### admin-state *keyword*

Synopsis Administrative state for P2MP SR  
Context **configure service vprn string mvpn provider-tunnel inclusive p2mp-sr admin-state keyword**

Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	21.5.R1
Platforms	All

### **bfd-leaf** *boolean*

Synopsis	Enable unidirectional multipoint BFD on the leaf PE
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">mvpn</a> <a href="#">provider-tunnel</a> <a href="#">inclusive</a> <a href="#">p2mp-sr</a> <b>bfd-leaf</b> <i>boolean</i>
Tree	<a href="#">bfd-leaf</a>
Description	When configured to <b>true</b> , this command enables unidirectional multipoint BFD sessions on a receiver (leaf) PE node for upstream fast failure detection over P2MP SR tree LSP.
Default	false
Introduced	21.10.R1
Platforms	All

### **bfd-root**

Synopsis	Enable the <b>bfd-root</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">mvpn</a> <a href="#">provider-tunnel</a> <a href="#">inclusive</a> <a href="#">p2mp-sr</a> <b>bfd-root</b>

### **multiplier** *number*

Synopsis	Multiplier for the transmit interval of the BFD session
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">mvpn</a> <a href="#">provider-tunnel</a> <a href="#">inclusive</a> <a href="#">p2mp-sr</a> <b>bfd-root</b> <b>multiplier</b> <i>number</i>
Tree	<a href="#">multiplier</a>
Description	This command configures the multiplier for the transmit interval. The interval and the multiplier are used to calculate the detection time, which is the period of time without receiving BFD packets after which the session failure is determined.
Range	1 to 20
Default	3

Introduced 21.10.R1  
Platforms All

### **transmit-interval** *number*

Synopsis Transmit interval of the BFD session

Tree	<a href="#">min-first-fragment-size-rx</a>
Description	This command configures the minimum MTU size for the first fragment in the upstream direction. This command can be used to enable processing of first IPv6 fragments smaller than 1280 bytes. RFC 8200 recommends the minimum MTU in IPv6 be 1280 bytes which allows fragmentation only for packets that are larger than 1280 bytes. If a first fragment is smaller than 1280 bytes, DS-lite implementation in the SR OS, by default, drops the first fragment.
Range	512 to 1280
Default	1280
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **icmp-echo-reply** *boolean*

Synopsis	Allow NAT pool IP addresses to respond to ICMP PINGs
Context	<b>configure service vprn string nat outside pool string icmp-echo-reply boolean</b>
Tree	<a href="#">icmp-echo-reply</a>
Description	This command allows IP addresses in the NAT pool to respond to ICMP Echo requests (PINGs). The configuration can be toggled while the pool is in use.

In L2-aware NAT when port-block-extensions is disabled, the reply from an outside IP address is generated only when this IP address has at least one host (binding) behind it.

In L2-aware NAT when port-block-extensions is enabled, the reply from an outside IP address is generated regardless if a binding is present.

In LSN, the reply from an outside IP address is generated regardless if a binding is present.

## dynamic-block-reservation *boolean*

### WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Reserve dynamic block for subscriber
Context	<b>configure service vprn string nat outside pool string port-forwarding dynamic-block-reservation boolean</b>
Tree	<a href="#">dynamic-block-reservation</a>
Description	<p>When configured to <b>true</b>, the system reserves dynamic port block when the first port forward for the subscriber is created. The dynamic port block allocation is logged only if the block is being used and mappings are created. Dynamic port block reservation due to the port forward creation but without any dynamic mapping, is not logged.</p> <p>The reserved port block is released only when the last mapping in the block expires and there are no port forwards associated with the subscriber. The de-allocation log (syslog or RADIUS) is generated when the dynamic port block is completely released.</p> <p>Dynamic port block reservations can be enabled only if the configured maximum number of subscribers per outside IP addresses are less than or equal to the maximum number of configured port blocks per outside IP address.</p> <p>When configured to <b>false</b>, dynamic port blocks are not reserved when the first port forward for the subscriber is created.</p>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

Synopsis	End of the wildcard range for port forwards
Context	<b>configure service vprn string nat outside pool string port-forwarding range-end number</b>
Tree	<b>range-end</b>
Description	<p>This command configures the upper boundary of the wildcard port range dedicated to port forwarding in a NAT pool, whereas the <b>range-start</b> command configures the lower boundary (the starting port) of the wildcard port range dedicated to port forwarding in a NAT pool.</p> <p>If left unconfigured, the <b>range-end</b> implicit value is set to 1023, that represents the end of the well-known port range that is always enabled.</p> <p>Port forwards are supported only in pools in NAPT mode. Pools in 1:1 mode do not support port-forwards.</p>
Range	0   1023 to 65535
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**range-start number**

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Start of the wildcard range for port forwards
Context	<b>configure service vprn string nat outside pool string port-forwarding range-start number</b>
Tree	<b>range-start</b>
Description	<p>This command configures the lower boundary (the starting port) of the wildcard port range dedicated to port forwarding in a NAT pool, whereas the <b>range-end</b> command configures the upper boundary of the wildcard port range dedicated to port forwarding in a NAT pool.</p> <p>If left unconfigured, the <b>range-start</b> implicit value is set to 1. Port 0 is always excluded from the port forwarding range.</p> <p>Port forwards are supported only in pools in Network Address and Port Translation (NAPT) mode. Pools in 1:1 mode do not support configured port forwards.</p>
Range	0   1   1025 to 65535
Introduced	22.7.R1

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

### WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Port block size for NAT subscribers
Context	<b>configure service vprn string nat outside pool string port-reservation port-blocks number</b>
Tree	<a href="#">port-blocks</a>
Description	<p>In CGN, this specifies the number of port-blocks per outside IP address in the NAT pool. The available ports per outside IP address (the end port minus the upper bound value of the static port-forwarding range) are divided into the number of port blocks specified in this command. This implicitly determines the size of each port block.</p> <p>For L2-aware NAT, this command can be configured only if the port block extensions (extended port blocks) are disabled. You must disable the <b>l2-aware port-block-extension</b> hierarchy in the NAT pool.</p>
Range	0 to 64512
Notes	<p>This element is the default part of a choice.</p> <p>The following elements are part of a choice: <b>port-blocks</b> or <b>ports</b>.</p>

### **ipv4**

Synopsis	Enter the <b>ipv4</b> context
Context	<b>configure service vprn</b> <i>string network-interface string ipv4</i>
Tree	<a href="#">ipv4</a>
Introduced	16.0.R1
Platforms	All

### **allow-directed-broadcasts** *boolean*

Synopsis	Accept broadcasts that are directed to this interface
Context	<b>configure service vprn</b> <i>string network-interface string ipv4 allow-directed-broadcasts boolean</i>
Tree	<a href="#">allow-directed-broadcasts</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **bfd**

Synopsis	Enter the <b>bfd</b> context
Context	<b>configure service vprn</b> <i>string network-interface string ipv4 bfd</i>
Tree	<a href="#">bfd</a>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of BFD sessions
Context	<b>configure service vprn</b> <i>string network-interface string ipv4 bfd admin-state keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **echo-receive** *number*

Synopsis	Minimum echo interval over this interface
Context	<b>configure service vprn</b> <i>string network-interface string ipv4 bfd echo-receive number</i>
Tree	<a href="#">echo-receive</a>
Range	100 to 100000
Units	milliseconds
Introduced	16.0.R1
Platforms	All

### **multiplier** *number*

Synopsis	Number of consecutive BFD messages missed from the peer
Context	<b>configure service vprn</b> <i>string network-interface string ipv4 bfd multiplier number</i>
Tree	<a href="#">multiplier</a>
Description	This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments.
Range	1 to 20
Default	3
Introduced	16.0.R1
Platforms	All

### **receive** *number*

Synopsis	BFD receive interval over this interface
----------	--

Context	<b>configure service vprn</b> <i>string</i> <b>network-interface</b> <i>string</i> <b>ipv4 bfd receive</b> <i>number</i>
Tree	<b>receive</b>
Description	This command specifies the receive interval for the BFD session. On the 7750 SR, this command can only be configured to a value less than 100 when the <b>type</b> command is configured to <b>cpm-np</b> .
Range	10 to 100000
Default	100
Units	milliseconds
Introduced	16.0.R1
Platforms	All

### **transmit-interval** *number*

Synopsis	BFD transmit interval over this interface
Context	<b>configure service vprn</b> <i>string</i> <b>network-interface</b> <i>string</i> <b>ipv4 bfd transmit-interval</b> <i>number</i>
Tree	<b>transmit-interval</b>
Description	This command configures the transmit intervals. On the 7750 SR, this command can only be configured to a value less than 100 when the <b>type</b> command is configured to <b>cpm-np</b> .
Range	10 to 100000
Default	100
Units	milliseconds
Introduced	16.0.R1
Platforms	All

### **type** *keyword*

Synopsis	Local termination point for the BFD session
Context	<b>configure service vprn</b> <i>string</i> <b>network-interface</b> <i>string</i> <b>ipv4 bfd type</b> <i>keyword</i>
Tree	<b>type</b>
Description	This command sets the local termination point for the BFD session to allow for fast timers down to 10 ms granularity. The options to specify where the BFD session runs are: <ul style="list-style-type: none"><li>• <b>auto</b> (default) – the system chooses and uses the line card CPU only for single-hop BFD sessions with timer intervals equal to or greater than 100ms. All others are placed on the <b>cpm-np</b>.</li></ul>

- **cpm-np** – BFD session runs on the FP complex associated with the CPM. This is either the FP on the CPM or the one elected on smaller systems.
- **fp** – BFD session runs on the line card CPU. This option can only be used for single-hop BFD sessions with timers equal to or greater than 100ms.

Default	auto
Options	cpm-np, auto, fp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## link-map-profile *number*

Synopsis LAG link map profile for a SAP or network interface  
 Context **configure service vprn string network-interface string lag link-map-profile number**  
 Tree **link-map-profile**  
 Description This command assigns a preconfigured LAG link map profile to a SAP or network interface configured on a LAG or a PW port that exists on a LAG. After an operator assigns a LAG link map profile, the system rehashes the SAP or network interface egress traffic over the LAG as required by the new configuration.  
 If the LAG link map profile for a SAP or network interface is deleted, the system reverts back to per-flow hashing.  
 Range 1 to 64  
 Introduced 16.0.R1  
 Platforms All

Synopsis	Enable flow label load balancing
Context	<b>configure service vprn</b> <i>string</i> <b>network-interface</b> <i>string</i> <b>load-balancing flow-label-load-balancing</b> <i>boolean</i>
Tree	<b>flow-label-load-balancing</b>
Description	When configured to <b>true</b> , the router enables load balancing in ECMP and LAG based on the output of a hash performed on the triplet (SA, DA, flow label) in the header of an IPv6 packet received on an IES, VPRN, R-VPLS, CSC, or network interface.  When configured to <b>false</b> , the router disables load balancing in ECMP and LAG.
Default	false

Introduced 21.5.R1  
Platforms All

Tree	<b>interface-type</b>
Description	<p>This command specifies the interface type.</p> <p>Use this command to set the interface type of an Ethernet link to point-to-point to avoid having to carry the broadcast adjacency maintenance overhead if the Ethernet link provided the link is used as a point-to-point.</p> <p>If the interface type is not known at the time the interface is added to OSPF and subsequently the IP interface is bound (or moved) to a different interface type, this command must be entered manually.</p> <p>Configuring the interface type to <b>secondary</b>, allows multiple secondary adjacencies, in addition to the primary adjacency, to be established over a single IP interface. This interface type can also be applied to the system interface and to loopback interfaces to allow them to participate in multiple areas, although no adjacencies are formed over these types of interfaces.</p>
Options	broadcast, non-broadcast, point-to-point, secondary

### **interface-type** *keyword*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Interface type
Context	<b>configure service vprn</b> <i>string ospf3 number area string interface string interface-type keyword</i>
Tree	<b>interface-type</b>
Description	<p>This command specifies the interface type.</p> <p>Use this command to set the interface type of an Ethernet link to point-to-point to avoid having to carry the broadcast adjacency maintenance overhead if the Ethernet link provided the link is used as a point-to-point.</p> <p>If the interface type is not known at the time the interface is added to OSPF and subsequently the IP interface is bound (or moved) to a different interface type, this command must be entered manually.</p> <p>Configuring the interface type to <b>secondary</b>, allows multiple secondary adjacencies, in addition to the primary adjacency, to be established over a single IP interface. This interface type can also be applied to the system interface and to loopback interfaces to allow them to participate in multiple areas, although no adjacencies are formed over these types of interfaces.</p>
Options	broadcast, non-broadcast, point-to-point, secondary
Introduced	16.0.R1
Platforms	All

Description	When configured to <b>true</b> , port weight is used when determining available bandwidth per level when LAG ports go down or come up. This command is required for proper operation on mixed port-speed LAGs and can also be used for unmixed port-speed LAGs.
Default	false
Introduced	16.0.R1
Platforms	All

### **policy reference**

Synopsis	Multicast CAC policy name
Context	<b>configure</b> <a href="#">service vprn string pim interface string mcac policy reference</a>
Tree	<a href="#">policy</a>
Description	This command configures the name of the global channel bandwidth definition policy that is used for (H)MCAC and HQoS adjustment.

Within the scope of HQoS adjustment, the channel definition policy under the group interface is used if redirection is unconfigured. In this case, the HQoS adjustment can be applied to IPoE subscribers in per-SAP replication mode.

If redirection is configured, the channel bandwidth definition policy applied under the Layer 3 redirected interface is in effect.

Hierarchical MCAC (HMCAC) is supported on two levels simultaneously:

- subscriber level and redirected interface when redirection is configured
- subscriber level and group-interface level when redirection is unconfigured

In HMCAC, the subscriber is checked against its bandwidth limits first, then against the bandwidth limits of the redirected or group interface. If redirection is configured but the policy is referenced only under the group interface, no admission control is executed (HMCAC or MCAC).

Tree	<a href="#">candidate</a>

Description	When configured to <b>true</b> , the auto-RP is enabled to advertise the candidate RP information. The auto-RP candidate RP announces the candidate RP messages on the 224.0.1.39 multicast address. This functionality is in addition to the listener functionality enabled by the auto RP discovery.  When configured to <b>false</b> , the candidate RP information is not specified.
Default	false
Introduced	20.10.R1
Platforms	All

### mapping-agent *boolean*

Synopsis	Enable the mapping agent on the node
Context	<b>configure service vprn string pim rp ipv4 mapping-agent boolean</b>
Tree	<a href="#">mapping-agent</a>
Description	When configured to <b>true</b> , the mapping agent is enabled on the node. The auto-RP MA observes the <b>auto-rp-announcement</b> messages, selects the RP and generates the RP discovery 224.0.1.40 messages. This functionality is in addition to the auto-RP discovery functionality.
Default	false
Introduced	20.10.R1
Platforms	All

### **split-horizon** *boolean*

Synopsis	Enable split horizon and poison reverse
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>rip</b> <b>group</b> <i>string</i> <b>neighbor</b> <i>string</i> <b>split-horizon</b> <i>boolean</i>
Tree	<b>split-horizon</b>
Description	When configured to <b>true</b> , this command enables the use of split horizon with poison reverse. Split-horizon with poison reverse means that routes learned from a neighbor through a given interface are advertised in updates out of the same interface but with a metric of 16 (infinity).

When configured to **false**, this command enables split horizon without poison reverse. This allows the routes to be re-advertised on interfaces other than the interface that learned the route, with the advertised metric equaling an increment of the metric-in value.

Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

## timeout number

Synopsis	RIP timeout timer
Context	<b>configure service vprn string ripng group string neighbor reference timers timeout number</b>

Tree	<a href="#">timeout</a>
Description	This command specifies the RIP timeout timer. If a route is not updated by the time the timer expires, the route is declared invalid, but the route is maintained in the RIP database.
Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4

### **community** [**community-string**] *string*

Synopsis Enter the **community** list instance  
Context **configure service vprn** *string* **snmp community** *string*  
Tree **community**  
Description Commands in this context set the SNMP community names to be used with the associated VPRN instance. These VPRN community names are used to associate

SNMP v1/v2c requests with a particular VPRN context and to return a reply that contains VPRN-specific data or limit SNMP access to data in a specific VPRN instance.

VPRN SNMP communities configured with an access permission of 'r' are automatically associated with the default access group "snmp-vprn-ro" and the "vprn-view" view (read only). VPRN SNMP communities configured with an access permission of 'rw' are automatically associated with the default access group "snmp-vprn" and the "vprn-view" view (read/write).

The community in an SNMP v1/v2 request determines the SNMP context (that is, the VPRN number for accessing SNMP tables) and not the VPRN of the incoming interface on which the request was received. For example, when an SNMP request arrives on VPRN 5 interface "ringo" with a destination IP address equal to the "ringo" interface, but the community in the SNMP request is the community configured against VPRN 101, the SNMP request is processed using the VPRN 101 context. (the response contains information about VPRN 101). Nokia recommends avoiding the use of a simple series of VPRN SNMP community values that are similar to each other (for example, avoid my-vprncomm-1, my-vprn-comm-2, and so on).

Tree	<b>cpe-check</b>
Description	<p>When configured, this command enables the Customer Premises Equipment (CPE) check feature and specifies the IP address of the target CPE device.</p> <p>This option initiates a background ICMP ping test to the configured target IP address. The IP address can either be an IPv4 address for IPv4 static routes or an IPv6 address for IPv6 static routes. To avoid possible circular references, the target IP address cannot exist in the same subnet as the static route subnet. This command is mutually exclusive with BFD support on a specific static route.</p> <p><b>Note:</b> A node that is sourcing CPE-check packets waits an additional full interval before taking action, which gives the CPE time to respond. For example, with a drop-count of 3 and an interval of 1s, three CPE-check packets are sent out and the node waits for the duration of another interval before acting on the loss. Failure declaration may take extra time depending on the load, interval, and other factors. In line with multitasking, multi-priority operating principles of the node, and the relative priority of <b>cpe-ping</b>, the node paces these minor events.</p>

Tree	<b>cpe-check</b>
Description	<p>When configured, this command enables the Customer Premises Equipment (CPE) check feature and specifies the IP address of the target CPE device.</p> <p>This option initiates a background ICMP ping test to the configured target IP address. The IP address can either be an IPv4 address for IPv4 static routes or an IPv6 address for IPv6 static routes. To avoid possible circular references, the target IP address cannot exist in the same subnet as the static route subnet. This command is mutually exclusive with BFD support on a specific static route.</p> <p><b>Note:</b> A node that is sourcing CPE-check packets waits an additional full interval before taking action, which gives the CPE time to respond. For example, with a drop-count of 3 and an interval of 1s, three CPE-check packets are sent out and the node waits for the duration of another interval before acting on the loss. Failure declaration may take extra time depending on the load, interval, and other factors. In line with multitasking, multi-priority operating principles of the node, and the relative priority of <b>cpe-ping</b>, the node paces these minor events.</p>

Tree	<b>address</b>
Description	<p>This command specifies the backup IP forwarding address that is used for static route Fast ReRoute (FRR). The configured address, if reachable, acts as pre-installed backup forwarding information that can be used when the primary IP next-hop suddenly fails.</p> <p>The configured backup next-hop IP address can be directly or indirectly connected (using an IGP or tunnel) to the node. The backup next-hop forwarding information or the Next-hop Label Forwarding Entry (NHLFE) tunnel forwarding information from the IP Routing Table Manager (RTM) is used to preconfigure an IP fast-reroute backup path.</p> <p>One backup next-hop address can protect a single primary static route entry next-hop address without ECMP and it is only activated when the primary next-hop has no active ECMP.</p> <p>The configured IP address can be either on the network or the access side.</p>

Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">static-routes</a> <a href="#">route</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">route-type</a> <a href="#">keyword</a> <a href="#">next-hop</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>cpe-check</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>drop-count</b> <i>number</i>
Tree	<a href="#">drop-count</a>
Range	1 to 255
Default	3
Introduced	16.0.R1
Platforms	All

### **interval** *number*

Synopsis	Time between ICMP pings to the target CPE IP address
Context	<b>configure service vprn</b> <i>string static-routes route (ipv4-prefix   ipv6-prefix) route-type keyword next-hop (ipv4-address-with-zone   ipv6-address-with-zone) cpe-check (ipv4-address-no-zone   ipv6-address-no-zone) interval number</i>
Tree	<a href="#">interval</a>
Description	This command configures the interval between ICMP pings to the target IP address.
Range	1 to 255
Default	1
Units	seconds
Introduced	16.0.R1
Platforms	All

### **log** *boolean*

Synopsis	Log CPE connectivity checks transitions
Context	<b>configure service vprn</b> <i>string static-routes route (ipv4-prefix   ipv6-prefix) route-type keyword next-hop (ipv4-address-with-zone   ipv6-address-with-zone) cpe-check (ipv4-address-no-zone   ipv6-address-no-zone) log boolean</i>
Tree	<a href="#">log</a>
Description	This command logs the transitions between active and in-active based on the CPE connectivity check. Events are sent to the system log, syslog, and SNMP traps.
Default	false
Introduced	16.0.R1
Platforms	All

### **padding-size** *number*

Synopsis	Padding size for CPE connectivity checks
Context	<b>configure service vprn</b> <i>string static-routes route (ipv4-prefix   ipv6-prefix) route-type keyword next-hop (ipv4-address-with-zone   ipv6-address-with-zone) cpe-check (ipv4-address-no-zone   ipv6-address-no-zone) padding-size number</i>
Tree	<a href="#">padding-size</a>
Description	This command configures the amount of padding to add to the ICMP packet in bytes.
Range	0 to 16384
Default	56

Units	bytes
Introduced	16.0.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure service vprn</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <b>keyword</b> <b>next-hop</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>description</b> <i>string</i>
Tree	<b>description</b>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **destination-class** *number*

Synopsis	Destination class for this static route
Context	<b>configure service vprn</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <b>keyword</b> <b>next-hop</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>destination-class</b> <i>number</i>
Tree	<b>destination-class</b>
Range	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

### **load-balancing-weight** *number*

Synopsis	Load-balancing weight for all of the ECMP next hops
Context	<b>configure service vprn</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <b>keyword</b> <b>next-hop</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>load-balancing-weight</b> <i>number</i>
Tree	<b>load-balancing-weight</b>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **metric number**

Synopsis	Static route metric
Context	<b>configure service vprn string static-routes route (ipv4-prefix   ipv6-prefix) route-type keyword next-hop (ipv4-address-with-zone   ipv6-address-with-zone) metric number</b>
Tree	<b>metric</b>
Range	0 to 65535
Default	1
Introduced	16.0.R1
Platforms	All

### **preference number**

Synopsis	Priority of this static route over the routes from different sources
Context	<b>configure service vprn string static-routes route (ipv4-prefix   ipv6-prefix) route-type keyword next-hop (ipv4-address-with-zone   ipv6-address-with-zone) preference number</b>
Tree	<b>preference</b>
Range	1 to 255
Default	5
Introduced	16.0.R1
Platforms	All

### **prefix-list**

Synopsis	Enter the <b>prefix-list</b> context

Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>bfd</b> <b>multiplier</b> <i>number</i>
Tree	<b>multiplier</b>
Description	This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments.
Range	1 to 20
Default	3
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **receive** *number*

----------	---

Context	<b>configure service vprn</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 bfd</b> <b>transmit-interval</b> <i>number</i>
Tree	<b>transmit-interval</b>
Description	This command configures the transmit intervals.  On the 7750 SR, this command can only be configured to a value less than 100 when the <b>type</b> command is configured to <b>cpm-np</b> .
Range	10 to 100000
Default	100
Units	milliseconds
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **type** *keyword*

Synopsis	Local termination point for the BFD session
Context	<b>configure service vprn</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 bfd</b> <b>type</b> <i>keyword</i>
Tree	<b>type</b>
Description	This command sets the local termination point for the BFD session to allow for fast timers down to 10 ms granularity.  The options to specify where the BFD session runs are: <ul style="list-style-type: none"> <li>• <b>auto</b> (default) – the system chooses and uses the line card CPU only for single-hop BFD sessions with timer intervals equal to or greater than 100ms. All others are placed on the <b>cpm-np</b>.</li> <li>• <b>cpm-np</b> – BFD session runs on the FP complex associated with the CPM. This is either the FP on the CPM or the one elected on smaller systems.</li> <li>• <b>fp</b> – BFD session runs on the line card CPU. This option can only be used for single-hop BFD sessions with timers equal to or greater than 100ms.</li> </ul>
Default	auto
Options	cpm-np, auto, fp
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **gi-address** *string*

Synopsis	GI address for the DHCP relay
Context	<b>configure service vprn</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 dhcp gi-address</b> <i>string</i>
Tree	<b>gi-address</b>
Description	This command configures the GI address to distinguish between the different subscriber interfaces (and potentially group interfaces) defined when the router functions as a DHCP relay.

By default, the GI address used in the relayed DHCP packet is the primary IP address of a normal IES interface. Specifying the GI address allows the user to choose a secondary address. For group interfaces, a GI address must be specified under the group interface DHCP context or subscriber interface DHCP context for DHCP to function.

Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## vlan-ascii-tuple

Synopsis Include the VLAN ID and dot1p bits in the ASCII tuple

Context **configure service vprn** *string* **subscriber-interface** *string* **group-interface** *string* **ipv4 dhcp option-82 circuit-id** **vlan-ascii-tuple**

Tree **vlan-ascii-tuple**

Description When configured, the router includes the VLAN ID and dot1p bits with the ASCII-tuple information. This only occurs on dot1q and QinQ-encapsulated ports. When the Option 82 bits are stripped, dot1p bits are copied to the Ethernet header of the outgoing packet. When unconfigured, the router leaves the circuit ID sub-option of the DHCP packet empty.

Notes The following elements are part of a choice: **ascii-tuple**, **ifindex**, **none**, **sap-id**, or **vlan-ascii-tuple**.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## remote-id

Synopsis Enter the **remote-id** context

Context **configure service vprn** *string* **subscriber-interface** *string* **group-interface** *string* **ipv4 dhcp option-82 remote-id**

Tree **remote-id**

Description Commands in this context configure the remote IP sub-option of the DHCP packet with the identity of the remote host end (typically the DHCP client).

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Tree	<a href="#">server</a>
Description	This command configures a list of servers that this interface forwards requests to.  The operator can enter the list of servers as either IP addresses or fully qualified domain names. The operator must specify at least one server specified for DHCP relay to work. If there are multiple servers, the system forwards the request to all the servers in the list.
Max. Instances	8
Notes	This element is ordered by the user.
Introduced	16.0.R1

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **trusted** *boolean*

Synopsis Relay untrusted packets

Context **configure** *service vprn string subscriber-interface string group-interface string ipv4 dhcp trusted boolean*

Tree [trusted](#)

Description When configured to **true**, the router enables the trusted mode on the interface. When enabled, the relay agent changes the existing GI address (of the request) to the ingress interface, and forwards the request.

A DHCP request that contains a GI address of 0.0.0.0 and an Option 82 field in the packet is discarded unless it arrives on a trusted circuit.

This behavior only applies if the Relay Agent Information Option action is to keep the existing information. When the Option 82 field is replaced by the relay agent, the original Option 82 information is lost, and there is no reason to enable the trusted option.

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **use-matching-address** *boolean*

Synopsis	Use the subscriber interface address as source address
Context	<b>configure service vprn</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 icmp ttl-expired</b> <b>use-matching-address</b> <i>boolean</i>
Tree	<b>use-matching-address</b>
Description	<p>When configured to <b>true</b>, the system uses a matching subscriber interface address as the source address of the ICMP TTL expired message.</p> <p>For matching to occur, the source address of the offending packet must be in the same subnet of the subscriber interface address.</p> <p>When configured to <b>false</b>, the system uses the first configured address.</p>
Default	false
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## unreachables

Synopsis	Enter the <b>unreachables</b> context
Context	<b>configure service vprn string subscriber-interface string group-interface string ipv4 icmp unreachables</b>
Tree	<b>unreachables</b>
Description	Commands in this context specify the settings for ICMP host and network destination unreachable messages generated by the interface.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## admin-state *keyword*

Synopsis	Administrative state of sending unreachable messages

### **ignore-df-bit** *boolean*

Synopsis	Ignore DF bit in the IPv4 header when fragmenting
Context	<b>configure service vprn</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 ignore-df-bit</b> <i>boolean</i>
Tree	<b>ignore-df-bit</b>
Description	When configured to <b>true</b> , fragmentation is applied according to the applicable egress MTU instead of the DF bit for frames egressing the WLAN-GW group. The DF bit is reset for frames that are fragmented.  When configured to <b>false</b> , the router fragments a packet larger than the MTU if the DF bit is set to 0 and drops the packet if the DF bit is set to 1.
Default	false
Introduced	20.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **neighbor-discovery**

Synopsis	Enter the <b>neighbor-discovery</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 neighbor-discovery</b>
Tree	<b>neighbor-discovery</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **local-proxy-arp** *boolean*

Synopsis	Enable local proxy ARP on interface
----------	-------------------------------------

Context	<b>configure service vprn</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 neighbor-discovery local-proxy-arp</b> <i>boolean</i>
Tree	<b>local-proxy-arp</b>
Description	When configured to <b>true</b> , the router enables local proxy ARP on the interface. When configured to <b>false</b> , the router does not respond to ARP requests for addresses on the same subnet.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **populate** *boolean*

Synopsis	Allow static and dynamic hosts to be populated in system ARP cache
Context	<b>configure service vprn</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 neighbor-discovery populate</b> <i>boolean</i>
Tree	<b>populate</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **proxy-arp-policy** *reference*

Synopsis	Proxy ARP policy name
Context	<b>configure service vprn</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 neighbor-discovery proxy-arp-policy</b> <i>reference</i>
Tree	<b>proxy-arp-policy</b>
Reference	<b>configure policy-options policy-statement</b> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **remote-proxy-arp** *boolean*

Synopsis	Enable remote proxy ARP on the interface
Context	<b>configure service vprn</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 neighbor-discovery remote-proxy-arp</b> <i>boolean</i>
Tree	<b>remote-proxy-arp</b>

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **echo-receive** *number*

Synopsis	Minimum echo interval over this interface
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 bfd</b> <b>echo-receive</b> <i>number</i>
Tree	<b>echo-receive</b>
Range	100 to 100000
Units	milliseconds
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **multiplier** *number*

Synopsis	Number of consecutive BFD messages missed from the peer
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 bfd</b> <b>multiplier</b> <i>number</i>
Tree	<b>multiplier</b>
Description	This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments.
Range	1 to 20
Default	3
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **receive** *number*

Synopsis	BFD receive interval over this interface
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 bfd</b> <b>receive</b> <i>number</i>
Tree	<b>receive</b>

Description	This command specifies the receive interval for the BFD session. On the 7750 SR, this command can only be configured to a value less than 100 when the <b>type</b> command is configured to <b>cpm-np</b> .
Range	10 to 100000
Default	100
Units	milliseconds
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **transmit-interval** *number*

Synopsis	BFD transmit interval over this interface
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>bfd</b> <b>transmit-interval</b> <i>number</i>
Tree	<b>transmit-interval</b>
Description	This command configures the transmit intervals. On the 7750 SR, this command can only be configured to a value less than 100 when the <b>type</b> command is configured to <b>cpm-np</b> .
Range	10 to 100000
Default	100
Units	milliseconds
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **type** *keyword*

Synopsis	Local termination point for the BFD session
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>bfd</b> <b>type</b> <i>keyword</i>
Tree	<b>type</b>
Description	This command sets the local termination point for the BFD session to allow for fast timers down to 10 ms granularity. The options to specify where the BFD session runs are: <ul style="list-style-type: none"> <li>• <b>auto</b> (default) – the system chooses and uses the line card CPU only for single-hop BFD sessions with timer intervals equal to or greater than 100ms. All others are placed on the <b>cpm-np</b>.</li> <li>• <b>cpm-np</b> – BFD session runs on the FP complex associated with the CPM. This is either the FP on the CPM or the one elected on smaller systems.</li> </ul>

- **fp** – BFD session runs on the line card CPU. This option can only be used for single-hop BFD sessions with timers equal to or greater than 100ms.

Default	auto
Options	cpm-np, auto, fp
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

## dhcp6

Synopsis	Enter the <b>dhcp6</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6</b>
Tree	<b>dhcp6</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### tx-eth-vsm-grace *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm mep md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">grace eth-vsm-grace tx-eth-vsm-grace</a> <i>boolean</i>
Tree	<a href="#">tx-eth-vsm-grace</a>
Description	When configured to <b>true</b> , the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.

The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.

The operator must configure the **configure system eth-cfm grace** command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).

When configured to **false**, the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.

Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **squelch-ingress-levels** *number*

Synopsis	Levels for which ETH-CFM packets are silently discarded
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm</b> <b>squelch-ingress-levels</b> <i>number</i>
Tree	<b>squelch-ingress-levels</b>
Description	This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.  The list of levels must be a complete contiguous list from 0 up to the highest level that will be dropped.
Range	0 to 7
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **withdraw** *boolean*

Synopsis	Withdraw the route when the CPE check fails
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host</b> <b>ipv4</b> <i>string</i> <b>mac</b> <i>string</i> <b>managed-route</b> <i>string</i> <b>cpe-check</b> <b>failed-action</b> <b>withdraw</b> <i>boolean</i>
Tree	<b>withdraw</b>
Default	false
Notes	The following elements are part of a choice: ( <b>metric</b> , <b>preference</b> , and <b>tag</b> ) or <b>withdraw</b> .
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **interval** *number*

Synopsis	Time between ICMP pings to the target CPE IP address
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host</b> <b>ipv4</b> <i>string</i> <b>mac</b> <i>string</i> <b>managed-route</b> <i>string</i> <b>cpe-check</b> <b>interval</b> <i>number</i>
Tree	<b>interval</b>
Description	This command configures the interval between ICMP pings to the target IP address.
Range	1 to 255
Default	1
Units	seconds
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **log** *boolean*

Synopsis	Log CPE connectivity checks transitions
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host</b> <b>ipv4</b> <i>string</i> <b>mac</b> <i>string</i> <b>managed-route</b> <i>string</i> <b>cpe-check</b> <b>log</b> <i>boolean</i>
Tree	<b>log</b>
Description	This command logs the transitions between active and in-active based on the CPE connectivity check. Events are sent to the system log, syslog, and SNMP traps.
Default	false
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **padding-size** *number*

Synopsis	Padding size for CPE connectivity checks
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host</a> <a href="#">ipv4</a> <i>string</i> <a href="#">mac</a> <i>string</i> <a href="#">managed-route</a> <i>string</i> <a href="#">cpe-check</a> <a href="#">padding-size</a> <i>number</i>
Tree	<a href="#">padding-size</a>
Description	This command configures the amount of padding to add to the ICMP packet in bytes.
Range	0 to 16384
Default	56
Units	bytes
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **source-ip-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source IP address used in the ICMP messages
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host</a> <a href="#">ipv4</a> <i>string</i> <a href="#">mac</a> <i>string</i> <a href="#">managed-route</a> <i>string</i> <a href="#">cpe-check</a> <a href="#">source-ip-address</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">source-ip-address</a>
Description	This command configures the source IP address used in the ICMP messages. When not specified, the system uses the system address of the appropriate address family.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **timeout** *number*

Synopsis	Time interval determining that a ping is missed
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host</a> <a href="#">ipv4</a> <i>string</i> <a href="#">mac</a> <i>string</i> <a href="#">managed-route</a> <i>string</i> <a href="#">cpe-check</a> <a href="#">timeout</a> <i>number</i>
Tree	<a href="#">timeout</a>
Description	This command configures the time interval the system waits for a reply to a specific ping before determining that the ping is missed.
Range	1 to 10
Default	1
Units	seconds

Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **metric number**

Synopsis	Metric associated with the provisioned managed route
Context	<b>configure service vprn</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host ipv4</b> <i>string</i> <b>mac</b> <i>string</i> <b>managed-route</b> <i>string</i> <b>metric</b> <i>number</i>
Tree	<b>metric</b>
Description	This command configures a metric to associate with the provisioned managed route.
Max. Range	0 to 4294967295
Default	0
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **preference number**

Synopsis	Preference associated to the provisioned managed route
Context	<b>configure service vprn</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host ipv4</b> <i>string</i> <b>mac</b> <i>string</i> <b>managed-route</b> <i>string</i> <b>preference</b> <i>number</i>
Tree	<b>preference</b>
Description	This command configures the preference associated with the provisioned managed route.
Range	0 to 255
Default	0
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **tag number**

Synopsis	Route tag used if CPE check fails

Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **withdraw boolean**

Synopsis	Withdraw the route when the CPE check fails
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host</b> <b>ipv6</b> <i>string</i> <b>mac</b> <i>string</i> <b>managed-route</b> <i>string</i> <b>cpe-check</b> <b>failed-action</b> <b>withdraw</b> <i>boolean</i>
Tree	<b>withdraw</b>
Default	false
Notes	The following elements are part of a choice: ( <b>metric</b> , <b>preference</b> , and <b>tag</b> ) or <b>withdraw</b> .
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **interval number**

Synopsis	Time between ICMP pings to the target CPE IP address
----------	--

Context	<b>configure service vprn</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host ipv6</b> <i>string</i> <b>mac</b> <i>string</i> <b>managed-route</b> <i>string</i> <b>cpe-check interval</b> <i>number</i>
Tree	<b>interval</b>
Description	This command configures the interval between ICMP pings to the target IP address.
Range	1 to 255
Default	1
Units	seconds
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **log** *boolean*

Synopsis	Log CPE connectivity checks transitions
Context	<b>configure service vprn</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host ipv6</b> <i>string</i> <b>mac</b> <i>string</i> <b>managed-route</b> <i>string</i> <b>cpe-check log</b> <i>boolean</i>
Tree	<b>log</b>
Description	This command logs the transitions between active and in-active based on the CPE connectivity check. Events are sent to the system log, syslog, and SNMP traps.
Default	false
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **padding-size** *number*

Synopsis	Padding size for CPE connectivity checks
Context	<b>configure service vprn</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host ipv6</b> <i>string</i> <b>mac</b> <i>string</i> <b>managed-route</b> <i>string</i> <b>cpe-check padding-size</b> <i>number</i>
Tree	<b>padding-size</b>
Description	This command configures the amount of padding to add to the ICMP packet in bytes.
Range	0 to 16384
Default	56
Units	bytes
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **source-ip-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source IP address used in the ICMP messages
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host</a> <a href="#">ipv6</a> <i>string</i> <a href="#">mac</a> <i>string</i> <a href="#">managed-route</a> <i>string</i> <a href="#">cpe-check</a> <a href="#">source-ip-address</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">source-ip-address</a>
Description	This command configures the source IP address used in the ICMP messages. When not specified, the system uses the system address of the appropriate address family.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **timeout** *number*

Synopsis	Time interval determining that a ping is missed
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host</a> <a href="#">ipv6</a> <i>string</i> <a href="#">mac</a> <i>string</i> <a href="#">managed-route</a> <i>string</i> <a href="#">cpe-check</a> <a href="#">timeout</a> <i>number</i>
Tree	<a href="#">timeout</a>
Description	This command configures the time interval the system waits for a reply to a specific ping before determining that the ping is missed.
Range	1 to 10
Default	1
Units	seconds
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **metric** *number*

Synopsis	Metric associated with the provisioned managed route
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host</a> <a href="#">ipv6</a> <i>string</i> <a href="#">mac</a> <i>string</i> <a href="#">managed-route</a> <i>string</i> <a href="#">metric</a> <i>number</i>
Tree	<a href="#">metric</a>
Description	This command configures a metric to associate with the provisioned managed route.
Max. Range	0 to 4294967295
Default	0
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### preference number

Synopsis	Preference associated to the provisioned managed route

 Introduced 21.10.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **multiplier** *number*

Synopsis Number of consecutive BFD messages missed from the peer  
 Context **configure service vprn string subscriber-interface string ipv4 bfd multiplier number**  
 Tree **multiplier**  
 Description This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments.  
 Range 1 to 20  
 Default 3  
 Introduced 21.10.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **receive number**

Synopsis	BFD receive interval over this interface
Context	<b>configure service vprn string subscriber-interface string ipv4 bfd receive number</b>
Tree	<a href="#">receive</a>
Description	This command specifies the receive interval for the BFD session. On the 7750 SR, this command can only be configured to a value less than 100 when the <b>type</b> command is configured to <b>cpm-np</b> .
Range	10 to 100000
Default	100
Units	milliseconds
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **transmit-interval number**

Synopsis	BFD transmit interval over this interface
Context	<b>configure service vprn string subscriber-interface string ipv4 bfd transmit-interval number</b>
Tree	<a href="#">transmit-interval</a>
Description	This command configures the transmit intervals. On the 7750 SR, this command can only be configured to a value less than 100 when the <b>type</b> command is configured to <b>cpm-np</b> .
Range	10 to 100000
Default	100
Units	milliseconds
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **type keyword**

Synopsis	Local termination point for the BFD session
Context	<b>configure service vprn string subscriber-interface string ipv4 bfd type keyword</b>
Tree	<a href="#">type</a>
Description	This command sets the local termination point for the BFD session to allow for fast timers down to 10 ms granularity. The options to specify where the BFD session runs are:

- **auto** (default) – the system chooses and uses the line card CPU only for single-hop BFD sessions with timer intervals equal to or greater than 100ms. All others are placed on the **cpm-np**.
- **cpm-np** – BFD session runs on the FP complex associated with the CPM. This is either the FP on the CPM or the one elected on smaller systems.
- **fp** – BFD session runs on the line card CPU. This option can only be used for single-hop BFD sessions with timers equal to or greater than 100ms.

Default	auto
Options	cpm-np, auto, fp
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **default-dns** *string*

Synopsis Shunt ID for a pair of resilient nodes  
 Context **configure service vprn string subscriber-mgmt multi-chassis-shunt-id *number***  
 Tree [multi-chassis-shunt-id](#)  
 Description This command configures the shunt ID that is used to shunt downstream traffic from a standby node to an active node. Because this ID identifies the traffic service on the standby node, the same ID must be configured per service on each node.  
 This configuration is required for BNG CUPS inter-UPF resiliency shunting, but not for non-BNG CUPS shunting. However, when configured, it is also used for shunting non-BNG CUPS sessions in the same service.  
 Range 1 to 8191

Synopsis Enter the **monitor-oper-group** list instance

Context	<b>configure service vprn string subscriber-mgmt up-resiliency monitor-oper-group reference</b>
Tree	<a href="#">monitor-oper-group</a>
Description	Commands in this context define parameters to derive the service health based on monitored operational groups. The BNG UPF sends the health value to the BNG CPF. The BNG CPF uses the value to determine the need for a BNG UPF status change (active or standby). <b>Note:</b> The following is only applicable for the <b>configure service vpls capture-sap</b> context. If the configured groups are not the same for all capture SAPs sharing the same underlying port or LAG, the configuration of a Layer 2 access ID alias is required, or else the system chooses arbitrarily one set of configured groups.

## allow-ipv6-udp-checksum-zero *boolean*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Process IPv6 packets with a zero UDP checksum
Context	<b>configure service vprn string twamp-light reflector allow-ipv6-udp-checksum-zero boolean</b>
Tree	<b>allow-ipv6-udp-checksum-zero</b>

Description	When configured to <b>true</b> , this command allows the processing of IPv6 packets that arrive with a UDP checksum of zero. The destination UDP ports that are registered as TWAMP Test packets as part of this template allow this behavior.  When configured to <b>false</b> , IPv6 packets that arrive with a UDP checksum of zero are discarded.
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**type keyword**

Synopsis	Processing behavior type for the reflector
Context	<b>configure service vprn string twamp-light reflector type keyword</b>
Tree	<b>type</b>
Description	<p>This command configures the processing behavior of the TWAMP Light reflector. When the value is <b>twamp-light</b> the reflector does not check the received PDU as a traditional base TWAMP Light packet without TLV processing. When the value is <b>stamp</b>, the reflector attempts to find and process supported STAMP TLVs that follow the base STAMP packet.</p> <p>In mixed environments where different types of Session-Senders may be targeting a common TWAMP Light reflector, set the value to <b>stamp</b>. When the reflector is operating in <b>stamp</b> mode, the primary parsing is based on STAMP, checking and processing known TLVs, or determining if the arriving PDU is a TWAMP Light PDU. A Session-Sender launching a TWAMP Light-based packet must use all zeros padding pattern when the pad size is non zero.</p>
Default	twamp-light
Options	stamp, twamp-light
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### 3.45.1 subscriber-mgmt command descriptions

#### subscriber-mgmt

Synopsis	Enter the <b>subscriber-mgmt</b> context
Context	<b>configure</b> <a href="#">subscriber-mgmt</a>
Tree	<a href="#">subscriber-mgmt</a>
Description	Commands in this context configure subscriber management attributes, policies, and profiles.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

#### accu-stats-policy [[name](#)] *string*

Synopsis	Enter the <b>accu-stats-policy</b> list instance
Context	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">accu-stats-policy</a> <i>string</i>
Tree	<a href="#">accu-stats-policy</a>
Description	<p>Commands in this context configure a storage policy for cumulative statistics for subscribers.</p> <p>The policy defines the direction for the policer or the queue to be stored.</p> <p>The policy stores subscriber statistics even if the subscriber session has ended. The subscriber statistics can be viewed even if the subscriber is offline.</p> <p>When the subscriber session ends, the statistics are added to the past statistics stored in memory so that all previous session statistics are accumulated. The accumulated statistics are not persistent; they are only stored in memory and reset to zero when the chassis reboots.</p>
Max. Instances	32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ancp

Synopsis	Enter the <b>ancp</b> context
Context	<b>configure</b> <a href="#">subscriber-mgmt ancp</a>
Tree	<a href="#">ancp</a>
Description	Commands in this context configure Access Node Control Protocol (ANCP) settings.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ancp-policy [[name](#)] *string*

Synopsis	Enter the <b>ancp-policy</b> list instance
Context	<b>configure</b> <a href="#">subscriber-mgmt ancp ancp-policy</a> <i>string</i>
Tree	<a href="#">ancp-policy</a>
Description	<p>Commands in this context configure the specified ANCP policy, which can be associated with either an ANCP string (static) or a subscriber-profile (dynamic), and define the behavior of hosts belonging to these profiles.</p> <p>ANCP policies control rates and subscribers based on port-up/port-down messages from the access node. When configured, the node stops SHCV to a host that is part of a port that is down (by port-down message). When a port-up message is received for the port that was down, the node initiates the SHCV process immediately to verify connectivity.</p> <p>When ANCP is used with ESM, all hosts of a subscriber are updated with the ANCP string last associated with the subscriber.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **[name]** *string*

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## rate-adjustment *number*

Synopsis	Rate adjustment for the scheduler
Context	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">ancp</a> <a href="#">ancp-policy</a> <i>string</i> <a href="#">egress</a> <a href="#">rate-adjustment</a> <i>number</i>
Tree	<a href="#">rate-adjustment</a>
Description	This command configures the rate adjustment for the scheduler. This setting is used when the rate returned by the DSLAM is calculated with a different encapsulation than the SR node. The node adjusts the rate by the percentage specified as:  $\text{DSLAM\_RATE} * (\text{adjustment rate})/100 - (\text{rate reduction})$
Range	1 to 200
Default	100
Units	percent
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## rate-modify

Synopsis	Enter the <b>rate-modify</b> context
Context	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">ancp</a> <a href="#">ancp-policy</a> <i>string</i> <a href="#">egress</a> <a href="#">rate-modify</a>

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## agg-rate

Synopsis	Maximum total rate for all subscriber egress queues
Context	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">ancp</a> <a href="#">ancp-policy</a> <i>string</i> <a href="#">egress</a> <a href="#">rate-modify</a> <a href="#">agg-rate</a>
Tree	<a href="#">agg-rate</a>
Description	This command specifies the maximum total rate for all subscriber egress queues for each subscriber associated with the policy.
Notes	The following elements are part of a choice: <b>agg-rate</b> or <b>scheduler</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## scheduler *string*

Synopsis	Scheduler to be applied for rate modification
Context	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">ancp</a> <a href="#">ancp-policy</a> <i>string</i> <a href="#">egress</a> <a href="#">rate-modify</a> <a href="#">scheduler</a> <i>string</i>
Tree	<a href="#">scheduler</a>
String Length	1 to 32
Notes	The following elements are part of a choice: <b>agg-rate</b> or <b>scheduler</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## rate-monitor

Synopsis	Enter the <b>rate-monitor</b> context
Context	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">ancp</a> <a href="#">ancp-policy</a> <i>string</i> <a href="#">egress</a> <a href="#">rate-monitor</a>
Tree	<a href="#">rate-monitor</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## alarm *boolean*

Synopsis	Generate SNMP notification when monitor event is raised
Context	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">ancp</a> <a href="#">ancp-policy</a> <i>string</i> <a href="#">egress</a> <a href="#">rate-monitor</a> <a href="#">alarm</a> <i>boolean</i>
Tree	<a href="#">alarm</a>
Description	When configured to <b>true</b> , the system generates an alarm (trap) to the management system including the rate, the ANCP policy name, and the ANCP string when the monitored rate is below the configured rate.

When configured to **false**, no alarm is generated.

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **rate number**

Synopsis	Rate below which the system generates an event
Context	<b>configure</b> <a href="#">subscriber-mgmt ancp ancp-policy</a> <i>string</i> <a href="#">egress rate-monitor</a> <i>rate number</i>
Tree	<a href="#">rate</a>
Range	1 to 4294967295
Units	kilobps
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **rate-reduction number**

Synopsis	Constant rate reduction to specified DSLAM rate
Context	<b>configure</b> <a href="#">subscriber-mgmt ancp ancp-policy</a> <i>string</i> <a href="#">egress rate-reduction</a> <i>number</i>
Tree	<a href="#">rate-reduction</a>
Description	This command configures a constant rate reduction to the rate specified by the DSLAM. This setting is used if the node must adjust the rate to a value that is offset (for example by a fixed multicast dedicated bandwidth) compared to the total available on the DSLAM. The rate is calculated as:  $\text{DSLAM\_RATE} * (\text{adjustment rate})/100 - (\text{rate reduction})$
Range	1 to 4294967295
Units	kilobps
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ingress**

Synopsis	Enter the <b>ingress</b> context
Context	<b>configure</b> <a href="#">subscriber-mgmt ancp ancp-policy</a> <i>string</i> <a href="#">ingress</a>
Tree	<a href="#">ingress</a>
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## alarm *boolean*

Synopsis	Generate SNMP notification when monitor event is raised
Context	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">ancp</a> <a href="#">ancp-policy</a> <i>string</i> <a href="#">ingress</a> <a href="#">rate-monitor</a> <a href="#">alarm</a> <i>boolean</i>
Tree	<a href="#">alarm</a>
Description	When configured to <b>true</b> , the system generates an alarm (trap) to the management system including the rate, the ANCP policy name, and the ANCP string when the monitored rate is below the configured rate.  When configured to <b>false</b> , no alarm is generated.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## rate *number*

Synopsis	Rate below which the system generates an event
Context	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">ancp</a> <a href="#">ancp-policy</a> <i>string</i> <a href="#">ingress</a> <a href="#">rate-monitor</a> <a href="#">rate</a> <i>number</i>

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## rate-reduction *number*

Synopsis	Constant rate reduction to specified DSLAM rate
Context	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">ancp</a> <a href="#">ancp-policy</a> <i>string</i> <a href="#">ingress</a> <a href="#">rate-reduction</a> <i>number</i>
Tree	<a href="#">rate-reduction</a>

Description	This command configures a constant rate reduction to the rate specified by the DSLAM. This setting is used if the node must adjust the rate to a value that is offset (for example by a fixed multicast dedicated bandwidth) compared to the total available on the DSLAM. The rate is calculated as: $\text{DSLAM\_RATE} * (\text{adjustment rate})/100 - (\text{rate reduction})$
Range	1 to 4294967295
Units	kilobps
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## port-down

Synopsis	Enter the <b>port-down</b> context
Context	<b>configure</b> <a href="#">subscriber-mgmt ancp ancp-policy</a> <i>string</i> <b>port-down</b>
Tree	<a href="#">port-down</a>
Description	Commands in this context configure the actions taken on port-down.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## suspend-shcv

Synopsis	Enable the <b>suspend-shcv</b> context
Context	<b>configure</b> <a href="#">subscriber-mgmt ancp ancp-policy</a> <i>string</i> <b>port-down suspend-shcv</b>
Tree	<a href="#">suspend-shcv</a>
Description	Commands in this context specify the configuration to suspend SHCV for the hosts defined with the ANCP policy.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## alarm *boolean*

Synopsis	Send an alarm before suspending SHCV
Context	<b>configure</b> <a href="#">subscriber-mgmt ancp ancp-policy</a> <i>string</i> <b>port-down suspend-shcv alarm</b> <i>boolean</i>
Tree	<a href="#">alarm</a>

Tree	<a href="#">user-db</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt local-user-db</a> <i>string</i>
Notes	The following elements are part of a choice: <b>diameter-nasreq-policy</b> , <b>radius-auth-policy</b> , or <b>user-db</b> .
Introduced	16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **max-held-uplink-sessions** *number*

Synopsis Maximum GTP sessions to be held while there is no corresponding ESM state  
Context **configure** [subscriber-mgmt gtp max-held-uplink-sessions](#) *number*  
Tree [max-held-uplink-sessions](#)  
Range 0 to 500000  
Default 2000  
Introduced 16.0.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **peer-profile** [[name](#)] *string*

Synopsis Enter the **peer-profile** list instance  
Context **configure** [subscriber-mgmt gtp peer-profile](#) *string*  
Tree [peer-profile](#)  
Introduced 16.0.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[name]** *string*

Synopsis Peer profile name  
Context **configure** [subscriber-mgmt gtp peer-profile](#) *string*  
Tree [peer-profile](#)  
String Length 1 to 32  
Notes This element is part of a list key.  
Introduced 16.0.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **description** *string*

Synopsis Text description  
Context **configure** [subscriber-mgmt gtp peer-profile](#) *string* [description](#) *string*

String Length 1 to 80  
Introduced 16.0.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **interface-type** *keyword*

Synopsis 3GPP interface type for connections toward this peer  
Context **configure** [subscriber-mgmt](#) [gtp](#) [peer-profile](#) *string* [interface-type](#) *keyword*  
Tree [interface-type](#)  
Options gn, s2a, s2b, s11  
Introduced 16.0.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ip-ttl** *number*

Synopsis IP header TTL value for GTP control messages  
Context **configure** [subscriber-mgmt](#) [gtp](#) [peer-profile](#) *string* [ip-ttl](#) *number*  
Tree [ip-ttl](#)  
Range 1 to 255  
Default 255  
Introduced 16.0.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **keep-alive**

Synopsis Enter the **keep-alive** context

Tree [keep-alive](#)  
Introduced 16.0.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis Administrative state of GTP-C echo request messages  
Context **configure** [subscriber-mgmt](#) [gtp](#) [peer-profile](#) *string* [keep-alive](#) [admin-state](#) *keyword*

Tree	<a href="#">admin-state</a>
Default	enable
Options	enable, disable
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **interval** *number*

Synopsis	Frequency for sending keepalives
Context	<b>configure</b> <a href="#">subscriber-mgmt gtp peer-profile</a> <i>string</i> <a href="#">keep-alive interval</a> <i>number</i>
Tree	<a href="#">interval</a>
Range	60 to 180
Default	60
Units	seconds
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **retry-count** *number*

Synopsis	Maximum number of unanswered echo retries after which keepalive failure is detected
Context	<b>configure</b> <a href="#">subscriber-mgmt gtp peer-profile</a> <i>string</i> <a href="#">keep-alive retry-count</a> <i>number</i>
Tree	<a href="#">retry-count</a>
Range	1 to 15
Default	4
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **timeout** *number*

Synopsis	Timeout after which an echo request is considered unanswered
Context	<b>configure</b> <a href="#">subscriber-mgmt gtp peer-profile</a> <i>string</i> <a href="#">keep-alive timeout</a> <i>number</i>
Tree	<a href="#">timeout</a>
Range	1 to 20
Default	5
Units	seconds

Introduced 16.0.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **message-retransmit**

Synopsis Enter the **message-retransmit** context  
Context **configure** [subscriber-mgmt](#) [gtp](#) [peer-profile](#) *string* **message-retransmit**  
Tree [message-retransmit](#)  
Introduced 16.0.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **retry-count** *number*

Synopsis Maximum number of unanswered retries after which the message is considered failed  
Context **configure** [subscriber-mgmt](#) [gtp](#) [peer-profile](#) *string* **message-retransmit** **retry-count** *number*  
Tree [retry-count](#)  
Range 1 to 8  
Default 3  
Introduced 16.0.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **timeout** *number*

Synopsis Timeout after which a message is considered unanswered  
Context **configure** [subscriber-mgmt](#) [gtp](#) [peer-profile](#) *string* **message-retransmit** **timeout** *number*  
Tree [timeout](#)  
Range 1 to 30  
Default 5  
Units seconds  
Introduced 16.0.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **python-policy** *reference*

Synopsis Python policy for MGW profile packets sent or received

Context	<b>configure subscriber-mgmt gtp peer-profile</b> <i>string python-policy reference</i>
Tree	<a href="#">python-policy</a>
Reference	<b>configure python python-policy</b> <i>string</i>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## s11

Synopsis	Enter the <b>s11</b> context
Context	<b>configure subscriber-mgmt gtp peer-profile</b> <i>string s11</i>
Tree	<a href="#">s11</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## change-reporting-action (*number* | *keyword*)

Synopsis	Value of change reporting action IE sends to the peer
Context	<b>configure subscriber-mgmt gtp peer-profile</b> <i>string s11 change-reporting-action</i> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">change-reporting-action</a>
Description	<p>This command specifies the value of the change reporting action IE sends to the peer in applicable messages. The peer needs to indicate support first using the appropriate flag in the indication IE.</p> <p>This can be overridden by AAA, if AAA explicitly request notification changes for either ECGI, TAI or both. If AAA does not request any notification changes or only the generic location changes, the configured value is used.</p> <p>When unconfigured, this command indicates that the IE is not sent, unless specified by AAA.</p>
Range	0 to 255
Options	cgi-sai, rai, tai, ecgi, cgi-sai-rai, tai-ecgi
Introduced	16.0.R5
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## end-marker-count *number*

Synopsis	Number of GTP-U end marker packets that are sent
Context	<b>configure subscriber-mgmt gtp peer-profile</b> <i>string s11 end-marker-count</i> <i>number</i>

Tree	<a href="#">end-marker-count</a>
Description	This command specifies the number of end marker packets that are sent when it is certain no more packets will be sent over the corresponding GTP-U tunnel, such as after a completed mobility event.
Range	0 to 5
Default	1
Introduced	16.0.R5
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ipv4-mtu** *number*

Synopsis	IPv4 MTU signaled in the Protocol Configuration Options (PCO)
Context	<b>configure</b> <a href="#">subscriber-mgmt gtp peer-profile</a> <i>string s11</i> <a href="#">ipv4-mtu</a> <i>number</i>
Tree	<a href="#">ipv4-mtu</a>
Range	512 to 9000
Default	1400
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **qos**

Synopsis	Enter the <b>qos</b> context
Context	<b>configure</b> <a href="#">subscriber-mgmt gtp peer-profile</a> <i>string s11</i> <a href="#">qos</a>
Tree	<a href="#">qos</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ambr**

Synopsis	Enter the <b>ambr</b> context
Context	<b>configure</b> <a href="#">subscriber-mgmt gtp peer-profile</a> <i>string s11</i> <a href="#">qos</a> <a href="#">ambr</a>

Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **down-link** *number*

Synopsis	Downlink Aggregated Maximum Bit Rate (AMBR)
Context	<b>configure</b> <b>subscriber-mgmt</b> <b>gtp</b> <b>peer-profile</b> <i>string</i> <b>s11</b> <b>qos</b> <b>ambr</b> <b>down-link</b> <i>number</i>
Tree	<a href="#">down-link</a>
Range	0 to 10000000
Default	20000
Units	kilobps
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **up-link** *number*

Synopsis	Uplink Aggregated Maximum Bit Rate (AMBR)
Context	<b>configure</b> <b>subscriber-mgmt</b> <b>gtp</b> <b>peer-profile</b> <i>string</i> <b>s11</b> <b>qos</b> <b>ambr</b> <b>up-link</b> <i>number</i>
Tree	<a href="#">up-link</a>
Range	0 to 10000000
Default	10000
Units	kilobps
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **arp** *number*

Synopsis	Allocation or retention priority
Context	<b>configure</b> <b>subscriber-mgmt</b> <b>gtp</b> <b>peer-profile</b> <i>string</i> <b>s11</b> <b>qos</b> <b>arp</b> <i>number</i>
Tree	<a href="#">arp</a>
Range	1 to 15
Default	1
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **down-link**

Synopsis	Enter the <b>down-link</b> context
Context	<b>configure</b> <b>subscriber-mgmt</b> <b>gtp</b> <b>peer-profile</b> <i>string</i> <b>s11</b> <b>qos</b> <b>down-link</b>

Description	<p>When configured to <b>true</b>, MSAPs associated with the specified MSAP policy are not removed unless a manual <b>clear</b> command is issued.</p> <p>This feature is useful if historical statistics records on MSAPs need to be retained. It can also reduce host creation time because the MSAP is already created.</p> <p>When configured to <b>false</b>, MSAPs can be automatically removed when a host creation fails or when a subscriber is no longer associated with the MSAP, for example, when a subscriber ends the session.</p>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sticky-msaps-idle-timeout** *number*

Synopsis	Timeout used for sticky MSAPs
Context	<b>configure subscriber-mgmt msap-policy</b> <i>string</i> <b>sticky-msaps-idle-timeout</b> <i>number</i>
Tree	<a href="#">sticky-msaps-idle-timeout</a>

Description	<p>This command configures the timeout interval which determines when idle sticky MSAPs can be removed.</p> <p>By default, MSAPs are deleted shortly after the subscriber session ends. The system is prevented from automatically deleting sticky MSAPs after the session ends, allowing for a faster subsequent subscriber connection without MSAP creation; however, sticky MSAPs require SAP resources. The configuration of this command allows for the removal of sticky MSAPs that are idle for the specified time period.</p> <p>When unconfigured, no timeout interval is applied.</p>
Range	5 to 604800

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **association-release-timeout** (*keyword | number*)

Synopsis	Time to wait for a response to a release request
Context	<b>configure subscriber-mgmt pfcg association</b> <i>string</i> <b>association-release-timeout</b> ( <i>keyword   number</i> )
Tree	<a href="#">association-release-timeout</a>
Description	<p>This command configures the time to wait to clean up the PFCP association after it has been disabled. After administratively disabling a PFCP association, the system requests a shutdown to the BNG CPF. If the BNG CPF does not gracefully remove the association before expiry of the timer, the full association and all related sessions are forcefully removed.</p> <p>The PFCP protocol encoding does not allow the full range of configured values. The system automatically rounds up the configured value to the nearest value allowed by the protocol. For more information about the protocol encoding, see 3GPP TS 29.244 8.2.78.1.</p>
Range	30 to 3600
Default	3600
Units	seconds
Options	none
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **association-setup-retry** *number*

Synopsis	Time to wait between successive association attempts
Context	<b>configure subscriber-mgmt pfcg association</b> <i>string</i> <b>association-setup-retry</b> <i>number</i>
Tree	<a href="#">association-setup-retry</a>
Description	This command configures the time to wait before attempting a retry after a PFCP association setup fails.
Range	1 to 36000
Default	10
Units	seconds
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **bfd-expedited-path-down** *boolean*

Synopsis	Track BFD sessions to expedite PFCP path down detection
----------	---

Context	<b>configure subscriber-mgmt pfcf association string bfd-expedited-path-down boolean</b>
Tree	<b>bfd-expedited-path-down</b>
Description	When configured to <b>true</b> , the system tracks BFD sessions to expedite PFCF path down detection on BFD down events. This requires the configuration of <b>path-restoration-time</b> .
Default	false
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **heartbeat**

Synopsis	Enter the <b>heartbeat</b> context
Context	<b>configure subscriber-mgmt pfcf association string heartbeat</b>
Tree	<b>heartbeat</b>
Description	Commands in this context configure the parameters for transmitting PFCF Heartbeat Request messages to a PFCF peer.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **interval number**

Synopsis	Time between two successful heartbeat request messages
Context	<b>configure subscriber-mgmt pfcf association string heartbeat interval number</b>
Tree	<b>interval</b>
Range	5 to 180
Default	60
Units	seconds

Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **retries** *number*

Synopsis	Number of retries after the heartbeat timeout expires
Context	<b>configure</b> <a href="#">subscriber-mgmt pfcg association</a> <i>string</i> <a href="#">heartbeat retries</a> <i>number</i>
Tree	<a href="#">retries</a>
Description	This command configures the number of times the same Heartbeat Request is sent before the PFCP path to the peer is considered down.
Range	0 to 15
Default	4
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **timeout** *number*

Synopsis	Time the system waits for a heartbeat response message
Context	<b>configure</b> <a href="#">subscriber-mgmt pfcg association</a> <i>string</i> <a href="#">heartbeat timeout</a> <i>number</i>
Tree	<a href="#">timeout</a>
Description	This command configures the timeout after which a Heartbeat Request is considered unanswered.
Range	1 to 20
Default	5
Units	seconds
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Tree	<a href="#">allow-sessions-without-cid</a>
Description	<p>When configured to <b>true</b>, PPPoE sessions without an Agent Circuit ID can be established on a SAP. The limit configured for the maximum number of sessions allowed per Agent Circuit ID does not apply to these sessions.</p> <p>When configured to <b>false</b>, PPPoE sessions without an Agent Circuit ID are denied.</p> <p>The command is valid only when a limit is configured for the maximum sessions per Agent Circuit ID on a SAP.</p>
Default	false
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### limit number

Synopsis	Maximum sessions per Agent Circuit ID and per SAP
Context	<b>configure</b> <b>subscriber-mgmt</b> <b>ppp-policy</b> <i>string</i> <b>max-sessions-per-cid</b> <b>limit</b> <i>number</i>
Tree	<b>limit</b>
Description	<p>This command configures the maximum number of PPPoE sessions that can be active with the same Agent Circuit ID on the same SAP or MSAP. This limit is enforced in the discovery phase, prior to PAP or CHAP authentication, based on the Agent Circuit ID sub-option present in the vendor-specific PPPoE access loop identification tag added in PADI and PADR messages by a PPPoE intermediate agent.</p> <p>PPPoE sessions without an Agent Circuit ID are not subject to the configured limit; however, sessions without an Agent Circuit ID can only be established when the <b>allow-sessions-without-cid</b> command is configured to <b>true</b>.</p>
Range	1 to 8190
Notes	This element is mandatory.
Introduced	20.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### max-sessions-per-mac number

Synopsis	Maximum number of sessions per MAC address
Context	<b>configure</b> <b>subscriber-mgmt</b> <b>ppp-policy</b> <i>string</i> <b>max-sessions-per-mac</b> <i>number</i>
Tree	<b>max-sessions-per-mac</b>
Description	<p>This command sets the maximum PPP sessions that can be opened for a specified MAC address.</p> <p>To enable IPv4 address allocation using the internal DHCPv4 client for multiple PPPoE sessions on a single SAP and having the same MAC address and circuit-ID, the optional CLI parameter <b>allow-same-circuit-id-for-dhcp</b> should be added. The SR OS local DHCP server detects the additional vendor-specific options inserted by the internal DHCPv4 client and use an extended unique key for lease allocation.</p>
Range	1 to 8191
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **framed-ipv6-prefix** *boolean*

Synopsis Include framed-ipv6-prefix attribute

Context	<b>configure subscriber-mgmt radius-accounting-policy</b> <i>string</i> <b>include-radius-attribute framed-ipv6-prefix</b> <i>boolean</i>
Tree	<b>framed-ipv6-prefix</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **framed-ipv6-route** *boolean*

Synopsis	Include framed-ipv6-route attribute
Context	<b>configure subscriber-mgmt radius-accounting-policy</b> <i>string</i> <b>include-radius-attribute framed-ipv6-route</b> <i>boolean</i>
Tree	<b>framed-ipv6-route</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **framed-route** *boolean*

Synopsis	Include framed-route attribute
Context	<b>configure subscriber-mgmt radius-accounting-policy</b> <i>string</i> <b>include-radius-attribute framed-route</b> <i>boolean</i>
Tree	<b>framed-route</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **imei** *boolean*

Synopsis	Enable/disable include of the IMEI attribute.
Context	<b>configure subscriber-mgmt radius-accounting-policy</b> <i>string</i> <b>include-radius-attribute imei</b> <i>boolean</i>
Tree	<b>imei</b>
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **imsi** *boolean*

Synopsis	Include the IMSI attribute for FWA sessions
Context	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">radius-accounting-policy</a> <i>string</i> <a href="#">include-radius-attribute</a> <a href="#">imsi</a> <i>boolean</i>

Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **lanext-route-target** *boolean*

Synopsis	Include route target (Alc-RT) in RADIUS packets
Context	<b>configure</b> <b>subscriber-mgmt</b> <b>radius-accounting-policy</b> <i>string</i> <b>include-radius-attribute</b> <b>lanext-route-target</b> <i>boolean</i>
Tree	<a href="#">lanext-route-target</a>
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **lanext-vni** *boolean*

Synopsis	Enable/disable include of the lanext-vni attribute.
Context	<b>configure</b> <b>subscriber-mgmt</b> <b>radius-accounting-policy</b> <i>string</i> <b>include-radius-attribute</b> <b>lanext-vni</b> <i>boolean</i>
Tree	<a href="#">lanext-vni</a>
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **mac-address** *boolean*

Synopsis	Include the client MAC address in the RADIUS message
Context	<b>configure</b> <b>subscriber-mgmt</b> <b>radius-accounting-policy</b> <i>string</i> <b>include-radius-attribute</b> <b>mac-address</b> <i>boolean</i>
Tree	<a href="#">mac-address</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **msisdn** *boolean*

Synopsis	Enable/disable include of the MSISDN attribute.
Context	<b>configure</b> <b>subscriber-mgmt</b> <b>radius-accounting-policy</b> <i>string</i> <b>include-radius-attribute</b> <b>msisdn</b> <i>boolean</i>
Tree	<a href="#">msisdn</a>
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **nas-identifier** *boolean*

Synopsis	Enable/disable include of the NAS-Identifier attribute.
Context	<b>configure</b> <b>subscriber-mgmt</b> <b>radius-accounting-policy</b> <i>string</i> <b>include-radius-attribute</b> <b>nas-identifier</b> <i>boolean</i>
Tree	<a href="#">nas-identifier</a>

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **nas-port**

Synopsis	Enable the <b>nas-port</b> context
Context	<b>configure</b> <b>subscriber-mgmt</b> <b>radius-accounting-policy</b> <i>string</i> <b>include-radius-attribute</b> <b>nas-port</b>
Tree	<a href="#">nas-port</a>
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **bit-spec** *string*

Synopsis RADIUS NAS-Port attribute

Context **configure** **subscriber-mgmt** **radius-accounting-policy** *string* **include-radius-attribute** **nas-port** **bit-spec** *string*

Tree **bit-spec**

String Length 1 to 255

Notes This element is mandatory.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **nas-port-id**

Synopsis Enable the **nas-port-id** context

Context **configure** **subscriber-mgmt** **radius-accounting-policy** *string* **include-radius-attribute** **nas-port-id**

Tree **nas-port-id**

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **prefix-string** *string*

Synopsis String to be prefixed to the NAS-Port-Id attribute

Context **configure** **subscriber-mgmt** **radius-accounting-policy** *string* **include-radius-attribute** **nas-port-id** **prefix-string** *string*

Tree **prefix-string**

String Length 1 to 8

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **suffix** *keyword*

Synopsis String to be suffixed to the NAS-Port-Id attribute

Context	<b>configure</b> <a href="#">subscriber-mgmt radius-accounting-policy</a> <i>string</i> <a href="#">include-radius-attribute nas-port-id</a> <a href="#">suffix</a> <i>keyword</i>

Introduced	16.0.R5

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## update-interval

Synopsis Enter the **update-interval** context

Context **configure** **subscriber-mgmt** **radius-accounting-policy** *string* **update-interval**

Tree **update-interval**

Description Commands in this context configure the attributes of the intermediate update interval.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## interval *number*

Synopsis Intermediate update interval

Context **configure** **subscriber-mgmt** **radius-accounting-policy** *string* **update-interval** **interval** *number*

Tree **interval**

Description This command specifies the interval at which accounting data of subscriber hosts is updated in a RADIUS Accounting Interim-Update message. The **interim-update** option must be enabled when specifying the accounting mode in the RADIUS accounting policy.

A RADIUS-specified interim interval (attribute [85] Acct-Interim-Interval) overrides the CLI configured value.

Range 5 to 259200

Units minutes

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **jitter** (*keyword* | *number*)

Synopsis Maximum random delay for intermediate update interval

Context **configure** **subscriber-mgmt** **radius-accounting-policy** *string* **update-interval** **jitter** (*keyword* | *number*)

Tree **jitter**

Description This command specifies the absolute maximum random delay introduced on the update interval between two accounting interim update messages. The effective maximum random delay value is the minimum of the configured absolute jitter value and 10% of the configured update-interval.

A value of zero sends the accounting interim update message without introducing an additional random delay.

Range	0 to 3600
Default	auto
Units	seconds
Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **radius-authentication-policy** *[name]* *string*

Synopsis	Enter the <b>radius-authentication-policy</b> list instance
Context	<b>configure</b> <a href="#">subscriber-mgmt</a> <b>radius-authentication-policy</b> <i>string</i>
Tree	<a href="#">radius-authentication-policy</a>

Context	<b>configure</b> <a href="#">subscriber-mgmt sla-profile</a> <i>string</i> <a href="#">pfc-p mappings</a>
Tree	<a href="#">pfc-p mappings</a>
Description	Commands in this context configure the mapping of packet forwarding control protocol (PFCP) QoS IEs (such as QoS enforcement rule (QER) GBR/MBR IEs), to local QoS overrides (such as queue and policer rates).
Introduced	21.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## session-qer

Synopsis	Enter the <b>session-qer</b> context
Context	<b>configure</b> <a href="#">subscriber-mgmt sla-profile</a> <i>string</i> <a href="#">pfc-mappings session-qer</a>
Tree	<a href="#">session-qer</a>
Description	<p>Commands in this context configure the mapping of the PFCP session QER rate to the local QoS rate.</p> <p>If a signaled PFCP QER rate applies to all data-plane rules, it is interpreted as the session QER rate and is mapped to the QoS overrides in the configuration. Examples of such QER rates are APN-AMBR for 4G FWA sessions and session-AMBR for 5G FWA sessions.</p> <p>A QER that contains a QER correlation ID does not use the QER mapping because it is assumed not to be a per-session construct.</p>
Introduced	21.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

Synopsis Restrict authentication origins for name servers  
 Context **configure** [subscriber-mgmt](#) [system-behavior](#) **legacy-dns-nbns** *boolean*  
 Tree [legacy-dns-nbns](#)  
 Description When configured to **true**, this command enables legacy DNS NBNS behavior, which restricts the supported default extended authentication origins for DNS and NBNS name servers. The main differences include:
 

- only support DHCP server as origin for DHCP relay: IPoE DHCPv4/DHCPv6 and PPPoE DHCPv6
- Local Address Assignment (LAA) is highest priority origin: IPoE and PPPoE SLAAC DNSv6 and PPPoE DNSv4
- no default DNS for IPoE DHCPv4 proxy

 When configured to **false**, this command reverts to the recommended default extended DNS and NBNS name server origin priorities.

Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , <b>ipv4-address</b> , or <b>netbios-node-type</b> .
Introduced	16.0.R7
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ipv4-address** *string*

Synopsis	DHCP option as a list of IPv4 addresses
Context	<b>configure</b> <b>subscriber-mgmt</b> <b>vrgw</b> <b>brg-profile</b> <i>string</i> <b>home-pool</b> <b>option</b> ( <i>number</i>   <i>keyword</i> ) <b>ipv4-address</b> <i>string</i>
Tree	<b>ipv4-address</b>
Max. Instances	4
Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , <b>ipv4-address</b> , or <b>netbios-node-type</b> . This element is ordered by the user.
Introduced	16.0.R7
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **netbios-node-type** *keyword*

Synopsis	DHCP option as NetBIOS node type.
Context	<b>configure</b> <b>subscriber-mgmt</b> <b>vrgw</b> <b>brg-profile</b> <i>string</i> <b>home-pool</b> <b>option</b> ( <i>number</i>   <i>keyword</i> ) <b>netbios-node-type</b> <i>keyword</i>
Tree	<b>netbios-node-type</b>
Options	b-node, p-node, m-node, h-node
Notes	The following elements are part of a mandatory choice: <b>ascii-string</b> , <b>duration</b> , <b>empty</b> , <b>hex-string</b> , <b>ipv4-address</b> , or <b>netbios-node-type</b> .
Introduced	16.0.R7
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **standby-ip-lifetime** *number*

Synopsis	The lifetime of the standby IP addresses
Context	<b>configure</b> <b>subscriber-mgmt</b> <b>vrgw</b> <b>brg-profile</b> <i>string</i> <b>home-pool</b> <b>standby-ip-lifetime</b> <i>number</i>

Tree	<a href="#">standby-ip-lifetime</a>
Range	300 to 315446399
Default	21600
Units	seconds
Introduced	16.0.R7
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## subnet

Synopsis	Enter the <b>subnet</b> context
Context	<b>configure</b> <a href="#">subscriber-mgmt vrgw brg-profile</a> <i>string</i> <a href="#">home-pool subnet</a>

### **maximum** *number*

Synopsis Maximum number of UEs  
Context **configure** [subscriber-mgmt wlan-gw queries tunnel](#) *string* **ues** [maximum](#) *number*  
Tree [maximum](#)  
Max. Range 0 to 4294967295  
Introduced 19.5.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **minimum** *number*

Synopsis	Minimum number of UEs
Context	<b>configure</b> <a href="#">subscriber-mgmt wlan-gw queries tunnel</a> <i>string ues minimum number</i>
Tree	<a href="#">minimum</a>
Max. Range	0 to 4294967295
Default	1
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **state**

Synopsis	Enable the <b>state</b> context
Context	<b>configure</b> <a href="#">subscriber-mgmt wlan-gw queries tunnel</a> <i>string ues state</i>
Tree	<a href="#">state</a>
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **cross-connect** *boolean*

Synopsis	Match on tunnels with cross-connect UEs
Context	<b>configure</b> <a href="#">subscriber-mgmt wlan-gw queries tunnel</a> <i>string ues state cross-connect boolean</i>
Tree	<a href="#">cross-connect</a>
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **dsm** *boolean*

Synopsis	Match on DSM UEs
Context	<b>configure</b> <a href="#">subscriber-mgmt wlan-gw queries tunnel</a> <i>string ues state dsm boolean</i>
Tree	<a href="#">dsm</a>
Default	true
Introduced	19.5.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **esm** *boolean*

Synopsis Match on ESM UEs  
Context **configure** [subscriber-mgmt](#) [wlan-gw](#) [queries](#) [tunnel](#) *string* [ues](#) [state](#) **esm** *boolean*  
Tree [esm](#)  
Default true  
Introduced 19.5.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **l2** *boolean*

Synopsis Match on tunnels with L2W UEs  
Context **configure** [subscriber-mgmt](#) [wlan-gw](#) [queries](#) [tunnel](#) *string* [ues](#) [state](#) **l2** *boolean*  
Tree [l2](#)  
Default true  
Introduced 19.5.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **migrant** *boolean*

Synopsis Match on tunnels with migrant UEs  
Context **configure** [subscriber-mgmt](#) [wlan-gw](#) [queries](#) [tunnel](#) *string* [ues](#) [state](#) **migrant** *boolean*  
Tree [migrant](#)  
Default true  
Introduced 19.5.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ue** [[name](#)] *string*

Synopsis Enter the **ue** list instance  
Context **configure** [subscriber-mgmt](#) [wlan-gw](#) [queries](#) [ue](#) *string*  
Tree [ue](#)  
Max. Instances 1024

Introduced 19.5.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[name]** *string*

Synopsis UE query name  
Context **configure** [subscriber-mgmt wlan-gw queries ue string](#)  
Tree [ue](#)  
String Length 1 to 32  
Notes This element is part of a list key.  
Introduced 19.5.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **address**

Synopsis Enter the **address** context  
Context **configure** [subscriber-mgmt wlan-gw queries ue string address](#)  
Tree [address](#)  
Introduced 19.5.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **dhcp6-na** *string*

Synopsis DHCPv6 IA-NA address to match for UEs  
Context **configure** [subscriber-mgmt wlan-gw queries ue string address dhcp6-na string](#)  
Tree [dhcp6-na](#)  
Introduced 19.5.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ipv4** *string*

Synopsis IPv4 address to match for UEs  
Context **configure** [subscriber-mgmt wlan-gw queries ue string address ipv4 string](#)  
Tree [ipv4](#)  
Introduced 19.5.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **slaac string**

Synopsis SLAAC prefix to match for UEs  
Context **configure subscriber-mgmt wlan-gw queries ue string address slaac string**  
Tree [slaac](#)  
Introduced 19.5.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **type keyword**

Synopsis Address type to match for UEs  
Context **configure subscriber-mgmt wlan-gw queries ue string address type keyword**  
Tree [type](#)  
Options ipv4, ipv6, ipv4-only, ipv6-only, ipv4v6  
Introduced 19.5.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **bridge-domain number**

Synopsis Bridge Domain to match for UEs  
Context **configure subscriber-mgmt wlan-gw queries ue string bridge-domain number**  
Tree [bridge-domain](#)  
Range 0 to 4294967294  
Introduced 19.5.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **connection-state**

Synopsis Enable the **connection-state** context  
Context **configure subscriber-mgmt wlan-gw queries ue string connection-state**  
Tree [connection-state](#)  
Introduced 19.5.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **already-signed-in** *boolean*

Synopsis	Enable matching on UEs that are already signed in
Context	<b>configure</b> <a href="#">subscriber-mgmt wlan-gw queries ue</a> <i>string</i> <a href="#">connection-state already-signed-in</a> <i>boolean</i>
Tree	<a href="#">already-signed-in</a>
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **authorized-only** *boolean*

Synopsis	Enable matching on UEs in an authorized state
Context	<b>configure</b> <a href="#">subscriber-mgmt wlan-gw queries ue</a> <i>string</i> <a href="#">connection-state authorized-only</a> <i>boolean</i>
Tree	<a href="#">authorized-only</a>
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **cross-connect** *boolean*

Synopsis	Enable matching on cross-connected UEs
Context	<b>configure</b> <a href="#">subscriber-mgmt wlan-gw queries ue</a> <i>string</i> <a href="#">connection-state cross-connect</a> <i>boolean</i>
Tree	<a href="#">cross-connect</a>
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **data-triggered** *boolean*

Synopsis	Enable matching on UEs in a data-triggered state
Context	<b>configure</b> <a href="#">subscriber-mgmt wlan-gw queries ue</a> <i>string</i> <a href="#">connection-state data-triggered</a> <i>boolean</i>
Tree	<a href="#">data-triggered</a>

Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **delete-pending** *boolean*

Synopsis	Enable matching on UEs in a delete-pending state
Context	<b>configure</b> <a href="#">subscriber-mgmt wlan-gw queries ue</a> <i>string</i> <a href="#">connection-state delete-pending</a> <i>boolean</i>
Tree	<a href="#">delete-pending</a>
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **dhcp-triggered** *boolean*

Synopsis	Enable matching on UEs in DHCP-triggered state
Context	<b>configure</b> <a href="#">subscriber-mgmt wlan-gw queries ue</a> <i>string</i> <a href="#">connection-state dhcp-triggered</a> <i>boolean</i>
Tree	<a href="#">dhcp-triggered</a>
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **dsm** *boolean*

Synopsis	Controls whether the query returns UEs in DSM state
Context	<b>configure</b> <a href="#">subscriber-mgmt wlan-gw queries ue</a> <i>string</i> <a href="#">connection-state dsm</a> <i>boolean</i>
Tree	<a href="#">dsm</a>
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **esm** *boolean*

Synopsis	Controls whether the query returns UEs in ESM state
----------	---

Context	<b>configure</b> <a href="#">subscriber-mgmt wlan-gw queries ue</a> <i>string</i> <a href="#">connection-state esm</a> <i>boolean</i>
Tree	<a href="#">esm</a>
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **gtp-authorized** *boolean*

Synopsis	Enable matching on UEs in GTP-authorized state
Context	<b>configure</b> <a href="#">subscriber-mgmt wlan-gw queries ue</a> <i>string</i> <a href="#">connection-state gtp-authorized</a> <i>boolean</i>
Tree	<a href="#">gtp-authorized</a>
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ip-assigned** *boolean*

Synopsis	Controls whether the query returns UEs in IP-assigned state
Context	<b>configure</b> <a href="#">subscriber-mgmt wlan-gw queries ue</a> <i>string</i> <a href="#">connection-state ip-assigned</a> <i>boolean</i>
Tree	<a href="#">ip-assigned</a>
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ip-assigned-authorized** *boolean*

Synopsis	Controls whether the query returns UEs in IP-assigned-authorized state
Context	<b>configure</b> <a href="#">subscriber-mgmt wlan-gw queries ue</a> <i>string</i> <a href="#">connection-state ip-assigned-authorized</a> <i>boolean</i>
Tree	<a href="#">ip-assigned-authorized</a>
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ***l2 boolean***

Synopsis	Match on Layer-2 wholesale state for UEs
Context	<b>configure</b> <a href="#">subscriber-mgmt wlan-gw queries ue</a> <i>string</i> <a href="#">connection-state l2</a> <i>boolean</i>
Tree	<a href="#">l2</a>
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ***portal boolean***

Synopsis	Controls whether the query returns UEs in portal state
Context	<b>configure</b> <a href="#">subscriber-mgmt wlan-gw queries ue</a> <i>string</i> <a href="#">connection-state portal</a> <i>boolean</i>
Tree	<a href="#">portal</a>
Default	true
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ***mac-address string***

Synopsis	MAC address to use for matching on UEs
Context	<b>configure</b> <a href="#">subscriber-mgmt wlan-gw queries ue</a> <i>string</i> <a href="#">mac-address</a> <i>string</i>
Tree	<a href="#">mac-address</a>
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ***soft-quota-exhausted boolean***

Synopsis	Send interim update message when the quota is reached
Context	<b>configure</b> <a href="#">subscriber-mgmt wlan-gw queries ue</a> <i>string</i> <a href="#">soft-quota-exhausted</a> <i>boolean</i>
Tree	<a href="#">soft-quota-exhausted</a>
Default	false
Introduced	21.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## tunnel

Synopsis	Enter the <b>tunnel</b> context
Context	<b>configure subscriber-mgmt wlan-gw queries ue string tunnel</b>
Tree	<b>tunnel</b>
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## encapsulation *keyword*

Synopsis	Tunnel type to match for active UEs
Context	<b>configure subscriber-mgmt wlan-gw queries ue string tunnel encapsulation keyword</b>
Tree	<b>encapsulation</b>
Options	gre, l2tp, l2, vxlan
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## local-address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	IP address as local tunnel endpoint to match for UEs
Context	<b>configure subscriber-mgmt wlan-gw queries ue string tunnel local-address (<i>ipv4-address-no-zone   ipv6-address-no-zone</i>)</b>
Tree	<b>local-address</b>
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## remote-address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	IP address as remote tunnel endpoint to match for UEs
Context	<b>configure subscriber-mgmt wlan-gw queries ue string tunnel remote-address (<i>ipv4-address-no-zone   ipv6-address-no-zone</i>)</b>
Tree	<b>remote-address</b>
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **router-instance** *string*

Synopsis	Router instance of tunnels to match for UEs
Context	<b>configure</b> <a href="#">subscriber-mgmt wlan-gw queries ue</a> <i>string</i> <a href="#">tunnel router-instance</a> <i>string</i>
Tree	<a href="#">router-instance</a>
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **vlan** *number*

Synopsis	VLAN tag within the tunnel to match for UEs
Context	<b>configure</b> <a href="#">subscriber-mgmt wlan-gw queries ue</a> <i>string</i> <a href="#">vlan</a> <i>number</i>
Tree	<a href="#">vlan</a>
Range	0 to 4095
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **wlan-gw-group**

Synopsis	Enable the <b>wlan-gw-group</b> context
Context	<b>configure</b> <a href="#">subscriber-mgmt wlan-gw queries ue</a> <i>string</i> <a href="#">wlan-gw-group</a>
Tree	<a href="#">wlan-gw-group</a>
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **id** *number*

Synopsis	WLAN-GW ISA group ID
Context	<b>configure</b> <a href="#">subscriber-mgmt wlan-gw queries ue</a> <i>string</i> <a href="#">wlan-gw-group</a> <i>id</i> <i>number</i>
Tree	<a href="#">id</a>
Range	1 to 4
Notes	This element is mandatory.
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **member number**

Synopsis	The member of the WLAN-GW ISA group
Context	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">wlan-gw</a> <a href="#">queries</a> <a href="#">ue</a> <i>string</i> <a href="#">wlan-gw-group</a> <a href="#">member</a> <i>number</i>
Tree	<a href="#">member</a>
Range	1 to 1024
Introduced	19.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **virtual-chassis-identifier string**

Synopsis	WLAN Gateway virtual chassis ID or dual homing key
Context	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">wlan-gw</a> <a href="#">virtual-chassis-identifier</a> <i>string</i>
Tree	<a href="#">virtual-chassis-identifier</a>
String Length	1 to 16
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### 3.46.1 system command descriptions

#### system

Synopsis	Enter the <b>system</b> context
Context	<b>configure system</b>
Tree	<a href="#">system</a>
Description	Commands in this context enable configuring of general system level functions and router management protocols.
Introduced	16.0.R1
Platforms	All

#### alarm-contact-in-power *boolean*

Synopsis	Power the output pin on the CPM alarm interface port
Context	<b>configure system alarm-contact-in-power boolean</b>
Tree	<a href="#">alarm-contact-in-power</a>
Default	false
Introduced	16.0.R1
Platforms	7750 SR-a

#### alarm-contact-input [[input-pin-number](#)] *number*

Synopsis	Enter the <b>alarm-contact-input</b> list instance
Context	<b>configure system alarm-contact-input number</b>
Tree	<a href="#">alarm-contact-input</a>
Introduced	16.0.R1
Platforms	7750 SR-a

#### [[input-pin-number](#)] *number*

Synopsis	Alarm contact input pin
Context	<b>configure system alarm-contact-input number</b>
Tree	<a href="#">alarm-contact-input</a>
Range	1 to 4

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR-a

### **admin-state** *keyword*

Synopsis	Administrative state of the alarm contact input
Context	<b>configure</b> <a href="#">system</a> <a href="#">alarm-contact-input</a> <i>number</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7750 SR-a

### **clear-message** *string*

Synopsis	Text message sent in the log event when an alarm clears
Context	<b>configure</b> <a href="#">system</a> <a href="#">alarm-contact-input</a> <i>number</i> <a href="#">clear-message</a> <i>string</i>
Tree	<a href="#">clear-message</a>
Description	<p>This command configures a text message to be included in the log event that is sent when the system clears an alarm.</p> <p>The system generates the default "Alarm Input Cleared" message if no message is configured. The <b>clear-message</b> string is included in the log event when the pin changes to the normal state.</p>
String Length	1 to 80
Default	Alarm Input Cleared
Introduced	16.0.R1
Platforms	7750 SR-a

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">system</a> <a href="#">alarm-contact-input</a> <i>number</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 160
Introduced	16.0.R1

Platforms 7750 SR-a

### **normal-state** *keyword*

Synopsis Normal state associated with the alarm contact input

Context **configure** [system](#) [alarm-contact-input](#) *number* [normal-state](#) *keyword*

Tree [normal-state](#)

Default open

Options open, closed

Introduced 16.0.R1

Platforms 7750 SR-a

### **trigger-message** *string*

Synopsis Text message sent in the log event when input changes

Context **configure** [system](#) [alarm-contact-input](#) *number* [trigger-message](#) *string*

Tree [trigger-message](#)

Description This command configures a text message to be included in the log event that is sent when the system generates an alarm.

The system generates the default message "Alarm Input Triggered" if no message is configured. This command's message string is included in the log event when the pin changes from the normal state.

String Length 1 to 80

Default Alarm Input Triggered

Introduced 16.0.R1

Platforms 7750 SR-a

### **alarms**

Synopsis Enter the **alarms** context

Context **configure** [system](#) [alarms](#)

Synopsis	Enter the <b>bluetooth</b> context
Context	<b>configure</b> <a href="#">system</a> <b>bluetooth</b>
Tree	<a href="#">bluetooth</a>
Introduced	16.0.R1
Platforms	7750 SR-1, 7750 SR-s, 7950 XRS-20e

### **admin-state** *keyword*

Synopsis	Administrative state of the Bluetooth module
Context	<b>configure system bluetooth admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	20.2.R1
Platforms	7750 SR-1, 7750 SR-s, 7950 XRS-20e

### **advertising-timeout** *number*

Synopsis	Bluetooth advertising timeout
Context	<b>configure system bluetooth advertising-timeout</b> <i>number</i>
Tree	<a href="#">advertising-timeout</a>
Range	30 to 3600
Units	seconds
Introduced	16.0.R1
Platforms	7750 SR-1, 7750 SR-s, 7950 XRS-20e

### **grace-tx** *boolean*

Synopsis Send Grace TLVs for soft reset graceful recovery events  
Context **configure** [system efm-oam grace-tx](#) *boolean*  
Tree [grace-tx](#)

Description	<p>When configured to <b>true</b>, the system sends the Nokia Vendor specific Grace TLV in the information PDU after an ISSU or a soft reset. The Grace TLV informs a remote peer to ignore the negotiated interval and multiplier and instead use the new timeout interval.</p> <p>By default, the command is disabled at the system level and enabled at the port level. Both the system and port level must be enabled to support grace on a specific port. When configured to <b>true</b>, the EFM-OAM protocol does not enter a non-operational state when both nodes acknowledge the grace function. This feature minimizes service interruption by giving the restarting router time to become operationally and administratively up within the grace period.</p> <p>The peer receiving the Grace TLV must be able to parse and process the vendor-specific messaging. Do not configure grace if the Nokia Vendor Specific Grace TLV is not supported on the remote peer.</p> <p>When configured to <b>false</b>, the Nokia Vendor Specific Grace TLV is not sent.</p>

Platforms	All

## classic-cli

Synopsis	Enter the <b>classic-cli</b> context
Context	<b>configure</b> <a href="#">system management-interface cli classic-cli</a>
Tree	<a href="#">classic-cli</a>
Description	Commands in this context configure the classic CLI management interface.
Introduced	16.0.R1
Platforms	All

**allow-immediate** *boolean*

Synopsis	Allow writable access in classic CLI configure branch
Context	<b>configure</b> <a href="#">system management-interface cli classic-cli allow-immediate</a> <i>boolean</i>
Tree	<a href="#">allow-immediate</a>
Description	When configured to <b>true</b> , this command enables write access in the classic CLI configuration branch without having to use the classic CLI <b>candidate edit</b> functionality.  When configured to <b>false</b> , this command blocks write access and configuration changes in the classic CLI configuration branch, and the classic CLI configuration branch is read-only. This enforces using the classic CLI <b>candidate edit</b> functionality, including <b>candidate commit</b> , to modify the router configuration, instead of allowing immediate line-by-line configuration changes.
Default	true
Introduced	16.0.R1
Platforms	All

**rollback**

Synopsis	Enter the <b>rollback</b> context
Context	<b>configure</b> <a href="#">system management-interface cli classic-cli rollback</a>
Tree	<a href="#">rollback</a>
Description	Commands in this context control classic CLI configuration rollback functionality, such as the maximum number of rollback checkpoints the system maintains. Configuration rollback allows the operator to revert to previous router configuration states while minimizing impacts to services.
Introduced	16.0.R1
Platforms	All

**local-checkpoints** *number*

Synopsis	Maximum number of rollback files on local storage
Context	<b>configure</b> <a href="#">system management-interface cli classic-cli rollback local-checkpoints</a> <i>number</i>
Tree	<a href="#">local-checkpoints</a>
Range	1 to 50
Default	10
Introduced	16.0.R1
Platforms	All

### **location string**

Synopsis	Path and filename prefix for rollback checkpoint files
Context	<b>configure</b> <a href="#">system management-interface cli classic-cli rollback location string</a>
Tree	<a href="#">location</a>
Description	This command configures the local (for example, compact flash) or remote location and name of the classic CLI rollback checkpoint files. The filename must not contain a suffix. The suffixes for rollback checkpoint files are, for example, .rb, .rb.1, .rb.2, and so on. The suffixes are automatically appended to rollback checkpoint files.
String Length	1 to 180
Introduced	16.0.R1
Platforms	All

### **remote-checkpoints number**

Synopsis	Maximum rollback files saved at a remote location
Context	<b>configure</b> <a href="#">system management-interface cli classic-cli rollback remote-checkpoints number</a>
Tree	<a href="#">remote-checkpoints</a>
Range	1 to 200
Default	10
Introduced	16.0.R1
Platforms	All

### **rescue**

Synopsis	Enter the <b>rescue</b> context
Context	<b>configure</b> <a href="#">system management-interface cli classic-cli rollback rescue</a>
Tree	<a href="#">rescue</a>
Introduced	16.0.R1
Platforms	All

### **location string**

Synopsis	Location of the rescue configuration file
Context	<b>configure</b> <a href="#">system management-interface cli classic-cli rollback rescue location string</a>

Tree	<a href="#">location</a>
Description	This command configures the local or remote location and filename of the classic CLI rescue configuration file. The suffix (.rc) is automatically appended to the filename when a rescue configuration file is saved. Trivial FTP (TFTP) is not supported for remote locations.
String Length	1 to 180
Introduced	16.0.R1
Platforms	All

### **cli-engine** *keyword*

Synopsis	System-wide CLI engine access
Context	<b>configure</b> <a href="#">system management-interface cli cli-engine</a> <i>keyword</i>
Tree	<a href="#">cli-engine</a>
Description	This command configures the system-wide CLI engine. The operator can configure one or both engines. For the configuration to take effect, exit the running CLI session and start a new session after committing the new value.
Default	md-cli
Options	classic-cli, md-cli
Max. Instances	2
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **md-cli**

Synopsis	Enter the <b>md-cli</b> context
Context	<b>configure</b> <a href="#">system management-interface cli md-cli</a>
Tree	<a href="#">md-cli</a>
Description	Commands in this context configure the MD-CLI management interface.
Introduced	16.0.R1
Platforms	All

### **auto-config-save** *boolean*

Synopsis	Automatically save configuration as part of commit
Context	<b>configure</b> <a href="#">system management-interface cli md-cli auto-config-save</a> <i>boolean</i>
Tree	<a href="#">auto-config-save</a>
Description	When configured to <b>true</b> , the system automatically writes the running configuration to the save configuration file as part of a successful commit operation.
Default	false
Introduced	16.0.R1
Platforms	All

### **time-display** *keyword*

Synopsis	Time zone to display time
Context	<b>configure</b> <a href="#">system management-interface cli md-cli environment time-display keyword</a>
Tree	<a href="#">time-display</a>
Description	This command configures the time zone for a timestamp displayed in outputs, such as event logs and traps for the current CLI session.  Log files on compact flash are maintained and displayed in UTC format.
Default	local
Options	local, utc
Introduced	16.0.R1
Platforms	All

### **time-format** *keyword*

Synopsis	Format to display the date and time
Context	<b>configure</b> <a href="#">system management-interface cli md-cli environment time-format keyword</a>
Tree	<a href="#">time-format</a>
Description	This command specifies the format of the time display in configuration, state, and certain <b>show</b> command output in the current CLI session.
Default	rfc-3339

Options	iso-8601, rfc-1123, rfc-3339
Introduced	20.5.R1
Platforms	All

### **commit-history** *number*

Synopsis	Number of commit history IDs to store
Context	<b>configure</b> <a href="#">system management-interface</a> <b>commit-history</b> <i>number</i>
Tree	<a href="#">commit-history</a>
Description	This command sets the number of IDs to store in the commit history. Setting the value to 0 disables the commit history.
Range	0 to 200
Default	50
Introduced	21.10.R1
Platforms	All

### **configuration-mode** *keyword*

Synopsis	Management interfaces allowed to edit the configuration
Context	<b>configure</b> <a href="#">system management-interface</a> <b>configuration-mode</b> <i>keyword</i>
Tree	<a href="#">configuration-mode</a>
Description	This command controls which of the classic or model-driven management interfaces can modify the configuration of the router.  Any management interface can be used in any configuration mode (to gather state information or perform operations, for example), but only specific management interfaces (CLI, NETCONF, and so on) are allowed to edit the configuration of the router in different modes. For example, only classic CLI and SNMP can be used to edit the configuration when in classic mode.
Default	classic
Options	classic, model-driven, mixed
Introduced	16.0.R1
Platforms	All

### **configuration-save**

Synopsis	Enter the <b>configuration-save</b> context
----------	---

Context	<b>configure system management-interface configuration-save</b>
Tree	<a href="#">configuration-save</a>
Description	Commands in this context configure the attributes for saved configuration files.
Introduced	16.0.R1
Platforms	All

### **configuration-backups *number***

Synopsis	Maximum number of configuration versions maintained
Context	<b>configure system management-interface configuration-save configuration-backups <i>number</i></b>
Tree	<a href="#">configuration-backups</a>
Description	<p>This command configures the maximum number of saved configuration file versions the router maintains.</p> <p>When the configuration is saved, configuration file names are appended with a numeric extension. Each subsequent configuration save creates a new configuration file version with an incremented numeric extension until the maximum count is reached, after which the next configuration save overwrites the oldest file version.</p> <p>Each persistent index file is updated at the same time as the associated configuration file. The system synchronizes the active and standby CPM for all configurations and their associated persistent index files.</p>
Range	1 to 200
Default	5
Introduced	16.0.R1
Platforms	All

### **incremental-saves *boolean***

Synopsis	Use incremental saved configuration files
Context	<b>configure system management-interface configuration-save incremental-saves <i>boolean</i></b>
Tree	<a href="#">incremental-saves</a>
Description	When configured to <b>true</b> , the system saves each commit to the <b>configure</b> configuration region in a separate incremental saved configuration file, which allows for faster commits, instead of saving a complete saved configuration file each time.
Default	false
Introduced	22.7.R1
Platforms	All

## netconf

Synopsis	Enter the <b>netconf</b> context
Context	<b>configure</b> <a href="#">system management-interface netconf</a>
Tree	<a href="#">netconf</a>
Introduced	16.0.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of NETCONF
Context	<b>configure</b> <a href="#">system management-interface netconf admin-state keyword</a>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

## auto-config-save *boolean*

Synopsis	Automatically save configuration as part of commit
Context	<b>configure</b> <a href="#">system management-interface netconf auto-config-save boolean</a>
Tree	<a href="#">auto-config-save</a>
Description	When configured to <b>true</b> , the system automatically writes the running configuration to the save configuration file as part of a successful commit operation.
Default	false
Introduced	16.0.R1
Platforms	All

## capabilities

Synopsis	Enter the <b>capabilities</b> context
Context	<b>configure</b> <a href="#">system management-interface netconf capabilities</a>
Tree	<a href="#">capabilities</a>
Description	Commands in this context configure explicit capabilities for the NETCONF server.

Introduced	16.0.R1
Platforms	All

### **candidate** *boolean*

Synopsis	Allow the NETCONF server to access candidate datastore
Context	<b>configure</b> <a href="#">system management-interface netconf capabilities candidate</a> <i>boolean</i>
Tree	<a href="#">candidate</a>
Description	<p>When configured to <b>true</b>, this command allows the SR OS NETCONF server to access the candidate configuration datastore. Configuring this command to <b>true</b> also enables using <b>commit</b> and <b>discard-changes</b>.</p> <p>When <b>configure system management-interface configuration-mode</b> is set to <b>classic</b>, the candidate capability is disabled, even if this command is configured to <b>true</b>.</p> <p>When configured to <b>false</b>, this command disables the SR OS NETCONF server from accessing the candidate datastore. If the candidate is disabled, requests that reference the candidate datastore return an error, and when a NETCONF client establishes a new session, the candidate capability is not advertised in the SR OS NETCONF Hello message.</p>
Default	true
Introduced	16.0.R1
Platforms	All

### **writable-running** *boolean*

Synopsis	Allow NETCONF server to access the running datastore
Context	<b>configure</b> <a href="#">system management-interface netconf capabilities writable-running</a> <i>boolean</i>
Tree	<a href="#">writable-running</a>
Description	<p>When configured to <b>true</b>, this command allows the SR OS NETCONF server to access the running configuration datastore.</p> <p>When <b>configure system management-interface configuration-mode</b> is set to <b>model-driven</b>, the writable-running capability is disabled, even if this command is configured to <b>true</b>.</p> <p>When configured to <b>false</b>, this command disables the SR OS NETCONF server from accessing the running datastore. Requests that reference the running datastore as a target return an error. When a NETCONF client establishes a new session, the writable-running capability is not advertised in the SR OS NETCONF Hello message.</p>
Default	false
Introduced	16.0.R1

Platforms All

### port number

Synopsis Port on which NETCONF server listens for connections

Context **configure system management-interface netconf port number**

Tree [port](#)

Description This command specifies the port on which the SR OS NETCONF server listens for new connections. One port can be configured for NETCONF management.

The configured port applies to both non-VPRN and VPRN management. New NETCONF connections are able to use the configured port.

For NETCONF connections not using VPRN management, active NETCONF connections are not disconnected if the connection port changes. For NETCONF connections using VPRN management, active NETCONF connections are disconnected if the connection port changes.

Range 22 | 830

Default 830

Introduced 19.10.R1

Platforms All

### operations

Synopsis Enter the **operations** context

Context **configure system management-interface operations**

Tree [operations](#)

Description Commands in this context configure parameters associated with operational commands in model-driven interfaces.

Introduced 21.5.R1

Platforms All

### global-timeouts

Synopsis Enter the **global-timeouts** context

Context **configure system management-interface operations global-timeouts**

Tree [global-timeouts](#)

Description Commands in this context configure system timeout parameters for operational commands.

Timeout parameters provide default system-level control for various types of operational commands in model-driven interfaces. The timeout values are used when specific execution and retention timeouts are not requested for a specific operation.

Introduced 21.5.R1

Platforms All

### **asynchronous-execution** (*number* | *keyword*)

Synopsis Timeout for asynchronous operation execution

Context **configure** [system management-interface operations global-timeouts asynchronous-execution](#) (*number* | *keyword*)

Tree [asynchronous-execution](#)

Description This command configures the period of time that operations launched as “asynchronous” are allowed to execute before being automatically stopped by the SR OS.

An asynchronous operation is not deleted from the system when it is stopped. See the **asynchronous-retention** command.

If a specific execution timeout is not included in the request for a particular asynchronous operation, this system-level timeout applies.

**Note:** This execution timeout is part of the general global operations infrastructure and is separate and independent from any operation-specific timeouts (for example, the **ping** operation also has its own timeout parameter).

Range 1 to 604800

Default 3600

Units seconds

Options never

Introduced 21.5.R1

Platforms All

### **asynchronous-retention** (*number* | *keyword*)

Synopsis Timeout for asynchronous operation data retention

Context **configure** [system management-interface operations global-timeouts asynchronous-retention](#) (*number* | *keyword*)

Tree [asynchronous-retention](#)

Description This command configures the period of time that data related to operations launched as “asynchronous” is retained in the system. After the retention timeout expires, all information related to the operation is deleted, including any status information and result data.

If a specific retention timeout is not included in the request for a particular asynchronous operation, this system-level timeout applies.

Range	1 to 604800
Default	86400
Units	seconds
Options	never
Introduced	21.5.R1
Platforms	All

### **synchronous-execution** (*number* | *keyword*)

Synopsis	Timeout for synchronous operation execution
Context	<b>configure</b> <a href="#">system management-interface operations global-timeouts synchronous-execution</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">synchronous-execution</a>
Description	<p>This command configures the period of time that operations launched as “synchronous” (the default method for all operations) are allowed to execute before they are automatically stopped, and their associated data is deleted.</p> <p>If a specific execution timeout is not included in the request for a particular synchronous operation, this system-level timeout applies.</p> <p><b>Note:</b> This execution timeout is part of the general global operations infrastructure and is separate and independent from any operation-specific timeouts (for example, the <b>ping</b> operation also has its own timeout parameter).</p> <p><b>Caution:</b> If this command is set with a specific time value, MD-CLI operations are subject to the timeout and are interrupted if they execute longer than the time value. This situation can arise because the timeout also applies to operations requested in the MD-CLI interface (for example, <b>ping</b>, <b>file dir</b>, and so on).</p>
Range	1 to 604800
Default	never
Units	seconds
Options	never
Introduced	21.5.R1
Platforms	All

### **remote-management**

Synopsis	Enter the <b>remote-management</b> context
Context	<b>configure</b> <a href="#">system management-interface remote-management</a>

Tree	<a href="#">remote-management</a>
Description	Commands in this context configure the SR OS node to use the remote management service. Configuring remote management enables the SR OS node to report itself to a remote manager service running on a remote server, so that it is included in the dynamic list of available nodes. The manager service streamlines the management of multiple SR OS nodes running different SR OS versions using the same client application providing a similar shell to the MD-CLI.
Introduced	20.5.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of remote management registration
Context	<b>configure</b> <a href="#">system</a> <a href="#">management-interface</a> <a href="#">remote-management</a> <b>admin-state</b> <i>keyword</i>

### **device-label** *string*

Synopsis	Device label supplied to the remote manager
Context	<b>configure</b> <a href="#">system management-interface remote-management device-label</a> <i>string</i>
Tree	<a href="#">device-label</a>
Description	This command specifies a metadata label that is supplied to the manager. This label is used to group devices or network nodes with a common purpose or goal.
String Length	1 to 64
Introduced	20.5.R1
Platforms	All

### **device-name** *string*

Synopsis	Device name supplied to the remote manager
Context	<b>configure</b> <a href="#">system management-interface remote-management device-name</a> <i>string</i>

Tree	<a href="#">device-name</a>
Description	This command specifies a device name that is supplied to the manager. The name identifies a specific SR OS node in the network. When unconfigured, the default system name is used.
String Length	1 to 64
Introduced	20.5.R1
Platforms	All

### **hello-interval** *number*

Synopsis	Time between hello messages from SR OS node to manager
Context	<b>configure</b> <a href="#">system management-interface remote-management hello-interval</a> <i>number</i>

### **device-label** *string*

Synopsis	Device label supplied to the remote manager
----------	---

Context	<b>configure system management-interface remote-management manager</b> <i>string device-label string</i>
Tree	<i>device-label</i>
Description	This command specifies a metadata label that is supplied to the manager. This label is used to group devices or network nodes with a common purpose or goal.
String Length	1 to 64
Introduced	20.5.R1
Platforms	All

### **device-name** *string*

Synopsis	Device name supplied to the remote manager
Context	<b>configure system management-interface remote-management manager</b> <i>string device-name string</i>
Tree	<i>device-name</i>
Description	This command specifies a device name that is supplied to the manager. The name identifies a specific SR OS node in the network.  When unconfigured, the default system name is used.
String Length	1 to 64
Introduced	20.5.R1
Platforms	All

Synopsis	Schema path URL
Context	<b>configure</b> <a href="#">system</a> <a href="#">management-interface</a> <a href="#">schema-path</a> <i>string</i>
Tree	<a href="#">schema-path</a>

Description	<p>This command specifies the schema path where the SR OS YANG modules can be placed by the user before using a &lt;get-schema&gt; request. Nokia recommends that the URL string not exceed 135 characters for the &lt;get-schema&gt; request to work correctly with all schema files.</p> <p>If this command is not configured, the software upgrade process manages the YANG schema files to ensure the schema files are synchronized with the software image on both the primary and standby CPM.</p>
String Length	1 to 180
Introduced	16.0.R4
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of the SNMP agent
Context	<b>configure</b> <a href="#">system management-interface snmp admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Description	<p>This command administratively enables or disables SNMP agent operations. Disabling SNMP does not prevent the agent from sending SNMP notifications to configured SNMP trap destinations.</p> <p>In classic and mixed configuration mode, the agent is administratively disabled in the event of a reboot when the processing of the configuration file fails to complete or when an SNMP persistent index file fails while the <b>bof system persistent-indices</b> command is set to <b>true</b>. This prevents an SNMP-based management system from accessing and possibly synchronizing with a partially booted or incomplete network element. This auto-disable behavior is not applicable to model-driven configuration mode.</p>
Default	enable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

## **engine-id** *string*

Synopsis	SNMP engine ID that identifies the SNMPv3 node
Context	<b>configure</b> <a href="#">system</a> <a href="#">management-interface snmp</a> <b>engine-id</b> <i>string</i>
Tree	<a href="#">engine-id</a>
Description	<p>This command sets the SNMP engine ID that uniquely identifies the SNMPv3 node.</p> <p>If unconfigured, the system uses an engine ID based on the information from the system backplane.</p> <p>If the SNMP engine ID is changed, the current configuration must be saved and a reboot must be executed. Otherwise, the previously configured SNMP communities and logger trap-target notify communities will not be valid for the new engine ID.</p> <p><b>Note:</b> Changing the SNMP engine ID invalidates all SNMPv3 MD5 and SHA security digest keys, which may render the node unmanageable.</p> <p>When replacing a chassis, configure the new router to use the same engine ID as the previous router. This preserves SNMPv3 security keys and allows management stations to use their existing authentication keys for the new router.</p> <p>Ensure that the engine ID of each router is unique. A management domain can only maintain one instance of a specific engine ID.</p>
String Length	10 to 64
Introduced	16.0.R1
Platforms	All

## **general-port** *number*

Synopsis	Port number used to send general SNMP messages
Context	<b>configure</b> <a href="#">system</a> <a href="#">management-interface snmp</a> <b>general-port</b> <i>number</i>
Tree	<a href="#">general-port</a>
Description	<p>This command configures the port number used to receive SNMP request messages and send replies.</p> <p>For the port used for SNMP notifications, configure the <b>configure log snmp-trap-group trap-target port</b> command.</p>
Range	0   1 to 65535
Default	161
Introduced	16.0.R1
Platforms	All

## **packet-size** *number*

Synopsis	Maximum SNMP packet size generated by the node
----------	--

Context	<b>configure system management-interface snmp packet-size</b> <i>number</i>

Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of SNMP streaming
Context	<b>configure system management-interface snmp streaming admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Description	This command enables or disables the proprietary SNMP request and response bundling as well as the TCP-based transport mechanism for optimizing network management of the router nodes. In higher latency networks, synchronizing router MIBs from network management using streaming takes less time than synchronizing using classic SNMP UDP requests. Streaming operates on TCP port 1491 and runs over IPv4 or IPv6.
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

## yang-modules

Synopsis	Enter the <b>yang-modules</b> context
Context	<b>configure system management-interface yang-modules</b>
Tree	<a href="#">yang-modules</a>

Description	<p>Commands in this context determine the system support of the Nokia YANG models.</p> <p>The settings affect the data sent in a NETCONF &lt;hello&gt;, data populated in the RFC 6022 /netconf-state/schemas list, data returned in a &lt;get-schema&gt; request, and data populated in the RFC 8525 /yang-library.</p> <p>See "NETCONF monitoring" and "YANG library" in the <i>7450 ESS, 7750 SR, 7950 XRS, and VSR System Management Guide</i> for more information.</p>
Introduced	16.0.R1
Platforms	All

### **base-r13-modules** *boolean*

Synopsis	Support Base-R13 YANG models
Context	<b>configure</b> <a href="#">system management-interface yang-modules base-r13-modules</a> <i>boolean</i>
Tree	<a href="#">base-r13-modules</a>
Description	<p>When configured to <b>true</b>, this command enables support of the Base-R13 YANG modules in the SR OS NETCONF server.</p> <p>When the <b>configure system management-interface configuration-mode</b> command is set to <b>model-driven</b>, the configuration cannot be modified using Base-R13 modules in NETCONF, even if the <b>base-r13-modules</b> command is configured to <b>true</b>.</p> <p>When configured to <b>false</b>, this command disables Base-R13 YANG modules, and any NETCONF request that references the Base-R13 modules results in an error.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **nmda**

Synopsis	Enter the <b>nmda</b> context
Context	<b>configure</b> <a href="#">system management-interface yang-modules nmda</a>
Tree	<a href="#">nmda</a>
Description	Commands in this context configure the attributes for the Network Management Datastores Architecture (NMDA).
Introduced	21.7.R1
Platforms	All

### **nmda-support** *boolean*

Context	<b>configure</b> <a href="#">system</a> <a href="#">management-interface</a> <a href="#">yang-modules</a> <a href="#">nmda</a> <a href="#">nmda-support</a> <i>boolean</i>
Tree	<a href="#">nmda-support</a>
Description	<p>When configured to <b>true</b>, this command enables the advertisement of NMDA support over NETCONF through the use of YANG library 1.1.</p> <p>When configured to <b>false</b>, this command disables NMDA advertisement over NETCONF and YANG library 1.0 is used.</p>
Default	false
Introduced	21.7.R1
Platforms	All

### **nokia-combined-modules** *boolean*

Synopsis	Support access to combined Nokia YANG models
Context	<b>configure</b> <a href="#">system</a> <a href="#">management-interface</a> <a href="#">yang-modules</a> <a href="#">nokia-combined-modules</a> <i>boolean</i>
Tree	<a href="#">nokia-combined-modules</a>
Description	<p>When configured to <b>true</b>, the system supports the combined Nokia YANG files for both configuration and state data in the NETCONF server.</p> <p>When the system is operating in classic configuration mode, attempts to access (read or write) the configuration using the Nokia configuration modules or namespace via NETCONF result in errors, even if this command is set to <b>true</b>.</p> <p>When configured to <b>false</b>, access to the combined Nokia YANG files is not supported.</p> <p>This command and the <b>nokia-submodules</b> command cannot both be set to <b>true</b> at the same time.</p>
Introduced	16.0.R4
Platforms	All

### **nokia-submodules** *boolean*

Synopsis	Support submodule-based packaging of Nokia YANG models
Context	<b>configure</b> <a href="#">system</a> <a href="#">management-interface</a> <a href="#">yang-modules</a> <a href="#">nokia-submodules</a> <i>boolean</i>
Tree	<a href="#">nokia-submodules</a>
Description	When configured to <b>true</b> , the system supports the alternative submodule-based packaging of the Nokia YANG files for both configuration and state data in the NETCONF server.

When the system is operating in classic configuration mode, attempts to access (read or write) the configuration using the Nokia configuration modules or namespace via NETCONF result in errors, even if this command is set to **true**.

When configured to **false**, access to the submodule-based packaging of the Nokia YANG files is not supported.

This command and the **nokia-combined-modules** command cannot both be set to **true** at the same time.

Introduced	21.2.R1
Platforms	All

### **openconfig-modules** *boolean*

Synopsis	Support access to OpenConfig YANG models
Context	<b>configure</b> <a href="#">system</a> <a href="#">management-interface</a> <a href="#">yang-modules</a> <a href="#">openconfig-modules</a> <i>boolean</i>
Tree	<a href="#">openconfig-modules</a>
Description	When configured to <b>true</b> , this command allows access to OpenConfig YANG models in all model-driven interfaces.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## **persistence**

Synopsis	Enter the <b>persistence</b> context
Context	<b>configure</b> <a href="#">system persistence</a>
Tree	<a href="#">persistence</a>
Description	Commands in this context configure persistence on the system.  The persistence feature enables the system to retain state information learned through DHCP snooping across reboots. This information includes data such as the IP address and MAC binding information, lease-length information, and ingress SAP information (required for VPLS snooping to identify the ingress interface).  If persistence is enabled when there are no DHCP relay or snooping commands enabled, the system creates an empty file.

## log-announce-interval *number*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Announce message interval in log form
Context	<b>configure system ptp log-announce-interval</b> <i>number</i>
Tree	<a href="#">log-announce-interval</a>
Description	<p>This command configures the Announce message interval used for both unicast and multicast messages.</p> <p>For unicast messages, the Announce message interval is requested during unicast negotiation to any peer. This controls the Announce message rate sent from remote peers to the local node. It does not affect the announce message rate that may be sent from the local node to remote peers. Remote peers may request an Announce message rate within the acceptable grant range.</p> <p>For multicast messages used on PTP Ethernet ports, this command specifies the message interval used for Announce messages transmitted by the local node.</p> <p>This value also defines the interval between executions of the BMCA within the node.</p> <p>To minimize BMCA driven reconfigurations, IEEE recommends that the announce interval should be consistent across the entire 1588 network.</p>
Range	-3 to 4
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## network-type *keyword*

## **port** [[port-id](#)] *reference*

Synopsis	Enter the <b>port</b> list instance
Context	<b>configure system ptp port</b> <i>reference</i>
Tree	<a href="#">port</a>
Description	<p>Commands in this context configure PTP over Ethernet on the physical port. The PTP process transmits and receives PTP messages through the port using Ethernet encapsulation (as opposed to UDP/IPv4 encapsulation).</p> <p>Frames are transmitted with no VLAN tags, even if the port is configured for dot1q or qinq modes for encap-type. The received frames from the external PTP clock must also be untagged.</p> <p>Two reserved multicast addresses are allocated for PTP messages (see Annex F IEEE Std 1588-2008). Either address can be configured for the PTP messages sent through the port.</p> <p>A PTP port cannot be created if the PTP profile is configured for G.8265.1.</p> <p>If the port supports 1588 port-based timestamping, Synchronous Ethernet must be enabled on the MDA when PTP over Ethernet is enabled.</p> <p>De-provisioning of the card or MDA containing the specified port is not permitted while the port is configured within PTP.</p> <p>Changing the encapsulation or the port type of the Ethernet port is not permitted when PTP Ethernet Multicast operation is configured on the port.</p> <p>To allocate an Ethernet satellite client port as a PTP port, the Ethernet satellite must first be enabled for the transparent clock function. For more information, see the <b>configure satellite ethernet-satellite ptp-tc</b> command.</p> <p>The SyncE/1588 ports of the CPM and CCMs can be specified as PTP ports. These use the 'A/3' and 'B/3' designation and both must be specified as two PTP ports if both are used. The active CPM sends and receives messages on both ports if they are specified and enabled.</p>

Context	<b>configure</b> <a href="#">system</a> <a href="#">ptp port</a> <i>reference</i> <a href="#">log-delay-interval</a> <i>number</i>
Tree	<a href="#">log-delay-interval</a>
Description	<p>This command configures the minimum interval used for multicast Delay_Req messages for the port. For ports in a slave state, the interval is used, unless the parent port indicates a longer interval. For a port in master state, the interval is advertised to external slave ports as the minimum acceptable interval for Delay_Req messages from the slave ports.</p> <p>The router supports the 1588 standard requirement for a port in slave state to check the logMessageInterval field of received multicast Delay_Resp messages. If the value of the logMessageInterval field of the messages is greater than the value configured locally for the generation of Delay_Req messages, the slave must use the longer interval for the generation of Delay_Req messages.</p> <p>The interval value is specified as the logarithm to the base 2.</p>
Range	-6 to 0

Tree	<b>monitor-ptsf-unusable</b>
Description	<p>Commands in this context configure monitoring of neighbor clocks for the PTSF-unusable state (condition) when the profile is set to g8275dot1-2014.</p> <p>When administratively enabled, the local clock monitors the noise level of PTP event messages between external neighbor PTP ports and the local clock. If it detects a high variation in the network path between the external neighbor port and the local port, it considers the neighbor port unusable. Announce messages from the neighbor are discarded and excluded from the BMCA and the port cannot be selected as the parent clock. The unusable condition must be manually cleared.</p> <p>When administratively disabled, the monitor PTSF function of the PTP clock clears PTSF-unusable states from all neighbor PTP ports. If no PTP messages are received from a neighbor for 15 minutes, the neighbor information is purged and the PTSF-unusable state is cleared.</p>

Context	<b>configure system ptp router string peer</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> )
Tree	<a href="#">peer</a>
Description	Commands in this context configure a remote PTP peer. In the current release, the system supports PTP using IPv4 only.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **[ip-address]** (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	IP address of the remote PTP peer
Context	<b>configure system ptp router string peer</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> )
Tree	<a href="#">peer</a>
Description	This command specifies the IP address of the remote PTP peer. In the current release, the system supports PTP using IPv4 only.
Notes	This element is part of a list key.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **admin-state** *keyword*

Synopsis	Administrative state of the PTP peer
Context	<b>configure system ptp router string peer</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <a href="#">admin-state keyword</a>
Tree	<a href="#">admin-state</a>
Default	enable
Options	enable, disable
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **local-priority** *number*

Synopsis	PTP peer local priority
Context	<b>configure system ptp router string peer</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <a href="#">local-priority number</a>
Tree	<a href="#">local-priority</a>

Description	<p>This command configures the local priority for the peer, which is used to choose between PTP masters in the best master clock algorithm (BMCA). This setting applies when the PTP profile is configured for G.8265.1, G.8275.1, or G.8275.2 and is ignored for any other profile.</p> <p>For G.8265.1, this command configures the priority used to choose between master clocks with the same quality (see G.8265.1 for more details).</p> <p>For G.8275.1 or G.8275.2, this command configures the localPriority parameter associated with the Announce messages received from the external clocks (<b>ptp router peer</b> context). See G.8275.1 or G.8275.2 for detailed information.</p>
Range	1 to 255
Default	128
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### log-sync-interval *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	PTP peer interval for Sync messages in log form
Context	<b>configure system ptp router</b> <i>string peer (ipv4-address-no-zone   ipv6-address-no-zone) log-sync-interval number</i>
Tree	<a href="#">log-sync-interval</a>
Description	<p>This command configures the message interval used for Sync and Delay_Resp messages that are requested during unicast negotiation to the peer. The setting controls messages sent from remote peers to the local node but the packet rate from the local node to remote peers is not affected. Remote peers may request a packet rate within the acceptable range.</p> <p>The interval value is specified as the logarithm to the base 2.</p>
Range	-6 to 0
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### peer-limit *number*

Synopsis	Number of discovered peers allowed for routing instance
Context	<b>configure system ptp router</b> <i>string peer-limit number</i>
Tree	<a href="#">peer-limit</a>

Description	This command specifies the maximum number of discovered peers permitted within the routing instance. This ensures that a routing instance does not consume all the possible discovered peers and prevents the routing instance from blocking discovered peers in other routing instances.  The sum of all peer limit values for all routing instances cannot exceed the maximum number of discovered peers supported by the system.
Range	0 to 512
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **tx-while-sync-uncertain** *boolean*

Synopsis	Send Announce messages while clock is unsynchronized
Context	<b>configure</b> <b>system</b> <b>ptp</b> <b>tx-while-sync-uncertain</b> <i>boolean</i>
Tree	<a href="#">tx-while-sync-uncertain</a>
Description	When configured to <b>true</b> , the local PTP clock transmits Announce messages to downstream clocks to indicate it has not yet stabilized on the recovered synchronization source (upstream clocks or GM clock). While the PTP clock is unsynchronized, the Sync Uncertain state is true.  When configured to <b>false</b> , the local PTP clock does not send Announce messages to downstream clocks to indicate it is not synchronized to a valid timing source. If the Sync Uncertain state of the clock is true while this command is configured to <b>false</b> , unicast negotiation grant requests are not granted and current grants are canceled.
Default	true
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Synopsis Enter the **request-format** context  
Context **configure** [system](#) [security](#) [aaa](#) [remote-servers](#) [tacplus](#) [authorization](#) [request-format](#)  
Tree [request-format](#)

Description	Commands in this context configure access operations that are sent to the TACACS+ server during authorization.
Introduced	21.10.R3
Platforms	All

### **access-operation-cmd** *keyword*

Synopsis	Access operations sent in authorization requests
Context	<b>configure</b> <a href="#">system</a> <a href="#">security</a> <a href="#">aaa</a> <a href="#">remote-servers</a> <a href="#">tacplus</a> <a href="#">authorization</a> <a href="#">request-format</a> <b>access-operation-cmd</b> <i>keyword</i>
Tree	<a href="#">access-operation-cmd</a>
Description	This command sends an operation argument in authorization requests.  In model-driven interfaces, this command configures the system to send the operation in the cmd argument, and the path in the cmd-args argument, in TACACS+ authorization requests. This command does not apply to authorization requests in classic interfaces.
Options	delete
Max. Instances	1
Introduced	21.10.R3
Platforms	All

### **use-priv-lvl** *boolean*

Synopsis	Allow privilege level mapping
Context	<b>configure</b> <a href="#">system</a> <a href="#">security</a> <a href="#">aaa</a> <a href="#">remote-servers</a> <a href="#">tacplus</a> <a href="#">authorization</a> <b>use-priv-lvl</b> <i>boolean</i>
Tree	<a href="#">use-priv-lvl</a>
Description	When configured to <b>true</b> , this command automatically performs a single authorization request to the TACACS+ server for cmd* (all commands) immediately after login, and then uses the local profile associated (via the <b>priv-lvl-map</b> ) with the priv-lvl returned by the TACACS+ server for all subsequent authorization (except <b>enable-admin</b> ). After the initial authorization for cmd*, no further authorization requests are sent to the TACACS+ server (except <b>enable-admin</b> ).  When configured to <b>false</b> , each command is sent to the TACACS+ server for authorization (this is true regardless of whether the <b>tacplus use-default-template</b> setting is enabled).
Default	false
Introduced	16.0.R1
Platforms	All

### **interactive-authentication** *boolean*

Synopsis	Allows TACACS+ interactive authentication
Context	<b>configure</b> <a href="#">system security aaa remote-servers tacplus interactive-authentication</a> <i>boolean</i>

Tree	<a href="#">fragment</a>
Description	<p>This command specifies the match criterion based on the existence or absence of fragmented IP packets.</p> <p>Matching on fragmented IPv4 packets occurs when all packets have either the MF (more fragment) bit set or have the Fragment Offset field of the IP header set to a non-zero value. For IPv6, the existence of the IPv6 Fragmentation Extension Header results in a fragmented packet match.</p> <p>Matching on non-fragmented IPv4 packets occurs when all packets have the MF bit set to zero and the Fragment Offset field is also set to zero. For IPv6, the absence of an IPv6 Fragmentation Extension Header results in a non-fragmented packet match.</p>
Options	false, true
Introduced	16.0.R1

Tree	<a href="#">fragment</a>
Description	<p>This command specifies the match criterion based on the existence or absence of fragmented IP packets.</p> <p>Matching on fragmented IPv4 packets occurs when all packets have either the MF (more fragment) bit set or have the Fragment Offset field of the IP header set to a non-zero value. For IPv6, the existence of the IPv6 Fragmentation Extension Header results in a fragmented packet match.</p> <p>Matching on non-fragmented IPv4 packets occurs when all packets have the MF bit set to zero and the Fragment Offset field is also set to zero. For IPv6, the absence of an IPv6 Fragmentation Extension Header results in a non-fragmented packet match.</p>
Options	false, true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **link-specific-rate (number | keyword)**

Synopsis Packet arrival rate limit for link level protocols

Context **configure system security cpu-protection link-specific-rate (number | keyword)**

Tree [link-specific-rate](#)

Description This command configures a link-specific rate for CPU protection. The limit is applied to all ports within the system. The CPU receives no more than the configured packet rate for all link level protocols, such as LACP, from any one port.  
The measurement is cleared each second and is based on the ingress port.

Range 1 to 65535

Units packets per second

Context	<b>configure</b> <a href="#">system</a> <a href="#">security</a> <a href="#">hash-control</a> <a href="#">management-interface</a> <a href="#">classic-cli</a> <b>read-algorithm</b> <i>keyword</i>
Tree	<a href="#">read-algorithm</a>
Description	This command specifies how encrypted configuration secrets are interpreted and which encryption types are accepted when secrets are input into the system or read from a configuration file (for example, at system bootup time).
Default	all-hash
Options	all-hash, hash, hash2, custom
Introduced	16.0.R4
Platforms	All

### **write-algorithm** *keyword*

Synopsis	Output encryption algorithm for configuration secrets
Context	<b>configure</b> <a href="#">system</a> <a href="#">security</a> <a href="#">hash-control</a> <a href="#">management-interface</a> <a href="#">classic-cli</a> <b>write-algorithm</b> <i>keyword</i>
Tree	<a href="#">write-algorithm</a>
Description	This command specifies the format of the output for encrypted configuration secrets (for example, in the saved configuration file, or in the output of the <b>info</b> or <b>show</b> commands).
Default	hash2
Options	cleartext, hash, hash2, custom
Introduced	16.0.R4
Platforms	All

### **grpc**

### **allow-ssh** *boolean*

Synopsis	Allow access to the SSH server
Context	<b>configure</b> <a href="#">system security management allow-ssh</a> <i>boolean</i>
Tree	<a href="#">allow-ssh</a>
Description	When configured to <b>true</b> , this command allows SSH server access to the SR OS router via the 'Base' and 'management' router instances. When configured to <b>false</b> , this command disallows SSH server access.
Default	true
Introduced	16.0.R5
Platforms	All

### **allow-telnet** *boolean*

Synopsis	Allow access to the IPv4 Telnet server
Context	<b>configure</b> <a href="#">system security management allow-telnet</a> <i>boolean</i>
Tree	<a href="#">allow-telnet</a>
Description	When configured to <b>true</b> , this command allows IPv4 Telnet server access to the SR OS router via the 'Base' and 'management' router instances. When configured to <b>false</b> , this command disallows access to the IPv4 Telnet server.
Default	true
Introduced	16.0.R5
Platforms	All

### **allow-telnet6** *boolean*

Synopsis	Allow access to the Telnet IPv6 server
Context	<b>configure</b> <a href="#">system security management allow-telnet6</a> <i>boolean</i>
Tree	<a href="#">allow-telnet6</a>
Description	When configured to <b>true</b> , this command allows IPv6 Telnet server access to the SR OS router via the 'Base' and 'management' router instances. When configured to <b>false</b> , this command disallows access to the IPv6 Telnet server.
Default	true
Introduced	16.0.R5
Platforms	All

### **management-access-filter**

Synopsis	Enter the <b>management-access-filter</b> context
Context	<b>configure</b> <a href="#">system security management-access-filter</a>
Tree	<a href="#">management-access-filter</a>
Description	Commands in this context configure the attributes for management access filters. Management access filters control all traffic in and out of the CPM. The filters can be used to restrict management of the router by other nodes outside of specific networks (or sub-networks) or through designated ports. Management filters are enforced by the system software.
Introduced	16.0.R4
Platforms	All

### **ip-filter**

Synopsis	Enter the <b>ip-filter</b> context
Context	<b>configure</b> <a href="#">system security management-access-filter ip-filter</a>

**snap-oui** *keyword*

Synopsis	IEEE 802.3 LLC SNAP Ethernet Frame OUI value for match
Context	<b>configure</b> <a href="#">system</a> <a href="#">security management-access-filter</a> <a href="#">mac-filter</a> <a href="#">entry</a> <i>number</i> <a href="#">match</a> <a href="#">snap-oui</a> <i>keyword</i>
Tree	<a href="#">snap-oui</a>
Description	This command specifies the IEEE 802.3 LLC SNAP Ethernet Frame OUI value as the MAC filter match criterion.
Options	zero, non-zero
Introduced	16.0.R4
Platforms	All

**snap-pid** *number*

Synopsis	IEEE 802.3 LLC SNAP Ethernet Frame PID as the match
Context	<b>configure</b> <a href="#">system</a> <a href="#">security management-access-filter</a> <a href="#">mac-filter</a> <a href="#">entry</a> <i>number</i> <a href="#">match</a> <a href="#">snap-pid</a> <i>number</i>
Tree	<a href="#">snap-pid</a>
Description	This command specifies an IEEE 802.3 LLC SNAP Ethernet Frame PID value used as the MAC filter match criterion.  The SNAP PID match criterion is independent of the OUI field within the SNAP header. Two packets with different 3-byte OUI fields but the same PID field match the same filter entry based on a SNAP PID match criterion.
Range	0 to 65535
Introduced	16.0.R4
Platforms	All

### **source-address**

Synopsis	Enter the <b>source-address</b> context
Context	<b>configure</b> <a href="#">system</a> <a href="#">security</a> <b>source-address</b>
Tree	<a href="#">source-address</a>
Description	Commands in this context configure the IP source address that is used in all unsolicited packets sent by the specified applications.

This configuration applies to packets transmitted in-band (for example, a network port on an IOM) and does not apply to packets transmitted out-of-band on the management interface on the CPM Ethernet port. Packets transmitted using the CPM Ethernet port use the address of the CPM Ethernet port as the IP source address in the packet.

When a source address is specified for the PTP application, the port-based 1588 hardware timestamping assist function is applied to PTP packets matching the IPv4 address of the router interface used to ingress the SR/ESS or IP address specified in this command. If the IP address is removed, the port-based 1588 hardware timestamping assist function is only applied to PTP packets matching the IPv4 address of the router interface.

### **vprn-network-exceptions**

Synopsis Enable the **vprn-network-exceptions** context

Context **configure system security vprn-network-exceptions**

Tree [vprn-network-exceptions](#)

Description Commands in this context configure the rate limiting attributes for processing packets with label TTL expiry received within an LSP shortcut or VPRN instances in the system and from all network IP interfaces. This includes labeled user and control plan packets, ping, and traceroute packets within GRT and VPRN, and ICMP replies.  
These commands do not rate limit MPLS or service OAM packets.

Introduced 16.0.R1

Platforms All

### **count number**

Synopsis Limit of exception messages received

Context **configure system security vprn-network-exceptions count number**

Tree [count](#)

Description This command specifies the threshold limit of exception messages. If the threshold value is exceeded within the configured time interval, packets are dropped.

Range 10 to 1000

Default 100

Introduced 16.0.R1

Platforms All

### **window number**

Synopsis Time interval to measure exception messages

Context **configure system security vprn-network-exceptions window number**

### **switch-fabric**

Synopsis	Enter the <b>switch-fabric</b> context
----------	--

Context	<b>configure system switch-fabric</b>
Tree	<a href="#">switch-fabric</a>
Description	Commands in this context configure system level attributes related to the switch fabric.
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR-7, 7750 SR-7s, 7750 SR-14s, 7950 XRS-20, 7950 XRS-40

## failure-recovery

Synopsis	Enter the <b>failure-recovery</b> context
Context	<b>configure system switch-fabric failure-recovery</b>
Tree	<a href="#">failure-recovery</a>
Description	Commands in this context configure the attributes related to the automatic switch fabric recovery process. This process is triggered when there are two resets of an IOM/XCM due to ICC failures within a small time frame. The recovery process involves the sequential resetting of SFM in case the issues are due to one of the SFM in the ICC communication path. As the final step in the recovery process, a CPM switchover is triggered to reset the active CPM.
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR-7, 7950 XRS-20, 7950 XRS-40

## admin-state *keyword*

## sfm-loss-threshold *number*

Synopsis	Number of SFMs that can fail before SFM overload state
Context	<b>configure system switch-fabric sfm-loss-threshold <i>number</i></b>
Tree	<a href="#">sfm-loss-threshold</a>
Description	This command specifies the number of SFMs that are permitted to fail before the system goes into SFM overload state.

The default value for the 7750 SR-7s is 1 and the default value for the 7750 SR-14s is 2. Users can select the SFM limit based on the number possible for the system minus one. For the 7750 SR-7s, the limit is 3 and the limit for the 7750 SR-14s is 7.

Range	1 to 7
Introduced	20.5.R1
Platforms	7750 SR-7s, 7750 SR-14s

Synopsis	Falling threshold for the sampled statistic
Context	<b>configure</b> <a href="#">system thresholds cflash-cap-alarm-percent</a> <i>string</i> <b>falling-threshold</b> <i>number</i>
Tree	<a href="#">falling-threshold</a>
Description	<p>This command specifies a falling threshold for the sampled statistic. When the current sampled value is less than or equal to this threshold, and the value at the last sampling interval was greater than this threshold, a single threshold-crossing event is generated. A single threshold-crossing event is also generated if the first sample taken is less than or equal to this threshold and the associated <b>startup-alarm</b> command is equal to the <b>falling</b> or <b>either</b> values.</p> <p>After a falling threshold-crossing event is generated, another such event is not generated until the sampled value rises above this threshold and reaches greater than or equal to the <b>rising-threshold</b> command.</p>

Synopsis	Rising threshold for the sampled statistic
Context	<b>configure</b> <a href="#">system thresholds cflash-cap-alarm-percent</a> <i>string</i> <b>rising-threshold</b> <i>number</i>
Tree	<a href="#">rising-threshold</a>
Description	This command specifies a rising threshold for the sampled statistic. When the current sampled value is greater than or equal to this threshold, and the value at the last

sampling interval was less than this threshold, a single threshold-crossing event is generated. A single threshold crossing event is also generated if the first sample taken is greater than or equal to this threshold and the associated **startup-alarm** command is equal to the **rising** or **either** values.

After a rising threshold-crossing event is generated, another such event is not generated until the sampled value falls below this threshold and reaches less than or equal the **falling-threshold** command.

#### test-oam

Synopsis	Enter the <b>test-oam</b> context
Context	<b>configure test-oam</b>
Tree	<a href="#">test-oam</a>
Introduced	16.0.R4
Platforms	All

#### icmp

Synopsis	Enter the <b>icmp</b> context
Context	<b>configure test-oam icmp</b>
Tree	<a href="#">icmp</a>
Introduced	20.10.R1
Platforms	All

#### ipv6

Synopsis	Enter the <b>ipv6</b> context
Context	<b>configure test-oam icmp ipv6</b>
Tree	<a href="#">ipv6</a>
Introduced	22.7.R1
Platforms	All

#### length-field *boolean*

Synopsis	Use length field in ICMPv6 responses
Context	<b>configure test-oam icmp ipv6 length-field boolean</b>
Tree	<a href="#">length-field</a>
Default	false
Introduced	22.7.R1
Platforms	All

### **maximum-original-datagram** *boolean*

Synopsis	ICMPv6 traceroute responses with largest datagram
Context	<b>configure test-oam icmp ipv6 maximum-original-datagram</b> <i>boolean</i>
Tree	<a href="#">maximum-original-datagram</a>
Description	When configured to <b>true</b> , this command enables the original datagram field of the ICMPv6 error message to be a maximum of 1232 bytes.  When configured to <b>false</b> , the original datagram field of the ICMPv6 error message smaller than 1232 bytes be built smaller.
Default	false
Introduced	22.7.R1
Platforms	All

### **ping-template** [[name](#)] *string*

Synopsis	Enter the <b>ping-template</b> list instance
Context	<b>configure test-oam icmp ping-template</b> <i>string</i>
Tree	<a href="#">ping-template</a>
Description	Commands in this context define ping timers and thresholds that verify connectivity and the the operational state of the IP interface.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **[name]** *string*

Synopsis	Ping template name
Context	<b>configure test-oam icmp ping-template</b> <i>string</i>
Tree	<a href="#">ping-template</a>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **description** *string*

Synopsis	Text description
----------	------------------

Context	<b>configure test-oam icmp ping-template</b> <i>string description string</i>
Tree	<b>description</b>
String Length	1 to 80
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **dot1p** *number*

Synopsis	Dot1p in Ethernet header of outgoing ping packets
Context	<b>configure test-oam icmp ping-template</b> <i>string dot1p number</i>
Tree	<b>dot1p</b>
Range	0 to 7
Default	7
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **dscp** *keyword*

Synopsis	DSCP value used in the outgoing ping packet
Context	<b>configure test-oam icmp ping-template</b> <i>string dscp keyword</i>
Tree	<b>dscp</b>
Default	nc1
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **failure-threshold** *number*

Synopsis	Failure threshold to declare inter-connectivity down
Context	<b>configure test-oam icmp ping-template</b> <i>string failure-threshold number</i>
Tree	<b>failure-threshold</b>
Range	2 to 10

Default	3
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **interval** *number*

Synopsis	Packet transmit interval
Context	<b>configure</b> <a href="#">test-oam icmp ping-template</a> <i>string</i> <a href="#">interval</a> <i>number</i>
Tree	<a href="#">interval</a>
Range	1 to 60
Default	60
Units	seconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **reactivation-failure-threshold** *number*

Synopsis	Threshold of consecutive failures at reactivation
Context	<b>configure</b> <a href="#">test-oam icmp ping-template</a> <i>string</i> <a href="#">reactivation-failure-threshold</a> <i>number</i>
Tree	<a href="#">reactivation-failure-threshold</a>
Description	This command configures the number of consecutive failures that must occur when transmitting at the reactivation interval without success before the transmission interval is changed to the standard interval.
Range	1 to 10
Default	4
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **reactivation-interval** *number*

Synopsis	Ping reactivation interval
Context	<b>configure</b> <a href="#">test-oam icmp ping-template</a> <i>string</i> <a href="#">reactivation-interval</a> <i>number</i>
Tree	<a href="#">reactivation-interval</a>
Description	This command configures the packet transmit interval used when the IP interface becomes operationally down because of a ping template failure after receiving a successful response to the previous ICMP echo request.

Range	1 to 60
Default	1
Units	seconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **reactivation-threshold** *number*

Synopsis	Success threshold to declare inter-connectivity up
Context	<b>configure</b> <a href="#">test-oam icmp ping-template</a> <i>string</i> <a href="#">reactivation-threshold</a> <i>number</i>
Tree	<a href="#">reactivation-threshold</a>
Description	This command configures the minimum number of consecutive successful responses of ICMP replies that must occur before the IP interface transitions from operationally down (due to ping validation failure) to operationally up. This value is a stability metric intended to prevent flapping.
Range	1 to 10
Default	3
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **reactivation-timeout** *number*

Synopsis	Reactivation wait time before packet is declared lost
Context	<b>configure</b> <a href="#">test-oam icmp ping-template</a> <i>string</i> <a href="#">reactivation-timeout</a> <i>number</i>
Tree	<a href="#">reactivation-timeout</a>
Range	1 to 60
Default	1
Units	seconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **size** *number*

Synopsis	Data field size of the outgoing ICMP echo packet
Context	<b>configure</b> <a href="#">test-oam icmp ping-template</a> <i>string</i> <a href="#">size</a> <i>number</i>
Tree	<a href="#">size</a>

Range	12 to 9786
Default	56
Units	octets
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **timeout** *number*

Synopsis	Wait time before ICMP echo request is declared lost
Context	<b>configure</b> <a href="#">test-oam icmp ping-template</a> <i>string</i> <b>timeout</b> <i>number</i>
Tree	<a href="#">timeout</a>
Range	1 to 60
Default	5
Units	seconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ttl** *number*

Synopsis	TTL value for the outgoing ping packet
Context	<b>configure</b> <a href="#">test-oam icmp ping-template</a> <i>string</i> <b>tll</b> <i>number</i>
Tree	<a href="#">ttl</a>
Description	This command configures the TTL value used in the outgoing ping packet. The tested interface must be directly connected on the same subnet.
Range	1 to 255
Default	1
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **link-measurement**

Synopsis	Enter the <b>link-measurement</b> context
Context	<b>configure</b> <a href="#">test-oam link-measurement</a>
Tree	<a href="#">link-measurement</a>

Description	Commands in this context configure the link measurement template attributes that are inherited on associated IP interfaces for delay reporting to the routing engine.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **measurement-template** [[template-name](#)] *string*

Synopsis	Enter the <b>measurement-template</b> list instance
Context	<b>configure</b> <a href="#">test-oam</a> <a href="#">link-measurement</a> <a href="#">measurement-template</a> <i>string</i>
Tree	<a href="#">measurement-template</a>
Description	Commands in this context configure the attributes of the measurement template that can be assigned to an IP interface.  Changes can be made without disabling the template, although some modifications cause the test on associated IP interfaces to terminate and restart.  A measurement template can be removed if no interfaces reference it.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **[template-name]** *string*

Synopsis	Measurement template name
Context	<b>configure</b> <a href="#">test-oam</a> <a href="#">link-measurement</a> <a href="#">measurement-template</a> <i>string</i>
Tree	<a href="#">measurement-template</a>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **admin-state** *keyword*

Synopsis	Administrative state of the measurement template
Context	<b>configure</b> <a href="#">test-oam</a> <a href="#">link-measurement</a> <a href="#">measurement-template</a> <i>string</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable

Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## aggregate-sample-window

Synopsis	Enter the <b>aggregate-sample-window</b> context
Context	<b>configure</b> <a href="#">test-oam link-measurement measurement-template</a> <i>string</i> <a href="#">aggregate-sample-window</a>
Tree	<a href="#">aggregate-sample-window</a>
Description	Commands in this context configure the attributes of the aggregate sample window used with the measurement template assigned to an IP interface. The aggregate sample window is the collection of sample windows.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## multiplier *number*

Synopsis	Number of sample windows in the aggregate sample window
Context	<b>configure</b> <a href="#">test-oam link-measurement measurement-template</a> <i>string</i> <a href="#">aggregate-sample-window</a> <a href="#">multiplier</a> <i>number</i>
Tree	<a href="#">multiplier</a>
Range	1 to 12
Default	12
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## threshold

Synopsis	Enter the <b>threshold</b> context
Context	<b>configure</b> <a href="#">test-oam link-measurement measurement-template</a> <i>string</i> <a href="#">aggregate-sample-window</a> <a href="#">threshold</a>
Tree	<a href="#">threshold</a>
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **absolute** *number*

Synopsis	Absolute delta for delay measurement reporting
Context	<b>configure</b> <a href="#">test-oam link-measurement measurement-template</a> <i>string</i> <a href="#">aggregate-sample-window threshold absolute</a> <i>number</i>
Tree	<a href="#">absolute</a>
Description	This command configures the absolute minimum delta by which a new delay measurement must differ from the previously reported measurement to be reported to the routing engine.  If an absolute value is not configured the threshold is disabled.
Range	1 to 100000
Units	microseconds
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **relative** *number*

Synopsis	Relative delta for measurement reporting
Context	<b>configure</b> <a href="#">test-oam link-measurement measurement-template</a> <i>string</i> <a href="#">aggregate-sample-window threshold relative</a> <i>number</i>
Tree	<a href="#">relative</a>
Description	This command configures the relative minimum delta by which a new delay measurement must differ from the previously reported measurement to be reported to the routing engine.  If a relative value is not configured, the threshold is disabled.
Range	1 to 100
Units	percent
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **window-integrity** *number*

Synopsis	Sample percentage required for window integrity report
Context	<b>configure</b> <a href="#">test-oam link-measurement measurement-template</a> <i>string</i> <a href="#">aggregate-sample-window window-integrity</a> <i>number</i>
Tree	<a href="#">window-integrity</a>
Description	This command configures the percentage value that is used to determine whether the aggregate sample window is integral, by comparing the number of samples received from the sample window to the percentage configured.

The configured percentage translates to a required sample window count that must be included in the aggregate sample window. The number of samples is computed as follows:

$$(\text{window-integrity (\%)}) \times (((\text{aggregate-sample-window length (s)}) / (\text{sample-window length (s)}))$$

If the number of samples in the aggregate sample window is equal to or greater than the computed number of required samples, the sample window has integrity and the aggregate sample window result is compared to the configured sample window thresholds.

If the count is less than the computed number of required samples, the aggregate sample window does not have integrity and the value is not considered as representative. In this case the aggregate sample window results are not compared to the configured sample window thresholds.

If this parameter is not configured, integrity checking is disabled and all results are compared to the configured thresholds.

Range	1 to 100
Units	percent
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **delay** *keyword*

Synopsis	Delay measurement statistic type
Context	<b>configure</b> <a href="#">test-oam</a> <a href="#">link-measurement</a> <a href="#">measurement-template</a> <i>string</i> <b>delay</b> <i>keyword</i>
Tree	<a href="#">delay</a>
Description	This command configures the type of delay measurement statistic used in the sample window and aggregate sample window.
Default	min
Options	min, max, avg
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">test-oam</a> <a href="#">link-measurement</a> <a href="#">measurement-template</a> <i>string</i> <b>description</b> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80

Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **interval** *number*

Synopsis	Interval between test packet transmissions
Context	<b>configure</b> test-oam link-measurement measurement-template <i>string</i> interval <i>number</i>
Tree	interval
Range	1 to 10
Default	1
Units	seconds
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **last-reported-delay-hold** *number*

Synopsis	Time to wait to flush the last reported delay
Context	<b>configure</b> test-oam link-measurement measurement-template <i>string</i> last-reported-delay-hold <i>number</i>
Tree	last-reported-delay-hold
Description	<p>This command configures the timer that specifies the wait time before the last reported delay measurement is flushed after a link measurement test enters the operationally down state.</p> <p>The aging timer delays the flushing of the last reported delay metric to the routing engine. This timer starts a countdown to zero when an administrative function causes the operational state of the test on that specific interface to transition from up to down. If the timer expires before the operational state transitions to up, the previously reported value is flushed. The Delay Measurement Last Reported indicates "Cleared". The timestamp indicates the time of the clear event. The Triggered By indicates "Expired". If the administrative state recovers to operationally up before the expiration of the timer, the previous reported value is not flushed.</p> <p>The aging timer does not apply to failure conditions that do not affect the administrative state of the interface, for example interface failure or routing changes.</p>
Range	0   1 to 86400
Default	86400
Units	seconds
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## reporting *boolean*

Synopsis	Report behavior for values for the configured threshold
Context	<b>configure</b> <a href="#">test-oam link-measurement measurement-template</a> <i>string</i> <a href="#">reporting</a> <i>boolean</i>
Tree	<a href="#">reporting</a>
Description	<p>When configured to <b>true</b>, the system reports a reached threshold to the routing engine. Reaching a configured <b>sample-window</b> or <b>aggregate-sample-window</b> indicates a value of interest.</p> <p>When configured to <b>false</b>, values reaching thresholds are not reported to the routing engine. In both enabled and disabled cases, the sample-window and aggregate-sample-window information and computed values are stored on the node until overwriting occurs.</p>
Default	true
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## sample-window

Synopsis	Enter the <b>sample-window</b> context
Context	<b>configure</b> <a href="#">test-oam link-measurement measurement-template</a> <i>string</i> <a href="#">sample-window</a>
Tree	<a href="#">sample-window</a>
Description	Commands in this context configure sample window attributes used when the measurement template is assigned to an IP interface. The sample window is the collection of individual probe results over a defined period.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## multiplier *number*

Synopsis	Multiplier of interval used for sample window length
Context	<b>configure</b> <a href="#">test-oam link-measurement measurement-template</a> <i>string</i> <a href="#">sample-window</a> <a href="#">multiplier</a> <i>number</i>
Tree	<a href="#">multiplier</a>
Description	This command configures the number of probe results that should be in the sample window. For example, a multiplier of 10 and an interval of 5 equals 50 probes being transmitted from an individual sample window. Consequently, 50 probe results are expected within the 50 second duration that the sample window is "In-progress".
Range	1 to 900

Default	10
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## threshold

Synopsis	Enter the <b>threshold</b> context
Context	<b>configure</b> <a href="#">test-oam link-measurement measurement-template</a> <i>string</i> <a href="#">sample-window</a> <b>threshold</b>
Tree	<a href="#">threshold</a>
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## absolute *number*

Synopsis	Absolute delta for delay measurement reporting
Context	<b>configure</b> <a href="#">test-oam link-measurement measurement-template</a> <i>string</i> <a href="#">sample-window</a> <b>threshold</b> <b>absolute</b> <i>number</i>
Tree	<a href="#">absolute</a>
Description	This command configures the absolute minimum delta by which a new delay measurement must differ from the previously reported measurement to be reported to the routing engine.  If an absolute value is not configured the threshold is disabled.
Range	1 to 100000
Units	microseconds
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## relative *number*

Synopsis	Relative delta for delay measurement reporting
Context	<b>configure</b> <a href="#">test-oam link-measurement measurement-template</a> <i>string</i> <a href="#">sample-window</a> <b>threshold</b> <b>relative</b> <i>number</i>
Tree	<a href="#">relative</a>
Description	This command configures the relative minimum delta by which a new delay measurement must differ from the previously reported measurement to be reported to the routing engine.

	If a relative value is not configured, the threshold is disabled.
Range	1 to 500
Units	percent
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **window-integrity** *number*

Synopsis	Sample percentage required for window integrity report
Context	<b>configure</b> <b>test-oam</b> <b>link-measurement</b> <b>measurement-template</b> <i>string</i> <b>sample-window</b> <b>window-integrity</b> <i>number</i>
Tree	<b>window-integrity</b>
Description	<p>This command configures the percentage value that is used to determine whether the sample window has enough samples to be considered representative for that window (integrity), by comparing the number of samples received from the sample window to the percentage configured.</p> <p>The configured percentage considers the interval of probes and the length of the sample window to determine the number of packets required in the sample:</p> $(\text{window-integrity (\%)}) \times ((\text{sample-window length (s)}) / \text{pps per test (interval)})$ <p>If the count is less than the computed number of required samples, the sample window does not have integrity and the sample window results are not compared to configured sample window thresholds.</p> <p>If the count is equal to or greater than the computed number of required samples, the sample window has integrity and the aggregate sample window result is compared to the configured sample window thresholds.</p> <p>If the count is less than the computed number of required samples, the sample window does not have integrity and the value is not considered as representative. In this case the sample window results are not compared to the configured sample window thresholds.</p> <p>If this parameter is not configured, integrity checking is disabled and all results are compared to the configured thresholds.</p>
Range	1 to 100
Units	percent
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **twamp-light**

Synopsis	Enter the <b>twamp-light</b> context
----------	--------------------------------------

Context	<b>configure</b> <a href="#">test-oam link-measurement measurement-template</a> <i>string</i> <a href="#">twamp-light</a>
Tree	<a href="#">twamp-light</a>
Description	Commands in this context configure TWAMP Light attributes that are used with the measurement template when assigned to IP interfaces.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **allow-egress-remark-dscp** *boolean*

Synopsis	Allow overwrite of DSCP value by the egress QoS policy
Context	<b>configure</b> <a href="#">test-oam link-measurement measurement-template</a> <i>string</i> <a href="#">twamp-light</a> <a href="#">allow-egress-remark-dscp</a> <i>boolean</i>
Tree	<a href="#">allow-egress-remark-dscp</a>
Description	<p>When configured to <b>true</b>, the egress QoS process is able to modify the DSCP based on the egress QoS configuration and expose the DSCP to egress DSCP processing rules.</p> <p>When configured to <b>false</b>, the egress QoS process uses the DSCP as configured and bypasses egress QoS DSCP marking.</p> <p>If the <b>configure qos network egress remark-trusted force-egress-marking</b> command is configured for the network egress QoS profile, the egress QoS process is applied and the DSCP can be overwritten regardless of the <b>allow-egress-remark-dscp</b> configuration.</p>
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **allow-ipv6-udp-checksum-zero** *boolean*

Synopsis	Process IPv6 packets with UDP check sum zero
Context	<b>configure</b> <a href="#">test-oam link-measurement measurement-template</a> <i>string</i> <a href="#">twamp-light</a> <a href="#">allow-ipv6-udp-checksum-zero</a> <i>boolean</i>
Tree	<a href="#">allow-ipv6-udp-checksum-zero</a>
Description	<p>When configured to <b>true</b>, processing of IPv6 packets that arrive with a UDP checksum of zero is allowed. The destination UDP ports that are registered as TWAMP Test packets in the template allow this behavior.</p> <p>When configured to <b>false</b>, IPv6 packets that arrive with a UDP checksum of zero are discarded.</p>
Default	false
Introduced	21.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **dest-udp-port** *number*

Synopsis Destination UDP port used by link measurement tests

Context **configure** **test-oam link-measurement measurement-template** *string* **twamp-light dest-udp-port** *number*

Tree **dest-udp-port**

Description This command configures the destination UDP port on outbound TWAMP Light measurement packets sent from the session controller. The destination UDP port must match the UDP port value configured on the TWAMP Light reflector that responds to this specific TWAMP Light test.

Range 1 to 65535

Default 862

Introduced 21.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Tree	<a href="#">discovery-interval</a>

Description	This command configures transmission frequency of the discovery packet to the all-routers multicast group (ff02::2) to discover the link-local address of the peer. This frequency is used during the <b>discover-timer</b> interval.
Range	1 to 10
Default	10
Units	seconds
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **discover-timer** *number*

Context	<b>configure</b> <a href="#">test-oam</a> <a href="#">link-measurement</a> <a href="#">measurement-template</a> <i>string</i> <a href="#">twamp-light ipv6-destination-discovery</a> <b>discover-timer</b> <i>number</i>
Tree	<a href="#">discover-timer</a>
Description	This command configures the amount of time to transmit peer discovery packets at the <b>discover-interval</b> .  The timer starts when the IPv6 protocols is enabled under the <b>configure router interface if-attribute delay dynamic twamp-light ipv6</b> context. At the expiration of the <b>discover-interval</b> or when a peer is discovered, whichever comes first, the probe interval changes to the value configured for the <b>update-interval</b> .
Range	1 to 1800
Default	60
Units	seconds
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **update-interval** *number*

### **pad-tlv-size** *number*

Synopsis Optional PAD TLV size

Context **configure** [test-oam link-measurement measurement-template](#) *string* [twamp-light pad-tlv-size](#) *number*

Tree [pad-tlv-size](#)

Description This command enables a STAMP PDU to include the PAD TLV. This increases the size of the STAMP PDU by the size of the added TLV. The PAD TLV includes an all zeros pattern.

Range 4 to 9714

Units bytes

Introduced 22.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **profile** *keyword*

Synopsis QoS profile for packet treatment in local node

Context **configure** [test-oam link-measurement measurement-template](#) *string* [twamp-light profile](#) *keyword*

Tree [profile](#)

Description This command specifies if the packets should be treated as in or out of profile as they move through the local node.

Default in

Options in, out

Introduced 21.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **return-path**

Synopsis Enter the **return-path** context

Context **configure** [test-oam link-measurement measurement-template](#) *string* [twamp-light return-path](#)

Tree [return-path](#)

Description Commands in this context configure the return-path TLV carried in the STAMP PDU.

Introduced 22.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### link *boolean*

Synopsis The Return Path sub-TLV specifying link

Context **configure test-oam link-measurement measurement-template** *string twamp-light return-path link* *boolean*

Tree [link](#)

Description When configured to **true**, the system includes the **return-path** TLV link. The link sub-tlv instructs a Session-Reflector configured for type **stamp** to use the receiving logical IP interface for the transmission of the response packet from the reflector to the **session-sender**. The destination of the reflected packet must be installed in the forwarding table and reachable out the IP interface or the packet is dropped by the Session-Reflector. When there are parallel non-equal cost return paths between the Session-Reflector and the Session-Sender the response packet can only be returned on the lowest cost path.

When configured to **false**, the Return Path TLV carried in the STAMP PDU is not included with the test packet.

Default false

Introduced 22.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### src-udp-port *number*

Synopsis Fixed source UDP port for link measurement tests

Context **configure test-oam link-measurement measurement-template** *string twamp-light src-udp-port* *number*

Tree [src-udp-port](#)

Description This command specifies a source UDP port for link measurement tests.

Unless required, Nokia suggests that the link measurement dynamically select an available source UDP port from the dynamic range. Before a UDP port in the configurable range can be configured as a source it must be owned by the application. Use the **configure test-oam twamp twamp-light source-udp-port-pools port pool-type** command to map the port range to the application.

By default a source UDP port allocates from the dynamic range. The configuration of the source port should only be configured when required for interoperability. When the source IP, destination IP, and destination UPD port are the same for a test, the source UDP port must be different in order to uniquely identify the session.

Range 64374 to 64383

Introduced 22.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**timestamp-format** *keyword*

Tree	<a href="#">timestamp-format</a>
Description	This command configures the format of the timestamp used in the TWAMP Light PDU and places the requested timestamp format in the packet using the appropriate epoch. This is unrelated to any time distribution protocol used to synchronize time between clocks.
Default	ntp
Options	ntp, ptp
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

oam-pm. The test-oam link-measurement measurement-template can only configure the src-udp-port when the port pool UDP source port is configured with a pool-type link-measurement. A pool-type cannot be changed if its current application is a test (either an oam-pm session or link-measurement template) and is configured to use the specified port, regardless of the administrative or operational state. The configuration reference linking to the source UDP prevents the change.

Synopsis	Host IP address that receives a constant ping probe
Context	<b>configure vrrp policy</b> <i>number</i> <b>priority-event host-unreachable</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> )
Tree	<b>host-unreachable</b>
Description	This command configures the host IP address for which the specific host unreachable priority event monitors connectivity with a continuous ICMP echo request (ping) probe.
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## drop-count *number*

Synopsis	Threshold for consecutive message send attempts
Context	<b>configure vrrp policy</b> <i>number</i> <b>priority-event host-unreachable</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>drop-count</b> <i>number</i>
Tree	<b>drop-count</b>
Range	1 to 60
Default	3

Introduced 16.0.R1

## 4 Deprecated and obsolete commands

This section lists the deprecated and obsolete commands in this major release.

## 4.1 Deprecated commands

This chapter provides a list of commands that are marked as “status deprecated” in the Nokia YANG models and the MD-CLI and should no longer be used. Only releases in which commands are initially deprecated are included in this section. If applicable, the equivalent configuration groups command is also deprecated (but not explicitly listed).

See the SR OS Software Release Notes for more information.
