a>
Max. Instances	2
Introduced	16.0.R1
Platforms	All

### **[level-number] keyword**

Synopsis	ISIS protocol level number
Context	<b>configure service vprn string isis number interface string level keyword</b>
Tree	<b>level</b>
Options	1, 2
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **hello-authentication-key string**

Synopsis	Authentication key for Hello PDUs
Context	<b>configure service vprn string isis number interface string level keyword hello-authentication-key string</b>
Tree	<b>hello-authentication-key</b>
Description	This command configures the authentication key (password) for Hello PDUs. Both the Hello authentication key and the Hello authentication type on a segment must match.  If both IS-IS and Hello authentication are configured, Hello messages are validated using Hello authentication. If only IS-IS authentication is configured, it is used to authenticate all IS-IS (including Hello) protocol PDUs.
String Length	1 to 366
Introduced	16.0.R1
Platforms	All

### **hello-authentication-keychain reference**

Synopsis	Authentication keychain to use for the session
Context	<b>configure service vprn string isis number interface string level keyword hello-authentication-keychain reference</b>
Tree	<b>hello-authentication-keychain</b>
Reference	<b>configure system security keychains keychain string</b>
Introduced	16.0.R3
Platforms	All

### **hello-authentication-type** *keyword*

Synopsis	Hello authentication enabled on the context
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>isis</b> <i>number</i> <b>interface</b> <i>string</i> <b>level</b> <i>keyword</i> <b>hello-authentication-type</b> <i>keyword</i>
Tree	<b>hello-authentication-type</b>
Description	This command enables Hello authentication at the level context. Both the Hello authentication key and the Hello authentication type on a segment must match. The Hello <b>authentication-key</b> statement must also be included.
Options	password, message-digest
Introduced	16.0.R1
Platforms	All

### **hello-interval** *number*

Synopsis	Interval between Hello messages sent on this level
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>isis</b> <i>number</i> <b>interface</b> <i>string</i> <b>level</b> <i>keyword</i> <b>hello-interval</b> <i>number</i>
Tree	<b>hello-interval</b>
Range	1 to 20000
Default	9
Units	seconds
Introduced	16.0.R1
Platforms	All

### **hello-multiplier** *number*

Synopsis	Hello messages missed from neighbor before router declares adjacency down
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>isis</b> <i>number</i> <b>interface</b> <i>string</i> <b>level</b> <i>keyword</i> <b>hello-multiplier</b> <i>number</i>
Tree	<b>hello-multiplier</b>
Range	2 to 100
Default	3
Introduced	16.0.R1
Platforms	All

### hello-padding *keyword*

Synopsis	Padding on IS-IS Hello packets
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">level</a> <i>keyword</i> <b>hello-padding</b> <i>keyword</i>
Tree	<a href="#">hello-padding</a>
Options	adaptive, loose, strict, none
Introduced	16.0.R1
Platforms	All

### ipv4-multicast-metric *number*

Synopsis	IS-IS interface metric applied for IPv4 multicast
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">level</a> <i>keyword</i> <b>ipv4-multicast-metric</b> <i>number</i>
Tree	<a href="#">ipv4-multicast-metric</a>
Range	1 to 16777215
Introduced	16.0.R1
Platforms	All

### ipv6-unicast-metric *number*

Synopsis	IS-IS interface metric applied for IPv6 unicast
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">level</a> <i>keyword</i> <b>ipv6-unicast-metric</b> <i>number</i>
Tree	<a href="#">ipv6-unicast-metric</a>
Range	1 to 16777215
Introduced	16.0.R1
Platforms	All

### metric *number*

Synopsis	IS-IS interface metric applied for IPv4 unicast
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">level</a> <i>keyword</i> <b>metric</b> <i>number</i>
Tree	<a href="#">metric</a>
Range	1 to 16777215
Introduced	16.0.R1

Platforms All

### **passive** *boolean*

Synopsis Passive interface  
Context **configure** [service](#) [vprn](#) *string* [isis](#) *number* [interface](#) *string* [level](#) *keyword* [passive](#) *boolean*  
Tree [passive](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **priority** *number*

Synopsis Router to become the designated router on a multi-access network  
Context **configure** [service](#) [vprn](#) *string* [isis](#) *number* [interface](#) *string* [level](#) *keyword* [priority](#) *number*  
Tree [priority](#)  
Range 0 to 127  
Default 64  
Introduced 16.0.R1  
Platforms All

### **sd-offset** *number*

Synopsis Value of the signal degrade offset  
Context **configure** [service](#) [vprn](#) *string* [isis](#) *number* [interface](#) *string* [level](#) *keyword* [sd-offset](#) *number*  
Tree [sd-offset](#)  
Range 1 to 16777215  
Introduced 16.0.R1  
Platforms All

### **sf-offset** *number*

Synopsis Value of the signal fail offset  
Context **configure** [service](#) [vprn](#) *string* [isis](#) *number* [interface](#) *string* [level](#) *keyword* [sf-offset](#) *number*  
Tree [sf-offset](#)

Range	1 to 16777215
Introduced	16.0.R1
Platforms	All

### **level-capability** *keyword*

Synopsis	IS-IS levels for this interface
Context	<b>configure service vprn</b> <i>string isis number interface string level-capability keyword</i>
Tree	<a href="#">level-capability</a>
Default	1/2
Options	1, 2, 1/2
Introduced	16.0.R1
Platforms	All

### **load-balancing-weight** *number*

Synopsis	Load balancing weight
Context	<b>configure service vprn</b> <i>string isis number interface string load-balancing-weight number</i>
Tree	<a href="#">load-balancing-weight</a>
Max. Range	0 to 4294967295
Introduced	16.0.R1
Platforms	All

### **loopfree-alternate**

Synopsis	Enter the <b>loopfree-alternate</b> context
Context	<b>configure service vprn</b> <i>string isis number interface string loopfree-alternate</i>
Tree	<a href="#">loopfree-alternate</a>
Introduced	16.0.R3
Platforms	All

### **exclude** *boolean*

Synopsis	Enable/disable Loopfree Alternative at interface level.
Context	<b>configure service vprn</b> <i>string isis number interface string loopfree-alternate exclude boolean</i>

Tree	<a href="#">exclude</a>
Default	false
Introduced	16.0.R3
Platforms	All

## policy-map

Synopsis	Enable the <b>policy-map</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">loopfree-alternate</a> <a href="#">policy-map</a>
Tree	<a href="#">policy-map</a>
Introduced	16.0.R3
Platforms	All

## route-nh-template *reference*

Synopsis	Route next hop policy template that is applied to interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">loopfree-alternate</a> <a href="#">policy-map</a> <a href="#">route-nh-template</a> <i>reference</i>
Tree	<a href="#">route-nh-template</a>
Reference	<b>configure</b> <a href="#">routing-options</a> <a href="#">route-next-hop-policy</a> <i>template</i> <i>string</i>
Notes	This element is mandatory.
Introduced	16.0.R3
Platforms	All

## lsp-pacing-interval *number*

Synopsis	Interval for sending LSPs from interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <a href="#">lsp-pacing-interval</a> <i>number</i>
Tree	<a href="#">lsp-pacing-interval</a>
Range	0 to 65535
Default	100
Units	milliseconds
Introduced	16.0.R1
Platforms	All

## mesh-group

Synopsis	Enable the <b>mesh-group</b> context
Context	<b>configure service vprn string isis number interface string mesh-group</b>
Tree	<b>mesh-group</b>
Introduced	16.0.R1
Platforms	All

## blocked

Synopsis	Prevent the interface from flooding LSPs
Context	<b>configure service vprn string isis number interface string mesh-group blocked</b>
Tree	<b>blocked</b>
Notes	The following elements are part of a choice: <b>blocked</b> or <b>value</b> .
Introduced	16.0.R1
Platforms	All

## value number

Synopsis	Mesh group for the interface
Context	<b>configure service vprn string isis number interface string mesh-group value number</b>
Tree	<b>value</b>
Range	1 to 2000000000
Notes	The following elements are part of a choice: <b>blocked</b> or <b>value</b> .
Introduced	16.0.R1
Platforms	All

## passive boolean

Synopsis	Passive interface
Context	<b>configure service vprn string isis number interface string passive boolean</b>
Tree	<b>passive</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **retransmit-interval** *number*

Synopsis	Minimum time between LSP PDU retransmissions on point-to-point interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <b>retransmit-interval</b> <i>number</i>
Tree	<a href="#">retransmit-interval</a>
Range	1 to 65535
Default	5
Units	seconds
Introduced	16.0.R1
Platforms	All

### **tag** *number*

Synopsis	Route tag for IP address of interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i> <b>tag</b> <i>number</i>
Tree	<a href="#">tag</a>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **ipv4-multicast-routing** *keyword*

Synopsis	IS-IS topology for IPv4 multicast routing
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">isis</a> <i>number</i> <b>ipv4-multicast-routing</b> <i>keyword</i>
Tree	<a href="#">ipv4-multicast-routing</a>
Default	native
Options	false, native, mt
Introduced	16.0.R1
Platforms	All

### **ipv4-routing** *boolean*

Synopsis	Support IPv4 routing for IS-IS instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">isis</a> <i>number</i> <b>ipv4-routing</b> <i>boolean</i>
Tree	<a href="#">ipv4-routing</a>

Default	true
Introduced	16.0.R1
Platforms	All

### **ipv6-routing** *keyword*

Synopsis	Routing topology for IPv6
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">isis</a> <i>number</i> <b>ipv6-routing</b> <i>keyword</i>
Tree	<a href="#">ipv6-routing</a>
Default	false
Options	false, native, mt
Introduced	16.0.R1
Platforms	All

### **level** [[level-number](#)] *keyword*

Synopsis	Enter the <b>level</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">isis</a> <i>number</i> <b>level</b> <i>keyword</i>
Tree	<a href="#">level</a>
Max. Instances	2
Introduced	16.0.R1
Platforms	All

### **[level-number]** *keyword*

Synopsis	ISIS protocol level number
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">isis</a> <i>number</i> <b>level</b> <i>keyword</i>
Tree	<a href="#">level</a>
Options	1, 2
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **advertise-router-capability** *boolean*

Synopsis	Allow router advertisement capabilities
Context	<b>configure</b> <a href="#">service vprn</a> <i>string isis number level</i> <i>keyword</i> <a href="#">advertise-router-capability</a> <i>boolean</i>
Tree	<a href="#">advertise-router-capability</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **authentication-key** *string*

Synopsis	Authentication key to verify PDUs sent on the interface
Context	<b>configure</b> <a href="#">service vprn</a> <i>string isis number level</i> <i>keyword</i> <a href="#">authentication-key</a> <i>string</i>
Tree	<a href="#">authentication-key</a>
Description	This command sets the authentication key used to verify PDUs sent by neighboring routers on the interface.  Neighboring routers use passwords to authenticate PDUs sent from an interface. For authentication to work, both the authentication key and the authentication type on a segment must match. The <b>authentication-type</b> command must also be included.
String Length	1 to 366
Introduced	16.0.R1
Platforms	All

### **authentication-keychain** *reference*

Synopsis	Keychain used to sign and authenticate
Context	<b>configure</b> <a href="#">service vprn</a> <i>string isis number level</i> <i>keyword</i> <a href="#">authentication-keychain</a> <i>reference</i>
Tree	<a href="#">authentication-keychain</a>
Reference	<b>configure</b> <a href="#">system security keychains</a> <a href="#">keychain</a> <i>string</i>
Introduced	16.0.R3
Platforms	All

### **authentication-type** *keyword*

Synopsis	Authentication type to be used
----------	--------------------------------

Context	<b>configure service vprn string isis number level keyword authentication-type keyword</b>
Tree	<a href="#">authentication-type</a>
Options	password, message-digest
Introduced	16.0.R1
Platforms	All

### **csnp-authentication *boolean***

Synopsis	Enable authentication of CSNP IS-IS protocol packets
Context	<b>configure service vprn string isis number level keyword csnp-authentication boolean</b>
Tree	<a href="#">csnp-authentication</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **default-ipv4-multicast-metric *number***

Synopsis	Default metric for IPv4 unicast
Context	<b>configure service vprn string isis number level keyword default-ipv4-multicast-metric number</b>
Tree	<a href="#">default-ipv4-multicast-metric</a>
Range	1 to 16777215
Default	10
Introduced	16.0.R1
Platforms	All

### **default-ipv6-unicast-metric *number***

Synopsis	Default metric for IPv6 unicast
Context	<b>configure service vprn string isis number level keyword default-ipv6-unicast-metric number</b>
Tree	<a href="#">default-ipv6-unicast-metric</a>
Range	1 to 16777215
Default	10
Introduced	16.0.R1

Platforms All

### **default-metric** *number*

Synopsis Default metric  
Context **configure** [service](#) [vprn](#) *string* [isis](#) *number* [level](#) *keyword* [default-metric](#) *number*  
Tree [default-metric](#)  
Range 1 to 16777215  
Default 10  
Introduced 16.0.R1  
Platforms All

### **external-preference** *number*

Synopsis External route preference for IS-IS level  
Context **configure** [service](#) [vprn](#) *string* [isis](#) *number* [level](#) *keyword* [external-preference](#) *number*  
Tree [external-preference](#)  
Range 1 to 255  
Introduced 16.0.R1  
Platforms All

### **hello-authentication** *boolean*

Synopsis Authenticate Hello type IS-IS protocol packets  
Context **configure** [service](#) [vprn](#) *string* [isis](#) *number* [level](#) *keyword* [hello-authentication](#) *boolean*  
Tree [hello-authentication](#)  
Default true  
Introduced 16.0.R1  
Platforms All

### **hello-padding** *keyword*

Synopsis Padding on IS-IS Hello packets  
Context **configure** [service](#) [vprn](#) *string* [isis](#) *number* [level](#) *keyword* [hello-padding](#) *keyword*  
Tree [hello-padding](#)

Options	adaptive, loose, strict, none
Introduced	16.0.R1
Platforms	All

### **loopfree-alternate-exclude** *boolean*

Synopsis	Exclude interface participating in specific IS-IS level in SPF LFA computation
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">level</a> <i>keyword</i> <a href="#">loopfree-alternate-exclude</a> <i>boolean</i>
Tree	<a href="#">loopfree-alternate-exclude</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **lsp-mtu-size** *number*

**WARNING:**

Modifying this element requires the **admin-state** of the parent element to be toggled manually for the new value to take effect.

Synopsis	LSP MTU size
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">level</a> <i>keyword</i> <a href="#">lsp-mtu-size</a> <i>number</i>
Tree	<a href="#">lsp-mtu-size</a>
Range	490 to 9778
Default	1492
Units	bytes
Introduced	16.0.R1
Platforms	All

### **preference** *number*

Synopsis	External route preference at level
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">level</a> <i>keyword</i> <a href="#">preference</a> <i>number</i>
Tree	<a href="#">preference</a>
Range	1 to 255
Introduced	16.0.R1

Platforms All

### **psnp-authentication** *boolean*

Synopsis Enable authentication on PSNP IS-IS protocol packets  
Context **configure** [service vprn](#) *string isis number level* keyword [psnp-authentication](#) *boolean*  
Tree [psnp-authentication](#)  
Default true  
Introduced 16.0.R1  
Platforms All

### **wide-metrics-only** *boolean*

Synopsis Use wide metrics advertisements in the LSPs  
Context **configure** [service vprn](#) *string isis number level* keyword [wide-metrics-only](#) *boolean*  
Tree [wide-metrics-only](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **level-capability** *keyword*

Synopsis Routing level for instance  
Context **configure** [service vprn](#) *string isis number* [level-capability](#) *keyword*  
Tree [level-capability](#)  
Default 1/2  
Options 1, 2, 1/2  
Introduced 16.0.R1  
Platforms All

### **link-group** [[link-group-name](#)] *string*

Synopsis Enter the **link-group** list instance  
Context **configure** [service vprn](#) *string isis number* [link-group](#) *string*  
Tree [link-group](#)

Introduced 16.0.R1  
Platforms All

### **[link-group-name]** *string*

Synopsis Link group name for the IS-IS protocol  
Context **configure service vprn** *string isis number link-group string*  
Tree [link-group](#)  
String Length 1 to 32  
Notes This element is part of a list key.  
Introduced 16.0.R1  
Platforms All

### **description** *string*

Synopsis Text description  
Context **configure service vprn** *string isis number link-group string description string*  
Tree [description](#)  
String Length 1 to 255  
Introduced 16.0.R1  
Platforms All

### **level** [[level-number](#)] *keyword*

Synopsis Enter the **level** list instance  
Context **configure service vprn** *string isis number link-group string level keyword*  
Tree [level](#)  
Max. Instances 2  
Introduced 16.0.R1  
Platforms All

### **[level-number]** *keyword*

Synopsis ISIS protocol level number

Context	<b>configure service vprn</b> <i>string isis number link-group string level keyword</i>
Tree	<a href="#">level</a>
Options	1, 2
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **ipv4-multicast-metric-offset** *number*

Synopsis	Offset value for the IPv4 multicast address family
Context	<b>configure service vprn</b> <i>string isis number link-group string level keyword ipv4-multicast-metric-offset number</i>
Tree	<a href="#">ipv4-multicast-metric-offset</a>
Range	1 to 16777215
Introduced	16.0.R1
Platforms	All

### **ipv4-unicast-metric-offset** *number*

Synopsis	Offset value for the IPv4 unicast address family
Context	<b>configure service vprn</b> <i>string isis number link-group string level keyword ipv4-unicast-metric-offset number</i>
Tree	<a href="#">ipv4-unicast-metric-offset</a>
Range	1 to 16777215
Introduced	16.0.R1
Platforms	All

### **ipv6-unicast-metric-offset** *number*

Synopsis	Offset value for the IPv6 unicast address family
Context	<b>configure service vprn</b> <i>string isis number link-group string level keyword ipv6-unicast-metric-offset number</i>
Tree	<a href="#">ipv6-unicast-metric-offset</a>
Range	1 to 16777215
Introduced	16.0.R1
Platforms	All

## **member** [[interface-name](#)] *reference*

Synopsis	Add a list entry for <b>member</b>
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">link-group</a> <i>string</i> <a href="#">level</a> <i>keyword</i> <a href="#">member</a> <i>reference</i>
Tree	<a href="#">member</a>
Max. Instances	8
Introduced	16.0.R1
Platforms	All

## **[interface-name]** *reference*

Synopsis	Interface name for the associated link group
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">link-group</a> <i>string</i> <a href="#">level</a> <i>keyword</i> <a href="#">member</a> <i>reference</i>
Tree	<a href="#">member</a>
Reference	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">interface</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## **oper-members** *number*

Synopsis	Minimum number of operational links
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">link-group</a> <i>string</i> <a href="#">level</a> <i>keyword</i> <a href="#">oper-members</a> <i>number</i>
Tree	<a href="#">oper-members</a>
Range	1 to 8
Introduced	16.0.R1
Platforms	All

## **revert-members** *number*

Synopsis	Minimum number of operational links to return link group to normal state and remove offsets
----------	---

Context	<b>configure service vprn</b> <i>string isis number link-group string level keyword revert-members number</i>
Tree	<a href="#">revert-members</a>
Range	1 to 8
Introduced	16.0.R1
Platforms	All

## loopfree-alternate

Synopsis	Enable the <b>loopfree-alternate</b> context
Context	<b>configure service vprn</b> <i>string isis number loopfree-alternate</i>
Tree	<a href="#">loopfree-alternate</a>
Introduced	16.0.R1
Platforms	All

## exclude

Synopsis	Enter the <b>exclude</b> context
Context	<b>configure service vprn</b> <i>string isis number loopfree-alternate exclude</i>
Tree	<a href="#">exclude</a>
Introduced	16.0.R3
Platforms	All

## prefix-policy *reference*

Synopsis	Policy to exclude prefixes from LFA SPF calculation
Context	<b>configure service vprn</b> <i>string isis number loopfree-alternate exclude prefix-policy reference</i>
Tree	<a href="#">prefix-policy</a>
Description	This command specifies the name of the policy for the prefixes to exclude from the LFA SPF calculation.  An excluded prefix is not included in LFA calculation regardless of its priority. The prefix tag is, however, used in the main SPF.
Reference	<b>configure policy-options policy-statement</b> <i>string</i>
Max. Instances	5

Notes	This element is ordered by the user.
Introduced	16.0.R3
Platforms	All

### **Isp-lifetime** *number*

**WARNING:**

Modifying this element requires the **admin-state** of the parent element to be toggled manually for the new value to take effect.

Synopsis	Amount of time during which an LSP is considered valid
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">isis</a> <i>number</i> <b>isp-lifetime</b> <i>number</i>
Tree	<a href="#">isp-lifetime</a>
Range	350 to 65535
Default	1200
Units	seconds
Introduced	16.0.R1
Platforms	All

### **Isp-minimum-remaining-lifetime** *number*

Synopsis	Minimum value for the Remaining Lifetime of an LSP
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">isis</a> <i>number</i> <b>isp-minimum-remaining-lifetime</b> <i>number</i>
Tree	<a href="#">isp-minimum-remaining-lifetime</a>
Range	350 to 65535
Units	seconds
Introduced	19.7.R1
Platforms	All

### **Isp-mtu-size** *number*

**WARNING:**

Modifying this element requires the **admin-state** of the parent element to be toggled manually for the new value to take effect.

Synopsis	LSP MTU size
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">isis</a> <i>number</i> <b>isp-mtu-size</b> <i>number</i>

Tree	<a href="#">lsp-mtu-size</a>
Range	490 to 9778
Default	1492
Units	bytes
Introduced	16.0.R1
Platforms	All

## **lsp-refresh**

Synopsis	Enter the <b>lsp-refresh</b> context
Context	<b>configure</b> <a href="#">service vprn string isis number lsp-refresh</a>
Tree	<a href="#">lsp-refresh</a>
Introduced	16.0.R1
Platforms	All

## **half-lifetime** *boolean*

Synopsis	Set the refresh interval to always be half the LSP lifetime
Context	<b>configure</b> <a href="#">service vprn string isis number lsp-refresh half-lifetime boolean</a>
Tree	<a href="#">half-lifetime</a>
Default	true
Introduced	16.0.R1
Platforms	All

## **interval** *number*

Synopsis	Refresh timer interval
Context	<b>configure</b> <a href="#">service vprn string isis number lsp-refresh interval number</a>
Tree	<a href="#">interval</a>
Range	150 to 65535
Default	600
Units	seconds
Introduced	16.0.R1
Platforms	All

### **mru-mismatch-detection** *boolean*

Synopsis	Enable detection of MRU mismatch
Context	<b>configure service vprn</b> <i>string isis number mru-mismatch-detection boolean</i>
Tree	<a href="#">mru-mismatch-detection</a>
Description	<p>When configured to <b>true</b>, this command verifies that the received IS-IS Hello (IIH) packet size does not exceed the configured maximum port MTU size. The received IIH packet is dropped when its size exceeds the maximum port MTU size.</p> <p>When configured to <b>false</b>, the IS-IS router instance will not drop oversized IIH packets.</p> <p>By default, FP-based hardware can receive oversized packets but it will not originate them.</p>
Default	false
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **multi-topology**

Synopsis	Enable the <b>multi-topology</b> context
Context	<b>configure service vprn</b> <i>string isis number multi-topology</i>
Tree	<a href="#">multi-topology</a>
Introduced	16.0.R1
Platforms	All

### **ipv4-multicast** *boolean*

Synopsis	Support IPv4 topology (MT3)
Context	<b>configure service vprn</b> <i>string isis number multi-topology ipv4-multicast boolean</i>
Tree	<a href="#">ipv4-multicast</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **ipv6-unicast** *boolean*

Synopsis	Support multi-topology TLVs
Context	<b>configure service vprn</b> <i>string isis number multi-topology ipv6-unicast boolean</i>

Tree	<a href="#">ipv6-unicast</a>
Default	false
Introduced	16.0.R1
Platforms	All

## multicast-import

Synopsis	Enter the <b>multicast-import</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">multicast-import</a>
Tree	<a href="#">multicast-import</a>
Introduced	16.0.R1
Platforms	All

## ipv4 *boolean*

Synopsis	Submit IPv4 routes into the multicast RPF of the RTM
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">multicast-import</a> <a href="#">ipv4</a> <i>boolean</i>
Tree	<a href="#">ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

## overload

Synopsis	Enable the <b>overload</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">overload</a>
Tree	<a href="#">overload</a>
Introduced	16.0.R1
Platforms	All

## max-metric *boolean*

Synopsis	Advertise transit links with maximum metric instead of setting overload bit
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">overload</a> <a href="#">max-metric</a> <i>boolean</i>
Tree	<a href="#">max-metric</a>

Default	false
Introduced	16.0.R1
Platforms	All

### **overload-export-external** *boolean*

Synopsis	Advertise the external routes when router is in overloaded
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">overload-export-external</a> <i>boolean</i>
Tree	<a href="#">overload-export-external</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **overload-export-interlevel** *boolean*

Synopsis	Advertise the inter-level routes when router is overloaded
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">overload-export-interlevel</a> <i>boolean</i>
Tree	<a href="#">overload-export-interlevel</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **overload-on-boot**

Synopsis	Enable the <b>overload-on-boot</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">overload-on-boot</a>
Tree	<a href="#">overload-on-boot</a>
Introduced	16.0.R1
Platforms	All

### **max-metric** *boolean*

Synopsis	Advertise transit links with maximum metric instead of setting overload bit
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">isis</a> <i>number</i> <a href="#">overload-on-boot</a> <a href="#">max-metric</a> <i>boolean</i>
Tree	<a href="#">max-metric</a>

Default	false
Introduced	16.0.R1
Platforms	All

### **timeout** *number*

Synopsis	Time during which the router operates in overload state after reboot
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">isis</a> <i>number</i> <b>overload-on-boot</b> <a href="#">timeout</a> <i>number</i>
Tree	<a href="#">timeout</a>
Range	60 to 1800
Units	seconds
Introduced	16.0.R1
Platforms	All

### **poi-tlv** *boolean*

Synopsis	Purge Originator Identification TLV
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">isis</a> <i>number</i> <b>poi-tlv</b> <i>boolean</i>
Tree	<a href="#">poi-tlv</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **prefix-attributes-tlv** *boolean*

Synopsis	Use IS-IS Prefix Attributes TLV to exchange extended IPv4 and IPv6 reachability information
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">isis</a> <i>number</i> <b>prefix-attributes-tlv</b> <i>boolean</i>
Tree	<a href="#">prefix-attributes-tlv</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **prefix-limit**

Synopsis	Enable the <b>prefix-limit</b> context
----------	--

Context	<b>configure service vprn string isis number prefix-limit</b>
Tree	<b>prefix-limit</b>
Introduced	16.0.R1
Platforms	All

### **limit number**

Synopsis	Maximum number of prefixes for IS-IS instance
Context	<b>configure service vprn string isis number prefix-limit limit number</b>
Tree	<b>limit</b>
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **log-only boolean**

Synopsis	Send warning message when the prefix limit is reached
Context	<b>configure service vprn string isis number prefix-limit log-only boolean</b>
Tree	<b>log-only</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **overload-timeout (number | keyword)**

Synopsis	Time router remains in overload after prefix limit is exceeded before restarting
Context	<b>configure service vprn string isis number prefix-limit overload-timeout (number   keyword)</b>
Tree	<b>overload-timeout</b>
Range	1 to 1800
Default	forever
Units	seconds
Options	forever
Introduced	16.0.R1

Platforms All

### **warning-threshold** *number*

Synopsis Threshold value to trigger a warning message to be sent

Context **configure** [service vprn](#) *string* [isis number](#) [prefix-limit](#) [warning-threshold](#) *number*

Tree [warning-threshold](#)

Range 0 to 100

Default 0

Units percent

Introduced 16.0.R1

Platforms All

### **psnp-authentication** *boolean*

Synopsis Authenticate individual IS-IS protocol packets of partial sequence number PDU (PSNP) type

Context **configure** [service vprn](#) *string* [isis number](#) [psnp-authentication](#) *boolean*

Tree [psnp-authentication](#)

Default true

Introduced 16.0.R1

Platforms All

### **reference-bandwidth** *number*

Synopsis Reference bandwidth for bandwidth relative costing

Context **configure** [service vprn](#) *string* [isis number](#) [reference-bandwidth](#) *number*

Tree [reference-bandwidth](#)

Range 1 to 18446744073709551615

Units kilobps

Introduced 16.0.R1

Platforms All

### **rib-priority**

Synopsis Enter the **rib-priority** context

Context	<b>configure service vprn string isis number rib-priority</b>
Tree	<a href="#">rib-priority</a>
Introduced	16.0.R1
Platforms	All

## high

Synopsis	Enter the <b>high</b> context
Context	<b>configure service vprn string isis number rib-priority high</b>
Tree	<a href="#">high</a>
Introduced	16.0.R1
Platforms	All

## prefix-list *reference*

Synopsis	List used to select routes processed at higher priority through OSPF route calculation process
Context	<b>configure service vprn string isis number rib-priority high prefix-list reference</b>
Tree	<a href="#">prefix-list</a>
Reference	<b>configure policy-options prefix-list string</b>
Notes	The following elements are part of a choice: <b>prefix-list</b> or <b>tag</b> .
Introduced	16.0.R1
Platforms	All

## tag *number*

Synopsis	Tag value that is used to match IS-IS routes
Context	<b>configure service vprn string isis number rib-priority high tag number</b>
Tree	<a href="#">tag</a>
Range	1 to 4294967295
Notes	The following elements are part of a choice: <b>prefix-list</b> or <b>tag</b> .
Introduced	16.0.R1
Platforms	All

## router-id *string*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Unique router ID for the ISIS instance
Context	<b>configure service vprn</b> <i>string isis number router-id string</i>
Tree	<a href="#">router-id</a>
Introduced	16.0.R1
Platforms	All

## standard-multi-instance *boolean*

Synopsis	Enable RFC standards compliant multi-instance behavior
Context	<b>configure service vprn</b> <i>string isis number standard-multi-instance boolean</i>
Tree	<a href="#">standard-multi-instance</a>
Default	false
Introduced	16.0.R1
Platforms	All

## strict-adjacency-check *boolean*

Synopsis	Enable strict checking of address families for IS-IS adjacencies
Context	<b>configure service vprn</b> <i>string isis number strict-adjacency-check boolean</i>
Tree	<a href="#">strict-adjacency-check</a>
Default	false
Introduced	16.0.R1
Platforms	All

## summary-address [[ip-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Enter the <b>summary-address</b> list instance
Context	<b>configure service vprn</b> <i>string isis number summary-address (ipv4-prefix   ipv6-prefix)</i>
Tree	<a href="#">summary-address</a>
Introduced	16.0.R1
Platforms	All

### **[ip-prefix]** (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	IP prefix for the summary address
Context	<b>configure service vprn</b> <i>string isis number summary-address</i> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
Tree	<a href="#">summary-address</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **level-capability** *keyword*

Synopsis	IS-IS level for the summary address
Context	<b>configure service vprn</b> <i>string isis number summary-address</i> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">level-capability</a> <i>keyword</i>
Tree	<a href="#">level-capability</a>
Default	1/2
Options	1, 2, 1/2
Introduced	16.0.R1
Platforms	All

### **route-tag** *number*

Synopsis	Route tag assigned to the summary address
Context	<b>configure service vprn</b> <i>string isis number summary-address</i> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">route-tag</a> <i>number</i>
Tree	<a href="#">route-tag</a>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **suppress-attached-bit** *boolean*

Synopsis	Allow IS-IS to suppress setting attached bit on LSPs
Context	<b>configure service vprn</b> <i>string isis number suppress-attached-bit</i> <i>boolean</i>
Tree	<a href="#">suppress-attached-bit</a>
Default	false

Introduced 16.0.R1  
Platforms All

### **system-id** *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element requires the **admin-state** of the parent element to be toggled manually for the new value to take effect.

Synopsis System ID  
Context **configure** *service vprn string isis number system-id string*  
Tree *system-id*  
String Length 14  
Default 0000.0000.0000  
Introduced 16.0.R1  
Platforms All

### **timers**

Synopsis Enter the **timers** context  
Context **configure** *service vprn string isis number timers*  
Tree *timers*  
Introduced 16.0.R1  
Platforms All

### **lsp-wait**

Synopsis Enter the **lsp-wait** context  
Context **configure** *service vprn string isis number timers lsp-wait*  
Tree *lsp-wait*  
Introduced 16.0.R1  
Platforms All

### **lsp-initial-wait** *number*

Synopsis	Initial LSP generation delay
Context	<b>configure service vprn string isis number timers lsp-wait lsp-initial-wait number</b>
Tree	<a href="#">lsp-initial-wait</a>
Range	10 to 100000
Default	10
Units	milliseconds
Introduced	16.0.R1
Platforms	All

### **lsp-max-wait** *number*

Synopsis	Maximum time between two consecutive LSP occurrences
Context	<b>configure service vprn string isis number timers lsp-wait lsp-max-wait number</b>
Tree	<a href="#">lsp-max-wait</a>
Range	10 to 120000
Default	5000
Units	milliseconds
Introduced	16.0.R1
Platforms	All

### **lsp-second-wait** *number*

Synopsis	Delay between first and second LSP generation
Context	<b>configure service vprn string isis number timers lsp-wait lsp-second-wait number</b>
Tree	<a href="#">lsp-second-wait</a>
Range	10 to 100000
Default	1000
Units	milliseconds
Introduced	16.0.R1
Platforms	All

## spf-wait

Synopsis	Enter the <b>spf-wait</b> context
Context	<b>configure service vprn string isis number timers spf-wait</b>
Tree	<a href="#">spf-wait</a>
Introduced	16.0.R1
Platforms	All

## spf-initial-wait *number*

Synopsis	Initial SPF calculation delay after topology change
Context	<b>configure service vprn string isis number timers spf-wait spf-initial-wait number</b>
Tree	<a href="#">spf-initial-wait</a>
Range	10 to 100000
Default	1000
Units	milliseconds
Introduced	16.0.R1
Platforms	All

## spf-max-wait *number*

Synopsis	Maximum interval amid two consecutive SPF calculations
Context	<b>configure service vprn string isis number timers spf-wait spf-max-wait number</b>
Tree	<a href="#">spf-max-wait</a>
Range	10 to 120000
Default	10000
Units	milliseconds
Introduced	16.0.R1
Platforms	All

## spf-second-wait *number*

Synopsis	Hold time between first and second SPF calculations
Context	<b>configure service vprn string isis number timers spf-wait spf-second-wait number</b>
Tree	<a href="#">spf-second-wait</a>
Range	10 to 100000

Default	1000
Units	milliseconds
Introduced	16.0.R1
Platforms	All

## unicast-import

Synopsis	Enter the <b>unicast-import</b> context
Context	<b>configure service vprn string isis number unicast-import</b>
Tree	<a href="#">unicast-import</a>
Introduced	16.0.R1
Platforms	All

## ipv4 boolean

Synopsis	Submit IPv4 routes into unicast RTM
Context	<b>configure service vprn string isis number unicast-import ipv4 boolean</b>
Tree	<a href="#">ipv4</a>
Default	true
Introduced	16.0.R1
Platforms	All

## ipv6 boolean

Synopsis	Submit IPv6 routes into unicast RTM
Context	<b>configure service vprn string isis number unicast-import ipv6 boolean</b>
Tree	<a href="#">ipv6</a>
Default	true
Introduced	16.0.R1
Platforms	All

## l2tp

Synopsis	Enable the <b>l2tp</b> context
Context	<b>configure service vprn string l2tp</b>

Tree	<a href="#">l2tp</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of L2TP
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">l2tp</a> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **avp-hiding** *keyword*

Synopsis	Attribute of the Value Pair (AVP) hiding algorithm
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">l2tp</a> <b>avp-hiding</b> <i>keyword</i>
Tree	<a href="#">avp-hiding</a>
Options	sensitive, always
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **challenge** *boolean*

Synopsis	Use challenge-response authentication
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">l2tp</a> <b>challenge</b> <i>boolean</i>
Tree	<a href="#">challenge</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **destruct-timeout** *number*

Synopsis	Destruction timeout
----------	---------------------

Context	<b>configure service vprn string l2tp destruct-timeout number</b>
Tree	<a href="#">destruct-timeout</a>
Range	60 to 86400
Default	60
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ethernet-tunnel

Synopsis	Enter the <b>ethernet-tunnel</b> context
Context	<b>configure service vprn string l2tp ethernet-tunnel</b>
Tree	<a href="#">ethernet-tunnel</a>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## reconnect-timeout (*number* | *keyword*)

Synopsis	Timeout for a session setup retry
Context	<b>configure service vprn string l2tp ethernet-tunnel reconnect-timeout (<i>number</i>   <i>keyword</i>)</b>
Tree	<a href="#">reconnect-timeout</a>
Range	10 to 3600
Default	infinite
Units	seconds
Options	infinite
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## exclude-avps

Synopsis	Enter the <b>exclude-avps</b> context
Context	<b>configure service vprn string l2tp exclude-avps</b>
Tree	<a href="#">exclude-avps</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **calling-number** *boolean*

Synopsis	Calling Number AVP to exclude
Context	<b>configure service vprn</b> <i>string l2tp exclude-avps calling-number boolean</i>
Tree	<a href="#">calling-number</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **initial-rx-lcp-conf-req** *boolean*

Synopsis	Exclude the Initial Received LCP CONFREQ AVP
Context	<b>configure service vprn</b> <i>string l2tp exclude-avps initial-rx-lcp-conf-req boolean</i>
Tree	<a href="#">initial-rx-lcp-conf-req</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **failover**

Synopsis	Enter the <b>failover</b> context
Context	<b>configure service vprn</b> <i>string l2tp failover</i>
Tree	<a href="#">failover</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **recovery-max-session-lifetime** *number*

Synopsis	Subset of sessions that this system attempts to synchronize in the Session State Synchronization phase
Context	<b>configure service vprn</b> <i>string l2tp failover recovery-max-session-lifetime number</i>
Tree	<a href="#">recovery-max-session-lifetime</a>
Range	2 to 4294967295
Default	2
Units	centiseconds

Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **recovery-method** *keyword*

Synopsis Recovery method of the sequence numbers after failover  
Context **configure** [service](#) [vpn](#) *string* [l2tp](#) [failover](#) [recovery-method](#) *keyword*  
Tree [recovery-method](#)  
Default mcs  
Options mcs, recovery-tunnel  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **recovery-time** *number*

Synopsis Time requested from the L2TP peer before assuming failover as failed  
Context **configure** [service](#) [vpn](#) *string* [l2tp](#) [failover](#) [recovery-time](#) *number*  
Tree [recovery-time](#)  
Range 0 to 900  
Default 0  
Units seconds  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **track-srrp** [*id*] *reference*

Synopsis Enter the **track-srrp** list instance  
Context **configure** [service](#) [vpn](#) *string* [l2tp](#) [failover](#) [track-srrp](#) *reference*  
Tree [track-srrp](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[id]** *reference*

Synopsis SRRP instance ID for multi-chassis redundancy failover

Context	<b>configure service vprn string l2tp failover track-srrp reference</b>
Tree	<a href="#">track-srrp</a>
Reference	<b>configure redundancy multi-chassis peer</b> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> ) <a href="#">sync track-srrp number</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **peer reference**

Synopsis	Multi-chassis peer address
Context	<b>configure service vprn string l2tp failover track-srrp reference peer reference</b>
Tree	<a href="#">peer</a>
Reference	<b>configure redundancy multi-chassis peer</b> ( <a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a> )
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sync-tag string**

Synopsis	Synchronization tag on the multi-chassis peer
Context	<b>configure service vprn string l2tp failover track-srrp reference sync-tag string</b>
Tree	<a href="#">sync-tag</a>
String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **group [tunnel-group-name] string**

Synopsis	Enter the <b>group</b> list instance
Context	<b>configure service vprn string l2tp group string</b>
Tree	<a href="#">group</a>
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[tunnel-group-name] string**

Synopsis Tunnel group name  
Context **configure service vpn string l2tp group string**  
Tree **group**  
String Length 1 to 63  
Notes This element is part of a list key.  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state keyword**

Synopsis Administrative state of the L2TP tunnel group  
Context **configure service vpn string l2tp group string admin-state keyword**  
Tree **admin-state**  
Default disable  
Options enable, disable  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **avp-hiding keyword**

Synopsis The AVP hiding algorithm  
Context **configure service vpn string l2tp group string avp-hiding keyword**  
Tree **avp-hiding**  
Options never, sensitive, always  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **challenge keyword**

Synopsis Enable use of challenge-response authentication  
Context **configure service vpn string l2tp group string challenge keyword**

Tree	<a href="#">challenge</a>
Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service vpn</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **destruct-timeout** *number*

Synopsis	Destruction timeout
Context	<b>configure</b> <a href="#">service vpn</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <a href="#">destruct-timeout</a> <i>number</i>
Tree	<a href="#">destruct-timeout</a>
Range	60 to 86400
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ethernet-tunnel**

Synopsis	Enter the <b>ethernet-tunnel</b> context
Context	<b>configure</b> <a href="#">service vpn</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <a href="#">ethernet-tunnel</a>
Tree	<a href="#">ethernet-tunnel</a>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **reconnect-timeout** (*number* | *keyword*)

Synopsis	Timeout for a session setup retry at group level
----------	--

Context	<b>configure service vprn</b> <i>string</i> <b>l2tp group</b> <i>string</i> <b>ethernet-tunnel reconnect-timeout</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>reconnect-timeout</b>
Range	10 to 3600
Units	seconds
Options	infinite
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## failover

Synopsis	Enter the <b>failover</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>l2tp group</b> <i>string</i> <b>failover</b>
Tree	<b>failover</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## recovery-method *keyword*

Synopsis	Recovery method of the sequence numbers after failover
Context	<b>configure service vprn</b> <i>string</i> <b>l2tp group</b> <i>string</i> <b>failover recovery-method</b> <i>keyword</i>
Tree	<b>recovery-method</b>
Options	mcs, recovery-tunnel
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## recovery-time *number*

Synopsis	Time requested from the L2TP peer before assuming failover as failed
Context	<b>configure service vprn</b> <i>string</i> <b>l2tp group</b> <i>string</i> <b>failover recovery-time</b> <i>number</i>
Tree	<b>recovery-time</b>
Range	0 to 900
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **hello-interval** (*number* | *keyword*)

Synopsis	Hello interval
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <b>hello-interval</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">hello-interval</a>
Range	10 to 3600
Units	seconds
Options	infinite
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **idle-timeout** (*number* | *keyword*)

Synopsis	Idle timeout
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <b>idle-timeout</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">idle-timeout</a>
Range	0 to 3600
Units	seconds
Options	infinite
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **l2tpv3**

Synopsis	Enter the <b>l2tpv3</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <b>l2tpv3</b>
Tree	<a href="#">l2tpv3</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **cookie-length** (*number* | *keyword*)

Synopsis	Cookie field length
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <a href="#">l2tpv3</a> <b>cookie-length</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cookie-length</a>

Range	4   8
Options	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **digest-type** *keyword*

Synopsis	Hashing algorithm that calculates the message digest
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>l2tp</b> <b>group</b> <i>string</i> <b>l2tpv3</b> <b>digest-type</b> <i>keyword</i>
Tree	<b>digest-type</b>
Options	none, md5, sha1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **nonce-length** *number*

Synopsis	Length for the local L2TPv3 nonce (random number)
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>l2tp</b> <b>group</b> <i>string</i> <b>l2tpv3</b> <b>nonce-length</b> <i>number</i>
Tree	<b>nonce-length</b>
Range	0   16 to 64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **password** *string*

Synopsis	L2TPv3 password
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>l2tp</b> <b>group</b> <i>string</i> <b>l2tpv3</b> <b>password</b> <i>string</i>
Tree	<b>password</b>
String Length	1 to 115
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **private-tcp-mss-adjust** (*number* | *keyword*)

Synopsis	TCP maximum segment size (MSS) on private network
----------	---

Context	<b>configure service vpn</b> <i>string</i> <b>l2tp group</b> <i>string</i> <b>l2tpv3 private-tcp-mss-adjust</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">private-tcp-mss-adjust</a>
Range	512 to 9000
Units	octets
Options	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **public-tcp-mss-adjust** (*number* | *keyword*)

Synopsis	TCP Maximum Segment Size (MSS) on public network
Context	<b>configure service vpn</b> <i>string</i> <b>l2tp group</b> <i>string</i> <b>l2tpv3 public-tcp-mss-adjust</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">public-tcp-mss-adjust</a>
Range	512 to 9000
Units	octets
Options	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **pw-cap-list**

Synopsis	Enter the <b>pw-cap-list</b> context
Context	<b>configure service vpn</b> <i>string</i> <b>l2tp group</b> <i>string</i> <b>l2tpv3 pw-cap-list</b>
Tree	<a href="#">pw-cap-list</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ethernet** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Advertise Ethernet pseudowire type
----------	------------------------------------

Context	<b>configure service vpn</b> <i>string l2tp group string l2tpv3 pw-cap-list ethernet boolean</i>
Tree	<a href="#">ethernet</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ethernet-vlan** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Advertise Ethernet VLAN pseudowire type
Context	<b>configure service vpn</b> <i>string l2tp group string l2tpv3 pw-cap-list ethernet-vlan boolean</i>
Tree	<a href="#">ethernet-vlan</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **rem-router-id** *string*

Synopsis	Filter on remote router ID
Context	<b>configure service vpn</b> <i>string l2tp group string l2tpv3 rem-router-id string</i>
Tree	<a href="#">rem-router-id</a>
Default	0.0.0.0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **track-password-change** *boolean*

Synopsis	Enable tracking of password changes
Context	<b>configure service vpn</b> <i>string l2tp group string l2tpv3 track-password-change boolean</i>
Tree	<a href="#">track-password-change</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## lac

Synopsis	Enter the <b>lac</b> context
Context	<b>configure service vprn string l2tp group string lac</b>
Tree	<b>lac</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## df-bit keyword

Synopsis	DF (do not fragment) bit in data traffic transmitted as LAC
Context	<b>configure service vprn string l2tp group string lac df-bit keyword</b>
Tree	<b>df-bit</b>
Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## Ins

Synopsis	Enter the <b>Ins</b> context
Context	<b>configure service vprn string l2tp group string Ins</b>
Tree	<b>Ins</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## Ins-group reference

Synopsis	ISA LNS group
Context	<b>configure service vprn string l2tp group string Ins Ins-group reference</b>
Tree	<b>Ins-group</b>
Reference	<b>configure isa Ins-group number</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **load-balance-method** *keyword*

Synopsis	New sessions for L2TP ISA MDA
Context	<b>configure service vprn</b> <i>string</i> <b>l2tp group</b> <i>string</i> <b>lns load-balance-method</b> <i>keyword</i>
Tree	<b>load-balance-method</b>
Default	per-session
Options	per-session, per-tunnel
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **mlppp**

Synopsis	Enter the <b>mlppp</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>l2tp group</b> <i>string</i> <b>lns mlppp</b>
Tree	<b>mlppp</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

### **admin-state** *keyword*

Synopsis	Administrative state of MLPPP in the L2TP tunnel group
Context	<b>configure service vprn</b> <i>string</i> <b>l2tp group</b> <i>string</i> <b>lns mlppp admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

### **endpoint**

Synopsis	Enter the <b>endpoint</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>l2tp group</b> <i>string</i> <b>lns mlppp endpoint</b>
Tree	<b>endpoint</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

### **ip** (*ipv4-address* | *keyword*)

Synopsis	Endpoint ID as an IP address
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">lns</a> <a href="#">mlppp</a> <a href="#">endpoint</a> <b>ip</b> ( <i>ipv4-address</i>   <i>keyword</i> )
Tree	<a href="#">ip</a>
Options	system
Notes	The following elements are part of a choice: <b>ip</b> or <b>mac</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

### **mac** (*mac-address* | *keyword*)

Synopsis	Endpoint ID as a MAC address
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">lns</a> <a href="#">mlppp</a> <a href="#">endpoint</a> <b>mac</b> ( <i>mac-address</i>   <i>keyword</i> )
Tree	<a href="#">mac</a>
Options	system
Notes	The following elements are part of a choice: <b>ip</b> or <b>mac</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

### **interleave** *boolean*

Synopsis	Enable link fragmentation and interleaving
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">lns</a> <a href="#">mlppp</a> <a href="#">interleave</a> <i>boolean</i>
Tree	<a href="#">interleave</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

### **max-fragment-delay** (*number* | *keyword*)

Synopsis	Maximum fragment delay caused by transmission on a link
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">lns</a> <a href="#">mlppp</a> <a href="#">max-fragment-delay</a> ( <i>number</i>   <i>keyword</i> )

Tree	<a href="#">max-fragment-delay</a>
Range	5 to 1000
Default	no-fragmentation
Units	milliseconds
Options	no-fragmentation
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

### **max-links** *number*

Synopsis	Maximum MLPPP links
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <a href="#">lns mlppp</a> <a href="#">max-links</a> <i>number</i>
Tree	<a href="#">max-links</a>
Range	1 to 8
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

### **reassemble-timeout** *number*

Synopsis	Reassembly timeout
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <a href="#">lns mlppp</a> <a href="#">reassemble-timeout</a> <i>number</i>
Tree	<a href="#">reassemble-timeout</a>
Range	100   1000
Default	1000
Units	milliseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

### **short-sequence-numbers** *boolean*

Synopsis	Request a peer to send short sequence numbers
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <a href="#">lns mlppp</a> <a href="#">short-sequence-numbers</a> <i>boolean</i>
Tree	<a href="#">short-sequence-numbers</a>

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

## ppp

Synopsis	Enter the <b>ppp</b> context
Context	<b>configure service vprn string l2tp group string lns ppp</b>
Tree	<b>ppp</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## authentication *keyword*

Synopsis	PPP authentication protocol to negotiate
Context	<b>configure service vprn string l2tp group string lns ppp authentication keyword</b>
Tree	<b>authentication</b>
Default	pref-chap
Options	pap, chap, pref-chap, pref-pap
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## authentication-policy *string*

Synopsis	Authentication policy when a DHCP message is received
Context	<b>configure service vprn string l2tp group string lns ppp authentication-policy string</b>
Tree	<b>authentication-policy</b>
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## chap-challenge-length

Synopsis	Enter the <b>chap-challenge-length</b> context
Context	<b>configure service vprn string l2tp group string lns ppp chap-challenge-length</b>

Tree	<a href="#">chap-challenge-length</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **end number**

Synopsis	Upper bound of the PPP CHAP challenge length
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">ins</a> <a href="#">ppp</a> <a href="#">chap-challenge-length</a> <a href="#">end</a> <a href="#">number</a>
Tree	<a href="#">end</a>
Range	8 to 64
Default	64
Units	octets
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **start number**

Synopsis	Lower bound of the PPP CHAP challenge length
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">ins</a> <a href="#">ppp</a> <a href="#">chap-challenge-length</a> <a href="#">start</a> <a href="#">number</a>
Tree	<a href="#">start</a>
Range	8 to 64
Default	32
Units	octets
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **default-group-interface**

Synopsis	Enter the <b>default-group-interface</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">ins</a> <a href="#">ppp</a> <a href="#">default-group-interface</a>
Tree	<a href="#">default-group-interface</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## interface *string*

Synopsis	Group interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <a href="#">string</a> <a href="#">l2tp</a> <a href="#">group</a> <a href="#">string</a> <a href="#">lns</a> <a href="#">ppp</a> <a href="#">default-group-interface</a> <a href="#">interface</a> <a href="#">string</a>
Tree	<a href="#">interface</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## service-name *string*

Synopsis	Administrative service name
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <a href="#">string</a> <a href="#">l2tp</a> <a href="#">group</a> <a href="#">string</a> <a href="#">lns</a> <a href="#">ppp</a> <a href="#">default-group-interface</a> <a href="#">service-name</a> <a href="#">string</a>
Tree	<a href="#">service-name</a>
String Length	1 to 64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ipcp-subnet-negotiation *boolean*

Synopsis	Allow IPCP subnet negotiation for PPPoE hosts
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <a href="#">string</a> <a href="#">l2tp</a> <a href="#">group</a> <a href="#">string</a> <a href="#">lns</a> <a href="#">ppp</a> <a href="#">ipcp-subnet-negotiation</a> <a href="#">boolean</a>
Tree	<a href="#">ipcp-subnet-negotiation</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## keepalive

Synopsis	Enter the <b>keepalive</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <a href="#">string</a> <a href="#">l2tp</a> <a href="#">group</a> <a href="#">string</a> <a href="#">lns</a> <a href="#">ppp</a> <a href="#">keepalive</a>
Tree	<a href="#">keepalive</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **interval** *number*

Synopsis	PPP keepalive interval
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">lns</a> <a href="#">ppp</a> <a href="#">keepalive</a> <a href="#">interval</a> <i>number</i>
Tree	<a href="#">interval</a>
Range	10 to 300
Default	30
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **multiplier** *number*

Synopsis	PPP keepalive multiplier
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">lns</a> <a href="#">ppp</a> <a href="#">keepalive</a> <a href="#">multiplier</a> <i>number</i>
Tree	<a href="#">multiplier</a>
Range	1 to 5
Default	3
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **lcp-force-ack-accm** *boolean*

Synopsis	Force acknowledgement of the LCP Asynchronous Control Character Map (ACCM) option
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">lns</a> <a href="#">ppp</a> <a href="#">lcp-force-ack-accm</a> <i>boolean</i>
Tree	<a href="#">lcp-force-ack-accm</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **lcp-ignore-magic-numbers** *boolean*

Synopsis	Check magic number in echo request and reply messages
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">lns</a> <a href="#">ppp</a> <a href="#">lcp-ignore-magic-numbers</a> <i>boolean</i>

Tree	<a href="#">lcp-ignore-magic-numbers</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **mtu number**

Synopsis	Maximum PPP MTU size
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">l2tp group string</a> <a href="#">lns ppp mtu number</a>
Tree	<a href="#">mtu</a>
Range	512 to 9212
Default	1500
Units	octets
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **proxy-authentication boolean**

Synopsis	Use authentication AVPs that are received from LAC
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">l2tp group string</a> <a href="#">lns ppp proxy-authentication boolean</a>
Tree	<a href="#">proxy-authentication</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **proxy-lcp boolean**

Synopsis	Proxy LCP AVPs that are received from LAC
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">l2tp group string</a> <a href="#">lns ppp proxy-lcp boolean</a>
Tree	<a href="#">proxy-lcp</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **reject-disabled-ncp** *boolean*

Synopsis	Force LCP Protocol Reject for IPv6CP Configure Request
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <a href="#">lns ppp reject-disabled-ncp</a> <i>boolean</i>
Tree	<a href="#">reject-disabled-ncp</a>
Default	false
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **user-db** *string*

Synopsis	Local user database for PPP PAP and CHAP authentication
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <a href="#">lns ppp user-db</a> <i>string</i>
Tree	<a href="#">user-db</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **local-address** *string*

Synopsis	Local address
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <a href="#">local-address</a> <i>string</i>
Tree	<a href="#">local-address</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **local-name** *string*

Synopsis	Local host name used to distinguish tunnels
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <a href="#">local-name</a> <i>string</i>
Tree	<a href="#">local-name</a>
String Length	1 to 64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **max-retries-estab** *number*

Synopsis	Maximum retries for established tunnels
Context	<b>configure</b> <b>service vpn</b> <i>string</i> <b>l2tp group</b> <i>string</i> <b>max-retries-estab</b> <i>number</i>
Tree	<b>max-retries-estab</b>
Range	2 to 7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **max-retries-not-estab** *number*

Synopsis	Maximum retries for unestablished tunnels
Context	<b>configure</b> <b>service vpn</b> <i>string</i> <b>l2tp group</b> <i>string</i> <b>max-retries-not-estab</b> <i>number</i>
Tree	<b>max-retries-not-estab</b>
Range	2 to 7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **password** *string*

Synopsis	Password between L2TP LAC and LNS
Context	<b>configure</b> <b>service vpn</b> <i>string</i> <b>l2tp group</b> <i>string</i> <b>password</b> <i>string</i>
Tree	<b>password</b>
String Length	1 to 115
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **protocol** *keyword*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Protocol version
Context	<b>configure</b> <b>service vpn</b> <i>string</i> <b>l2tp group</b> <i>string</i> <b>protocol</b> <i>keyword</i>
Tree	<b>protocol</b>
Default	v2

Options	v2, v3, v3draft
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **radius-accounting-policy** *reference*

Synopsis	RADIUS accounting policy
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <a href="#">radius-accounting-policy</a> <i>reference</i>
Tree	<a href="#">radius-accounting-policy</a>
Reference	<b>configure</b> <a href="#">aaa radius l2tp-accounting-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **receive-window-size** *number*

Synopsis	L2TP receive window size
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <a href="#">receive-window-size</a> <i>number</i>
Tree	<a href="#">receive-window-size</a>
Range	4 to 1024
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **session-assign-method** *keyword*

Synopsis	Session assignment method
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <a href="#">session-assign-method</a> <i>keyword</i>
Tree	<a href="#">session-assign-method</a>
Options	existing-first, weighted, weighted-random
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **session-limit** (*number* | *keyword*)

Synopsis	Session limit
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <a href="#">session-limit</a> ( <i>number</i>   <i>keyword</i> )

Tree	<a href="#">session-limit</a>
Range	1 to 250000
Options	unlimited
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **tunnel** [[tunnel-name](#)] *string*

Synopsis	Enter the <b>tunnel</b> list instance
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <b>tunnel</b> <i>string</i>
Tree	<a href="#">tunnel</a>
Max. Instances	31
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[tunnel-name]** *string*

Synopsis	Tunnel name
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <b>tunnel</b> <i>string</i>
Tree	<a href="#">tunnel</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of the L2TP tunnel
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <b>tunnel</b> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **auto-establish** *boolean*

Synopsis	Allow the tunnel to be automatically set up by the system
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <b>auto-establish</b> <i>boolean</i>
Tree	<a href="#">auto-establish</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **avp-hiding** *keyword*

Synopsis	The AVP hiding algorithm
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <b>avp-hiding</b> <i>keyword</i>
Tree	<a href="#">avp-hiding</a>
Options	never, sensitive, always
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **challenge** *keyword*

Synopsis	Enable use of challenge-response authentication
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <b>challenge</b> <i>keyword</i>
Tree	<a href="#">challenge</a>
Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <b>description</b> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **destruct-timeout** *number*

Synopsis	Destruction timeout
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <b>destruct-timeout</b> <i>number</i>
Tree	<a href="#">destruct-timeout</a>
Range	60 to 86400
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **failover**

Synopsis	Enter the <b>failover</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <b>failover</b>
Tree	<a href="#">failover</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **recovery-method** *keyword*

Synopsis	Recovery method of the sequence numbers after failover
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <b>failover</b> <a href="#">recovery-method</a> <i>keyword</i>
Tree	<a href="#">recovery-method</a>
Options	mcs, recovery-tunnel
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **recovery-time** *number*

Synopsis	Time requested from the L2TP peer before assuming failover as failed
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <b>failover</b> <a href="#">recovery-time</a> <i>number</i>
Tree	<a href="#">recovery-time</a>
Range	0 to 900
Units	seconds

Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **hello-interval** (*number* | *keyword*)

Synopsis Hello interval  
Context **configure** [service vprn](#) *string* [l2tp group](#) *string* [tunnel](#) *string* **hello-interval** (*number* | *keyword*)  
Tree [hello-interval](#)  
Range 10 to 3600  
Units seconds  
Options infinite  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **idle-timeout** (*number* | *keyword*)

Synopsis Idle timeout  
Context **configure** [service vprn](#) *string* [l2tp group](#) *string* [tunnel](#) *string* **idle-timeout** (*number* | *keyword*)  
Tree [idle-timeout](#)  
Range 0 to 3600  
Units seconds  
Options infinite  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **l2tpv3**

Synopsis Enter the **l2tpv3** context  
Context **configure** [service vprn](#) *string* [l2tp group](#) *string* [tunnel](#) *string* **l2tpv3**  
Tree [l2tpv3](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **private-tcp-mss-adjust** (*number* | *keyword*)

Synopsis	TCP maximum segment size (MSS) on private network
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">l2tpv3</a> <b>private-tcp-mss-adjust</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">private-tcp-mss-adjust</a>
Range	512 to 9000
Units	octets
Options	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **public-tcp-mss-adjust** (*number* | *keyword*)

Synopsis	TCP maximum segment size (MSS) on public network
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">l2tpv3</a> <b>public-tcp-mss-adjust</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">public-tcp-mss-adjust</a>
Range	512 to 9000
Units	octets
Options	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **lac**

Synopsis	Enter the <b>lac</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <b>lac</b>
Tree	<a href="#">lac</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **df-bit** *keyword*

Synopsis	DF (do not fragment) bit in data traffic transmitted as LAC
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">l2tp group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <b>lac df-bit</b> <i>keyword</i>

Tree	<a href="#">df-bit</a>
Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## Ins

Synopsis	Enter the <b>Ins</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <b>Ins</b>
Tree	<a href="#">Ins</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## Ins-group *reference*

Synopsis	ISA LNS group
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <b>Ins</b> <a href="#">Ins-group</a> <i>reference</i>
Tree	<a href="#">Ins-group</a>
Reference	<b>configure</b> <a href="#">isa</a> <a href="#">Ins-group</a> <i>number</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## load-balance-method *keyword*

Synopsis	New sessions for L2TP ISA MDA
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <b>Ins</b> <a href="#">load-balance-method</a> <i>keyword</i>
Tree	<a href="#">load-balance-method</a>
Options	per-session, per-tunnel
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## mlppp

Synopsis	Enter the <b>mlppp</b> context
----------	--------------------------------

Context	<b>configure service vprn</b> <i>string</i> <b>l2tp group</b> <i>string</i> <b>tunnel</b> <i>string</i> <b>lns mlppp</b>
Tree	<b>mlppp</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

### **admin-state** *keyword*

Synopsis	Administrative state of MLPPP in the L2TP tunnel
Context	<b>configure service vprn</b> <i>string</i> <b>l2tp group</b> <i>string</i> <b>tunnel</b> <i>string</i> <b>lns mlppp admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

### **endpoint**

Synopsis	Enter the <b>endpoint</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>l2tp group</b> <i>string</i> <b>tunnel</b> <i>string</i> <b>lns mlppp endpoint</b>
Tree	<b>endpoint</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

### **ip** (*ipv4-address* | *keyword*)

Synopsis	Endpoint ID as an IP address
Context	<b>configure service vprn</b> <i>string</i> <b>l2tp group</b> <i>string</i> <b>tunnel</b> <i>string</i> <b>lns mlppp endpoint ip</b> ( <i>ipv4-address</i>   <i>keyword</i> )
Tree	<b>ip</b>
Options	system
Notes	The following elements are part of a choice: <b>ip</b> or <b>mac</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

### **mac** (*mac-address* | *keyword*)

Synopsis	Endpoint ID as a MAC address
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">lns</a> <a href="#">mlppp</a> <a href="#">endpoint</a> <a href="#">mac</a> ( <i>mac-address</i>   <i>keyword</i> )
Tree	<a href="#">mac</a>
Options	system
Notes	The following elements are part of a choice: <b>ip</b> or <b>mac</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

### **interleave** *keyword*

Synopsis	Use of Link fragmentation and interleaving
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">lns</a> <a href="#">mlppp</a> <a href="#">interleave</a> <i>keyword</i>
Tree	<a href="#">interleave</a>
Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

### **max-fragment-delay** *number*

Synopsis	Maximum fragment delay caused by transmission on a link
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">lns</a> <a href="#">mlppp</a> <a href="#">max-fragment-delay</a> <i>number</i>
Tree	<a href="#">max-fragment-delay</a>
Range	5 to 1000
Units	milliseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

### **max-links** *number*

Synopsis	Maximum MLPPP links
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">l2tp</a> <a href="#">group</a> <i>string</i> <a href="#">tunnel</a> <i>string</i> <a href="#">lns</a> <a href="#">mlppp</a> <a href="#">max-links</a> <i>number</i>
Tree	<a href="#">max-links</a>

Range	1 to 8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

### **reassemble-timeout** *number*

Synopsis	Reassembly timeout
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>l2tp</b> <b>group</b> <i>string</i> <b>tunnel</b> <i>string</i> <b>lms</b> <b>mlppp</b> <b>reassemble-timeout</b> <i>number</i>
Tree	<a href="#">reassemble-timeout</a>
Range	100   1000
Units	milliseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

### **short-sequence-numbers** *keyword*

Synopsis	Request a peer to send short sequence numbers
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>l2tp</b> <b>group</b> <i>string</i> <b>tunnel</b> <i>string</i> <b>lms</b> <b>mlppp</b> <b>short-sequence-numbers</b> <i>keyword</i>
Tree	<a href="#">short-sequence-numbers</a>
Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s

### **ppp**

Synopsis	Enter the <b>ppp</b> context
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>l2tp</b> <b>group</b> <i>string</i> <b>tunnel</b> <i>string</i> <b>lms</b> <b>ppp</b>
Tree	<a href="#">ppp</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **authentication** *keyword*

Synopsis	PPP authentication protocol to negotiate
----------	--

Context	<b>configure service vprn string l2tp group string tunnel string lns ppp authentication keyword</b>
Tree	<a href="#">authentication</a>
Options	pap, chap, pref-chap, pref-pap
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **authentication-policy string**

Synopsis	Authentication policy when a DHCP message is received
Context	<b>configure service vprn string l2tp group string tunnel string lns ppp authentication-policy string</b>
Tree	<a href="#">authentication-policy</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **chap-challenge-length**

Synopsis	Enter the <b>chap-challenge-length</b> context
Context	<b>configure service vprn string l2tp group string tunnel string lns ppp chap-challenge-length</b>
Tree	<a href="#">chap-challenge-length</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **end number**

Synopsis	Upper bound of the PPP CHAP challenge length
Context	<b>configure service vprn string l2tp group string tunnel string lns ppp chap-challenge-length end number</b>
Tree	<a href="#">end</a>
Range	8 to 64
Units	octets
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **start number**

Synopsis	Lower bound of the PPP CHAP challenge length
Context	<b>configure service vprn string l2tp group string tunnel string lns ppp chap-challenge-length start number</b>
Tree	<b>start</b>
Range	8 to 64
Units	octets
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **default-group-interface**

Synopsis	Enter the <b>default-group-interface</b> context
Context	<b>configure service vprn string l2tp group string tunnel string lns ppp default-group-interface</b>
Tree	<b>default-group-interface</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **interface string**

Synopsis	Group interface
Context	<b>configure service vprn string l2tp group string tunnel string lns ppp default-group-interface interface string</b>
Tree	<b>interface</b>
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **service-name string**

Synopsis	Administrative service name
Context	<b>configure service vprn string l2tp group string tunnel string lns ppp default-group-interface service-name string</b>
Tree	<b>service-name</b>

String Length 1 to 64  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ipcp-subnet-negotiation** *keyword*

Synopsis Use of IPCP subnet negotiation for PPPoE hosts  
Context **configure service vprn** *string* **l2tp group** *string* **tunnel** *string* **lns ppp ipcp-subnet-negotiation** *keyword*  
Tree [ipcp-subnet-negotiation](#)  
Options false, true  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **keepalive**

Synopsis Enter the **keepalive** context  
Context **configure service vprn** *string* **l2tp group** *string* **tunnel** *string* **lns ppp keepalive**  
Tree [keepalive](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **interval** *number*

Synopsis PPP keepalive interval  
Context **configure service vprn** *string* **l2tp group** *string* **tunnel** *string* **lns ppp keepalive interval** *number*  
Tree [interval](#)  
Range 10 to 300  
Units seconds  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **multiplier** *number*

Synopsis PPP keepalive multiplier

Context	<b>configure service vprn</b> <i>string</i> <b>l2tp group</b> <i>string</i> <b>tunnel</b> <i>string</i> <b>lns ppp</b> <b>keepalive multiplier</b> <i>number</i>
Tree	<a href="#">multiplier</a>
Range	1 to 5
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **lcp-force-ack-accm** *keyword*

Synopsis	Forced acknowledgement of the LCP Asynchronous Control Character Map (ACCM) option
Context	<b>configure service vprn</b> <i>string</i> <b>l2tp group</b> <i>string</i> <b>tunnel</b> <i>string</i> <b>lns ppp</b> <b>lcp-force-ack-accm</b> <i>keyword</i>
Tree	<a href="#">lcp-force-ack-accm</a>
Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **lcp-ignore-magic-numbers** *keyword*

Synopsis	Magic-Number field in LCP Echo-Request and LCP Echo-Reply messages that are checked
Context	<b>configure service vprn</b> <i>string</i> <b>l2tp group</b> <i>string</i> <b>tunnel</b> <i>string</i> <b>lns ppp</b> <b>lcp-ignore-magic-numbers</b> <i>keyword</i>
Tree	<a href="#">lcp-ignore-magic-numbers</a>
Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **mtu** *number*

Synopsis	Maximum PPP MTU size
Context	<b>configure service vprn</b> <i>string</i> <b>l2tp group</b> <i>string</i> <b>tunnel</b> <i>string</i> <b>lns ppp</b> <b>mtu</b> <i>number</i>
Tree	<a href="#">mtu</a>
Range	512 to 9212
Units	octets
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **proxy-authentication** *keyword*

Synopsis Authentication AVPs that are received from LAC

Context **configure** [service vprn string l2tp group string tunnel string lns ppp proxy-authentication keyword](#)

Tree [proxy-authentication](#)

Options false, true

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **proxy-lcp** *keyword*

Synopsis Use the Proxy LCP AVPs that are received from the LAC

Context **configure** [service vprn string l2tp group string tunnel string lns ppp proxy-lcp keyword](#)

Tree [proxy-lcp](#)

Options false, true

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **reject-disabled-ncp** *keyword*

Synopsis Force LCP Project Reject for IPv6CP Configure Request

Context **configure** [service vprn string l2tp group string tunnel string lns ppp reject-disabled-ncp keyword](#)

Tree [reject-disabled-ncp](#)

Options false, true

Introduced 16.0.R6

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **user-db** *string*

Synopsis Local user database for PPP PAP and CHAP authentication

Context **configure** [service vprn string l2tp group string tunnel string lns ppp user-db string](#)

Tree [user-db](#)

String Length 1 to 32  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **local-address** *string*

Synopsis Local address  
Context **configure** [service vprn](#) *string* [l2tp group](#) *string* [tunnel](#) *string* [local-address](#) *string*  
Tree [local-address](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **local-name** *string*

Synopsis Local host name used to distinguish tunnels  
Context **configure** [service vprn](#) *string* [l2tp group](#) *string* [tunnel](#) *string* [local-name](#) *string*  
Tree [local-name](#)  
String Length 1 to 64  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **max-retries-estab** *number*

Synopsis Maximum retries for established tunnels  
Context **configure** [service vprn](#) *string* [l2tp group](#) *string* [tunnel](#) *string* [max-retries-estab](#) *number*  
Tree [max-retries-estab](#)  
Range 2 to 7  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **max-retries-not-estab** *number*

Synopsis Maximum retries for unestablished tunnels  
Context **configure** [service vprn](#) *string* [l2tp group](#) *string* [tunnel](#) *string* [max-retries-not-estab](#) *number*  
Tree [max-retries-not-estab](#)

Range	2 to 7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **password string**

Synopsis	Password between L2TP LAC and LNS
Context	<b>configure service vpn string l2tp group string tunnel string password string</b>
Tree	<b>password</b>
String Length	1 to 115
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **peer string**

Synopsis	Peer address
Context	<b>configure service vpn string l2tp group string tunnel string peer string</b>
Tree	<b>peer</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **preference number**

Synopsis	Tunnel preference number with its group
Context	<b>configure service vpn string l2tp group string tunnel string preference number</b>
Tree	<b>preference</b>
Range	0 to 16777215
Default	50
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **radius-accounting-policy reference**

Synopsis	RADIUS accounting policy
Context	<b>configure service vpn string l2tp group string tunnel string radius-accounting-policy reference</b>

Tree [radius-accounting-policy](#)  
Reference **configure** [aaa](#) [radius](#) [l2tp-accounting-policy](#) *string*  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **receive-window-size** *number*

Synopsis L2TP receive window size  
Context **configure** [service](#) [vprn](#) *string* [l2tp](#) [group](#) *string* [tunnel](#) *string* [receive-window-size](#) *number*  
Tree [receive-window-size](#)  
Range 4 to 1024  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **remote-name** *string*

Synopsis Remote tunnel host name  
Context **configure** [service](#) [vprn](#) *string* [l2tp](#) [group](#) *string* [tunnel](#) *string* [remote-name](#) *string*  
Tree [remote-name](#)  
String Length 1 to 64  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **session-limit** (*number* | *keyword*)

Synopsis L2TP session limit for each tunnel of this router  
Context **configure** [service](#) [vprn](#) *string* [l2tp](#) [group](#) *string* [tunnel](#) *string* [session-limit](#) (*number* | *keyword*)  
Tree [session-limit](#)  
Range 1 to 65534  
Options unlimited  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **group-session-limit** *number*

Synopsis	L2TP session limit for each group of this router
Context	<b>configure service vpn</b> <i>string</i> <b>l2tp group-session-limit</b> <i>number</i>
Tree	<b>group-session-limit</b>
Range	1 to 250000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **hello-interval** (*number* | *keyword*)

Synopsis	Hello interval
Context	<b>configure service vpn</b> <i>string</i> <b>l2tp hello-interval</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>hello-interval</b>
Range	10 to 3600
Default	300
Units	seconds
Options	infinite
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **idle-timeout** (*number* | *keyword*)

Synopsis	Idle timeout
Context	<b>configure service vpn</b> <i>string</i> <b>l2tp idle-timeout</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>idle-timeout</b>
Range	0 to 3600
Default	infinite
Units	seconds
Options	infinite
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ignore-avps**

Synopsis	Enter the <b>ignore-avps</b> context
----------	--------------------------------------

Context	<b>configure service vprn string l2tp ignore-avps</b>
Tree	<a href="#">ignore-avps</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sequencing-required** *boolean*

Synopsis	Ignore Sequencing Required AVP
Context	<b>configure service vprn string l2tp ignore-avps sequencing-required boolean</b>
Tree	<a href="#">sequencing-required</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **l2tpv3**

Synopsis	Enter the <b>l2tpv3</b> context
Context	<b>configure service vprn string l2tp l2tpv3</b>
Tree	<a href="#">l2tpv3</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **cookie-length** *number*

Synopsis	Cookie field length
Context	<b>configure service vprn string l2tp l2tpv3 cookie-length number</b>
Tree	<a href="#">cookie-length</a>
Range	4   8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **digest-type** *keyword*

Synopsis	Hashing algorithm that calculates the message digest
Context	<b>configure service vprn string l2tp l2tpv3 digest-type keyword</b>

Tree	<a href="#">digest-type</a>
Options	md5, sha1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **nonce-length** *number*

Synopsis	Length of the local L2TPv3 nonce (random number)
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">l2tp</a> <a href="#">l2tpv3</a> <a href="#">nonce-length</a> <i>number</i>
Tree	<a href="#">nonce-length</a>
Range	0   16 to 64
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **password** *string*

Synopsis	L2TPv3 password
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">l2tp</a> <a href="#">l2tpv3</a> <a href="#">password</a> <i>string</i>
Tree	<a href="#">password</a>
String Length	1 to 115
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **private-tcp-mss-adjust** *number*

Synopsis	TCP maximum segment size (MSS) on private network
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">l2tp</a> <a href="#">l2tpv3</a> <a href="#">private-tcp-mss-adjust</a> <i>number</i>
Tree	<a href="#">private-tcp-mss-adjust</a>
Range	512 to 9000
Units	octets
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **public-tcp-mss-adjust** *number*

Synopsis	TCP maximum segment size (MSS) on public network
Context	<b>configure service vprn</b> <i>string</i> <b>l2tp l2tpv3 public-tcp-mss-adjust</b> <i>number</i>
Tree	<b>public-tcp-mss-adjust</b>
Range	512 to 9000
Units	octets
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **transport-type**

Synopsis	Enter the <b>transport-type</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>l2tp l2tpv3 transport-type</b>
Tree	<b>transport-type</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ip** *boolean*

Synopsis	Use IP as the transport type for the L2TPv3 tunnel
Context	<b>configure service vprn</b> <i>string</i> <b>l2tp l2tpv3 transport-type ip</b> <i>boolean</i>
Tree	<b>ip</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **lac**

Synopsis	Enter the <b>lac</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>l2tp lac</b>
Tree	<b>lac</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **calling-number-format** *string*

Synopsis	Calling Number AVP for L2TP control messages
Context	<b>configure service vprn string l2tp lac calling-number-format string</b>
Tree	<a href="#">calling-number-format</a>
String Length	1 to 255
Default	%S %s
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **cisco-nas-port**

Synopsis	Enter the <b>cisco-nas-port</b> context
Context	<b>configure service vprn string l2tp lac cisco-nas-port</b>
Tree	<a href="#">cisco-nas-port</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ethernet** *string*

Synopsis	L2TP Cisco NAS port AVP with binary patterns for Ethernet
Context	<b>configure service vprn string l2tp lac cisco-nas-port ethernet string</b>
Tree	<a href="#">ethernet</a>
String Length	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **df-bit** *boolean*

Synopsis	Send all L2TP packets with DF bit set to 1
Context	<b>configure service vprn string l2tp lac df-bit boolean</b>
Tree	<a href="#">df-bit</a>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **local-address** *string*

Synopsis	Local address
Context	<b>configure service vpn</b> <i>string</i> <b>l2tp local-address</b> <i>string</i>
Tree	<b>local-address</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **local-name** *string*

Synopsis	Local host name
Context	<b>configure service vpn</b> <i>string</i> <b>l2tp local-name</b> <i>string</i>
Tree	<b>local-name</b>
String Length	1 to 64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **max-retries-estab** *number*

Synopsis	Maximum retries for established tunnels
Context	<b>configure service vpn</b> <i>string</i> <b>l2tp max-retries-estab</b> <i>number</i>
Tree	<b>max-retries-estab</b>
Range	2 to 7
Default	5
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **max-retries-not-estab** *number*

Synopsis	Maximum retries for unestablished tunnels
Context	<b>configure service vpn</b> <i>string</i> <b>l2tp max-retries-not-estab</b> <i>number</i>
Tree	<b>max-retries-not-estab</b>
Range	2 to 7
Default	5
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **next-attempt** *keyword*

Synopsis Tunnel that is selected when previous session setup failed  
Context **configure service vprn string l2tp next-attempt keyword**  
Tree [next-attempt](#)  
Default next-preference-level  
Options same-preference-level, next-preference-level  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **password** *string*

Synopsis L2TP password  
Context **configure service vprn string l2tp password string**  
Tree [password](#)  
String Length 1 to 115  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **peer-address-change-policy** *keyword*

Synopsis Reaction for L2TP response from a different address  
Context **configure service vprn string l2tp peer-address-change-policy keyword**  
Tree [peer-address-change-policy](#)  
Default reject  
Options accept, ignore, reject  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **radius-accounting-policy** *reference*

Synopsis RADIUS accounting policy  
Context **configure service vprn string l2tp radius-accounting-policy reference**

Tree	<a href="#">radius-accounting-policy</a>
Reference	<b>configure</b> <a href="#">aaa radius l2tp-accounting-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **receive-window-size** *number*

Synopsis	L2TP receive window size
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">l2tp receive-window-size</a> <i>number</i>
Tree	<a href="#">receive-window-size</a>
Range	4 to 1024
Default	64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **replace-result-code**

Synopsis	Enter the <b>replace-result-code</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">l2tp replace-result-code</a>
Tree	<a href="#">replace-result-code</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **cdn-invalid-dst** *boolean*

Synopsis	Replace result code with general error code
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">l2tp replace-result-code cdn-invalid-dst</a> <i>boolean</i>
Tree	<a href="#">cdn-invalid-dst</a>
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **cdn-permanent-no-facilities** *boolean*

Synopsis	Replace result code with general error
----------	--

Context	<b>configure service vprn string l2tp replace-result-code cdn-permanent-no-facilities boolean</b>
Tree	<a href="#">cdn-permanent-no-facilities</a>
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **cdn-temporary-no-facilities boolean**

Synopsis	Replace result code with general error
Context	<b>configure service vprn string l2tp replace-result-code cdn-temporary-no-facilities boolean</b>
Tree	<a href="#">cdn-temporary-no-facilities</a>
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **rtm-debounce-time (number | keyword)**

Synopsis	Debounce timer that declares L2TP action for route table management events
Context	<b>configure service vprn string l2tp rtm-debounce-time (number   keyword)</b>
Tree	<a href="#">rtm-debounce-time</a>
Range	0 to 5000
Default	infinite
Units	milliseconds
Options	infinite
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **session-assign-method keyword**

Synopsis	Session assignment method
Context	<b>configure service vprn string l2tp session-assign-method keyword</b>
Tree	<a href="#">session-assign-method</a>
Default	existing-first
Options	existing-first, weighted, weighted-random

Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **session-limit** *number*

Synopsis L2TP session limit of this router  
Context **configure service vprn string l2tp session-limit number**  
Tree [session-limit](#)  
Range 1 to 250000  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **tunnel-selection-blacklist**

Synopsis Enter the **tunnel-selection-blacklist** context  
Context **configure service vprn string l2tp tunnel-selection-blacklist**  
Tree [tunnel-selection-blacklist](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **add-tunnel-on**

Synopsis Enter the **add-tunnel-on** context  
Context **configure service vprn string l2tp tunnel-selection-blacklist add-tunnel-on**  
Tree [add-tunnel-on](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **address-change-timeout** *boolean*

Synopsis Enable a timed-out tunnel to be forced to the denylist  
Context **configure service vprn string l2tp tunnel-selection-blacklist add-tunnel-on address-change-timeout boolean**  
Tree [address-change-timeout](#)  
Default false  
Introduced 16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **cdn-err-code** *boolean*

Synopsis Add to deny if CDN is received with code: General error  
Context **configure service vprn string l2tp tunnel-selection-blacklist add-tunnel-on cdn-err-code boolean**  
Tree [cdn-err-code](#)  
Default false  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **cdn-invalid-dst** *boolean*

Synopsis Force tunnel to the denylist in case of Result Codes 6  
Context **configure service vprn string l2tp tunnel-selection-blacklist add-tunnel-on cdn-invalid-dst boolean**  
Tree [cdn-invalid-dst](#)  
Default false  
Introduced 16.0.R4  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **cdn-permanent-no-facilities** *boolean*

Synopsis Force tunnel to the denylist in case of Result Codes 5  
Context **configure service vprn string l2tp tunnel-selection-blacklist add-tunnel-on cdn-permanent-no-facilities boolean**  
Tree [cdn-permanent-no-facilities](#)  
Default false  
Introduced 16.0.R4  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **cdn-temporary-no-facilities** *boolean*

Synopsis Force tunnel to the denylist in case of Result Codes 4  
Context **configure service vprn string l2tp tunnel-selection-blacklist add-tunnel-on cdn-temporary-no-facilities boolean**

Tree	<a href="#">cdn-temporary-no-facilities</a>
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **stop-ccn-err-code** *boolean*

Synopsis	Add to denylist if received with general error code
Context	<b>configure</b> <a href="#">service vprn</a> <a href="#">string</a> <a href="#">l2tp tunnel-selection-blacklist</a> <a href="#">add-tunnel-on</a> <a href="#">stop-ccn-err-code</a> <i>boolean</i>
Tree	<a href="#">stop-ccn-err-code</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **stop-ccn-other** *boolean*

Synopsis	Add to denylist if StopCCN received with general error
Context	<b>configure</b> <a href="#">service vprn</a> <a href="#">string</a> <a href="#">l2tp tunnel-selection-blacklist</a> <a href="#">add-tunnel-on</a> <a href="#">stop-ccn-other</a> <i>boolean</i>
Tree	<a href="#">stop-ccn-other</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **tx-cdn-not-established-in-time** *boolean*

Synopsis	Add to denylist if CDN transmitted with result code
Context	<b>configure</b> <a href="#">service vprn</a> <a href="#">string</a> <a href="#">l2tp tunnel-selection-blacklist</a> <a href="#">add-tunnel-on</a> <a href="#">tx-cdn-not-established-in-time</a> <i>boolean</i>
Tree	<a href="#">tx-cdn-not-established-in-time</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **max-list-length** (*number* | *keyword*)

Synopsis	Number of tunnels or peers in the denylist
Context	<b>configure service vpn</b> <i>string</i> <b>l2tp tunnel-selection-blacklist</b> <b>max-list-length</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>max-list-length</b>
Range	1 to 65535
Default	infinite
Options	infinite
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **max-time** *number*

Synopsis	Time that a tunnel or peer can remain in the denylist
Context	<b>configure service vpn</b> <i>string</i> <b>l2tp tunnel-selection-blacklist</b> <b>max-time</b> <i>number</i>
Tree	<b>max-time</b>
Range	1 to 60
Default	5
Units	minutes
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **timeout-action** *keyword*

Synopsis	Action when a tunnel or peer exceeds time in denylist
Context	<b>configure service vpn</b> <i>string</i> <b>l2tp tunnel-selection-blacklist</b> <b>timeout-action</b> <i>keyword</i>
Tree	<b>timeout-action</b>
Default	remove-from-blacklist
Options	remove-from-blacklist, try-one-session
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **tunnel-session-limit** *number*

Synopsis	L2TP session limit for each tunnel of this router
----------	---

Context	<b>configure service vprn</b> <i>string</i> <b>l2tp tunnel-session-limit</b> <i>number</i>
Tree	<b>tunnel-session-limit</b>
Range	1 to 65534
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **label-mode** *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Allocation mode for VPRN service labels
Context	<b>configure service vprn</b> <i>string</i> <b>label-mode</b> <i>keyword</i>
Tree	<b>label-mode</b>
Default	vrf
Options	vrf, next-hop
Introduced	16.0.R1
Platforms	All

### **local-routes-domain-id** *string*

Synopsis	Local routes domain ID
Context	<b>configure service vprn</b> <i>string</i> <b>local-routes-domain-id</b> <i>string</i>
Tree	<b>local-routes-domain-id</b>
Description	<p>This command specifies the domain ID that is used in the D-PATH attribute for local routes before those routes are exported to a BGP neighbor using BGP-IPVPN, EVPN-IFF, EVPN-IFL, or PE-CE BGP. A local route is a non-BGP route installed in the VPRN route table and learned using static route or an IGP.</p> <p>The domain IDs are used in the D-PATH attribute, in accordance with draft-ietf-bess-evpn-ipvpn-interworking. Gateway routers modify the D-PATH attribute. A gateway is a PE where a VPRN is instantiated. The VPRN in this case advertises or receives routes from multiple BGP owners (for example, EVPN IFL and BGP IPVPN).</p> <p>Gateways use the D-PATH attribute to detect loops (for received routes where the D-PATH contains a local domain ID) and to make BGP best-path selection decisions based on the D-PATH length (shorter D-PATH is preferred).</p>
Introduced	21.10.R1
Platforms	All

## log

Synopsis	Enter the <b>log</b> context
Context	<b>configure service vprn string log</b>
Tree	<b>log</b>
Introduced	16.0.R1
Platforms	All

## filter [filter-name] string

Synopsis	Enter the <b>filter</b> list instance
Context	<b>configure service vprn string log filter string</b>
Tree	<b>filter</b>
Max. Instances	1500
Introduced	16.0.R1
Platforms	All

## [filter-name] string

Synopsis	Filter ID
Context	<b>configure service vprn string log filter string</b>
Tree	<b>filter</b>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	21.2.R1
Platforms	All

## default-action keyword

Synopsis	Default action for the event filter
Context	<b>configure service vprn string log filter string default-action keyword</b>
Tree	<b>default-action</b>
Default	forward
Options	drop, forward

Introduced 16.0.R1  
Platforms All

### **description** *string*

Synopsis Text description  
Context **configure** [service](#) [vpn](#) *string* [log filter](#) *string* [description](#) *string*  
Tree [description](#)  
String Length 1 to 80  
Introduced 16.0.R1  
Platforms All

### **named-entry** [[entry-name](#)] *string*

Synopsis Enter the **named-entry** list instance  
Context **configure** [service](#) [vpn](#) *string* [log filter](#) *string* [named-entry](#) *string*  
Tree [named-entry](#)  
Description Commands in this context create or edit an event filter entry.  
Max. Instances 999  
Notes This element is ordered by the user.  
Introduced 21.2.R1  
Platforms All

### **[entry-name]** *string*

Synopsis Entry name  
Context **configure** [service](#) [vpn](#) *string* [log filter](#) *string* [named-entry](#) *string*  
Tree [named-entry](#)  
String Length 1 to 64  
Notes This element is part of a list key.  
Introduced 21.2.R1  
Platforms All

### **action** *keyword*

Synopsis	Action for this event filter entry
Context	<b>configure service vprn</b> <i>string</i> <b>log filter</b> <i>string</i> <b>named-entry</b> <i>string</i> <b>action</b> <i>keyword</i>
Tree	<b>action</b>
Options	drop, forward
Introduced	21.2.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure service vprn</b> <i>string</i> <b>log filter</b> <i>string</i> <b>named-entry</b> <i>string</i> <b>description</b> <i>string</i>
Tree	<b>description</b>
String Length	1 to 80
Introduced	21.2.R1
Platforms	All

### **match**

Synopsis	Enter the <b>match</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>log filter</b> <i>string</i> <b>named-entry</b> <i>string</i> <b>match</b>
Tree	<b>match</b>
Introduced	21.2.R1
Platforms	All

### **application**

Synopsis	Enter the <b>application</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>log filter</b> <i>string</i> <b>named-entry</b> <i>string</i> <b>match</b> <b>application</b>
Tree	<b>application</b>
Introduced	21.2.R1
Platforms	All

## eq keyword

Synopsis	Application to match
Context	<b>configure service vprn</b> <i>string</i> <b>log filter</b> <i>string</i> <b>named-entry</b> <i>string</i> <b>match application eq</b> <i>keyword</i>
Tree	<b>eq</b>
Options	application-assurance, aps, atm, bgp, cflowd, chassis, debug, dhcp, dhcps, diameter, dot1x, efm-oam, elmi, ering, eth-cfm, etun, filter, gsmp, igh, igmp, igmp-snooping, ip, ipsec, isis, l2tp, lag, ldp, li, lldp, logger, mcpath, mc-redundancy, mirror, mld, mld-snooping, mpls, msdp, nat, ntp, oam, ospf, pim, pim-snooping, port, ppp, pppoe, ptp, rip, route-policy, rsvp, security, snmp, stp, svcmgr, system, user, video, vrrp, vrtr, radius, wpp, wlan-gw, dynsvc, mpls-tp, bfd, python, ripng, openflow, sflow, rpki, gmpls, lmp, pcep, calltrace, satellite, ldap, pppoe-clnt, tls, adp, mgmt-core, macsec, pcap, auto-prov, bier, pfc, tree-sid, srv6, sr-mpls
Notes	The following elements are part of a choice: <b>eq</b> or <b>neq</b> .
Introduced	21.2.R1
Platforms	All

## neq keyword

Synopsis	Application to be filtered out
Context	<b>configure service vprn</b> <i>string</i> <b>log filter</b> <i>string</i> <b>named-entry</b> <i>string</i> <b>match application neq</b> <i>keyword</i>
Tree	<b>neq</b>
Options	application-assurance, aps, atm, bgp, cflowd, chassis, debug, dhcp, dhcps, diameter, dot1x, efm-oam, elmi, ering, eth-cfm, etun, filter, gsmp, igh, igmp, igmp-snooping, ip, ipsec, isis, l2tp, lag, ldp, li, lldp, logger, mcpath, mc-redundancy, mirror, mld, mld-snooping, mpls, msdp, nat, ntp, oam, ospf, pim, pim-snooping, port, ppp, pppoe, ptp, rip, route-policy, rsvp, security, snmp, stp, svcmgr, system, user, video, vrrp, vrtr, radius, wpp, wlan-gw, dynsvc, mpls-tp, bfd, python, ripng, openflow, sflow, rpki, gmpls, lmp, pcep, calltrace, satellite, ldap, pppoe-clnt, tls, adp, mgmt-core, macsec, pcap, auto-prov, bier, pfc, tree-sid, srv6, sr-mpls
Notes	The following elements are part of a choice: <b>eq</b> or <b>neq</b> .
Introduced	21.2.R1
Platforms	All

## event

Synopsis	Enter the <b>event</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>log filter</b> <i>string</i> <b>named-entry</b> <i>string</i> <b>match event</b>
Tree	<b>event</b>

Introduced 21.2.R1  
Platforms All

### **eq number**

Synopsis Log event message to match  
Context **configure service vprn string log filter string named-entry string match event eq number**  
Tree **eq**  
Range 1 to 4294967295  
Notes The following elements are part of a choice: **eq, gt, gte, lt, lte, or neq.**  
Introduced 21.2.R1  
Platforms All

### **gt number**

Synopsis Number of the log event to match  
Context **configure service vprn string log filter string named-entry string match event gt number**  
Tree **gt**  
Range 1 to 4294967295  
Notes The following elements are part of a choice: **eq, gt, gte, lt, lte, or neq.**  
Introduced 21.2.R1  
Platforms All

### **gte number**

Synopsis Number of the log event to match  
Context **configure service vprn string log filter string named-entry string match event gte number**  
Tree **gte**  
Range 1 to 4294967295  
Notes The following elements are part of a choice: **eq, gt, gte, lt, lte, or neq.**  
Introduced 21.2.R1  
Platforms All

### **lt number**

Synopsis	Number of the log event to match
Context	<b>configure service vprn string log filter string named-entry string match event lt number</b>
Tree	<b>lt</b>
Range	1 to 4294967295
Notes	The following elements are part of a choice: <b>eq, gt, gte, lt, lte</b> , or <b>neq</b> .
Introduced	21.2.R1
Platforms	All

### **lte number**

Synopsis	Number of the log event to match
Context	<b>configure service vprn string log filter string named-entry string match event lte number</b>
Tree	<b>lte</b>
Range	1 to 4294967295
Notes	The following elements are part of a choice: <b>eq, gt, gte, lt, lte</b> , or <b>neq</b> .
Introduced	21.2.R1
Platforms	All

### **neq number**

Synopsis	Log event message to filter out
Context	<b>configure service vprn string log filter string named-entry string match event neq number</b>
Tree	<b>neq</b>
Range	1 to 4294967295
Notes	The following elements are part of a choice: <b>eq, gt, gte, lt, lte</b> , or <b>neq</b> .
Introduced	21.2.R1
Platforms	All

### **message**

Synopsis	Enter the <b>message</b> context
Context	<b>configure service vprn string log filter string named-entry string match message</b>
Tree	<b>message</b>

Introduced 21.2.R1  
Platforms All

### **eq string**

Synopsis Log event message to match  
Context **configure service vprn string log filter string named-entry string match message eq string**  
Tree **eq**  
String Length 1 to 400  
Notes The following elements are part of a choice: **eq** or **neq**.  
Introduced 21.2.R1  
Platforms All

### **neq string**

Synopsis Log event message to be filtered out  
Context **configure service vprn string log filter string named-entry string match message neq string**  
Tree **neq**  
String Length 1 to 400  
Notes The following elements are part of a choice: **eq** or **neq**.  
Introduced 21.2.R1  
Platforms All

### **regexp boolean**

Synopsis String comparison to determine if the log event matches the value of pattern  
Context **configure service vprn string log filter string named-entry string match message regexp boolean**  
Tree **regexp**  
Default false  
Introduced 21.2.R1  
Platforms All

## severity

Synopsis	Enter the <b>severity</b> context
Context	<b>configure service vprn string log filter string named-entry string match severity</b>
Tree	<b>severity</b>
Introduced	21.2.R1
Platforms	All

## eq keyword

Synopsis	Log event severity level to match
Context	<b>configure service vprn string log filter string named-entry string match severity eq keyword</b>
Tree	<b>eq</b>
Options	cleared, indeterminate, critical, major, minor, warning
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>gte</b> , <b>lt</b> , <b>lte</b> , or <b>neq</b> .
Introduced	21.2.R1
Platforms	All

## gt keyword

Synopsis	Log event severity level
Context	<b>configure service vprn string log filter string named-entry string match severity gt keyword</b>
Tree	<b>gt</b>
Options	cleared, indeterminate, critical, major, minor, warning
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>gte</b> , <b>lt</b> , <b>lte</b> , or <b>neq</b> .
Introduced	21.2.R1
Platforms	All

## gte keyword

Synopsis	Log event severity level
Context	<b>configure service vprn string log filter string named-entry string match severity gte keyword</b>
Tree	<b>gte</b>
Options	cleared, indeterminate, critical, major, minor, warning

Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>gte</b> , <b>lt</b> , <b>lte</b> , or <b>neq</b> .
Introduced	21.2.R1
Platforms	All

### **lt** keyword

Synopsis	Log event severity level
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>log filter</b> <i>string</i> <b>named-entry</b> <i>string</i> <b>match severity</b> <b>lt</b> <i>keyword</i>
Tree	<b>lt</b>
Options	cleared, indeterminate, critical, major, minor, warning
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>gte</b> , <b>lt</b> , <b>lte</b> , or <b>neq</b> .
Introduced	21.2.R1
Platforms	All

### **lte** keyword

Synopsis	Log event severity level
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>log filter</b> <i>string</i> <b>named-entry</b> <i>string</i> <b>match severity</b> <b>lte</b> <i>keyword</i>
Tree	<b>lte</b>
Options	cleared, indeterminate, critical, major, minor, warning
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>gte</b> , <b>lt</b> , <b>lte</b> , or <b>neq</b> .
Introduced	21.2.R1
Platforms	All

### **neq** keyword

Synopsis	Log event severity level to filter out
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>log filter</b> <i>string</i> <b>named-entry</b> <i>string</i> <b>match severity</b> <b>neq</b> <i>keyword</i>
Tree	<b>neq</b>
Options	cleared, indeterminate, critical, major, minor, warning
Notes	The following elements are part of a choice: <b>eq</b> , <b>gt</b> , <b>gte</b> , <b>lt</b> , <b>lte</b> , or <b>neq</b> .
Introduced	21.2.R1

Platforms All

## subject

Synopsis Enter the **subject** context  
Context **configure service vprn string log filter string named-entry string match subject**  
Tree **subject**  
Introduced 21.2.R1  
Platforms All

## eq string

Synopsis Log event subject string to match  
Context **configure service vprn string log filter string named-entry string match subject eq string**  
Tree **eq**  
String Length 1 to 32  
Notes The following elements are part of a choice: **eq** or **neq**.  
Introduced 21.2.R1  
Platforms All

## neq string

Synopsis Log event subject string to filter out  
Context **configure service vprn string log filter string named-entry string match subject neq string**  
Tree **neq**  
String Length 1 to 32  
Notes The following elements are part of a choice: **eq** or **neq**.  
Introduced 21.2.R1  
Platforms All

## regexp boolean

Synopsis String comparison to determine if the log event matches the value of subject  
Context **configure service vprn string log filter string named-entry string match subject regexp boolean**

Tree	<a href="#">regex</a>
Default	false
Introduced	21.2.R1
Platforms	All

### **log-id** [[name](#)] *string*

Synopsis	Enter the <b>log-id</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <b>log</b> <a href="#">log-id</a> <i>string</i>
Tree	<a href="#">log-id</a>
Max. Instances	30
Introduced	16.0.R1
Platforms	All

### **[name]** *string*

Synopsis	Log ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <b>log</b> <a href="#">log-id</a> <i>string</i>
Tree	<a href="#">log-id</a>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	21.2.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the log
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <b>log</b> <a href="#">log-id</a> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	enable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">log log-id</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **destination**

Synopsis	Enter the <b>destination</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">log log-id</a> <i>string</i> <a href="#">destination</a>
Tree	<a href="#">destination</a>
Introduced	16.0.R1
Platforms	All

### **netconf**

Synopsis	Enable the <b>netconf</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">log log-id</a> <i>string</i> <a href="#">destination</a> <a href="#">netconf</a>
Tree	<a href="#">netconf</a>
Notes	The following elements are part of a choice: <b>netconf</b> , <b>snmp</b> , or <b>syslog</b> .
Introduced	16.0.R1
Platforms	All

### **max-entries** *number*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Number of events stored in the NETCONF log
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">log log-id</a> <i>string</i> <a href="#">destination</a> <a href="#">netconf</a> <a href="#">max-entries</a> <i>number</i>
Tree	<a href="#">max-entries</a>
Range	50 to 3000
Default	100

Introduced 16.0.R1  
Platforms All

## snmp

Synopsis Enable the **snmp** context  
Context **configure service vprn string log log-id string destination snmp**  
Tree **snmp**  
Notes The following elements are part of a choice: **netconf**, **snmp**, or **syslog**.  
Introduced 16.0.R1  
Platforms All

## max-entries *number*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Number of events stored in the memory log  
Context **configure service vprn string log log-id string destination snmp max-entries number**  
Tree **max-entries**  
Range 50 to 3000  
Default 100  
Introduced 16.0.R1  
Platforms All

## syslog *reference*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Index with the information to format event messages sent to a specific SYSLOG collector  
Context **configure service vprn string log log-id string destination syslog reference**  
Tree **syslog**  
Reference **configure service vprn string log syslog string**

Notes	The following elements are part of a choice: <b>netconf</b> , <b>snmp</b> , or <b>syslog</b> .
Introduced	16.0.R1
Platforms	All

### **filter** *reference*

Synopsis	Event filter policy with the log destination
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">log</a> <a href="#">log-id</a> <i>string</i> <a href="#">filter</a> <i>reference</i>
Tree	<a href="#">filter</a>
Reference	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">log</a> <a href="#">filter</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **netconf-stream** *string*

Synopsis	Destination NETCONF stream name
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">log</a> <a href="#">log-id</a> <i>string</i> <a href="#">netconf-stream</a> <i>string</i>
Tree	<a href="#">netconf-stream</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

### **python-policy** *reference*

Synopsis	Python policy name
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">log</a> <a href="#">log-id</a> <i>string</i> <a href="#">python-policy</a> <i>reference</i>
Tree	<a href="#">python-policy</a>
Reference	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **source**

Synopsis	Enter the <b>source</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">log</a> <a href="#">log-id</a> <i>string</i> <a href="#">source</a>

Tree [source](#)  
Introduced 16.0.R1  
Platforms All

### **change** *boolean*

Synopsis Collect log events from the change event stream  
Context **configure** [service](#) [vprn](#) *string* [log](#) [log-id](#) *string* [source](#) [change](#) *boolean*  
Tree [change](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **debug** *boolean*

Synopsis Collect log events from the debug event stream  
Context **configure** [service](#) [vprn](#) *string* [log](#) [log-id](#) *string* [source](#) [debug](#) *boolean*  
Tree [debug](#)  
Default false  
Introduced 19.10.R1  
Platforms All

### **main** *boolean*

Synopsis Collect log events from the main event stream  
Context **configure** [service](#) [vprn](#) *string* [log](#) [log-id](#) *string* [source](#) [main](#) *boolean*  
Tree [main](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **security** *boolean*

Synopsis Collect log events from the security event stream  
Context **configure** [service](#) [vprn](#) *string* [log](#) [log-id](#) *string* [source](#) [security](#) *boolean*

Tree	<a href="#">security</a>
Default	false
Introduced	19.10.R1
Platforms	All

### **time-format** *keyword*

Synopsis	Time zone displayed for log events
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">log</a> <a href="#">log-id</a> <i>string</i> <b>time-format</b> <i>keyword</i>
Tree	<a href="#">time-format</a>
Default	utc
Options	utc, local
Introduced	16.0.R1
Platforms	All

### **snmp-trap-group** [[log-name](#)] *string*

Synopsis	Enter the <b>snmp-trap-group</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">log</a> <b>snmp-trap-group</b> <i>string</i>
Tree	<a href="#">snmp-trap-group</a>
Introduced	16.0.R1
Platforms	All

### **[log-name]** *string*

Synopsis	Log ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">log</a> <b>snmp-trap-group</b> <i>string</i>
Tree	<a href="#">snmp-trap-group</a>
String Length	1 to 17
Notes	This element is part of a list key.
Introduced	21.2.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">log snmp-trap-group</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **trap-target** [[name](#)] *string*

Synopsis	Enter the <b>trap-target</b> list instance
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">log snmp-trap-group</a> <i>string</i> <a href="#">trap-target</a> <i>string</i>
Tree	<a href="#">trap-target</a>
Max. Instances	25
Introduced	16.0.R1
Platforms	All

### [[name](#)] *string*

Synopsis	Trap target name
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">log snmp-trap-group</a> <i>string</i> <a href="#">trap-target</a> <i>string</i>
Tree	<a href="#">trap-target</a>
String Length	1 to 28
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the trap receiver
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">log snmp-trap-group</a> <i>string</i> <a href="#">trap-target</a> <i>string</i> <a href="#">address</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">address</a>
Notes	This element is mandatory.

Introduced 16.0.R1  
Platforms All

### **description** *string*

Synopsis Text description  
Context **configure** [service](#) [vprn](#) *string* [log snmp-trap-group](#) *string* [trap-target](#) *string* **description** *string*  
Tree [description](#)  
String Length 1 to 80  
Introduced 16.0.R1  
Platforms All

### **notify-community** *string*

Synopsis SNMPv1 or SNMPv2c community name string, or SNMPv3 security name, for sending a notification  
Context **configure** [service](#) [vprn](#) *string* [log snmp-trap-group](#) *string* [trap-target](#) *string* **notify-community** *string*  
Tree [notify-community](#)  
String Length 1 to 31  
Notes This element is mandatory.  
Introduced 16.0.R1  
Platforms All

### **port** *number*

Synopsis UDP port number to send messages to this remote SNMP notification collector  
Context **configure** [service](#) [vprn](#) *string* [log snmp-trap-group](#) *string* [trap-target](#) *string* **port** *number*  
Tree [port](#)  
Range 0 | 1 to 65535  
Default 162  
Introduced 16.0.R1  
Platforms All

### **replay** *boolean*

Synopsis	Retransmit missed notifications
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>log snmp-trap-group</b> <i>string</i> <b>trap-target</b> <i>string</i> <b>replay</b> <i>boolean</i>
Tree	<b>replay</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **security-level** *keyword*

Synopsis	Security level at which SNMP notification messages are sent to SNMP notification collector
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>log snmp-trap-group</b> <i>string</i> <b>trap-target</b> <i>string</i> <b>security-level</b> <i>keyword</i>
Tree	<b>security-level</b>
Default	no-auth-no-privacy
Options	no-auth-no-privacy, auth-no-privacy, privacy
Introduced	16.0.R1
Platforms	All

### **version** *keyword*

Synopsis	SNMP version to format notification messages sent to this SNMP notification collector
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>log snmp-trap-group</b> <i>string</i> <b>trap-target</b> <i>string</i> <b>version</b> <i>keyword</i>
Tree	<b>version</b>
Default	snmpv3
Options	snmpv1, snmpv2c, snmpv3
Introduced	16.0.R1
Platforms	All

### **syslog** [**syslog-name**] *string*

Synopsis	Enter the <b>syslog</b> list instance
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>log syslog</b> <i>string</i>

Tree	<a href="#">syslog</a>
Max. Instances	30
Introduced	16.0.R1
Platforms	All

### **[syslog-name]** *string*

Synopsis	Syslog name
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">log</a> <a href="#">syslog</a> <i>string</i>
Tree	<a href="#">syslog</a>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	21.2.R1
Platforms	All

### **address** (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	IP address of the Syslog target host
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">log</a> <a href="#">syslog</a> <i>string</i> <b>address</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> )
Tree	<a href="#">address</a>
Introduced	16.0.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">log</a> <a href="#">syslog</a> <i>string</i> <b>description</b> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **facility** *keyword*

Synopsis	Facility code for messages
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">log syslog</a> <i>string</i> <b>facility</b> <i>keyword</i>
Tree	<a href="#">facility</a>
Default	local7
Options	kernel, user, mail, systemd, auth, syslogd, printer, netnews, uucp, cron, authpriv, ftp, ntp, logaudit, logalert, cron2, local0, local1, local2, local3, local4, local5, local6, local7
Introduced	16.0.R1
Platforms	All

### **log-prefix** (*keyword* | *string*)

Synopsis	String that is prepended to every log message sent to this target syslog host
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">log syslog</a> <i>string</i> <b>log-prefix</b> ( <i>keyword</i>   <i>string</i> )
Tree	<a href="#">log-prefix</a>
String Length	1 to 32
Default	TMNX
Options	no-prefix
Introduced	16.0.R1
Platforms	All

### **port** *number*

Synopsis	Destination port when sending syslog over UDP
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">log syslog</a> <i>string</i> <b>port</b> <i>number</i>
Tree	<a href="#">port</a>
Range	0   1 to 65535
Default	514
Introduced	16.0.R1
Platforms	All

### **severity** *keyword*

Synopsis	Severity level threshold for the syslog message
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">log syslog</a> <i>string</i> <b>severity</b> <i>keyword</i>

Tree	<a href="#">severity</a>
Default	info
Options	emergency, alert, critical, error, warning, notice, info, debug
Introduced	16.0.R1
Platforms	All

### **tls-client-profile** *reference*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	TLS client profile used to encrypt syslog communication
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">log syslog</a> <i>string</i> <a href="#">tls-client-profile</a> <i>reference</i>
Tree	<a href="#">tls-client-profile</a>
Description	This command specifies the Transport Layer Security (TLS) client profile used to encrypt syslog communications. When configured, syslog messages are sent using TLS.  Any change to this command results in a brief interruption of the event log, which may cause the loss of a few syslog messages.  When this command is unconfigured, the syslog messages are sent over UDP.
Reference	<b>configure</b> <a href="#">system security</a> <a href="#">tls client-tls-profile</a> <i>string</i>
Introduced	21.10.R1
Platforms	All

### **management**

Synopsis	Enable the <b>management</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">management</a>
Tree	<a href="#">management</a>
Introduced	16.0.R4
Platforms	All

### **allow-ftp** *boolean*

Synopsis	Allow access to the FTP server
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">management</a> <a href="#">allow-ftp</a> <i>boolean</i>

Tree	<a href="#">allow-ftp</a>
Description	When configured to <b>true</b> , this command allows FTP access to the SR OS router via the VPRN router instance. When configured to <b>false</b> , this command disallows access to the SR OS FTP server.
Default	false
Introduced	16.0.R6
Platforms	All

### **allow-grpc** *boolean*

Synopsis	Allow access to the gRPC server
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">management allow-grpc</a> <i>boolean</i>
Tree	<a href="#">allow-grpc</a>
Description	When configured to <b>true</b> , this command allows access to the gRPC server via the VPRN router instance. When configured to <b>false</b> , this command disallows gRPC server access.
Default	false
Introduced	19.5.R1
Platforms	All

### **allow-netconf** *boolean*

Synopsis	Allow access to the NETCONF server
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">management allow-netconf</a> <i>boolean</i>
Tree	<a href="#">allow-netconf</a>
Description	When configured to <b>true</b> , this command allows NETCONF server access to the SR OS router via the VPRN router instance. When configured to <b>false</b> , this command disallows access to the NETCONF server.
Default	false
Introduced	19.5.R1
Platforms	All

### **allow-ssh** *boolean*

Synopsis	Allow access to the SSH server
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">management allow-ssh</a> <i>boolean</i>

Tree	<a href="#">allow-ssh</a>
Description	When configured to <b>true</b> , this command allows SSH server access to the SR OS router via the VPRN router instance. When configured to <b>false</b> , this command disallows SSH server access.
Default	false
Introduced	16.0.R5
Platforms	All

### **allow-telnet** *boolean*

Synopsis	Allow access to the IPv4 Telnet server
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">management allow-telnet</a> <i>boolean</i>
Tree	<a href="#">allow-telnet</a>
Description	When configured to <b>true</b> , this command allows IPv4 Telnet server access to the SR OS router via the VPRN router instance. When configured to <b>false</b> , this command disallows access to the IPv4 Telnet server.
Default	false
Introduced	16.0.R5
Platforms	All

### **allow-telnet6** *boolean*

Synopsis	Allow access to the Telnet IPv6 server
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">management allow-telnet6</a> <i>boolean</i>
Tree	<a href="#">allow-telnet6</a>
Description	When configured to <b>true</b> , this command allows IPv6 Telnet server access to the SR OS router via the VPRN router instance. When configured to <b>false</b> , this command removes access to the IPv6 Telnet server.
Default	false
Introduced	16.0.R5
Platforms	All

### **maximum-ipv4-routes**

Synopsis	Enter the <b>maximum-ipv4-routes</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">maximum-ipv4-routes</a>

Tree	<a href="#">maximum-ipv4-routes</a>
Introduced	16.0.R1
Platforms	All

### **log-only** *boolean*

Synopsis	Action when the maximum number of routes, held within a VRF context, is reached
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">maximum-ipv4-routes</a> <a href="#">log-only</a> <i>boolean</i>
Tree	<a href="#">log-only</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **threshold** *number*

Synopsis	Mid-level water marker for the number of routes which this VRF holds
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">maximum-ipv4-routes</a> <a href="#">threshold</a> <i>number</i>
Tree	<a href="#">threshold</a>
Range	1 to 100
Units	percent
Introduced	16.0.R1
Platforms	All

### **value** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of routes that are configured on this virtual router
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">maximum-ipv4-routes</a> <a href="#">value</a> <i>number</i>
Tree	<a href="#">value</a>
Range	1 to 2147483647
Introduced	16.0.R1
Platforms	All

## maximum-ipv6-routes

Synopsis	Enter the <b>maximum-ipv6-routes</b> context
Context	<b>configure service vprn string maximum-ipv6-routes</b>
Tree	<b>maximum-ipv6-routes</b>
Introduced	16.0.R1
Platforms	All

## log-only *boolean*

Synopsis	Action when the maximum number of routes, held within a VRF context, is reached
Context	<b>configure service vprn string maximum-ipv6-routes log-only boolean</b>
Tree	<b>log-only</b>
Default	false
Introduced	16.0.R1
Platforms	All

## threshold *number*

Synopsis	Mid-level water marker for the number of routes which this VRF holds
Context	<b>configure service vprn string maximum-ipv6-routes threshold number</b>
Tree	<b>threshold</b>
Range	1 to 100
Units	percent
Introduced	16.0.R1
Platforms	All

## value *number*

### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of routes that are configured on this virtual router
Context	<b>configure service vprn string maximum-ipv6-routes value number</b>
Tree	<b>value</b>

Range	1 to 2147483647
Introduced	16.0.R1
Platforms	All

### **mc-maximum-routes**

Synopsis	Enter the <b>mc-maximum-routes</b> context
Context	<b>configure service vprn string mc-maximum-routes</b>
Tree	<a href="#">mc-maximum-routes</a>
Introduced	16.0.R1
Platforms	All

### **log-only *boolean***

Synopsis	Action when the maximum number of multicast routes, held within a VRF context, is reached
Context	<b>configure service vprn string mc-maximum-routes log-only <i>boolean</i></b>
Tree	<a href="#">log-only</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **threshold *number***

Synopsis	Mid-level water marker for the number of multicast routes which this VRF holds
Context	<b>configure service vprn string mc-maximum-routes threshold <i>number</i></b>
Tree	<a href="#">threshold</a>
Range	1 to 100
Units	percent
Introduced	16.0.R1
Platforms	All

### **value *number***

Synopsis	Maximum multicast routes configured on virtual router
Context	<b>configure service vprn string mc-maximum-routes value <i>number</i></b>

Tree	<a href="#">value</a>
Range	1 to 2147483647
Introduced	16.0.R1
Platforms	All

## **mld**

Synopsis	Enable the <b>mld</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <b>mld</b>
Tree	<a href="#">mld</a>
Introduced	16.0.R1
Platforms	All

## **admin-state** *keyword*

Synopsis	Administrative state of MLD
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <b>mld</b> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	enable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

## **forwarding-group-interface** [forwarding-service](#) *string* [group-interface-name](#) *reference*

Synopsis	Enter the <b>forwarding-group-interface</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <b>mld</b> <a href="#">forwarding-group-interface</a> <a href="#">forwarding-service</a> <i>string</i> <a href="#">group-interface-name</a> <i>reference</i>
Tree	<a href="#">forwarding-group-interface</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **forwarding-service** *string*

Synopsis	Forwarding service for a subscriber interface in a retailer context
----------	---

Context	<b>configure service vprn</b> <i>string</i> <b>ml</b> forwarding-group-interface forwarding-service <i>string</i> group-interface-name <i>reference</i>
Tree	forwarding-group-interface
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **group-interface-name** *reference*

Synopsis	Group interface name
Context	<b>configure service vprn</b> <i>string</i> <b>ml</b> forwarding-group-interface forwarding-service <i>string</i> group-interface-name <i>reference</i>
Tree	forwarding-group-interface
Reference	<b>configure service vprn</b> <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of the MLD interface
Context	<b>configure service vprn</b> <i>string</i> <b>ml</b> forwarding-group-interface forwarding-service <i>string</i> group-interface-name <i>reference</i> admin-state <i>keyword</i>
Tree	admin-state
Default	enable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **import-policy** *reference*

Synopsis	Import policy to filter MLD packets
Context	<b>configure service vprn</b> <i>string</i> <b>ml</b> forwarding-group-interface forwarding-service <i>string</i> group-interface-name <i>reference</i> import-policy <i>reference</i>
Tree	import-policy

Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **maximum-number-group-sources** *number*

Synopsis	Maximum number of group sources for this interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">mld</a> <a href="#">forwarding-group-interface</a> <a href="#">forwarding-service</a> <i>string</i> <a href="#">group-interface-name</a> <i>reference</i> <a href="#">maximum-number-group-sources</a> <i>number</i>
Tree	<a href="#">maximum-number-group-sources</a>
Description	This command configures the maximum number of group sources for which IGMP or MLD can have local receiver information based on received IGMP or MLD reports on this interface. When this configuration is changed dynamically to a lower value than the currently accepted number of group sources, the group sources that are already accepted are not deleted. Only new group sources are not allowed.
Range	1 to 32000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **maximum-number-groups** *number*

Synopsis	Maximum number of groups for this interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">mld</a> <a href="#">forwarding-group-interface</a> <a href="#">forwarding-service</a> <i>string</i> <a href="#">group-interface-name</a> <i>reference</i> <a href="#">maximum-number-groups</a> <i>number</i>
Tree	<a href="#">maximum-number-groups</a>
Range	1 to 16000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **maximum-number-sources** *number*

Synopsis	Maximum number of sources that are allowed per group
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">mld</a> <a href="#">forwarding-group-interface</a> <a href="#">forwarding-service</a> <i>string</i> <a href="#">group-interface-name</a> <i>reference</i> <a href="#">maximum-number-sources</a> <i>number</i>
Tree	<a href="#">maximum-number-sources</a>
Range	1 to 1000
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## mcac

Synopsis Enter the **mcac** context

Context **configure service vprn string mld forwarding-group-interface forwarding-service string group-interface-name reference mcac**

Tree **mcac**

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## bandwidth

Synopsis Enter the **bandwidth** context

Context **configure service vprn string mld forwarding-group-interface forwarding-service string group-interface-name reference mcac bandwidth**

Tree **bandwidth**

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## mandatory (*number* | *keyword*)

Synopsis Pre-reserved bandwidth for all mandatory channels

Context **configure service vprn string mld forwarding-group-interface forwarding-service string group-interface-name reference mcac bandwidth mandatory (*number* | *keyword*)**

Tree **mandatory**

Range 0 to 2147483647

Default unlimited

Options unlimited

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## total (*number* | *keyword*)

Synopsis Maximum allowed bandwidth

Context **configure service vprn string mld forwarding-group-interface forwarding-service string group-interface-name reference mcac bandwidth total (*number* | *keyword*)**

Tree	<a href="#">total</a>
Range	0 to 2147483647
Default	unlimited
Options	unlimited
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **interface-policy** *reference*

Synopsis	Name of multicast CAC interface policy
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">mld</a> <a href="#">forwarding-group-interface</a> <a href="#">forwarding-service</a> <i>string</i> <a href="#">group-interface-name</a> <i>reference</i> <a href="#">mcac</a> <a href="#">interface-policy</a> <i>reference</i>
Tree	<a href="#">interface-policy</a>
Reference	<b>configure</b> <a href="#">mcac</a> <a href="#">interface-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **policy** *reference*

Synopsis	Multicast CAC policy name
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">mld</a> <a href="#">forwarding-group-interface</a> <a href="#">forwarding-service</a> <i>string</i> <a href="#">group-interface-name</a> <i>reference</i> <a href="#">mcac</a> <a href="#">policy</a> <i>reference</i>
Tree	<a href="#">policy</a>
Description	<p>This command configures the name of the global channel bandwidth definition policy that is used for (H)MCAC and HQoS adjustment.</p> <p>Within the scope of HQoS adjustment, the channel definition policy under the group interface is used if redirection is unconfigured. In this case, the HQoS adjustment can be applied to IPoE subscribers in per-SAP replication mode.</p> <p>If redirection is configured, the channel bandwidth definition policy applied under the Layer 3 redirected interface is in effect.</p> <p>Hierarchical MCAC (HMCAC) is supported on two levels simultaneously:</p> <ul style="list-style-type: none"> <li>• subscriber level and redirected interface when redirection is configured</li> <li>• subscriber level and group-interface level when redirection is unconfigured</li> </ul> <p>In HMCAC, the subscriber is checked against its bandwidth limits first, then against the bandwidth limits of the redirected or group interface. If redirection is configured but the policy is referenced only under the group interface, no admission control is executed (HMCAC or MCAC).</p>
Reference	<b>configure</b> <a href="#">mcac</a> <a href="#">policy</a> <i>string</i>

Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **query-interval** *number*

Synopsis Time between two consecutive host-query messages  
Context **configure** [service vprn string](#) [mld forwarding-group-interface forwarding-service string](#)  
[group-interface-name reference](#) **query-interval** *number*  
Tree [query-interval](#)  
Range 2 to 1024  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **query-last-member-interval** *number*

Synopsis Time between group-specific query messages  
Context **configure** [service vprn string](#) [mld forwarding-group-interface forwarding-service string](#)  
[group-interface-name reference](#) **query-last-member-interval** *number*  
Tree [query-last-member-interval](#)  
Range 1 to 1023  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **query-response-interval** *number*

Synopsis Time to wait for a response to the host-query messages  
Context **configure** [service vprn string](#) [mld forwarding-group-interface forwarding-service string](#)  
[group-interface-name reference](#) **query-response-interval** *number*  
Tree [query-response-interval](#)  
Range 1 to 1023  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **query-source-address** *string*

Synopsis Source address for MLD queries

Context	<b>configure service vprn</b> <i>string</i> <b>mld forwarding-group-interface forwarding-service</b> <i>string</i> <b>group-interface-name</b> <i>reference</i> <b>query-source-address</b> <i>string</i>
Tree	<b>query-source-address</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **router-alert-check** *boolean*

Synopsis	Enable router alert checking for IGMP or MLD messages
Context	<b>configure service vprn</b> <i>string</i> <b>mld forwarding-group-interface forwarding-service</b> <i>string</i> <b>group-interface-name</b> <i>reference</i> <b>router-alert-check</b> <i>boolean</i>
Tree	<b>router-alert-check</b>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sub-hosts-only** *boolean*

Synopsis	Allow MLD traffic from known hosts only
Context	<b>configure service vprn</b> <i>string</i> <b>mld forwarding-group-interface forwarding-service</b> <i>string</i> <b>group-interface-name</b> <i>reference</i> <b>sub-hosts-only</b> <i>boolean</i>
Tree	<b>sub-hosts-only</b>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **subnet-check** *boolean*

Synopsis	Enable subnet checking
Context	<b>configure service vprn</b> <i>string</i> <b>mld forwarding-group-interface forwarding-service</b> <i>string</i> <b>group-interface-name</b> <i>reference</i> <b>subnet-check</b> <i>boolean</i>
Tree	<b>subnet-check</b>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **version** *keyword*

Synopsis	MLD protocol version
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">mld forwarding-group-interface forwarding-service</a> <i>string</i> <a href="#">group-interface-name</a> <i>reference</i> <b>version</b> <i>keyword</i>
Tree	<a href="#">version</a>
Default	2
Options	1, 2
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **group-if-query-source-address** *string*

Synopsis	Source address in queries for group interfaces when not configured at group interface level
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">mld group-if-query-source-address</a> <i>string</i>
Tree	<a href="#">group-if-query-source-address</a>
Introduced	16.0.R1
Platforms	All

### **group-interface** [[group-interface-name](#)] *reference*

Synopsis	Enter the <b>group-interface</b> list instance
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">mld group-interface</a> <i>reference</i>
Tree	<a href="#">group-interface</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### [[group-interface-name](#)] *reference*

Synopsis	Group interface name
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">mld group-interface</a> <i>reference</i>
Tree	<a href="#">group-interface</a>
Reference	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis Administrative state of the MLD interface  
 Context **configure service vprn string mld group-interface reference admin-state keyword**  
 Tree [admin-state](#)  
 Default enable  
 Options enable, disable  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **import-policy** *reference*

Synopsis Import policy to filter MLD packets  
 Context **configure service vprn string mld group-interface reference import-policy reference**  
 Tree [import-policy](#)  
 Reference **configure policy-options policy-statement string**  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **maximum-number-group-sources** *number*

Synopsis Maximum number of group sources for this interface  
 Context **configure service vprn string mld group-interface reference maximum-number-group-sources number**  
 Tree [maximum-number-group-sources](#)  
 Description This command configures the maximum number of group sources for which IGMP or MLD can have local receiver information based on received IGMP or MLD reports on this interface. When this configuration is changed dynamically to a lower value than the currently accepted number of group sources, the group sources that are already accepted are not deleted. Only new group sources are not allowed.  
 Range 1 to 32000  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **maximum-number-groups** *number*

Synopsis	Maximum number of groups for this interface
Context	<b>configure</b> <a href="#">service vprn string mld group-interface reference maximum-number-groups number</a>
Tree	<a href="#">maximum-number-groups</a>
Range	1 to 16000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **maximum-number-sources** *number*

Synopsis	Maximum number of sources that are allowed per group
Context	<b>configure</b> <a href="#">service vprn string mld group-interface reference maximum-number-sources number</a>
Tree	<a href="#">maximum-number-sources</a>
Range	1 to 1000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **mcac**

Synopsis	Enter the <b>mcac</b> context
Context	<b>configure</b> <a href="#">service vprn string mld group-interface reference mcac</a>
Tree	<a href="#">mcac</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **bandwidth**

Synopsis	Enter the <b>bandwidth</b> context
Context	<b>configure</b> <a href="#">service vprn string mld group-interface reference mcac bandwidth</a>
Tree	<a href="#">bandwidth</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **mandatory** (*number* | *keyword*)

Synopsis	Pre-reserved bandwidth for all mandatory channels
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">mld</a> <a href="#">group-interface</a> <i>reference</i> <a href="#">mcac</a> <a href="#">bandwidth</a> <a href="#">mandatory</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">mandatory</a>
Range	0 to 2147483647
Default	unlimited
Options	unlimited
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **total** (*number* | *keyword*)

Synopsis	Maximum allowed bandwidth
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">mld</a> <a href="#">group-interface</a> <i>reference</i> <a href="#">mcac</a> <a href="#">bandwidth</a> <a href="#">total</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">total</a>
Range	0 to 2147483647
Default	unlimited
Options	unlimited
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **interface-policy** *reference*

Synopsis	Name of multicast CAC interface policy
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">mld</a> <a href="#">group-interface</a> <i>reference</i> <a href="#">mcac</a> <a href="#">interface-policy</a> <i>reference</i>
Tree	<a href="#">interface-policy</a>
Reference	<b>configure</b> <a href="#">mcac</a> <a href="#">interface-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **policy** *reference*

Synopsis	Multicast CAC policy name
----------	---------------------------

Context	<b>configure service vprn string mld group-interface reference mcac policy reference</b>
Tree	<a href="#">policy</a>
