Tree	<b>adj-sid</b>
Description	When configured to <b>true</b> , this command enables the allocation of statistic indexes to each programmed NHLFE corresponding to Adjacency SIDs (local and received by means of IGP advertisement). All NHLFEs associated to a given SID share the same index. If a statistics index is not available at allocation time, the allocation fails and the system retries the allocation. The system generates a log on the first fail and a log on the final successful allocation.
Default	false
Introduced	19.10.R1
Platforms	All

### node-sid *boolean*

Synopsis	Enable the allocation of statistics on node SIDs
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf3</b> <i>number</i> <b>segment-routing</b> <b>ingress-statistics</b> <b>node-sid</b> <i>boolean</i>
Tree	<b>node-sid</b>
Default	false
Introduced	19.10.R1
Platforms	All

### prefix-sid-range

Synopsis	Enable the <b>prefix-sid-range</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf3</b> <i>number</i> <b>segment-routing</b> <b>prefix-sid-range</b>
Tree	<b>prefix-sid-range</b>
Description	Commands in this context configure the label block BGP segment routing can use.
Introduced	16.0.R4
Platforms	All

### global

Synopsis	BGP global SR range allocation
----------	--------------------------------

Context	<b>configure router string ospf3 number segment-routing prefix-sid-range global</b>
Tree	<b>global</b>
Description	When configured, the system allows BGP to allocate labels from the SRGB space, as defined under the <b>configure router mpls-labels sr-labels</b> context.
Notes	The following elements are part of a choice: <b>global</b> or ( <b>max-index</b> and <b>start-label</b> ).
Introduced	16.0.R4
Platforms	All

### **max-index number**

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Upper bound value for the local SID index
Context	<b>configure router string ospf3 number segment-routing prefix-sid-range max-index number</b>
Tree	<b>max-index</b>
Range	0 to 524287
Default	1
Notes	The following elements are part of a choice: <b>global</b> or ( <b>max-index</b> and <b>start-label</b> ).
Introduced	16.0.R4
Platforms	All

### **start-label number**

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Lower bound value for the local label offset
Context	<b>configure router string ospf3 number segment-routing prefix-sid-range start-label number</b>
Tree	<b>start-label</b>
Range	0 to 524287
Default	0
Notes	The following elements are part of a choice: <b>global</b> or ( <b>max-index</b> and <b>start-label</b> ).

Introduced	16.0.R4
Platforms	All

### **tunnel-mtu** *number*

Synopsis	Tunnel MTU size
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf3</b> <i>number</i> <b>segment-routing</b> <b>tunnel-mtu</b> <i>number</i>
Tree	<b>tunnel-mtu</b>
Range	512 to 9786
Introduced	16.0.R4
Platforms	All

### **tunnel-table-pref** *number*

Synopsis	Preference of SR tunnels created by the IGP instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf3</b> <i>number</i> <b>segment-routing</b> <b>tunnel-table-pref</b> <i>number</i>
Tree	<b>tunnel-table-pref</b>

**Description** This command configures the TTM preference of shortest path SR tunnels created by the IGP instance. This is used for BGP shortcuts, VPRN auto-bind, or BGP transport tunnel when the tunnel binding commands are configured to the **any** value, which parses the TTM for tunnels in the protocol preference order. The user can choose to either accept the global TTM preference or explicitly list the tunnel types they want to use. If the user lists the tunnel type explicitly, the TTM preference is still used to select one type over the other. In both cases, a fallback to the next preferred tunnel type is performed if the selected type fails. A reversion to a more preferred tunnel type is performed as soon as one is available.

The segment routing module adds to the TTM an SR tunnel entry for each resolved remote node SID prefix and programs the data path having the corresponding LTN with the push operation pointing to the primary and LFA backup NHLFEs.

The default preference for shortest path SR tunnels in the TTM is set lower than LDP tunnels but higher than BGP tunnels to allow controlled migration of customers without disrupting their current deployment when they enable segment routing. The following is the value of the default preference for the various tunnel types. This includes the preference of SR tunnels based on shortest path (referred to as SR-ISIS and SR-OSPF).

**Note:** The preference of an SR-TE LSP is not configurable and is the second most preferred tunnel type after RSVP-TE. The preference is the same whether if the SR-TE LSP was resolved in IS-IS or OSPF.

The global default TTM preference for the tunnel types is as follows:

- ROUTE\_PREF\_RSVP 7
- ROUTE\_PREF\_SR\_TE 8

- `ROUTE_PREF_LDP 9`
- `ROUTE_PREF_OSPF_TTM 10`
- `ROUTE_PREF_ISIS_TTM 11`
- `ROUTE_PREF_BGP_TTM 12`
- `ROUTE_PREF_GRE 255`

The default value for SR-ISIS or SR-OSPF is the same regardless if one or more IS-ISIS or OSPF instances programmed a tunnel for the same prefix. The selection of a SR tunnel in this case will be based on the lowest IGP instance ID. Similarly, IPv6 SR-ISIS and SR-OSPF3 tunnels are programmed into TTMv6 with the same default preference value as IPv4 SR-ISIS and IPv4 SR-OSPF respectively.

Nokia recommends not to set two or more tunnel types to the same preference value. In such a situation, the tunnel table prefers the tunnel type which was first introduced in SR OS implementation historically.

Range	1 to 255
Default	10
Introduced	16.0.R4
Platforms	All

## timers

Synopsis	Enter the <b>timers</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf3</a> <i>number</i> <a href="#">timers</a>
Tree	<a href="#">timers</a>
Introduced	16.0.R1
Platforms	All

## incremental-spf-wait *number*

Synopsis	Delay time before an incremental SPF calculation starts
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ospf3</a> <i>number</i> <a href="#">timers</a> <a href="#">incremental-spf-wait</a> <i>number</i>
Tree	<a href="#">incremental-spf-wait</a>
Range	0 to 1000
Default	1000
Units	milliseconds
Introduced	16.0.R1
Platforms	All

### **lsa-accumulate** *number*

Synopsis	Delay to gather LSAs before advertising to neighbors
Context	<b>configure</b> <b>router</b> <i>string ospf3 number timers lsa-accumulate number</i>
Tree	<a href="#">lsa-accumulate</a>
Range	0 to 1000
Default	1000
Units	milliseconds
Introduced	16.0.R1
Platforms	All

### **lsa-arrival** *number*

Synopsis	Min delay between receipt of same LSAs from neighbors
Context	<b>configure</b> <b>router</b> <i>string ospf3 number timers lsa-arrival number</i>
Tree	<a href="#">lsa-arrival</a>
Range	0 to 600000
Default	1000
Units	milliseconds
Introduced	16.0.R1
Platforms	All

### **lsa-generate**

Synopsis	Enter the <b>lsa-generate</b> context
Context	<b>configure</b> <b>router</b> <i>string ospf3 number timers lsa-generate</i>
Tree	<a href="#">lsa-generate</a>
Introduced	16.0.R1
Platforms	All

### **lsa-initial-wait** *number*

Synopsis	First wait period between OSPF LSA generation
Context	<b>configure</b> <b>router</b> <i>string ospf3 number timers lsa-generate lsa-initial-wait number</i>
Tree	<a href="#">lsa-initial-wait</a>

Range	10 to 600000
Default	5000
Units	milliseconds
Introduced	16.0.R1
Platforms	All

### **lsa-second-wait** *number*

Synopsis	Hold time between the first and second LSA generation
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf3</b> <i>number</i> <b>timers</b> <b>lsa-generate</b> <b>lsa-second-wait</b> <i>number</i>
Tree	<a href="#">lsa-second-wait</a>
Range	10 to 600000
Default	5000
Units	milliseconds
Introduced	16.0.R1
Platforms	All

### **max-lsa-wait** *number*

Synopsis	Max time between two LSAs being generated
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf3</b> <i>number</i> <b>timers</b> <b>lsa-generate</b> <b>max-lsa-wait</b> <i>number</i>
Tree	<a href="#">max-lsa-wait</a>
Range	10 to 600000
Default	5000
Units	milliseconds
Introduced	16.0.R1
Platforms	All

### **redistribute-delay** *number*

Synopsis	Hold down timer for external routes into OSPF
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ospf3</b> <i>number</i> <b>timers</b> <b>redistribute-delay</b> <i>number</i>
Tree	<a href="#">redistribute-delay</a>
Range	0 to 1000
Default	1000

Units	milliseconds
Introduced	16.0.R1
Platforms	All

### **spf-wait**

Range	1 to 255
Default	30
Units	seconds
Introduced	16.0.R4
Platforms	All

### **local-address** *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local IPv4 address of the PCEP speaker
Context	<b>configure</b> <i>router string pcep pcc local-address string</i>
Tree	<a href="#">local-address</a>
Description	This command configures the local IPv4 address of the PCEP speaker.  See "PCEP session establishment and maintenance" in the <i>7750 SR and 7950 XRS Segment Routing and PCE User Guide</i> for more information about configuring a PCEP local IPv4 address to establish a PCEP session.
Introduced	16.0.R4
Platforms	All

### local-address-ipv6 *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local IPv6 address of the PCEP speaker
Context	<b>configure</b> <i>router string pcep pcc local-address-ipv6 string</i>
Tree	<a href="#">local-address-ipv6</a>
Description	This command configures the local IPv6 address of the PCEP speaker.  See "PCEP session establishment and maintenance" in the <i>7750 SR and 7950 XRS Segment Routing and PCE User Guide</i> for more information about configuring a PCEP local IPv6 address to establish a PCEP session.
Introduced	20.2.R1
Platforms	All

### max-srte-pce-init-lsps *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Configure max sr te pce init LSP
Context	<b>configure</b> <i>router string pcep pcc max-srte-pce-init-lsps number</i>
Tree	<a href="#">max-srte-pce-init-lsps</a>
Range	0 to 8191
Default	8191
Introduced	16.0.R5

Platforms All

## **pce-associations**

Synopsis Enter the **pce-associations** context  
Context **configure router** *string* [pcep pcc pce-associations](#)  
Tree [pce-associations](#)  
Description Commands in this context configure PCE association groups.  
Introduced 22.5.R1  
Platforms All

## **diversity** [[assoc-name](#)] *string*

Synopsis Enter the **diversity** list instance  
Context **configure router** *string* [pcep pcc pce-associations diversity](#) *string*  
Tree [diversity](#)  
Description Commands in this context create a named diversity association from which the parameters for the specified diversity association are configured.  
Introduced 22.5.R1  
Platforms All

## **[assoc-name]** *string*

Synopsis Name of the association group  
Context **configure router** *string* [pcep pcc pce-associations diversity](#) *string*  
Tree [diversity](#)  
String Length 1 to 32  
Notes This element is part of a list key.  
Introduced 22.5.R1  
Platforms All

## **association-id** *number*

Synopsis Association ID for the diversity association group  
Context **configure router** *string* [pcep pcc pce-associations diversity](#) *string* [association-id](#) *number*

Tree	<a href="#">association-id</a>
Description	This command configures the diversity association ID. The user must specify an association ID.
Range	0 to 65535
Default	0
Introduced	22.5.R1
Platforms	All

### **association-source** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source IP address for the association
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">pcep</a> <a href="#">pcc</a> <a href="#">pce-associations</a> <a href="#">diversity</a> <i>string</i> <a href="#">association-source</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">association-source</a>
Description	This command configures the source IP address of the diversity association.
Introduced	22.5.R1
Platforms	All

### **disjointness-reference** *boolean*

Synopsis	Configure P-flag in the disjointness configuration TLV
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">pcep</a> <a href="#">pcc</a> <a href="#">pce-associations</a> <a href="#">diversity</a> <i>string</i> <a href="#">disjointness-reference</a> <i>boolean</i>
Tree	<a href="#">disjointness-reference</a>
Description	<p>When configured to <b>true</b>, the router sets the P-flag in the disjointness configuration TLV. When the P-flag is set, it indicates that this LSP path is the reference path for the disjoint set of paths. The PCE must first compute the path of this LSP and then apply the requested disjointness type to compute the path of all other paths in the same diversity association ID.</p> <p>When configured to <b>false</b>, the router does not set the P-flag in the disjointness configuration TLV.</p>
Default	false
Introduced	22.5.R1
Platforms	All

### **disjointness-type** *keyword*

Synopsis	Disjointness type for the association group
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pcep</b> <b>pcc</b> <b>pce-associations</b> <b>diversity</b> <i>string</i> <b>disjointness-type</b> <i>keyword</i>
Tree	<b>disjointness-type</b>
Description	This command configures the disjointness type for the association group.
Default	loose
Options	strict, loose
Introduced	22.5.R1
Platforms	All

### **diversity-type** *keyword*

Synopsis	Diversity type for the association group
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pcep</b> <b>pcc</b> <b>pce-associations</b> <b>diversity</b> <i>string</i> <b>diversity-type</b> <i>keyword</i>
Tree	<b>diversity-type</b>
Description	This command configures the diversity type for the association group.
Default	none
Options	none, link, node, srlg-link, srlg-node
Introduced	22.5.R1
Platforms	All

### **policy** [**assoc-name**] *string*

Synopsis	Enter the <b>policy</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pcep</b> <b>pcc</b> <b>pce-associations</b> <b>policy</b> <i>string</i>
Tree	<b>policy</b>
Description	Commands in this context create a named policy association from which the parameters for the specified policy association are configured.
Introduced	22.5.R1
Platforms	All

### **[assoc-name]** *string*

Synopsis	Name of the association group
----------	-------------------------------

Context	<b>configure router</b> <i>string</i> <b>pcep pcc pce-associations policy</b> <i>string</i>
Tree	<b>policy</b>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	22.5.R1
Platforms	All

### **association-id** *number*

Synopsis	Association ID for the policy association group
Context	<b>configure router</b> <i>string</i> <b>pcep pcc pce-associations policy</b> <i>string</i> <b>association-id</b> <i>number</i>
Tree	<b>association-id</b>
Description	This command configures the policy association ID. The user must specify an association ID.
Range	0 to 65535
Default	0
Introduced	22.5.R1
Platforms	All

### **association-source** (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Source IP address for the association
Context	<b>configure router</b> <i>string</i> <b>pcep pcc pce-associations policy</b> <i>string</i> <b>association-source</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> )
Tree	<b>association-source</b>
Description	This command configures the source IP address of the policy association.
Introduced	22.5.R1
Platforms	All

### **peer** [*ip-address*] (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Enter the <b>peer</b> list instance
Context	<b>configure router</b> <i>string</i> <b>pcep pcc peer</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> )
Tree	<b>peer</b>
Max. Instances	2

Introduced 16.0.R4  
Platforms All

### **[ip-address]** (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis Destination IP address of a PCE peer in a PCEP session  
Context **configure** *router string pcep pcc peer (ipv4-address-no-zone | ipv6-address-no-zone)*  
Tree *peer*  
Notes This element is part of a list key.  
Introduced 16.0.R4  
Platforms All

### **admin-state** *keyword*

Synopsis Administrative state of the PCC peer  
Context **configure** *router string pcep pcc peer (ipv4-address-no-zone | ipv6-address-no-zone) admin-state keyword*  
Tree *admin-state*  
Default *disable*  
Options *enable, disable*  
Introduced 16.0.R4  
Platforms All

### **preference** *number*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Preference value of the peer  
Context **configure** *router string pcep pcc peer (ipv4-address-no-zone | ipv6-address-no-zone) preference number*  
Tree *preference*  
Range 0 to 100  
Default 0  
Introduced 16.0.R4

Platforms All

## route-preference *keyword*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Route preference to reach the PCE server
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pcep pcc peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>route-preference</b> <i>keyword</i>
Tree	<b>route-preference</b>
Description	This command specifies the routing preference to reach the PCE server. If the configured option is to use both in-band and out-of-band routes, the out-of-band routes in the management routing instance are used to reach the PCE server before the in-band routes in the Base routing instance.
Default	both
Options	inband, outband, both
Introduced	21.10.R1
Platforms	All

## tls-client-profile *reference*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	TLS client profile name assigned to this PCC peer
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pcep pcc peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>tls-client-profile</b> <i>reference</i>
Tree	<b>tls-client-profile</b>
Reference	<b>configure</b> <b>system</b> <b>security</b> <b>tls</b> <b>client-tls-profile</b> <i>string</i>
Introduced	21.10.R1
Platforms	All

## tls-wait-timer *number*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time the PCC waits until declaring handshake failure
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pcep</b> <b>pcc</b> <b>peer</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>tls-wait-timer</b> <i>number</i>
Tree	<b>tls-wait-timer</b>
Range	60 to 255
Default	60
Units	seconds
Introduced	21.10.R1
Platforms	All

## redelegation-timer *number*

Synopsis	Configure redelegation-timer
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pcep</b> <b>pcc</b> <b>redelegation-timer</b> <i>number</i>
Tree	<b>redelegation-timer</b>
Range	1 to 3600
Default	90
Units	seconds
Introduced	16.0.R4
Platforms	All

## report-path-constraints *boolean*

Synopsis	Include LSP path constraints in PCE report messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pcep</b> <b>pcc</b> <b>report-path-constraints</b> <i>boolean</i>
Tree	<b>report-path-constraints</b>
Default	true
Introduced	16.0.R4
Platforms	All

## state-timer

Synopsis	Enter the <b>state-timer</b> context
Context	<b>configure</b> <i>router string</i> <i>pcep pcc state-timer</i>
Tree	<i>state-timer</i>
Introduced	16.0.R4
Platforms	All

## timer number

Synopsis	Configure state-timer
Context	<b>configure</b> <i>router string pcep pcc state-timer timer number</i>
Tree	<i>timer</i>
Range	1 to 3600
Default	180
Units	seconds
Introduced	16.0.R4
Platforms	All

## timer-action keyword

Synopsis	State timer action remove/none
Context	<b>configure</b> <i>router string pcep pcc state-timer timer-action keyword</i>
Tree	<i>timer-action</i>
Default	remove
Options	none, remove
Introduced	16.0.R4
Platforms	All

## unknown-message-rate number

Synopsis	Configure unknown message rate
Context	<b>configure</b> <i>router string pcep pcc unknown-message-rate number</i>
Tree	<i>unknown-message-rate</i>
Range	1 to 255
Default	10

Introduced 16.0.R4  
Platforms All

## **pcp**

Synopsis Enter the **pcp** context  
Context **configure** *router string* **pcp**  
Tree **pcp**  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **server** [*name*] *string*

Synopsis Enter the **server** list instance  
Context **configure** *router string* **pcp server** *string*  
Tree **server**  
Max. Instances 8  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **[name]** *string*

Synopsis PCP server name  
Context **configure** *router string* **pcp server** *string*  
Tree **server**  
String Length 1 to 32  
Notes This element is part of a list key.  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **admin-state** *keyword*

Synopsis Administrative state of the PCP server  
Context **configure** *router string* **pcp server** *string* **admin-state** *keyword*

Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pcp server</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **dual-stack-lite-address** *string*

Synopsis	Inside Dual Stack Lite AFTR address
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pcp server</a> <i>string</i> <a href="#">dual-stack-lite-address</a> <i>string</i>
Tree	<a href="#">dual-stack-lite-address</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **fwd-inside-router** *string*

Synopsis	PCP forwarding inside virtual router instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pcp server</a> <i>string</i> <a href="#">fwd-inside-router</a> <i>string</i>
Tree	<a href="#">fwd-inside-router</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **interface** [[name](#)] *reference*

Synopsis	Add a list entry for <b>interface</b>
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pcp server</a> <i>string</i> <a href="#">interface</a> <i>reference</i>

Tree	<a href="#">interface</a>
Max. Instances	32
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[name]** *reference*

Synopsis	Interface name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pcp server</a> <i>string</i> <a href="#">interface</a> <i>reference</i>
Tree	<a href="#">interface</a>
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **policy** *reference*

Synopsis	PCP server policy
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pcp server</a> <i>string</i> <a href="#">policy</a> <i>reference</i>
Tree	<a href="#">policy</a>
Reference	<b>configure</b> <a href="#">service nat</a> <a href="#">pcp-server-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **pim**

Synopsis	Enable the <b>pim</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim</a>
Tree	<a href="#">pim</a>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of PIM
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Default	enable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **apply-to** *keyword*

Synopsis	IES and non-IES interfaces to create in PIM
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>apply-to</b> <i>keyword</i>
Tree	<b>apply-to</b>
Default	none
Options	ies, non-ies, all, none
Introduced	16.0.R1
Platforms	All

### **import**

Synopsis	Enter the <b>import</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>import</b>
Tree	<b>import</b>
Introduced	16.0.R1
Platforms	All

### **join-policy** *reference*

Synopsis	Character limit for policy name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>import</b> <b>join-policy</b> <i>reference</i>
Tree	<b>join-policy</b>
Reference	<b>configure</b> <b>policy-options</b> <b>policy-statement</b> <i>string</i>
Max. Instances	5

Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **register-policy** *reference*

Synopsis	Character limit for policy name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>import</b> <b>register-policy</b> <i>reference</i>
Tree	<b>register-policy</b>
Reference	<b>configure</b> <b>policy-options</b> <b>policy-statement</b> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **interface** [**interface-name**] *string*

Synopsis	Enter the <b>interface</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>interface</b> <i>string</i>
Tree	<b>interface</b>
Introduced	16.0.R1
Platforms	All

### [**interface-name**] *string*

Synopsis	Router interface name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>interface</b> <i>string</i>
Tree	<b>interface</b>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the PIM interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>interface</b> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Default	enable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **assert-period** *number*

Synopsis	Time for periodic refreshes of PIM Assert messages on an interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>interface</b> <i>string</i> <b>assert-period</b> <i>number</i>
Tree	<b>assert-period</b>
Range	1 to 300
Default	60
Introduced	16.0.R1
Platforms	All

### **bfd-liveness**

Synopsis	Enter the <b>bfd-liveness</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>interface</b> <i>string</i> <b>bfd-liveness</b>
Tree	<b>bfd-liveness</b>
Introduced	16.0.R1
Platforms	All

### **ipv4** *boolean*

Synopsis	Use Bidirectional Forwarding Detection for IPv4 on PIM interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>interface</b> <i>string</i> <b>bfd-liveness</b> <b>ipv4</b> <i>boolean</i>
Tree	<b>ipv4</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **ipv6 boolean**

Synopsis	Use Bidirectional Forwarding Detection for IPv6 on PIM interface
Context	<b>configure</b> <i>router string pim interface string bfd-liveness ipv6 boolean</i>
Tree	<a href="#">ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **bier-signaling-type**

Synopsis	Enter the <b>bier-signaling-type</b> context
Context	<b>configure</b> <i>router string pim interface string bier-signaling-type</i>
Tree	<a href="#">bier-signaling-type</a>
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ipv4 boolean**

Synopsis	Enable PIM IPv4 signaling through a BIER domain
Context	<b>configure</b> <i>router string pim interface string bier-signaling-type ipv4 boolean</i>
Tree	<a href="#">ipv4</a>
Default	false
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ipv6 boolean**

Synopsis	Enable PIM IPv6 signaling through a BIER domain
Context	<b>configure</b> <i>router string pim interface string bier-signaling-type ipv6 boolean</i>
Tree	<a href="#">ipv6</a>
Default	false
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **bsm-check-rtr-alert** *boolean*

Synopsis	Check router alert option in bootstrap messages received
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>interface</b> <i>string</i> <b>bsm-check-rtr-alert</b> <i>boolean</i>
Tree	<b>bsm-check-rtr-alert</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **hello-interval** *number*

Synopsis	Frequency at which PIM Hello messages are sent over this interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>interface</b> <i>string</i> <b>hello-interval</b> <i>number</i>
Tree	<b>hello-interval</b>
Range	0 to 255
Default	30
Introduced	16.0.R1
Platforms	All

### **hello-multiplier** *number*

Synopsis	Multiplier to determine the hold time for PIM neighbor
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>interface</b> <i>string</i> <b>hello-multiplier</b> <i>number</i>
Tree	<b>hello-multiplier</b>
Range	20 to 100
Default	35
Introduced	16.0.R1
Platforms	All

### **improved-assert** *boolean*

Synopsis	Allow improved assert processing on interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>interface</b> <i>string</i> <b>improved-assert</b> <i>boolean</i>
Tree	<b>improved-assert</b>
Default	true

Introduced 16.0.R1  
Platforms All

### **instant-prune-echo** *boolean*

Synopsis Allow PIM to send an instant prune echo when router starts the prune pending timer for PIM interface

Context **configure** *router string pim interface string instant-prune-echo boolean*

Tree [instant-prune-echo](#)

Default false

Introduced 16.0.R1

Platforms All

### **ipv4**

Synopsis Enter the **ipv4** context

Context **configure** *router string pim interface string ipv4*

Tree [ipv4](#)

Introduced 16.0.R1

Platforms All

### **monitor-oper-group**

Synopsis Enter the **monitor-oper-group** context

Context **configure** *router string pim interface string ipv4 monitor-oper-group*

Tree [monitor-oper-group](#)

Introduced 16.0.R1

Platforms All

### **name** *reference*

Synopsis Operational group identifier

Context **configure** *router string pim interface string ipv4 monitor-oper-group name reference*

Tree [name](#)

Reference **configure** *service oper-group string*

Introduced 16.0.R1  
Platforms All

### **operation** *keyword*

Synopsis Operation performed when operational group is active  
Context **configure** *router string pim interface string ipv4 monitor-oper-group operation keyword*  
Tree [operation](#)  
Options add, subtract, set  
Introduced 16.0.R1  
Platforms All

### **priority-delta** *number*

Synopsis Delta priority with operation when operational group is active  
Context **configure** *router string pim interface string ipv4 monitor-oper-group priority-delta number*  
Tree [priority-delta](#)  
Range 1 to 4294967295  
Introduced 16.0.R1  
Platforms All

### **multicast** *boolean*

Synopsis Enable PIM interface operation  
Context **configure** *router string pim interface string ipv4 multicast boolean*  
Tree [multicast](#)  
Default true  
Introduced 16.0.R1  
Platforms All

### **ipv6**

Synopsis Enter the **ipv6** context  
Context **configure** *router string pim interface string ipv6*  
Tree [ipv6](#)

Introduced 16.0.R1  
Platforms All

## **monitor-oper-group**

Synopsis Enter the **monitor-oper-group** context  
Context **configure** [router](#) *string* [pim](#) [interface](#) *string* [ipv6](#) [monitor-oper-group](#)  
Tree [monitor-oper-group](#)  
Introduced 16.0.R1  
Platforms All

## **name** *reference*

Synopsis Operational group identifier  
Context **configure** [router](#) *string* [pim](#) [interface](#) *string* [ipv6](#) [monitor-oper-group](#) [name](#) *reference*  
Tree [name](#)  
Reference **configure** [service](#) [oper-group](#) *string*  
Introduced 16.0.R1  
Platforms All

## **operation** *keyword*

Synopsis Operation performed when operational group is active  
Context **configure** [router](#) *string* [pim](#) [interface](#) *string* [ipv6](#) [monitor-oper-group](#) [operation](#) *keyword*  
Tree [operation](#)  
Options add, subtract, set  
Introduced 16.0.R1  
Platforms All

## **priority-delta** *number*

Synopsis Delta priority with operation when operational group is active  
Context **configure** [router](#) *string* [pim](#) [interface](#) *string* [ipv6](#) [monitor-oper-group](#) [priority-delta](#) *number*  
Tree [priority-delta](#)

Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **multicast** *boolean*

Synopsis	Enable PIM interface operation
Context	<b>configure</b> <i>router string pim interface string ipv6 multicast boolean</i>
Tree	<i>multicast</i>
Default	true
Introduced	16.0.R1
Platforms	All

### **max-groups** *number*

Synopsis	Maximum number of groups for the interface
Context	<b>configure</b> <i>router string pim interface string max-groups number</i>
Tree	<i>max-groups</i>
Range	0   1 to 16000
Default	0
Introduced	16.0.R1
Platforms	All

### **mcac**

Synopsis	Enter the <b>mcac</b> context
Context	<b>configure</b> <i>router string pim interface string mcac</i>
Tree	<i>mcac</i>
Introduced	16.0.R1
Platforms	All

### **bandwidth**

Synopsis	Enter the <b>bandwidth</b> context
Context	<b>configure</b> <i>router string pim interface string mcac bandwidth</i>

Tree	<a href="#">bandwidth</a>
Introduced	16.0.R1
Platforms	All

### **mandatory** (*number* | *keyword*)

Synopsis	Pre-reserved bandwidth for all mandatory channels
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim</a> <a href="#">interface</a> <i>string</i> <a href="#">mcac</a> <a href="#">bandwidth</a> <a href="#">mandatory</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">mandatory</a>
Range	0 to 2147483647
Default	unlimited
Options	unlimited
Introduced	16.0.R1
Platforms	All

### **total** (*number* | *keyword*)

Synopsis	Maximum allowed bandwidth
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim</a> <a href="#">interface</a> <i>string</i> <a href="#">mcac</a> <a href="#">bandwidth</a> <a href="#">total</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">total</a>
Range	0 to 2147483647
Default	unlimited
Options	unlimited
Introduced	16.0.R1
Platforms	All

### **interface-policy** *reference*

Synopsis	Name of multicast CAC interface policy
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim</a> <a href="#">interface</a> <i>string</i> <a href="#">mcac</a> <a href="#">interface-policy</a> <i>reference</i>
Tree	<a href="#">interface-policy</a>
Reference	<b>configure</b> <a href="#">mcac</a> <a href="#">interface-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

## mc-constraints

Synopsis	Enter the <b>mc-constraints</b> context
Context	<b>configure</b> <i>router string pim interface string mcac mc-constraints</i>
Tree	<a href="#">mc-constraints</a>
Introduced	16.0.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of the multicast CAC constraints
Context	<b>configure</b> <i>router string pim interface string mcac mc-constraints admin-state keyword</i>
Tree	<a href="#">admin-state</a>
Default	enable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

## level [[level-id](#)] *number*

Synopsis	Enter the <b>level</b> list instance
Context	<b>configure</b> <i>router string pim interface string mcac mc-constraints level number</i>
Tree	<a href="#">level</a>
Introduced	16.0.R1
Platforms	All

## [[level-id](#)] *number*

Synopsis	Bandwidth level ID for an MCAC constraint
Context	<b>configure</b> <i>router string pim interface string mcac mc-constraints level number</i>
Tree	<a href="#">level</a>
Range	1 to 8
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **bandwidth** *number*

Synopsis	Bandwidth available for this level
Context	<b>configure</b> <i>router string pim interface string mcac mc-constraints level number bandwidth number</i>
Tree	<b>bandwidth</b>
Range	0 to 2147483647
Units	kilobps
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **number-down** [**number-lag-port-down**] *number*

Synopsis	Enter the <b>number-down</b> list instance
Context	<b>configure</b> <i>router string pim interface string mcac mc-constraints number-down number</i>
Tree	<b>number-down</b>
Introduced	16.0.R1
Platforms	All

### **[number-lag-port-down]** *number*

Synopsis	Number of ports that are down in this LAG link
Context	<b>configure</b> <i>router string pim interface string mcac mc-constraints number-down number</i>
Tree	<b>number-down</b>
Range	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **level** *number*

Synopsis	Level ID to associate with number of down LAG ports
Context	<b>configure</b> <i>router string pim interface string mcac mc-constraints number-down number level number</i>

Tree	<a href="#">level</a>
Description	This command specifies the bandwidth for a given level. Level 1 has the highest priority and level 8 has the lowest priority.
Range	1 to 8
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **use-lag-port-weight** *boolean*

Synopsis	Use LAG port weight in calculating MCAC constraints
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim</a> <a href="#">interface</a> <i>string</i> <a href="#">mcac</a> <a href="#">mc-constraints</a> <a href="#">use-lag-port-weight</a> <i>boolean</i>
Tree	<a href="#">use-lag-port-weight</a>
Description	When configured to <b>true</b> , port weight is used when determining available bandwidth per level when LAG ports go down or come up. This command is required for proper operation on mixed port-speed LAGs and can also be used for unmixed port-speed LAGs.
Default	false
Introduced	16.0.R1
Platforms	All

### **policy** *reference*

Synopsis	Multicast CAC policy name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim</a> <a href="#">interface</a> <i>string</i> <a href="#">mcac</a> <a href="#">policy</a> <i>reference</i>
Tree	<a href="#">policy</a>
Description	<p>This command configures the name of the global channel bandwidth definition policy that is used for (H)MCAC and HQoS adjustment.</p> <p>Within the scope of HQoS adjustment, the channel definition policy under the group interface is used if redirection is unconfigured. In this case, the HQoS adjustment can be applied to IPoE subscribers in per-SAP replication mode.</p> <p>If redirection is configured, the channel bandwidth definition policy applied under the Layer 3 redirected interface is in effect.</p> <p>Hierarchical MCAC (HMCAC) is supported on two levels simultaneously:</p> <ul style="list-style-type: none"><li>• subscriber level and redirected interface when redirection is configured</li><li>• subscriber level and group-interface level when redirection is unconfigured</li></ul>

In HMCAC, the subscriber is checked against its bandwidth limits first, then against the bandwidth limits of the redirected or group interface. If redirection is configured but the policy is referenced only under the group interface, no admission control is executed (HMCAC or MCAC).

Reference	<b>configure mcac policy string</b>
Introduced	16.0.R1
Platforms	All

### **multicast-senders** *keyword*

Synopsis	Subnet matching for the incoming data packets
Context	<b>configure router string pim interface string multicast-senders keyword</b>
Tree	<b>multicast-senders</b>
Default	auto
Options	auto, always, never
Introduced	16.0.R1
Platforms	All

### **p2mp-ldp-tree-join**

Synopsis	Enter the <b>p2mp-ldp-tree-join</b> context
Context	<b>configure router string pim interface string p2mp-ldp-tree-join</b>
Tree	<b>p2mp-ldp-tree-join</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ipv4** *boolean*

Synopsis	Allow dynamic mLDP in-band signaling for IPv4 PIM joins
Context	<b>configure router string pim interface string p2mp-ldp-tree-join ipv4 boolean</b>
Tree	<b>ipv4</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ipv6 boolean**

Synopsis	Allow dynamic mLDP in-band signaling for IPv6 PIM joins
Context	<b>configure router</b> <i>string</i> <b>pim interface</b> <i>string</i> <b>p2mp-ldp-tree-join ipv6</b> <i>boolean</i>
Tree	<b>ipv6</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **priority number**

Synopsis	DR election priority for this interface
Context	<b>configure router</b> <i>string</i> <b>pim interface</b> <i>string</i> <b>priority</b> <i>number</i>
Tree	<b>priority</b>
Range	1 to 4294967295
Default	1
Introduced	16.0.R1
Platforms	All

### **sticky-dr**

Synopsis	Enable the <b>sticky-dr</b> context
Context	<b>configure router</b> <i>string</i> <b>pim interface</b> <i>string</i> <b>sticky-dr</b>
Tree	<b>sticky-dr</b>
Introduced	16.0.R1
Platforms	All

### **priority number**

Synopsis	DR election priority for this interface
Context	<b>configure router</b> <i>string</i> <b>pim interface</b> <i>string</i> <b>sticky-dr</b> <i>priority</i> <i>number</i>
Tree	<b>priority</b>
Range	1 to 4294967295
Default	1024
Introduced	16.0.R1
Platforms	All

### **three-way-hello** *boolean*

Synopsis	Allow three-way hello compatibility mode
Context	<b>configure</b> <i>router string pim interface string three-way-hello boolean</i>
Tree	<a href="#">three-way-hello</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **tracking-support** *boolean*

Synopsis	Allow upstream routers to explicitly track join membership
Context	<b>configure</b> <i>router string pim interface string tracking-support boolean</i>
Tree	<a href="#">tracking-support</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **ipv4**

Synopsis	Enter the <b>ipv4</b> context
Context	<b>configure</b> <i>router string pim ipv4</i>
Tree	<a href="#">ipv4</a>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of PIM operation for IPv4
Context	<b>configure</b> <i>router string pim ipv4 admin-state keyword</i>
Tree	<a href="#">admin-state</a>
Default	enable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

## gtm

Synopsis	Enter the <b>gtm</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim ipv4 gtm</a>
Tree	<a href="#">gtm</a>
Introduced	16.0.R1
Platforms	All

## auto-discovery *keyword*

Synopsis	Method for multicast VPN membership auto-discovery
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim ipv4 gtm auto-discovery</a> <i>keyword</i>
Tree	<a href="#">auto-discovery</a>
Options	bgp
Introduced	16.0.R1
Platforms	All

## multicast-fast-failover *boolean*

Synopsis	Use Multicast-Only Fast Reroute (MoFRR) functionality
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim ipv4 multicast-fast-failover</a> <i>boolean</i>
Tree	<a href="#">multicast-fast-failover</a>
Default	false
Introduced	16.0.R1
Platforms	All

## rpf-table *keyword*

Synopsis	Route tables for RPF lookup
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim ipv4 rpf-table</a> <i>keyword</i>
Tree	<a href="#">rpf-table</a>
Default	rtable-u
Options	rtable-m, rtable-u, both
Introduced	16.0.R1
Platforms	All

### **ssm-assert-compatible-mode** *boolean*

Synopsis	Enable SSM assert compatible mode
Context	<b>configure</b> <i>router</i> <i>string</i> <i>pim ipv4</i> <b>ssm-assert-compatible-mode</b> <i>boolean</i>
Tree	<a href="#">ssm-assert-compatible-mode</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **ssm-default-range** *boolean*

Synopsis	SSM default range
Context	<b>configure</b> <i>router</i> <i>string</i> <i>pim ipv4</i> <b>ssm-default-range</b> <i>boolean</i>
Tree	<a href="#">ssm-default-range</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **ipv6**

Synopsis	Enter the <b>ipv6</b> context
Context	<b>configure</b> <i>router</i> <i>string</i> <i>pim ipv6</i>
Tree	<a href="#">ipv6</a>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of PIM operation for IPv6
Context	<b>configure</b> <i>router</i> <i>string</i> <i>pim ipv6</i> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **multicast-fast-failover** *boolean*

Synopsis	Use Multicast-Only Fast Reroute (MoFRR) functionality
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>ipv6</b> <b>multicast-fast-failover</b> <i>boolean</i>
Tree	<b>multicast-fast-failover</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **rpf-table** *keyword*

Synopsis	Route tables for RPF lookup
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>ipv6</b> <b>rpf-table</b> <i>keyword</i>
Tree	<b>rpf-table</b>
Default	rtable-u
Options	rtable-m, rtable-u, both
Introduced	16.0.R1
Platforms	All

### **ssm-default-range** *boolean*

Synopsis	SSM default range
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>ipv6</b> <b>ssm-default-range</b> <i>boolean</i>
Tree	<b>ssm-default-range</b>
Default	true
Introduced	16.0.R1
Platforms	All

### **lag-usage-optimization** *boolean*

Synopsis	Optimize LAG usage
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>lag-usage-optimization</b> <i>boolean</i>
Tree	<b>lag-usage-optimization</b>
Default	false
Introduced	16.0.R1

Platforms All

### **mc-ecmp-balance** *boolean*

Synopsis Enable multicast balancing of traffic over ECMP links  
Context **configure** *router* *string* *pim* **mc-ecmp-balance** *boolean*  
Tree [mc-ecmp-balance](#)  
Default true  
Introduced 16.0.R1  
Platforms All

### **mc-ecmp-balance-hold** *number*

Synopsis Hold time for multicast balancing over ECMP links  
Context **configure** *router* *string* *pim* **mc-ecmp-balance-hold** *number*  
Tree [mc-ecmp-balance-hold](#)  
Range 2 to 600  
Units minutes  
Introduced 16.0.R1  
Platforms All

### **mc-ecmp-hashing**

Synopsis Enable the **mc-ecmp-hashing** context  
Context **configure** *router* *string* *pim* **mc-ecmp-hashing**  
Tree [mc-ecmp-hashing](#)  
Introduced 16.0.R1  
Platforms All

### **rebalance** *boolean*

Synopsis Rebalance flows to newly added links immediately instead of waiting until they are pruned  
Context **configure** *router* *string* *pim* **mc-ecmp-hashing** **rebalance** *boolean*  
Tree [rebalance](#)  
Default false

Introduced 16.0.R1  
Platforms All

### **mdt-spt** *boolean*

Synopsis Use SPT switchover for default MDT  
Context **configure** *router string pim mdt-spt boolean*  
Tree [mdt-spt](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **non-dr-attract-traffic** *boolean*

Synopsis Attract traffic when the router is not the designated one  
Context **configure** *router string pim non-dr-attract-traffic boolean*  
Tree [non-dr-attract-traffic](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **pim-ssm-scaling** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enable PIM-SSM scaling  
Context **configure** *router string pim pim-ssm-scaling boolean*  
Tree [pim-ssm-scaling](#)  
Description When configured to **true**, this command enables an increase of PIM SSM (S,G) scaling to a maximum of 256000 per system. The total maximum multicast capacity is, however, constrained by the lowest-performance FP.  
  
When the maximum link capacity from the fabric to the lowest-performance FP is reached, the link to that FP is overloaded, resulting in packet loss for all FPs. This capacity constraint is independent of whether the lowest-performance FP has a receiver on it or not. If the multicast management chassis per-plane total capacity is configured to an explicit value larger than that supported by the lowest-performance FP, then IMPM

believes that there is more plane capacity available than there actually is and the result is (S,G) packet loss instead of blackholing. By setting the multicast management chassis per-plane total capacity to **dynamic**, the system automatically sets the switch fabric multicast plane capacity to the minimum value supported by the fabric and all line cards in the system.

When PIM SSM scaling is enabled, the following multicast features are disabled:• DM• MoFRR• JP policy• SSM groups• InBand features (BIER and MLDP)• Extranet• ASM

When configured to **false**, there is no increase of PIM SSM (S,G) scaling.

Default	false
Introduced	19.7.R1
Platforms	All

## rp

Synopsis	Enter the <b>rp</b> context
Context	<b>configure</b> <i>router string</i> <b>pim rp</b>
Tree	<b>rp</b>
Introduced	16.0.R1
Platforms	All

## bootstrap

Synopsis	Enter the <b>bootstrap</b> context
Context	<b>configure</b> <i>router string</i> <b>pim rp bootstrap</b>
Tree	<b>bootstrap</b>
Introduced	16.0.R1
Platforms	All

## export *reference*

Synopsis	Character limit for policy name
Context	<b>configure</b> <i>router string</i> <b>pim rp bootstrap export reference</b>
Tree	<b>export</b>
Reference	<b>configure</b> <i>policy-options policy-statement</i> <b>string</b>
Max. Instances	5
Notes	This element is ordered by the user.

Introduced 16.0.R1  
Platforms All

Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **hash-mask-len** *number*

Synopsis	Length for bootstrap hash mask
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim</a> <a href="#">rp</a> <a href="#">ipv4</a> <a href="#">bsr-candidate</a> <a href="#">hash-mask-len</a> <i>number</i>
Tree	<a href="#">hash-mask-len</a>
Range	0 to 32
Default	30
Introduced	16.0.R1
Platforms	All

### **priority** *number*

Synopsis	Bootstrap priority of the router
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">pim</a> <a href="#">rp</a> <a href="#">ipv4</a> <a href="#">bsr-candidate</a> <a href="#">priority</a> <i>number</i>
Tree	<a href="#">priority</a>
Range	0 to 255
Default	0
Introduced	16.0.R1
Platforms	All

### **candidate** *boolean*

Synopsis	Enable auto-RP to advertise candidate RP information
Context	<b>configure</b> <i>router</i> <i>string</i> <i>pim rp ipv4 candidate</i> <i>boolean</i>
Tree	<i>candidate</i>
Description	When configured to <b>true</b> , the auto-RP is enabled to advertise the candidate RP information. The auto-RP candidate RP announces the candidate RP messages on the 224.0.1.39 multicast address. This functionality is in addition to the listener functionality enabled by the auto RP discovery.  When configured to <b>false</b> , the candidate RP information is not specified.
Default	false
Introduced	20.10.R1
Platforms	All

### **mapping-agent** *boolean*

Synopsis	Enable the mapping agent on the node
Context	<b>configure</b> <i>router</i> <i>string</i> <i>pim rp ipv4 mapping-agent</i> <i>boolean</i>
Tree	<i>mapping-agent</i>
Description	When configured to <b>true</b> , the mapping agent is enabled on the node. The auto-RP MA observes the <b>auto-rp-announcement</b> messages, selects the RP and generates the RP discovery 224.0.1.40 messages. This functionality is in addition to the auto-RP discovery functionality.
Default	false
Introduced	20.10.R1
Platforms	All

### **rp-candidate**

Synopsis	Enter the <b>rp-candidate</b> context
Context	<b>configure</b> <i>router</i> <i>string</i> <i>pim rp ipv4 rp-candidate</i>
Tree	<i>rp-candidate</i>
Introduced	16.0.R1
Platforms	All

### **address** *string*

Synopsis	Local RP address
----------	------------------

Context	<b>configure router</b> <i>string</i> <b>pim rp ipv4 rp-candidate address</b> <i>string</i>
Tree	<b>address</b>
Description	This command specifies the local RP address that is sent in the RP candidate advertisements to the Bootstrap Router.
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the Candidate RP
Context	<b>configure router</b> <i>string</i> <b>pim rp ipv4 rp-candidate admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **group-range** [**ipv4-prefix**] *string*

Synopsis	Add a list entry for <b>group-range</b>
Context	<b>configure router</b> <i>string</i> <b>pim rp ipv4 rp-candidate group-range</b> <i>string</i>
Tree	<b>group-range</b>
Introduced	16.0.R1
Platforms	All

### [**ipv4-prefix**] *string*

Synopsis	IPv4 address and prefix length
Context	<b>configure router</b> <i>string</i> <b>pim rp ipv4 rp-candidate group-range</b> <i>string</i>
Tree	<b>group-range</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **holdtime** *number*

Synopsis	Time during which the neighboring router considers this router to be up
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>rp</b> <b>ipv4</b> <b>rp-candidate</b> <b>holdtime</b> <i>number</i>
Tree	<b>holdtime</b>
Range	5 to 255
Default	150
Units	seconds
Introduced	16.0.R1
Platforms	All

### **priority** *number*

Synopsis	Candidate RP priority
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>rp</b> <b>ipv4</b> <b>rp-candidate</b> <b>priority</b> <i>number</i>
Tree	<b>priority</b>
Range	0 to 255
Default	192
Introduced	16.0.R1
Platforms	All

### **static**

Synopsis	Enter the <b>static</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>rp</b> <b>ipv4</b> <b>static</b>
Tree	<b>static</b>
Introduced	16.0.R1
Platforms	All

### **address** [*ipv4-address*] *string*

Synopsis	Enter the <b>address</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>rp</b> <b>ipv4</b> <b>static</b> <b>address</b> <i>string</i>
Tree	<b>address</b>
Introduced	16.0.R1
Platforms	All

### **[ipv4-address]** *string*

Synopsis	IPv4 address for the static RP
Context	<b>configure router</b> <i>string</i> <b>pim rp ipv4 static address</b> <i>string</i>
Tree	<b>address</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **group-prefix** [**ipv4-prefix**] *string*

Synopsis	Add a list entry for <b>group-prefix</b>
Context	<b>configure router</b> <i>string</i> <b>pim rp ipv4 static address</b> <i>string</i> <b>group-prefix</b> <i>string</i>
Tree	<b>group-prefix</b>
Introduced	16.0.R1
Platforms	All

### **[ipv4-prefix]** *string*

Synopsis	IPv4 address and prefix length
Context	<b>configure router</b> <i>string</i> <b>pim rp ipv4 static address</b> <i>string</i> <b>group-prefix</b> <i>string</i>
Tree	<b>group-prefix</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **override** *boolean*

Synopsis	Change the precedence for static RP over dynamically learnt RP
Context	<b>configure router</b> <i>string</i> <b>pim rp ipv4 static address</b> <i>string</i> <b>override</b> <i>boolean</i>
Tree	<b>override</b>
Default	false
Introduced	16.0.R1
Platforms	All

## ipv6

Synopsis	Enter the <b>ipv6</b> context
Context	<b>configure router</b> <i>string</i> <b>pim rp ipv6</b>
Tree	<b>ipv6</b>
Introduced	16.0.R1
Platforms	All

## **anycast** [**ipv6-address**] *string rp-set-peer string*

Synopsis	Add a list entry for <b>anycast</b>
Context	<b>configure router</b> <i>string</i> <b>pim rp ipv6 anycast</b> <i>string rp-set-peer string</i>
Tree	<b>anycast</b>
Introduced	16.0.R1
Platforms	All

## **[ipv6-address]** *string*

Synopsis	Loopback IP address shared by routes in RP set
Context	<b>configure router</b> <i>string</i> <b>pim rp ipv6 anycast</b> <i>string rp-set-peer string</i>
Tree	<b>anycast</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## **rp-set-peer** *string*

Synopsis	Peer in the anycast RP set
Context	<b>configure router</b> <i>string</i> <b>pim rp ipv6 anycast</b> <i>string rp-set-peer string</i>
Tree	<b>anycast</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## **bsr-candidate**

Synopsis	Enter the <b>bsr-candidate</b> context
Context	<b>configure router string pim rp ipv6 bsr-candidate</b>
Tree	<b>bsr-candidate</b>
Introduced	16.0.R1
Platforms	All

## **address string**

Synopsis	Candidate BSR IP address for Bootstrap Router election
Context	<b>configure router string pim rp ipv6 bsr-candidate address string</b>
Tree	<b>address</b>
Introduced	16.0.R1
Platforms	All

## **admin-state keyword**

Synopsis	Administrative state of the Candidate BSR
Context	<b>configure router string pim rp ipv6 bsr-candidate admin-state keyword</b>
Tree	<b>admin-state</b>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

## **hash-mask-len number**

Synopsis	Length for bootstrap hash mask
Context	<b>configure router string pim rp ipv6 bsr-candidate hash-mask-len number</b>
Tree	<b>hash-mask-len</b>
Range	0 to 128
Default	126
Introduced	16.0.R1
Platforms	All

### **priority** *number*

Synopsis	Bootstrap priority of the router
Context	<b>configure</b> <i>router string pim rp ipv6 bsr-candidate priority number</i>
Tree	<i>priority</i>
Range	0 to 255
Default	0
Introduced	16.0.R1
Platforms	All

### **embedded-rp**

Synopsis	Enable the <b>embedded-rp</b> context
Context	<b>configure</b> <i>router string pim rp ipv6 embedded-rp</i>
Tree	<i>embedded-rp</i>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of embedded RP
Context	<b>configure</b> <i>router string pim rp ipv6 embedded-rp admin-state keyword</i>
Tree	<i>admin-state</i>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **group-range** [*ipv6-prefix*] *string*

Synopsis	Add a list entry for <b>group-range</b>
Context	<b>configure</b> <i>router string pim rp ipv6 embedded-rp group-range string</i>
Tree	<i>group-range</i>
Introduced	16.0.R1
Platforms	All

### **[ipv6-prefix] string**

Synopsis	IPv6 address and prefix length
Context	<b>configure router string pim rp ipv6 embedded-rp group-range string</b>
Tree	<a href="#">group-range</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **rp-candidate**

Synopsis	Enter the <b>rp-candidate</b> context
Context	<b>configure router string pim rp ipv6 rp-candidate</b>
Tree	<a href="#">rp-candidate</a>
Introduced	16.0.R1
Platforms	All

### **address string**

Synopsis	Local RP address
Context	<b>configure router string pim rp ipv6 rp-candidate address string</b>
Tree	<a href="#">address</a>
Introduced	16.0.R1
Platforms	All

### **admin-state keyword**

Synopsis	Administrative state of the Candidate RP
Context	<b>configure router string pim rp ipv6 rp-candidate admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **group-range** [ipv6-prefix] *string*

Synopsis	Add a list entry for <b>group-range</b>
Context	<b>configure</b> <i>router string pim rp ipv6 rp-candidate group-range string</i>
Tree	<a href="#">group-range</a>
Introduced	16.0.R1
Platforms	All

### **[ipv6-prefix]** *string*

Synopsis	IPv6 address and prefix length
Context	<b>configure</b> <i>router string pim rp ipv6 rp-candidate group-range string</i>
Tree	<a href="#">group-range</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **holdtime** *number*

Synopsis	Time during which the neighboring router considers this router to be up
Context	<b>configure</b> <i>router string pim rp ipv6 rp-candidate holdtime number</i>
Tree	<a href="#">holdtime</a>
Range	5 to 255
Default	150
Units	seconds
Introduced	16.0.R1
Platforms	All

### **priority** *number*

Synopsis	Candidate RP priority
Context	<b>configure</b> <i>router string pim rp ipv6 rp-candidate priority number</i>
Tree	<a href="#">priority</a>
Range	0 to 255
Default	192

Introduced 16.0.R1  
Platforms All

## **static**

Synopsis Enter the **static** context  
Context **configure router string pim rp ipv6 static**  
Tree **static**  
Introduced 16.0.R1  
Platforms All

## **address [ipv6-address] string**

Synopsis Enter the **address** list instance  
Context **configure router string pim rp ipv6 static address string**  
Tree **address**  
Introduced 16.0.R1  
Platforms All

## **[ipv6-address] string**

Synopsis Static IP address of the RP  
Context **configure router string pim rp ipv6 static address string**  
Tree **address**  
Notes This element is part of a list key.  
Introduced 16.0.R1  
Platforms All

## **group-prefix [ipv6-prefix] string**

Synopsis Add a list entry for **group-prefix**  
Context **configure router string pim rp ipv6 static address string group-prefix string**  
Tree **group-prefix**  
Introduced 16.0.R1  
Platforms All

### [**ipv6-prefix**] *string*

Synopsis	IPv6 address and prefix length
Context	<b>configure router</b> <i>string</i> <b>pim rp ipv6 static address</b> <i>string</i> <b>group-prefix</b> <i>string</i>
Tree	<b>group-prefix</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **override** *boolean*

Synopsis	Change the precedence for static RP over dynamically learnt RP
Context	<b>configure router</b> <i>string</i> <b>pim rp ipv6 static address</b> <i>string</i> <b>override</b> <i>boolean</i>
Tree	<b>override</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **rpfv**

Synopsis	Enter the <b>rpfv</b> context
Context	<b>configure router</b> <i>string</i> <b>pim rpfv</b>
Tree	<b>rpfv</b>
Introduced	16.0.R1
Platforms	All

### **core** *boolean*

Synopsis	Include proxy RPF vector for core
Context	<b>configure router</b> <i>string</i> <b>pim rpfv core</b> <i>boolean</i>
Tree	<b>core</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **mvpn** *boolean*

Synopsis	Include proxy RPF vector for Inter-AS Rosen MVPN
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>rpfv</b> <b>mvpn</b> <i>boolean</i>
Tree	<b>mvpn</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **spt-switchover** [**ip-prefix**] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Enter the <b>spt-switchover</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>spt-switchover</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
Tree	<b>spt-switchover</b>
Introduced	16.0.R1
Platforms	All

### **[ip-prefix]** (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	IP address and mask length
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>spt-switchover</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
Tree	<b>spt-switchover</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **threshold** (*number* | *keyword*)

Synopsis	SPT switchover threshold
Context	<b>configure</b> <b>router</b> <i>string</i> <b>pim</b> <b>spt-switchover</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>threshold</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>threshold</b>
Range	1 to 4294967294
Units	kilobps
Options	infinity

Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

## ssm-groups

Synopsis	Enter the <b>ssm-groups</b> context
Context	<b>configure</b> <i>router string pim ssm-groups</i>
Tree	<a href="#">ssm-groups</a>
Introduced	16.0.R1
Platforms	All

## group-range [[ip-prefix](#)] (*ipv4-prefix | ipv6-prefix*)

Synopsis	Add a list entry for <b>group-range</b>
Context	<b>configure</b> <i>router string pim ssm-groups group-range (ipv4-prefix   ipv6-prefix)</i>
Tree	<a href="#">group-range</a>
Introduced	16.0.R1
Platforms	All

## [[ip-prefix](#)] (*ipv4-prefix | ipv6-prefix*)

Synopsis	IP address and mask length
Context	<b>configure</b> <i>router string pim ssm-groups group-range (ipv4-prefix   ipv6-prefix)</i>
Tree	<a href="#">group-range</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## radius

Synopsis	Enter the <b>radius</b> context
Context	<b>configure</b> <i>router string radius</i>
Tree	<a href="#">radius</a>
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **proxy** [*name*] *string*

Synopsis Enter the **proxy** list instance  
Context **configure** *router string radius proxy string*  
Tree *proxy*  
Max. Instances 8  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[name]** *string*

Synopsis RADIUS proxy name  
Context **configure** *router string radius proxy string*  
Tree *proxy*  
String Length 1 to 32  
Notes This element is part of a list key.  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis Administrative state of RADIUS proxy  
Context **configure** *router string radius proxy string admin-state keyword*  
Tree *admin-state*  
Default disable  
Options enable, disable  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **attribute-matching**

Synopsis Enter the **attribute-matching** context

Context **configure** *router string radius proxy string attribute-matching*  
Tree [attribute-matching](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **entry** [[index](#)] *number*

Synopsis Enter the **entry** list instance  
Context **configure** *router string radius proxy string attribute-matching entry number*  
Tree [entry](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[index]** *number*

Synopsis Index of this entry  
Context **configure** *router string radius proxy string attribute-matching entry number*  
Tree [entry](#)  
Range 1 to 32  
Notes This element is part of a list key.  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **accounting-server-policy** *string*

Synopsis Accounting server policy  
Context **configure** *router string radius proxy string attribute-matching entry number accounting-server-policy string*  
Tree [accounting-server-policy](#)  
String Length 1 to 32  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **authentication-server-policy** *string*

Synopsis	Authentication server policy
Context	<b>configure</b> <b>router</b> <i>string</i> <b>radius proxy</b> <i>string</i> <b>attribute-matching</b> <b>entry</b> <i>number</i> <b>authentication-server-policy</b> <i>string</i>
Tree	<b>authentication-server-policy</b>
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **prefix-string** *string*

Synopsis	Prefix string
Context	<b>configure</b> <b>router</b> <i>string</i> <b>radius proxy</b> <i>string</i> <b>attribute-matching</b> <b>entry</b> <i>number</i> <b>prefix-string</b> <i>string</i>
Tree	<b>prefix-string</b>
String Length	1 to 128
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **suffix-string** *string*

Synopsis	Prefix string
Context	<b>configure</b> <b>router</b> <i>string</i> <b>radius proxy</b> <i>string</i> <b>attribute-matching</b> <b>entry</b> <i>number</i> <b>suffix-string</b> <i>string</i>
Tree	<b>suffix-string</b>
String Length	1 to 128
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **type** *number*

Synopsis	Matching attribute type to RADIUS server policy
Context	<b>configure</b> <b>router</b> <i>string</i> <b>radius proxy</b> <i>string</i> <b>attribute-matching</b> <b>type</b> <i>number</i>
Tree	<b>type</b>
Range	1 to 255
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **vendor** (*number | keyword*)

Synopsis Matching Vendor ID to RADIUS server policy  
Context **configure** *router string radius proxy string attribute-matching vendor (number | keyword)*  
Tree *vendor*  
Range 1 to 16777215  
Options nokia  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **cache**

Synopsis Enter the **cache** context  
Context **configure** *router string radius proxy string cache*  
Tree *cache*  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis Administrative state of the RADIUS proxy cache  
Context **configure** *router string radius proxy string cache admin-state keyword*  
Tree *admin-state*  
Default disable  
Options enable, disable  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **key**

Synopsis Enable the **key** context  
Context **configure** *router string radius proxy string cache key*  
Tree *key*

Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **attribute-type** *number*

Synopsis RADIUS attribute type to cache for this RADIUS proxy server  
Context **configure** *router string radius proxy string cache key attribute-type number*  
Tree [attribute-type](#)  
Range 1 to 255  
Notes This element is mandatory.  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **packet-type** *keyword*

Synopsis Packet type of the RADIUS messages  
Context **configure** *router string radius proxy string cache key packet-type keyword*  
Tree [packet-type](#)  
Options access-request, access-accept  
Notes This element is mandatory.  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **vendor** (*number | keyword*)

Synopsis RADIUS Vendor ID  
Context **configure** *router string radius proxy string cache key vendor (number | keyword)*  
Tree [vendor](#)  
Range 1 to 16777215  
Options nokia  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **timeout** *number*

Synopsis	Idle timeout value
Context	<b>configure</b> <b>router</b> <i>string</i> <b>radius proxy</b> <i>string</i> <b>cache</b> <b>timeout</b> <i>number</i>
Tree	<b>timeout</b>
Range	60 to 3600
Default	300
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **track-accounting**

Synopsis	Enter the <b>track-accounting</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>radius proxy</b> <i>string</i> <b>cache</b> <b>track-accounting</b>
Tree	<b>track-accounting</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **accounting-off** *boolean*

Synopsis	Remove all ESM hosts associated with the RADIUS client
Context	<b>configure</b> <b>router</b> <i>string</i> <b>radius proxy</b> <i>string</i> <b>cache</b> <b>track-accounting</b> <b>accounting-off</b> <i>boolean</i>
Tree	<b>accounting-off</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **accounting-on** *boolean*

Synopsis	Remove all ESM hosts associated with the RADIUS client
Context	<b>configure</b> <b>router</b> <i>string</i> <b>radius proxy</b> <i>string</i> <b>cache</b> <b>track-accounting</b> <b>accounting-on</b> <i>boolean</i>
Tree	<b>accounting-on</b>
Default	false

Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **interim-update** *boolean*

Synopsis Update the ESM host with the RADIUS client that generated the interim update  
Context **configure** *router string radius proxy string cache track-accounting interim-update boolean*  
Tree [interim-update](#)  
Default false  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **start** *boolean*

Synopsis Update host with client that generated accounting-start  
Context **configure** *router string radius proxy string cache track-accounting start boolean*  
Tree [start](#)  
Default false  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **stop** *boolean*

Synopsis Remove ESM host and forward accounting-stop packet  
Context **configure** *router string radius proxy string cache track-accounting stop boolean*  
Tree [stop](#)  
Default false  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **track-authentication**

Synopsis Enter the **track-authentication** context  
Context **configure** *router string radius proxy string cache track-authentication*  
Tree [track-authentication](#)

Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **accept** *boolean*

Synopsis Track Access-Accept message for mobility  
Context **configure** *router string radius proxy string cache track-authentication accept boolean*  
Tree *accept*  
Default true  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **track-delete-hold-time** *number*

Synopsis Delete hold time  
Context **configure** *router string radius proxy string cache track-delete-hold-time number*  
Tree *track-delete-hold-time*  
Range 0 to 6000  
Default 0  
Units seconds  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **defaults**

Synopsis Enter the **defaults** context  
Context **configure** *router string radius proxy string defaults*  
Tree *defaults*  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **accounting-server-policy** *string*

Synopsis Default accounting RADIUS server policy  
Context **configure** *router string radius proxy string defaults accounting-server-policy string*

Tree [accounting-server-policy](#)  
String Length 1 to 32  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **authentication-server-policy** *string*

Synopsis Default authentication RADIUS server policy  
Context **configure** [router](#) *string* [radius proxy](#) *string* [defaults authentication-server-policy](#) *string*  
Tree [authentication-server-policy](#)  
String Length 1 to 32  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **description** *string*

Synopsis Text description  
Context **configure** [router](#) *string* [radius proxy](#) *string* [description](#) *string*  
Tree [description](#)  
String Length 1 to 80  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **interface** [[interface-name](#)] *string*

Synopsis Add a list entry for **interface**  
Context **configure** [router](#) *string* [radius proxy](#) *string* [interface](#) *string*  
Tree [interface](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[interface-name]** *string*

Synopsis IP interface name  
Context **configure** [router](#) *string* [radius proxy](#) *string* [interface](#) *string*

Tree	<a href="#">interface</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## load-balance-key

Synopsis	Enter the <b>load-balance-key</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <a href="#">load-balance-key</a>
Tree	<a href="#">load-balance-key</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## attribute-1

Synopsis	Enter the <b>attribute-1</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <a href="#">load-balance-key</a> <a href="#">attribute-1</a>
Tree	<a href="#">attribute-1</a>
Notes	The following elements are part of a choice: ( <b>attribute-1</b> , <b>attribute-2</b> , <b>attribute-3</b> , <b>attribute-4</b> , and <b>attribute-5</b> ) or <b>source-ip-udp</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## type *number*

Synopsis	Attribute type to cache for this RADIUS Proxy server
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <a href="#">load-balance-key</a> <a href="#">attribute-1</a> <i>type</i> <i>number</i>
Tree	<a href="#">type</a>
Range	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **vendor** (*number* | *keyword*)

Synopsis	Vendor-Id attribute
Context	<b>configure</b> <b>router</b> <i>string</i> <b>radius proxy</b> <i>string</i> <b>load-balance-key attribute-1</b> <b>vendor</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>vendor</b>
Range	1 to 16777215
Options	nokia
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **attribute-2**

Synopsis	Enter the <b>attribute-2</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>radius proxy</b> <i>string</i> <b>load-balance-key attribute-2</b>
Tree	<b>attribute-2</b>
Notes	The following elements are part of a choice: ( <b>attribute-1</b> , <b>attribute-2</b> , <b>attribute-3</b> , <b>attribute-4</b> , and <b>attribute-5</b> ) or <b>source-ip-udp</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **type** *number*

Synopsis	Attribute type to cache for this RADIUS Proxy server
Context	<b>configure</b> <b>router</b> <i>string</i> <b>radius proxy</b> <i>string</i> <b>load-balance-key attribute-2</b> <b>type</b> <i>number</i>
Tree	<b>type</b>
Range	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **vendor** (*number* | *keyword*)

Synopsis	Vendor-Id attribute
Context	<b>configure</b> <b>router</b> <i>string</i> <b>radius proxy</b> <i>string</i> <b>load-balance-key attribute-2</b> <b>vendor</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>vendor</b>
Range	1 to 16777215

Options	nokia
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **attribute-3**

Synopsis	Enter the <b>attribute-3</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <a href="#">load-balance-key</a> <a href="#">attribute-3</a>
Tree	<a href="#">attribute-3</a>
Notes	The following elements are part of a choice: ( <b>attribute-1</b> , <b>attribute-2</b> , <b>attribute-3</b> , <b>attribute-4</b> , and <b>attribute-5</b> ) or <b>source-ip-udp</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **type number**

Synopsis	Attribute type to cache for this RADIUS Proxy server
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <a href="#">load-balance-key</a> <a href="#">attribute-3</a> <a href="#">type</a> <i>number</i>
Tree	<a href="#">type</a>
Range	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **vendor (number | keyword)**

Synopsis	Vendor-Id attribute
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <a href="#">load-balance-key</a> <a href="#">attribute-3</a> <a href="#">vendor</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">vendor</a>
Range	1 to 16777215
Options	nokia
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## attribute-4

Synopsis	Enter the <b>attribute-4</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <a href="#">load-balance-key</a> <a href="#">attribute-4</a>
Tree	<a href="#">attribute-4</a>
Notes	The following elements are part of a choice: ( <b>attribute-1</b> , <b>attribute-2</b> , <b>attribute-3</b> , <b>attribute-4</b> , and <b>attribute-5</b> ) or <b>source-ip-udp</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## type *number*

Synopsis	Attribute type to cache for this RADIUS Proxy server
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <a href="#">load-balance-key</a> <a href="#">attribute-4</a> <a href="#">type</a> <i>number</i>
Tree	<a href="#">type</a>
Range	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## vendor (*number* | *keyword*)

Synopsis	Vendor-Id attribute
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <a href="#">load-balance-key</a> <a href="#">attribute-4</a> <a href="#">vendor</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">vendor</a>
Range	1 to 16777215
Options	nokia
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## attribute-5

Synopsis	Enter the <b>attribute-5</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <a href="#">load-balance-key</a> <a href="#">attribute-5</a>
Tree	<a href="#">attribute-5</a>
Notes	The following elements are part of a choice: ( <b>attribute-1</b> , <b>attribute-2</b> , <b>attribute-3</b> , <b>attribute-4</b> , and <b>attribute-5</b> ) or <b>source-ip-udp</b> .

Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **type** *number*

Synopsis Attribute type to cache for this RADIUS Proxy server  
Context **configure** *router string radius proxy string load-balance-key attribute-5 type number*  
Tree *type*  
Range 1 to 255  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **vendor** (*number | keyword*)

Synopsis Vendor-Id attribute  
Context **configure** *router string radius proxy string load-balance-key attribute-5 vendor (number | keyword)*  
Tree *vendor*  
Range 1 to 16777215  
Options nokia  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **source-ip-udp**

Synopsis Key to consist of the source IP address and source UDP port of the RADIUS message  
Context **configure** *router string radius proxy string load-balance-key source-ip-udp*  
Tree *source-ip-udp*  
Notes The following elements are part of a choice: (**attribute-1**, **attribute-2**, **attribute-3**, **attribute-4**, and **attribute-5**) or **source-ip-udp**.  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **purpose** *keyword*

### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Purpose of the RADIUS proxy
Context	<b>configure</b> <b>router</b> <i>string</i> <b>radius proxy</b> <i>string</i> <b>purpose</b> <i>keyword</i>
Tree	<a href="#">purpose</a>
Options	accounting, authentication, accounting-authentication
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **python-policy** *reference*

Synopsis	Python policy
Context	<b>configure</b> <b>router</b> <i>string</i> <b>radius proxy</b> <i>string</i> <b>python-policy</b> <i>reference</i>
Tree	<a href="#">python-policy</a>
Reference	<b>configure</b> <b>python</b> <b>python-policy</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **secret** *string*

Synopsis	Format of the secret key to access the RADIUS proxy server
Context	<b>configure</b> <b>router</b> <i>string</i> <b>radius proxy</b> <i>string</i> <b>secret</b> <i>string</i>
Tree	<a href="#">secret</a>
String Length	1 to 115
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **send-accounting-response** *boolean*

Synopsis	Allow RADIUS proxy server to respond to Accounting-Response messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>radius proxy</b> <i>string</i> <b>send-accounting-response</b> <i>boolean</i>

Tree	<a href="#">send-accounting-response</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## wlan-gw

Synopsis	Enter the <b>wlan-gw</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <a href="#">wlan-gw</a>
Tree	<a href="#">wlan-gw</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## address *string*

Synopsis	IPv4 address of the distributed RADIUS proxy server
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">address</a> <i>string</i>
Tree	<a href="#">address</a>
Description	This command configures the IPv4 address of the distributed RADIUS proxy server for use by the access points.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ipv6-address *string*

Synopsis	IPv6 address of the distributed RADIUS proxy server
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius proxy</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">ipv6-address</a> <i>string</i>
Tree	<a href="#">ipv6-address</a>
Description	This command configures the IPv6 address of the distributed RADIUS proxy server for use by the access points.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## wlan-gw-group *reference*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	ISA WLAN gateway group
Context	<b>configure</b> <i>router string radius proxy string wlan-gw-group reference</i>
Tree	<i>wlan-gw-group</i>
Reference	<b>configure</b> <i>isa wlan-gw-group number</i>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## server *[name] string*

Synopsis	Enter the <b>server</b> list instance
Context	<b>configure</b> <i>router string radius server string</i>
Tree	<i>server</i>
Max. Instances	64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## *[name] string*

Synopsis	External RADIUS server name
Context	<b>configure</b> <i>router string radius server string</i>
Tree	<i>server</i>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## accept-coa *boolean*

Synopsis	Process Change of Authorization (CoA) messages
Context	<b>configure</b> <i>router string radius server string accept-coa boolean</i>

Tree	<a href="#">accept-coa</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **acct-port number**

Synopsis	UDP port number of the RADIUS for accounting events
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius server</a> <i>string</i> <a href="#">acct-port number</a>
Tree	<a href="#">acct-port</a>
Range	1 to 65535
Default	1813
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **address (ipv4-address-no-zone | ipv6-address-no-zone)**

Synopsis	IP address of the RADIUS server
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius server</a> <i>string</i> <a href="#">address (ipv4-address-no-zone   ipv6-address-no-zone)</a>
Tree	<a href="#">address</a>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **auth-port number**

Synopsis	UDP port number of the RADIUS to be used as match criteria
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">radius server</a> <i>string</i> <a href="#">auth-port number</a>
Tree	<a href="#">auth-port</a>
Range	1 to 65535
Default	1812
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <b>router</b> <i>string</i> <b>radius</b> <b>server</b> <i>string</i> <b>description</b> <i>string</i>
Tree	<b>description</b>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **pending-requests-limit** *number*

Synopsis	Limit of the number for pending RADIUS requests
Context	<b>configure</b> <b>router</b> <i>string</i> <b>radius</b> <b>server</b> <i>string</i> <b>pending-requests-limit</b> <i>number</i>
Tree	<b>pending-requests-limit</b>
Range	1 to 4096
Default	4096
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **python-policy** *reference*

Synopsis	Python script policy to modify CoA messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>radius</b> <b>server</b> <i>string</i> <b>python-policy</b> <i>reference</i>
Tree	<b>python-policy</b>
Reference	<b>configure</b> <b>python</b> <b>python-policy</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **secret** *string*

Synopsis	Secret key associated with this RADIUS server
Context	<b>configure</b> <b>router</b> <i>string</i> <b>radius</b> <b>server</b> <i>string</i> <b>secret</b> <i>string</i>
Tree	<b>secret</b>
String Length	1 to 115
Notes	This element is mandatory.
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## reassemble

Synopsis Enable the **reassemble** context  
Context **configure router string reassemble**  
Tree **reassemble**  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## nat-group *number*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis NAT group (including WLAN Gateway group) that executes the reassemble  
Context **configure router string reassemble nat-group number**  
Tree **nat-group**  
Max. Range 0 to 4294967295  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## to-base-network *boolean*

Synopsis Allow reassembled traffic sent to network interface  
Context **configure router string reassemble to-base-network boolean**  
Tree **to-base-network**  
Default false  
Introduced 19.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## rib-api

Synopsis Enter the **rib-api** context  
Context **configure router string rib-api**

Tree	<a href="#">rib-api</a>
Introduced	16.0.R4
Platforms	All

## mpls

Synopsis	Enter the <b>mpls</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rib-api</a> <a href="#">mpls</a>
Tree	<a href="#">mpls</a>
Introduced	16.0.R4
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of MPLS for RIB-API gRPC service
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rib-api</a> <a href="#">mpls</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R4
Platforms	All

## label-name *reference*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Configure reserved label block.
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rib-api</a> <a href="#">mpls</a> <a href="#">label-name</a> <i>reference</i>
Tree	<a href="#">label-name</a>
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls-labels</a> <a href="#">reserved-label-block</a> <i>string</i>
Introduced	16.0.R4
Platforms	All

## rip

Synopsis	Enable the <b>rip</b> context
Context	<b>configure router string rip</b>
Tree	<b>rip</b>
Introduced	16.0.R4
Platforms	All

## admin-state keyword

Synopsis	Administrative state of the RIP instance
Context	<b>configure router string rip admin-state keyword</b>
Tree	<b>admin-state</b>
Default	enable
Options	enable, disable
Introduced	16.0.R4
Platforms	All

## authentication-key string

Synopsis	Authentication password passed between RIP neighbors
Context	<b>configure router string rip authentication-key string</b>
Tree	<b>authentication-key</b>
Description	<p>This command sets the authentication password to be passed between RIP neighbors. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.</p> <p>The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.</p> <p>When unconfigured, this command removes the authentication password from the configuration and disables authentication.</p>
String Length	1 to 51
Introduced	16.0.R4
Platforms	All

## authentication-type keyword

Synopsis	Authentication type used between RIP neighbors
----------	--

Context	<b>configure</b> <i>router string rip authentication-type keyword</i>
Tree	<a href="#">authentication-type</a>
Description	This command sets the type of authentication to be used between RIP neighbors. The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed. When unconfigured, this command removes the authentication type from the configuration and effectively disables authentication.
Default	none
Options	none, password, md5, md20
Introduced	16.0.R4
Platforms	All

### **bfd-liveness** *boolean*

Synopsis	Enable BFD to control the state of protocol adjacency
Context	<b>configure</b> <i>router string rip bfd-liveness boolean</i>
Tree	<a href="#">bfd-liveness</a>
Description	When configured to <b>true</b> , this command enables BFD to control the state of the associated protocol adjacency. When configured to <b>false</b> , this command removes BFD from the associated protocol adjacency.
Default	false
Introduced	16.0.R4
Platforms	All

### **check-zero** *boolean*

Synopsis	Enable checking of mandatory zero fields
Context	<b>configure</b> <i>router string rip check-zero boolean</i>
Tree	<a href="#">check-zero</a>
Description	When configured to <b>true</b> , this command enables checking of the mandatory zero fields in the RIPv1 and RIPv2 specifications and rejecting non-compliant RIP messages. When configured to <b>false</b> , this command disables the check and allows the receipt of RIP messages even if the mandatory zero fields are non-zero.
Default	false
Introduced	16.0.R4

Platforms All

### **description** *string*

Synopsis Text description  
Context **configure** [router](#) *string* [rip](#) [description](#) *string*  
Tree [description](#)  
String Length 1 to 80  
Introduced 16.0.R4  
Platforms All

### **export-limit**

Synopsis Enable the **export-limit** context  
Context **configure** [router](#) *string* [rip](#) [export-limit](#)  
Tree [export-limit](#)  
Introduced 16.0.R4  
Platforms All

### **log-percent** *number*

Synopsis Export limit before warning and SNMP notification sent  
Context **configure** [router](#) *string* [rip](#) [export-limit](#) [log-percent](#) *number*  
Tree [log-percent](#)  
Range 1 to 100  
Introduced 16.0.R4  
Platforms All

### **number** *number*

Synopsis Maximum routes or prefixes exported from route table  
Context **configure** [router](#) *string* [rip](#) [export-limit](#) [number](#) *number*  
Tree [number](#)  
Range 1 to 4294967295  
Notes This element is mandatory.

Introduced 16.0.R4  
Platforms All

### **export-policy** *reference*

Synopsis Policies to determine exported routes  
Context **configure** *router string rip export-policy reference*  
Tree [export-policy](#)  
Reference **configure** [policy-options](#) [policy-statement](#) *string*  
Max. Instances 5  
Notes This element is ordered by the user.  
Introduced 16.0.R4  
Platforms All

### **group** [[group-name](#)] *string*

Synopsis Enter the **group** list instance  
Context **configure** *router string rip group string*  
Tree [group](#)  
Introduced 16.0.R4  
Platforms All

### **[group-name]** *string*

Synopsis RIP group name  
Context **configure** *router string rip group string*  
Tree [group](#)  
String Length 1 to 32  
Notes This element is part of a list key.  
Introduced 16.0.R4  
Platforms All

### **admin-state** *keyword*

Synopsis	Administrative state of RIP neighbor interface group
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rip</b> <b>group</b> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Default	enable
Options	enable, disable
Introduced	16.0.R4
Platforms	All

### **authentication-key** *string*

Synopsis	Authentication password passed between RIP neighbors
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rip</b> <b>group</b> <i>string</i> <b>authentication-key</b> <i>string</i>
Tree	<b>authentication-key</b>
Description	<p>This command sets the authentication password to be passed between RIP neighbors. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.</p> <p>The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.</p> <p>When unconfigured, this command removes the authentication password from the configuration and disables authentication.</p>
String Length	1 to 51
Introduced	16.0.R4
Platforms	All

### **authentication-type** *keyword*

Synopsis	Authentication type
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rip</b> <b>group</b> <i>string</i> <b>authentication-type</b> <i>keyword</i>
Tree	<b>authentication-type</b>
Description	<p>This command configures the type of authentication to be used.</p> <p>The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.</p> <p>When unconfigured, this command removes the authentication type from the configuration and effectively disables authentication.</p>
Options	none, password, md5, md20

Introduced 16.0.R4  
Platforms All

### **bfd-liveness** *boolean*

Synopsis Enable BFD to control the state of protocol adjacency  
Context **configure** *router string rip group string bfd-liveness boolean*  
Tree [bfd-liveness](#)  
Description When configured to **true**, this command enables BFD to control the state of the associated protocol adjacency.  
When configured to **false**, this command removes BFD from the associated protocol adjacency.  
Introduced 16.0.R4  
Platforms All

### **check-zero** *boolean*

Synopsis Enable checking of mandatory zero fields  
Context **configure** *router string rip group string check-zero boolean*  
Tree [check-zero](#)  
Description When configured to **true**, this command enables checking of the mandatory zero fields in the RIPv1 and RIPv2 specifications and rejecting non-compliant RIP messages.  
When configured to **false**, this command disables the check and allows the receipt of RIP messages even if the mandatory zero fields are non-zero.  
Introduced 16.0.R4  
Platforms All

### **description** *string*

Synopsis Text description  
Context **configure** *router string rip group string description string*  
Tree [description](#)  
String Length 1 to 80  
Introduced 16.0.R4  
Platforms All

### **export-policy** *reference*

Synopsis	Policies used to rule which routes are exported to RIP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rip</b> <b>group</b> <i>string</i> <b>export-policy</b> <i>reference</i>
Tree	<a href="#">export-policy</a>
Description	This command specifies the export route policies used to determine which routes are exported to RIP.  If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R4
Platforms	All

### **import-policy** *reference*

Synopsis	Policies to decide routes accepted from RIP neighbors
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rip</b> <b>group</b> <i>string</i> <b>import-policy</b> <i>reference</i>
Tree	<a href="#">import-policy</a>
Description	This command configures import route policies to determine which routes are accepted from RIP neighbors.  If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R4
Platforms	All

### **message-size** *number*

Synopsis	Maximum number of routes per RIP update message
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rip</b> <b>group</b> <i>string</i> <b>message-size</b> <i>number</i>
Tree	<a href="#">message-size</a>

Range	25 to 255
Introduced	16.0.R4
Platforms	All

### **metric-in** *number*

Synopsis	Metric added to routes received from a RIP neighbor
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rip</b> <b>group</b> <i>string</i> <b>metric-in</b> <i>number</i>
Tree	<b>metric-in</b>
Range	1 to 16
Introduced	16.0.R4
Platforms	All

### **metric-out** *number*

Synopsis	Metric added to routes exported into RIP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rip</b> <b>group</b> <i>string</i> <b>metric-out</b> <i>number</i>
Tree	<b>metric-out</b>
Range	1 to 16
Introduced	16.0.R4
Platforms	All

### **neighbor** [*interface-name*] *string*

Synopsis	Enter the <b>neighbor</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rip</b> <b>group</b> <i>string</i> <b>neighbor</b> <i>string</i>
Tree	<b>neighbor</b>
Introduced	16.0.R4
Platforms	All

### **[interface-name]** *string*

Synopsis	Neighbor added through the interface to the RIP group
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rip</b> <b>group</b> <i>string</i> <b>neighbor</b> <i>string</i>
Tree	<b>neighbor</b>

String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the RIP neighbor interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rip</b> <b>group</b> <i>string</i> <b>neighbor</b> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Default	enable
Options	enable, disable
Introduced	16.0.R4
Platforms	All

### **authentication-key** *string*

Synopsis	Authentication password passed between RIP neighbors
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rip</b> <b>group</b> <i>string</i> <b>neighbor</b> <i>string</i> <b>authentication-key</b> <i>string</i>
Tree	<b>authentication-key</b>
Description	<p>This command sets the authentication password to be passed between RIP neighbors. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes.</p> <p>The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.</p> <p>When unconfigured, this command removes the authentication password from the configuration and disables authentication.</p>
String Length	1 to 51
Introduced	16.0.R4
Platforms	All

### **authentication-type** *keyword*

Synopsis	Authentication type
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rip</b> <b>group</b> <i>string</i> <b>neighbor</b> <i>string</i> <b>authentication-type</b> <i>keyword</i>
Tree	<b>authentication-type</b>

Description	<p>This command configures the type of authentication to be used.</p> <p>The authentication type and authentication key must match exactly for the RIP message to be considered authentic and processed.</p> <p>When unconfigured, this command removes the authentication type from the configuration and effectively disables authentication.</p>
Options	none, password, md5, md20
Introduced	16.0.R4
Platforms	All

### **bfd-liveness** *boolean*

Synopsis	Enable BFD to control the state of protocol adjacency
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rip</b> <b>group</b> <i>string</i> <b>neighbor</b> <i>string</i> <b>bfd-liveness</b> <i>boolean</i>
Tree	<b>bfd-liveness</b>
Description	<p>When configured to <b>true</b>, this command enables BFD to control the state of the associated protocol adjacency.</p> <p>When configured to <b>false</b>, this command removes BFD from the associated protocol adjacency.</p>
Introduced	16.0.R4
Platforms	All

### **check-zero** *boolean*

Synopsis	Enable checking of mandatory zero fields
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rip</b> <b>group</b> <i>string</i> <b>neighbor</b> <i>string</i> <b>check-zero</b> <i>boolean</i>
Tree	<b>check-zero</b>
Description	<p>When configured to <b>true</b>, this command enables checking of the mandatory zero fields in the RIPv1 and RIPv2 specifications and rejecting non-compliant RIP messages.</p> <p>When configured to <b>false</b>, this command disables the check and allows the receipt of RIP messages even if the mandatory zero fields are non-zero.</p>
Introduced	16.0.R4
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rip</b> <b>group</b> <i>string</i> <b>neighbor</b> <i>string</i> <b>description</b> <i>string</i>

Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R4
Platforms	All

### **export-policy** *reference*

Synopsis	Policies used to rule which routes are exported to RIP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rip</a> <a href="#">group</a> <i>string</i> <a href="#">neighbor</a> <i>string</i> <a href="#">export-policy</a> <i>reference</i>
Tree	<a href="#">export-policy</a>
Description	This command specifies the export route policies used to determine which routes are exported to RIP.  If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R4
Platforms	All

### **import-policy** *reference*

Synopsis	Policies to decide routes accepted from RIP neighbors
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rip</a> <a href="#">group</a> <i>string</i> <a href="#">neighbor</a> <i>string</i> <a href="#">import-policy</a> <i>reference</i>
Tree	<a href="#">import-policy</a>
Description	This command configures import route policies to determine which routes are accepted from RIP neighbors.  If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R4
Platforms	All

### **message-size** *number*

Synopsis	Maximum number of routes per RIP update message
Context	<b>configure</b> <i>router string rip group string neighbor string message-size number</i>
Tree	<a href="#">message-size</a>
Range	25 to 255
Introduced	16.0.R4
Platforms	All

### **metric-in** *number*

Synopsis	Metric added to routes received from a RIP neighbor
Context	<b>configure</b> <i>router string rip group string neighbor string metric-in number</i>
Tree	<a href="#">metric-in</a>
Range	1 to 16
Introduced	16.0.R4
Platforms	All

### **metric-out** *number*

Synopsis	Metric added to routes exported into RIP
Context	<b>configure</b> <i>router string rip group string neighbor string metric-out number</i>
Tree	<a href="#">metric-out</a>
Range	1 to 16
Introduced	16.0.R4
Platforms	All

### **preference** *number*

Synopsis	Route preference
Context	<b>configure</b> <i>router string rip group string neighbor string preference number</i>
Tree	<a href="#">preference</a>
Range	1 to 255
Introduced	16.0.R4
Platforms	All

**receive keyword**

Synopsis	Accepted version on received packets
Context	<b>configure router string rip group string neighbor string receive keyword</b>
Tree	<b>receive</b>
Options	version-1, version-2, both, none
Introduced	16.0.R4
Platforms	All

**send keyword**

Synopsis	RIP version and method used to send RIP updates
Context	<b>configure router string rip group string neighbor string send keyword</b>
Tree	<b>send</b>
Options	none, version-1, broadcast, multicast, unicast
Introduced	16.0.R4
Platforms	All

**split-horizon boolean**

Synopsis	Enable split horizon and poison reverse
Context	<b>configure router string rip group string neighbor string split-horizon boolean</b>
Tree	<b>split-horizon</b>
Description	<p>When configured to <b>true</b>, this command enables the use of split horizon with poison reverse. Split-horizon with poison reverse means that routes learned from a neighbor through a given interface are advertised in updates out of the same interface but with a metric of 16 (infinity).</p> <p>When configured to <b>false</b>, this command enables split horizon without poison reverse. This allows the routes to be re-advertised on interfaces other than the interface that learned the route, with the advertised metric equaling an increment of the metric-in value.</p>
Introduced	16.0.R4
Platforms	All

**timers**

Synopsis	Enable the <b>timers</b> context
----------	----------------------------------

Context	<b>configure</b> <i>router string rip group string neighbor string timers</i>
Tree	<i>timers</i>
Introduced	16.0.R4
Platforms	All

### **flush** *number*

Synopsis	RIP flush timer
Context	<b>configure</b> <i>router string rip group string neighbor string timers flush number</i>
Tree	<i>flush</i>
Description	This command specifies the time a route is maintained in the RIP database after it has been declared invalid. When the timer expires, the route is flushed from the RIP database completely.
Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **timeout** *number*

Synopsis	RIP timeout timer
Context	<b>configure</b> <i>router string rip group string neighbor string timers timeout number</i>
Tree	<i>timeout</i>
Description	This command specifies the RIP timeout timer. If a route is not updated by the time the timer expires, the route is declared invalid, but the route is maintained in the RIP database.
Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **update** *number*

Synopsis	Timer that controls the frequency of updates
----------	--

Context	<b>configure</b> <i>router string rip group string neighbor string timers update number</i>
Tree	<a href="#">update</a>
Range	1 to 600
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **unicast-address** [[address](#)] *string*

Synopsis	Add a list entry for <b>unicast-address</b>
Context	<b>configure</b> <i>router string rip group string neighbor string unicast-address string</i>
Tree	<a href="#">unicast-address</a>
Introduced	16.0.R4
Platforms	All

### **[address]** *string*

Synopsis	Unicast address for the neighbor
Context	<b>configure</b> <i>router string rip group string neighbor string unicast-address string</i>
Tree	<a href="#">unicast-address</a>
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

### **preference** *number*

Synopsis	Route preference
Context	<b>configure</b> <i>router string rip group string preference number</i>
Tree	<a href="#">preference</a>
Range	1 to 255
Introduced	16.0.R4
Platforms	All

### receive keyword

Synopsis	Accepted version on received packets
Context	<b>configure</b> <i>router string rip group string receive keyword</i>
Tree	<i>receive</i>
Options	version-1, version-2, both, none
Introduced	16.0.R4
Platforms	All

### send keyword

Synopsis	RIP version and method used to send RIP updates
Context	<b>configure</b> <i>router string rip group string send keyword</i>
Tree	<i>send</i>
Options	none, version-1, broadcast, multicast
Introduced	16.0.R4
Platforms	All

### split-horizon *boolean*

Synopsis	Enable split horizon and poison reverse
Context	<b>configure</b> <i>router string rip group string split-horizon boolean</i>
Tree	<i>split-horizon</i>
Description	<p>When configured to <b>true</b>, this command enables the use of split horizon with poison reverse. Split-horizon with poison reverse means that routes learned from a neighbor through a given interface are advertised in updates out of the same interface but with a metric of 16 (infinity).</p> <p>When configured to <b>false</b>, this command enables split horizon without poison reverse. This allows the routes to be re-advertised on interfaces other than the interface that learned the route, with the advertised metric equaling an increment of the metric-in value.</p>
Introduced	16.0.R4
Platforms	All

### timers

Synopsis	Enable the <b>timers</b> context
Context	<b>configure</b> <i>router string rip group string timers</i>

Tree	<a href="#">timers</a>
Introduced	16.0.R4
Platforms	All

### **flush** *number*

Synopsis	RIP flush timer
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rip</a> <i>group</i> <i>string</i> <a href="#">timers</a> <a href="#">flush</a> <i>number</i>
Tree	<a href="#">flush</a>
Description	This command specifies the time a route is maintained in the RIP database after it has been declared invalid. When the timer expires, the route is flushed from the RIP database completely.
Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **timeout** *number*

Synopsis	RIP timeout timer
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rip</a> <i>group</i> <i>string</i> <a href="#">timers</a> <a href="#">timeout</a> <i>number</i>
Tree	<a href="#">timeout</a>
Description	This command specifies the RIP timeout timer. If a route is not updated by the time the timer expires, the route is declared invalid, but the route is maintained in the RIP database.
Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **update** *number*

Synopsis	Timer that controls the frequency of updates
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rip</a> <i>group</i> <i>string</i> <a href="#">timers</a> <a href="#">update</a> <i>number</i>

Tree	<a href="#">update</a>
Range	1 to 600
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **import-policy** *reference*

Synopsis	Import policies to decide routes for routing table
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rip</a> <a href="#">import-policy</a> <i>reference</i>
Tree	<a href="#">import-policy</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R4
Platforms	All

### **message-size** *number*

Synopsis	Maximum number of routes in the RIP message
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rip</a> <a href="#">message-size</a> <i>number</i>
Tree	<a href="#">message-size</a>
Range	25 to 255
Default	25
Introduced	16.0.R4
Platforms	All

### **metric-in** *number*

Synopsis	Metric added to routes received from a RIP neighbor
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rip</a> <a href="#">metric-in</a> <i>number</i>
Tree	<a href="#">metric-in</a>
Range	1 to 16

Default	1
Introduced	16.0.R4
Platforms	All

### **metric-out** *number*

Synopsis	Metric added to routes exported into RIP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rip</b> <b>metric-out</b> <i>number</i>
Tree	<a href="#">metric-out</a>
Range	1 to 16
Default	1
Introduced	16.0.R4
Platforms	All

### **preference** *number*

Synopsis	Route preference
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rip</b> <b>preference</b> <i>number</i>
Tree	<a href="#">preference</a>
Range	1 to 255
Default	100
Introduced	16.0.R4
Platforms	All

### **receive** *keyword*

Synopsis	Accepted version on received packets
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rip</b> <b>receive</b> <i>keyword</i>
Tree	<a href="#">receive</a>
Default	both
Options	version-1, version-2, both, none
Introduced	16.0.R4
Platforms	All

### send *keyword*

Synopsis	RIP version and method used to send RIP updates
Context	<b>configure</b> <i>router string rip send keyword</i>
Tree	<a href="#">send</a>
Default	broadcast
Options	none, version-1, broadcast, multicast
Introduced	16.0.R4
Platforms	All

### split-horizon *boolean*

Synopsis	Enable split horizon and poison reverse
Context	<b>configure</b> <i>router string rip split-horizon boolean</i>
Tree	<a href="#">split-horizon</a>
Description	<p>When configured to <b>true</b>, this command enables the use of split horizon with poison reverse. Split-horizon with poison reverse means that routes learned from a neighbor through a given interface are advertised in updates out of the same interface but with a metric of 16 (infinity).</p> <p>When configured to <b>false</b>, this command enables split horizon without poison reverse. This allows the routes to be re-advertised on interfaces other than the interface that learned the route, with the advertised metric equaling an increment of the metric-in value.</p>
Default	true
Introduced	16.0.R4
Platforms	All

### timers

Synopsis	Enable the <b>timers</b> context
Context	<b>configure</b> <i>router string rip timers</i>
Tree	<a href="#">timers</a>
Introduced	16.0.R4
Platforms	All

### flush *number*

Synopsis	RIP flush timer
----------	-----------------

Context	<b>configure router</b> <i>string rip timers flush number</i>
Tree	<a href="#">flush</a>
Description	This command specifies the time a route is maintained in the RIP database after it has been declared invalid. When the timer expires, the route is flushed from the RIP database completely.
Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **timeout** *number*

Synopsis	RIP timeout timer
Context	<b>configure router</b> <i>string rip timers timeout number</i>
Tree	<a href="#">timeout</a>
Description	This command specifies the RIP timeout timer. If a route is not updated by the time the timer expires, the route is declared invalid, but the route is maintained in the RIP database.
Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **update** *number*

Synopsis	Timer that controls the frequency of updates
Context	<b>configure router</b> <i>string rip timers update number</i>
Tree	<a href="#">update</a>
Range	1 to 600
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

## ripng

Synopsis	Enable the <b>ripng</b> context
Context	<b>configure router string ripng</b>
Tree	<a href="#">ripng</a>
Introduced	16.0.R4
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of the RIPng instance
Context	<b>configure router string ripng admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Default	enable
Options	enable, disable
Introduced	16.0.R4
Platforms	All

## bfd-liveness *boolean*

Synopsis	Enable BFD to control the state of protocol adjacency
Context	<b>configure router string ripng bfd-liveness boolean</b>
Tree	<a href="#">bfd-liveness</a>
Description	When configured to <b>true</b> , this command enables BFD to control the state of the associated protocol adjacency.  When configured to <b>false</b> , this command removes BFD from the associated protocol adjacency.
Default	false
Introduced	16.0.R4
Platforms	All

## check-zero *boolean*

Synopsis	Enable checking of mandatory zero fields
Context	<b>configure router string ripng check-zero boolean</b>
Tree	<a href="#">check-zero</a>

Description	When configured to <b>true</b> , this command enables checking of the mandatory zero fields in the RIPv1 and RIPv2 specifications and rejecting non-compliant RIP messages. When configured to <b>false</b> , this command disables the check and allows the receipt of RIP messages even if the mandatory zero fields are non-zero.
Default	false
Introduced	16.0.R4
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <i>router string ripng description string</i>
Tree	<i>description</i>
String Length	1 to 80
Introduced	16.0.R4
Platforms	All

### **export-limit**

Synopsis	Enable the <b>export-limit</b> context
Context	<b>configure</b> <i>router string ripng export-limit</i>
Tree	<i>export-limit</i>
Introduced	16.0.R4
Platforms	All

### **log-percent** *number*

Synopsis	Export limit before warning and SNMP notification sent
Context	<b>configure</b> <i>router string ripng export-limit log-percent number</i>
Tree	<i>log-percent</i>
Range	1 to 100
Introduced	16.0.R4
Platforms	All

### **number** *number*

Synopsis	Maximum routes or prefixes exported from route table
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ripng</b> <b>export-limit</b> <i>number</i> <i>number</i>
Tree	<b>number</b>
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **export-policy** *reference*

Synopsis	Policies to determine exported routes
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ripng</b> <b>export-policy</b> <i>reference</i>
Tree	<b>export-policy</b>
Reference	<b>configure</b> <b>policy-options</b> <b>policy-statement</b> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R4
Platforms	All

### **group** [*group-name*] *string*

Synopsis	Enter the <b>group</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ripng</b> <b>group</b> <i>string</i>
Tree	<b>group</b>
Introduced	16.0.R4
Platforms	All

### [*group-name*] *string*

Synopsis	RIP group name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ripng</b> <b>group</b> <i>string</i>
Tree	<b>group</b>
String Length	1 to 32

Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of RIPng neighbor interface group
Context	<b>configure</b> <b>router</b> <i>string ripng group string admin-state keyword</i>
Tree	<a href="#">admin-state</a>
Default	enable
Options	enable, disable
Introduced	16.0.R4
Platforms	All

### **bfd-liveness** *boolean*

Synopsis	Enable BFD to control the state of protocol adjacency
Context	<b>configure</b> <b>router</b> <i>string ripng group string bfd-liveness boolean</i>
Tree	<a href="#">bfd-liveness</a>
Description	When configured to <b>true</b> , this command enables BFD to control the state of the associated protocol adjacency.  When configured to <b>false</b> , this command removes BFD from the associated protocol adjacency.
Introduced	16.0.R4
Platforms	All

### **check-zero** *boolean*

Synopsis	Enable checking of mandatory zero fields
Context	<b>configure</b> <b>router</b> <i>string ripng group string check-zero boolean</i>
Tree	<a href="#">check-zero</a>
Description	When configured to <b>true</b> , this command enables checking of the mandatory zero fields in the RIPv1 and RIPv2 specifications and rejecting non-compliant RIP messages.  When configured to <b>false</b> , this command disables the check and allows the receipt of RIP messages even if the mandatory zero fields are non-zero.
Introduced	16.0.R4

Platforms All

### **description** *string*

Synopsis Text description  
 Context **configure** [router](#) *string* [ripng](#) [group](#) *string* [description](#) *string*  
 Tree [description](#)  
 String Length 1 to 80  
 Introduced 16.0.R4  
 Platforms All

### **export-policy** *reference*

Synopsis Policies used to rule which routes are exported to RIP  
 Context **configure** [router](#) *string* [ripng](#) [group](#) *string* [export-policy](#) *reference*  
 Tree [export-policy](#)  
 Description This command specifies the export route policies used to determine which routes are exported to RIP.  
 If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.  
 Reference **configure** [policy-options](#) [policy-statement](#) *string*  
 Max. Instances 5  
 Notes This element is ordered by the user.  
 Introduced 16.0.R4  
 Platforms All

### **import-policy** *reference*

Synopsis Policies to decide routes accepted from RIP neighbors  
 Context **configure** [router](#) *string* [ripng](#) [group](#) *string* [import-policy](#) *reference*  
 Tree [import-policy](#)  
 Description This command configures import route policies to determine which routes are accepted from RIP neighbors.  
 If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.

Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R4
Platforms	All

### **message-size** *number*

Synopsis	Maximum number of routes in the message
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ripng</a> <a href="#">group</a> <i>string</i> <b>message-size</b> <i>number</i>
Tree	<a href="#">message-size</a>
Range	25 to 255
Introduced	16.0.R4
Platforms	All

### **metric-in** *number*

Synopsis	Metric added to routes received from the neighbor
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ripng</a> <a href="#">group</a> <i>string</i> <b>metric-in</b> <i>number</i>
Tree	<a href="#">metric-in</a>
Range	1 to 16
Introduced	16.0.R4
Platforms	All

### **metric-out** *number*

Synopsis	Metric added to routes exported into RIPng
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ripng</a> <a href="#">group</a> <i>string</i> <b>metric-out</b> <i>number</i>
Tree	<a href="#">metric-out</a>
Range	1 to 16
Introduced	16.0.R4
Platforms	All

### **neighbor** [*interface-name*] *string*

Synopsis	Enter the <b>neighbor</b> list instance
Context	<b>configure</b> <i>router string ripng group string neighbor string</i>
Tree	<i>neighbor</i>
Introduced	16.0.R4
Platforms	All

### **[interface-name]** *string*

Synopsis	Neighbor added to the RIPng group through the interface
Context	<b>configure</b> <i>router string ripng group string neighbor string</i>
Tree	<i>neighbor</i>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the RIPng neighbor
Context	<b>configure</b> <i>router string ripng group string neighbor string admin-state keyword</i>
Tree	<i>admin-state</i>
Default	enable
Options	enable, disable
Introduced	16.0.R4
Platforms	All

### **bfd-liveness** *boolean*

Synopsis	Enable BFD to control the state of protocol adjacency
Context	<b>configure</b> <i>router string ripng group string neighbor string bfd-liveness boolean</i>
Tree	<i>bfd-liveness</i>
Description	When configured to <b>true</b> , this command enables BFD to control the state of the associated protocol adjacency.

When configured to **false**, this command removes BFD from the associated protocol adjacency.

Introduced 16.0.R4  
Platforms All

### **check-zero** *boolean*

Synopsis Enable checking of mandatory zero fields  
Context **configure** *router string ripng group string neighbor string check-zero boolean*  
Tree [check-zero](#)  
Description When configured to **true**, this command enables checking of the mandatory zero fields in the RIPv1 and RIPv2 specifications and rejecting non-compliant RIP messages.  
When configured to **false**, this command disables the check and allows the receipt of RIP messages even if the mandatory zero fields are non-zero.  
Introduced 16.0.R4  
Platforms All

### **description** *string*

Synopsis Text description

Tree [description](#)  
String Length 1 to 80  
Introduced 16.0.R4  
Platforms All

### **export-policy** *reference*

Synopsis Policies used to rule which routes are exported to RIP  
Context **configure** *router string ripng group string neighbor string export-policy reference*  
Tree [export-policy](#)  
Description This command specifies the export route policies used to determine which routes are exported to RIP.  
If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.  
Reference **configure** *policy-options policy-statement string*

Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R4
Platforms	All

### **import-policy** *reference*

Synopsis	Policies to decide routes accepted from RIP neighbors
Context	<b>configure</b> <b>router</b> <i>string ripng group string neighbor string import-policy reference</i>
Tree	<a href="#">import-policy</a>
Description	This command configures import route policies to determine which routes are accepted from RIP neighbors.  If multiple policy names are specified, the policies are evaluated in the order they are specified. The first policy that matches is applied.
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R4
Platforms	All

### **message-size** *number*

Synopsis	Maximum number of routes in the message
Context	<b>configure</b> <b>router</b> <i>string ripng group string neighbor string message-size number</i>
Tree	<a href="#">message-size</a>
Range	25 to 255
Introduced	16.0.R4
Platforms	All

### **metric-in** *number*

Synopsis	Metric added to routes received from the neighbor
Context	<b>configure</b> <b>router</b> <i>string ripng group string neighbor string metric-in number</i>
Tree	<a href="#">metric-in</a>

Range	1 to 16
Introduced	16.0.R4
Platforms	All

### **metric-out** *number*

Synopsis	Metric added to routes exported into RIPng
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ripng</b> <b>group</b> <i>string</i> <b>neighbor</b> <i>string</i> <b>metric-out</b> <i>number</i>
Tree	<b>metric-out</b>
Range	1 to 16
Introduced	16.0.R4
Platforms	All

### **preference** *number*

Synopsis	Route preference
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ripng</b> <b>group</b> <i>string</i> <b>neighbor</b> <i>string</i> <b>preference</b> <i>number</i>
Tree	<b>preference</b>
Range	1 to 255
Introduced	16.0.R4
Platforms	All

### **receive** *keyword*

Synopsis	Accepted version on received packets
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ripng</b> <b>group</b> <i>string</i> <b>neighbor</b> <i>string</i> <b>receive</b> <i>keyword</i>
Tree	<b>receive</b>
Options	none, ripng
Introduced	16.0.R4
Platforms	All

### **send** *keyword*

Synopsis	RIPng version and method used to send RIPng updates
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ripng</b> <b>group</b> <i>string</i> <b>neighbor</b> <i>string</i> <b>send</b> <i>keyword</i>

Tree	<a href="#">send</a>
Options	none, ripng, unicast
Introduced	16.0.R4
Platforms	All

### **split-horizon** *boolean*

Synopsis	Enable split horizon and poison reverse
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ripng</a> <a href="#">group</a> <i>string</i> <a href="#">neighbor</a> <i>string</i> <a href="#">split-horizon</a> <i>boolean</i>
Tree	<a href="#">split-horizon</a>
Description	<p>When configured to <b>true</b>, this command enables the use of split horizon with poison reverse. Split-horizon with poison reverse means that routes learned from a neighbor through a given interface are advertised in updates out of the same interface but with a metric of 16 (infinity).</p> <p>When configured to <b>false</b>, this command enables split horizon without poison reverse. This allows the routes to be re-advertised on interfaces other than the interface that learned the route, with the advertised metric equaling an increment of the metric-in value.</p>
Introduced	16.0.R4
Platforms	All

### **timers**

Synopsis	Enable the <b>timers</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ripng</a> <a href="#">group</a> <i>string</i> <a href="#">neighbor</a> <i>string</i> <a href="#">timers</a>
Tree	<a href="#">timers</a>
Introduced	16.0.R4
Platforms	All

### **flush** *number*

Synopsis	RIP flush timer
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ripng</a> <a href="#">group</a> <i>string</i> <a href="#">neighbor</a> <i>string</i> <a href="#">timers</a> <a href="#">flush</a> <i>number</i>
Tree	<a href="#">flush</a>
Description	This command specifies the time a route is maintained in the RIP database after it has been declared invalid. When the timer expires, the route is flushed from the RIP database completely.

Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **timeout** *number*

Synopsis	RIP timeout timer
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ripng</b> <b>group</b> <i>string</i> <b>neighbor</b> <i>string</i> <b>timers</b> <b>timeout</b> <i>number</i>
Tree	<b>timeout</b>
Description	This command specifies the RIP timeout timer. If a route is not updated by the time the timer expires, the route is declared invalid, but the route is maintained in the RIP database.
Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **update** *number*

Synopsis	Timer that controls the frequency of updates
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ripng</b> <b>group</b> <i>string</i> <b>neighbor</b> <i>string</i> <b>timers</b> <b>update</b> <i>number</i>
Tree	<b>update</b>
Range	1 to 600
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **unicast-address** [*address*] *string*

Synopsis	Add a list entry for <b>unicast-address</b>
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ripng</b> <b>group</b> <i>string</i> <b>neighbor</b> <i>string</i> <b>unicast-address</b> <i>string</i>

Tree	<a href="#">unicast-address</a>
Introduced	16.0.R4
Platforms	All

### **[address]** *string*

Synopsis	Unicast address for the neighbour
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ripng</a> <a href="#">group</a> <i>string</i> <a href="#">neighbor</a> <i>string</i> <a href="#">unicast-address</a> <i>string</i>
Tree	<a href="#">unicast-address</a>
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

### **preference** *number*

Synopsis	Route preference
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ripng</a> <a href="#">group</a> <i>string</i> <a href="#">preference</a> <i>number</i>
Tree	<a href="#">preference</a>
Range	1 to 255
Introduced	16.0.R4
Platforms	All

### **receive** *keyword*

Synopsis	Accepted version on received packets
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ripng</a> <a href="#">group</a> <i>string</i> <a href="#">receive</a> <i>keyword</i>
Tree	<a href="#">receive</a>
Options	none, ripng
Introduced	16.0.R4
Platforms	All

### **send** *keyword*

Synopsis	RIPng version and method used to send RIPng updates
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ripng</a> <a href="#">group</a> <i>string</i> <a href="#">send</a> <i>keyword</i>

Tree	<a href="#">send</a>
Options	none, ripng
Introduced	16.0.R4
Platforms	All

### **split-horizon** *boolean*

Synopsis	Enable split horizon and poison reverse
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ripng</a> <a href="#">group</a> <i>string</i> <a href="#">split-horizon</a> <i>boolean</i>
Tree	<a href="#">split-horizon</a>
Description	<p>When configured to <b>true</b>, this command enables the use of split horizon with poison reverse. Split-horizon with poison reverse means that routes learned from a neighbor through a given interface are advertised in updates out of the same interface but with a metric of 16 (infinity).</p> <p>When configured to <b>false</b>, this command enables split horizon without poison reverse. This allows the routes to be re-advertised on interfaces other than the interface that learned the route, with the advertised metric equaling an increment of the metric-in value.</p>
Introduced	16.0.R4
Platforms	All

### **timers**

Synopsis	Enable the <b>timers</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ripng</a> <a href="#">group</a> <i>string</i> <a href="#">timers</a>
Tree	<a href="#">timers</a>
Introduced	16.0.R4
Platforms	All

### **flush** *number*

Synopsis	RIP flush timer
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ripng</a> <a href="#">group</a> <i>string</i> <a href="#">timers</a> <a href="#">flush</a> <i>number</i>
Tree	<a href="#">flush</a>
Description	This command specifies the time a route is maintained in the RIP database after it has been declared invalid. When the timer expires, the route is flushed from the RIP database completely.

Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **timeout** *number*

Synopsis	RIP timeout timer
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ripng</b> <b>group</b> <i>string</i> <b>timers</b> <b>timeout</b> <i>number</i>
Tree	<b>timeout</b>
Description	This command specifies the RIP timeout timer. If a route is not updated by the time the timer expires, the route is declared invalid, but the route is maintained in the RIP database.
Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **update** *number*

Synopsis	Timer that controls the frequency of updates
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ripng</b> <b>group</b> <i>string</i> <b>timers</b> <b>update</b> <i>number</i>
Tree	<b>update</b>
Range	1 to 600
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **import-policy** *reference*

Synopsis	Import policies to decide routes for routing table
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ripng</b> <b>import-policy</b> <i>reference</i>

Tree	<a href="#">import-policy</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R4
Platforms	All

### **message-size** *number*

Synopsis	Maximum number of routes in the message
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ripng</a> <a href="#">message-size</a> <i>number</i>
Tree	<a href="#">message-size</a>
Range	25 to 255
Default	25
Introduced	16.0.R4
Platforms	All

### **metric-in** *number*

Synopsis	Metric added to routes received from the neighbor
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ripng</a> <a href="#">metric-in</a> <i>number</i>
Tree	<a href="#">metric-in</a>
Range	1 to 16
Default	1
Introduced	16.0.R4
Platforms	All

### **metric-out** *number*

Synopsis	Metric added to routes exported into RIPng
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ripng</a> <a href="#">metric-out</a> <i>number</i>
Tree	<a href="#">metric-out</a>
Range	1 to 16
Default	1

Introduced 16.0.R4  
Platforms All

### **preference** *number*

Synopsis Route preference  
Context **configure** *router string ripng preference number*  
Tree [preference](#)  
Range 1 to 255  
Default 100  
Introduced 16.0.R4  
Platforms All

### **receive** *keyword*

Synopsis Accepted version on received packets  
Context **configure** *router string ripng receive keyword*  
Tree [receive](#)  
Default ripng  
Options none, ripng  
Introduced 16.0.R4  
Platforms All

### **send** *keyword*

Synopsis RIPng version and method used to send RIPng updates  
Context **configure** *router string ripng send keyword*  
Tree [send](#)  
Default ripng  
Options none, ripng  
Introduced 16.0.R4  
Platforms All

## **split-horizon** *boolean*

Synopsis	Enable split horizon and poison reverse
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ripng</b> <b>split-horizon</b> <i>boolean</i>
Tree	<b>split-horizon</b>
Description	<p>When configured to <b>true</b>, this command enables the use of split horizon with poison reverse. Split-horizon with poison reverse means that routes learned from a neighbor through a given interface are advertised in updates out of the same interface but with a metric of 16 (infinity).</p> <p>When configured to <b>false</b>, this command enables split horizon without poison reverse. This allows the routes to be re-advertised on interfaces other than the interface that learned the route, with the advertised metric equaling an increment of the metric-in value.</p>
Default	true
Introduced	16.0.R4
Platforms	All

## **timers**

Synopsis	Enable the <b>timers</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ripng</b> <b>timers</b>
Tree	<b>timers</b>
Introduced	16.0.R4
Platforms	All

## **flush** *number*

Synopsis	RIP flush timer
Context	<b>configure</b> <b>router</b> <i>string</i> <b>ripng</b> <b>timers</b> <b>flush</b> <i>number</i>
Tree	<b>flush</b>
Description	This command specifies the time a route is maintained in the RIP database after it has been declared invalid. When the timer expires, the route is flushed from the RIP database completely.
Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **timeout** *number*

Synopsis	RIP timeout timer
Context	<b>configure</b> <i>router string ripng timers timeout number</i>
Tree	<a href="#">timeout</a>
Description	This command specifies the RIP timeout timer. If a route is not updated by the time the timer expires, the route is declared invalid, but the route is maintained in the RIP database.
Range	1 to 1200
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **update** *number*

Synopsis	Timer that controls the frequency of updates
Context	<b>configure</b> <i>router string ripng timers update number</i>
Tree	<a href="#">update</a>
Range	1 to 600
Units	seconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **router-id** *string*

Synopsis	Unique router ID for the router in the AS
Context	<b>configure</b> <i>router string router-id string</i>
Tree	<a href="#">router-id</a>
Introduced	16.0.R1
Platforms	All

## rsvp

Synopsis	Enable the <b>rsvp</b> context
Context	<b>configure router string rsvp</b>
Tree	<b>rsvp</b>
Introduced	16.0.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of RSVP
Context	<b>configure router string rsvp admin-state keyword</b>
Tree	<b>admin-state</b>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

## authentication-over-bypass *boolean*

Synopsis	Enable MD5 authentication over bypass LSP of PLR and MP
Context	<b>configure router string rsvp authentication-over-bypass boolean</b>
Tree	<b>authentication-over-bypass</b>
Description	<p>When configured to <b>true</b>, this command configures the MD5 authentication over the bypass LSP of all Point of Local Repairs (PLRs) and Merge Points (MPs) on the router. Only enable this command when the TE interfaces in the RSVP-TE network use the same MD5 authentication parameters.</p> <p>When a Point of Local Repair (PLR) activates a bypass LSP towards a Merge Point (MP), by default, the INTEGRITY object corresponding to the bypass LSP interface is not added to a transmitted RSVP message except for packets of routed RSVP messages (Resv, Srefresh, and ACK), and only when the packet is intended for a bypass LSP endpoint (PLR or MP) that is a directly connected neighbor.</p> <p>When this command is enabled, the INTEGRITY object of the interface corresponding to the bypass LSP is added to a transmitted RSVP message regardless of whether the bypass LSP endpoint (PLR or MP) is a directly connected RSVP neighbor. The INTEGRITY object is included with the following RSVP messages: Path, PathTear, PathErr, Resv, ResvTear, ResvErr, Srefresh, and ACK.</p> <p>In all cases, an RSVP message received from a PLR or a MP (sender address in the SenderTemplate or FilterSpec is different from an Extended Tunnel Id in a Session Object), and which includes the INTEGRITY object is authenticated against the bypass</p>

LSP interface. An RSVP message received from a PLR or MP without the INTEGRITY object is also accepted.

When configured to **false**, the router disables MD5 authentication over bypass LSP of the PLRs and MPs.

Default	false
Introduced	22.10.R1
Platforms	All

## dbw-accounting

Synopsis	Enable the <b>dbw-accounting</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rsvp</a> <a href="#">dbw-accounting</a>
Tree	<a href="#">dbw-accounting</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-s, 7950 XRS, VSR

## dbw-multiplier *number*

Synopsis	Dark Bandwidth multiplier
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rsvp</a> <a href="#">dbw-accounting</a> <a href="#">dbw-multiplier</a> <i>number</i>
Tree	<a href="#">dbw-multiplier</a>
Range	0 to 1000
Default	100
Units	percent
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-s, 7950 XRS, VSR

## down-threshold

Synopsis	Enter the <b>down-threshold</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rsvp</a> <a href="#">dbw-accounting</a> <a href="#">down-threshold</a>
Tree	<a href="#">down-threshold</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-s, 7950 XRS, VSR

### **bw number**

Synopsis	Minimum difference in MRLB or MRB to trigger an update
Context	<b>configure router string rsvp dbw-accounting down-threshold bw number</b>
Tree	<b>bw</b>
Range	0 to 1000000
Units	megabps
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-s, 7950 XRS, VSR

### **percent number**

Synopsis	Minimum difference in percent between dark bandwidth and sampled data rate, to trigger IGP-TE update
Context	<b>configure router string rsvp dbw-accounting down-threshold percent number</b>
Tree	<b>percent</b>
Range	0 to 100
Default	0
Units	percent
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-s, 7950 XRS, VSR

### **sample-interval number**

Synopsis	Dark Bandwidth sample interval
Context	<b>configure router string rsvp dbw-accounting sample-interval number</b>
Tree	<b>sample-interval</b>
Range	10 to 600
Default	30
Units	seconds
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-s, 7950 XRS, VSR

### **sample-multiplier number**

Synopsis	Dark Bandwidth sample multiplier
----------	----------------------------------

Context	<b>configure router</b> <i>string rsvp dbw-accounting sample-multiplier number</i>
Tree	<a href="#">sample-multiplier</a>
Range	1 to 10
Default	3
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-s, 7950 XRS, VSR

## **up-threshold**

Synopsis	Enter the <b>up-threshold</b> context
Context	<b>configure router</b> <i>string rsvp dbw-accounting up-threshold</i>
Tree	<a href="#">up-threshold</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-s, 7950 XRS, VSR

## **bw number**

Synopsis	Minimum difference in MRLB or MRB to trigger an update
Context	<b>configure router</b> <i>string rsvp dbw-accounting up-threshold bw number</i>
Tree	<a href="#">bw</a>
Range	0 to 1000000
Units	megabps
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-s, 7950 XRS, VSR

## **percent number**

Synopsis	Minimum difference in percent between dark bandwidth and sampled data rate, to trigger IGP-TE update
Context	<b>configure router</b> <i>string rsvp dbw-accounting up-threshold percent number</i>
Tree	<a href="#">percent</a>
Range	0 to 100
Default	0
Units	percent
Introduced	16.0.R1

Platforms 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **diffserv-te**

Synopsis Enable the **diffserv-te** context  
Context **configure router string rsvp diffserv-te**  
Tree [diffserv-te](#)  
Introduced 16.0.R1  
Platforms All

### **admission-control-model** *keyword*

Synopsis Parameters for the DiffServ TE node  
Context **configure router string rsvp diffserv-te admission-control-model keyword**  
Tree [admission-control-model](#)  
Options mam, rdm  
Notes This element is mandatory.  
Introduced 16.0.R1  
Platforms All

### **class-type-bw**

Synopsis Enter the **class-type-bw** context  
Context **configure router string rsvp diffserv-te class-type-bw**  
Tree [class-type-bw](#)  
Introduced 16.0.R1  
Platforms All

### **ct0** *number*

Synopsis RSVP interface bandwidth percentage for class type 0  
Context **configure router string rsvp diffserv-te class-type-bw ct0 number**  
Tree [ct0](#)  
Range 0 to 100  
Default 0

Introduced 16.0.R1  
Platforms All

### **ct1 number**

Synopsis RSVP interface bandwidth percentage for class type 1  
Context **configure router string rsvp diffserv-te class-type-bw ct1 number**  
Tree [ct1](#)  
Range 0 to 100  
Default 0  
Introduced 16.0.R1  
Platforms All

### **ct2 number**

Synopsis RSVP interface bandwidth percentage for class type 2  
Context **configure router string rsvp diffserv-te class-type-bw ct2 number**  
Tree [ct2](#)  
Range 0 to 100  
Default 0  
Introduced 16.0.R1  
Platforms All

### **ct3 number**

Synopsis RSVP interface bandwidth percentage for class type 3  
Context **configure router string rsvp diffserv-te class-type-bw ct3 number**  
Tree [ct3](#)  
Range 0 to 100  
Default 0  
Introduced 16.0.R1  
Platforms All

### **ct4 number**

Synopsis	RSVP interface bandwidth percentage for class type 4
Context	<b>configure router</b> <i>string</i> <b>rsvp diffserv-te class-type-bw ct4 number</b>
Tree	<b>ct4</b>
Range	0 to 100
Default	0
Introduced	16.0.R1
Platforms	All

### **ct5 number**

Synopsis	RSVP interface bandwidth percentage for class type 5
Context	<b>configure router</b> <i>string</i> <b>rsvp diffserv-te class-type-bw ct5 number</b>
Tree	<b>ct5</b>
Range	0 to 100
Default	0
Introduced	16.0.R1
Platforms	All

### **ct6 number**

Synopsis	RSVP interface bandwidth percentage for class type 6
Context	<b>configure router</b> <i>string</i> <b>rsvp diffserv-te class-type-bw ct6 number</b>
Tree	<b>ct6</b>
Range	0 to 100
Default	0
Introduced	16.0.R1
Platforms	All

### **ct7 number**

Synopsis	RSVP interface bandwidth percentage for class type 7
Context	<b>configure router</b> <i>string</i> <b>rsvp diffserv-te class-type-bw ct7 number</b>
Tree	<b>ct7</b>
Range	0 to 100

Default	0
Introduced	16.0.R1
Platforms	All

### **fc** [**fc-name**] *keyword*

Synopsis	Enter the <b>fc</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rsvp</b> <b>diffserv-te</b> <b>fc</b> <i>keyword</i>
Tree	<b>fc</b>
Introduced	16.0.R1
Platforms	All

### **[fc-name]** *keyword*

Synopsis	Forwarding class for this mapping
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rsvp</b> <b>diffserv-te</b> <b>fc</b> <i>keyword</i>
Tree	<b>fc</b>
Options	be, l2, af, l1, h2, ef, h1, nc
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **class-type** *number*

Synopsis	Diff-Serv Class Type (CT) for an LSP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rsvp</b> <b>diffserv-te</b> <b>fc</b> <i>keyword</i> <b>class-type</b> <i>number</i>
Tree	<b>class-type</b>
Range	0 to 7
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **te-class** [**te-class-number**] *number*

Synopsis	Enter the <b>te-class</b> list instance
----------	---

Context	<b>configure</b> <i>router string rsvp diffserv-te te-class number</i>
Tree	<a href="#">te-class</a>
Introduced	16.0.R1
Platforms	All

### **[te-class-number]** *number*

Synopsis	TE class number
Context	<b>configure</b> <i>router string rsvp diffserv-te te-class number</i>
Tree	<a href="#">te-class</a>
Range	0 to 7
Notes	This element is part of a list key.
Introduced	16.0.R2
Platforms	All

### **class-type** *number*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Class type (CT) associated with the TE class
Context	<b>configure</b> <i>router string rsvp diffserv-te te-class number class-type number</i>
Tree	<a href="#">class-type</a>
Range	0 to 7
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **priority** *number*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	TE class priority
----------	-------------------

Context	<b>configure router</b> <i>string</i> <b>rsvp diffserv-te te-class</b> <i>number</i> <b>priority</b> <i>number</i>
Tree	<a href="#">priority</a>
Range	0 to 7
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **entropy-label-capability** *boolean*

Synopsis	Allow receiving and processing of the entropy label and ELI on incoming packets of RSVP LSPs
Context	<b>configure router</b> <i>string</i> <b>rsvp entropy-label-capability</b> <i>boolean</i>
Tree	<a href="#">entropy-label-capability</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **graceful-restart**

Synopsis	Enter the <b>graceful-restart</b> context
Context	<b>configure router</b> <i>string</i> <b>rsvp graceful-restart</b>
Tree	<a href="#">graceful-restart</a>
Introduced	16.0.R1
Platforms	All

### **max-recovery** *number*

Synopsis	Maximum time to wait before a graceful helper recovers the session
Context	<b>configure router</b> <i>string</i> <b>rsvp graceful-restart max-recovery</b> <i>number</i>
Tree	<a href="#">max-recovery</a>
Range	1 to 1800
Default	300
Units	seconds
Introduced	16.0.R1
Platforms	All

### **max-restart** *number*

Synopsis	Maximum time that a graceful helper waits for session restart after the neighbor is considered down
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rsvp</b> <b>graceful-restart</b> <b>max-restart</b> <i>number</i>
Tree	<b>max-restart</b>
Range	1 to 300
Default	120
Units	seconds
Introduced	16.0.R1
Platforms	All

### **graceful-shutdown** *boolean*

Synopsis	Initiate a graceful shutdown of all RSVP interfaces on the node
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rsvp</b> <b>graceful-shutdown</b> <i>boolean</i>
Tree	<b>graceful-shutdown</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **implicit-null-label** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Signal the implicit null option for all RSVP LSPs
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rsvp</b> <b>implicit-null-label</b> <i>boolean</i>
Tree	<b>implicit-null-label</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **include-node-id-in-rro** *boolean*

Synopsis	Include the node-id sub-object in the RRO (Record Route Object) on the RSVP instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rsvp</b> <b>include-node-id-in-rro</b> <i>boolean</i>
Tree	<a href="#">include-node-id-in-rro</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **interface** [[interface-name](#)] *reference*

Synopsis	Enter the <b>interface</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rsvp</b> <b>interface</b> <i>reference</i>
Tree	<a href="#">interface</a>
Description	<p>Commands in this context configure the attributes of the RSVP protocol support on an IP interface. RSVP commands are not executed on an IP interface if RSVP is not enabled.</p> <p>The RSVP interface must be administratively disabled before it can be deleted.</p> <p>A corresponding MPLS interface must also be configured. The RSVP interface cannot be deleted without also deleting the MPLS interface.</p>
Introduced	16.0.R1
Platforms	All

### **[interface-name]** *reference*

Synopsis	Index for router RSVP interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rsvp</b> <b>interface</b> <i>reference</i>
Tree	<a href="#">interface</a>
Reference	<b>configure</b> <b>router</b> <i>string</i> <b>interface</b> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of RSVP on the IP interface
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rsvp</b> <b>interface</b> <i>reference</i> <b>admin-state</b> <i>keyword</i>

Tree	<a href="#">admin-state</a>
Default	enable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **authentication-key *string***

Synopsis	Authentication or hash key string
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">rsvp interface</a> <a href="#">reference</a> <a href="#">authentication-key</a> <a href="#">string</a>
Tree	<a href="#">authentication-key</a>
Description	<p>This command configures the authentication key for use between RSVP neighbors to authenticate RSVP messages. Authentication uses the MD5 message-based digest.</p> <p>When enabled on an RSVP interface, authentication of RSVP messages operates in both directions of the interface. A router maintains a security association using one authentication key for each interface to an RSVP neighbor.</p> <p>An RSVP neighbor transmits an authenticating digest of the RSVP message that is computed using the shared authentication key and a keyed-hash algorithm. The message digest is included in an INTEGRITY object, which also contains a flags field, a key identifier field, and a sequence number field. An RSVP neighbor uses the key together with the authentication algorithm to process received RSVP messages. The RSVP MD5 authentication complies to the procedures for RSVP message generation in RFC 2747, <i>RSVP Cryptographic Authentication</i>.</p> <p>The MD5 implementation does not support the authentication challenge procedures in RFC 2747.</p>
String Length	1 to 51
Introduced	16.0.R1
Platforms	All

### **authentication-keychain *reference***

Synopsis	TCP authentication keychain for the session
Context	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">rsvp interface</a> <a href="#">reference</a> <a href="#">authentication-keychain</a> <a href="#">reference</a>
Tree	<a href="#">authentication-keychain</a>
Reference	<b>configure</b> <a href="#">system</a> <a href="#">security</a> <a href="#">keychains</a> <a href="#">keychain</a> <a href="#">string</a>
Introduced	16.0.R3
Platforms	All

### **bfd-liveness** *boolean*

Synopsis	Enable BFD
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rsvp</b> <b>interface</b> <i>reference</i> <b>bfd-liveness</b> <i>boolean</i>
Tree	<b>bfd-liveness</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **class-type-bw**

Synopsis	Enable the <b>class-type-bw</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rsvp</b> <b>interface</b> <i>reference</i> <b>class-type-bw</b>
Tree	<b>class-type-bw</b>
Introduced	16.0.R1
Platforms	All

### **ct0** *number*

Synopsis	Percentage of link bandwidth for class type (CT) 0
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rsvp</b> <b>interface</b> <i>reference</i> <b>class-type-bw</b> <b>ct0</b> <i>number</i>
Tree	<b>ct0</b>
Range	0 to 100
Introduced	16.0.R1
Platforms	All

### **ct1** *number*

Synopsis	Percentage of link bandwidth for class type (CT) 1
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rsvp</b> <b>interface</b> <i>reference</i> <b>class-type-bw</b> <b>ct1</b> <i>number</i>
Tree	<b>ct1</b>
Range	0 to 100
Introduced	16.0.R1
Platforms	All

### **ct2 number**

Synopsis	Percentage of link bandwidth for class type (CT) 2
Context	<b>configure router</b> <i>string rsvp interface reference class-type-bw ct2 number</i>
Tree	<a href="#">ct2</a>
Range	0 to 100
Introduced	16.0.R1
Platforms	All

### **ct3 number**

Synopsis	Percentage of link bandwidth for class type (CT) 3
Context	<b>configure router</b> <i>string rsvp interface reference class-type-bw ct3 number</i>
Tree	<a href="#">ct3</a>
Range	0 to 100
Introduced	16.0.R1
Platforms	All

### **ct4 number**

Synopsis	Percentage of link bandwidth for class type (CT) 4
Context	<b>configure router</b> <i>string rsvp interface reference class-type-bw ct4 number</i>
Tree	<a href="#">ct4</a>
Range	0 to 100
Introduced	16.0.R1
Platforms	All

### **ct5 number**

Synopsis	Percentage of link bandwidth for class type (CT) 5
Context	<b>configure router</b> <i>string rsvp interface reference class-type-bw ct5 number</i>
Tree	<a href="#">ct5</a>
Range	0 to 100
Introduced	16.0.R1
Platforms	All

### **ct6 number**

Synopsis	Percentage of link bandwidth for class type (CT) 6
Context	<b>configure router string rsvp interface reference class-type-bw ct6 number</b>
Tree	<a href="#">ct6</a>
Range	0 to 100
Introduced	16.0.R1
Platforms	All

### **ct7 number**

Synopsis	Percentage of link bandwidth for class type (CT) 7
Context	<b>configure router string rsvp interface reference class-type-bw ct7 number</b>
Tree	<a href="#">ct7</a>
Range	0 to 100
Introduced	16.0.R1
Platforms	All

### **dbw-down-threshold**

Synopsis	Enable the <b>dbw-down-threshold</b> context
Context	<b>configure router string rsvp interface reference dbw-down-threshold</b>
Tree	<a href="#">dbw-down-threshold</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-s, 7950 XRS, VSR

### **bw number**

Synopsis	Minimum difference in MRLB or MRB to trigger an update
Context	<b>configure router string rsvp interface reference dbw-down-threshold bw number</b>
Tree	<a href="#">bw</a>
Range	0 to 1000000
Units	megabps
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-s, 7950 XRS, VSR

### **percent** *number*

Synopsis	Minimum difference in percent between dark bandwidth and sampled data rate, to trigger IGP-TE update
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rsvp</b> <b>interface</b> <i>reference</i> <b>dbw-down-threshold</b> <b>percent</b> <i>number</i>
Tree	<b>percent</b>
Range	0 to 100
Units	percent
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-s, 7950 XRS, VSR

### **dbw-multiplier** *number*

Synopsis	Configure the Dark Bandwidth multiplier.
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rsvp</b> <b>interface</b> <i>reference</i> <b>dbw-multiplier</b> <i>number</i>
Tree	<b>dbw-multiplier</b>
Range	0 to 1000
Units	percent
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-s, 7950 XRS, VSR

### **dbw-up-threshold**

Synopsis	Enable the <b>dbw-up-threshold</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rsvp</b> <b>interface</b> <i>reference</i> <b>dbw-up-threshold</b>
Tree	<b>dbw-up-threshold</b>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-s, 7950 XRS, VSR

### **bw** *number*

Synopsis	Minimum difference in MRLB or MRB to trigger an update
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rsvp</b> <b>interface</b> <i>reference</i> <b>dbw-up-threshold</b> <b>bw</b> <i>number</i>
Tree	<b>bw</b>
Range	0 to 1000000

Units	megabps
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-s, 7950 XRS, VSR

### **percent** *number*

Synopsis	Minimum difference in percent between dark bandwidth and sampled data rate, to trigger IGP-TE update
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rsvp interface</a> <i>reference</i> <a href="#">dbw-up-threshold</a> <b>percent</b> <i>number</i>
Tree	<a href="#">percent</a>
Range	0 to 100
Units	percent
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-s, 7950 XRS, VSR

### **graceful-restart-helper-mode** *boolean*

Synopsis	Enable graceful restart helper for the RSVP interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rsvp interface</a> <i>reference</i> <a href="#">graceful-restart-helper-mode</a> <i>boolean</i>
Tree	<a href="#">graceful-restart-helper-mode</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **graceful-shutdown** *boolean*

Synopsis	Initiate a graceful shutdown of RSVP interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rsvp interface</a> <i>reference</i> <a href="#">graceful-shutdown</a> <i>boolean</i>
Tree	<a href="#">graceful-shutdown</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **hello-interval** *number*

Synopsis	Time between RSVP Hello messages
----------	----------------------------------

Context	<b>configure</b> <i>router</i> <i>string</i> <i>rsvp</i> <i>interface</i> <i>reference</i> <i>hello-interval</i> <i>number</i>
Tree	<a href="#">hello-interval</a>
Range	0 to 60
Default	3
Units	seconds
Introduced	16.0.R1
Platforms	All

### **implicit-null-label** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Signal the implicit null label value for all LSPs
Context	<b>configure</b> <i>router</i> <i>string</i> <i>rsvp</i> <i>interface</i> <i>reference</i> <i>implicit-null-label</i> <i>boolean</i>
Tree	<a href="#">implicit-null-label</a>
Introduced	16.0.R1
Platforms	All

### **refresh-reduction**

Synopsis	Enable the <b>refresh-reduction</b> context
Context	<b>configure</b> <i>router</i> <i>string</i> <i>rsvp</i> <i>interface</i> <i>reference</i> <i>refresh-reduction</i>
Tree	<a href="#">refresh-reduction</a>
Introduced	16.0.R1
Platforms	All

### **reliable-delivery** *boolean*

Synopsis	Reliable delivery of RSVP messages over the RSVP interface
Context	<b>configure</b> <i>router</i> <i>string</i> <i>rsvp</i> <i>interface</i> <i>reference</i> <i>refresh-reduction</i> <i>reliable-delivery</i> <i>boolean</i>
Tree	<a href="#">reliable-delivery</a>
Default	false
Introduced	16.0.R1

Platforms All

### **subscription** *number*

Synopsis Percentage of the link bandwidth to use for reservation  
Context **configure** [router](#) *string* [rsvp](#) [interface](#) *reference* [subscription](#) *number*  
Tree [subscription](#)  
Range 0 to 1000  
Default 100  
Introduced 16.0.R1  
Platforms All

### **te-down-threshold**

Synopsis Enable the **te-down-threshold** context  
Context **configure** [router](#) *string* [rsvp](#) [interface](#) *reference* [te-down-threshold](#)  
Tree [te-down-threshold](#)  
Introduced 16.0.R1  
Platforms All

### **value** *number*

Synopsis Threshold level per interface  
Context **configure** [router](#) *string* [rsvp](#) [interface](#) *reference* [te-down-threshold](#) [value](#) *number*  
Tree [value](#)  
Range 0 to 100

## te-up-threshold

Synopsis	Enable the <b>te-up-threshold</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rsvp</a> <a href="#">interface</a> <i>reference</i> <a href="#">te-up-threshold</a>
Tree	<a href="#">te-up-threshold</a>
Introduced	16.0.R1
Platforms	All

## value *number*

Synopsis	Threshold level per interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rsvp</a> <a href="#">interface</a> <i>reference</i> <a href="#">te-up-threshold</a> <i>value</i> <i>number</i>
Tree	<a href="#">value</a>
Range	0 to 100
Max. Instances	16
Min. Instances	1
Notes	This element is ordered by the user.
Introduced	16.0.R2
Platforms	All

## keep-multiplier *number*

Synopsis	Value for the keep-multiplier to declare a reservation or neighbor as down
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rsvp</a> <a href="#">keep-multiplier</a> <i>number</i>
Tree	<a href="#">keep-multiplier</a>
Range	1 to 255
Default	3
Introduced	16.0.R1
Platforms	All

## msg-pacing

Synopsis	Enable the <b>msg-pacing</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rsvp</a> <a href="#">msg-pacing</a>

Tree	<a href="#">msg-pacing</a>
Introduced	16.0.R1
Platforms	All

### **max-burst** *number*

Synopsis	Maximum RSVP messages that are sent over a specified period when message pacing is enabled
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rsvp</a> <a href="#">msg-pacing</a> <a href="#">max-burst</a> <i>number</i>
Tree	<a href="#">max-burst</a>
Range	100 to 1000
Default	650
Introduced	16.0.R1
Platforms	All

### **period** *number*

Synopsis	Time for RSVP message pacing
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rsvp</a> <a href="#">msg-pacing</a> <a href="#">period</a> <i>number</i>
Tree	<a href="#">period</a>
Range	100 to 1000
Default	100
Units	milliseconds
Introduced	16.0.R1
Platforms	All

### **p2mp-merge-point-abort-timer** *number*

Synopsis	Merge pointer timer for abort timer
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">rsvp</a> <a href="#">p2mp-merge-point-abort-timer</a> <i>number</i>
Tree	<a href="#">p2mp-merge-point-abort-timer</a>
Range	1 to 65535
Units	seconds
Introduced	16.0.R1
Platforms	All

### **p2p-merge-point-abort-timer** *number*

Synopsis	Merge pointer timer for P2P paths
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rsvp</b> <b>p2p-merge-point-abort-timer</b> <i>number</i>
Tree	<a href="#">p2p-merge-point-abort-timer</a>
Range	1 to 65535
Units	seconds
Introduced	16.0.R1
Platforms	All

### **preemption-timer** *number*

Synopsis	Preemption timer for the MPLS instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rsvp</b> <b>preemption-timer</b> <i>number</i>
Tree	<a href="#">preemption-timer</a>
Range	0 to 1800
Default	300
Units	seconds
Introduced	16.0.R1
Platforms	All

### **rapid-retransmit-time** *number*

Synopsis	Rapid retransmission interval to reliably deliver RSVP messages
Context	<b>configure</b> <b>router</b> <i>string</i> <b>rsvp</b> <b>rapid-retransmit-time</b> <i>number</i>
Tree	<a href="#">rapid-retransmit-time</a>
Range	1 to 100
Default	5
Units	deciseconds
Introduced	16.0.R1
Platforms	All

### **rapid-retry-limit** *number*

Synopsis	Rapid retry limit to reliably deliver RSVP messages
----------	---

Context	<b>configure router</b> <i>string rsvp rapid-retry-limit number</i>
Tree	<a href="#">rapid-retry-limit</a>
Range	1 to 6
Default	3
Introduced	16.0.R1
Platforms	All

### **refresh-reduction-over-bypass** *boolean*

Synopsis	Enable refresh reduction capabilities over tunnels
Context	<b>configure router</b> <i>string rsvp refresh-reduction-over-bypass boolean</i>
Tree	<a href="#">refresh-reduction-over-bypass</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **refresh-time** *number*

Synopsis	Interval between refresh messages
Context	<b>configure router</b> <i>string rsvp refresh-time number</i>
Tree	<a href="#">refresh-time</a>
Range	1 to 65535
Default	30
Units	seconds
Introduced	16.0.R1
Platforms	All

### **te-down-threshold** *number*

Synopsis	Value for the te-down-threshold
Context	<b>configure router</b> <i>string rsvp te-down-threshold number</i>
Tree	<a href="#">te-down-threshold</a>
Range	0 to 100
Max. Instances	16

Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **te-threshold-update**

Synopsis	Enable the <b>te-threshold-update</b> context
Context	<b>configure router string rsvp te-threshold-update</b>
Tree	<a href="#">te-threshold-update</a>
Introduced	16.0.R1
Platforms	All

### **on-cac-failure *boolean***

Synopsis	CAC (Call Admission Control) failure-triggered IGP update
Context	<b>configure router string rsvp te-threshold-update on-cac-failure <i>boolean</i></b>
Tree	<a href="#">on-cac-failure</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **update-timer *number***

Synopsis	Timer-based IGP updates
Context	<b>configure router string rsvp te-threshold-update update-timer <i>number</i></b>
Tree	<a href="#">update-timer</a>
Range	1 to 300
Units	seconds
Introduced	16.0.R1
Platforms	All

### **te-up-threshold *number***

Synopsis	Value for the te-up-threshold
Context	<b>configure router string rsvp te-up-threshold <i>number</i></b>

Tree	<a href="#">te-up-threshold</a>
Range	0 to 100
Max. Instances	16
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

## segment-routing

Synopsis	Enter the <b>segment-routing</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a>
Tree	<a href="#">segment-routing</a>
Introduced	16.0.R1
Platforms	All

## maintenance-policy [[policy-name](#)] *string*

Synopsis	Enter the <b>maintenance-policy</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">maintenance-policy</a> <i>string</i>
Tree	<a href="#">maintenance-policy</a>
Description	Commands in this context configure a named maintenance policy that can be applied to SR policy candidate paths that are either statically configured or imported via BGP.
Introduced	20.10.R1
Platforms	All

## [[policy-name](#)] *string*

Synopsis	Maintenance policy name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">maintenance-policy</a> <i>string</i>
Tree	<a href="#">maintenance-policy</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the maintenance policy
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>maintenance-policy</b> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Description	This command sets the administrative state of the maintenance policy.  A maintenance policy must be administratively disabled to change any of the parameters.  When a maintenance template is administratively disabled, all applicable candidate paths are removed from the data path.
Default	disable
Options	enable, disable
Introduced	20.10.R1
Platforms	All

### **bfd-liveness** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable seamless BFD for segment lists of candidate path
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>maintenance-policy</b> <i>string</i> <b>bfd-liveness</b> <i>boolean</i>
Tree	<b>bfd-liveness</b>
Description	When configured to <b>true</b> , this command enables seamless BFD on every segment list of an SR policy candidate path to which the maintenance policy is applied. The BFD template configures the parameters for the BFD session.  When configured to <b>false</b> , seamless BFD is disabled.
Default	false
Introduced	20.10.R1
Platforms	All

### **bfd-template** *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	BFD template to be used by seamless BFD
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>maintenance-policy</b> <i>string</i> <b>bfd-template</b> <i>reference</i>
Tree	<b>bfd-template</b>
Description	This command references a named BFD template to be used by seamless BFD. A BFD template must exist on the system before being referenced from a maintenance policy. The template specifies parameters that are used by the BFD session, such as the minimum transmit and receive control packet timer intervals.
Reference	<b>configure</b> <b>bfd</b> <b>bfd-template</b> <i>string</i>
Introduced	20.10.R1
Platforms	All

### **hold-down-timer** *number*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Hold down timer for SR policy candidate paths
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>maintenance-policy</b> <i>string</i> <b>hold-down-timer</b> <i>number</i>
Tree	<b>hold-down-timer</b>
Description	<p>This command configures the hold down timer for the maintenance policy. The purpose of the timer is to prevent bouncing of the SR policy path state if S-BFD sessions associated with the segment lists flap, causing the threshold to be repeatedly crossed in a short period of time.</p> <p>The timer is started when the number of up S-BFD sessions drops below the threshold. The SR policy path is not considered to be up again until the hold down timer has expired and the number of up S-BFD sessions reaches or exceeds the threshold and the internal hold timer is not running.</p> <p>If the revert timer is also configured, the revert timer is not started until after the number of up S-BFD sessions equals or exceeds the threshold and the hold down timer for the primary candidate path has expired.</p>
Range	0 to 5000
Default	0
Units	deciseconds
Introduced	20.10.R1
Platforms	All

## mode *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Protection mode for SR policy candidate paths
Context	<b>configure</b> <i>router string segment-routing maintenance-policy string mode keyword</i>
Tree	<i>mode</i>
Description	This command specifies the data path programming and protection mechanism for SR policy candidate paths to which the maintenance policy is applied.
Default	none
Options	none, ecmp-protected, linear
Introduced	20.10.R1
Platforms	All

## return-path-label *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	S-BFD return-path label
Context	<b>configure</b> <i>router string segment-routing maintenance-policy string return-path-label number</i>
Tree	<i>return-path-label</i>
Description	<p>This command configures the S-BFD session to echo mode and adds an additional MPLS label to the bottom of the label stack for the S-BFD packet.</p> <p>The command applies to the initiator of the S-BFD sessions. The return-path label may be a binding SID for an SR policy or other MPLS path configured on the reflector router. Instead of being routed through the IGP path, the S-BFD packet returns to the initiator through this MPLS return path.</p> <p>If the command is deleted, S-BFD returns to asynchronous mode and no return-path label is pushed by the initiator node. Any S-BFD packets for this LSP or path that the reflector receives are routed through the IGP path.</p>
Range	32 to 1048512
Introduced	22.10.R1
Platforms	All

### revert-timer *number*

Synopsis	Revert timer for SR policy candidate paths
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>maintenance-policy</b> <i>string</i> <b>revert-timer</b> <i>number</i>
Tree	<b>revert-timer</b>
Description	This command configures the revert timer for SR Policy candidate paths.  The revert timer is started when the primary path recovers (the number of S-BFD sessions that are up equals or exceeds the threshold value and the hold down timer has expired). When the timer expires, the system reverts to the primary path.
Range	0 to 4320
Default	0
Units	minutes
Introduced	20.10.R1
Platforms	All

### threshold *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Minimum number of up S-BFD sessions for up path status
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>maintenance-policy</b> <i>string</i> <b>threshold</b> <i>number</i>
Tree	<b>threshold</b>
Description	This command configures the minimum number of S-BFD sessions that must be up for the SR policy candidate path to be considered up. If the number of up sessions is below this threshold value, the policy candidate path is marked as BFD degraded by the system.  This command is only valid in the <b>ecmp-protected</b> mode.
Range	1 to 32
Default	1
Introduced	20.10.R1
Platforms	All

### segment-routing-v6

Synopsis	Enable the <b>segment-routing-v6</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>segment-routing-v6</b>

Tree	<a href="#">segment-routing-v6</a>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## **base-routing-instance**

Synopsis	Enter the <b>base-routing-instance</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a>
Tree	<a href="#">base-routing-instance</a>
Description	Commands in this context configure SRv6 SID functions for End, End.X, and service SIDs for IPv4 and IPv6 prefixes in the base routing instance.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## **locator** [[locator-name](#)] *reference*

Synopsis	Enter the <b>locator</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">locator</a> <i>reference</i>
Tree	<a href="#">locator</a>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## **[locator-name]** *reference*

Synopsis	SRv6 locator name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">locator</a> <i>reference</i>
Tree	<a href="#">locator</a>
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">locator</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## function

Synopsis	Enter the <b>function</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>segment-routing-v6</b> <b>base-routing-instance</b> <b>locator</b> <i>reference</i> <b>function</b>
Tree	<b>function</b>
Description	Commands in this context configure the function value of SRv6 SIDs. The <b>end-dt46</b> command is mutually exclusive with the <b>end-dt4</b> and <b>end-dt6</b> commands.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## end [*value*] *number*

Synopsis	Enter the <b>end</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>segment-routing-v6</b> <b>base-routing-instance</b> <b>locator</b> <i>reference</i> <b>function</b> <b>end</b> <i>number</i>
Tree	<b>end</b>
Description	Commands in this context configure the attributes of SRv6 End SID function. The End SID functions for each SRH mode must be statically allocated. The value is not automatically allocated by default for a locator.
Max. Instances	8
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## [*value*] *number*

Synopsis	SRv6 End SID function value
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>segment-routing-v6</b> <b>base-routing-instance</b> <b>locator</b> <i>reference</i> <b>function</b> <b>end</b> <i>number</i>
Tree	<b>end</b>
Range	1 to 1048575
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **srh-mode** *keyword*

Synopsis	Segment Routing Header (SRH) mode
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>segment-routing-v6</b> <b>base-routing-instance</b> <b>locator</b> <i>reference</i> <b>function</b> <b>end</b> <i>number</i> <b>srh-mode</b> <i>keyword</i>
Tree	<b>srh-mode</b>
Description	This command configures the popping mode for the SID.
Default	psp
Options	psp, usp
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **end-dt4**

Synopsis	Enable the <b>end-dt4</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>segment-routing-v6</b> <b>base-routing-instance</b> <b>locator</b> <i>reference</i> <b>function</b> <b>end-dt4</b>
Tree	<b>end-dt4</b>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **value** *number*

Synopsis	Service SID value for base router routes
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>segment-routing-v6</b> <b>base-routing-instance</b> <b>locator</b> <i>reference</i> <b>function</b> <b>end-dt4</b> <b>value</b> <i>number</i>
Tree	<b>value</b>
Description	This command assigns a SID function value for all IPv4 and/or IPv6 routes in the base routing instance. These can be signaled using BGP or static.
Range	1 to 1048575
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **end-dt46**

Synopsis	Enable the <b>end-dt46</b> context
----------	------------------------------------

Context	<b>configure</b> <i>router string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">locator reference function end-dt46</a>
Tree	<a href="#">end-dt46</a>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **value number**

Synopsis	Service SID value for base router routes
Context	<b>configure</b> <i>router string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">locator reference function end-dt46 value number</a>
Tree	<a href="#">value</a>
Description	This command assigns a SID function value for all IPv4 and/or IPv6 routes in the base routing instance. These can be signaled using BGP or static.
Range	1 to 1048575
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **end-dt6**

Synopsis	Enable the <b>end-dt6</b> context
Context	<b>configure</b> <i>router string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">locator reference function end-dt6</a>
Tree	<a href="#">end-dt6</a>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **value number**

Synopsis	Service SID value for base router routes
Context	<b>configure</b> <i>router string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">locator reference function end-dt6 value number</a>
Tree	<a href="#">value</a>
Description	This command assigns a SID function value for all IPv4 and/or IPv6 routes in the base routing instance. These can be signaled using BGP or static.
Range	1 to 1048575
Introduced	21.5.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **end-x** [*value*] *number*

Synopsis Enter the **end-x** list instance

Context **configure** *router string segment-routing segment-routing-v6 base-routing-instance locator reference function end-x number*

Tree **end-x**

Description Commands in this context configure the attributes of the End.X SID function associated with a P2P interface.

A static function value can be configured for each combination of SRH mode and protection type. For a specific interface, the static function value associated with the same combination of protection type and SRH mode overrides any corresponding function value that is automatically allocated (**end.x-auto-allocate** list configuration).

If more than one value is configured for an interface and combination of SRH mode and protection type, they are all advertised in IS-IS.

When used in remote TI-LFA repair tunnel programming, IS-IS uses rules to select one End.X value from the multiple values received in IS-IS link advertisements.

Values assigned to loopback and system interfaces are not advertised in IS-IS.

End.X SID functions for adjacencies over broadcast interfaces are always automatically allocated based on the configuration of the **end.x-auto-allocate** list.

Introduced 21.5.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **[value]** *number*

Synopsis SRv6 End SID function value

Context **configure** *router string segment-routing segment-routing-v6 base-routing-instance locator reference function end-x number*

Tree **end-x**

Range 1 to 1048575

Notes This element is part of a list key.

Introduced 21.5.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **interface-name** *reference*

Synopsis Interface name

Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">locator</a> <i>reference</i> <a href="#">function</a> <a href="#">end-x</a> <i>number</i> <a href="#">interface-name</a> <i>reference</i>
Tree	<a href="#">interface-name</a>
Reference	<b>configure</b> <i>router</i> <i>string</i> <a href="#">interface</a> <i>string</i>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **protection** *keyword*

Synopsis	Adjacency protection for static End.x SID function
Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">locator</a> <i>reference</i> <a href="#">function</a> <a href="#">end-x</a> <i>number</i> <a href="#">protection</a> <i>keyword</i>
Tree	<a href="#">protection</a>
Description	This command configures the adjacency protection type for the SID function.
Default	protected
Options	unprotected, protected
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **srh-mode** *keyword*

Synopsis	Segment Routing Header (SRH) mode
Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">locator</a> <i>reference</i> <a href="#">function</a> <a href="#">end-x</a> <i>number</i> <a href="#">srh-mode</a> <i>keyword</i>
Tree	<a href="#">srh-mode</a>
Description	This command configures the popping mode for the SID.
Default	psp
Options	psp, usp
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **end-x-auto-allocate** [[srh-mode](#)] *keyword* [protection](#) *keyword*

Synopsis	Add a list entry for <b>end-x-auto-allocate</b>
Context	<b>configure</b> <i>router</i> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">locator</a> <i>reference</i> <a href="#">function</a> <a href="#">end-x-auto-allocate</a> <i>keyword</i> <a href="#">protection</a> <i>keyword</i>

Tree	<a href="#">end-x-auto-allocate</a>
Description	<p>This command adds a list entry for the automatic allocation of the End.X SID function for all adjacencies over all network interfaces on the router (P2P and broadcast interfaces).</p> <p>A list entry is a combination of the protection type and the SRH mode. Any combinations in addition to the maximum supported by this command must be allocated statically under each P2P interface (<b>end.x</b> configuration).</p> <p>When no list entries are configured, no End.X function values are automatically allocated by default for a locator.</p>
Max. Instances	2
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **[srh-mode]** *keyword*

Synopsis	Segment Routing Header (SRH) mode
Context	<b>configure</b> <i>router string segment-routing segment-routing-v6 base-routing-instance locator reference function end-x-auto-allocate keyword protection keyword</i>
Tree	<a href="#">end-x-auto-allocate</a>
Description	This command specifies the popping mode for the automatically allocated SID.
Options	psp, usp
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **protection** *keyword*

Synopsis	Adjacency protection for automatic End.x SID function
Context	<b>configure</b> <i>router string segment-routing segment-routing-v6 base-routing-instance locator reference function end-x-auto-allocate keyword protection keyword</i>
Tree	<a href="#">end-x-auto-allocate</a>
Description	This command specifies the adjacency protection for the automatically allocated SID function.
Options	unprotected, protected
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## **micro-segment-locator** [[locator-name](#)] *reference*

Synopsis	Enter the <b>micro-segment-locator</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">micro-segment-locator</a> <i>reference</i>
Tree	<a href="#">micro-segment-locator</a>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## **[locator-name]** *reference*

Synopsis	SRv6 micro-segment locator name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">micro-segment-locator</a> <i>reference</i>
Tree	<a href="#">micro-segment-locator</a>
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment-locator</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## **function**

Synopsis	Enter the <b>function</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">micro-segment-locator</a> <i>reference</i> <a href="#">function</a>
Tree	<a href="#">function</a>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## **ua** [[value](#)] *number*

Synopsis	Enter the <b>ua</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">micro-segment-locator</a> <i>reference</i> <a href="#">function</a> <a href="#">ua</a> <i>number</i>
Tree	<a href="#">ua</a>

Description	Commands in this context configure the attributes of the uA micro-SID function associated with a P2P interface. The uA micro-SID function encodes the behavior of an adjacency SID.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### [value] *number*

Synopsis	SRv6 End SID function value
Context	<b>configure</b> <i>router</i> <i>string</i> <i>segment-routing</i> <i>segment-routing-v6</i> <i>base-routing-instance</i> <i>micro-segment-locator</i> <i>reference</i> <i>function</i> <i>ua</i> <i>number</i>
Tree	<i>ua</i>
Range	1 to 1048575
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### interface-name *reference*

Synopsis	Interface name
Context	<b>configure</b> <i>router</i> <i>string</i> <i>segment-routing</i> <i>segment-routing-v6</i> <i>base-routing-instance</i> <i>micro-segment-locator</i> <i>reference</i> <i>function</i> <i>ua</i> <i>number</i> <i>interface-name</i> <i>reference</i>
Tree	<i>interface-name</i>
Reference	<b>configure</b> <i>router</i> <i>string</i> <i>interface</i> <i>string</i>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### protection *keyword*

Synopsis	Adjacency protection for static End.x SID function
Context	<b>configure</b> <i>router</i> <i>string</i> <i>segment-routing</i> <i>segment-routing-v6</i> <i>base-routing-instance</i> <i>micro-segment-locator</i> <i>reference</i> <i>function</i> <i>ua</i> <i>number</i> <i>protection</i> <i>keyword</i>
Tree	<i>protection</i>
Description	This command configures the adjacency protection type for the SID function.
Default	protected
Options	unprotected, protected

Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **srh-mode** *keyword*

Synopsis	Segment Routing Header (SRH) mode
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>segment-routing-v6</b> <b>base-routing-instance</b> <b>micro-segment-locator</b> <i>reference</i> <b>function</b> <b>ua</b> <i>number</i> <b>srh-mode</b> <i>keyword</i>
Tree	<b>srh-mode</b>
Description	This command configures the popping mode for the SID.
Default	psp
Options	psp, usp
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **ua-auto-allocate** [**srh-mode**] *keyword* **protection** *keyword*

Synopsis	Add a list entry for <b>ua-auto-allocate</b>
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>segment-routing-v6</b> <b>base-routing-instance</b> <b>micro-segment-locator</b> <i>reference</i> <b>function</b> <b>ua-auto-allocate</b> <i>keyword</i> <b>protection</b> <i>keyword</i>
Tree	<b>ua-auto-allocate</b>
Max. Instances	2
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### [**srh-mode**] *keyword*

Synopsis	Segment Routing Header (SRH) mode
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>segment-routing-v6</b> <b>base-routing-instance</b> <b>micro-segment-locator</b> <i>reference</i> <b>function</b> <b>ua-auto-allocate</b> <i>keyword</i> <b>protection</b> <i>keyword</i>
Tree	<b>ua-auto-allocate</b>
Description	This command specifies the popping mode for the automatically allocated SID.
Options	psp, usp
Notes	This element is part of a list key.
Introduced	22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **protection** *keyword*

Synopsis Adjacency protection for automatic End.x SID function

Context **configure** *router string* [segment-routing](#) [segment-routing-v6](#) [base-routing-instance](#) [micro-segment-locator](#) *reference* [function](#) [ua-auto-allocate](#) *keyword* **protection** *keyword*

Tree [ua-auto-allocate](#)

Description This command specifies the adjacency protection for the automatically allocated SID function.

Options unprotected, protected

Notes This element is part of a list key.

Introduced 22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **udt4**

Synopsis Enable the **udt4** context

Context **configure** *router string* [segment-routing](#) [segment-routing-v6](#) [base-routing-instance](#) [micro-segment-locator](#) *reference* [function](#) **udt4**

Tree [udt4](#)

Introduced 22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **value** *number*

Synopsis Service SID value for base router routes

Context **configure** *router string* [segment-routing](#) [segment-routing-v6](#) [base-routing-instance](#) [micro-segment-locator](#) *reference* [function](#) [udt4](#) [value](#) *number*

Tree [value](#)

Description This command assigns a SID function value for all IPv4 and/or IPv6 routes in the base routing instance. These can be signaled using BGP or static.

Range 1 to 1048575

Introduced 22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## udt46

Synopsis	Enable the <b>udt46</b> context
Context	<b>configure</b> <i>router string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">micro-segment-locator</a> <i>reference</i> <a href="#">function</a> <b>udt46</b>
Tree	<a href="#">udt46</a>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## value number

Synopsis	Service SID value for base router routes
Context	<b>configure</b> <i>router string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">micro-segment-locator</a> <i>reference</i> <a href="#">function</a> <b>udt46</b> <i>value number</i>
Tree	<a href="#">value</a>
Description	This command assigns a SID function value for all IPv4 and/or IPv6 routes in the base routing instance. These can be signaled using BGP or static.
Range	1 to 1048575
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## udt6

Synopsis	Enable the <b>udt6</b> context
Context	<b>configure</b> <i>router string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">micro-segment-locator</a> <i>reference</i> <a href="#">function</a> <b>udt6</b>
Tree	<a href="#">udt6</a>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## value number

Synopsis	Service SID value for base router routes
Context	<b>configure</b> <i>router string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">base-routing-instance</a> <a href="#">micro-segment-locator</a> <i>reference</i> <a href="#">function</a> <b>udt6</b> <i>value number</i>
Tree	<a href="#">value</a>
Description	This command assigns a SID function value for all IPv4 and/or IPv6 routes in the base routing instance. These can be signaled using BGP or static.

Range	1 to 1048575
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **locator** [*locator-name*] *string*

Synopsis	Enter the <b>locator</b> list instance
Context	<b>configure</b> <i>router string segment-routing segment-routing-v6 locator string</i>
Tree	<i>locator</i>
Max. Instances	16
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **[locator-name]** *string*

Synopsis	SRv6 locator name
Context	<b>configure</b> <i>router string segment-routing segment-routing-v6 locator string</i>
Tree	<i>locator</i>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of the locator
Context	<b>configure</b> <i>router string segment-routing segment-routing-v6 locator string admin-state keyword</i>
Tree	<i>admin-state</i>
Default	disable
Options	enable, disable
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## algorithm *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IGP flexible algorithm ID
Context	<b>configure</b> <i>router string segment-routing segment-routing-v6 locator string algorithm number</i>
Tree	<i>algorithm</i>
Range	128 to 255
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## block-length *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	SRv6 locator block address length
Context	<b>configure</b> <i>router string segment-routing segment-routing-v6 locator string block-length number</i>
Tree	<i>block-length</i>
Range	0 to 96
Default	0
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## function-length *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Function length
Context	<b>configure</b> <i>router string segment-routing segment-routing-v6 locator string function-length number</i>
Tree	<i>function-length</i>

Description	This command configures the size of the function length. The sum of the function length and the locator prefix length must not exceed 128 bits. Operators can configure the locator level <b>label-block</b> command before they configure a function length of 16. If the function length is configured as 16, the locator level <b>label-block</b> must be configured rather than the static-function level <b>label-block</b> . The validation occurs when committed.
Range	16   20 to 96
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### label-block *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Reserved label block name for service termination
Context	<b>configure</b> <i>router string segment-routing segment-routing-v6 locator string label-block reference</i>
Tree	<a href="#">label-block</a>
Reference	<b>configure</b> <i>router string mpls-labels reserved-label-block string</i>
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### prefix

Synopsis	Enter the <b>prefix</b> context
Context	<b>configure</b> <i>router string segment-routing segment-routing-v6 locator string prefix</i>
Tree	<a href="#">prefix</a>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### ip-prefix *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	SRv6 locator prefix
----------	---------------------

Context	<b>configure</b> <i>router string segment-routing segment-routing-v6 locator string prefix ip-prefix string</i>
Tree	<a href="#">ip-prefix</a>
Description	This command configures the IPv6 prefix for the locator.  For regular SRv6, the locator prefix length range is the sum of the length of the block field and the length of the node ID field. For micro-segment SRv6, the locator prefix length must be equal to the micro-SID block length.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### static-function

Synopsis	Enter the <b>static-function</b> context
Context	<b>configure</b> <i>router string segment-routing segment-routing-v6 locator string static-function</i>
Tree	<a href="#">static-function</a>
Description	Commands in this context configure the attributes of the function field range reserved for static End.d, End.X, and service SID assignment.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### label-block *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Label block for the service SIDs of the SRv6 locator
Context	<b>configure</b> <i>router string segment-routing segment-routing-v6 locator string static-function label-block reference</i>
Tree	<a href="#">label-block</a>
Reference	<b>configure</b> <i>router string mpls-labels reserved-label-block string</i>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### max-entries *number*

Synopsis	Maximum number of static SID functions
----------	--

Context	<b>configure router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">locator</a> <i>string</i> <a href="#">static-function</a> <a href="#">max-entries</a> <i>number</i>
Tree	<a href="#">max-entries</a>
Description	This command configures the maximum number of values that are reserved from the function field to assign to static SID functions.
Range	1 to 1048575
Default	1
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **termination-fpe** *reference*

Synopsis	List of the SRv6 termination FPE
Context	<b>configure router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">locator</a> <i>string</i> <a href="#">termination-fpe</a> <i>reference</i>
Tree	<a href="#">termination-fpe</a>
Description	This command associates the Forwarding Path Extension (FPE) with the locator for terminating SRv6 in local services. Multiple locators can share the same FPE or each locator can use a different FPE. The FPE can be the same or different from the origination FPE.
Reference	<b>configure</b> <a href="#">fwd-path-ext</a> <a href="#">fpe</a> <i>number</i>
Max. Instances	1
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **micro-segment**

Synopsis	Enable the <b>micro-segment</b> context
Context	<b>configure router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment</a>
Tree	<a href="#">micro-segment</a>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **block** [[block-name](#)] *string*

Synopsis	Enter the <b>block</b> list instance
----------	--------------------------------------

Context	<b>configure</b> <i>router</i> <i>string</i> <i>segment-routing</i> <i>segment-routing-v6</i> <i>micro-segment</i> <i>block</i> <i>string</i>
Tree	<i>block</i>
Max. Instances	16
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **[block-name]** *string*

Synopsis	Micro-SID block name
Context	<b>configure</b> <i>router</i> <i>string</i> <i>segment-routing</i> <i>segment-routing-v6</i> <i>micro-segment</i> <i>block</i> <i>string</i>
Tree	<i>block</i>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of micro-SID block
Context	<b>configure</b> <i>router</i> <i>string</i> <i>segment-routing</i> <i>segment-routing-v6</i> <i>micro-segment</i> <i>block</i> <i>string</i> <i>admin-state</i> <i>keyword</i>
Tree	<i>admin-state</i>
Default	disable
Options	enable, disable
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **label-block** *reference*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Reserved label block
Context	<b>configure</b> <i>router</i> <i>string</i> <i>segment-routing</i> <i>segment-routing-v6</i> <i>micro-segment</i> <i>block</i> <i>string</i> <i>label-block</i> <i>reference</i>

Tree	<a href="#">label-block</a>
Description	This command associates a pre-configured reserved label block with the micro-SID block.
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls-labels</a> <a href="#">reserved-label-block</a> <i>string</i>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## prefix

Synopsis	Enter the <b>prefix</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment</a> <a href="#">block</a> <i>string</i> <a href="#">prefix</a>
Tree	<a href="#">prefix</a>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## ip-prefix *string*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	SRv6 locator prefix
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment</a> <a href="#">block</a> <i>string</i> <a href="#">prefix</a> <a href="#">ip-prefix</a> <i>string</i>
Tree	<a href="#">ip-prefix</a>
Description	This command configures the IPv6 prefix for the locator.  For regular SRv6, the locator prefix length range is the sum of the length of the block field and the length of the node ID field. For micro-segment SRv6, the locator prefix length must be equal to the micro-SID block length.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## static-function

Synopsis	Enter the <b>static-function</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment</a> <a href="#">block</a> <i>string</i> <a href="#">static-function</a>

Tree	<a href="#">static-function</a>
Description	Commands in this context configure the function field parameters of a static uA or service micro-SID assignment.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **max-entries** *number*

Synopsis	Maximum number of static SID functions
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment</a> <a href="#">block</a> <i>string</i> <a href="#">static-function</a> <b>max-entries</b> <i>number</i>
Tree	<a href="#">max-entries</a>
Description	This command configures the maximum number of values that are reserved from the function field to assign to static SID functions.
Range	1 to 1048575
Default	1
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **termination-fpe** *reference*

Synopsis	FPE ID for SRv6 termination
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment</a> <a href="#">block</a> <i>string</i> <a href="#">termination-fpe</a> <i>reference</i>
Tree	<a href="#">termination-fpe</a>
Description	This command associates the FPE ID with the locator for SRv6 termination in local services.
Reference	<b>configure</b> <a href="#">fwd-path-ext</a> <a href="#">fpe</a> <i>number</i>
Max. Instances	1
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **block-length** *number*

Synopsis	Micro-SID block length
----------	------------------------

Context	<b>configure</b> <i>router string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment</a> <a href="#">block-length</a> <i>number</i>
Tree	<a href="#">block-length</a>
Range	8   16   24   32   40   48   56   64
Default	32
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **global-sid-entries** *number*

Synopsis	Maximum number of micro-segment locators network-wide
Context	<b>configure</b> <i>router string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment</a> <a href="#">global-sid-entries</a> <i>number</i>
Tree	<a href="#">global-sid-entries</a>
Range	4 to 60
Default	16
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **sid-length** *number*

Synopsis	Micro-SID length
Context	<b>configure</b> <i>router string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment</a> <a href="#">sid-length</a> <i>number</i>
Tree	<a href="#">sid-length</a>
Description	This command configures the length of the micro-SIDs.
Range	16
Default	16
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **micro-segment-locator** [[locator-name](#)] *string*

Synopsis	Enter the <b>micro-segment-locator</b> list instance
Context	<b>configure</b> <i>router string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment-locator</a> <i>string</i>

Tree	<a href="#">micro-segment-locator</a>
Max. Instances	16
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **[locator-name]** *string*

Synopsis	SRv6 locator name
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment-locator</a> <i>string</i>
Tree	<a href="#">micro-segment-locator</a>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of the locator
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment-locator</a> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **algorithm** *number*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IGP flexible algorithm ID
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment-locator</a> <i>string</i> <b>algorithm</b> <i>number</i>

Tree	<a href="#">algorithm</a>
Range	128 to 255
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## block reference

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Pre-defined micro-SID block
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment-locator</a> <i>string</i> <a href="#">block</a> <i>reference</i>
Tree	<a href="#">block</a>
Description	This command associates a pre-defined micro-SID block with the micro-segment SRv6 locator.
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment</a> <a href="#">block</a> <i>string</i>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## un

Synopsis	Enter the <b>un</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment-locator</a> <i>string</i> <a href="#">un</a>
Tree	<a href="#">un</a>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## srh-mode keyword

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Segment Routing Header (SRH) mode
----------	-----------------------------------

Context	<b>configure</b> <i>router string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment-locator</a> <i>string un srh-mode keyword</i>
Tree	<a href="#">srh-mode</a>
Description	This command configures the popping mode for the SID.
Default	psp
Options	psp, usp
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### value number

#### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Service SID value for base router routes
Context	<b>configure</b> <i>router string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment-locator</a> <i>string un value number</i>
Tree	<a href="#">value</a>
Description	This command assigns a SID function value for all IPv4 and/or IPv6 routes in the base routing instance. These can be signaled using BGP or static.
Range	1 to 1048575
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### origination-fpe reference

Synopsis	List of the SRv6 origination FPEs
Context	<b>configure</b> <i>router string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">origination-fpe</a> <i>reference</i>
Tree	<a href="#">origination-fpe</a>
Description	This command configures the origination Forwarding Path Extension (FPE) for SRv6 tunnels on local services. The origination FPE must be different from any of the SRv6 termination FPEs.
Reference	<b>configure</b> <a href="#">fwd-path-ext</a> <i>fpe number</i>
Max. Instances	1
Introduced	21.5.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### source-address *string*

Synopsis Source address used in the SRv6 packet

Context **configure** *router string segment-routing segment-routing-v6 source-address string*

Tree [source-address](#)

Description This command specifies the global default source IPv6 address used in the SA field of the outerIPv6 header of the SRv6 encapsulated packet.

The value is inherited in the BGP and services contexts (for example, **configure router "base" bgp segment-routing-v6 source-address** and **configure service vprn bgp-ipvprn segment-routing-v6 source-address**), but is overwritten by the value configured in those contexts.

A source IPv6 address must be configured in the global context or in the BGP or services context.

The system does not check if the entered address is a valid local address.

Introduced 21.5.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### sr-mpls

Synopsis Enter the **sr-mpls** context

Context **configure** *router string segment-routing sr-mpls*

Tree [sr-mpls](#)

Introduced 21.10.R1

Platforms All

### prefix-sids [[interface-name](#)] *reference*

Synopsis Enter the **prefix-sids** list instance

Context **configure** *router string segment-routing sr-mpls prefix-sids reference*

Tree [prefix-sids](#)

Description Commands in this context configure the prefix SIDs for an interface.

Introduced 21.10.R1

Platforms All

### **[interface-name] reference**

Synopsis	Loopback interface name that owns the prefix to be advertised
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-mpls</a> <a href="#">prefix-sids</a> <i>reference</i>
Tree	<a href="#">prefix-sids</a>
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">interface</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	All

### **ipv4-sid**

Synopsis	Enable the <b>ipv4-sid</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-mpls</a> <a href="#">prefix-sids</a> <i>reference</i> <a href="#">ipv4-sid</a>
Tree	<a href="#">ipv4-sid</a>
Introduced	21.10.R1
Platforms	All

### **index number**

Synopsis	Node SID index for the interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-mpls</a> <a href="#">prefix-sids</a> <i>reference</i> <a href="#">ipv4-sid</a> <a href="#">index</a> <i>number</i>
Tree	<a href="#">index</a>
Range	0 to 4294967295
Notes	The following elements are part of a choice: <b>index</b> or <b>label</b> .
Introduced	21.10.R1
Platforms	All

### **label number**

Synopsis	Label value for the node SID
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-mpls</a> <a href="#">prefix-sids</a> <i>reference</i> <a href="#">ipv4-sid</a> <a href="#">label</a> <i>number</i>
Tree	<a href="#">label</a>
Range	32 to 1048575

Notes	The following elements are part of a choice: <b>index</b> or <b>label</b> .
Introduced	21.10.R1
Platforms	All

## ipv6-sid

Synopsis	Enable the <b>ipv6-sid</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-mpls</a> <a href="#">prefix-sids</a> <i>reference</i> <a href="#">ipv6-sid</a>
Tree	<a href="#">ipv6-sid</a>
Introduced	21.10.R1
Platforms	All

## index number

Synopsis	Node SID index for the interface
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-mpls</a> <a href="#">prefix-sids</a> <i>reference</i> <a href="#">ipv6-sid</a> <a href="#">index</a> <i>number</i>
Tree	<a href="#">index</a>
Range	0 to 4294967295
Notes	The following elements are part of a choice: <b>index</b> or <b>label</b> .
Introduced	21.10.R1
Platforms	All

## label number

Synopsis	Label value for the node SID
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-mpls</a> <a href="#">prefix-sids</a> <i>reference</i> <a href="#">ipv6-sid</a> <a href="#">label</a> <i>number</i>
Tree	<a href="#">label</a>
Range	32 to 1048575
Notes	The following elements are part of a choice: <b>index</b> or <b>label</b> .
Introduced	21.10.R1
Platforms	All

### **node-sid** *boolean*

Synopsis	Assign a node SID to the prefix referencing the router
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>sr-mpls</b> <b>prefix-sids</b> <i>reference</i> <b>node-sid</b> <i>boolean</i>
Tree	<b>node-sid</b>
Default	true
Introduced	21.10.R1
Platforms	All

### **sr-policies**

Synopsis	Enter the <b>sr-policies</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>sr-policies</b>
Tree	<b>sr-policies</b>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of segment routing policies
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>sr-policies</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **egress-statistics**

Synopsis	Enable the <b>egress-statistics</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>segment-routing</b> <b>sr-policies</b> <b>egress-statistics</b>
Tree	<b>egress-statistics</b>
Introduced	19.10.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the traffic statistics
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a> <a href="#">egress-statistics</a> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	19.10.R1
Platforms	All

### **ingress-statistics**

Synopsis	Enable the <b>ingress-statistics</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a> <b>ingress-statistics</b>
Tree	<a href="#">ingress-statistics</a>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the traffic statistics
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a> <a href="#">ingress-statistics</a> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **reserved-label-block** *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Reserved local block for segment routing policies
----------	---

Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a> <a href="#">reserved-label-block</a> <i>reference</i>
Tree	<a href="#">reserved-label-block</a>
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">mpls-labels</a> <a href="#">reserved-label-block</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **static-policy** [[name](#)] *string*

Synopsis	Enter the <b>static-policy</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a> <a href="#">static-policy</a> <i>string</i>
Tree	<a href="#">static-policy</a>
Max. Instances	8192
Introduced	16.0.R1
Platforms	All

### **[name]** *string*

Synopsis	Name for the segment routing static policy
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a> <a href="#">static-policy</a> <i>string</i>
Tree	<a href="#">static-policy</a>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of segment routing static policy
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a> <a href="#">static-policy</a> <i>string</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1

Platforms All

### **binding-sid** *number*

Synopsis Segment ID that opaquely represents an SR policy to upstream routers

Context **configure** *router string segment-routing sr-policies static-policy string binding-sid number*

Tree [binding-sid](#)

Range 32 to 1048575

Introduced 16.0.R1

Platforms All

### **color** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Traffic flows to be steered by this policy

Context **configure** *router string segment-routing sr-policies static-policy string color number*

Tree [color](#)

Range 0 to 4294967295

Introduced 16.0.R1

Platforms All

### **distinguisher** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Unique value for a policy

Context **configure** *router string segment-routing sr-policies static-policy string distinguisher number*

Tree [distinguisher](#)

Range 1 to 4294967295

Introduced 16.0.R1

Platforms All

## endpoint (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Destination of the source-routed path

Context **configure** *router* *string* [segment-routing](#) [sr-policies](#) [static-policy](#) *string* [endpoint](#) (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Tree [endpoint](#)

Introduced 16.0.R1

Platforms All

## head-end (*ipv4-address-no-zone* | *ipv6-address-no-zone* | *keyword*)

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Head end address for this static policy

Context **configure** *router* *string* [segment-routing](#) [sr-policies](#) [static-policy](#) *string* [head-end](#) (*ipv4-address-no-zone* | *ipv6-address-no-zone* | *keyword*)

Tree [head-end](#)

Options local

Introduced 16.0.R1

Platforms All

## maintenance-policy *reference*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Policy name

Context **configure** *router* *string* [segment-routing](#) [sr-policies](#) [static-policy](#) *string* [maintenance-policy](#) *reference*

Tree [maintenance-policy](#)

Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">maintenance-policy</a> <i>string</i>
Introduced	20.10.R1
Platforms	All

### **preference** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Preference value of this static policy
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a> <a href="#">static-policy</a> <i>string</i> <a href="#">preference</a> <i>number</i>
Tree	<a href="#">preference</a>
Max. Range	0 to 4294967295
Default	100
Introduced	16.0.R1
Platforms	All

### **segment-list** [[seg-list-index](#)] *number*

Synopsis	Enter the <b>segment-list</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a> <a href="#">static-policy</a> <i>string</i> <a href="#">segment-list</a> <i>number</i>
Tree	<a href="#">segment-list</a>
Max. Instances	32
Introduced	16.0.R1
Platforms	All

### **[seg-list-index]** *number*

Synopsis	Index for identifying a particular segment list
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a> <a href="#">static-policy</a> <i>string</i> <a href="#">segment-list</a> <i>number</i>
Tree	<a href="#">segment-list</a>
Range	1 to 32

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of segment list for static policy
Context	<b>configure</b> <i>router</i> <i>string</i> <i>segment-routing</i> <i>sr-policies</i> <i>static-policy</i> <i>string</i> <i>segment-list</i> <i>number</i> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **segment** [[segment-index](#)] *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>segment</b> list instance
Context	<b>configure</b> <i>router</i> <i>string</i> <i>segment-routing</i> <i>sr-policies</i> <i>static-policy</i> <i>string</i> <i>segment-list</i> <i>number</i> <b>segment</b> <i>number</i>
Tree	<a href="#">segment</a>
Max. Instances	11
Introduced	16.0.R1
Platforms	All

### **[segment-index]** *number*

Synopsis	Index for identifying a particular segment list
Context	<b>configure</b> <i>router</i> <i>string</i> <i>segment-routing</i> <i>sr-policies</i> <i>static-policy</i> <i>string</i> <i>segment-list</i> <i>number</i> <b>segment</b> <i>number</i>
Tree	<a href="#">segment</a>
Range	1 to 11

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **mpls-label** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Value for the MPLS label
Context	<b>configure</b> <i>router string segment-routing sr-policies static-policy string segment-list number segment number mpls-label number</i>
Tree	<a href="#">mpls-label</a>
Range	0 to 1048575
Introduced	16.0.R1
Platforms	All

### **srv6-sid** *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Segment ID for segment routing IPv6
Context	<b>configure</b> <i>router string segment-routing sr-policies static-policy string segment-list number segment number srv6-sid string</i>
Tree	<a href="#">srv6-sid</a>
Description	This command defines the 128-bit SRv6 SID for the segment.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **weight** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Weight of this segment list
Context	<b>configure</b> <i>router string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a> <a href="#">static-policy</a> <i>string</i> <a href="#">segment-list</a> <i>number</i> <a href="#">weight</a> <i>number</i>
Tree	<a href="#">weight</a>
Max. Range	0 to 4294967295
Default	1
Introduced	16.0.R1
Platforms	All

## segment-routing-v6

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the <b>segment-routing-v6</b> context
Context	<b>configure</b> <i>router string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a> <a href="#">static-policy</a> <i>string</i> <a href="#">segment-routing-v6</a>
Tree	<a href="#">segment-routing-v6</a>
Description	Commands in this context configure a static SRv6 policy.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## binding-sid [[index](#)] *number*

Synopsis	Enter the <b>binding-sid</b> list instance
Context	<b>configure</b> <i>router string</i> <a href="#">segment-routing</a> <a href="#">sr-policies</a> <a href="#">static-policy</a> <i>string</i> <a href="#">segment-routing-v6</a> <a href="#">binding-sid</a> <i>number</i>
Tree	<a href="#">binding-sid</a>
Max. Instances	1
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## [\[index\]](#) *number*

Synopsis	Binding SID index
----------	-------------------

Context	<b>configure</b> <i>router string</i> <a href="#">segment-routing sr-policies static-policy string</a> <a href="#">segment-routing-v6 binding-sid</a> <i>number</i>
Tree	<a href="#">binding-sid</a>
Range	1
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **ip-address** *string*

Synopsis	Remote SRv6 binding SID
Context	<b>configure</b> <i>router string</i> <a href="#">segment-routing sr-policies static-policy string</a> <a href="#">segment-routing-v6 binding-sid</a> <i>number</i> <a href="#">ip-address</a> <i>string</i>
Tree	<a href="#">ip-address</a>
Notes	The following elements are part of a choice: <b>ip-address</b> or <b>locator</b> .
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **locator**

Synopsis	Enable the <b>locator</b> context
Context	<b>configure</b> <i>router string</i> <a href="#">segment-routing sr-policies static-policy string</a> <a href="#">segment-routing-v6 binding-sid</a> <i>number</i> <b>locator</b>
Tree	<a href="#">locator</a>
Notes	The following elements are part of a choice: <b>ip-address</b> or <b>locator</b> .
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **function** *keyword*

Synopsis	Local SRv6 binding SID locator function
Context	<b>configure</b> <i>router string</i> <a href="#">segment-routing sr-policies static-policy string</a> <a href="#">segment-routing-v6 binding-sid</a> <i>number</i> <a href="#">locator</a> <i>function</i> <i>keyword</i>
Tree	<a href="#">function</a>

Description	This command configures an SRv6 binding SID function for a static SRv6 policy with a local head end location ( <b>configure router segment-routing sr-policies static-policy head-end local</b> ).
Options	end-b6-encaps-red
Notes	This element is mandatory.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **function-value** *number*

Synopsis	Local SRv6 binding SID locator function value
Context	<b>configure router</b> <i>string</i> <b>segment-routing sr-policies static-policy</b> <i>string</i> <b>segment-routing-v6 binding-sid</b> <i>number</i> <b>locator function-value</b> <i>number</i>
Tree	<b>function-value</b>
Description	This command configures the function value for a static SRv6 policy with a local head end location ( <b>configure router segment-routing sr-policies static-policy head-end local</b> ). If a function value is configured, the router checks whether this function value is available for the named locator. If no function value is configured, the router dynamically allocates a value.
Range	1 to 1048575
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **locator-name** *reference*

Synopsis	Local SRv6 binding SID locator name
Context	<b>configure router</b> <i>string</i> <b>segment-routing sr-policies static-policy</b> <i>string</i> <b>segment-routing-v6 binding-sid</b> <i>number</i> <b>locator</b> <i>locator-name reference</i>
Tree	<b>locator-name</b>
Description	This command configures an SRv6 binding SID locator for a static SRv6 policy with a local head end location ( <b>configure router segment-routing sr-policies static-policy head-end local</b> ). A corresponding locator must exist in the <b>configure router segment-routing segment-routing-v6</b> context.
Reference	<b>configure router</b> <i>string</i> <b>segment-routing segment-routing-v6</b> <i>locator string</i>
Notes	This element is mandatory.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **type** *keyword*

Synopsis	Static policy type
Context	<b>configure</b> <i>router string segment-routing sr-policies static-policy string type keyword</i>
Tree	<a href="#">type</a>
Description	This command configures the type of static policy. Only commands relevant to the type of the static policy can be executed. The type of the static policy can only be changed to a new type if there is no configuration present for the old type, or if all configuration for the old type is deleted.
Default	sr-mpls
Options	sr-mpls, srv6
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **selective-fib** *boolean*

Synopsis	Enable selective FIB
Context	<b>configure</b> <i>router string selective-fib boolean</i>
Tree	<a href="#">selective-fib</a>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **sfm-overload**

Synopsis	Enable the <b>sfm-overload</b> context
Context	<b>configure</b> <i>router string sfm-overload</i>
Tree	<a href="#">sfm-overload</a>
Introduced	16.0.R2
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s, 7950 XRS, VSR

### **holdoff-time** *number*

Synopsis	Delay in detecting SFM failures and setting overload
Context	<b>configure</b> <i>router string sfm-overload holdoff-time number</i>

Tree	<a href="#">holdoff-time</a>
Range	1 to 600
Units	seconds
Introduced	16.0.R2
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s, 7950 XRS, VSR

## sgt-qos

Synopsis	Enter the <b>sgt-qos</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">sgt-qos</a>
Tree	<a href="#">sgt-qos</a>
Introduced	16.0.R1
Platforms	All

## dot1p

Synopsis	Enter the <b>dot1p</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">sgt-qos</a> <a href="#">dot1p</a>
Tree	<a href="#">dot1p</a>
Introduced	16.0.R1
Platforms	All

## application [[dot1p-app-name](#)] *keyword*

Synopsis	Enter the <b>application</b> list instance
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">sgt-qos</a> <a href="#">dot1p</a> <a href="#">application</a> <i>keyword</i>
Tree	<a href="#">application</a>
Introduced	16.0.R1
Platforms	All

## [[dot1p-app-name](#)] *keyword*

Synopsis	Dot1p application identifier on the NOKIA SR OS router that generates control traffic over IP
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">sgt-qos</a> <a href="#">dot1p</a> <a href="#">application</a> <i>keyword</i>

Tree	<a href="#">application</a>
Options	arp, isis, pppoe
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **dot1p** (*keyword | number*)

Synopsis	Dot1p value to the traffic generated by this application
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">sgt-qos dot1p application</a> <i>keyword</i> <a href="#">dot1p</a> ( <i>keyword   number</i> )
Tree	<a href="#">dot1p</a>
Range	0 to 7
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1
Platforms	All

### **dscp**

Synopsis	Enter the <b>dscp</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">sgt-qos dscp</a>
Tree	<a href="#">dscp</a>
Introduced	16.0.R1
Platforms	All

### **application** [[dscp-app-name](#)] *keyword*

Synopsis	Enter the <b>application</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <a href="#">sgt-qos dscp application</a> <i>keyword</i>
Tree	<a href="#">application</a>
Introduced	16.0.R1
Platforms	All

### [dscp-app-name] *keyword*

Synopsis	DSCP application identifier on the NOKIA SR OS router that generates control traffic over IP
Context	<b>configure</b> <b>router</b> <i>string</i> <b>sgt-qos</b> <b>dscp</b> <b>application</b> <i>keyword</i>
Tree	<b>application</b>
Options	bgp, cflowd, dhcp, dns, ftp, icmp, igmp, l2tp, ldp, mld, msdp, ndis, ntp, ospf, pim, radius, rip, rsvp, snmp, snmp-notification, srrp, ssh, syslog, tacplus, telnet, tftp, traceroute, vrrp, ptp, igmp-reporter, gtp, sflow, diameter, pcep, call-trace, bmp, grpc, mtrace2, http, mpls-udp-return, pfc, ibcp
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **dscp** (*keyword* | *number*)

Synopsis	DSCP value to the traffic generated by this application
Context	<b>configure</b> <b>router</b> <i>string</i> <b>sgt-qos</b> <b>dscp</b> <b>application</b> <i>keyword</i> <b>dscp</b> ( <i>keyword</i>   <i>number</i> )
Tree	<b>dscp</b>
Range	0 to 63
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1
Platforms	All

### **dscp-map** [**dscp-name**] *keyword*

Synopsis	Enter the <b>dscp-map</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>sgt-qos</b> <b>dscp</b> <b>dscp-map</b> <i>keyword</i>
Tree	<b>dscp-map</b>
Introduced	16.0.R2
Platforms	All

### [dscp-name] keyword

Synopsis	DSCP name mapped to forwarding class
Context	<b>configure</b> <b>router</b> <i>string</i> <b>sgt-qos dscp dscp-map</b> <i>keyword</i>
Tree	<b>dscp-map</b>
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Notes	This element is part of a list key.
Introduced	16.0.R2
Platforms	All

### fc keyword

Synopsis	Value for the forwarding class for this mapping
Context	<b>configure</b> <b>router</b> <i>string</i> <b>sgt-qos dscp dscp-map</b> <i>keyword</i> <b>fc</b> <i>keyword</i>
Tree	<b>fc</b>
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R2
Platforms	All

### static-routes

Synopsis	Enter the <b>static-routes</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b>
Tree	<b>static-routes</b>
Introduced	16.0.R1
Platforms	All

### hold-down

Synopsis	Enable the <b>hold-down</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>hold-down</b>
Tree	<b>hold-down</b>
Introduced	16.0.R1

Platforms All

### **initial number**

Synopsis Value for the initial hold down time  
Context **configure router string static-routes hold-down initial number**  
Tree **initial**  
Range 1 to 65535  
Notes This element is mandatory.  
Introduced 16.0.R1  
Platforms All

### **max-value number**

Synopsis Maximum value of the hold down time  
Context **configure router string static-routes hold-down max-value number**  
Tree **max-value**  
Range 1 to 65535  
Notes This element is mandatory.  
Introduced 16.0.R1  
Platforms All

### **multiplier number**

Synopsis Value by which the previous hold-down time is multiplied to calculate the new one  
Context **configure router string static-routes hold-down multiplier number**  
Tree **multiplier**  
Range 1 to 10  
Notes This element is mandatory.  
Introduced 16.0.R1  
Platforms All

### **route [ip-prefix] (ipv4-prefix | ipv6-prefix) route-type keyword**

Synopsis Enter the **route** list instance

Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type keyword</b>
Tree	<b>route</b>
Introduced	16.0.R1
Platforms	All

### **[ip-prefix]** (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	IP prefix and prefix length for the static routes
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type keyword</b>
Tree	<b>route</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **route-type** *keyword*

Synopsis	Static route type for unicast or multicast RPF
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type keyword</b>
Tree	<b>route</b>
Options	unicast, multicast
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **backup-tag** *number*

Synopsis	Static route backup tag
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type keyword backup-tag number</b>
Tree	<b>backup-tag</b>
Description	<p>This command associates a 4-byte backup route tag with the static route when the backup next-hop functionality is activated. The tag value is used in route policies to control distribution of the static route into other protocols when the backup next-hop function is activated for the associated static route.</p> <p>The tag specified at this level of the static route causes the tag values that are configured under the <b>next-hop</b>, <b>black-hole</b>, and <b>indirect</b> contexts of the static route to be ignored.</p>

Range	1 to 4294967295
Introduced	21.2.R1
Platforms	All

## **blackhole**

Synopsis	Enable the <b>blackhole</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>blackhole</b>
Tree	<b>blackhole</b>
Introduced	16.0.R1
Platforms	All

## **admin-state** *keyword*

Synopsis	Administrative state of the static route operation
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>blackhole</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Introduced	16.0.R1
Platforms	All

## **community** *string*

Synopsis	Community ID associated with the static route
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>blackhole</b> <b>community</b> <i>string</i>
Tree	<b>community</b>
String Length	1 to 72
Introduced	16.0.R1
Platforms	All

## **description** *string*

Synopsis	Text description
----------	------------------

Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>blackhole</b> <i>description string</i>
Tree	<b>description</b>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **dynamic-bgp** *boolean*

Synopsis	Derive static route next hop from BGP next hop value
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>blackhole dynamic-bgp</b> <i>boolean</i>
Tree	<b>dynamic-bgp</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **generate-icmp** *boolean*

Synopsis	Send ICMP unreachable messages when received packets match a static route with black-hole next-hop
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>blackhole generate-icmp</b> <i>boolean</i>
Tree	<b>generate-icmp</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **metric** *number*

Synopsis	Static route metric
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>blackhole metric</b> <i>number</i>
Tree	<b>metric</b>
Range	0 to 65535
Default	1
Introduced	16.0.R1

Platforms All

### **preference** *number*

Synopsis Priority of this static route over the routes from different sources

Context **configure** **router** *string* **static-routes** **route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword*  
**blackhole** **preference** *number*

Tree [preference](#)

Range 1 to 255

Default 5

Introduced 16.0.R1

Platforms All

### **prefix-list**

Synopsis Enter the **prefix-list** context

Context **configure** **router** *string* **static-routes** **route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword*  
**blackhole** **prefix-list**

Tree [prefix-list](#)

Introduced 16.0.R1

Platforms All

### **flag** *keyword*

Synopsis Static route match condition from prefix list

Context **configure** **router** *string* **static-routes** **route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword*  
**blackhole** **prefix-list** **flag** *keyword*

Tree [flag](#)

Default any

Options any, all, none

Introduced 16.0.R1

Platforms All

### **name** *reference*

Synopsis Prefix list name

Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>blackhole prefix-list name reference</b>
Tree	<b>name</b>
Reference	<b>configure policy-options prefix-list string</b>
Introduced	16.0.R1
Platforms	All

### **tag number**

Synopsis	Static route tag
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>blackhole tag number</b>
Tree	<b>tag</b>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **community string**

Synopsis	Community ID associated with the static route
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>community string</b>
Tree	<b>community</b>
String Length	1 to 72
Max. Instances	12
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **indirect [ip-address] (ipv4-address-no-zone | ipv6-address-no-zone)**

Synopsis	Enter the <b>indirect</b> list instance
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect (ipv4-address-no-zone   ipv6-address-no-zone)</b>
Tree	<b>indirect</b>

Introduced 16.0.R1  
Platforms All

**[ip-address]** (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis Next-hop IP address used to reach the destination  
Context **configure router string static-routes route** (*ipv4-prefix | ipv6-prefix*) **route-type keyword indirect** (*ipv4-address-no-zone | ipv6-address-no-zone*)  
Tree **indirect**  
Description This command specifies the next-hop IP address used to reach the destination. The specified IP address can be either on the network side or the access side and is typically at least one hop away from the node.  
Notes This element is part of a list key.  
Introduced 16.0.R1  
Platforms All

**admin-state keyword**

Synopsis Administrative state of the static route operation  
Context **configure router string static-routes route** (*ipv4-prefix | ipv6-prefix*) **route-type keyword indirect** (*ipv4-address-no-zone | ipv6-address-no-zone*) **admin-state keyword**  
Tree **admin-state**  
Options enable, disable  
Introduced 16.0.R1  
Platforms All

**community string**

Synopsis Community ID associated with the static route  
Context **configure router string static-routes route** (*ipv4-prefix | ipv6-prefix*) **route-type keyword indirect** (*ipv4-address-no-zone | ipv6-address-no-zone*) **community string**  
Tree **community**  
String Length 1 to 72  
Introduced 16.0.R1  
Platforms All

## **cpe-check** [address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the <b>cpe-check</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>cpe-check</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>cpe-check</b>
Description	<p>When configured, this command enables the Customer Premises Equipment (CPE) check feature and specifies the IP address of the target CPE device.</p> <p>This option initiates a background ICMP ping test to the configured target IP address. The IP address can either be an IPv4 address for IPv4 static routes or an IPv6 address for IPv6 static routes. To avoid possible circular references, the target IP address cannot exist in the same subnet as the static route subnet. This command is mutually exclusive with BFD support on a specific static route.</p> <p><b>Note:</b> A node that is sourcing CPE-check packets waits an additional full interval before taking action, which gives the CPE time to respond. For example, with a drop-count of 3 and an interval of 1s, three CPE-check packets are sent out and the node waits for the duration of another interval before acting on the loss. Failure declaration may take extra time depending on the load, interval, and other factors. In line with multitasking, multi-priority operating principles of the node, and the relative priority of <b>cpe-ping</b>, the node paces these minor events.</p>
Max. Instances	1
Introduced	16.0.R1
Platforms	All

## [address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the target CPE device
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>cpe-check</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>cpe-check</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## **drop-count** *number*

Synopsis	Consecutive ping replies missed before CPE deemed down
----------	--

Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>cpe-check</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>drop-count</b> <i>number</i>
Tree	<b>drop-count</b>
Range	1 to 255
Default	3
Introduced	16.0.R1
Platforms	All

### **interval** *number*

Synopsis	Time between ICMP pings to the target CPE IP address
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>cpe-check</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>interval</b> <i>number</i>
Tree	<b>interval</b>
Description	This command configures the interval between ICMP pings to the target IP address.
Range	1 to 255
Default	1
Units	seconds
Introduced	16.0.R1
Platforms	All

### **log** *boolean*

Synopsis	Log CPE connectivity checks transitions
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>cpe-check</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>log</b> <i>boolean</i>
Tree	<b>log</b>
Description	This command logs the transitions between active and in-active based on the CPE connectivity check. Events are sent to the system log, syslog, and SNMP traps.
Default	false
Introduced	16.0.R1
Platforms	All

### **padding-size** *number*

Synopsis	Padding size for CPE connectivity checks
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>cpe-check</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>padding-size</b> <i>number</i>
Tree	<b>padding-size</b>
Description	This command configures the amount of padding to add to the ICMP packet in bytes.
Range	0 to 16384
Default	56
Units	bytes
Introduced	16.0.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>description</b> <i>string</i>
Tree	<b>description</b>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **destination-class** *number*

Synopsis	Destination class for this static route
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>destination-class</b> <i>number</i>
Tree	<b>destination-class</b>
Range	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

### **metric** *number*

Synopsis	Static route metric
----------	---------------------

Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>metric</b> <i>number</i>
Tree	<b>metric</b>
Range	0 to 65535
Default	1
Introduced	16.0.R1
Platforms	All

### **preference** *number*

Synopsis	Priority of this static route over the routes from different sources
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>preference</b> <i>number</i>
Tree	<b>preference</b>
Range	1 to 255
Default	5
Introduced	16.0.R1
Platforms	All

### **prefix-list**

Synopsis	Enter the <b>prefix-list</b> context
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>prefix-list</b>
Tree	<b>prefix-list</b>
Introduced	16.0.R1
Platforms	All

### **flag** *keyword*

Synopsis	Static route match condition from prefix list
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>prefix-list</b> <b>flag</b> <i>keyword</i>
Tree	<b>flag</b>
Default	any
Options	any, all, none

Introduced 16.0.R1  
Platforms All

### **name** *reference*

Synopsis Prefix list name  
Context **configure** **router** *string* **static-routes** **route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **prefix-list** **name** *reference*  
Tree **name**  
Reference **configure** **policy-options** **prefix-list** *string*  
Introduced 16.0.R1  
Platforms All

### **qos**

Synopsis Enter the **qos** context  
Context **configure** **router** *string* **static-routes** **route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **qos**  
Tree **qos**  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **forwarding-class** *keyword*

Synopsis Forwarding class associated with the static route  
Context **configure** **router** *string* **static-routes** **route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **qos** **forwarding-class** *keyword*  
Tree **forwarding-class**  
Options be, l2, af, l1, h2, ef, h1, nc  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **priority** *keyword*

Synopsis Static route priority

Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>qos priority</b> <i>keyword</i>
Tree	<b>priority</b>
Options	low, high
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **source-class** *number*

Synopsis	Source class for this static route
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>source-class</b> <i>number</i>
Tree	<b>source-class</b>
Range	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

### **tag** *number*

Synopsis	Static route tag
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>tag</b> <i>number</i>
Tree	<b>tag</b>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **tunnel-next-hop**

Synopsis	Enter the <b>tunnel-next-hop</b> context
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>tunnel-next-hop</b>
Tree	<b>tunnel-next-hop</b>
Introduced	16.0.R1
Platforms	All

### **disallow-igp** *boolean*

Synopsis	Do not resolve indirect static routes using IGP next-hops in RTM if no tunnel next-hops found in TTM
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>tunnel-next-hop</b> <b>disallow-igp</b> <i>boolean</i>
Tree	<b>disallow-igp</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **flex-algo** *number*

Synopsis	Flexible Algorithm ID
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>tunnel-next-hop</b> <b>flex-algo</b> <i>number</i>
Tree	<b>flex-algo</b>
Range	128 to 255
Introduced	20.7.R1
Platforms	All

### **resolution** *keyword*

Synopsis	Tunnel next hop resolution to resolve indirect static route
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>tunnel-next-hop</b> <b>resolution</b> <i>keyword</i>
Tree	<b>resolution</b>
Default	none
Options	none, filter, any
Introduced	16.0.R1
Platforms	All

### **resolution-filter**

Synopsis	Enter the <b>resolution-filter</b> context
----------	--

Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>tunnel-next-hop resolution-filter</b>
Tree	<b>resolution-filter</b>
Introduced	16.0.R1
Platforms	All

### **ldp boolean**

Synopsis	Use LDP Route Forwarding Equivalence Class (FEC) tunneling for next-hop resolution
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>tunnel-next-hop resolution-filter</b> <b>ldp boolean</b>
Tree	<b>ldp</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **mpls-fwd-policy boolean**

Synopsis	Use MPLS forwarding policy for tunnel-next-hop
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>tunnel-next-hop resolution-filter</b> <b>mpls-fwd-policy boolean</b>
Tree	<b>mpls-fwd-policy</b>
Default	false
Introduced	16.0.R4
Platforms	All

### **rib-api boolean**

Synopsis	Set RIB API type for use with tunnel next-hop
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>tunnel-next-hop resolution-filter</b> <b>rib-api boolean</b>
Tree	<b>rib-api</b>
Default	false
Introduced	16.0.R4

Platforms All

## **rsvp-te**

Synopsis Enable the **rsvp-te** context

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **tunnel-next-hop resolution-filter rsvp-te**

Tree **rsvp-te**

Introduced 16.0.R1

Platforms All

## **lsp** [*lsp-name*] *string*

Synopsis Add a list entry for **lsp**

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **tunnel-next-hop resolution-filter rsvp-te lsp** *string*

Tree **lsp**

Introduced 16.0.R1

Platforms All

## **[lsp-name]** *string*

Synopsis Labeled Switch Path name

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **tunnel-next-hop resolution-filter rsvp-te lsp** *string*

Tree **lsp**

String Length 1 to 64

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms All

## **sr-isis** *boolean*

Synopsis Use the SR ISIS tunneling mechanism to resolve next hop for the static route

Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>tunnel-next-hop resolution-filter sr-isis</b> <i>boolean</i>
Tree	<b>sr-isis</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **sr-ospf boolean**

Synopsis	Use SR OSPF tunneling for next-hop resolution
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>tunnel-next-hop resolution-filter sr-ospf</b> <i>boolean</i>
Tree	<b>sr-ospf</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **sr-ospf3 boolean**

Synopsis	Use SR OSPFv3 tunneling mechanism to resolve next-hop
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>tunnel-next-hop resolution-filter sr-ospf3</b> <i>boolean</i>
Tree	<b>sr-ospf3</b>
Default	false
Introduced	16.0.R6
Platforms	All

### **sr-te**

Synopsis	Enable the <b>sr-te</b> context
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>indirect</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>tunnel-next-hop resolution-filter sr-te</b>
Tree	<b>sr-te</b>
Introduced	16.0.R1

Platforms All

### **lsp** [**lsp-name**] *string*

Synopsis Add a list entry for **lsp**

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **tunnel-next-hop resolution-filter sr-te lsp** *string*

Tree **lsp**

Introduced 16.0.R1

Platforms All

### **[lsp-name]** *string*

Synopsis Labeled Switch Path name

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **indirect** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **tunnel-next-hop resolution-filter sr-te lsp** *string*

Tree **lsp**

String Length 1 to 64

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms All

### **interface** [**interface-name**] *string*

Synopsis Enter the **interface** list instance

Context **configure router** *string* **static-routes route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **interface** *string*

Tree **interface**

Introduced 16.0.R1

Platforms All

### **[interface-name]** *string*

Synopsis Router interface name

Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>interface</b> <i>string</i>
Tree	<b>interface</b>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the static route operation
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>interface</b> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **community** *string*

Synopsis	Community ID associated with the static route
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>interface</b> <i>string</i> <b>community</b> <i>string</i>
Tree	<b>community</b>
String Length	1 to 72
Introduced	16.0.R1
Platforms	All

### **cpe-check** [**address**] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the <b>cpe-check</b> list instance
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>interface</b> <i>string</i> <b>cpe-check</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>cpe-check</b>
Max. Instances	1

Introduced 16.0.R1  
Platforms All

**[address]** (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis IP address of the target CPE device  
Context **configure** *router string static-routes route (ipv4-prefix | ipv6-prefix) route-type keyword interface string cpe-check (ipv4-address-no-zone | ipv6-address-no-zone)*  
Tree *cpe-check*  
Notes This element is part of a list key.  
Introduced 16.0.R1  
Platforms All

**drop-count** *number*

Synopsis Consecutive ping replies missed before CPE deemed down  
Context **configure** *router string static-routes route (ipv4-prefix | ipv6-prefix) route-type keyword interface string cpe-check (ipv4-address-no-zone | ipv6-address-no-zone) drop-count number*  
Tree *drop-count*  
Range 1 to 255  
Default 3  
Introduced 16.0.R1  
Platforms All

**interval** *number*

Synopsis Time between ICMP pings to the target CPE IP address  
Context **configure** *router string static-routes route (ipv4-prefix | ipv6-prefix) route-type keyword interface string cpe-check (ipv4-address-no-zone | ipv6-address-no-zone) interval number*  
Tree *interval*  
Description This command configures the interval between ICMP pings to the target IP address.  
Range 1 to 255  
Default 1  
Units seconds

Introduced 16.0.R1  
Platforms All

### **log** *boolean*

Synopsis Log CPE connectivity checks transitions  
Context **configure** **router** *string* **static-routes** **route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **interface** *string* **cpe-check** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **log** *boolean*  
Tree **log**  
Description This command logs the transitions between active and in-active based on the CPE connectivity check. Events are sent to the system log, syslog, and SNMP traps.  
Default false  
Introduced 16.0.R1  
Platforms All

### **padding-size** *number*

Synopsis Padding size for CPE connectivity checks  
Context **configure** **router** *string* **static-routes** **route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **interface** *string* **cpe-check** (*ipv4-address-no-zone* | *ipv6-address-no-zone*) **padding-size** *number*  
Tree **padding-size**  
Description This command configures the amount of padding to add to the ICMP packet in bytes.  
Range 0 to 16384  
Default 56  
Units bytes  
Introduced 16.0.R1  
Platforms All

### **description** *string*

Synopsis Text description  
Context **configure** **router** *string* **static-routes** **route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **interface** *string* **description** *string*  
Tree **description**  
String Length 1 to 80

Introduced 16.0.R1  
Platforms All

### **destination-class** *number*

Synopsis Destination class for this static route  
Context **configure** **router** *string* **static-routes** **route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword*  
**interface** *string* **destination-class** *number*  
Tree **destination-class**  
Range 1 to 255  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

### **load-balancing-weight** *number*

Synopsis Load-balancing weight for all of the ECMP next hops  
Context **configure** **router** *string* **static-routes** **route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword*  
**interface** *string* **load-balancing-weight** *number*  
Tree **load-balancing-weight**  
Range 1 to 4294967295  
Introduced 16.0.R1  
Platforms All

### **metric** *number*

Synopsis Static route metric  
Context **configure** **router** *string* **static-routes** **route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword*  
**interface** *string* **metric** *number*  
Tree **metric**  
Range 0 to 65535  
Default 1  
Introduced 16.0.R1  
Platforms All

### **preference** *number*

Synopsis	Priority of this static route over the routes from different sources
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>interface</b> <i>string</i> <b>preference</b> <i>number</i>
Tree	<b>preference</b>
Range	1 to 255
Default	5
Introduced	16.0.R1
Platforms	All

### **prefix-list**

Synopsis	Enter the <b>prefix-list</b> context
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>interface</b> <i>string</i> <b>prefix-list</b>
Tree	<b>prefix-list</b>
Introduced	16.0.R1
Platforms	All

### **flag** *keyword*

Synopsis	Static route match condition from prefix list
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>interface</b> <i>string</i> <b>prefix-list</b> <b>flag</b> <i>keyword</i>
Tree	<b>flag</b>
Default	any
Options	any, all, none
Introduced	16.0.R1
Platforms	All

### **name** *reference*

Synopsis	Prefix list name
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>interface</b> <i>string</i> <b>prefix-list</b> <b>name</b> <i>reference</i>
Tree	<b>name</b>

Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">prefix-list</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

## qos

Synopsis	Enter the <b>qos</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">static-routes</a> <a href="#">route</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">route-type</a> <i>keyword</i> <a href="#">interface</a> <i>string</i> <b>qos</b>
Tree	<a href="#">qos</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## forwarding-class *keyword*

Synopsis	Forwarding class associated with the static route
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">static-routes</a> <a href="#">route</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">route-type</a> <i>keyword</i> <a href="#">interface</a> <i>string</i> <b>qos</b> <a href="#">forwarding-class</a> <i>keyword</i>
Tree	<a href="#">forwarding-class</a>
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## priority *keyword*

Synopsis	Static route priority
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">static-routes</a> <a href="#">route</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">route-type</a> <i>keyword</i> <a href="#">interface</a> <i>string</i> <b>qos</b> <a href="#">priority</a> <i>keyword</i>
Tree	<a href="#">priority</a>
Options	low, high
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## source-class *number*

Synopsis	Source class for this static route
----------	------------------------------------

Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>interface</b> <i>string</i> <b>source-class</b> <i>number</i>
Tree	<b>source-class</b>
Range	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

### **tag** *number*

Synopsis	Static route tag
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>interface</b> <i>string</i> <b>tag</b> <i>number</i>
Tree	<b>tag</b>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **ipsec-tunnel** [**ipsec-tunnel-name**] *string*

Synopsis	Enter the <b>ipsec-tunnel</b> list instance
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>ipsec-tunnel</b> <i>string</i>
Tree	<b>ipsec-tunnel</b>
Introduced	22.7.R1
Platforms	VSR

### [**ipsec-tunnel-name**] *string*

Synopsis	IPsec tunnel name.
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>ipsec-tunnel</b> <i>string</i>
Tree	<b>ipsec-tunnel</b>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	VSR

### **admin-state** *keyword*

Synopsis	Administrative state of the static route operation
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>ipsec-tunnel</b> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Introduced	22.7.R1
Platforms	VSR

### **community** *string*

Synopsis	Community ID associated with the static route
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>ipsec-tunnel</b> <i>string</i> <b>community</b> <i>string</i>
Tree	<b>community</b>
String Length	1 to 72
Introduced	22.7.R1
Platforms	VSR

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>ipsec-tunnel</b> <i>string</i> <b>description</b> <i>string</i>
Tree	<b>description</b>
String Length	1 to 80
Introduced	22.7.R1
Platforms	VSR

### **metric** *number*

Synopsis	Static route metric
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>ipsec-tunnel</b> <i>string</i> <b>metric</b> <i>number</i>
Tree	<b>metric</b>

Range	0 to 65535
Default	1
Introduced	22.7.R1
Platforms	VSR

### **preference** *number*

Synopsis	Priority of this static route over the routes from different sources
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>ipsec-tunnel</b> <i>string</i> <b>preference</b> <i>number</i>
Tree	<b>preference</b>
Range	1 to 255
Default	5
Introduced	22.7.R1
Platforms	VSR

### **tag** *number*

Synopsis	Static route tag
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>ipsec-tunnel</b> <i>string</i> <b>tag</b> <i>number</i>
Tree	<b>tag</b>
Range	1 to 4294967295
Introduced	22.7.R1
Platforms	VSR

### **next-hop** [**ip-address**] (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

Synopsis	Enter the <b>next-hop</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>next-hop</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> )
Tree	<b>next-hop</b>
Introduced	16.0.R1
Platforms	All

**[ip-address]** (*ipv4-address-with-zone | ipv6-address-with-zone*)

Synopsis	IP address of the directly-connected next hop
Context	<b>configure router string static-routes route</b> ( <i>ipv4-prefix   ipv6-prefix</i> ) <b>route-type keyword next-hop</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> )
Tree	<b>next-hop</b>
Description	This command specifies the IP address of the directly-connected next hop. The IP address can either be on the network side or the access side on the node. The address must be associated with a network directly connected to a network configured on the node.
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**admin-state keyword**

Synopsis	Administrative state of the static route operation
Context	<b>configure router string static-routes route</b> ( <i>ipv4-prefix   ipv6-prefix</i> ) <b>route-type keyword next-hop</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>admin-state keyword</b>
Tree	<b>admin-state</b>
Options	enable, disable
Introduced	16.0.R1
Platforms	All

**backup-next-hop**

Synopsis	Enter the <b>backup-next-hop</b> context
Context	<b>configure router string static-routes route</b> ( <i>ipv4-prefix   ipv6-prefix</i> ) <b>route-type keyword next-hop</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>backup-next-hop</b>
Tree	<b>backup-next-hop</b>
Description	Commands in this context configure static route entry fast failover.
Introduced	21.2.R1
Platforms	All

**address** (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Backup next-hop IP address
----------	----------------------------

Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>next-hop</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>backup-next-hop address</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>address</b>
Description	<p>This command specifies the backup IP forwarding address that is used for static route Fast ReRoute (FRR). The configured address, if reachable, acts as pre-installed backup forwarding information that can be used when the primary IP next-hop suddenly fails.</p> <p>The configured backup next-hop IP address can be directly or indirectly connected (using an IGP or tunnel) to the node. The backup next-hop forwarding information or the Next-hop Label Forwarding Entry (NHLFE) tunnel forwarding information from the IP Routing Table Manager (RTM) is used to preconfigure an IP fast-reroute backup path.</p> <p>One backup next-hop address can protect a single primary static route entry next-hop address without ECMP and it is only activated when the primary next-hop has no active ECMP.</p> <p>The configured IP address can be either on the network or the access side.</p>
Introduced	21.2.R1
Platforms	All

### **bfd-liveness** *boolean*

Synopsis	Use Bidirectional Forwarding Detection on this static route
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>next-hop</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>bfd-liveness</b> <i>boolean</i>
Tree	<b>bfd-liveness</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **community** *string*

Synopsis	Community ID associated with the static route
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>next-hop</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>community</b> <i>string</i>
Tree	<b>community</b>
String Length	1 to 72
Introduced	16.0.R1
Platforms	All

## **cpe-check** [address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the <b>cpe-check</b> list instance
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>next-hop</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>cpe-check</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>cpe-check</b>
Description	<p>When configured, this command enables the Customer Premises Equipment (CPE) check feature and specifies the IP address of the target CPE device.</p> <p>This option initiates a background ICMP ping test to the configured target IP address. The IP address can either be an IPv4 address for IPv4 static routes or an IPv6 address for IPv6 static routes. To avoid possible circular references, the target IP address cannot exist in the same subnet as the static route subnet. This command is mutually exclusive with BFD support on a specific static route.</p> <p><b>Note:</b> A node that is sourcing CPE-check packets waits an additional full interval before taking action, which gives the CPE time to respond. For example, with a drop-count of 3 and an interval of 1s, three CPE-check packets are sent out and the node waits for the duration of another interval before acting on the loss. Failure declaration may take extra time depending on the load, interval, and other factors. In line with multitasking, multi-priority operating principles of the node, and the relative priority of <b>cpe-ping</b>, the node paces these minor events.</p>
Max. Instances	1
Introduced	16.0.R1
Platforms	All

## [address] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the target CPE device
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>next-hop</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>cpe-check</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>cpe-check</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## **drop-count** *number*

Synopsis	Consecutive ping replies missed before CPE deemed down
----------	--

Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>next-hop</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>cpe-check</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>drop-count</b> <i>number</i>
Tree	<b>drop-count</b>
Range	1 to 255
Default	3
Introduced	16.0.R1
Platforms	All

### **interval** *number*

Synopsis	Time between ICMP pings to the target CPE IP address
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>next-hop</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>cpe-check</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>interval</b> <i>number</i>
Tree	<b>interval</b>
Description	This command configures the interval between ICMP pings to the target IP address.
Range	1 to 255
Default	1
Units	seconds
Introduced	16.0.R1
Platforms	All

### **log** *boolean*

Synopsis	Log CPE connectivity checks transitions
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>next-hop</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>cpe-check</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>log</b> <i>boolean</i>
Tree	<b>log</b>
Description	This command logs the transitions between active and in-active based on the CPE connectivity check. Events are sent to the system log, syslog, and SNMP traps.
Default	false
Introduced	16.0.R1
Platforms	All

### **padding-size** *number*

Synopsis	Padding size for CPE connectivity checks
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>next-hop</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>cpe-check</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>padding-size</b> <i>number</i>
Tree	<b>padding-size</b>
Description	This command configures the amount of padding to add to the ICMP packet in bytes.
Range	0 to 16384
Default	56
Units	bytes
Introduced	16.0.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>next-hop</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>description</b> <i>string</i>
Tree	<b>description</b>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **destination-class** *number*

Synopsis	Destination class for this static route
Context	<b>configure</b> <b>router</b> <i>string</i> <b>static-routes</b> <b>route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>next-hop</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>destination-class</b> <i>number</i>
Tree	<b>destination-class</b>
Range	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

### **ldp-sync** *boolean*

Synopsis	Use LDP synchronization feature for a static route
----------	--

Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>next-hop</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>ldp-sync</b> <i>boolean</i>
Tree	<b>ldp-sync</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **load-balancing-weight** *number*

Synopsis	Load-balancing weight for all of the ECMP next hops
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>next-hop</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>load-balancing-weight</b> <i>number</i>
Tree	<b>load-balancing-weight</b>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **metric** *number*

Synopsis	Static route metric
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>next-hop</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>metric</b> <i>number</i>
Tree	<b>metric</b>
Range	0 to 65535
Default	1
Introduced	16.0.R1
Platforms	All

### **preference** *number*

Synopsis	Priority of this static route over the routes from different sources
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>next-hop</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>preference</b> <i>number</i>
Tree	<b>preference</b>
Range	1 to 255
Default	5

Introduced 16.0.R1  
Platforms All

## prefix-list

Synopsis Enter the **prefix-list** context  
Context **configure** **router** *string* **static-routes** **route** (*ipv4-prefix* | *ipv6-prefix*) **route-type** *keyword* **next-hop** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **prefix-list**

Options	low, high
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **source-class** *number*

Synopsis	Source class for this static route
Context	<b>configure router</b> <i>string</i> <b>static-routes route</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>route-type</b> <i>keyword</i> <b>next-hop</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>source-class</b> <i>number</i>
Tree	<b>source-class</b>
Range	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

### **tag number**

Synopsis	Static route tag
Context	<b>configure router string static-routes route</b> ( <i>ipv4-prefix   ipv6-prefix</i> ) <b>route-type keyword next-hop</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>tag number</b>
Tree	<b>tag</b>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **validate-next-hop boolean**

Synopsis	Track the state of the next hop in the IPv4 ARP Cache or the IPv6 Neighbor Cache
Context	<b>configure router string static-routes route</b> ( <i>ipv4-prefix   ipv6-prefix</i> ) <b>route-type keyword next-hop</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>validate-next-hop boolean</b>
Tree	<b>validate-next-hop</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **tag number**

Synopsis	Static route tag
Context	<b>configure router string static-routes route</b> ( <i>ipv4-prefix   ipv6-prefix</i> ) <b>route-type keyword tag number</b>
Tree	<b>tag</b>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **triggered-policy boolean**

Synopsis	Trigger route policy re-evaluation
Context	<b>configure router string triggered-policy boolean</b>
Tree	<b>triggered-policy</b>
Default	false

Introduced 16.0.R1  
Platforms All

### **ttl-propagate**

Synopsis Enter the **ttl-propagate** context  
Context **configure router string ttl-propagate**  
Tree **ttl-propagate**  
Introduced 16.0.R1  
Platforms All

### **label-route-local keyword**

Synopsis TTL propagation from IP header into label stack for local packets  
Context **configure router string ttl-propagate label-route-local keyword**  
Tree **label-route-local**  
Default none  
Options none, all  
Introduced 16.0.R1  
Platforms All

### **label-route-transit keyword**

Synopsis TTL propagation from IP header into label stack for transit packets  
Context **configure router string ttl-propagate label-route-transit keyword**  
Tree **label-route-transit**  
Default none  
Options none, all  
Introduced 16.0.R1  
Platforms All

### **lsr-label-route keyword**

Synopsis TTL propagation from IP header into label stack  
Context **configure router string ttl-propagate lsr-label-route keyword**

Tree	<a href="#">lsr-label-route</a>
Default	none
Options	none, all
Introduced	16.0.R1
Platforms	All

### **vprn-local** *keyword*

Synopsis	TTL propagation from IP header into label stack for VPRN local packets
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ttl-propagate</a> <a href="#">vprn-local</a> <i>keyword</i>
Tree	<a href="#">vprn-local</a>
Default	vc-only
Options	none, all, vc-only
Introduced	16.0.R1
Platforms	All

### **vprn-transit** *keyword*

Synopsis	TTL propagation from IP header into label stack for VPRN transit packets
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ttl-propagate</a> <a href="#">vprn-transit</a> <i>keyword</i>
Tree	<a href="#">vprn-transit</a>
Default	vc-only
Options	none, all, vc-only
Introduced	16.0.R1
Platforms	All

### **tunnel-interface**

Synopsis	Enter the <b>tunnel-interface</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">tunnel-interface</a>
Tree	<a href="#">tunnel-interface</a>
Introduced	16.0.R1
Platforms	All

## **ldp-p2mp-leaf** [p2mp-id] *number sender-address string*

Synopsis	Enter the <b>ldp-p2mp-leaf</b> list instance
Context	<b>configure router</b> <i>string tunnel-interface ldp-p2mp-leaf number sender-address string</i>
Tree	<a href="#">ldp-p2mp-leaf</a>
Introduced	16.0.R1
Platforms	All

## **[p2mp-id]** *number*

Synopsis	Identifier used for signaling MLDP P2MP LSP
Context	<b>configure router</b> <i>string tunnel-interface ldp-p2mp-leaf number sender-address string</i>
Tree	<a href="#">ldp-p2mp-leaf</a>
Max. Range	0 to 4294967295
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## **sender-address** *string*

Synopsis	Address of an LDP sender for the P2MP RSVP tunnel interface instance
Context	<b>configure router</b> <i>string tunnel-interface ldp-p2mp-leaf number sender-address string</i>
Tree	<a href="#">ldp-p2mp-leaf</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## **description** *string*

Synopsis	Text description
Context	<b>configure router</b> <i>string tunnel-interface ldp-p2mp-leaf number sender-address string description string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **ldp-p2mp-root** [p2mp-id] *number* sender-address *string*

Synopsis	Enter the <b>ldp-p2mp-root</b> list instance
Context	<b>configure</b> <i>router string tunnel-interface ldp-p2mp-root number sender-address string</i>
Tree	<a href="#">ldp-p2mp-root</a>
Introduced	16.0.R1
Platforms	All

### **[p2mp-id]** *number*

Synopsis	Identifier used for signaling MLDP P2MP LSP
Context	<b>configure</b> <i>router string tunnel-interface ldp-p2mp-root number sender-address string</i>
Tree	<a href="#">ldp-p2mp-root</a>
Range	1 to 8192
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **sender-address** *string*

Synopsis	Address of an LDP sender for the P2MP RSVP tunnel interface instance
Context	<b>configure</b> <i>router string tunnel-interface ldp-p2mp-root number sender-address string</i>
Tree	<a href="#">ldp-p2mp-root</a>
Notes	This element is part of a list key.
Introduced	16.0.R1

### **twamp-light**

Synopsis Enter the **twamp-light** context  
Context **configure router** *string* **twamp-light**

Tree	<a href="#">twamp-light</a>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## reflector

Synopsis	Enable the <b>reflector</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">twamp-light</a> <a href="#">reflector</a>
Tree	<a href="#">reflector</a>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## admin-state *keyword*

Synopsis	Administrative state of TWAMP Light functionality
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">twamp-light</a> <a href="#">reflector</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## allow-ipv6-udp-checksum-zero *boolean*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Process IPv6 packets with a zero UDP checksum
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">twamp-light</a> <a href="#">reflector</a> <a href="#">allow-ipv6-udp-checksum-zero</a> <i>boolean</i>
Tree	<a href="#">allow-ipv6-udp-checksum-zero</a>
Description	When configured to <b>true</b> , this command allows the processing of IPv6 packets that arrive with a UDP checksum of zero. The destination UDP ports that are registered as TWAMP Test packets as part of this template allow this behavior.  When configured to <b>false</b> , IPv6 packets that arrive with a UDP checksum of zero are discarded.
Default	false

Introduced 21.7.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **description** *string*

Synopsis Text description  
Context **configure** *router string twamp-light reflector description string*  
Tree [description](#)  
String Length 1 to 80  
Introduced 16.0.R4  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **prefix** [[ip-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis Enter the **prefix** list instance  
Context **configure** *router string twamp-light reflector prefix (ipv4-prefix | ipv6-prefix)*  
Tree [prefix](#)  
Max. 50  
Instances  
Introduced 16.0.R4  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **[ip-prefix]** (*ipv4-prefix* | *ipv6-prefix*)

Synopsis Source prefix for the TWAMP-Light reflector  
Context **configure** *router string twamp-light reflector prefix (ipv4-prefix | ipv6-prefix)*  
Tree [prefix](#)  
Notes This element is part of a list key.  
Introduced 16.0.R4  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **description** *string*

Synopsis Text description  
Context **configure** *router string twamp-light reflector prefix (ipv4-prefix | ipv6-prefix) description string*

Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **type** *keyword*

Synopsis	Processing behavior type for the reflector
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">twamp-light</a> <a href="#">reflector</a> <i>type</i> <i>keyword</i>
Tree	<a href="#">type</a>
Description	<p>This command configures the processing behavior of the TWAMP Light reflector. When the value is <b>twamp-light</b> the reflector does not check the received PDU as a traditional base TWAMP Light packet without TLV processing. When the value is <b>stamp</b>, the reflector attempts to find and process supported STAMP TLVs that follow the base STAMP packet.</p> <p>In mixed environments where different types of Session-Senders may be targeting a common TWAMP Light reflector, set the value to <b>stamp</b>. When the reflector is operating in <b>stamp</b> mode, the primary parsing is based on STAMP, checking and processing known TLVs, or determining if the arriving PDU is a TWAMP Light PDU. A Session-Sender launching a TWAMP Light-based packet must use all zeros padding pattern when the pad size is non zero.</p>
Default	twamp-light
Options	stamp, twamp-light
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **udp-port** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	UDP port on which the specified TWAMP-Light reflector listens for TWAMP PDUs
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">twamp-light</a> <a href="#">reflector</a> <i>udp-port</i> <i>number</i>
Tree	<a href="#">udp-port</a>
Range	862   64364 to 64373
Notes	This element is mandatory.
Introduced	16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## vrgw

Synopsis Enter the **vrgw** context  
Context **configure router string vrgw**  
Tree **vrgw**  
Introduced 16.0.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## lanext

Synopsis Enable the **lanext** context  
Context **configure router string vrgw lanext**  
Tree **lanext**  
Introduced 16.0.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## admin-state *keyword*

Synopsis Administrative state of Home LAN Extension  
Context **configure router string vrgw lanext admin-state keyword**  
Tree **admin-state**  
Default disable  
Options enable, disable  
Introduced 16.0.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## vxlan-port *number*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis UDP port to be used by local or remote VXLAN VTEP  
Context **configure router string vrgw lanext vxlan-port number**

Tree	<a href="#">vxlan-port</a>
Range	4789   8472
Default	4789
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## vxlan-vtep-range

Synopsis	Enter the <b>vxlan-vtep-range</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">vrgw lanext vxlan-vtep-range</a>
Tree	<a href="#">vxlan-vtep-range</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## end (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Upper bound of the VXLAN VTEP range
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">vrgw lanext vxlan-vtep-range end</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">end</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## start (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Lower bound of the VXLAN VTEP range
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">vrgw lanext vxlan-vtep-range start</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">start</a>

Introduced 16.0.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### wlan-gw-group *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis WLAN-GW group used for Home LAN Extension  
Context **configure** [router](#) *string* [vrgw lanext wlan-gw-group reference](#)

Synopsis Enter the **xconnect** context  
Context **configure** *router string wlan-gw xconnect*  
Tree [xconnect](#)  
Introduced 16.0.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis Administrative state of the WLAN-GW cross-connect  
Context **configure** *router string wlan-gw xconnect admin-state keyword*  
Tree [admin-state](#)  
Default disable

Options	enable, disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### tunnel-source-ip *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPv6 address and prefix for the tunnel source
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">xconnect</a> <a href="#">tunnel-source-ip</a> <i>string</i>
Tree	<a href="#">tunnel-source-ip</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### wlan-gw-group *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	ISA WLAN-GW Group
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">xconnect</a> <a href="#">wlan-gw-group</a> <i>reference</i>
Tree	<a href="#">wlan-gw-group</a>
Reference	<b>configure</b> <a href="#">isa</a> <a href="#">wlan-gw-group</a> <i>number</i>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### wpp

Synopsis	Enable the <b>wpp</b> context
Context	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">wpp</a>
Tree	<a href="#">wpp</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of WPP
Context	<b>configure</b> <i>router string wpp admin-state keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **portal** [[name](#)] *string*

Synopsis	Enter the <b>portal</b> list instance
Context	<b>configure</b> <i>router string wpp portal string</i>
Tree	<a href="#">portal</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[name]** *string*

Synopsis	Web portal name
Context	<b>configure</b> <i>router string wpp portal string</i>
Tree	<a href="#">portal</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ack-auth-retry-count** *number*

Synopsis	Number of retransmissions of an ACK_OUT message
Context	<b>configure</b> <i>router string wpp portal string ack-auth-retry-count number</i>
Tree	<a href="#">ack-auth-retry-count</a>
Range	0 to 5
Default	5

Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis WPP portal address  
Context **configure** *router* *string* **wpp portal** *string* **address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)  
Tree **address**  
Notes This element is mandatory.  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis Administrative state of the WPP portal server  
Context **configure** *router* *string* **wpp portal** *string* **admin-state** *keyword*  
Tree **admin-state**  
Default disable  
Options enable, disable  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ntf-logout-retry-count** *number*

Synopsis Number of retransmissions of an NTF\_LOGOUT message  
Context **configure** *router* *string* **wpp portal** *string* **ntf-logout-retry-count** *number*  
Tree **ntf-logout-retry-count**  
Range 0 to 5  
Default 5  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **port-format** *keyword*

Synopsis	Format of the port in the ACK_INO message
Context	<b>configure</b> <b>router</b> <i>string</i> <b>wpp portal</b> <i>string</i> <b>port-format</b> <i>keyword</i>
Tree	<b>port-format</b>
Default	standard
Options	standard, vendor-specific
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **retry-interval** *number*

Synopsis	Time between two consecutive retransmissions
Context	<b>configure</b> <b>router</b> <i>string</i> <b>wpp portal</b> <i>string</i> <b>retry-interval</b> <i>number</i>
Tree	<b>retry-interval</b>
Range	10 to 2000
Default	2000
Units	milliseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **secret** *string*

Synopsis	Message authentication between portal and BRAS by applying the secret used by WPPv2
Context	<b>configure</b> <b>router</b> <i>string</i> <b>wpp portal</b> <i>string</i> <b>secret</b> <i>string</i>
Tree	<b>secret</b>
String Length	1 to 115
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **version** *number*

Synopsis	Protocol version to be expected by the WPP portal
Context	<b>configure</b> <b>router</b> <i>string</i> <b>wpp portal</b> <i>string</i> <b>version</b> <i>number</i>

Tree	<a href="#">version</a>
Range	1   2
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **flexible-algorithm-definitions**

Synopsis	Enter the <b>flexible-algorithm-definitions</b> context
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">flexible-algorithm-definitions</a>
Tree	<a href="#">flexible-algorithm-definitions</a>
Description	Commands in this context enable locally-configured algorithm definitions and configure administrative groups.
Introduced	20.7.R1

Platforms All

### **flex-algo** [[flex-algo-name](#)] *string*

Synopsis Enter the **flex-algo** list instance

Context **configure** [routing-options](#) [flexible-algorithm-definitions](#) [flex-algo](#) *string*

Tree [flex-algo](#)

Description Commands in this context configure the definition context for a Flexible Algorithm Definition (FAD).

Max. Instances 256

Introduced 20.7.R1

Platforms All

### **[flex-algo-name]** *string*

Synopsis Flexible Algorithm Definition (FAD) name

Context **configure** [routing-options](#) [flexible-algorithm-definitions](#) [flex-algo](#) *string*

Tree [flex-algo](#)

Description This command specifies the name of the flexible algorithm definition that is used as a reference anchor for the configuration.

String Length 1 to 32

Notes This element is part of a list key.

Introduced 20.7.R1

Platforms All

### **admin-state** *keyword*

Synopsis Administrative state of the FAD

Context **configure** [routing-options](#) [flexible-algorithm-definitions](#) [flex-algo](#) *string* **admin-state** *keyword*

Tree [admin-state](#)

Default disable

Options enable, disable

Introduced 20.7.R1

Platforms All

## description *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">flexible-algorithm-definitions</a> <a href="#">flex-algo</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	20.7.R1
Platforms	All

## exclude

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>exclude</b> context
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">flexible-algorithm-definitions</a> <a href="#">flex-algo</a> <i>string</i> <a href="#">exclude</a>
Tree	<a href="#">exclude</a>
Description	<p>Commands in this context define administrative groups that are used to exclude links from the Flexible Algorithm topology graph.</p> <p>Administrative groups, also known as link colors, are attributes associated with a link. The exclude rule that is part of the FAD specifies that links with the named administrative groups set are to be excluded from the topology graph.</p>
Introduced	20.7.R1
Platforms	All

## admin-group [[group-name](#)] *reference*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Add a list entry for <b>admin-group</b>
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">flexible-algorithm-definitions</a> <a href="#">flex-algo</a> <i>string</i> <a href="#">exclude</a> <a href="#">admin-group</a> <i>reference</i>
Tree	<a href="#">admin-group</a>
Introduced	20.7.R1
Platforms	All

### [group-name] *reference*

Synopsis	Administrative group name
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">flexible-algorithm-definitions</a> <a href="#">flex-algo</a> <i>string</i> <a href="#">exclude</a> <a href="#">admin-group</a> <i>reference</i>
Tree	<a href="#">admin-group</a>
Reference	<b>configure</b> <a href="#">routing-options</a> <a href="#">if-attribute</a> <a href="#">admin-group</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	20.7.R1
Platforms	All

### flags-tlv *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Advertise the FAD Flags TLV
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">flexible-algorithm-definitions</a> <a href="#">flex-algo</a> <i>string</i> <a href="#">flags-tlv</a> <i>boolean</i>
Tree	<a href="#">flags-tlv</a>
Description	<p>When configured to <b>true</b>, the router advertises the FAD Flags TLV within the FAD. The M-flag within the TLV is set to 1, specifying the use of a Flex-Algorithm specific prefix metric. A router receiving the TLV modifies the constrained SPF (cSPF) based on the M-flag status.</p> <p>When configured to <b>false</b>, the FAD Flags TLV is not included with the FAD advertisement.</p>
Default	true
Introduced	20.10.R1
Platforms	All

### include-all

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>include-all</b> context
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">flexible-algorithm-definitions</a> <a href="#">flex-algo</a> <i>string</i> <a href="#">include-all</a>

Tree	<a href="#">include-all</a>
Description	<p>Commands in this context define administrative groups that are used to include links from the Flexible Algorithm topology graph.</p> <p>Administrative groups, also known as link colors, are attributes associated with a link. The include-all rule that is part of the FAD specifies that all named administrative groups must be present in a link to be included in the topology graph.</p>
Introduced	20.7.R1
Platforms	All

### **admin-group** [[group-name](#)] *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Add a list entry for <b>admin-group</b>
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">flexible-algorithm-definitions</a> <a href="#">flex-algo</a> <i>string</i> <a href="#">include-all</a> <a href="#">admin-group</a> <i>reference</i>
Tree	<a href="#">admin-group</a>
Introduced	20.7.R1
Platforms	All

### **[group-name]** *reference*

Synopsis	Administrative group name
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">flexible-algorithm-definitions</a> <a href="#">flex-algo</a> <i>string</i> <a href="#">include-all</a> <a href="#">admin-group</a> <i>reference</i>
Tree	<a href="#">admin-group</a>
Reference	<b>configure</b> <a href="#">routing-options</a> <a href="#">if-attribute</a> <a href="#">admin-group</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	20.7.R1
Platforms	All

## include-any

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>include-any</b> context
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">flexible-algorithm-definitions</a> <a href="#">flex-algo</a> <i>string</i> <a href="#">include-any</a>
Tree	<a href="#">include-any</a>
Description	<p>Commands in this context define administrative groups that are used to include links from the Flexible Algorithm topology graph.</p> <p>Administrative groups, also known as link colors, are attributes associated with a link. The include-all rule that is part of the FAD specifies that any link with the named administrative groups is included in the topology graph</p>
Introduced	20.7.R1
Platforms	All

## admin-group [[group-name](#)] *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Add a list entry for <b>admin-group</b>
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">flexible-algorithm-definitions</a> <a href="#">flex-algo</a> <i>string</i> <a href="#">include-any</a> <a href="#">admin-group</a> <i>reference</i>
Tree	<a href="#">admin-group</a>
Introduced	20.7.R1
Platforms	All

## [\[group-name\]](#) *reference*

Synopsis	Administrative group name
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">flexible-algorithm-definitions</a> <a href="#">flex-algo</a> <i>string</i> <a href="#">include-any</a> <a href="#">admin-group</a> <i>reference</i>
Tree	<a href="#">admin-group</a>
Reference	<b>configure</b> <a href="#">routing-options</a> <a href="#">if-attribute</a> <a href="#">admin-group</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	20.7.R1

Platforms All

### **metric-type** *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	FAD metric type
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">flexible-algorithm-definitions</a> <a href="#">flex-algo</a> <i>string</i> <b>metric-type</b> <i>keyword</i>
Tree	<a href="#">metric-type</a>
Default	igp
Options	igp, delay, te-metric
Introduced	20.7.R1
Platforms	All

### **priority** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	FAD priority
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">flexible-algorithm-definitions</a> <a href="#">flex-algo</a> <i>string</i> <b>priority</b> <i>number</i>
Tree	<a href="#">priority</a>
Description	This command configures the priority of the FAD. The priority is used as a tie-breaker when the router has received multiple FADs for the same flexible algorithm.
Range	0 to 255
Default	100
Introduced	20.7.R1
Platforms	All

### **if-attribute**

Synopsis	Enter the <b>if-attribute</b> context
Context	<b>configure</b> <a href="#">routing-options</a> <b>if-attribute</b>

Tree	<a href="#">if-attribute</a>
Introduced	16.0.R1
Platforms	All

### **admin-group** [[group-name](#)] *string*

Synopsis	Enter the <b>admin-group</b> list instance
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">if-attribute</a> <a href="#">admin-group</a> <i>string</i>
Tree	<a href="#">admin-group</a>
Max. Instances	255
Introduced	16.0.R1
Platforms	All

### **[group-name]** *string*

Synopsis	Interface group name
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">if-attribute</a> <a href="#">admin-group</a> <i>string</i>
Tree	<a href="#">admin-group</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **value** *number*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Integer value associated with the group
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">if-attribute</a> <a href="#">admin-group</a> <i>string</i> <a href="#">value</a> <i>number</i>
Tree	<a href="#">value</a>
Range	0 to 255
Notes	This element is mandatory.
Introduced	16.0.R1

Platforms All

### **srlg-group** *[name]* *string*

Synopsis Enter the **srlg-group** list instance  
Context **configure** [routing-options](#) [if-attribute srlg-group](#) *string*  
Tree [srlg-group](#)  
Max. Instances 1024  
Introduced 16.0.R1  
Platforms All

### **[name]** *string*

Synopsis SRLG name  
Context **configure** [routing-options](#) [if-attribute srlg-group](#) *string*  
Tree [srlg-group](#)  
String Length 1 to 32  
Notes This element is part of a list key.  
Introduced 16.0.R1  
Platforms All

### **penalty-weight** *number*

Synopsis Integer value of the penalty weight assigned to SRLG  
Context **configure** [routing-options](#) [if-attribute srlg-group](#) *string* [penalty-weight](#) *number*  
Tree [penalty-weight](#)  
Description This command specifies the penalty weight associated with a SRLG. The higher the penalty weight, the less desirable it is to use the link with a given SRLG.  
Range 0 to 65535  
Default 0  
Introduced 16.0.R1  
Platforms All

## **value** *number*

### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Integer value associated with the SRLG
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">if-attribute srlg-group</a> <i>string</i> <b>value</b> <i>number</i>
Tree	<a href="#">value</a>
Range	0 to 4294967295
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

## **ip-fast-reroute** *boolean*

Synopsis	Enable IP fast reroute capability
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">ip-fast-reroute</a> <i>boolean</i>
Tree	<a href="#">ip-fast-reroute</a>
Default	false
Introduced	16.0.R1
Platforms	All

## **policy-accounting**

Synopsis	Enter the <b>policy-accounting</b> context
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">policy-accounting</a>
Tree	<a href="#">policy-accounting</a>
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

## **policy-acct-template** [[name](#)] *string*

Synopsis	Enter the <b>policy-acct-template</b> list instance
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">policy-accounting</a> <a href="#">policy-acct-template</a> <i>string</i>
Tree	<a href="#">policy-acct-template</a>

Max. Instances	1024
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

### **[name]** *string*

Synopsis	Policy accounting template name
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">policy-accounting</a> <a href="#">policy-acct-template</a> <i>string</i>
Tree	<a href="#">policy-acct-template</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

### **destination-class** [[index](#)] *number*

Synopsis	Enter the <b>destination-class</b> list instance
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">policy-accounting</a> <a href="#">policy-acct-template</a> <i>string</i> <b>destination-class</b> <i>number</i>
Tree	<a href="#">destination-class</a>
Max. Instances	255
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

### **[index]** *number*

Synopsis	Destination class index
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">policy-accounting</a> <a href="#">policy-acct-template</a> <i>string</i> <b>destination-class</b> <i>number</i>
Tree	<a href="#">destination-class</a>
Range	1 to 255
Notes	This element is part of a list key.
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

### **policer** *reference*

Synopsis	Policer ID
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">policy-accounting</a> <a href="#">policy-acct-template</a> <i>string</i> <a href="#">destination-class</a> <i>number</i> <a href="#">policer</a> <i>reference</i>
Tree	<a href="#">policer</a>
Reference	<b>configure</b> <a href="#">routing-options</a> <a href="#">policy-accounting</a> <a href="#">policy-acct-template</a> <i>string</i> <a href="#">policer</a> <i>number</i>
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

### **policer** [[policer-id](#)] *number*

Synopsis	Enter the <b>policer</b> list instance
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">policy-accounting</a> <a href="#">policy-acct-template</a> <i>string</i> <a href="#">policer</a> <i>number</i>
Tree	<a href="#">policer</a>
Description	Commands in this context configure the policer definition for the instance. Policing by action of a policy accounting template is only supported by cards and systems that are FP4 and later.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

### [[policer-id](#)] *number*

Synopsis	Policer ID
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">policy-accounting</a> <a href="#">policy-acct-template</a> <i>string</i> <a href="#">policer</a> <i>number</i>
Tree	<a href="#">policer</a>
Range	1 to 63
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

### **max-burst-size** (*number* | *keyword*)

Synopsis	Exceed threshold to drop packets from PIR leaky bucket
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">policy-accounting</a> <a href="#">policy-acct-template</a> <i>string</i> <a href="#">policer</a> <i>number</i> <a href="#">max-burst-size</a> ( <i>number</i>   <i>keyword</i> )

Tree	<a href="#">max-burst-size</a>
Description	This command specifies the maximum burst size for the policer. When this value is exceeded, packets are considered violating and are dropped.
Range	0 to 16777216
Default	auto
Units	bytes
Options	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

### **peak-rate** (*number* | *keyword*)

Synopsis	Peak rate of the policy accounting policer
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">policy-accounting</a> <a href="#">policy-acct-template</a> <i>string</i> <a href="#">policer</a> <i>number</i> <a href="#">peak-rate</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">peak-rate</a>
Description	This command configures the peak rate of the policy accounting policer, which is the fill or drain rate of the bucket.
Range	1 to 6400000000
Default	max
Options	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

### **source-class** [[index](#)] *number*

Synopsis	Add a list entry for <b>source-class</b>
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">policy-accounting</a> <a href="#">policy-acct-template</a> <i>string</i> <a href="#">source-class</a> <i>number</i>
Tree	<a href="#">source-class</a>
Max. Instances	255
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

### [index] *number*

Synopsis	Source-class index
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">policy-accounting</a> <a href="#">policy-acct-template</a> <i>string</i> <a href="#">source-class</a> <i>number</i>
Tree	<a href="#">source-class</a>
Range	1 to 255
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

### route-next-hop-policy

Synopsis	Enter the <b>route-next-hop-policy</b> context
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">route-next-hop-policy</a>
Tree	<a href="#">route-next-hop-policy</a>
Introduced	16.0.R1
Platforms	All

### template [[template-name](#)] *string*

Synopsis	Enter the <b>template</b> list instance
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">route-next-hop-policy</a> <a href="#">template</a> <i>string</i>
Tree	<a href="#">template</a>
Introduced	16.0.R1
Platforms	All

### [[template-name](#)] *string*

Synopsis	Template name
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">route-next-hop-policy</a> <a href="#">template</a> <i>string</i>
Tree	<a href="#">template</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">route-next-hop-policy</a> <a href="#">template</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **exclude-group** [[group-name](#)] *reference*

Synopsis	Add a list entry for <b>exclude-group</b>
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">route-next-hop-policy</a> <a href="#">template</a> <i>string</i> <a href="#">exclude-group</a> <i>reference</i>
Tree	<a href="#">exclude-group</a>
Max. Instances	32
Introduced	16.0.R1
Platforms	All

### [[group-name](#)] *reference*

Synopsis	Administrative group name
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">route-next-hop-policy</a> <a href="#">template</a> <i>string</i> <a href="#">exclude-group</a> <i>reference</i>
Tree	<a href="#">exclude-group</a>
Description	This command specifies the name of the administrative group.  If the same group name is part of both include and exclude statements, the exclude statement will win. In other words, the exclude statement can be viewed as having an implicit preference value of 0.
Reference	<b>configure</b> <a href="#">routing-options</a> <a href="#">if-attribute</a> <a href="#">admin-group</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **include-group** [[group-name](#)] *reference*

Synopsis	Enter the <b>include-group</b> list instance
----------	--

Context	<b>configure</b> routing-options route-next-hop-policy template <i>string</i> include-group <i>reference</i>
Tree	<a href="#">include-group</a>
Max. Instances	32
Introduced	16.0.R1
Platforms	All

### **[group-name]** *reference*

Synopsis	Administrative group name
Context	<b>configure</b> routing-options route-next-hop-policy template <i>string</i> include-group <i>reference</i>
Tree	<a href="#">include-group</a>
Description	This command specifies the name of the administrative group.  If the same group name is part of both include and exclude statements, the exclude statement will win. In other words, the exclude statement can be viewed as having an implicit preference value of 0.
Reference	<b>configure</b> routing-options if-attribute admin-group <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **preference** *number*

Synopsis	Preference number for configured admin-group.
Context	<b>configure</b> routing-options route-next-hop-policy template <i>string</i> include-group <i>reference</i> <a href="#">preference</a> <i>number</i>
Tree	<a href="#">preference</a>
Range	1 to 255
Default	255
Introduced	16.0.R1
Platforms	All

### **nh-type** *keyword*

Synopsis	Preferred next hop
Context	<b>configure</b> routing-options route-next-hop-policy template <i>string</i> nh-type <i>keyword</i>

Tree	<a href="#">nh-type</a>
Default	ip
Options	ip, tunnel
Introduced	16.0.R1
Platforms	All

### **protection-type** *keyword*

Synopsis	Protection type used
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">route-next-hop-policy</a> <a href="#">template</a> <i>string</i> <a href="#">protection-type</a> <i>keyword</i>
Tree	<a href="#">protection-type</a>
Default	node
Options	link, node
Introduced	16.0.R1
Platforms	All

### **srlg** *boolean*

Synopsis	Select next hops from the SRLG
Context	<b>configure</b> <a href="#">routing-options</a> <a href="#">route-next-hop-policy</a> <a href="#">template</a> <i>string</i> <a href="#">srlg</a> <i>boolean</i>
Tree	<a href="#">srlg</a>
Default	false
Introduced	16.0.R1
Platforms	All

## 3.41 saa commands

```

configure
-  saa
  -  apply-groups reference
  -  apply-groups-exclude reference
  -  owner string test string
    -  accounting-policy reference
    -  admin-state keyword
    -  apply-groups reference
    -  apply-groups-exclude reference
    -  continuous boolean
    -  description string
    -  jitter-event keyword threshold-type keyword
      -  apply-groups reference
      -  apply-groups-exclude reference
      -  threshold number
    -  latency-event keyword threshold-type keyword
      -  apply-groups reference
      -  apply-groups-exclude reference
      -  threshold number
    -  loss-event keyword threshold-type keyword
      -  apply-groups reference
      -  apply-groups-exclude reference
      -  threshold number
    -  probe-history keyword
  -  type
    -  dns
      -  apply-groups reference
      -  apply-groups-exclude reference
      -  count number
      -  interval number
      -  name-server (ipv4-address-no-zone | ipv6-address-no-zone)
      -  record-type keyword
      -  router-instance string
      -  source-address (ipv4-address-no-zone | ipv6-address-no-zone)
      -  target-address string
      -  timeout number
      -  trap-generation
        -  probe-fail boolean
        -  probe-fail-threshold number
        -  test-complete boolean
        -  test-fail boolean
        -  test-fail-threshold number
    -  icmp-ping
      -  apply-groups reference
      -  apply-groups-exclude reference
      -  bypass-routing boolean
      -  count number
      -  destination-address (ipv4-address-no-zone | ipv6-address-no-zone | string-
not-all-spaces)
      -  do-not-fragment boolean
      -  interface string
      -  interval (number | decimal-number)
      -  next-hop-address (ipv4-address-no-zone | ipv6-address-no-zone)
      -  pattern (keyword | number)
    -  qos
      -  fc keyword
      -  tos number
      -  router-instance string
      -  size number

```

configure saa owner type icmp-ping source-address

- **source-address** (ipv4-address-no-zone | ipv6-address-no-zone)
- **timeout** number
- **trap-generation**
  - **probe-fail** boolean
  - **probe-fail-threshold** number
  - **test-complete** boolean
  - **test-fail** boolean
  - **test-fail-threshold** number
- **ttl** number
- **lsp-ping**
  - **apply-groups** reference
  - **apply-groups-exclude** reference
  - **interval** number
  - **qos**
    - **fc** keyword
    - **profile** keyword
  - **send-count** number
  - **size** number
  - **source-ip-address** (ipv4-address-no-zone | ipv6-address-no-zone)
  - **sub-type**
    - **bgp-label**
      - **path-destination**
        - **interface** string
        - **ip-address** (ipv4-address-no-zone | ipv6-address-no-zone)
        - **next-hop** (ipv4-address-no-zone | ipv6-address-no-zone)
      - **prefix** (ipv4-prefix | ipv6-prefix)
    - **ldp**
      - **path-destination**
        - **interface** string
        - **ip-address** (ipv4-address-no-zone | ipv6-address-no-zone)
        - **next-hop** (ipv4-address-no-zone | ipv6-address-no-zone)
      - **prefix** (ipv4-prefix | ipv6-prefix)
  - **rsvp-te**
    - **lsp-name** string
    - **path** string
  - **sr-isis**
    - **igp-instance** number
    - **path-destination**
      - **interface** string
      - **ip-address** (ipv4-address-no-zone | ipv6-address-no-zone)
      - **next-hop** (ipv4-address-no-zone | ipv6-address-no-zone)
    - **prefix** (ipv4-prefix | ipv6-prefix)
  - **sr-ospf**
    - **igp-instance** number
    - **path-destination**
      - **interface** string
      - **ip-address** (ipv4-address-no-zone | ipv6-address-no-zone)

  - **test-complete** *boolean*
  - **test-fail** *boolean*
  - **test-fail-threshold** *number*
- **ttl** *number*

### 3.41.1 saa command descriptions

#### **saa**

Synopsis	Enter the <b>saa</b> context
Context	<b>configure saa</b>
Tree	<b>saa</b>
Description	Commands in this context configure the Service Assurance Agent (SAA) tests.
Introduced	16.0.R4
Platforms	All

#### **owner [owner-name] string test string**

Synopsis	Enter the <b>owner</b> list instance
Context	<b>configure saa owner string test string</b>
Tree	<b>owner</b>
Introduced	16.0.R4
Platforms	All

#### **[owner-name] string**

Synopsis	Optional owner name of the SAA operation
Context	<b>configure saa owner string test string</b>
Tree	<b>owner</b>
Description	This command configures the owner associated with the SAA operation. The owner is optional and "TIMOS CLI" is used if an owner is not specified.
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

#### **test string**

Synopsis	SAA test name
Context	<b>configure saa owner string test string</b>

Tree	<a href="#">owner</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

### **accounting-policy** *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Accounting policy associated with the SAA test
Context	<b>configure</b> <a href="#">saa owner</a> <i>string</i> <a href="#">test</a> <i>string</i> <a href="#">accounting-policy</a> <i>reference</i>
Tree	<a href="#">accounting-policy</a>
Reference	<b>configure</b> <a href="#">log</a> <a href="#">accounting-policy</a> <i>number</i>
Introduced	16.0.R4
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the SAA test
Context	<b>configure</b> <a href="#">saa owner</a> <i>string</i> <a href="#">test</a> <i>string</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R4
Platforms	All

### **continuous** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Execute the SAA tests as continuous
----------	-------------------------------------

Context	<b>configure</b> <i>saa owner string test string continuous boolean</i>
Tree	<i>continuous</i>
Description	<p>When configured to <b>true</b>, the SAA test execution is continuous, that is, it cannot be started or stopped with the <b>oam saa test start</b> or <b>stop</b> commands.</p> <p>The SAA test types supported by this command include the following:</p> <ul style="list-style-type: none"> <li>• <b>cpe-ping</b></li> <li>• <b>dns</b></li> <li>• <b>eth-cfm-loopback</b></li> <li>• <b>eth-cfm-two-way-delay</b></li> <li>• <b>eth-cfm-two-way-slm</b></li> <li>• <b>icmp-ping</b> (not applicable to <b>rapid</b> type)</li> <li>• <b>lsp-ping</b></li> <li>• <b>mac-ping</b></li> <li>• <b>sdp-ping</b></li> <li>• <b>vccv-ping</b></li> <li>• <b>vprn-ping</b></li> </ul>
Default	false
Introduced	16.0.R4
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <i>saa owner string test string description string</i>
Tree	<i>description</i>
String Length	1 to 80
Introduced	16.0.R4
Platforms	All

### **jitter-event** [*direction*] *keyword threshold-type keyword*

Synopsis	Enter the <b>jitter-event</b> list instance
Context	<b>configure</b> <i>saa owner string test string jitter-event keyword threshold-type keyword</i>
Tree	<i>jitter-event</i>

Description	Commands in this context configure the jitter event thresholds used to evaluate the jitter event value at the termination of an SAA test probe. The system generates SAA threshold events as required.
Introduced	16.0.R4
Platforms	All

### **[direction]** *keyword*

Synopsis	Direction for OAM ping responses for OAM ping test run
Context	<b>configure</b> <i>saa owner string test string jitter-event keyword threshold-type keyword</i>
Tree	<i>jitter-event</i>
Options	inbound, outbound, round-trip
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

### **threshold-type** *keyword*

Synopsis	Threshold type
Context	<b>configure</b> <i>saa owner string test string jitter-event keyword threshold-type keyword</i>
Tree	<i>jitter-event</i>
Options	rising, falling
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

### **threshold** *number*

Synopsis	Threshold jitter value
Context	<b>configure</b> <i>saa owner string test string jitter-event keyword threshold-type keyword threshold number</i>
Tree	<i>threshold</i>
Description	This command specifies the threshold jitter value. The system generates an SAA threshold event when the jitter value of the test run crosses the threshold value.
Range	0 to 2147483647
Units	microseconds

Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **latency-event** [*direction*] *keyword* **threshold-type** *keyword*

Synopsis	Enter the <b>latency-event</b> list instance
Context	<b>configure</b> <i>saa owner string test string latency-event keyword threshold-type keyword</i>
Tree	<i>latency-event</i>
Description	Commands in this context configure the latency event thresholds used to evaluate the latency event value at the termination of an SAA test probe. The system generates SAA threshold events as required.
Introduced	16.0.R4
Platforms	All

### **[direction]** *keyword*

Synopsis	Direction for OAM ping responses for OAM ping test run
Context	<b>configure</b> <i>saa owner string test string latency-event keyword threshold-type keyword</i>
Tree	<i>latency-event</i>
Options	inbound, outbound, round-trip
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

### **threshold-type** *keyword*

Synopsis	Threshold type
Context	<b>configure</b> <i>saa owner string test string latency-event keyword threshold-type keyword</i>
Tree	<i>latency-event</i>
Options	rising, falling
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

### **threshold** *number*

Synopsis	Threshold latency value
Context	<b>configure</b> <i>saa owner string test string latency-event keyword threshold-type keyword threshold number</i>
Tree	<b>threshold</b>
Description	This command specifies the threshold latency value. The system generates an SAA threshold event when the latency value of the test run crosses the threshold value.
Range	0 to 2147483647
Units	microseconds
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **loss-event** [*direction*] *keyword threshold-type keyword*

Synopsis	Enter the <b>loss-event</b> list instance
Context	<b>configure</b> <i>saa owner string test string loss-event keyword threshold-type keyword</i>
Tree	<b>loss-event</b>
Description	Commands in this context configure the loss event thresholds used to evaluate the loss event value at the termination of an SAA test probe. The system generates SAA threshold events as required.
Introduced	16.0.R4
Platforms	All

### **[direction]** *keyword*

Synopsis	Direction for OAM ping responses for OAM ping test run
Context	<b>configure</b> <i>saa owner string test string loss-event keyword threshold-type keyword</i>
Tree	<b>loss-event</b>
Options	inbound, outbound, round-trip
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

### **threshold-type** *keyword*

Synopsis	Threshold type
Context	<b>configure</b> <i>saa owner string test string loss-event keyword threshold-type keyword</i>
Tree	<i>loss-event</i>
Options	rising, falling
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

### **threshold** *number*

Synopsis	Threshold loss event value
Context	<b>configure</b> <i>saa owner string test string loss-event keyword threshold-type keyword threshold number</i>
Tree	<i>threshold</i>
Description	This command specifies the threshold loss value. The system generates an SAA threshold event when the loss value of the test run crosses the threshold value.
Range	0 to 2147483647
Units	packets
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **probe-history** *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	History probe behavior
Context	<b>configure</b> <i>saa owner string test string probe-history keyword</i>
Tree	<i>probe-history</i>
Default	auto
Options	keep, drop, auto
Introduced	16.0.R4
Platforms	All

## type

Synopsis	Enter the <b>type</b> context
Context	<b>configure</b> <i>saa owner string test string type</i>
Tree	<i>type</i>
Introduced	16.0.R4
Platforms	All

## dns

Synopsis	Enable the <b>dns</b> context
Context	<b>configure</b> <i>saa owner string test string type dns</i>
Tree	<i>dns</i>
Notes	The following elements are part of a choice: <b>dns</b> , <b>icmp-ping</b> , or <b>lsp-ping</b> .
Introduced	22.10.R1
Platforms	All

## count *number*

Synopsis	Number of messages to send in a sample window
Context	<b>configure</b> <i>saa owner string test string type dns count number</i>
Tree	<i>count</i>
Description	This command specifies the number of messages to send. Each message request must either time out or receive a reply before the next message request is sent.
Range	1 to 100
Default	1
Units	packets
Introduced	22.10.R1
Platforms	All

## interval *number*

Synopsis	Minimum time before the next message request is sent
Context	<b>configure</b> <i>saa owner string test string type dns interval number</i>
Tree	<i>interval</i>

Range	1 to 10
Default	1
Units	seconds
Introduced	22.10.R1
Platforms	All

### **name-server** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the DNS name server used for the test
Context	<b>configure</b> <i>saa owner string test string type dns name-server</i> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">name-server</a>
Notes	This element is mandatory.
Introduced	22.10.R1
Platforms	All

### **record-type** *keyword*

Synopsis	Record type
Context	<b>configure</b> <i>saa owner string test string type dns record-type keyword</i>
Tree	<a href="#">record-type</a>
Default	ipv4-a-record
Options	ipv4-a-record, ipv6-aaaa-record
Introduced	22.10.R1
Platforms	All

### **router-instance** *string*

Synopsis	Router name or VPRN service name
Context	<b>configure</b> <i>saa owner string test string type dns router-instance string</i>
Tree	<a href="#">router-instance</a>
Default	_Base_and_management
Introduced	22.10.R1
Platforms	All

### **source-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address on the local system
Context	<b>configure</b> <b>saa owner</b> <i>string</i> <b>test</b> <i>string</i> <b>type</b> <b>dns</b> <b>source-address</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>source-address</b>
Description	This command configures the IP address on the local system. If unconfigured, the router uses a system selected local IP address.
Introduced	22.10.R1
Platforms	All

### **target-address** *string*

Synopsis	DNS name to be resolved to an IP address
Context	<b>configure</b> <b>saa owner</b> <i>string</i> <b>test</b> <i>string</i> <b>type</b> <b>dns</b> <b>target-address</b> <i>string</i>
Tree	<b>target-address</b>
String Length	1 to 255
Notes	This element is mandatory.
Introduced	22.10.R1
Platforms	All

### **timeout** *number*

Synopsis	Maximum time to wait for a reply message
Context	<b>configure</b> <b>saa owner</b> <i>string</i> <b>test</b> <i>string</i> <b>type</b> <b>dns</b> <b>timeout</b> <i>number</i>
Tree	<b>timeout</b>
Description	This command specifies the maximum time the router waits for a message response after sending the message request. When the timeout expires, the requesting router assumes the message response is not received. Any response received after the request times out is silently discarded.
Range	1 to 120
Default	5
Units	seconds
Introduced	22.10.R1
Platforms	All

## trap-generation

Synopsis	Enter the <b>trap-generation</b> context
Context	<b>configure</b> <i>saa owner string test string type dns trap-generation</i>
Tree	<a href="#">trap-generation</a>
Introduced	22.10.R1
Platforms	All

## probe-fail *boolean*

Synopsis	Enable the generation of probe fail notifications
Context	<b>configure</b> <i>saa owner string test string type dns trap-generation probe-fail boolean</i>
Tree	<a href="#">probe-fail</a>
Description	When configured to <b>true</b> , the system generates an SNMP trap if the consecutive probe failure threshold is reached during the execution of the SAA ping test.  This command is not applicable to SAA traceroute tests.
Default	false
Introduced	22.10.R1
Platforms	All

## probe-fail-threshold *number*

Synopsis	Consecutive probe failure count
Context	<b>configure</b> <i>saa owner string test string type dns trap-generation probe-fail-threshold number</i>
Tree	<a href="#">probe-fail-threshold</a>
Description	This command configures the number of consecutive ping probe failures required to generate a trap.  This command has no effect if the <b>probe-fail</b> command is set to <b>false</b> .  This command is not applicable to SAA traceroute tests.
Range	0 to 15
Default	1
Introduced	22.10.R1
Platforms	All

**test-complete** *boolean*

Synopsis	Enable generation of test complete notifications
Context	<b>configure</b> <i>saa owner string test string type dns trap-generation test-complete boolean</i>
Tree	<a href="#">test-complete</a>
Default	false
Introduced	22.10.R1
Platforms	All

**test-fail** *boolean*

Synopsis	Enable the generation of test fail notifications
Context	<b>configure</b> <i>saa owner string test string type dns trap-generation test-fail boolean</i>
Tree	<a href="#">test-fail</a>
Description	When configured to <b>true</b> , the system generates a trap if a test fails. In the case of a ping test, the test is considered to have failed (for trap generation) if the number of failed probes is at least the value of the <b>test-fail-threshold</b> setting.
Default	false
Introduced	22.10.R1
Platforms	All

**test-fail-threshold** *number*

Synopsis	Total probe failures for trap generation
Context	<b>configure</b> <i>saa owner string test string type dns trap-generation test-fail-threshold number</i>
Tree	<a href="#">test-fail-threshold</a>
Description	This command configures the number of consecutive test failures required to generate a trap. This command has no effect when <b>test-fail</b> is set to <b>false</b> . This command is not applicable to SAA traceroute tests.
Range	0 to 15
Default	1
Introduced	22.10.R1
Platforms	All

## icmp-ping

Synopsis	Enable the <b>icmp-ping</b> context
Context	<b>configure</b> <i>saa owner string test string type icmp-ping</i>
Tree	<a href="#">icmp-ping</a>
Description	Commands in this context configure an ICMP ping test.
Notes	The following elements are part of a choice: <b>dns</b> , <b>icmp-ping</b> , or <b>lsp-ping</b> .
Introduced	16.0.R4
Platforms	All

## bypass-routing *boolean*

Synopsis	Bypass routing table for directly connected interfaces
Context	<b>configure</b> <i>saa owner string test string type icmp-ping bypass-routing boolean</i>
Tree	<a href="#">bypass-routing</a>
Default	false
Notes	The following elements are part of a choice: <b>bypass-routing</b> , <b>interface</b> , or <b>next-hop-address</b> .
Introduced	16.0.R4
Platforms	All

## count *number*

Synopsis	ICMP Echo Request packets to send in a sample window
Context	<b>configure</b> <i>saa owner string test string type icmp-ping count number</i>
Tree	<a href="#">count</a>
Range	1 to 100000
Default	5
Units	packets
Introduced	16.0.R4
Platforms	All

## destination-address (*ipv4-address-no-zone | ipv6-address-no-zone | string-not-all-spaces*)

Synopsis	Destination IP address or DNS name to send ping request
----------	---

Context	<b>configure</b> <i>saa owner string test string type icmp-ping destination-address (ipv4-address-no-zone   ipv6-address-no-zone   string-not-all-spaces)</i>
Tree	<a href="#">destination-address</a>
String Length	1 to 128
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **do-not-fragment** *boolean*

Synopsis	Prevent fragmentation of the ICMP Echo Request packet
Context	<b>configure</b> <i>saa owner string test string type icmp-ping do-not-fragment boolean</i>
Tree	<a href="#">do-not-fragment</a>
Default	false
Introduced	16.0.R4
Platforms	All

### **interface** *string*

Synopsis	Interface name
Context	<b>configure</b> <i>saa owner string test string type icmp-ping interface string</i>
Tree	<a href="#">interface</a>
String Length	1 to 32
Notes	The following elements are part of a choice: <b>bypass-routing</b> , <b>interface</b> , or <b>next-hop-address</b> .
Introduced	16.0.R4
Platforms	All

### **interval** (*number | decimal-number*)

Synopsis	Minimum time to expire before message request is sent
Context	<b>configure</b> <i>saa owner string test string type icmp-ping interval (number   decimal-number)</i>
Tree	<a href="#">interval</a>
Range	1 to 10000
Default	1

Units	seconds
Introduced	16.0.R4
Platforms	All

### **next-hop-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Next-hop IP address to reach destination
Context	<b>configure</b> <i>saa owner string test string type icmp-ping next-hop-address</i> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">next-hop-address</a>
Notes	The following elements are part of a choice: <b>bypass-routing</b> , <b>interface</b> , or <b>next-hop-address</b> .
Introduced	16.0.R4
Platforms	All

### **pattern** (*keyword* | *number*)

Synopsis	Pattern to fill the data portion in a ping packet
Context	<b>configure</b> <i>saa owner string test string type icmp-ping pattern</i> ( <i>keyword</i>   <i>number</i> )
Tree	<a href="#">pattern</a>
Range	0 to 65535
Default	sequential
Options	sequential
Introduced	16.0.R4
Platforms	All

### **qos**

Synopsis	Enter the <b>qos</b> context
Context	<b>configure</b> <i>saa owner string test string type icmp-ping qos</i>
Tree	<a href="#">qos</a>
Introduced	16.0.R4
Platforms	All

### **fc keyword**

Synopsis	Forwarding class
Context	<b>configure</b> <i>saa owner string test string type icmp-ping qos fc keyword</i>
Tree	<b>fc</b>
Default	nc
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	16.0.R4
Platforms	All

### **tos number**

Synopsis	Type of service
Context	<b>configure</b> <i>saa owner string test string type icmp-ping qos tos number</i>
Tree	<b>tos</b>
Range	0 to 255
Default	0
Introduced	16.0.R4
Platforms	All

### **router-instance string**

Synopsis	Router name or VPRN service name
Context	<b>configure</b> <i>saa owner string test string type icmp-ping router-instance string</i>
Tree	<b>router-instance</b>
Default	Base
Introduced	16.0.R4
Platforms	All

### **size number**

Synopsis	Packet padding size
Context	<b>configure</b> <i>saa owner string test string type icmp-ping size number</i>
Tree	<b>size</b>
Description	This command configures the number of bytes in the combined ICMP Header (8 bytes) and ICMP Payload (variable size) of the ICMP Echo Request packets.

Range	0 to 16384
Default	56
Units	bytes
Introduced	16.0.R4
Platforms	All

### **source-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source IP address
Context	<b>configure</b> <i>saa owner string test string type icmp-ping source-address</i> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">source-address</a>
Description	This command configures the source IP address to be loaded into the IP header of the ICMP Echo Request packet. If unconfigured, the router uses a system-selected local address.
Introduced	16.0.R4
Platforms	All

### **timeout** *number*

Synopsis	Time router waits for a reply after sending last probe
Context	<b>configure</b> <i>saa owner string test string type icmp-ping timeout number</i>
Tree	<a href="#">timeout</a>
Range	1 to 10
Default	5
Units	seconds
Introduced	16.0.R4
Platforms	All

### **trap-generation**

Synopsis	Enter the <b>trap-generation</b> context
Context	<b>configure</b> <i>saa owner string test string type icmp-ping trap-generation</i>
Tree	<a href="#">trap-generation</a>
Introduced	22.10.R1

Platforms All

### **probe-fail** *boolean*

Synopsis Enable the generation of probe fail notifications

Context **configure** *saa owner string test string type icmp-ping trap-generation probe-fail boolean*

Tree [probe-fail](#)

Description When configured to **true**, the system generates an SNMP trap if the consecutive probe failure threshold is reached during the execution of the SAA ping test.  
This command is not applicable to SAA traceroute tests.

Default false

Introduced 22.10.R1

Platforms All

### **probe-fail-threshold** *number*

Synopsis Consecutive probe failure count

Context **configure** *saa owner string test string type icmp-ping trap-generation probe-fail-threshold number*

Tree [probe-fail-threshold](#)

Description This command configures the number of consecutive ping probe failures required to generate a trap.  
This command has no effect if the **probe-fail** command is set to **false**.  
This command is not applicable to SAA traceroute tests.

Range 0 to 15

Default 1

Introduced 22.10.R1

Platforms All

### **test-complete** *boolean*

Synopsis Enable generation of test complete notifications

Context **configure** *saa owner string test string type icmp-ping trap-generation test-complete boolean*

Tree [test-complete](#)

Default false

Introduced 22.10.R1  
Platforms All

### **test-fail** *boolean*

Synopsis Enable the generation of test fail notifications  
Context **configure** *saa owner string test string type icmp-ping trap-generation test-fail boolean*  
Tree [test-fail](#)  
Description When configured to **true**, the system generates a trap if a test fails. In the case of a ping test, the test is considered to have failed (for trap generation) if the number of failed probes is at least the value of the **test-fail-threshold** setting.  
Default false  
Introduced 22.10.R1  
Platforms All

### **test-fail-threshold** *number*

Synopsis Total probe failures for trap generation  
Context **configure** *saa owner string test string type icmp-ping trap-generation test-fail-threshold number*  
Tree [test-fail-threshold](#)  
Description This command configures the number of consecutive test failures required to generate a trap.  
This command has no effect when **test-fail** is set to **false**.  
This command is not applicable to SAA traceroute tests.  
Range 0 to 15  
Default 1  
Introduced 22.10.R1  
Platforms All

### **ttl** *number*

Synopsis Time to live in the IP header  
Context **configure** *saa owner string test string type icmp-ping ttl number*  
Tree [ttl](#)  
Range 1 to 128

Default	64
Introduced	16.0.R4
Platforms	All

## **lsp-ping**

Synopsis	Enable the <b>lsp-ping</b> context
Context	<b>configure</b> <a href="#">saa owner string test string type lsp-ping</a>
Tree	<a href="#">lsp-ping</a>
Description	Commands in this context configure the command options to perform in-band LSP connectivity tests.  LSP ping uses the protocol and data structures defined in RFC 8029, <i>Detecting Multiprotocol Label Switched (MPLS) Data-Plane Failures</i> .
Notes	The following elements are part of a choice: <b>dns</b> , <b>icmp-ping</b> , or <b>lsp-ping</b> .
Introduced	22.10.R1
Platforms	All

## **interval number**

Synopsis	Minimum time before the next lsp-ping request is sent
Context	<b>configure</b> <a href="#">saa owner string test string type lsp-ping interval number</a>
Tree	<a href="#">interval</a>
Range	1 to 10
Default	1
Units	seconds
Introduced	22.10.R1
Platforms	All

## **qos**

Synopsis	Enter the <b>qos</b> context
Context	<b>configure</b> <a href="#">saa owner string test string type lsp-ping qos</a>
Tree	<a href="#">qos</a>
Introduced	22.10.R1
Platforms	All

### **fc** *keyword*

Synopsis	Forwarding class
Context	<b>configure</b> <i>saa owner string test string type lsp-ping qos fc keyword</i>
Tree	<b>fc</b>
Default	be
Options	be, l2, af, l1, h2, ef, h1, nc
Introduced	22.10.R1
Platforms	All

### **profile** *keyword*

Synopsis	Profile
Context	<b>configure</b> <i>saa owner string test string type lsp-ping qos profile keyword</i>
Tree	<b>profile</b>
Default	out
Options	in, out
Introduced	22.10.R1
Platforms	All

### **send-count** *number*

Synopsis	Number of request packets to send in a sample window
Context	<b>configure</b> <i>saa owner string test string type lsp-ping send-count number</i>
Tree	<b>send-count</b>
Range	1 to 100
Default	1
Units	packets
Introduced	22.10.R1
Platforms	All

### **size** *number*

Synopsis	Packet pad size
Context	<b>configure</b> <i>saa owner string test string type lsp-ping size number</i>

Tree	<a href="#">size</a>
Range	1 to 9786
Default	1
Units	bytes
Introduced	22.10.R1
Platforms	All

### **source-ip-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source IP address
Context	<b>configure</b> <a href="#">saa owner</a> <a href="#">string</a> <a href="#">test</a> <a href="#">string</a> <a href="#">type</a> <a href="#">lsp-ping</a> <a href="#">source-ip-address</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">source-ip-address</a>
Introduced	22.10.R1
Platforms	All

### **sub-type**

Synopsis	Enter the <b>sub-type</b> context
Context	<b>configure</b> <a href="#">saa owner</a> <a href="#">string</a> <a href="#">test</a> <a href="#">string</a> <a href="#">type</a> <a href="#">lsp-ping</a> <a href="#">sub-type</a>
Tree	<a href="#">sub-type</a>
Introduced	22.10.R1
Platforms	All

### **bgp-label**

Synopsis	Enable the <b>bgp-label</b> context
Context	<b>configure</b> <a href="#">saa owner</a> <a href="#">string</a> <a href="#">test</a> <a href="#">string</a> <a href="#">type</a> <a href="#">lsp-ping</a> <a href="#">sub-type</a> <a href="#">bgp-label</a>
Tree	<a href="#">bgp-label</a>
Notes	The following elements are part of a choice: <b>bgp-label</b> , <b>ldp</b> , <b>rsvp-te</b> , <b>sr-isis</b> , <b>sr-ospf</b> , <b>sr-ospf3</b> , <b>sr-policy</b> , or <b>sr-te</b> .
Introduced	22.10.R1
Platforms	All

## path-destination

Synopsis	Enter the <b>path-destination</b> context
Context	<b>configure</b> <a href="#">saa owner</a> <a href="#">string test string type</a> <a href="#">lsp-ping sub-type</a> <a href="#">bgp-label</a> <a href="#">path-destination</a>
Tree	<a href="#">path-destination</a>
Introduced	22.10.R1
Platforms	All

## interface *string*

Synopsis	Egress router interface used with the path destination
Context	<b>configure</b> <a href="#">saa owner</a> <a href="#">string test string type</a> <a href="#">lsp-ping sub-type</a> <a href="#">bgp-label</a> <a href="#">path-destination</a> <a href="#">interface</a> <i>string</i>
Tree	<a href="#">interface</a>
String Length	1 to 32
Notes	The following elements are part of a choice: <b>interface</b> or <b>next-hop</b> .
Introduced	22.10.R1
Platforms	All

## ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the path destination
Context	<b>configure</b> <a href="#">saa owner</a> <a href="#">string test string type</a> <a href="#">lsp-ping sub-type</a> <a href="#">bgp-label</a> <a href="#">path-destination</a> <a href="#">ip-address</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">ip-address</a>
Introduced	22.10.R1
Platforms	All

## next-hop (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Egress IP next hop address used with path destination
Context	<b>configure</b> <a href="#">saa owner</a> <a href="#">string test string type</a> <a href="#">lsp-ping sub-type</a> <a href="#">bgp-label</a> <a href="#">path-destination</a> <a href="#">next-hop</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">next-hop</a>
Notes	The following elements are part of a choice: <b>interface</b> or <b>next-hop</b> .
Introduced	22.10.R1

Platforms All

### **prefix** (*ipv4-prefix* | *ipv6-prefix*)

Synopsis Destination IP prefix for the test

Context **configure** *saa owner string test string type lsp-ping sub-type bgp-label prefix* (*ipv4-prefix* | *ipv6-prefix*)

Tree [prefix](#)

Notes This element is mandatory.

Introduced 22.10.R1

Platforms All

### **ldp**

Synopsis Enable the **ldp** context

Context **configure** *saa owner string test string type lsp-ping sub-type ldp*

Tree [ldp](#)

Notes The following elements are part of a choice: **bgp-label**, **ldp**, **rsvp-te**, **sr-isis**, **sr-ospf**, **sr-ospf3**, **sr-policy**, or **sr-te**.

Introduced 22.10.R1

Platforms All

### **path-destination**

Synopsis Enter the **path-destination** context

Context **configure** *saa owner string test string type lsp-ping sub-type ldp path-destination*

Tree [path-destination](#)

Introduced 22.10.R1

Platforms All

### **interface** *string*

Synopsis Egress router interface used with the path destination

Context **configure** *saa owner string test string type lsp-ping sub-type ldp path-destination interface string*

Tree [interface](#)

String Length	1 to 32
Notes	The following elements are part of a choice: <b>interface</b> or <b>next-hop</b> .
Introduced	22.10.R1
Platforms	All

### **ip-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the path destination
Context	<b>configure</b> <b>saa</b> <b>owner</b> <i>string</i> <b>test</b> <i>string</i> <b>type</b> <b>lsp-ping</b> <b>sub-type</b> <b>ldp</b> <b>path-destination</b> <b>ip-address</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">ip-address</a>
Introduced	22.10.R1
Platforms	All

### **next-hop** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Egress IP next hop address used with path destination
Context	<b>configure</b> <b>saa</b> <b>owner</b> <i>string</i> <b>test</b> <i>string</i> <b>type</b> <b>lsp-ping</b> <b>sub-type</b> <b>ldp</b> <b>path-destination</b> <b>next-hop</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">next-hop</a>
Notes	The following elements are part of a choice: <b>interface</b> or <b>next-hop</b> .
Introduced	22.10.R1
Platforms	All

### **prefix** (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Destination IP prefix for the test
Context	<b>configure</b> <b>saa</b> <b>owner</b> <i>string</i> <b>test</b> <i>string</i> <b>type</b> <b>lsp-ping</b> <b>sub-type</b> <b>ldp</b> <b>prefix</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
Tree	<a href="#">prefix</a>
Notes	This element is mandatory.
Introduced	22.10.R1
Platforms	All

## rsvp-te

Synopsis	Enable the <b>rsvp-te</b> context
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type rsvp-te</i>
Tree	<i>rsvp-te</i>
Notes	The following elements are part of a choice: <b>bgp-label</b> , <b>ldp</b> , <b>rsvp-te</b> , <b>sr-isis</b> , <b>sr-ospf</b> , <b>sr-ospf3</b> , <b>sr-policy</b> , or <b>sr-te</b> .
Introduced	22.10.R1
Platforms	All

## **lsp-name** *string*

Synopsis	Name of the LSP to be tested
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type rsvp-te lsp-name string</i>
Tree	<i>lsp-name</i>
String Length	1 to 64
Notes	This element is mandatory.
Introduced	22.10.R1
Platforms	All

## **path** *string*

Synopsis	Name of the MPLS path to be tested
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type rsvp-te path string</i>
Tree	<i>path</i>
String Length	1 to 64
Introduced	22.10.R1
Platforms	All

## sr-isis

Synopsis	Enable the <b>sr-isis</b> context
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-isis</i>
Tree	<i>sr-isis</i>
Notes	The following elements are part of a choice: <b>bgp-label</b> , <b>ldp</b> , <b>rsvp-te</b> , <b>sr-isis</b> , <b>sr-ospf</b> , <b>sr-ospf3</b> , <b>sr-policy</b> , or <b>sr-te</b> .

Introduced 22.10.R1  
Platforms All

### **igp-instance** *number*

Synopsis IGP instance for the SR IS-IS test  
Context **configure** *saa owner string test string type lsp-ping sub-type sr-isis igp-instance number*  
Tree [igp-instance](#)  
Range 0 to 127  
Default 0  
Introduced 22.10.R1  
Platforms All

### **path-destination**

Synopsis Enter the **path-destination** context  
Context **configure** *saa owner string test string type lsp-ping sub-type sr-isis path-destination*  
Tree [path-destination](#)  
Introduced 22.10.R1  
Platforms All

### **interface** *string*

Synopsis Egress router interface used with the path destination  
Context **configure** *saa owner string test string type lsp-ping sub-type sr-isis path-destination interface string*  
Tree [interface](#)  
String Length 1 to 32  
Notes The following elements are part of a choice: **interface** or **next-hop**.  
Introduced 22.10.R1  
Platforms All

### **ip-address** (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis IP address of the path destination

Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-isis path-destination ip-address (ipv4-address-no-zone   ipv6-address-no-zone)</i>
Tree	<a href="#">ip-address</a>
Introduced	22.10.R1
Platforms	All

### **next-hop** (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Egress IP next hop address used with path destination
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-isis path-destination next-hop (ipv4-address-no-zone   ipv6-address-no-zone)</i>
Tree	<a href="#">next-hop</a>
Notes	The following elements are part of a choice: <b>interface</b> or <b>next-hop</b> .
Introduced	22.10.R1
Platforms	All

### **prefix** (*ipv4-prefix | ipv6-prefix*)

Synopsis	Destination IP prefix for the test
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-isis prefix (ipv4-prefix   ipv6-prefix)</i>
Tree	<a href="#">prefix</a>
Notes	This element is mandatory.
Introduced	22.10.R1
Platforms	All

### **sr-ospf**

Synopsis	Enable the <b>sr-ospf</b> context
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-ospf</i>
Tree	<a href="#">sr-ospf</a>
Notes	The following elements are part of a choice: <b>bgp-label</b> , <b>ldp</b> , <b>rsvp-te</b> , <b>sr-isis</b> , <b>sr-ospf</b> , <b>sr-ospf3</b> , <b>sr-policy</b> , or <b>sr-te</b> .
Introduced	22.10.R1
Platforms	All

### **igp-instance** *number*

Synopsis	IGP instance for the SR OSPF test
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-ospf igp-instance number</i>
Tree	<a href="#">igp-instance</a>
Range	0 to 31
Default	0
Introduced	22.10.R1
Platforms	All

### **path-destination**

Synopsis	Enter the <b>path-destination</b> context
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-ospf path-destination</i>
Tree	<a href="#">path-destination</a>
Introduced	22.10.R1
Platforms	All

### **interface** *string*

Synopsis	Egress router interface used with the path destination
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-ospf path-destination interface string</i>
Tree	<a href="#">interface</a>
String Length	1 to 32
Notes	The following elements are part of a choice: <b>interface</b> or <b>next-hop</b> .
Introduced	22.10.R1
Platforms	All

### **ip-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the path destination
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-ospf path-destination ip-address (ipv4-address-no-zone   ipv6-address-no-zone)</i>
Tree	<a href="#">ip-address</a>

Introduced 22.10.R1  
Platforms All

### **next-hop** (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis Egress IP next hop address used with path destination  
Context **configure** *saa owner string test string type lsp-ping sub-type sr-ospf path-destination next-hop (ipv4-address-no-zone | ipv6-address-no-zone)*  
Tree [next-hop](#)  
Notes The following elements are part of a choice: **interface** or **next-hop**.  
Introduced 22.10.R1  
Platforms All

### **prefix** (*ipv4-prefix | ipv6-prefix*)

Synopsis Destination IP prefix for the test  
Context **configure** *saa owner string test string type lsp-ping sub-type sr-ospf prefix (ipv4-prefix | ipv6-prefix)*  
Tree [prefix](#)  
Notes This element is mandatory.  
Introduced 22.10.R1  
Platforms All

### **sr-ospf3**

Synopsis Enable the **sr-ospf3** context  
Context **configure** *saa owner string test string type lsp-ping sub-type sr-ospf3*  
Tree [sr-ospf3](#)  
Notes The following elements are part of a choice: **bgp-label**, **ldp**, **rsvp-te**, **sr-isis**, **sr-ospf**, **sr-ospf3**, **sr-policy**, or **sr-te**.  
Introduced 22.10.R1  
Platforms All

### **igp-instance** *number*

Synopsis IGP instance for the SR OSPFv3 test

Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-ospf3 igp-instance number</i>
Tree	<a href="#">igp-instance</a>
Range	0 to 31   64 to 95
Default	0
Introduced	22.10.R1
Platforms	All

### path-destination

Synopsis	Enter the <b>path-destination</b> context
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-ospf3 path-destination</i>
Tree	<a href="#">path-destination</a>
Introduced	22.10.R1
Platforms	All

### interface *string*

Synopsis	Egress router interface used with the path destination
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-ospf3 path-destination interface string</i>
Tree	<a href="#">interface</a>
String Length	1 to 32
Notes	The following elements are part of a choice: <b>interface</b> or <b>next-hop</b> .
Introduced	22.10.R1
Platforms	All

### ip-address (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	IP address of the path destination
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-ospf3 path-destination ip-address (ipv4-address-no-zone   ipv6-address-no-zone)</i>
Tree	<a href="#">ip-address</a>
Introduced	22.10.R1
Platforms	All

### **next-hop** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Egress IP next hop address used with path destination
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-ospf3 path-destination next-hop</i> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">next-hop</a>
Notes	The following elements are part of a choice: <b>interface</b> or <b>next-hop</b> .
Introduced	22.10.R1
Platforms	All

### **prefix** (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Destination IP prefix for the test
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-ospf3 prefix</i> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
Tree	<a href="#">prefix</a>
Notes	This element is mandatory.
Introduced	22.10.R1
Platforms	All

### **sr-policy**

Synopsis	Enable the <b>sr-policy</b> context
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-policy</i>
Tree	<a href="#">sr-policy</a>
Notes	The following elements are part of a choice: <b>bgp-label</b> , <b>ldp</b> , <b>rsvp-te</b> , <b>sr-isis</b> , <b>sr-ospf</b> , <b>sr-ospf3</b> , <b>sr-policy</b> , or <b>sr-te</b> .
Introduced	22.10.R1
Platforms	All

### **color number**

Synopsis	Segment Routing color for the test
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-policy color number</i>
Tree	<a href="#">color</a>
Range	0 to 4294967295

Notes	This element is mandatory.
Introduced	22.10.R1
Platforms	All

### **endpoint** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Segment Routing endpoint for the test
Context	<b>configure</b> <b>saa owner</b> <i>string test string type lsp-ping sub-type sr-policy endpoint</i> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">endpoint</a>
Notes	This element is mandatory.
Introduced	22.10.R1
Platforms	All

### **path-destination**

Synopsis	Enter the <b>path-destination</b> context
Context	<b>configure</b> <b>saa owner</b> <i>string test string type lsp-ping sub-type sr-policy path-destination</i>
Tree	<a href="#">path-destination</a>
Introduced	22.10.R1
Platforms	All

### **interface** *string*

Synopsis	Egress router interface used with the path destination
Context	<b>configure</b> <b>saa owner</b> <i>string test string type lsp-ping sub-type sr-policy path-destination interface string</i>
Tree	<a href="#">interface</a>
String Length	1 to 32
Notes	The following elements are part of a choice: <b>interface</b> or <b>next-hop</b> .
Introduced	22.10.R1
Platforms	All

### **ip-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the path destination
----------	------------------------------------

Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-policy path-destination ip-address (ipv4-address-no-zone   ipv6-address-no-zone)</i>
Tree	<a href="#">ip-address</a>
Introduced	22.10.R1
Platforms	All

### **next-hop** (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Egress IP next hop address used with path destination
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-policy path-destination next-hop (ipv4-address-no-zone   ipv6-address-no-zone)</i>
Tree	<a href="#">next-hop</a>
Notes	The following elements are part of a choice: <b>interface</b> or <b>next-hop</b> .
Introduced	22.10.R1
Platforms	All

### **segment-list** *number*

Synopsis	Segment Routing segment list for the test
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-policy segment-list number</i>
Tree	<a href="#">segment-list</a>
Range	1 to 32
Introduced	22.10.R1
Platforms	All

### **sr-te**

Synopsis	Enable the <b>sr-te</b> context
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-te</i>
Tree	<a href="#">sr-te</a>
Notes	The following elements are part of a choice: <b>bgp-label</b> , <b>ldp</b> , <b>rsvp-te</b> , <b>sr-isis</b> , <b>sr-ospf</b> , <b>sr-ospf3</b> , <b>sr-policy</b> , or <b>sr-te</b> .
Introduced	22.10.R1
Platforms	All

### **lsp-name** *string*

Synopsis	Name of the LSP to be tested
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-te lsp-name string</i>
Tree	<i>lsp-name</i>
String Length	1 to 64
Notes	This element is mandatory.
Introduced	22.10.R1
Platforms	All

### **path** *string*

Synopsis	Name of the MPLS path to be tested
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-te path string</i>
Tree	<i>path</i>
String Length	1 to 64
Introduced	22.10.R1
Platforms	All

### **path-destination**

Synopsis	Enter the <b>path-destination</b> context
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-te path-destination</i>
Tree	<i>path-destination</i>
Introduced	22.10.R1
Platforms	All

### **interface** *string*

Synopsis	Egress router interface used with the path destination
Context	<b>configure</b> <i>saa owner string test string type lsp-ping sub-type sr-te path-destination interface string</i>
Tree	<i>interface</i>
String Length	1 to 32
Notes	The following elements are part of a choice: <b>interface</b> or <b>next-hop</b> .

Introduced 22.10.R1  
Platforms All

### **ip-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis IP address of the path destination  
Context **configure** *saa owner string test string type lsp-ping sub-type sr-te path-destination ip-address* (*ipv4-address-no-zone* | *ipv6-address-no-zone*)  
Tree [ip-address](#)  
Introduced 22.10.R1  
Platforms All

### **next-hop** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis Egress IP next hop address used with path destination  
Context **configure** *saa owner string test string type lsp-ping sub-type sr-te path-destination next-hop* (*ipv4-address-no-zone* | *ipv6-address-no-zone*)  
Tree [next-hop](#)  
Notes The following elements are part of a choice: **interface** or **next-hop**.  
Introduced 22.10.R1  
Platforms All

### **timeout** *number*

Synopsis Time router waits for a reply to an echo request  
Context **configure** *saa owner string test string type lsp-ping timeout number*  
Tree [timeout](#)  
Range 1 to 10  
Default 5  
Units seconds  
Introduced 22.10.R1  
Platforms All

### **trap-generation**

Synopsis Enter the **trap-generation** context

Context	<b>configure</b> <i>saa owner string test string type lsp-ping trap-generation</i>
Tree	<i>trap-generation</i>
Introduced	22.10.R1
Platforms	All

### **probe-fail** *boolean*

Synopsis	Enable the generation of probe fail notifications
Context	<b>configure</b> <i>saa owner string test string type lsp-ping trap-generation probe-fail boolean</i>
Tree	<i>probe-fail</i>
Description	When configured to <b>true</b> , the system generates an SNMP trap if the consecutive probe failure threshold is reached during the execution of the SAA ping test.  This command is not applicable to SAA traceroute tests.
Default	false
Introduced	22.10.R1
Platforms	All

### **probe-fail-threshold** *number*

Synopsis	Consecutive probe failure count
Context	<b>configure</b> <i>saa owner string test string type lsp-ping trap-generation probe-fail-threshold number</i>
Tree	<i>probe-fail-threshold</i>
Description	This command configures the number of consecutive ping probe failures required to generate a trap.  This command has no effect if the <b>probe-fail</b> command is set to <b>false</b> .  This command is not applicable to SAA traceroute tests.
Range	0 to 15
Default	1
Introduced	22.10.R1
Platforms	All

### **test-complete** *boolean*

Synopsis	Enable generation of test complete notifications
----------	--

Context	<b>configure</b> <i>saa owner string test string type lsp-ping trap-generation test-complete boolean</i>
Tree	<a href="#">test-complete</a>
Default	false
Introduced	22.10.R1
Platforms	All

### **test-fail** *boolean*

Synopsis	Enable the generation of test fail notifications
Context	<b>configure</b> <i>saa owner string test string type lsp-ping trap-generation test-fail boolean</i>
Tree	<a href="#">test-fail</a>
Description	When configured to <b>true</b> , the system generates a trap if a test fails. In the case of a ping test, the test is considered to have failed (for trap generation) if the number of failed probes is at least the value of the <b>test-fail-threshold</b> setting.
Default	false
Introduced	22.10.R1
Platforms	All

### **test-fail-threshold** *number*

Synopsis	Total probe failures for trap generation
Context	<b>configure</b> <i>saa owner string test string type lsp-ping trap-generation test-fail-threshold number</i>
Tree	<a href="#">test-fail-threshold</a>
Description	This command configures the number of consecutive test failures required to generate a trap.  This command has no effect when <b>test-fail</b> is set to <b>false</b> . This command is not applicable to SAA traceroute tests.
Range	0 to 15
Default	1
Introduced	22.10.R1
Platforms	All

### ***ttl number***

Synopsis	TTL value for the echo request MPLS label
Context	<b>configure</b> <i>saa owner string test string type lsp-ping ttl number</i>
Tree	<i>tll</i>
Range	1 to 255
Default	255
Introduced	22.10.R1
Platforms	All

## 3.42 satellite commands

```
configure
- satellite
  - apply-groups reference
  - apply-groups-exclude reference
  - ethernet-satellite number
    - admin-state keyword
    - apply-groups reference
    - apply-groups-exclude reference
    - client-down-delay number
    - console-access keyword
    - description string
    - dynamic-uplink boolean
    - feature keyword
    - mac-address string
    - port-map reference
      - apply-groups reference
      - apply-groups-exclude reference
      - primary reference
      - secondary reference
    - port-template string
    - ptp-tc boolean
    - sat-type keyword
    - software-repository reference
    - sync-e boolean
    - uplink-distribution keyword
  - file-transfer
    - apply-groups reference

    - scp boolean
  - port-template string
    - admin-state keyword
    - apply-groups reference
    - apply-groups-exclude reference
    - description string
    - port string
      - apply-groups reference
      - apply-groups-exclude reference
      - role keyword
      - uplink reference
    - sat-type keyword
  - port-topology reference
    - apply-groups reference
    - apply-groups-exclude reference
    - far-end-port-id reference
```

### 3.42.1 satellite command descriptions

#### satellite

Synopsis	Enter the <b>satellite</b> context
Context	<b>configure satellite</b>
Tree	<a href="#">satellite</a>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

#### ethernet-satellite [[satellite-id](#)] *number*

Synopsis	Enter the <b>ethernet-satellite</b> list instance
Context	<b>configure satellite ethernet-satellite number</b>
Tree	<a href="#">ethernet-satellite</a>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

#### [\[satellite-id\]](#) *number*

Synopsis	The unique index identifying this satellite
Context	<b>configure satellite ethernet-satellite number</b>
Tree	<a href="#">ethernet-satellite</a>
Range	1 to 20
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

#### **admin-state** *keyword*

Synopsis	Administrative state of the satellite
Context	<b>configure satellite ethernet-satellite number admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable

Introduced 19.7.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **client-down-delay** *number*

Synopsis Delay between uplink as unavailable and disabling ports  
Context **configure** [satellite ethernet-satellite](#) *number* [client-down-delay](#) *number*  
Tree [client-down-delay](#)  
Range 0 to 1800  
Introduced 19.7.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **console-access** *keyword*

Synopsis Satellite console interface access  
Context **configure** [satellite ethernet-satellite](#) *number* [console-access](#) *keyword*  
Tree [console-access](#)  
Default disable  
Options enable, disable  
Introduced 20.2.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **description** *string*

Synopsis Text description  
Context **configure** [satellite ethernet-satellite](#) *number* [description](#) *string*  
Tree [description](#)  
String Length 1 to 80  
Introduced 19.7.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## dynamic-uplink *boolean*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Enable dynamic uplink resilience for Ethernet satellite
Context	<b>configure</b> <a href="#">satellite ethernet-satellite</a> <i>number</i> <a href="#">dynamic-uplink</a> <i>boolean</i>
Tree	<a href="#">dynamic-uplink</a>
Default	false
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## feature *keyword*

Synopsis	Functionality to enable
Context	<b>configure</b> <a href="#">satellite ethernet-satellite</a> <i>number</i> <a href="#">feature</a> <i>keyword</i>
Tree	<a href="#">feature</a>
Options	local-forward, ptp-tc
Max. Instances	2
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## mac-address *string*

Synopsis	MAC address for the satellite chassis
Context	<b>configure</b> <a href="#">satellite ethernet-satellite</a> <i>number</i> <a href="#">mac-address</a> <i>string</i>
Tree	<a href="#">mac-address</a>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## port-map [[client-port-id](#)] *reference*

Synopsis	Enter the <b>port-map</b> list instance
Context	<b>configure</b> <a href="#">satellite ethernet-satellite</a> <i>number</i> <a href="#">port-map</a> <i>reference</i>
Tree	<a href="#">port-map</a>

Introduced 19.7.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **[client-port-id] reference**

Synopsis Satellite client port associated with the port mapping  
Context **configure** [satellite ethernet-satellite](#) *number* [port-map](#) *reference*  
Tree [port-map](#)  
Reference **configure** [port](#) *string*  
Notes This element is part of a list key.  
Introduced 19.7.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **primary reference**

Synopsis Primary satellite uplink for the associate client port  
Context **configure** [satellite ethernet-satellite](#) *number* [port-map](#) *reference* [primary](#) *reference*  
Tree [primary](#)  
Reference **configure** [port](#) *string*  
Introduced 19.7.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **secondary reference**

Synopsis Secondary satellite uplink for associate client port  
Context **configure** [satellite ethernet-satellite](#) *number* [port-map](#) *reference* [secondary](#) *reference*  
Tree [secondary](#)  
Reference **configure** [port](#) *string*  
Introduced 19.7.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## port-template *string*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Port template name
Context	<b>configure</b> <a href="#">satellite ethernet-satellite</a> <i>number</i> <a href="#">port-template</a> <i>string</i>
Tree	<a href="#">port-template</a>
String Length	1 to 32
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## ptp-tc *boolean*

Synopsis	Enable the 1EEE 1588 transparent clock function
Context	<b>configure</b> <a href="#">satellite ethernet-satellite</a> <i>number</i> <a href="#">ptp-tc</a> <i>boolean</i>
Tree	<a href="#">ptp-tc</a>
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## sat-type *keyword*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Type of satellite variant for the associated chassis
Context	<b>configure</b> <a href="#">satellite ethernet-satellite</a> <i>number</i> <a href="#">sat-type</a> <i>keyword</i>
Tree	<a href="#">sat-type</a>
Options	es48-1gb-sfp, es24-1gb-sfp, es48-1gb-tx, es24-1gb-tx, es64-10gb-sfpp+4-100gb-cfp4, es24-sass-1gb-sfp, es48-sass-1gb-sfp, es24-sasmxp-1gb-sfp, es64-10gb-sfpp+4-100gb-qsfp28, es24-sfpp+8-sfp28+2-qsfp28, es32-qsfp28+4-qsfpdd, es6-qsfpdd+48-sfp56
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### software-repository *reference*

Synopsis	Software repository bound to the associated satellite
Context	<b>configure</b> <a href="#">satellite ethernet-satellite</a> <i>number</i> <a href="#">software-repository</a> <i>reference</i>
Tree	<a href="#">software-repository</a>
Reference	<b>configure</b> <a href="#">system software-repository</a> <i>string</i>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### sync-e *boolean*

Synopsis	Enable the synchronous Ethernet operation
Context	<b>configure</b> <a href="#">satellite ethernet-satellite</a> <i>number</i> <a href="#">sync-e</a> <i>boolean</i>
Tree	<a href="#">sync-e</a>
Description	<p>When configured to <b>true</b>, this command enables the Ethernet satellite for synchronous Ethernet operation so that the transmit timing of the satellite access ports use the frequency of the central clock of the host router.</p> <p>To enable this functionality, both host ports on the router that connect to the U1 and U2 ports of the satellite must be synchronous Ethernet-capable ports.</p> <p>When configured to <b>false</b>, the command disables the Ethernet satellite for synchronous Ethernet operation.</p>
Default	false
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### uplink-distribution *keyword*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Forwarding complex type for uplink distribution
Context	<b>configure</b> <a href="#">satellite ethernet-satellite</a> <i>number</i> <a href="#">uplink-distribution</a> <i>keyword</i>
Tree	<a href="#">uplink-distribution</a>
Description	<p>This command specifies the forwarding complex used for the satellite uplink association to the ports.</p> <p>With <b>single-complex</b>, all uplinks for the associated satellite must be connected to ports using a single forwarding complex.</p>

With **dual-complex**, all uplinks for the associated satellite must be connected to ports using a double forwarding complex. This option optimizes the resources across the two complexes.

Options	single-complex, dual-complex
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## file-transfer

Synopsis	Enter the <b>file-transfer</b> context
Context	<b>configure</b> <a href="#">satellite file-transfer</a>
Tree	<a href="#">file-transfer</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## ftp boolean

Synopsis	Use FTP between host and satellite
Context	<b>configure</b> <a href="#">satellite file-transfer ftp boolean</a>
Tree	<a href="#">ftp</a>
Description	When configured to <b>true</b> , the file transfer FTP is used between 7750 SR or 7950 XRS host and the 7210 SAS Ethernet satellite.
Default	true
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## scp boolean

Synopsis	Use FTP between host and satellite
Context	<b>configure</b> <a href="#">satellite file-transfer scp boolean</a>
Tree	<a href="#">scp</a>
Description	When configured to <b>true</b> , the file transfer SCP protocol is used between 7750 SR or 7950 XRS host and the 7210 SAS Ethernet satellite.  When configured to <b>false</b> , the file transfer FTP protocol is used between 7750 SR or 7950 XRS host and the 7210 SAS Ethernet satellite.
Default	false

Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **port-template** *[template-name] string*

Synopsis Enter the **port-template** list instance  
Context **configure satellite port-template string**  
Tree [port-template](#)  
Introduced 19.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **[template-name] string**

Synopsis Associated port template name  
Context **configure satellite port-template string**  
Tree [port-template](#)  
String Length 1 to 32  
Notes This element is part of a list key.  
Introduced 19.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **admin-state keyword**

Synopsis Administrative state of the port template  
Context **configure satellite port-template string admin-state keyword**  
Tree [admin-state](#)  
Default disable  
Options enable, disable  
Introduced 19.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **description string**

Synopsis Text description  
Context **configure satellite port-template string description string**

Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **port** [[sat-phys-port-id](#)] *string*

Synopsis	Enter the <b>port</b> list instance
Context	<b>configure</b> <a href="#">satellite</a> <a href="#">port-template</a> <i>string</i> <a href="#">port</a> <i>string</i>
Tree	<a href="#">port</a>
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **[sat-phys-port-id]** *string*

Synopsis	Satellite physical port ID
Context	<b>configure</b> <a href="#">satellite</a> <a href="#">port-template</a> <i>string</i> <a href="#">port</a> <i>string</i>
Tree	<a href="#">port</a>
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **role** *keyword*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Satellite port role
Context	<b>configure</b> <a href="#">satellite</a> <a href="#">port-template</a> <i>string</i> <a href="#">port</a> <i>string</i> <a href="#">role</a> <i>keyword</i>
Tree	<a href="#">role</a>
Options	none, uplink, client
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## uplink reference

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Uplink association used for associated satellite port
Context	<b>configure</b> <a href="#">satellite port-template</a> <i>string</i> <a href="#">port</a> <i>string</i> <a href="#">uplink reference</a>
Tree	<a href="#">uplink</a>
Reference	<b>configure</b> <a href="#">satellite port-template</a> <i>string</i> <a href="#">port</a> <i>string</i>
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## sat-type keyword

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	The satellite type for the port template to use.
Context	<b>configure</b> <a href="#">satellite port-template</a> <i>string</i> <a href="#">sat-type</a> <i>keyword</i>
Tree	<a href="#">sat-type</a>
Options	es48-1gb-sfp, es24-1gb-sfp, es48-1gb-tx, es24-1gb-tx, es64-10gb-sfpp+4-100gb-cfp4, es24-sass-1gb-sfp, es48-sass-1gb-sfp, es24-sasmxp-1gb-sfp, es64-10gb-sfpp+4-100gb-qsfp28, es24-sfpp+8-sfp28+2-qsfp28, es32-qsfp28+4-qsfpdd, es6-qsfpdd+48-sfp56
Notes	This element is mandatory.
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## port-topology [[local-port-id](#)] reference

Synopsis	Enter the <b>port-topology</b> list instance
Context	<b>configure</b> <a href="#">satellite port-topology</a> <i>reference</i>
Tree	<a href="#">port-topology</a>

Introduced 19.7.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **[local-port-id] reference**

Synopsis Local port identifier  
Context **configure** [satellite port-topology reference](#)  
Tree [port-topology](#)  
Reference **configure** [port string](#)  
Notes This element is part of a list key.  
Introduced 19.7.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **far-end-port-id reference**

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Far end port identifier.  
Context **configure** [satellite port-topology reference](#) [far-end-port-id reference](#)  
Tree [far-end-port-id](#)  
Reference **configure** [port string](#)  
Notes This element is mandatory.  
Introduced 19.7.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### 3.43 service commands

### 3.43.1 service command descriptions

#### **service**

Synopsis	Enter the <b>service</b> context
Context	<b>configure service</b>
Tree	<a href="#">service</a>
Introduced	16.0.R1
Platforms	All

#### **cpipe** [[service-name](#)] *string*

Synopsis	Enter the <b>cpipe</b> list instance
Context	<b>configure service cpipe string</b>
Tree	<a href="#">cpipe</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

#### **[service-name]** *string*

Synopsis	Administrative service name
Context	<b>configure service cpipe string</b>
Tree	<a href="#">cpipe</a>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

#### **admin-state** *keyword*

Synopsis	Administrative state of the service
Context	<b>configure service cpipe string admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable

Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **customer** *reference*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Service customer ID  
Context **configure** *service cpipe string customer reference*  
Tree *customer*  
Reference **configure** *service customer string*  
Notes This element is mandatory.  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **description** *string*

Synopsis Text description  
Context **configure** *service cpipe string description string*  
Tree *description*  
String Length 1 to 80  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **endpoint** [*name*] *string*

Synopsis Enter the **endpoint** list instance  
Context **configure** *service cpipe string endpoint string*  
Tree *endpoint*  
Max. Instances 2  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **[name]** *string*

Synopsis	Service endpoint name
Context	<b>configure</b> <i>service cpipe string endpoint string</i>
Tree	<i>endpoint</i>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <i>service cpipe string endpoint string description string</i>
Tree	<i>description</i>
String Length	1 to 80
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **hold-time-active** *number*

Synopsis	Time to hold the active state before entering standby when a local MC-LAG SAP goes down
Context	<b>configure</b> <i>service cpipe string endpoint string hold-time-active number</i>
Tree	<i>hold-time-active</i>
Range	1 to 60
Units	deciseconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **revert-time** (*number* | *keyword*)

Synopsis	Time to wait before reverting back to the primary spoke-sdp defined on this service endpoint
Context	<b>configure</b> <i>service cpipe string endpoint string revert-time (number   keyword)</i>
Tree	<i>revert-time</i>

Range	1 to 600
Default	immediate
Units	seconds
Options	never, immediate
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **sap** [[sap-id](#)] *string*

Synopsis	Enter the <b>sap</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <b>sap</b> <i>string</i>
Tree	<a href="#">sap</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **[sap-id]** *string*

Synopsis	SAP ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <b>sap</b> <i>string</i>
Tree	<a href="#">sap</a>
String Length	1 to 45
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **accounting-policy** *reference*

Synopsis	Accounting policy
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <b>sap</b> <i>string</i> <a href="#">accounting-policy</a> <i>reference</i>
Tree	<a href="#">accounting-policy</a>
Reference	<b>configure</b> <a href="#">log</a> <a href="#">accounting-policy</a> <i>number</i>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **admin-state** *keyword*

Synopsis	Administrative state of the SAP
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	enable
Options	enable, disable
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **cem**

Synopsis	Enter the <b>cem</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <b>cem</b>
Tree	<a href="#">cem</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **packet**

Synopsis	Enter the <b>packet</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <b>cem</b> <b>packet</b>
Tree	<a href="#">packet</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **jitter-buffer** *number*

Synopsis	Jitter buffer size
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <b>cem</b> <b>packet</b> <b>jitter-buffer</b> <i>number</i>
Tree	<a href="#">jitter-buffer</a>
Range	1 to 250
Units	milliseconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **payload-size** *number*

Synopsis	Size of payload packets transmitted to PSN by CEM SAP
Context	<b>configure</b> <a href="#">service cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">cem packet</a> <a href="#">payload-size</a> <i>number</i>
Tree	<a href="#">payload-size</a>
Range	16 to 2048
Units	bytes
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **report-alarm**

Synopsis	Enter the <b>report-alarm</b> context
Context	<b>configure</b> <a href="#">service cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">cem</a> <a href="#">report-alarm</a>
Tree	<a href="#">report-alarm</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **buffer-overflow** *boolean*

Synopsis	Report alarm for buffer overflow
Context	<b>configure</b> <a href="#">service cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">cem</a> <a href="#">report-alarm</a> <a href="#">buffer-overflow</a> <i>boolean</i>
Tree	<a href="#">buffer-overflow</a>
Default	true
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **buffer-underrun** *boolean*

Synopsis	Report alarm for buffer underrun
Context	<b>configure</b> <a href="#">service cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">cem</a> <a href="#">report-alarm</a> <a href="#">buffer-underrun</a> <i>boolean</i>
Tree	<a href="#">buffer-underrun</a>
Default	true
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **malformed-packets** *boolean*

Synopsis	Report alarm for malformed packets
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">cem</a> <a href="#">report-alarm</a> <a href="#">malformed-packets</a> <i>boolean</i>
Tree	<a href="#">malformed-packets</a>
Default	true
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **packet-loss** *boolean*

Synopsis	Report remote peer is currently in packet loss status
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">cem</a> <a href="#">report-alarm</a> <a href="#">packet-loss</a> <i>boolean</i>
Tree	<a href="#">packet-loss</a>
Default	true
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **remote-fault** *boolean*

Synopsis	Report remote TDM interface is currently not in service
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">cem</a> <a href="#">report-alarm</a> <a href="#">remote-fault</a> <i>boolean</i>
Tree	<a href="#">remote-fault</a>
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **remote-packet-loss** *boolean*

Synopsis	Report remote peer is currently in packet loss status
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">cem</a> <a href="#">report-alarm</a> <a href="#">remote-packet-loss</a> <i>boolean</i>
Tree	<a href="#">remote-packet-loss</a>
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **remote-rdi** *boolean*

Synopsis	Report remote TDM interface is currently in RDI status
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">cem</a> <a href="#">report-alarm</a> <a href="#">remote-rdi</a> <i>boolean</i>
Tree	<a href="#">remote-rdi</a>
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **stray-packets** *boolean*

Synopsis	Report alarm for stray packets
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">cem</a> <a href="#">report-alarm</a> <a href="#">stray-packets</a> <i>boolean</i>
Tree	<a href="#">stray-packets</a>
Default	true
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **rtp-header** *boolean*

Synopsis	Use RTP header for transmitted packets to the PSN
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">cem</a> <a href="#">rtp-header</a> <i>boolean</i>
Tree	<a href="#">rtp-header</a>
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

### **collect-stats** *boolean*

Synopsis	Collect accounting statistics
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">collect-stats</a> <i>boolean</i>
Tree	<a href="#">collect-stats</a>
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">description</a> <a href="#">string</a>
Tree	<a href="#">description</a>
String Length	1 to 160
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **dist-cpu-protection** *reference*

Synopsis	Distributed CPU protection policy for SAP
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">dist-cpu-protection</a> <a href="#">reference</a>
Tree	<a href="#">dist-cpu-protection</a>
Reference	<b>configure</b> <a href="#">system</a> <a href="#">security</a> <a href="#">dist-cpu-protection</a> <a href="#">policy</a> <a href="#">string</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **egress**

Synopsis	Enter the <b>egress</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a>
Tree	<a href="#">egress</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **agg-rate**

Synopsis	Enter the <b>agg-rate</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">agg-rate</a>
Tree	<a href="#">agg-rate</a>
Notes	This element is the default part of a choice.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **adaptation-rule** *keyword*

Synopsis	Adaptation rule to compute the operational PIR value when an aggregate shaper is used
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">agg-rate</a> <a href="#">adaptation-rule</a> <i>keyword</i>
Tree	<a href="#">adaptation-rule</a>
Default	closest
Options	max, min, closest
Introduced	22.10.R1
Platforms	7750 SR-1, 7750 SR-s

### **burst-limit** (*number* | *keyword*)

Synopsis	Shaping burst size when an aggregate shaper is used
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">agg-rate</a> <a href="#">burst-limit</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">burst-limit</a>
Range	1 to 14000000
Default	auto
Units	bytes
Options	auto
Introduced	22.10.R1
Platforms	7750 SR-1, 7750 SR-s

### **limit-unused-bandwidth** *boolean*

Synopsis	Enable aggregate rate overrun protection
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">agg-rate</a> <a href="#">limit-unused-bandwidth</a> <i>boolean</i>
Tree	<a href="#">limit-unused-bandwidth</a>
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **rate** *number*

Synopsis	Enforced aggregate rate for all queues
----------	--

Context	<b>configure service cpipe string sap string egress agg-rate rate number</b>
Tree	<b>rate</b>
Range	1 to 6400000000
Units	kilobps
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## qos

Synopsis	Enter the <b>qos</b> context
Context	<b>configure service cpipe string sap string egress qos</b>
Tree	<b>qos</b>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## policer-control-policy

Synopsis	Enter the <b>policer-control-policy</b> context
Context	<b>configure service cpipe string sap string egress qos policer-control-policy</b>
Tree	<b>policer-control-policy</b>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

## overrides

Synopsis	Enable the <b>overrides</b> context
Context	<b>configure service cpipe string sap string egress qos policer-control-policy overrides</b>
Tree	<b>overrides</b>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

## root

Synopsis	Enter the <b>root</b> context
Context	<b>configure service cpipe string sap string egress qos policer-control-policy overrides root</b>

Tree	<a href="#">root</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

### **max-rate** (*number* | *keyword*)

Synopsis	Maximum frame-based bandwidth limit
Context	<b>configure</b> <a href="#">service cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos policer-control-policy overrides root max-rate</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">max-rate</a>
Range	1 to 6400000000
Options	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

### **priority-mbs-thresholds**

Synopsis	Enter the <b>priority-mbs-thresholds</b> context
Context	<b>configure</b> <a href="#">service cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos policer-control-policy overrides root priority-mbs-thresholds</a>
Tree	<a href="#">priority-mbs-thresholds</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

### **min-thresh-separation** (*number* | *keyword*)

Synopsis	Minimum amount of separation buffer space
Context	<b>configure</b> <a href="#">service cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos policer-control-policy overrides root priority-mbs-thresholds min-thresh-separation</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">min-thresh-separation</a>
Range	0 to 16777216
Units	bytes
Options	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

### **priority** [[priority-level](#)] *number*

Synopsis	Enter the <b>priority</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a> <a href="#">priority-mbs-thresholds</a> <a href="#">priority</a> <i>number</i>
Tree	<a href="#">priority</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

### **[priority-level]** *number*

Synopsis	Priority level
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a> <a href="#">priority-mbs-thresholds</a> <a href="#">priority</a> <i>number</i>
Tree	<a href="#">priority</a>
Range	1 to 8
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mbs-contribution** (*number* | *keyword*)

Synopsis	Minimum amount of cumulative buffer space allowed
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a> <a href="#">priority-mbs-thresholds</a> <a href="#">priority</a> <i>number</i> <a href="#">mbs-contribution</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">mbs-contribution</a>
Range	0 to 16777216
Units	bytes
Options	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

### **policy-name** *reference*

Synopsis	Policer control policy name
----------	-----------------------------

Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">policy-name</a> <a href="#">reference</a>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">string</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

## **sap-egress**

Synopsis	Enter the <b>sap-egress</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a>
Tree	<a href="#">sap-egress</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## **overrides**

Synopsis	Enter the <b>overrides</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a>
Tree	<a href="#">overrides</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## **policer** [[policer-id](#)] [reference](#)

Synopsis	Enter the <b>policer</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a>
Tree	<a href="#">policer</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

## **[policer-id]** [reference](#)

Synopsis	Policer unique ID
----------	-------------------

Context	<b>configure service cpipe string sap string egress qos sap-egress overrides policer reference</b>
Tree	<b>policer</b>
Reference	<b>configure qos sap-egress string policer number</b>
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

### **cbs** (*number* | *keyword*)

Synopsis	CBS
Context	<b>configure service cpipe string sap string egress qos sap-egress overrides policer reference cbs</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>cbs</b>
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mbs** (*number* | *keyword*)

Synopsis	MBS
Context	<b>configure service cpipe string sap string egress qos sap-egress overrides policer reference mbs</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>mbs</b>
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

### **packet-byte-offset** *number*

Synopsis	Packet size modification for policing information
----------	---

Context	<b>configure service cpipe string sap string egress qos sap-egress overrides policer reference packet-byte-offset number</b>
Tree	<a href="#">packet-byte-offset</a>
Range	-64 to 31
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

### **percent-rate**

Synopsis	Enter the <b>percent-rate</b> context
Context	<b>configure service cpipe string sap string egress qos sap-egress overrides policer reference percent-rate</b>
Tree	<a href="#">percent-rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

### **cir decimal-number**

Synopsis	CIR percent rate
Context	<b>configure service cpipe string sap string egress qos sap-egress overrides policer reference percent-rate cir decimal-number</b>
Tree	<a href="#">cir</a>
Range	0.00 to 100.00
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

### **pir decimal-number**

Synopsis	PIR percent rate
Context	<b>configure service cpipe string sap string egress qos sap-egress overrides policer reference percent-rate pir decimal-number</b>
Tree	<a href="#">pir</a>
Range	0.01 to 100.00
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

## rate

Synopsis	Enter the <b>rate</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <b>rate</b>
Tree	<a href="#">rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

## cir (*number* | *keyword*)

Synopsis	CIR rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <a href="#">rate</a> <b>cir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cir</a>
Range	0 to 6400000000
Units	kilobps
Options	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

## pir (*number* | *keyword*)

Synopsis	PIR rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <a href="#">rate</a> <b>pir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">pir</a>
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

### **stat-mode** *keyword*

Synopsis	Mode of statistics collected by the policer
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <i>reference</i> <a href="#">stat-mode</a> <i>keyword</i>
Tree	<a href="#">stat-mode</a>
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-profile-cir, offered-limited-capped-cir, offered-profile-capped-cir, offered-total-cir-exceed, offered-four-profile-no-cir, offered-total-cir-four-profile
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

### **queue** [[queue-id](#)] *reference*

Synopsis	Enter the <b>queue</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i>
Tree	<a href="#">queue</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### [[queue-id](#)] *reference*

Synopsis	Policer unique ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i>
Tree	<a href="#">queue</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">sap-egress</a> <i>string</i> <a href="#">queue</a> <i>number</i>
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **adaptation-rule**

Synopsis	Enter the <b>adaptation-rule</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i> <a href="#">adaptation-rule</a>
Tree	<a href="#">adaptation-rule</a>

Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **cir keyword**

Synopsis Constraint used when deriving the operational CIR value  
Context **configure** [service cpipe string sap string egress qos sap-egress overrides queue reference adaptation-rule cir keyword](#)  
Tree [cir](#)  
Options max, min, closest  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **pir keyword**

Synopsis Constraint used when deriving the operational PIR value  
Context **configure** [service cpipe string sap string egress qos sap-egress overrides queue reference adaptation-rule pir keyword](#)  
Tree [pir](#)  
Options max, min, closest  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **avg-frame-overhead decimal-number**

Synopsis Average packet-to-frame encapsulation overhead  
Context **configure** [service cpipe string sap string egress qos sap-egress overrides queue reference avg-frame-overhead decimal-number](#)  
Tree [avg-frame-overhead](#)  
Range 0.00 to 100.00  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **burst-limit (number | keyword)**

Synopsis Explicit shaping burst size for the queue

Context	<b>configure service cpipe string sap string egress qos sap-egress overrides queue reference burst-limit (number   keyword)</b>
Tree	<a href="#">burst-limit</a>
Range	1 to 14000000
Units	bytes
Options	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **cbs (number | keyword)**

Synopsis	CBS
Context	<b>configure service cpipe string sap string egress qos sap-egress overrides queue reference cbs (number   keyword)</b>
Tree	<a href="#">cbs</a>
Range	0 to 1048576
Units	kilobytes
Options	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **drop-tail**

Synopsis	Enter the <b>drop-tail</b> context
Context	<b>configure service cpipe string sap string egress qos sap-egress overrides queue reference drop-tail</b>
Tree	<a href="#">drop-tail</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **low**

Synopsis	Enter the <b>low</b> context
Context	<b>configure service cpipe string sap string egress qos sap-egress overrides queue reference drop-tail low</b>
Tree	<a href="#">low</a>

Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **percent-reduction-from-mbs** (*number* | *keyword*)

Synopsis Percentage reduction from the MBS for a queue drop tail  
Context **configure** [service](#) [cpipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#)  
*reference* [drop-tail](#) [low](#) **percent-reduction-from-mbs** (*number* | *keyword*)  
Tree [percent-reduction-from-mbs](#)  
Range 0 to 100  
Options auto  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **hs-class-weight** *number*

Synopsis Class weight override for the queue  
Context **configure** [service](#) [cpipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#)  
*reference* [hs-class-weight](#) *number*  
Tree [hs-class-weight](#)  
Range 1 | 2 | 4 | 8  
Introduced 20.10.R1  
Platforms 7750 SR-7/12/12e

### **hs-wred-queue**

Synopsis Enter the **hs-wred-queue** context  
Context **configure** [service](#) [cpipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#)  
*reference* [hs-wred-queue](#)  
Tree [hs-wred-queue](#)  
Introduced 20.10.R1  
Platforms 7750 SR-7/12/12e

### **policy** *reference*

Synopsis Slope policy applied to the HSQ queue group queue

Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">hs-wred-queue</a> <a href="#">policy</a> <a href="#">reference</a>
Tree	<a href="#">policy</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">slope-policy</a> <a href="#">string</a>
Introduced	20.10.R1
Platforms	7750 SR-7/12/12e

### **hs-wrr-weight** *number*

Synopsis	Weighted Round Robin (WRR) weight to parent with this queue into the scheduler
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">hs-wrr-weight</a> <a href="#">number</a>
Tree	<a href="#">hs-wrr-weight</a>
Range	1 to 127
Default	1
Introduced	20.10.R1
Platforms	7750 SR-7/12/12e

### **mbs** (*number* | *keyword*)

Synopsis	MBS
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">mbs</a> ( <a href="#">number</a>   <a href="#">keyword</a> )
Tree	<a href="#">mbs</a>
Range	0 to 1073741824
Units	bytes
Options	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **monitor-queue-depth**

Synopsis	Enable the <b>monitor-queue-depth</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">monitor-queue-depth</a>
Tree	<a href="#">monitor-queue-depth</a>

Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fast-polling** *boolean*

Synopsis	Enable fast polling of the queue depth
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">monitor-queue-depth</a> <b>fast-polling</b> <i>boolean</i>
Tree	<a href="#">fast-polling</a>
Description	When configured to <b>true</b> , this command enables fast polling of the queue depth. Faster polling allows a more accurate view of the actual depth. When configured to <b>false</b> , fast queue polling is not enabled.
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **violation-threshold** *decimal-number*

Synopsis	Threshold for queue depth before violation is raised
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">monitor-queue-depth</a> <b>violation-threshold</b> <i>decimal-number</i>
Tree	<a href="#">violation-threshold</a>
Description	This command specifies the threshold for the queue MBS. When the queue depth exceeds the threshold value, a violation is registered.
Range	0.01 to 99.99
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **parent**

Synopsis	Enter the <b>parent</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <b>parent</b>
Tree	<a href="#">parent</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **cir-weight** *number*

Synopsis	CIR parameter that overrides parent for queue group
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">parent</a> <a href="#">cir-weight</a> <a href="#">number</a>
Tree	<a href="#">cir-weight</a>
Range	0 to 100
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **weight** *number*

Synopsis	PIR parameter that overrides parent for queue group
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">parent</a> <a href="#">weight</a> <a href="#">number</a>
Tree	<a href="#">weight</a>
Range	0 to 100
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **percent-rate**

Synopsis	Enter the <b>percent-rate</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">percent-rate</a>
Tree	<a href="#">percent-rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **cir** *decimal-number*

Synopsis	CIR percent rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">percent-rate</a> <a href="#">cir</a> <a href="#">decimal-number</a>
Tree	<a href="#">cir</a>

Range	0.00 to 100.00
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **pir** *decimal-number*

Synopsis	PIR percent rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">percent-rate</a> <b>pir</b> <i>decimal-number</i>
Tree	<a href="#">pir</a>
Range	0.01 to 100.00
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **rate**

Synopsis	Enter the <b>rate</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <b>rate</b>
Tree	<a href="#">rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **cir** (*number* | *keyword*)

Synopsis	CIR rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">rate</a> <b>cir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cir</a>
Range	0 to 6400000000
Units	kilobps
Options	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **pir** (*number* | *keyword*)

Synopsis	PIR rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">rate</a> <b>pir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">pir</a>
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **policy-name** *reference*

Synopsis	Policy ID to associate with SAP for mirrored service
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">policy-name</a> <i>reference</i>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">sap-egress</a> <i>string</i>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **scheduler-policy**

Synopsis	Enter the <b>scheduler-policy</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a>
Tree	<a href="#">scheduler-policy</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **overrides**

Synopsis	Enter the <b>overrides</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a>
Tree	<a href="#">overrides</a>
Introduced	20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **scheduler** [*scheduler-name*] *string*

Synopsis Enter the **scheduler** list instance

Context **configure service cpipe** *string* **sap** *string* **egress qos scheduler-policy overrides scheduler** *string*

Tree **scheduler**

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **[scheduler-name]** *string*

Synopsis Scheduler name

Context **configure service cpipe** *string* **sap** *string* **egress qos scheduler-policy overrides scheduler** *string*

Tree **scheduler**

Description This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (**#**, **\$**, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.

If the scheduler name exists within the policy on a different tier, an error occurs and the current context will not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.

If the provided scheduler name is invalid, a name syntax error will occur, the command will not execute, and the context will not change.

String Length 1 to 32

Notes This element is part of a list key.

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **parent**

Synopsis Enter the **parent** context

Context	<b>configure service cpipe string sap string egress qos scheduler-policy overrides scheduler string parent</b>
Tree	<b>parent</b>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **cir-weight number**

Synopsis	Weight used at the within-CIR port priority level
Context	<b>configure service cpipe string sap string egress qos scheduler-policy overrides scheduler string parent cir-weight number</b>
Tree	<b>cir-weight</b>
Range	0 to 100
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **weight number**

Synopsis	Relative weight of the scheduler to feed the queue
Context	<b>configure service cpipe string sap string egress qos scheduler-policy overrides scheduler string parent weight number</b>
Tree	<b>weight</b>
Range	0 to 100
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **rate**

Synopsis	Enter the <b>rate</b> context
Context	<b>configure service cpipe string sap string egress qos scheduler-policy overrides scheduler string rate</b>
Tree	<b>rate</b>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **cir** (*number* | *keyword*)

Synopsis	CIR at which the queue it to operate
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <i>string</i> <a href="#">rate</a> <b>cir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cir</a>
Range	0 to 6400000000
Units	kilobps
Options	sum, max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **pir** (*number* | *keyword*)

Synopsis	PIR at which the queue is to operate
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <i>string</i> <a href="#">rate</a> <b>pir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">pir</a>

Units	kilobps
Options	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **policy-name** *reference*

Synopsis	Scheduler policy name
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">policy-name</a> <i>reference</i>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">scheduler-policy</a> <i>string</i>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **endpoint** *reference*

Synopsis	Endpoint name
----------	---------------

Context	<b>configure service cpipe</b> <i>string sap string endpoint reference</i>
Tree	<a href="#">endpoint</a>
Reference	<b>configure service cpipe</b> <i>string endpoint string</i>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## ingress

Synopsis	Enter the <b>ingress</b> context
Context	<b>configure service cpipe</b> <i>string sap string ingress</i>
Tree	<a href="#">ingress</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## qos

Synopsis	Enter the <b>qos</b> context
Context	<b>configure service cpipe</b> <i>string sap string ingress qos</i>
Tree	<a href="#">qos</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## policer-control-policy

Synopsis	Enter the <b>policer-control-policy</b> context
Context	<b>configure service cpipe</b> <i>string sap string ingress qos policer-control-policy</i>
Tree	<a href="#">policer-control-policy</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

## overrides

Synopsis	Enable the <b>overrides</b> context
Context	<b>configure service cpipe</b> <i>string sap string ingress qos policer-control-policy overrides</i>
Tree	<a href="#">overrides</a>

Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

## root

Synopsis Enter the **root** context  
Context **configure** [service](#) [cpipe](#) [string](#) [sap](#) [string](#) [ingress](#) [qos](#) [policer-control-policy](#) [overrides](#)

Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

### **sap-ingress**

Synopsis Enter the **sap-ingress** context  
Context **configure** [service](#) [cpipe](#) [string](#) [sap](#) [string](#) [ingress](#) [qos](#) [sap-ingress](#)  
Tree [sap-ingress](#)  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **overrides**

Synopsis Enter the **overrides** context  
Context **configure** [service](#) [cpipe](#) [string](#) [sap](#) [string](#) [ingress](#) [qos](#) [sap-ingress](#) [overrides](#)  
Tree [overrides](#)  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ip-criteria**

Synopsis Enter the **ip-criteria** context  
Context **configure** [service](#) [cpipe](#) [string](#) [sap](#) [string](#) [ingress](#) [qos](#) [sap-ingress](#) [overrides](#) [ip-criteria](#)  
Tree [ip-criteria](#)  
Introduced 20.10.R2

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **activate-entry-tag** *number*

Synopsis Tag ID activated for IP criteria  
Context **configure** [service](#) [cpipe](#) *string* [sap](#) *string* [ingress](#) [qos](#) [sap-ingress](#) [overrides](#) [ip-criteria](#)  
[activate-entry-tag](#) *number*  
Tree [activate-entry-tag](#)  
Range 1 to 255  
Introduced 20.10.R2  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ipv6-criteria**

Synopsis Enter the **ipv6-criteria** context  
Context **configure** [service](#) [cpipe](#) *string* [sap](#) *string* [ingress](#) [qos](#) [sap-ingress](#) [overrides](#) [ipv6-criteria](#)  
Tree [ipv6-criteria](#)  
Introduced 20.10.R2  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **activate-entry-tag** *number*

Synopsis Tag ID activated for IPv6 criteria  
Context **configure** [service](#) [cpipe](#) *string* [sap](#) *string* [ingress](#) [qos](#) [sap-ingress](#) [overrides](#) [ipv6-criteria](#)  
[activate-entry-tag](#) *number*  
Tree [activate-entry-tag](#)  
Range 1 to 255  
Introduced 20.10.R2  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **policer** [[policer-id](#)] *reference*

Synopsis Enter the **policer** list instance  
Context **configure** [service](#) [cpipe](#) *string* [sap](#) *string* [ingress](#) [qos](#) [sap-ingress](#) [overrides](#) [policer](#)  
*reference*  
Tree [policer](#)

Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

### [**policer-id**] *reference*

Synopsis Policer unique ID  
Context **configure** [service](#) [cpipe](#) [string](#) [sap](#) [string](#) [ingress](#) [qos](#) [sap-ingress](#) [overrides](#) [policer](#) [reference](#)  
Tree [policer](#)  
Reference **configure** [qos](#) [sap-ingress](#) [string](#) [policer](#) [number](#)  
Notes This element is part of a list key.  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

### **cbs** (*number* | *keyword*)

Synopsis CBS  
Context **configure** [service](#) [cpipe](#) [string](#) [sap](#) [string](#) [ingress](#) [qos](#) [sap-ingress](#) [overrides](#) [policer](#) [reference](#) [cbs](#) (*number* | *keyword*)  
Tree [cbs](#)  
Range 0 to 268435456  
Units bytes  
Options auto  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mbs** (*number* | *keyword*)

Synopsis MBS  
Context **configure** [service](#) [cpipe](#) [string](#) [sap](#) [string](#) [ingress](#) [qos](#) [sap-ingress](#) [overrides](#) [policer](#) [reference](#) [mbs](#) (*number* | *keyword*)  
Tree [mbs](#)  
Range 0 to 268435456  
Units bytes  
Options auto  
Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

### **packet-byte-offset** *number*

Synopsis Packet size modification for policing information

Context **configure** [service](#) [cpipe](#) [string](#) [sap](#) [string](#) [ingress](#) [qos](#) [sap-ingress](#) [overrides](#) [policer](#)  
[reference](#) [packet-byte-offset](#) *number*

Tree [packet-byte-offset](#)

Range -32 to 31

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

### **percent-rate**

Synopsis Enter the **percent-rate** context

Context **configure** [service](#) [cpipe](#) [string](#) [sap](#) [string](#) [ingress](#) [qos](#) [sap-ingress](#) [overrides](#) [policer](#)  
[reference](#) [percent-rate](#)

Tree [percent-rate](#)

Notes The following elements are part of a choice: **percent-rate** or **rate**.

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

### **cir** *decimal-number*

Synopsis CIR percent rate

Context **configure** [service](#) [cpipe](#) [string](#) [sap](#) [string](#) [ingress](#) [qos](#) [sap-ingress](#) [overrides](#) [policer](#)  
[reference](#) [percent-rate](#) [cir](#) *decimal-number*

Tree [cir](#)

Range 0.00 to 100.00

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

### **pir** *decimal-number*

Synopsis PIR percent rate

Context	<b>configure service cpipe</b> <i>string sap string ingress qos sap-ingress overrides policer reference percent-rate pir decimal-number</i>
Tree	<a href="#">pir</a>
Range	0.01 to 100.00
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

## rate

Synopsis	Enter the <b>rate</b> context
Context	<b>configure service cpipe</b> <i>string sap string ingress qos sap-ingress overrides policer reference rate</i>
Tree	<a href="#">rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

## cir (*number* | *keyword*)

Synopsis	CIR rate
Context	<b>configure service cpipe</b> <i>string sap string ingress qos sap-ingress overrides policer reference rate cir (number   keyword)</i>
Tree	<a href="#">cir</a>
Range	0 to 6400000000
Units	kilobps
Options	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

## pir (*number* | *keyword*)

Synopsis	PIR rate
Context	<b>configure service cpipe</b> <i>string sap string ingress qos sap-ingress overrides policer reference rate pir (number   keyword)</i>
Tree	<a href="#">pir</a>
Range	1 to 6400000000

Units	kilobps
Options	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

### **stat-mode** *keyword*

Synopsis	Mode of statistics collected by the policer
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">policer</a> <i>reference</i> <a href="#">stat-mode</a> <i>keyword</i>
Tree	<a href="#">stat-mode</a>
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-priority-no-cir, offered-profile-cir, offered-priority-cir, offered-limited-profile-cir, offered-profile-capped-cir, offered-limited-capped-cir
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS

### **queue** [[queue-id](#)] *reference*

Synopsis	Enter the <b>queue</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i>
Tree	<a href="#">queue</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **[queue-id]** *reference*

Synopsis	Policer unique ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i>
Tree	<a href="#">queue</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">sap-ingress</a> <i>string</i> <a href="#">queue</a> <i>number</i>
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## adaptation-rule

Synopsis	Enter the <b>adaptation-rule</b> context
Context	<b>configure service cpipe string sap string ingress qos sap-ingress overrides queue reference adaptation-rule</b>
Tree	<b>adaptation-rule</b>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## cir keyword

Synopsis	Constraint used when deriving the operational CIR value
Context	<b>configure service cpipe string sap string ingress qos sap-ingress overrides queue reference adaptation-rule cir keyword</b>
Tree	<b>cir</b>
Options	max, min, closest
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## pir keyword

Synopsis	Constraint used when deriving the operational PIR value
Context	<b>configure service cpipe string sap string ingress qos sap-ingress overrides queue reference adaptation-rule pir keyword</b>
Tree	<b>pir</b>
Options	max, min, closest
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## cbs (number | keyword)

Synopsis	CBS
Context	<b>configure service cpipe string sap string ingress qos sap-ingress overrides queue reference cbs (number   keyword)</b>
Tree	<b>cbs</b>
Range	0 to 1048576

Units	kilobytes
Options	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## drop-tail

Synopsis	Enter the <b>drop-tail</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">drop-tail</a>
Tree	<a href="#">drop-tail</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## low

Synopsis	Enter the <b>low</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">drop-tail</a> <a href="#">low</a>
Tree	<a href="#">low</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## percent-reduction-from-mbs (*number* | *keyword*)

Synopsis	Percentage reduction from the MBS for a queue drop tail
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">drop-tail</a> <a href="#">low</a> <a href="#">percent-reduction-from-mbs</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">percent-reduction-from-mbs</a>
Range	0 to 100
Options	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## **mbs** (*number* | *keyword*)

Synopsis	MBS
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">mbs</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">mbs</a>
Range	0 to 1073741824
Units	bytes
Options	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## **monitor-queue-depth**

Synopsis	Enable the <b>monitor-queue-depth</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">monitor-queue-depth</a>
Tree	<a href="#">monitor-queue-depth</a>
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## **fast-polling** *boolean*

Synopsis	Enable fast polling of the queue depth
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">monitor-queue-depth</a> <a href="#">fast-polling</a> <i>boolean</i>
Tree	<a href="#">fast-polling</a>
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## **parent**

Synopsis	Enter the <b>parent</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">parent</a>
Tree	<a href="#">parent</a>

Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **cir-weight** *number*

Synopsis CIR parameter that overrides parent for queue group  
Context **configure** [service cpipe](#) [string sap](#) [string ingress qos sap-ingress](#) [overrides queue reference](#) [parent cir-weight](#) *number*  
Tree [cir-weight](#)  
Range 0 to 100  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **weight** *number*

Synopsis PIR parameter that overrides parent for queue group  
Context **configure** [service cpipe](#) [string sap](#) [string ingress qos sap-ingress](#) [overrides queue reference](#) [parent weight](#) *number*  
Tree [weight](#)  
Range 0 to 100  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **percent-rate**

Synopsis Enter the **percent-rate** context  
Context **configure** [service cpipe](#) [string sap](#) [string ingress qos sap-ingress](#) [overrides queue reference](#) [percent-rate](#)  
Tree [percent-rate](#)  
Notes The following elements are part of a choice: **percent-rate** or **rate**.  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **cir** *decimal-number*

Synopsis CIR percent rate

Context	<b>configure service cpipe</b> <i>string sap string ingress qos sap-ingress overrides queue reference percent-rate cir decimal-number</i>
Tree	<b>cir</b>
Range	0.00 to 100.00
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **pir** *decimal-number*

Synopsis	PIR percent rate
Context	<b>configure service cpipe</b> <i>string sap string ingress qos sap-ingress overrides queue reference percent-rate pir decimal-number</i>
Tree	<b>pir</b>
Range	0.01 to 100.00
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **rate**

Synopsis	Enter the <b>rate</b> context
Context	<b>configure service cpipe</b> <i>string sap string ingress qos sap-ingress overrides queue reference rate</i>
Tree	<b>rate</b>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **cir** (*number* | *keyword*)

Synopsis	CIR rate
Context	<b>configure service cpipe</b> <i>string sap string ingress qos sap-ingress overrides queue reference rate cir (number   keyword)</i>
Tree	<b>cir</b>
Range	0 to 6400000000
Units	kilobps
Options	max

Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **pir** (*number* | *keyword*)

Synopsis PIR rate  
Context **configure** [service](#) [cpipe](#) [string](#) [sap](#) [string](#) [ingress](#) [qos](#) [sap-ingress](#) [overrides](#) [queue](#) [reference](#) [rate](#) **pir** (*number* | *keyword*)  
Tree [pir](#)  
Range 1 to 6400000000  
Units kilobps  
Options max  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **policy-name** *reference*

Synopsis Policy ID  
Context **configure** [service](#) [cpipe](#) [string](#) [sap](#) [string](#) [ingress](#) [qos](#) [sap-ingress](#) [policy-name](#) *reference*  
Tree [policy-name](#)  
Reference **configure** [qos](#) [sap-ingress](#) [string](#)  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **queuing-type** *keyword*

Synopsis Queuing type  
Context **configure** [service](#) [cpipe](#) [string](#) [sap](#) [string](#) [ingress](#) [qos](#) [sap-ingress](#) [queuing-type](#) *keyword*  
Tree [queuing-type](#)  
Options shared, multipoint-shared  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e

## **scheduler-policy**

Synopsis	Enter the <b>scheduler-policy</b> context
Context	<b>configure service cpipe string sap string ingress qos scheduler-policy</b>
Tree	<a href="#">scheduler-policy</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## **overrides**

Synopsis	Enter the <b>overrides</b> context
Context	<b>configure service cpipe string sap string ingress qos scheduler-policy overrides</b>
Tree	<a href="#">overrides</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## **scheduler** [[scheduler-name](#)] *string*

Synopsis	Enter the <b>scheduler</b> list instance
Context	<b>configure service cpipe string sap string ingress qos scheduler-policy overrides scheduler string</b>
Tree	<a href="#">scheduler</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## **[scheduler-name]** *string*

Synopsis	Scheduler name
Context	<b>configure service cpipe string sap string ingress qos scheduler-policy overrides scheduler string</b>
Tree	<a href="#">scheduler</a>
Description	This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.

If the scheduler name exists within the policy on a different tier, an error occurs and the current context will not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.

If the provided scheduler name is invalid, a name syntax error will occur, the command will not execute, and the context will not change.

String Length	1 to 32
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## parent

Synopsis	Enter the <b>parent</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <a href="#">string</a> <b>parent</b>
Tree	<a href="#">parent</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## cir-weight *number*

Synopsis	Weight used at the within-CIR port priority level
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <a href="#">string</a> <a href="#">parent</a> <b>cir-weight</b> <i>number</i>
Tree	<a href="#">cir-weight</a>
Range	0 to 100
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## weight *number*

Synopsis	Relative weight of the scheduler to feed the queue
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <a href="#">string</a> <a href="#">parent</a> <b>weight</b> <i>number</i>
Tree	<a href="#">weight</a>
Range	0 to 100

Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## rate

Synopsis Enter the **rate** context  
Context **configure** [service](#) [cpipe](#) [string](#) [sap](#) [string](#) [ingress](#) [qos](#) [scheduler-policy](#) [overrides](#)  
[scheduler](#) [string](#) **rate**  
Tree [rate](#)  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## cir (*number* | *keyword*)

Synopsis CIR at which the queue it to operate  
Context **configure** [service](#) [cpipe](#) [string](#) [sap](#) [string](#) [ingress](#) [qos](#) [scheduler-policy](#) [overrides](#)  
[scheduler](#) [string](#) [rate](#) **cir** (*number* | *keyword*)  
Tree [cir](#)  
Range 0 to 6400000000  
Units kilobps  
Options sum, max  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## pir (*number* | *keyword*)

Synopsis PIR at which the queue is to operate  
Context **configure** [service](#) [cpipe](#) [string](#) [sap](#) [string](#) [ingress](#) [qos](#) [scheduler-policy](#) [overrides](#)  
[scheduler](#) [string](#) [rate](#) **pir** (*number* | *keyword*)  
Tree [pir](#)  
Range 1 to 6400000000  
Units kilobps  
Options max  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **policy-name** *reference*

Synopsis	Scheduler policy name
Context	<b>configure</b> <a href="#">service cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress qos scheduler-policy</a> <i>policy-name reference</i>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos scheduler-policy</a> <i>string</i>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **lag**

Synopsis	Enter the <b>lag</b> context
Context	<b>configure</b> <a href="#">service cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">lag</a>
Tree	<a href="#">lag</a>
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **multi-service-site** *reference*

Synopsis	Multi service site name
Context	<b>configure</b> <a href="#">service cpipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">multi-service-site</a> <i>reference</i>
Tree	<a href="#">multi-service-site</a>
Reference	<b>configure</b> <a href="#">service customer</a> <i>string</i> <a href="#">multi-service-site</a> <i>string</i>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **service-id** *number*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Service ID
Context	<b>configure</b> <a href="#">service cpipe</a> <i>string</i> <a href="#">service-id</a> <i>number</i>
Tree	<a href="#">service-id</a>

Range 1 to 2147483647  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **service-mtu** *number*

Synopsis MTU size  
Context **configure** [service cpipe](#) *string* **service-mtu** *number*  
Tree [service-mtu](#)  
Range 1 to 9194  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **spoke-sdp** [[sdp-bind-id](#)] *string*

Synopsis Enter the **spoke-sdp** list instance  
Context **configure** [service cpipe](#) *string* **spoke-sdp** *string*  
Tree [spoke-sdp](#)  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **[sdp-bind-id]** *string*

Synopsis SDP binding ID  
Context **configure** [service cpipe](#) *string* **spoke-sdp** *string*  
Tree [spoke-sdp](#)  
String Length 3 to 16  
Notes This element is part of a list key.  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **admin-state** *keyword*

Synopsis Administrative state of the SDP binding to the service  
Context **configure** [service cpipe](#) *string* **spoke-sdp** *string* **admin-state** *keyword*

Tree	<a href="#">admin-state</a>
Default	enable
Options	enable, disable
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **bandwidth** (*number* | *keyword*)

Synopsis	Bandwidth that is reserved for this SDP binding
Context	<b>configure</b> <a href="#">service cpipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <b>bandwidth</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">bandwidth</a>
Range	0 to 1000000000
Default	0
Units	kilobps
Options	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **bfd**

Synopsis	Enter the <b>bfd</b> context
Context	<b>configure</b> <a href="#">service cpipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <b>bfd</b>
Tree	<a href="#">bfd</a>
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **bfd-liveness**

Synopsis	Enable the <b>bfd-liveness</b> context
Context	<b>configure</b> <a href="#">service cpipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <b>bfd</b> <b>bfd-liveness</b>
Tree	<a href="#">bfd-liveness</a>
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **encap** *keyword*

Synopsis	BFD encapsulation used on the SDP binding
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">bfd</a> <a href="#">bfd-liveness</a> <a href="#">encap</a> <i>keyword</i>
Tree	<a href="#">encap</a>
Default	ipv4
Options	ipv4
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **bfd-template** *reference*

Synopsis	BFD template associated with the SDP binding
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">bfd</a> <a href="#">bfd-template</a> <i>reference</i>
Tree	<a href="#">bfd-template</a>
Description	This command configures a named BFD template to be used by VCCV BFD on PWs belonging to the VLL service. The template specifies parameters, such as the minimum transmit and receive control packet timer intervals, used by the BFD session. Template parameters are configured under the <b>configure router bfd</b> context.
Reference	<b>configure</b> <a href="#">bfd</a> <a href="#">bfd-template</a> <i>string</i>
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **control-word** *boolean*

Synopsis	Use control word as part of packet encapsulation
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">control-word</a> <i>boolean</i>
Tree	<a href="#">control-word</a>
Default	true
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>

String Length 1 to 80  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## **egress**

Synopsis Enter the **egress** context  
Context **configure** [service cpipe](#) [string spoke-sdp](#) [string egress](#)  
Tree [egress](#)  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## **qos**

Synopsis Enter the **qos** context  
Context **configure** [service cpipe](#) [string spoke-sdp](#) [string egress](#) [qos](#)  
Tree [qos](#)  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## **network**

Synopsis Enter the **network** context  
Context **configure** [service cpipe](#) [string spoke-sdp](#) [string egress](#) [qos](#) [network](#)  
Tree [network](#)  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## **policy-name** *reference*

Synopsis Network policy ID  
Context **configure** [service cpipe](#) [string spoke-sdp](#) [string egress](#) [qos](#) [network](#) [policy-name](#) *reference*  
Tree [policy-name](#)  
Reference **configure** [qos](#) [network](#) [string](#)

Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### port-redirect-group

Synopsis Enter the **port-redirect-group** context  
Context **configure** [service](#) [cpipe](#) [string](#) [spoke-sdp](#) [string](#) [egress](#) [qos](#) [network](#) [port-redirect-group](#)  
Tree [port-redirect-group](#)  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### group-name *reference*

Synopsis Name of the egress port queue group  
Context **configure** [service](#) [cpipe](#) [string](#) [spoke-sdp](#) [string](#) [egress](#) [qos](#) [network](#) [port-redirect-group](#) [group-name](#) *reference*  
Tree [group-name](#)  
Reference **configure** [qos](#) [queue-group-templates](#) [egress](#) [queue-group](#) [string](#)  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### instance *number*

Synopsis Queue-group instance ID  
Context **configure** [service](#) [cpipe](#) [string](#) [spoke-sdp](#) [string](#) [egress](#) [qos](#) [network](#) [port-redirect-group](#) [instance](#) *number*  
Tree [instance](#)  
Range 1 to 65535  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### vc-label *number*

**WARNING:**  
Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Egress MPLS VC label to send packets to the far end
Context	<b>configure</b> <i>service cpipe string spoke-sdp string egress vc-label number</i>
Tree	<i>vc-label</i>
Range	16 to 1048575
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## endpoint

Synopsis	Enter the <b>endpoint</b> context
Context	<b>configure</b> <i>service cpipe string spoke-sdp string endpoint</i>
Tree	<i>endpoint</i>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## icb *boolean*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Bind the SDP as the Inter-Chassis Backup (ICB) type
Context	<b>configure</b> <i>service cpipe string spoke-sdp string endpoint icb boolean</i>
Tree	<i>icb</i>
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## name *reference*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Endpoint name to which SDP bind is attached
Context	<b>configure</b> <i>service cpipe string spoke-sdp string endpoint name reference</i>
Tree	<i>name</i>

Reference	<b>configure service cpipe string endpoint string</b>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **precedence** (*number* | *keyword*)

Synopsis	Precedence when multiple SDP binds are on one endpoint
Context	<b>configure service cpipe string spoke-sdp string endpoint precedence</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">precedence</a>
Range	1 to 4
Default	4
Options	primary
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ingress**

Synopsis	Enter the <b>ingress</b> context
Context	<b>configure service cpipe string spoke-sdp string ingress</b>
Tree	<a href="#">ingress</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **qos**

Synopsis	Enter the <b>qos</b> context
Context	<b>configure service cpipe string spoke-sdp string ingress qos</b>
Tree	<a href="#">qos</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **network**

Synopsis	Enter the <b>network</b> context
----------	----------------------------------

Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">spoke-sdp</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">network</a>
Tree	<a href="#">network</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## **fp-redirect-group**

Synopsis	Enter the <b>fp-redirect-group</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">spoke-sdp</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">network</a> <a href="#">fp-redirect-group</a>
Tree	<a href="#">fp-redirect-group</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## **group-name** *reference*

Synopsis	Name of the forwarding plane queue group template
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">spoke-sdp</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">network</a> <a href="#">fp-redirect-group</a> <a href="#">group-name</a> <i>reference</i>
Tree	<a href="#">group-name</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">queue-group-templates</a> <a href="#">ingress</a> <a href="#">queue-group</a> <a href="#">string</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## **instance** *number*

Synopsis	Instance of the forwarding-plane ingress Queue Group for this SDP binding
Context	<b>configure</b> <a href="#">service</a> <a href="#">cpipe</a> <a href="#">string</a> <a href="#">spoke-sdp</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">network</a> <a href="#">fp-redirect-group</a> <a href="#">instance</a> <i>number</i>
Tree	<a href="#">instance</a>
Range	1 to 65535
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## **policy-name** *reference*

Synopsis	Network policy ID
----------	-------------------

Context	<b>configure service cpipe</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>ingress qos network</b> <i>policy-name</i> <i>reference</i>
Tree	<b>policy-name</b>
Reference	<b>configure qos network</b> <i>string</i>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **vc-label** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Ingress MPLS VC label to send packets to the far end
Context	<b>configure service cpipe</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>ingress</b> <b>vc-label</b> <i>number</i>
Tree	<b>vc-label</b>
Range	1 to 1048575
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **test** *boolean*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Designate as a test service
Context	<b>configure service cpipe</b> <i>string</i> <b>test</b> <i>boolean</i>
Tree	<b>test</b>
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## **vc-switching** *boolean*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Use PW switching signaling for spoke SDPs in service
Context	<b>configure</b> <i>service cpipe string vc-switching boolean</i>
Tree	<i>vc-switching</i>
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## **vc-type** *keyword*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Circuit emulation service type
Context	<b>configure</b> <i>service cpipe string vc-type keyword</i>
Tree	<i>vc-type</i>
Options	satop-e1, satop-t1, cesopsn, cesopsn-cas
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## **vpn-id** *number*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VPN identifier for the service
Context	<b>configure</b> <i>service cpipe string vpn-id number</i>
Tree	<i>vpn-id</i>
Range	1 to 2147483647
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **customer** [*customer-name*] *string*

Synopsis	Enter the <b>customer</b> list instance
Context	<b>configure service customer string</b>
Tree	<b>customer</b>
Introduced	16.0.R1
Platforms	All

### **[customer-name]** *string*

Synopsis	Customer name for a service
Context	<b>configure service customer string</b>
Tree	<b>customer</b>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **contact** *string*

Synopsis	Service customer contact information
Context	<b>configure service customer string contact string</b>
Tree	<b>contact</b>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **customer-id** *number*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Customer ID
Context	<b>configure service customer string customer-id number</b>
Tree	<b>customer-id</b>

Range 1 to 2147483647  
Introduced 16.0.R1  
Platforms All

### **description** *string*

Synopsis Text description  
Context **configure** [service](#) [customer](#) *string* [description](#) *string*

### **scheduler-policy**

Synopsis Enter the **scheduler-policy** context  
Context **configure** [service customer string](#) [multi-service-site string](#) [egress scheduler-policy](#)

Tree	<a href="#">scheduler-policy</a>
Introduced	16.0.R1
Platforms	All

## overrides

Synopsis	Enter the <b>overrides</b> context
Context	<b>configure</b> <a href="#">service customer string multi-service-site string egress scheduler-policy overrides</a>
Tree	<a href="#">overrides</a>
Introduced	16.0.R1
Platforms	All

## **scheduler** [[scheduler-name](#)] *string*

Synopsis	Enter the <b>scheduler</b> list instance
Context	<b>configure</b> <a href="#">service customer string multi-service-site string egress scheduler-policy overrides scheduler string</a>
Tree	<a href="#">scheduler</a>
Introduced	16.0.R1
Platforms	All

## **[scheduler-name]** *string*

Synopsis	Scheduler name
Context	<b>configure</b> <a href="#">service customer string multi-service-site string egress scheduler-policy overrides scheduler string</a>
Tree	<a href="#">scheduler</a>
Description	<p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context will not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p>

If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context does not change.

String Length 1 to 32

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms All

## parent

Synopsis Enter the **parent** context

Context **configure** **service** **customer** *string* **multi-service-site** *string* **egress** **scheduler-policy** **overrides** **scheduler** *string* **parent**

Units	kilobps

Options	sum, max
Introduced	16.0.R1
Platforms	All

### **pir** (*number* | *keyword*)

Synopsis	PIR for the scheduler
Context	<b>configure</b> <a href="#">service</a> <a href="#">customer</a> <i>string</i> <a href="#">multi-service-site</a> <i>string</i> <a href="#">ingress</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <i>string</i> <b>rate</b> <b>pir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">pir</a>
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	All

### **policy-name** *reference*

Synopsis	Scheduler policy name
Context	<b>configure</b> <a href="#">service</a> <a href="#">customer</a> <i>string</i> <a href="#">multi-service-site</a> <i>string</i> <a href="#">ingress</a> <a href="#">scheduler-policy</a> <a href="#">policy-name</a> <i>reference</i>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">scheduler-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **phone** *string*

Synopsis	Service customer telephone number information
Context	<b>configure</b> <a href="#">service</a> <a href="#">customer</a> <i>string</i> <b>phone</b> <i>string</i>
Tree	<a href="#">phone</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **epipe** [[service-name](#)] *string*

Synopsis	Enter the <b>epipe</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i>
Tree	<a href="#">epipe</a>
Introduced	16.0.R1
Platforms	All

### **[service-name]** *string*

Synopsis	Administrative service name
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i>
Tree	<a href="#">epipe</a>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the service
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **bgp** [[bgp-instance](#)] *number*

Synopsis	Enter the <b>bgp</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">bgp</a> <i>number</i>
Tree	<a href="#">bgp</a>
Introduced	16.0.R1
Platforms	All

### **[bgp-instance] number**

Synopsis	BGP instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">bgp</a> <i>number</i>
Tree	<a href="#">bgp</a>
Range	1
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **adv-service-mtu number**

Synopsis	Advertised service MTU value
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">bgp</a> <i>number</i> <a href="#">adv-service-mtu</a> <i>number</i>
Tree	<a href="#">adv-service-mtu</a>
Description	This command configures the MTU signaled value used in the BGP for the service. When configured, the router uses the value for signaling and for validation with the received MTU instead of the service MTU. However, the value does not affect the locally enforced value, which is still based on the service MTU.
Range	0 to 9782
Introduced	22.2.R1
Platforms	All

### **pw-template-binding [pw-template-name] reference**

Synopsis	Enter the <b>pw-template-binding</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">bgp</a> <i>number</i> <a href="#">pw-template-binding</a> <i>reference</i>
Tree	<a href="#">pw-template-binding</a>
Max. Instances	100
Introduced	16.0.R1
Platforms	All

### **[pw-template-name] reference**

Synopsis	Policy name
----------	-------------

Context	<b>configure service epipe string bgp number pw-template-binding reference</b>
Tree	<a href="#">pw-template-binding</a>
Reference	<b>configure service pw-template string</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **bfd-liveness boolean**

Synopsis	Enable BFD
Context	<b>configure service epipe string bgp number pw-template-binding reference bfd-liveness boolean</b>
Tree	<a href="#">bfd-liveness</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **bfd-template reference**

Synopsis	BFD template name for PW-Template binding
Context	<b>configure service epipe string bgp number pw-template-binding reference bfd-template reference</b>
Tree	<a href="#">bfd-template</a>
Reference	<b>configure bfd bfd-template string</b>
Introduced	16.0.R1
Platforms	All

### **endpoint reference**

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Endpoint name associated with the BGP PW template
Context	<b>configure service epipe string bgp number pw-template-binding reference endpoint reference</b>

Tree	<a href="#">endpoint</a>
Description	This command specifies the endpoint name associated with the BGP PW template. When an endpoint is associated to the PW template binding of a BGP VPWS service, EVPN MPLS can also be configured and associated to the same endpoint in the same Epipe service.
Reference	<b>configure</b> <a href="#">service epipe string endpoint string</a>
Introduced	20.5.R1
Platforms	All

### **import-rt** *string*

Synopsis	Import route-target communities
Context	<b>configure</b> <a href="#">service epipe string bgp number pw-template-binding reference import-rt string</a>
Tree	<a href="#">import-rt</a>
String Length	10 to 28
Max. Instances	5
Introduced	16.0.R1
Platforms	All

### **route-distinguisher** (*keyword* | *vpn-route-distinguisher*)

Synopsis	High-order 6 bytes that are used as string to compose VSI-ID for use in NLRI
Context	<b>configure</b> <a href="#">service epipe string bgp number route-distinguisher (keyword   vpn-route-distinguisher)</a>
Tree	<a href="#">route-distinguisher</a>
Options	auto-rd
Introduced	16.0.R1
Platforms	All

### **route-target**

Synopsis	Enter the <b>route-target</b> context
Context	<b>configure</b> <a href="#">service epipe string bgp number route-target</a>
Tree	<a href="#">route-target</a>
Introduced	16.0.R1

Platforms All

### **export string**

Synopsis Extended community name for default import policy  
Context **configure** [service epipe string](#) [bgp number route-target export string](#)  
Tree [export](#)  
String Length 10 to 28  
Introduced 16.0.R1  
Platforms All

### **import string**

Synopsis Extended community name for default import policy  
Context **configure** [service epipe string](#) [bgp number route-target import string](#)  
Tree [import](#)  
String Length 10 to 28  
Introduced 16.0.R1  
Platforms All

### **vsi-export reference**

Synopsis VSI export policies  
Context **configure** [service epipe string](#) [bgp number vsi-export reference](#)  
Tree [vsi-export](#)  
Reference **configure** [policy-options policy-statement string](#)  
Max. Instances 5  
Notes This element is ordered by the user.  
Introduced 19.10.R1  
Platforms All

### **vsi-import reference**

Synopsis VSI import policies

Context	<b>configure service epipe</b> <i>string</i> <b>bgp number vsi-import</b> <i>reference</i>
Tree	<b>vsi-import</b>
Reference	<b>configure policy-options policy-statement</b> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	19.10.R1
Platforms	All

### **bgp-evpn**

Synopsis	Enable the <b>bgp-evpn</b> context
Context	<b>configure service epipe</b> <i>string</i> <b>bgp-evpn</b>
Tree	<b>bgp-evpn</b>
Introduced	16.0.R1
Platforms	All

### **evi number**

Synopsis	EVPN ID
Context	<b>configure service epipe</b> <i>string</i> <b>bgp-evpn evi number</b>
Tree	<b>evi</b>

Description This command configures an EVPN instance (EVI) unique in the system. It is used for the service-carving algorithm for multi-homing and auto-deriving route target and route distinguishers.

The following options are supported:

If this EVPN identifier is not specified, the value is zero and no route distinguisher or route target is automatically derived from it. If the specified EVPN identifier is lower than 65535 and no other route distinguisher or route target is configured in the service, the following applies:

- the route distinguisher is derived from <system\_ip>:evi
- the route target is derived from <autonomous-system>:evi

If the specified EVPN identifier is higher than 65535 and no other route distinguisher or route target is configured in the service, the following applies.

- The route distinguisher cannot be automatically derived. An error is generated if enabling EVPN is attempted without a route distinguisher. A manual or an **auto-rd** route distinguisher must be configured.

- The route target can only be automatically derived if the **evi-three-byte-auto-rt** command is configured. If configured, the route target is automatically derived in accordance with the rules described in RFC8365.

Range	1 to 16777215
Introduced	16.0.R1
Platforms	All

### **local-attachment-circuit** [*name*] *string*

Synopsis	Enter the <b>local-attachment-circuit</b> list instance
Context	<b>configure</b> <i>service</i> <i>epipe</i> <i>string</i> <i>bgp-evpn</i> <b>local-attachment-circuit</b> <i>string</i>
Tree	<i>local-attachment-circuit</i>
Max. Instances	2
Introduced	20.10.R1
Platforms	All

### **[name]** *string*

Synopsis	Attachment circuit name
Context	<b>configure</b> <i>service</i> <i>epipe</i> <i>string</i> <i>bgp-evpn</i> <b>local-attachment-circuit</b> <i>string</i>
Tree	<i>local-attachment-circuit</i>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	All

### **endpoint** *reference*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Endpoint name
Context	<b>configure</b> <i>service</i> <i>epipe</i> <i>string</i> <i>bgp-evpn</i> <b>local-attachment-circuit</b> <i>string</i> <b>endpoint</b> <i>reference</i>
Tree	<i>endpoint</i>

Reference	<b>configure service epipe</b> <i>string endpoint string</i>
Introduced	20.10.R1
Platforms	All

### **eth-tag** *number*

Synopsis	Ethernet tag of the attachment circuit
Context	<b>configure service epipe</b> <i>string bgp-evpn local-attachment-circuit string eth-tag number</i>
Tree	<b>eth-tag</b>
Description	<p>This command configures the Ethernet tag value of the attachment circuit.</p> <p>When configured in the local attachment circuit context, the tag value is used in the advertised AD per-EVI route sent for the attachment circuit.</p> <p>When configured in the remote attachment circuit context, the value is compared with the Ethernet tag value of the imported D per-EVI routes for the service. When there is a match, the system creates an EVPN destination for the Epipe.</p>
Range	1 to 16777215
Introduced	20.10.R1
Platforms	All

### **mpls** [**bgp-instance**] *number*

Synopsis	Enter the <b>mpls</b> list instance
Context	<b>configure service epipe</b> <i>string bgp-evpn mpls number</i>
Tree	<b>mpls</b>
Introduced	16.0.R1
Platforms	All

### **[bgp-instance]** *number*

Synopsis	BGP instance
Context	<b>configure service epipe</b> <i>string bgp-evpn mpls number</i>
Tree	<b>mpls</b>
Range	1
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of BGP EVPN MPLS
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">bgp-evpn</a> <a href="#">mpls</a> <i>number</i> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **auto-bind-tunnel**

Synopsis	Enter the <b>auto-bind-tunnel</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">bgp-evpn</a> <a href="#">mpls</a> <i>number</i> <b>auto-bind-tunnel</b>
Tree	<a href="#">auto-bind-tunnel</a>
Introduced	16.0.R1
Platforms	All

### **allow-flex-algo-fallback** *boolean*

Synopsis	Enable flexible algorithm fallback
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">bgp-evpn</a> <a href="#">mpls</a> <i>number</i> <a href="#">auto-bind-tunnel</a> <b>allow-flex-algo-fallback</b> <i>boolean</i>
Tree	<a href="#">allow-flex-algo-fallback</a>
Description	When configured to <b>true</b> , a BGP router with a Flex-Algorithm action configured (via the <b>configure policy-options policy-statement entry action flex-algo</b> command) can resolve to a tunnel with algorithm 0 if no target Flex-Algorithm tunnel is available.  When configured to <b>false</b> , the BGP router can resolve only to the intended Flex-Algorithm tunnel, which may cause traffic loss if no corresponding Flex-Algorithm tunnel is available.
Default	false
Introduced	20.10.R1
Platforms	All

### **ecmp** *number*

Synopsis	Maximum ECMP routes information
----------	---------------------------------

Context	<b>configure service epipe string</b> <i>bgp-evpn mpls number auto-bind-tunnel ecmp number</i>
Tree	<a href="#">ecmp</a>
Range	1 to 32
Default	1
Introduced	19.10.R1
Platforms	All

### **enforce-strict-tunnel-tagging** *boolean*

Synopsis	Enable/disable enforcement of strict tunnel tagging
Context	<b>configure service epipe string</b> <i>bgp-evpn mpls number auto-bind-tunnel enforce-strict-tunnel-tagging boolean</i>
Tree	<a href="#">enforce-strict-tunnel-tagging</a>
Default	false
Introduced	16.0.R4
Platforms	All

### **resolution** *keyword*

Synopsis	Resolution method for tunnel selection
Context	<b>configure service epipe string</b> <i>bgp-evpn mpls number auto-bind-tunnel resolution keyword</i>
Tree	<a href="#">resolution</a>
Default	none
Options	none, filter, any
Introduced	16.0.R1
Platforms	All

### **resolution-filter**

Synopsis	Enter the <b>resolution-filter</b> context
Context	<b>configure service epipe string</b> <i>bgp-evpn mpls number auto-bind-tunnel resolution-filter</i>
Tree	<a href="#">resolution-filter</a>
Introduced	16.0.R1
Platforms	All

### **bgp *boolean***

Synopsis	Use BGP tunneling for next-hop resolution
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">bgp-evpn</a> <a href="#">mpls</a> <i>number</i> <a href="#">auto-bind-tunnel</a> <a href="#">resolution-filter</a> <a href="#">bgp</a> <i>boolean</i>
Tree	<a href="#">bgp</a>
Description	When configured to <b>true</b> , BGP searches the BGP LSP for the address of the BGP next hop.  When configured to <b>false</b> , BGP tunneling is not used and inter-area or inter-as prefixes are not resolved.
Default	false
Introduced	16.0.R1
Platforms	All

### **ldp *boolean***

Synopsis	Use LDP tunneling for next-hop resolution
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">bgp-evpn</a> <a href="#">mpls</a> <i>number</i> <a href="#">auto-bind-tunnel</a> <a href="#">resolution-filter</a> <a href="#">ldp</a> <i>boolean</i>
Tree	<a href="#">ldp</a>
Description	When configured to <b>true</b> , BGP searches for an LDP LSP with a FEC prefix corresponding to the address of the BGP next hop.  When configured to <b>false</b> , LDP tunneling is not used for next-hop resolution.
Default	false
Introduced	16.0.R1
Platforms	All

### **mpls-fwd-policy *boolean***

Synopsis	Use MPLS forwarding policy for next-hop resolution
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">bgp-evpn</a> <a href="#">mpls</a> <i>number</i> <a href="#">auto-bind-tunnel</a> <a href="#">resolution-filter</a> <a href="#">mpls-fwd-policy</a> <i>boolean</i>
Tree	<a href="#">mpls-fwd-policy</a>
Description	When configured to <b>true</b> , BGP uses the MPLS forwarding policy to determine the address of the BGP next hop.  When configured to <b>false</b> , the MPLS forwarding policy is not used for next-hop resolution.

Default	false
Introduced	19.5.R1
Platforms	All

### **rib-api** *boolean*

Synopsis	Use RIB API gRPC service for next-hop resolution
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>bgp-evpn</b> <b>mpls</b> <i>number</i> <b>auto-bind-tunnel</b> <b>resolution-filter</b> <b>rib-api</b> <i>boolean</i>
Tree	<b>rib-api</b>
Description	When configured to <b>true</b> , BGP uses tunnels programmed using the RIB API gRPC service to resolve the next hops of routes imported into the EVPN service. When configured to <b>false</b> , the RIB API service tunnels are not used for next-hop resolution.
Default	false
Introduced	19.5.R1
Platforms	All

### **rsvp** *boolean*

Synopsis	Use RSVP tunneling for next-hop resolution
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>bgp-evpn</b> <b>mpls</b> <i>number</i> <b>auto-bind-tunnel</b> <b>resolution-filter</b> <b>rsvp</b> <i>boolean</i>
Tree	<b>rsvp</b>
Description	When configured to <b>true</b> , BGP searches the best metric RSVP LSP to determine the address of the BGP next hop. This address can correspond to the system interface or to another loopback interface used by the BGP instance on the remote node. The LSP metric is provided by MPLS in the tunnel table. In the case of multiple RSVP LSPs with the same lowest metric, BGP selects the LSP with the lowest tunnel ID. When configured to <b>false</b> , the RSVP LSP is not used for next-hop resolution.
Default	false
Introduced	16.0.R1
Platforms	All

### **sr-isis** *boolean*

Synopsis	Use IS-IS SR tunneling for next-hop resolution
----------	--

Context	<b>configure service epipe</b> <i>string</i> <b>bgp-evpn mpls</b> <i>number</i> <b>auto-bind-tunnel resolution-filter sr-isis</b> <i>boolean</i>
Tree	<b>sr-isis</b>
Description	When configured to <b>true</b> , BGP uses an IS-IS tunnel type to determine the address of the BGP next hop.  The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered IS-IS instance.  When configured to <b>false</b> , IS-IS tunneling is not used for next-hop resolution.
Default	false
Introduced	16.0.R1
Platforms	All

### **sr-ospf** *boolean*

Synopsis	Use OSPF SR tunneling for next-hop resolution
Context	<b>configure service epipe</b> <i>string</i> <b>bgp-evpn mpls</b> <i>number</i> <b>auto-bind-tunnel resolution-filter sr-ospf</b> <i>boolean</i>
Tree	<b>sr-ospf</b>
Description	When configured to <b>true</b> , BGP uses an OSPF tunnel type to determine the address of the BGP next hop.  The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered OPSF instance.  When configured to <b>false</b> , OSPF tunneling is not used for next-hop resolution.
Default	false
Introduced	16.0.R1
Platforms	All

### **sr-ospf3** *boolean*

Synopsis	Use OSPFv3 SR tunneling for next-hop resolution
Context	<b>configure service epipe</b> <i>string</i> <b>bgp-evpn mpls</b> <i>number</i> <b>auto-bind-tunnel resolution-filter sr-ospf3</b> <i>boolean</i>
Tree	<b>sr-ospf3</b>
Description	When configured to <b>true</b> , BGP uses an OSPF3 tunnel type to determine the address of the BGP next hop.  The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered OPSF3 instance.  When configured to <b>false</b> , OSPF3 tunneling is not used for next-hop resolution.

Default	false
Introduced	19.10.R1
Platforms	All

### **sr-policy** *boolean*

Synopsis	Use SR policies for next-hop resolution
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>bgp-evpn</b> <b>mpls</b> <i>number</i> <b>auto-bind-tunnel</b> <b>resolution-filter</b> <b>sr-policy</b> <i>boolean</i>
Tree	<b>sr-policy</b>
Description	When configured to <b>true</b> , this command instructs BGP to use an SR policy to determine the address of the BGP next hop. The SR policy search criteria includes a non-null endpoint and color value that matches the BGP next hop and color extended community value, respectively, of the EVPN route.  When configured to <b>false</b> , SR policies are not used for next-hop resolution.
Default	false
Introduced	19.5.R1
Platforms	All

### **sr-te** *boolean*

Synopsis	Use SR-TE tunneling for next-hop resolution
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>bgp-evpn</b> <b>mpls</b> <i>number</i> <b>auto-bind-tunnel</b> <b>resolution-filter</b> <b>sr-te</b> <i>boolean</i>
Tree	<b>sr-te</b>
Description	When configured to <b>true</b> , BGP uses an SR-TE tunnel type to determine the address of the BGP next hop.  The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered tunnel ID.  When configured to <b>false</b> , SR-TE tunneling is not used for next-hop resolution.
Default	false
Introduced	16.0.R1
Platforms	All

### **udp** *boolean*

Synopsis	Use MPLS over UDP tunneling for next-hop resolution
----------	---

Context	<b>configure service epipe</b> <i>string</i> <b>bgp-evpn mpls</b> <i>number</i> <b>auto-bind-tunnel resolution-filter</b> <b>udp</b> <i>boolean</i>
Tree	<b>udp</b>
Description	When configured to <b>true</b> , BGP uses an MPLS over UDP tunnel type to determine the address of the BGP next hop. When configured to <b>false</b> , MPLS over UDP tunneling is not used for next-hop resolution.
Default	false
Introduced	16.0.R1
Platforms	All

### **weighted-ecmp** *boolean*

Synopsis	Allow weighted load balancing
Context	<b>configure service epipe</b> <i>string</i> <b>bgp-evpn mpls</b> <i>number</i> <b>auto-bind-tunnel weighted-ecmp</b> <b>boolean</b>
Tree	<b>weighted-ecmp</b>
Description	When configured to <b>true</b> , this router enables weighted ECMP for packets using tunnels that a VPLS or Epipe automatically binds to. Packets are sprayed across LSPs in the ECMP according to the outcome of the hash algorithm and the configured load balancing weight of each LSP. When configured to <b>false</b> , this command disables weighted ECMP for next-hop tunnel selection.
Default	false
Introduced	22.7.R1
Platforms	All

### **control-word** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the CW bit in the label message
Context	<b>configure service epipe</b> <i>string</i> <b>bgp-evpn mpls</b> <i>number</i> <b>control-word</b> <i>boolean</i>
Tree	<b>control-word</b>
Default	false
Introduced	16.0.R1
Platforms	All

## default-route-tag *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Default route tag
Context	<b>configure</b> <i>service epipe string bgp-evpn mpls number default-route-tag string</i>
Tree	<i>default-route-tag</i>
Description	<p>This command configures a route tag that is used when sending a route to the BGP application (for the corresponding service and BGP instance). If the corresponding BGP instance is enabled, the command cannot be changed.</p> <p>When used for BGP EVPN contexts, only one route tag can be passed to BGP for matching on export policies. In case of a conflict with other route tags pushed by EVPN, the default route tag has the least priority.</p> <p>The following are examples of the conflict priority handling:</p> <ul style="list-style-type: none"><li>• If a service is configured with both <b>default-route-tag X</b> and <b>proxy-arp evpn-route-tag Y</b>, the EVPN uses route tag Y when sending EVPN proxy-arp routes to the BGP RIB for advertisement.</li><li>• If a given IP-prefix route is tagged in the route-table with tag A and the R-VPLS, in which the route is advertised, uses B as the <b>default-route-tag</b>, then EVPN keeps tag A when sending the route to the BGP RIB.</li></ul> <p>The <b>default-route-tag</b> configuration is only supported on EVPN and IP-VPN service routes. The route tag for ES and AD per-ES routes is always zero.</p>
Introduced	16.0.R4
Platforms	All

## dynamic-egress-label-limit *boolean*

Synopsis	Enables dynamic egress label limit
Context	<b>configure</b> <i>service epipe string bgp-evpn mpls number dynamic-egress-label-limit boolean</i>
Tree	<i>dynamic-egress-label-limit</i>
Description	<p>When configured to <b>true</b>, this command relaxes the egress MPLS label limit check when resolving BGP next hops in the tunnel table.</p> <p>For VPRN services, the OAM label is never computed and, therefore, one more egress label is allowed.</p> <p>For EVPN (Epipe and VPLS) services, the system only computes the control word and ESI label if they are used. For the control word, the system reduces the egress label limit by one label if the control word is configured in the service. When configured, the ESI label is not counted for Epipes or VPLS services without an ES.</p>

When configured to **false** this command, for EVPN, Epipe, and VPLS services, always accounts for the ESI label and control word.

Default	false
Introduced	22.2.R1
Platforms	All

### **ecmp number**

Synopsis	Maximum ECMP routes information
Context	<b>configure service epipe string</b> <i>bgp-evpn mpls number</i> <i>ecmp number</i>
Tree	<i>ecmp</i>
Range	1 to 32
Default	1
Introduced	16.0.R1
Platforms	All

### **entropy-label boolean**

Synopsis	Enable use of entropy-labels
Context	<b>configure service epipe string</b> <i>bgp-evpn mpls number</i> <i>entropy-label boolean</i>
Tree	<i>entropy-label</i>
Default	false
Introduced	16.0.R1
Platforms	All

### **evi-three-byte-auto-rt boolean**

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Auto-derive the BGP EVPN route target
Context	<b>configure service epipe string</b> <i>bgp-evpn mpls number</i> <i>evi-three-byte-auto-rt boolean</i>
Tree	<i>evi-three-byte-auto-rt</i>
Description	When configured to <b>true</b> , the BGP-EVPN instance import and export route target is auto-derived as described in RFC 8365 (Global-Administrator:A/Type/D-ID/Service-ID). Where:

- Global Administrator – is the configured 2-octet AS number; if the configured ASN exceeds the 2 byte limit, the low order 16-bit value is taken
- A=0 (for auto-derivation)
- Type=4 (EVI-based route-target)
- D-ID= [1..2] – encodes the BGP instance, which allows the auto-derivation of different route-targets in multi-instance services; the value is inherited from the corresponding BGP instance
- Service ID=3-octet EVI

When configured to **false**, route target derivation is not allowed.

Default	false
Introduced	21.10.R1
Platforms	All

### **force-vc-forwarding** *keyword*

Synopsis	VC forwarding action
Context	<b>configure</b> <i>service</i> <i>epipe</i> <i>string</i> <i>bgp-evpn</i> <i>mpls</i> <i>number</i> <b>force-vc-forwarding</b> <i>keyword</i>
Tree	<a href="#">force-vc-forwarding</a>
Options	vlan, qinq-c-tag-c-tag, qinq-s-tag-c-tag
Introduced	16.0.R1
Platforms	All

### **oper-group** *reference*

Synopsis	Operational group identifier
Context	<b>configure</b> <i>service</i> <i>epipe</i> <i>string</i> <i>bgp-evpn</i> <i>mpls</i> <i>number</i> <b>oper-group</b> <i>reference</i>
Tree	<a href="#">oper-group</a>
Reference	<b>configure</b> <i>service</i> <b>oper-group</b> <i>string</i>
Introduced	19.5.R1
Platforms	All

### **route-next-hop**

Synopsis	Enter the <b>route-next-hop</b> context
Context	<b>configure</b> <i>service</i> <i>epipe</i> <i>string</i> <i>bgp-evpn</i> <i>mpls</i> <i>number</i> <b>route-next-hop</b>
Tree	<a href="#">route-next-hop</a>

Description	Commands in this context configure the next hop of the EVPN routes.
Introduced	19.10.R1
Platforms	All

### **ip-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IP address of the next-hop for the service EVPN route
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>bgp-evpn</b> <b>mpls</b> <i>number</i> <b>route-next-hop</b> <b>ip-address</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">ip-address</a>
Notes	The following elements are part of a choice: <b>ip-address</b> , <b>system-ipv4</b> , or <b>system-ipv6</b> .
Introduced	19.10.R1
Platforms	All

### **system-ipv4**

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	System IPv4 address for service EVPN route next hop
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>bgp-evpn</b> <b>mpls</b> <i>number</i> <b>route-next-hop</b> <b>system-ipv4</b>
Tree	<a href="#">system-ipv4</a>
Notes	The following elements are part of a choice: <b>ip-address</b> , <b>system-ipv4</b> , or <b>system-ipv6</b> .
Introduced	19.10.R1
Platforms	All

### **system-ipv6**

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	System IPv6 address for service EVPN route next hop
----------	---

Context	<b>configure service epipe</b> <i>string</i> <b>bgp-evpn mpls</b> <i>number</i> <b>route-next-hop system-ipv6</b>
Tree	<b>system-ipv6</b>
Notes	The following elements are part of a choice: <b>ip-address</b> , <b>system-ipv4</b> , or <b>system-ipv6</b> .
Introduced	19.10.R1
Platforms	All

## send-tunnel-encap

Synopsis	Enter the <b>send-tunnel-encap</b> context
Context	<b>configure service epipe</b> <i>string</i> <b>bgp-evpn mpls</b> <i>number</i> <b>send-tunnel-encap</b>
Tree	<b>send-tunnel-encap</b>
Introduced	16.0.R1
Platforms	All

## mpls *boolean*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable MPLS encapsulation
Context	<b>configure service epipe</b> <i>string</i> <b>bgp-evpn mpls</b> <i>number</i> <b>send-tunnel-encap mpls</b> <i>boolean</i>
Tree	<b>mpls</b>
Default	true
Introduced	16.0.R1
Platforms	All

## mpls-over-udp *boolean*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable MPLS over UDP encapsulation
Context	<b>configure service epipe</b> <i>string</i> <b>bgp-evpn mpls</b> <i>number</i> <b>send-tunnel-encap mpls-over-udp</b> <i>boolean</i>
Tree	<b>mpls-over-udp</b>

Default	false
Introduced	16.0.R1
Platforms	All

### **remote-attachment-circuit** [*name*] *string*

Synopsis	Enter the <b>remote-attachment-circuit</b> list instance
Context	<b>configure service epipe</b> <i>string</i> <b>bgp-evpn remote-attachment-circuit</b> <i>string</i>
Tree	<b>remote-attachment-circuit</b>
Max. Instances	2
Introduced	20.10.R1
Platforms	All

### **[name]** *string*

Synopsis	Attachment circuit name
Context	<b>configure service epipe</b> <i>string</i> <b>bgp-evpn remote-attachment-circuit</b> <i>string</i>
Tree	<b>remote-attachment-circuit</b>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	All

### **endpoint** *reference*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Endpoint name
Context	<b>configure service epipe</b> <i>string</i> <b>bgp-evpn remote-attachment-circuit</b> <i>string</i> <b>endpoint</b> <i>reference</i>
Tree	<b>endpoint</b>
Reference	<b>configure service epipe</b> <i>string</i> <b>endpoint</b> <i>string</i>
Introduced	20.10.R1

Platforms All

### **eth-tag** *number*

Synopsis Ethernet tag of the attachment circuit

Context **configure** *service* *epipe* *string* *bgp-evpn* *remote-attachment-circuit* *string* *eth-tag* *number*

Tree [eth-tag](#)

Description This command configures the Ethernet tag value of the attachment circuit.  
When configured in the local attachment circuit context, the tag value is used in the advertised AD per-EVI route sent for the attachment circuit.  
When configured in the remote attachment circuit context, the value is compared with the Ethernet tag value of the imported D per-EVI routes for the service. When there is a match, the system creates an EVPN destination for the Epipe.

Range 1 to 16777215

Introduced 20.10.R1

Platforms All

### **segment-routing-v6** [[bgp-instance](#)] *number*

Synopsis Enter the **segment-routing-v6** list instance

Context **configure** *service* *epipe* *string* *bgp-evpn* *segment-routing-v6* *number*

Tree [segment-routing-v6](#)

Description Commands in this context configure the SRv6 instance that is used in the service.

Introduced 21.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **[bgp-instance]** *number*

Synopsis BGP instance

Context **configure** *service* *epipe* *string* *bgp-evpn* *segment-routing-v6* *number*

Tree [segment-routing-v6](#)

Range 1

Notes This element is part of a list key.

Introduced 21.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### admin-state keyword

Synopsis	Administrative state of segment routing over IPv6
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>bgp-evpn</b> <b>segment-routing-v6</b> <i>number</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Default	disable
Options	enable, disable
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### default-route-tag string

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Default route tag
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>bgp-evpn</b> <b>segment-routing-v6</b> <i>number</i> <b>default-route-tag</b> <i>string</i>
Tree	<b>default-route-tag</b>
Description	<p>This command configures a route tag that is used when sending a route to the BGP application (for the corresponding service and BGP instance). If the corresponding BGP instance is enabled, the command cannot be changed.</p> <p>When used for BGP EVPN contexts, only one route tag can be passed to BGP for matching on export policies. In case of a conflict with other route tags pushed by EVPN, the default route tag has the least priority.</p> <p>The following are examples of the conflict priority handling:</p> <ul style="list-style-type: none"> <li>• If a service is configured with both <b>default-route-tag</b> <i>X</i> and <b>proxy-arp evpn-route-tag</b> <i>Y</i>, the EVPN uses route tag <i>Y</i> when sending EVPN proxy-arp routes to the BGP RIB for advertisement.</li> <li>• If a given IP-prefix route is tagged in the route-table with tag <i>A</i> and the R-VPLS, in which the route is advertised, uses <i>B</i> as the <b>default-route-tag</b>, then EVPN keeps tag <i>A</i> when sending the route to the BGP RIB.</li> </ul> <p>The <b>default-route-tag</b> configuration is only supported on EVPN and IP-VPN service routes. The route tag for ES and AD per-ES routes is always zero.</p>
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## ecmp number

Synopsis	Maximum ECMP value configured on the service
Context	<b>configure</b> service <i>epipe</i> string <i>bgp-evpn segment-routing-v6</i> number <i>ecmp</i> number
Tree	<i>ecmp</i>
Range	1 to 32
Default	1
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## evi-three-byte-auto-rt boolean

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Auto-derive the BGP EVPN route target
Context	<b>configure</b> service <i>epipe</i> string <i>bgp-evpn segment-routing-v6</i> number <i>evi-three-byte-auto-rt</i> boolean
Tree	<i>evi-three-byte-auto-rt</i>
Description	<p>When configured to <b>true</b>, the BGP-EVPN instance import and export route target is auto-derived as described in RFC 8365 (Global-Administrator:A/Type/D-ID/Service-ID). Where:</p> <ul style="list-style-type: none"> <li>• Global Administrator – is the configured 2-octet AS number; if the configured ASN exceeds the 2 byte limit, the low order 16-bit value is taken</li> <li>• A=0 (for auto-derivation)</li> <li>• Type=4 (EVI-based route-target)</li> <li>• D-ID= [1..2] – encodes the BGP instance, which allows the auto-derivation of different route-targets in multi-instance services; the value is inherited from the corresponding BGP instance</li> <li>• Service ID=3-octet EVI</li> </ul> <p>When configured to <b>false</b>, route target derivation is not allowed.</p>
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## force-vc-forwarding *keyword*

Synopsis	Datapath forwarding to force vlan-vc-type
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>bgp-evpn</b> <b>segment-routing-v6</b> <i>number</i> <b>force-vc-forwarding</b> <i>keyword</i>
Tree	<b>force-vc-forwarding</b>
Description	<p>This command allows the system to preserve the VLAN ID and 802.1p bits of the service-delimiting qtag in a new tag added in the customer frame before sending it to the EVPN destinations.</p> <p>This command may be used in conjunction with the <b>sap ingress vlan-translation</b> command. If so used, the configured translated VLAN ID is the VLAN ID sent to the EVPN destinations as opposed to the service-delimiting tag VLAN ID. If the ingress SAP/SDP binding is 'null'-encapsulated, the output VLAN ID and pbits is zero.</p>
Options	vlan, qinq-c-tag-c-tag, qinq-s-tag-c-tag
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## oper-group *reference*

Synopsis	Operational group
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>bgp-evpn</b> <b>segment-routing-v6</b> <i>number</i> <b>oper-group</b> <i>reference</i>
Tree	<b>oper-group</b>
Description	<p>This command adds the BGP EVPN SRv6 instance or an Ethernet Segment (ES) as a member of the operational group.</p> <p>When configured on a BGP EVPN instance, the operational group is up when it is either empty (meaning that the operational group has no members) or at least an EVPN destination is created under the EVPN instance added as member. When configured, no other SAP, SDP binding, or BGP EVPN instance can be added to the same operational group within the same or different service.</p> <p>The operational group will be down when it is applied on a BGP EVPN instance as well as:</p> <ul style="list-style-type: none"><li>• the service is <b>admin-state disable</b></li><li>• the BGP EVPN MPLS and VXLAN are <b>admin-state disable</b></li><li>• all the EVPN destinations in the instance are removed</li></ul> <p>When configured on an ES, the state of the operational group depends on the state of the SAPs contained in the ES. The operational group transitions to up if at least one SAP in the ES is up. The operational group goes down when all the associated SAPs are operationally down. The ES operational group should be monitored on the LAG associated to the ES, along with single-active multi-homing, so that the NDF state can be signaled to the CE by LAG standby signaling.</p>

Reference	<b>configure</b> <a href="#">service oper-group</a> <i>string</i>
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **resolution** *keyword*

Synopsis	Resolution options for routes
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">bgp-evpn segment-routing-v6</a> <i>number</i> <a href="#">resolution</a> <i>keyword</i>
Tree	<a href="#">resolution</a>
Default	route-table
Options	route-table, tunnel-table, fallback-tunnel-to-route-table
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **route-next-hop**

Synopsis	Enter the <b>route-next-hop</b> context
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">bgp-evpn segment-routing-v6</a> <i>number</i> <a href="#">route-next-hop</a>
Tree	<a href="#">route-next-hop</a>
Description	Commands in this context configure the next hop of the EVPN routes.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **ip-address** (*ipv4-address-no-zone | ipv6-address-no-zone*)

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IP address of the next-hop for the service EVPN route
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">bgp-evpn segment-routing-v6</a> <i>number</i> <a href="#">route-next-hop</a> <a href="#">ip-address</a> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> )
Tree	<a href="#">ip-address</a>
Notes	The following elements are part of a choice: <b>ip-address</b> , <b>system-ipv4</b> , or <b>system-ipv6</b> .
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## system-ipv4

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	System IPv4 address for service EVPN route next hop
Context	<b>configure service epipe string bgp-evpn segment-routing-v6 number route-next-hop system-ipv4</b>
Tree	<a href="#">system-ipv4</a>
Notes	The following elements are part of a choice: <b>ip-address</b> , <b>system-ipv4</b> , or <b>system-ipv6</b> .
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## system-ipv6

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	System IPv6 address for service EVPN route next hop
Context	<b>configure service epipe string bgp-evpn segment-routing-v6 number route-next-hop system-ipv6</b>
Tree	<a href="#">system-ipv6</a>
Notes	The following elements are part of a choice: <b>ip-address</b> , <b>system-ipv4</b> , or <b>system-ipv6</b> .
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## source-address *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Source IPv6 address
Context	<b>configure service epipe string bgp-evpn segment-routing-v6 number source-address string</b>
Tree	<a href="#">source-address</a>

Description	<p>When configured, this command specifies the source IPv6 address used in the SA field of the outer IPv6 header of the SRv6 encapsulated packet.</p> <p>When not configured, the source IPv6 address is inherited from the configuration of the global default address in the <b>router "base" segment-routing segment-routing-v6 source-address</b> context.</p> <p>A source IPv6 address must be configured in this context or in the base router context.</p> <p>The system does not check if the address entered is a valid local address.</p>
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## srv6

Synopsis	Enter the <b>srv6</b> context
Context	<b>configure service epipe string bgp-evpn segment-routing-v6 number srv6</b>
Tree	<b>srv6</b>
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## default-locator *string*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Default route locator
Context	<b>configure service epipe string bgp-evpn segment-routing-v6 number srv6 default-locator string</b>
Tree	<b>default-locator</b>
Description	This command specifies the locator that exists in the SRv6 service instance and is used as the default locator for the service.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## instance *reference*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Segment Routing SRv6 instance
Context	<b>configure service epipe string</b> <a href="#">bgp-evpn segment-routing-v6 number srv6 instance reference</a>
Tree	<a href="#">instance</a>
Reference	<b>configure service epipe string</b> <a href="#">segment-routing-v6 number</a>
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## vxlan [[bgp-instance](#)] *number*

Synopsis	Enter the <b>vxlan</b> list instance
Context	<b>configure service epipe string</b> <a href="#">bgp-evpn vxlan number</a>
Tree	<a href="#">vxlan</a>
Introduced	16.0.R1
Platforms	All

## [[bgp-instance](#)] *number*

Synopsis	BGP instance
Context	<b>configure service epipe string</b> <a href="#">bgp-evpn vxlan number</a>
Tree	<a href="#">vxlan</a>
Range	1
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of BGP EVPN VXLAN
Context	<b>configure service epipe string</b> <a href="#">bgp-evpn vxlan number admin-state keyword</a>
Tree	<a href="#">admin-state</a>

Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

## default-route-tag *string*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Default route tag
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">bgp-evpn</a> <a href="#">vxlan</a> <i>number</i> <a href="#">default-route-tag</a> <i>string</i>
Tree	<a href="#">default-route-tag</a>
Description	<p>This command configures a route tag that is used when sending a route to the BGP application (for the corresponding service and BGP instance). If the corresponding BGP instance is enabled, the command cannot be changed.</p> <p>When used for BGP EVPN contexts, only one route tag can be passed to BGP for matching on export policies. In case of a conflict with other route tags pushed by EVPN, the default route tag has the least priority.</p> <p>The following are examples of the conflict priority handling:</p> <ul style="list-style-type: none"> <li>• If a service is configured with both <b>default-route-tag</b> <i>X</i> and <b>proxy-arp evpn-route-tag</b> <i>Y</i>, the EVPN uses route tag <i>Y</i> when sending EVPN proxy-arp routes to the BGP RIB for advertisement.</li> <li>• If a given IP-prefix route is tagged in the route-table with tag <i>A</i> and the R-VPLS, in which the route is advertised, uses <i>B</i> as the <b>default-route-tag</b>, then EVPN keeps tag <i>A</i> when sending the route to the BGP RIB.</li> </ul> <p>The <b>default-route-tag</b> configuration is only supported on EVPN and IP-VPN service routes. The route tag for ES and AD per-ES routes is always zero.</p>
Introduced	16.0.R4
Platforms	All

## ecmp *number*

Synopsis	Maximum ECMP routes information
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">bgp-evpn</a> <a href="#">vxlan</a> <i>number</i> <a href="#">ecmp</a> <i>number</i>
Tree	<a href="#">ecmp</a>
Range	1 to 32
Default	1

Introduced 16.0.R1  
Platforms All

### evi-three-byte-auto-rt *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Auto-derive the BGP EVPN route target

Context **configure service epipe string bgp-evpn vxlan number evi-three-byte-auto-rt boolean**

Tree [evi-three-byte-auto-rt](#)

Description When configured to **true**, the BGP-EVPN instance import and export route target is auto-derived as described in RFC 8365 (Global-Administrator:A/Type/D-ID/Service-ID).  
Where:

- Global Administrator – is the configured 2-octet AS number; if the configured ASN exceeds the 2 byte limit, the low order 16-bit value is taken
- A=0 (for auto-derivation)
- Type=4 (EVI-based route-target)
- D-ID= [1..2] – encodes the BGP instance, which allows the auto-derivation of different route-targets in multi-instance services; the value is inherited from the corresponding BGP instance
- Service ID=3-octet EVI

When configured to **false**, route target derivation is not allowed.

Default false

Introduced 21.10.R1

Platforms All

### send-tunnel-encap *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Send VXLAN value in encapsulation extended community

Context **configure service epipe string bgp-evpn vxlan number send-tunnel-encap boolean**

Tree [send-tunnel-encap](#)

Description	When configured to <b>true</b> , this command sends the VXLAN value in the encapsulation that is advertised with the EVPN routes for the service. The encapsulation is encoded in RFC5512-based tunnel encapsulation extended communities. When configured to <b>false</b> , no encapsulation extended community is sent.
Default	true
Introduced	16.0.R1
Platforms	All

### **vxlan-instance** *reference*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VXLAN instance
Context	<b>configure service epipe string</b> <i>bgp-evpn vxlan number vxlan-instance reference</i>
Tree	<i>vxlan-instance</i>
Reference	<b>configure service epipe string vxlan instance number</b>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **bgp-mh-site** [*site-name*] *string*

Synopsis	Enter the <b>bgp-mh-site</b> list instance
Context	<b>configure service epipe string</b> <i>bgp-mh-site string</i>
Tree	<i>bgp-mh-site</i>
Max. Instances	1
Introduced	16.0.R1
Platforms	All

### **[site-name]** *string*

Synopsis	Name for the specific site
Context	<b>configure service epipe string</b> <i>bgp-mh-site string</i>
Tree	<i>bgp-mh-site</i>

String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **activation-timer** *number*

Synopsis	Time that the local sites are in standby status, waiting for BGP updates
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>bgp-mh-site</b> <i>string</i> <b>activation-timer</b> <i>number</i>
Tree	<b>activation-timer</b>
Range	0 to 100
Units	seconds
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the site
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>bgp-mh-site</b> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **boot-timer** *number*

Synopsis	Wait time after reboot to run the DF election algorithm
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>bgp-mh-site</b> <i>string</i> <b>boot-timer</b> <i>number</i>
Tree	<b>boot-timer</b>
Range	0 to 600
Units	seconds
Introduced	16.0.R1
Platforms	All

## **id number**

### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Site ID for the service
Context	<b>configure service epipe string bgp-mh-site string id number</b>
Tree	<b>id</b>
Description	This command configures the ID for the site. The ID must match between services but is local to the service.
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

## **min-down-timer number**

Synopsis	Minimum downtime for BGP multi-homing site after transition from up to down
Context	<b>configure service epipe string bgp-mh-site string min-down-timer number</b>
Tree	<b>min-down-timer</b>
Range	0 to 100
Units	seconds
Introduced	16.0.R1
Platforms	All

## **preference number**

Synopsis	Preference value to advertise in the NLRI L2 extended community
Context	<b>configure service epipe string bgp-mh-site string preference number</b>
Tree	<b>preference</b>
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

## **sap string**

### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	SAP to be associated with this site
Context	<b>configure service epipe string bgp-mh-site string sap string</b>
Tree	<a href="#">sap</a>
String Length	1 to 45
Introduced	16.0.R1
Platforms	All

## **bgp-vpws**

Synopsis	Enable the <b>bgp-vpws</b> context
Context	<b>configure service epipe string bgp-vpws</b>
Tree	<a href="#">bgp-vpws</a>
Introduced	16.0.R1
Platforms	All

## **admin-state keyword**

Synopsis	Administrative state of the VPWS edge instance
Context	<b>configure service epipe string bgp-vpws admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

## **local-ve**

Synopsis	Enter the <b>local-ve</b> context
Context	<b>configure service epipe string bgp-vpws local-ve</b>
Tree	<a href="#">local-ve</a>
Introduced	16.0.R1

Platforms All

### **id number**

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Local VPWS edge ID  
Context **configure service epipe string** *bgp-vpws local-ve id number*  
Tree *id*  
Range 1 to 65535  
Introduced 16.0.R1  
Platforms All

### **name string**

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Local VPWS instance name  
Context **configure service epipe string** *bgp-vpws local-ve name string*  
Tree *name*  
String Length 1 to 32  
Introduced 16.0.R1  
Platforms All

### **remote-ve [name] string**

Synopsis Enter the **remote-ve** list instance  
Context **configure service epipe string** *bgp-vpws remote-ve string*  
Tree *remote-ve*  
Max. Instances 2  
Introduced 16.0.R1  
Platforms All

### **[name]** *string*

Synopsis	Remote PE name to which a PW is to be signaled
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">bgp-vpws</a> <a href="#">remote-ve</a> <i>string</i>
Tree	<a href="#">remote-ve</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **id** *number*

Synopsis	Remote VPWS edge ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">bgp-vpws</a> <a href="#">remote-ve</a> <i>string</i> <b>id</b> <i>number</i>
Tree	<a href="#">id</a>
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

### **customer** *reference*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Service customer ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <b>customer</b> <i>reference</i>
Tree	<a href="#">customer</a>
Reference	<b>configure</b> <a href="#">service</a> <a href="#">customer</a> <i>string</i>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **description** *string*

Synopsis	Text description
----------	------------------

Context	<b>configure service epipe string description string</b>
Tree	<b>description</b>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **endpoint [name] string**

Synopsis	Enter the <b>endpoint</b> list instance
Context	<b>configure service epipe string endpoint string</b>
Tree	<b>endpoint</b>
Max. Instances	2
Introduced	16.0.R1
Platforms	All

### **[name] string**

Synopsis	Service endpoint name
Context	<b>configure service epipe string endpoint string</b>
Tree	<b>endpoint</b>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **description string**

Synopsis	Text description
Context	<b>configure service epipe string endpoint string description string</b>
Tree	<b>description</b>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **hold-time-active** *number*

Synopsis	Time to hold the active state before entering standby when a local MC-LAG SAP goes down
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>endpoint</b> <i>string</i> <b>hold-time-active</b> <i>number</i>
Tree	<b>hold-time-active</b>
Range	1 to 60
Units	deciseconds
Introduced	16.0.R1
Platforms	All

### **revert-time** (*number* | *keyword*)

Synopsis	Time to wait before reverting back to the primary spoke-sdp defined on this service endpoint
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>endpoint</b> <i>string</i> <b>revert-time</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>revert-time</b>
Range	1 to 600
Default	immediate
Units	seconds
Options	never, immediate
Introduced	16.0.R1
Platforms	All

### **standby-signaling** *keyword*

Synopsis	Endpoint behavior to handle the PW standby bit
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>endpoint</b> <i>string</i> <b>standby-signaling</b> <i>keyword</i>
Tree	<b>standby-signaling</b>
Options	master, slave
Introduced	16.0.R1
Platforms	All

### **eth-cfm**

Synopsis	Enter the <b>eth-cfm</b> context
----------	----------------------------------

Context	<b>configure service epipe</b> <i>string eth-cfm</i>
Tree	<a href="#">eth-cfm</a>
Introduced	19.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ignore-l2vpn-mtu-mismatch** *boolean*

Synopsis	Ignore the L2 VPN MTU mismatch with local service MTU
Context	<b>configure service epipe</b> <i>string ignore-l2vpn-mtu-mismatch boolean</i>
Tree	<a href="#">ignore-l2vpn-mtu-mismatch</a>
Description	<p>When configured to <b>true</b>, the router does not check the value of the Layer 2 MTU in the Layer2 Info Extended Community received in a BGP update message against the local service MTU or locally signaled MTU. It may, therefore, bring up the BGP VPWS service regardless of any MTU mismatch.</p> <p>When configured to <b>false</b>, an MTU mismatch prevents the system from bringing up a BGP-VPWS service.</p>
Default	false
Introduced	22.2.R1
Platforms	All

### **load-balancing**

Synopsis	Enter the <b>load-balancing</b> context
Context	<b>configure service epipe</b> <i>string load-balancing</i>
Tree	<a href="#">load-balancing</a>
Introduced	16.0.R1
Platforms	All

### **lbl-eth-or-ip-l4-teid** *boolean*

Synopsis	Enable hashing of MPLS ethernet and IP packets on SAPs
Context	<b>configure service epipe</b> <i>string load-balancing lbl-eth-or-ip-l4-teid boolean</i>
Tree	<a href="#">lbl-eth-or-ip-l4-teid</a>
Description	<p>When configured to <b>true</b>, this command enables hashing of MPLS Ethernet and MPLS IP packets received on the Epipe and VPLS service SAP using the MPLS labels, the inner IP addresses, the port numbers, and the GTP TEID field, if read by the system. This capability is supported on line cards that are FP4-based or later.</p>

Default	false
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **per-service-hashing** *boolean*

Synopsis	Enable per-service hashing for Ethernet services
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">load-balancing per-service-hashing</a> <i>boolean</i>
Tree	<a href="#">per-service-hashing</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **nat-outside** [[nat-group](#)] *number*

Synopsis	Enter the <b>nat-outside</b> list instance
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">nat-outside</a> <i>number</i>
Tree	<a href="#">nat-outside</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[nat-group]** *number*

Synopsis	NAT group
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">nat-outside</a> <i>number</i>
Tree	<a href="#">nat-outside</a>
Max. Range	0 to 4294967295
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of Epipe as a NAT outside service
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">nat-outside</a> <i>number</i> <a href="#">admin-state</a> <i>keyword</i>

Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **oper-group** *reference*

Synopsis	Oper-group name
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">oper-group</a> <i>reference</i>
Tree	<a href="#">oper-group</a>
Reference	<b>configure</b> <a href="#">service</a> <a href="#">oper-group</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **pbb**

Synopsis	Enter the <b>pbb</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">pbb</a>
Tree	<a href="#">pbb</a>
Introduced	16.0.R1
Platforms	All

### **force-qtag-forwarding** *boolean*

Synopsis	Add an IEEE 802.1q tag after CMAC addresses PBB header
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">pbb</a> <b>force-qtag-forwarding</b> <i>boolean</i>
Tree	<a href="#">force-qtag-forwarding</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **local-switch-service-state** *keyword*

Synopsis	Endpoint state used to determine PBB-Epipe state
----------	--

Context	<b>configure service epipe</b> <i>string pbb local-switch-service-state keyword</i>
Tree	<a href="#">local-switch-service-state</a>
Description	In a PBB Epipe with two SAPs and a PBB tunnel, this command controls whether the operational state of the PBB-Epipe service depends on the state of the PBB tunnel only, or on the state of two of the three endpoints (PBB tunnel and two SAPs). The second case implies that at least one of the SAPs must be up for the PBB-Epipe service to be operationally up.
Default	sap
Options	sap, pbb-tunnel
Introduced	21.7.R1
Platforms	All

## tunnel

Synopsis	Enable the <b>tunnel</b> context
Context	<b>configure service epipe</b> <i>string pbb tunnel</i>
Tree	<a href="#">tunnel</a>
Introduced	16.0.R1
Platforms	All

## backbone-dest-mac *string*

Synopsis	Backbone Destination MAC address
Context	<b>configure service epipe</b> <i>string pbb tunnel backbone-dest-mac string</i>
Tree	<a href="#">backbone-dest-mac</a>
Notes	The following elements are part of a mandatory choice: <b>backbone-dest-mac</b> or <b>backbone-dest-mac-name</b> .
Introduced	16.0.R1
Platforms	All

## backbone-dest-mac-name *reference*

Synopsis	Backbone destination MAC name for PBB packets
Context	<b>configure service epipe</b> <i>string pbb tunnel backbone-dest-mac-name reference</i>
Tree	<a href="#">backbone-dest-mac-name</a>
Reference	<b>configure service pbb mac</b> <i>string</i>

Notes	The following elements are part of a mandatory choice: <b>backbone-dest-mac</b> or <b>backbone-dest-mac-name</b> .
Introduced	16.0.R1
Platforms	All

### **backbone-vpls-service-name** *reference*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Backbone VPLS service
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">pbb</a> <a href="#">tunnel</a> <b>backbone-vpls-service-name</b> <i>reference</i>
Tree	<a href="#">backbone-vpls-service-name</a>
Reference	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **isid** *number*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Service instance ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">pbb</a> <a href="#">tunnel</a> <b>isid</b> <i>number</i>
Tree	<a href="#">isid</a>
Range	0 to 16777215
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **sap** [[sap-id](#)] *string*

Synopsis	Enter the <b>sap</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <b>sap</b> <i>string</i>

Tree	<a href="#">sap</a>
Max. Instances	2
Introduced	16.0.R1
Platforms	All

Tree	<a href="#">app-profile</a>
Reference	<b>configure</b> <a href="#">application-assurance</a> <a href="#">group</a> <i>number</i> <a href="#">partition</a> <i>number</i> <a href="#">policy</a> <a href="#">app-profile</a> <i>string</i>
Introduced	21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **bandwidth** *number*

Synopsis SAP bandwidth  
Context **configure service epipe** *string sap string bandwidth number*  
Tree [bandwidth](#)  
Range 1 to 6400000000  
Units kilobps  
Introduced 16.0.R1  
Platforms All

### **cflowd** *boolean*

Synopsis Enable Cflowd collection and analysis on this SAP  
Context **configure service epipe** *string sap string cflowd boolean*  
Tree [cflowd](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **collect-stats** *boolean*

Synopsis Collect accounting statistics  
Context **configure service epipe** *string sap string collect-stats boolean*  
Tree [collect-stats](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **cpu-protection**

Synopsis Enter the **cpu-protection** context  
Context **configure service epipe** *string sap string cpu-protection*  
Tree [cpu-protection](#)

Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## eth-cfm-monitoring

Synopsis Enable the **eth-cfm-monitoring** context  
Context **configure service epipe string sap string cpu-protection eth-cfm-monitoring**  
Tree [eth-cfm-monitoring](#)  
Notes The following elements are part of a choice: **eth-cfm-monitoring** or **mac-monitoring**.  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## aggregate

Synopsis Apply rate limit to the sum of per-peer packet rates  
Context **configure service epipe string sap string cpu-protection eth-cfm-monitoring aggregate**  
Tree [aggregate](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## car

Synopsis Ignore Ethernet CFM packets when enforcing overall rate  
Context **configure service epipe string sap string cpu-protection eth-cfm-monitoring car**  
Tree [car](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## mac-monitoring

Synopsis Monitor MAC for CPU protection  
Context **configure service epipe string sap string cpu-protection mac-monitoring**  
Tree [mac-monitoring](#)  
Notes The following elements are part of a choice: **eth-cfm-monitoring** or **mac-monitoring**.  
Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

### **policy-id** *reference*

Synopsis CPM protection policy  
Context **configure** [service epipe](#) *string* [sap](#) *string* [cpu-protection](#) [policy-id](#) *reference*  
Tree [policy-id](#)  
Reference **configure** [system security](#) [cpu-protection](#) [policy](#) *number*  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

### **description** *string*

Synopsis Text description  
Context **configure** [service epipe](#) *string* [sap](#) *string* [description](#) *string*  
Tree [description](#)  
String Length 1 to 160  
Introduced 16.0.R1  
Platforms All

### **dist-cpu-protection** *reference*

Synopsis Distributed CPU protection policy for SAP  
Context **configure** [service epipe](#) *string* [sap](#) *string* [dist-cpu-protection](#) *reference*  
Tree [dist-cpu-protection](#)  
Reference **configure** [system security](#) [dist-cpu-protection](#) [policy](#) *string*  
Introduced 16.0.R1  
Platforms All

### **egress**

Synopsis Enter the **egress** context  
Context **configure** [service epipe](#) *string* [sap](#) *string* [egress](#)  
Tree [egress](#)  
Introduced 16.0.R1

Platforms All

## **agg-rate**

Synopsis Enter the **agg-rate** context

Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [egress](#) [agg-rate](#)

Tree [agg-rate](#)

Notes This element is the default part of a choice.  
The following elements are part of a choice: **agg-rate** or **percent-agg-rate**.

Introduced 16.0.R1

Platforms All

## **adaptation-rule** *keyword*

Synopsis Adaptation rule to compute the operational PIR value when an aggregate shaper is used

Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [egress](#) [agg-rate](#) [adaptation-rule](#) *keyword*

Tree [adaptation-rule](#)

Default closest

Options max, min, closest

Introduced 22.10.R1

Platforms 7750 SR-1, 7750 SR-s

## **burst-limit** (*number* | *keyword*)

Synopsis Shaping burst size when an aggregate shaper is used

Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [egress](#) [agg-rate](#) [burst-limit](#) (*number* | *keyword*)

Tree [burst-limit](#)

Range 1 to 14000000

Default auto

Units bytes

Options auto

Introduced 22.10.R1

Platforms 7750 SR-1, 7750 SR-s

### **limit-unused-bandwidth** *boolean*

Synopsis	Enable aggregate rate overrun protection
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress agg-rate</a> <a href="#">limit-unused-bandwidth</a> <i>boolean</i>
Tree	<a href="#">limit-unused-bandwidth</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **queue-frame-based-accounting** *boolean*

Synopsis	Enable frame-based accounting on all policers and queues associated with context
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress agg-rate</a> <a href="#">queue-frame-based-accounting</a> <i>boolean</i>
Tree	<a href="#">queue-frame-based-accounting</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **rate** *number*

Synopsis	Enforced aggregate rate for all queues
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress agg-rate</a> <a href="#">rate</a> <i>number</i>
Tree	<a href="#">rate</a>
Range	1 to 6400000000
Units	kilobps
Introduced	16.0.R1
Platforms	All

### **filter**

Synopsis	Enter the <b>filter</b> context
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">filter</a>
Tree	<a href="#">filter</a>
Introduced	16.0.R1

Platforms All

### **ip reference**

Synopsis IPv4 filter policy name  
Context **configure** [service epipe](#) *string* [sap](#) *string* [egress filter ip reference](#)  
Tree [ip](#)  
Reference **configure** [filter ip-filter](#) *string*  
Introduced 16.0.R1  
Platforms All

### **ipv6 reference**

Synopsis IPv6 filter policy name  
Context **configure** [service epipe](#) *string* [sap](#) *string* [egress filter ipv6 reference](#)  
Tree [ipv6](#)  
Reference **configure** [filter ipv6-filter](#) *string*  
Introduced 16.0.R1  
Platforms All

### **mac reference**

Synopsis MAC filter policy name  
Context **configure** [service epipe](#) *string* [sap](#) *string* [egress filter mac reference](#)  
Tree [mac](#)  
Reference **configure** [filter mac-filter](#) *string*  
Introduced 16.0.R1  
Platforms All

### **qos**

Synopsis Enter the **qos** context  
Context **configure** [service epipe](#) *string* [sap](#) *string* [egress qos](#)  
Tree [qos](#)  
Introduced 16.0.R1

Platforms All

## **policer-control-policy**

Synopsis Enter the **policer-control-policy** context  
Context **configure service epipe string sap string egress qos policer-control-policy**  
Tree [policer-control-policy](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## **overrides**

Synopsis Enable the **overrides** context  
Context **configure service epipe string sap string egress qos policer-control-policy overrides**  
Tree [overrides](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## **root**

Synopsis Enter the **root** context  
Context **configure service epipe string sap string egress qos policer-control-policy overrides root**  
Tree [root](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## **max-rate** (*number* | *keyword*)

Synopsis Maximum frame-based bandwidth limit  
Context **configure service epipe string sap string egress qos policer-control-policy overrides root max-rate** (*number* | *keyword*)  
Tree [max-rate](#)  
Range 1 to 6400000000  
Options max  
Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### priority-mbs-thresholds

Synopsis Enter the **priority-mbs-thresholds** context

Context **configure service epipe** *string* **sap** *string* **egress qos policer-control-policy overrides root**  
**priority-mbs-thresholds**

Tree **priority-mbs-thresholds**

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### min-thresh-separation (*number* | *keyword*)

Synopsis Minimum amount of separation buffer space

Context **configure service epipe** *string* **sap** *string* **egress qos policer-control-policy overrides root**  
**priority-mbs-thresholds min-thresh-separation** (*number* | *keyword*)

Tree **min-thresh-separation**

Range 0 to 16777216

Units bytes

Options auto

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### priority [*priority-level*] *number*

Synopsis Enter the **priority** list instance

Context **configure service epipe** *string* **sap** *string* **egress qos policer-control-policy overrides root**  
**priority-mbs-thresholds priority** *number*

Tree **priority**

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### [*priority-level*] *number*

Synopsis Priority level

Context **configure service epipe** *string* **sap** *string* **egress qos policer-control-policy overrides root**  
**priority-mbs-thresholds priority** *number*

Tree	<a href="#">priority</a>
Range	1 to 8
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **mbs-contribution** (*number* | *keyword*)

Synopsis	Minimum amount of cumulative buffer space allowed
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a> <a href="#">priority-mbs-thresholds</a> <a href="#">priority</a> <i>number</i> <a href="#">mbs-contribution</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">mbs-contribution</a>
Range	0 to 16777216
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **policy-name** *reference*

Synopsis	Policer control policy name
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">policy-name</a> <i>reference</i>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">policer-control-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **qinq-mark-top-only** *boolean*

Synopsis	Mark top Q-tags
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">qinq-mark-top-only</a> <i>boolean</i>
Tree	<a href="#">qinq-mark-top-only</a>
Default	false
Introduced	16.0.R1

Platforms All

## sap-egress

Synopsis Enter the **sap-egress** context  
Context **configure service epipe** *string* **sap** *string* **egress qos sap-egress**  
Tree [sap-egress](#)  
Introduced 16.0.R1  
Platforms All

## overrides

Synopsis Enter the **overrides** context  
Context **configure service epipe** *string* **sap** *string* **egress qos sap-egress overrides**  
Tree [overrides](#)  
Introduced 16.0.R1  
Platforms All

## hs-secondary-shaper *string*

Synopsis HS Secondary Shaper  
Context **configure service epipe** *string* **sap** *string* **egress qos sap-egress overrides hs-secondary-shaper** *string*  
Tree [hs-secondary-shaper](#)  
String Length 1 to 32  
Introduced 16.0.R1  
Platforms 7750 SR-7/12/12e

## hs-wrr-group [*group-id*] *reference*

Synopsis Enter the **hs-wrr-group** list instance  
Context **configure service epipe** *string* **sap** *string* **egress qos sap-egress overrides hs-wrr-group** *reference*  
Tree [hs-wrr-group](#)  
Introduced 16.0.R1  
Platforms 7750 SR-7/12/12e

### **[group-id]** *reference*

Synopsis	HS WRR group identifier
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">hs-wrr-group</a> <i>reference</i>
Tree	<a href="#">hs-wrr-group</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">sap-egress</a> <i>string</i> <a href="#">hs-wrr-group</a> <i>number</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **hs-class-weight** *number*

Synopsis	Class weight override of the WRR group
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">hs-wrr-group</a> <i>reference</i> <a href="#">hs-class-weight</a> <i>number</i>
Tree	<a href="#">hs-class-weight</a>
Range	1   2   4   8
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **percent-rate** *decimal-number*

Synopsis	Percent rate override applied to the HS WRR group
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">hs-wrr-group</a> <i>reference</i> <a href="#">percent-rate</a> <i>decimal-number</i>
Tree	<a href="#">percent-rate</a>
Range	0.01 to 100.00
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **rate** (*number* | *keyword*)

Synopsis	Scheduling rate override applied to the HS WRR group
----------	--

Context	<b>configure service epipe string sap string egress qos sap-egress overrides hs-wrr-group reference rate (number   keyword)</b>
Tree	<a href="#">rate</a>
Range	1 to 2000000000
Units	kilobps
Options	max
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **policer** [[policer-id](#)] *reference*

Synopsis	Enter the <b>policer</b> list instance
Context	<b>configure service epipe string sap string egress qos sap-egress overrides policer reference</b>
Tree	<a href="#">policer</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **[policer-id]** *reference*

Synopsis	Policer unique ID
Context	<b>configure service epipe string sap string egress qos sap-egress overrides policer reference</b>
Tree	<a href="#">policer</a>
Reference	<b>configure qos sap-egress string policer number</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **cbs** (*number | keyword*)

Synopsis	CBS
Context	<b>configure service epipe string sap string egress qos sap-egress overrides policer reference cbs (number   keyword)</b>
Tree	<a href="#">cbs</a>

Range	0 to 268435456
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **mbs** (*number* | *keyword*)

Synopsis	MBS
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <i>reference</i> <a href="#">mbs</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">mbs</a>
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **packet-byte-offset** *number*

Synopsis	Packet size modification for policing information
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <i>reference</i> <a href="#">packet-byte-offset</a> <i>number</i>
Tree	<a href="#">packet-byte-offset</a>
Range	-64 to 31
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **percent-rate**

Synopsis	Enter the <b>percent-rate</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <i>reference</i> <a href="#">percent-rate</a>
Tree	<a href="#">percent-rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **cir** *decimal-number*

Synopsis CIR percent rate  
Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#) [policer](#)  
*reference* [percent-rate](#) [cir](#) *decimal-number*  
Tree [cir](#)  
Range 0.00 to 100.00  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **pir** *decimal-number*

Synopsis PIR percent rate  
Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#) [policer](#)  
*reference* [percent-rate](#) [pir](#) *decimal-number*  
Tree [pir](#)  
Range 0.01 to 100.00  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **rate**

Synopsis Enter the **rate** context  
Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#) [policer](#)  
*reference* [rate](#)  
Tree [rate](#)  
Notes The following elements are part of a choice: **percent-rate** or **rate**.  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **cir** (*number* | *keyword*)

Synopsis CIR rate

Context	<b>configure service epipe string sap string egress qos sap-egress overrides policer reference rate cir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cir</a>
Range	0 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **pir** (*number* | *keyword*)

Synopsis	PIR rate
Context	<b>configure service epipe string sap string egress qos sap-egress overrides policer reference rate pir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">pir</a>
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **stat-mode** *keyword*

Synopsis	Mode of statistics collected by the policer
Context	<b>configure service epipe string sap string egress qos sap-egress overrides policer reference stat-mode</b> <i>keyword</i>
Tree	<a href="#">stat-mode</a>
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-profile-cir, offered-limited-capped-cir, offered-profile-capped-cir, offered-total-cir-exceed, offered-four-profile-no-cir, offered-total-cir-four-profile
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **queue** [[queue-id](#)] *reference*

Synopsis	Enter the <b>queue</b> list instance
----------	--------------------------------------

Context	<b>configure service epipe string sap string egress qos sap-egress overrides queue reference</b>
Tree	<b>queue</b>
Introduced	16.0.R1
Platforms	All

### **[queue-id] reference**

Synopsis	Policer unique ID
Context	<b>configure service epipe string sap string egress qos sap-egress overrides queue reference</b>
Tree	<b>queue</b>
Reference	<b>configure qos sap-egress string queue number</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **adaptation-rule**

Synopsis	Enter the <b>adaptation-rule</b> context
Context	<b>configure service epipe string sap string egress qos sap-egress overrides queue reference adaptation-rule</b>
Tree	<b>adaptation-rule</b>
Introduced	16.0.R1
Platforms	All

### **cir keyword**

Synopsis	Constraint used when deriving the operational CIR value
Context	<b>configure service epipe string sap string egress qos sap-egress overrides queue reference adaptation-rule cir keyword</b>
Tree	<b>cir</b>
Options	max, min, closest
Introduced	16.0.R1
Platforms	All

### **pir** *keyword*

Synopsis	Constraint used when deriving the operational PIR value
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">adaptation-rule</a> <b>pir</b> <i>keyword</i>
Tree	<a href="#">pir</a>
Options	max, min, closest
Introduced	16.0.R1
Platforms	All

### **avg-frame-overhead** *decimal-number*

Synopsis	Average packet-to-frame encapsulation overhead
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <b>avg-frame-overhead</b> <i>decimal-number</i>
Tree	<a href="#">avg-frame-overhead</a>
Range	0.00 to 100.00
Introduced	16.0.R1
Platforms	All

### **burst-limit** (*number* | *keyword*)

Synopsis	Explicit shaping burst size for the queue
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <b>burst-limit</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">burst-limit</a>
Range	1 to 14000000
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	All

### **cbs** (*number* | *keyword*)

Synopsis	CBS
----------	-----

Context	<b>configure service epipe</b> <i>string sap string egress qos sap-egress overrides queue reference cbs</i> ( <i>number   keyword</i> )
Tree	<a href="#">cbs</a>
Range	0 to 1048576
Units	kilobytes
Options	auto
Introduced	16.0.R1
Platforms	All

### drop-tail

Synopsis	Enter the <b>drop-tail</b> context
Context	<b>configure service epipe</b> <i>string sap string egress qos sap-egress overrides queue reference drop-tail</i>
Tree	<a href="#">drop-tail</a>
Introduced	16.0.R1
Platforms	All

### low

Synopsis	Enter the <b>low</b> context
Context	<b>configure service epipe</b> <i>string sap string egress qos sap-egress overrides queue reference drop-tail low</i>
Tree	<a href="#">low</a>
Introduced	16.0.R1
Platforms	All

### percent-reduction-from-mbs (*number | keyword*)

Synopsis	Percentage reduction from the MBS for a queue drop tail
Context	<b>configure service epipe</b> <i>string sap string egress qos sap-egress overrides queue reference drop-tail low percent-reduction-from-mbs</i> ( <i>number   keyword</i> )
Tree	<a href="#">percent-reduction-from-mbs</a>
Range	0 to 100
Options	auto
Introduced	16.0.R1

Platforms All

### **hs-class-weight** *number*

Synopsis Class weight override for the queue  
Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#)  
*reference* [hs-class-weight](#) *number*  
Tree [hs-class-weight](#)  
Range 1 | 2 | 4 | 8  
Introduced 16.0.R1  
Platforms 7750 SR-7/12/12e

### **hs-wred-queue**

Synopsis Enter the **hs-wred-queue** context  
Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#)  
*reference* [hs-wred-queue](#)  
Tree [hs-wred-queue](#)  
Introduced 16.0.R1  
Platforms 7750 SR-7/12/12e

### **policy** *reference*

Synopsis Slope policy applied to the HSQ queue group queue  
Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#)  
*reference* [hs-wred-queue](#) [policy](#) *reference*  
Tree [policy](#)  
Reference **configure** [qos](#) [slope-policy](#) *string*  
Introduced 16.0.R1  
Platforms 7750 SR-7/12/12e

### **hs-wrr-weight** *number*

Synopsis Weighted Round Robin (WRR) weight to parent with this queue into the scheduler  
Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#)  
*reference* [hs-wrr-weight](#) *number*

Tree	<a href="#">hs-wrr-weight</a>
Range	1 to 127
Default	1
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **mbs** (*number* | *keyword*)

Synopsis	MBS
Context	<a href="#">configure</a> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i> <a href="#">mbs</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">mbs</a>
Range	0 to 1073741824
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	All

### **monitor-queue-depth**

Synopsis	Enable the <b>monitor-queue-depth</b> context
Context	<a href="#">configure</a> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i> <a href="#">monitor-queue-depth</a>
Tree	<a href="#">monitor-queue-depth</a>
Introduced	20.10.R1
Platforms	All

### **fast-polling** *boolean*

Synopsis	Enable fast polling of the queue depth
Context	<a href="#">configure</a> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i> <a href="#">monitor-queue-depth</a> <a href="#">fast-polling</a> <i>boolean</i>
Tree	<a href="#">fast-polling</a>
Description	When configured to <b>true</b> , this command enables fast polling of the queue depth. Faster polling allows a more accurate view of the actual depth. When configured to <b>false</b> , fast queue polling is not enabled.

Default	false
Introduced	20.10.R1
Platforms	All

### **violation-threshold** *decimal-number*

Synopsis	Threshold for queue depth before violation is raised
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">monitor-queue-depth</a> <b>violation-threshold</b> <i>decimal-number</i>
Tree	<a href="#">violation-threshold</a>
Description	This command specifies the threshold for the queue MBS. When the queue depth exceeds the threshold value, a violation is registered.
Range	0.01 to 99.99
Introduced	20.10.R1
Platforms	All

### **parent**

Synopsis	Enter the <b>parent</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <b>parent</b>
Tree	<a href="#">parent</a>
Introduced	16.0.R1
Platforms	All

### **cir-weight** *number*

Synopsis	CIR parameter that overrides parent for queue group
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">parent</a> <b>cir-weight</b> <i>number</i>
Tree	<a href="#">cir-weight</a>
Range	0 to 100
Introduced	16.0.R1
Platforms	All

### **weight** *number*

Synopsis	PIR parameter that overrides parent for queue group
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">parent</a> <b>weight</b> <i>number</i>
Tree	<a href="#">weight</a>
Range	0 to 100
Introduced	16.0.R1
Platforms	All

### **percent-rate**

Synopsis	Enter the <b>percent-rate</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <b>percent-rate</b>
Tree	<a href="#">percent-rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	All

### **cir** *decimal-number*

Synopsis	CIR percent rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">percent-rate</a> <b>cir</b> <i>decimal-number</i>
Tree	<a href="#">cir</a>
Range	0.00 to 100.00
Introduced	16.0.R1
Platforms	All

### **pir** *decimal-number*

Synopsis	PIR percent rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">percent-rate</a> <b>pir</b> <i>decimal-number</i>
Tree	<a href="#">pir</a>
Range	0.01 to 100.00

Introduced 16.0.R1  
Platforms All

## rate

Synopsis Enter the **rate** context  
Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#)

Notes The following elements are part of a choice: **percent-rate** or **rate**.  
Introduced 16.0.R1  
Platforms All

## cir (*number* | *keyword*)

Synopsis CIR rate  
Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#)  
[reference](#) **rate** **cir** (*number* | *keyword*)  
Tree [cir](#)  
Range 0 to 6400000000  
Units kilobps  
Options max  
Introduced 16.0.R1  
Platforms All

## pir (*number* | *keyword*)

Synopsis PIR rate  
Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#)  
[reference](#) **rate** **pir** (*number* | *keyword*)  
Tree [pir](#)  
Range 1 to 6400000000  
Units kilobps  
Options max  
Introduced 16.0.R1  
Platforms All

### **policy-name** *reference*

Synopsis	Policy ID to associate with SAP for mirrored service
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos sap-egress</a> <a href="#">policy-name</a> <i>reference</i>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **port-redirect-group**

Synopsis	Enter the <b>port-redirect-group</b> context
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos sap-egress</a> <a href="#">port-redirect-group</a>
Tree	<a href="#">port-redirect-group</a>
Introduced	16.0.R1
Platforms	All

### **group-name** *reference*

Synopsis	Name of the queue group redirect list policy
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos sap-egress</a> <a href="#">port-redirect-group</a> <a href="#">group-name</a> <i>reference</i>
Tree	<a href="#">group-name</a>
Reference	<b>configure</b> <a href="#">qos queue-group-templates</a> <a href="#">egress queue-group</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **instance** *number*

Synopsis	Instance of port queue group
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos sap-egress</a> <a href="#">port-redirect-group</a> <a href="#">instance</a> <i>number</i>
Tree	<a href="#">instance</a>
Range	1 to 65535
Introduced	16.0.R1

Platforms All

## scheduler-policy

Synopsis Enter the **scheduler-policy** context  
 Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [scheduler-policy](#)  
 Tree [scheduler-policy](#)  
 Introduced 16.0.R1  
 Platforms All

## overrides

Synopsis Enter the **overrides** context  
 Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [scheduler-policy](#) [overrides](#)  
 Tree [overrides](#)  
 Introduced 16.0.R1  
 Platforms All

## scheduler [[scheduler-name](#)] *string*

Synopsis Enter the **scheduler** list instance  
 Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [scheduler-policy](#) [overrides](#) [scheduler](#) *string*  
 Tree [scheduler](#)  
 Introduced 16.0.R1  
 Platforms All

## [[scheduler-name](#)] *string*

Synopsis Scheduler name  
 Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [scheduler-policy](#) [overrides](#) [scheduler](#) *string*  
 Tree [scheduler](#)  
 Description This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can

be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.

If the scheduler name exists within the policy on a different tier, an error occurs and the current context will not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.

If the provided scheduler name is invalid, a name syntax error will occur, the command will not execute, and the context will not change.

String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## parent

Synopsis	Enter the <b>parent</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <i>string</i> <b>parent</b>
Tree	<a href="#">parent</a>
Introduced	16.0.R1
Platforms	All

## cir-weight *number*

Synopsis	Weight used at the within-CIR port priority level
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <i>string</i> <a href="#">parent</a> <b>cir-weight</b> <i>number</i>
Tree	<a href="#">cir-weight</a>
Range	0 to 100
Introduced	16.0.R1
Platforms	All

## weight *number*

Synopsis	Relative weight of the scheduler to feed the queue
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <i>string</i> <a href="#">parent</a> <b>weight</b> <i>number</i>

Tree	<a href="#">weight</a>
Range	0 to 100
Introduced	16.0.R1
Platforms	All

## rate

Synopsis	Enter the <b>rate</b> context
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos scheduler-policy overrides scheduler</a> <i>string</i> <a href="#">rate</a>
Tree	<a href="#">rate</a>
Introduced	16.0.R1
Platforms	All

## cir (*number* | *keyword*)

Synopsis	CIR at which the queue it to operate
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos scheduler-policy overrides scheduler</a> <i>string</i> <a href="#">rate cir</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cir</a>
Range	0 to 6400000000
Units	kilobps
Options	sum, max
Introduced	16.0.R1
Platforms	All

## pir (*number* | *keyword*)

Synopsis	PIR at which the queue is to operate
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos scheduler-policy overrides scheduler</a> <i>string</i> <a href="#">rate pir</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">pir</a>
Range	1 to 6400000000

### **endpoint** *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Name of the endpoint

Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [endpoint](#) *reference*

Tree [endpoint](#)

Reference **configure** [service](#) [epipe](#) *string* [endpoint](#) *string*

Introduced 16.0.R1

Platforms All

### **eth-cfm**

Synopsis Enter the **eth-cfm** context

Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [eth-cfm](#)

Tree [eth-cfm](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ais** *boolean*

Synopsis Enable the generation and the reception of AIS messages

Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">ais</a> <i>boolean</i>
Tree	<a href="#">ais</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### collect-lmm-fc-stats

Synopsis	Enter the <b>collect-lmm-fc-stats</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">collect-lmm-fc-stats</a>
Tree	<a href="#">collect-lmm-fc-stats</a>
Description	<p>Commands in this context configure per forwarding class (FC) LMM information collection.</p> <p>The commands <b>fc-in-profile</b> and <b>fc</b> in this context are mutually exclusive. The commands apply to either profile-aware or profile-unaware FCs respectively.</p> <p>This command and the <b>collect-lmm-stats</b> command are mutually exclusive when there is entity resource contention.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### fc keyword

Synopsis	Forwarding class name for profile-unaware counter
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">collect-lmm-fc-stats</a> <a href="#">fc</a> <i>keyword</i>
Tree	<a href="#">fc</a>
Description	<p>This command configures individual counters for the specified FCs without regard for profile. The system includes all countable packets that match a configured FC, regardless of profile, in this counter.</p> <p>An FC specified as part of this command and for this specific context cannot be specified as a profile-aware FC using the <b>fc-in-profile</b> command under the <b>collect-lmm-fc-stats</b> context.</p> <p>When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.</p>
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**fc-in-profile** *keyword*

Synopsis	Forwarding class name for profile-aware counter
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">collect-lmm-fc-stats</a> <a href="#">fc-in-profile</a> <i>keyword</i>
Tree	<a href="#">fc-in-profile</a>
Description	<p>This command configures individual counters for the specified FCs with regard to profile. The system includes all countable packets that match a configured FC and that are deemed to be in-profile in this counter.</p> <p>An FC specified as part of this command and for this specific context cannot be specified as a profile-unaware FC using the <b>fc</b> command under the <b>collect-lmm-fc-stats</b> context.</p> <p>When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.</p>
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**collect-lmm-stats** *boolean*

Synopsis	Collect statistics for loss measurement message tests
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">collect-lmm-stats</a> <i>boolean</i>
Tree	<a href="#">collect-lmm-stats</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**mep** [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number*

Synopsis	Enter the <b>mep</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i>
Tree	<a href="#">mep</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **md-admin-name** *reference*

Synopsis	Maintenance Domain (MD) name
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i>

Range	1 to 8191
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **admin-state** *keyword*

Synopsis	Administrative state of the MEP
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ais**

Synopsis	Enable the <b>ais</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">ais</a>
Tree	<a href="#">ais</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **client-meg-level** *number*

Synopsis	Client MEG level for AIS message generation
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">ais</a> <a href="#">client-meg-level</a> <i>number</i>
Tree	<a href="#">client-meg-level</a>
Range	1 to 7
Max.	7
Instances	
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **interface-support** *boolean*

Synopsis	Enable generation of AIS PDUs based on endpoint state
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">ais</a> <a href="#">interface-support</a> <i>boolean</i>

Tree	<a href="#">interface-support</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **interval** *number*

Synopsis	Transmission interval for AIS messages
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">ais</a> <a href="#">interval</a> <i>number</i>
Tree	<a href="#">interval</a>
Range	1   60
Default	1
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **low-priority-defect** *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">ais</a> <a href="#">low-priority-defect</a> <i>keyword</i>
Tree	<a href="#">low-priority-defect</a>
Default	all-def
Options	all-def, mac-rem-err-xcon
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **priority** *number*

Synopsis	Priority of the AIS messages generated by the node
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">ais</a> <a href="#">priority</a> <i>number</i>
Tree	<a href="#">priority</a>
Range	0 to 7
Default	7

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## alarm-notification

Synopsis	Enter the <b>alarm-notification</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>alarm-notification</b>
Tree	<a href="#">alarm-notification</a>
Description	Commands in this context configure the Fault Notification Generator (FNG) time values to raise an alarm or reset the CCM defect alarm.  Use these timers for network management processes. The timers are not tied into delaying the notification to the fault management system on the network element and do not affect fault propagation mechanisms.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## fng-alarm-time *number*

Synopsis	Time that must expire before an FNG alarm is raised
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">alarm-notification</a> <b>fng-alarm-time</b> <i>number</i>
Tree	<a href="#">fng-alarm-time</a>
Range	250   500   1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## fng-reset-time *number*

Synopsis	Time that must expire before an FNG alarm is reset
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">alarm-notification</a> <b>fng-reset-time</b> <i>number</i>
Tree	<a href="#">fng-reset-time</a>
Range	250   500   1000
Units	centiseconds
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm boolean**

Synopsis Generate CCM messages

Context **configure service epipe string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm boolean**

Tree **ccm**

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm-ltm-priority number**

Synopsis Priority of CCM and LTM messages transmitted by the MEP

Context **configure service epipe string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm-ltm-priority number**

Tree **ccm-ltm-priority**

Range 0 to 7

Default 7

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm-padding-size number**

Synopsis Number of octets of padding to insert in CCM packets

Context **configure service epipe string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm-padding-size number**

Tree **ccm-padding-size**

Description This command sets the byte size of the optional Data TLV to be included in the ETH-CC PDU.

This command increases the size of the ETH-CC PDU by the configured value. The base size of the ETH-CC PDU, including the Interface Status TLV and Port Status TLV, is 83 bytes not including the Layer 2 encapsulation. CCM padding is not supported when the CCM interval (configured through **configure eth-cfm domain association ccm-interval**) is less than 1 second.

Range 3 to 1500

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **cfm-vlan-tag** *string*

Synopsis VLAN tags to apply to CFM PDUs for egress processing  
Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [eth-cfm](#) [mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* **cfm-vlan-tag** *string*  
Tree [cfm-vlan-tag](#)  
String Length 1 to 9  
Introduced 21.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **csf**

Synopsis Enable the **csf** context  
Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [eth-cfm](#) [mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* **csf**  
Tree [csf](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **multiplier** *decimal-number*

Synopsis Multiplication factor used to clear the CSF condition  
Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [eth-cfm](#) [mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* **csf** **multiplier** *decimal-number*  
Tree [multiplier](#)  
Range 0.0 | 2.0 to 30.0  
Default 3.5  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **description** *string*

Synopsis Text description  
Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [eth-cfm](#) [mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* **description** *string*

Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **direction** *keyword*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Direction the MEP faces
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">direction</a> <i>keyword</i>
Tree	<a href="#">direction</a>
Default	down
Options	down, up
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **eth-test**

Synopsis	Enable the <b>eth-test</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">eth-test</a>
Tree	<a href="#">eth-test</a>
Description	Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the <b>oam eth-cfm eth-test</b> command.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **bit-error-threshold** *number*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">eth-test</a> <a href="#">bit-error-threshold</a> <i>number</i>

Tree	<a href="#">bit-error-threshold</a>
Range	0 to 11840
Default	1
Units	bit errors
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## test-pattern

Synopsis	Enter the <b>test-pattern</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">eth-test</a> <a href="#">test-pattern</a>
Tree	<a href="#">test-pattern</a>
Description	Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## crc-tlv *boolean*

Synopsis	Generate a CRC checksum
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">eth-test</a> <a href="#">test-pattern</a> <a href="#">crc-tlv</a> <i>boolean</i>
Tree	<a href="#">crc-tlv</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## pattern *keyword*

Synopsis	Test pattern for Ethernet Test frames
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">eth-test</a> <a href="#">test-pattern</a> <a href="#">pattern</a> <i>keyword</i>
Tree	<a href="#">pattern</a>
Description	This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.

Default	all-zeros
Options	all-zeros, all-ones
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fault-propagation** *keyword*

Synopsis	Fault propagation for the MEP
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm</b> <b>mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>fault-propagation</b> <i>keyword</i>
Tree	<b>fault-propagation</b>
Options	use-if-status-tlv, suspend-ccm
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **grace**

Synopsis	Enter the <b>grace</b> context
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm</b> <b>mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>grace</b>
Tree	<b>grace</b>
Description	Commands in this context configure the Nokia ETH-CFM Grace function and the ITU-T Y.1731 Ethernet Expected Default (ETH-ED) function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **eth-ed**

Synopsis	Enter the <b>eth-ed</b> context
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm</b> <b>mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>grace</b> <b>eth-ed</b>
Tree	<b>eth-ed</b>
Description	Commands in this context configure the ITU-T Y.1731 ETH-ED function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **max-rx-defect-window** *number*

Synopsis	Maximum received ETH-ED expected defect window duration
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">grace</a> <a href="#">eth-ed</a> <a href="#">max-rx-defect-window</a> <i>number</i>
Tree	<a href="#">max-rx-defect-window</a>
Range	1 to 86400
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **priority** *number*

Synopsis	Transmission priority for ETH-ED PDUs
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">grace</a> <a href="#">eth-ed</a> <a href="#">priority</a> <i>number</i>
Tree	<a href="#">priority</a>
Range	0 to 7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **rx-eth-ed** *boolean*

Synopsis	Receive and process ETH-ED ITU-T Y.1731 PDUs on the MEP
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">grace</a> <a href="#">eth-ed</a> <a href="#">rx-eth-ed</a> <i>boolean</i>
Tree	<a href="#">rx-eth-ed</a>
Description	This command enables the reception and processing of the ITU-T Y.1731 ETH-ED PDU on the MEP.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **tx-eth-ed** *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
----------	-----------------------------------

Context	<b>configure service epipe</b> <i>string sap string eth-cfm mep md-admin-name</i> <i>reference ma-admin-name reference mep-id number grace eth-ed tx-eth-ed</i> <i>boolean</i>
Tree	<a href="#">tx-eth-ed</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## eth-vsm-grace

Synopsis	Enter the <b>eth-vsm-grace</b> context
Context	<b>configure service epipe</b> <i>string sap string eth-cfm mep md-admin-name</i> <i>reference ma-admin-name reference mep-id number grace eth-vsm-grace</i>
Tree	<a href="#">eth-vsm-grace</a>
Description	Commands in this context configure the Nokia ETH-CFM Grace function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## rx-eth-vsm-grace *boolean*

Synopsis	Receive and process Nokia ETH-CFM Grace PDU on the MEP
Context	<b>configure service epipe</b> <i>string sap string eth-cfm mep md-admin-name</i> <i>reference ma-admin-name reference mep-id number grace eth-vsm-grace rx-eth-vsm-grace</i> <i>boolean</i>
Tree	<a href="#">rx-eth-vsm-grace</a>
Description	When configured to <b>true</b> , the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.  When configured to <b>false</b> , the router disables the Nokia Grace function.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## tx-eth-vsm-grace *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	<b>configure service epipe</b> <i>string sap string eth-cfm mep md-admin-name</i> <i>reference ma-admin-name reference mep-id number grace eth-vsm-grace tx-eth-vsm-grace</i> <i>boolean</i>
Tree	<a href="#">tx-eth-vsm-grace</a>

Description	<p>When configured to <b>true</b>, the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.</p> <p>The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.</p> <p>The operator must configure the <b>configure system eth-cfm grace</b> command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).</p> <p>When configured to <b>false</b>, the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.</p>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **lbm-svc-act-responder** *boolean*

Synopsis	Process service activation streams in ETH-CFM LBM
Context	<b>configure service epipe</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>lbm-svc-act-responder</b> <i>boolean</i>
Tree	<a href="#">lbm-svc-act-responder</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **low-priority-defect** *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	<b>configure service epipe</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>low-priority-defect</b> <i>keyword</i>
Tree	<a href="#">low-priority-defect</a>
Default	mac-rem-err-xcon
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mac-address** *string*

Synopsis	MAC address of the MEP
----------	------------------------

Context	<b>configure service epipe</b> <i>string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number mac-address string</i>
Tree	<a href="#">mac-address</a>
Description	This command specifies the MAC address of the MEP. When unconfigured, the MAC address of the port (if the MEP is on a SAP) or the MAC address of a bridge (if the MEP is on a spoke) is used.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **one-way-delay-threshold** *number*

Synopsis	Threshold time limit for the one-way delay test
Context	<b>configure service epipe</b> <i>string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number one-way-delay-threshold number</i>
Tree	<a href="#">one-way-delay-threshold</a>
Range	0 to 600
Default	3
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **primary-vlan** *boolean*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	MEP provisioned using MA primary VLAN ID
Context	<b>configure service epipe</b> <i>string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number primary-vlan boolean</i>
Tree	<a href="#">primary-vlan</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**mip primary-vlan** (*number* | *keyword*)

Synopsis	Enter the <b>mip</b> list instance
Context	<b>configure service epipe</b> <i>string sap string eth-cfm mip primary-vlan</i> ( <i>number</i>   <i>keyword</i> )
Tree	<b>mip</b>
Description	This command allows the CFM function to include additional VLAN tags to the CFM packet that are carried to the egress and treated as service delimited. Typically, this function is used to influence the VLAN carried over a binding that uses the <b>vc-type vlan</b> or the binding forces the use of one or more VLAN tag that results in a mismatch between the service data arriving at the binding and the locally generated ETH-CFM PDUs arriving at the same egress. When this command is included under the MEP or MIP configuration, the tags used as part of the configuration typically match the SAP service delimited configuration.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**primary-vlan** (*number* | *keyword*)

Synopsis	VLAN ID to which the MIP is attached
Context	<b>configure service epipe</b> <i>string sap string eth-cfm mip primary-vlan</i> ( <i>number</i>   <i>keyword</i> )
Tree	<b>mip</b>
Description	This command provides an option for linking a MIP with a Primary VLAN number or none. When the <b>none</b> option is provided, the MIP does not include the primary vlan.
Range	1 to 4094
Options	none
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**cfm-vlan-tag** *string*

Synopsis	VLAN tags to apply to CFM PDUs for egress processing
Context	<b>configure service epipe</b> <i>string sap string eth-cfm mip primary-vlan</i> ( <i>number</i>   <i>keyword</i> ) <b>cfm-vlan-tag</b> <i>string</i>
Tree	<b>cfm-vlan-tag</b>
Description	This command allows the CFM function to include additional VLAN tags to the CFM packet that are carried to the egress and treated as service delimited. Typically, this function is used to influence the VLAN carried over a binding that uses the <b>vc-type vlan</b> or the binding forces the use of one or more VLAN tag that results in a mismatch between the service data arriving at the binding and the locally generated ETH-CFM

PDUs arriving at the same egress. When this command is included under the MEP or MIP configuration, the tags used as part of the configuration typically match the SAP service delimited configuration.

String Length	1 to 9
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mac-address** *string*

Synopsis	MAC address of the MIP
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm</b> <b>mip</b> <b>primary-vlan</b> ( <i>number</i>   <i>keyword</i> ) <b>mac-address</b> <i>string</i>
Tree	<b>mac-address</b>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **squelch-ingress-ctag-levels** *number*

Synopsis	Squelch levels using additional VLAN C-Tag space
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm</b> <b>squelch-ingress-ctag-levels</b> <i>number</i>
Tree	<b>squelch-ingress-ctag-levels</b>
Description	This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding plus an additional VLAN, up to a maximum tag length of two tags. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.  The list of levels must be a complete contiguous list from 0 up to the highest level to be dropped.
Range	0 to 7
Max.	8
Instances	
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **squelch-ingress-levels** *number*

Synopsis	Levels for which ETH-CFM packets are silently discarded
----------	---

Context	<b>configure service epipe</b> <i>string sap string eth-cfm squelch-ingress-levels number</i>
Tree	<a href="#">squelch-ingress-levels</a>
Description	<p>This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.</p> <p>The list of levels must be a complete contiguous list from 0 up to the highest level that will be dropped.</p>
Range	0 to 7
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## ethernet

Synopsis	Enter the <b>ethernet</b> context
Context	<b>configure service epipe</b> <i>string sap string ethernet</i>
Tree	<a href="#">ethernet</a>
Introduced	20.5.R1
Platforms	All

## llf

Synopsis	Enter the <b>llf</b> context
Context	<b>configure service epipe</b> <i>string sap string ethernet llf</i>
Tree	<a href="#">llf</a>
Description	<p>Commands in this context enable Link Loss Forwarding (LLF) on an Ethernet port. This feature provides an end-to-end OAM fault notification for Ethernet VLL service. It brings down the Ethernet port (Ethernet LLF) or sends a SONET/SDH Path AIS (ATM LLF) toward the attached CE when there is a local fault on the pseudowire or service, or a remote fault on the SAP or pseudowire, signaled with label withdrawal or T-LDP status bits. It ceases when the fault disappears.</p> <p>The Ethernet port must be configured for null encapsulation.</p> <p>This feature is also supported in Epipes with BGP-EVPN enabled. In this case, upon removal of the EVPN destination, the port transitions to an operationally down state, however the AD per-EVI route for the SAP is still advertised (the SAP remains</p>

operationally up). The port transitions to the operationally up state when the EVPN destination is created.

Introduced 20.5.R1  
Platforms All

### **admin-state** *keyword*

Synopsis Administrative state of Link Loss Forwarding  
Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [ethernet](#) [l1f](#) **admin-state** *keyword*  
Tree [admin-state](#)  
Default disable  
Options enable, disable  
Introduced 20.5.R1  
Platforms All

### **ignore-oper-down** *boolean*

Synopsis Ignore operational down state of the SAP on SAP failure  
Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* **ignore-oper-down** *boolean*  
Tree [ignore-oper-down](#)  
Description When configured to **true**, the Epipe service does not transition to the operational down state when the SAP fails. This command can only be set to **true** for a single SAP in an Epipe. The command can be used in Epipes with or without EVPN enabled.  
When configured to **false**, the Epipe service transitions to the operational down state when SAP fails.  
Default false  
Introduced 16.0.R1  
Platforms All

### **ingress**

### **cir** (*number* | *keyword*)

Synopsis	CIR rate
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>sap</b> <i>string</i> <b>ingress</b> <b>qos</b> <b>sap-ingress</b> <b>overrides</b> <b>policer</b> <i>reference</i> <b>rate</b> <b>cir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>cir</b>
Range	0 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **pir** (*number* | *keyword*)

Synopsis	PIR rate
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>sap</b> <i>string</i> <b>ingress</b> <b>qos</b> <b>sap-ingress</b> <b>overrides</b> <b>policer</b> <i>reference</i> <b>rate</b> <b>pir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>pir</b>
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **stat-mode** *keyword*

Synopsis	Mode of statistics collected by the policer
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>sap</b> <i>string</i> <b>ingress</b> <b>qos</b> <b>sap-ingress</b> <b>overrides</b> <b>policer</b> <i>reference</i> <b>stat-mode</b> <i>keyword</i>
Tree	<b>stat-mode</b>

Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-priority-no-cir, offered-profile-cir, offered-priority-cir, offered-limited-profile-cir, offered-profile-capped-cir, offered-limited-capped-cir
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **queue** [\[queue-id\]](#) *reference*

Synopsis	Enter the <b>queue</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i>
Tree	<a href="#">queue</a>
Introduced	16.0.R1
Platforms	All

### **[queue-id]** *reference*

Synopsis	Policer unique ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i>
Tree	<a href="#">queue</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">sap-ingress</a> <i>string</i> <a href="#">queue</a> <i>number</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **adaptation-rule**

Synopsis	Enter the <b>adaptation-rule</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i> <a href="#">adaptation-rule</a>
Tree	<a href="#">adaptation-rule</a>
Introduced	16.0.R1
Platforms	All

### **cir keyword**

Synopsis	Constraint used when deriving the operational CIR value
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">adaptation-rule</a> <a href="#">cir</a> <i>keyword</i>
Tree	<a href="#">cir</a>
Options	max, min, closest
Introduced	16.0.R1
Platforms	All

### **pir keyword**

Synopsis	Constraint used when deriving the operational PIR value
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">adaptation-rule</a> <a href="#">pir</a> <i>keyword</i>
Tree	<a href="#">pir</a>
Options	max, min, closest
Introduced	16.0.R1
Platforms	All

### **cbs (number | keyword)**

Synopsis	CBS
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">cbs</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cbs</a>
Range	0 to 1048576
Units	kilobytes
Options	auto
Introduced	16.0.R1
Platforms	All

### **drop-tail**

Synopsis	Enter the <b>drop-tail</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">drop-tail</a>

Tree	<a href="#">drop-tail</a>
Introduced	16.0.R1
Platforms	All

## low

Synopsis	Enter the <b>low</b> context
Context	<b>configure service epipe</b> <i>string</i> <b>sap</b> <i>string</i> <b>ingress qos sap-ingress overrides queue reference</b> <a href="#">drop-tail low</a>
Tree	<a href="#">low</a>
Introduced	16.0.R1
Platforms	All

## percent-reduction-from-mbs (*number* | *keyword*)

Synopsis	Percentage reduction from the MBS for a queue drop tail
Context	<b>configure service epipe</b> <i>string</i> <b>sap</b> <i>string</i> <b>ingress qos sap-ingress overrides queue reference</b> <a href="#">drop-tail low percent-reduction-from-mbs</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">percent-reduction-from-mbs</a>
Range	0 to 100
Options	auto
Introduced	16.0.R1
Platforms	All

## mbs (*number* | *keyword*)

Synopsis	MBS
Context	<b>configure service epipe</b> <i>string</i> <b>sap</b> <i>string</i> <b>ingress qos sap-ingress overrides queue reference</b> <a href="#">mbs</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">mbs</a>
Range	0 to 1073741824
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	All

## monitor-queue-depth

Synopsis	Enable the <b>monitor-queue-depth</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">monitor-queue-depth</a>
Tree	<a href="#">monitor-queue-depth</a>
Introduced	21.7.R1
Platforms	All

## fast-polling *boolean*

Synopsis	Enable fast polling of the queue depth
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">monitor-queue-depth</a> <a href="#">fast-polling</a> <i>boolean</i>
Tree	<a href="#">fast-polling</a>
Default	false
Introduced	21.7.R1
Platforms	All

## parent

Synopsis	Enter the <b>parent</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">parent</a>
Tree	<a href="#">parent</a>
Introduced	16.0.R1
Platforms	All

## cir-weight *number*

Synopsis	CIR parameter that overrides parent for queue group
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">parent</a> <a href="#">cir-weight</a> <i>number</i>
Tree	<a href="#">cir-weight</a>
Range	0 to 100
Introduced	16.0.R1

Platforms All

### **weight** *number*

Synopsis PIR parameter that overrides parent for queue group

Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [ingress](#) [qos](#) [sap-ingress](#) [overrides](#) [queue](#)  
*reference* [parent](#) [weight](#) *number*

Tree [weight](#)

Range 0 to 100

Introduced 16.0.R1

Platforms All

### **percent-rate**

Synopsis Enter the **percent-rate** context

Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [ingress](#) [qos](#) [sap-ingress](#) [overrides](#) [queue](#)  
*reference* [percent-rate](#)

Tree [percent-rate](#)

Notes The following elements are part of a choice: **percent-rate** or **rate**.

Introduced 16.0.R1

Platforms All

### **cir** *decimal-number*

Synopsis CIR percent rate

Context **configure** [service](#) [epipe](#) *string* [sap](#) *string* [ingress](#) [qos](#) [sap-ingress](#) [overrides](#) [queue](#)  
*reference* [percent-rate](#) [cir](#) *decimal-number*

Tree [cir](#)

Range 0.00 to 100.00

Introduced 16.0.R1

Platforms All

### **pir** *decimal-number*

Synopsis PIR percent rate

Context	<b>configure service epipe</b> <i>string sap string ingress qos sap-ingress overrides queue reference percent-rate pir decimal-number</i>
Tree	<a href="#">pir</a>
Range	0.01 to 100.00
Introduced	16.0.R1
Platforms	All

## rate

Synopsis	Enter the <b>rate</b> context
Context	<b>configure service epipe</b> <i>string sap string ingress qos sap-ingress overrides queue reference rate</i>
Tree	<a href="#">rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	All

## cir (*number* | *keyword*)

Synopsis	CIR rate
Context	<b>configure service epipe</b> <i>string sap string ingress qos sap-ingress overrides queue reference rate cir (number   keyword)</i>
Tree	<a href="#">cir</a>
Range	0 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	All

## pir (*number* | *keyword*)

Synopsis	PIR rate
Context	<b>configure service epipe</b> <i>string sap string ingress qos sap-ingress overrides queue reference rate pir (number   keyword)</i>
Tree	<a href="#">pir</a>
Range	1 to 6400000000

Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	All

### **policy-name** *reference*

Synopsis	Policy ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">policy-name</a> <i>reference</i>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">sap-ingress</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **queuing-type** *keyword*

Synopsis	Queuing type
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">queuing-type</a> <i>keyword</i>
Tree	<a href="#">queuing-type</a>
Options	shared, multipoint-shared
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, VSR

### **scheduler-policy**

Synopsis	Enter the <b>scheduler-policy</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a>
Tree	<a href="#">scheduler-policy</a>
Introduced	16.0.R1
Platforms	All

### **overrides**

Synopsis	Enter the <b>overrides</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a>

Tree	<a href="#">overrides</a>
Introduced	16.0.R1
Platforms	All

### **scheduler** [[scheduler-name](#)] *string*

Synopsis	Enter the <b>scheduler</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <i>string</i>
Tree	<a href="#">scheduler</a>
Introduced	16.0.R1
Platforms	All

### **[scheduler-name]** *string*

Synopsis	Scheduler name
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <i>string</i>
Tree	<a href="#">scheduler</a>
Description	<p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (<b>#</b>, <b>\$</b>, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context will not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error will occur, the command will not execute, and the context will not change.</p>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## parent

Synopsis	Enter the <b>parent</b> context
Context	<b>configure service epipe</b> <i>string sap string ingress qos scheduler-policy overrides scheduler string parent</i>
Tree	<b>parent</b>
Introduced	16.0.R1
Platforms	All

## cir-weight *number*

Synopsis	Weight used at the within-CIR port priority level
Context	<b>configure service epipe</b> <i>string sap string ingress qos scheduler-policy overrides scheduler string parent cir-weight number</i>
Tree	<b>cir-weight</b>
Range	0 to 100
Introduced	16.0.R1
Platforms	All

## weight *number*

Synopsis	Relative weight of the scheduler to feed the queue
Context	<b>configure service epipe</b> <i>string sap string ingress qos scheduler-policy overrides scheduler string parent weight number</i>
Tree	<b>weight</b>
Range	0 to 100
Introduced	16.0.R1
Platforms	All

## rate

Synopsis	Enter the <b>rate</b> context
Context	<b>configure service epipe</b> <i>string sap string ingress qos scheduler-policy overrides scheduler string rate</i>
Tree	<b>rate</b>
Introduced	16.0.R1
Platforms	All

### **cir** (*number* | *keyword*)

Synopsis	CIR at which the queue it to operate
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <i>string</i> <a href="#">rate</a> <b>cir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cir</a>
Range	0 to 6400000000
Units	kilobps
Options	sum, max
Introduced	16.0.R1
Platforms	All

### **pir** (*number* | *keyword*)

Synopsis	PIR at which the queue is to operate
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <i>string</i> <a href="#">rate</a> <b>pir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">pir</a>
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	All

### **policy-name** *reference*

Synopsis	Scheduler policy name
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <b>policy-name</b> <i>reference</i>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">scheduler-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

## qtag-manipulation

Synopsis	Enter the <b>qtag-manipulation</b> context
Context	<b>configure service epipe</b> <i>string sap string ingress</i> <b>qtag-manipulation</b>
Tree	<b>qtag-manipulation</b>
Introduced	16.0.R1
Platforms	All

## c-tag (*number | keyword*)

Synopsis	Inner ingress VLAN translation for two service delimiting VLAN values
Context	<b>configure service epipe</b> <i>string sap string ingress</i> <b>qtag-manipulation c-tag</b> ( <i>number   keyword</i> )
Tree	<b>c-tag</b>
Range	0 to 4094
Options	tag-*
Notes	The following elements are part of a choice: <b>push-dot1q-vlan</b> or ( <b>c-tag</b> and <b>s-tag</b> ).
Introduced	16.0.R1
Platforms	All

## push-dot1q-vlan (*number | keyword*)

Synopsis	VLAN translation information
Context	<b>configure service epipe</b> <i>string sap string ingress</i> <b>qtag-manipulation push-dot1q-vlan</b> ( <i>number   keyword</i> )
Tree	<b>push-dot1q-vlan</b>
Range	0 to 4094
Options	use-sap-svlan
Notes	The following elements are part of a choice: <b>push-dot1q-vlan</b> or ( <b>c-tag</b> and <b>s-tag</b> ).
Introduced	16.0.R1
Platforms	All

## s-tag *number*

Synopsis	Outer ingress VLN translation for two service delimiting VLAN values
Context	<b>configure service epipe</b> <i>string sap string ingress</i> <b>qtag-manipulation s-tag</b> <i>number</i>

Tree	<a href="#">s-tag</a>
Range	0 to 4094
Notes	The following elements are part of a choice: <b>push-dot1q-vlan</b> or ( <b>c-tag</b> and <b>s-tag</b> ).
Introduced	16.0.R1
Platforms	All

## **I2tpv3-session**

Synopsis	Enable the <b>I2tpv3-session</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">I2tpv3-session</a>
Tree	<a href="#">I2tpv3-session</a>
Introduced	16.0.R4
Platforms	All

## **admin-state** *keyword*

Synopsis	Administrative state of the session for the service
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">I2tpv3-session</a> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R4
Platforms	All

## **pseudo-wire**

### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>pseudo-wire</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">I2tpv3-session</a> <b>pseudo-wire</b>
Tree	<a href="#">pseudo-wire</a>
Introduced	16.0.R4
Platforms	All

## ethernet

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the Ethernet PW-type for the L2TPv3 session
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">l2tpv3-session</a> <a href="#">pseudo-wire</a> <a href="#">ethernet</a>
Tree	<a href="#">ethernet</a>
Notes	The following elements are part of a choice: <b>ethernet</b> or <b>ethernet-vlan-id</b> .
Introduced	16.0.R4
Platforms	All

## ethernet-vlan-id *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Ethernet-VLAN PW-type ID for the L2TPv3 session
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">l2tpv3-session</a> <a href="#">pseudo-wire</a> <a href="#">ethernet-vlan-id</a> <i>number</i>
Tree	<a href="#">ethernet-vlan-id</a>
Range	0 to 4095
Notes	The following elements are part of a choice: <b>ethernet</b> or <b>ethernet-vlan-id</b> .
Introduced	16.0.R4
Platforms	All

## router

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>router</b> context
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">l2tpv3-session</a> <a href="#">router</a>
Tree	<a href="#">router</a>

Introduced 16.0.R4  
Platforms All

### group *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Tunnel group name  
Context **configure** service epipe *string* sap *string* l2tpv3-session router group *string*  
Tree [group](#)  
String Length 1 to 32  
Introduced 16.0.R4  
Platforms All

### router-instance *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Router name used to identify the router instance  
Context **configure** service epipe *string* sap *string* l2tpv3-session router router-instance *string*  
Tree [router-instance](#)  
String Length 1 to 64  
Introduced 16.0.R4  
Platforms All

### vc-id *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis VC ID for the L2TPv3 session  
Context **configure** service epipe *string* sap *string* l2tpv3-session vc-id *number*  
Tree [vc-id](#)

Range	1 to 4294967295
Introduced	16.0.R4
Platforms	All

## lag

Synopsis	Enter the <b>lag</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <b>lag</b>
Tree	<a href="#">lag</a>
Introduced	16.0.R1
Platforms	All

## link-map-profile *number*

Synopsis	LAG link map profile
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <b>lag</b> <a href="#">link-map-profile</a> <i>number</i>
Tree	<a href="#">link-map-profile</a>
Range	1 to 64
Introduced	16.0.R1
Platforms	All

## per-link-hash

Synopsis	Enter the <b>per-link-hash</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <b>lag</b> <a href="#">per-link-hash</a>
Tree	<a href="#">per-link-hash</a>
Introduced	16.0.R1
Platforms	All

## class *number*

Synopsis	Class used on LAG egress using weighted per-link-hash
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <b>lag</b> <a href="#">per-link-hash</a> <a href="#">class</a> <i>number</i>
Tree	<a href="#">class</a>
Range	1 to 3

Default	1
Introduced	16.0.R1
Platforms	All

### **weight** *number*

Synopsis	Weight used on LAG egress using weighted per-link-hash
Context	<b>configure</b> <a href="#">service epipe string sap string lag per-link-hash weight number</a>
Tree	<a href="#">weight</a>
Range	1 to 1024
Default	1
Introduced	16.0.R1
Platforms	All

### **mc-ring**

Synopsis	Enable the <b>mc-ring</b> context
Context	<b>configure</b> <a href="#">service epipe string sap string mc-ring</a>
Tree	<a href="#">mc-ring</a>
Introduced	16.0.R1
Platforms	All

### **ring-node** *string*

Synopsis	Name for the ring node associated with this SAP
Context	<b>configure</b> <a href="#">service epipe string sap string mc-ring ring-node string</a>
Tree	<a href="#">ring-node</a>
String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **monitor-oper-group** *reference*

Synopsis	Monitor operational group
----------	---------------------------

Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">monitor-oper-group</a> <i>reference</i>
Tree	<a href="#">monitor-oper-group</a>
Reference	<b>configure</b> <a href="#">service</a> <a href="#">oper-group</a> <i>string</i>
Notes	The following elements are part of a choice: <b>monitor-oper-group</b> or <b>oper-group</b> .
Introduced	16.0.R1
Platforms	All

### **multi-service-site** *reference*

Synopsis	Multi service site name
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">multi-service-site</a> <i>reference</i>
Tree	<a href="#">multi-service-site</a>
Reference	<b>configure</b> <a href="#">service</a> <a href="#">customer</a> <i>string</i> <a href="#">multi-service-site</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **oper-group** *reference*

Synopsis	Operational group
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">oper-group</a> <i>reference</i>
Tree	<a href="#">oper-group</a>
Reference	<b>configure</b> <a href="#">service</a> <a href="#">oper-group</a> <i>string</i>
Notes	The following elements are part of a choice: <b>monitor-oper-group</b> or <b>oper-group</b> .
Introduced	16.0.R1
Platforms	All

### **transit-policy**

Synopsis	Enable the <b>transit-policy</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">transit-policy</a>
Tree	<a href="#">transit-policy</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ip reference

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IP transit policy ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">transit-policy</a> <a href="#">ip</a> <i>reference</i>
Tree	<a href="#">ip</a>
Reference	<b>configure</b> <a href="#">application-assurance</a> <a href="#">group</a> <i>number</i> <a href="#">partition</a> <i>number</i> <a href="#">transit-ip-policy</a> <i>number</i>
Notes	The following elements are part of a mandatory choice: <b>ip</b> or <b>prefix</b> .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## prefix reference

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IP prefix policy ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">transit-policy</a> <a href="#">prefix</a> <i>reference</i>
Tree	<a href="#">prefix</a>
Reference	<b>configure</b> <a href="#">application-assurance</a> <a href="#">group</a> <i>number</i> <a href="#">partition</a> <i>number</i> <a href="#">transit-prefix-policy</a> <i>number</i>
Notes	The following elements are part of a mandatory choice: <b>ip</b> or <b>prefix</b> .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## segment-routing-v6 [[instance](#)] *number*

Synopsis	Enter the <b>segment-routing-v6</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">segment-routing-v6</a> <i>number</i>
Tree	<a href="#">segment-routing-v6</a>
Description	Commands in this context configure the SRv6 instance that is used in the service.
Introduced	21.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **[instance]** *number*

Synopsis Segment routing v6 instance  
Context **configure service epipe** *string segment-routing-v6 number*  
Tree [segment-routing-v6](#)  
Range 1  
Notes This element is part of a list key.  
Introduced 21.7.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **locator** [[locator-name](#)] *reference*

Synopsis Enter the **locator** list instance  
Context **configure service epipe** *string segment-routing-v6 number locator reference*  
Tree [locator](#)  
Max. Instances 1  
Introduced 21.7.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **[locator-name]** *reference*

Synopsis SRv6 locator name  
Context **configure service epipe** *string segment-routing-v6 number locator reference*  
Tree [locator](#)  
Reference **configure router** *string segment-routing segment-routing-v6 locator string*  
Notes This element is part of a list key.  
Introduced 21.7.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **function**

Synopsis Enter the **function** context

Context	<b>configure service epipe</b> <i>string segment-routing-v6 number locator reference function</i>
Tree	<a href="#">function</a>
Description	Commands in this context configure SRv6 SID function values and parameters for the locator.
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## end-dx2

Synopsis	Enable the <b>end-dx2</b> context
Context	<b>configure service epipe</b> <i>string segment-routing-v6 number locator reference function end-dx2</i>
Tree	<a href="#">end-dx2</a>
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## value *number*

Synopsis	SRv6 function value
Context	<b>configure service epipe</b> <i>string segment-routing-v6 number locator reference function end-dx2 value number</i>
Tree	<a href="#">value</a>
Description	This command assigns the optional static function value for the routes in the VPRN, VPLS, or Epipe instance.  When unconfigured, the system allocates a value dynamically.
Range	1 to 1048575
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## micro-segment-locator [[locator-name](#)] *reference*

Synopsis	Enter the <b>micro-segment-locator</b> list instance
Context	<b>configure service epipe</b> <i>string segment-routing-v6 number micro-segment-locator reference</i>
Tree	<a href="#">micro-segment-locator</a>
Max. Instances	1

Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### [locator-name] *reference*

Synopsis	Micro-segment SRv6 locator name
Context	<b>configure service epipe</b> <i>string</i> <b>segment-routing-v6</b> <i>number</i> <b>micro-segment-locator</b> <i>reference</i>
Tree	<b>micro-segment-locator</b>
Description	This command associates a pre-defined micro-segment SRv6 locator (defined in the <b>configure router segment-routing segment-routing-v6</b> context) with the SRv6 instance in the service. The same micro-segment locator can be referenced in multiple BGP instances used by IPVPN or EVPN.
Reference	<b>configure router</b> <i>string</i> <b>segment-routing</b> <b>segment-routing-v6</b> <b>micro-segment-locator</b> <i>string</i>
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### function

Synopsis	Enter the <b>function</b> context
Context	<b>configure service epipe</b> <i>string</i> <b>segment-routing-v6</b> <i>number</i> <b>micro-segment-locator</b> <i>reference</i> <b>function</b>
Tree	<b>function</b>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### udx2

Synopsis	Enable the <b>udx2</b> context
Context	<b>configure service epipe</b> <i>string</i> <b>segment-routing-v6</b> <i>number</i> <b>micro-segment-locator</b> <i>reference</i> <b>function</b> <b>udx2</b>
Tree	<b>udx2</b>
Description	Commands in this context configure the SRv6 micro-segment uDX2 behavior and the function value that is associated with the SRv6 instance in the service. When configured, decapsulation and cross-connect to the egress SAP occurs in the Epipe service.

Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **value** *number*

Synopsis	SRv6 function value
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>segment-routing-v6</b> <i>number</i> <b>micro-segment-locator</b> <i>reference</i> <b>function</b> <b>udx2</b> <i>value</i> <i>number</i>
Tree	<b>value</b>
Description	This command assigns the optional static function value for the routes in the VPRN, VPLS, or Epipe instance.  When unconfigured, the system allocates a value dynamically.
Range	1 to 1048575
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **service-id** *number*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Service ID
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>service-id</b> <i>number</i>
Tree	<b>service-id</b>
Range	1 to 2147483647
Introduced	16.0.R1
Platforms	All

### **service-mtu** *number*

Synopsis	MTU size
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>service-mtu</b> <i>number</i>
Tree	<b>service-mtu</b>
Description	This command configures the Maximum Transmission Unit (MTU) value (payload) for the service. The system uses the value to validate the operational state of the SAP and SDP binding within the service. The value overrides the default MTU for the service type.

The service MTU and a SAP's service delineation encapsulation overhead (4 bytes for a dot1q tag) are used to derive the required MTU of the physical port or channel on which the SAP was created. If the required payload is larger than the port or channel MTU, the SAP is placed in an inoperative state. If the required MTU is equal to or less than the port or channel MTU, the SAP transitions to the operative state.

When binding an SDP to a service, the service MTU is compared to the path MTU associated with the SDP. The path MTU can be administratively defined in the context of the SDP. The default or administrative path MTU can be dynamically reduced due to the MTU capabilities discovered by the tunneling mechanism of the SDP or the egress interface MTU capabilities based on the next hop in the tunnel path. If the service MTU is larger than the path MTU, the SDP binding for the service is placed in an inoperative state. If the service MTU is equal to or less than the path MTU, the SDP binding is placed in an operational state.

If a service MTU, port or channel MTU, or path MTU is dynamically or administratively modified, all associated SAP and SDP binding operational states are automatically reevaluated.

Binding operational states are automatically reevaluated.

For I-VPLS and Epipes bound to a B-VPLS, the service MTU must be at least 18 bytes smaller than the B-VPLS service MTU to accommodate the PBB header.

Because this connects a Layer 2 to a Layer 3 service, adjust the service MTU under the Epipe service. The MTU that is advertised from the Epipe side is service MTU minus EtherHeaderSize.

In the **configure service epipe spoke-sdp** context, the **adv-service-mtu** command can be used to override the configured MTU value used in T-LDP signaling to the far-end of an Epipe spoke-sdp. The **adv-service-mtu** command is also used to validate the value signaled by the far-end PE.

Range	1 to 9782
Introduced	16.0.R1
Platforms	All

### **spoke-sdp** [[sdp-bind-id](#)] *string*

Synopsis	Enter the <b>spoke-sdp</b> list instance
Context	<b>configure service epipe</b> <i>string</i> <b>spoke-sdp</b> <i>string</i>
Tree	<a href="#">spoke-sdp</a>
Introduced	16.0.R1
Platforms	All

### **[sdp-bind-id]** *string*

Synopsis	SDP binding ID
----------	----------------

Context	<b>configure service epipe string spoke-sdp string</b>
Tree	<b>spoke-sdp</b>
String Length	3 to 16
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## **aarp**

Synopsis	Enable the <b>aarp</b> context
Context	<b>configure service epipe string spoke-sdp string aarp</b>
Tree	<b>aarp</b>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **id reference**

Synopsis	AARP instance ID
Context	<b>configure service epipe string spoke-sdp string aarp id reference</b>
Tree	<b>id</b>
Reference	<b>configure application-assurance aarp number</b>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **type keyword**

Synopsis	Role referenced by the AARP
Context	<b>configure service epipe string spoke-sdp string aarp type keyword</b>
Tree	<b>type</b>
Options	dual-homed, dual-homed-secondary
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **accounting-policy** *reference*

Synopsis	Policy to collect accounting statistics
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>accounting-policy</b> <i>reference</i>
Tree	<b>accounting-policy</b>
Reference	<b>configure</b> <b>log</b> <b>accounting-policy</b> <i>number</i>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the SDP binding to the service
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Default	enable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **adv-service-mtu** *number*

Synopsis	Service MTU used in signaling
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>adv-service-mtu</b> <i>number</i>
Tree	<b>adv-service-mtu</b>
Description	<p>This command configures the MTU value that is signaled in the targeted LDP for the spoke-SDP, instead of the service MTU. However, the configuration does not affect the locally enforced value, which is still based on the service MTU.</p> <p>This MTU value cannot be configured on a spoke-SDP that is bound to an SDP with the <b>adv-mtu-override</b> command (<b>configure service sdp</b> context).</p> <p>When unconfigured, an adjusted service MTU is used (<b>service-mtu</b> command).</p>
Range	0 to 9782
Introduced	21.5.R1
Platforms	All

### **app-profile** *reference*

Synopsis	Application profile name for this SDP
----------	---------------------------------------

Context	<b>configure service epipe</b> <i>string spoke-sdp string app-profile reference</i>
Tree	<a href="#">app-profile</a>
Reference	<b>configure application-assurance group</b> <i>number partition number policy app-profile string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **bandwidth** (*number | keyword*)

Synopsis	Bandwidth that is reserved for this SDP binding
Context	<b>configure service epipe</b> <i>string spoke-sdp string bandwidth</i> ( <i>number   keyword</i> )
Tree	<a href="#">bandwidth</a>
Range	0 to 1000000000
Default	0
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	All

### **bfd**

Synopsis	Enter the <b>bfd</b> context
Context	<b>configure service epipe</b> <i>string spoke-sdp string bfd</i>
Tree	<a href="#">bfd</a>
Introduced	21.2.R1
Platforms	All

### **bfd-liveness**

Synopsis	Enable the <b>bfd-liveness</b> context
Context	<b>configure service epipe</b> <i>string spoke-sdp string bfd bfd-liveness</i>
Tree	<a href="#">bfd-liveness</a>
Introduced	21.2.R1
Platforms	All

### **encap** *keyword*

Synopsis	BFD encapsulation used on the SDP binding
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">bfd</a> <a href="#">bfd-liveness</a> <b>encap</b> <i>keyword</i>
Tree	<a href="#">encap</a>
Default	ipv4
Options	ipv4
Introduced	21.2.R1
Platforms	All

### **bfd-template** *reference*

Synopsis	BFD template associated with the SDP binding
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">bfd</a> <b>bfd-template</b> <i>reference</i>
Tree	<a href="#">bfd-template</a>
Description	This command configures a named BFD template to be used by VCCV BFD on PWs belonging to the VLL service. The template specifies parameters, such as the minimum transmit and receive control packet timer intervals, used by the BFD session. Template parameters are configured under the <b>configure router bfd</b> context.
Reference	<b>configure</b> <a href="#">bfd</a> <b>bfd-template</b> <i>string</i>
Introduced	21.2.R1
Platforms	All

### **failure-action** *keyword*

Synopsis	VCCV BFD action taken on the SDP binding
Context	<b>configure</b> <a href="#">service epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">bfd</a> <b>failure-action</b> <i>keyword</i>
Tree	<a href="#">failure-action</a>
Description	This command configures a named BFD template to be used by VCCV BFD on PWs belonging to the VLL service. The template specifies parameters, such as the minimum transmit and receive control packet timer intervals, used by the BFD session. Template parameters are configured under the <b>configure router bfd</b> context.
Default	none
Options	none, down
Introduced	21.2.R1
Platforms	All

### **wait-for-up-timer** *number*

Synopsis	Time waited for BFD up status
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>bfd</b> <b>wait-for-up-timer</b> <i>number</i>
Tree	<b>wait-for-up-timer</b>
Description	This command configures the time interval that is used to wait for a BFD session to come up.  This command is triggered when a spoke-SDP is first administratively enabled and a VCCV BFD session transitions from up to down. The command is required to allow time for BFD sessions to come up, and for BFD to settle before selecting the active spoke-SDP for use in a redundant set. In the case where a VCCV BFD session is bouncing, the timer prevents excessive flapping of the operational state of a spoke-SDP.
Range	1 to 60
Units	seconds
Introduced	21.2.R1
Platforms	All

### **collect-stats** *boolean*

Synopsis	Allow agent to collect accounting statistics
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>collect-stats</b> <i>boolean</i>
Tree	<b>collect-stats</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **control-word** *boolean*

Synopsis	Use the control word as preferred
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>control-word</b> <i>boolean</i>
Tree	<b>control-word</b>
Default	false
Introduced	16.0.R1
Platforms	All

## cpu-protection

Synopsis	Enter the <b>cpu-protection</b> context
Context	<b>configure service epipe string spoke-sdp string cpu-protection</b>
Tree	<a href="#">cpu-protection</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## eth-cfm-monitoring

Synopsis	Enable the <b>eth-cfm-monitoring</b> context
Context	<b>configure service epipe string spoke-sdp string cpu-protection eth-cfm-monitoring</b>
Tree	<a href="#">eth-cfm-monitoring</a>
Notes	The following elements are part of a choice: <b>eth-cfm-monitoring</b> or <b>mac-monitoring</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## aggregate

Synopsis	Apply rate limit to the sum of per-peer packet rates
Context	<b>configure service epipe string spoke-sdp string cpu-protection eth-cfm-monitoring aggregate</b>
Tree	<a href="#">aggregate</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## car

Synopsis	Ignore Ethernet CFM packets when enforcing overall rate
Context	<b>configure service epipe string spoke-sdp string cpu-protection eth-cfm-monitoring car</b>
Tree	<a href="#">car</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## mac-monitoring

Synopsis	Monitor MAC for CPU protection
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">cpu-protection</a> <a href="#">mac-monitoring</a>
Tree	<a href="#">mac-monitoring</a>
Notes	The following elements are part of a choice: <b>eth-cfm-monitoring</b> or <b>mac-monitoring</b> .
Introduced	16.0.R1

## **endpoint**

Synopsis	Enter the <b>endpoint</b> context
Context	<b>configure</b> <i>service epipe string spoke-sdp string endpoint</i>
Tree	<i>endpoint</i>
Introduced	16.0.R1
Platforms	All

## **icb** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Bind SDP as type Inter-Chassis Backup (ICB)
Context	<b>configure</b> <i>service epipe string spoke-sdp string endpoint icb boolean</i>
Tree	<i>icb</i>
Default	false
Introduced	16.0.R1
Platforms	All

## name *reference*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Service endpoint name
Context	<b>configure service epipe string spoke-sdp string endpoint name reference</b>
Tree	<b>name</b>
Reference	<b>configure service epipe string endpoint string</b>
Introduced	16.0.R1
Platforms	All

## precedence (*number* | *keyword*)

Synopsis	Precedence when multiple SDP binds are on one endpoint
Context	<b>configure service epipe string spoke-sdp string endpoint precedence (<i>number</i>   <i>keyword</i>)</b>
Tree	<b>precedence</b>
Range	1 to 4
Default	4
Options	primary
Introduced	16.0.R1
Platforms	All

## entropy-label

Synopsis	Enable the use of entropy labels for spoke SDPs
Context	<b>configure service epipe string spoke-sdp string entropy-label</b>
Tree	<b>entropy-label</b>
Notes	The following elements are part of a choice: <b>entropy-label</b> or <b>hash-label</b> .
Introduced	16.0.R1
Platforms	All

## eth-cfm

Synopsis	Enter the <b>eth-cfm</b> context
----------	----------------------------------

Context	<b>configure service epipe string spoke-sdp string eth-cfm</b>
Tree	<b>eth-cfm</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### collect-lmm-fc-stats

Synopsis	Enter the <b>collect-lmm-fc-stats</b> context
Context	<b>configure service epipe string spoke-sdp string eth-cfm collect-lmm-fc-stats</b>
Tree	<b>collect-lmm-fc-stats</b>
Description	<p>Commands in this context configure per forwarding class (FC) LMM information collection.</p> <p>The commands <b>fc-in-profile</b> and <b>fc</b> in this context are mutually exclusive. The commands apply to either profile-aware or profile-unaware FCs respectively.</p> <p>This command and the <b>collect-lmm-stats</b> command are mutually exclusive when there is entity resource contention.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### fc keyword

Synopsis	Forwarding class name for profile-unaware counter
Context	<b>configure service epipe string spoke-sdp string eth-cfm collect-lmm-fc-stats fc keyword</b>
Tree	<b>fc</b>
Description	<p>This command configures individual counters for the specified FCs without regard for profile. The system includes all countable packets that match a configured FC, regardless of profile, in this counter.</p> <p>An FC specified as part of this command and for this specific context cannot be specified as a profile-aware FC using the <b>fc-in-profile</b> command under the <b>collect-lmm-fc-stats</b> context.</p> <p>When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.</p>
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fc-in-profile** *keyword*

Synopsis	Forwarding class name for profile-aware counter
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">collect-lmm-fc-stats</a> <b>fc-in-profile</b> <i>keyword</i>
Tree	<a href="#">fc-in-profile</a>
Description	<p>This command configures individual counters for the specified FCs with regard to profile. The system includes all countable packets that match a configured FC and that are deemed to be in-profile in this counter.</p> <p>An FC specified as part of this command and for this specific context cannot be specified as a profile-unaware FC using the <b>fc</b> command under the <b>collect-lmm-fc-stats</b> context.</p> <p>When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.</p>
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **collect-lmm-stats** *boolean*

Synopsis	Collect statistics for loss measurement message tests
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">collect-lmm-stats</a> <i>boolean</i>
Tree	<a href="#">collect-lmm-stats</a>
Description	<p>When configured to <b>true</b>, the router instantiates the statistical counter to transmit and receive packets for the LAG facility MEP bindings.</p> <p>The <b>show eth-cfm collect-lmm-stats</b> command displays entities that have been enabled to collect transit and receive counters.</p> <p>When configured to <b>false</b>, the router does not instantiate the counter and the LMM PDU associated with the MEP does not populate the counters in the packet.</p>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mep** [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number*

Synopsis	Enter the <b>mep</b> list instance
----------	------------------------------------

Context	<b>configure service epipe string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number</b>
Tree	<b>mep</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **md-admin-name reference**

Synopsis	Maintenance Domain (MD) name
Context	<b>configure service epipe string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number</b>
Tree	<b>mep</b>
Reference	<b>configure eth-cfm domain string</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ma-admin-name reference**

Synopsis	Maintenance Association (MA) name
Context	<b>configure service epipe string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number</b>
Tree	<b>mep</b>
Reference	<b>configure eth-cfm domain string association string</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mep-id number**

Synopsis	Maintenance Endpoint (MEP) ID
Context	<b>configure service epipe string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number</b>
Tree	<b>mep</b>
Range	1 to 8191
Notes	This element is part of a list key.

Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **admin-state** *keyword*

Synopsis Administrative state of the MEP  
Context **configure** **service** **epipe** *string* **spoke-sdp** *string* **eth-cfm** **mep** **md-admin-name** *reference* **ma-admin-name** *reference* **mep-id** *number* **admin-state** *keyword*  
Tree **admin-state**  
Default disable  
Options enable, disable  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ais**

Synopsis Enable the **ais** context  
Context **configure** **service** **epipe** *string* **spoke-sdp** *string* **eth-cfm** **mep** **md-admin-name** *reference* **ma-admin-name** *reference* **mep-id** *number* **ais**  
Tree **ais**  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **client-meg-level** *number*

Synopsis Client MEG level for AIS message generation  
Context **configure** **service** **epipe** *string* **spoke-sdp** *string* **eth-cfm** **mep** **md-admin-name** *reference* **ma-admin-name** *reference* **mep-id** *number* **ais** **client-meg-level** *number*  
Tree **client-meg-level**  
Range 1 to 7  
Max. 7  
Instances  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **interface-support** *boolean*

Synopsis	Enable generation of AIS PDUs based on endpoint state
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">ais</a> <b>interface-support</b> <i>boolean</i>
Tree	<a href="#">interface-support</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **interval** *number*

Synopsis	Transmission interval for AIS messages
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">ais</a> <b>interval</b> <i>number</i>
Tree	<a href="#">interval</a>
Range	1   60
Default	1
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **low-priority-defect** *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">ais</a> <b>low-priority-defect</b> <i>keyword</i>
Tree	<a href="#">low-priority-defect</a>
Default	all-def
Options	all-def, mac-rem-err-xcon
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **priority** *number*

Synopsis	Priority of the AIS messages generated by the node
----------	--

Context	<b>configure service epipe</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ais priority number</i>
Tree	<a href="#">priority</a>
Range	0 to 7
Default	7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## alarm-notification

Synopsis	Enter the <b>alarm-notification</b> context
Context	<b>configure service epipe</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number alarm-notification</i>
Tree	<a href="#">alarm-notification</a>
Description	<p>Commands in this context configure the Fault Notification Generator (FNG) time values to raise an alarm or reset the CCM defect alarm.</p> <p>Use these timers for network management processes. The timers are not tied into delaying the notification to the fault management system on the network element and do not affect fault propagation mechanisms.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## fng-alarm-time *number*

Synopsis	Time that must expire before an FNG alarm is raised
Context	<b>configure service epipe</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number alarm-notification fng-alarm-time number</i>
Tree	<a href="#">fng-alarm-time</a>
Range	250   500   1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## fng-reset-time *number*

Synopsis	Time that must expire before an FNG alarm is reset
----------	--

Context	<b>configure service epipe</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number alarm-notification fng-reset-time number</i>
Tree	<a href="#">fng-reset-time</a>
Range	250   500   1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm boolean**

Synopsis	Generate CCM messages
Context	<b>configure service epipe</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm boolean</i>
Tree	<a href="#">ccm</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm-ltm-priority number**

Synopsis	Priority of CCM and LTM messages transmitted by the MEP
Context	<b>configure service epipe</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm-ltm-priority number</i>
Tree	<a href="#">ccm-ltm-priority</a>
Range	0 to 7
Default	7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm-padding-size number**

Synopsis	Number of octets of padding to insert in CCM packets
Context	<b>configure service epipe</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm-padding-size number</i>
Tree	<a href="#">ccm-padding-size</a>
Description	This command sets the byte size of the optional Data TLV to be included in the ETH-CC PDU.

This command increases the size of the ETH-CC PDU by the configured value. The base size of the ETH-CC PDU, including the Interface Status TLV and Port Status TLV, is 83 bytes not including the Layer 2 encapsulation. CCM padding is not supported when the CCM interval (configured through **configure eth-cfm domain association ccm-interval**) is less than 1 second.

Range	3 to 1500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **cfm-vlan-tag** *string*

Synopsis	VLAN tags to apply to CFM PDUs for egress processing
Context	<b>configure service epipe</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number cfm-vlan-tag string</i>
Tree	<a href="#">cfm-vlan-tag</a>
String Length	1 to 9
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **csf**

Synopsis	Enable the <b>csf</b> context
Context	<b>configure service epipe</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number csf</i>
Tree	<a href="#">csf</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **multiplier** *decimal-number*

Synopsis	Multiplication factor used to clear the CSF condition
Context	<b>configure service epipe</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number csf multiplier decimal-number</i>
Tree	<a href="#">multiplier</a>
Range	0.0   2.0 to 30.0
Default	3.5
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### description *string*

Synopsis Text description

Context **configure** [service](#) [epipe](#) *string* [spoke-sdp](#) *string* [eth-cfm](#) [mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* [description](#) *string*

Tree [description](#)

String Length 1 to 80

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### direction *keyword*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Direction the MEP faces

Context **configure** [service](#) [epipe](#) *string* [spoke-sdp](#) *string* [eth-cfm](#) [mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* [direction](#) *keyword*

Tree [direction](#)

Default down

Options down, up

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### eth-test

Synopsis Enable the **eth-test** context

Context **configure** [service](#) [epipe](#) *string* [spoke-sdp](#) *string* [eth-cfm](#) [mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* [eth-test](#)

Tree [eth-test](#)

Description Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the **oam eth-cfm eth-test** command.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **bit-error-threshold** *number*

Synopsis Lowest priority defect allowed to generate fault alarm

Context **configure** [service](#) [epipe](#) *string* [spoke-sdp](#) *string* [eth-cfm](#) [mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* [eth-test](#) **bit-error-threshold** *number*

Tree [bit-error-threshold](#)

Range 0 to 11840

Default 1

Units bit errors

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **test-pattern**

Synopsis Enter the **test-pattern** context

Context **configure** [service](#) [epipe](#) *string* [spoke-sdp](#) *string* [eth-cfm](#) [mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* [eth-test](#) **test-pattern**

Tree [test-pattern](#)

Description Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **crc-tlv** *boolean*

Synopsis Generate a CRC checksum

Context **configure** [service](#) [epipe](#) *string* [spoke-sdp](#) *string* [eth-cfm](#) [mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* [eth-test](#) **test-pattern** **crc-tlv** *boolean*

Tree [crc-tlv](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **pattern** keyword

Synopsis	Test pattern for Ethernet Test frames
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">eth-test</a> <a href="#">test-pattern</a> <a href="#">pattern</a> <i>keyword</i>
Tree	<a href="#">pattern</a>
Description	This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.
Default	all-zeros
Options	all-zeros, all-ones
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fault-propagation** keyword

Synopsis	Fault propagation for the MEP
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">fault-propagation</a> <i>keyword</i>
Tree	<a href="#">fault-propagation</a>
Options	use-if-status-tlv, suspend-ccm
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **grace**

Synopsis	Enter the <b>grace</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">grace</a>
Tree	<a href="#">grace</a>
Description	Commands in this context configure the Nokia ETH-CFM Grace function and the ITU-T Y.1731 Ethernet Expected Default (ETH-ED) function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **eth-ed**

Synopsis	Enter the <b>eth-ed</b> context
----------	---------------------------------

Context	<b>configure service epipe</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed</i>
Tree	<a href="#">eth-ed</a>
Description	Commands in this context configure the ITU-T Y.1731 ETH-ED function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **max-rx-defect-window** *number*

Synopsis	Maximum received ETH-ED expected defect window duration
Context	<b>configure service epipe</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed max-rx-defect-window number</i>
Tree	<a href="#">max-rx-defect-window</a>
Range	1 to 86400
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **priority** *number*

Synopsis	Transmission priority for ETH-ED PDUs
Context	<b>configure service epipe</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed priority number</i>
Tree	<a href="#">priority</a>
Range	0 to 7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **rx-eth-ed** *boolean*

Synopsis	Receive and process ETH-ED ITU-T Y.1731 PDUs on the MEP
Context	<b>configure service epipe</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed rx-eth-ed boolean</i>
Tree	<a href="#">rx-eth-ed</a>
Description	This command enables the reception and processing of the ITU-T Y.1731 ETH-ED PDU on the MEP.

Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **tx-eth-ed** *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">grace</a> <a href="#">eth-ed</a> <b>tx-eth-ed</b> <i>boolean</i>
Tree	<a href="#">tx-eth-ed</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **eth-vsm-grace**

Synopsis	Enter the <b>eth-vsm-grace</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">grace</a> <b>eth-vsm-grace</b>
Tree	<a href="#">eth-vsm-grace</a>
Description	Commands in this context configure the Nokia ETH-CFM Grace function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **rx-eth-vsm-grace** *boolean*

Synopsis	Receive and process Nokia ETH-CFM Grace PDU on the MEP
Context	<b>configure</b> <a href="#">service</a> <a href="#">epipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">grace</a> <a href="#">eth-vsm-grace</a> <b>rx-eth-vsm-grace</b> <i>boolean</i>
Tree	<a href="#">rx-eth-vsm-grace</a>
Description	When configured to <b>true</b> , the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.  When configured to <b>false</b> , the router disables the Nokia Grace function.
Default	true
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **tx-eth-vsm-grace** *boolean*

Synopsis Transmit ETH-ED PDUs from the MEP

Context **configure** [service](#) [epipe](#) *string* [spoke-sdp](#) *string* [eth-cfm](#) [mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* [eth-vsm-grace](#) [tx-eth-vsm-grace](#) *boolean*

Tree [tx-eth-vsm-grace](#)

Description When configured to **true**, the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.

The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.

The operator must configure the **configure system eth-cfm grace** command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).

When configured to **false**, the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.

Default true

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **lbm-svc-act-responder** *boolean*

Synopsis Process service activation streams in ETH-CFM LBM

Context **configure** [service](#) [epipe](#) *string* [spoke-sdp](#) *string* [eth-cfm](#) [mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* [lbm-svc-act-responder](#) *boolean*

Tree [lbm-svc-act-responder](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **low-priority-defect** *keyword*

Synopsis Lowest priority defect allowed to generate fault alarm

Context **configure** [service](#) [epipe](#) *string* [spoke-sdp](#) *string* [eth-cfm](#) [mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* [low-priority-defect](#) *keyword*

Tree [low-priority-defect](#)

Default	mac-rem-err-xcon
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### mac-address *string*

Synopsis	MAC address of the MEP
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm</b> <b>mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>mac-address</b> <i>string</i>
Tree	<b>mac-address</b>
Description	This command specifies the MAC address of the MEP.  When unconfigured, the MAC address of the port (if the MEP is on a SAP) or the MAC address of a bridge (if the MEP is on a spoke) is used.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### one-way-delay-threshold *number*

Synopsis	Threshold time limit for the one-way delay test
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm</b> <b>mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>one-way-delay-threshold</b> <i>number</i>
Tree	<b>one-way-delay-threshold</b>
Range	0 to 600
Default	3
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### primary-vlan *boolean*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	MEP provisioned using MA primary VLAN ID
----------	--

Context	<b>configure service epipe</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number primary-vlan boolean</i>
Tree	<a href="#">primary-vlan</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mip primary-vlan** (*number | keyword*)

Synopsis	Enter the <b>mip</b> list instance
Context	<b>configure service epipe</b> <i>string spoke-sdp string eth-cfm mip primary-vlan (number   keyword)</i>
Tree	<a href="#">mip</a>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **primary-vlan** (*number | keyword*)

Synopsis	VLAN ID to which the MIP is attached
Context	<b>configure service epipe</b> <i>string spoke-sdp string eth-cfm mip primary-vlan (number   keyword)</i>
Tree	<a href="#">mip</a>
Description	This command provides an option for linking a MIP with a Primary VLAN number or none. When the <b>none</b> option is provided, the MIP does not include the primary vlan.
Range	1 to 4094
Options	none
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **cfm-vlan-tag** *string*

Synopsis	VLAN tags to apply to CFM PDUs for egress processing
Context	<b>configure service epipe</b> <i>string spoke-sdp string eth-cfm mip primary-vlan (number   keyword) cfm-vlan-tag string</i>
Tree	<a href="#">cfm-vlan-tag</a>

Description	This command allows the CFM function to include additional VLAN tags to the CFM packet that are carried to the egress and treated as service delimited. Typically, this function is used to influence the VLAN carried over a binding that uses the vc-type vlan or the binding forces the use of one or more VLAN tag that results in a mismatch between the service data arriving at the binding and the locally generated ETH-CFM PDUs arriving at the same egress. When this command is included under the MEP or MIP configuration, the tags used as part of the configuration typically match the SAP service delimited configuration.
String Length	1 to 9
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mac-address** *string*

Synopsis	MAC address of the MIP
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm</b> <b>mip</b> <b>primary-vlan</b> ( <i>number</i>   <i>keyword</i> ) <b>mac-address</b> <i>string</i>
Tree	<a href="#">mac-address</a>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **squelch-ingress-ctag-levels** *number*

Synopsis	Squelch levels using additional VLAN C-Tag space
Context	<b>configure</b> <b>service</b> <b>epipe</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm</b> <b>squelch-ingress-ctag-levels</b> <i>number</i>
Tree	<a href="#">squelch-ingress-ctag-levels</a>
Description	<p>This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding plus an additional VLAN, up to a maximum tag length of two tags. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.</p> <p>The list of levels must be a complete contiguous list from 0 up to the highest level to be dropped.</p>
Range	0 to 7
Max. Instances	8
Introduced	21.2.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **snelch- ingress-levels *number***

Synopsis Levels for which ETH-CFM packets are silently discarded

Context **configure service epipe** *string spoke-sdp string eth-cfm snelch- ingress-levels number*

Tree [snelch- ingress-levels](#)

Description This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.

The list of levels must be a complete contiguous list from 0 up to the highest level that will be dropped.

Range 0 to 7

Max. 8

Instances

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **[interface-name]** *string*

Synopsis	Interface name
Context	<b>configure service ies string aa-interface string</b>
Tree	<b>aa-interface</b>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of the interface
Context	<b>configure service ies string aa-interface string admin-state keyword</b>
Tree	<b>admin-state</b>
Default	enable
Options	enable, disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **description** *string*

Synopsis	Text description
Context	<b>configure service ies string aa-interface string description string</b>
Tree	<b>description</b>
String Length	1 to 255
Introduced	21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ip-mtu** *number*

Synopsis IP MTU applied to outgoing packets  
Context **configure service ies** *string aa-interface string ip-mtu number*  
Tree [ip-mtu](#)  
Range 512 to 9786  
Units bytes  
Introduced 21.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ipv4**

Synopsis Enter the **ipv4** context  
Context **configure service ies** *string aa-interface string ipv4*  
Tree [ipv4](#)  
Introduced 21.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **primary**

Synopsis Enable the **primary** context  
Context **configure service ies** *string aa-interface string ipv4 primary*  
Tree [primary](#)  
Introduced 21.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **address** *string*

Synopsis Primary IPv4 address assigned to the interface  
Context **configure service ies** *string aa-interface string ipv4 primary address string*  
Tree [address](#)  
Notes This element is mandatory.  
Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **prefix-length** *number*

Synopsis IPv4 address prefix length  
Context **configure service ies** *string aa-interface string ipv4 primary prefix-length number*  
Tree [prefix-length](#)  
Range 0 to 32  
Notes This element is mandatory.  
Introduced 21.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **sap** [[sap-id](#)] *string*

Synopsis Enter the **sap** list instance  
Context **configure service ies** *string aa-interface string sap string*  
Tree [sap](#)  
Max. 1  
Instances  
Introduced 21.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[sap-id]** *string*

Synopsis SAP ID  
Context **configure service ies** *string aa-interface string sap string*  
Tree [sap](#)  
String Length 1 to 45  
Notes This element is part of a list key.  
Introduced 21.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis Administrative state of the SAP

Context	<b>configure service ies</b> <i>string aa-interface string sap string admin-state keyword</i>
Tree	<b>admin-state</b>
Default	enable
Options	enable, disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **description** *string*

Synopsis	Text description
Context	<b>configure service ies</b> <i>string aa-interface string sap string description string</i>
Tree	<b>description</b>
String Length	1 to 160
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **egress**

Synopsis	Enter the <b>egress</b> context
Context	<b>configure service ies</b> <i>string aa-interface string sap string egress</i>
Tree	<b>egress</b>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **filter**

Synopsis	Enter the <b>filter</b> context
Context	<b>configure service ies</b> <i>string aa-interface string sap string egress filter</i>
Tree	<b>filter</b>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ip reference**

Synopsis	IPv4 filter policy name
----------	-------------------------

Context	<b>configure service ies</b> <i>string aa-interface string sap string egress filter ip reference</i>
Tree	<a href="#">ip</a>
Reference	<b>configure filter ip-filter</b> <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## qos

Synopsis	Enter the <b>qos</b> context
Context	<b>configure service ies</b> <i>string aa-interface string sap string egress qos</i>
Tree	<a href="#">qos</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## sap-egress

Synopsis	Enter the <b>sap-egress</b> context
Context	<b>configure service ies</b> <i>string aa-interface string sap string egress qos sap-egress</i>
Tree	<a href="#">sap-egress</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## policy-name *reference*

Synopsis	Policy ID to associate with SAP for mirrored service
Context	<b>configure service ies</b> <i>string aa-interface string sap string egress qos sap-egress policy-name reference</i>
Tree	<a href="#">policy-name</a>
Reference	<b>configure qos sap-egress</b> <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## fwd-wholesale

Synopsis	Enter the <b>fwd-wholesale</b> context
----------	--

Context **configure service ies** *string aa-interface string sap string fwd-wholesale*  
Tree [fwd-wholesale](#)  
Introduced 21.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### pppoe-service *reference*

Synopsis PPPoE service name  
Context **configure service ies** *string aa-interface string sap string fwd-wholesale pppoe-service reference*  
Tree [pppoe-service](#)  
Reference **configure service epipe** *string*  
Introduced 21.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### ingress

Synopsis Enter the **ingress** context  
Context **configure service ies** *string aa-interface string sap string ingress*  
Tree [ingress](#)  
Introduced 21.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### qos

Synopsis Enter the **qos** context  
Context **configure service ies** *string aa-interface string sap string ingress qos*  
Tree [qos](#)  
Introduced 21.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### sap-ingress

Synopsis Enter the **sap-ingress** context  
Context **configure service ies** *string aa-interface string sap string ingress qos sap-ingress*

Tree [sap-ingress](#)  
Introduced 21.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## overrides

Synopsis Enter the **overrides** context  
Context **configure service ies** *string aa-interface string sap string ingress qos sap-ingress overrides*  
Tree [overrides](#)  
Introduced 21.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## policy-name *reference*

Synopsis Policy ID  
Context **configure service ies** *string aa-interface string sap string ingress qos sap-ingress policy-name reference*  
Tree [policy-name](#)  
Reference **configure qos sap-ingress** *string*  
Introduced 21.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## lag

Synopsis Enter the **lag** context  
Context **configure service ies** *string aa-interface string sap string lag*  
Tree [lag](#)  
Introduced 21.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## aarp-interface [[interface-name](#)] *string*

Synopsis Enter the **aarp-interface** list instance  
Context **configure service ies** *string aarp-interface string*  
Tree [aarp-interface](#)

Introduced 21.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[interface-name]** *string*

Synopsis Interface name  
Context **configure** [service](#) [ies](#) *string* [aarp-interface](#) *string*  
Tree [aarp-interface](#)  
String Length 1 to 32  
Notes This element is part of a list key.  
Introduced 21.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis Administrative state of the interface  
Context **configure** [service](#) [ies](#) *string* [aarp-interface](#) *string* **admin-state** *keyword*  
Tree [admin-state](#)  
Default enable  
Options enable, disable  
Introduced 21.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **description** *string*

Synopsis Text description  
Context **configure** [service](#) [ies](#) *string* [aarp-interface](#) *string* **description** *string*  
Tree [description](#)  
String Length 1 to 255  
Introduced 21.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ip-mtu** *number*

Synopsis IP MTU applied to outgoing packets

Context	<b>configure service ies</b> <i>string aarp-interface string ip-mtu number</i>
Tree	<b>ip-mtu</b>
Range	512 to 9786
Units	bytes
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **spoke-sdp** [**sdp-bind-id**] *string*

Synopsis	Enter the <b>spoke-sdp</b> list instance
Context	<b>configure service ies</b> <i>string aarp-interface string spoke-sdp string</i>
Tree	<b>spoke-sdp</b>
Max. Instances	1
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[sdp-bind-id]** *string*

Synopsis	SDP binding ID
Context	<b>configure service ies</b> <i>string aarp-interface string spoke-sdp string</i>
Tree	<b>spoke-sdp</b>
String Length	3 to 16
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **aarp**

Synopsis	Enable the <b>aarp</b> context
Context	<b>configure service ies</b> <i>string aarp-interface string spoke-sdp string aarp</i>
Tree	<b>aarp</b>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## id reference

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	AARP instance ID
Context	<b>configure</b> <a href="#">service ies</a> <i>string aarp-interface</i> <i>string spoke-sdp</i> <i>string aarp id reference</i>
Tree	<a href="#">id</a>
Reference	<b>configure</b> <a href="#">application-assurance aarp</a> <i>number</i>
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## type keyword

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Role of the spoke SDP referenced by the AARP
Context	<b>configure</b> <a href="#">service ies</a> <i>string aarp-interface</i> <i>string spoke-sdp</i> <i>string aarp type keyword</i>
Tree	<a href="#">type</a>
Options	subscriber-side-shunt, network-side-shunt
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## admin-state keyword

Synopsis	Administrative state of this service SDP binding
Context	<b>configure</b> <a href="#">service ies</a> <i>string aarp-interface</i> <i>string spoke-sdp</i> <i>string admin-state keyword</i>
Tree	<a href="#">admin-state</a>
Default	enable
Options	enable, disable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">aarp-interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **egress**

Synopsis	Enter the <b>egress</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">aarp-interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">egress</a>
Tree	<a href="#">egress</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **filter**

Synopsis	Enter the <b>filter</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">aarp-interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">egress</a> <a href="#">filter</a>
Tree	<a href="#">filter</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ip** *reference*

Synopsis	IP filter ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">aarp-interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">egress</a> <a href="#">filter</a> <a href="#">ip</a> <i>reference</i>
Tree	<a href="#">ip</a>
Reference	<b>configure</b> <a href="#">filter</a> <a href="#">ip-filter</a> <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## vc-label *number*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	VC egress value that indicates a specific connection
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">aarp-interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">egress</a> <a href="#">vc-label</a> <i>number</i>
Tree	<a href="#">vc-label</a>
Range	16 to 1048575
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ingress

Synopsis	Enter the <b>ingress</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">aarp-interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">ingress</a>
Tree	<a href="#">ingress</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## filter

Synopsis	Enter the <b>filter</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">aarp-interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">ingress</a> <a href="#">filter</a>
Tree	<a href="#">filter</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ip *reference*

Synopsis	IP filter name
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">aarp-interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">ingress</a> <a href="#">filter</a> <a href="#">ip</a> <i>reference</i>
Tree	<a href="#">ip</a>
Reference	<b>configure</b> <a href="#">filter</a> <a href="#">ip-filter</a> <i>string</i>

Introduced 21.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **vc-label** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis VC ingress value that indicates a specific connection  
Context **configure** *service ies string aarp-interface string spoke-sdp string ingress vc-label number*  
Tree *vc-label*  
Range 1 to 1048575  
Introduced 21.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis Administrative state of the service  
Context **configure** *service ies string admin-state keyword*  
Tree *admin-state*  
Default disable  
Options enable, disable  
Introduced 16.0.R1  
Platforms All

### **customer** *reference*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Service customer ID  
Context **configure** *service ies string customer reference*  
Tree *customer*  
Reference **configure** *service customer string*

Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **eth-cfm**

Synopsis	Enter the <b>eth-cfm</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">eth-cfm</a>
Tree	<a href="#">eth-cfm</a>
Introduced	19.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **igmp-host-tracking**

Synopsis	Enter the <b>igmp-host-tracking</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">igmp-host-tracking</a>
Tree	<a href="#">igmp-host-tracking</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of IGMP host tracking
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">igmp-host-tracking</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable

Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **expiry-time** *number*

Synopsis	Time that the system continues to track inactive hosts
Context	<b>configure service ies</b> <i>string</i> <b>igmp-host-tracking expiry-time</b> <i>number</i>
Tree	<b>expiry-time</b>
Range	1 to 65535
Default	260
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **interface** [**interface-name**] *string*

Synopsis	Enter the <b>interface</b> list instance
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i>
Tree	<b>interface</b>
Description	Commands in this context create a logical IP routing interface. When created, attributes such as an IP address and SAP ID can be associated with the IP interface.
Introduced	16.0.R1
Platforms	All

### **[interface-name]** *string*

Synopsis	Interface name
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i>
Tree	<b>interface</b>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	enable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **cflowd-parameters**

Synopsis	Enter the <b>cflowd-parameters</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <b>cflowd-parameters</b>
Tree	<a href="#">cflowd-parameters</a>
Introduced	16.0.R1
Platforms	All

### **sampling** [[sampling-type](#)] *keyword*

Synopsis	Enter the <b>sampling</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <b>cflowd-parameters</b> <b>sampling</b> <i>keyword</i>
Tree	<a href="#">sampling</a>
Introduced	16.0.R1
Platforms	All

### [[sampling-type](#)] *keyword*

Synopsis	Traffic sampling type
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <b>cflowd-parameters</b> <b>sampling</b> <i>keyword</i>
Tree	<a href="#">sampling</a>
Description	This command configures the type of traffic to be sampled on the associated IP interface.
Options	unicast, multicast, both
Notes	This element is part of a list key.

Introduced 16.0.R1  
Platforms All

### **direction** *keyword*

Synopsis Direction of traffic for cflowd sampling  
Context **configure** [service ies](#) *string* [interface](#) *string* [cflowd-parameters](#) [sampling](#) *keyword* [direction](#) *keyword*  
Tree [direction](#)  
Description This command configures the direction in which sampling occurs on the associated IP interfaces.  
Default ingress-only  
Options ingress-only, egress-only, both  
Introduced 16.0.R1  
Platforms All

### **sample-profile** (*keyword* | *number*)

Synopsis Sample profile ID  
Context **configure** [service ies](#) *string* [interface](#) *string* [cflowd-parameters](#) [sampling](#) *keyword* [sample-profile](#) (*keyword* | *number*)  
Tree [sample-profile](#)  
Description This command defines the sampling rate profile associated with this interface.  
Max. Range 0 to 4294967295  
Options 1  
Introduced 19.5.R1  
Platforms All

### **type** *keyword*

Synopsis Type of cflowd analysis  
Context **configure** [service ies](#) *string* [interface](#) *string* [cflowd-parameters](#) [sampling](#) *keyword* [type](#) *keyword*  
Tree [type](#)  
Description This command configures the cflowd sampling type on the associated IP interface.  
Options acl, interface

Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **cpu-protection** *reference*

Synopsis	CPU protection policy
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">cpu-protection</a> <i>reference</i>
Tree	<a href="#">cpu-protection</a>
Reference	<b>configure</b> <a href="#">system security</a> <a href="#">cpu-protection</a> <i>policy</i> <i>number</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 255
Introduced	16.0.R1
Platforms	All

### **dynamic-tunnel-redundant-nexthop** *string*

Synopsis	Redundant next-hop address for the dynamic IPsec tunnel
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">dynamic-tunnel-redundant-nexthop</a> <i>string</i>
Tree	<a href="#">dynamic-tunnel-redundant-nexthop</a>
Description	This command specifies the redundant next-hop address on a public or private IPsec interface (with public or private tunnel SAP) for a dynamic IPsec tunnel. The next-hop address is used by a standby node to shunt traffic to a master if it receives the address. The next-hop address is resolved in the routing table of a corresponding service.
Notes	The following elements are part of a choice: <b>multi-chassis-shunting-profile</b> or <b>(dynamic-tunnel-redundant-nexthop</b> and <b>static-tunnel-redundant-nexthop)</b> .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## hold-time

Synopsis	Enter the <b>hold-time</b> context
Context	<b>configure service ies string interface string hold-time</b>
Tree	<b>hold-time</b>
Introduced	16.0.R1
Platforms	All

## ipv4

Synopsis	Enter the <b>ipv4</b> context
Context	<b>configure service ies string interface string hold-time ipv4</b>
Tree	<b>ipv4</b>
Introduced	16.0.R1
Platforms	All

## down

Synopsis	Enter the <b>down</b> context
Context	<b>configure service ies string interface string hold-time ipv4 down</b>
Tree	<b>down</b>
Description	Commands in this context configure the down hold timer, which specifies the delay before activating the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface up, unless an operator configures the <b>init-only</b> command.
Introduced	16.0.R1
Platforms	All

## init-only *boolean*

Synopsis	Apply delay only at interface configuration or reboot
Context	<b>configure service ies string interface string hold-time ipv4 down init-only <i>boolean</i></b>
Tree	<b>init-only</b>
Description	This command applies a delay only when the IP interface is first configured or after a system reboot.
Default	false

Introduced 16.0.R1  
Platforms All

### **seconds** *number*

Synopsis Down hold time for the IP interface  
Context **configure service ies** *string* **interface** *string* **hold-time ipv4 down seconds** *number*  
Tree **seconds**  
Range 1 to 1200  
Units seconds  
Introduced 16.0.R1  
Platforms All

### **up**

Synopsis Enter the **up** context  
Context **configure service ies** *string* **interface** *string* **hold-time ipv4 up**  
Tree **up**  
Description Commands in this context configure the up hold timer, which specifies the delay before deactivation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface down.  
Introduced 16.0.R1  
Platforms All

### **seconds** *number*

Synopsis Up hold time for the IP interface  
Context **configure service ies** *string* **interface** *string* **hold-time ipv4 up seconds** *number*  
Tree **seconds**  
Range 1 to 1200  
Units seconds  
Introduced 16.0.R1  
Platforms All

## ipv6

Synopsis	Enter the <b>ipv6</b> context
Context	<b>configure service ies string interface string hold-time ipv6</b>
Tree	<b>ipv6</b>
Introduced	16.0.R1
Platforms	All

## down

Synopsis	Enter the <b>down</b> context
Context	<b>configure service ies string interface string hold-time ipv6 down</b>
Tree	<b>down</b>
Description	Commands in this context configure the down hold timer, which specifies the delay before activation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface up, unless an operator configures the <b>init-only</b> command.
Introduced	16.0.R1
Platforms	All

## init-only *boolean*

Synopsis	Apply delay only at interface configuration or reboot
Context	<b>configure service ies string interface string hold-time ipv6 down init-only boolean</b>
Tree	<b>init-only</b>
Description	This command applies the delay only when when the IP interface is first configured or after a system reboot.
Default	false
Introduced	16.0.R1
Platforms	All

## seconds *number*

Synopsis	Down hold time for the IP interface
Context	<b>configure service ies string interface string hold-time ipv6 down seconds number</b>
Tree	<b>seconds</b>
Range	1 to 1200

Units	seconds
Introduced	16.0.R1
Platforms	All

## up

Synopsis	Enter the <b>up</b> context
Context	<b>configure service ies string interface string hold-time ipv6 up</b>
Tree	<b>up</b>
Description	Commands in this context configure the up hold timer, which specifies the delay before deactivation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface down.
Introduced	16.0.R1
Platforms	All

## seconds *number*

Synopsis	Up hold time for the IP interface
Context	<b>configure service ies string interface string hold-time ipv6 up seconds number</b>
Tree	<b>seconds</b>
Range	1 to 1200
Units	seconds
Introduced	16.0.R1
Platforms	All

## if-attribute

Synopsis	Enter the <b>if-attribute</b> context
Context	<b>configure service ies string interface string if-attribute</b>
Tree	<b>if-attribute</b>
Introduced	16.0.R1
Platforms	All

## admin-group *reference*

Synopsis	Administrative group name for the interface
----------	---

Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>if-attribute</b> <b>admin-group</b> <i>reference</i>
Tree	<b>admin-group</b>
Reference	<b>configure</b> <b>routing-options</b> <b>if-attribute</b> <b>admin-group</b> <i>string</i>
Max. Instances	32
Introduced	16.0.R1
Platforms	All

### **srlg-group** [*name*] *reference*

Synopsis	Add a list entry for <b>srlg-group</b>
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>if-attribute</b> <b>srlg-group</b> <i>reference</i>
Tree	<b>srlg-group</b>
Introduced	16.0.R1
Platforms	All

### [*name*] *reference*

Synopsis	SRLG name
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>if-attribute</b> <b>srlg-group</b> <i>reference</i>
Tree	<b>srlg-group</b>
Reference	<b>configure</b> <b>routing-options</b> <b>if-attribute</b> <b>srlg-group</b> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **ingress**

Synopsis	Enter the <b>ingress</b> context
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ingress</b>
Tree	<b>ingress</b>
Introduced	19.7.R1
Platforms	All

### **destination-class-lookup** *boolean*

Synopsis	Enable BGP destination class lookup
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ingress destination-class-lookup</a> <i>boolean</i>
Tree	<a href="#">destination-class-lookup</a>
Description	When configured to <b>true</b> , the router performs a destination class lookup. This command is supported on FP3-based cards and later and is used in combination with the <b>destination-class</b> match criterion for an IP filter policy to filter egress traffic based on BGP destination classes.  When configured to <b>false</b> , destination class lookup is not enabled.
Default	false
Introduced	20.7.R1
Platforms	All

### **policy-accounting** *reference*

Synopsis	Ingress policy accounting template name
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ingress policy-accounting</a> <i>reference</i>
Tree	<a href="#">policy-accounting</a>
Reference	<b>configure</b> <a href="#">routing-options policy-accounting policy-acct-template</a> <i>string</i>
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS

### **ingress-stats** *boolean*

Synopsis	Collect ingress statistics
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ingress-stats</a> <i>boolean</i>
Tree	<a href="#">ingress-stats</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **ip-mtu** *number*

Synopsis	IP MTU applied to outgoing packets
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ip-mtu</a> <i>number</i>
Tree	<a href="#">ip-mtu</a>

Range	512 to 9786
Units	bytes
Introduced	16.0.R1
Platforms	All

## ipsec

Synopsis	Enable the <b>ipsec</b> context
Context	<b>configure service ies string interface string ipsec</b>
Tree	<a href="#">ipsec</a>
Description	Commands in this context configure an IPsec secured interface.
Introduced	22.7.R1
Platforms	VSR

## admin-state *keyword*

Synopsis	Administrative state of IPsec secured interface
Context	<b>configure service ies string interface string ipsec admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	22.7.R1
Platforms	VSR

## ip-exception *reference*

Synopsis	IP exception filter
Context	<b>configure service ies string interface string ipsec ip-exception reference</b>
Tree	<a href="#">ip-exception</a>
Description	This command configures the IP exception filter for the secured interface. All ingress traffic matching the specified filter bypasses IPsec processing.
Reference	<b>configure filter ip-exception string</b>
Introduced	22.7.R1
Platforms	VSR

## **ipsec-tunnel** *[name]* *string*

Synopsis	Enter the <b>ipsec-tunnel</b> list instance
Context	<b>configure</b> <i>service ies string interface string ipsec ipsec-tunnel string</i>
Tree	<i>ipsec-tunnel</i>
Description	Commands in this context configure IPsec tunnels used to secure traffic forwarded over the interface.
Introduced	22.7.R1
Platforms	VSR

## **[name]** *string*

Synopsis	IPsec tunnel name
Context	<b>configure</b> <i>service ies string interface string ipsec ipsec-tunnel string</i>
Tree	<i>ipsec-tunnel</i>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	VSR

## **admin-state** *keyword*

Synopsis	Administrative state of the IPsec tunnel
Context	<b>configure</b> <i>service ies string interface string ipsec ipsec-tunnel string admin-state keyword</i>
Tree	<i>admin-state</i>
Default	disable
Options	enable, disable
Introduced	22.7.R1
Platforms	VSR

## bfd

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>bfd</b> context
Context	<b>configure service ies string interface string ipsec ipsec-tunnel string bfd</b>
Tree	<b>bfd</b>
Introduced	22.7.R1
Platforms	VSR

## bfd-designate *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Designate IPsec tunnel to carry BFD traffic
Context	<b>configure service ies string interface string ipsec ipsec-tunnel string bfd bfd-designate boolean</b>
Tree	<b>bfd-designate</b>
Default	false
Introduced	22.7.R1
Platforms	VSR

## bfd-liveness

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the <b>bfd-liveness</b> context
Context	<b>configure service ies string interface string ipsec ipsec-tunnel string bfd bfd-liveness</b>
Tree	<b>bfd-liveness</b>
Description	Commands in this context configure a BFD session to provide a heart-beat mechanism for a specified IPsec tunnel. There can be only one BFD session assigned to any given IPsec tunnel, but there can be multiple IPsec tunnels using the same BFD session.

BFD controls the state of the association tunnel. If the BFD session goes down, the system brings down the associated non-designated IPsec tunnel.

Introduced 22.7.R1  
Platforms VSR

### **dest-ip** *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Destination address used for the BFD session  
Context **configure** *service ies string interface string ipsec ipsec-tunnel string bfd bfd-liveness dest-ip string*  
Tree *dest-ip*  
Notes This element is mandatory.  
Introduced 22.7.R1  
Platforms VSR

### **interface** *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Name of the interface used by the BFD session  
Context **configure** *service ies string interface string ipsec ipsec-tunnel string bfd bfd-liveness interface string*  
Tree *interface*  
String Length 1 to 32  
Notes This element is mandatory.  
Introduced 22.7.R1  
Platforms VSR

## **service-name** *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative service name
Context	<b>configure</b> <i>service ies string interface string ipsec ipsec-tunnel string bfd bfd-liveness service-name string</i>
Tree	<i>service-name</i>
Description	This command configures the name of the service where BFD traffic is forwarded to.
String Length	1 to 64
Notes	This element is mandatory.
Introduced	22.7.R1
Platforms	VSR

## **clear-df-bit** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Reset the DF bit to 0 in all payload IP packets
Context	<b>configure</b> <i>service ies string interface string ipsec ipsec-tunnel string clear-df-bit boolean</i>
Tree	<i>clear-df-bit</i>
Description	When configured to <b>true</b> , the DF bit is set to 0 in all payload IP packets associated with the IPsec tunnel, before any potential fragmentation occurs.
Default	false
Introduced	22.7.R1
Platforms	VSR

## **copy-traffic-class-upon-decapsulation** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable traffic class copy upon decapsulation
----------	--

Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>copy-traffic-class-upon-decapsulation</b> <i>boolean</i>
Tree	<b>copy-traffic-class-upon-decapsulation</b>
Description	When configured to <b>true</b> , the system copies the traffic class from the outer tunnel IP packet header to the payload IP packet header in the decapsulating direction (public to private).
Default	false
Introduced	22.7.R1
Platforms	VSR

### **description** *string*

Synopsis	Text description
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>description</b> <i>string</i>
Tree	<b>description</b>
String Length	1 to 80
Introduced	22.7.R1
Platforms	VSR

### **encapsulated-ip-mtu** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum size of the encapsulated tunnel packet
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>encapsulated-ip-mtu</b> <i>number</i>
Tree	<b>encapsulated-ip-mtu</b>
Description	This command specifies the maximum size of the encapsulated tunnel packet to the IPsec tunnel, the IP tunnel, or the dynamic tunnels terminated on the IPsec Gateway. If the encapsulated IPv4 or IPv6 tunnel packet exceeds this value, the system fragments the packet.
Range	512 to 9000
Units	bytes
Introduced	22.7.R1
Platforms	VSR

## icmp-generation

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>icmp-generation</b> context
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">ipsec ipsec-tunnel string</a> <a href="#">icmp-generation</a>
Tree	<a href="#">icmp-generation</a>
Description	Commands in this context configure settings for ICMPv4 message generation.
Introduced	22.7.R1
Platforms	VSR

## frag-required

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>frag-required</b> context
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">ipsec ipsec-tunnel string</a> <a href="#">icmp-generation</a> <a href="#">frag-required</a>
Tree	<a href="#">frag-required</a>
Description	Commands in this context configure the attributes for sending generated ICMP Destination Unreachable "fragmentation needed and DF set" messages (type 3, code 4) back to the source, if the received size of the IPv4 packet on the private side exceeds the private MTU size.
Introduced	22.7.R1
Platforms	VSR

## admin-state *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of sending ICMP messages
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">ipsec ipsec-tunnel string</a> <a href="#">icmp-generation</a> <a href="#">frag-required</a> <b>admin-state</b> <i>keyword</i>

Tree	<a href="#">admin-state</a>
Description	This command configures the administrative state of sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) messages to the source if the received size of the IPv4 packet on the private side exceeds the private MTU size.
Default	enable
Options	enable, disable
Introduced	22.7.R1
Platforms	VSR

### **interval** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Interval for sending ICMP messages
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipsec</a> <a href="#">ipsec-tunnel</a> <a href="#">string</a> <a href="#">icmp-generation</a> <a href="#">frag-required</a> <a href="#">interval</a> <i>number</i>
Tree	<a href="#">interval</a>
Description	This command configures the interval for sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4).
Range	1 to 60
Default	10
Units	seconds
Introduced	22.7.R1
Platforms	VSR

### **message-count** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of ICMP messages that can be sent
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipsec</a> <a href="#">ipsec-tunnel</a> <a href="#">string</a> <a href="#">icmp-generation</a> <a href="#">frag-required</a> <a href="#">message-count</a> <i>number</i>
Tree	<a href="#">message-count</a>

Description	This command configures the maximum number of ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) that can be sent during the configured interval.
Range	10 to 1000
Default	100
Introduced	22.7.R1
Platforms	VSR

## icmp6-generation

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>icmp6-generation</b> context
Context	<b>configure</b> <a href="#">service ies string interface string ipsec ipsec-tunnel string icmp6-generation</a>
Tree	<a href="#">icmp6-generation</a>
Description	Commands in this context configure settings for ICMPv6 message generation.
Introduced	22.7.R1
Platforms	VSR

## packet-too-big

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>packet-too-big</b> context
Context	<b>configure</b> <a href="#">service ies string interface string ipsec ipsec-tunnel string icmp6-generation packet-too-big</a>
Tree	<a href="#">packet-too-big</a>
Description	<p>Commands in this context configure the parameters to send ICMPv6 PTB (Packet Too Big) messages on the private side.</p> <p>The system sends PTB messages if a received IPv6 packet on the private side is greater than 1280 bytes and it exceeds the private MTU of the tunnel.</p> <p>The private MTU for the tunnel is configured via the <b>configure router interface ipsec ipsec-tunnel ip-mtu</b> command for the interface.</p>
Introduced	22.7.R1

Platforms VSR

### **admin-state** *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of Packet Too Big message sends
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>icmp6-generation</b> <b>packet-too-big</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Default	enable
Options	enable, disable
Introduced	22.7.R1
Platforms	VSR

### **interval** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Interval for sending Packet Too Big messages
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>icmp6-generation</b> <b>packet-too-big</b> <b>interval</b> <i>number</i>
Tree	<b>interval</b>
Range	1 to 60
Default	10
Units	seconds
Introduced	22.7.R1
Platforms	VSR

## message-count *number*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of ICMPv6 PTB messages that can be sent
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>icmp6-generation</b> <b>packet-too-big</b> <b>message-count</b> <i>number</i>
Tree	<b>message-count</b>
Description	This command configures the maximum number of PTB messages that can be sent during the configured interval.
Range	10 to 1000
Default	100
Introduced	22.7.R1
Platforms	VSR

## ip-mtu *number*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Private MTU of the IPsec tunnel
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>ip-mtu</b> <i>number</i>
Tree	<b>ip-mtu</b>
Description	This command specifies the private MTU of the IPsec tunnel. The private MTU is used to determine the need for fragmentation before encapsulation of the payload packet.
Range	512 to 9000
Units	bytes
Introduced	22.7.R1
Platforms	VSR

## key-exchange

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>key-exchange</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange</a>
Tree	<a href="#">key-exchange</a>
Introduced	22.7.R1
Platforms	VSR

## dynamic

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the <b>dynamic</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange</a> <a href="#">dynamic</a>
Tree	<a href="#">dynamic</a>
Notes	The following elements are part of a choice: <b>dynamic</b> or <b>manual</b> .
Introduced	22.7.R1
Platforms	VSR

## auto-establish *boolean*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Attempt to establish automatic phase 1 exchange
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange</a> <a href="#">dynamic auto-establish</a> <i>boolean</i>
Tree	<a href="#">auto-establish</a>
Default	false
Introduced	22.7.R1
Platforms	VSR

## cert

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>cert</b> context
Context	<b>configure service ies string interface string ipsec ipsec-tunnel string key-exchange dynamic cert</b>
Tree	<b>cert</b>
Description	Commands in this context configure the attributes of the dynamic keying certificate.
Introduced	22.7.R1
Platforms	VSR

## cert-profile *reference*

Synopsis	Certificate profile name
Context	<b>configure service ies string interface string ipsec ipsec-tunnel string key-exchange dynamic cert cert-profile reference</b>
Tree	<b>cert-profile</b>
Reference	<b>configure ipsec cert-profile string</b>
Introduced	22.7.R1
Platforms	VSR

## status-verify

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>status-verify</b> context
Context	<b>configure service ies string interface string ipsec ipsec-tunnel string key-exchange dynamic cert status-verify</b>
Tree	<b>status-verify</b>
Description	Commands in this context configure attributes of Certificate Status Verification (CSV).
Introduced	22.7.R1
Platforms	VSR

### **default-result** *keyword*

Synopsis	Default result for Certificate Status Verification
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>key-exchange</b> <b>dynamic</b> <b>cert</b> <b>status-verify</b> <b>default-result</b> <i>keyword</i>
Tree	<b>default-result</b>
Description	This command specifies the default certificate revocation status result to use when all configured CSV methods fail to return a result.
Default	revoked
Options	revoked, good
Introduced	22.7.R1
Platforms	VSR

### **primary** *keyword*

Synopsis	Primary method of CSV to verify the revocation status
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>key-exchange</b> <b>dynamic</b> <b>cert</b> <b>status-verify</b> <b>primary</b> <i>keyword</i>
Tree	<b>primary</b>
Description	This command configures the primary method of Certificate Status Verification (CSV) that is used to verify the revocation status of the certificate of the peer.
Default	crl
Options	crl, ocsp
Introduced	22.7.R1
Platforms	VSR

### **secondary** *keyword*

Synopsis	Secondary method used to verify certificate revocation
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>key-exchange</b> <b>dynamic</b> <b>cert</b> <b>status-verify</b> <b>secondary</b> <i>keyword</i>
Tree	<b>secondary</b>
Description	This command specifies the secondary method of Certificate Status Verification (CSV) that is used to verify the revocation status of the peer certificate.
Default	none
Options	none, crl, ocsp

Introduced 22.7.R1  
Platforms VSR

### **trust-anchor-profile** *reference*

Synopsis Trust anchor profile name  
Context **configure** [service ies string](#) [interface string](#) [ipsec ipsec-tunnel string](#) [key-exchange dynamic cert trust-anchor-profile reference](#)  
Tree [trust-anchor-profile](#)  
Reference **configure** [ipsec trust-anchor-profile string](#)  
Introduced 22.7.R1  
Platforms VSR

### **id**

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enter the **id** context  
Context **configure** [service ies string](#) [interface string](#) [ipsec ipsec-tunnel string](#) [key-exchange dynamic id](#)  
Tree [id](#)  
Description Commands in this context specify the local ID used for IDi or IDr for IKEv2 negotiation. The default behavior depends on the local authentication method as follows:

- Psk: local tunnel IP address
- Cert-auth: subject of the local certificate

  
Introduced 22.7.R1  
Platforms VSR

### **fqdn** *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis FQDN used as the local ID IKE type

Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>key-exchange</b> <b>dynamic id fqdn</b> <i>string</i>
Tree	<b>fqdn</b>
String Length	1 to 255
Notes	The following elements are part of a choice: <b>fqdn</b> , <b>ipv4</b> , or <b>ipv6</b> .
Introduced	22.7.R1
Platforms	VSR

### **ipv4** *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPv4 as the local ID type
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>key-exchange</b> <b>dynamic id ipv4</b> <i>string</i>
Tree	<b>ipv4</b>
Notes	The following elements are part of a choice: <b>fqdn</b> , <b>ipv4</b> , or <b>ipv6</b> .
Introduced	22.7.R1
Platforms	VSR

### **ipv6** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPv6 used as the local IKE ID type
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>key-exchange</b> <b>dynamic id ipv6</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>ipv6</b>
Notes	The following elements are part of a choice: <b>fqdn</b> , <b>ipv4</b> , or <b>ipv6</b> .
Introduced	22.7.R1
Platforms	VSR

## ike-policy *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IKE policy ID
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange dynamic ike-policy</a> <i>reference</i>
Tree	<a href="#">ike-policy</a>
Description	This command specifies the ID of the IKE policy used for IKE negotiation. The <b>ipsec-transport-mode-profile</b> configuration only supports IKEv2.
Reference	<b>configure</b> <a href="#">ipsec ike-policy</a> <i>number</i>
Introduced	22.7.R1
Platforms	VSR

## ipsec-transform *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPsec transform IDs used by the dynamic key
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange dynamic ipsec-transform</a> <i>reference</i>
Tree	<a href="#">ipsec-transform</a>
Description	This command specifies IPsec transform IDs used for CHILD_SA negotiation.
Reference	<b>configure</b> <a href="#">ipsec ipsec-transform</a> <i>number</i>
Max. Instances	4
Introduced	22.7.R1
Platforms	VSR

## pre-shared-key *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Pre-shared key for authentication
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange dynamic pre-shared-key</a> <i>string</i>
Tree	<a href="#">pre-shared-key</a>
String Length	1 to 115
Introduced	22.7.R1
Platforms	VSR

## manual

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the <b>manual</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange manual</a>
Tree	<a href="#">manual</a>
Description	Commands in this context configure settings for manually configured security associations for the IPsec tunnel.
Notes	The following elements are part of a choice: <b>dynamic</b> or <b>manual</b> .
Introduced	22.7.R1
Platforms	VSR

## keys [[security-association](#)] *number direction keyword*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>keys</b> list instance
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">key-exchange manual keys</a> <i>number direction keyword</i>
Tree	<a href="#">keys</a>
Description	Commands in this context configure the security association list for the tunnel.
Introduced	22.7.R1
Platforms	VSR

### [**security-association**] *number*

Synopsis	SA entry ID
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>key-exchange</b> <b>manual</b> <b>keys</b> <i>number</i> <b>direction</b> <i>keyword</i>
Tree	<b>keys</b>
Range	1 to 16
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	VSR

### **direction** *keyword*

Synopsis	Direction of the IPsec tunnel
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>key-exchange</b> <b>manual</b> <b>keys</b> <i>number</i> <b>direction</b> <i>keyword</i>
Tree	<b>keys</b>
Options	inbound, outbound
Notes	This element is part of a list key.
Introduced	22.7.R1
Platforms	VSR

### **authentication-key** *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Key used for the authentication algorithm
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>key-exchange</b> <b>manual</b> <b>keys</b> <i>number</i> <b>direction</b> <i>keyword</i> <b>authentication-key</b> <i>string</i>
Tree	<b>authentication-key</b>
String Length	1 to 130

Introduced 22.7.R1  
Platforms VSR

### encryption-key *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Key used for the encryption algorithm  
Context **configure** [service ies string](#) [interface string](#) [ipsec ipsec-tunnel string](#) [key-exchange manual keys number direction keyword](#) [encryption-key string](#)  
Tree [encryption-key](#)  
String Length 1 to 66  
Introduced 22.7.R1  
Platforms VSR

### ipsec-transform *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Transform entry used by manual SAs  
Context **configure** [service ies string](#) [interface string](#) [ipsec ipsec-tunnel string](#) [key-exchange manual keys number direction keyword](#) [ipsec-transform reference](#)  
Tree [ipsec-transform](#)  
Reference **configure** [ipsec ipsec-transform number](#)  
Notes This element is mandatory.  
Introduced 22.7.R1  
Platforms VSR

## **spi number**

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	SPI of inbound and outbound packets
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>key-exchange</b> <b>manual</b> <b>keys</b> <i>number</i> <b>direction</b> <i>keyword</i> <b>spi</b> <i>number</i>
Tree	<b>spi</b>
Description	This command specifies the Security Parameter Index (SPI) used to look up the instruction to verify and decrypt the incoming IPsec packets when the direction is inbound. When the direction is outbound, the SPI is used in the encoding of the outgoing packets.  The remote node can use the SPI to look up the instruction to verify and decrypt the packet.
Range	256 to 16383
Notes	This element is mandatory.
Introduced	22.7.R1
Platforms	VSR

## **local-gateway-address-override** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local IPsec tunnel endpoint address
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec</b> <b>ipsec-tunnel</b> <i>string</i> <b>local-gateway-address-override</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>local-gateway-address-override</b>
Description	This command configures the local IPsec tunnel endpoint address. This overrides the default endpoint address, which is the interface address.
Introduced	22.7.R1
Platforms	VSR

## max-history-key-records

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>max-history-key-records</b> context
Context	<b>configure service ies string interface string ipsec ipsec-tunnel string max-history-key-records</b>
Tree	<b>max-history-key-records</b>
Description	Commands in this context configure the settings for recording historical IPsec keys.
Introduced	22.7.R1
Platforms	VSR

## esp number

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of recent records
Context	<b>configure service ies string interface string ipsec ipsec-tunnel string max-history-key-records esp number</b>
Tree	<b>esp</b>
Range	1 to 48
Introduced	22.7.R1
Platforms	VSR

## ike number

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of historical IKE key records
Context	<b>configure service ies string interface string ipsec ipsec-tunnel string max-history-key-records ike number</b>
Tree	<b>ike</b>

Range	1 to 3
Introduced	22.7.R1
Platforms	VSR

### **pmtu-discovery-aging** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Aging out time of the learned path MTU
Context	<b>configure</b> <b>service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>pmtu-discovery-aging</b> <i>number</i>
Tree	<b>pmtu-discovery-aging</b>
Description	This command configures the temporary public and private MTU expiration time. The temporary MTU is used for MTU propagation.
Range	900 to 3600
Default	900
Units	seconds
Introduced	22.7.R1
Platforms	VSR

### **private-sap** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Private SAP ID
Context	<b>configure</b> <b>service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>private-sap</b> <i>number</i>
Tree	<b>private-sap</b>
Range	0 to 4094
Notes	This element is mandatory.
Introduced	22.7.R1

Platforms VSR

### **private-service** *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Private service name

Context **configure** [service](#) [ies](#) *string* [interface](#) *string* [ipsec](#) [ipsec-tunnel](#) *string* **private-service** *string*

Tree [private-service](#)

Description This command configures the private service name.  
If unconfigured, the private service is the service where the secured interface resides.

String Length 1 to 64

Introduced 22.7.R1

Platforms VSR

### **private-tcp-mss-adjust** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis TCP maximum segment size (MSS) adjustment

Context **configure** [service](#) [ies](#) *string* [interface](#) *string* [ipsec](#) [ipsec-tunnel](#) *string* **private-tcp-mss-adjust** *number*

Tree [private-tcp-mss-adjust](#)

Description This command specifies the TCP MSS to adjust for the tunnel on the private side.  
When configured, the system may use the value to update the MSS option in the received TCP SYN packet on the private side.

Range 512 to 9000

Units bytes

Introduced 22.7.R1

Platforms VSR

### **propagate-pmtu-v4** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable propagation of the path MTU to IPv4 hosts
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">propagate-pmtu-v4</a> <i>boolean</i>
Tree	<a href="#">propagate-pmtu-v4</a>
Description	When configured to <b>true</b> , the system propagates the path MTU learned from the public side to the private side (IPv4 hosts).
Default	true
Introduced	22.7.R1
Platforms	VSR

### **propagate-pmtu-v6** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable propagation of the path MTU to IPv6 hosts
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">propagate-pmtu-v6</a> <i>boolean</i>
Tree	<a href="#">propagate-pmtu-v6</a>
Description	When configured to <b>true</b> , the system propagates the path MTU learned from the public side to the private side (IPv6 hosts).
Default	true
Introduced	22.7.R1
Platforms	VSR

## public-tcp-mss-adjust (*number* | *keyword*)

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	TCP maximum segment size (MSS) on the public network
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <b>public-tcp-mss-adjust</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">public-tcp-mss-adjust</a>
Description	This command configures the MSS for the TCP traffic in an IPsec tunnel that is sent from the public network to the private network. The system may use this value to adjust or insert the MSS option in the TCP SYN packet.
Range	512 to 9000
Units	bytes
Options	auto
Introduced	22.7.R1
Platforms	VSR

## remote-gateway-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Remote IPsec tunnel endpoint address
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <b>remote-gateway-address</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">remote-gateway-address</a>
Introduced	22.7.R1
Platforms	VSR

## replay-window *number*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Anti-replay window size
----------	-------------------------

Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>replay-window</b> <i>number</i>
Tree	<a href="#">replay-window</a>
Description	This command specifies the size of an IPsec anti-replay window. If unconfigured, IPsec anti-replay is disabled.
Range	32   64   128   256   512
Units	packets
Introduced	22.7.R1
Platforms	VSR

## security-policy

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>security-policy</b> context
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>security-policy</b>
Tree	<a href="#">security-policy</a>
Description	Commands in this context specify a security policy used by the tunnel.
Introduced	22.7.R1
Platforms	VSR

## id number

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Security policy ID for use by the tunnel
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipsec ipsec-tunnel</b> <i>string</i> <b>security-policy</b> <i>id number</i>
Tree	<a href="#">id</a>
Max. Range	0 to 4294967295
Introduced	22.7.R1
Platforms	VSR

## strict-match *boolean*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable strict match of the security policy entry
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec ipsec-tunnel</a> <i>string</i> <a href="#">security-policy</a> <a href="#">strict-match</a> <i>boolean</i>
Tree	<a href="#">strict-match</a>
Description	<p>When configured to <b>true</b>, this command enables strict match of the security policy entry.</p> <p>When a CREATE_CHILD exchange request is received for a static IPsec tunnel, and this request is not a rekey request, ISA matches the received TSi and TSr with the configured security policy. This can be a match only when a received TS (in TSi or TSr) address range matches exactly with the subnet in a security policy entry.</p> <p>If there is no match, the setup fails, and TS_UNACCEPTABLE is sent.</p> <p>If there is a match, but there is an existing CHILD_SA for the matched security policy, the setup fails, and NO_PROPOSAL_CHOSEN is sent.</p> <p>If there is a match, and there is not a CHILD_SA for the matched entry, the subnet is sent in the matched security policy entry as TSi and TSr, and the CHILD_SA is created.</p>
Default	false
Introduced	22.7.R1
Platforms	VSR

## ipv6-exception *reference*

Synopsis	IPv6 filter exception used to bypass encryption
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec</a> <a href="#">ipv6-exception</a> <i>reference</i>
Tree	<a href="#">ipv6-exception</a>
Description	<p>This command specifies the IPv6 filter exception for an IPsec-secured IPv6 interface. When an IPv6 filter exception is added, clear text packets that match the exception criteria in the IPv6 filter exception can ingress the interface, even when IPsec is enabled on the interface.</p>
Reference	<b>configure</b> <a href="#">filter</a> <a href="#">ipv6-exception</a> <i>string</i>
Introduced	22.7.R1
Platforms	VSR

## public-sap *number*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Public SAP ID
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec public-sap</a> <i>number</i>
Tree	<a href="#">public-sap</a>
Range	0 to 4094
Notes	This element is mandatory.
Introduced	22.7.R1
Platforms	VSR

## tunnel-group *reference*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tunnel group ID
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipsec tunnel-group</a> <i>reference</i>
Tree	<a href="#">tunnel-group</a>
Reference	<b>configure isa</b> <a href="#">tunnel-group</a> <i>number</i>
Notes	This element is mandatory.
Introduced	22.7.R1
Platforms	VSR

## ipv4

Synopsis	Enter the <b>ipv4</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a>
Tree	<a href="#">ipv4</a>
Introduced	16.0.R1
Platforms	All

## addresses

Synopsis	Enter the <b>addresses</b> context
Context	<b>configure service ies string interface string ipv4 addresses</b>
Tree	<a href="#">addresses</a>
Introduced	16.0.R1
Platforms	All

## address [ipv4-address] string

Synopsis	Enter the <b>address</b> list instance
Context	<b>configure service ies string interface string ipv4 addresses address string</b>
Tree	<a href="#">address</a>
Introduced	16.0.R1
Platforms	All

## [ipv4-address] string

Synopsis	IPv4 address for the interface
Context	<b>configure service ies string interface string ipv4 addresses address string</b>
Tree	<a href="#">address</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## prefix-length number

Synopsis	IPv4 address prefix length
Context	<b>configure service ies string interface string ipv4 addresses address string prefix-length number</b>
Tree	<a href="#">prefix-length</a>
Range	0 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **allow-directed-broadcasts** *boolean*

Synopsis	Forward directed broadcasts
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <b>allow-directed-broadcasts</b> <i>boolean</i>
Tree	<a href="#">allow-directed-broadcasts</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **bfd**

Synopsis	Enter the <b>bfd</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <b>bfd</b>
Tree	<a href="#">bfd</a>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of BFD sessions
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <b>bfd</b> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **echo-receive** *number*

Synopsis	Minimum echo interval over this interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <b>bfd</b> <b>echo-receive</b> <i>number</i>
Tree	<a href="#">echo-receive</a>
Range	100 to 100000
Units	milliseconds
Introduced	16.0.R1

Platforms All

### **multiplier** *number*

Synopsis Number of consecutive BFD messages missed from the peer

Context **configure** [service](#) [ies](#) [string](#) [interface](#) [string](#) [ipv4](#) [bfd](#) [multiplier](#) *number*

Tree [multiplier](#)

Description This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments.

Range 1 to 20

Default 3

Introduced 16.0.R1

Platforms All

### **receive** *number*

Synopsis BFD receive interval over this interface

Context **configure** [service](#) [ies](#) [string](#) [interface](#) [string](#) [ipv4](#) [bfd](#) [receive](#) *number*

Tree [receive](#)

Description This command specifies the receive interval for the BFD session.  
On the 7750 SR, this command can only be configured to a value less than 100 when the **type** command is configured to **cpm-np**.

Range 10 to 100000

Default 100

Units milliseconds

Introduced 16.0.R1

Platforms All

### **transmit-interval** *number*

Synopsis BFD transmit interval over this interface

Context **configure** [service](#) [ies](#) [string](#) [interface](#) [string](#) [ipv4](#) [bfd](#) [transmit-interval](#) *number*

Tree [transmit-interval](#)

Description This command configures the transmit intervals.

On the 7750 SR, this command can only be configured to a value less than 100 when the **type** command is configured to **cpm-np**.

Range	10 to 100000
Default	100
Units	milliseconds
Introduced	16.0.R1
Platforms	All

### **type** keyword

Synopsis	Local termination point for the BFD session
Context	<b>configure</b> <a href="#">service ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">bfd</a> <a href="#">type</a> <a href="#">keyword</a>
Tree	<a href="#">type</a>
Description	This command sets the local termination point for the BFD session to allow for fast timers down to 10 ms granularity. The options to specify where the BFD session runs are: <ul style="list-style-type: none"> <li>• <b>auto</b> (default) – the system chooses and uses the line card CPU only for single-hop BFD sessions with timer intervals equal to or greater than 100ms. All others are placed on the <b>cpm-np</b>.</li> <li>• <b>cpm-np</b> – BFD session runs on the FP complex associated with the CPM. This is either the FP on the CPM or the one elected on smaller systems.</li> <li>• <b>fp</b> – BFD session runs on the line card CPU. This option can only be used for single-hop BFD sessions with timers equal to or greater than 100ms.</li> </ul>
Default	auto
Options	cpm-np, auto, fp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **dhcp**

Synopsis	Enter the <b>dhcp</b> context
Context	<b>configure</b> <a href="#">service ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a>
Tree	<a href="#">dhcp</a>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of DHCP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">admin-state</a> <a href="#">keyword</a>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">description</a> <a href="#">string</a>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **gi-address** *string*

Synopsis	GI address for the DHCP relay
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">gi-address</a> <a href="#">string</a>
Tree	<a href="#">gi-address</a>
Description	<p>This command configures the GI address to distinguish between the different subscriber interfaces (and potentially group interfaces) defined when the router functions as a DHCP relay.</p> <p>By default, the GI address used in the relayed DHCP packet is the primary IP address of a normal IES interface. Specifying the GI address allows the user to choose a secondary address. For group interfaces, a GI address must be specified under the group interface DHCP context or subscriber interface DHCP context for DHCP to function.</p>
Introduced	16.0.R1
Platforms	All

### **lease-populate**

Synopsis	Enter the <b>lease-populate</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">lease-populate</a>

Tree	<a href="#">lease-populate</a>
Introduced	16.0.R1
Platforms	All

### **max-leases** *number*

Synopsis	Maximum number of DHCPv4 leases allowed
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">lease-populate</a> <b>max-leases</b> <i>number</i>
Tree	<a href="#">max-leases</a>
Range	0 to 511999
Introduced	16.0.R1
Platforms	All

### **option-82**

Synopsis	Enter the <b>option-82</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">dhcp</a> <b>option-82</b>
Tree	<a href="#">option-82</a>
Description	Commands in this context configure the processing required when the router receives a DHCP request that already has an Option 82 field in the packet.
Introduced	16.0.R1
Platforms	All

### **action** *keyword*

Synopsis	Action to take with received DHCP Option 82
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a> <b>action</b> <i>keyword</i>
Tree	<a href="#">action</a>
Default	keep
Options	replace, drop, keep
Introduced	16.0.R1
Platforms	All

## circuit-id

Synopsis	Enter the <b>circuit-id</b> context
Context	<b>configure service ies string interface string ipv4 dhcp option-82 circuit-id</b>
Tree	<a href="#">circuit-id</a>
Introduced	16.0.R1
Platforms	All

## ascii-tuple

Synopsis	Use the ASCII-encoded tuple for the circuit ID
Context	<b>configure service ies string interface string ipv4 dhcp option-82 circuit-id ascii-tuple</b>
Tree	<a href="#">ascii-tuple</a>
Notes	This element is the default part of a choice. The following elements are part of a choice: <b>ascii-tuple</b> , <b>ifindex</b> , <b>none</b> , <b>sap-id</b> , or <b>vlan-ascii-tuple</b> .
Introduced	16.0.R1
Platforms	All

## ifindex

Synopsis	Use the interface index for the circuit ID
Context	<b>configure service ies string interface string ipv4 dhcp option-82 circuit-id ifindex</b>
Tree	<a href="#">ifindex</a>
Notes	The following elements are part of a choice: <b>ascii-tuple</b> , <b>ifindex</b> , <b>none</b> , <b>sap-id</b> , or <b>vlan-ascii-tuple</b> .
Introduced	16.0.R1
Platforms	All

## none

Synopsis	Do not include the circuit ID
Context	<b>configure service ies string interface string ipv4 dhcp option-82 circuit-id none</b>
Tree	<a href="#">none</a>
Notes	The following elements are part of a choice: <b>ascii-tuple</b> , <b>ifindex</b> , <b>none</b> , <b>sap-id</b> , or <b>vlan-ascii-tuple</b> .
Introduced	16.0.R1

Platforms All

## sap-id

Synopsis Use the SAP ID

Context **configure** [service ies](#) *string* [interface](#) *string* [ipv4 dhcp option-82 circuit-id sap-id](#)

Tree [sap-id](#)

Notes The following elements are part of a choice: **ascii-tuple**, **ifindex**, **none**, **sap-id**, or **vlan-ascii-tuple**.

Introduced 16.0.R1

Platforms All

## vlan-ascii-tuple

Synopsis Include the VLAN ID and dot1p bits in the ASCII tuple

Context **configure** [service ies](#) *string* [interface](#) *string* [ipv4 dhcp option-82 circuit-id vlan-ascii-tuple](#)

Tree [vlan-ascii-tuple](#)

Description When configured, the router includes the VLAN ID and dot1p bits with the ASCII-tuple information. This only occurs on dot1q and QinQ-encapsulated ports. When the Option 82 bits are stripped, dot1p bits are copied to the Ethernet header of the outgoing packet.  
When unconfigured, the router leaves the circuit ID sub-option of the DHCP packet empty.

Notes The following elements are part of a choice: **ascii-tuple**, **ifindex**, **none**, **sap-id**, or **vlan-ascii-tuple**.

Introduced 16.0.R1

Platforms All

## remote-id

Synopsis Enter the **remote-id** context

Context **configure** [service ies](#) *string* [interface](#) *string* [ipv4 dhcp option-82 remote-id](#)

Tree [remote-id](#)

Description Commands in this context configure the remote IP sub-option of the DHCP packet with the identity of the remote host end (typically the DHCP client).

Introduced 16.0.R1

Platforms All

### **ascii-string** *string*

Synopsis	User-defined ASCII string for the remote ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a> <a href="#">remote-id</a> <a href="#">ascii-string</a> <a href="#">string</a>
Tree	<a href="#">ascii-string</a>
String Length	1 to 32
Notes	The following elements are part of a choice: <b>ascii-string</b> , <b>mac</b> , or <b>none</b> .
Introduced	16.0.R1
Platforms	All

### **mac**

Synopsis	Use the MAC address for the remote ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a> <a href="#">remote-id</a> <a href="#">mac</a>
Tree	<a href="#">mac</a>
Notes	The following elements are part of a choice: <b>ascii-string</b> , <b>mac</b> , or <b>none</b> .
Introduced	16.0.R1
Platforms	All

### **none**

Synopsis	Do not include the remote ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a> <a href="#">remote-id</a> <a href="#">none</a>
Tree	<a href="#">none</a>
Notes	This element is the default part of a choice. The following elements are part of a choice: <b>ascii-string</b> , <b>mac</b> , or <b>none</b> .
Introduced	16.0.R1
Platforms	All

### **vendor-specific-option**

Synopsis	Enter the <b>vendor-specific-option</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a> <a href="#">vendor-specific-option</a>
Tree	<a href="#">vendor-specific-option</a>

Description	Commands in this context configure the Nokia Vendor-Specific Option (VSO) of the DHCP packet.
Introduced	16.0.R1
Platforms	All

### **client-mac-address** *boolean*

Synopsis	Send the MAC address in the VSO
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 dhcp option-82 vendor-specific-option</a> <a href="#">client-mac-address</a> <i>boolean</i>
Tree	<a href="#">client-mac-address</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **pool-name** *boolean*

Synopsis	Send the pool name in the VSO
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 dhcp option-82 vendor-specific-option</a> <a href="#">pool-name</a> <i>boolean</i>
Tree	<a href="#">pool-name</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **sap-id** *boolean*

Synopsis	Send SAP ID in the sub-option of the DHCP relay packet
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 dhcp option-82 vendor-specific-option</a> <a href="#">sap-id</a> <i>boolean</i>
Tree	<a href="#">sap-id</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **service-id** *boolean*

Synopsis	Send the service ID in the Vendor Specific Option
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a> <a href="#">vendor-specific-option</a> <a href="#">service-id</a> <i>boolean</i>
Tree	<a href="#">service-id</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **string** *string*

Synopsis	User-defined ASCII string for the VSO
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a> <a href="#">vendor-specific-option</a> <a href="#">string</a> <i>string</i>
Tree	<a href="#">string</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

### **system-id** *boolean*

Synopsis	Send the system ID in the VSO
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a> <a href="#">vendor-specific-option</a> <a href="#">system-id</a> <i>boolean</i>
Tree	<a href="#">system-id</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **proxy-server**

Synopsis	Enter the <b>proxy-server</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">proxy-server</a>
Tree	<a href="#">proxy-server</a>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the DHCP proxy server
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">proxy-server</a> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **emulated-server** *string*

Synopsis	IP address used as the DHCP server address for the SAP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">proxy-server</a> <b>emulated-server</b> <i>string</i>
Tree	<a href="#">emulated-server</a>
Description	This command configures the IP address which will be used as the DHCP server address in the context of the SAP. Typically, the configured address should be in the context of the subnet represented by the service.
Introduced	16.0.R1
Platforms	All

### **lease-time**

Synopsis	Enter the <b>lease-time</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">proxy-server</a> <b>lease-time</b>
Tree	<a href="#">lease-time</a>
Introduced	16.0.R1
Platforms	All

### **radius-override** *boolean*

Synopsis	Use lease time information provided by RADIUS server
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">proxy-server</a> <b>lease-time</b> <b>radius-override</b> <i>boolean</i>
Tree	<a href="#">radius-override</a>

Default	false
Introduced	16.0.R1
Platforms	All

### **value** *number*

Synopsis	DHCP lease time
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 dhcp proxy-server lease-time</a> <i>value number</i>
Tree	<a href="#">value</a>
Range	300 to 315446399
Units	seconds
Introduced	16.0.R1
Platforms	All

### **python-policy** *reference*

Synopsis	Python policy
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 dhcp python-policy</a> <i>reference</i>
Tree	<a href="#">python-policy</a>
Reference	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **relay-plain-bootp** *boolean*

Synopsis	Enable relaying of plain BOOTP packets
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 dhcp relay-plain-bootp</a> <i>boolean</i>
Tree	<a href="#">relay-plain-bootp</a>
Default	false
Introduced	16.0.R1
Platforms	All

## relay-proxy

Synopsis	Enable the <b>relay-proxy</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">relay-proxy</a>
Tree	<a href="#">relay-proxy</a>
Introduced	16.0.R1
Platforms	All

## release-update-src-ip *boolean*

Synopsis	Update the source IP address of a DHCP RELEASE message
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">relay-proxy</a> <a href="#">release-update-src-ip</a> <i>boolean</i>
Tree	<a href="#">release-update-src-ip</a>
Default	false
Introduced	16.0.R1
Platforms	All

## siaddr-override *string*

Synopsis	DHCP server IP address for address hiding function
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">relay-proxy</a> <a href="#">siaddr-override</a> <i>string</i>
Tree	<a href="#">siaddr-override</a>
Introduced	16.0.R1
Platforms	All

## release-include-gi-address *boolean*

Synopsis	Include gateway IP address in DHCP Release messages
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">release-include-gi-address</a> <i>boolean</i>
Tree	<a href="#">release-include-gi-address</a>
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **server string**

Synopsis	IP addresses for DHCP server requests
Context	<b>configure service ies string interface string ipv4 dhcp server string</b>
Tree	<b>server</b>
Description	This command configures a list of servers that this interface forwards requests to.  The operator can enter the list of servers as either IP addresses or fully qualified domain names. The operator must specify at least one server specified for DHCP relay to work. If there are multiple servers, the system forwards the request to all the servers in the list.
Max. Instances	8
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **src-ip-addr keyword**

Synopsis	Type of source address to use for DHCP relay
Context	<b>configure service ies string interface string ipv4 dhcp src-ip-addr keyword</b>
Tree	<b>src-ip-addr</b>
Default	auto
Options	auto, gi-address
Introduced	16.0.R1
Platforms	All

### **trusted boolean**

Synopsis	Relay untrusted packets
Context	<b>configure service ies string interface string ipv4 dhcp trusted boolean</b>
Tree	<b>trusted</b>
Description	When configured to <b>true</b> , the router enables the trusted mode on the interface. When enabled, the relay agent changes the existing GI address (of the request) to the ingress interface, and forwards the request.  A DHCP request that contains a GI address of 0.0.0.0 and an Option 82 field in the packet is discarded unless it arrives on a trusted circuit.  This behavior only applies if the Relay Agent Information Option action is to keep the existing information. When the Option 82 field is replaced by the relay agent, the original Option 82 information is lost, and there is no reason to enable the trusted option.

Default	false
Introduced	16.0.R1
Platforms	All

### **use-arp** *boolean*

Synopsis	Use ARP to determine the destination hardware address
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 dhcp</a> <a href="#">use-arp</a> <i>boolean</i>
Tree	<a href="#">use-arp</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **icmp**

Synopsis	Enter the <b>icmp</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 icmp</a>
Tree	<a href="#">icmp</a>
Introduced	16.0.R1
Platforms	All

### **mask-reply** *boolean*

Synopsis	Allow responses to ICMP mask requests on the interface
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 icmp</a> <a href="#">mask-reply</a> <i>boolean</i>
Tree	<a href="#">mask-reply</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **param-problem**

Synopsis	Enter the <b>param-problem</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 icmp</a> <a href="#">param-problem</a>
Tree	<a href="#">param-problem</a>

Description	Commands in this context specify the settings for ICMP Parameter Problem messages generated by the interface.
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of sent Parameter Problem messages
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">icmp</a> <a href="#">param-problem</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	enable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **number** *number*

Synopsis	Maximum number of Parameter Problem messages to send
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">icmp</a> <a href="#">param-problem</a> <a href="#">number</a> <i>number</i>
Tree	<a href="#">number</a>
Range	10 to 1000
Default	100
Introduced	16.0.R1
Platforms	All

### **seconds** *number*

Synopsis	Time used to limit number of Parameter Problem messages
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">icmp</a> <a href="#">param-problem</a> <a href="#">seconds</a> <i>number</i>
Tree	<a href="#">seconds</a>
Range	1 to 60
Default	10
Units	seconds
Introduced	16.0.R1

Platforms All

## redirects

Synopsis Enter the **redirects** context

Context **configure service ies string interface string ipv4 icmp redirects**

Tree **redirects**

Description Commands in this context configure the settings for ICMP redirect messages generated by the interface.

The system sends ICMP redirect messages to alert the sending node that a more optimal route is available on another router on the same subnetwork.

Introduced 16.0.R1

Platforms All

## admin-state *keyword*

Synopsis Administrative state of sending ICMP redirect messages

Context **configure service ies string interface string ipv4 icmp redirects admin-state keyword**

Tree **admin-state**

Default enable

Options enable, disable

Introduced 16.0.R1

Platforms All

## number *number*

Synopsis Maximum number of ICMP redirect messages to send

Context **configure service ies string interface string ipv4 icmp redirects number number**

Tree **number**

Range 10 to 1000

Default 100

Introduced 16.0.R1

Platforms All

### **seconds** *number*

Synopsis	Time used to limit the number of ICMP redirect messages
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">icmp</a> <a href="#">redirects</a> <a href="#">seconds</a> <i>number</i>
Tree	<a href="#">seconds</a>
Range	1 to 60
Default	10
Units	seconds
Introduced	16.0.R1
Platforms	All

### **ttl-expired**

Synopsis	Enter the <b>ttl-expired</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">icmp</a> <a href="#">ttl-expired</a>
Tree	<a href="#">ttl-expired</a>
Description	Commands in this context configure the settings for ICMP TTL expired messages generated by the interface.
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of sending TTL expired messages
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">icmp</a> <a href="#">ttl-expired</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	enable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **number** *number*

Synopsis	Maximum number of TTL expired messages to send
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">icmp</a> <a href="#">ttl-expired</a> <a href="#">number</a> <i>number</i>
Tree	<a href="#">number</a>

Range	10 to 2000
Default	100
Introduced	16.0.R1
Platforms	All

### **seconds** *number*

Synopsis	Time used to limit the number of TTL expired messages
Context	<b>configure service ies string interface string ipv4 icmp ttl-expired seconds number</b>
Tree	<b>seconds</b>
Range	1 to 60
Default	10
Units	seconds
Introduced	16.0.R1
Platforms	All

### **unreachables**

Synopsis	Enter the <b>unreachables</b> context
Context	<b>configure service ies string interface string ipv4 icmp unreachables</b>
Tree	<b>unreachables</b>
Description	Commands in this context specify the settings for ICMP host and network destination unreachable messages generated by the interface.
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of sending unreachable messages
Context	<b>configure service ies string interface string ipv4 icmp unreachables admin-state keyword</b>
Tree	<b>admin-state</b>
Default	enable
Options	enable, disable
Introduced	16.0.R1

Platforms All

### **number** *number*

Synopsis Maximum number of unreachable messages to send  
Context **configure** [service](#) [ies](#) [string](#) [interface](#) [string](#) [ipv4](#) [icmp](#) [unreachables](#) [number](#) *number*  
Tree [number](#)  
Range 10 to 2000  
Default 100  
Introduced 16.0.R1  
Platforms All

### **seconds** *number*

Synopsis Time to limit the number of ICMP unreachable messages  
Context **configure** [service](#) [ies](#) [string](#) [interface](#) [string](#) [ipv4](#) [icmp](#) [unreachables](#) [seconds](#) *number*  
Tree [seconds](#)  
Range 1 to 60  
Default 10  
Units seconds  
Introduced 16.0.R1  
Platforms All

### **ip-helper-address** *string*

Synopsis Gateway address  
Context **configure** [service](#) [ies](#) [string](#) [interface](#) [string](#) [ipv4](#) [ip-helper-address](#) *string*  
Tree [ip-helper-address](#)  
Introduced 16.0.R1  
Platforms All

### **local-dhcp-server** *reference*

Synopsis DHCP server for the interface  
Context **configure** [service](#) [ies](#) [string](#) [interface](#) [string](#) [ipv4](#) [local-dhcp-server](#) *reference*

Tree	<a href="#">local-dhcp-server</a>
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv4</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## neighbor-discovery

Synopsis	Enter the <b>neighbor-discovery</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a>
Tree	<a href="#">neighbor-discovery</a>
Introduced	16.0.R1
Platforms	All

## host-route

Synopsis	Enter the <b>host-route</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a> <a href="#">host-route</a>
Tree	<a href="#">host-route</a>
Introduced	19.10.R1
Platforms	All

## populate [[route-type](#)] *keyword*

Synopsis	Enter the <b>populate</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a> <a href="#">host-route</a> <a href="#">populate</a> <i>keyword</i>
Tree	<a href="#">populate</a>
Introduced	19.10.R1
Platforms	All

## [[route-type](#)] *keyword*

Synopsis	Type of ARP or ND entries that generate host routes
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a> <a href="#">host-route</a> <a href="#">populate</a> <i>keyword</i>
Tree	<a href="#">populate</a>

Options	static, dynamic, evpn
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	All

### route-tag *number*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tag value used with the host route from an ARP/ND entry
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 neighbor-discovery host-route populate</a> <i>keyword</i> <b>route-tag</b> <i>number</i>
Tree	<a href="#">route-tag</a>
Description	This command specifies the route tag that is added in the route table for ARP or ND host routes. This tag can be matched on BGP VRF export and BGP peer export policies.
Range	1 to 255
Introduced	19.10.R1
Platforms	All

### learn-unsolicited *boolean*

Synopsis	Learn new entries from any received NA message
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 neighbor-discovery</a> <b>learn-unsolicited</b> <i>boolean</i>
Tree	<a href="#">learn-unsolicited</a>
Description	<p>When configured to <b>true</b>, the router can learn neighbor entries from received unsolicited Neighbor Advertisement (NA) messages, with or without the solicited (S) flag set. The command can be enabled for global addresses, link-local addresses, or for both.</p> <p>When configured to <b>false</b>, the router follows standard behavior for learning neighbor entries.</p> <ul style="list-style-type: none"> <li>• If an unsolicited NA (regardless of the S flag) is received from a neighbor that is not yet in the Neighbor Discovery (ND) cache, the NA is ignored.</li> <li>• If an NS, RS, RA, or Redirect message with a Link Layer Address (MAC) is received from a neighbor that is not yet in the ND cache, a new neighbor entry is created in the cache to store the received Link Layer MAC. The neighbor is put in the STALE state.</li> </ul>
Default	false

Introduced 16.0.R1  
Platforms All

## limit

Synopsis Enter the **limit** context  
Context **configure service ies string interface string ipv4 neighbor-discovery limit**  
Tree **limit**  
Introduced 16.0.R1  
Platforms All

## log-only *boolean*

Synopsis Generate log entries only if limit is reached  
Context **configure service ies string interface string ipv4 neighbor-discovery limit log-only boolean**  
Tree **log-only**  
Default false  
Introduced 16.0.R1  
Platforms All

## max-entries *number*

Synopsis Maximum number of entries learned on an IP interface  
Context **configure service ies string interface string ipv4 neighbor-discovery limit max-entries number**  
Tree **max-entries**  
Range 0 to 524288  
Introduced 16.0.R1  
Platforms All

## threshold *number*

Synopsis Threshold value that triggers a warning message  
Context **configure service ies string interface string ipv4 neighbor-discovery limit threshold number**

Tree	<a href="#">threshold</a>
Range	1 to 100
Default	90
Units	percent
Introduced	16.0.R1
Platforms	All

### **local-proxy-arp** *boolean*

Synopsis	Enable local proxy ARP on interface
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 neighbor-discovery local-proxy-arp</a> <i>boolean</i>
Tree	<a href="#">local-proxy-arp</a>
Description	When configured to <b>true</b> , the router enables local proxy ARP on the interface. When configured to <b>false</b> , the router does not respond to ARP requests for addresses on the same subnet.
Introduced	16.0.R1
Platforms	All

### **populate** *boolean*

Synopsis	Allow static and dynamic hosts to be populated in system ARP cache
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 neighbor-discovery populate</a> <i>boolean</i>
Tree	<a href="#">populate</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **proactive-refresh** *boolean*

Synopsis	Send a single refresh message before entry timeout
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 neighbor-discovery proactive-refresh</a> <i>boolean</i>
Tree	<a href="#">proactive-refresh</a>
Description	When configured to <b>true</b> , the router always sends a refresh message 30 seconds before the timeout of the entry (a single refresh message with no retries).

When configured to **false**, the router marks an entry as stale 30 seconds before age-out, and the router only sends an ARP request to refresh the entry if the IOM receives traffic that uses it. Then, the IOM asks the ARP application to send a refresh message. With ARP proactive refresh enabled, the ARP module sends a refresh message regardless of the IOM receiving traffic.

Default	false
Introduced	16.0.R1
Platforms	All

### **proxy-arp-policy** *reference*

Synopsis	Proxy ARP policy name
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a> <a href="#">proxy-arp-policy</a> <a href="#">reference</a>
Tree	<a href="#">proxy-arp-policy</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <a href="#">string</a>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **remote-proxy-arp** *boolean*

Synopsis	Enable remote proxy ARP on the interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a> <a href="#">remote-proxy-arp</a> <a href="#">boolean</a>
Tree	<a href="#">remote-proxy-arp</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **retry-timer** *number*

Synopsis	ARP retry interval
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a> <a href="#">retry-timer</a> <a href="#">number</a>
Tree	<a href="#">retry-timer</a>

Range	1 to 300
Default	50
Units	deciseconds
Introduced	16.0.R1
Platforms	All

### **static-neighbor** [*ipv4-address*] *string*

Synopsis	Enter the <b>static-neighbor</b> list instance
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 neighbor-discovery</a> <b>static-neighbor</b> <i>string</i>
Tree	<a href="#">static-neighbor</a>
Introduced	16.0.R1
Platforms	All

### **[ipv4-address]** *string*

Synopsis	IPv4 address that corresponds to the physical address
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 neighbor-discovery</a> <b>static-neighbor</b> <i>string</i>
Tree	<a href="#">static-neighbor</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **mac-address** *string*

Synopsis	MAC address for the static neighbor
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 neighbor-discovery</a> <b>static-neighbor</b> <i>string</i> <b>mac-address</b> <i>string</i>
Tree	<a href="#">mac-address</a>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

## static-neighbor-unnumbered

Synopsis	Enable the <b>static-neighbor-unnumbered</b> context
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 neighbor-discovery static-neighbor-unnumbered</b>
Tree	<a href="#">static-neighbor-unnumbered</a>
Introduced	16.0.R1
Platforms	All

## mac-address *string*

Synopsis	MAC address for the static neighbor
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 neighbor-discovery static-neighbor-unnumbered mac-address</b> <i>string</i>
Tree	<a href="#">mac-address</a>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

## timeout *number*

Synopsis	Timeout for an ARP entry learned on the interface
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 neighbor-discovery timeout</b> <i>number</i>
Tree	<a href="#">timeout</a>
Description	This command configures the minimum time an ARP entry learned on the IP interface is stored in the ARP table. ARP entries are automatically refreshed when an ARP request or gratuitous ARP is seen by an IP host. Otherwise, the ARP entry is aged from the ARP table.
Range	0 to 65535
Default	14400
Units	seconds
Introduced	16.0.R1
Platforms	All

## primary

Synopsis	Enable the <b>primary</b> context
----------	-----------------------------------

Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 primary</b>
Tree	<b>primary</b>
Introduced	16.0.R1
Platforms	All

### **address** *string*

Synopsis	Primary IPv4 address assigned to the interface
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 primary address</b> <i>string</i>
Tree	<b>address</b>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **broadcast** *keyword*

Synopsis	Broadcast address format
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 primary broadcast</b> <i>keyword</i>
Tree	<b>broadcast</b>
Default	host-ones
Options	all-ones, host-ones
Introduced	16.0.R1
Platforms	All

### **prefix-length** *number*

Synopsis	IPv4 address prefix length
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 primary prefix-length</b> <i>number</i>
Tree	<b>prefix-length</b>
Range	0 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **track-srrp** *number*

Synopsis	SRRP instance whose state is tracked on this IP address
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>primary</b> <b>track-srrp</b> <i>number</i>
Tree	<b>track-srrp</b>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **qos-route-lookup** *keyword*

Synopsis	QoS Route lookup
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>qos-route-lookup</b> <i>keyword</i>
Tree	<b>qos-route-lookup</b>
Options	destination, source
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **secondary** [*address*] *string*

Synopsis	Enter the <b>secondary</b> list instance
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>secondary</b> <i>string</i>
Tree	<b>secondary</b>
Introduced	16.0.R1
Platforms	All

Synopsis Enter the **unnumbered** context  
Context **configure** *service ies string interface string ipv4 unnumbered*  
Tree [unnumbered](#)  
Introduced 16.0.R1  
Platforms All

### **ip-address** *string*

Synopsis IP address of the unnumbered interface  
Context **configure** *service ies string interface string ipv4 unnumbered ip-address string*  
Tree [ip-address](#)  
Notes The following elements are part of a choice: **ip-address**, **ip-int-name**, or **system**.  
Introduced 16.0.R1  
Platforms All

### **ip-int-name** *string*

Synopsis IP interface name  
Context **configure** *service ies string interface string ipv4 unnumbered ip-int-name string*  
Tree [ip-int-name](#)

String Length	1 to 32
Notes	The following elements are part of a choice: <b>ip-address</b> , <b>ip-int-name</b> , or <b>system</b> .
Introduced	16.0.R1
Platforms	All

## **system**

Synopsis	IP interface as an unnumbered interface
Context	<b>configure service ies string interface string ipv4 unnumbered system</b>
Tree	<a href="#">system</a>
Notes	The following elements are part of a choice: <b>ip-address</b> , <b>ip-int-name</b> , or <b>system</b> .
Introduced	16.0.R1
Platforms	All

## **urpf-check**

Synopsis	Enable the <b>urpf-check</b> context
Context	<b>configure service ies string interface string ipv4 urpf-check</b>
Tree	<a href="#">urpf-check</a>
Introduced	16.0.R1
Platforms	All

## **ignore-default** *boolean*

Synopsis	Ignore default route when performing a uRPF check
Context	<b>configure service ies string interface string ipv4 urpf-check ignore-default boolean</b>
Tree	<a href="#">ignore-default</a>
Default	false
Introduced	16.0.R1
Platforms	All

## **mode** *keyword*

Synopsis	Unicast RPF check mode
Context	<b>configure service ies string interface string ipv4 urpf-check mode keyword</b>

Tree	<a href="#">mode</a>
Default	strict
Options	strict, loose, strict-no-ecmp
Introduced	16.0.R1
Platforms	All

### **vrrp** [[virtual-router-id](#)] *number*

Synopsis	Enter the <b>vrrp</b> list instance
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 vrrp</a> <i>number</i>
Tree	<a href="#">vrrp</a>
Introduced	16.0.R1
Platforms	All

### **[virtual-router-id]** *number*

Synopsis	Virtual Router Identifier (VRID) for the IP interface
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 vrrp</a> <i>number</i>
Tree	<a href="#">vrrp</a>
Range	1 to 255
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of VRRP
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 vrrp</a> <i>number</i> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Description	<p>The command determines the administrative state of non-owner virtual router instances.</p> <p>Non-owner virtual router instances can be administratively disabled. This allows the termination of VRRP participation in the virtual router and stops all routing and other access capabilities with regards to the virtual router IP addresses. Disabling the virtual router instance provides a mechanism to maintain the virtual routers without causing false backup or master state changes.</p> <p>When <b>disabled</b>, no VRRP advertisement messages are generated and all received VRRP advertisement messages are silently discarded with no processing.</p>

Whenever the administrative or operational state of a virtual router instance transitions, a log message is generated.

An owner virtual router context does not use this command. To administratively disable an owner virtual router instance, use the **admin-state** command within the parent IP interface node which administratively disables the IP interface.

Default	enable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **authentication-key *string***

Synopsis	Password for simple text authentication
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">vrrp</a> <a href="#">number</a> <a href="#">authentication-key</a> <a href="#">string</a>
Tree	<a href="#">authentication-key</a>
Description	<p>This command optionally assigns a simple text password authentication key to generate master VRRP advertisement messages and validate received VRRP advertisement messages.</p> <p>If this command is re-executed with a different password key defined, the new key immediately replaces the old key. This command may be executed at any time.</p>
String Length	1 to 38
Introduced	16.0.R1
Platforms	All

### **backup *string***

Synopsis	Virtual router IP addresses for the interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">vrrp</a> <a href="#">number</a> <a href="#">backup</a> <a href="#">string</a>
Tree	<a href="#">backup</a>
Description	<p>This command associates virtual router IP addresses with those of the parental IP interface.</p> <p>This command has two different functions based on whether it is being executed on an owner or non-owner virtual router instance.</p> <p>Non-owner virtual router instances create a routable IP interface address that is operationally dependent on the virtual router instance mode (master or backup). This command, when executed on an owner virtual router instance, does not create a routable IP interface address; it simply defines the existing IP addresses of the parental IP interface that are advertised by the virtual router instance.</p>

For owner virtual router instances, this command defines the IP addresses that are advertised within VRRP advertisement messages. This communicates the IP addresses that the master is advertising to backup virtual routers receiving the messages. The specified *unicast-ipv4-address* must be equal to one of the existing IP addresses in the parental IP interface (primary or secondary) or this command fails.

Max. Instances	16
Introduced	16.0.R1
Platforms	All

## bfd-liveness

Synopsis	Enable the <b>bfd-liveness</b> context
Context	<b>configure</b> <a href="#">service ies string interface string ipv4 vrrp number bfd-liveness</a>
Tree	<a href="#">bfd-liveness</a>
Introduced	16.0.R1

String Length	1 to 64
Introduced	16.0.R1
Platforms	All

### **init-delay** *number*

Synopsis	VRRP initialization delay timer
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 vrrp</b> <i>number</i> <b>init-delay</b> <i>number</i>
Tree	<b>init-delay</b>
Range	1 to 65535
Units	seconds
Introduced	16.0.R1
Platforms	All

### **mac** *string*

Synopsis	Virtual MAC address to use in ARP responses
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 vrrp</b> <i>number</i> <b>mac</b> <i>string</i>

Tree	<a href="#">mac</a>
Description	<p>This command sets an explicit MAC address for the virtual router instance that overrides the VRRP default derived from the VRID.</p> <p>Changing the default MAC address is useful when an existing HSRP or other non-VRRP default MAC is in use by the IP hosts that use the virtual router IP address. Many hosts do not monitor unessential ARPs and continue to use the cached non-VRRP MAC address after the virtual router becomes master of the host's gateway address.</p> <p>Additionally, this command sets the MAC address used in ARP responses when the virtual router instance is master. Routing of IP packets with <i>unicast-mac-address</i> as the destination MAC is also enabled. The MAC must be the same for all virtual routers participating as a virtual router or indeterminate connectivity by the attached IP hosts results. All VRRP advertisement messages are transmitted with <i>unicast-mac-address</i> as the source MAC.</p> <p>An operator can execute this command at any time and it takes effect immediately. When the virtual router MAC on a master virtual router instance changes, a gratuitous ARP is immediately sent with a VRRP advertisement message. If the virtual router instance is disabled or operating as a backup, the gratuitous ARP and VRRP advertisement messages are not sent.</p>
Introduced	16.0.R1
Platforms	All

### **master-int-inherit** *boolean*

Synopsis	Allow master instance to dictate the master down timer
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 vrrp</a> <i>number</i> <b>master-int-inherit</b> <i>boolean</i>
Tree	<a href="#">master-int-inherit</a>
Description	<p>When configured to <b>true</b>, the virtual router instance inherits the advertisement interval timer of the master VRRP router, which backup routers use to calculate the master down timer.</p> <p>When configured to <b>false</b>, the locally configured message interval must match the master's VRRP advertisement message advertisement interval field value or the message is discarded.</p>
Introduced	16.0.R1
Platforms	All

### **message-interval** *number*

Synopsis	Interval for sending VRRP advertisement messages
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 vrrp</a> <i>number</i> <b>message-interval</b> <i>number</i>
Tree	<a href="#">message-interval</a>

Description	<p>This command configures the administrative advertisement message timer used by the master virtual router instance to send VRRP advertisement messages. The backup master down timer is derived from the value configured using this command.</p> <p>The usage of this command varies for non-owner virtual router instances, depending on the state of the virtual router (master or backup) and the state of the <b>master-int-inherit</b> command:</p> <ul style="list-style-type: none"> <li>• When a non-owner is operating as master for the virtual router, the system uses the configured value of this command as the operational advertisement timer, similar to an owner virtual router instance. The <b>master-int-inherit</b> command has no effect when operating as master.</li> <li>• When a non-owner is in the backup state with <b>master-int-inherit</b> disabled, the system uses the configured value of this command to match the incoming advertisement interval field of the VRRP advertisement message. If the locally configured message interval does not match the advertisement interval field, the system discards the VRRP advertisement.</li> <li>• When a non-owner is in the backup state with <b>master-int-inherit</b> enabled, the configured value of this command is ignored. The master down timer is indirectly derived from the advertisement interval field value of the incoming VRRP advertisement message.</li> </ul>
Range	1 to 2559
Default	10
Units	deciseconds
Introduced	16.0.R1
Platforms	All

## monitor-oper-group *reference*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VRRP instance to follow a specified operational group
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4</b> <b>vrrp</b> <i>number</i> <b>monitor-oper-group</b> <i>reference</i>
Tree	<b>monitor-oper-group</b>
Description	This command configures VRRP to associate with an operational group. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router, the operational group is up and the operational group is down for all other VRRP states.
Reference	<b>configure</b> <b>service</b> <b>oper-group</b> <i>string</i>

Introduced 22.2.R1  
Platforms All

### **ntp-reply** *boolean*

Synopsis Allow processing of NTP requests  
Context **configure** *service ies string interface string ipv4 vrrp number ntp-reply boolean*  
Tree [ntp-reply](#)  
Description When configured to **true**, the router redirects NTP requests to the VRRP virtual IP address. This behavior only applies to the router acting as the master VRRP router.  
When configured to **false**, the router does not process NTP requests.  
Default false  
Introduced 20.2.R1  
Platforms All

### **oper-group** *reference*

Synopsis Operational group name associated with the VRRP  
Context **configure** *service ies string interface string ipv4 vrrp number oper-group reference*  
Tree [oper-group](#)  
Description This command configures an operational group to associate with the VRRP. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router (MR), the operational group is up. The operational group is down for all other VRRP states.  
Reference **configure** *service oper-group string*  
Introduced 16.0.R1  
Platforms All

### **owner** *boolean*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Designate the virtual router instance as owner  
Context **configure** *service ies string interface string ipv4 vrrp number owner boolean*

Tree	<a href="#">owner</a>
Description	When configured to <b>true</b> , the router designates this virtual router instance as the owner of the virtual router IP addresses. Therefore, this virtual router becomes responsible for forwarding packets sent to the virtual router IP addresses. The owner also assumes the role of master virtual router.  When configured to <b>false</b> , this virtual router instance is designated as a non-owner.
Default	false
Introduced	16.0.R1
Platforms	All

### **passive** *boolean*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Suppress the processing of VRRP advertisement messages
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 vrrp</a> <i>number</i> <a href="#">passive</a> <i>boolean</i>
Tree	<a href="#">passive</a>
Description	When configured to <b>true</b> , the router identifies this virtual router instance as passive; and therefore the owner of the virtual router IP addresses. A passive virtual router instance does not transmit or receive VRRP advertisement messages and is always in either the master state (if the interface is operationally up) or the init state (if the interface is operationally down).  When configured to <b>false</b> , this virtual router instance is not identified as passive, meaning that it transmits and receives VRRP advertisement messages.
Default	false
Introduced	16.0.R1
Platforms	All

### **ping-reply** *boolean*

Synopsis	Allow non-owner master to reply to ICMP echo requests
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 vrrp</a> <i>number</i> <a href="#">ping-reply</a> <i>boolean</i>
Tree	<a href="#">ping-reply</a>
Description	When configured to <b>true</b> , the router allows the non-owner master to reply to ICMP echo requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the ping request. Ping must not have been disabled at the management security level (either on the parental IP interface or on the Ping source host address).

When configured to **false**, ICMP echo requests sent to non-owner master virtual IP addresses are silently discarded.

Non-owner backup virtual routers never respond to ICMP echo requests, regardless of the configuration of this command.

Default	false
Introduced	16.0.R1
Platforms	All

### policy reference

Synopsis	VRRP priority control policy
Context	<b>configure service ies string interface string ipv4 vrrp number policy reference</b>
Tree	<a href="#">policy</a>
Description	<p>This command configures a VRRP priority control policy to associate with the virtual router instance.</p> <p>VRRP priority control policies can override or adjust the base priority value of the virtual router instance, depending on events or conditions within the chassis.</p> <p>An operator can associate a policy with more than one virtual router instance. The priority events within the policy either override or diminish the base priority set with the <b>priority</b> command. As priority events clear in the policy, the in-use priority can eventually be restored to the base priority value.</p> <p>For non-owner virtual router instances, if this command is not executed, the base priority is used as the in-use priority.</p>
Reference	<b>configure vrrp policy number</b>
Introduced	16.0.R1
Platforms	All

### preempt boolean

Synopsis	Allow the VRRP to override an existing non-owner master
Context	<b>configure service ies string interface string ipv4 vrrp number preempt boolean</b>
Tree	<a href="#">preempt</a>
Description	<p>When configured to <b>true</b>, this virtual router instance overrides any non-owner master with an in-use message priority value less than the in-use priority value of this virtual router.</p> <p>When configured to <b>false</b>, this virtual router only becomes master if the master down timer expires before a VRRP advertisement message is received from another virtual router.</p>
Default	true

Introduced	16.0.R1
Platforms	All

### **priority number**

Synopsis	Base priority for the VRRP
Context	<b>configure service ies string interface string ipv4 vrrp number priority number</b>
Tree	<b>priority</b>
Description	<p>This command configures the base router priority for the virtual router instance, which defines the selection order of the virtual router in the master election process.</p> <p>The in-use priority is derived from the base priority. However, the in-use priority is modified by optional VRRP priority control policies. An operator can use VRRP priority control policies to either override or adjust the base priority value depending on events or conditions within the chassis.</p>
Range	1 to 255
Introduced	16.0.R1
Platforms	All

### **ssh-reply boolean**

Synopsis	Allow the non-owner master to reply to SSH requests
Context	<b>configure service ies string interface string ipv4 vrrp number ssh-reply boolean</b>
Tree	<b>ssh-reply</b>
Description	<p>When configured to <b>true</b>, the router allows the non-owner master to reply to SSH requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the SSH request. SSH cannot be disabled at the management security level (either on the parental IP interface or on the SSH source host address).</p> <p>When configure to <b>false</b>, SSH requests to non-owner master virtual IP addresses are silently discarded.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **standby-forwarding boolean**

Synopsis	Allow standby router to forward traffic
Context	<b>configure service ies string interface string ipv4 vrrp number standby-forwarding boolean</b>

Tree	<a href="#">standby-forwarding</a>
Description	When configured to <b>true</b> , the standby router forwards all traffic. When configured to <b>false</b> , the standby router cannot forward traffic sent to the MAC address of the virtual router. However, the standby router still forwards traffic sent to its own MAC address.
Default	false
Introduced	16.0.R1
Platforms	All

### **telnet-reply** *boolean*

Synopsis	Allow non-owner master to reply to Telnet requests
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 vrrp</a> <i>number</i> <a href="#">telnet-reply</a> <i>boolean</i>
Tree	<a href="#">telnet-reply</a>
Description	When configured to <b>true</b> , the router allows the non-owner master to reply to Telnet requests directed at the IP addresses of the virtual router instance. Any routed interface can receive Telnet requests. Telnet cannot be disabled at the management security level (either on the parental IP interface or on the Telnet source host address). When configured to <b>false</b> , the router silently discards Telnet requests sent to non-owner master virtual IP addresses.
Default	false
Introduced	16.0.R1
Platforms	All

### **traceroute-reply** *boolean*

Synopsis	Allow non-owner master to reply to traceroute requests
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 vrrp</a> <i>number</i> <a href="#">traceroute-reply</a> <i>boolean</i>
Tree	<a href="#">traceroute-reply</a>
Description	When configured to <b>true</b> , the router allows a non-owner master to reply to traceroute requests directed to the IP addresses of the virtual router instance. When configured to <b>false</b> , the router silently discards traceroute requests sent to non-owner master virtual IP addresses. Traceroute must not have been disabled at the management security level (either on the parental IP interface or the source host address).
Default	false
Introduced	16.0.R1

Platforms All

## ipv6

Synopsis Enable the **ipv6** context  
Context **configure service ies string interface string ipv6**  
Tree **ipv6**  
Introduced 16.0.R1  
Platforms All

## address [ipv6-address] string

Synopsis Enter the **address** list instance  
Context **configure service ies string interface string ipv6 address string**  
Tree **address**  
Introduced 16.0.R1  
Platforms All

## [ipv6-address] string

Synopsis IPv6 address assigned to the interface  
Context **configure service ies string interface string ipv6 address string**  
Tree **address**  
Notes This element is part of a list key.  
Introduced 16.0.R1  
Platforms All

## duplicate-address-detection boolean

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Enable Duplicate Address Detection  
Context **configure service ies string interface string ipv6 address string duplicate-address-detection boolean**

Tree	<a href="#">duplicate-address-detection</a>
Description	When configured to <b>true</b> , the router enables Duplicate Address Detection (DAD). When configured to <b>false</b> , the router disables DAD and sets the address to preferred, even if there is a duplicated address.
Default	true
Introduced	16.0.R1
Platforms	All

### **eui-64** *boolean*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Form IPv6 address from prefix and 64-bit interface ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">address</a> <a href="#">string</a> <b>eui-64</b> <i>boolean</i>
Tree	<a href="#">eui-64</a>
Description	When configured to <b>true</b> , the router forms a complete IPv6 address from the supplied prefix and 64-bit interface identifier. The 64-bit interface identifier is derived from the MAC address on Ethernet interfaces. For interfaces without a MAC address, for example POS interfaces, use the base MAC address of the chassis.
Default	false
Introduced	16.0.R1
Platforms	All

### **prefix-length** *number*

Synopsis	IPv6 address prefix length
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">address</a> <a href="#">string</a> <b>prefix-length</b> <i>number</i>
Tree	<a href="#">prefix-length</a>
Range	4 to 128
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **primary-preference** *number*

Synopsis	Index assigned to the IPv6 address of the interface
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 address</a> <i>string</i> <b>primary-preference</b> <i>number</i>
Tree	<a href="#">primary-preference</a>
Description	<p>This command assigns a primary preference index to an IPv6 address of the interface to enforce the order in which the address is used by control plane protocols and applications that require a fixed address of the interface, such as LDP and Segment Routing. In cases where a fixed address is required when originating packets from the interface, the IPv6 address with the lowest primary preference index is selected. If the selected address is removed, the next IPv6 address with the next lowest primary preference index is selected.</p> <p>If this index is not specified for the IPv6 address, the system assigns the next available index value to the address. The address index space is unique across all addresses of a given interface.</p>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **track-srrp** *number*

Synopsis	SRRP ID whose state is tracked on this IP address
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 address</a> <i>string</i> <b>track-srrp</b> <i>number</i>
Tree	<a href="#">track-srrp</a>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **bfd**

Synopsis	Enter the <b>bfd</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <b>bfd</b>
Tree	<a href="#">bfd</a>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of BFD sessions
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 bfd admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **echo-receive** *number*

Synopsis	Minimum echo interval over this interface
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 bfd echo-receive</b> <i>number</i>
Tree	<b>echo-receive</b>
Range	100 to 100000
Units	milliseconds
Introduced	16.0.R1
Platforms	All

### **multiplier** *number*

Synopsis	Number of consecutive BFD messages missed from the peer
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 bfd multiplier</b> <i>number</i>
Tree	<b>multiplier</b>
Description	This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments.
Range	1 to 20
Default	3
Introduced	16.0.R1
Platforms	All

### **receive** *number*

Synopsis	BFD receive interval over this interface
----------	--

Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 bfd receive</b> <i>number</i>
Tree	<b>receive</b>
Description	This command specifies the receive interval for the BFD session. On the 7750 SR, this command can only be configured to a value less than 100 when the <b>type</b> command is configured to <b>cpm-np</b> .
Range	10 to 100000
Default	100
Units	milliseconds
Introduced	16.0.R1
Platforms	All

### **transmit-interval** *number*

Synopsis	BFD transmit interval over this interface
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 bfd transmit-interval</b> <i>number</i>
Tree	<b>transmit-interval</b>
Description	This command configures the transmit intervals. On the 7750 SR, this command can only be configured to a value less than 100 when the <b>type</b> command is configured to <b>cpm-np</b> .
Range	10 to 100000
Default	100
Units	milliseconds
Introduced	16.0.R1
Platforms	All

### **type** *keyword*

Synopsis	Local termination point for the BFD session
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 bfd type</b> <i>keyword</i>
Tree	<b>type</b>
Description	This command sets the local termination point for the BFD session to allow for fast timers down to 10 ms granularity. The options to specify where the BFD session runs are: <ul style="list-style-type: none"><li>• <b>auto</b> (default) – the system chooses and uses the line card CPU only for single-hop BFD sessions with timer intervals equal to or greater than 100ms. All others are placed on the <b>cpm-np</b>.</li></ul>

- **cpm-np** – BFD session runs on the FP complex associated with the CPM. This is either the FP on the CPM or the one elected on smaller systems.
- **fp** – BFD session runs on the line card CPU. This option can only be used for single-hop BFD sessions with timers equal to or greater than 100ms.

Default	auto
Options	cpm-np, auto, fp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## dhcp6

Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 dhcp6</a> <a href="#">server</a> <a href="#">max-nbr-of-leases</a> <i>number</i>
Tree	<a href="#">max-nbr-of-leases</a>
Range	0 to 8000
Default	8000
Introduced	16.0.R1
Platforms	All

## prefix-delegation

Synopsis	Enter the <b>prefix-delegation</b> context
Context	<b>configure service ies string interface string ipv6 dhcp6 server prefix-delegation</b>
Tree	<a href="#">prefix-delegation</a>
Introduced	16.0.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of the prefix delegation
Context	<b>configure service ies string interface string ipv6 dhcp6 server prefix-delegation admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

## prefix [[ipv6-prefix](#)] *string*

Synopsis	Enter the <b>prefix</b> list instance
Context	<b>configure service ies string interface string ipv6 dhcp6 server prefix-delegation prefix string</b>
Tree	<a href="#">prefix</a>
Introduced	16.0.R1
Platforms	All

## [[ipv6-prefix](#)] *string*

Synopsis	IPv6 address and prefix
Context	<b>configure service ies string interface string ipv6 dhcp6 server prefix-delegation prefix string</b>
Tree	<a href="#">prefix</a>
Notes	This element is part of a list key.
Introduced	16.0.R1

Platforms All

### client-id

Synopsis Enter the **client-id** context

Context **configure service ies string interface string ipv6 dhcp6 server prefix-delegation prefix string client-id**

Tree [client-id](#)

Introduced 16.0.R1

Platforms All

### duid string

Synopsis Requesting router ID

Context **configure service ies string interface string ipv6 dhcp6 server prefix-delegation prefix string client-id duid string**

Tree [duid](#)

String Length 1 to 130

Introduced 16.0.R1

Platforms All

### iaid number

Synopsis IAID from the requesting router to match

Context **configure service ies string interface string ipv6 dhcp6 server prefix-delegation prefix string client-id iaid number**

Tree [iaid](#)

Range 1 to 4294967295

Introduced 16.0.R1

Platforms All

### preferred-lifetime (number | keyword)

Synopsis Preferred lifetime of the prefix

Context **configure service ies string interface string ipv6 dhcp6 server prefix-delegation prefix string preferred-lifetime (number | keyword)**

Tree [preferred-lifetime](#)

Range	1 to 4294967294
Default	604800
Units	seconds
Options	infinite
Introduced	16.0.R1
Platforms	All

### **valid-lifetime** (*number* | *keyword*)

Synopsis	Valid lifetime of the prefix
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">dhcp6</a> <a href="#">server</a> <a href="#">prefix-delegation</a> <a href="#">prefix</a> <i>string</i> <b>valid-lifetime</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">valid-lifetime</a>
Range	1 to 4294967294
Default	2592000
Units	seconds
Options	infinite
Introduced	16.0.R1
Platforms	All

### **duplicate-address-detection** *boolean*

Synopsis	Enable/disable Duplicate Address Detection
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">duplicate-address-detection</a> <i>boolean</i>
Tree	<a href="#">duplicate-address-detection</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **forward-ipv4-packets** *boolean*

Synopsis	Forward unencapsulated IPv4 packets
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">forward-ipv4-packets</a> <i>boolean</i>
Tree	<a href="#">forward-ipv4-packets</a>
Default	false

Introduced 19.5.R1  
Platforms All

## icmp6

Synopsis Enter the **icmp6** context  
Context **configure service ies string interface string ipv6 icmp6**

Default 10  
Introduced 16.0.R1  
Platforms All

### **time-exceeded**

Synopsis Enter the **time-exceeded** context  
Context **configure** [service](#) [ies](#) [string](#) [interface](#) [string](#) [ipv6](#) [icmp6](#) [time-exceeded](#)  
Tree [time-exceeded](#)  
Introduced 16.0.R1  
Platforms All

### **admin-state** *keyword*

Synopsis Administrative state of Time Exceeded message sends  
Context **configure** [service](#) [ies](#) [string](#) [interface](#) [string](#) [ipv6](#) [icmp6](#) [time-exceeded](#) [admin-state](#) *keyword*  
Tree [admin-state](#)

Default	enable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **number** *number*

Synopsis	Number to limit Time Exceeded messages per time frame
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 icmp6 time-exceeded</b> <i>number</i> <i>number</i>
Tree	<b>number</b>
Range	10 to 2000
Default	100
Introduced	16.0.R1
Platforms	All

### **seconds** *number*

Synopsis	Time used to limit ICMPv6 Time Exceeded messages
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 icmp6 time-exceeded</b> <i>seconds</i> <i>number</i>
Tree	<b>seconds</b>
Range	1 to 60
Default	10
Introduced	16.0.R1
Platforms	All

### **unreachables**

Synopsis	Enter the <b>unreachables</b> context
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 icmp6 unreachables</b>
Tree	<b>unreachables</b>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of Unreachable message sends
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 icmp6 unreachablees admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Default	enable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **number** *number*

Synopsis	Number to limit Unreachable messages per time frame
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 icmp6 unreachablees number</b> <i>number</i>
Tree	<b>number</b>
Range	10 to 2000
Default	100
Introduced	16.0.R1
Platforms	All

### **seconds** *number*

Synopsis	Time used to limit ICMPv6 Unreachable messages
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 icmp6 unreachablees seconds</b> <i>number</i>
Tree	<b>seconds</b>
Range	1 to 60
Default	10
Introduced	16.0.R1
Platforms	All

### **link-local-address**

Synopsis	Enter the <b>link-local-address</b> context
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 link-local-address</b>
Tree	<b>link-local-address</b>

Introduced 16.0.R1  
Platforms All

### **address** *string*

Synopsis IPv6 link-local address  
Context **configure** [service ies](#) *string* [interface](#) *string* [ipv6 link-local-address](#) [address](#) *string*  
Tree [address](#)  
Introduced 16.0.R1  
Platforms All

### **duplicate-address-detection** *boolean*

Synopsis Enable Duplicate Address Detection  
Context **configure** [service ies](#) *string* [interface](#) *string* [ipv6 link-local-address](#) [duplicate-address-detection](#) *boolean*  
Tree [duplicate-address-detection](#)  
Description When configured to **true**, the router enables Duplicate Address Detection (DAD) on the interface.  
When configured to **false**, the router disables DAD and sets the address to preferred, even if there is a duplicated address.  
Default true  
Introduced 16.0.R1  
Platforms All

### **local-dhcp-server** *reference*

Synopsis DHCP server for the interface  
Context **configure** [service ies](#) *string* [interface](#) *string* [ipv6 local-dhcp-server](#) *reference*  
Tree [local-dhcp-server](#)  
Reference **configure** [router](#) *string* [dhcp-server](#) [dhcpv6](#) *string*  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## neighbor-discovery

Synopsis	Enter the <b>neighbor-discovery</b> context
Context	<b>configure service ies string interface string ipv6 neighbor-discovery</b>
Tree	<a href="#">neighbor-discovery</a>
Introduced	16.0.R1
Platforms	All

## host-route

Synopsis	Enter the <b>host-route</b> context
Context	<b>configure service ies string interface string ipv6 neighbor-discovery host-route</b>
Tree	<a href="#">host-route</a>
Introduced	20.2.R1
Platforms	All

## populate [[route-type](#)] *keyword*

Synopsis	Enter the <b>populate</b> list instance
Context	<b>configure service ies string interface string ipv6 neighbor-discovery host-route populate keyword</b>
Tree	<a href="#">populate</a>
Introduced	20.2.R1
Platforms	All

## [[route-type](#)] *keyword*

Synopsis	Type of ARP or ND entries that generate host routes
Context	<b>configure service ies string interface string ipv6 neighbor-discovery host-route populate keyword</b>
Tree	<a href="#">populate</a>
Options	static, dynamic, evpn
Notes	This element is part of a list key.
Introduced	20.2.R1
Platforms	All

## route-tag *number*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tag value used with the host route from an ARP/ND entry
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 neighbor-discovery host-route populate</a> <i>keyword</i> <b>route-tag</b> <i>number</i>
Tree	<a href="#">route-tag</a>
Description	This command specifies the route tag that is added in the route table for ARP or ND host routes. This tag can be matched on BGP VRF export and BGP peer export policies.
Range	1 to 255
Introduced	20.2.R1
Platforms	All

## learn-unsolicited *keyword*

Synopsis	Type of entries learned from unsolicited NA messages
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 neighbor-discovery learn-unsolicited</a> <i>keyword</i>
Tree	<a href="#">learn-unsolicited</a>
Description	This command enables the ability to learn neighbor entries out of received unsolicited Neighbor Advertisement (NA) messages, with or without the solicited flag set.  When unconfigured, the router follows standard RFC 4861 behavior for learning of neighbor entries. The neighbor is put in the stale state. This is the standard RFC behavior.
Options	global, link-local, both
Introduced	16.0.R1
Platforms	All

## limit

Synopsis	Enter the <b>limit</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 neighbor-discovery limit</a>
Tree	<a href="#">limit</a>
Introduced	16.0.R1
Platforms	All

### **log-only** *boolean*

Synopsis	Generate log entries when limit is reached
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">neighbor-discovery</a> <a href="#">limit</a> <a href="#">log-only</a> <a href="#">boolean</a>
Tree	<a href="#">log-only</a>
Description	When configured to <b>true</b> , the router sends the warning message at the specified threshold percentage or upon exceeding the specified limit. Entries that exceed the limit are learned.  When configured to <b>false</b> , the router does not send the warning message.
Default	false
Introduced	16.0.R1
Platforms	All

### **max-entries** *number*

Synopsis	Maximum number of entries learned on an IP interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">neighbor-discovery</a> <a href="#">limit</a> <a href="#">max-entries</a> <a href="#">number</a>
Tree	<a href="#">max-entries</a>
Description	This command configures the maximum number of entries that can be learned on an IP interface.  When unconfigured, no maximum limit is imposed.
Range	0 to 102400
Introduced	16.0.R1
Platforms	All

### **threshold** *number*

Synopsis	Threshold percentage that triggers a warning message
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">neighbor-discovery</a> <a href="#">limit</a> <a href="#">threshold</a> <a href="#">number</a>
Tree	<a href="#">threshold</a>
Range	1 to 100
Default	90
Units	percent
Introduced	16.0.R1

Platforms All

### **local-proxy-nd** *boolean*

Synopsis Enable local proxy neighbor discovery on the interface

Context **configure** [service](#) [ies](#) [string](#) [interface](#) [string](#) [ipv6](#) [neighbor-discovery](#) [local-proxy-nd](#) [boolean](#)

Tree [local-proxy-nd](#)

Description When configured to **true**, the router enables local proxy neighbor discovery on the interface and replies to neighbor solicitation requests when both the hosts are on the same subnet. In this case, ICMP redirects are disabled.

When configured to **false**, the router disables local proxy neighbor discovery on the interface and does not reply to neighbor solicitation requests if both the hosts are on the same subnet.

Default false

Introduced 16.0.R1

Platforms All

### **proactive-refresh** *keyword*

Synopsis Proactive refresh of neighbor entries

Context **configure** [service](#) [ies](#) [string](#) [interface](#) [string](#) [ipv6](#) [neighbor-discovery](#) [proactive-refresh](#) [keyword](#)

Tree [proactive-refresh](#)

Description This command enables a proactive refresh of the neighbor entries. After the stale timer expires, the router sends an NUD message to the host (regardless of the existence of traffic to the IP address on the IOM), so the entry can be refreshed or removed.

Options global, link-local, both

Introduced 16.0.R1

Platforms All

### **proxy-nd-policy** *reference*

Synopsis Proxy Neighbor Discovery policy name for the interface

Context **configure** [service](#) [ies](#) [string](#) [interface](#) [string](#) [ipv6](#) [neighbor-discovery](#) [proxy-nd-policy](#) [reference](#)

Tree [proxy-nd-policy](#)

Reference **configure** [policy-options](#) [policy-statement](#) [string](#)

Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **reachable-time** *number*

Synopsis	Neighbor reachability detection timer
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">neighbor-discovery</a> <a href="#">reachable-time</a> <i>number</i>
Tree	<a href="#">reachable-time</a>
Range	30 to 3600
Introduced	16.0.R1
Platforms	All

### **secure-nd**

Synopsis	Enter the <b>secure-nd</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">neighbor-discovery</a> <a href="#">secure-nd</a>
Tree	<a href="#">secure-nd</a>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of Secure Neighbor Discovery
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">neighbor-discovery</a> <a href="#">secure-nd</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

**allow-unsecured-msgs** *boolean*

Synopsis	Accept unsecured messages
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6</b> <b>neighbor-discovery</b> <b>secure-nd</b> <b>allow-unsecured-msgs</b> <i>boolean</i>
Tree	<b>allow-unsecured-msgs</b>
Description	When configured to <b>true</b> , the router accepts unsecured messages. When Secure Neighbor Discovery (SeND) is enabled, only secure messages are accepted. When configured to <b>false</b> , the router disables the acceptance of unsecured messages.
Default	true
Introduced	16.0.R1
Platforms	All

**public-key-min-bits** *number*

Synopsis	Minimum acceptable key length for public keys in CGA
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6</b> <b>neighbor-discovery</b> <b>secure-nd</b> <b>public-key-min-bits</b> <i>number</i>
Tree	<b>public-key-min-bits</b>
Range	512 to 1024
Default	1024
Introduced	16.0.R1
Platforms	All

**security-parameter** *number*

Synopsis	Security parameter used in the generation of a CGA
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6</b> <b>neighbor-discovery</b> <b>secure-nd</b> <b>security-parameter</b> <i>number</i>
Tree	<b>security-parameter</b>
Range	0 to 1
Default	1
Introduced	16.0.R1
Platforms	All

### **stale-time** *number*

Synopsis	Time a Neighbor Discovery cache entry remains stale
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 neighbor-discovery</b> <b>stale-time</b> <i>number</i>
Tree	<a href="#">stale-time</a>
Range	60 to 65535
Introduced	16.0.R1
Platforms	All

### **static-neighbor** [**ipv6-address**] *string*

Synopsis	Enter the <b>static-neighbor</b> list instance
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 neighbor-discovery</b> <b>static-neighbor</b> <i>string</i>
Tree	<a href="#">static-neighbor</a>
Introduced	16.0.R1
Platforms	All

### **[ipv6-address]** *string*

Synopsis	IPv6 address corresponding to the physical address
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 neighbor-discovery</b> <b>static-neighbor</b> <i>string</i>
Tree	<a href="#">static-neighbor</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **mac-address** *string*

Synopsis	MAC address for the static neighbor
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 neighbor-discovery</b> <b>static-neighbor</b> <i>string</i> <b>mac-address</b> <i>string</i>
Tree	<a href="#">mac-address</a>
Notes	This element is mandatory.
Introduced	16.0.R1

Platforms All

### **qos-route-lookup** *keyword*

Synopsis QoS Route lookup  
Context **configure** [service](#) [ies](#) *string* [interface](#) *string* [ipv6](#) **qos-route-lookup** *keyword*  
Tree [qos-route-lookup](#)  
Options destination, source  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **tcp-mss** *number*

Synopsis TCP maximum segment size for the interface  
Context **configure** [service](#) [ies](#) *string* [interface](#) *string* [ipv6](#) **tcp-mss** *number*  
Tree [tcp-mss](#)  
Range 1220 to 9726  
Introduced 16.0.R1  
Platforms All

### **urpf-check**

Synopsis Enable the **urpf-check** context  
Context **configure** [service](#) [ies](#) *string* [interface](#) *string* [ipv6](#) **urpf-check**  
Tree [urpf-check](#)  
Introduced 16.0.R1  
Platforms All

### **ignore-default** *boolean*

Synopsis Ignore default route when performing a uRPF check  
Context **configure** [service](#) [ies](#) *string* [interface](#) *string* [ipv6](#) **urpf-check** **ignore-default** *boolean*  
Tree [ignore-default](#)  
Default false  
Introduced 16.0.R1

Platforms All

### **mode** *keyword*

Synopsis Unicast RPF check mode  
Context **configure service ies** *string* **interface** *string* **ipv6 urpf-check mode** *keyword*  
Tree **mode**  
Default strict  
Options strict, loose, strict-no-ecmp  
Introduced 16.0.R1  
Platforms All

### **vrrp** [**virtual-router-id**] *number*

Synopsis Enter the **vrrp** list instance  
Context **configure service ies** *string* **interface** *string* **ipv6 vrrp** *number*  
Tree **vrrp**  
Max. Instances 4  
Introduced 16.0.R1  
Platforms All

### [**virtual-router-id**] *number*

Synopsis Virtual Router Identifier (VRID) for the IP interface  
Context **configure service ies** *string* **interface** *string* **ipv6 vrrp** *number*  
Tree **vrrp**  
Range 1 to 255  
Notes This element is part of a list key.  
Introduced 16.0.R1  
Platforms All

### **admin-state** *keyword*

Synopsis Administrative state of VRRP

Context	<b>configure service ies string interface string ipv6 vrrp number admin-state keyword</b>
Tree	<b>admin-state</b>
Description	<p>The command determines the administrative state of non-owner virtual router instances.</p> <p>Non-owner virtual router instances can be administratively disabled. This allows the termination of VRRP participation in the virtual router and stops all routing and other access capabilities with regards to the virtual router IP addresses. Disabling the virtual router instance provides a mechanism to maintain the virtual routers without causing false backup or master state changes.</p> <p>When <b>disabled</b>, no VRRP advertisement messages are generated and all received VRRP advertisement messages are silently discarded with no processing.</p> <p>Whenever the administrative or operational state of a virtual router instance transitions, a log message is generated.</p> <p>An owner virtual router context does not use this command. To administratively disable an owner virtual router instance, use the <b>admin-state</b> command within the parent IP interface node which administratively disables the IP interface.</p>
Default	enable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **backup string**

Synopsis	Virtual router IP addresses for the interface
Context	<b>configure service ies string interface string ipv6 vrrp number backup string</b>
Tree	<b>backup</b>
Description	<p>This command associates router IPv6 virtual router IP addresses with those of the parental IP interface.</p> <p>This command has two different functions based on whether it is being executed on an owner or non-owner virtual router instance.</p> <p>Non-owner virtual router instance create a routable IP interface address that is operationally dependent on the virtual router instance mode (master or backup). This command, when executed on an owner virtual router instance, does not create a routable IP interface address; it simply defines the existing IP addresses of the parental IP interface that are advertised by the virtual router instance.</p> <p>For owner virtual router instances, this command defines the IP addresses that are advertised within VRRP advertisement messages. This communicates the IP addresses that the master is representing to backup virtual routers receiving the messages. The specified IPv6 address must be equal to one of the existing parental IP addresses in the parental IP interface (primary or secondary) or this command fails.</p>
Max. Instances	4

Introduced 16.0.R1  
Platforms All

## **bfd-liveness**

### **init-delay** *number*

Synopsis VRRP initialization delay timer  
Context **configure** *service ies string interface string ipv6 vrrp number init-delay number*  
Tree [init-delay](#)  
Range 1 to 65535  
Units seconds  
Introduced 16.0.R1  
Platforms All

### **mac** *string*

Synopsis Virtual MAC address to use in ARP responses  
Context **configure** *service ies string interface string ipv6 vrrp number mac string*  
Tree [mac](#)  
Description This command sets an explicit MAC address for the virtual router instance that overrides the VRRP default derived from the VRID.  
  
Changing the default MAC address is useful when an existing HSRP or other non-VRRP default MAC is in use by the IP hosts that use the virtual router IP address. Many hosts do not monitor unessential ARPs and continue to use the cached non-VRRP MAC address after the virtual router becomes master of the host's gateway address.

Additionally, this command sets the MAC address used in ARP responses when the virtual router instance is master. Routing of IP packets with *unicast-mac-address* as the destination MAC is also enabled. The MAC must be the same for all virtual routers participating as a virtual router or indeterminate connectivity by the attached IP hosts results. All VRRP advertisement messages are transmitted with *unicast-mac-address* as the source MAC.

An operator can execute this command at any time and it takes effect immediately. When the virtual router MAC on a master virtual router instance changes, a gratuitous ARP is immediately sent with a VRRP advertisement message. If the virtual router instance is disabled or operating as a backup, the gratuitous ARP and VRRP advertisement messages are not sent.

Introduced	16.0.R1
Platforms	All

### **master-int-inherit** *boolean*

Synopsis	Allow master instance to dictate the master down timer
Context	<b>configure</b> <i>service ies string interface string ipv6 vrrp number master-int-inherit boolean</i>
Tree	<a href="#">master-int-inherit</a>
Description	<p>When configured to <b>true</b>, the virtual router instance inherits the advertisement interval timer of the master VRRP router, which backup routers use to calculate the master down timer.</p> <p>When configured to <b>false</b>, the locally configured message interval must match the master's VRRP advertisement message advertisement interval field value or the message is discarded.</p>
Introduced	16.0.R1
Platforms	All

### **message-interval** *number*

Synopsis	Interval for sending VRRP advertisement messages
Context	<b>configure</b> <i>service ies string interface string ipv6 vrrp number message-interval number</i>
Tree	<a href="#">message-interval</a>
Description	<p>This command configures the administrative advertisement message timer used by the master virtual router instance to send VRRP advertisement messages. The backup master down timer is derived from the value configured using this command.</p> <p>The use of this command varies for non-owner virtual router instances, depending on the state of the virtual router (master or backup) and the state of the <b>master-int-inherit</b> command:</p> <ul style="list-style-type: none"><li>• When a non-owner is operating as master for the virtual router, the system uses the configured value of this command as the operational advertisement timer, similar</li></ul>

to an owner virtual router instance. The **master-int-inherit** command has no effect when operating as the master.

- When a non-owner is in the backup state with **master-int-inherit** disabled, the system uses the configured value of this command to match the incoming advertisement interval field of the VRRP advertisement message. If the locally configured message interval does not match the advertisement interval field, the system discards the VRRP advertisement.
- When a non-owner is in the backup state with **master-int-inherit** enabled, the configured value of this command is ignored. The master down timer is indirectly derived from the advertisement interval field value of the incoming VRRP advertisement message.

Range	10 to 4095
Default	100
Units	centiseconds
Introduced	16.0.R1
Platforms	All

## monitor-oper-group *reference*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VRRP instance to follow a specified operational group
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">vrrp</a> <a href="#">number</a> <a href="#">monitor-oper-group</a> <a href="#">reference</a>
Tree	<a href="#">monitor-oper-group</a>
Description	This command configures VRRP to associate with an operational group. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router, the operational group is up and the operational group is down for all other VRRP states.
Reference	<b>configure</b> <a href="#">service</a> <a href="#">oper-group</a> <a href="#">string</a>
Introduced	22.2.R1
Platforms	All

## ntp-reply *boolean*

Synopsis	Allow processing of NTP requests
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">vrrp</a> <a href="#">number</a> <a href="#">ntp-reply</a> <a href="#">boolean</a>

Tree	<a href="#">ntp-reply</a>
Description	When configured to <b>true</b> , the router redirects NTP requests to the VRRP virtual IP address. This behavior only applies to the router acting as the master VRRP router. When configured to <b>false</b> , the router does not process NTP requests.
Default	false
Introduced	20.2.R1
Platforms	All

### **oper-group** *reference*

Synopsis	Operational group name associated with the VRRP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">vrrp</a> <i>number</i> <a href="#">oper-group</a> <i>reference</i>
Tree	<a href="#">oper-group</a>
Description	This command configures an operational group to associate with the VRRP. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router (MR), the operational group is up. The operational group is down for all other VRRP states.
Reference	<b>configure</b> <a href="#">service</a> <a href="#">oper-group</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **owner** *boolean*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Designate the virtual router instance as owner
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">vrrp</a> <i>number</i> <a href="#">owner</a> <i>boolean</i>
Tree	<a href="#">owner</a>
Description	When configured to <b>true</b> , the router designates this virtual router instance as the owner of the virtual router IP addresses. Therefore, this virtual router becomes responsible for forwarding packets sent to the virtual router IP addresses. The owner also assumes the role of master virtual router. When configured to <b>false</b> , this virtual router instance is designated as a non-owner.
Default	false
Introduced	16.0.R1

Platforms All

### **passive** *boolean*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Suppress the processing of VRRP advertisement messages
Context	<b>configure</b> <i>service ies string interface string ipv6 vrrp number</i> <b>passive</b> <i>boolean</i>
Tree	<b>passive</b>
Description	<p>When configured to <b>true</b>, the router identifies this virtual router instance as passive; and therefore the owner of the virtual router IP addresses. A passive virtual router instance does not transmit or receive VRRP advertisement messages and is always in either the master state (if the interface is operationally up) or the init state (if the interface is operationally down).</p> <p>When configured to <b>false</b>, this virtual router instance is not identified as passive, meaning that it transmits and receives VRRP advertisement messages.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **ping-reply** *boolean*

Synopsis	Allow non-owner master to reply to ICMP echo requests
Context	<b>configure</b> <i>service ies string interface string ipv6 vrrp number</i> <b>ping-reply</b> <i>boolean</i>
Tree	<b>ping-reply</b>
Description	<p>When configured to <b>true</b>, the router allows the non-owner master to reply to ICMP echo requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the ping request. Ping must not have been disabled at the management security level (either on the parental IP interface or on the Ping source host address).</p> <p>When configured to <b>false</b>, ICMP echo requests sent to non-owner master virtual IP addresses are silently discarded.</p> <p>Non-owner backup virtual routers never respond to ICMP echo requests, regardless of the configuration of this command.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### policy reference

Synopsis	VRRP priority control policy
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">vrrp</a> <a href="#">number</a> <a href="#">policy</a> <a href="#">reference</a>
Tree	<a href="#">policy</a>
Description	<p>This command configures a VRRP priority control policy to associate with the virtual router instance.</p> <p>VRRP priority control policies can override or adjust the base priority value of the virtual router instance, depending on events or conditions within the chassis.</p> <p>An operator can associate a policy with more than one virtual router instance. The priority events within the policy either override or diminish the base priority set with the <b>priority</b> command. As priority events clear in the policy, the in-use priority can eventually be restored to the base priority value.</p> <p>For non-owner virtual router instances, if this command is not executed, the base priority is used as the in-use priority.</p>
Reference	<b>configure</b> <a href="#">vrrp</a> <a href="#">policy</a> <a href="#">number</a>
Introduced	16.0.R1
Platforms	All

### preempt boolean

Synopsis	Allow the VRRP to override an existing non-owner master
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">vrrp</a> <a href="#">number</a> <a href="#">preempt</a> <a href="#">boolean</a>
Tree	<a href="#">preempt</a>
Description	<p>When configured to <b>true</b>, this virtual router instance overrides any non-owner master with an in-use message priority value less than the in-use priority value of this virtual router.</p> <p>When configured to <b>false</b>, this virtual router only becomes master if the master down timer expires before a VRRP advertisement message is received from another virtual router.</p>
Default	true
Introduced	16.0.R1
Platforms	All

### priority number

Synopsis	Base priority for the VRRP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">vrrp</a> <a href="#">number</a> <a href="#">priority</a> <a href="#">number</a>

Tree	<a href="#">priority</a>
Description	<p>This command configures the base router priority for the virtual router instance, which defines the selection order of the virtual router in the master election process.</p> <p>The in-use priority is derived from the base priority. However, the in-use priority is modified by optional VRRP priority control policies. An operator can use VRRP priority control policies to either override or adjust the base priority value depending on events or conditions within the chassis.</p>
Range	1 to 255
Introduced	16.0.R1
Platforms	All

### **standby-forwarding *boolean***

Synopsis	Allow standby router to forward traffic
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 vrrp</a> <i>number</i> <a href="#">standby-forwarding</a> <i>boolean</i>
Tree	<a href="#">standby-forwarding</a>
Description	<p>When configured to <b>true</b>, the standby router forwards all traffic.</p> <p>When configured to <b>false</b>, the standby router cannot forward traffic sent to the MAC address of the virtual router. However, the standby router still forwards traffic sent to its own MAC address.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **telnet-reply *boolean***

Synopsis	Allow non-owner master to reply to Telnet requests
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 vrrp</a> <i>number</i> <a href="#">telnet-reply</a> <i>boolean</i>
Tree	<a href="#">telnet-reply</a>
Description	<p>When configured to <b>true</b>, the router allows the non-owner master to reply to Telnet requests directed at the IP addresses of the virtual router instance. Any routed interface can receive Telnet requests. Telnet cannot be disabled at the management security level (either on the parental IP interface or on the Telnet source host address).</p> <p>When configured to <b>false</b>, the router silently discards Telnet requests sent to non-owner master virtual IP addresses.</p>
Default	false
Introduced	16.0.R1

Platforms All

### traceroute-reply *boolean*

Synopsis Allow non-owner master to reply to traceroute requests

Context **configure** [service ies](#) *string* [interface](#) *string* [ipv6 vrrp](#) *number* **traceroute-reply** *boolean*

Tree [traceroute-reply](#)

Description When configured to **true**, the router allows a non-owner master to reply to traceroute requests directed to the IP addresses of the virtual router instance.

When configured to **false**, the router silently discards traceroute requests sent to non-owner master virtual IP addresses.

Traceroute must not have been disabled at the management security level (either on the parental IP interface or the source host address).

Default false

Introduced 16.0.R1

Platforms All

### load-balancing

Synopsis Enter the **load-balancing** context

Context **configure** [service ies](#) *string* [interface](#) *string* **load-balancing**

Tree [load-balancing](#)

Introduced 16.0.R1

Platforms All

### flow-label-load-balancing *boolean*

Synopsis Enable flow label load balancing

Context **configure** [service ies](#) *string* [interface](#) *string* **load-balancing** [flow-label-load-balancing](#) *boolean*

Tree [flow-label-load-balancing](#)

Description When configured to **true**, the router enables load balancing in ECMP and LAG based on the output of a hash performed on the triplet (SA, DA, flow label) in the header of an IPv6 packet received on an IES, VPRN, R-VPLS, CSC, or network interface.

When configured to **false**, the router disables load balancing in ECMP and LAG.

Default false

Introduced 21.5.R1

Platforms All

### **ip-load-balancing** *keyword*

Synopsis IP load-balancing algorithm

Context **configure** [service ies](#) *string* [interface](#) *string* [load-balancing](#) [ip-load-balancing](#) *keyword*

Tree [ip-load-balancing](#)

Description This command specifies whether to include the source address, destination address, or both in LAG or ECMP hash on IP interfaces. Additionally, when the **I4-load-balancing** command is enabled, this command also includes the source or destination port in the hash inputs.

Default both

Options both, destination, source, inner-ip

Introduced 16.0.R3

Platforms All

### **spi-load-balancing** *boolean*

Synopsis Enable SPI use in hashing

Context **configure** [service ies](#) *string* [interface](#) *string* [load-balancing](#) [spi-load-balancing](#) *boolean*

Tree [spi-load-balancing](#)

Description When configured to **true**, the router uses the Security Parameter Index (SPI) in hashing for ESP and AH encrypted IPv4 and IPv6 traffic. This is a per-interface setting.

Default false

Introduced 16.0.R1

Platforms All

### **teid-load-balancing** *boolean*

Synopsis Enable use of TEID in hashing

Context **configure** [service ies](#) *string* [interface](#) *string* [load-balancing](#) [teid-load-balancing](#) *boolean*

Tree [teid-load-balancing](#)

Default false

Introduced 16.0.R1

Platforms All

### **loopback** *boolean*

Synopsis	Use interface as a loopback interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">loopback</a> <i>boolean</i>
Tree	<a href="#">loopback</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **mac** *string*

Synopsis	MAC address for the interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">mac</a> <i>string</i>
Tree	<a href="#">mac</a>
Introduced	16.0.R1
Platforms	All

### **mac-accounting** *boolean*

Synopsis	Enable MAC accounting functionality
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">mac-accounting</a> <i>boolean</i>
Tree	<a href="#">mac-accounting</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **monitor-oper-group** *reference*

Synopsis	Operational group to monitor
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">monitor-oper-group</a> <i>reference</i>
Tree	<a href="#">monitor-oper-group</a>
Reference	<b>configure</b> <a href="#">service</a> <a href="#">oper-group</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

## multi-chassis-shunting-profile *reference*

Synopsis	Multi-chassis shunting profile name
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">multi-chassis-shunting-profile</a> <i>reference</i>
Tree	<a href="#">multi-chassis-shunting-profile</a>
Description	This command configures the name of a multi-chassis shunting profile to use on public or private tunnel interfaces.
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">ipsec</a> <a href="#">multi-chassis-shunting-profile</a> <i>string</i>
Notes	The following elements are part of a choice: <b>multi-chassis-shunting-profile</b> or ( <b>dynamic-tunnel-redundant-nexthop</b> and <b>static-tunnel-redundant-nexthop</b> ).
Introduced	22.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## multicast-network-domain *reference*

Synopsis	Network domain name
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">multicast-network-domain</a> <i>reference</i>

Introduced	16.0.R1
Platforms	All

## ping-template

Synopsis	Enable the <b>ping-template</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ping-template</a>
Tree	<a href="#">ping-template</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## admin-state *keyword*

Synopsis	Administrative state of the ping template
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ping-template</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>

Default	disable
Options	enable, disable
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### destination-address *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Ping template destination address
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ping-template</a> <i>destination-address</i> <i>string</i>
Tree	<a href="#">destination-address</a>
Description	<p>This command configures the address to where the ICMP echo requests are directed to test connectivity. The source of the ICMP echo request is the primary IPv4 address of the interface under which the ping-template is configured. The destination address must be on the same subnet as the source IP address. A configuration warning message displays if the primary IPv4 address and the destination are not on the same subnet, INFO: PIP #2092 Ping template misconfiguration - destination-address and primary IP address should fall in the same subnet.</p> <p>Unnumbered interfaces and loopback addresses are not supported.</p> <p>The config service ies vprn interface ping-template must be administratively disabled to remove or change the destination-address ip-address.</p>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### name *reference*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Ping template name
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ping-template</a> <i>name</i> <i>reference</i>
Tree	<a href="#">name</a>
Description	This command configures the name of the ping template to be assigned to the IP interface.
Reference	<b>configure</b> <a href="#">test-oam icmp ping-template</a> <i>string</i>

Notes	This element is mandatory.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## **ptp-hw-assist**

Synopsis	Enter the <b>ptp-hw-assist</b> context
Context	<b>configure service ies string interface string ptp-hw-assist</b>
Tree	<a href="#">ptp-hw-assist</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## **admin-state keyword**

Synopsis	Administrative state of the PTP time stamping assist
Context	<b>configure service ies string interface string ptp-hw-assist admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Description	<p>This command controls the administrative state of port-based time stamping assist of PTP packets at the physical interface. This capability is supported on specific hardware. The command may be blocked if not all hardware has the required level of support.</p> <p>Only one interface per physical port can have ptp-hw-assist enabled. This feature cannot be enabled if the physical port supporting the interface is configured as a PTP port.</p>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## **radius-auth-policy reference**

Synopsis	Authentication policy
Context	<b>configure service ies string interface string radius-auth-policy reference</b>
Tree	<a href="#">radius-auth-policy</a>
Reference	<b>configure subscriber-mgmt radius-authentication-policy string</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **sap** [**sap-id**] *string*

Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>cpu-protection</b>
Tree	<b>cpu-protection</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## eth-cfm-monitoring

Synopsis	Enable the <b>eth-cfm-monitoring</b> context
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>cpu-protection eth-cfm-monitoring</b>
Tree	<b>eth-cfm-monitoring</b>
Notes	The following elements are part of a choice: <b>eth-cfm-monitoring</b> , <b>ip-src-monitoring</b> , or <b>mac-monitoring</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## aggregate

Synopsis	Apply rate limit to the sum of per-peer packet rates
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>cpu-protection eth-cfm-monitoring aggregate</b>
Tree	<b>aggregate</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## car

Synopsis	Ignore Ethernet CFM packets when enforcing overall rate
----------	---

Context	<b>configure service ies string interface string sap string cpu-protection eth-cfm-monitoring car</b>
Tree	<b>car</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## ip-src-monitoring

Synopsis	Enable IP source monitoring for CPU protection
Context	<b>configure service ies string interface string sap string cpu-protection ip-src-monitoring</b>
Tree	<b>ip-src-monitoring</b>
Notes	The following elements are part of a choice: <b>eth-cfm-monitoring</b> , <b>ip-src-monitoring</b> , or <b>mac-monitoring</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## mac-monitoring

Synopsis	Monitor MAC for CPU protection
Context	<b>configure service ies string interface string sap string cpu-protection mac-monitoring</b>
Tree	<b>mac-monitoring</b>
Notes	The following elements are part of a choice: <b>eth-cfm-monitoring</b> , <b>ip-src-monitoring</b> , or <b>mac-monitoring</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## policy-id reference

Synopsis	CPM protection policy
Context	<b>configure service ies string interface string sap string cpu-protection policy-id reference</b>
Tree	<b>policy-id</b>
Reference	<b>configure system security cpu-protection policy number</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">description string</a>
Tree	<a href="#">description</a>
String Length	1 to 160
Introduced	16.0.R1
Platforms	All

### **dist-cpu-protection** *reference*

Synopsis	Distributed CPU protection policy for SAP
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">dist-cpu-protection reference</a>
Tree	<a href="#">dist-cpu-protection</a>
Reference	<b>configure</b> <a href="#">system security</a> <a href="#">dist-cpu-protection policy string</a>
Introduced	16.0.R1
Platforms	All

### **egress**

Synopsis	Enter the <b>egress</b> context
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">egress</a>
Tree	<a href="#">egress</a>
Introduced	16.0.R1
Platforms	All

### **agg-rate**

Synopsis	Enter the <b>agg-rate</b> context
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">egress</a> <a href="#">agg-rate</a>
Tree	<a href="#">agg-rate</a>
Notes	This element is the default part of a choice. The following elements are part of a choice: <b>agg-rate</b> or <b>percent-agg-rate</b> .
Introduced	16.0.R1
Platforms	All

### **adaptation-rule** *keyword*

Synopsis	Adaptation rule to compute the operational PIR value when an aggregate shaper is used
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">agg-rate</a> <a href="#">adaptation-rule</a> <a href="#">keyword</a>
Tree	<a href="#">adaptation-rule</a>
Default	closest
Options	max, min, closest
Introduced	22.10.R1
Platforms	7750 SR-1, 7750 SR-s

### **burst-limit** (*number* | *keyword*)

Synopsis	Shaping burst size when an aggregate shaper is used
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">agg-rate</a> <a href="#">burst-limit</a> ( <a href="#">number</a>   <a href="#">keyword</a> )
Tree	<a href="#">burst-limit</a>
Range	1 to 14000000
Default	auto
Units	bytes
Options	auto
Introduced	22.10.R1
Platforms	7750 SR-1, 7750 SR-s

### **limit-unused-bandwidth** *boolean*

Synopsis	Enable aggregate rate overrun protection
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">agg-rate</a> <a href="#">limit-unused-bandwidth</a> <a href="#">boolean</a>
Tree	<a href="#">limit-unused-bandwidth</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **queue-frame-based-accounting** *boolean*

Synopsis	Enable frame-based accounting on all policers and queues associated with context
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">egress agg-rate queue-frame-based-accounting boolean</a>
Tree	<a href="#">queue-frame-based-accounting</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **rate** *number*

Synopsis	Enforced aggregate rate for all queues
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">egress agg-rate rate number</a>
Tree	<a href="#">rate</a>
Range	1 to 6400000000
Units	kilobps
Introduced	16.0.R1
Platforms	All

### **filter**

Synopsis	Enter the <b>filter</b> context
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">egress filter</a>
Tree	<a href="#">filter</a>
Introduced	16.0.R1
Platforms	All

### **ip reference**

Synopsis	IPv4 filter policy name
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">egress filter ip reference</a>
Tree	<a href="#">ip</a>
Reference	<b>configure filter ip-filter string</b>
Introduced	16.0.R1
Platforms	All

## ipv6 reference

Synopsis	IPv6 filter policy name
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">filter</a> <a href="#">ipv6</a> <a href="#">reference</a>
Tree	<a href="#">ipv6</a>
Reference	<b>configure</b> <a href="#">filter</a> <a href="#">ipv6-filter</a> <a href="#">string</a>
Introduced	16.0.R1
Platforms	All

## qos

Synopsis	Enter the <b>qos</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a>
Tree	<a href="#">qos</a>
Introduced	16.0.R1
Platforms	All

## policer-control-policy

Synopsis	Enter the <b>policer-control-policy</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a>
Tree	<a href="#">policer-control-policy</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## overrides

Synopsis	Enable the <b>overrides</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a>
Tree	<a href="#">overrides</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## root

Synopsis	Enter the <b>root</b> context
Context	<b>configure service ies string interface string sap string egress qos policer-control-policy overrides root</b>
Tree	<b>root</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## max-rate (*number* | *keyword*)

Synopsis	Maximum frame-based bandwidth limit
Context	<b>configure service ies string interface string sap string egress qos policer-control-policy overrides root max-rate (<i>number</i>   <i>keyword</i>)</b>
Tree	<b>max-rate</b>
Range	1 to 6400000000
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## priority-mbs-thresholds

Synopsis	Enter the <b>priority-mbs-thresholds</b> context
Context	<b>configure service ies string interface string sap string egress qos policer-control-policy overrides root priority-mbs-thresholds</b>
Tree	<b>priority-mbs-thresholds</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## min-thresh-separation (*number* | *keyword*)

Synopsis	Minimum amount of separation buffer space
Context	<b>configure service ies string interface string sap string egress qos policer-control-policy overrides root priority-mbs-thresholds min-thresh-separation (<i>number</i>   <i>keyword</i>)</b>
Tree	<b>min-thresh-separation</b>
Range	0 to 16777216
Units	bytes

Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **priority** [[priority-level](#)] *number*

Synopsis	Enter the <b>priority</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a> <a href="#">priority-mbs-thresholds</a> <a href="#">priority</a> <i>number</i>
Tree	<a href="#">priority</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **[priority-level]** *number*

Synopsis	Priority level
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a> <a href="#">priority-mbs-thresholds</a> <a href="#">priority</a> <i>number</i>
Tree	<a href="#">priority</a>
Range	1 to 8
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **mbs-contribution** (*number* | *keyword*)

Synopsis	Minimum amount of cumulative buffer space allowed
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a> <a href="#">priority-mbs-thresholds</a> <a href="#">priority</a> <i>number</i> <a href="#">mbs-contribution</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">mbs-contribution</a>
Range	0 to 16777216
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **policy-name** *reference*

Synopsis	Policer control policy name
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">policy-name</a> <i>reference</i>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">policer-control-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **qinq-mark-top-only** *boolean*

Synopsis	Mark top Q-tags
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">qinq-mark-top-only</a> <i>boolean</i>
Tree	<a href="#">qinq-mark-top-only</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **sap-egress**

Synopsis	Enter the <b>sap-egress</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a>
Tree	<a href="#">sap-egress</a>
Introduced	16.0.R1
Platforms	All

### **overrides**

Synopsis	Enter the <b>overrides</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a>
Tree	<a href="#">overrides</a>
Introduced	16.0.R1
Platforms	All

### **hs-secondary-shaper** *string*

Synopsis	HS Secondary Shaper
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string sap string</a> <a href="#">egress qos sap-egress overrides</a> <a href="#">hs-secondary-shaper string</a>
Tree	<a href="#">hs-secondary-shaper</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **hs-wrr-group** [[group-id](#)] *reference*

Synopsis	Enter the <b>hs-wrr-group</b> list instance
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string sap string</a> <a href="#">egress qos sap-egress overrides</a> <a href="#">hs-wrr-group reference</a>
Tree	<a href="#">hs-wrr-group</a>
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### [[group-id](#)] *reference*

Synopsis	HS WRR group identifier
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string sap string</a> <a href="#">egress qos sap-egress overrides</a> <a href="#">hs-wrr-group reference</a>
Tree	<a href="#">hs-wrr-group</a>
Reference	<b>configure</b> <a href="#">qos sap-egress string</a> <a href="#">hs-wrr-group number</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **hs-class-weight** *number*

Synopsis	Class weight override of the WRR group
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string sap string</a> <a href="#">egress qos sap-egress overrides</a> <a href="#">hs-wrr-group reference</a> <a href="#">hs-class-weight number</a>
Tree	<a href="#">hs-class-weight</a>

Range	1   2   4   8
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **percent-rate** *decimal-number*

Synopsis	Percent rate override applied to the HS WRR group
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">egress qos sap-egress overrides</a> <a href="#">hs-wrr-group reference</a> <b>percent-rate</b> <i>decimal-number</i>
Tree	<a href="#">percent-rate</a>
Range	0.01 to 100.00
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **rate** (*number* | *keyword*)

Synopsis	Scheduling rate override applied to the HS WRR group
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">egress qos sap-egress overrides</a> <a href="#">hs-wrr-group reference</a> <b>rate</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">rate</a>
Range	1 to 2000000000
Units	kilobps
Options	max
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **policer** [[policer-id](#)] *reference*

Synopsis	Enter the <b>policer</b> list instance
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">egress qos sap-egress overrides</a> <a href="#">policer reference</a>
Tree	<a href="#">policer</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### [**policer-id**] *reference*

Synopsis	Policer unique ID
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">egress qos sap-egress overrides</a> <a href="#">policer reference</a>
Tree	<a href="#">policer</a>
Reference	<b>configure</b> <a href="#">qos sap-egress string</a> <a href="#">policer number</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **cbs** (*number* | *keyword*)

Synopsis	CBS
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">egress qos sap-egress overrides</a> <a href="#">policer reference</a> <a href="#">cbs (number   keyword)</a>
Tree	<a href="#">cbs</a>
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **mbs** (*number* | *keyword*)

Synopsis	MBS
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">egress qos sap-egress overrides</a> <a href="#">policer reference</a> <a href="#">mbs (number   keyword)</a>
Tree	<a href="#">mbs</a>
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **packet-byte-offset** *number*

Synopsis	Packet size modification for policing information
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <b>packet-byte-offset</b> <i>number</i>
Tree	<a href="#">packet-byte-offset</a>
Range	-64 to 31
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **percent-rate**

Synopsis	Enter the <b>percent-rate</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <b>percent-rate</b>
Tree	<a href="#">percent-rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **cir** *decimal-number*

Synopsis	CIR percent rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <a href="#">percent-rate</a> <b>cir</b> <i>decimal-number</i>
Tree	<a href="#">cir</a>
Range	0.00 to 100.00
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **pir** *decimal-number*

Synopsis	PIR percent rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <a href="#">percent-rate</a> <b>pir</b> <i>decimal-number</i>
Tree	<a href="#">pir</a>
Range	0.01 to 100.00

Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## rate

Synopsis Enter the **rate** context  
Context **configure service ies string interface string sap string egress qos sap-egress overrides policer reference rate**  
Tree **rate**  
Notes The following elements are part of a choice: **percent-rate** or **rate**.  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## cir (*number* | *keyword*)

Synopsis CIR rate  
Context **configure service ies string interface string sap string egress qos sap-egress overrides policer reference rate cir (*number* | *keyword*)**  
Tree **cir**  
Range 0 to 6400000000  
Units kilobps  
Options max  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## pir (*number* | *keyword*)

Synopsis PIR rate  
Context **configure service ies string interface string sap string egress qos sap-egress overrides policer reference rate pir (*number* | *keyword*)**  
Tree **pir**  
Range 1 to 6400000000  
Units kilobps  
Options max  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **stat-mode** *keyword*

Synopsis	Mode of statistics collected by the policer
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">egress qos sap-egress overrides policer reference</a> <b>stat-mode</b> <i>keyword</i>
Tree	<a href="#">stat-mode</a>
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-profile-cir, offered-limited-capped-cir, offered-profile-capped-cir, offered-total-cir-exceed, offered-four-profile-no-cir, offered-total-cir-four-profile
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **queue** [[queue-id](#)] *reference*

Synopsis	Enter the <b>queue</b> list instance
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">egress qos sap-egress overrides queue reference</a>
Tree	<a href="#">queue</a>
Introduced	16.0.R1
Platforms	All

### [[queue-id](#)] *reference*

Synopsis	Policer unique ID
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">egress qos sap-egress overrides queue reference</a>
Tree	<a href="#">queue</a>
Reference	<b>configure</b> <a href="#">qos sap-egress string</a> <a href="#">queue number</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **adaptation-rule**

Synopsis	Enter the <b>adaptation-rule</b> context
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">egress qos sap-egress overrides queue reference</a> <b>adaptation-rule</b>

Tree	<a href="#">adaptation-rule</a>
Introduced	16.0.R1
Platforms	All

### **cir** keyword

Synopsis	Constraint used when deriving the operational CIR value
Context	<a href="#">configure</a> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">adaptation-rule</a> <a href="#">cir</a> <a href="#">keyword</a>
Tree	<a href="#">cir</a>
Options	max, min, closest
Introduced	16.0.R1
Platforms	All

### **pir** keyword

Synopsis	Constraint used when deriving the operational PIR value
Context	<a href="#">configure</a> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">adaptation-rule</a> <a href="#">pir</a> <a href="#">keyword</a>
Tree	<a href="#">pir</a>
Options	max, min, closest
Introduced	16.0.R1
Platforms	All

### **avg-frame-overhead** *decimal-number*

Synopsis	Average packet-to-frame encapsulation overhead
Context	<a href="#">configure</a> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">avg-frame-overhead</a> <a href="#">decimal-number</a>
Tree	<a href="#">avg-frame-overhead</a>
Range	0.00 to 100.00
Introduced	16.0.R1
Platforms	All

### **burst-limit** (*number* | *keyword*)

Synopsis	Explicit shaping burst size for the queue
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <b>burst-limit</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">burst-limit</a>
Range	1 to 14000000
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	All

### **cbs** (*number* | *keyword*)

Synopsis	CBS
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <b>cbs</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cbs</a>
Range	0 to 1048576
Units	kilobytes
Options	auto
Introduced	16.0.R1
Platforms	All

### **drop-tail**

Synopsis	Enter the <b>drop-tail</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <b>drop-tail</b>
Tree	<a href="#">drop-tail</a>
Introduced	16.0.R1
Platforms	All

### **low**

Synopsis	Enter the <b>low</b> context
----------	------------------------------

Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">drop-tail</a> <a href="#">low</a>
Tree	<a href="#">low</a>
Introduced	16.0.R1
Platforms	All

### **percent-reduction-from-mbs** (*number* | *keyword*)

Synopsis	Percentage reduction from the MBS for a queue drop tail
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">drop-tail</a> <a href="#">low</a> <a href="#">percent-reduction-from-mbs</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">percent-reduction-from-mbs</a>
Range	0 to 100
Options	auto
Introduced	16.0.R1
Platforms	All

### **hs-class-weight** *number*

Synopsis	Class weight override for the queue
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">hs-class-weight</a> <i>number</i>
Tree	<a href="#">hs-class-weight</a>
Range	1   2   4   8
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **hs-wred-queue**

Synopsis	Enter the <b>hs-wred-queue</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">hs-wred-queue</a>
Tree	<a href="#">hs-wred-queue</a>
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

## policy reference

Synopsis	Slope policy applied to the HSQ queue group queue
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">hs-wred-queue</a> <a href="#">policy</a> <a href="#">reference</a>
Tree	<a href="#">policy</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">slope-policy</a> <a href="#">string</a>
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

## hs-wrr-weight *number*

Synopsis	Weighted Round Robin (WRR) weight to parent with this queue into the scheduler
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">hs-wrr-weight</a> <a href="#">number</a>
Tree	<a href="#">hs-wrr-weight</a>
Range	1 to 127
Default	1
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

## mbs (*number* | *keyword*)

Synopsis	MBS
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">mbs</a> ( <a href="#">number</a>   <a href="#">keyword</a> )
Tree	<a href="#">mbs</a>
Range	0 to 1073741824
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	All

## monitor-queue-depth

Synopsis	Enable the <b>monitor-queue-depth</b> context
----------	---

Context	<b>configure</b> <a href="#">service ies string interface string sap string egress qos sap-egress overrides queue reference monitor-queue-depth</a>
Tree	<a href="#">monitor-queue-depth</a>
Introduced	20.10.R1
Platforms	All

### **fast-polling** *boolean*

Synopsis	Enable fast polling of the queue depth
Context	<b>configure</b> <a href="#">service ies string interface string sap string egress qos sap-egress overrides queue reference monitor-queue-depth fast-polling boolean</a>
Tree	<a href="#">fast-polling</a>
Description	When configured to <b>true</b> , this command enables fast polling of the queue depth. Faster polling allows a more accurate view of the actual depth. When configured to <b>false</b> , fast queue polling is not enabled.
Default	false
Introduced	20.10.R1
Platforms	All

### **violation-threshold** *decimal-number*

Synopsis	Threshold for queue depth before violation is raised
Context	<b>configure</b> <a href="#">service ies string interface string sap string egress qos sap-egress overrides queue reference monitor-queue-depth violation-threshold decimal-number</a>
Tree	<a href="#">violation-threshold</a>
Description	This command specifies the threshold for the queue MBS. When the queue depth exceeds the threshold value, a violation is registered.
Range	0.01 to 99.99
Introduced	20.10.R1
Platforms	All

### **parent**

Synopsis	Enter the <b>parent</b> context
Context	<b>configure</b> <a href="#">service ies string interface string sap string egress qos sap-egress overrides queue reference parent</a>
Tree	<a href="#">parent</a>

Introduced 16.0.R1  
Platforms All

### **cir-weight** *number*

Synopsis CIR parameter that overrides parent for queue group  
Context **configure** [service](#) [ies](#) [string](#) [interface](#) [string](#) [sap](#) [string](#) [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#) [reference](#) [parent](#) **cir-weight** *number*  
Tree [cir-weight](#)  
Range 0 to 100  
Introduced 16.0.R1  
Platforms All

### **weight** *number*

Synopsis PIR parameter that overrides parent for queue group  
Context **configure** [service](#) [ies](#) [string](#) [interface](#) [string](#) [sap](#) [string](#) [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#) [reference](#) [parent](#) **weight** *number*  
Tree [weight](#)  
Range 0 to 100  
Introduced 16.0.R1  
Platforms All

### **percent-rate**

Synopsis Enter the **percent-rate** context  
Context **configure** [service](#) [ies](#) [string](#) [interface](#) [string](#) [sap](#) [string](#) [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#) [reference](#) **percent-rate**  
Tree [percent-rate](#)  
Notes The following elements are part of a choice: **percent-rate** or **rate**.  
Introduced 16.0.R1  
Platforms All

### **cir** *decimal-number*

Synopsis CIR percent rate

Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos sap-egress overrides</b> <b>queue</b> <i>reference</i> <b>percent-rate cir</b> <i>decimal-number</i>
Tree	<b>cir</b>
Range	0.00 to 100.00
Introduced	16.0.R1
Platforms	All

### **pir** *decimal-number*

Synopsis	PIR percent rate
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos sap-egress overrides</b> <b>queue</b> <i>reference</i> <b>percent-rate pir</b> <i>decimal-number</i>
Tree	<b>pir</b>
Range	0.01 to 100.00
Introduced	16.0.R1
Platforms	All

### **rate**

Synopsis	Enter the <b>rate</b> context
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos sap-egress overrides</b> <b>queue</b> <i>reference</i> <b>rate</b>
Tree	<b>rate</b>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	All

### **cir** (*number* | *keyword*)

Synopsis	CIR rate
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos sap-egress overrides</b> <b>queue</b> <i>reference</i> <b>rate cir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>cir</b>
Range	0 to 6400000000
Units	kilobps
Options	max

Introduced 16.0.R1  
Platforms All

### **pir** (*number* | *keyword*)

Synopsis PIR rate  
Context **configure** [service ies string](#) [interface string](#) [sap string](#) [egress qos sap-egress overrides](#)  
[queue reference rate](#) **pir** (*number* | *keyword*)  
Tree [pir](#)  
Range 1 to 6400000000  
Units kilobps  
Options max  
Introduced 16.0.R1  
Platforms All

### **policy-name** *reference*

Synopsis Policy ID to associate with SAP for mirrored service  
Context **configure** [service ies string](#) [interface string](#) [sap string](#) [egress qos sap-egress](#) [policy-name reference](#)  
Tree [policy-name](#)  
Reference **configure** [qos sap-egress string](#)  
Introduced 16.0.R1  
Platforms All

### **port-redirect-group**

Synopsis Enter the **port-redirect-group** context  
Context **configure** [service ies string](#) [interface string](#) [sap string](#) [egress qos sap-egress](#) [port-redirect-group](#)  
Tree [port-redirect-group](#)  
Introduced 16.0.R1  
Platforms All

### **group-name** *reference*

Synopsis	Name of the queue group redirect list policy
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">port-redirect-group</a> <a href="#">group-name</a> <i>reference</i>
Tree	<a href="#">group-name</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">queue-group-templates</a> <a href="#">egress</a> <a href="#">queue-group</a> <a href="#">string</a>
Introduced	16.0.R1
Platforms	All

### **instance** *number*

Synopsis	Instance of port queue group
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">port-redirect-group</a> <a href="#">instance</a> <i>number</i>
Tree	<a href="#">instance</a>
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

### **scheduler-policy**

Synopsis	Enter the <b>scheduler-policy</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a>
Tree	<a href="#">scheduler-policy</a>
Introduced	16.0.R1
Platforms	All

### **overrides**

Synopsis	Enter the <b>overrides</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a>
Tree	<a href="#">overrides</a>
Introduced	16.0.R1
Platforms	All

## **scheduler** [*scheduler-name*] *string*

Synopsis	Enter the <b>scheduler</b> list instance
Context	<b>configure</b> <i>service ies string interface string sap string egress qos scheduler-policy overrides scheduler string</i>
Tree	<i>scheduler</i>
Introduced	16.0.R1
Platforms	All

## **[scheduler-name]** *string*

Synopsis	Scheduler name
Context	<b>configure</b> <i>service ies string interface string sap string egress qos scheduler-policy overrides scheduler string</i>
Tree	<i>scheduler</i>
Description	<p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context will not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error will occur, the command will not execute, and the context will not change.</p>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## **parent**

Synopsis	Enter the <b>parent</b> context
Context	<b>configure</b> <i>service ies string interface string sap string egress qos scheduler-policy overrides scheduler string parent</i>
Tree	<i>parent</i>

Introduced 16.0.R1  
Platforms All

### **cir-weight** *number*

Synopsis Weight used at the within-CIR port priority level  
Context **configure** [service](#) [ies](#) [string](#) [interface](#) [string](#) [sap](#) [string](#) [egress](#) [qos](#) [scheduler-policy](#)  
[overrides](#) [scheduler](#) [string](#) [parent](#) [cir-weight](#) [number](#)  
Tree [cir-weight](#)  
Range 0 to 100  
Introduced 16.0.R1  
Platforms All

### **weight** *number*

Synopsis Relative weight of the scheduler to feed the queue  
Context **configure** [service](#) [ies](#) [string](#) [interface](#) [string](#) [sap](#) [string](#) [egress](#) [qos](#) [scheduler-policy](#)  
[overrides](#) [scheduler](#) [string](#) [parent](#) [weight](#) [number](#)  
Tree [weight](#)  
Range 0 to 100  
Introduced 16.0.R1  
Platforms All

### **rate**

Synopsis Enter the **rate** context  
Context **configure** [service](#) [ies](#) [string](#) [interface](#) [string](#) [sap](#) [string](#) [egress](#) [qos](#) [scheduler-policy](#)  
[overrides](#) [scheduler](#) [string](#) [rate](#)  
Tree [rate](#)  
Introduced 16.0.R1  
Platforms All

### **cir** (*number* | *keyword*)

Synopsis CIR at which the queue it to operate  
Context **configure** [service](#) [ies](#) [string](#) [interface](#) [string](#) [sap](#) [string](#) [egress](#) [qos](#) [scheduler-policy](#)  
[overrides](#) [scheduler](#) [string](#) [rate](#) [cir](#) ([number](#) | [keyword](#))

Tree	<a href="#">cir</a>
Range	0 to 6400000000
Units	kilobps
Options	sum, max
Introduced	16.0.R1
Platforms	All

### **pir** (*number* | *keyword*)

Synopsis	PIR at which the queue is to operate
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <i>string</i> <a href="#">rate</a> <b>pir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">pir</a>
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	All

### **policy-name** *reference*

Synopsis	Scheduler policy name
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">policy-name</a> <i>reference</i>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">scheduler-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **queue-group-redirect-list** *reference*

Synopsis	Assign queue-group redirect list
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">queue-group-redirect-list</a> <i>reference</i>
Tree	<a href="#">queue-group-redirect-list</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">queue-group-redirect-list</a> <i>string</i>

Introduced 16.0.R1  
Platforms All

### eth-cfm

Synopsis Enter the **eth-cfm** context  
Context **configure service ies string interface string sap string eth-cfm**  
Tree **eth-cfm**  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### collect-lmm-fc-stats

Synopsis Enter the **collect-lmm-fc-stats** context  
Context **configure service ies string interface string sap string eth-cfm collect-lmm-fc-stats**  
Tree **collect-lmm-fc-stats**  
Description Commands in this context configure per forwarding class (FC) LMM information collection.  
The commands **fc-in-profile** and **fc** in this context are mutually exclusive. The commands apply to either profile-aware or profile-unaware FCs respectively.  
This command and the **collect-lmm-stats** command are mutually exclusive when there is entity resource contention.  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### fc keyword

Synopsis Forwarding class name for profile-unaware counter  
Context **configure service ies string interface string sap string eth-cfm collect-lmm-fc-stats fc keyword**  
Tree **fc**  
Description This command configures individual counters for the specified FCs without regard for profile. The system includes all countable packets that match a configured FC, regardless of profile, in this counter.  
An FC specified as part of this command and for this specific context cannot be specified as a profile-aware FC using the **fc-in-profile** command under the **collect-lmm-fc-stats** context.

When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.

Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fc-in-profile** *keyword*

Synopsis	Forwarding class name for profile-aware counter
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm</b> <b>collect-lmm-fc-stats</b> <b>fc-in-profile</b> <i>keyword</i>
Tree	<b>fc-in-profile</b>
Description	<p>This command configures individual counters for the specified FCs with regard to profile. The system includes all countable packets that match a configured FC and that are deemed to be in-profile in this counter.</p> <p>An FC specified as part of this command and for this specific context cannot be specified as a profile-unaware FC using the <b>fc</b> command under the <b>collect-lmm-fc-stats</b> context.</p> <p>When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.</p>
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **collect-lmm-stats** *boolean*

Synopsis	Collect statistics for loss measurement message tests
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm</b> <b>collect-lmm-stats</b> <i>boolean</i>
Tree	<b>collect-lmm-stats</b>
Description	<p>When configured to <b>true</b>, the router instantiates the statistical counter to transmit and receive packets for the LAG facility MEP bindings.</p> <p>The <b>show eth-cfm collect-lmm-stats</b> command displays entities that have been enabled to collect transit and receive counters.</p> <p>When configured to <b>false</b>, the router does not instantiate the counter and the LMM PDU associated with the MEP does not populate the counters in the packet.</p>

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mep** *md-admin-name* *reference* *ma-admin-name* *reference* *mep-id* *number*

Synopsis	Enter the <b>mep</b> list instance
Context	<b>configure</b> <i>service ies string</i> <i>interface string</i> <i>sap string</i> <i>eth-cfm</i> <i>mep md-admin-name</i> <i>reference</i> <i>ma-admin-name</i> <i>reference</i> <i>mep-id</i> <i>number</i>
Tree	<i>mep</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **md-admin-name** *reference*

Synopsis	Maintenance Domain (MD) name
Context	<b>configure</b> <i>service ies string</i> <i>interface string</i> <i>sap string</i> <i>eth-cfm</i> <i>mep md-admin-name</i> <i>reference</i> <i>ma-admin-name</i> <i>reference</i> <i>mep-id</i> <i>number</i>
Tree	<i>mep</i>
Reference	<b>configure</b> <i>eth-cfm domain string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ma-admin-name** *reference*

Synopsis	Maintenance Association (MA) name
Context	<b>configure</b> <i>service ies string</i> <i>interface string</i> <i>sap string</i> <i>eth-cfm</i> <i>mep md-admin-name</i> <i>reference</i> <i>ma-admin-name</i> <i>reference</i> <i>mep-id</i> <i>number</i>
Tree	<i>mep</i>
Reference	<b>configure</b> <i>eth-cfm domain string</i> <i>association string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mep-id** *number*

Synopsis	Maintenance Endpoint (MEP) ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a>
Tree	<a href="#">mep</a>
Range	1 to 8191
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **admin-state** *keyword*

Synopsis	Administrative state of the MEP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">admin-state</a> <a href="#">keyword</a>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ais** *boolean*

Synopsis	Enable the generation and the reception of AIS messages
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">ais</a> <a href="#">boolean</a>
Tree	<a href="#">ais</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **alarm-notification**

Synopsis	Enter the <b>alarm-notification</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">alarm-notification</a>

Tree	<a href="#">alarm-notification</a>
Description	<p>Commands in this context configure the Fault Notification Generator (FNG) time values to raise an alarm or reset the CCM defect alarm.</p> <p>Use these timers for network management processes. The timers are not tied into delaying the notification to the fault management system on the network element and do not affect fault propagation mechanisms.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fng-alarm-time** *number*

Synopsis	Time that must expire before an FNG alarm is raised
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">alarm-notification</a> <b>fng-alarm-time</b> <i>number</i>
Tree	<a href="#">fng-alarm-time</a>
Range	250   500   1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fng-reset-time** *number*

Synopsis	Time that must expire before an FNG alarm is reset
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">alarm-notification</a> <b>fng-reset-time</b> <i>number</i>
Tree	<a href="#">fng-reset-time</a>
Range	250   500   1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm** *boolean*

Synopsis	Generate CCM messages
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>ccm</b> <i>boolean</i>

Tree	<a href="#">ccm</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm-ltm-priority** *number*

Synopsis	Priority of CCM and LTM messages transmitted by the MEP
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm mep md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>ccm-ltm-priority</b> <i>number</i>
Tree	<a href="#">ccm-ltm-priority</a>
Range	0 to 7
Default	7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm-padding-size** *number*

Synopsis	Number of octets of padding to insert in CCM packets
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm mep md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>ccm-padding-size</b> <i>number</i>
Tree	<a href="#">ccm-padding-size</a>
Description	This command sets the byte size of the optional Data TLV to be included in the ETH-CC PDU.  This command increases the size of the ETH-CC PDU by the configured value. The base size of the ETH-CC PDU, including the Interface Status TLV and Port Status TLV, is 83 bytes not including the Layer 2 encapsulation. CCM padding is not supported when the CCM interval (configured through <b>configure eth-cfm domain association ccm-interval</b> ) is less than 1 second.
Range	3 to 1500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **csf**

Synopsis	Enable the <b>csf</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm mep md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>csf</b>

Tree	<a href="#">csf</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **multiplier** *decimal-number*

Synopsis	Multiplication factor used to clear the CSF condition
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">csf</a> <b>multiplier</b> <i>decimal-number</i>
Tree	<a href="#">multiplier</a>
Range	0.0   2.0 to 30.0
Default	3.5
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <b>description</b> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **eth-test**

Synopsis	Enable the <b>eth-test</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <b>eth-test</b>
Tree	<a href="#">eth-test</a>
Description	Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the <b>oam eth-cfm eth-test</b> command.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **bit-error-threshold** *number*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <i>number</i> <a href="#">eth-test</a> <b>bit-error-threshold</b> <i>number</i>
Tree	<a href="#">bit-error-threshold</a>
Range	0 to 11840
Default	1
Units	bit errors
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **test-pattern**

Synopsis	Enter the <b>test-pattern</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <i>number</i> <a href="#">eth-test</a> <b>test-pattern</b>
Tree	<a href="#">test-pattern</a>
Description	Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **crc-tlv** *boolean*

Synopsis	Generate a CRC checksum
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <i>number</i> <a href="#">eth-test</a> <a href="#">test-pattern</a> <b>crc-tlv</b> <i>boolean</i>
Tree	<a href="#">crc-tlv</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **pattern** *keyword*

Synopsis	Test pattern for Ethernet Test frames
----------	---------------------------------------

Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">eth-test</a> <a href="#">test-pattern</a> <a href="#">pattern</a> <a href="#">keyword</a>
Tree	<a href="#">pattern</a>
Description	This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.
Default	all-zeros
Options	all-zeros, all-ones
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fault-propagation** *keyword*

Synopsis	Fault propagation for the MEP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">fault-propagation</a> <a href="#">keyword</a>
Tree	<a href="#">fault-propagation</a>
Options	use-if-status-tlv, suspend-ccm
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **grace**

Synopsis	Enter the <b>grace</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">grace</a>
Tree	<a href="#">grace</a>
Description	Commands in this context configure the Nokia ETH-CFM Grace function and the ITU-T Y.1731 Ethernet Expected Default (ETH-ED) function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **eth-ed**

Synopsis	Enter the <b>eth-ed</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">grace</a> <a href="#">eth-ed</a>

Tree	<a href="#">eth-ed</a>
Description	Commands in this context configure the ITU-T Y.1731 ETH-ED function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **max-rx-defect-window** *number*

Synopsis	Maximum received ETH-ED expected defect window duration
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">grace</a> <a href="#">eth-ed</a> <a href="#">max-rx-defect-window</a> <i>number</i>
Tree	<a href="#">max-rx-defect-window</a>
Range	1 to 86400
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **priority** *number*

Synopsis	Transmission priority for ETH-ED PDUs
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">grace</a> <a href="#">eth-ed</a> <a href="#">priority</a> <i>number</i>
Tree	<a href="#">priority</a>
Range	0 to 7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **rx-eth-ed** *boolean*

Synopsis	Receive and process ETH-ED ITU-T Y.1731 PDUs on the MEP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">grace</a> <a href="#">eth-ed</a> <a href="#">rx-eth-ed</a> <i>boolean</i>
Tree	<a href="#">rx-eth-ed</a>
Description	This command enables the reception and processing of the ITU-T Y.1731 ETH-ED PDU on the MEP.
Default	true

Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **tx-eth-ed** *boolean*

Synopsis Transmit ETH-ED PDUs from the MEP  
Context **configure** [service](#) [ies](#) [string](#) [interface](#) [string](#) [sap](#) [string](#) [eth-cfm](#) [mep](#) [md-admin-name](#) [reference](#) [ma-admin-name](#) [reference](#) [mep-id](#) [number](#) [grace](#) [eth-ed](#) [tx-eth-ed](#) [boolean](#)  
Tree [tx-eth-ed](#)  
Default false  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **eth-vsm-grace**

Synopsis Enter the **eth-vsm-grace** context  
Context **configure** [service](#) [ies](#) [string](#) [interface](#) [string](#) [sap](#) [string](#) [eth-cfm](#) [mep](#) [md-admin-name](#) [reference](#) [ma-admin-name](#) [reference](#) [mep-id](#) [number](#) [grace](#) [eth-vsm-grace](#)  
Tree [eth-vsm-grace](#)  
Description Commands in this context configure the Nokia ETH-CFM Grace function.  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **rx-eth-vsm-grace** *boolean*

Synopsis Receive and process Nokia ETH-CFM Grace PDU on the MEP  
Context **configure** [service](#) [ies](#) [string](#) [interface](#) [string](#) [sap](#) [string](#) [eth-cfm](#) [mep](#) [md-admin-name](#) [reference](#) [ma-admin-name](#) [reference](#) [mep-id](#) [number](#) [grace](#) [eth-vsm-grace](#) [rx-eth-vsm-grace](#) [boolean](#)  
Tree [rx-eth-vsm-grace](#)  
Description When configured to **true**, the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.  
When configured to **false**, the router disables the Nokia Grace function.  
Default true  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **tx-eth-vsm-grace** *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	<b>configure</b> <i>service ies string interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace tx-eth-vsm-grace boolean</i>
Tree	<a href="#">tx-eth-vsm-grace</a>
Description	<p>When configured to <b>true</b>, the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.</p> <p>The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.</p> <p>The operator must configure the <b>configure system eth-cfm grace</b> command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).</p> <p>When configured to <b>false</b>, the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.</p>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **low-priority-defect** *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	<b>configure</b> <i>service ies string interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number low-priority-defect keyword</i>
Tree	<a href="#">low-priority-defect</a>
Default	mac-rem-err-xcon
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **one-way-delay-threshold** *number*

Synopsis	Threshold time limit for the one-way delay test
Context	<b>configure</b> <i>service ies string interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number one-way-delay-threshold number</i>
Tree	<a href="#">one-way-delay-threshold</a>

Range	0 to 600
Default	3
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **squelch-ingress-levels** *number*

Synopsis	Levels for which ETH-CFM packets are silently discarded
Context	<b>configure</b> <b>service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm</b> <b>squelch-ingress-levels</b> <i>number</i>
Tree	<a href="#">squelch-ingress-levels</a>
Description	<p>This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.</p> <p>The list of levels must be a complete contiguous list from 0 up to the highest level that will be dropped.</p>
Range	0 to 7
Max.	8
Instances	
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fwd-wholesale**

Synopsis	Enter the <b>fwd-wholesale</b> context
Context	<b>configure</b> <b>service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>fwd-wholesale</b>
Tree	<a href="#">fwd-wholesale</a>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **pppoe-service** *reference*

Synopsis	PPPoE service name
----------	--------------------

Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>fwd-wholesale pppoe-service</b> <i>reference</i>
Tree	<a href="#">ppoe-service</a>
Reference	<b>configure service epipe</b> <i>string</i>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **host-admin-state** *keyword*

Synopsis	Administrative state of host creation on the SAP
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>host-admin-state</b> <i>keyword</i>
Tree	<a href="#">host-admin-state</a>
Default	enable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **host-lockout-policy** *reference*

Synopsis	Host lockout policy
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>host-lockout-policy</b> <i>reference</i>
Tree	<a href="#">host-lockout-policy</a>
Reference	<b>configure subscriber-mgmt</b> <b>host-lockout-policy</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ingress**

Synopsis	Enter the <b>ingress</b> context
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ingress</b>
Tree	<a href="#">ingress</a>
Introduced	16.0.R1
Platforms	All

## filter

Synopsis	Enter the <b>filter</b> context

Introduced 16.0.R1

Platforms All

### **low**

Synopsis Enter the **low** context

Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">drop-tail</a> <a href="#">low</a>
Tree	<a href="#">low</a>
Introduced	16.0.R1
Platforms	All

### **percent-reduction-from-mbs** (*number* | *keyword*)

Synopsis	Percentage reduction from the MBS for a queue drop tail
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">drop-tail</a> <a href="#">low</a> <a href="#">percent-reduction-from-mbs</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">percent-reduction-from-mbs</a>
Range	0 to 100
Options	auto
Introduced	16.0.R1
Platforms	All

### **mbs** (*number* | *keyword*)

Synopsis	MBS
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">mbs</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">mbs</a>
Range	0 to 1073741824
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	All

### **monitor-queue-depth**

Synopsis	Enable the <b>monitor-queue-depth</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">monitor-queue-depth</a>
Tree	<a href="#">monitor-queue-depth</a>
Introduced	21.7.R1

Platforms All

### **fast-polling** *boolean*

Synopsis Enable fast polling of the queue depth

Context **configure** [service](#) [ies](#) [string](#) [interface](#) [string](#) [sap](#) [string](#) [ingress](#) [qos](#) [sap-ingress](#) [overrides](#) [queue](#) [reference](#) [monitor-queue-depth](#) [fast-polling](#) *boolean*

Tree [fast-polling](#)

Default false

Introduced 21.7.R1

Platforms All

### **parent**

Synopsis Enter the **parent** context

Context **configure** [service](#) [ies](#) [string](#) [interface](#) [string](#) [sap](#) [string](#) [ingress](#) [qos](#) [sap-ingress](#) [overrides](#) [queue](#) [reference](#) [parent](#)

Tree [parent](#)

Introduced 16.0.R1

Platforms All

### **cir-weight** *number*

Synopsis CIR parameter that overrides parent for queue group

Context **configure** [service](#) [ies](#) [string](#) [interface](#) [string](#) [sap](#) [string](#) [ingress](#) [qos](#) [sap-ingress](#) [overrides](#) [queue](#) [reference](#) [parent](#) [cir-weight](#) *number*

Tree [cir-weight](#)

Range 0 to 100

Introduced 16.0.R1

Platforms All

### **weight** *number*

Synopsis PIR parameter that overrides parent for queue group

Context **configure** [service](#) [ies](#) [string](#) [interface](#) [string](#) [sap](#) [string](#) [ingress](#) [qos](#) [sap-ingress](#) [overrides](#) [queue](#) [reference](#) [parent](#) [weight](#) *number*

Tree [weight](#)

Range	0 to 100
Introduced	16.0.R1
Platforms	All

### **percent-rate**

Synopsis	Enter the <b>percent-rate</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <b>percent-rate</b>
Tree	<a href="#">percent-rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	All

### **cir decimal-number**

Synopsis	CIR percent rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">percent-rate</a> <b>cir</b> <i>decimal-number</i>
Tree	<a href="#">cir</a>
Range	0.00 to 100.00
Introduced	16.0.R1
Platforms	All

### **pir decimal-number**

Synopsis	PIR percent rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">percent-rate</a> <b>pir</b> <i>decimal-number</i>
Tree	<a href="#">pir</a>
Range	0.01 to 100.00
Introduced	16.0.R1
Platforms	All

## rate

Synopsis	Enter the <b>rate</b> context
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ingress qos sap-ingress overrides</b> <b>queue reference rate</b>
Tree	<b>rate</b>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	All

## **cir** (*number* | *keyword*)

Synopsis	CIR rate
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ingress qos sap-ingress overrides</b> <b>queue reference rate cir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>cir</b>
Range	0 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	All

## **pir** (*number* | *keyword*)

Synopsis	PIR rate
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ingress qos sap-ingress overrides</b> <b>queue reference rate pir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>pir</b>
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	All

## **policy-name** *reference*

Synopsis	Policy ID
----------	-----------

Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ingress qos sap-ingress</b> <b>policy-name</b> <i>reference</i>
Tree	<a href="#">policy-name</a>
Reference	<b>configure qos sap-ingress</b> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **queuing-type** *keyword*

Synopsis	Queuing type
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ingress qos sap-ingress</b> <b>queuing-type</b> <i>keyword</i>
Tree	<a href="#">queuing-type</a>
Options	shared, multipoint-shared
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, VSR

### **scheduler-policy**

Synopsis	Enter the <b>scheduler-policy</b> context
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ingress qos scheduler-policy</b>
Tree	<a href="#">scheduler-policy</a>
Introduced	16.0.R1
Platforms	All

### **overrides**

Synopsis	Enter the <b>overrides</b> context
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ingress qos scheduler-policy</b> <b>overrides</b>
Tree	<a href="#">overrides</a>
Introduced	16.0.R1
Platforms	All

## **scheduler** [*scheduler-name*] *string*

Synopsis	Enter the <b>scheduler</b> list instance
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ingress qos scheduler-policy</b> <b>overrides scheduler</b> <i>string</i>
Tree	<b>scheduler</b>
Introduced	16.0.R1
Platforms	All

## **[scheduler-name]** *string*

Synopsis	Scheduler name
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ingress qos scheduler-policy</b> <b>overrides scheduler</b> <i>string</i>
Tree	<b>scheduler</b>
Description	<p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context will not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error will occur, the command will not execute, and the context will not change.</p>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## **parent**

Synopsis	Enter the <b>parent</b> context
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ingress qos scheduler-policy</b> <b>overrides scheduler</b> <i>string</i> <b>parent</b>
Tree	<b>parent</b>
Introduced	16.0.R1

Platforms All

### **cir-weight** *number*

Synopsis Weight used at the within-CIR port priority level

Context **configure** [service](#) [ies](#) *string* [interface](#) *string* [sap](#) *string* [ingress](#) [qos](#) [scheduler-policy](#)  
[overrides](#) [scheduler](#) *string* [parent](#) [cir-weight](#) *number*

Tree [cir-weight](#)

Range 0 to 100

Introduced 16.0.R1

Platforms All

### **weight** *number*

Synopsis Relative weight of the scheduler to feed the queue

Context **configure** [service](#) [ies](#) *string* [interface](#) *string* [sap](#) *string* [ingress](#) [qos](#) [scheduler-policy](#)  
[overrides](#) [scheduler](#) *string* [parent](#) [weight](#) *number*

Tree [weight](#)

Range 0 to 100

Introduced 16.0.R1

Platforms All

### **rate**

Synopsis Enter the **rate** context

Context **configure** [service](#) [ies](#) *string* [interface](#) *string* [sap](#) *string* [ingress](#) [qos](#) [scheduler-policy](#)  
[overrides](#) [scheduler](#) *string* [rate](#)

Tree [rate](#)

Introduced 16.0.R1

Platforms All

### **cir** (*number* | *keyword*)

Synopsis CIR at which the queue it to operate

Context **configure** [service](#) [ies](#) *string* [interface](#) *string* [sap](#) *string* [ingress](#) [qos](#) [scheduler-policy](#)  
[overrides](#) [scheduler](#) *string* [rate](#) [cir](#) (*number* | *keyword*)

Tree [cir](#)

Range	0 to 6400000000
Units	kilobps
Options	sum, max
Introduced	16.0.R1
Platforms	All

### **pir** (*number* | *keyword*)

Synopsis	PIR at which the queue is to operate
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <i>string</i> <b>rate</b> <b>pir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">pir</a>
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	All

### **policy-name** *reference*

Synopsis	Scheduler policy name
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">policy-name</a> <i>reference</i>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">scheduler-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **queue-group-redirect-list** *reference*

Synopsis	Queue group redirect list
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">queue-group-redirect-list</a> <i>reference</i>
Tree	<a href="#">queue-group-redirect-list</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">queue-group-redirect-list</a> <i>string</i>
Introduced	16.0.R1

Platforms All

### **ip-tunnel** [tunnel-name] *string*

Synopsis Enter the **ip-tunnel** list instance

Context **configure service ies** *string* **interface** *string* **sap** *string* **ip-tunnel** *string*

Tree **ip-tunnel**

Description Commands in this context configure an IP-GRE or IP-IP tunnel and associate it with a private tunnel SAP within an IES service.

Max. Instances 1

Introduced 16.0.R1

Platforms All

### **[tunnel-name]** *string*

Synopsis IP tunnel name

Context **configure service ies** *string* **interface** *string* **sap** *string* **ip-tunnel** *string*

Tree **ip-tunnel**

String Length 1 to 32

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms All

### **admin-state** *keyword*

Synopsis Administrative state of the IP tunnel

Context **configure service ies** *string* **interface** *string* **sap** *string* **ip-tunnel** *string* **admin-state** *keyword*

Tree **admin-state**

Default disable

Options enable, disable

Introduced 16.0.R1

Platforms All

## backup-remote-ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Backup remote IP address that is applied to this tunnel
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>backup-remote-ip-address</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>backup-remote-ip-address</b>
Introduced	16.0.R1
Platforms	All

## clear-df-bit *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Clear the Do-not-Fragment bit
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>clear-df-bit</b> <i>boolean</i>
Tree	<b>clear-df-bit</b>
Description	When configured to <b>true</b> , the DF bit is cleared (set to 0) in all payload IP packets associated with the GRE or IPsec tunnel, before any potential fragmentation resulting from the ip-mtu command. This requires a modification of the header checksum. When configured to <b>false</b> , clearing of the DF bit is disabled.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## delivery-service *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Service to originate and terminate GRE packets
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>delivery-service</b> <i>string</i>

Tree	<a href="#">delivery-service</a>
Description	This command specifies the service used to originate and terminate the GRE encapsulated packets belonging to the GRE tunnel. The delivery service may be the same service that owns the private tunnel SAP associated with the GRE tunnel. The GRE tunnel does not come up until a valid delivery service is configured.
String Length	1 to 64
Introduced	16.0.R1
Platforms	All

### **description** *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Text description
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ip-tunnel</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **dest-ip** [[dest-ip-address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Add a list entry for <b>dest-ip</b>
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ip-tunnel</a> <i>string</i> <a href="#">dest-ip</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">dest-ip</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[dest-ip-address]** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the remote IP tunnel endpoint
----------	---

Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>dest-ip</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> )
Tree	<b>dest-ip</b>
Description	This command configures the IP address of the remote IP tunnel endpoint. If the remote IP address is not within the subnet of the IP interface associated with the tunnel, the tunnel fails to come up.
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **dscp** *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Differentiated Services Code Point (DSCP) name
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>dscp</b> <i>keyword</i>
Tree	<b>dscp</b>
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **encapsulated-ip-mtu** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum size of the encapsulated tunnel packet
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>encapsulated-ip-mtu</b> <i>number</i>
Tree	<b>encapsulated-ip-mtu</b>
Description	This command specifies the maximum size of the encapsulated tunnel packet for the IP tunnel. If the packet exceeds this value, the system fragments the packet.

Range	512 to 9000
Units	bytes
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## gre-header

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>gre-header</b> context
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">ip-tunnel string</a> <a href="#">gre-header</a>
Tree	<a href="#">gre-header</a>
Introduced	16.0.R1
Platforms	All

## admin-state *keyword*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of the GRE header in the tunnel
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">ip-tunnel string</a> <a href="#">gre-header</a> <a href="#">admin-state keyword</a>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Introduced	16.0.R1
Platforms	All

## key

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>key</b> context
----------	------------------------------

Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">ip-tunnel string</a> <a href="#">gre-header key</a>
Tree	<a href="#">key</a>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of the keys in the GRE header
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">ip-tunnel string</a> <a href="#">gre-header key</a> <a href="#">admin-state keyword</a>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **receive number**

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Receive key of the GRE header
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">ip-tunnel string</a> <a href="#">gre-header key</a> <a href="#">receive number</a>
Tree	<a href="#">receive</a>
Max. Range	0 to 4294967295
Default	0
Introduced	16.0.R1
Platforms	All

## send number

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Send key of the GRE header
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ip-tunnel</a> <i>string</i> <a href="#">gre-header</a> <i>key</i> <a href="#">send</a> <i>number</i>
Tree	<a href="#">send</a>
Max. Range	0 to 4294967295
Default	0
Introduced	16.0.R1
Platforms	All

## icmp-generation

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>icmp-generation</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ip-tunnel</a> <i>string</i> <a href="#">icmp-generation</a>
Tree	<a href="#">icmp-generation</a>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## frag-required

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>frag-required</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ip-tunnel</a> <i>string</i> <a href="#">icmp-generation</a> <a href="#">frag-required</a>
Tree	<a href="#">frag-required</a>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## admin-state keyword

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Send fragmentation required messages
Context	<b>configure</b> <b>service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>icmp-generation</b> <b>frag-required</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## interval number

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum interval that the ICMP messages can be sent
Context	<b>configure</b> <b>service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>icmp-generation</b> <b>frag-required</b> <b>interval</b> <i>number</i>
Tree	<b>interval</b>
Range	1 to 60
Default	10
Units	seconds
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## message-count number

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of ICMP messages sent
----------	--------------------------------------

Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>icmp-generation</b> <b>frag-required</b> <b>message-count</b> <i>number</i>
Tree	<b>message-count</b>
Description	This command configures the maximum number of ICMP messages that can be sent during the period specified by the <b>interval</b> command.
Range	10 to 1000
Default	100
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## icmp6-generation

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>icmp6-generation</b> context
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>icmp6-generation</b>
Tree	<b>icmp6-generation</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## packet-too-big

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>packet-too-big</b> context
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>icmp6-generation</b> <b>packet-too-big</b>
Tree	<b>packet-too-big</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **admin-state** *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of sending Packet Too Big messages
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ip-tunnel</a> <i>string</i> <a href="#">icmp6-generation</a> <a href="#">packet-too-big</a> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **number** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of PTB ICMPv6 messages that can be sent
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ip-tunnel</a> <i>string</i> <a href="#">icmp6-generation</a> <a href="#">packet-too-big</a> <b>number</b> <i>number</i>
Tree	<a href="#">number</a>
Description	This command configures the maximum number of ICMPv6 messages that can be sent during the configured interval.
Range	10 to 1000
Default	100
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **seconds** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum interval when PTB messages can be sent
----------	--

Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>icmp6-generation</b> <b>packet-too-big</b> <b>seconds</b> <i>number</i>
Tree	<b>seconds</b>
Range	1 to 60
Default	10
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ip-mtu** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IP MTU for the interface
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>ip-mtu</b> <i>number</i>
Tree	<b>ip-mtu</b>
Description	This command specifies the IP MTU for the interface. If the DF bit is not set in the packet, IP packet fragmentation is performed, if necessary, based on this configured value.  When unconfigured, all IP packets, regardless of the packet size or DF bit setting, are allowed into the tunnel without fragmentation.
Range	512 to 9000
Units	bytes
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ipsec-transport-mode-profile** *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPsec transport mode profile name
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>ipsec-transport-mode-profile</b> <i>reference</i>
Tree	<b>ipsec-transport-mode-profile</b>

Reference	<b>configure ipsec ipsec-transport-mode-profile</b> <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## local-ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local IP address of this tunnel
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>local-ip-address</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>local-ip-address</b>
Description	This command specifies the local IP address to use for the IP tunnel. This configuration applies to the outer IP header of the encapsulated packets. The address must belong to one of the IP subnets associated with the public SAP interface of the tunnel group. The source IP address, the remote IP address, and the backup remote IP address of a tunnel must all belong to the same address family (IPv4 or IPv6).  When this command specifies an IPv6 address, it must be a global unicast address.
Introduced	16.0.R1
Platforms	All

## pmtu-discovery-aging *number*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time to age out the learned path MTU
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>pmtu-discovery-aging</b> <i>number</i>
Tree	<b>pmtu-discovery-aging</b>
Description	This command configures the temporary public MTU expiration time. The temporary public MTU is used for MTU propagation.
Range	900 to 3600
Default	900
Units	seconds

Introduced 21.5.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **private-tcp-mss-adjust** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis TCP Maximum Segment Size (MSS) on the private side  
Context **configure** *service ies string interface string sap string ip-tunnel string private-tcp-mss-adjust number*  
Tree [private-tcp-mss-adjust](#)  
Description This command specifies the TCP MSS to adjust for tunnels on the private side. The value is used to adjust the TCP MSS option in the TCP SYN packet.  
Range 512 to 9000  
Units bytes  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **propagate-pmtu-v4** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enable propagation of the path MTU to IPv4 hosts  
Context **configure** *service ies string interface string sap string ip-tunnel string propagate-pmtu-v4 boolean*  
Tree [propagate-pmtu-v4](#)  
Introduced 21.5.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## propagate-pmtu-v6 *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable propagation of path MTU to IPv6 hosts
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ip-tunnel</a> <i>string</i> <a href="#">propagate-pmtu-v6</a> <i>boolean</i>
Tree	<a href="#">propagate-pmtu-v6</a>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## public-tcp-mss-adjust (*number* | *keyword*)

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	TCP Maximum Segment Size (MSS) on the public side
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ip-tunnel</a> <i>string</i> <a href="#">public-tcp-mss-adjust</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">public-tcp-mss-adjust</a>
Description	This command specifies the TCP MSS for TCP traffic sent from the public network to the private network. The value is used to adjust the TCP MSS option in the TCP SYN packet.
Range	512 to 9000
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## reassemble (*number* | *keyword*)

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum reassembly wait time
----------	------------------------------

Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>reassemble</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>reassemble</b>
Description	This command configures the maximum time to wait to receive all fragments of a particular IPsec or GRE packet for reassembly.
Range	1 to 5000
Units	milliseconds
Options	use-tunnel-group-setting, none
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **remote-ip-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Remote IP address of the tunnel
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>remote-ip-address</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>remote-ip-address</b>
Introduced	16.0.R1
Platforms	All

### **ipsec-gateway** [**name**] *string*

Synopsis	Enter the <b>ipsec-gateway</b> list instance
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i>
Tree	<b>ipsec-gateway</b>
Max. Instances	1
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[name]** *string*

Synopsis	IPsec gateway name
----------	--------------------

Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i>
Tree	<b>ipsec-gateway</b>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of the IPsec gateway
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Default	disable
Options	enable, disable
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **cert**

Synopsis	Enter the <b>cert</b> context
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>cert</b>
Tree	<b>cert</b>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **cert-profile** *reference*

Synopsis	Certificate profile name
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>cert</b> <b>cert-profile</b> <i>reference</i>
Tree	<b>cert-profile</b>
Reference	<b>configure ipsec</b> <b>cert-profile</b> <i>string</i>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## status-verify

Synopsis	Enter the <b>status-verify</b> context
Context	<b>configure service ies string interface string sap string ipsec-gateway string cert status-verify</b>
Tree	<b>status-verify</b>
Description	Commands in this context configure certificate revocation status verification.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## default-result *keyword*

Synopsis	Default result of Certificate Status Verification (CSV)
Context	<b>configure service ies string interface string sap string ipsec-gateway string cert status-verify default-result keyword</b>
Tree	<b>default-result</b>
Description	This command specifies the default result when both the primary and secondary methods fail to provide an answer.
Default	revoked
Options	revoked, good
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## primary *keyword*

Synopsis	Primary method of CSV to verify the revocation status
Context	<b>configure service ies string interface string sap string ipsec-gateway string cert status-verify primary keyword</b>
Tree	<b>primary</b>
Default	crI
Options	crI, ocsp
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **secondary** *keyword*

Synopsis	Secondary method of CSV to verify the revocation status
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">cert status-verify</a> <b>secondary</b> <i>keyword</i>
Tree	<a href="#">secondary</a>
Default	none
Options	none, <a href="#">crl</a> , <a href="#">ocsp</a>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **trust-anchor-profile** *reference*

Synopsis	Trust anchor profile name
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">cert trust-anchor-profile</a> <i>reference</i>
Tree	<a href="#">trust-anchor-profile</a>
Reference	<b>configure</b> <a href="#">ipsec trust-anchor-profile</a> <i>string</i>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **client-db**

Synopsis	Enable the <b>client-db</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <b>client-db</b>
Tree	<a href="#">client-db</a>
Description	Commands in this context configure the IPsec client database. The client database is used to authenticate the IKEv2 dynamic LAN-to-LAN tunnel.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **fallback** *boolean*

Synopsis	Fall back to the default authentication policy
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">client-db</a> <b>fallback</b> <i>boolean</i>
Tree	<a href="#">fallback</a>

Description	When configured to <b>true</b> , this command specifies whether the IPsec gateway can fall back to the default authentication policy when the IPsec tunnel authentication request fails to match any clients in the IPsec database.  When configured to <b>false</b> and the client database lookup fails to return a matched result, the system fails the tunnel setup.
Default	true
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### name reference

Synopsis	Client database name
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>client-db</b> <i>name reference</i>
Tree	<b>name</b>
Reference	<b>configure ipsec client-db</b> <i>string</i>
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### default-secure-service

Synopsis	Enable the <b>default-secure-service</b> context
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>default-secure-service</b>
Tree	<b>default-secure-service</b>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### interface string

#### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Private IPsec tunnel interface name
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>default-secure-service interface</b> <i>string</i>

Tree	<a href="#">interface</a>
String Length	1 to 32
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **service-name** *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Default security service name
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">default-secure-service</a> <a href="#">service-name</a> <i>string</i>
Tree	<a href="#">service-name</a>
String Length	1 to 64
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **default-tunnel-template** *reference*

Synopsis	Default tunnel policy template for the gateway
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">default-tunnel-template</a> <i>reference</i>
Tree	<a href="#">default-tunnel-template</a>
Reference	<b>configure</b> <a href="#">ipsec</a> <a href="#">tunnel-template</a> <i>number</i>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **dhcp-address-assignment**

Synopsis	Enter the <b>dhcp-address-assignment</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">dhcp-address-assignment</a>
Tree	<a href="#">dhcp-address-assignment</a>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## dhcpv4

Synopsis	Enable the <b>dhcpv4</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>dhcp-address-assignment</b> <b>dhcpv4</b>
Tree	<b>dhcpv4</b>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## admin-state *keyword*

Synopsis	Administrative state of the IPsec DHCPv4 server
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>dhcp-address-assignment</b> <b>dhcpv4</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Default	disable
Options	enable, disable
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## gi-address *string*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Gateway IP address of DHCPv4 packets sent by the system
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>dhcp-address-assignment</b> <b>dhcpv4</b> <b>gi-address</b> <i>string</i>
Tree	<b>gi-address</b>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## send-release *boolean*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Send DHCPv4 release message when IPsec tunnel removed
Context	<b>configure</b> <b>service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>dhcp-address-assignment dhcpv4</b> <b>send-release</b> <i>boolean</i>
Tree	<b>send-release</b>
Default	true
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## server

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>server</b> context
Context	<b>configure</b> <b>service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>dhcp-address-assignment dhcpv4</b> <b>server</b>
Tree	<b>server</b>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## address *string*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	DHCPv4 server addresses
Context	<b>configure</b> <b>service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>dhcp-address-assignment dhcpv4</b> <b>server</b> <b>address</b> <i>string</i>
Tree	<b>address</b>
Description	This command specifies DHCPv4 server addresses for the DHCPv4-based address assignment. If multiple server addresses are specified, the first advertised DHCPv4 address received is chosen.

Max. Instances	8
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### router-instance *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Router instance used to reach the DHCPv4 server
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>dhcp-address-assignment dhcpv4 server router-instance</b> <i>string</i>
Tree	<a href="#">router-instance</a>
String Length	1 to 64
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### dhcpv6

Synopsis	Enable the <b>dhcpv6</b> context
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>dhcp-address-assignment dhcpv6</b>
Tree	<a href="#">dhcpv6</a>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### admin-state *keyword*

Synopsis	Administrative state of the DHCPv6 server
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>dhcp-address-assignment dhcpv6 admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	19.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## link-address *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Link address of the relayed DHCPv6 packets

Context **configure** [service ies](#) *string* [interface](#) *string* [sap](#) *string* [ipsec-gateway](#) *string* [dhcp-address-assignment dhcpv6 link-address](#) *string*

Tree [link-address](#)

Introduced 19.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## send-release *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Send DHCPv6 release message when IPsec tunnel removed

Context **configure** [service ies](#) *string* [interface](#) *string* [sap](#) *string* [ipsec-gateway](#) *string* [dhcp-address-assignment dhcpv6 send-release](#) *boolean*

Tree [send-release](#)

Default true

Introduced 19.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## server

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enter the **server** context

Context **configure** [service ies](#) *string* [interface](#) *string* [sap](#) *string* [ipsec-gateway](#) *string* [dhcp-address-assignment dhcpv6 server](#)

Tree [server](#)

Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### address *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	DHCPv6 server addresses
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">dhcp-address-assignment dhcpv6 server address</a> <i>string</i>
Tree	<a href="#">address</a>
Description	This command specifies DHCPv6 server addresses for the DHCPv6-based address assignment. If multiple server addresses are specified, the first advertised DHCPv6 address received is chosen.
Max. Instances	8
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### router-instance *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Router instance to reach the DHCPv6 server
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">dhcp-address-assignment dhcpv6 server router-instance</a> <i>string</i>
Tree	<a href="#">router-instance</a>
String Length	1 to 64
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### ike-policy *reference*

Synopsis	IKE policy ID
----------	---------------

Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>ike-policy</b> <i>reference</i>
Tree	<b>ike-policy</b>
Reference	<b>configure ipsec ike-policy</b> <i>number</i>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## local

Synopsis	Enter the <b>local</b> context
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>local</b>
Tree	<b>local</b>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## address-assignment

Synopsis	Enable the <b>address-assignment</b> context
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>local</b> <b>address-assignment</b>
Tree	<b>address-assignment</b>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## admin-state *keyword*

Synopsis	Administrative state of local address assignments
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>local</b> <b>address-assignment</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Default	disable
Options	enable, disable
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ipv4

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the <b>ipv4</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>local</b> <b>address-assignment</b> <b>ipv4</b>
Tree	<b>ipv4</b>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## dhcp-server *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local DHCPv4 server name
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>local</b> <b>address-assignment</b> <b>ipv4</b> <b>dhcp-server</b> <i>string</i>
Tree	<b>dhcp-server</b>
String Length	1 to 32
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## pool *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Name of the pool defined in the specified DHCPv4 server
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>local</b> <b>address-assignment</b> <b>ipv4</b> <b>pool</b> <i>string</i>
Tree	<b>pool</b>
String Length	1 to 32

Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### router-instance *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Router instance ID for the local DHCPv4 server
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>local</b> <b>address-assignment</b> <b>ipv4</b> <b>router-instance</b> <i>string</i>
Tree	<b>router-instance</b>
String Length	1 to 64
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### secondary-pool *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Name of the secondary pool defined in the DHCPv4 server
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>local</b> <b>address-assignment</b> <b>ipv4</b> <b>secondary-pool</b> <i>string</i>
Tree	<b>secondary-pool</b>
String Length	1 to 32
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ipv6

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the <b>ipv6</b> context
Context	<b>configure service ies string interface string sap string ipsec-gateway string local address-assignment ipv6</b>
Tree	<b>ipv6</b>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## dhcp-server string

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local DHCPv6 server name
Context	<b>configure service ies string interface string sap string ipsec-gateway string local address-assignment ipv6 dhcp-server string</b>
Tree	<b>dhcp-server</b>
String Length	1 to 32
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## pool string

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Secondary pool name defined in the DHCPv6 server
Context	<b>configure service ies string interface string sap string ipsec-gateway string local address-assignment ipv6 pool string</b>
Tree	<b>pool</b>
String Length	1 to 32

Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### router-instance *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Router instance ID hosting the DHCPv6 connection
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">local address-assignment ipv6</a> <a href="#">router-instance</a> <i>string</i>
Tree	<a href="#">router-instance</a>
String Length	1 to 64
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### gateway-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local gateway address of the IPsec gateway
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">local gateway-address</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">gateway-address</a>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### id

Synopsis	Enter the <b>id</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">local id</a>
Tree	<a href="#">id</a>

Description	Commands in this context specify the local ID used for the Identification Indicator (IDi) or Identification Responder (IDr) in the IKEv2 tunnel.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## auto

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Select ID based on authentication method in IKE policy
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">ipsec-gateway string</a> <a href="#">local id auto</a>
Tree	<a href="#">auto</a>
Notes	This element is the default part of a choice. The following elements are part of a choice: <b>auto</b> , <b>fqdn</b> , <b>ipv4</b> , or <b>ipv6</b> .
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## fqdn string

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	FQDN as the local ID type
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">ipsec-gateway string</a> <a href="#">local id fqdn string</a>
Tree	<a href="#">fqdn</a>
String Length	1 to 255
Notes	The following elements are part of a choice: <b>auto</b> , <b>fqdn</b> , <b>ipv4</b> , or <b>ipv6</b> .
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ipv4 string

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPv4 address as the local ID type
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">ipsec-gateway string</a> <a href="#">local id ipv4 string</a>
Tree	<a href="#">ipv4</a>
Notes	The following elements are part of a choice: <b>auto</b> , <b>fqdn</b> , <b>ipv4</b> , or <b>ipv6</b> .
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ipv6 ([ipv4-address-no-zone](#) | [ipv6-address-no-zone](#))

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPv6 address as the local ID type
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">ipsec-gateway string</a> <a href="#">local id ipv6 (<a href="#">ipv4-address-no-zone</a>   <a href="#">ipv6-address-no-zone</a>)</a>
Tree	<a href="#">ipv6</a>
Notes	The following elements are part of a choice: <b>auto</b> , <b>fqdn</b> , <b>ipv4</b> , or <b>ipv6</b> .
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## max-history-key-records

Synopsis	Enter the <b>max-history-key-records</b> context
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">ipsec-gateway string</a> <a href="#">max-history-key-records</a>
Tree	<a href="#">max-history-key-records</a>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **esp number**

Synopsis	Maximum number of recent records
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>max-history-key-records</b> <b>esp</b> <i>number</i>
Tree	<b>esp</b>
Range	1 to 48
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ike number**

Synopsis	Maximum number of historical IKE keys recorded
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>max-history-key-records</b> <b>ike</b> <i>number</i>
Tree	<b>ike</b>
Range	1 to 3
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **pre-shared-key string**

Synopsis	Pre-shared key for the IPsec gateway
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>pre-shared-key</b> <i>string</i>
Tree	<b>pre-shared-key</b>
String Length	1 to 115
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **radius**

Synopsis	Enter the <b>radius</b> context
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>radius</b>
Tree	<b>radius</b>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### accounting-policy *reference*

Synopsis	RADIUS accounting policy
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">radius</a> <a href="#">accounting-policy</a> <i>reference</i>
Tree	<a href="#">accounting-policy</a>
Reference	<b>configure</b> <a href="#">ipsec</a> <a href="#">radius</a> <a href="#">accounting-policy</a> <i>string</i>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### authentication-policy *reference*

Synopsis	RADIUS authentication policy
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">radius</a> <a href="#">authentication-policy</a> <i>reference</i>
Tree	<a href="#">authentication-policy</a>
Reference	<b>configure</b> <a href="#">ipsec</a> <a href="#">radius</a> <a href="#">authentication-policy</a> <i>string</i>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### ts-list *reference*

Synopsis	TS list used for IKEv2 TS negotiation
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">ts-list</a> <i>reference</i>
Tree	<a href="#">ts-list</a>
Reference	<b>configure</b> <a href="#">ipsec</a> <a href="#">ts-list</a> <i>string</i>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### lag

Synopsis	Enter the <b>lag</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">lag</a>
Tree	<a href="#">lag</a>
Introduced	16.0.R1

Platforms All

### **link-map-profile** *number*

Synopsis LAG link map profile for a SAP or network interface

Context **configure** *service ies string interface string sap string lag link-map-profile number*

Tree [link-map-profile](#)

Description This command assigns a preconfigured LAG link map profile to a SAP or network interface configured on a LAG or a PW port that exists on a LAG. After an operator assigns a LAG link map profile, the system rehashes the SAP or network interface egress traffic over the LAG as required by the new configuration.

If the LAG link map profile for a SAP or network interface is deleted, the system reverts back to per-flow hashing.

Range 1 to 64

Introduced 16.0.R1

Platforms All

### **per-link-hash**

Synopsis Enter the **per-link-hash** context

Context **configure** *service ies string interface string sap string lag per-link-hash*

Tree [per-link-hash](#)

Introduced 16.0.R1

Platforms All

### **class** *number*

Synopsis Class used on LAG egress using weighted per-link-hash

Context **configure** *service ies string interface string sap string lag per-link-hash class number*

Tree [class](#)

Range 1 to 3

Default 1

Introduced 16.0.R1

Platforms All

## **weight** *number*

Synopsis	Weight used on LAG egress using weighted per-link-hash
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">lag</a> <a href="#">per-link-hash</a> <a href="#">weight</a> <i>number</i>
Tree	<a href="#">weight</a>
Range	1 to 1024
Default	1
Introduced	16.0.R1
Platforms	All

## **multi-service-site** *reference*

Synopsis	Multi service site name
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">multi-service-site</a> <a href="#">reference</a>
Tree	<a href="#">multi-service-site</a>
Reference	<b>configure</b> <a href="#">service</a> <a href="#">customer</a> <i>string</i> <a href="#">multi-service-site</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

## **static-host**

Synopsis	Enter the <b>static-host</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host</a>
Tree	<a href="#">static-host</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **ipv4** [[ip](#)] *string* [mac](#) *string*

Synopsis	Enter the <b>ipv4</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host</a> <a href="#">ipv4</a> <i>string</i> <a href="#">mac</a> <i>string</i>
Tree	<a href="#">ipv4</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[ip] string**

Synopsis	IP address
Context	<b>configure service ies string interface string sap string static-host ipv4 string mac string</b>
Tree	<a href="#">ipv4</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **mac string**

Synopsis	MAC address
Context	<b>configure service ies string interface string sap string static-host ipv4 string mac string</b>
Tree	<a href="#">ipv4</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state keyword**

Synopsis	Administrative state of the static host
Context	<b>configure service ies string interface string sap string static-host ipv4 string mac string admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ancp-string string**

Synopsis	ANCP string
Context	<b>configure service ies string interface string sap string static-host ipv4 string mac string ancp-string string</b>
Tree	<a href="#">ancp-string</a>
String Length	1 to 63

Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## app-profile

Synopsis Enter the **app-profile** context  
Context **configure** [service](#) [ies](#) *string* [interface](#) *string* [sap](#) *string* [static-host](#) [ipv4](#) *string* [mac](#) *string* [app-profile](#)  
Tree [app-profile](#)  
Introduced 21.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## profile *reference*

Synopsis Application profile used by the static host  
Context **configure** [service](#) [ies](#) *string* [interface](#) *string* [sap](#) *string* [static-host](#) [ipv4](#) *string* [mac](#) *string* [app-profile](#) [profile](#) *reference*  
Tree [profile](#)  
Reference **configure** [application-assurance](#) [group](#) *number* [partition](#) *number* [policy](#) [app-profile](#) *string*  
Introduced 21.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## int-dest-id *string*

Synopsis Intermediate destination ID  
Context **configure** [service](#) [ies](#) *string* [interface](#) *string* [sap](#) *string* [static-host](#) [ipv4](#) *string* [mac](#) *string* [int-dest-id](#) *string*  
Tree [int-dest-id](#)  
String Length 1 to 32  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## sla-profile *reference*

Synopsis SLA profile name

Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host ipv4</b> <i>string</i> <b>mac</b> <i>string</i> <b>sla-profile</b> <i>reference</i>
Tree	<b>sla-profile</b>
Reference	<b>configure subscriber-mgmt sla-profile</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sub-profile** *reference*

Synopsis	Sub-profile name
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host ipv4</b> <i>string</i> <b>mac</b> <i>string</i> <b>sub-profile</b> <i>reference</i>
Tree	<b>sub-profile</b>
Reference	<b>configure subscriber-mgmt sub-profile</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **subscriber-id**

Synopsis	Enter the <b>subscriber-id</b> context
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host ipv4</b> <i>string</i> <b>mac</b> <i>string</i> <b>subscriber-id</b>
Tree	<b>subscriber-id</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **string** *string*

Synopsis	Subscriber identification
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host ipv4</b> <i>string</i> <b>mac</b> <i>string</i> <b>subscriber-id</b> <i>string</i> <i>string</i>
Tree	<b>string</b>
String Length	1 to 64
Notes	The following elements are part of a choice: <b>string</b> or <b>use-sap-id</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## use-sap-id

Synopsis	Use the SAP id as subscriber ID
Context	<b>configure</b> <i>service ies string interface string sap string static-host ipv4 string mac string subscriber-id use-sap-id</i>
Tree	<i>use-sap-id</i>
Notes	The following elements are part of a choice: <b>string</b> or <b>use-sap-id</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## transit-policy

Synopsis	Enable the <b>transit-policy</b> context
Context	<b>configure</b> <i>service ies string interface string sap string transit-policy</i>
Tree	<i>transit-policy</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ip reference

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IP transit policy ID
Context	<b>configure</b> <i>service ies string interface string sap string transit-policy ip reference</i>
Tree	<i>ip</i>
Reference	<b>configure</b> <i>application-assurance group number partition number transit-ip-policy number</i>
Notes	The following elements are part of a mandatory choice: <b>ip</b> or <b>prefix</b> .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## prefix reference

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IP prefix policy ID
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">transit-policy</a> <a href="#">prefix</a> <i>reference</i>
Tree	<a href="#">prefix</a>
Reference	<b>configure</b> <a href="#">application-assurance</a> <a href="#">group</a> <i>number</i> <a href="#">partition</a> <i>number</i> <a href="#">transit-prefix-policy</a> <i>number</i>
Notes	The following elements are part of a mandatory choice: <b>ip</b> or <b>prefix</b> .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## shcv-policy-ipv4 reference

Synopsis	Host connectivity IPv4 policy
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">shcv-policy-ipv4</a> <i>reference</i>
Tree	<a href="#">shcv-policy-ipv4</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">shcv-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## spoke-sdp [[sdp-bind-id](#)] *string*

Synopsis	Enter the <b>spoke-sdp</b> list instance
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i>
Tree	<a href="#">spoke-sdp</a>
Max. Instances	1
Introduced	16.0.R1
Platforms	All

## [[sdp-bind-id](#)] *string*

Synopsis	SDP binding ID
----------	----------------

Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i>
Tree	<b>spoke-sdp</b>
String Length	3 to 16
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## **aarp**

Synopsis	Enable the <b>aarp</b> context
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>aarp</b>
Tree	<b>aarp</b>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **id reference**

Synopsis	AARP instance ID
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>aarp id reference</b>
Tree	<b>id</b>
Reference	<b>configure application-assurance aarp</b> <i>number</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **type keyword**

Synopsis	Role referenced by the AARP
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>aarp type keyword</b>
Tree	<b>type</b>
Options	dual-homed, dual-homed-secondary
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **accounting-policy** *reference*

Synopsis	Policy to collect accounting statistics
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">accounting-policy</a> <i>reference</i>
Tree	<a href="#">accounting-policy</a>
Reference	<b>configure</b> <a href="#">log</a> <a href="#">accounting-policy</a> <i>number</i>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the SDP binding to the service
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	enable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **app-profile** *reference*

Synopsis	Application profile name for this SDP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">app-profile</a> <i>reference</i>
Tree	<a href="#">app-profile</a>
Reference	<b>configure</b> <a href="#">application-assurance</a> <a href="#">group</a> <i>number</i> <a href="#">partition</a> <i>number</i> <a href="#">policy</a> <a href="#">app-profile</a> <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **bfd**

Synopsis	Enter the <b>bfd</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">bfd</a>
Tree	<a href="#">bfd</a>
Introduced	21.2.R1
Platforms	All

## **bfd-liveness**

Synopsis	Enable the <b>bfd-liveness</b> context
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">spoke-sdp string</a> <a href="#">bfd</a> <a href="#">bfd-liveness</a>
Tree	<a href="#">bfd-liveness</a>
Introduced	21.2.R1
Platforms	All

## **encap keyword**

Synopsis	BFD encapsulation used on the SDP binding
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">spoke-sdp string</a> <a href="#">bfd</a> <a href="#">bfd-liveness</a> <a href="#">encap keyword</a>
Tree	<a href="#">encap</a>
Default	ipv4
Options	ipv4
Introduced	21.2.R1
Platforms	All

## **bfd-template reference**

Synopsis	BFD template associated with the SDP binding
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">spoke-sdp string</a> <a href="#">bfd</a> <a href="#">bfd-template</a> <a href="#">reference</a>
Tree	<a href="#">bfd-template</a>
Description	This command configures a named BFD template to be used by VCCV BFD on PWs belonging to the VLL service. The template specifies parameters, such as the minimum transmit and receive control packet timer intervals, used by the BFD session. Template parameters are configured under the <b>configure router bfd</b> context.
Reference	<b>configure</b> <a href="#">bfd</a> <a href="#">bfd-template</a> <a href="#">string</a>
Introduced	21.2.R1
Platforms	All

## **failure-action keyword**

Synopsis	VCCV BFD action taken on the SDP binding
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">spoke-sdp string</a> <a href="#">bfd</a> <a href="#">failure-action</a> <a href="#">keyword</a>

Tree	<a href="#">failure-action</a>
Description	This command configures a named BFD template to be used by VCCV BFD on PWs belonging to the VLL service. The template specifies parameters, such as the minimum transmit and receive control packet timer intervals, used by the BFD session. Template parameters are configured under the <b>configure router bfd</b> context.
Default	none
Options	none, down
Introduced	21.2.R1
Platforms	All

### **wait-for-up-timer** *number*

Synopsis	Time waited for BFD up status
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <b>bfd</b> <a href="#">wait-for-up-timer</a> <i>number</i>
Tree	<a href="#">wait-for-up-timer</a>
Description	<p>This command configures the time interval that is used to wait for a BFD session to come up.</p> <p>This command is triggered when a spoke-SDP is first administratively enabled and a VCCV BFD session transitions from up to down. The command is required to allow time for BFD sessions to come up, and for BFD to settle before selecting the active spoke-SDP for use in a redundant set. In the case where a VCCV BFD session is bouncing, the timer prevents excessive flapping of the operational state of a spoke-SDP.</p>
Range	1 to 60
Units	seconds
Introduced	21.2.R1
Platforms	All

### **collect-stats** *boolean*

Synopsis	Allow agent to collect accounting statistics
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <b>collect-stats</b> <i>boolean</i>
Tree	<a href="#">collect-stats</a>
Default	false
Introduced	16.0.R1
Platforms	All

## control-word *boolean*

Synopsis	Use the control word as preferred
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">control-word</a> <i>boolean</i>
Tree	<a href="#">control-word</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## cpu-protection

Synopsis	Enter the <b>cpu-protection</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">cpu-protection</a>
Tree	<a href="#">cpu-protection</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## eth-cfm-monitoring

Synopsis	Enable the <b>eth-cfm-monitoring</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">cpu-protection</a> <a href="#">eth-cfm-monitoring</a>
Tree	<a href="#">eth-cfm-monitoring</a>
Notes	The following elements are part of a choice: <b>eth-cfm-monitoring</b> , <b>ip-src-monitoring</b> , or <b>mac-monitoring</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## aggregate

Synopsis	Apply rate limit to the sum of per-peer packet rates
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">cpu-protection</a> <a href="#">eth-cfm-monitoring</a> <a href="#">aggregate</a>
Tree	<a href="#">aggregate</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## car

Synopsis	Ignore Ethernet CFM packets when enforcing overall rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">spoke-sdp</a> <a href="#">string</a> <a href="#">cpu-protection</a> <a href="#">eth-cfm-monitoring</a> <a href="#">car</a>
Tree	<a href="#">car</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## ip-src-monitoring

Synopsis	Enable IP source monitoring for CPU protection
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">spoke-sdp</a> <a href="#">string</a> <a href="#">cpu-protection</a> <a href="#">ip-src-monitoring</a>
Tree	<a href="#">ip-src-monitoring</a>
Notes	The following elements are part of a choice: <b>eth-cfm-monitoring</b> , <b>ip-src-monitoring</b> , or <b>mac-monitoring</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## mac-monitoring

Synopsis	Monitor MAC for CPU protection
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">spoke-sdp</a> <a href="#">string</a> <a href="#">cpu-protection</a> <a href="#">mac-monitoring</a>
Tree	<a href="#">mac-monitoring</a>
Notes	The following elements are part of a choice: <b>eth-cfm-monitoring</b> , <b>ip-src-monitoring</b> , or <b>mac-monitoring</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## policy-id *reference*

Synopsis	CPM protection policy
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">spoke-sdp</a> <a href="#">string</a> <a href="#">cpu-protection</a> <a href="#">policy-id</a> <a href="#">reference</a>
Tree	<a href="#">policy-id</a>

Reference	<b>configure system security cpu-protection policy number</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

### **description string**

## **collect-lmm-fc-stats**

Synopsis	Enter the <b>collect-lmm-fc-stats</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">collect-lmm-fc-stats</a>
Tree	<a href="#">collect-lmm-fc-stats</a>

Description	<p>Commands in this context configure per forwarding class (FC) LMM information collection.</p> <p>The commands <b>fc-in-profile</b> and <b>fc</b> in this context are mutually exclusive. The commands apply to either profile-aware or profile-unaware FCs respectively.</p> <p>This command and the <b>collect-lmm-stats</b> command are mutually exclusive when there is entity resource contention.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fc** keyword

Synopsis	Forwarding class name for profile-unaware counter
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm collect-lmm-fc-stats</b> <b>fc</b> <i>keyword</i>
Tree	<b>fc</b>
Description	<p>This command configures individual counters for the specified FCs without regard for profile. The system includes all countable packets that match a configured FC, regardless of profile, in this counter.</p> <p>An FC specified as part of this command and for this specific context cannot be specified as a profile-aware FC using the <b>fc-in-profile</b> command under the <b>collect-lmm-fc-stats</b> context.</p> <p>When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.</p>
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fc-in-profile** keyword

Synopsis	Forwarding class name for profile-aware counter
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm collect-lmm-fc-stats</b> <b>fc-in-profile</b> <i>keyword</i>
Tree	<b>fc-in-profile</b>
Description	<p>This command configures individual counters for the specified FCs with regard to profile. The system includes all countable packets that match a configured FC and that are deemed to be in-profile in this counter.</p>

An FC specified as part of this command and for this specific context cannot be specified as a profile-unaware FC using the **fc** command under the **collect-lmm-fc-stats** context.

When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.

Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **collect-lmm-stats** *boolean*

Synopsis	Collect statistics for loss measurement message tests
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <b>collect-lmm-stats</b> <i>boolean</i>
Tree	<a href="#">collect-lmm-stats</a>
Description	<p>When configured to <b>true</b>, the router instantiates the statistical counter to transmit and receive packets for the LAG facility MEP bindings.</p> <p>The <b>show eth-cfm collect-lmm-stats</b> command displays entities that have been enabled to collect transit and receive counters.</p> <p>When configured to <b>false</b>, the router does not instantiate the counter and the LMM PDU associated with the MEP does not populate the counters in the packet.</p>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mep** [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number*

Synopsis	Enter the <b>mep</b> list instance
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <b>mep</b> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i>
Tree	<a href="#">mep</a>

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **md-admin-name** *reference*

Synopsis	Maintenance Domain (MD) name
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm mep md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i>
Tree	<a href="#">mep</a>
Reference	<b>configure</b> <a href="#">eth-cfm domain</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ma-admin-name** *reference*

Synopsis	Maintenance Association (MA) name
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm mep md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i>
Tree	<a href="#">mep</a>
Reference	<b>configure</b> <a href="#">eth-cfm domain</a> <i>string</i> <a href="#">association</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mep-id** *number*

Synopsis	Maintenance Endpoint (MEP) ID
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm mep md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i>
Tree	<a href="#">mep</a>
Range	1 to 8191
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **admin-state** *keyword*

Synopsis	Administrative state of the MEP
----------	---------------------------------

Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ais** *boolean*

Synopsis	Enable the generation and the reception of AIS messages
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">ais</a> <i>boolean</i>
Tree	<a href="#">ais</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **alarm-notification**

Synopsis	Enter the <b>alarm-notification</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">alarm-notification</a>
Tree	<a href="#">alarm-notification</a>
Description	<p>Commands in this context configure the Fault Notification Generator (FNG) time values to raise an alarm or reset the CCM defect alarm.</p> <p>Use these timers for network management processes. The timers are not tied into delaying the notification to the fault management system on the network element and do not affect fault propagation mechanisms.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fng-alarm-time** *number*

Synopsis	Time that must expire before an FNG alarm is raised
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">alarm-notification</a> <a href="#">fng-alarm-time</a> <i>number</i>

Tree	<a href="#">fng-alarm-time</a>
Range	250   500   1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fng-reset-time** *number*

Synopsis	Time that must expire before an FNG alarm is reset
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">spoke-sdp</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">alarm-notification</a> <a href="#">fng-reset-time</a> <a href="#">number</a>
Tree	<a href="#">fng-reset-time</a>
Range	250   500   1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm** *boolean*

Synopsis	Generate CCM messages
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">spoke-sdp</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">ccm</a> <a href="#">boolean</a>
Tree	<a href="#">ccm</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm-ltm-priority** *number*

Synopsis	Priority of CCM and LTM messages transmitted by the MEP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">spoke-sdp</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">ccm-ltm-priority</a> <a href="#">number</a>
Tree	<a href="#">ccm-ltm-priority</a>
Range	0 to 7
Default	7

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm-padding-size** *number*

Synopsis	Number of octets of padding to insert in CCM packets
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>ccm-padding-size</b> <i>number</i>
Tree	<a href="#">ccm-padding-size</a>
Description	This command sets the byte size of the optional Data TLV to be included in the ETH-CC PDU.  This command increases the size of the ETH-CC PDU by the configured value. The base size of the ETH-CC PDU, including the Interface Status TLV and Port Status TLV, is 83 bytes not including the Layer 2 encapsulation. CCM padding is not supported when the CCM interval (configured through <b>configure eth-cfm domain association ccm-interval</b> ) is less than 1 second.
Range	3 to 1500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **csf**

Synopsis	Enable the <b>csf</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>csf</b>
Tree	<a href="#">csf</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **multiplier** *decimal-number*

Synopsis	Multiplication factor used to clear the CSF condition
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>csf</b> <b>multiplier</b> <i>decimal-number</i>
Tree	<a href="#">multiplier</a>
Range	0.0   2.0 to 30.0
Default	3.5

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">spoke-sdp</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">description</a> <a href="#">string</a>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **eth-test**

Synopsis	Enable the <b>eth-test</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">spoke-sdp</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">eth-test</a>
Tree	<a href="#">eth-test</a>
Description	Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the <b>oam eth-cfm eth-test</b> command.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **bit-error-threshold** *number*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">spoke-sdp</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">eth-test</a> <a href="#">bit-error-threshold</a> <a href="#">number</a>
Tree	<a href="#">bit-error-threshold</a>
Range	0 to 11840
Default	1
Units	bit errors
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## test-pattern

Synopsis	Enter the <b>test-pattern</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">eth-test</a> <b>test-pattern</b>
Tree	<a href="#">test-pattern</a>
Description	Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## crc-tlv *boolean*

Synopsis	Generate a CRC checksum
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">eth-test</a> <a href="#">test-pattern</a> <b>crc-tlv</b> <i>boolean</i>
Tree	<a href="#">crc-tlv</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## pattern *keyword*

Synopsis	Test pattern for Ethernet Test frames
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">eth-test</a> <a href="#">test-pattern</a> <b>pattern</b> <i>keyword</i>
Tree	<a href="#">pattern</a>
Description	This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.
Default	all-zeros
Options	all-zeros, all-ones
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fault-propagation** *keyword*

Synopsis	Fault propagation for the MEP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">spoke-sdp</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <b>fault-propagation</b> <i>keyword</i>
Tree	<a href="#">fault-propagation</a>
Options	use-if-status-tlv, suspend-ccm
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **grace**

Synopsis	Enter the <b>grace</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">spoke-sdp</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <b>grace</b>
Tree	<a href="#">grace</a>
Description	Commands in this context configure the Nokia ETH-CFM Grace function and the ITU-T Y.1731 Ethernet Expected Default (ETH-ED) function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **eth-ed**

Synopsis	Enter the <b>eth-ed</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">spoke-sdp</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">grace</a> <b>eth-ed</b>
Tree	<a href="#">eth-ed</a>
Description	Commands in this context configure the ITU-T Y.1731 ETH-ED function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **max-rx-defect-window** *number*

Synopsis	Maximum received ETH-ED expected defect window duration
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">spoke-sdp</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">grace</a> <a href="#">eth-ed</a> <b>max-rx-defect-window</b> <i>number</i>
Tree	<a href="#">max-rx-defect-window</a>

Range	1 to 86400
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **priority number**

Synopsis	Transmission priority for ETH-ED PDUs
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm mep md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">grace eth-ed</a> <b>priority</b> <i>number</i>
Tree	<a href="#">priority</a>
Range	0 to 7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **rx-eth-ed boolean**

Synopsis	Receive and process ETH-ED ITU-T Y.1731 PDUs on the MEP
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm mep md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">grace eth-ed</a> <b>rx-eth-ed</b> <i>boolean</i>
Tree	<a href="#">rx-eth-ed</a>
Description	This command enables the reception and processing of the ITU-T Y.1731 ETH-ED PDU on the MEP.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **tx-eth-ed boolean**

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm mep md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">grace eth-ed</a> <b>tx-eth-ed</b> <i>boolean</i>
Tree	<a href="#">tx-eth-ed</a>
Default	false
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## eth-vsm-grace

Synopsis Enter the **eth-vsm-grace** context

Context **configure** [service](#) [ies](#) [string](#) [interface](#) [string](#) [spoke-sdp](#) [string](#) [eth-cfm](#) [mep](#) [md-admin-name](#) [reference](#) [ma-admin-name](#) [reference](#) [mep-id](#) [number](#) [grace](#) [eth-vsm-grace](#)

Tree [eth-vsm-grace](#)

Description Commands in this context configure the Nokia ETH-CFM Grace function.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## rx-eth-vsm-grace *boolean*

Synopsis Receive and process Nokia ETH-CFM Grace PDU on the MEP

Context **configure** [service](#) [ies](#) [string](#) [interface](#) [string](#) [spoke-sdp](#) [string](#) [eth-cfm](#) [mep](#) [md-admin-name](#) [reference](#) [ma-admin-name](#) [reference](#) [mep-id](#) [number](#) [grace](#) [eth-vsm-grace](#) [rx-eth-vsm-grace](#) *boolean*

Tree [rx-eth-vsm-grace](#)

Description When configured to **true**, the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.

When configured to **false**, the router disables the Nokia Grace function.

Default true

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## tx-eth-vsm-grace *boolean*

Synopsis Transmit ETH-ED PDUs from the MEP

Context **configure** [service](#) [ies](#) [string](#) [interface](#) [string](#) [spoke-sdp](#) [string](#) [eth-cfm](#) [mep](#) [md-admin-name](#) [reference](#) [ma-admin-name](#) [reference](#) [mep-id](#) [number](#) [grace](#) [eth-vsm-grace](#) [tx-eth-vsm-grace](#) *boolean*

Tree [tx-eth-vsm-grace](#)

Description When configured to **true**, the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.

The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.

The operator must configure the **configure system eth-cfm grace** command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).

When configured to **false**, the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.

Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **low-priority-defect** *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm mep md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>low-priority-defect</b> <i>keyword</i>
Tree	<a href="#">low-priority-defect</a>
Default	mac-rem-err-xcon
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **one-way-delay-threshold** *number*

Synopsis	Threshold time limit for the one-way delay test
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm mep md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>one-way-delay-threshold</b> <i>number</i>
Tree	<a href="#">one-way-delay-threshold</a>
Range	0 to 600
Default	3
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **squelch-ingress-levels** *number*

Synopsis	Levels for which ETH-CFM packets are silently discarded
----------	---

Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm squelch-ingress-levels</b> <i>number</i>
Tree	<b>squelch-ingress-levels</b>
Description	<p>This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.</p> <p>The list of levels must be a complete contiguous list from 0 up to the highest level that will be dropped.</p>
Range	0 to 7
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## hash-label

Synopsis	Enable the <b>hash-label</b> context
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>hash-label</b>
Tree	<b>hash-label</b>
Notes	The following elements are part of a choice: <b>entropy-label</b> or <b>hash-label</b> .
Introduced	16.0.R1
Platforms	All

## signal-capability

Synopsis	Enable the signaling of the hash label between PE nodes
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>hash-label signal-capability</b>
Tree	<b>signal-capability</b>
Introduced	16.0.R1
Platforms	All

## ingress

Synopsis	Enter the <b>ingress</b> context
----------	----------------------------------

Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>ingress</b>
Tree	<b>ingress</b>
Introduced	16.0.R1
Platforms	All

## filter

Synopsis	Enter the <b>filter</b> context
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>ingress filter</b>
Tree	<b>filter</b>
Introduced	16.0.R1
Platforms	All

## ip reference

Synopsis	IPv4 filter policy name
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>ingress filter ip reference</b>
Tree	<b>ip</b>
Reference	<b>configure filter ip-filter</b> <i>string</i>
Introduced	16.0.R1
Platforms	All

## ipv6 reference

Synopsis	IPv6 filter policy name
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>ingress filter ipv6 reference</b>
Tree	<b>ipv6</b>
Reference	<b>configure filter ipv6-filter</b> <i>string</i>
Introduced	16.0.R1
Platforms	All

## qos

Synopsis	Enter the <b>qos</b> context
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>ingress qos</b>

Tree	<a href="#">qos</a>
Introduced	16.0.R1
Platforms	All

## network

Synopsis	Enter the <b>network</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">ingress qos network</a>
Tree	<a href="#">network</a>
Introduced	16.0.R1
Platforms	All

## fp-redirect-group

Synopsis	Enter the <b>fp-redirect-group</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">ingress qos network fp-redirect-group</a>
Tree	<a href="#">fp-redirect-group</a>
Introduced	16.0.R1
Platforms	All

## group-name *reference*

Synopsis	Name of the forwarding plane queue group template
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">ingress qos network fp-redirect-group group-name</a> <i>reference</i>
Tree	<a href="#">group-name</a>
Reference	<b>configure</b> <a href="#">qos queue-group-templates</a> <a href="#">ingress queue-group</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

## instance *number*

Synopsis	Instance of the forwarding-plane ingress Queue Group for this SDP binding
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">ingress qos network fp-redirect-group instance</a> <i>number</i>

Tree	<a href="#">instance</a>
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

### **policy-name** *reference*

Synopsis	Network policy ID
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">spoke-sdp string</a> <a href="#">ingress qos network policy-name reference</a>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos network string</a>
Introduced	16.0.R1
Platforms	All

### **vc-label** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Ingress MPLS VC label to send packets to the far end
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">spoke-sdp string</a> <a href="#">ingress vc-label number</a>
Tree	<a href="#">vc-label</a>
Range	1 to 1048575
Introduced	16.0.R1
Platforms	All

### **transit-policy**

Synopsis	Enable the <b>transit-policy</b> context
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">spoke-sdp string</a> <a href="#">transit-policy</a>
Tree	<a href="#">transit-policy</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ip reference

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IP transit policy ID
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">transit-policy ip reference</a>
Tree	<a href="#">ip</a>
Reference	<b>configure</b> <a href="#">application-assurance group</a> <i>number</i> <a href="#">partition</a> <i>number</i> <a href="#">transit-ip-policy</a> <i>number</i>
Notes	The following elements are part of a mandatory choice: <b>ip</b> or <b>prefix</b> .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## prefix reference

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IP prefix policy ID
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">transit-policy prefix reference</a>
Tree	<a href="#">prefix</a>
Reference	<b>configure</b> <a href="#">application-assurance group</a> <i>number</i> <a href="#">partition</a> <i>number</i> <a href="#">transit-prefix-policy</a> <i>number</i>
Notes	The following elements are part of a mandatory choice: <b>ip</b> or <b>prefix</b> .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## vc-type keyword

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Type of virtual circuit (VC) associated with the SDP binding
----------	--

Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>vc-type</b> <i>keyword</i>
Tree	<b>vc-type</b>
Default	ether
Options	ether, ipipe
Introduced	16.0.R1
Platforms	All

### **static-tunnel-redundant-nexthop** *string*

Synopsis	Address for the static ISA tunnel redundant next-hop
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>static-tunnel-redundant-nexthop</b> <i>string</i>
Tree	<b>static-tunnel-redundant-nexthop</b>
Description	This command specifies the redundant next-hop address on public or private IPsec interfaces (with a public or private tunnel SAP) for the static IPsec tunnel. The next-hop address is resolved in the routing table of the corresponding service.
Notes	The following elements are part of a choice: <b>multi-chassis-shunting-profile</b> or <b>(dynamic-tunnel-redundant-nexthop</b> and <b>static-tunnel-redundant-nexthop)</b> .
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **tos-marking-state** *keyword*

Synopsis	TOS marking state
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>tos-marking-state</b> <i>keyword</i>
Tree	<b>tos-marking-state</b>
Default	untrusted
Options	trusted, untrusted
Introduced	16.0.R1
Platforms	All

### **tunnel** *boolean*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Enable/disable tunnel interface
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>tunnel</b> <i>boolean</i>
Tree	<b>tunnel</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **vas-if-type** *keyword*

Synopsis	VAS interface type
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>vas-if-type</b> <i>keyword</i>
Tree	<b>vas-if-type</b>
Options	to-from-access, to-from-network, to-from-both
Introduced	16.0.R1
Platforms	All

### **vpls** [**vpls-name**] *string*

Synopsis	Enter the <b>vpls</b> list instance
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>vpls</b> <i>string</i>
Tree	<b>vpls</b>
Max. Instances	1
Introduced	16.0.R1
Platforms	All

### [**vpls-name**] *string*

Synopsis	VPLS service
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>vpls</b> <i>string</i>
Tree	<b>vpls</b>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

## egress

Synopsis	Enter the <b>egress</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">vpls</a> <i>string</i> <b>egress</b>
Tree	<a href="#">egress</a>
Introduced	16.0.R1
Platforms	All

## reclassify-using-qos *reference*

Synopsis	Egress QoS policy
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">vpls</a> <i>string</i> <b>egress</b> <a href="#">reclassify-using-qos</a> <i>reference</i>

## evpn

Synopsis	Enter the <b>evpn</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">vpls</a> <i>string</i> <a href="#">evpn</a>
Tree	<a href="#">evpn</a>
Introduced	19.10.R1
Platforms	All

## arp

Synopsis	Enter the <b>arp</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">vpls</a> <i>string</i> <a href="#">evpn arp</a>
Tree	<a href="#">arp</a>
Introduced	19.10.R1
Platforms	All

## advertise [[route-type](#)] *keyword*

Synopsis	Enter the <b>advertise</b> list instance
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">vpls</a> <i>string</i> <a href="#">evpn arp advertise</a> <i>keyword</i>
Tree	<a href="#">advertise</a>
Description	Commands in this context specify the configuration to allow ARP or ND entries that are installed in the ARP or ND cache to be advertised in EVPN MAC/IP routes.  The <b>learn-dynamic</b> command must be set to <b>false</b> when using this functionality.
Introduced	19.10.R1

Platforms All

### **[route-type] keyword**

Synopsis Type of ARP or ND entries that generate host routes

Context **configure service ies string interface string vpls string evpn arp advertise keyword**

Tree **advertise**

Description This command specifies the type of ARP or ND entries that are installed in the ARP or ND cache into EVPN MAC/IP routes.

Options static, dynamic

Notes This element is part of a list key.

Introduced 19.10.R1

Platforms All

### **route-tag number**

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Tag value used with the host route from an ARP/ND entry

Context **configure service ies string interface string vpls string evpn arp advertise keyword route-tag number**

Tree **route-tag**

Description This command specifies the route tag that is added separately to dynamic or static ARP or ND entries that are advertised in EVPN MAC/IP routes. This tag can be matched on BGP vsi-export (in the R-VPLS) and BGP peer export policies.

Range 0 to 255

Introduced 19.10.R1

Platforms All

### **flood-garp-and-unknown-req boolean**

Synopsis Allow CPM originated ARP frames to flood R-VPLS service

Context **configure service ies string interface string vpls string evpn arp flood-garp-and-unknown-req boolean**

Tree **flood-garp-and-unknown-req**

Description	When configured to <b>true</b> , the system allows CPM-originated ARP frames to be flooded in the R-VPLS service. Any frames that are data path flooded such as the ARP messages received on a SAP, are flooded irrespective of this command. When configured to <b>false</b> , CPM-originated ARP flooding is suppressed.
Default	true
Introduced	19.10.R1
Platforms	All

### **learn-dynamic** *boolean*

Synopsis	Process ARP or ND messages on EVPN tunnels
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">vpls</a> <i>string</i> <a href="#">evpn arp</a> <b>learn-dynamic</b> <i>boolean</i>
Tree	<a href="#">learn-dynamic</a>
Default	true
Introduced	19.10.R1
Platforms	All

### **nd**

Synopsis	Enter the <b>nd</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">vpls</a> <i>string</i> <a href="#">evpn</a> <b>nd</b>
Tree	<a href="#">nd</a>
Introduced	20.5.R1
Platforms	All

### **advertise** [[route-type](#)] *keyword*

Synopsis	Enter the <b>advertise</b> list instance
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">vpls</a> <i>string</i> <a href="#">evpn</a> <b>nd</b> <b>advertise</b> <i>keyword</i>
Tree	<a href="#">advertise</a>
Description	Commands in this context specify the configuration to allow ARP or ND entries that are installed in the ARP or ND cache to be advertised in EVPN MAC/IP routes. The <b>learn-dynamic</b> command must be set to <b>false</b> when using this functionality.
Introduced	20.5.R1
Platforms	All

### [route-type] keyword

Synopsis	Type of ARP or ND entries that generate host routes
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">evpn</a> <a href="#">nd</a> <a href="#">advertise</a> <i>keyword</i>
Tree	<a href="#">advertise</a>
Description	This command specifies the type of ARP or ND entries that are installed in the ARP or ND cache into EVPN MAC/IP routes.
Options	static, dynamic
Notes	This element is part of a list key.
Introduced	20.5.R1
Platforms	All

### route-tag number

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tag value used with the host route from an ARP/ND entry
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">evpn</a> <a href="#">nd</a> <a href="#">advertise</a> <i>keyword</i> <a href="#">route-tag</a> <i>number</i>
Tree	<a href="#">route-tag</a>
Description	This command specifies the route tag that is added separately to dynamic or static ARP or ND entries that are advertised in EVPN MAC/IP routes. This tag can be matched on BGP vsi-export (in the R-VPLS) and BGP peer export policies.
Range	0 to 255
Introduced	20.5.R1
Platforms	All

### learn-dynamic boolean

Synopsis	Process ARP or ND messages on EVPN tunnels
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">evpn</a> <a href="#">nd</a> <a href="#">learn-dynamic</a> <i>boolean</i>

## down

Synopsis Enter the **down** context  
Context **configure service ies string redundant-interface string hold-time ipv4 down**  
Tree **down**  
Description Commands in this context configure the down hold timer, which specifies the delay before activating the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface up, unless an operator configures the **init-only** command.  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## init-only *boolean*

Synopsis Apply delay only at interface configuration or reboot

Context	<b>configure service ies</b> <i>string</i> <b>redundant-interface</b> <i>string</i> <b>hold-time ipv4 down</b> <b>init-only</b> <i>boolean</i>
Tree	<b>init-only</b>
Description	This command applies a delay only when the IP interface is first configured or after a system reboot.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **seconds** *number*

Synopsis	Down hold time for the IP interface
Context	<b>configure service ies</b> <i>string</i> <b>redundant-interface</b> <i>string</i> <b>hold-time ipv4 down</b> <b>seconds</b> <i>number</i>
Tree	<b>seconds</b>
Range	1 to 1200
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **up**

Synopsis	Enter the <b>up</b> context
Context	<b>configure service ies</b> <i>string</i> <b>redundant-interface</b> <i>string</i> <b>hold-time ipv4 up</b>
Tree	<b>up</b>
Description	Commands in this context configure the up hold timer, which specifies the delay before deactivation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface down.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **seconds** *number*

Synopsis	Up hold time for the IP interface
Context	<b>configure service ies</b> <i>string</i> <b>redundant-interface</b> <i>string</i> <b>hold-time ipv4 up</b> <b>seconds</b> <i>number</i>
Tree	<b>seconds</b>

Range	1 to 1200
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ip-mtu** *number*

Synopsis	IP MTU applied to outgoing packets
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">redundant-interface</a> <i>string</i> <a href="#">ip-mtu</a> <i>number</i>
Tree	<a href="#">ip-mtu</a>
Range	512 to 9786
Units	bytes
Introduced	16.0.R1

Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **prefix-length** *number*

Synopsis	IPv4 address prefix length
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">redundant-interface</a> <i>string</i> <a href="#">ipv4</a> <b>primary</b> <a href="#">prefix-length</a> <i>number</i>
Tree	<a href="#">prefix-length</a>
Range	0 to 32
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **remote-ip** *string*

Synopsis	Remote IP address for the interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">redundant-interface</a> <i>string</i> <a href="#">ipv4</a> <b>primary</b> <a href="#">remote-ip</a> <i>string</i>
Tree	<a href="#">remote-ip</a>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **spoke-sdp** [[sdp-bind-id](#)] *string*

Synopsis	Enter the <b>spoke-sdp</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">redundant-interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i>
Tree	<a href="#">spoke-sdp</a>
Max. Instances	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[sdp-bind-id]** *string*

Synopsis	SDP binding ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">redundant-interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i>
Tree	<a href="#">spoke-sdp</a>
String Length	3 to 16
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of the SDP binding to the service
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">redundant-interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	enable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **control-word** *boolean*

Synopsis	Use the control word as preferred
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">redundant-interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <b>control-word</b> <i>boolean</i>
Tree	<a href="#">control-word</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">redundant-interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <b>description</b> <i>string</i>
Tree	<a href="#">description</a>

String Length 1 to 80  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## egress

Synopsis Enter the **egress** context  
Context **configure** [service ies](#) *string* [redundant-interface](#) *string* [spoke-sdp](#) *string* **egress**  
Tree [egress](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## filter

Synopsis Enter the **filter** context  
Context **configure** [service ies](#) *string* [redundant-interface](#) *string* [spoke-sdp](#) *string* [egress](#) **filter**  
Tree [filter](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ip reference

Synopsis IPv4 filter policy name  
Context **configure** [service ies](#) *string* [redundant-interface](#) *string* [spoke-sdp](#) *string* [egress](#) **filter** **ip** *reference*  
Tree [ip](#)  
Reference **configure** [filter](#) [ip-filter](#) *string*  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## vc-label *number*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Egress MPLS VC label to send packets to the far end
Context	<b>configure service ies</b> <i>string</i> <b>redundant-interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>egress vc-label</b> <i>number</i>
Tree	<b>vc-label</b>
Range	16 to 1048575
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ingress

Synopsis	Enter the <b>ingress</b> context
Context	<b>configure service ies</b> <i>string</i> <b>redundant-interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>ingress</b>
Tree	<b>ingress</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## filter

Synopsis	Enter the <b>filter</b> context
Context	<b>configure service ies</b> <i>string</i> <b>redundant-interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>ingress filter</b>
Tree	<b>filter</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ip reference

Synopsis	IPv4 filter policy name
Context	<b>configure service ies</b> <i>string</i> <b>redundant-interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>ingress filter ip</b> <i>reference</i>
Tree	<b>ip</b>
Reference	<b>configure filter ip-filter</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## vc-label *number*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Ingress MPLS VC label to send packets to the far end
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">redundant-interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">ingress</a> <a href="#">vc-label</a> <i>number</i>
Tree	<a href="#">vc-label</a>
Range	1 to 1048575
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## service-id *number*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Service ID
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">service-id</a> <i>number</i>
Tree	<a href="#">service-id</a>
Range	1 to 2147483647
Introduced	16.0.R1
Platforms	All

## subscriber-interface [[interface-name](#)] *string*

Synopsis	Enter the <b>subscriber-interface</b> list instance
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i>
Tree	<a href="#">subscriber-interface</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## [[interface-name](#)] *string*

Synopsis	Subscriber interface name
----------	---------------------------

Context	<b>configure service ies string subscriber-interface string</b>
Tree	<b>subscriber-interface</b>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state keyword**

Synopsis	Administrative state of the subscriber interface
Context	<b>configure service ies string subscriber-interface string admin-state keyword</b>
Tree	<b>admin-state</b>
Default	enable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **description string**

Synopsis	Text description
Context	<b>configure service ies string subscriber-interface string description string</b>
Tree	<b>description</b>
String Length	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **fwd-service reference**

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Forwarding service name
Context	<b>configure service ies string subscriber-interface string fwd-service reference</b>
Tree	<b>fwd-service</b>
Reference	<b>configure service vprn string</b>

Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **fwd-subscriber-interface** *reference*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Forwarding subscriber interface name  
Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [fwd-subscriber-interface](#) *reference*  
Tree [fwd-subscriber-interface](#)  
Reference **configure** [service vprn](#) *string* [subscriber-interface](#) *string*  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **group-interface** [[group-interface-name](#)] *string*

Synopsis Enter the **group-interface** list instance  
Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string*  
Tree [group-interface](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[group-interface-name]** *string*

Synopsis Group interface name  
Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string*  
Tree [group-interface](#)  
String Length 1 to 32  
Notes This element is part of a list key.  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of the interface
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Default	enable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **bonding-parameters**

Synopsis	Enter the <b>bonding-parameters</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>bonding-parameters</b>
Tree	<b>bonding-parameters</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of ESM connection bonding
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>bonding-parameters</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **connection** [**connection-index**] *number*

Synopsis	Enter the <b>connection</b> list instance
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>bonding-parameters</b> <b>connection</b> <i>number</i>
Tree	<b>connection</b>

Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### [**connection-index**] *number*

Synopsis Bonding connection index  
Context **configure** *service ies string subscriber-interface string group-interface string bonding-parameters connection number*  
Tree *connection*  
Range 1 to 2  
Notes This element is part of a list key.  
Introduced 16.0.R4  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **service** *string*

Synopsis Connection service  
Context **configure** *service ies string subscriber-interface string group-interface string bonding-parameters connection number service string*  
Tree *service*  
String Length 1 to 64  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **fpe** *reference*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis FPE that provisions bonding functionality  
Context **configure** *service ies string subscriber-interface string group-interface string bonding-parameters fpe reference*  
Tree *fpe*  
Reference **configure** *fwd-path-ext fpe number*  
Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## multicast

Synopsis Enter the **multicast** context

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **bonding-parameters** **multicast**

Tree **multicast**

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## connection (*number* | *keyword*)

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Multicast connection

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **bonding-parameters** **multicast** **connection** (*number* | *keyword*)

Tree **connection**

Range 1 to 2

Default use-incoming

Options use-incoming

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## brg

Synopsis Enter the **brg** context

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **brg**

Tree **brg**

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of BRG
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>brg</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **authenticated-brg-only** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Allow BRGs that have been pre-authenticated
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>brg</b> <b>authenticated-brg-only</b> <i>boolean</i>
Tree	<b>authenticated-brg-only</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **default-brg-profile** *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Default BRG profile that can be overridden during authentication
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>brg</b> <b>default-brg-profile</b> <i>reference</i>
Tree	<b>default-brg-profile</b>
Reference	<b>configure</b> <b>subscriber-mgmt</b> <b>vrgw</b> <b>brg-profile</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **cflowd-parameters**

Synopsis	Enter the <b>cflowd-parameters</b> context
Context	<b>configure service ies string subscriber-interface string group-interface string cflowd-parameters</b>
Tree	<b>cflowd-parameters</b>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **sampling [sampling-type] keyword**

Synopsis	Enter the <b>sampling</b> list instance
Context	<b>configure service ies string subscriber-interface string group-interface string cflowd-parameters sampling keyword</b>
Tree	<b>sampling</b>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **[sampling-type] keyword**

Synopsis	Traffic sampling type
Context	<b>configure service ies string subscriber-interface string group-interface string cflowd-parameters sampling keyword</b>
Tree	<b>sampling</b>
Description	This command configures the type of traffic to be sampled on the associated IP interface.
Options	unicast, multicast, both
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **direction keyword**

Synopsis	Direction of traffic for cflowd sampling
Context	<b>configure service ies string subscriber-interface string group-interface string cflowd-parameters sampling keyword direction keyword</b>

Tree	<a href="#">direction</a>
Description	This command configures the direction in which sampling occurs on the associated IP interfaces.
Default	ingress-only
Options	ingress-only, egress-only, both
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sample-profile** (*keyword | number*)

Synopsis	Sample profile ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">cflowd-parameters</a> <a href="#">sampling</a> <a href="#">keyword</a> <b>sample-profile</b> ( <i>keyword   number</i> )
Tree	<a href="#">sample-profile</a>
Description	This command defines the sampling rate profile associated with this interface.
Max. Range	0 to 4294967295
Options	1
Introduced	19.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **type** *keyword*

Synopsis	Type of cflowd analysis
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">cflowd-parameters</a> <a href="#">sampling</a> <a href="#">keyword</a> <b>type</b> <a href="#">keyword</a>
Tree	<a href="#">type</a>
Description	This command configures the cflowd sampling type on the associated IP interface.
Options	acl, interface
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **data-trigger**

Synopsis	Enter the <b>data-trigger</b> context
----------	---------------------------------------

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>data-trigger</b>
Tree	<b>data-trigger</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of data-triggered host creation
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>data-trigger admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **description** *string*

Synopsis	Text description
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>description</b> <i>string</i>
Tree	<b>description</b>
String Length	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **dynamic-routes-track-srrp**

Synopsis	Enable the <b>dynamic-routes-track-srrp</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>dynamic-routes-track-srrp</b>
Tree	<b>dynamic-routes-track-srrp</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **hold-time** *number*

Synopsis	Delay before updating the route state after the last SRRP transition
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>dynamic-routes-track-srrp</b> <b>hold-time</b> <i>number</i>
Tree	<b>hold-time</b>
Range	1 to 50
Units	deciseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **gtp-parameters**

Synopsis	Enter the <b>gtp-parameters</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>gtp-parameters</b>
Tree	<b>gtp-parameters</b>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of GTP access
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>gtp-parameters</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **fpe** *reference*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	PE that provisions the GTP user interface
----------	---

Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>gtp-parameters fpe reference</i>
Tree	<a href="#">fpe</a>
Reference	<b>configure fwd-path-ext fpe</b> <i>number</i>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **gx-policy reference**

Synopsis	Diameter application policy
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>gx-policy reference</i>
Tree	<a href="#">gx-policy</a>
Reference	<b>configure subscriber-mgmt diameter-gx-policy</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ingress**

Synopsis	Enter the <b>ingress</b> context
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>ingress</i>
Tree	<a href="#">ingress</a>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **policy-accounting reference**

Synopsis	Ingress policy accounting template name
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>ingress policy-accounting reference</i>
Tree	<a href="#">policy-accounting</a>
Reference	<b>configure routing-options policy-accounting policy-acct-template</b> <i>string</i>
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

### **ingress-stats** *boolean*

Synopsis	Collect ingress interface statistics
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ingress-stats</b> <i>boolean</i>
Tree	<a href="#">ingress-stats</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ip-mtu** *number*

Synopsis	Interface IP MTU
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ip-mtu</b> <i>number</i>
Tree	<a href="#">ip-mtu</a>
Range	512 to 9786
Units	bytes
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ipoe-linking**

Synopsis	Enter the <b>ipoe-linking</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipoe-linking</b>
Tree	<a href="#">ipoe-linking</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of IPoE host linking
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipoe-linking</b> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable

Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **gratuitous-router-advertisement** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Send unsolicited router advertisement after DHCP setup  
Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipoe-linking** **gratuitous-router-advertisement** *boolean*  
Tree **gratuitous-router-advertisement**  
Default false  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **shared-circuit-id** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enable circuit ID in DHCPv4 Option82 to validate DHCPv6  
Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipoe-linking** **shared-circuit-id** *boolean*  
Tree **shared-circuit-id**  
Default false  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ipoe-session**

Synopsis Enter the **ipoe-session** context  
Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipoe-session**  
Tree **ipoe-session**  
Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis Administrative state of IPoE session management

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipoe-session** **admin-state** *keyword*

Tree **admin-state**

Options enable, disable

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **description** *string*

Synopsis Text description

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipoe-session** **description** *string*

Tree **description**

String Length 1 to 80

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **force-auth**

Synopsis Enter the **force-auth** context

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipoe-session** **force-auth**

Tree **force-auth**

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **cid-change** *boolean*

Synopsis Ignore min-auth-interval when circuit ID changed

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipoe-session** **force-auth** **cid-change** *boolean*

Tree **cid-change**

Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **rid-change** *boolean*

Synopsis Ignore min-auth-interval when remote ID changed  
Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [ipoe-session](#) [force-auth](#) [rid-change](#) *boolean*  
Tree [rid-change](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ipoe-session-policy** *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis IPoE Session policy to be used for new sessions  
Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [ipoe-session](#) [ipoe-session-policy](#) *reference*  
Tree [ipoe-session-policy](#)  
Reference **configure** [subscriber-mgmt](#) [ipoe-session-policy](#) *string*  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **min-auth-interval** (*keyword | number*)

Synopsis Minimum time between two authentication attempts  
Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [ipoe-session](#) [min-auth-interval](#) (*keyword | number*)  
Tree [min-auth-interval](#)  
Range 1 to 32000000  
Default infinite  
Units seconds  
Options infinite, always-reauthenticate  
Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **radius-session-timeout** *keyword*

Synopsis Session timeout attribute to be interpreted

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipoe-session** **radius-session-timeout** *keyword*

Tree **radius-session-timeout**

Options absolute, ignore, backwards-compatible

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sap-session-limit** *number*

Synopsis Maximum number of sessions per SAP

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipoe-session** **sap-session-limit** *number*

Tree **sap-session-limit**

Range 1 to 131071

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **session-limit** *number*

Synopsis Maximum number of sessions on this group interface

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipoe-session** **session-limit** *number*

Tree **session-limit**

Range 1 to 500000

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## stateless-redundancy *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Remove IPoE sessions when the system becomes stand-by in a stateless multi-chassis redundancy setup
Context	<b>configure</b> <i>service ies string subscriber-interface string group-interface string ipoe-session stateless-redundancy boolean</i>
Tree	<i>stateless-redundancy</i>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## user-db *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local user database that is used to (pre-)authenticate new sessions
Context	<b>configure</b> <i>service ies string subscriber-interface string group-interface string ipoe-session user-db reference</i>
Tree	<i>user-db</i>
Reference	<b>configure</b> <i>subscriber-mgmt local-user-db string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ipv4

Synopsis	Enter the <b>ipv4</b> context
Context	<b>configure</b> <i>service ies string subscriber-interface string group-interface string ipv4</i>
Tree	<i>ipv4</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## arp-host

Synopsis	Enter the <b>arp-host</b> context
Context	<b>configure service ies string subscriber-interface string group-interface string ipv4 arp-host</b>
Tree	<b>arp-host</b>
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## admin-state *keyword*

Synopsis	Administrative state of ARP hosts
Context	<b>configure service ies string subscriber-interface string group-interface string ipv4 arp-host admin-state keyword</b>
Tree	<b>admin-state</b>
Options	enable, disable
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## host-limit *number*

Synopsis	Maximum number of ARP hosts
Context	<b>configure service ies string subscriber-interface string group-interface string ipv4 arp-host host-limit number</b>
Tree	<b>host-limit</b>
Range	1 to 524287
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## min-auth-interval *number*

Synopsis	Minimum authentication interval
Context	<b>configure service ies string subscriber-interface string group-interface string ipv4 arp-host min-auth-interval number</b>
Tree	<b>min-auth-interval</b>
Range	1 to 6000
Default	15

Units	minutes
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sap-host-limit** *number*

Synopsis	Maximum number of ARP hosts per SAP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">arp-host</a> <b>sap-host-limit</b> <i>number</i>
Tree	<a href="#">sap-host-limit</a>
Range	1 to 131071
Default	1
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **dhcp**

Synopsis	Enter the <b>dhcp</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv4</a> <b>dhcp</b>
Tree	<a href="#">dhcp</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of DHCP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv4</a> <b>dhcp</b> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **client-applications**

Synopsis	Enter the <b>client-applications</b> context
----------	--

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 dhcp client-applications</b>
Tree	<b>client-applications</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **dhcp boolean**

Synopsis	Enable IPoE clients to use DHCP relay or proxy server
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 dhcp client-applications dhcp boolean</b>
Tree	<b>dhcp</b>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ppp boolean**

Synopsis	Enable PPPoE clients to use DHCP relay or proxy server
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 dhcp client-applications ppp boolean</b>
Tree	<b>ppp</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **description string**

Synopsis	Text description
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 dhcp description string</b>
Tree	<b>description</b>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## filter reference

Synopsis	DHCP filter ID for the group interface
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 dhcp filter reference</b>
Tree	<b>filter</b>
Reference	<b>configure filter dhcp-filter</b> <i>number</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## gi-address string

Synopsis	GI address for the DHCP relay
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 dhcp gi-address</b> <i>string</i>
Tree	<b>gi-address</b>
Description	<p>This command configures the GI address to distinguish between the different subscriber interfaces (and potentially group interfaces) defined when the router functions as a DHCP relay.</p> <p>By default, the GI address used in the relayed DHCP packet is the primary IP address of a normal IES interface. Specifying the GI address allows the user to choose a secondary address. For group interfaces, a GI address must be specified under the group interface DHCP context or subscriber interface DHCP context for DHCP to function.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## lease-populate

Synopsis	Enter the <b>lease-populate</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 dhcp lease-populate</b>
Tree	<b>lease-populate</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## I2-header

Synopsis	Enable the <b>I2-header</b> context
----------	-------------------------------------

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 dhcp lease-populate l2-header</b>
Tree	<b>l2-header</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **mac** *string*

Synopsis	IEEE address used in anti-spoofing entries for the SAP
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 dhcp lease-populate l2-header mac</b> <i>string</i>
Tree	<b>mac</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **max-leases** *number*

Synopsis	Maximum number of DHCPv4 leases
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 dhcp lease-populate max-leases</b> <i>number</i>
Tree	<b>max-leases</b>
Range	1 to 511999
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **match-circuit-id** *boolean*

Synopsis	Enable Option 82 circuit ID on relayed DHCP packets
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 dhcp match-circuit-id</b> <i>boolean</i>
Tree	<b>match-circuit-id</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## offer-selection

Synopsis	Enter the <b>offer-selection</b> context
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>group-interface</i> <i>string</i> <i>ipv4 dhcp offer-selection</i>
Tree	<i>offer-selection</i>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## client-mac

Synopsis	Enter the <b>client-mac</b> context
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>group-interface</i> <i>string</i> <i>ipv4 dhcp offer-selection client-mac</i>
Tree	<i>client-mac</i>
Notes	The following elements are part of a choice: <b>client-mac</b> or <b>server</b> .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## discover-delay *number*

Synopsis	Delay before sending DHCP Discover messages
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>group-interface</i> <i>string</i> <i>ipv4 dhcp offer-selection client-mac discover-delay</i> <i>number</i>
Tree	<i>discover-delay</i>
Description	This command configures the time to delay sending DHCP Discover messages from the specified MAC addresses.
Range	1 to 100
Units	deciseconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## mac-address *keyword*

Synopsis	Designated client MAC addresses for Offer selection
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>group-interface</i> <i>string</i> <i>ipv4 dhcp offer-selection client-mac mac-address</i> <i>keyword</i>

Tree	<a href="#">mac-address</a>
Description	This command specifies the client MAC addresses for which the Discover delay applies.
Options	odd, even
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **discover-delay** *number*

Synopsis	Delay before sending DHCP Discover messages
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv4 dhcp offer-selection</a> <a href="#">discover-delay</a> <i>number</i>
Tree	<a href="#">discover-delay</a>
Description	This command configures the time to delay sending DHCP Discover messages. The delay is applied to all DHCP Discover messages for which no per DHCP server or per client MAC delay is configured.
Range	1 to 100
Units	deciseconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **server** [[ipv4-address](#)] *string*

Synopsis	Enter the <b>server</b> list instance
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv4 dhcp offer-selection</a> <a href="#">server</a> <i>string</i>
Tree	<a href="#">server</a>
Max. Instances	8
Notes	The following elements are part of a choice: <b>client-mac</b> or <b>server</b> .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[ipv4-address]** *string*

Synopsis	IP address of the DHCP server
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv4 dhcp offer-selection</a> <a href="#">server</a> <i>string</i>

Tree	<a href="#">server</a>
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **discover-delay** *number*

Synopsis	Delay before sending DHCP Discover messages
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">offer-selection</a> <a href="#">server</a> <i>string</i> <b>discover-delay</b> <i>number</i>
Tree	<a href="#">discover-delay</a>
Description	This command configures the time to delay DHCP Discover messages sent to the server.
Range	1 to 100
Units	deciseconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **option-82**

Synopsis	Enter the <b>option-82</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a>
Tree	<a href="#">option-82</a>
Description	Commands in this context configure the processing required when the router receives a DHCP request that already has an Option 82 field in the packet.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **action** *keyword*

Synopsis	Action to take with received DHCP Option 82
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a> <b>action</b> <i>keyword</i>
Tree	<a href="#">action</a>
Default	keep

Options	replace, drop, keep
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## circuit-id

Synopsis	Enter the <b>circuit-id</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 dhcp option-82 circuit-id</b>
Tree	<b>circuit-id</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ascii-tuple

Synopsis	Use the ASCII-encoded tuple for the circuit ID
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 dhcp option-82 circuit-id ascii-tuple</b>
Tree	<b>ascii-tuple</b>
Notes	This element is the default part of a choice. The following elements are part of a choice: <b>ascii-tuple</b> , <b>ifindex</b> , <b>none</b> , <b>sap-id</b> , or <b>vlan-ascii-tuple</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ifindex

Synopsis	Use the interface index for the circuit ID
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 dhcp option-82 circuit-id ifindex</b>
Tree	<b>ifindex</b>
Notes	The following elements are part of a choice: <b>ascii-tuple</b> , <b>ifindex</b> , <b>none</b> , <b>sap-id</b> , or <b>vlan-ascii-tuple</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## none

Synopsis	Do not include the circuit ID
Context	<b>configure</b> <i>service ies string subscriber-interface string group-interface string ipv4 dhcp option-82 circuit-id none</i>
Tree	<i>none</i>
Notes	The following elements are part of a choice: <b>ascii-tuple</b> , <b>ifindex</b> , <b>none</b> , <b>sap-id</b> , or <b>vlan-ascii-tuple</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## sap-id

Synopsis	Use the SAP ID
Context	<b>configure</b> <i>service ies string subscriber-interface string group-interface string ipv4 dhcp option-82 circuit-id sap-id</i>
Tree	<i>sap-id</i>
Notes	The following elements are part of a choice: <b>ascii-tuple</b> , <b>ifindex</b> , <b>none</b> , <b>sap-id</b> , or <b>vlan-ascii-tuple</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## vlan-ascii-tuple

Synopsis	Include the VLAN ID and dot1p bits in the ASCII tuple
Context	<b>configure</b> <i>service ies string subscriber-interface string group-interface string ipv4 dhcp option-82 circuit-id vlan-ascii-tuple</i>
Tree	<i>vlan-ascii-tuple</i>
Description	When configured, the router includes the VLAN ID and dot1p bits with the ASCII-tuple information. This only occurs on dot1q and QinQ-encapsulated ports. When the Option 82 bits are stripped, dot1p bits are copied to the Ethernet header of the outgoing packet.  When unconfigured, the router leaves the circuit ID sub-option of the DHCP packet empty.
Notes	The following elements are part of a choice: <b>ascii-tuple</b> , <b>ifindex</b> , <b>none</b> , <b>sap-id</b> , or <b>vlan-ascii-tuple</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## remote-id

Synopsis	Enter the <b>remote-id</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 dhcp option-82 remote-id</b>
Tree	<b>remote-id</b>
Description	Commands in this context configure the remote IP sub-option of the DHCP packet with the identity of the remote host end (typically the DHCP client).
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ascii-string *string*

Synopsis	User-defined ASCII string for the remote ID
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 dhcp option-82 remote-id ascii-string</b> <i>string</i>
Tree	<b>ascii-string</b>
String Length	1 to 32
Notes	The following elements are part of a choice: <b>ascii-string</b> , <b>mac</b> , or <b>none</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## mac

Synopsis	Use the MAC address for the remote ID
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 dhcp option-82 remote-id mac</b>
Tree	<b>mac</b>
Notes	The following elements are part of a choice: <b>ascii-string</b> , <b>mac</b> , or <b>none</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## none

Synopsis	Do not include the remote ID
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 dhcp option-82 remote-id none</b>

Tree	<a href="#">none</a>
Notes	This element is the default part of a choice. The following elements are part of a choice: <b>ascii-string</b> , <b>mac</b> , or <b>none</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## vendor-specific-option

Synopsis	Enter the <b>vendor-specific-option</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a> <a href="#">vendor-specific-option</a>
Tree	<a href="#">vendor-specific-option</a>
Description	Commands in this context configure the Nokia Vendor-Specific Option (VSO) of the DHCP packet.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## client-mac-address *boolean*

Synopsis	Send the MAC address in the VSO
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a> <a href="#">vendor-specific-option</a> <a href="#">client-mac-address</a> <i>boolean</i>
Tree	<a href="#">client-mac-address</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## pool-name *boolean*

Synopsis	Send the pool name in the VSO
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a> <a href="#">vendor-specific-option</a> <a href="#">pool-name</a> <i>boolean</i>
Tree	<a href="#">pool-name</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sap-id** *boolean*

Synopsis	Send SAP ID in the sub-option of the DHCP relay packet
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>dhcp</b> <b>option-82</b> <b>vendor-specific-option</b> <b>sap-id</b> <i>boolean</i>
Tree	<b>sap-id</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **service-id** *boolean*

Synopsis	Send the service ID in the Vendor Specific Option
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>dhcp</b> <b>option-82</b> <b>vendor-specific-option</b> <b>service-id</b> <i>boolean</i>
Tree	<b>service-id</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **string** *string*

Synopsis	User-defined ASCII string for the VSO
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>dhcp</b> <b>option-82</b> <b>vendor-specific-option</b> <b>string</b> <i>string</i>
Tree	<b>string</b>
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **system-id** *boolean*

Synopsis	Send the system ID in the VSO
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>dhcp</b> <b>option-82</b> <b>vendor-specific-option</b> <b>system-id</b> <i>boolean</i>
Tree	<b>system-id</b>

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## proxy-server

Synopsis	Enter the <b>proxy-server</b> context
Context	<b>configure service ies string subscriber-interface string group-interface string ipv4 dhcp proxy-server</b>
Tree	<a href="#">proxy-server</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## admin-state *keyword*

Synopsis	Administrative state of the DHCP proxy server
Context	<b>configure service ies string subscriber-interface string group-interface string ipv4 dhcp proxy-server admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## emulated-server *string*

Synopsis	IP address used as DHCP server address in SAP context
Context	<b>configure service ies string subscriber-interface string group-interface string ipv4 dhcp proxy-server emulated-server string</b>
Tree	<a href="#">emulated-server</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## lease-time

Synopsis	Enter the <b>lease-time</b> context
----------	-------------------------------------

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 dhcp proxy-server lease-time</b>
Tree	<b>lease-time</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **radius-override** *boolean*

Synopsis	Use lease time information provided by RADIUS server
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 dhcp proxy-server lease-time radius-override</b> <i>boolean</i>
Tree	<b>radius-override</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **value** *number*

Synopsis	DHCP lease time
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 dhcp proxy-server lease-time value</b> <i>number</i>
Tree	<b>value</b>
Range	300 to 315446399
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **python-policy** *reference*

Synopsis	Python policy name
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 dhcp python-policy</b> <i>reference</i>
Tree	<b>python-policy</b>
Description	This command associates a Python policy name with the interface.
Reference	<b>configure python</b> <b>python-policy</b> <i>string</i>
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## relay-proxy

Synopsis Enable the **relay-proxy** context

Context **configure service ies** *string* *subscriber-interface string* *group-interface string* *ipv4 dhcp relay-proxy*

Tree [relay-proxy](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## release-update-src-ip *boolean*

Synopsis Update the source IP address of a DHCP RELEASE message

Context **configure service ies** *string* *subscriber-interface string* *group-interface string* *ipv4 dhcp relay-proxy release-update-src-ip boolean*

Tree [release-update-src-ip](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## siaddr-override *string*

Synopsis DHCP server IP address for address hiding function

Context **configure service ies** *string* *subscriber-interface string* *group-interface string* *ipv4 dhcp relay-proxy siaddr-override string*

Tree [siaddr-override](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## release-include-gi-address *boolean*

Synopsis Include gateway IP address in DHCP Release messages

Context **configure service ies** *string* *subscriber-interface string* *group-interface string* *ipv4 dhcp release-include-gi-address boolean*

Tree [release-include-gi-address](#)

Default false

Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **server** *string*

Synopsis	IP addresses for DHCP server requests
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>dhcp</b> <b>server</b> <i>string</i>
Tree	<b>server</b>
Description	This command configures a list of servers that this interface forwards requests to. The operator can enter the list of servers as either IP addresses or fully qualified domain names. The operator must specify at least one server specified for DHCP relay to work. If there are multiple servers, the system forwards the request to all the servers in the list.
Max. Instances	8
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **src-ip-addr** *keyword*

Synopsis	Type of source address to use for DHCP relay
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>dhcp</b> <b>src-ip-addr</b> <i>keyword</i>
Tree	<b>src-ip-addr</b>
Default	auto
Options	auto, gi-address
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **trusted** *boolean*

Synopsis	Relay untrusted packets
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>dhcp</b> <b>trusted</b> <i>boolean</i>
Tree	<b>trusted</b>

Description	<p>When configured to <b>true</b>, the router enables the trusted mode on the interface. When enabled, the relay agent changes the existing GI address (of the request) to the ingress interface, and forwards the request.</p> <p>A DHCP request that contains a GI address of 0.0.0.0 and an Option 82 field in the packet is discarded unless it arrives on a trusted circuit.</p> <p>This behavior only applies if the Relay Agent Information Option action is to keep the existing information. When the Option 82 field is replaced by the relay agent, the original Option 82 information is lost, and there is no reason to enable the trusted option.</p>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### user-db *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local user database for authentication
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv4 dhcp</a> <a href="#">user-db</a> <i>reference</i>
Tree	<a href="#">user-db</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt local-user-db</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### icmp

Synopsis	Enter the <b>icmp</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv4 icmp</a>
Tree	<a href="#">icmp</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### mask-reply *boolean*

Synopsis	Allow responses to ICMP mask requests on the interface
----------	--

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 icmp mask-reply</b> <i>boolean</i>
Tree	<b>mask-reply</b>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **param-problem**

Synopsis	Enter the <b>param-problem</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 icmp param-problem</b>
Tree	<b>param-problem</b>
Description	Commands in this context specify the settings for ICMP Parameter Problem messages generated by the interface.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of sent Parameter Problem messages
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 icmp param-problem admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Default	enable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **number** *number*

Synopsis	Maximum number of Parameter Problem messages to send
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 icmp param-problem number</b> <i>number</i>
Tree	<b>number</b>
Range	10 to 1000

Default	100
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **seconds** *number*

Synopsis	Time used to limit number of Parameter Problem messages
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 icmp param-problem seconds</b> <i>number</i>
Tree	<b>seconds</b>
Range	1 to 60
Default	10
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **redirects**

Synopsis	Enter the <b>redirects</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 icmp redirects</b>
Tree	<b>redirects</b>
Description	<p>Commands in this context configure the settings for ICMP redirect messages generated by the interface.</p> <p>The system sends ICMP redirect messages to alert the sending node that a more optimal route is available on another router on the same subnetwork.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of sending ICMP redirect messages
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 icmp redirects admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Default	enable
Options	enable, disable

Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **number** *number*

Synopsis Maximum number of ICMP redirect messages to send  
Context **configure** *service ies string subscriber-interface string group-interface string ipv4 icmp redirects number number*  
Tree *number*  
Range 10 to 1000  
Default 100  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **seconds** *number*

Synopsis Time used to limit the number of ICMP redirect messages  
Context **configure** *service ies string subscriber-interface string group-interface string ipv4 icmp redirects seconds number*  
Tree *seconds*  
Range 1 to 60  
Default 10  
Units seconds  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ttl-expired**

Synopsis Enter the **ttl-expired** context  
Context **configure** *service ies string subscriber-interface string group-interface string ipv4 icmp ttl-expired*  
Tree *ttl-expired*  
Description Commands in this context configure the settings for ICMP TTL expired messages generated by the interface.  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of sending TTL expired messages
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>icmp</b> <b>tll-expired</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Default	enable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **number** *number*

Synopsis	Maximum number of TTL expired messages to send
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>icmp</b> <b>tll-expired</b> <b>number</b> <i>number</i>
Tree	<b>number</b>
Range	10 to 2000
Default	100
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **seconds** *number*

Synopsis	Time used to limit the number of TTL expired messages
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>icmp</b> <b>tll-expired</b> <b>seconds</b> <i>number</i>
Tree	<b>seconds</b>
Range	1 to 60
Default	10
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **use-matching-address** *boolean*

Synopsis	Use the subscriber interface address as source address
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>icmp</b> <b>tll-expired</b> <b>use-matching-address</b> <i>boolean</i>
Tree	<b>use-matching-address</b>
Description	When configured to <b>true</b> , the system uses a matching subscriber interface address as the source address of the ICMP TTL expired message.  For matching to occur, the source address of the offending packet must be in the same subnet of the subscriber interface address.  When configured to <b>false</b> , the system uses the first configured address.
Default	false
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **unreachables**

Synopsis	Enter the <b>unreachables</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>icmp</b> <b>unreachables</b>
Tree	<b>unreachables</b>
Description	Commands in this context specify the settings for ICMP host and network destination unreachable messages generated by the interface.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of sending unreachable messages
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>icmp</b> <b>unreachables</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Default	enable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **number** *number*

Synopsis	Maximum number of unreachable messages to send
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>icmp</b> <b>unreachables</b> <b>number</b> <i>number</i>
Tree	<b>number</b>
Range	10 to 2000
Default	100
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **seconds** *number*

Synopsis	Time to limit the number of ICMP unreachable messages
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>icmp</b> <b>unreachables</b> <b>seconds</b> <i>number</i>
Tree	<b>seconds</b>
Range	1 to 60
Default	10
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ignore-df-bit** *boolean*

Synopsis	Ignore DF bit in the IPv4 header when fragmenting
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>ignore-df-bit</b> <i>boolean</i>
Tree	<b>ignore-df-bit</b>
Description	<p>When configured to <b>true</b>, fragmentation is applied according to the applicable egress MTU instead of the DF bit for frames egressing the WLAN-GW group. The DF bit is reset for frames that are fragmented.</p> <p>When configured to <b>false</b>, the router fragments a packet larger than the MTU if the DF bit is set to 0 and drops the packet if the DF bit is set to 1.</p>
Default	false
Introduced	20.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## neighbor-discovery

Synopsis	Enter the <b>neighbor-discovery</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a>
Tree	<a href="#">neighbor-discovery</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## local-proxy-arp *boolean*

Synopsis	Enable local proxy ARP on interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a> <a href="#">local-proxy-arp</a> <i>boolean</i>
Tree	<a href="#">local-proxy-arp</a>
Description	When configured to <b>true</b> , the router enables local proxy ARP on the interface. When configured to <b>false</b> , the router does not respond to ARP requests for addresses on the same subnet.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## populate *boolean*

Synopsis	Allow static and dynamic hosts to be populated in system ARP cache
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a> <a href="#">populate</a> <i>boolean</i>
Tree	<a href="#">populate</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## proxy-arp-policy *reference*

Synopsis	Proxy ARP policy name
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a> <a href="#">proxy-arp-policy</a> <i>reference</i>
Tree	<a href="#">proxy-arp-policy</a>

Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **remote-proxy-arp** *boolean*

Synopsis	Enable remote proxy ARP on the interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a> <a href="#">remote-proxy-arp</a> <i>boolean</i>
Tree	<a href="#">remote-proxy-arp</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **timeout** *number*

Synopsis	Timeout for an ARP entry learned on the interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a> <a href="#">timeout</a> <i>number</i>
Tree	<a href="#">timeout</a>
Range	0 to 65535
Default	14400
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **qos-route-lookup** *keyword*

Synopsis	QoS route lookup
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">qos-route-lookup</a> <i>keyword</i>
Tree	<a href="#">qos-route-lookup</a>
Options	destination

Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

## urpf-check

Synopsis Enable the **urpf-check** context  
Context **configure service ies string subscriber-interface string group-interface string ipv4 urpf-check**  
Tree [urpf-check](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## mode keyword

Synopsis Unicast RPF check mode  
Context **configure service ies string subscriber-interface string group-interface string ipv4 urpf-check mode keyword**  
Tree [mode](#)  
Default strict  
Options strict, loose, strict-no-ecmp  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ipv6

Synopsis Enable the **ipv6** context  
Context **configure service ies string subscriber-interface string group-interface string ipv6**  
Tree [ipv6](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## allow-multiple-wan-addresses boolean

Synopsis Allow multiple WAN addresses  
Context **configure service ies string subscriber-interface string group-interface string ipv6 allow-multiple-wan-addresses boolean**

Tree	<a href="#">allow-multiple-wan-addresses</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **auto-reply**

Synopsis	Enter the <b>auto-reply</b> context
Context	<b>configure service ies</b> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv6 auto-reply</a>
Tree	<a href="#">auto-reply</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **neighbor-solicitation** *boolean*

Synopsis	Enable auto-reply for NS
Context	<b>configure service ies</b> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv6 auto-reply neighbor-solicitation</a> <i>boolean</i>
Tree	<a href="#">neighbor-solicitation</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **router-solicitation** *boolean*

Synopsis	Enable auto-reply for RS
Context	<b>configure service ies</b> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv6 auto-reply router-solicitation</a> <i>boolean</i>
Tree	<a href="#">router-solicitation</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## dhcp6

Synopsis	Enter the <b>dhcp6</b> context
Context	<b>configure service ies string subscriber-interface string group-interface string ipv6 dhcp6</b>
Tree	<b>dhcp6</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## filter reference

Synopsis	DHCPv6 filter
Context	<b>configure service ies string subscriber-interface string group-interface string ipv6 dhcp6 filter reference</b>
Tree	<b>filter</b>
Reference	<b>configure filter dhcp6-filter number</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## option

Synopsis	Enter the <b>option</b> context
Context	<b>configure service ies string subscriber-interface string group-interface string ipv6 dhcp6 option</b>
Tree	<b>option</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## interface-id

Synopsis	Enter the <b>interface-id</b> context
Context	<b>configure service ies string subscriber-interface string group-interface string ipv6 dhcp6 option interface-id</b>
Tree	<b>interface-id</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ascii-tuple

Synopsis	Use ASCII-encoded concatenated tuple
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6</b> <b>option</b> <b>interface-id</b> <b>ascii-tuple</b>
Tree	<a href="#">ascii-tuple</a>
Notes	The following elements are part of a choice: <b>ascii-tuple</b> , <b>if-index</b> , <b>sap-id</b> , or <b>string</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## if-index

Synopsis	Use interface index in interface ID option in DHCPv6 relay packet
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6</b> <b>option</b> <b>interface-id</b> <b>if-index</b>
Tree	<a href="#">if-index</a>
Notes	The following elements are part of a choice: <b>ascii-tuple</b> , <b>if-index</b> , <b>sap-id</b> , or <b>string</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## sap-id

Synopsis	Use SAP ID in interface ID option in DHCPv6 relay packet
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6</b> <b>option</b> <b>interface-id</b> <b>sap-id</b>
Tree	<a href="#">sap-id</a>
Notes	The following elements are part of a choice: <b>ascii-tuple</b> , <b>if-index</b> , <b>sap-id</b> , or <b>string</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## string *string*

Synopsis	String for interface ID option in DHCPv6 relay packet
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6</b> <b>option</b> <b>interface-id</b> <b>string</b> <i>string</i>
Tree	<a href="#">string</a>
String Length	1 to 80

Notes	The following elements are part of a choice: <b>ascii-tuple</b> , <b>if-index</b> , <b>sap-id</b> , or <b>string</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **remote-id** *boolean*

Synopsis	Allow remote ID option to be sent in the DHCPv6 relay packet
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6</b> <b>option remote-id</b> <i>boolean</i>
Tree	<b>remote-id</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **override-slaac** *boolean*

Synopsis	Allow WAN address offered by DHCP to overwrite the WAN address acquired from SLAAC
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6</b> <b>override-slaac</b> <i>boolean</i>
Tree	<b>override-slaac</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **pd-managed-route**

Synopsis	Enable the <b>pd-managed-route</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6</b> <b>pd-managed-route</b>
Tree	<b>pd-managed-route</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **next-hop** *keyword*

Synopsis	Next hop type
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>dhcp6</b> <b>pd-managed-route</b> <b>next-hop</b> <i>keyword</i>
Tree	<b>next-hop</b>
Default	ipv6
Options	ipv4, ipv6
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **proxy-server**

Synopsis	Enter the <b>proxy-server</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>dhcp6</b> <b>proxy-server</b>
Tree	<b>proxy-server</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of the DHCPv6 proxy server
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>dhcp6</b> <b>proxy-server</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **client-applications**

Synopsis	Enter the <b>client-applications</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>dhcp6</b> <b>proxy-server</b> <b>client-applications</b>
Tree	<b>client-applications</b>

Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **dhcp boolean**

Synopsis Enable IPoE clients to use DHCP relay or proxy server  
Context **configure** [service](#) [ies](#) [string](#) [subscriber-interface](#) [string](#) [group-interface](#) [string](#) [ipv6](#) [dhcp6](#)  
[proxy-server](#) [client-applications](#) [dhcp](#) [boolean](#)  
Tree [dhcp](#)  
Default true  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ppp boolean**

Synopsis Allow the PPP application to use DHCP relay functionality  
Context **configure** [service](#) [ies](#) [string](#) [subscriber-interface](#) [string](#) [group-interface](#) [string](#) [ipv6](#) [dhcp6](#)  
[proxy-server](#) [client-applications](#) [ppp](#) [boolean](#)  
Tree [ppp](#)  
Default false  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **preferred-lifetime (number | keyword)**

Synopsis Time for prefix to remain preferred on this interface  
Context **configure** [service](#) [ies](#) [string](#) [subscriber-interface](#) [string](#) [group-interface](#) [string](#) [ipv6](#) [dhcp6](#)  
[proxy-server](#) [preferred-lifetime](#) ([number](#) | [keyword](#))  
Tree [preferred-lifetime](#)  
Range 300 to 4294967294  
Default 3600  
Units seconds  
Options infinite  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **rebind-timer** *number*

Synopsis	Rebind timer (T2) for this interface
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6 proxy-server rebind-timer</b> <i>number</i>
Tree	<b>rebind-timer</b>
Range	0 to 1209600
Default	2880
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **renew-timer** *number*

Synopsis	Renew timer (T1)
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6 proxy-server renew-timer</b> <i>number</i>
Tree	<b>renew-timer</b>
Range	0 to 604800
Default	1800
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **server-id**

Synopsis	Enter the <b>server-id</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6 proxy-server server-id</b>
Tree	<b>server-id</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **duid-en-ascii** *string*

Synopsis	Vendor-assigned ID based on Enterprise Number (DUID-EN)
----------	---

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6 proxy-server server-id</b> <b>duid-en-ascii</b> <i>string</i>
Tree	<b>duid-en-ascii</b>
String Length	1 to 58
Notes	The following elements are part of a choice: <b>duid-en-ascii</b> , <b>duid-en-hex</b> , or <b>duid-ll</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **duid-en-hex** *string*

Synopsis	DUID system ID in hexadecimal format
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6 proxy-server server-id</b> <b>duid-en-hex</b> <i>string</i>
Tree	<b>duid-en-hex</b>
String Length	1 to 118
Notes	The following elements are part of a choice: <b>duid-en-ascii</b> , <b>duid-en-hex</b> , or <b>duid-ll</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **duid-ll**

Synopsis	Use link-layer address (DUID-LL) as DUID
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6 proxy-server server-id</b> <b>duid-ll</b>
Tree	<b>duid-ll</b>
Notes	This element is the default part of a choice. The following elements are part of a choice: <b>duid-en-ascii</b> , <b>duid-en-hex</b> , or <b>duid-ll</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **valid-lifetime** (*number* | *keyword*)

Synopsis	Time for prefix to remain valid on this interface
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6 proxy-server</b> <b>valid-lifetime</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>valid-lifetime</b>

Range	300 to 4294967294
Default	86400
Units	seconds
Options	infinite
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **python-policy** *reference*

Synopsis	Python policy
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">dhcp6</a> <a href="#">python-policy</a> <i>reference</i>
Tree	<a href="#">python-policy</a>
Reference	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <a href="#">string</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **relay**

Synopsis	Enter the <b>relay</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">dhcp6</a> <a href="#">relay</a>
Tree	<a href="#">relay</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of DHCPv6 Relay
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">dhcp6</a> <a href="#">relay</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## advertise-selection

Synopsis	Enter the <b>advertise-selection</b> context
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>ipv6 dhcp6 relay advertise-selection</i>
Tree	<i>advertise-selection</i>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## client-mac

Synopsis	Enter the <b>client-mac</b> context
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>ipv6 dhcp6 relay advertise-selection client-mac</i>
Tree	<i>client-mac</i>
Notes	The following elements are part of a choice: <b>client-mac</b> or <b>server</b> .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## mac-address *keyword*

Synopsis	Designated client MAC addresses for Advertise selection
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>ipv6 dhcp6 relay advertise-selection client-mac mac-address keyword</i>
Tree	<i>mac-address</i>
Options	odd, even
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## preference-option

Synopsis	Enter the <b>preference-option</b> context
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>ipv6 dhcp6 relay advertise-selection client-mac preference-option</i>
Tree	<i>preference-option</i>

Description	Commands in this context configure the DHCPv6 preference option that is inserted in the DHCPv6 Advertise message.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **value number**

Synopsis	Preference option value for DHCPv6 Advertise messages
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6 relay advertise-selection client-mac preference-option value number</b>
Tree	<b>value</b>
Range	0 to 255
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **solicit-delay number**

Synopsis	Delay before sending DHCPv6 Solicit messages
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6 relay advertise-selection client-mac solicit-delay number</b>
Tree	<b>solicit-delay</b>
Description	This command configures the time to delay DHCPv6 Solicit messages sent from the designated client MAC addresses.
Range	1 to 100
Units	deciseconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **preference-option**

Synopsis	Enter the <b>preference-option</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6 relay advertise-selection preference-option</b>
Tree	<b>preference-option</b>
Description	Commands in this context configure the DHCPv6 preference option that is inserted in the DHCPv6 Advertise message.
Introduced	20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **value** *number*

Synopsis Preference option value for DHCPv6 Advertise messages

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipv6 dhcp6 relay advertise-selection preference-option** **value** *number*

Tree **value**

Range 0 to 255

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **server** [**ipv6-address**] *string*

Synopsis Enter the **server** list instance

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipv6 dhcp6 relay advertise-selection server** *string*

Tree **server**

Max. Instances 8

Notes The following elements are part of a choice: **client-mac** or **server**.

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[ipv6-address]** *string*

Synopsis IP address of the DHCPv6 server

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipv6 dhcp6 relay advertise-selection server** *string*

Tree **server**

Notes This element is part of a list key.

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## preference-option

Synopsis	Enter the <b>preference-option</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6 relay advertise-selection server</b> <i>string</i> <b>preference-option</b>
Tree	<b>preference-option</b>
Description	Commands in this context configure the DHCPv6 preference option that is inserted in the DHCPv6 Advertise message.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## value *number*

Synopsis	Preference option value for DHCPv6 Advertise messages
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6 relay advertise-selection server</b> <i>string</i> <b>preference-option value</b> <i>number</i>
Tree	<b>value</b>
Range	0 to 255
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## solicit-delay *number*

Synopsis	Delay before sending DHCPv6 Solicit messages
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6 relay advertise-selection server</b> <i>string</i> <b>solicit-delay</b> <i>number</i>
Tree	<b>solicit-delay</b>
Description	This command configures the time to delay DHCPv6 Solicit messages sent to the server.
Range	1 to 100
Units	deciseconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## solicit-delay *number*

Synopsis	Delay before sending DHCPv6 Solicit messages
----------	--

Context	<b>configure service ies</b> <i>string subscriber-interface string group-interface string ipv6 dhcp6 relay advertise-selection solicit-delay number</i>
Tree	<a href="#">solicit-delay</a>
Description	This command configures the time to delay DHCPv6 Solicit messages. The delay is applied to DHCPv6 Solicit messages for which no overriding value is configured in the <b>server</b> instance or the <b>client-mac</b> context.
Range	1 to 100
Units	deciseconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## client-applications

Synopsis	Enter the <b>client-applications</b> context
Context	<b>configure service ies</b> <i>string subscriber-interface string group-interface string ipv6 dhcp6 relay client-applications</i>
Tree	<a href="#">client-applications</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## dhcp boolean

Synopsis	Enable IPoE clients to use DHCP relay or proxy server
Context	<b>configure service ies</b> <i>string subscriber-interface string group-interface string ipv6 dhcp6 relay client-applications dhcp boolean</i>
Tree	<a href="#">dhcp</a>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ppp boolean

Synopsis	Allow the PPP application to use DHCP relay functionality
Context	<b>configure service ies</b> <i>string subscriber-interface string group-interface string ipv6 dhcp6 relay client-applications ppp boolean</i>
Tree	<a href="#">ppp</a>
Default	false

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>dhcp6</b> <b>relay</b> <b>description</b> <i>string</i>
Tree	<b>description</b>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **lease-split**

Synopsis	Enter the <b>lease-split</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>dhcp6</b> <b>relay</b> <b>lease-split</b>
Tree	<b>lease-split</b>
Description	Commands in this context configure DHCPv6 lease split.  DHCPv6 lease split is active when administratively enabled and for all IA_NA and IA_PD options in the transaction, the configured lease split valid lifetime (short lease time) is less than or equal to one of the following: <ul style="list-style-type: none"><li>• the renew time T1 committed by the server (long renew time)</li><li>• half of the preferred lifetime committed by the server when T1 committed by the server equals zero</li></ul>
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of DHCPv6 lease split
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>dhcp6</b> <b>relay</b> <b>lease-split</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Default	disable
Options	enable, disable

Introduced 21.2.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **valid-lifetime** *number*

Synopsis DHCPv6 lease split valid lifetime (short lease time)  
Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipv6 dhcp6 relay lease-split valid-lifetime** *number*  
Tree **valid-lifetime**  
Range 300 to 315446399  
Default 3600  
Units seconds  
Introduced 21.2.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **link-address** *string*

Synopsis Link address for the DHCPv6 relay messages  
Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipv6 dhcp6 relay link-address** *string*  
Tree **link-address**  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **server** *string*

Synopsis DHCP6 server(s) to which the DHCP6 requests are forwarded  
Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipv6 dhcp6 relay server** *string*  
Tree **server**  
Max. Instances 8  
Notes This element is ordered by the user.  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **source-address** *string*

Synopsis	Source IPv6 address for the DHCPv6 relay messages
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>dhcp6</b> <b>relay</b> <b>source-address</b> <i>string</i>
Tree	<a href="#">source-address</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **snooping**

Synopsis	Enter the <b>snooping</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>dhcp6</b> <b>snooping</b>
Tree	<a href="#">snooping</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **admin-state** *keyword*

Synopsis	Administrative state of DHCPv6 snooping
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>dhcp6</b> <b>snooping</b> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **user-db** *reference*

Synopsis	Local user database for authentication
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>dhcp6</b> <b>user-db</b> <i>reference</i>
Tree	<a href="#">user-db</a>
Reference	<b>configure</b> <b>subscriber-mgmt</b> <b>local-user-db</b> <i>string</i>
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **user-ident** *keyword*

Synopsis DHCP6 user identification for this interface

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipv6** **dhcp6** **user-ident** *keyword*

Tree **user-ident**

Default mac

Options mac, mac-interface-id

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ipoe-bridged-mode** *boolean*

Synopsis Enable IPv6 IPoE bridged mode

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipv6** **ipoe-bridged-mode** *boolean*

Tree **ipoe-bridged-mode**

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **neighbor-discovery**

Synopsis Enter the **neighbor-discovery** context

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipv6** **neighbor-discovery**

Tree **neighbor-discovery**

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **dad-snooping** *boolean*

Synopsis Populate table via duplicate address detection packets

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipv6** **neighbor-discovery** **dad-snooping** *boolean*

Tree	<a href="#">dad-snooping</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **neighbor-limit** *number*

Synopsis	Maximum number of neighbor entries learned per SLAAC host
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">neighbor-discovery</a> <a href="#">neighbor-limit</a> <i>number</i>
Tree	<a href="#">neighbor-limit</a>
Range	1 to 8
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **qos-route-lookup** *keyword*

Synopsis	QoS route lookup
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">qos-route-lookup</a> <i>keyword</i>
Tree	<a href="#">qos-route-lookup</a>
Options	destination
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **router-advertisements**

Synopsis	Enter the <b>router-advertisements</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">router-advertisements</a>
Tree	<a href="#">router-advertisements</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of router advertisements
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>router-advertisements</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **force-mcast** *keyword*

Synopsis	Protocol with forced multicast
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>router-advertisements</b> <b>force-mcast</b> <i>keyword</i>
Tree	<b>force-mcast</b>
Options	ip, ip-mac
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **max-advertisement-interval** *number*

Synopsis	Maximum advertisement interval
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>router-advertisements</b> <b>max-advertisement-interval</b> <i>number</i>
Tree	<b>max-advertisement-interval</b>
Range	900 to 1800
Default	1800
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **min-advertisement-interval** *number*

Synopsis	Minimum advertisement interval
----------	--------------------------------

Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>ipv6 router-advertisements min-advertisement-interval number</i>
Tree	<i>min-advertisement-interval</i>
Range	900 to 1350
Default	900
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## options

Synopsis	Enter the <b>options</b> context
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>ipv6 router-advertisements options</i>
Tree	<i>options</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## current-hop-limit *number*

Synopsis	Hop limit to be advertised
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>ipv6 router-advertisements options current-hop-limit number</i>
Tree	<i>current-hop-limit</i>
Range	0 to 255
Default	64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## dns

Synopsis	Enter the <b>dns</b> context
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>ipv6 router-advertisements options dns</i>
Tree	<i>dns</i>
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **include-rdnss** *boolean*

Synopsis Include the RDNSS server option 25

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipv6** **router-advertisements** **options** **dns** **include-rdnss** *boolean*

Tree [include-rdnss](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **rdnss-lifetime** (*number* | *keyword*)

Synopsis Maximum time for the RDNSS address to remain valid

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipv6** **router-advertisements** **options** **dns** **rdnss-lifetime** (*number* | *keyword*)

Tree [rdnss-lifetime](#)

Range 900 to 3600

Default 3600

Units seconds

Options infinite

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **managed-configuration** *boolean*

Synopsis Managed address configuration flag

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipv6** **router-advertisements** **options** **managed-configuration** *boolean*

Tree [managed-configuration](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **mtu** (*number* | *keyword*)

Synopsis	Advertised MTU value
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>router-advertisements</b> <b>options</b> <b>mtu</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>mtu</b>
Range	1280 to 9212
Default	not-included
Units	bytes
Options	not-included
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **other-stateful-configuration** *boolean*

Synopsis	Other stateful configuration flag
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>router-advertisements</b> <b>options</b> <b>other-stateful-configuration</b> <i>boolean</i>
Tree	<b>other-stateful-configuration</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **reachable-time** *number*

Synopsis	Neighbor discovery reachable time that is advertised for this group interface
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>router-advertisements</b> <b>options</b> <b>reachable-time</b> <i>number</i>
Tree	<b>reachable-time</b>
Range	0 to 3600000
Default	0
Units	milliseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **retransmit-timer** *number*

Synopsis	Neighbor discovery retransmit timer that is advertised for this group interface
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>router-advertisements</b> <b>options</b> <b>retransmit-timer</b> <i>number</i>
Tree	<a href="#">retransmit-timer</a>
Range	0 to 1800000
Default	0
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **router-lifetime** (*number* | *keyword*)

Synopsis	Router lifetime
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>router-advertisements</b> <b>options</b> <b>router-lifetime</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">router-lifetime</a>
Range	2700 to 9000
Default	4500
Units	seconds
Options	no-default-router
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **prefix-options**

Synopsis	Enter the <b>prefix-options</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>router-advertisements</b> <b>prefix-options</b>
Tree	<a href="#">prefix-options</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **autonomous** *boolean*

Synopsis	Value of the autonomous flag
----------	------------------------------

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 router-advertisements prefix-options autonomous</b> <i>boolean</i>
Tree	<b>autonomous</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **on-link** *boolean*

Synopsis	Assign the prefix to an interface on the specified link
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 router-advertisements prefix-options on-link</b> <i>boolean</i>
Tree	<b>on-link</b>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **preferred-lifetime** (*number* | *keyword*)

Synopsis	Time for a prefix to remain preferred
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 router-advertisements prefix-options preferred-lifetime</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>preferred-lifetime</b>
Range	0 to 4294967294
Default	3600
Units	seconds
Options	infinite
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **valid-lifetime** (*number* | *keyword*)

Synopsis	Time for a prefix to remain valid
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 router-advertisements prefix-options valid-lifetime</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>valid-lifetime</b>

Range	0 to 4294967294
Default	86400
Units	seconds
Options	infinite
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## router-solicit

Synopsis	Enter the <b>router-solicit</b> context
Context	<b>configure service ies string subscriber-interface string group-interface string ipv6 router-solicit</b>
Tree	<b>router-solicit</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## admin-state *keyword*

Synopsis	Administrative state of router-solicit based authentication
Context	<b>configure service ies string subscriber-interface string group-interface string ipv6 router-solicit admin-state keyword</b>
Tree	<b>admin-state</b>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## inactivity-timer (*number* | *keyword*)

Synopsis	Time before an inactive host is removed
Context	<b>configure service ies string subscriber-interface string group-interface string ipv6 router-solicit inactivity-timer (number   keyword)</b>
Tree	<b>inactivity-timer</b>
Range	1 to 31536000
Default	300
Units	seconds

Options	infinite
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **min-auth-interval** *number*

Synopsis	Minimum interval between two consecutive authentication attempts for the same host
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>router-solicit</b> <b>min-auth-interval</b> <i>number</i>
Tree	<b>min-auth-interval</b>
Range	1 to 360000
Default	300
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **user-db** *reference*

Synopsis	Local user-database that is used for router solicit based authentication
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>router-solicit</b> <b>user-db</b> <i>reference</i>
Tree	<b>user-db</b>
Reference	<b>configure</b> <b>subscriber-mgmt</b> <b>local-user-db</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **urpf-check**

Synopsis	Enable the <b>urpf-check</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>urpf-check</b>
Tree	<b>urpf-check</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **mode** *keyword*

Synopsis	Unicast RPF check mode
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">urpf-check</a> <b>mode</b> <i>keyword</i>
Tree	<a href="#">mode</a>
Default	strict
Options	strict, loose, strict-no-ecmp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **local-address-assignment**

Synopsis	Enter the <b>local-address-assignment</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">local-address-assignment</a>
Tree	<a href="#">local-address-assignment</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of Local Address Assignment
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">local-address-assignment</a> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ipv4**

Synopsis	Enter the <b>ipv4</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">local-address-assignment</a> <b>ipv4</b>
Tree	<a href="#">ipv4</a>

Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## client-applications

Synopsis Enter the **client-applications** context  
Context **configure service ies string subscriber-interface string group-interface string local-address-assignment ipv4 client-applications**  
Tree [client-applications](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ipoe boolean

Synopsis Request local addresses for non-DHCP/managed IPoE hosts  
Context **configure service ies string subscriber-interface string group-interface string local-address-assignment ipv4 client-applications ipoe boolean**  
Tree [ipoe](#)  
Default false  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ppp boolean

Synopsis Request local addresses for PPP IPCP hosts  
Context **configure service ies string subscriber-interface string group-interface string local-address-assignment ipv4 client-applications ppp boolean**  
Tree [ppp](#)  
Default false  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## default-pool string

Synopsis Default pools  
Context **configure service ies string subscriber-interface string group-interface string local-address-assignment ipv4 default-pool string**

Tree	<a href="#">default-pool</a>
String Length	1 to 32
Max. Instances	2
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **server reference**

Synopsis	Local DHCP server that contains pools for local address assignment
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">local-address-assignment</a> <a href="#">ipv4</a> <a href="#">server</a> <a href="#">reference</a>
Tree	<a href="#">server</a>
Reference	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">dhcp-server</a> <a href="#">dhcpv4</a> <a href="#">string</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ipv6**

Synopsis	Enter the <b>ipv6</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">local-address-assignment</a> <a href="#">ipv6</a>
Tree	<a href="#">ipv6</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **client-applications**

Synopsis	Enter the <b>client-applications</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">local-address-assignment</a> <a href="#">ipv6</a> <a href="#">client-applications</a>
Tree	<a href="#">client-applications</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ipoe-slaac** *boolean*

Synopsis	Request local addresses for IPoE SLAAC hosts
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>local-address-assignment</b> <b>ipv6</b> <b>client-applications</b> <b>ipoe-slaac</b> <i>boolean</i>
Tree	<a href="#">ipoe-slaac</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ipoe-wan** *boolean*

Synopsis	Request local addresses for IPoE IA NA hosts
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>local-address-assignment</b> <b>ipv6</b> <b>client-applications</b> <b>ipoe-wan</b> <i>boolean</i>
Tree	<a href="#">ipoe-wan</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ppp-slaac** *boolean*

Synopsis	Request local addresses for PPP SLAAC hosts
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>local-address-assignment</b> <b>ipv6</b> <b>client-applications</b> <b>ppp-slaac</b> <i>boolean</i>
Tree	<a href="#">ppp-slaac</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **server** *reference*

Synopsis	Local DHCPv6 server that contains pools for local address assignment
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>local-address-assignment</b> <b>ipv6</b> <b>server</b> <i>reference</i>
Tree	<a href="#">server</a>

Reference **configure** [router](#) *string* [dhcp-server](#) [dhcpv6](#) *string*  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **mac** *string*

Synopsis MAC address for the interface  
Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [mac](#) *string*  
Tree [mac](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **nasreq-auth-policy** *reference*

Synopsis Diameter NASREQ application policy to use for authentication  
Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [nasreq-auth-policy](#) *reference*  
Tree [nasreq-auth-policy](#)  
Reference **configure** [subscriber-mgmt](#) [diameter-nasreq-policy](#) *string*  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **oper-up-while-empty** *boolean*

Synopsis Enable this group interface without any active SAPs  
Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [oper-up-while-empty](#) *boolean*  
Tree [oper-up-while-empty](#)  
Default false  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **pppoe**

Synopsis Enter the **pppoe** context  
Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [pppoe](#)

Tree	<a href="#">pppoe</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of PPPoE
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">pppoe</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **anti-spoof** *keyword*

Synopsis	PPPoE anti-spoof filtering
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">pppoe</a> <a href="#">anti-spoof</a> <i>keyword</i>
Tree	<a href="#">anti-spoof</a>
Default	mac-sid
Options	mac-sid, mac-sid-ip
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">pppoe</a> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## dhcp-client

Synopsis	Enter the <b>dhcp-client</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">pppoe</a> <a href="#">dhcp-client</a>
Tree	<a href="#">dhcp-client</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## client-id *keyword*

Synopsis	Type of information that DHCP option 61 contains
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">pppoe</a> <a href="#">dhcp-client</a> <a href="#">client-id</a> <i>keyword</i>
Tree	<a href="#">client-id</a>
Options	mac-pppoe-session-id
Introduced	16.0.R7
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## policy *reference*

Synopsis	PPPoE policy
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">pppoe</a> <a href="#">policy</a> <i>reference</i>
Tree	<a href="#">policy</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">ppp-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## python-policy *reference*

Synopsis	Python policy used to modify PPPoE packets
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">pppoe</a> <a href="#">python-policy</a> <i>reference</i>
Tree	<a href="#">python-policy</a>
Reference	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i>

Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sap-session-limit** *number*

Synopsis Maximum PPPoE sessions per SAP  
Context **configure** *service ies string subscriber-interface string group-interface string pppoe sap-session-limit number*  
Tree [sap-session-limit](#)  
Range 1 to 131071  
Default 1  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **session-limit** *number*

Synopsis Maximum PPPoE sessions  
Context **configure** *service ies string subscriber-interface string group-interface string pppoe session-limit number*  
Tree [session-limit](#)  
Range 1 to 333823  
Default 1  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **user-db** *reference*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Local user database for authentication  
Context **configure** *service ies string subscriber-interface string group-interface string pppoe user-db reference*  
Tree [user-db](#)  
Reference **configure** *subscriber-mgmt local-user-db string*  
Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **radius-auth-policy** *reference*

Synopsis RADIUS authentication policy

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [radius-auth-policy](#) *reference*

Tree [radius-auth-policy](#)

Reference **configure** [subscriber-mgmt](#) [radius-authentication-policy](#) *string*

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **redundant-interface** *reference*

Synopsis Redundant interface

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [redundant-interface](#) *reference*

Tree [redundant-interface](#)

Reference **configure** [service ies](#) *string* [redundant-interface](#) *string*

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sap** [[sap-id](#)] *string*

Synopsis Enter the **sap** list instance

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [sap](#) *string*

Tree [sap](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[sap-id]** *string*

Synopsis SAP ID

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [sap](#) *string*

Tree [sap](#)

String Length 1 to 45

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **accounting-policy** *reference*

Synopsis	Accounting policy
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>accounting-policy</b> <i>reference</i>
Tree	<b>accounting-policy</b>
Reference	<b>configure</b> <b>log</b> <b>accounting-policy</b> <i>number</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of the SAP
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Default	enable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **anti-spoof** *keyword*

Synopsis	Type of anti-spoof filtering
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>anti-spoof</b> <i>keyword</i>
Tree	<b>anti-spoof</b>
Options	source-ip-addr, source-ip-and-mac-addr, next-hop-ip-and-mac-addr
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **app-profile** *reference*

Synopsis	Application profile name
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">app-profile</a> <i>reference</i>
Tree	<a href="#">app-profile</a>
Reference	<b>configure</b> <a href="#">application-assurance</a> <a href="#">group</a> <i>number</i> <a href="#">partition</a> <i>number</i> <a href="#">policy</a> <a href="#">app-profile</a> <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **calling-station-id** *string*

Synopsis	Calling station ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">calling-station-id</a> <i>string</i>
Tree	<a href="#">calling-station-id</a>
String Length	1 to 64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **collect-stats** *boolean*

Synopsis	Collect accounting statistics
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">collect-stats</a> <i>boolean</i>
Tree	<a href="#">collect-stats</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **cpu-protection**

Synopsis	Enter the <b>cpu-protection</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">cpu-protection</a>
Tree	<a href="#">cpu-protection</a>
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s

## eth-cfm-monitoring

Synopsis Enable the **eth-cfm-monitoring** context

Context **configure** *service ies string subscriber-interface string group-interface string sap string*  
*cpu-protection eth-cfm-monitoring*

Tree [eth-cfm-monitoring](#)

Notes The following elements are part of a choice: **eth-cfm-monitoring**, **ip-src-monitoring**, or **mac-monitoring**.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s

## aggregate

Synopsis Apply rate limit to the sum of per-peer packet rates

Context **configure** *service ies string subscriber-interface string group-interface string sap string*  
*cpu-protection eth-cfm-monitoring aggregate*

Tree [aggregate](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s

## car

Synopsis Ignore Ethernet CFM packets when enforcing overall rate

Context **configure** *service ies string subscriber-interface string group-interface string sap string*  
*cpu-protection eth-cfm-monitoring car*

Tree [car](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s

## ip-src-monitoring

Synopsis Enable IP source monitoring for CPU protection

Context **configure** *service ies string subscriber-interface string group-interface string sap string*  
*cpu-protection ip-src-monitoring*

Tree [ip-src-monitoring](#)

Notes	The following elements are part of a choice: <b>eth-cfm-monitoring</b> , <b>ip-src-monitoring</b> , or <b>mac-monitoring</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s

## mac-monitoring

Synopsis	Monitor MAC for CPU protection
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>cpu-protection</b> <b>mac-monitoring</b>
Tree	<b>mac-monitoring</b>
Notes	The following elements are part of a choice: <b>eth-cfm-monitoring</b> , <b>ip-src-monitoring</b> , or <b>mac-monitoring</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s

## policy-id reference

Synopsis	CPM protection policy
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>cpu-protection</b> <b>policy-id</b> <i>reference</i>
Tree	<b>policy-id</b>
Reference	<b>configure</b> <b>system</b> <b>security</b> <b>cpu-protection</b> <b>policy</b> <i>number</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s

## default-host

Synopsis	Enter the <b>default-host</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>default-host</b>
Tree	<b>default-host</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

## **ipv4** [address] reference prefix-length number

Synopsis	Enter the <b>ipv4</b> list instance
Context	<b>configure</b> service ies string subscriber-interface string group-interface string sap string default-host ipv4 reference prefix-length number
Tree	ipv4
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

## **[address]** reference

Synopsis	IPv4 default host address
Context	<b>configure</b> service ies string subscriber-interface string group-interface string sap string default-host ipv4 reference prefix-length number
Tree	ipv4
Reference	<b>configure</b> service ies string subscriber-interface string ipv4 address string
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

## **prefix-length** number

Synopsis	IPv4 address prefix length
Context	<b>configure</b> service ies string subscriber-interface string group-interface string sap string default-host ipv4 reference prefix-length number
Tree	ipv4
Range	0 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

## **next-hop** string

### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Next hop IP address
Context	<b>configure service ies</b> <i>string subscriber-interface string group-interface string sap string default-host ipv4 reference prefix-length number next-hop string</i>
Tree	<a href="#">next-hop</a>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **ipv6** [[address](#)] *string prefix-length number*

Synopsis	Enter the <b>ipv6</b> list instance
Context	<b>configure service ies</b> <i>string subscriber-interface string group-interface string sap string default-host ipv6 string prefix-length number</i>
Tree	<a href="#">ipv6</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **[address]** *string*

Synopsis	IPv6 default host address
Context	<b>configure service ies</b> <i>string subscriber-interface string group-interface string sap string default-host ipv6 string prefix-length number</i>
Tree	<a href="#">ipv6</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **prefix-length** *number*

Synopsis	IPv6 address prefix length
Context	<b>configure service ies</b> <i>string subscriber-interface string group-interface string sap string default-host ipv6 string prefix-length number</i>
Tree	<a href="#">ipv6</a>
Range	0 to 128
Notes	This element is part of a list key.
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### next-hop *string*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Next hop IP address

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **sap** *string* **default-host** **ipv6** *string* **prefix-length** *number* **next-hop** *string*

Tree **next-hop**

Notes This element is mandatory.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### description *string*

Synopsis Text description

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **sap** *string* **description** *string*

Tree **description**

String Length 1 to 160

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### dist-cpu-protection *reference*

Synopsis Distributed CPU protection policy for SAP

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **sap** *string* **dist-cpu-protection** *reference*

Tree **dist-cpu-protection**

Reference **configure** **system** **security** **dist-cpu-protection** *policy* *string*

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## egress

Synopsis	Enter the <b>egress</b> context
Context	<b>configure service ies string subscriber-interface string group-interface string sap string egress</b>
Tree	<b>egress</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## agg-rate

Synopsis	Enter the <b>agg-rate</b> context
Context	<b>configure service ies string subscriber-interface string group-interface string sap string egress agg-rate</b>
Tree	<b>agg-rate</b>
Notes	This element is the default part of a choice.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## adaptation-rule *keyword*

Synopsis	Adaptation rule to compute the operational PIR value when an aggregate shaper is used
Context	<b>configure service ies string subscriber-interface string group-interface string sap string egress agg-rate adaptation-rule keyword</b>
Tree	<b>adaptation-rule</b>
Default	closest
Options	max, min, closest
Introduced	22.10.R1
Platforms	7750 SR-1, 7750 SR-s

## burst-limit (*number* | *keyword*)

Synopsis	Shaping burst size when an aggregate shaper is used
Context	<b>configure service ies string subscriber-interface string group-interface string sap string egress agg-rate burst-limit (number   keyword)</b>
Tree	<b>burst-limit</b>
Range	1 to 14000000

Default	auto
Units	bytes
Options	auto
Introduced	22.10.R1
Platforms	7750 SR-1, 7750 SR-s

### **limit-unused-bandwidth** *boolean*

Synopsis	Enable aggregate rate overrun protection
Context	<b>configure</b> <b>service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress agg-rate limit-unused-bandwidth</b> <i>boolean</i>
Tree	<a href="#">limit-unused-bandwidth</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **queue-frame-based-accounting** *boolean*

Synopsis	Enable frame-based accounting on all policers and queues associated with context
Context	<b>configure</b> <b>service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress agg-rate queue-frame-based-accounting</b> <i>boolean</i>
Tree	<a href="#">queue-frame-based-accounting</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **rate** *number*

Synopsis	Enforced aggregate rate for all queues
Context	<b>configure</b> <b>service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress agg-rate rate</b> <i>number</i>
Tree	<a href="#">rate</a>
Range	1 to 6400000000
Units	kilobps
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## filter

Synopsis	Enter the <b>filter</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress filter</b>
Tree	<b>filter</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ip reference

Synopsis	IPv4 filter policy name
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress filter ip reference</b>
Tree	<b>ip</b>
Reference	<b>configure filter ip-filter</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ipv6 reference

Synopsis	IPv6 filter policy name
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress filter ipv6 reference</b>
Tree	<b>ipv6</b>
Reference	<b>configure filter ipv6-filter</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## qos

Synopsis	Enter the <b>qos</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos</b>
Tree	<b>qos</b>
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **policer-control-policy**

Synopsis Enter the **policer-control-policy** context

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [sap](#) *string* [egress qos](#) **policer-control-policy**

Tree [policer-control-policy](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **policy-name** *reference*

Synopsis Policer control policy name

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [sap](#) *string* [egress qos](#) **policer-control-policy** *policy-name* *reference*

Tree [policy-name](#)

Reference **configure** [qos](#) **policer-control-policy** *string*

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **qinq-mark-top-only** *boolean*

Synopsis Mark top Q-tags

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [sap](#) *string* [egress qos](#) **qinq-mark-top-only** *boolean*

Tree [qinq-mark-top-only](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sap-egress**

Synopsis Enter the **sap-egress** context

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [sap](#) *string* [egress qos](#) **sap-egress**

Tree [sap-egress](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **policy-name** *reference*

Synopsis Policy ID to associate with SAP for mirrored service  
Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [policy-name](#) *reference*  
Tree [policy-name](#)  
Reference **configure** [qos](#) [sap-egress](#) *string*  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **scheduler-policy**

Synopsis Enter the **scheduler-policy** context  
Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [sap](#) *string* [egress](#) [qos](#) [scheduler-policy](#)  
Tree [scheduler-policy](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **policy-name** *reference*

Synopsis Scheduler policy name  
Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [sap](#) *string* [egress](#) [qos](#) [scheduler-policy](#) [policy-name](#) *reference*

Reference **configure** [qos](#) [scheduler-policy](#) *string*  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **eth-cfm**

Synopsis Enter the **eth-cfm** context

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm</b>
Tree	<b>eth-cfm</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### collect-lmm-fc-stats

Synopsis	Enter the <b>collect-lmm-fc-stats</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm</b> <b>collect-lmm-fc-stats</b>
Tree	<b>collect-lmm-fc-stats</b>
Description	<p>Commands in this context configure per forwarding class (FC) LMM information collection.</p> <p>The commands <b>fc-in-profile</b> and <b>fc</b> in this context are mutually exclusive. The commands apply to either profile-aware or profile-unaware FCs respectively.</p> <p>This command and the <b>collect-lmm-stats</b> command are mutually exclusive when there is entity resource contention.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### fc keyword

Synopsis	Forwarding class name for profile-unaware counter
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm</b> <b>collect-lmm-fc-stats</b> <b>fc</b> <i>keyword</i>
Tree	<b>fc</b>
Description	<p>This command configures individual counters for the specified FCs without regard for profile. The system includes all countable packets that match a configured FC, regardless of profile, in this counter.</p> <p>An FC specified as part of this command and for this specific context cannot be specified as a profile-aware FC using the <b>fc-in-profile</b> command under the <b>collect-lmm-fc-stats</b> context.</p> <p>When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.</p>
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **fc-in-profile** *keyword*

Synopsis Forwarding class name for profile-aware counter

Context **configure** *service ies string subscriber-interface string group-interface string sap string eth-cfm collect-lmm-fc-stats fc-in-profile keyword*

Tree [fc-in-profile](#)

Description This command configures individual counters for the specified FCs with regard to profile. The system includes all countable packets that match a configured FC and that are deemed to be in-profile in this counter.

An FC specified as part of this command and for this specific context cannot be specified as a profile-unaware FC using the **fc** command under the **collect-lmm-fc-stats** context.

When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.

Options be, l2, af, l1, h2, ef, h1, nc

Max. Instances 8

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **collect-lmm-stats** *boolean*

Synopsis Collect statistics for loss measurement message tests

Context **configure** *service ies string subscriber-interface string group-interface string sap string eth-cfm collect-lmm-stats boolean*

Tree [collect-lmm-stats](#)

Description When configured to **true**, the router instantiates the statistical counter to transmit and receive packets for the LAG facility MEP bindings.

The **show eth-cfm collect-lmm-stats** command displays entities that have been enabled to collect transit and receive counters.

When configured to **false**, the router does not instantiate the counter and the LMM PDU associated with the MEP does not populate the counters in the packet.

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

## **mep** *md-admin-name reference ma-admin-name reference mep-id number*

Synopsis	Enter the <b>mep</b> list instance
Context	<b>configure</b> <i>service ies string subscriber-interface string group-interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number</i>
Tree	<i>mep</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

## **md-admin-name** *reference*

Synopsis	Maintenance Domain (MD) name
Context	<b>configure</b> <i>service ies string subscriber-interface string group-interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number</i>
Tree	<i>mep</i>
Reference	<b>configure</b> <i>eth-cfm domain string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

## **ma-admin-name** *reference*

Synopsis	Maintenance Association (MA) name
Context	<b>configure</b> <i>service ies string subscriber-interface string group-interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number</i>
Tree	<i>mep</i>
Reference	<b>configure</b> <i>eth-cfm domain string association string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

## **mep-id** *number*

Synopsis	Maintenance Endpoint (MEP) ID
Context	<b>configure</b> <i>service ies string subscriber-interface string group-interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number</i>
Tree	<i>mep</i>

Range	1 to 8191
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **admin-state** *keyword*

Synopsis	Administrative state of the MEP
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm</b> <b>mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **ais** *boolean*

Synopsis	Enable the generation and the reception of AIS messages
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm</b> <b>mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>ais</b> <i>boolean</i>
Tree	<b>ais</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **alarm-notification**

Synopsis	Enter the <b>alarm-notification</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm</b> <b>mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>alarm-notification</b>
Tree	<b>alarm-notification</b>
Description	Commands in this context configure the Fault Notification Generator (FNG) time values to raise an alarm or reset the CCM defect alarm.

Use these timers for network management processes. The timers are not tied into delaying the notification to the fault management system on the network element and do not affect fault propagation mechanisms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **fng-alarm-time** *number*

Synopsis	Time that must expire before an FNG alarm is raised
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm</b> <b>mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>alarm-notification</b> <b>fng-alarm-time</b> <i>number</i>
Tree	<b>fng-alarm-time</b>
Range	250   500   1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **fng-reset-time** *number*

Synopsis	Time that must expire before an FNG alarm is reset
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm</b> <b>mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>alarm-notification</b> <b>fng-reset-time</b> <i>number</i>
Tree	<b>fng-reset-time</b>
Range	250   500   1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **ccm** *boolean*

Synopsis	Generate CCM messages
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm</b> <b>mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>ccm</b> <i>boolean</i>
Tree	<b>ccm</b>
Default	false

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **ccm-ltm-priority** *number*

Synopsis	Priority of CCM and LTM messages transmitted by the MEP
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm</b> <b>mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>ccm-ltm-priority</b> <i>number</i>
Tree	<b>ccm-ltm-priority</b>
Range	0 to 7
Default	7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **ccm-padding-size** *number*

Synopsis	Number of octets of padding to insert in CCM packets
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm</b> <b>mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>ccm-padding-size</b> <i>number</i>
Tree	<b>ccm-padding-size</b>
Description	This command sets the byte size of the optional Data TLV to be included in the ETH-CC PDU.  This command increases the size of the ETH-CC PDU by the configured value. The base size of the ETH-CC PDU, including the Interface Status TLV and Port Status TLV, is 83 bytes not including the Layer 2 encapsulation. CCM padding is not supported when the CCM interval (configured through <b>configure eth-cfm domain association ccm-interval</b> ) is less than 1 second.
Range	3 to 1500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **csf**

Synopsis	Enable the <b>csf</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm</b> <b>mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>csf</b>

Tree	<a href="#">csf</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **multiplier** *decimal-number*

Synopsis	Multiplication factor used to clear the CSF condition
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">csf</a> <a href="#">multiplier</a> <i>decimal-number</i>
Tree	<a href="#">multiplier</a>
Range	0.0   2.0 to 30.0
Default	3.5
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **eth-test**

Synopsis	Enable the <b>eth-test</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">eth-test</a>
Tree	<a href="#">eth-test</a>
Description	Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the <b>oam eth-cfm eth-test</b> command.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **bit-error-threshold** *number*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm</b> <b>mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>eth-test</b> <b>bit-error-threshold</b> <i>number</i>
Tree	<a href="#">bit-error-threshold</a>
Range	0 to 11840
Default	1
Units	bit errors
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **test-pattern**

Synopsis	Enter the <b>test-pattern</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm</b> <b>mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>eth-test</b> <b>test-pattern</b>
Tree	<a href="#">test-pattern</a>
Description	Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **crc-tlv** *boolean*

Synopsis	Generate a CRC checksum
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm</b> <b>mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>eth-test</b> <b>test-pattern</b> <b>crc-tlv</b> <i>boolean</i>
Tree	<a href="#">crc-tlv</a>
Default	false
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **pattern** keyword

Synopsis Test pattern for Ethernet Test frames

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **sap** *string* **eth-cfm** **mep** **md-admin-name** *reference* **ma-admin-name** *reference* **mep-id** *number* **eth-test** **test-pattern** **pattern** *keyword*

Tree **pattern**

Description This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.

Default all-zeros

Options all-zeros, all-ones

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **fault-propagation** keyword

Synopsis Fault propagation for the MEP

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **sap** *string* **eth-cfm** **mep** **md-admin-name** *reference* **ma-admin-name** *reference* **mep-id** *number* **fault-propagation** *keyword*

Tree **fault-propagation**

Options use-if-status-tlv, suspend-ccm

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **grace**

Synopsis Enter the **grace** context

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **sap** *string* **eth-cfm** **mep** **md-admin-name** *reference* **ma-admin-name** *reference* **mep-id** *number* **grace**

Tree **grace**

Description Commands in this context configure the Nokia ETH-CFM Grace function and the ITU-T Y.1731 Ethernet Expected Default (ETH-ED) function.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

## eth-ed

Synopsis Enter the **eth-ed** context

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **sap** *string* **eth-cfm** **mep** **md-admin-name** *reference* **ma-admin-name** *reference* **mep-id** *number* **grace** **eth-ed**

Tree **eth-ed**

Description Commands in this context configure the ITU-T Y.1731 ETH-ED function.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

## max-rx-defect-window *number*

Synopsis Maximum received ETH-ED expected defect window duration

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **sap** *string* **eth-cfm** **mep** **md-admin-name** *reference* **ma-admin-name** *reference* **mep-id** *number* **grace** **eth-ed** **max-rx-defect-window** *number*

Tree **max-rx-defect-window**

Range 1 to 86400

Units seconds

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

## priority *number*

Synopsis Transmission priority for ETH-ED PDUs

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **sap** *string* **eth-cfm** **mep** **md-admin-name** *reference* **ma-admin-name** *reference* **mep-id** *number* **grace** **eth-ed** **priority** *number*

Tree **priority**

Range 0 to 7

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **rx-eth-ed** *boolean*

Synopsis	Receive and process ETH-ED ITU-T Y.1731 PDUs on the MEP
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm</b> <b>mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>grace</b> <b>eth-ed</b> <b>rx-eth-ed</b> <i>boolean</i>
Tree	<a href="#">rx-eth-ed</a>
Description	This command enables the reception and processing of the ITU-T Y.1731 ETH-ED PDU on the MEP.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **tx-eth-ed** *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm</b> <b>mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>grace</b> <b>eth-ed</b> <b>tx-eth-ed</b> <i>boolean</i>
Tree	<a href="#">tx-eth-ed</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **eth-vsm-grace**

Synopsis	Enter the <b>eth-vsm-grace</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm</b> <b>mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>grace</b> <b>eth-vsm-grace</b>
Tree	<a href="#">eth-vsm-grace</a>
Description	Commands in this context configure the Nokia ETH-CFM Grace function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **rx-eth-vsm-grace** *boolean*

Synopsis	Receive and process Nokia ETH-CFM Grace PDU on the MEP
----------	--

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>grace eth-vsm-grace rx-eth-vsm-grace</b> <i>boolean</i>
Tree	<b>rx-eth-vsm-grace</b>
Description	When configured to <b>true</b> , the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.  When configured to <b>false</b> , the router disables the Nokia Grace function.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **tx-eth-vsm-grace** *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>grace eth-vsm-grace tx-eth-vsm-grace</b> <i>boolean</i>
Tree	<b>tx-eth-vsm-grace</b>
Description	When configured to <b>true</b> , the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.  The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.  The operator must configure the <b>configure system eth-cfm grace</b> command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).  When configured to <b>false</b> , the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **low-priority-defect** *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>low-priority-defect</b> <i>keyword</i>

Tree	<a href="#">low-priority-defect</a>
Default	mac-rem-err-xcon
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **one-way-delay-threshold** *number*

Synopsis	Threshold time limit for the one-way delay test
Context	<b>configure</b> <b>service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>one-way-delay-threshold</b> <i>number</i>
Tree	<a href="#">one-way-delay-threshold</a>
Range	0 to 600
Default	3
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **squelch-ingress-levels** *number*

Synopsis	Levels for which ETH-CFM packets are silently discarded
Context	<b>configure</b> <b>service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm squelch-ingress-levels</b> <i>number</i>
Tree	<a href="#">squelch-ingress-levels</a>
Description	<p>This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.</p> <p>The list of levels must be a complete contiguous list from 0 up to the highest level that will be dropped.</p>
Range	0 to 7
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

## fwd-wholesale

Synopsis	Enter the <b>fwd-wholesale</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>fwd-wholesale</b>
Tree	<b>fwd-wholesale</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## pppoe-service *reference*

Synopsis	PPPoE service name
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>fwd-wholesale pppoe-service</b> <i>reference</i>
Tree	<b>pppoe-service</b>
Reference	<b>configure service epipe</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## host-admin-state *keyword*

Synopsis	Administrative state of the hosts
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>host-admin-state</b> <i>keyword</i>
Tree	<b>host-admin-state</b>
Default	enable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## host-lockout-policy *reference*

Synopsis	Host lockout policy
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>host-lockout-policy</b> <i>reference</i>
Tree	<b>host-lockout-policy</b>

Reference	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">host-lockout-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## igmp-host-tracking

Synopsis	Enter the <b>igmp-host-tracking</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">igmp-host-tracking</a>
Tree	<a href="#">igmp-host-tracking</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## expiry-time *number*

Synopsis	Time that the system continues to track inactive hosts
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">igmp-host-tracking</a> <a href="#">expiry-time</a> <i>number</i>
Tree	<a href="#">expiry-time</a>
Range	1 to 65535
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## import-policy *reference*

Synopsis	Import policy that filters IGMP packets
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">igmp-host-tracking</a> <a href="#">import-policy</a> <i>reference</i>
Tree	<a href="#">import-policy</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **maximum-number-group-sources** *number*

Synopsis	Maximum number of multicast groups to be tracked per group
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>igmp-host-tracking</b> <b>maximum-number-group-sources</b> <i>number</i>
Tree	<b>maximum-number-group-sources</b>
Range	1 to 32000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **maximum-number-groups** *number*

Synopsis	Maximum number of multicast groups to be tracked
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>igmp-host-tracking</b> <b>maximum-number-groups</b> <i>number</i>
Tree	<b>maximum-number-groups</b>
Range	1 to 16000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **maximum-number-sources** *number*

Synopsis	Maximum number of multicast sources to be tracked
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>igmp-host-tracking</b> <b>maximum-number-sources</b> <i>number</i>
Tree	<b>maximum-number-sources</b>
Range	1 to 1000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **router-alert-check** *boolean*

Synopsis	Enable IGMP router alert check option
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>igmp-host-tracking</b> <b>router-alert-check</b> <i>boolean</i>
Tree	<b>router-alert-check</b>
Default	true

Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ingress

Synopsis Enter the **ingress** context  
Context **configure service ies** *string* *subscriber-interface* *string* *group-interface* *string* *sap* *string*  
*ingress*  
Tree *ingress*  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## filter

Synopsis Enter the **filter** context  
Context **configure service ies** *string* *subscriber-interface* *string* *group-interface* *string* *sap* *string*  
*ingress filter*

## **policy-name** *reference*

Synopsis	Policy ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">policy-name</a> <i>reference</i>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">sap-ingress</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **queuing-type** *keyword*

Synopsis	Queuing type
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">queuing-type</a> <i>keyword</i>
Tree	<a href="#">queuing-type</a>
Options	shared, multipoint-shared
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, VSR

## **scheduler-policy**

Synopsis	Enter the <b>scheduler-policy</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a>
Tree	<a href="#">scheduler-policy</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **policy-name** *reference*

Synopsis	Scheduler policy name
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">policy-name</a> <i>reference</i>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">scheduler-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **lag**

Synopsis	Enter the <b>lag</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">lag</a>
Tree	<a href="#">lag</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **link-map-profile** *number*

Synopsis	LAG link map profile for a SAP or network interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">lag</a> <a href="#">link-map-profile</a> <i>number</i>
Tree	<a href="#">link-map-profile</a>
Description	This command assigns a preconfigured LAG link map profile to a SAP or network interface configured on a LAG or a PW port that exists on a LAG. After an operator

assigns a LAG link map profile, the system rehashes the SAP or network interface egress traffic over the LAG as required by the new configuration.

If the LAG link map profile for a SAP or network interface is deleted, the system reverts back to per-flow hashing.

Range	1 to 64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## per-link-hash

Synopsis	Enter the <b>per-link-hash</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>lag per-link-hash</b>
Tree	<b>per-link-hash</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## class number

Synopsis	Class used on LAG egress using weighted per-link-hash
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>lag per-link-hash class</b> <i>number</i>
Tree	<b>class</b>
Range	1 to 3
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## weight number

Synopsis	Weight used on LAG egress using weighted per-link-hash
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>lag per-link-hash weight</b> <i>number</i>
Tree	<b>weight</b>
Range	1 to 1024
Default	1
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **monitor-oper-group** *reference*

Synopsis Monitor operational group

Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [sap](#) *string* [monitor-oper-group](#) *reference*

Tree [monitor-oper-group](#)

Reference **configure** [service](#) [oper-group](#) *string*

Notes The following elements are part of a choice: **monitor-oper-group** or **oper-group**.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **multi-service-site** *reference*

Synopsis Multi service site name

Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [sap](#) *string* [multi-service-site](#) *reference*

Tree [multi-service-site](#)

Reference **configure** [service](#) [customer](#) *string* [multi-service-site](#) *string*

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **oper-group** *reference*

Synopsis Operational group

Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [sap](#) *string* [oper-group](#) *reference*

Tree [oper-group](#)

Reference **configure** [service](#) [oper-group](#) *string*

Notes The following elements are part of a choice: **monitor-oper-group** or **oper-group**.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## static-host

Synopsis	Enter the <b>static-host</b> context
Context	<b>configure service ies string subscriber-interface string group-interface string sap string static-host</b>
Tree	<b>static-host</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ipv4 [ip] string mac string

Synopsis	Enter the <b>ipv4</b> list instance
Context	<b>configure service ies string subscriber-interface string group-interface string sap string static-host ipv4 string mac string</b>
Tree	<b>ipv4</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## [ip] string

Synopsis	IPv4 address used by the static host
Context	<b>configure service ies string subscriber-interface string group-interface string sap string static-host ipv4 string mac string</b>
Tree	<b>ipv4</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## mac string

Synopsis	MAC address used by the static host
Context	<b>configure service ies string subscriber-interface string group-interface string sap string static-host ipv4 string mac string</b>
Tree	<b>ipv4</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of the static host
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">static-host</a> <a href="#">ipv4</a> <a href="#">string</a> <a href="#">mac</a> <a href="#">string</a> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ancp-string** *string*

Synopsis	ANCP string
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">static-host</a> <a href="#">ipv4</a> <a href="#">string</a> <a href="#">mac</a> <a href="#">string</a> <b>ancp-string</b> <i>string</i>
Tree	<a href="#">ancp-string</a>
String Length	1 to 63
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **app-profile**

Synopsis	Enter the <b>app-profile</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">static-host</a> <a href="#">ipv4</a> <a href="#">string</a> <a href="#">mac</a> <a href="#">string</a> <b>app-profile</b>
Tree	<a href="#">app-profile</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **profile** *reference*

Synopsis	Application profile used by the static host
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">static-host</a> <a href="#">ipv4</a> <a href="#">string</a> <a href="#">mac</a> <a href="#">string</a> <b>app-profile</b> <i>profile</i> <i>reference</i>
Tree	<a href="#">profile</a>

Reference	<b>configure</b> <a href="#">application-assurance</a> <a href="#">group</a> <i>number</i> <a href="#">partition</a> <i>number</i> <a href="#">policy</a> <a href="#">app-profile</a> <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **scope** *keyword*

Synopsis	Scope of the static host application profile
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host</a> <a href="#">ipv4</a> <i>string</i> <a href="#">mac</a> <i>string</i> <a href="#">app-profile</a> <a href="#">scope</a> <i>keyword</i>
Tree	<a href="#">scope</a>
Default	subscriber
Options	subscriber, mac
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **int-dest-id** *string*

Synopsis	Intermediate destination ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host</a> <a href="#">ipv4</a> <i>string</i> <a href="#">mac</a> <i>string</i> <a href="#">int-dest-id</a> <i>string</i>
Tree	<a href="#">int-dest-id</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **managed-route** [[prefix](#)] *string*

Synopsis	Enter the <b>managed-route</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host</a> <a href="#">ipv4</a> <i>string</i> <a href="#">mac</a> <i>string</i> <a href="#">managed-route</a> <i>string</i>
Tree	<a href="#">managed-route</a>
Description	Commands in this context configure managed route parameters.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### [prefix] string

Synopsis	Managed route prefix associated with IPv4 static host
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">static-host</a> <a href="#">ipv4</a> <a href="#">string</a> <a href="#">mac</a> <a href="#">string</a> <a href="#">managed-route</a> <a href="#">string</a>
Tree	<a href="#">managed-route</a>
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### cpe-check

Synopsis	Enable the <b>cpe-check</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">static-host</a> <a href="#">ipv4</a> <a href="#">string</a> <a href="#">mac</a> <a href="#">string</a> <a href="#">managed-route</a> <a href="#">string</a> <a href="#">cpe-check</a>
Tree	<a href="#">cpe-check</a>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### destination-ip-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

#### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IP address of the target CPE device
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">static-host</a> <a href="#">ipv4</a> <a href="#">string</a> <a href="#">mac</a> <a href="#">string</a> <a href="#">managed-route</a> <a href="#">string</a> <a href="#">cpe-check</a> <a href="#">destination-ip-address</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">destination-ip-address</a>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### drop-count number

Synopsis	Consecutive ping replies missed before CPE deemed down
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">static-host</a> <a href="#">ipv4</a> <a href="#">string</a> <a href="#">mac</a> <a href="#">string</a> <a href="#">managed-route</a> <a href="#">string</a> <a href="#">cpe-check</a> <a href="#">drop-count</a> <a href="#">number</a>

Tree	<a href="#">drop-count</a>
Range	1 to 255
Default	3
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### failed-action

Synopsis	Enter the <b>failed-action</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host</a> <a href="#">ipv4</a> <i>string</i> <a href="#">mac</a> <i>string</i> <a href="#">managed-route</a> <i>string</i> <a href="#">cpe-check</a> <a href="#">failed-action</a>
Tree	<a href="#">failed-action</a>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### metric number

Synopsis	Metric associated with the provisioned managed route
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host</a> <a href="#">ipv4</a> <i>string</i> <a href="#">mac</a> <i>string</i> <a href="#">managed-route</a> <i>string</i> <a href="#">cpe-check</a> <a href="#">failed-action</a> <a href="#">metric</a> <i>number</i>
Tree	<a href="#">metric</a>
Max. Range	0 to 4294967295
Default	0
Notes	The following elements are part of a choice: ( <b>metric</b> , <b>preference</b> , and <b>tag</b> ) or <b>withdraw</b> .
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### preference number

Synopsis	Preference associated to the provisioned managed route
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host</a> <a href="#">ipv4</a> <i>string</i> <a href="#">mac</a> <i>string</i> <a href="#">managed-route</a> <i>string</i> <a href="#">cpe-check</a> <a href="#">failed-action</a> <a href="#">preference</a> <i>number</i>
Tree	<a href="#">preference</a>
Description	This command configures the preference associated with the provisioned managed route.

Range	0 to 255
Notes	The following elements are part of a choice: ( <b>metric</b> , <b>preference</b> , and <b>tag</b> ) or <b>withdraw</b> .
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **tag number**

Synopsis	Route tag used if CPE check fails
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host ipv4</b> <i>string</i> <b>mac</b> <i>string</i> <b>managed-route</b> <i>string</i> <b>cpe-check</b> <b>failed-action</b> <b>tag</b> <i>number</i>
Tree	<b>tag</b>
Max. Range	0 to 4294967295
Default	0
Notes	The following elements are part of a choice: ( <b>metric</b> , <b>preference</b> , and <b>tag</b> ) or <b>withdraw</b> .
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **withdraw boolean**

Synopsis	Withdraw the route when the CPE check fails
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host ipv4</b> <i>string</i> <b>mac</b> <i>string</i> <b>managed-route</b> <i>string</i> <b>cpe-check</b> <b>failed-action</b> <b>withdraw</b> <i>boolean</i>
Tree	<b>withdraw</b>
Default	false
Notes	The following elements are part of a choice: ( <b>metric</b> , <b>preference</b> , and <b>tag</b> ) or <b>withdraw</b> .
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **interval number**

Synopsis	Time between ICMP pings to the target CPE IP address
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host ipv4</b> <i>string</i> <b>mac</b> <i>string</i> <b>managed-route</b> <i>string</i> <b>cpe-check</b> <b>interval</b> <i>number</i>
Tree	<b>interval</b>

Description	This command configures the interval between ICMP pings to the target IP address.
Range	1 to 255
Default	1
Units	seconds
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **log** *boolean*

Synopsis	Log CPE connectivity checks transitions
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host</b> <b>ipv4</b> <i>string</i> <b>mac</b> <i>string</i> <b>managed-route</b> <i>string</i> <b>cpe-check</b> <b>log</b> <i>boolean</i>
Tree	<b>log</b>
Description	This command logs the transitions between active and in-active based on the CPE connectivity check. Events are sent to the system log, syslog, and SNMP traps.
Default	false
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **padding-size** *number*

Synopsis	Padding size for CPE connectivity checks
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host</b> <b>ipv4</b> <i>string</i> <b>mac</b> <i>string</i> <b>managed-route</b> <i>string</i> <b>cpe-check</b> <b>padding-size</b> <i>number</i>
Tree	<b>padding-size</b>
Description	This command configures the amount of padding to add to the ICMP packet in bytes.
Range	0 to 16384
Default	56
Units	bytes
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **source-ip-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source IP address used in the ICMP messages
----------	---

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host ipv4</b> <i>string</i> <b>mac</b> <i>string</i> <b>managed-route</b> <i>string</i> <b>cpe-check source-ip-address</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>source-ip-address</b>
Description	This command configures the source IP address used in the ICMP messages. When not specified, the system uses the system address of the appropriate address family.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **timeout** *number*

Synopsis	Time interval determining that a ping is missed
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host ipv4</b> <i>string</i> <b>mac</b> <i>string</i> <b>managed-route</b> <i>string</i> <b>cpe-check timeout</b> <i>number</i>
Tree	<b>timeout</b>
Description	This command configures the time interval the system waits for a reply to a specific ping before determining that the ping is missed.
Range	1 to 10
Default	1
Units	seconds
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **metric** *number*

Synopsis	Metric associated with the provisioned managed route
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host ipv4</b> <i>string</i> <b>mac</b> <i>string</i> <b>managed-route</b> <i>string</i> <b>metric</b> <i>number</i>
Tree	<b>metric</b>
Description	This command configures a metric to associate with the provisioned managed route.
Max. Range	0 to 4294967295
Default	0
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **preference** *number*

Synopsis	Preference associated to the provisioned managed route
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host</b> <b>ipv4</b> <i>string</i> <b>mac</b> <i>string</i> <b>managed-route</b> <i>string</i> <b>preference</b> <i>number</i>
Tree	<b>preference</b>
Description	This command configures the preference associated with the provisioned managed route.
Range	0 to 255
Default	0
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **tag** *number*

Synopsis	Route tag used if CPE check fails
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host</b> <b>ipv4</b> <i>string</i> <b>mac</b> <i>string</i> <b>managed-route</b> <i>string</i> <b>tag</b> <i>number</i>
Tree	<b>tag</b>
Max. Range	0 to 4294967295
Default	0
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **rip-policy** *reference*

Synopsis	RIP policy name
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host</b> <b>ipv4</b> <i>string</i> <b>mac</b> <i>string</i> <b>rip-policy</b> <i>reference</i>
Tree	<b>rip-policy</b>
Reference	<b>configure</b> <b>subscriber-mgmt</b> <b>rip-policy</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **shcv**

Synopsis	Enter the <b>shcv</b> context
----------	-------------------------------

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host ipv4</b> <i>string</i> <b>mac</b> <i>string</i> <b>shcv</b>
Tree	<b>shcv</b>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sla-profile** *reference*

Synopsis	SLA profile name
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host ipv4</b> <i>string</i> <b>mac</b> <i>string</i> <b>sla-profile</b> <i>reference</i>
Tree	<b>sla-profile</b>
Reference	<b>configure subscriber-mgmt</b> <b>sla-profile</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sub-profile** *reference*

Synopsis	Sub-profile name
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host ipv4</b> <i>string</i> <b>mac</b> <i>string</i> <b>sub-profile</b> <i>reference</i>
Tree	<b>sub-profile</b>
Reference	<b>configure subscriber-mgmt</b> <b>sub-profile</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **subscriber-id**

Synopsis	Enter the <b>subscriber-id</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host ipv4</b> <i>string</i> <b>mac</b> <i>string</i> <b>subscriber-id</b>
Tree	<b>subscriber-id</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **string** *string*

Synopsis	Subscriber identification
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">static-host</a> <a href="#">ipv4</a> <a href="#">string</a> <a href="#">mac</a> <a href="#">string</a> <a href="#">subscriber-id</a> <a href="#">string</a> <a href="#">string</a>
Tree	<a href="#">string</a>
String Length	1 to 64
Notes	The following elements are part of a choice: <b>string</b> or <b>use-sap-id</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **use-sap-id**

Synopsis	Use the SAP id as subscriber ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">static-host</a> <a href="#">ipv4</a> <a href="#">string</a> <a href="#">mac</a> <a href="#">string</a> <a href="#">subscriber-id</a> <a href="#">use-sap-id</a>
Tree	<a href="#">use-sap-id</a>
Notes	The following elements are part of a choice: <b>string</b> or <b>use-sap-id</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **ipv6** [[prefix](#)] [string](#) [mac](#) [string](#)

Synopsis	Enter the <b>ipv6</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">static-host</a> <a href="#">ipv6</a> <a href="#">string</a> <a href="#">mac</a> <a href="#">string</a>
Tree	<a href="#">ipv6</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## [[prefix](#)] [string](#)

Synopsis	IPv6 prefix
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">static-host</a> <a href="#">ipv6</a> <a href="#">string</a> <a href="#">mac</a> <a href="#">string</a>
Tree	<a href="#">ipv6</a>
Notes	This element is part of a list key.

Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **mac string**

Synopsis MAC address  
Context **configure** [service](#) [ies](#) [string](#) [subscriber-interface](#) [string](#) [group-interface](#) [string](#) [sap](#) [string](#) [static-host](#) [ipv6](#) [string](#) [mac](#) [string](#)  
Tree [ipv6](#)  
Notes This element is part of a list key.  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state keyword**

Synopsis Administrative state of the static host  
Context **configure** [service](#) [ies](#) [string](#) [subscriber-interface](#) [string](#) [group-interface](#) [string](#) [sap](#) [string](#) [static-host](#) [ipv6](#) [string](#) [mac](#) [string](#) [admin-state](#) [keyword](#)  
Tree [admin-state](#)  
Default disable  
Options enable, disable  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ancp-string string**

Synopsis ANCP string  
Context **configure** [service](#) [ies](#) [string](#) [subscriber-interface](#) [string](#) [group-interface](#) [string](#) [sap](#) [string](#) [static-host](#) [ipv6](#) [string](#) [mac](#) [string](#) [ancp-string](#) [string](#)  
Tree [ancp-string](#)  
String Length 1 to 63  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## app-profile

Synopsis	Enter the <b>app-profile</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">static-host</a> <a href="#">ipv6</a> <a href="#">string</a> <a href="#">mac</a> <a href="#">string</a> <a href="#">app-profile</a>
Tree	<a href="#">app-profile</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## profile reference

Synopsis	Application profile used by the static host
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">static-host</a> <a href="#">ipv6</a> <a href="#">string</a> <a href="#">mac</a> <a href="#">string</a> <a href="#">app-profile</a> <a href="#">profile</a> <a href="#">reference</a>
Tree	<a href="#">profile</a>
Reference	<b>configure</b> <a href="#">application-assurance</a> <a href="#">group</a> <a href="#">number</a> <a href="#">partition</a> <a href="#">number</a> <a href="#">policy</a> <a href="#">app-profile</a> <a href="#">string</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## scope keyword

Synopsis	Scope of the static host application profile
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">static-host</a> <a href="#">ipv6</a> <a href="#">string</a> <a href="#">mac</a> <a href="#">string</a> <a href="#">app-profile</a> <a href="#">scope</a> <a href="#">keyword</a>
Tree	<a href="#">scope</a>
Default	subscriber
Options	subscriber, mac
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## int-dest-id string

Synopsis	Intermediate destination ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">static-host</a> <a href="#">ipv6</a> <a href="#">string</a> <a href="#">mac</a> <a href="#">string</a> <a href="#">int-dest-id</a> <a href="#">string</a>
Tree	<a href="#">int-dest-id</a>
String Length	1 to 32

Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **mac-linking** *string*

Synopsis IPv6 host associated with the IPv4 host through the learned MAC address  
Context **configure** *service ies string subscriber-interface string group-interface string sap string static-host ipv6 string mac string mac-linking string*  
Tree *mac-linking*  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **managed-route** [*ipv6-prefix*] *string*

Synopsis Enter the **managed-route** list instance  
Context **configure** *service ies string subscriber-interface string group-interface string sap string static-host ipv6 string mac string managed-route string*  
Tree *managed-route*  
Description Commands in this context configure managed route parameters.  
Introduced 16.0.R4  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[ipv6-prefix]** *string*

Synopsis Managed route prefix associated with IPv6 static host  
Context **configure** *service ies string subscriber-interface string group-interface string sap string static-host ipv6 string mac string managed-route string*  
Tree *managed-route*  
Notes This element is part of a list key.  
Introduced 16.0.R4  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **cpe-check**

Synopsis Enable the **cpe-check** context

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host ipv6</b> <i>string</i> <b>mac</b> <i>string</i> <b>managed-route</b> <i>string</i> <b>cpe-check</b>
Tree	<b>cpe-check</b>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **destination-ip-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IP address of the target CPE device
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host ipv6</b> <i>string</i> <b>mac</b> <i>string</i> <b>managed-route</b> <i>string</i> <b>cpe-check destination-ip-address</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>destination-ip-address</b>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **drop-count** *number*

Synopsis	Consecutive ping replies missed before CPE deemed down
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host ipv6</b> <i>string</i> <b>mac</b> <i>string</i> <b>managed-route</b> <i>string</i> <b>cpe-check drop-count</b> <i>number</i>
Tree	<b>drop-count</b>
Range	1 to 255
Default	3
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **failed-action**

Synopsis	Enter the <b>failed-action</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host ipv6</b> <i>string</i> <b>mac</b> <i>string</i> <b>managed-route</b> <i>string</i> <b>cpe-check failed-action</b>
Tree	<b>failed-action</b>

Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **metric** *number*

Synopsis	Metric associated with the provisioned managed route
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host ipv6</b> <i>string</i> <b>mac</b> <i>string</i> <b>managed-route</b> <i>string</i> <b>cpe-check</b> <b>failed-action</b> <b>metric</b> <i>number</i>
Tree	<b>metric</b>
Max. Range	0 to 4294967295
Default	0
Notes	The following elements are part of a choice: ( <b>metric</b> , <b>preference</b> , and <b>tag</b> ) or <b>withdraw</b> .
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **preference** *number*

Synopsis	Preference associated to the provisioned managed route
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host ipv6</b> <i>string</i> <b>mac</b> <i>string</i> <b>managed-route</b> <i>string</i> <b>cpe-check</b> <b>failed-action</b> <b>preference</b> <i>number</i>
Tree	<b>preference</b>
Description	This command configures the preference associated with the provisioned managed route.
Range	0 to 255
Notes	The following elements are part of a choice: ( <b>metric</b> , <b>preference</b> , and <b>tag</b> ) or <b>withdraw</b> .
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **tag** *number*

Synopsis	Route tag used if CPE check fails
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host ipv6</b> <i>string</i> <b>mac</b> <i>string</i> <b>managed-route</b> <i>string</i> <b>cpe-check</b> <b>failed-action</b> <b>tag</b> <i>number</i>
Tree	<b>tag</b>

Max. Range	0 to 4294967295
Default	0
Notes	The following elements are part of a choice: ( <b>metric</b> , <b>preference</b> , and <b>tag</b> ) or <b>withdraw</b> .
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **withdraw** *boolean*

Synopsis	Withdraw the route when the CPE check fails
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host</b> <b>ipv6</b> <i>string</i> <b>mac</b> <i>string</i> <b>managed-route</b> <i>string</i> <b>cpe-check</b> <b>failed-action</b> <b>withdraw</b> <i>boolean</i>
Tree	<b>withdraw</b>
Default	false
Notes	The following elements are part of a choice: ( <b>metric</b> , <b>preference</b> , and <b>tag</b> ) or <b>withdraw</b> .
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **interval** *number*

Synopsis	Time between ICMP pings to the target CPE IP address
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host</b> <b>ipv6</b> <i>string</i> <b>mac</b> <i>string</i> <b>managed-route</b> <i>string</i> <b>cpe-check</b> <b>interval</b> <i>number</i>
Tree	<b>interval</b>
Description	This command configures the interval between ICMP pings to the target IP address.
Range	1 to 255
Default	1
Units	seconds
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **log** *boolean*

Synopsis	Log CPE connectivity checks transitions
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host</b> <b>ipv6</b> <i>string</i> <b>mac</b> <i>string</i> <b>managed-route</b> <i>string</i> <b>cpe-check</b> <b>log</b> <i>boolean</i>

Tree	<a href="#">log</a>
Description	This command logs the transitions between active and in-active based on the CPE connectivity check. Events are sent to the system log, syslog, and SNMP traps.
Default	false
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **padding-size** *number*

Synopsis	Padding size for CPE connectivity checks
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host</a> <a href="#">ipv6</a> <i>string</i> <a href="#">mac</a> <i>string</i> <a href="#">managed-route</a> <i>string</i> <a href="#">cpe-check</a> <a href="#">padding-size</a> <i>number</i>
Tree	<a href="#">padding-size</a>
Description	This command configures the amount of padding to add to the ICMP packet in bytes.
Range	0 to 16384
Default	56
Units	bytes
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **source-ip-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source IP address used in the ICMP messages
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host</a> <a href="#">ipv6</a> <i>string</i> <a href="#">mac</a> <i>string</i> <a href="#">managed-route</a> <i>string</i> <a href="#">cpe-check</a> <a href="#">source-ip-address</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">source-ip-address</a>
Description	This command configures the source IP address used in the ICMP messages. When not specified, the system uses the system address of the appropriate address family.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **timeout** *number*

Synopsis	Time interval determining that a ping is missed
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host</a> <a href="#">ipv6</a> <i>string</i> <a href="#">mac</a> <i>string</i> <a href="#">managed-route</a> <i>string</i> <a href="#">cpe-check</a> <a href="#">timeout</a> <i>number</i>

Tree	<a href="#">timeout</a>
Description	This command configures the time interval the system waits for a reply to a specific ping before determining that the ping is missed.
Range	1 to 10
Default	1
Units	seconds
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **metric number**

Synopsis	Metric associated with the provisioned managed route
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host</a> <a href="#">ipv6</a> <i>string</i> <a href="#">mac</a> <i>string</i> <a href="#">managed-route</a> <i>string</i> <a href="#">metric</a> <i>number</i>
Tree	<a href="#">metric</a>
Description	This command configures a metric to associate with the provisioned managed route.
Max. Range	0 to 4294967295
Default	0
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **preference number**

Synopsis	Preference associated to the provisioned managed route
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host</a> <a href="#">ipv6</a> <i>string</i> <a href="#">mac</a> <i>string</i> <a href="#">managed-route</a> <i>string</i> <a href="#">preference</a> <i>number</i>
Tree	<a href="#">preference</a>
Description	This command configures the preference associated with the provisioned managed route.
Range	0 to 255
Default	0
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## tag *number*

Synopsis	Route tag used if CPE check fails
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">static-host</a> <a href="#">ipv6</a> <a href="#">string</a> <a href="#">mac</a> <a href="#">string</a> <a href="#">managed-route</a> <a href="#">string</a> <a href="#">tag</a> <a href="#">number</a>
Tree	<a href="#">tag</a>
Max. Range	0 to 4294967295
Default	0
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## retail-svc-id *number*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Retail service ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">static-host</a> <a href="#">ipv6</a> <a href="#">string</a> <a href="#">mac</a> <a href="#">string</a> <a href="#">retail-svc-id</a> <a href="#">number</a>
Tree	<a href="#">retail-svc-id</a>
Range	1 to 2147483647
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## shcv

Synopsis	Enter the <b>shcv</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">static-host</a> <a href="#">ipv6</a> <a href="#">string</a> <a href="#">mac</a> <a href="#">string</a> <a href="#">shcv</a>
Tree	<a href="#">shcv</a>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## sla-profile *reference*

Synopsis	SLA profile name
----------	------------------

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host ipv6</b> <i>string</i> <b>mac</b> <i>string</i> <b>sla-profile</b> <i>reference</i>
Tree	<a href="#">sla-profile</a>
Reference	<b>configure subscriber-mgmt sla-profile</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sub-profile** *reference*

Synopsis	Sub-profile name
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host ipv6</b> <i>string</i> <b>mac</b> <i>string</i> <b>sub-profile</b> <i>reference</i>
Tree	<a href="#">sub-profile</a>
Reference	<b>configure subscriber-mgmt sub-profile</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **subscriber-id**

Synopsis	Enter the <b>subscriber-id</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host ipv6</b> <i>string</i> <b>mac</b> <i>string</i> <b>subscriber-id</b>
Tree	<a href="#">subscriber-id</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **string** *string*

Synopsis	Subscriber identification
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host ipv6</b> <i>string</i> <b>mac</b> <i>string</i> <b>subscriber-id</b> <i>string</i> <i>string</i>
Tree	<a href="#">string</a>
String Length	1 to 64
Notes	The following elements are part of a choice: <b>string</b> or <b>use-sap-id</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## use-sap-id

Synopsis	Use the SAP id as subscriber ID
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host</b> <b>ipv6</b> <i>string</i> <b>mac</b> <i>string</i> <b>subscriber-id</b> <b>use-sap-id</b>
Tree	<b>use-sap-id</b>
Notes	The following elements are part of a choice: <b>string</b> or <b>use-sap-id</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## mac-learning

Synopsis	Enter the <b>mac-learning</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host</b> <b>mac-learning</b>
Tree	<b>mac-learning</b>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## data-triggered *boolean*

Synopsis	Enable learning of MAC addresses from data packets
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host</b> <b>mac-learning</b> <b>data-triggered</b> <i>boolean</i>
Tree	<b>data-triggered</b>
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## single-mac *boolean*

Synopsis	Enforce single MAC address and subscriber for the SAP
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host</b> <b>mac-learning</b> <b>single-mac</b> <i>boolean</i>
Tree	<b>single-mac</b>
Default	false

Introduced 16.0.R4  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## sub-sla-mgmt

Synopsis Enter the **sub-sla-mgmt** context  
Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [sap](#) *string* [sub-sla-mgmt](#)  
Tree [sub-sla-mgmt](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## admin-state *keyword*

Synopsis Administrative state of SAP subscriber management  
Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [sap](#) *string* [sub-sla-mgmt](#) [admin-state](#) *keyword*  
Tree [admin-state](#)  
Default disable  
Options enable, disable  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## defaults

Synopsis Enter the **defaults** context  
Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [sap](#) *string* [sub-sla-mgmt](#) [defaults](#)  
Tree [defaults](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## app-profile *reference*

Synopsis Default application profile name for this SAP  
Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [sap](#) *string* [sub-sla-mgmt](#) [defaults](#) [app-profile](#) *reference*

Tree	<a href="#">app-profile</a>
Reference	<b>configure</b> <a href="#">application-assurance</a> <a href="#">group</a> <a href="#">number</a> <a href="#">partition</a> <a href="#">number</a> <a href="#">policy</a> <a href="#">app-profile</a> <a href="#">string</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## int-dest-id

Synopsis	Enter the <b>int-dest-id</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">sub-sla-mgmt</a> <a href="#">defaults</a> <a href="#">int-dest-id</a>
Tree	<a href="#">int-dest-id</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## string *string*

Synopsis	Use the configured string
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">sub-sla-mgmt</a> <a href="#">defaults</a> <a href="#">int-dest-id</a> <a href="#">string</a> <a href="#">string</a>
Tree	<a href="#">string</a>
String Length	1 to 32
Notes	The following elements are part of a choice: <b>string</b> or <b>top-q-tag</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## top-q-tag

Synopsis	Use the top Q-tag of this SAP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">sub-sla-mgmt</a> <a href="#">defaults</a> <a href="#">int-dest-id</a> <a href="#">top-q-tag</a>
Tree	<a href="#">top-q-tag</a>
Notes	The following elements are part of a choice: <b>string</b> or <b>top-q-tag</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sla-profile** *reference*

Synopsis	Default SLA profile for hosts on this SAP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">sub-sla-mgmt</a> <a href="#">defaults</a> <a href="#">sla-profile</a> <a href="#">reference</a>
Tree	<a href="#">sla-profile</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">sla-profile</a> <a href="#">string</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sub-profile** *reference*

Synopsis	Default subscriber profile used for subscribers on this SAP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">sub-sla-mgmt</a> <a href="#">defaults</a> <a href="#">sub-profile</a> <a href="#">reference</a>
Tree	<a href="#">sub-profile</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">sub-profile</a> <a href="#">string</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **subscriber-id**

Synopsis	Enter the <b>subscriber-id</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">sub-sla-mgmt</a> <a href="#">defaults</a> <a href="#">subscriber-id</a>
Tree	<a href="#">subscriber-id</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **auto-id**

Synopsis	Use auto-generated subscriber identification string
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">sub-sla-mgmt</a> <a href="#">defaults</a> <a href="#">subscriber-id</a> <a href="#">auto-id</a>
Tree	<a href="#">auto-id</a>
Notes	The following elements are part of a choice: <b>auto-id</b> , <b>sap-id</b> , or <b>string</b> .
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## sap-id

Synopsis Use SAP ID as default subscriber identification string

Context **configure service ies** *string* **subscriber-interface** *string* **group-interface** *string* **sap** *string*  
**sub-sla-mgmt defaults subscriber-id sap-id**

Tree [sap-id](#)

Notes The following elements are part of a choice: **auto-id**, **sap-id**, or **string**.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## string *string*

Synopsis Default subscriber identification string for the SAP

Context **configure service ies** *string* **subscriber-interface** *string* **group-interface** *string* **sap** *string*  
**sub-sla-mgmt defaults subscriber-id string** *string*

Tree [string](#)

String Length 1 to 64

Notes The following elements are part of a choice: **auto-id**, **sap-id**, or **string**.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## single-sub-parameters

Synopsis Enter the **single-sub-parameters** context

Context **configure service ies** *string* **subscriber-interface** *string* **group-interface** *string* **sap** *string*  
**sub-sla-mgmt single-sub-parameters**

Tree [single-sub-parameters](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## non-sub-traffic

Synopsis Enable the **non-sub-traffic** context

Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>sap string</i> <i>sub-sla-mgmt</i> <i>single-sub-parameters</i> <i>non-sub-traffic</i>
Tree	<a href="#">non-sub-traffic</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **app-profile** *reference*

Synopsis	Application profile name for all non-subscriber traffic
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>sap string</i> <i>sub-sla-mgmt</i> <i>single-sub-parameters</i> <i>non-sub-traffic</i> <i>app-profile reference</i>
Tree	<a href="#">app-profile</a>
Reference	<b>configure application-assurance</b> <i>group number</i> <i>partition number</i> <i>policy app-profile string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **sla-profile** *reference*

Synopsis	SLA profile applicable for all non-subscriber traffic
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>sap string</i> <i>sub-sla-mgmt</i> <i>single-sub-parameters</i> <i>non-sub-traffic</i> <i>sla-profile reference</i>
Tree	<a href="#">sla-profile</a>
Reference	<b>configure subscriber-mgmt</b> <i>sla-profile string</i>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sub-profile** *reference*

Synopsis	Subscriber ID profile applied for all non-subscriber traffic
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>sap string</i> <i>sub-sla-mgmt</i> <i>single-sub-parameters</i> <i>non-sub-traffic</i> <i>sub-profile reference</i>
Tree	<a href="#">sub-profile</a>
Reference	<b>configure subscriber-mgmt</b> <i>sub-profile string</i>
Notes	This element is mandatory.
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### subscriber-id *string*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Subscriber ID applied for all non-subscriber traffic

Context **configure** [service](#) [ies](#) [string](#) [subscriber-interface](#) [string](#) [group-interface](#) [string](#) [sap](#) [string](#) [sub-sla-mgmt](#) [single-sub-parameters](#) [non-sub-traffic](#) [subscriber-id](#) [string](#)

Tree [subscriber-id](#)

String Length 1 to 64

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### profiled-traffic-only *boolean*

Synopsis Include all traffic in subscriber profile

Context **configure** [service](#) [ies](#) [string](#) [subscriber-interface](#) [string](#) [group-interface](#) [string](#) [sap](#) [string](#) [sub-sla-mgmt](#) [single-sub-parameters](#) [profiled-traffic-only](#) [boolean](#)

Tree [profiled-traffic-only](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### sub-ident-policy *reference*

Synopsis Subscriber identification policy used on this SAP

Context **configure** [service](#) [ies](#) [string](#) [subscriber-interface](#) [string](#) [group-interface](#) [string](#) [sap](#) [string](#) [sub-sla-mgmt](#) [sub-ident-policy](#) [reference](#)

Tree [sub-ident-policy](#)

Reference **configure** [subscriber-mgmt](#) [sub-ident-policy](#) [string](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **subscriber-limit** (*keyword* | *number*)

Synopsis	Maximum number of subscribers on this SAP
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>sub-sla-mgmt subscriber-limit</b> ( <i>keyword</i>   <i>number</i> )
Tree	<b>subscriber-limit</b>
Range	1 to 131071
Default	1
Options	no-limit
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sap-parameters**

Synopsis	Enter the <b>sap-parameters</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap-parameters</b>
Tree	<b>sap-parameters</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **anti-spoof** *keyword*

Synopsis	Anti-spoof type of the SAP
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap-parameters anti-spoof</b> <i>keyword</i>
Tree	<b>anti-spoof</b>
Default	ip-mac
Options	ip-mac, nh-mac
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **description** *string*

Synopsis	Text description
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap-parameters description</b> <i>string</i>

Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## sub-sla-mgmt

Synopsis	Enter the <b>sub-sla-mgmt</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap-parameters</a> <a href="#">sub-sla-mgmt</a>
Tree	<a href="#">sub-sla-mgmt</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## defaults

Synopsis	Enter the <b>defaults</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap-parameters</a> <a href="#">sub-sla-mgmt</a> <a href="#">defaults</a>
Tree	<a href="#">defaults</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## app-profile *reference*

Synopsis	Default application profile name
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap-parameters</a> <a href="#">sub-sla-mgmt</a> <a href="#">defaults</a> <a href="#">app-profile</a> <a href="#">reference</a>
Tree	<a href="#">app-profile</a>
Reference	<b>configure</b> <a href="#">application-assurance</a> <a href="#">group</a> <a href="#">number</a> <a href="#">partition</a> <a href="#">number</a> <a href="#">policy</a> <a href="#">app-profile</a> <a href="#">string</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## sla-profile *reference*

Synopsis	Default SLA profile
----------	---------------------

Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>sap-parameters sub-sla-mgmt defaults sla-profile reference</i>
Tree	<a href="#">sla-profile</a>
Reference	<b>configure subscriber-mgmt sla-profile</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sub-profile** *reference*

Synopsis	Default subscriber profile
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>sap-parameters sub-sla-mgmt defaults sub-profile reference</i>
Tree	<a href="#">sub-profile</a>
Reference	<b>configure subscriber-mgmt sub-profile</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **subscriber-id**

Synopsis	Enter the <b>subscriber-id</b> context
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>sap-parameters sub-sla-mgmt defaults subscriber-id</i>
Tree	<a href="#">subscriber-id</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **auto-id**

Synopsis	Subscriber ID that is autogenerated
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>sap-parameters sub-sla-mgmt defaults subscriber-id auto-id</i>
Tree	<a href="#">auto-id</a>
Notes	The following elements are part of a choice: <b>auto-id</b> or <b>string</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **string** *string*

Synopsis	String to be used as default subscriber ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap-parameters</a> <a href="#">sub-sla-mgmt</a> <a href="#">defaults</a> <a href="#">subscriber-id</a> <i>string</i> <i>string</i>
Tree	<a href="#">string</a>
String Length	1 to 64
Notes	The following elements are part of a choice: <b>auto-id</b> or <b>string</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sub-ident-policy** *reference*

Synopsis	Subscriber identification policy
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap-parameters</a> <a href="#">sub-sla-mgmt</a> <a href="#">sub-ident-policy</a> <i>reference</i>
Tree	<a href="#">sub-ident-policy</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">sub-ident-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **shcv-policy** *reference*

Synopsis	Subscriber host connectivity verification policy for IPv4 and IPv6
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">shcv-policy</a> <i>reference</i>
Tree	<a href="#">shcv-policy</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">shcv-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **shcv-policy-ipv4** *reference*

Synopsis	Subscriber host connectivity verification policy for IPv4
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">shcv-policy-ipv4</a> <i>reference</i>

Tree	<a href="#">shcv-policy-ipv4</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">shcv-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **shcv-policy-ipv6** *reference*

Synopsis	Subscriber host connectivity verification policy for IPv6
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">shcv-policy-ipv6</a> <i>reference</i>
Tree	<a href="#">shcv-policy-ipv6</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">shcv-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **srrp** [[srrp-id](#)] *number*

Synopsis	Enter the <b>srrp</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">srrp</a> <i>number</i>
Tree	<a href="#">srrp</a>
Max. Instances	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[srrp-id]** *number*

Synopsis	SRRP instance ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">srrp</a> <i>number</i>
Tree	<a href="#">srrp</a>
Range	1 to 4294967295
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of SRRP
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>srrp</b> <i>number</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **bfd-liveness**

Synopsis	Enable the <b>bfd-liveness</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>srrp</b> <i>number</i> <b>bfd-liveness</b>
Tree	<b>bfd-liveness</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **dest-ip** *string*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Destination IPv4 prefix
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>srrp</b> <i>number</i> <b>bfd-liveness</b> <b>dest-ip</b> <i>string</i>
Tree	<b>dest-ip</b>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## interface-name *string*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Name of the interface running BFD
Context	<b>configure</b> <b>service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>srrp</b> <b>number</b> <b>bfd-liveness</b> <b>interface-name</b> <i>string</i>
Tree	<b>interface-name</b>
String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## service-name *string*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Administrative service name
Context	<b>configure</b> <b>service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>srrp</b> <b>number</b> <b>bfd-liveness</b> <b>service-name</b> <i>string</i>
Tree	<b>service-name</b>
String Length	1 to 64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## description *string*

Synopsis	Text description
Context	<b>configure</b> <b>service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>srrp</b> <b>number</b> <b>description</b> <i>string</i>
Tree	<b>description</b>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **gw-mac** *string*

Synopsis	Gateway MAC address
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>srrp</b> <i>number</i> <b>gw-mac</b> <i>string</i>
Tree	<b>gw-mac</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **keep-alive-interval** *number*

Synopsis	Interval between SRRP advertisements
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>srrp</b> <i>number</i> <b>keep-alive-interval</b> <i>number</i>
Tree	<b>keep-alive-interval</b>
Range	1 to 100
Default	10
Units	deciseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **message-path** *reference*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	SAP to use as the SRRP message path
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>srrp</b> <i>number</i> <b>message-path</b> <i>reference</i>
Tree	<b>message-path</b>
Reference	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## monitor-oper-group

Synopsis	Enter the <b>monitor-oper-group</b> context
Context	<b>configure</b> <i>service ies string subscriber-interface string group-interface string srrp number</i> <b>monitor-oper-group</b>
Tree	<b>monitor-oper-group</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## group-name *reference*

Synopsis	Operational group name
Context	<b>configure</b> <i>service ies string subscriber-interface string group-interface string srrp number</i> <b>monitor-oper-group</b> <i>group-name reference</i>
Tree	<b>group-name</b>
Reference	<b>configure</b> <i>service oper-group string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## priority-step *number*

Synopsis	Step value to change priority of SRRP instance
Context	<b>configure</b> <i>service ies string subscriber-interface string group-interface string srrp number</i> <b>monitor-oper-group</b> <i>priority-step number</i>
Tree	<b>priority-step</b>
Range	1 to 10
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## one-garp-per-sap *boolean*

Synopsis	Send one gratuitous ARP to each SAP
Context	<b>configure</b> <i>service ies string subscriber-interface string group-interface string srrp number</i> <b>one-garp-per-sap</b> <i>boolean</i>
Tree	<b>one-garp-per-sap</b>
Default	false
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **policy reference**

Synopsis VRRP priority control policy associated with the SRRP

Context **configure** *service ies string subscriber-interface string group-interface string srrp number* *policy reference*

Tree *policy*

Reference **configure** *vrrp policy number*

Max. Instances 2

Notes This element is ordered by the user.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **preempt boolean**

Synopsis Allow the SRRP instance to override an existing master

Context **configure** *service ies string subscriber-interface string group-interface string srrp number* *preempt boolean*

Tree *preempt*

Default true

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **priority number**

Synopsis Priority for this interface at this level

Context **configure** *service ies string subscriber-interface string group-interface string srrp number* *priority number*

Tree *priority*

Range 1 to 254

Default 100

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **send-fib-population-packets** *keyword*

Synopsis	Mode used to send FIB population packets (such as ARP) on switchover
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">srrp</a> <a href="#">number</a> <b>send-fib-population-packets</b> <i>keyword</i>
Tree	<a href="#">send-fib-population-packets</a>
Default	all
Options	all, outer-tag-only
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **suppress-aa-sub** *boolean*

Synopsis	Enable application assurance suppression for ESM subscribers
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <b>suppress-aa-sub</b> <i>boolean</i>
Tree	<a href="#">suppress-aa-sub</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **tos-marking-state** *keyword*

Synopsis	TOS marking state
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <b>tos-marking-state</b> <i>keyword</i>
Tree	<a href="#">tos-marking-state</a>
Default	untrusted
Options	trusted, untrusted
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **type** *keyword*

### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Group interface type
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>type</b> <i>keyword</i>
Tree	<b>type</b>
Default	plain
Options	plain, lns, wlan-gw, gtp, bonding
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **wlan-gw**

Synopsis	Enter the <b>wlan-gw</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b>
Tree	<b>wlan-gw</b>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **admin-state** *keyword*

Synopsis	Administrative state of WLAN Gateway
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **gateway-address** [**address**] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the <b>gateway-address</b> list instance
----------	--

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw gateway-address</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> )
Tree	<b>gateway-address</b>
Max. Instances	10
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**[address]** (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Gateway endpoint address of the WLAN Gateway tunnel
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw gateway-address</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> )
Tree	<b>gateway-address</b>
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**purpose**

Synopsis	Enter the <b>purpose</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw gateway-address</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <b>purpose</b>
Tree	<b>purpose</b>
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**xconnect** *boolean*

Synopsis	Use tunnel IP address for crosse-connect traffic
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw gateway-address</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <b>purpose xconnect</b> <i>boolean</i>
Tree	<b>xconnect</b>
Default	false
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## gateway-router *string*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Routing instance the WLAN-GW endpoint resides in
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">gateway-router</a> <i>string</i>
Tree	<a href="#">gateway-router</a>
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## group-encryption

Synopsis	Enter the <b>group-encryption</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">group-encryption</a>
Tree	<a href="#">group-encryption</a>
Introduced	21.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## encryption-keygroup-inbound *reference*

Synopsis	Encryption keygroup for inbound traffic
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">group-encryption</a> <a href="#">encryption-keygroup-inbound</a> <i>reference</i>
Tree	<a href="#">encryption-keygroup-inbound</a>
Reference	<b>configure</b> <a href="#">group-encryption</a> <a href="#">encryption-keygroup</a> <i>number</i>
Introduced	21.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## encryption-keygroup-outbound *reference*

Synopsis	Encryption keygroup for inbound traffic
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">group-encryption</a> <a href="#">encryption-keygroup-outbound</a> <i>reference</i>

Tree	<a href="#">encryption-keygroup-outbound</a>
Reference	<b>configure</b> <a href="#">group-encryption</a> <a href="#">encryption-keygroup</a> <i>number</i>
Introduced	21.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## I2-ap

Synopsis	Enter the <b>I2-ap</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">I2-ap</a>
Tree	<a href="#">I2-ap</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## access-point [[sap-id](#)] *string*

Synopsis	Enter the <b>access-point</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">I2-ap</a> <a href="#">access-point</a> <i>string</i>
Tree	<a href="#">access-point</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## [[sap-id](#)] *string*

Synopsis	SAP ID for the Layer 2 access point
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">I2-ap</a> <a href="#">access-point</a> <i>string</i>
Tree	<a href="#">access-point</a>
String Length	1 to 45
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of the L2 access points
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw l2-ap access-point</b> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **encap-type** *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Service encapsulation type of this access point
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw l2-ap access-point</b> <i>string</i> <b>encap-type</b> <i>keyword</i>
Tree	<b>encap-type</b>
Options	null, dot1q, qinq
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **epipe-sap-template** *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Parameters template for the internal connections with the ISA cards
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw l2-ap access-point</b> <i>string</i> <b>epipe-sap-template</b> <i>reference</i>
Tree	<b>epipe-sap-template</b>
Reference	<b>configure</b> <b>service</b> <b>template</b> <b>epipe-sap-template</b> <i>string</i>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### auto-sub-id-fmt *keyword*

Synopsis	Format of the auto-generated subscriber ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">wlan-gw</a> <a href="#">l2-ap</a> <a href="#">auto-sub-id-fmt</a> <i>keyword</i>
Tree	<a href="#">auto-sub-id-fmt</a>
Default	include-ap-tags
Options	include-ap-tags, sap-only
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### default-encap-type *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Default encapsulation type for Layer 2 access points
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">wlan-gw</a> <a href="#">l2-ap</a> <a href="#">default-encap-type</a> <i>keyword</i>
Tree	<a href="#">default-encap-type</a>
Default	null
Options	null, dot1q, qinq
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### lanext

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the <b>lanext</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">wlan-gw</a> <a href="#">lanext</a>
Tree	<a href="#">lanext</a>
Introduced	16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## max-bd *number*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Maximum number of bridge domains

Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [wlan-gw](#) [lanext](#) **max-bd** *number*

Tree [max-bd](#)

Range 1 to 131071

Default 131071

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## learn-ap-mac

Synopsis Enable the **learn-ap-mac** context

Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [wlan-gw](#) [learn-ap-mac](#)

Tree [learn-ap-mac](#)

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## delay-auth *boolean*

Synopsis Delay authentication until ARP/ND is answered or timed out, after which AP MAC can be included

Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [wlan-gw](#) [learn-ap-mac](#) **delay-auth** *boolean*

Tree [delay-auth](#)

Default false

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## mobility

Synopsis	Enter the <b>mobility</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>mobility</b>
Tree	<b>mobility</b>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## hold-time *number*

Synopsis	Minimum time between two mobility events for a single UE
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>mobility</b> <b>hold-time</b> <i>number</i>
Tree	<b>hold-time</b>
Range	0 to 255
Default	5
Units	seconds
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## inter-tunnel-type *boolean*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable mobility between terminating tunnel types
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>mobility</b> <b>inter-tunnel-type</b> <i>boolean</i>
Tree	<b>inter-tunnel-type</b>
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## inter-vlan *boolean*

Synopsis	Enable mobility within different VLANs within the same range of VLAN Q-tags
----------	---

Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>wlan-gw mobility inter-vlan boolean</i>
Tree	<i>inter-vlan</i>
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## trigger

Synopsis	Enter the <b>trigger</b> context
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>wlan-gw mobility trigger</i>
Tree	<i>trigger</i>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## control *boolean*

Synopsis	Use control traffic (DHCP, DHCPv6, and ICMPv6-RS messages) as mobility trigger
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>wlan-gw mobility trigger control boolean</i>
Tree	<i>control</i>
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## data *boolean*

Synopsis	Use data traffic as mobility trigger
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>wlan-gw mobility trigger data boolean</i>
Tree	<i>data</i>
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **iapp** *boolean*

Synopsis	Use Inter Access Point Protocol (IAPP) messages as mobility trigger
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>mobility trigger</b> <b>iapp</b> <i>boolean</i>
Tree	<b>iapp</b>
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **oper-down-on-group-degrade** *boolean*

Synopsis	Bring interface operationally down when its ISA WLAN Gateway becomes degraded
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>oper-down-on-group-degrade</b> <i>boolean</i>
Tree	<b>oper-down-on-group-degrade</b>
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **tcp-mss-adjust** *number*

Synopsis	Value for the TCP Maximum Segment Size (MSS) option if not present, or if value is higher
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>tcp-mss-adjust</b> <i>number</i>
Tree	<b>tcp-mss-adjust</b>
Range	160 to 10240
Units	bytes
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **tunnel-egress-qos**

Synopsis	Enter the <b>tunnel-egress-qos</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>tunnel-egress-qos</b>

Tree	<a href="#">tunnel-egress-qos</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of egress QoS for WLAN-GW tunnels
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">tunnel-egress-qos</a> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **agg-rate-limit** (*number* | *keyword*)

Synopsis	Aggregate rate limit of each shaper associated with this interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">tunnel-egress-qos</a> <b>agg-rate-limit</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">agg-rate-limit</a>
Range	1 to 100000000
Default	max
Options	max
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **granularity** *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Granularity of the egress shaping for WLAN Gateway
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>tunnel-egress-qos</b> <b>granularity</b> <i>keyword</i>
Tree	<b>granularity</b>
Default	per-tunnel
Options	per-tunnel, per-retailer
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **hold-time** (*number* | *keyword*)

Synopsis	Minimum time that the egress QoS resources associated with a tunnel (such as a shaper) are held
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>tunnel-egress-qos</b> <b>hold-time</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>hold-time</b>
Range	1 to 86400
Units	seconds
Options	infinite
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **multi-client-only** *boolean*

Synopsis	Tunnel traffic to shape when multiple UEs use this tunnel
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>tunnel-egress-qos</b> <b>multi-client-only</b> <i>boolean</i>
Tree	<b>multi-client-only</b>
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## qos reference

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Identifier of the egress QoS policy associated with each tunnel of this interface
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">tunnel-egress-qos</a> <a href="#">qos</a> <i>reference</i>
Tree	<a href="#">qos</a>
Reference	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## scheduler-policy reference

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Identifier of the egress scheduler policy associated with each tunnel of this interface
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">tunnel-egress-qos</a> <a href="#">scheduler-policy</a> <i>reference</i>
Tree	<a href="#">scheduler-policy</a>
Reference	<b>configure</b> <a href="#">qos scheduler-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## tunnel-encaps

Synopsis	Enter the <b>tunnel-encaps</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">tunnel-encaps</a>
Tree	<a href="#">tunnel-encaps</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **learn-l2tp-cookie** (*keyword* | *hex-string*)

Synopsis	System that learns the cookie from L2TP tunnels terminating on this interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">tunnel-encaps</a> <b>learn-l2tp-cookie</b> ( <i>keyword</i>   <i>hex-string</i> )
Tree	<a href="#">learn-l2tp-cookie</a>
String Length	6
Default	never
Options	never, always
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **vlan-range** [[range](#)] *string*

Synopsis	Enter the <b>vlan-range</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <i>string</i>
Tree	<a href="#">vlan-range</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[range]** *string*

Synopsis	IEEE 802.1q VLAN tag range
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <i>string</i>
Tree	<a href="#">vlan-range</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **authentication**

Synopsis	Enter the <b>authentication</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <i>string</i> <b>authentication</b>
Tree	<a href="#">authentication</a>

Introduced 16.0.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **hold-time** *number*

Synopsis Minimum time to hold a UE down after an authentication failure  
Context **configure** *service ies string subscriber-interface string group-interface string wlan-gw  
vlan-range string authentication hold-time number*  
Tree [hold-time](#)  
Range 0 to 3600  
Default 5  
Units seconds  
Introduced 16.0.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **local**

Synopsis Enable the **local** context  
Context **configure** *service ies string subscriber-interface string group-interface string wlan-gw  
vlan-range string authentication local*  
Tree [local](#)  
Introduced 22.2.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **coa-policy** *reference*

Synopsis RADIUS ISA policy applied to CoA or disconnect messages  
Context **configure** *service ies string subscriber-interface string group-interface string wlan-gw  
vlan-range string authentication local coa-policy reference*  
Tree [coa-policy](#)  
Reference **configure** *aaa radius isa-policy string*  
Introduced 22.2.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **default-ue-state** *keyword*

Synopsis	UE state accepted for immediate authentication
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <i>string</i> <a href="#">authentication</a> <a href="#">local</a> <b>default-ue-state</b> <i>keyword</i>
Tree	<a href="#">default-ue-state</a>
Options	portal, dsm
Notes	This element is mandatory.
Introduced	22.2.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **on-control-plane** *boolean*

Synopsis	Trigger authentication on first control plane packet instead of first data packet
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <i>string</i> <a href="#">authentication</a> <b>on-control-plane</b> <i>boolean</i>
Tree	<a href="#">on-control-plane</a>
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **policy** *reference*

Synopsis	RADIUS policy for authentication
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <i>string</i> <a href="#">authentication</a> <b>policy</b> <i>reference</i>
Tree	<a href="#">policy</a>
Reference	<b>configure</b> <a href="#">aaa</a> <a href="#">radius</a> <a href="#">isa-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **vlan-mismatch-timeout** *number*

Synopsis	Timeout value for the RADIUS proxy cache if a packet is received with a non-matching VLAN
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <i>string</i> <a href="#">authentication</a> <b>vlan-mismatch-timeout</b> <i>number</i>

Tree	<a href="#">vlan-mismatch-timeout</a>
Range	5 to 60
Units	seconds
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **data-triggered-ue-creation**

Synopsis	Enter the <b>data-triggered-ue-creation</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <a href="#">string</a> <b>data-triggered-ue-creation</b>
Tree	<a href="#">data-triggered-ue-creation</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of data-triggered UE creation
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <a href="#">string</a> <a href="#">data-triggered-ue-creation</a> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **arp** *boolean*

Synopsis	Authenticate ARP packets received from an unknown UE
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <a href="#">string</a> <a href="#">data-triggered-ue-creation</a> <b>arp</b> <i>boolean</i>
Tree	<a href="#">arp</a>
Default	false
Introduced	22.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## create-proxy-cache-entry

Synopsis	Enter the <b>create-proxy-cache-entry</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <a href="#">string</a> <a href="#">data-triggered-ue-creation</a> <a href="#">create-proxy-cache-entry</a>
Tree	<a href="#">create-proxy-cache-entry</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## mac-format *string*

Synopsis	MAC address format
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <a href="#">string</a> <a href="#">data-triggered-ue-creation</a> <a href="#">create-proxy-cache-entry</a> <a href="#">mac-format</a> <i>string</i>
Tree	<a href="#">mac-format</a>
String Length	2 to 7
Default	aa:
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## proxy-server

Synopsis	Enable the <b>proxy-server</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <a href="#">string</a> <a href="#">data-triggered-ue-creation</a> <a href="#">create-proxy-cache-entry</a> <a href="#">proxy-server</a>
Tree	<a href="#">proxy-server</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## name *string*

Synopsis	RADIUS Proxy server name
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <a href="#">string</a> <a href="#">data-triggered-ue-creation</a> <a href="#">create-proxy-cache-entry</a> <a href="#">proxy-server</a> <a href="#">name</a> <i>string</i>
Tree	<a href="#">name</a>
String Length	1 to 32

Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **router-instance** *string*

Synopsis	Router instance of the RADIUS proxy server
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>vlan-range</b> <i>string</i> <b>data-triggered-ue-creation</b> <b>create-proxy-cache-entry</b> <b>proxy-server</b> <b>router-instance</b> <i>string</i>
Tree	<b>router-instance</b>
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **dhcp4**

Synopsis	Enter the <b>dhcp4</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>vlan-range</b> <i>string</i> <b>dhcp4</b>
Tree	<b>dhcp4</b>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of DHCPv4
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>vlan-range</b> <i>string</i> <b>dhcp4</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **dns string**

Synopsis	DNS servers signaled in DHCP
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>vlan-range</b> <i>string</i> <b>dhcp4</b> <b>dns</b> <i>string</i>
Tree	<b>dns</b>
Max. Instances	2
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **l2-aware-ip-address** (*ipv4-unicast-address* | *keyword*)

Synopsis	L2-Aware NAT inside IP address
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>vlan-range</b> <i>string</i> <b>dhcp4</b> <b>l2-aware-ip-address</b> ( <i>ipv4-unicast-address</i>   <i>keyword</i> )
Tree	<b>l2-aware-ip-address</b>
Options	from-pool
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **lease-time**

Synopsis	Enter the <b>lease-time</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>vlan-range</b> <i>string</i> <b>dhcp4</b> <b>lease-time</b>
Tree	<b>lease-time</b>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **active number**

Synopsis	IP address lease time for the UE after successful (portal) authentication
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>vlan-range</b> <i>string</i> <b>dhcp4</b> <b>lease-time</b> <b>active</b> <i>number</i>
Tree	<b>active</b>

Range	300 to 3600
Default	600
Units	seconds
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **initial number**

Synopsis	IP address lease time that is provided before and during (portal) authentication to the UE
Context	<b>configure service ies string subscriber-interface string group-interface string wlan-gw vlan-range string dhcp4 lease-time initial number</b>
Tree	<b>initial</b>
Range	300 to 3600
Default	600
Units	seconds
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **nbns string**

Synopsis	NetBIOS servers signaled in DHCP
Context	<b>configure service ies string subscriber-interface string group-interface string wlan-gw vlan-range string dhcp4 nbns string</b>
Tree	<b>nbns</b>
Max. Instances	2
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **dhcp6**

Synopsis	Enter the <b>dhcp6</b> context
Context	<b>configure service ies string subscriber-interface string group-interface string wlan-gw vlan-range string dhcp6</b>

Tree	<a href="#">dhcp6</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of the protocol
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <i>string</i> <a href="#">dhcp6</a> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **preferred-lifetime**

Synopsis	Enter the <b>preferred-lifetime</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <i>string</i> <a href="#">dhcp6</a> <b>preferred-lifetime</b>
Tree	<a href="#">preferred-lifetime</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **active** *number*

Synopsis	Preferred signaled lifetime after full authentication
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <i>string</i> <a href="#">dhcp6</a> <b>preferred-lifetime</b> <b>active</b> <i>number</i>
Tree	<a href="#">active</a>
Range	300 to 3600
Default	600
Units	seconds
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **initial number**

Synopsis	Preferred signaled lifetime when the UE is not fully authenticated
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>wlan-gw</i> <i>vlan-range string</i> <i>dhcp6 preferred-lifetime initial number</i>
Tree	<i>initial</i>
Range	300 to 3600
Default	300
Units	seconds
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **valid-lifetime**

Synopsis	Enter the <b>valid-lifetime</b> context
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>wlan-gw</i> <i>vlan-range string</i> <i>dhcp6 valid-lifetime</i>
Tree	<i>valid-lifetime</i>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **active number**

Synopsis	Signaled valid lifetime after full authentication
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>wlan-gw</i> <i>vlan-range string</i> <i>dhcp6 valid-lifetime active number</i>
Tree	<i>active</i>
Range	300 to 3600
Default	600
Units	seconds
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **initial number**

Synopsis	Valid signaled lifetime when the UE is not fully authenticated
----------	--

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>vlan-range</b> <i>string</i> <b>dhcp6 valid-lifetime</b> <i>initial</i> <i>number</i>
Tree	<b>initial</b>
Range	300 to 3600
Default	300
Units	seconds
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## dsm

Synopsis	Enter the <b>dsm</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>vlan-range</b> <i>string</i> <b>dsm</b>
Tree	<b>dsm</b>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## accounting-policy *reference*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	ISA Radius Policy for accounting
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>vlan-range</b> <i>string</i> <b>dsm accounting-policy</b> <i>reference</i>
Tree	<b>accounting-policy</b>
Reference	<b>configure aaa radius isa-policy</b> <i>string</i>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## accounting-update

Synopsis	Enable the <b>accounting-update</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>vlan-range</b> <i>string</i> <b>dsm accounting-update</b>

Tree	<a href="#">accounting-update</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **interval** *number*

Synopsis	Time interval between consecutive Interim accounting update messages
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <i>string</i> <a href="#">dsm</a> <a href="#">accounting-update</a> <a href="#">interval</a> <i>number</i>
Tree	<a href="#">interval</a>
Range	5 to 259200
Units	minutes
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of DSM
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <i>string</i> <a href="#">dsm</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **application-assurance**

Synopsis	Enter the <b>application-assurance</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <i>string</i> <a href="#">dsm</a> <a href="#">application-assurance</a>
Tree	<a href="#">application-assurance</a>
Introduced	21.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **accounting-statistics** *boolean*

Synopsis	Collect AA statistics
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <a href="#">string</a> <a href="#">dsm</a> <a href="#">application-assurance</a> <a href="#">accounting-statistics</a> <i>boolean</i>
Tree	<a href="#">accounting-statistics</a>
Default	false
Introduced	21.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **profile** *reference*

Synopsis	AA application profile used for portal authentication
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <a href="#">string</a> <a href="#">dsm</a> <a href="#">application-assurance</a> <a href="#">profile</a> <i>reference</i>
Tree	<a href="#">profile</a>
Reference	<b>configure</b> <a href="#">application-assurance</a> <a href="#">group</a> <a href="#">number</a> <a href="#">partition</a> <a href="#">number</a> <a href="#">policy</a> <a href="#">app-profile</a> <a href="#">string</a>
Introduced	21.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **url-parameter** *string*

Synopsis	AA URL parameter included for HTTP portal redirect
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <a href="#">string</a> <a href="#">dsm</a> <a href="#">application-assurance</a> <a href="#">url-parameter</a> <i>string</i>
Tree	<a href="#">url-parameter</a>
String Length	1 to 247
Introduced	22.2.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **egress**

Synopsis	Enter the <b>egress</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <a href="#">string</a> <a href="#">dsm</a> <a href="#">egress</a>
Tree	<a href="#">egress</a>

Introduced 16.0.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **policer** *reference*

Synopsis Policer for egress traffic  
Context **configure** [service](#) [ies](#) [string](#) [subscriber-interface](#) [string](#) [group-interface](#) [string](#) [wlan-gw](#) [vlan-range](#) [string](#) [dsm](#) [egress](#) [policer](#) [reference](#)  
Tree [policer](#)  
Reference **configure** [subscriber-mgmt](#) [isa-policer](#) [string](#)  
Introduced 16.0.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ingress**

Synopsis Enter the **ingress** context  
Context **configure** [service](#) [ies](#) [string](#) [subscriber-interface](#) [string](#) [group-interface](#) [string](#) [wlan-gw](#) [vlan-range](#) [string](#) [dsm](#) [ingress](#)  
Tree [ingress](#)  
Introduced 16.0.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ip-filter** *reference*

Synopsis Filter for ingress traffic  
Context **configure** [service](#) [ies](#) [string](#) [subscriber-interface](#) [string](#) [group-interface](#) [string](#) [wlan-gw](#) [vlan-range](#) [string](#) [dsm](#) [ingress](#) [ip-filter](#) [reference](#)  
Tree [ip-filter](#)  
Reference **configure** [subscriber-mgmt](#) [isa-filter](#) [string](#)  
Introduced 16.0.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **policer** *reference*

Synopsis Policer for ingress traffic

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>vlan-range</b> <i>string</i> <b>dsm ingress policer</b> <i>reference</i>
Tree	<b>policer</b>
Reference	<b>configure subscriber-mgmt isa-policer</b> <i>string</i>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **soft-quota-exhausted-filter** *reference*

Synopsis	Filter applied when soft volume quota is reached
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>vlan-range</b> <i>string</i> <b>dsm ingress soft-quota-exhausted-filter</b> <i>reference</i>
Tree	<b>soft-quota-exhausted-filter</b>
Description	This command applies a filter when a soft volume quota is reached. The filter replaces the currently applied filter (which can be preconfigured using the <b>ip-filter</b> command in the <b>configure service vprn subscriber-interface group-interface wlan-gw vlan-range dsm ingress ip-filter</b> context or be set using a RADIUS CoA message) for the UE upon quota exhaustion. If the quota is extended using a RADIUS CoA message, the filter is automatically reverted. Configuration changes apply only to new DSM UEs and not to existing UEs.
Reference	<b>configure subscriber-mgmt isa-filter</b> <i>string</i>
Introduced	21.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **one-time-redirect**

Synopsis	Enter the <b>one-time-redirect</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>vlan-range</b> <i>string</i> <b>dsm one-time-redirect</b>
Tree	<b>one-time-redirect</b>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **port** *number*

Synopsis	Destination port of packets considered for HTTP redirect
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>vlan-range</b> <i>string</i> <b>dsm one-time-redirect port</b> <i>number</i>

Tree	<a href="#">port</a>
Range	1 to 65535
Default	80
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **url string**

Synopsis	URL for redirected HTTP protocol packets that can be overridden by AAA
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">subscriber-interface string</a> <a href="#">group-interface string</a> <a href="#">wlan-gw vlan-range string</a> <a href="#">dsm one-time-redirect url string</a>
Tree	<a href="#">url</a>
String Length	1 to 255
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **volume-quota-direction keyword**

Synopsis	Volume quota direction for WLAN GW
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">subscriber-interface string</a> <a href="#">group-interface string</a> <a href="#">wlan-gw vlan-range string</a> <a href="#">dsm volume-quota-direction keyword</a>
Tree	<a href="#">volume-quota-direction</a>
Description	This command specifies the direction that volume quotas are applied. Configuration changes apply only to new DSM UEs and not to existing UEs.
Default	both
Options	both, ingress, egress
Introduced	21.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **extension [[extension-range](#)] string**

Synopsis	Add a list entry for <b>extension</b>
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">subscriber-interface string</a> <a href="#">group-interface string</a> <a href="#">wlan-gw vlan-range string</a> <a href="#">extension string</a>
Tree	<a href="#">extension</a>
Introduced	21.7.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[extension-range] string**

Synopsis VLAN tag range used for matching

Context **configure** [service ies string](#) [subscriber-interface string](#) [group-interface string](#) [wlan-gw vlan-range string](#) [extension string](#)

Tree [extension](#)

Description This command configures the additional VLAN range that is used for matching. Any traffic within the extension range is considered part of the same VLAN range for purposes of intra-SSID mobility.

Notes This element is part of a list key.

Introduced 21.7.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **http-redirect-policy reference**

Synopsis Default HTTP redirect policy for portal authentication

Context **configure** [service ies string](#) [subscriber-interface string](#) [group-interface string](#) [wlan-gw vlan-range string](#) [http-redirect-policy reference](#)

Tree [http-redirect-policy](#)

Reference **configure** [subscriber-mgmt http-redirect-policy string](#)

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **idle-timeout-action keyword**

Synopsis Action to perform when the idle timeout expires

Context **configure** [service ies string](#) [subscriber-interface string](#) [group-interface string](#) [wlan-gw vlan-range string](#) [idle-timeout-action keyword](#)

Tree [idle-timeout-action](#)

Default remove

Options remove, shcv

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## I2-service

Synopsis	Enable the <b>I2-service</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>vlan-range</b> <i>string</i> <b>I2-service</b>
Tree	<b>I2-service</b>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## admin-state *keyword*

Synopsis	Administrative state of Layer 2 service for VLAN range
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>vlan-range</b> <i>string</i> <b>I2-service admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## description *string*

Synopsis	Text description
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>vlan-range</b> <i>string</i> <b>I2-service description</b> <i>string</i>
Tree	<b>description</b>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## service *reference*

Synopsis	Layer 2 service associated with the range
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>vlan-range</b> <i>string</i> <b>I2-service service</b> <i>reference</i>
Tree	<b>service</b>
Reference	<b>configure service vpls</b> <i>string</i>

Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **nat-policy** *reference*

Synopsis	NAT policy for DSM and ISA portal authentication
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <i>string</i> <b>nat-policy</b> <i>reference</i>
Tree	<a href="#">nat-policy</a>
Reference	<b>configure</b> <a href="#">service</a> <a href="#">nat</a> <b>nat-policy</b> <i>string</i>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **retail-service** *string*

Synopsis	Default retail service for new UEs in this range
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <i>string</i> <b>retail-service</b> <i>string</i>
Tree	<a href="#">retail-service</a>
String Length	1 to 64
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **slaac**

Synopsis	Enter the <b>slaac</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <i>string</i> <b>slaac</b>
Tree	<a href="#">slaac</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of the protocol
----------	--------------------------------------

Context	<b>configure service ies</b> <i>string subscriber-interface string group-interface string wlan-gw</i> <i>vlan-range string slaac admin-state keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### preferred-lifetime

Synopsis	Enter the <b>preferred-lifetime</b> context
Context	<b>configure service ies</b> <i>string subscriber-interface string group-interface string wlan-gw</i> <i>vlan-range string slaac preferred-lifetime</i>
Tree	<a href="#">preferred-lifetime</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### active number

Synopsis	Preferred signaled lifetime after full authentication
Context	<b>configure service ies</b> <i>string subscriber-interface string group-interface string wlan-gw</i> <i>vlan-range string slaac preferred-lifetime active number</i>
Tree	<a href="#">active</a>
Range	300 to 3600
Default	600
Units	seconds
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### initial number

Synopsis	Preferred signaled lifetime when the UE is not fully authenticated
Context	<b>configure service ies</b> <i>string subscriber-interface string group-interface string wlan-gw</i> <i>vlan-range string slaac preferred-lifetime initial number</i>
Tree	<a href="#">initial</a>
Range	300 to 3600

Default	300
Units	seconds
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **valid-lifetime**

Synopsis	Enter the <b>valid-lifetime</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <i>string</i> <a href="#">slaac</a> <b>valid-lifetime</b>
Tree	<a href="#">valid-lifetime</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **active number**

Synopsis	Signaled valid lifetime after full authentication
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <i>string</i> <a href="#">slaac</a> <b>valid-lifetime</b> <b>active</b> <i>number</i>
Tree	<a href="#">active</a>
Range	300 to 3600
Default	600
Units	seconds
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **initial number**

Synopsis	Valid signaled lifetime when the UE is not fully authenticated
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <i>string</i> <a href="#">slaac</a> <b>valid-lifetime</b> <b>initial</b> <i>number</i>
Tree	<a href="#">initial</a>
Range	300 to 3600
Default	300
Units	seconds
Introduced	16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## vrgw

Synopsis Enter the **vrgw** context

Context **configure** **service ies** *string* **subscriber-interface** *string* **group-interface** *string* **wlan-gw**  
**vlan-range** *string* **vrgw**

Tree **vrgw**

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## admin-state *keyword*

Synopsis Administrative state of vRGW

Context **configure** **service ies** *string* **subscriber-interface** *string* **group-interface** *string* **wlan-gw**  
**vlan-range** *string* **vrgw** **admin-state** *keyword*

Tree **admin-state**

Default disable

Options enable, disable

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## brg

Synopsis Enter the **brg** context

Context **configure** **service ies** *string* **subscriber-interface** *string* **group-interface** *string* **wlan-gw**  
**vlan-range** *string* **vrgw** **brg**

Tree **brg**

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## authenticated-brg-only *boolean*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Only allow hosts from BRGs pre-authenticated using the radius-proxy
Context	<b>configure service ies</b> <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> vrgw brg authenticated-brg-only <i>boolean</i>
Tree	authenticated-brg-only
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### default-brg-profile *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Default BRG profile to use if the AAA server does not specify one
Context	<b>configure service ies</b> <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> vrgw brg default-brg-profile <i>reference</i>
Tree	default-brg-profile
Reference	<b>configure subscriber-mgmt vrgw brg-profile</b> <i>string</i>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### lanext

Synopsis	Enter the <b>lanext</b> context
Context	<b>configure service ies</b> <i>string</i> subscriber-interface <i>string</i> group-interface <i>string</i> wlan-gw vlan-range <i>string</i> vrgw lanext
Tree	lanext
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### access

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>access</b> context
----------	---------------------------------

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>vlan-range</b> <i>string</i> <b>vrgw lanext access</b>
Tree	<b>access</b>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **max-mac** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of allowed MAC entries on access side
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>vlan-range</b> <i>string</i> <b>vrgw lanext access max-mac</b> <i>number</i>
Tree	<b>max-mac</b>
Range	1 to 256
Default	20
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **multi-access** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Allow multiple access points
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>vlan-range</b> <i>string</i> <b>vrgw lanext access multi-access</b> <i>boolean</i>
Tree	<b>multi-access</b>
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **policer** *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Policer for ingress home traffic
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <a href="#">string</a> <a href="#">vrgw</a> <a href="#">lanext</a> <a href="#">access</a> <a href="#">policer</a> <a href="#">reference</a>
Tree	<a href="#">policer</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">isa-policer</a> <a href="#">string</a>
Introduced	19.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **admin-state** *keyword*

Synopsis	Administrative state of HLE
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <a href="#">string</a> <a href="#">vrgw</a> <a href="#">lanext</a> <a href="#">admin-state</a> <a href="#">keyword</a>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **assistive-address-resolution** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	ISA assists in address resolution
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <a href="#">string</a> <a href="#">vrgw</a> <a href="#">lanext</a> <a href="#">assistive-address-resolution</a> <a href="#">boolean</a>
Tree	<a href="#">assistive-address-resolution</a>
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## bd-mac-prefix *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Prefix from which BD MACs for MAC translation are derived
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">subscriber-interface string</a> <a href="#">group-interface string</a> <a href="#">wlan-gw vlan-range string</a> <a href="#">vrgw lanext bd-mac-prefix string</a>
Tree	<a href="#">bd-mac-prefix</a>
String Length	8
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## mac-translation *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Hide MAC address of home host by translating it to BD MAC
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">subscriber-interface string</a> <a href="#">group-interface string</a> <a href="#">wlan-gw vlan-range string</a> <a href="#">vrgw lanext mac-translation boolean</a>
Tree	<a href="#">mac-translation</a>
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## network

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>network</b> context
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">subscriber-interface string</a> <a href="#">group-interface string</a> <a href="#">wlan-gw vlan-range string</a> <a href="#">vrgw lanext network</a>
Tree	<a href="#">network</a>

Introduced 16.0.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Administrative state of the HLE network  
Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **wlan-gw** **vlan-range** *string* **vrgw lanext network admin-state** *keyword*  
Tree **admin-state**  
Default enable  
Options enable, disable  
Introduced 16.0.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **max-mac** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Maximum number of allowed MAC entries on network side  
Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **wlan-gw** **vlan-range** *string* **vrgw lanext network max-mac** *number*  
Tree **max-mac**  
Range 1 to 64  
Default 20  
Introduced 16.0.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **policer** *reference*

### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Policer for ingress data center traffic
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <a href="#">string</a> <a href="#">vrgw</a> <a href="#">lanext</a> <a href="#">network</a> <a href="#">policer</a> <a href="#">reference</a>
Tree	<a href="#">policer</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">isa-policer</a> <a href="#">string</a>
Introduced	19.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **xconnect**

Synopsis	Enter the <b>xconnect</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <a href="#">string</a> <a href="#">xconnect</a>
Tree	<a href="#">xconnect</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **accounting**

Synopsis	Enter the <b>accounting</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <a href="#">string</a> <a href="#">xconnect</a> <a href="#">accounting</a>
Tree	<a href="#">accounting</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **mobility-updates** *boolean*

Synopsis	Accounting updates triggered by mobility
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <a href="#">string</a> <a href="#">xconnect</a> <a href="#">accounting</a> <a href="#">mobility-updates</a> <a href="#">boolean</a>
Tree	<a href="#">mobility-updates</a>

Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **policy reference**

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	ISA RADIUS accounting policy for cross-connected UEs
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <a href="#">string</a> <a href="#">xconnect</a> <a href="#">accounting</a> <a href="#">policy</a> <a href="#">reference</a>
Tree	<a href="#">policy</a>
Reference	<b>configure</b> <a href="#">aaa</a> <a href="#">radius</a> <a href="#">isa-policy</a> <a href="#">string</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **update-interval number**

Synopsis	Time between consecutive Interim accounting update messages
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <a href="#">string</a> <a href="#">xconnect</a> <a href="#">accounting</a> <a href="#">update-interval</a> <a href="#">number</a>
Tree	<a href="#">update-interval</a>
Range	5 to 259200
Units	minutes
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **admin-state keyword**

Synopsis	Administrative state of the cross-connect
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <a href="#">string</a> <a href="#">xconnect</a> <a href="#">admin-state</a> <a href="#">keyword</a>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable

Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## wlan-gw-group *reference*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Identifier of the WLAN Gateway ISA group to terminate UEs for this group interface
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw wlan-gw-group</b> <i>reference</i>
Tree	<b>wlan-gw-group</b>
Reference	<b>configure isa wlan-gw-group</b> <i>number</i>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## wpp

Synopsis	Enable the <b>wpp</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wpp</b>
Tree	<b>wpp</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## admin-state *keyword*

Synopsis	Administrative state of WPP
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wpp admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## initial

Synopsis	Enter the <b>initial</b> context
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>group-interface</i> <i>string</i> <i>wpp</i> <b>initial</b>
Tree	<b>initial</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## app-profile *reference*

Synopsis	Initial application profile name
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>group-interface</i> <i>string</i> <i>wpp</i> <b>initial</b> <i>app-profile</i> <i>reference</i>
Tree	<b>app-profile</b>
Reference	<b>configure application-assurance</b> <i>group</i> <i>number</i> <i>partition</i> <i>number</i> <i>policy</i> <i>app-profile</i> <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## sla-profile *reference*

Synopsis	Initial SLA profile
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>group-interface</i> <i>string</i> <i>wpp</i> <b>initial</b> <i>sla-profile</i> <i>reference</i>
Tree	<b>sla-profile</b>
Reference	<b>configure subscriber-mgmt</b> <i>sla-profile</i> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## sub-profile *reference*

Synopsis	Initial subscriber profile
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>group-interface</i> <i>string</i> <i>wpp</i> <b>initial</b> <i>sub-profile</i> <i>reference</i>
Tree	<b>sub-profile</b>
Reference	<b>configure subscriber-mgmt</b> <i>sub-profile</i> <i>string</i>
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **lease-time** *number*

Synopsis Lease time

Context **configure** *service ies string subscriber-interface string group-interface string wpp lease-time number*

Tree *lease-time*

Range 10 to 315446399

Default 600

Units seconds

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **portal**

Synopsis Enter the **portal** context

Context **configure** *service ies string subscriber-interface string group-interface string wpp portal*

Tree *portal*

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **name** *string*

Synopsis Web portal server name

Context **configure** *service ies string subscriber-interface string group-interface string wpp portal name string*

Tree *name*

String Length 1 to 32

Notes The following elements are part of a choice: **portal-group** or (**name** and **router-instance**).

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **portal-group** *reference*

Synopsis	WPP portal group for this interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wpp</a> <a href="#">portal</a> <a href="#">portal-group</a> <i>reference</i>
Tree	<a href="#">portal-group</a>
Reference	<b>configure</b> <a href="#">aaa</a> <a href="#">wpp</a> <a href="#">portal-group</a> <i>string</i>
Notes	The following elements are part of a choice: <b>portal-group</b> or ( <b>name</b> and <b>router-instance</b> ).
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **router-instance** *string*

Synopsis	The virtual router instance of the WPP portal for this interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wpp</a> <a href="#">portal</a> <a href="#">router-instance</a> <i>string</i>
Tree	<a href="#">router-instance</a>
Notes	The following elements are part of a choice: <b>portal-group</b> or ( <b>name</b> and <b>router-instance</b> ).
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **restore-to-initial-on-disconnect** *boolean*

Synopsis	Restore initial profiles after a host has disconnected
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wpp</a> <a href="#">restore-to-initial-on-disconnect</a> <i>boolean</i>
Tree	<a href="#">restore-to-initial-on-disconnect</a>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **triggered-hosts** *boolean*

Synopsis	Enable/disable triggered hosts
----------	--------------------------------

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wpp triggered-hosts</b> <i>boolean</i>
Tree	<b>triggered-hosts</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **user-db** *reference*

Synopsis	User database
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wpp user-db</b> <i>reference</i>
Tree	<b>user-db</b>
Reference	<b>configure subscriber-mgmt local-user-db</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **hold-time**

Synopsis	Enter the <b>hold-time</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>hold-time</b>
Tree	<b>hold-time</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ipv4**

Synopsis	Enter the <b>ipv4</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>hold-time</b> <b>ipv4</b>
Tree	<b>ipv4</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **down**

Synopsis	Enter the <b>down</b> context
----------	-------------------------------

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>hold-time ipv4 down</b>
Tree	<b>down</b>
Description	Commands in this context configure the down hold timer, which specifies the delay before activating the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface up, unless an operator configures the <b>init-only</b> command.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **init-only** *boolean*

Synopsis	Apply delay only at interface configuration or reboot
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>hold-time ipv4 down init-only</b> <i>boolean</i>
Tree	<b>init-only</b>
Description	This command applies a delay only when the IP interface is first configured or after a system reboot.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **seconds** *number*

Synopsis	Down hold time for the IP interface
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>hold-time ipv4 down seconds</b> <i>number</i>
Tree	<b>seconds</b>
Range	1 to 1200
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **up**

Synopsis	Enter the <b>up</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>hold-time ipv4 up</b>
Tree	<b>up</b>

Description	Commands in this context configure the up hold timer, which specifies the delay before deactivation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface down.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **seconds** *number*

Synopsis	Up hold time for the IP interface
Context	<b>configure</b> <i>service ies string subscriber-interface string hold-time ipv4 up seconds number</i>
Tree	<i>seconds</i>
Range	1 to 1200
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ipv6**

Synopsis	Enter the <b>ipv6</b> context
Context	<b>configure</b> <i>service ies string subscriber-interface string hold-time ipv6</i>
Tree	<i>ipv6</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **down**

Synopsis	Enter the <b>down</b> context
Context	<b>configure</b> <i>service ies string subscriber-interface string hold-time ipv6 down</i>
Tree	<i>down</i>
Description	Commands in this context configure the down hold timer, which specifies the delay before activation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface up, unless an operator configures the <b>init-only</b> command.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **init-only** *boolean*

Synopsis	Apply delay only at interface configuration or reboot
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>hold-time</b> <b>ipv6</b> <b>down</b> <b>init-only</b> <b>boolean</b>
Tree	<b>init-only</b>
Description	This command applies the delay only when when the IP interface is first configured or after a system reboot.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **seconds** *number*

Synopsis	Down hold time for the IP interface
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>hold-time</b> <b>ipv6</b> <b>down</b> <b>seconds</b> <b>number</b>
Tree	<b>seconds</b>
Range	1 to 1200
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **up**

Synopsis	Enter the <b>up</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>hold-time</b> <b>ipv6</b> <b>up</b>
Tree	<b>up</b>
Description	Commands in this context configure the up hold timer, which specifies the delay before deactivation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface down.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **seconds** *number*

Synopsis	Up hold time for the IP interface
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">hold-time ipv6 up</a> <b>seconds</b> <i>number</i>
Tree	<a href="#">seconds</a>
Range	1 to 1200
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ipoe-linking**

Synopsis	Enter the <b>ipoe-linking</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <b>ipoe-linking</b>
Tree	<a href="#">ipoe-linking</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **gratuitous-router-advertisement** *boolean*

Synopsis	Send unsolicited router advertisement after DHCP setup
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipoe-linking</a> <b>gratuitous-router-advertisement</b> <i>boolean</i>
Tree	<a href="#">gratuitous-router-advertisement</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ipoe-session**

Synopsis	Enter the <b>ipoe-session</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <b>ipoe-session</b>
Tree	<a href="#">ipoe-session</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **session-limit** *number*

Synopsis	Maximum number of sessions on this group interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipoe-session</a> <a href="#">session-limit</a> <i>number</i>
Tree	<a href="#">session-limit</a>
Range	1 to 500000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ipv4**

Synopsis	Enter the <b>ipv4</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv4</a>
Tree	<a href="#">ipv4</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **address** [[ipv4-address](#)] *string*

Synopsis	Enter the <b>address</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">address</a> <i>string</i>
Tree	<a href="#">address</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[[ipv4-address](#)]** *string*

Synopsis	IP address associated with the subscriber subnet
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">address</a> <i>string</i>
Tree	<a href="#">address</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **gateway** *string*

Synopsis	Gateway IP address within the subnet for SRRP routing
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv4</b> <b>address</b> <i>string</i> <b>gateway</b> <i>string</i>
Tree	<a href="#">gateway</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **holdup-time** *number*

Synopsis	Wait time before accepting new state attribute
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv4</b> <b>address</b> <i>string</i> <b>holdup-time</b> <i>number</i>
Tree	<a href="#">holdup-time</a>
Range	100 to 5000
Units	milliseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **populate-host-routes** *boolean*

Synopsis	Populate subscriber host routes in local FIB
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv4</b> <b>address</b> <i>string</i> <b>populate-host-routes</b> <i>boolean</i>
Tree	<a href="#">populate-host-routes</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **prefix-length** *number*

Synopsis	IPv4 address prefix length
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv4</b> <b>address</b> <i>string</i> <b>prefix-length</b> <i>number</i>
Tree	<a href="#">prefix-length</a>
Range	0 to 32

Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **track-srrp** *number*

Synopsis	SRRP instance whose state is tracked on this IP address
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv4</b> <b>address</b> <i>string</i> <b>track-srrp</b> <i>number</i>
Tree	<a href="#">track-srrp</a>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **allow-unmatching-subnets** *boolean*

Synopsis	Allow subscriber hosts without a matching subnet
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv4</b> <b>allow-unmatching-subnets</b> <i>boolean</i>
Tree	<a href="#">allow-unmatching-subnets</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **default-dns** *string*

Synopsis	Default DNS server addresses
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv4</b> <b>default-dns</b> <i>string</i>
Tree	<a href="#">default-dns</a>
Max. Instances	2
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## dhcp

Synopsis	Enter the <b>dhcp</b> context
Context	<b>configure service ies string subscriber-interface string ipv4 dhcp</b>
Tree	<b>dhcp</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## admin-state keyword

Synopsis	Administrative state of DHCP
Context	<b>configure service ies string subscriber-interface string ipv4 dhcp admin-state keyword</b>
Tree	<b>admin-state</b>
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## client-applications

Synopsis	Enter the <b>client-applications</b> context
Context	<b>configure service ies string subscriber-interface string ipv4 dhcp client-applications</b>
Tree	<b>client-applications</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## dhcp boolean

Synopsis	Enable IPoE clients to use the DHCP relay or proxy server
Context	<b>configure service ies string subscriber-interface string ipv4 dhcp client-applications dhcp boolean</b>
Tree	<b>dhcp</b>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### ppp *boolean*

Synopsis	Enable PPPoE clients to use DHCP relay or proxy server
Context	<b>configure</b> <b>service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv4 dhcp client-applications ppp</b> <i>boolean</i>
Tree	<b>ppp</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### description *string*

Synopsis	Text description
Context	<b>configure</b> <b>service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv4 dhcp description</b> <i>string</i>
Tree	<b>description</b>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### gi-address *string*

Synopsis	GI address for the DHCP relay
Context	<b>configure</b> <b>service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv4 dhcp gi-address</b> <i>string</i>
Tree	<b>gi-address</b>
Description	<p>This command configures the GI address to distinguish between the different subscriber interfaces (and potentially group interfaces) defined when the router functions as a DHCP relay.</p> <p>By default, the GI address used in the relayed DHCP packet is the primary IP address of a normal IES interface. Specifying the GI address allows the user to choose a secondary address. For group interfaces, a GI address must be specified under the group interface DHCP context or subscriber interface DHCP context for DHCP to function.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### lease-populate

Synopsis	Enter the <b>lease-populate</b> context
----------	---

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv4 dhcp lease-populate</b>
Tree	<a href="#">lease-populate</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **max-leases** *number*

Synopsis	Maximum number of DHCPv4 leases
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv4 dhcp lease-populate max-leases</b> <i>number</i>
Tree	<a href="#">max-leases</a>
Range	0 to 511999
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **option-82**

Synopsis	Enter the <b>option-82</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv4 dhcp option-82</b>
Tree	<a href="#">option-82</a>
Description	Commands in this context configure the processing required when the router receives a DHCP request that already has an Option 82 field in the packet.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **vendor-specific-option**

Synopsis	Enter the <b>vendor-specific-option</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv4 dhcp option-82 vendor-specific-option</b>
Tree	<a href="#">vendor-specific-option</a>
Description	Commands in this context configure the Nokia Vendor-Specific Option (VSO) of the DHCP packet.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **client-mac-address** *boolean*

Synopsis	Send the MAC address in the VSO
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv4</b> <b>dhcp</b> <b>option-82</b> <b>vendor-specific-option</b> <b>client-mac-address</b> <i>boolean</i>
Tree	<b>client-mac-address</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sap-id** *boolean*

Synopsis	Send SAP ID in the sub-option of the DHCP relay packet
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv4</b> <b>dhcp</b> <b>option-82</b> <b>vendor-specific-option</b> <b>sap-id</b> <i>boolean</i>
Tree	<b>sap-id</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **service-id** *boolean*

Synopsis	Send the service ID in the Vendor Specific Option
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv4</b> <b>dhcp</b> <b>option-82</b> <b>vendor-specific-option</b> <b>service-id</b> <i>boolean</i>
Tree	<b>service-id</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **string** *string*

Synopsis	User-defined ASCII string for the VSO
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv4</b> <b>dhcp</b> <b>option-82</b> <b>vendor-specific-option</b> <b>string</b> <i>string</i>
Tree	<b>string</b>

String Length 1 to 32  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **system-id** *boolean*

Synopsis Send the system ID in the VSO  
Context **configure** [service](#) [ies](#) [string](#) [subscriber-interface](#) [string](#) [ipv4](#) [dhcp](#) [option-82](#) [vendor-specific-option](#) [system-id](#) *boolean*  
Tree [system-id](#)  
Default false  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **proxy-server**

Synopsis Enter the **proxy-server** context  
Context **configure** [service](#) [ies](#) [string](#) [subscriber-interface](#) [string](#) [ipv4](#) [dhcp](#) [proxy-server](#)  
Tree [proxy-server](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis Administrative state of the DHCP proxy server  
Context **configure** [service](#) [ies](#) [string](#) [subscriber-interface](#) [string](#) [ipv4](#) [dhcp](#) [proxy-server](#) [admin-state](#) *keyword*  
Tree [admin-state](#)  
Default disable  
Options enable, disable  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **emulated-server** *string*

Synopsis IP address used as DHCP server address in SAP context

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv4 dhcp proxy-server emulated-server</b> <i>string</i>
Tree	<b>emulated-server</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **lease-time**

Synopsis	Enter the <b>lease-time</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv4 dhcp proxy-server lease-time</b>
Tree	<b>lease-time</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **radius-override** *boolean*

Synopsis	Use lease time information provided by RADIUS server
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv4 dhcp proxy-server lease-time radius-override</b> <i>boolean</i>
Tree	<b>radius-override</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **value** *number*

Synopsis	DHCP lease time
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv4 dhcp proxy-server lease-time value</b> <i>number</i>
Tree	<b>value</b>
Range	300 to 315446399
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **python-policy** *reference*

Synopsis	Python policy
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">python-policy</a> <a href="#">reference</a>
Tree	<a href="#">python-policy</a>
Reference	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <a href="#">string</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **relay-proxy**

Synopsis	Enable the <b>relay-proxy</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">relay-proxy</a>
Tree	<a href="#">relay-proxy</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **release-update-src-ip** *boolean*

Synopsis	Update the source IP address of a DHCP RELEASE message
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">relay-proxy</a> <a href="#">release-update-src-ip</a> <a href="#">boolean</a>
Tree	<a href="#">release-update-src-ip</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **siaddr-override** *string*

Synopsis	DHCP server IP address for address hiding function
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">relay-proxy</a> <a href="#">siaddr-override</a> <a href="#">string</a>
Tree	<a href="#">siaddr-override</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **release-include-gi-address** *boolean*

Synopsis	Include the GI address in DHCP relay messages
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv4 dhcp</a> <a href="#">release-include-gi-address</a> <i>boolean</i>
Tree	<a href="#">release-include-gi-address</a>
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **server** *string*

Synopsis	DHCP server IP addresses
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv4 dhcp</a> <a href="#">server</a> <i>string</i>
Tree	<a href="#">server</a>
Max. Instances	8
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **src-ip-addr** *keyword*

Synopsis	Type of source address to use for DHCP relay
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv4 dhcp</a> <a href="#">src-ip-addr</a> <i>keyword</i>
Tree	<a href="#">src-ip-addr</a>
Default	auto
Options	auto, gi-address
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **virtual-subnet** *boolean*

Synopsis	Enable a virtual subnet for DHCPv4 hosts
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv4 dhcp</a> <a href="#">virtual-subnet</a> <i>boolean</i>
Tree	<a href="#">virtual-subnet</a>

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **export-host-routes** *boolean*

Synopsis	Allow export of subscriber management host routes
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv4</a> <b>export-host-routes</b> <i>boolean</i>
Tree	<a href="#">export-host-routes</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **unnumbered**

Synopsis	Enter the <b>unnumbered</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv4</a> <b>unnumbered</b>
Tree	<a href="#">unnumbered</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ip-address** *string*

Synopsis	IP address for the subscriber interface
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv4</a> <b>unnumbered</b> <b>ip-address</b> <i>string</i>
Tree	<a href="#">ip-address</a>
Notes	The following elements are part of a choice: <b>ip-address</b> or <b>ip-int-name</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ip-int-name** *string*

Synopsis	Interface name from which an IPv4 address is borrowed
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv4</a> <b>unnumbered</b> <b>ip-int-name</b> <i>string</i>

Tree	<a href="#">ip-int-name</a>
String Length	1 to 32
Notes	The following elements are part of a choice: <b>ip-address</b> or <b>ip-int-name</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ipv6

Synopsis	Enable the <b>ipv6</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv6</a>
Tree	<a href="#">ipv6</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## address [[ipv6-address](#)] *string*

Synopsis	Enter the <b>address</b> list instance
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">address</a> <i>string</i>
Tree	<a href="#">address</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## [[ipv6-address](#)] *string*

Synopsis	IPv6 address for the subscriber interface
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">address</a> <i>string</i>
Tree	<a href="#">address</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## host-type *keyword*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Host type for subscriber interface prefixes
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">address</a> <a href="#">string</a> <b>host-type</b> <a href="#">keyword</a>
Tree	<a href="#">host-type</a>
Default	pd
Options	pd, wan, pd-wan
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## prefix-length *number*

Synopsis	IPv6 address prefix length
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">address</a> <a href="#">string</a> <b>prefix-length</b> <a href="#">number</a>
Tree	<a href="#">prefix-length</a>
Range	0 to 128
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## allow-multiple-wan-addresses *boolean*

Synopsis	Allow multiple WAN addresses
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">ipv6</a> <b>allow-multiple-wan-addresses</b> <a href="#">boolean</a>
Tree	<a href="#">allow-multiple-wan-addresses</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **allow-unmatching-prefixes** *boolean*

Synopsis	Allow subscriber hosts without a matching prefix
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">allow-unmatching-prefixes</a> <i>boolean</i>
Tree	<a href="#">allow-unmatching-prefixes</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **default-dns** *string*

Synopsis	Default DNS server addresses
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">default-dns</a> <i>string</i>
Tree	<a href="#">default-dns</a>
Max. Instances	2
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **delegated-prefix-length** (*number* | *keyword*)

Synopsis	IPv6 delegated prefix length
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">delegated-prefix-length</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">delegated-prefix-length</a>
Range	48 to 64
Default	64
Options	variable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **dhcp6**

Synopsis	Enter the <b>dhcp6</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">dhcp6</a>

Tree	<a href="#">dhcp6</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **override-slaac** *boolean*

Synopsis	Allow WAN address offered by DHCP to overwrite the WAN address acquired from SLAAC
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">dhcp6</a> <a href="#">override-slaac</a> <i>boolean</i>
Tree	<a href="#">override-slaac</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **pd-managed-route**

Synopsis	Enable the <b>pd-managed-route</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">dhcp6</a> <a href="#">pd-managed-route</a>
Tree	<a href="#">pd-managed-route</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **next-hop** *keyword*

Synopsis	Next hop type
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">dhcp6</a> <a href="#">pd-managed-route</a> <a href="#">next-hop</a> <i>keyword</i>
Tree	<a href="#">next-hop</a>
Default	ipv6
Options	ipv4, ipv6
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## proxy-server

Synopsis	Enter the <b>proxy-server</b> context
Context	<b>configure service ies string subscriber-interface string ipv6 dhcp6 proxy-server</b>
Tree	<a href="#">proxy-server</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## admin-state *keyword*

Synopsis	Administrative state of the DHCPv6 proxy server
Context	<b>configure service ies string subscriber-interface string ipv6 dhcp6 proxy-server admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## client-applications

Synopsis	Enter the <b>client-applications</b> context
Context	<b>configure service ies string subscriber-interface string ipv6 dhcp6 proxy-server client-applications</b>
Tree	<a href="#">client-applications</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## dhcp *boolean*

Synopsis	Enable IPoE clients to use DHCP relay or proxy server
Context	<b>configure service ies string subscriber-interface string ipv6 dhcp6 proxy-server client-applications dhcp boolean</b>
Tree	<a href="#">dhcp</a>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ppp** *boolean*

Synopsis	Allow the PPP application to use DHCP relay functionality
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6</b> <b>dhcp6</b> <b>proxy-server</b> <b>client-applications</b> <b>ppp</b> <i>boolean</i>
Tree	<b>ppp</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **preferred-lifetime** (*number* | *keyword*)

Synopsis	Time for prefix to remain preferred on this interface
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6</b> <b>dhcp6</b> <b>proxy-server</b> <b>preferred-lifetime</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>preferred-lifetime</b>
Range	300 to 4294967294
Default	3600
Units	seconds
Options	infinite
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **rebind-timer** *number*

Synopsis	Rebind timer (T2) for this interface
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6</b> <b>dhcp6</b> <b>proxy-server</b> <b>rebind-timer</b> <i>number</i>
Tree	<b>rebind-timer</b>
Range	0 to 1209600
Default	2880
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **renew-timer** *number*

Synopsis	Renew timer (T1)
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6</b> <b>dhcp6</b> <b>proxy-server</b> <b>renew-timer</b> <i>number</i>
Tree	<b>renew-timer</b>
Range	0 to 604800
Default	1800
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **server-id**

Synopsis	Enter the <b>server-id</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6</b> <b>dhcp6</b> <b>proxy-server</b> <b>server-id</b>
Tree	<b>server-id</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **duid-en-ascii** *string*

Synopsis	Vendor-assigned ID based on Enterprise Number (DUID-EN)
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6</b> <b>dhcp6</b> <b>proxy-server</b> <b>server-id</b> <b>duid-en-ascii</b> <i>string</i>
Tree	<b>duid-en-ascii</b>
String Length	1 to 58
Notes	The following elements are part of a choice: <b>duid-en-ascii</b> , <b>duid-en-hex</b> , or <b>duid-ll</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **duid-en-hex** *string*

Synopsis	DUID system ID in hexadecimal format
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6</b> <b>dhcp6</b> <b>proxy-server</b> <b>server-id</b> <b>duid-en-hex</b> <i>string</i>

Tree	<a href="#">duid-en-hex</a>
String Length	1 to 118
Notes	The following elements are part of a choice: <b>duid-en-ascii</b> , <b>duid-en-hex</b> , or <b>duid-ll</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## duid-ll

Synopsis	Use link-layer address (DUID-LL) as DUID
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">dhcp6</a> <a href="#">proxy-server</a> <a href="#">server-id</a> <a href="#">duid-ll</a>
Tree	<a href="#">duid-ll</a>
Notes	This element is the default part of a choice. The following elements are part of a choice: <b>duid-en-ascii</b> , <b>duid-en-hex</b> , or <b>duid-ll</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## valid-lifetime (*number* | *keyword*)

Synopsis	Time for prefix to remain valid on this interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">dhcp6</a> <a href="#">proxy-server</a> <a href="#">valid-lifetime</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">valid-lifetime</a>
Range	300 to 4294967294
Default	86400
Units	seconds
Options	infinite
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## python-policy *reference*

Synopsis	Python policy
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">dhcp6</a> <a href="#">python-policy</a> <i>reference</i>
Tree	<a href="#">python-policy</a>

Reference **configure** [python](#) [python-policy](#) *string*  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## relay

Synopsis Enter the **relay** context  
Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [ipv6](#) [dhcp6](#) [relay](#)  
Tree [relay](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## admin-state *keyword*

Synopsis Administrative state of DHCPv6 Relay  
Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [ipv6](#) [dhcp6](#) [relay](#) [admin-state](#) *keyword*  
Tree [admin-state](#)  
Default disable  
Options enable, disable  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## client-applications

Synopsis Enter the **client-applications** context  
Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [ipv6](#) [dhcp6](#) [relay](#) [client-applications](#)  
Tree [client-applications](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## dhcp *boolean*

Synopsis Enable IPoE clients to use DHCP relay or proxy server

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6 dhcp6 relay client-applications dhcp</b> <i>boolean</i>
Tree	<b>dhcp</b>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ppp** *boolean*

Synopsis	Allow the PPP application to use DHCP relay functionality
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6 dhcp6 relay client-applications ppp</b> <i>boolean</i>
Tree	<b>ppp</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **description** *string*

Synopsis	Text description
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6 dhcp6 relay description</b> <i>string</i>
Tree	<b>description</b>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **lease-split**

Synopsis	Enter the <b>lease-split</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6 dhcp6 relay lease-split</b>
Tree	<b>lease-split</b>
Description	<p>Commands in this context configure DHCPv6 lease split.</p> <p>DHCPv6 lease split is active when administratively enabled and for all IA_NA and IA_PD options in the transaction, the configured lease split valid lifetime (short lease time) is less than or equal to one of the following:</p> <ul style="list-style-type: none"> <li>• the renew time T1 committed by the server (long renew time)</li> </ul>

- half of the preferred lifetime committed by the server when T1 committed by the server equals zero

Introduced 21.2.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis Administrative state of DHCPv6 lease split

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **ipv6** **dhcp6** **relay** **lease-split** **admin-state** *keyword*

Tree **admin-state**

Default disable

Options enable, disable

Introduced 21.2.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **valid-lifetime** *number*

Synopsis DHCPv6 lease split valid lifetime (short lease time)

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **ipv6** **dhcp6** **relay** **lease-split** **valid-lifetime** *number*

Tree **valid-lifetime**

Range 300 to 315446399

Default 3600

Units seconds

Introduced 21.2.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **link-address** *string*

Synopsis Link address for the DHCPv6 relay messages

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **ipv6** **dhcp6** **relay** **link-address** *string*

Tree **link-address**

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **server** *string*

Synopsis	DHCP6 server(s) to which the DHCP6 requests are forwarded
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">dhcp6</a> <a href="#">relay</a> <a href="#">server</a> <i>string</i>
Tree	<a href="#">server</a>
Max. Instances	8
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **source-address** *string*

Synopsis	Source IPv6 address for the DHCPv6 relay messages
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">dhcp6</a> <a href="#">relay</a> <a href="#">source-address</a> <i>string</i>
Tree	<a href="#">source-address</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ipoe-bridged-mode** *boolean*

Synopsis	Enable IPv6 IPoE bridged mode
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">ipoe-bridged-mode</a> <i>boolean</i>
Tree	<a href="#">ipoe-bridged-mode</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **link-local-address**

Synopsis	Enter the <b>link-local-address</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">link-local-address</a>
Tree	<a href="#">link-local-address</a>
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **address** *string*

Synopsis IPv6 link local address

Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [ipv6](#) [link-local-address](#) *address string*

Tree [address](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **prefix** [[ipv6-prefix](#)] *string*

Synopsis Enter the **prefix** list instance

Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [ipv6](#) [prefix](#) *string*

Tree [prefix](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[[ipv6-prefix](#)]** *string*

Synopsis IPv6 address for a router interface

Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [ipv6](#) [prefix](#) *string*

Tree [prefix](#)

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **holdup-time** *number*

Synopsis Time to wait before route accepts new state attribute

Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [ipv6](#) [prefix](#) *string* [holdup-time](#) *number*

Tree [holdup-time](#)

Range 100 to 5000

Units milliseconds

Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **host-type** *keyword*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Host type for subscriber interface prefixes  
Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [ipv6](#) [prefix](#) *string* **host-type** *keyword*  
Tree [host-type](#)  
Default pd  
Options pd, wan, pd-wan  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **track-srrp** *number*

Synopsis SRRP instance whose state is tracked on this IP address  
Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [ipv6](#) [prefix](#) *string* **track-srrp** *number*  
Tree [track-srrp](#)  
Range 1 to 4294967295  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **router-advertisements**

Synopsis Enter the **router-advertisements** context  
Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [ipv6](#) **router-advertisements**  
Tree [router-advertisements](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of router advertisements
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">router-advertisements</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **force-mcast** *keyword*

Synopsis	Protocol with forced multicast
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">router-advertisements</a> <a href="#">force-mcast</a> <i>keyword</i>
Tree	<a href="#">force-mcast</a>
Options	ip, ip-mac
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **max-advertisement-interval** *number*

Synopsis	Maximum advertisement interval
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">router-advertisements</a> <a href="#">max-advertisement-interval</a> <i>number</i>
Tree	<a href="#">max-advertisement-interval</a>
Range	900 to 1800
Default	1800
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **min-advertisement-interval** *number*

Synopsis	Minimum advertisement interval
----------	--------------------------------

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6 router-advertisements min-advertisement-interval</b> <i>number</i>
Tree	<b>min-advertisement-interval</b>
Range	900 to 1350
Default	900
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## options

Synopsis	Enter the <b>options</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6 router-advertisements options</b>
Tree	<b>options</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## current-hop-limit *number*

Synopsis	Hop limit to be advertised
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6 router-advertisements options current-hop-limit</b> <i>number</i>
Tree	<b>current-hop-limit</b>
Range	0 to 255
Default	64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## dns

Synopsis	Enter the <b>dns</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6 router-advertisements options dns</b>
Tree	<b>dns</b>
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **include-rdnss** *boolean*

Synopsis Include the RDNSS server option 25

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **ipv6** **router-advertisements**  
**options** **dns** **include-rdnss** *boolean*

Tree [include-rdnss](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **rdnss-lifetime** (*number* | *keyword*)

Synopsis Maximum time for the RDNSS address to remain valid

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **ipv6** **router-advertisements**  
**options** **dns** **rdnss-lifetime** (*number* | *keyword*)

Tree [rdnss-lifetime](#)

Range 900 to 3600

Default 3600

Units seconds

Options infinite

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **managed-configuration** *boolean*

Synopsis Managed address configuration flag

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **ipv6** **router-advertisements**  
**options** **managed-configuration** *boolean*

Tree [managed-configuration](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **mtu** (*number* | *keyword*)

Synopsis	Advertised MTU value
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">router-advertisements</a> <a href="#">options</a> <b>mtu</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">mtu</a>
Range	1280 to 9212
Default	not-included
Units	bytes
Options	not-included
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **other-stateful-configuration** *boolean*

Synopsis	Other stateful configuration flag
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">router-advertisements</a> <a href="#">options</a> <b>other-stateful-configuration</b> <i>boolean</i>
Tree	<a href="#">other-stateful-configuration</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **reachable-time** *number*

Synopsis	Neighbor discovery reachable time that is advertised for this group interface
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">router-advertisements</a> <a href="#">options</a> <b>reachable-time</b> <i>number</i>
Tree	<a href="#">reachable-time</a>
Range	0 to 3600000
Default	0
Units	milliseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **retransmit-timer** *number*

Synopsis	Neighbor discovery retransmit timer that is advertised for this group interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">router-advertisements</a> <a href="#">options</a> <b>retransmit-timer</b> <i>number</i>
Tree	<a href="#">retransmit-timer</a>
Range	0 to 1800000
Default	0
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **router-lifetime** (*number* | *keyword*)

Synopsis	Router lifetime
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">router-advertisements</a> <a href="#">options</a> <b>router-lifetime</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">router-lifetime</a>
Range	2700 to 9000
Default	4500
Units	seconds
Options	no-default-router
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **prefix-options**

Synopsis	Enter the <b>prefix-options</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">router-advertisements</a> <a href="#">prefix-options</a>
Tree	<a href="#">prefix-options</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **autonomous** *boolean*

Synopsis	Value of the autonomous flag
----------	------------------------------

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6</b> <b>router-advertisements</b> <b>prefix-options</b> <b>autonomous</b> <i>boolean</i>
Tree	<b>autonomous</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **on-link** *boolean*

Synopsis	Assign the prefix to an interface on the specified link
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6</b> <b>router-advertisements</b> <b>prefix-options</b> <b>on-link</b> <i>boolean</i>
Tree	<b>on-link</b>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **preferred-lifetime** (*number* | *keyword*)

Synopsis	Time for a prefix to remain preferred
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6</b> <b>router-advertisements</b> <b>prefix-options</b> <b>preferred-lifetime</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>preferred-lifetime</b>
Range	0 to 4294967294
Default	3600
Units	seconds
Options	infinite
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **valid-lifetime** (*number* | *keyword*)

Synopsis	Time for a prefix to remain valid
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6</b> <b>router-advertisements</b> <b>prefix-options</b> <b>valid-lifetime</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>valid-lifetime</b>

Range	0 to 4294967294
Default	86400
Units	seconds
Options	infinite
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## router-solicit

Synopsis	Enter the <b>router-solicit</b> context
Context	<b>configure service ies string subscriber-interface string ipv6 router-solicit</b>
Tree	<a href="#">router-solicit</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## inactivity-timer (*number* | *keyword*)

Synopsis	Time before an inactive host is removed
Context	<b>configure service ies string subscriber-interface string ipv6 router-solicit inactivity-timer (<i>number</i>   <i>keyword</i>)</b>
Tree	<a href="#">inactivity-timer</a>
Range	1 to 31536000
Default	300
Units	seconds
Options	infinite
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## local-address-assignment

Synopsis	Enter the <b>local-address-assignment</b> context
Context	<b>configure service ies string subscriber-interface string local-address-assignment</b>
Tree	<a href="#">local-address-assignment</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of Local Address Assignment
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">local-address-assignment</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ipv4**

Synopsis	Enter the <b>ipv4</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">local-address-assignment</a> <a href="#">ipv4</a>
Tree	<a href="#">ipv4</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **client-applications**

Synopsis	Enter the <b>client-applications</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">local-address-assignment</a> <a href="#">ipv4</a> <a href="#">client-applications</a>
Tree	<a href="#">client-applications</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ppp** *boolean*

Synopsis	Request local addresses for PPP IPCP hosts
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">local-address-assignment</a> <a href="#">ipv4</a> <a href="#">client-applications</a> <a href="#">ppp</a> <i>boolean</i>
Tree	<a href="#">ppp</a>
Default	false
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **default-pool** *string*

Synopsis Default pools

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [local-address-assignment ipv4](#)  
[default-pool](#) *string*

Tree [default-pool](#)

String Length 1 to 32

Max. Instances 2

Notes This element is ordered by the user.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **server** *reference*

Synopsis Local DHCP server that contains pools for local address assignment

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [local-address-assignment ipv4](#)  
[server](#) *reference*

Tree [server](#)

Reference **configure** [router](#) *string* [dhcp-server dhcpv4](#) *string*

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ipv6**

Synopsis Enter the **ipv6** context

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [local-address-assignment ipv6](#)

Tree [ipv6](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **client-applications**

Synopsis Enter the **client-applications** context

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>local-address-assignment ipv6</b> <b>client-applications</b>
Tree	<b>client-applications</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ipoe-slaac** *boolean*

Synopsis	Request local addresses for IpoE SLAAC hosts
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>local-address-assignment ipv6</b> <b>client-applications ipoe-slaac</b> <i>boolean</i>
Tree	<b>ipoe-slaac</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ipoe-wan** *boolean*

Synopsis	Request local addresses for IpoE IA NA hosts
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>local-address-assignment ipv6</b> <b>client-applications ipoe-wan</b> <i>boolean</i>
Tree	<b>ipoe-wan</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ppp-slaac** *boolean*

Synopsis	Request local addresses for PPP SLAAC hosts
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>local-address-assignment ipv6</b> <b>client-applications ppp-slaac</b> <i>boolean</i>
Tree	<b>ppp-slaac</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **server reference**

Synopsis	Local DHCPv6 server that contains pools for local address assignment
Context	<b>configure service ies string subscriber-interface string local-address-assignment ipv6 server reference</b>
Tree	<b>server</b>
Reference	<b>configure router string dhcp-server dhcpv6 string</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **pppoe**

Synopsis	Enter the <b>pppoe</b> context
Context	<b>configure service ies string subscriber-interface string pppoe</b>
Tree	<b>pppoe</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **description string**

Synopsis	Text description
Context	<b>configure service ies string subscriber-interface string pppoe description string</b>
Tree	<b>description</b>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **session-limit number**

Synopsis	Maximum PPPoE sessions
Context	<b>configure service ies string subscriber-interface string pppoe session-limit number</b>
Tree	<b>session-limit</b>
Range	1 to 333823
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## wan-mode keyword

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Mode of operation for hosts with /128 WAN IPv6 address
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>wan-mode</b> <i>keyword</i>
Tree	<b>wan-mode</b>
Default	mode64
Options	mode64, mode128
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## wlan-gw

Synopsis	Enable the <b>wlan-gw</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>wlan-gw</b>
Tree	<b>wlan-gw</b>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## pool-manager

Synopsis	Enter the <b>pool-manager</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>wlan-gw pool-manager</b>
Tree	<b>pool-manager</b>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## dhcp6-client

Synopsis	Enter the <b>dhcp6-client</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>wlan-gw pool-manager dhcp6-client</b>
Tree	<b>dhcp6-client</b>

Introduced 16.0.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **dhcpv4-nat**

Synopsis Enter the **dhcpv4-nat** context  
Context **configure** [service](#) [ies](#) [string](#) [subscriber-interface](#) [string](#) [wlan-gw](#) [pool-manager](#) [dhcp6-client](#) [dhcpv4-nat](#)  
Tree [dhcpv4-nat](#)  
Introduced 16.0.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis Administrative state of the DHCPv6 client entity  
Context **configure** [service](#) [ies](#) [string](#) [subscriber-interface](#) [string](#) [wlan-gw](#) [pool-manager](#) [dhcp6-client](#) [dhcpv4-nat](#) [admin-state](#) *keyword*  
Tree [admin-state](#)  
Default disable  
Options enable, disable  
Introduced 16.0.R1  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **link-address** *string*

Synopsis IPv6 address in the link address field of relay header  
Context **configure** [service](#) [ies](#) [string](#) [subscriber-interface](#) [string](#) [wlan-gw](#) [pool-manager](#) [dhcp6-client](#) [dhcpv4-nat](#) [link-address](#) *string*  
Tree [link-address](#)  
Default ::  
Introduced 16.0.R4  
Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **pool-name** *string*

Synopsis Pool name to be sent in the DHCPv6 messages

Context **configure service ies** *string* **subscriber-interface** *string* **wlan-gw pool-manager dhcp6-client dhcpv4-nat pool-name** *string*

Tree [pool-name](#)

String Length 1 to 32

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ia-na

Synopsis Enter the **ia-na** context

Context **configure service ies** *string* **subscriber-interface** *string* **wlan-gw pool-manager dhcp6-client ia-na**

Tree [ia-na](#)

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## admin-state *keyword*

Synopsis Administrative state of the DHCPv6 client entity

Context **configure service ies** *string* **subscriber-interface** *string* **wlan-gw pool-manager dhcp6-client ia-na admin-state** *keyword*

Tree [admin-state](#)

Default disable

Options enable, disable

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## link-address *string*

Synopsis IPv6 address in the link address field of relay header

Context **configure service ies** *string* **subscriber-interface** *string* **wlan-gw pool-manager dhcp6-client ia-na link-address** *string*

Tree [link-address](#)

Default ::

Introduced 16.0.R4

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **pool-name** *string*

Synopsis	Pool name to be sent in the DHCPv6 messages
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>wlan-gw</b> <b>pool-manager</b> <b>dhcp6-client</b> <b>ia-na</b> <b>pool-name</b> <i>string</i>
Tree	<b>pool-name</b>
String Length	1 to 32
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **lease-query**

Synopsis	Enable the <b>lease-query</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>wlan-gw</b> <b>pool-manager</b> <b>dhcp6-client</b> <b>lease-query</b>
Tree	<b>lease-query</b>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **max-retries** *number*

Synopsis	Maximum number of retries before the lease query assumes that no existing subnets were allocated
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>wlan-gw</b> <b>pool-manager</b> <b>dhcp6-client</b> <b>lease-query</b> <b>max-retries</b> <i>number</i>
Tree	<b>max-retries</b>
Range	0 to 10
Default	2
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **servers** *string*

Synopsis	DHCPv6 servers that are used for requesting addresses
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>wlan-gw</b> <b>pool-manager</b> <b>dhcp6-client</b> <b>servers</b> <i>string</i>
Tree	<b>servers</b>

Max. Instances	8
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **slaac**

Synopsis	Enter the <b>slaac</b> context
Context	<b>configure service ies string subscriber-interface string wlan-gw pool-manager dhcp6-client slaac</b>
Tree	<a href="#">slaac</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **admin-state keyword**

Synopsis	Administrative state of the DHCPv6 client entity
Context	<b>configure service ies string subscriber-interface string wlan-gw pool-manager dhcp6-client slaac admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **link-address string**

Synopsis	IPv6 address in the link address field of relay header
Context	<b>configure service ies string subscriber-interface string wlan-gw pool-manager dhcp6-client slaac link-address string</b>
Tree	<a href="#">link-address</a>
Default	::
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **pool-name** *string*

Synopsis	Pool name to be sent in the DHCPv6 messages
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>wlan-gw</b> <b>pool-manager</b> <b>dhcp6-client</b> <b>slaac</b> <b>pool-name</b> <i>string</i>
Tree	<b>pool-name</b>
String Length	1 to 32
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **source-ip** (*keyword* | *ipv6-address*)

Synopsis	Source IP address that is used by the DHCPv6 client
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>wlan-gw</b> <b>pool-manager</b> <b>dhcp6-client</b> <b>source-ip</b> ( <i>keyword</i>   <i>ipv6-address</i> )
Tree	<b>source-ip</b>
Default	use-interface-ip
Options	use-interface-ip
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **watermarks**

Synopsis	Enter the <b>watermarks</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>wlan-gw</b> <b>pool-manager</b> <b>watermarks</b>
Tree	<b>watermarks</b>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **high** *number*

Synopsis	New prefix that is used when the ISA level reaches high watermark
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>wlan-gw</b> <b>pool-manager</b> <b>watermarks</b> <b>high</b> <i>number</i>
Tree	<b>high</b>
Range	51 to 99

Default	95
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **low number**

Synopsis	Prefix that is released if the usage level without this prefix is below the low watermark
Context	<b>configure service ies string subscriber-interface string wlan-gw pool-manager watermarks low number</b>
Tree	<a href="#">low</a>
Range	50 to 98
Default	90
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **wlan-gw-group reference**

Synopsis	Identifier of the WLAN Gateway ISA group on which the prefixes are installed
Context	<b>configure service ies string subscriber-interface string wlan-gw pool-manager wlan-gw-group reference</b>
Tree	<a href="#">wlan-gw-group</a>
Reference	<b>configure isa wlan-gw-group number</b>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **redundancy**

Synopsis	Enter the <b>redundancy</b> context
Context	<b>configure service ies string subscriber-interface string wlan-gw redundancy</b>
Tree	<a href="#">redundancy</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **admin-state keyword**

Synopsis	Administrative state of WLAN-GW redundancy
----------	--

Context	<b>configure service ies string subscriber-interface string wlan-gw redundancy admin-state keyword</b>
Tree	<b>admin-state</b>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **export string**

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Route to export to peer
Context	<b>configure service ies string subscriber-interface string wlan-gw redundancy export string</b>
Tree	<b>export</b>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **monitor string**

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Peer route to monitor
Context	<b>configure service ies string subscriber-interface string wlan-gw redundancy monitor string</b>
Tree	<b>monitor</b>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **subscriber-mgmt**

Synopsis	Enter the <b>subscriber-mgmt</b> context
Context	<b>configure service ies string subscriber-mgmt</b>

Tree	<a href="#">subscriber-mgmt</a>
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **multi-chassis-shunt-id** *number*

Synopsis	Shunt ID for a pair of resilient nodes
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-mgmt</a> <a href="#">multi-chassis-shunt-id</a> <i>number</i>
Tree	<a href="#">multi-chassis-shunt-id</a>
Description	<p>This command configures the shunt ID that is used to shunt downstream traffic from a standby node to an active node. Because this ID identifies the traffic service on the standby node, the same ID must be configured per service on each node.</p> <p>This configuration is required for BNG CUPS inter-UPF resiliency shunting, but not for non-BNG CUPS shunting. However, when configured, it is also used for shunting non-BNG CUPS sessions in the same service.</p>
Range	1 to 8191
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **up-resiliency**

Synopsis	Enter the <b>up-resiliency</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-mgmt</a> <a href="#">up-resiliency</a>
Tree	<a href="#">up-resiliency</a>
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **monitor-oper-group** [[oper-group](#)] *reference*

Synopsis	Enter the <b>monitor-oper-group</b> list instance
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-mgmt</a> <a href="#">up-resiliency</a> <a href="#">monitor-oper-group</a> <i>reference</i>
Tree	<a href="#">monitor-oper-group</a>
Description	<p>Commands in this context define parameters to derive the service health based on monitored operational groups. The BNG UPF sends the health value to the BNG CPF. The BNG CPF uses the value to determine the need for a BNG UPF status change (active or standby).</p>

**Note:**

The following is only applicable for the **configure service vpls capture-sap** context. If the configured groups are not the same for all capture SAPs sharing the same underlying port or LAG, the configuration of a Layer 2 access ID alias is required, or else the system chooses arbitrarily one set of configured groups.

Max. Instances	4
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### [oper-group] *reference*

Synopsis	Operational group name
Context	<b>configure service ies</b> <i>string</i> <a href="#">subscriber-mgmt up-resiliency monitor-oper-group reference</a>
Tree	<a href="#">monitor-oper-group</a>
Reference	<b>configure service oper-group</b> <i>string</i>
Notes	This element is part of a list key.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### health-drop *number*

Synopsis	Number subtracted from the health value per failure
Context	<b>configure service ies</b> <i>string</i> <a href="#">subscriber-mgmt up-resiliency monitor-oper-group reference health-drop number</a>
Tree	<a href="#">health-drop</a>
Description	This command defines how the failure of an operational group member affects the health value. The base health value is 255; the value decreases with the defined number per member failure to a minimum of 0.
Range	1 to 255
Default	1
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### video-interface [[interface-name](#)] *string*

Synopsis	Enter the <b>video-interface</b> list instance
----------	--

Context	<b>configure service ies string video-interface string</b>
Tree	<a href="#">video-interface</a>
Max. Instances	9
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

### **[interface-name] string**

Synopsis	Video interface name
Context	<b>configure service ies string video-interface string</b>
Tree	<a href="#">video-interface</a>
String Length	1 to 29
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

### **accounting-policy reference**

Synopsis	Accounting Policy
Context	<b>configure service ies string video-interface string accounting-policy reference</b>
Tree	<a href="#">accounting-policy</a>
Reference	<b>configure log accounting-policy number</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

### **address [ip-address] string**

Synopsis	Add a list entry for <b>address</b>
Context	<b>configure service ies string video-interface string address string</b>
Tree	<a href="#">address</a>
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

### **[ip-address] string**

Synopsis IPv4 address for the video interface within the service  
Context **configure service ies string video-interface string address string**  
Tree **address**  
Notes This element is part of a list key.  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

### **adi**

Synopsis Enter the **adi** context  
Context **configure service ies string video-interface string adi**  
Tree **adi**  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

### **scte30**

Synopsis Enter the **scte30** context

Tree **scte30**  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

### **ad-server [address] string**

Synopsis Add a list entry for **ad-server**  
Context **configure service ies string video-interface string adi scte30 ad-server string**  
Tree **ad-server**

Max. Instances	4
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

### **[address] string**

Synopsis	Ad server address
Context	<b>configure service ies string video-interface string adi scte30 ad-server string</b>
Tree	<b>ad-server</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

### **local-address**

Synopsis	Enable the <b>local-address</b> context
Context	<b>configure service ies string video-interface string adi scte30 local-address</b>
Tree	<b>local-address</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

### **control string**

Synopsis	Control
Context	<b>configure service ies string video-interface string adi scte30 local-address control string</b>
Tree	<b>control</b>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

### **data** *string*

Synopsis	Data
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">video-interface</a> <a href="#">string</a> <a href="#">adi</a> <a href="#">scte30</a> <a href="#">local-address</a> <a href="#">data</a> <a href="#">string</a>
Tree	<a href="#">data</a>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

### **admin-state** *keyword*

Synopsis	Administrative state of the video interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">video-interface</a> <a href="#">string</a> <a href="#">admin-state</a> <a href="#">keyword</a>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

### **channel** [[mcast-address](#)] [string](#) [source](#) [string](#)

Synopsis	Enter the <b>channel</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">video-interface</a> <a href="#">string</a> <a href="#">channel</a> <a href="#">string</a> <a href="#">source</a> <a href="#">string</a>
Tree	<a href="#">channel</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

### [[mcast-address](#)] [string](#)

Synopsis	Multicast channel address
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">video-interface</a> <a href="#">string</a> <a href="#">channel</a> <a href="#">string</a> <a href="#">source</a> <a href="#">string</a>
Tree	<a href="#">channel</a>
Notes	This element is part of a list key.
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

### **source string**

Synopsis Unicast source address

Context **configure service ies string video-interface string channel string source string**

Tree **channel**

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

### **channel-name string**

Synopsis Channel name

Context **configure service ies string video-interface string channel string source string channel-name string**

Tree **channel-name**

String Length 1 to 32

Notes This element is mandatory.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

### **description string**

Synopsis Text description

Context **configure service ies string video-interface string channel string source string description string**

Tree **description**

String Length 1 to 80

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

### **scte35-action** *keyword*

Synopsis	Enable downstream forwarding of SCTE 35 cue avails
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>video-interface</b> <i>string</i> <b>channel</b> <i>string</i> <b>source</b> <i>string</i> <b>scte35-action</b> <i>keyword</i>
Tree	<b>scte35-action</b>
Default	forward
Options	forward, drop
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

### **zone-channel** [**zone-mcast-address**] *string* **zone-source** *string*

Synopsis	Enter the <b>zone-channel</b> list instance
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>video-interface</b> <i>string</i> <b>channel</b> <i>string</i> <b>source</b> <i>string</i> <b>zone-channel</b> <i>string</i> <b>zone-source</b> <i>string</i>

Introduced	16.0.R1
Platforms	All

## **collector** *router-instance string ip-address string*

Synopsis	Enter the <b>collector</b> list instance
Context	<b>configure</b> <i>service ipfix export-policy string collector router-instance string ip-address string</i>
Tree	<i>collector</i>
Introduced	16.0.R1
Platforms	All

## **router-instance** *string*

Synopsis	Router where the collector is reached
Context	<b>configure</b> <i>service ipfix export-policy string collector router-instance string ip-address string</i>
Tree	<i>collector</i>
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

### **ip-address** *string*

Synopsis	IPv4 address of the external collector node
Context	<b>configure</b> <b>service ipfix export-policy</b> <i>string</i> <b>collector</b> <b>router-instance</b> <i>string</i> <b>ip-address</b> <i>string</i>
Tree	<b>collector</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the collector
Context	<b>configure</b> <b>service ipfix export-policy</b> <i>string</i> <b>collector</b> <b>router-instance</b> <i>string</i> <b>ip-address</b> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Default	disable
Options	enable, disable
Introduced	16.0.R1
Platforms	All

### **mtu** *number*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum Transmission Unit
Context	<b>configure</b> <b>service ipfix export-policy</b> <i>string</i> <b>collector</b> <b>router-instance</b> <i>string</i> <b>ip-address</b> <i>string</i> <b>mtu</b> <i>number</i>
Tree	<b>mtu</b>
Range	512 to 9212
Default	1500
Units	octets
Introduced	16.0.R1
Platforms	All

## refresh-timeout *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPFIX template refresh time
Context	<b>configure</b> <a href="#">service ipfix export-policy</a> <i>string</i> <a href="#">collector router-instance</a> <i>string</i> <a href="#">ip-address</a> <i>string</i> <b>refresh-timeout</b> <i>number</i>
Tree	<a href="#">refresh-timeout</a>
Range	240 to 86400
Default	600
Units	seconds
Introduced	16.0.R1
Platforms	All

## source-ip-address *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Source IP address used in communication towards the collector
Context	<b>configure</b> <a href="#">service ipfix export-policy</a> <i>string</i> <a href="#">collector router-instance</a> <i>string</i> <a href="#">ip-address</a> <i>string</i> <b>source-ip-address</b> <i>string</i>
Tree	<a href="#">source-ip-address</a>
Introduced	16.0.R1
Platforms	All

## description *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service ipfix export-policy</a> <i>string</i> <b>description</b> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **template-format** *keyword*

Synopsis	Template format used by this IPFIX export policy
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipfix export-policy</a> <i>string</i> <a href="#">template-format</a> <i>keyword</i>
Tree	<a href="#">template-format</a>
Default	format1
Options	format1, format2
Introduced	16.0.R1
Platforms	All

### **ipipe** [[service-name](#)] *string*

Synopsis	Enter the <b>ipipe</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i>
Tree	<a href="#">ipipe</a>
Introduced	20.10.R1
Platforms	All

### **[service-name]** *string*

Synopsis	Administrative service name
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i>
Tree	<a href="#">ipipe</a>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the service
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	disable
Options	enable, disable

Introduced 20.10.R1  
Platforms All

### **ce-address-discovery**

Synopsis Enable the **ce-address-discovery** context  
Context **configure service ipipe string ce-address-discovery**  
Tree [ce-address-discovery](#)  
Introduced 20.10.R1  
Platforms All

### **customer reference**

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Service customer ID  
Context **configure service ipipe string customer reference**  
Tree [customer](#)  
Reference **configure service customer string**  
Notes This element is mandatory.  
Introduced 20.10.R1  
Platforms All

### **description string**

Synopsis Text description  
Context **configure service ipipe string description string**  
Tree [description](#)  
String Length 1 to 80  
Introduced 20.10.R1  
Platforms All

### **endpoint** *[name]* *string*

Synopsis	Enter the <b>endpoint</b> list instance
Context	<b>configure service ipipe</b> <i>string endpoint string</i>
Tree	<b>endpoint</b>
Max. Instances	2
Introduced	20.10.R1
Platforms	All

### **[name]** *string*

Synopsis	Service endpoint name
Context	<b>configure service ipipe</b> <i>string endpoint string</i>
Tree	<b>endpoint</b>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure service ipipe</b> <i>string endpoint string description string</i>
Tree	<b>description</b>
String Length	1 to 80
Introduced	20.10.R1
Platforms	All

### **hold-time-active** *number*

Synopsis	Time to hold the active state before entering standby when a local MC-LAG SAP goes down
Context	<b>configure service ipipe</b> <i>string endpoint string hold-time-active number</i>
Tree	<b>hold-time-active</b>
Range	1 to 60

Units	deciseconds
Introduced	20.10.R1
Platforms	All

### **revert-time** (*number* | *keyword*)

Synopsis	Time to wait before reverting back to the primary spoke-sdp defined on this service endpoint
Context	<b>configure</b> <b>service</b> <b>ipipe</b> <i>string</i> <b>endpoint</b> <i>string</i> <b>revert-time</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>revert-time</b>
Range	1 to 600
Default	immediate
Units	seconds
Options	never, immediate
Introduced	20.10.R1
Platforms	All

### **standby-signaling** *keyword*

Synopsis	Endpoint behavior for status of sending PW standby bit
Context	<b>configure</b> <b>service</b> <b>ipipe</b> <i>string</i> <b>endpoint</b> <i>string</i> <b>standby-signaling</b> <i>keyword</i>
Tree	<b>standby-signaling</b>
Options	master
Introduced	20.10.R1
Platforms	All

### **sap** [**sap-id**] *string*

Synopsis	Enter the <b>sap</b> list instance
Context	<b>configure</b> <b>service</b> <b>ipipe</b> <i>string</i> <b>sap</b> <i>string</i>
Tree	<b>sap</b>
Introduced	20.10.R1
Platforms	All

### [sap-id] *string*

Synopsis	SAP ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i>
Tree	<a href="#">sap</a>
String Length	1 to 45
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	All

### accounting-policy *reference*

Synopsis	Accounting policy
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">accounting-policy</a> <i>reference</i>
Tree	<a href="#">accounting-policy</a>
Reference	<b>configure</b> <a href="#">log</a> <a href="#">accounting-policy</a> <i>number</i>
Introduced	20.10.R1
Platforms	All

### admin-state *keyword*

Synopsis	Administrative state of the SAP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Default	enable
Options	enable, disable
Introduced	20.10.R1
Platforms	All

### app-profile *reference*

Synopsis	Application profile name
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">app-profile</a> <i>reference</i>
Tree	<a href="#">app-profile</a>
Reference	<b>configure</b> <a href="#">application-assurance</a> <a href="#">group</a> <i>number</i> <a href="#">partition</a> <i>number</i> <a href="#">policy</a> <a href="#">app-profile</a> <i>string</i>

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **bandwidth** *number*

Synopsis	SAP bandwidth
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">bandwidth</a> <i>number</i>
Tree	<a href="#">bandwidth</a>
Range	1 to 6400000000
Units	kilobps
Introduced	20.10.R1
Platforms	All

### **ce-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the CE device
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ce-address</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">ce-address</a>
Introduced	20.10.R1
Platforms	All

### **collect-stats** *boolean*

Synopsis	Collect accounting statistics
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">collect-stats</a> <i>boolean</i>
Tree	<a href="#">collect-stats</a>
Default	false
Introduced	20.10.R1
Platforms	All

### **cpu-protection**

Synopsis	Enter the <b>cpu-protection</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">cpu-protection</a>
Tree	<a href="#">cpu-protection</a>

Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

### mac-monitoring

Synopsis Monitor MAC for CPU protection  
Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [cpu-protection](#) [mac-monitoring](#)  
Tree [mac-monitoring](#)  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

### policy-id *reference*

Synopsis CPM protection policy  
Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [cpu-protection](#) [policy-id](#) *reference*  
Tree [policy-id](#)  
Reference **configure** [system](#) [security](#) [cpu-protection](#) [policy](#) *number*  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

### description *string*

Synopsis Text description  
Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [description](#) *string*  
Tree [description](#)  
String Length 1 to 160  
Introduced 20.10.R1  
Platforms All

### dist-cpu-protection *reference*

Synopsis Distributed CPU protection policy for SAP  
Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [dist-cpu-protection](#) *reference*  
Tree [dist-cpu-protection](#)  
Reference **configure** [system](#) [security](#) [dist-cpu-protection](#) [policy](#) *string*

Introduced 20.10.R1  
Platforms All

## **egress**

Synopsis Enter the **egress** context  
Context **configure service ipipe string sap string egress**  
Tree **egress**  
Introduced 20.10.R1  
Platforms All

## **agg-rate**

Synopsis Enter the **agg-rate** context  
Context **configure service ipipe string sap string egress agg-rate**  
Tree **agg-rate**  
Notes This element is the default part of a choice.  
Introduced 20.10.R1  
Platforms All

## **adaptation-rule** *keyword*

Synopsis Adaptation rule to compute the operational PIR value when an aggregate shaper is used  
Context **configure service ipipe string sap string egress agg-rate adaptation-rule keyword**  
Tree **adaptation-rule**  
Default closest  
Options max, min, closest  
Introduced 22.10.R1  
Platforms 7750 SR-1, 7750 SR-s

## **burst-limit** (*number | keyword*)

Synopsis Shaping burst size when an aggregate shaper is used  
Context **configure service ipipe string sap string egress agg-rate burst-limit (number | keyword)**  
Tree **burst-limit**

Range	1 to 14000000
Default	auto
Units	bytes
Options	auto
Introduced	22.10.R1
Platforms	7750 SR-1, 7750 SR-s

### **limit-unused-bandwidth** *boolean*

Synopsis	Enable aggregate rate overrun protection
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">agg-rate</a> <a href="#">limit-unused-bandwidth</a> <i>boolean</i>
Tree	<a href="#">limit-unused-bandwidth</a>
Default	false
Introduced	20.10.R1
Platforms	All

### **rate** *number*

Synopsis	Enforced aggregate rate for all queues
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">agg-rate</a> <a href="#">rate</a> <i>number</i>
Tree	<a href="#">rate</a>
Range	1 to 6400000000
Units	kilobps
Introduced	20.10.R1
Platforms	All

### **filter**

Synopsis	Enter the <b>filter</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">filter</a>
Tree	<a href="#">filter</a>
Introduced	20.10.R1
Platforms	All

## ip reference

Synopsis	MAC filter ID
Context	<b>configure</b> <a href="#">service ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress filter ip</a> <i>reference</i>
Tree	<a href="#">ip</a>
Reference	<b>configure</b> <a href="#">filter ip-filter</a> <i>string</i>
Introduced	20.10.R1
Platforms	All

## ipv6 reference

Synopsis	IPv6 filter identifier
Context	<b>configure</b> <a href="#">service ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress filter ipv6</a> <i>reference</i>
Tree	<a href="#">ipv6</a>
Reference	<b>configure</b> <a href="#">filter ipv6-filter</a> <i>string</i>
Introduced	20.10.R1
Platforms	All

## qos

Synopsis	Enter the <b>qos</b> context
Context	<b>configure</b> <a href="#">service ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos</a>
Tree	<a href="#">qos</a>
Introduced	20.10.R1
Platforms	All

## policer-control-policy

Synopsis	Enter the <b>policer-control-policy</b> context
Context	<b>configure</b> <a href="#">service ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos policer-control-policy</a>
Tree	<a href="#">policer-control-policy</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## overrides

Synopsis	Enable the <b>overrides</b> context
Context	<b>configure service ipipe string sap string egress qos policer-control-policy overrides</b>
Tree	<a href="#">overrides</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## root

Synopsis	Enter the <b>root</b> context
Context	<b>configure service ipipe string sap string egress qos policer-control-policy overrides root</b>
Tree	<a href="#">root</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## max-rate (*number* | *keyword*)

Synopsis	Maximum frame-based bandwidth limit
Context	<b>configure service ipipe string sap string egress qos policer-control-policy overrides root</b> <a href="#">max-rate (<i>number</i>   <i>keyword</i>)</a>
Tree	<a href="#">max-rate</a>
Range	1 to 6400000000
Options	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## priority-mbs-thresholds

Synopsis	Enter the <b>priority-mbs-thresholds</b> context
Context	<b>configure service ipipe string sap string egress qos policer-control-policy overrides root</b> <a href="#">priority-mbs-thresholds</a>
Tree	<a href="#">priority-mbs-thresholds</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **min-thresh-separation** (*number* | *keyword*)

Synopsis	Minimum amount of separation buffer space
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a> <a href="#">priority-mbs-thresholds</a> <b>min-thresh-separation</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">min-thresh-separation</a>
Range	0 to 16777216
Units	bytes
Options	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **priority** [[priority-level](#)] *number*

Synopsis	Enter the <b>priority</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a> <a href="#">priority-mbs-thresholds</a> <b>priority</b> <i>number</i>
Tree	<a href="#">priority</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **[priority-level]** *number*

Synopsis	Priority level
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a> <a href="#">priority-mbs-thresholds</a> <b>priority</b> <i>number</i>
Tree	<a href="#">priority</a>
Range	1 to 8
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **mbs-contribution** (*number* | *keyword*)

Synopsis	Minimum amount of cumulative buffer space allowed
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a> <a href="#">priority-mbs-thresholds</a> <b>priority</b> <i>number</i> <b>mbs-contribution</b> ( <i>number</i>   <i>keyword</i> )

Tree	<a href="#">mbs-contribution</a>
Range	0 to 16777216
Units	bytes
Options	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **policy-name** *reference*

Synopsis	Policer control policy name
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">policy-name</a> <i>reference</i>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">policer-control-policy</a> <i>string</i>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **qinq-mark-top-only** *boolean*

Synopsis	Mark top Q-tags
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">qinq-mark-top-only</a> <i>boolean</i>
Tree	<a href="#">qinq-mark-top-only</a>
Default	false
Introduced	20.10.R1
Platforms	All

### **sap-egress**

Synopsis	Enter the <b>sap-egress</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a>
Tree	<a href="#">sap-egress</a>
Introduced	20.10.R1
Platforms	All

## overrides

Synopsis	Enter the <b>overrides</b> context
Context	<b>configure service ipipe string sap string egress qos sap-egress overrides</b>
Tree	<a href="#">overrides</a>
Introduced	20.10.R1
Platforms	All

## hs-secondary-shaper *string*

Synopsis	HS Secondary Shaper
Context	<b>configure service ipipe string sap string egress qos sap-egress overrides hs-secondary-shaper string</b>
Tree	<a href="#">hs-secondary-shaper</a>
String Length	1 to 32
Introduced	20.10.R1
Platforms	7750 SR-7/12/12e

## hs-wrr-group [[group-id](#)] *reference*

Synopsis	Enter the <b>hs-wrr-group</b> list instance
Context	<b>configure service ipipe string sap string egress qos sap-egress overrides hs-wrr-group reference</b>
Tree	<a href="#">hs-wrr-group</a>
Introduced	20.10.R1
Platforms	7750 SR-7/12/12e

## [[group-id](#)] *reference*

Synopsis	HS WRR group identifier
Context	<b>configure service ipipe string sap string egress qos sap-egress overrides hs-wrr-group reference</b>
Tree	<a href="#">hs-wrr-group</a>
Reference	<b>configure qos sap-egress string hs-wrr-group number</b>
Notes	This element is part of a list key.
Introduced	20.10.R1

Platforms 7750 SR-7/12/12e

### **hs-class-weight** *number*

Synopsis Class weight override of the WRR group

Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#) [hs-wrr-group](#)  
*reference* [hs-class-weight](#) *number*

Tree [hs-class-weight](#)

Range 1 | 2 | 4 | 8

Introduced 20.10.R1

Platforms 7750 SR-7/12/12e

### **percent-rate** *decimal-number*

Synopsis Percent rate override applied to the HS WRR group

Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#) [hs-wrr-group](#)  
*reference* [percent-rate](#) *decimal-number*

Tree [percent-rate](#)

Range 0.01 to 100.00

Notes The following elements are part of a choice: **percent-rate** or **rate**.

Introduced 20.10.R1

Platforms 7750 SR-7/12/12e

### **rate** (*number* | *keyword*)

Synopsis Scheduling rate override applied to the HS WRR group

Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#) [hs-wrr-group](#)  
*reference* [rate](#) (*number* | *keyword*)

Tree [rate](#)

Range 1 to 2000000000

Units kilobps

Options max

Notes The following elements are part of a choice: **percent-rate** or **rate**.

Introduced 20.10.R1

Platforms 7750 SR-7/12/12e

### **policer** [[policer-id](#)] *reference*

Synopsis	Enter the <b>policer</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <i>reference</i>
Tree	<a href="#">policer</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **[policer-id]** *reference*

Synopsis	Policer unique ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <i>reference</i>
Tree	<a href="#">policer</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">sap-egress</a> <i>string</i> <a href="#">policer</a> <i>number</i>
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **cbs** (*number* | *keyword*)

Synopsis	CBS
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <i>reference</i> <a href="#">cbs</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cbs</a>
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **mbs** (*number* | *keyword*)

Synopsis	MBS
----------	-----

Context	<b>configure service ipipe string sap string egress qos sap-egress overrides policer reference mbs</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">mbs</a>
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **packet-byte-offset** *number*

Synopsis	Packet size modification for policing information
Context	<b>configure service ipipe string sap string egress qos sap-egress overrides policer reference packet-byte-offset number</b>
Tree	<a href="#">packet-byte-offset</a>
Range	-64 to 31
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **percent-rate**

Synopsis	Enter the <b>percent-rate</b> context
Context	<b>configure service ipipe string sap string egress qos sap-egress overrides policer reference percent-rate</b>
Tree	<a href="#">percent-rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **cir** *decimal-number*

Synopsis	CIR percent rate
Context	<b>configure service ipipe string sap string egress qos sap-egress overrides policer reference percent-rate cir decimal-number</b>
Tree	<a href="#">cir</a>
Range	0.00 to 100.00

Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **pir** *decimal-number*

Synopsis PIR percent rate  
Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#) [policer](#)  
[reference](#) [percent-rate](#) [pir](#) *decimal-number*  
Tree [pir](#)  
Range 0.01 to 100.00  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **rate**

Synopsis Enter the **rate** context  
Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#) [policer](#)  
[reference](#) [rate](#)  
Tree [rate](#)  
Notes The following elements are part of a choice: **percent-rate** or **rate**.  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **cir** (*number* | *keyword*)

Synopsis CIR rate  
Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#) [policer](#)  
[reference](#) [rate](#) [cir](#) (*number* | *keyword*)  
Tree [cir](#)  
Range 0 to 6400000000  
Units kilobps  
Options max  
Introduced 20.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **pir** (*number* | *keyword*)

Synopsis	PIR rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <b>rate</b> <b>pir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">pir</a>
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **stat-mode** *keyword*

Synopsis	Mode of statistics collected by the policer
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <b>stat-mode</b> <i>keyword</i>
Tree	<a href="#">stat-mode</a>
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-profile-cir, offered-limited-capped-cir, offered-profile-capped-cir, offered-total-cir-exceed, offered-four-profile-no-cir, offered-total-cir-four-profile
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **queue** [[queue-id](#)] *reference*

Synopsis	Enter the <b>queue</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a>
Tree	<a href="#">queue</a>
Introduced	20.10.R1
Platforms	All

### [[queue-id](#)] *reference*

Synopsis	Policer unique ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a>

Tree	<a href="#">queue</a>
Reference	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">queue</a> <i>number</i>
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	All

## **adaptation-rule**

Synopsis	Enter the <b>adaptation-rule</b> context
Context	<b>configure</b> <a href="#">service ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos sap-egress overrides</a> <a href="#">queue reference</a> <a href="#">adaptation-rule</a>
Tree	<a href="#">adaptation-rule</a>
Introduced	20.10.R1
Platforms	All

## **cir keyword**

Synopsis	Constraint used when deriving the operational CIR value
Context	<b>configure</b> <a href="#">service ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos sap-egress overrides</a> <a href="#">queue reference</a> <a href="#">adaptation-rule</a> <a href="#">cir</a> <i>keyword</i>
Tree	<a href="#">cir</a>
Options	max, min, closest
Introduced	20.10.R1
Platforms	All

## **pir keyword**

Synopsis	Constraint used when deriving the operational PIR value
Context	<b>configure</b> <a href="#">service ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos sap-egress overrides</a> <a href="#">queue reference</a> <a href="#">adaptation-rule</a> <a href="#">pir</a> <i>keyword</i>
Tree	<a href="#">pir</a>
Options	max, min, closest
Introduced	20.10.R1
Platforms	All

### **avg-frame-overhead** *decimal-number*

Synopsis	Average packet-to-frame encapsulation overhead
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i> <a href="#">avg-frame-overhead</a> <i>decimal-number</i>
Tree	<a href="#">avg-frame-overhead</a>
Range	0.00 to 100.00
Introduced	20.10.R1
Platforms	All

### **burst-limit** (*number* | *keyword*)

Synopsis	Explicit shaping burst size for the queue
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i> <a href="#">burst-limit</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">burst-limit</a>
Range	1 to 14000000
Units	bytes
Options	auto
Introduced	20.10.R1
Platforms	All

### **cbs** (*number* | *keyword*)

Synopsis	CBS
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i> <a href="#">cbs</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cbs</a>
Range	0 to 1048576
Units	kilobytes
Options	auto
Introduced	20.10.R1
Platforms	All

### **drop-tail**

Synopsis	Enter the <b>drop-tail</b> context
----------	------------------------------------

Context	<b>configure service ipipe</b> <i>string sap string egress qos sap-egress overrides queue reference drop-tail</i>
Tree	<a href="#">drop-tail</a>
Introduced	20.10.R1
Platforms	All

## low

Synopsis	Enter the <b>low</b> context
Context	<b>configure service ipipe</b> <i>string sap string egress qos sap-egress overrides queue reference drop-tail low</i>
Tree	<a href="#">low</a>
Introduced	20.10.R1
Platforms	All

## percent-reduction-from-mbs (*number | keyword*)

Synopsis	Percentage reduction from the MBS for a queue drop tail
Context	<b>configure service ipipe</b> <i>string sap string egress qos sap-egress overrides queue reference drop-tail low percent-reduction-from-mbs</i> ( <i>number   keyword</i> )
Tree	<a href="#">percent-reduction-from-mbs</a>
Range	0 to 100
Options	auto
Introduced	20.10.R1
Platforms	All

## hs-class-weight *number*

Synopsis	Class weight override for the queue
Context	<b>configure service ipipe</b> <i>string sap string egress qos sap-egress overrides queue reference hs-class-weight</i> <i>number</i>
Tree	<a href="#">hs-class-weight</a>
Range	1   2   4   8
Introduced	20.10.R1
Platforms	7750 SR-7/12/12e

## hs-wred-queue

Synopsis	Enter the <b>hs-wred-queue</b> context
Context	<b>configure service ipipe string sap string egress qos sap-egress overrides queue reference hs-wred-queue</b>
Tree	<a href="#">hs-wred-queue</a>
Introduced	20.10.R1
Platforms	7750 SR-7/12/12e

## policy reference

Synopsis	Slope policy applied to the HSQ queue group queue
Context	<b>configure service ipipe string sap string egress qos sap-egress overrides queue reference hs-wred-queue policy reference</b>
Tree	<a href="#">policy</a>
Reference	<b>configure qos slope-policy string</b>
Introduced	20.10.R1
Platforms	7750 SR-7/12/12e

## hs-wrr-weight *number*

Synopsis	Weighted Round Robin (WRR) weight to parent with this queue into the scheduler
Context	<b>configure service ipipe string sap string egress qos sap-egress overrides queue reference hs-wrr-weight number</b>
Tree	<a href="#">hs-wrr-weight</a>
Range	1 to 127
Default	1
Introduced	20.10.R1
Platforms	7750 SR-7/12/12e

## mbs (*number* | *keyword*)

Synopsis	MBS
Context	<b>configure service ipipe string sap string egress qos sap-egress overrides queue reference mbs (number   keyword)</b>
Tree	<a href="#">mbs</a>
Range	0 to 1073741824

Units	bytes
Options	auto
Introduced	20.10.R1
Platforms	All

## monitor-queue-depth

Synopsis	Enable the <b>monitor-queue-depth</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <b>monitor-queue-depth</b>
Tree	<a href="#">monitor-queue-depth</a>
Introduced	20.10.R1
Platforms	All

## fast-polling *boolean*

Synopsis	Enable fast polling of the queue depth
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">monitor-queue-depth</a> <b>fast-polling</b> <i>boolean</i>
Tree	<a href="#">fast-polling</a>
Description	When configured to <b>true</b> , this command enables fast polling of the queue depth. Faster polling allows a more accurate view of the actual depth. When configured to <b>false</b> , fast queue polling is not enabled.
Default	false
Introduced	20.10.R1
Platforms	All

## violation-threshold *decimal-number*

Synopsis	Threshold for queue depth before violation is raised
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">monitor-queue-depth</a> <b>violation-threshold</b> <i>decimal-number</i>
Tree	<a href="#">violation-threshold</a>
Description	This command specifies the threshold for the queue MBS. When the queue depth exceeds the threshold value, a violation is registered.
Range	0.01 to 99.99

Introduced 20.10.R1  
Platforms All

## parent

Synopsis Enter the **parent** context  
Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#)  
*reference* [parent](#)  
Tree [parent](#)  
Introduced 20.10.R1  
Platforms All

## cir-weight *number*

Synopsis CIR parameter that overrides parent for queue group  
Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#)  
*reference* [parent](#) [cir-weight](#) *number*  
Tree [cir-weight](#)  
Range 0 to 100  
Introduced 20.10.R1  
Platforms All

## weight *number*

Synopsis PIR parameter that overrides parent for queue group  
Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#)  
*reference* [parent](#) [weight](#) *number*  
Tree [weight](#)  
Range 0 to 100  
Introduced 20.10.R1  
Platforms All

## percent-rate

Synopsis Enter the **percent-rate** context  
Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#)  
*reference* [percent-rate](#)

Tree	<a href="#">percent-rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	20.10.R1
Platforms	All

### **cir decimal-number**

Synopsis	CIR percent rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">percent-rate</a> <a href="#">cir</a> <a href="#">decimal-number</a>
Tree	<a href="#">cir</a>
Range	0.00 to 100.00
Introduced	20.10.R1
Platforms	All

### **pir decimal-number**

Synopsis	PIR percent rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">percent-rate</a> <a href="#">pir</a> <a href="#">decimal-number</a>
Tree	<a href="#">pir</a>
Range	0.01 to 100.00
Introduced	20.10.R1
Platforms	All

### **rate**

Synopsis	Enter the <b>rate</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">rate</a>
Tree	<a href="#">rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	20.10.R1
Platforms	All

### **cir** (*number* | *keyword*)

Synopsis	CIR rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">rate</a> <b>cir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cir</a>
Range	0 to 6400000000
Units	kilobps
Options	max
Introduced	20.10.R1
Platforms	All

### **pir** (*number* | *keyword*)

Synopsis	PIR rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">rate</a> <b>pir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">pir</a>
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	20.10.R1
Platforms	All

### **policy-name** *reference*

Synopsis	Policy ID to associate with SAP for mirrored service
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">policy-name</a> <i>reference</i>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">sap-egress</a> <i>string</i>
Introduced	20.10.R1
Platforms	All

### **port-redirect-group**

Synopsis	Enter the <b>port-redirect-group</b> context
----------	--

Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">port-redirect-group</a>
Tree	<a href="#">port-redirect-group</a>
Introduced	20.10.R1
Platforms	All

### **group-name** *reference*

Synopsis	Name of the queue group redirect list policy
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">port-redirect-group</a> <a href="#">group-name</a> <i>reference</i>
Tree	<a href="#">group-name</a>
