Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a> <a href="#">host-route</a> <a href="#">populate</a> <i>keyword</i>
Tree	<a href="#">populate</a>
Options	static, dynamic, evpn
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	All

**route-tag** *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tag value used with the host route from an ARP/ND entry
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a> <a href="#">host-route</a> <a href="#">populate</a> <i>keyword</i> <a href="#">route-tag</a> <i>number</i>

Tree	<a href="#">route-tag</a>
Description	This command specifies the route tag that is added in the route table for ARP or ND host routes. This tag can be matched on BGP VRF export and BGP peer export policies.
Range	1 to 255
Introduced	19.10.R1
Platforms	All

### **learn-unsolicited** *boolean*

Synopsis	Learn new entries from any received NA message
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 neighbor-discovery</a> <b>learn-unsolicited</b> <i>boolean</i>
Tree	<a href="#">learn-unsolicited</a>
Description	<p>When configured to <b>true</b>, the router can learn neighbor entries from received unsolicited Neighbor Advertisement (NA) messages, with or without the solicited (S) flag set. The command can be enabled for global addresses, link-local addresses, or for both.</p> <p>When configured to <b>false</b>, the router follows standard behavior for learning neighbor entries.</p> <ul style="list-style-type: none"> <li>• If an unsolicited NA (regardless of the S flag) is received from a neighbor that is not yet in the Neighbor Discovery (ND) cache, the NA is ignored.</li> <li>• If an NS, RS, RA, or Redirect message with a Link Layer Address (MAC) is received from a neighbor that is not yet in the ND cache, a new neighbor entry is created in the cache to store the received Link Layer MAC. The neighbor is put in the STALE state.</li> </ul>
Default	false
Introduced	16.0.R1
Platforms	All

### **limit**

Synopsis	Enter the <b>limit</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 neighbor-discovery</a> <b>limit</b>
Tree	<a href="#">limit</a>
Introduced	16.0.R1
Platforms	All

### **log-only** *boolean*

Synopsis	Generate log entries only if limit is reached
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a> <a href="#">limit</a> <a href="#">log-only</a> <i>boolean</i>
Tree	<a href="#">log-only</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **max-entries** *number*

Synopsis	Maximum number of entries learned on an IP interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a> <a href="#">limit</a> <a href="#">max-entries</a> <i>number</i>
Tree	<a href="#">max-entries</a>
Range	0 to 524288
Introduced	16.0.R1
Platforms	All

### **threshold** *number*

Synopsis	Threshold value that triggers a warning message
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a> <a href="#">limit</a> <a href="#">threshold</a> <i>number</i>
Tree	<a href="#">threshold</a>
Range	1 to 100
Units	percent
Default	90
Introduced	16.0.R1
Platforms	All

### **local-proxy-arp** *boolean*

Synopsis	Enable local proxy ARP on interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">neighbor-discovery</a> <a href="#">local-proxy-arp</a> <i>boolean</i>

Tree	<a href="#">local-proxy-arp</a>
Description	When configured to <b>true</b> , the router enables local proxy ARP on the interface. When configured to <b>false</b> , the router does not respond to ARP requests for addresses on the same subnet.
Introduced	16.0.R1
Platforms	All

### **populate** *boolean*

Synopsis	Allow static and dynamic hosts to be populated in system ARP cache
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 neighbor-discovery</a> <a href="#">populate</a> <i>boolean</i>
Tree	<a href="#">populate</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **proactive-refresh** *boolean*

Synopsis	Send a single refresh message before entry timeout
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 neighbor-discovery</a> <a href="#">proactive-refresh</a> <i>boolean</i>
Tree	<a href="#">proactive-refresh</a>
Description	When configured to <b>true</b> , the router always sends a refresh message 30 seconds before the timeout of the entry (a single refresh message with no retries). When configured to <b>false</b> , the router marks an entry as stale 30 seconds before age-out, and the router only sends an ARP request to refresh the entry if the IOM receives traffic that uses it. Then, the IOM asks the ARP application to send a refresh message. With ARP proactive refresh enabled, the ARP module sends a refresh message regardless of the IOM receiving traffic.
Default	false
Introduced	16.0.R1
Platforms	All

### **proxy-arp-policy** *reference*

Synopsis	Proxy ARP policy name
----------	-----------------------

Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 neighbor-discovery proxy-arp-policy</a> <i>reference</i>
Tree	<a href="#">proxy-arp-policy</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **remote-proxy-arp** *boolean*

Synopsis	Enable remote proxy ARP on the interface
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 neighbor-discovery remote-proxy-arp</a> <i>boolean</i>
Tree	<a href="#">remote-proxy-arp</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **retry-timer** *number*

Synopsis	ARP retry interval
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 neighbor-discovery retry-timer</a> <i>number</i>
Tree	<a href="#">retry-timer</a>
Range	1 to 300
Units	deciseconds
Default	50
Introduced	16.0.R1
Platforms	All

### **static-neighbor** [[ipv4-address](#)] *string*

Synopsis	Enter the <b>static-neighbor</b> list instance
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 neighbor-discovery static-neighbor</a> <i>string</i>

---

Tree	<a href="#">static-neighbor</a>
Introduced	16.0.R1
Platforms	All

### **[ipv4-address] string**

Synopsis	IPv4 address that corresponds to the physical address
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">ipv4 neighbor-discovery static-neighbor string</a>
Tree	<a href="#">static-neighbor</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **mac-address string**

Synopsis	MAC address for the static neighbor
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">ipv4 neighbor-discovery static-neighbor string mac-address string</a>
Tree	<a href="#">mac-address</a>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **static-neighbor-unnumbered**

Synopsis	Enable the <b>static-neighbor-unnumbered</b> context
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">ipv4 neighbor-discovery static-neighbor-unnumbered</a>
Tree	<a href="#">static-neighbor-unnumbered</a>
Introduced	16.0.R1
Platforms	All

### **mac-address string**

Synopsis	MAC address for the static neighbor
----------	-------------------------------------

Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 neighbor-discovery static-neighbor-unnumbered mac-address</b> <i>string</i>
Tree	<b>mac-address</b>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **timeout** *number*

Synopsis	Timeout for an ARP entry learned on the interface
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 neighbor-discovery timeout</b> <i>number</i>
Tree	<b>timeout</b>
Description	This command configures the minimum time an ARP entry learned on the IP interface is stored in the ARP table. ARP entries are automatically refreshed when an ARP request or gratuitous ARP is seen by an IP host. Otherwise, the ARP entry is aged from the ARP table.
Range	0 to 65535
Units	seconds
Default	14400
Introduced	16.0.R1
Platforms	All

### **primary**

Synopsis	Enable the <b>primary</b> context
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 primary</b>
Tree	<b>primary</b>
Introduced	16.0.R1
Platforms	All

### **address** *string*

Synopsis	Primary IPv4 address assigned to the interface
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 primary address</b> <i>string</i>
Tree	<b>address</b>
Notes	This element is mandatory.

Introduced	16.0.R1
Platforms	All

### **broadcast** *keyword*

Synopsis	Broadcast address format
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">primary</a> <b>broadcast</b> <i>keyword</i>
Tree	<a href="#">broadcast</a>
Options	all-ones, host-ones
Default	host-ones
Introduced	16.0.R1
Platforms	All

### **prefix-length** *number*

Synopsis	IPv4 address prefix length
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">primary</a> <b>prefix-length</b> <i>number</i>
Tree	<a href="#">prefix-length</a>
Range	0 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **track-srrp** *number*

Synopsis	SRRP instance whose state is tracked on the IP address
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">primary</a> <b>track-srrp</b> <i>number</i>
Tree	<a href="#">track-srrp</a>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **qos-route-lookup** *keyword*

Synopsis	IP address for QoS route lookup for ingress IP packets
----------	--

Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 qos-route-lookup</b> <i>keyword</i>
Tree	<b>qos-route-lookup</b>
Description	This command specifies the IP address type used for QPPB enabled per-packet QoS handling (in terms of FC and priority). When using QPPB, routes are associated with a QoS treatment (FC and optionally priority) through either explicit configuration or the route policy. If an IPv4 or IPv6 packet arrives on an interface where the configuration of this command applies to the packet, the QoS treatment of the packet is based on the route that matched the destination IP address or the route that matched the source IP address.  See "Enabling QPPB on an IP interface" in the <i>7450 ESS, 7750 SR, 7950 XRS, and VSR Router Configuration Guide</i> for more information about QPPB.
Options	destination, source, source-and-dest
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **secondary** [**address**] *string*

Synopsis	Enter the <b>secondary</b> list instance
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 secondary</b> <i>string</i>
Tree	<b>secondary</b>
Introduced	16.0.R1
Platforms	All

### [**address**] *string*

Synopsis	Secondary IPv4 address assigned to the interface
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 secondary</b> <i>string</i>
Tree	<b>secondary</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **broadcast** *keyword*

Synopsis	Broadcast address format
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv4 secondary</b> <i>string</i> <b>broadcast</b> <i>keyword</i>
Tree	<b>broadcast</b>

Options	all-ones, host-ones
Default	host-ones
Introduced	16.0.R1
Platforms	All

### **igp-inhibit** *boolean*

Synopsis	Disable the running IGP from recognizing secondary IP
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 secondary</a> <i>string</i> <b>igp-inhibit</b> <i>boolean</i>
Tree	<a href="#">igp-inhibit</a>
Description	When configured to <b>true</b> , the running IGP does not recognize the secondary IP address as a local interface.
Default	false
Introduced	16.0.R1
Platforms	All

### **prefix-length** *number*

Synopsis	IPv4 address prefix length
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 secondary</a> <i>string</i> <b>prefix-length</b> <i>number</i>
Tree	<a href="#">prefix-length</a>
Range	0 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **track-srrp** *number*

Synopsis	SRRP instance whose state is tracked on the IP address
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 secondary</a> <i>string</i> <b>track-srrp</b> <i>number</i>
Tree	<a href="#">track-srrp</a>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **tcp-mss** *number*

Synopsis	TCP maximum segment size for the interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <b>tcp-mss</b> <i>number</i>
Tree	<a href="#">tcp-mss</a>
Range	384 to 9746
Introduced	16.0.R1
Platforms	All

### **unnumbered**

Synopsis	Enter the <b>unnumbered</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <b>unnumbered</b>
Tree	<a href="#">unnumbered</a>
Introduced	16.0.R1
Platforms	All

### **ip-address** *string*

Synopsis	IP address of the unnumbered interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">unnumbered</a> <b>ip-address</b> <i>string</i>
Tree	<a href="#">ip-address</a>
Notes	The following elements are part of a choice: <b>ip-address</b> , <b>ip-int-name</b> , or <b>system</b> .
Introduced	16.0.R1
Platforms	All

### **ip-int-name** *string*

Synopsis	IP interface name
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">unnumbered</a> <b>ip-int-name</b> <i>string</i>
Tree	<a href="#">ip-int-name</a>
String Length	1 to 32
Notes	The following elements are part of a choice: <b>ip-address</b> , <b>ip-int-name</b> , or <b>system</b> .
Introduced	16.0.R1
Platforms	All

## system

Synopsis	IP interface as an unnumbered interface
Context	<b>configure service ies string interface string ipv4 unnumbered system</b>
Tree	<a href="#">system</a>
Notes	The following elements are part of a choice: <b>ip-address</b> , <b>ip-int-name</b> , or <b>system</b> .
Introduced	16.0.R1
Platforms	All

## urpf-check

Synopsis	Enable the <b>urpf-check</b> context
Context	<b>configure service ies string interface string ipv4 urpf-check</b>
Tree	<a href="#">urpf-check</a>
Introduced	16.0.R1
Platforms	All

## ignore-default *boolean*

Synopsis	Ignore default route when performing a uRPF check
Context	<b>configure service ies string interface string ipv4 urpf-check ignore-default boolean</b>
Tree	<a href="#">ignore-default</a>
Default	false
Introduced	16.0.R1
Platforms	All

## mode *keyword*

Synopsis	Unicast RPF check mode
Context	<b>configure service ies string interface string ipv4 urpf-check mode keyword</b>
Tree	<a href="#">mode</a>
Options	strict, loose, strict-no-ecmp
Default	strict
Introduced	16.0.R1
Platforms	All

**vrrp** [*virtual-router-id*] *number*

Synopsis	Enter the <b>vrrp</b> list instance
Context	<b>configure</b> <i>service</i> <i>ies</i> <i>string</i> <i>interface</i> <i>string</i> <i>ipv4</i> <b>vrrp</b> <i>number</i>
Tree	<b>vrrp</b>
Introduced	16.0.R1
Platforms	All

**[virtual-router-id]** *number*

Synopsis	Virtual Router Identifier (VRID) for the IP interface
Context	<b>configure</b> <i>service</i> <i>ies</i> <i>string</i> <i>interface</i> <i>string</i> <i>ipv4</i> <b>vrrp</b> <i>number</i>
Tree	<b>vrrp</b>
Range	1 to 255
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of VRRP
Context	<b>configure</b> <i>service</i> <i>ies</i> <i>string</i> <i>interface</i> <i>string</i> <i>ipv4</i> <b>vrrp</b> <i>number</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Description	<p>The command determines the administrative state of non-owner virtual router instances.</p> <p>Non-owner virtual router instances can be administratively disabled. This allows the termination of VRRP participation in the virtual router and stops all routing and other access capabilities with regards to the virtual router IP addresses. Disabling the virtual router instance provides a mechanism to maintain the virtual routers without causing false backup or master state changes.</p> <p>When <b>disabled</b>, no VRRP advertisement messages are generated and all received VRRP advertisement messages are silently discarded with no processing.</p> <p>Whenever the administrative or operational state of a virtual router instance transitions, a log message is generated.</p> <p>An owner virtual router context does not use this command. To administratively disable an owner virtual router instance, use the <b>admin-state</b> command within the parent IP interface node which administratively disables the IP interface.</p>
Options	enable, disable

Default	enable
Introduced	16.0.R1
Platforms	All

### **authentication-key string**

Synopsis	Password for simple text authentication
Context	<b>configure service ies string interface string ipv4 vrrp number authentication-key string</b>
Tree	<b>authentication-key</b>
Description	<p>This command optionally assigns a simple text password authentication key to generate master VRRP advertisement messages and validate received VRRP advertisement messages.</p> <p>If this command is re-executed with a different password key defined, the new key immediately replaces the old key. This command may be executed at any time.</p>
String Length	1 to 38
Introduced	16.0.R1
Platforms	All

### **backup string**

Synopsis	Virtual router IP addresses for the interface
Context	<b>configure service ies string interface string ipv4 vrrp number backup string</b>
Tree	<b>backup</b>
Description	<p>This command associates virtual router IP addresses with those of the parental IP interface.</p> <p>This command has two different functions based on whether it is being executed on an owner or non-owner virtual router instance.</p> <p>Non-owner virtual router instances create a routable IP interface address that is operationally dependent on the virtual router instance mode (master or backup). This command, when executed on an owner virtual router instance, does not create a routable IP interface address; it simply defines the existing IP addresses of the parental IP interface that are advertised by the virtual router instance.</p> <p>For owner virtual router instances, this command defines the IP addresses that are advertised within VRRP advertisement messages. This communicates the IP addresses that the master is advertising to backup virtual routers receiving the messages. The specified <i>unicast-ipv4-address</i> must be equal to one of the existing IP addresses in the parental IP interface (primary or secondary) or this command fails.</p> <p>See "Owner and non-owner VRRP" in the <i>7450 ESS, 7750 SR, 7950 XRS, and VSR Router Configuration Guide</i> for more information about owner and non-owner virtual router instances.</p>

Max. Instances	16
Introduced	16.0.R1
Platforms	All

## bfd-liveness

Synopsis	Enable the <b>bfd-liveness</b> context
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string ipv4 vrrp number</a> <b>bfd-liveness</b>

Units	seconds
Introduced	16.0.R1
Platforms	All

### **mac** *string*

Synopsis	Virtual MAC address to use in ARP responses
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">vrrp</a> <a href="#">number</a> <a href="#">mac</a> <a href="#">string</a>
Tree	<a href="#">mac</a>
Description	This command sets an explicit MAC address for the virtual router instance that overrides the VRRP default derived from the VRID.  Changing the default MAC address is useful when an existing HSRP or other non-VRRP default MAC is in use by the IP hosts that use the virtual router IP address. Many

hosts do not monitor unessential ARPs and continue to use the cached non-VRRP MAC address after the virtual router becomes master of the host's gateway address.

Additionally, this command sets the MAC address used in ARP responses when the virtual router instance is master. Routing of IP packets with *unicast-mac-address* as the destination MAC is also enabled. The MAC must be the same for all virtual routers participating as a virtual router or indeterminate connectivity by the attached IP hosts results. All VRRP advertisement messages are transmitted with *unicast-mac-address* as the source MAC.

An operator can execute this command at any time and it takes effect immediately. When the virtual router MAC on a master virtual router instance changes, a gratuitous ARP is immediately sent with a VRRP advertisement message. If the virtual router instance is disabled or operating as a backup, the gratuitous ARP and VRRP advertisement messages are not sent.

Introduced	16.0.R1
Platforms	All

### **master-int-inherit** *boolean*

Synopsis	Allow master instance to dictate the master down timer
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 vrrp</a> <i>number</i> <b>master-int-inherit</b> <i>boolean</i>
Tree	<a href="#">master-int-inherit</a>
Description	<p>When configured to <b>true</b>, the virtual router instance inherits the advertisement interval timer of the master VRRP router, which backup routers use to calculate the master down timer.</p> <p>When configured to <b>false</b>, the locally configured message interval must match the master's VRRP advertisement message advertisement interval field value or the message is discarded.</p>
Introduced	16.0.R1
Platforms	All

### **message-interval** *number*

Synopsis	Interval for sending VRRP advertisement messages
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 vrrp</a> <i>number</i> <b>message-interval</b> <i>number</i>
Tree	<a href="#">message-interval</a>
Description	<p>This command configures the administrative advertisement message timer used by the master virtual router instance to send VRRP advertisement messages. The backup master down timer is derived from the value configured using this command.</p> <p>The usage of this command varies for non-owner virtual router instances, depending on the state of the virtual router (master or backup) and the state of the <b>master-int-inherit</b> command:</p>

- When a non-owner is operating as master for the virtual router, the system uses the configured value of this command as the operational advertisement timer, similar to an owner virtual router instance. The **master-int-inherit** command has no effect when operating as master.
- When a non-owner is in the backup state with **master-int-inherit** disabled, the system uses the configured value of this command to match the incoming advertisement interval field of the VRRP advertisement message. If the locally configured message interval does not match the advertisement interval field, the system discards the VRRP advertisement.
- When a non-owner is in the backup state with **master-int-inherit** enabled, the configured value of this command is ignored. The master down timer is indirectly derived from the advertisement interval field value of the incoming VRRP advertisement message.

Range	1 to 2559
Units	deciseconds
Default	10
Introduced	16.0.R1
Platforms	All

### monitor-oper-group *reference*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VRRP instance to follow a specified operational group
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">vrrp</a> <a href="#">number</a> <a href="#">monitor-oper-group</a> <a href="#">reference</a>
Tree	<a href="#">monitor-oper-group</a>
Description	This command configures VRRP to associate with an operational group. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router, the operational group is up and the operational group is down for all other VRRP states.
Reference	<b>configure</b> <a href="#">service</a> <a href="#">oper-group</a> <a href="#">string</a>
Introduced	22.2.R1
Platforms	All

**ntp-reply** *boolean*

Synopsis	Allow processing of NTP requests
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">vrrp</a> <a href="#">number</a> <b>ntp-reply</b> <a href="#">boolean</a>
Tree	<a href="#">ntp-reply</a>
Description	When configured to <b>true</b> , the router redirects NTP requests to the VRRP virtual IP address. This behavior only applies to the router acting as the master VRRP router. When configured to <b>false</b> , the router does not process NTP requests.
Default	false
Introduced	20.2.R1
Platforms	All

**oper-group** *reference*

Synopsis	Operational group name associated with the VRRP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">vrrp</a> <a href="#">number</a> <b>oper-group</b> <a href="#">reference</a>
Tree	<a href="#">oper-group</a>
Description	This command configures an operational group to associate with the VRRP. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router (MR), the operational group is up. The operational group is down for all other VRRP states.
Reference	<b>configure</b> <a href="#">service</a> <a href="#">oper-group</a> <a href="#">string</a>
Introduced	16.0.R1
Platforms	All

**owner** *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Designate the virtual router instance as owner
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">vrrp</a> <a href="#">number</a> <b>owner</b> <a href="#">boolean</a>
Tree	<a href="#">owner</a>
Description	When configured to <b>true</b> , the router designates this virtual router instance as the owner of the virtual router IP addresses. Therefore, this virtual router becomes responsible for forwarding packets sent to the virtual router IP addresses. The owner also assumes the role of master virtual router.

	When configured to <b>false</b> , this virtual router instance is designated as a non-owner.
Default	false
Introduced	16.0.R1
Platforms	All

### **passive** *boolean*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Suppress the processing of VRRP advertisement messages
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 vrrp</a> <i>number</i> <a href="#">passive</a> <i>boolean</i>
Tree	<a href="#">passive</a>
Description	<p>When configured to <b>true</b>, the router identifies this virtual router instance as passive; and therefore the owner of the virtual router IP addresses. A passive virtual router instance does not transmit or receive VRRP advertisement messages and is always in either the master state (if the interface is operationally up) or the init state (if the interface is operationally down).</p> <p>When configured to <b>false</b>, this virtual router instance is not identified as passive, meaning that it transmits and receives VRRP advertisement messages.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **ping-reply** *boolean*

Synopsis	Allow non-owner master to reply to ICMP echo requests
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 vrrp</a> <i>number</i> <a href="#">ping-reply</a> <i>boolean</i>
Tree	<a href="#">ping-reply</a>
Description	<p>When configured to <b>true</b>, the router allows the non-owner master to reply to ICMP echo requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the ping request. Ping must not have been disabled at the management security level (either on the parental IP interface or on the Ping source host address).</p> <p>When configured to <b>false</b>, ICMP echo requests sent to non-owner master virtual IP addresses are silently discarded.</p> <p>Non-owner backup virtual routers never respond to ICMP echo requests, regardless of the configuration of this command.</p>
Default	false

Introduced	16.0.R1
Platforms	All

### **policy reference**

Synopsis	VRRP priority control policy
Context	<b>configure service ies string interface string ipv4 vrrp number policy reference</b>
Tree	<a href="#">policy</a>
Description	<p>This command configures a VRRP priority control policy to associate with the virtual router instance.</p> <p>VRRP priority control policies can override or adjust the base priority value of the virtual router instance, depending on events or conditions within the chassis.</p> <p>An operator can associate a policy with more than one virtual router instance. The priority events within the policy either override or diminish the base priority set with the <b>priority</b> command. As priority events clear in the policy, the in-use priority can eventually be restored to the base priority value.</p> <p>For non-owner virtual router instances, if this command is not executed, the base priority is used as the in-use priority.</p>
Reference	<b>configure vrrp policy number</b>
Introduced	16.0.R1
Platforms	All

### **preempt boolean**

Synopsis	Allow the VRRP to override an existing non-owner master
Context	<b>configure service ies string interface string ipv4 vrrp number preempt boolean</b>
Tree	<a href="#">preempt</a>
Description	<p>When configured to <b>true</b>, this virtual router instance overrides any non-owner master with an in-use message priority value less than the in-use priority value of this virtual router.</p> <p>When configured to <b>false</b>, this virtual router only becomes master if the master down timer expires before a VRRP advertisement message is received from another virtual router.</p>
Default	true
Introduced	16.0.R1
Platforms	All

**priority number**

Synopsis	Base priority for the VRRP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">vrrp</a> <a href="#">number</a> <a href="#">priority</a> <a href="#">number</a>
Tree	<a href="#">priority</a>
Description	This command configures the base router priority for the virtual router instance, which defines the selection order of the virtual router in the master election process.  The in-use priority is derived from the base priority. However, the in-use priority is modified by optional VRRP priority control policies. An operator can use VRRP priority control policies to either override or adjust the base priority value depending on events or conditions within the chassis.
Range	1 to 255
Introduced	16.0.R1
Platforms	All

**ssh-reply boolean**

Synopsis	Allow the non-owner master to reply to SSH requests
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">vrrp</a> <a href="#">number</a> <a href="#">ssh-reply</a> <a href="#">boolean</a>
Tree	<a href="#">ssh-reply</a>
Description	When configured to <b>true</b> , the router allows the non-owner master to reply to SSH requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the SSH request. SSH cannot be disabled at the management security level (either on the parental IP interface or on the SSH source host address).  When configure to <b>false</b> , SSH requests to non-owner master virtual IP addresses are silently discarded.
Default	false
Introduced	16.0.R1
Platforms	All

**standby-forwarding boolean**

Synopsis	Allow standby router to forward traffic
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">vrrp</a> <a href="#">number</a> <a href="#">standby-forwarding</a> <a href="#">boolean</a>
Tree	<a href="#">standby-forwarding</a>
Description	When configured to <b>true</b> , the standby router forwards all traffic.

When configured to **false**, the standby router cannot forward traffic sent to the MAC address of the virtual router. However, the standby router still forwards traffic sent to its own MAC address.

Default	false
Introduced	16.0.R1
Platforms	All

### **telnet-reply** *boolean*

Synopsis	Allow non-owner master to reply to Telnet requests
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 vrrp</a> <i>number</i> <b>telnet-reply</b> <i>boolean</i>
Tree	<a href="#">telnet-reply</a>
Description	<p>When configured to <b>true</b>, the router allows the non-owner master to reply to Telnet requests directed at the IP addresses of the virtual router instance. Any routed interface can receive Telnet requests. Telnet cannot be disabled at the management security level (either on the parental IP interface or on the Telnet source host address).</p> <p>When configured to <b>false</b>, the router silently discards Telnet requests sent to non-owner master virtual IP addresses.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **traceroute-reply** *boolean*

Synopsis	Allow non-owner master to reply to traceroute requests
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv4 vrrp</a> <i>number</i> <b>traceroute-reply</b> <i>boolean</i>
Tree	<a href="#">traceroute-reply</a>
Description	<p>When configured to <b>true</b>, the router allows a non-owner master to reply to traceroute requests directed to the IP addresses of the virtual router instance.</p> <p>When configured to <b>false</b>, the router silently discards traceroute requests sent to non-owner master virtual IP addresses.</p> <p>Traceroute must not have been disabled at the management security level (either on the parental IP interface or the source host address).</p>
Default	false
Introduced	16.0.R1
Platforms	All

## ipv6

Synopsis	Enable the <b>ipv6</b> context
Context	<b>configure service ies string interface string ipv6</b>
Tree	<a href="#">ipv6</a>
Introduced	16.0.R1
Platforms	All

## address [[ipv6-address](#)] *string*

Synopsis	Enter the <b>address</b> list instance
Context	<b>configure service ies string interface string ipv6 address string</b>
Tree	<a href="#">address</a>
Introduced	16.0.R1
Platforms	All

## [[ipv6-address](#)] *string*

Synopsis	IPv6 address assigned to the interface
Context	<b>configure service ies string interface string ipv6 address string</b>
Tree	<a href="#">address</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## duplicate-address-detection *boolean*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Enable Duplicate Address Detection
Context	<b>configure service ies string interface string ipv6 address string duplicate-address-detection boolean</b>
Tree	<a href="#">duplicate-address-detection</a>
Description	When configured to <b>true</b> , the router enables Duplicate Address Detection (DAD).

When configured to **false**, the router disables DAD and sets the address to preferred, even if there is a duplicated address.

Default	true
Introduced	16.0.R1
Platforms	All

### **eui-64** *boolean*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Form IPv6 address from prefix and 64-bit interface ID
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6</b> <b>address</b> <i>string</i> <b>eui-64</b> <i>boolean</i>
Tree	<b>eui-64</b>
Description	When configured to <b>true</b> , the router forms a complete IPv6 address from the supplied prefix and 64-bit interface identifier. The 64-bit interface identifier is derived from the MAC address on Ethernet interfaces. For interfaces without a MAC address, for example POS interfaces, use the base MAC address of the chassis.
Default	false
Introduced	16.0.R1
Platforms	All

### **prefix-length** *number*

Synopsis	IPv6 address prefix length
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6</b> <b>address</b> <i>string</i> <b>prefix-length</b> <i>number</i>
Tree	<b>prefix-length</b>
Range	4 to 128
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **primary-preference** *number*

Synopsis	Index assigned to the IPv6 address of the interface
----------	---

Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 address</b> <i>string</i> <b>primary-preference</b> <i>number</i>
Tree	<b>primary-preference</b>
Description	<p>This command assigns a primary preference index to an IPv6 address of the interface to enforce the order in which the address is used by control plane protocols and applications that require a fixed address of the interface, such as LDP and Segment Routing. In cases where a fixed address is required when originating packets from the interface, the IPv6 address with the lowest primary preference index is selected. If the selected address is removed, the next IPv6 address with the next lowest primary preference index is selected.</p> <p>If this index is not specified for the IPv6 address, the system assigns the next available index value to the address. The address index space is unique across all addresses of a given interface.</p>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **track-srrp** *number*

Synopsis	SRRP ID whose state is tracked on this IP address
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 address</b> <i>string</i> <b>track-srrp</b> <i>number</i>
Tree	<b>track-srrp</b>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **bfd**

Synopsis	Enter the <b>bfd</b> context
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 bfd</b>
Tree	<b>bfd</b>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of BFD sessions
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 bfd admin-state</b> <i>keyword</i>

Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

### **echo-receive** *number*

Synopsis	Minimum echo interval over this interface
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 bfd</a> <a href="#">echo-receive</a> <i>number</i>
Tree	<a href="#">echo-receive</a>
Range	100 to 100000
Units	milliseconds
Introduced	16.0.R1
Platforms	All

### **multiplier** *number*

Synopsis	Number of consecutive BFD messages missed from the peer
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 bfd</a> <a href="#">multiplier</a> <i>number</i>
Tree	<a href="#">multiplier</a>
Description	This command configures the number of missed messages before the BFD session state is changed to down and the upper-level protocol is notified of the fault. A multiplier of less than 3 should not be used in production environments.
Range	1 to 20
Default	3
Introduced	16.0.R1
Platforms	All

### **receive** *number*

Synopsis	BFD receive interval over this interface
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 bfd</a> <a href="#">receive</a> <i>number</i>
Tree	<a href="#">receive</a>
Description	This command specifies the receive interval for the BFD session.

On the 7750 SR, this command can only be configured to a value less than 100 when the **type** command is configured to **cpm-np**.

Range	10 to 100000
Units	milliseconds
Default	100
Introduced	16.0.R1
Platforms	All

### **transmit-interval** *number*

Synopsis	BFD transmit interval over this interface
Context	<b>configure service ies string interface string ipv6 bfd transmit-interval number</b>
Tree	<a href="#">transmit-interval</a>
Description	This command configures the transmit intervals.  On the 7750 SR, this command can only be configured to a value less than 100 when the <b>type</b> command is configured to <b>cpm-np</b> .
Range	10 to 100000
Units	milliseconds
Default	100
Introduced	16.0.R1
Platforms	All

### **type** *keyword*

Synopsis	Local termination point for the BFD session
Context	<b>configure service ies string interface string ipv6 bfd type keyword</b>
Tree	<a href="#">type</a>
Description	This command sets the local termination point for the BFD session to allow for fast timers down to 10 ms granularity.  The options to specify where the BFD session runs are: <ul style="list-style-type: none"> <li>• <b>auto</b> (default) – the system chooses and uses the line card CPU only for single-hop BFD sessions with timer intervals equal to or greater than 100ms. All others are placed on the <b>cpm-np</b>.</li> <li>• <b>cpm-np</b> – BFD session runs on the FP complex associated with the CPM. This is either the FP on the CPM or the one elected on smaller systems.</li> <li>• <b>fp</b> – BFD session runs on the line card CPU. This option can only be used for single-hop BFD sessions with timers equal to or greater than 100ms.</li> </ul>

Options	cpm-np, auto, fp
Default	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## dhcp6

Synopsis	Enter the <b>dhcp6</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">dhcp6</a>
Tree	<a href="#">dhcp6</a>
Introduced	16.0.R1
Platforms	All

## relay

Synopsis	Enter the <b>relay</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">dhcp6</a> <a href="#">relay</a>
Tree	<a href="#">relay</a>
Introduced	16.0.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of DHCPv6 Relay
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">dhcp6</a> <a href="#">relay</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

## description *string*

Synopsis	Text description

Introduced	16.0.R1
Platforms	All

## ascii-tuple

Synopsis	Use ASCII-encoded concatenated tuple
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 dhcp6 relay option interface-id</b> <b>ascii-tuple</b>
Tree	<a href="#">ascii-tuple</a>
Notes	The following elements are part of a choice: <b>ascii-tuple</b> , <b>if-index</b> , <b>sap-id</b> , or <b>string</b> .
Introduced	16.0.R1
Platforms	All

## if-index

Synopsis	Use interface index in the DHCPv6 relay packet
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 dhcp6 relay option interface-id</b> <b>if-index</b>
Tree	<a href="#">if-index</a>
Notes	The following elements are part of a choice: <b>ascii-tuple</b> , <b>if-index</b> , <b>sap-id</b> , or <b>string</b> .
Introduced	16.0.R1
Platforms	All

## sap-id

Synopsis	Use SAP ID in interface ID option in relay packet
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 dhcp6 relay option interface-id</b> <b>sap-id</b>
Tree	<a href="#">sap-id</a>
Notes	The following elements are part of a choice: <b>ascii-tuple</b> , <b>if-index</b> , <b>sap-id</b> , or <b>string</b> .
Introduced	16.0.R1
Platforms	All

## string *string*

Synopsis	String for interface ID option in DHCPv6 relay packet
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 dhcp6 relay option interface-id</b> <b>string</b> <i>string</i>
Tree	<a href="#">string</a>
String Length	1 to 80
Notes	The following elements are part of a choice: <b>ascii-tuple</b> , <b>if-index</b> , <b>sap-id</b> , or <b>string</b> .

Introduced 16.0.R1  
 Platforms All

### **remote-id** *boolean*

Synopsis Send remote ID option in the DHCPv6 relay packet  
 Context **configure** [service ies](#) *string* [interface](#) *string* [ipv6 dhcp6 relay option remote-id](#) *boolean*  
 Tree [remote-id](#)  
 Default false  
 Introduced 16.0.R1  
 Platforms All

### **python-policy** *reference*

Synopsis Python policy name  
 Context **configure** [service ies](#) *string* [interface](#) *string* [ipv6 dhcp6 relay python-policy](#) *reference*  
 Tree [python-policy](#)  
 Reference **configure** [python](#) [python-policy](#) *string*  
 Introduced 16.0.R1  
 Platforms All

### **server** *string*

Synopsis DHCPv6 servers to which the DHCPv6 requests are forwarded  
 Context **configure** [service ies](#) *string* [interface](#) *string* [ipv6 dhcp6 relay server](#) *string*  
 Tree [server](#)  
 Max. Instances 8  
 Notes This element is ordered by the user.  
 Introduced 16.0.R1  
 Platforms All

### **source-address** *string*

Synopsis Source IPv6 address of the DHCPv6 relay messages

Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 dhcp6 relay source-address</b> <i>string</i>
Tree	<a href="#">source-address</a>
Introduced	16.0.R1
Platforms	All

### **user-db** *reference*

Synopsis	Local user database for authentication
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 dhcp6 relay user-db</b> <i>reference</i>
Tree	<a href="#">user-db</a>
Reference	<b>configure subscriber-mgmt local-user-db</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **server**

Synopsis	Enter the <b>server</b> context
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 dhcp6 server</b>
Tree	<a href="#">server</a>
Introduced	16.0.R1
Platforms	All

### **max-nbr-of-leases** *number*

Synopsis	DHCPv6 leases allowed
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 dhcp6 server max-nbr-of-leases</b> <i>number</i>
Tree	<a href="#">max-nbr-of-leases</a>
Range	0 to 8000
Default	8000
Introduced	16.0.R1
Platforms	All

## prefix-delegation

Synopsis	Enter the <b>prefix-delegation</b> context
Context	<b>configure service ies string interface string ipv6 dhcp6 server prefix-delegation</b>
Tree	<a href="#">prefix-delegation</a>
Description	Commands in this context configure the options for delegating a long-lived prefix from a delegating router to a requesting router, where the delegating router does not require knowledge about the link topology in the network to which the prefixes are assigned.
Introduced	16.0.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of the prefix delegation
Context	<b>configure service ies string interface string ipv6 dhcp6 server prefix-delegation admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

## prefix [[ipv6-prefix](#)] *string*

Synopsis	Enter the <b>prefix</b> list instance
Context	<b>configure service ies string interface string ipv6 dhcp6 server prefix-delegation prefix string</b>
Tree	<a href="#">prefix</a>
Description	Commands in this context configure the IPv6 prefix that is delegated by the system.
Introduced	16.0.R1
Platforms	All

## [[ipv6-prefix](#)] *string*

Synopsis	IPv6 address and prefix
Context	<b>configure service ies string interface string ipv6 dhcp6 server prefix-delegation prefix string</b>

Tree	<a href="#">prefix</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **client-id**

Synopsis	Enter the <b>client-id</b> context
Context	<b>configure service ies string interface string ipv6 dhcp6 server prefix-delegation prefix string client-id</b>
Tree	<a href="#">client-id</a>
Introduced	16.0.R1
Platforms	All

### **duid string**

Synopsis	Requesting router ID
Context	<b>configure service ies string interface string ipv6 dhcp6 server prefix-delegation prefix string client-id duid string</b>
Tree	<a href="#">duid</a>
String Length	1 to 130
Introduced	16.0.R1
Platforms	All

### **iaid number**

Synopsis	IAID from the requesting router to match
Context	<b>configure service ies string interface string ipv6 dhcp6 server prefix-delegation prefix string client-id iaid number</b>
Tree	<a href="#">iaid</a>
Description	This command configures the Identity Association ID (IAID) associated with a prefix delegation entry and must match the IAID sent by the requesting router for the prefix delegation to succeed.
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

**preferred-lifetime** (*number* | *keyword*)

Synopsis	Preferred lifetime of the prefix
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">dhcp6</a> <a href="#">server</a> <a href="#">prefix-delegation</a> <a href="#">prefix</a> <i>string</i> <b>preferred-lifetime</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">preferred-lifetime</a>
Description	This command configures the preferred lifetime of the prefix. The value cannot be greater than the valid lifetime value.
Range	1 to 4294967294
Units	seconds
Options	infinite
Default	604800
Introduced	16.0.R1
Platforms	All

**valid-lifetime** (*number* | *keyword*)

Synopsis	Valid lifetime of the prefix
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">dhcp6</a> <a href="#">server</a> <a href="#">prefix-delegation</a> <a href="#">prefix</a> <i>string</i> <b>valid-lifetime</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">valid-lifetime</a>
Range	1 to 4294967294
Units	seconds
Options	infinite
Default	2592000
Introduced	16.0.R1
Platforms	All

**duplicate-address-detection** *boolean*

Synopsis	Enable Duplicate Address Detection per interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">duplicate-address-detection</a> <i>boolean</i>
Tree	<a href="#">duplicate-address-detection</a>
Default	true
Introduced	16.0.R1

Platforms All

### **forward-ipv4-packets** *boolean*

Synopsis Forward unencapsulated IPv4 packets  
 Context **configure** [service](#) [ies](#) *string* [interface](#) *string* [ipv6](#) **forward-ipv4-packets** *boolean*  
 Tree [forward-ipv4-packets](#)  
 Default false  
 Introduced 19.5.R1  
 Platforms All

### **icmp6**

Synopsis Enter the **icmp6** context  
 Context **configure** [service](#) [ies](#) *string* [interface](#) *string* [ipv6](#) **icmp6**  
 Tree [icmp6](#)  
 Introduced 16.0.R1  
 Platforms All

### **packet-too-big**

Synopsis Enter the **packet-too-big** context  
 Context **configure** [service](#) [ies](#) *string* [interface](#) *string* [ipv6](#) [icmp6](#) **packet-too-big**  
 Tree [packet-too-big](#)  
 Description Commands in this context configure limiting the number of ICMPv6 Packet Too Big messages.  
 Introduced 16.0.R1  
 Platforms All

### **admin-state** *keyword*

Synopsis Administrative state of Packet Too Big message sends  
 Context **configure** [service](#) [ies](#) *string* [interface](#) *string* [ipv6](#) [icmp6](#) [packet-too-big](#) **admin-state** *keyword*  
 Tree [admin-state](#)  
 Options enable, disable

Default	enable
Introduced	16.0.R1
Platforms	All

**number** *number*

Synopsis	Number of Packet Too big Messages issued per time frame
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">icmp6</a> <a href="#">packet-too-big</a> <a href="#">number</a> <i>number</i>
Tree	<a href="#">number</a>
Range	10 to 1000
Default	100
Introduced	16.0.R1
Platforms	All

**seconds** *number*

Synopsis	Time used to limit Packet Too Big messages
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">icmp6</a> <a href="#">packet-too-big</a> <a href="#">seconds</a> <i>number</i>
Tree	<a href="#">seconds</a>
Range	1 to 60
Default	10
Introduced	16.0.R1
Platforms	All

**param-problem**

Synopsis	Enter the <b>param-problem</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">icmp6</a> <a href="#">param-problem</a>
Tree	<a href="#">param-problem</a>
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of Parameter Problem message sends
----------	---

Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 icmp6 param-problem admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

### **number** *number*

Synopsis	Number used to limit ICMPv6 Parameter Problem messages
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 icmp6 param-problem number</b> <i>number</i>
Tree	<a href="#">number</a>
Range	10 to 1000
Default	100
Introduced	16.0.R1
Platforms	All

### **seconds** *number*

Synopsis	Time used to limit ICMPv6 Parameter Problem messages
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 icmp6 param-problem seconds</b> <i>number</i>
Tree	<a href="#">seconds</a>
Range	1 to 60
Default	10
Introduced	16.0.R1
Platforms	All

### **redirects**

Synopsis	Enter the <b>redirects</b> context
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 icmp6 redirects</b>
Tree	<a href="#">redirects</a>
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of Redirect message sends
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6</b> <b>icmp6</b> <b>redirects</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

**number** *number*

Synopsis	Number to limit ICMPv6 Redirect messages per time frame
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6</b> <b>icmp6</b> <b>redirects</b> <b>number</b> <i>number</i>
Tree	<b>number</b>
Range	10 to 1000
Default	100
Introduced	16.0.R1
Platforms	All

**seconds** *number*

Synopsis	Time used to limit ICMPv6 Redirect messages
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6</b> <b>icmp6</b> <b>redirects</b> <b>seconds</b> <i>number</i>
Tree	<b>seconds</b>
Range	1 to 60
Default	10
Introduced	16.0.R1
Platforms	All

**time-exceeded**

Synopsis	Enter the <b>time-exceeded</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6</b> <b>icmp6</b> <b>time-exceeded</b>
Tree	<b>time-exceeded</b>

---

Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of Time Exceeded message sends
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">icmp6</a> <a href="#">time-exceeded</a> <a href="#">admin-state</a> <a href="#">keyword</a>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

**number** *number*

Synopsis	Number to limit Time Exceeded messages per time frame
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">icmp6</a> <a href="#">time-exceeded</a> <a href="#">number</a> <a href="#">number</a>
Tree	<a href="#">number</a>
Range	10 to 2000
Default	100
Introduced	16.0.R1
Platforms	All

**seconds** *number*

Synopsis	Time used to limit ICMPv6 Time Exceeded messages
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">icmp6</a> <a href="#">time-exceeded</a> <a href="#">seconds</a> <a href="#">number</a>
Tree	<a href="#">seconds</a>
Range	1 to 60
Default	10
Introduced	16.0.R1
Platforms	All

## unreachables

Synopsis	Enter the <b>unreachables</b> context
Context	<b>configure service ies string interface string ipv6 icmp6 unreachables</b>
Tree	<b>unreachables</b>
Introduced	16.0.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of Unreachable message sends
Context	<b>configure service ies string interface string ipv6 icmp6 unreachables admin-state keyword</b>
Tree	<b>admin-state</b>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

## number *number*

Synopsis	Number to limit Unreachable messages per time frame
Context	<b>configure service ies string interface string ipv6 icmp6 unreachables number number</b>
Tree	<b>number</b>
Range	10 to 2000
Default	100
Introduced	16.0.R1
Platforms	All

## seconds *number*

Synopsis	Time used to limit ICMPv6 Unreachable messages
Context	<b>configure service ies string interface string ipv6 icmp6 unreachables seconds number</b>
Tree	<b>seconds</b>
Range	1 to 60
Default	10

Introduced	16.0.R1
Platforms	All

## link-local-address

Synopsis	Enter the <b>link-local-address</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">link-local-address</a>
Tree	<a href="#">link-local-address</a>
Introduced	16.0.R1
Platforms	All

## address *string*

Synopsis	IPv6 link-local address
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">link-local-address</a> <a href="#">address</a> <a href="#">string</a>
Tree	<a href="#">address</a>
Introduced	16.0.R1
Platforms	All

## duplicate-address-detection *boolean*

Synopsis	Enable Duplicate Address Detection
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">link-local-address</a> <a href="#">duplicate-address-detection</a> <a href="#">boolean</a>
Tree	<a href="#">duplicate-address-detection</a>
Description	When configured to <b>true</b> , the router enables Duplicate Address Detection (DAD) on the interface.  When configured to <b>false</b> , the router disables DAD and sets the address to preferred, even if there is a duplicated address.
Default	true
Introduced	16.0.R1
Platforms	All

## local-dhcp-server *reference*

Synopsis	DHCP server for the interface
----------	-------------------------------

Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 local-dhcp-server</b> <i>reference</i>
Tree	<a href="#">local-dhcp-server</a>
Reference	<b>configure router</b> <i>string</i> <b>dhcp-server dhcpv6</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## neighbor-discovery

Synopsis	Enter the <b>neighbor-discovery</b> context
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 neighbor-discovery</b>
Tree	<a href="#">neighbor-discovery</a>
Introduced	16.0.R1
Platforms	All

## host-route

Synopsis	Enter the <b>host-route</b> context
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 neighbor-discovery host-route</b>
Tree	<a href="#">host-route</a>
Introduced	20.2.R1
Platforms	All

## populate [[route-type](#)] *keyword*

Synopsis	Enter the <b>populate</b> list instance
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 neighbor-discovery host-route populate</b> <i>keyword</i>
Tree	<a href="#">populate</a>
Introduced	20.2.R1
Platforms	All

## [[route-type](#)] *keyword*

Synopsis	Type of ARP or ND entries that generate host routes
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 neighbor-discovery host-route populate</b> <i>keyword</i>

Tree	<a href="#">populate</a>
Options	static, dynamic, evpn
Notes	This element is part of a list key.
Introduced	20.2.R1
Platforms	All

### **route-tag** *number*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tag value used with the host route from an ARP/ND entry
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">neighbor-discovery</a> <a href="#">host-route</a> <a href="#">populate</a> <i>keyword</i> <b>route-tag</b> <i>number</i>
Tree	<a href="#">route-tag</a>
Description	This command specifies the route tag that is added in the route table for ARP or ND host routes. This tag can be matched on BGP VRF export and BGP peer export policies.
Range	1 to 255
Introduced	20.2.R1
Platforms	All

### **learn-unsolicited** *keyword*

Synopsis	Type of entries learned from unsolicited NA messages
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">neighbor-discovery</a> <a href="#">learn-unsolicited</a> <i>keyword</i>
Tree	<a href="#">learn-unsolicited</a>
Description	This command enables the ability to learn neighbor entries out of received unsolicited Neighbor Advertisement (NA) messages, with or without the solicited flag set.  When unconfigured, the router follows standard RFC 4861 behavior for learning of neighbor entries. The neighbor is put in the stale state. This is the standard RFC behavior.
Options	global, link-local, both
Introduced	16.0.R1
Platforms	All

## limit

Synopsis	Enter the <b>limit</b> context
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 neighbor-discovery limit</b>
Tree	<b>limit</b>
Introduced	16.0.R1
Platforms	All

## log-only *boolean*

Synopsis	Generate log entries when limit is reached
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 neighbor-discovery limit log-only</b> <i>boolean</i>
Tree	<b>log-only</b>
Description	When configured to <b>true</b> , the router sends the warning message at the specified threshold percentage or upon exceeding the specified limit. Entries that exceed the limit are learned.  When configured to <b>false</b> , the router does not send the warning message.
Default	false
Introduced	16.0.R1
Platforms	All

## max-entries *number*

Synopsis	Maximum number of entries learned on an IP interface
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>ipv6 neighbor-discovery limit max-entries</b> <i>number</i>
Tree	<b>max-entries</b>
Description	This command configures the maximum number of entries that can be learned on an IP interface.  When unconfigured, no maximum limit is imposed.
Range	0 to 102400
Introduced	16.0.R1
Platforms	All

**threshold** *number*

Synopsis	Threshold percentage that triggers a warning message
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 neighbor-discovery limit threshold</a> <i>number</i>
Tree	<a href="#">threshold</a>
Range	1 to 100
Units	percent
Default	90
Introduced	16.0.R1
Platforms	All

**local-proxy-nd** *boolean*

Synopsis	Enable local proxy neighbor discovery on the interface
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 neighbor-discovery local-proxy-nd</a> <i>boolean</i>
Tree	<a href="#">local-proxy-nd</a>
Description	<p>When configured to <b>true</b>, the router enables local proxy neighbor discovery on the interface and replies to neighbor solicitation requests when both the hosts are on the same subnet. In this case, ICMP redirects are disabled.</p> <p>When configured to <b>false</b>, the router disables local proxy neighbor discovery on the interface and does not reply to neighbor solicitation requests if both the hosts are on the same subnet.</p>
Default	false
Introduced	16.0.R1
Platforms	All

**proactive-refresh** *keyword*

Synopsis	Proactive refresh of neighbor entries
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 neighbor-discovery proactive-refresh</a> <i>keyword</i>
Tree	<a href="#">proactive-refresh</a>
Description	This command enables a proactive refresh of the neighbor entries. After the stale timer expires, the router sends an NUD message to the host (regardless of the existence of traffic to the IP address on the IOM), so the entry can be refreshed or removed.
Options	global, link-local, both

Introduced 16.0.R1  
 Platforms All

### **proxy-nd-policy** *reference*

Synopsis Proxy Neighbor Discovery policy name for the interface  
 Context **configure** [service ies string](#) [interface string](#) [ipv6 neighbor-discovery proxy-nd-policy reference](#)  
 Tree [proxy-nd-policy](#)  
 Reference **configure** [policy-options policy-statement string](#)  
 Max. Instances 5  
 Notes This element is ordered by the user.  
 Introduced 16.0.R1  
 Platforms All

### **reachable-time** *number*

Synopsis Neighbor reachability detection timer  
 Context **configure** [service ies string](#) [interface string](#) [ipv6 neighbor-discovery reachable-time number](#)  
 Tree [reachable-time](#)  
 Range 30 to 3600  
 Introduced 16.0.R1  
 Platforms All

### **secure-nd**

Synopsis Enter the **secure-nd** context  
 Context **configure** [service ies string](#) [interface string](#) [ipv6 neighbor-discovery secure-nd](#)  
 Tree [secure-nd](#)  
 Introduced 16.0.R1  
 Platforms All

**admin-state** *keyword*

Synopsis	Administrative state of Secure Neighbor Discovery
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 neighbor-discovery secure-nd admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

**allow-unsecured-msgs** *boolean*

Synopsis	Accept unsecured messages
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 neighbor-discovery secure-nd allow-unsecured-msgs</a> <i>boolean</i>
Tree	<a href="#">allow-unsecured-msgs</a>
Description	When configured to <b>true</b> , the router accepts unsecured messages. When Secure Neighbor Discovery (SeND) is enabled, only secure messages are accepted. When configured to <b>false</b> , the router disables the acceptance of unsecured messages.
Default	true
Introduced	16.0.R1
Platforms	All

**public-key-min-bits** *number*

Synopsis	Minimum acceptable key length for public keys in CGA
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 neighbor-discovery secure-nd public-key-min-bits</a> <i>number</i>
Tree	<a href="#">public-key-min-bits</a>
Range	512 to 1024
Default	1024
Introduced	16.0.R1
Platforms	All

**security-parameter** *number*

Synopsis	Security parameter used in the generation of a CGA
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">neighbor-discovery</a> <a href="#">secure-nd</a> <a href="#">security-parameter</a> <i>number</i>
Tree	<a href="#">security-parameter</a>
Range	0 to 1
Default	1
Introduced	16.0.R1
Platforms	All

**stale-time** *number*

Synopsis	Time a Neighbor Discovery cache entry remains stale
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">neighbor-discovery</a> <a href="#">stale-time</a> <i>number</i>
Tree	<a href="#">stale-time</a>
Range	60 to 65535
Introduced	16.0.R1
Platforms	All

**static-neighbor** [[ipv6-address](#)] *string*

Synopsis	Enter the <b>static-neighbor</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">neighbor-discovery</a> <a href="#">static-neighbor</a> <i>string</i>
Tree	<a href="#">static-neighbor</a>
Introduced	16.0.R1
Platforms	All

**[[ipv6-address](#)]** *string*

Synopsis	IPv6 address corresponding to the physical address
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">neighbor-discovery</a> <a href="#">static-neighbor</a> <i>string</i>
Tree	<a href="#">static-neighbor</a>
Notes	This element is part of a list key.
Introduced	16.0.R1

Platforms All

### **mac-address** *string*

Synopsis MAC address for the static neighbor

Context **configure** [service](#) [ies](#) [string](#) [interface](#) [string](#) [ipv6](#) [neighbor-discovery](#) [static-neighbor](#) [string](#) **mac-address** [string](#)

Tree [mac-address](#)

Notes This element is mandatory.

Introduced 16.0.R1

Platforms All

### **qos-route-lookup** *keyword*

Synopsis IP address for QoS route lookup for ingress IP packets

Context **configure** [service](#) [ies](#) [string](#) [interface](#) [string](#) [ipv6](#) [qos-route-lookup](#) [keyword](#)

Tree [qos-route-lookup](#)

Description This command specifies the IP address type used for QPPB enabled per-packet QoS handling (in terms of FC and priority). When using QPPB, routes are associated with a QoS treatment (FC and optionally priority) through either explicit configuration or the route policy. If an IPv4 or IPv6 packet arrives on an interface where the configuration of this command applies to the packet, the QoS treatment of the packet is based on the route that matched the destination IP address or the route that matched the source IP address.

See "Enabling QPPB on an IP interface" in the *7450 ESS, 7750 SR, 7950 XRS, and VSR Router Configuration Guide* for more information about QPPB.

Options destination, source, source-and-dest

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **tcp-mss** *number*

Synopsis TCP maximum segment size for the interface

Context **configure** [service](#) [ies](#) [string](#) [interface](#) [string](#) [ipv6](#) [tcp-mss](#) [number](#)

Tree [tcp-mss](#)

Range 1220 to 9726

Introduced 16.0.R1

Platforms All

## urpf-check

Synopsis Enable the **urpf-check** context  
 Context **configure service ies string interface string ipv6 urpf-check**  
 Tree [urpf-check](#)  
 Introduced 16.0.R1  
 Platforms All

## ignore-default *boolean*

Synopsis Ignore default route when performing a uRPF check  
 Context **configure service ies string interface string ipv6 urpf-check ignore-default boolean**  
 Tree [ignore-default](#)  
 Default false  
 Introduced 16.0.R1  
 Platforms All

## mode *keyword*

Synopsis Unicast RPF check mode  
 Context **configure service ies string interface string ipv6 urpf-check mode keyword**  
 Tree [mode](#)  
 Options strict, loose, strict-no-ecmp  
 Default strict  
 Introduced 16.0.R1  
 Platforms All

## vrrp [*virtual-router-id*] *number*

Synopsis Enter the **vrrp** list instance  
 Context **configure service ies string interface string ipv6 vrrp number**  
 Tree [vrrp](#)

### **admin-state** *keyword*

Synopsis	Administrative state of VRRP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">vrrp</a> <i>number</i> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Description	<p>The command determines the administrative state of non-owner virtual router instances.</p> <p>Non-owner virtual router instances can be administratively disabled. This allows the termination of VRRP participation in the virtual router and stops all routing and other access capabilities with regards to the virtual router IP addresses. Disabling the virtual router instance provides a mechanism to maintain the virtual routers without causing false backup or master state changes.</p> <p>When <b>disabled</b>, no VRRP advertisement messages are generated and all received VRRP advertisement messages are silently discarded with no processing.</p> <p>Whenever the administrative or operational state of a virtual router instance transitions, a log message is generated.</p> <p>An owner virtual router context does not use this command. To administratively disable an owner virtual router instance, use the <b>admin-state</b> command within the parent IP interface node which administratively disables the IP interface.</p>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

**backup string**

Synopsis	Virtual router IP addresses for the interface
Context	<b>configure service ies string interface string ipv6 vrrp number backup string</b>
Tree	<b>backup</b>
Description	<p>This command associates router IPv6 virtual router IP addresses with those of the parental IP interface.</p> <p>This command has two different functions based on whether it is being executed on an owner or non-owner virtual router instance.</p> <p>Non-owner virtual router instance create a routable IP interface address that is operationally dependent on the virtual router instance mode (master or backup). This command, when executed on an owner virtual router instance, does not create a routable IP interface address; it simply defines the existing IP addresses of the parental IP interface that are advertised by the virtual router instance.</p> <p>For owner virtual router instances, this command defines the IP addresses that are advertised within VRRP advertisement messages. This communicates the IP addresses that the master is representing to backup virtual routers receiving the messages. The specified IPv6 address must be equal to one of the existing parental IP addresses in the parental IP interface (primary or secondary) or this command fails.</p> <p>See "Owner and non-owner VRRP" in the <i>7450 ESS, 7750 SR, 7950 XRS, and VSR Router Configuration Guide</i> for more information about owner and non-owner virtual router instances.</p>
Max. Instances	4

Range	1 to 65535
Units	seconds
Introduced	16.0.R1
Platforms	All

**mac string**

Synopsis	Virtual MAC address to use in ARP responses
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">vrrp</a> <a href="#">number</a> <b>mac</b> <a href="#">string</a>
Tree	<a href="#">mac</a>
Description	<p>This command sets an explicit MAC address for the virtual router instance that overrides the VRRP default derived from the VRID.</p> <p>Changing the default MAC address is useful when an existing HSRP or other non-VRRP default MAC is in use by the IP hosts that use the virtual router IP address. Many hosts do not monitor unessential ARPs and continue to use the cached non-VRRP MAC address after the virtual router becomes master of the host's gateway address.</p> <p>Additionally, this command sets the MAC address used in ARP responses when the virtual router instance is master. Routing of IP packets with <i>unicast-mac-address</i> as the destination MAC is also enabled. The MAC must be the same for all virtual routers participating as a virtual router or indeterminate connectivity by the attached IP hosts results. All VRRP advertisement messages are transmitted with <i>unicast-mac-address</i> as the source MAC.</p> <p>An operator can execute this command at any time and it takes effect immediately. When the virtual router MAC on a master virtual router instance changes, a gratuitous ARP is immediately sent with a VRRP advertisement message. If the virtual router instance is disabled or operating as a backup, the gratuitous ARP and VRRP advertisement messages are not sent.</p>
Introduced	16.0.R1
Platforms	All

**master-int-inherit boolean**

Synopsis	Allow master instance to dictate the master down timer
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">vrrp</a> <a href="#">number</a> <b>master-int-inherit</b> <a href="#">boolean</a>
Tree	<a href="#">master-int-inherit</a>

Description	<p>When configured to <b>true</b>, the virtual router instance inherits the advertisement interval timer of the master VRRP router, which backup routers use to calculate the master down timer.</p> <p>When configured to <b>false</b>, the locally configured message interval must match the master's VRRP advertisement message advertisement interval field value or the message is discarded.</p>
Introduced	16.0.R1
Platforms	All

### **message-interval** *number*

Synopsis	Interval for sending VRRP advertisement messages
Context	<b>configure</b> <i>service ies string interface string ipv6 vrrp number message-interval number</i>
Tree	<a href="#">message-interval</a>
Description	<p>This command configures the administrative advertisement message timer used by the master virtual router instance to send VRRP advertisement messages. The backup master down timer is derived from the value configured using this command.</p> <p>The use of this command varies for non-owner virtual router instances, depending on the state of the virtual router (master or backup) and the state of the <b>master-int-inherit</b> command:</p> <ul style="list-style-type: none"> <li>• When a non-owner is operating as master for the virtual router, the system uses the configured value of this command as the operational advertisement timer, similar to an owner virtual router instance. The <b>master-int-inherit</b> command has no effect when operating as the master.</li> <li>• When a non-owner is in the backup state with <b>master-int-inherit</b> disabled, the system uses the configured value of this command to match the incoming advertisement interval field of the VRRP advertisement message. If the locally configured message interval does not match the advertisement interval field, the system discards the VRRP advertisement.</li> <li>• When a non-owner is in the backup state with <b>master-int-inherit</b> enabled, the configured value of this command is ignored. The master down timer is indirectly derived from the advertisement interval field value of the incoming VRRP advertisement message.</li> </ul>
Range	10 to 4095
Units	centiseconds
Default	100
Introduced	16.0.R1
Platforms	All

## monitor-oper-group *reference*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VRRP instance to follow a specified operational group
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">vrrp</a> <a href="#">number</a> <a href="#">monitor-oper-group</a> <a href="#">reference</a>
Tree	<a href="#">monitor-oper-group</a>
Description	This command configures VRRP to associate with an operational group. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master router, the operational group is up and the operational group is down for all other VRRP states.
Reference	<b>configure</b> <a href="#">service</a> <a href="#">oper-group</a> <a href="#">string</a>
Introduced	22.2.R1
Platforms	All

## ntp-reply *boolean*

Synopsis	Allow processing of NTP requests
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">vrrp</a> <a href="#">number</a> <a href="#">ntp-reply</a> <a href="#">boolean</a>
Tree	<a href="#">ntp-reply</a>
Description	When configured to <b>true</b> , the router redirects NTP requests to the VRRP virtual IP address. This behavior only applies to the router acting as the master VRRP router. When configured to <b>false</b> , the router does not process NTP requests.
Default	false
Introduced	20.2.R1
Platforms	All

## oper-group *reference*

Synopsis	Operational group name associated with the VRRP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">vrrp</a> <a href="#">number</a> <a href="#">oper-group</a> <a href="#">reference</a>
Tree	<a href="#">oper-group</a>
Description	This command configures an operational group to associate with the VRRP. When associated, VRRP notifies the operational group of its state changes so that other protocols can monitor it to provide a redundancy mechanism. When VRRP is the master

router (MR), the operational group is up. The operational group is down for all other VRRP states.

Reference	<b>configure service oper-group</b> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **owner** *boolean*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Designate the virtual router instance as owner
Context	<b>configure service ies</b> <i>string interface string ipv6 vrrp number owner</i> <i>boolean</i>
Tree	<i>owner</i>
Description	When configured to <b>true</b> , the router designates this virtual router instance as the owner of the virtual router IP addresses. Therefore, this virtual router becomes responsible for forwarding packets sent to the virtual router IP addresses. The owner also assumes the role of master virtual router.  When configured to <b>false</b> , this virtual router instance is designated as a non-owner.
Default	false
Introduced	16.0.R1
Platforms	All

### **passive** *boolean*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Suppress the processing of VRRP advertisement messages
Context	<b>configure service ies</b> <i>string interface string ipv6 vrrp number passive</i> <i>boolean</i>
Tree	<i>passive</i>
Description	When configured to <b>true</b> , the router identifies this virtual router instance as passive; and therefore the owner of the virtual router IP addresses. A passive virtual router instance does not transmit or receive VRRP advertisement messages and is always in either the master state (if the interface is operationally up) or the init state (if the interface is operationally down).

When configured to **false**, this virtual router instance is not identified as passive, meaning that it transmits and receives VRRP advertisement messages.

Default	false
Introduced	16.0.R1
Platforms	All

### **ping-reply** *boolean*

Synopsis	Allow non-owner master to reply to ICMP echo requests
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 vrrp</a> <i>number</i> <a href="#">ping-reply</a> <i>boolean</i>
Tree	<a href="#">ping-reply</a>
Description	<p>When configured to <b>true</b>, the router allows the non-owner master to reply to ICMP echo requests directed at the IP addresses of the virtual router instance. Any routed interface can receive the ping request. Ping must not have been disabled at the management security level (either on the parental IP interface or on the Ping source host address).</p> <p>When configured to <b>false</b>, ICMP echo requests sent to non-owner master virtual IP addresses are silently discarded.</p> <p>Non-owner backup virtual routers never respond to ICMP echo requests, regardless of the configuration of this command.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **policy** *reference*

Synopsis	VRRP priority control policy
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 vrrp</a> <i>number</i> <a href="#">policy</a> <i>reference</i>
Tree	<a href="#">policy</a>
Description	<p>This command configures a VRRP priority control policy to associate with the virtual router instance.</p> <p>VRRP priority control policies can override or adjust the base priority value of the virtual router instance, depending on events or conditions within the chassis.</p> <p>An operator can associate a policy with more than one virtual router instance. The priority events within the policy either override or diminish the base priority set with the <b>priority</b> command. As priority events clear in the policy, the in-use priority can eventually be restored to the base priority value.</p> <p>For non-owner virtual router instances, if this command is not executed, the base priority is used as the in-use priority.</p>
Reference	<b>configure</b> <a href="#">vrrp</a> <a href="#">policy</a> <i>number</i>

Introduced	16.0.R1
Platforms	All

### **preempt** *boolean*

Synopsis	Allow the VRRP to override an existing non-owner master
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 vrrp</a> <i>number</i> <a href="#">preempt</a> <i>boolean</i>
Tree	<a href="#">preempt</a>
Description	When configured to <b>true</b> , this virtual router instance overrides any non-owner master with an in-use message priority value less than the in-use priority value of this virtual router.  When configured to <b>false</b> , this virtual router only becomes master if the master down timer expires before a VRRP advertisement message is received from another virtual router.
Default	true
Introduced	16.0.R1
Platforms	All

### **priority** *number*

Synopsis	Base priority for the VRRP
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 vrrp</a> <i>number</i> <a href="#">priority</a> <i>number</i>
Tree	<a href="#">priority</a>
Description	This command configures the base router priority for the virtual router instance, which defines the selection order of the virtual router in the master election process.  The in-use priority is derived from the base priority. However, the in-use priority is modified by optional VRRP priority control policies. An operator can use VRRP priority control policies to either override or adjust the base priority value depending on events or conditions within the chassis.
Range	1 to 255
Introduced	16.0.R1
Platforms	All

### **standby-forwarding** *boolean*

Synopsis	Allow standby router to forward traffic
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 vrrp</a> <i>number</i> <a href="#">standby-forwarding</a> <i>boolean</i>

Tree	<a href="#">standby-forwarding</a>
Description	When configured to <b>true</b> , the standby router forwards all traffic. When configured to <b>false</b> , the standby router cannot forward traffic sent to the MAC address of the virtual router. However, the standby router still forwards traffic sent to its own MAC address.
Default	false
Introduced	16.0.R1
Platforms	All

### **telnet-reply** *boolean*

Synopsis	Allow non-owner master to reply to Telnet requests
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 vrrp</a> <i>number</i> <b>telnet-reply</b> <i>boolean</i>
Tree	<a href="#">telnet-reply</a>
Description	When configured to <b>true</b> , the router allows the non-owner master to reply to Telnet requests directed at the IP addresses of the virtual router instance. Any routed interface can receive Telnet requests. Telnet cannot be disabled at the management security level (either on the parental IP interface or on the Telnet source host address). When configured to <b>false</b> , the router silently discards Telnet requests sent to non-owner master virtual IP addresses.
Default	false
Introduced	16.0.R1
Platforms	All

### **traceroute-reply** *boolean*

Synopsis	Allow non-owner master to reply to traceroute requests
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">ipv6 vrrp</a> <i>number</i> <b>traceroute-reply</b> <i>boolean</i>
Tree	<a href="#">traceroute-reply</a>
Description	When configured to <b>true</b> , the router allows a non-owner master to reply to traceroute requests directed to the IP addresses of the virtual router instance. When configured to <b>false</b> , the router silently discards traceroute requests sent to non-owner master virtual IP addresses. Traceroute must not have been disabled at the management security level (either on the parental IP interface or the source host address).
Default	false
Introduced	16.0.R1

Platforms All

## load-balancing

Synopsis Enter the **load-balancing** context

Context **configure service ies string interface string load-balancing**

Tree [load-balancing](#)

Introduced 16.0.R1

Platforms All

## flow-label-load-balancing *boolean*

Synopsis Enable flow label load balancing

Context **configure service ies string interface string load-balancing flow-label-load-balancing boolean**

Tree [flow-label-load-balancing](#)

Description When configured to **true**, the router enables load balancing in ECMP and LAG based on the output of a hash performed on the triplet (SA, DA, flow label) in the header of an IPv6 packet received on an IES, VPRN, R-VPLS, CSC, or network interface.

When configured to **false**, the router disables load balancing in ECMP and LAG.

Default false

Introduced 21.5.R1

Platforms All

## ip-load-balancing *keyword*

Synopsis IP load-balancing algorithm

Context **configure service ies string interface string load-balancing ip-load-balancing keyword**

Tree [ip-load-balancing](#)

Description This command specifies whether to include the source address, destination address, or both in LAG or ECMP hash on IP interfaces. Additionally, when the **l4-load-balancing** command is enabled, this command also includes the source or destination port in the hash inputs.

Options both, destination, source, inner-ip

Default both

Introduced 16.0.R3

Platforms All

### **spi-load-balancing** *boolean*

Synopsis	Enable SPI use in hashing
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">load-balancing</a> <a href="#">spi-load-balancing</a> <i>boolean</i>
Tree	<a href="#">spi-load-balancing</a>
Description	When configured to <b>true</b> , the router uses the Security Parameter Index (SPI) in hashing for ESP and AH encrypted IPv4 and IPv6 traffic. This is a per-interface setting.
Default	false
Introduced	16.0.R1
Platforms	All

### **teid-load-balancing** *boolean*

Synopsis	Enable use of TEID in hashing
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">load-balancing</a> <a href="#">teid-load-balancing</a> <i>boolean</i>

String Length	1 to 45

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## **aarp**

Synopsis	Enable the <b>aarp</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <b>aarp</b>
Tree	<a href="#">aarp</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **id reference**

Synopsis	AARP instance ID
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <b>aarp</b> <i>id reference</i>
Tree	<a href="#">id</a>
Reference	<b>configure</b> <a href="#">application-assurance</a> <b>aarp</b> <i>number</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **type keyword**

Synopsis	Role referenced by the AARP
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <b>aarp</b> <i>type keyword</i>
Tree	<a href="#">type</a>
Options	dual-homed, dual-homed-secondary
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **accounting-policy reference**

Synopsis	Accounting policy
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <b>accounting-policy</b> <i>reference</i>
Tree	<a href="#">accounting-policy</a>

Reference	<b>configure</b> <a href="#">log accounting-policy</a> <i>number</i>
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the SAP
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

**anti-spoof** *keyword*

Synopsis	Anti-spoof filtering
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">anti-spoof</a> <i>keyword</i>
Tree	<a href="#">anti-spoof</a>
Options	source-ip-addr, source-mac-addr, source-ip-and-mac-addr, next-hop-ip-and-mac-addr
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**app-profile** *reference*

Synopsis	Application profile name
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">app-profile</a> <i>reference</i>
Tree	<a href="#">app-profile</a>
Reference	<b>configure</b> <a href="#">application-assurance</a> <i>group</i> <i>number</i> <a href="#">partition</a> <i>number</i> <a href="#">policy</a> <a href="#">app-profile</a> <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**bandwidth** *number*

Synopsis	SAP bandwidth
----------	---------------

Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>bandwidth</b> <i>number</i>
Tree	<b>bandwidth</b>
Range	1 to 6400000000
Units	kilobps
Introduced	16.0.R1
Platforms	All

### **calling-station-id** *string*

Synopsis	Calling station ID
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>calling-station-id</b> <i>string</i>
Tree	<b>calling-station-id</b>
String Length	1 to 64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **collect-stats** *boolean*

Synopsis	Collect accounting statistics
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>collect-stats</b> <i>boolean</i>
Tree	<b>collect-stats</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **cpu-protection**

Synopsis	Enter the <b>cpu-protection</b> context
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>cpu-protection</b>
Tree	<b>cpu-protection</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## eth-cfm-monitoring

Synopsis	Enable the <b>eth-cfm-monitoring</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">cpu-protection</a> <a href="#">eth-cfm-monitoring</a>
Tree	<a href="#">eth-cfm-monitoring</a>
Notes	The following elements are part of a choice: <b>eth-cfm-monitoring</b> , <b>ip-src-monitoring</b> , or <b>mac-monitoring</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## aggregate

Synopsis	Apply rate limit to the sum of the per peer packet rates
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">cpu-protection</a> <a href="#">eth-cfm-monitoring</a> <a href="#">aggregate</a>
Tree	<a href="#">aggregate</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## car

Synopsis	Ignore Ethernet CFM packets when enforcing overall rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">cpu-protection</a> <a href="#">eth-cfm-monitoring</a> <a href="#">car</a>
Tree	<a href="#">car</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## ip-src-monitoring

Synopsis	Enable IP source monitoring for CPU protection
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">cpu-protection</a> <a href="#">ip-src-monitoring</a>
Tree	<a href="#">ip-src-monitoring</a>
Notes	The following elements are part of a choice: <b>eth-cfm-monitoring</b> , <b>ip-src-monitoring</b> , or <b>mac-monitoring</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## mac-monitoring

Synopsis	Monitor MAC for CPU protection
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">cpu-protection</a> <a href="#">mac-monitoring</a>
Tree	<a href="#">mac-monitoring</a>
Notes	The following elements are part of a choice: <b>eth-cfm-monitoring</b> , <b>ip-src-monitoring</b> , or <b>mac-monitoring</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## policy-id *reference*

Synopsis	CPM protection policy
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">cpu-protection</a> <a href="#">policy-id</a> <a href="#">reference</a>
Tree	<a href="#">policy-id</a>
Reference	<b>configure</b> <a href="#">system</a> <a href="#">security</a> <a href="#">cpu-protection</a> <a href="#">policy</a> <a href="#">number</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## description *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">description</a> <a href="#">string</a>
Tree	<a href="#">description</a>
String Length	1 to 160
Introduced	16.0.R1
Platforms	All

## dist-cpu-protection *reference*

Synopsis	Distributed CPU protection policy for SAP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">dist-cpu-protection</a> <a href="#">reference</a>
Tree	<a href="#">dist-cpu-protection</a>
Reference	<b>configure</b> <a href="#">system</a> <a href="#">security</a> <a href="#">dist-cpu-protection</a> <a href="#">policy</a> <a href="#">string</a>
Introduced	16.0.R1

Platforms All

## egress

Synopsis Enter the **egress** context

Context **configure** [service ies string](#) [interface string](#) [sap string](#) [egress](#)

Tree [egress](#)

Introduced 16.0.R1

Platforms All

## agg-rate

Synopsis Enter the **agg-rate** context

Context **configure** [service ies string](#) [interface string](#) [sap string](#) [egress](#) [agg-rate](#)

Tree [agg-rate](#)

Notes The following elements are part of a choice: **agg-rate** or **percent-agg-rate**.

Introduced 16.0.R1

Platforms All

## adaptation-rule *keyword*

Synopsis Adaptation rule to compute the operational PIR value when an aggregate shaper is used

Context **configure** [service ies string](#) [interface string](#) [sap string](#) [egress](#) [agg-rate](#) [adaptation-rule](#) *keyword*

Tree [adaptation-rule](#)

Options max, min, closest

Default closest

Introduced 22.10.R1

Platforms 7750 SR-1, 7750 SR-s

## burst-limit (*number* | *keyword*)

Synopsis Shaping burst size when an aggregate shaper is used

Context **configure** [service ies string](#) [interface string](#) [sap string](#) [egress](#) [agg-rate](#) [burst-limit](#) (*number* | *keyword*)

Tree [burst-limit](#)

Range	1 to 14000000
Units	bytes
Options	auto
Default	auto
Introduced	22.10.R1
Platforms	7750 SR-1, 7750 SR-s

### **limit-unused-bandwidth** *boolean*

Synopsis	Enable aggregate rate overrun protection
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress agg-rate limit-unused-bandwidth</a> <i>boolean</i>
Tree	<a href="#">limit-unused-bandwidth</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **queue-frame-based-accounting** *boolean*

Synopsis	Enable frame based accounting on policers and queues
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress agg-rate queue-frame-based-accounting</a> <i>boolean</i>
Tree	<a href="#">queue-frame-based-accounting</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **rate** *number*

Synopsis	Enforced aggregate rate for all queues
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress agg-rate rate</a> <i>number</i>
Tree	<a href="#">rate</a>
Range	1 to 6400000000
Units	kilobps
Introduced	16.0.R1

Platforms All

## filter

Synopsis Enter the **filter** context  
 Context **configure** [service ies string](#) [interface string](#) [sap string](#) [egress filter](#)  
 Tree [filter](#)  
 Introduced 16.0.R1  
 Platforms All

## ip reference

Synopsis IPv4 filter policy name  
 Context **configure** [service ies string](#) [interface string](#) [sap string](#) [egress filter](#) [ip reference](#)  
 Tree [ip](#)  
 Reference **configure** [filter ip-filter string](#)  
 Introduced 16.0.R1  
 Platforms All

## ipv6 reference

Synopsis IPv6 filter policy name  
 Context **configure** [service ies string](#) [interface string](#) [sap string](#) [egress filter](#) [ipv6 reference](#)  
 Tree [ipv6](#)  
 Reference **configure** [filter ipv6-filter string](#)  
 Introduced 16.0.R1  
 Platforms All

## qos

Synopsis Enter the **qos** context  
 Context **configure** [service ies string](#) [interface string](#) [sap string](#) [egress qos](#)  
 Tree [qos](#)  
 Introduced 16.0.R1  
 Platforms All

## **policer-control-policy**

Synopsis	Enter the <b>policer-control-policy</b> context
Context	<b>configure service ies string interface string sap string egress qos policer-control-policy</b>
Tree	<b>policer-control-policy</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## **overrides**

Synopsis	Enable the <b>overrides</b> context
Context	<b>configure service ies string interface string sap string egress qos policer-control-policy overrides</b>
Tree	<b>overrides</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## **root**

Synopsis	Enter the <b>root</b> context
Context	<b>configure service ies string interface string sap string egress qos policer-control-policy overrides root</b>
Tree	<b>root</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## **max-rate** (*number | keyword*)

Synopsis	Maximum frame-based bandwidth limit
Context	<b>configure service ies string interface string sap string egress qos policer-control-policy overrides root max-rate</b> ( <i>number   keyword</i> )
Tree	<b>max-rate</b>
Range	1 to 6400000000
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**priority-mbs-thresholds**

Synopsis	Enter the <b>priority-mbs-thresholds</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a> <a href="#">priority-mbs-thresholds</a>
Tree	<a href="#">priority-mbs-thresholds</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**min-thresh-separation** (*number* | *keyword*)

Synopsis	Minimum amount of separation buffer space
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a> <a href="#">priority-mbs-thresholds</a> <a href="#">min-thresh-separation</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">min-thresh-separation</a>
Range	0 to 16777216
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**priority** [[priority-level](#)] *number*

Synopsis	Enter the <b>priority</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a> <a href="#">priority-mbs-thresholds</a> <a href="#">priority</a> <i>number</i>
Tree	<a href="#">priority</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**[priority-level]** *number*

Synopsis	Priority level
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a> <a href="#">priority-mbs-thresholds</a> <a href="#">priority</a> <i>number</i>
Tree	<a href="#">priority</a>

Range	1 to 8
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **mbs-contribution** (*number* | *keyword*)

Synopsis	Minimum amount of cumulative buffer space allowed
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos policer-control-policy overrides</a> <a href="#">root priority-mbs-thresholds</a> <a href="#">priority</a> <i>number</i> <b>mbs-contribution</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">mbs-contribution</a>
Range	0 to 16777216
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **policy-name** *reference*

Synopsis	Policer control policy name
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos policer-control-policy</a> <a href="#">policy-name</a> <i>reference</i>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos policer-control-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **qinq-mark-top-only** *boolean*

Synopsis	Mark top Q-tags
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos qinq-mark-top-only</a> <i>boolean</i>
Tree	<a href="#">qinq-mark-top-only</a>
Default	false
Introduced	16.0.R1

Platforms All

## sap-egress

Synopsis Enter the **sap-egress** context

Context **configure service ies string interface string sap string egress qos sap-egress**

Tree [sap-egress](#)

Introduced 16.0.R1

Platforms All

## overrides

Synopsis Enter the **overrides** context

Context **configure service ies string interface string sap string egress qos sap-egress overrides**

Tree [overrides](#)

Introduced 16.0.R1

Platforms All

## hs-secondary-shaper *string*

Synopsis HS Secondary Shaper

Context **configure service ies string interface string sap string egress qos sap-egress overrides hs-secondary-shaper string**

Tree [hs-secondary-shaper](#)

String Length 1 to 32

Introduced 16.0.R1

Platforms 7750 SR-7/12/12e

## hs-wrr-group [[group-id](#)] *reference*

Synopsis Enter the **hs-wrr-group** list instance

Context **configure service ies string interface string sap string egress qos sap-egress overrides hs-wrr-group reference**

Tree [hs-wrr-group](#)

Introduced 16.0.R1

Platforms 7750 SR-7/12/12e

**[group-id] reference**

Synopsis	HS WRR group identifier
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string sap string</a> <a href="#">egress qos sap-egress overrides</a> <a href="#">hs-wrr-group reference</a>
Tree	<a href="#">hs-wrr-group</a>
Reference	<b>configure</b> <a href="#">qos sap-egress string</a> <a href="#">hs-wrr-group number</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

**hs-class-weight number**

Synopsis	Class weight override of the WRR group
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string sap string</a> <a href="#">egress qos sap-egress overrides</a> <a href="#">hs-wrr-group reference</a> <a href="#">hs-class-weight number</a>
Tree	<a href="#">hs-class-weight</a>
Range	1   2   4   8
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

**percent-rate decimal-number**

Synopsis	Percent rate override applied to the HS WRR group
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string sap string</a> <a href="#">egress qos sap-egress overrides</a> <a href="#">hs-wrr-group reference</a> <a href="#">percent-rate decimal-number</a>
Tree	<a href="#">percent-rate</a>
Range	0.01 to 100.00
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

**rate (number | keyword)**

Synopsis	Scheduling rate override applied to the HS WRR group
----------	--

Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos sap-egress overrides</b> <b>hs-wrr-group</b> <i>reference</i> <b>rate</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">rate</a>
Range	1 to 2000000000
Units	kilobps
Options	max
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **policer** [[policer-id](#)] *reference*

Synopsis	Enter the <b>policer</b> list instance
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos sap-egress overrides</b> <a href="#">policer</a> <i>reference</i>
Tree	<a href="#">policer</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### [\[policer-id\]](#) *reference*

Synopsis	Policer unique ID
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos sap-egress overrides</b> <a href="#">policer</a> <i>reference</i>
Tree	<a href="#">policer</a>
Reference	<b>configure qos sap-egress</b> <i>string</i> <a href="#">policer</a> <i>number</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **cbs** (*number* | *keyword*)

Synopsis	CBS
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos sap-egress overrides</b> <a href="#">policer</a> <i>reference</i> <b>cbs</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cbs</a>

Range	0 to 268435456
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **mbs** (*number* | *keyword*)

Synopsis	MBS
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <b>mbs</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">mbs</a>
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **packet-byte-offset** *number*

Synopsis	Packet size modification for policing information
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <b>packet-byte-offset</b> <i>number</i>
Tree	<a href="#">packet-byte-offset</a>
Range	-64 to 31
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **percent-rate**

Synopsis	Enter the <b>percent-rate</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <b>percent-rate</b>
Tree	<a href="#">percent-rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **cir** *decimal-number*

Synopsis CIR percent rate

Context **configure** [service ies](#) *string* [interface](#) *string* [sap](#) *string* [egress qos sap-egress overrides](#)  
[policer](#) [reference](#) [percent-rate](#) [cir](#) *decimal-number*

Tree [cir](#)

Range 0.00 to 100.00

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **pir** *decimal-number*

Synopsis PIR percent rate

Context **configure** [service ies](#) *string* [interface](#) *string* [sap](#) *string* [egress qos sap-egress overrides](#)  
[policer](#) [reference](#) [percent-rate](#) [pir](#) *decimal-number*

Tree [pir](#)

Range 0.01 to 100.00

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **rate**

Synopsis Enter the **rate** context

Context **configure** [service ies](#) *string* [interface](#) *string* [sap](#) *string* [egress qos sap-egress overrides](#)  
[policer](#) [reference](#) [rate](#)

Tree [rate](#)

Notes The following elements are part of a choice: **percent-rate** or **rate**.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **cir** (*number* | *keyword*)

Synopsis CIR rate

Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos sap-egress overrides</b> <b>policer reference rate cir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>cir</b>
Range	0 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **pir** (*number* | *keyword*)

Synopsis	PIR rate
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos sap-egress overrides</b> <b>policer reference rate pir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>pir</b>
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **stat-mode** *keyword*

Synopsis	Mode of statistics collected by the policer
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos sap-egress overrides</b> <b>policer reference stat-mode</b> <i>keyword</i>
Tree	<b>stat-mode</b>
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-profile-cir, offered-limited-capped-cir, offered-profile-capped-cir, offered-total-cir-exceed, offered-four-profile-no-cir, offered-total-cir-four-profile
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **queue** [*queue-id*] *reference*

Synopsis	Enter the <b>queue</b> list instance
----------	--------------------------------------

Context	<b>configure service ies string interface string sap string egress qos sap-egress overrides queue reference</b>
Tree	<b>queue</b>
Introduced	16.0.R1
Platforms	All

### **[queue-id] reference**

Synopsis	Policer unique ID
Context	<b>configure service ies string interface string sap string egress qos sap-egress overrides queue reference</b>
Tree	<b>queue</b>
Reference	<b>configure qos sap-egress string queue number</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **adaptation-rule**

Synopsis	Enter the <b>adaptation-rule</b> context
Context	<b>configure service ies string interface string sap string egress qos sap-egress overrides queue reference adaptation-rule</b>
Tree	<b>adaptation-rule</b>
Introduced	16.0.R1
Platforms	All

### **cir keyword**

Synopsis	Constraint used when deriving the operational CIR value
Context	<b>configure service ies string interface string sap string egress qos sap-egress overrides queue reference adaptation-rule cir keyword</b>
Tree	<b>cir</b>
Options	max, min, closest
Introduced	16.0.R1
Platforms	All

**pir** *keyword*

Synopsis	Constraint used when deriving the operational PIR value
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">adaptation-rule</a> <b>pir</b> <i>keyword</i>
Tree	<a href="#">pir</a>
Options	max, min, closest
Introduced	16.0.R1
Platforms	All

**avg-frame-overhead** *decimal-number*

Synopsis	Average packet-to-frame encapsulation overhead
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <b>avg-frame-overhead</b> <i>decimal-number</i>
Tree	<a href="#">avg-frame-overhead</a>
Range	0.00 to 100.00
Introduced	16.0.R1
Platforms	All

**burst-limit** (*number* | *keyword*)

Synopsis	Explicit shaping burst size for the queue
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <b>burst-limit</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">burst-limit</a>
Range	1 to 14000000
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	All

**cbs** (*number* | *keyword*)

Synopsis	CBS
----------	-----

Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos sap-egress overrides queue reference cbs</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cbs</a>
Range	0 to 1048576
Units	kilobytes
Options	auto
Introduced	16.0.R1
Platforms	All

## drop-tail

Synopsis	Enter the <b>drop-tail</b> context
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos sap-egress overrides queue reference drop-tail</b>
Tree	<a href="#">drop-tail</a>
Introduced	16.0.R1
Platforms	All

## low

Synopsis	Enter the <b>low</b> context
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos sap-egress overrides queue reference drop-tail low</b>
Tree	<a href="#">low</a>
Introduced	16.0.R1
Platforms	All

## percent-reduction-from-mbs (*number* | *keyword*)

Synopsis	Percentage reduction from the MBS for a queue drop tail
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos sap-egress overrides queue reference drop-tail low percent-reduction-from-mbs</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">percent-reduction-from-mbs</a>
Range	0 to 100
Options	auto
Introduced	16.0.R1

Platforms All

### **hs-class-weight** *number*

Synopsis Class weight override for the queue

Context **configure** [service](#) [ies](#) *string* [interface](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#) [reference](#) **hs-class-weight** *number*

Tree [hs-class-weight](#)

Range 1 | 2 | 4 | 8

Introduced 16.0.R1

Platforms 7750 SR-7/12/12e

### **hs-wred-queue**

Synopsis Enter the **hs-wred-queue** context

Context **configure** [service](#) [ies](#) *string* [interface](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#) [reference](#) **hs-wred-queue**

Tree [hs-wred-queue](#)

Introduced 16.0.R1

Platforms 7750 SR-7/12/12e

### **policy** *reference*

Synopsis Slope policy applied to the HSQ queue group queue

Context **configure** [service](#) [ies](#) *string* [interface](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#) [reference](#) **hs-wred-queue** [policy](#) *reference*

Tree [policy](#)

Reference **configure** [qos](#) [slope-policy](#) *string*

Introduced 16.0.R1

Platforms 7750 SR-7/12/12e

### **hs-wrr-weight** *number*

Synopsis WRR weight to parent with the queue into the scheduler

Context **configure** [service](#) [ies](#) *string* [interface](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#) [reference](#) **hs-wrr-weight** *number*

Tree	<a href="#">hs-wrr-weight</a>
Range	1 to 127
Default	1
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

### **mbs** (*number* | *keyword*)

Synopsis	MBS
Context	<a href="#">configure service ies string interface string sap string egress qos sap-egress overrides queue reference mbs</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">mbs</a>
Range	0 to 1073741824
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	All

### **monitor-queue-depth**

Synopsis	Enable the <b>monitor-queue-depth</b> context
Context	<a href="#">configure service ies string interface string sap string egress qos sap-egress overrides queue reference monitor-queue-depth</a>
Tree	<a href="#">monitor-queue-depth</a>
Description	Commands in this context configure queue depth monitoring for the specified queue.
Introduced	20.10.R1
Platforms	All

### **fast-polling** *boolean*

Synopsis	Enable fast polling of the queue depth
Context	<a href="#">configure service ies string interface string sap string egress qos sap-egress overrides queue reference monitor-queue-depth fast-polling boolean</a>
Tree	<a href="#">fast-polling</a>
Description	When configured to <b>true</b> , this command enables fast polling of the queue depth. Faster polling allows a more accurate view of the actual depth.

Default	false
Introduced	20.10.R1
Platforms	All

### **violation-threshold** *decimal-number*

Synopsis	Threshold for queue depth before violation is raised
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">monitor-queue-depth</a> <b>violation-threshold</b> <i>decimal-number</i>
Tree	<a href="#">violation-threshold</a>
Description	This command specifies the threshold for the queue MBS. When the queue depth exceeds the threshold value, a violation is registered.
Range	0.01 to 99.99
Introduced	20.10.R1
Platforms	All

### **parent**

Synopsis	Enter the <b>parent</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <b>parent</b>
Tree	<a href="#">parent</a>
Introduced	16.0.R1
Platforms	All

### **cir-weight** *number*

Synopsis	CIR parameter that overrides parent for queue group
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">parent</a> <b>cir-weight</b> <i>number</i>
Tree	<a href="#">cir-weight</a>
Range	0 to 100
Introduced	16.0.R1
Platforms	All

**weight number**

Synopsis	PIR parameter that overrides parent for queue group
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">parent</a> <a href="#">weight</a> <a href="#">number</a>
Tree	<a href="#">weight</a>
Range	0 to 100
Introduced	16.0.R1
Platforms	All

**percent-rate**

Synopsis	Enter the <b>percent-rate</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">percent-rate</a>
Tree	<a href="#">percent-rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	All

**cir decimal-number**

Synopsis	CIR percent rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">percent-rate</a> <a href="#">cir</a> <a href="#">decimal-number</a>
Tree	<a href="#">cir</a>
Range	0.00 to 100.00
Introduced	16.0.R1
Platforms	All

**pir decimal-number**

Synopsis	PIR percent rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">percent-rate</a> <a href="#">pir</a> <a href="#">decimal-number</a>
Tree	<a href="#">pir</a>
Range	0.01 to 100.00

Introduced	16.0.R1
Platforms	All

**rate**

Synopsis	Enter the <b>rate</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <b>rate</b>
Tree	<a href="#">rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	All

**cir** (*number* | *keyword*)

Synopsis	CIR rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">rate</a> <b>cir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cir</a>
Range	0 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	All

**pir** (*number* | *keyword*)

Synopsis	PIR rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">rate</a> <b>pir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">pir</a>
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	All

**policy-name** *reference*

Synopsis	Policy ID to associate with SAP for mirrored service
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">policy-name</a> <i>reference</i>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">sap-egress</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

**port-redirect-group**

Synopsis	Enter the <b>port-redirect-group</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">port-redirect-group</a>
Tree	<a href="#">port-redirect-group</a>
Introduced	16.0.R1
Platforms	All

**group-name** *reference*

Synopsis	Name of the queue group redirect list policy
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">port-redirect-group</a> <a href="#">group-name</a> <i>reference</i>
Tree	<a href="#">group-name</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">queue-group-templates</a> <a href="#">egress</a> <a href="#">queue-group</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

**instance** *number*

Synopsis	Instance of port queue group
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">port-redirect-group</a> <a href="#">instance</a> <i>number</i>
Tree	<a href="#">instance</a>
Range	1 to 65535

Introduced	16.0.R1
Platforms	All

## **scheduler-policy**

Synopsis	Enter the <b>scheduler-policy</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a>
Tree	<a href="#">scheduler-policy</a>
Introduced	16.0.R1
Platforms	All

## **overrides**

Synopsis	Enter the <b>overrides</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a>
Tree	<a href="#">overrides</a>
Introduced	16.0.R1
Platforms	All

## **scheduler** [[scheduler-name](#)] *string*

Synopsis	Enter the <b>scheduler</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <i>string</i>
Tree	<a href="#">scheduler</a>
Introduced	16.0.R1
Platforms	All

## **[scheduler-name]** *string*

Synopsis	Scheduler name
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <i>string</i>
Tree	<a href="#">scheduler</a>
Description	This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on),

the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.

If the scheduler name exists within the policy on a different tier, an error occurs and the current context does not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.

If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context is not change.

String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## parent

Synopsis	Enter the <b>parent</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <a href="#">string</a> <b>parent</b>
Tree	<a href="#">parent</a>
Introduced	16.0.R1
Platforms	All

## cir-weight *number*

Synopsis	Weight used at the within-CIR port priority level
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <a href="#">string</a> <a href="#">parent</a> <b>cir-weight</b> <i>number</i>
Tree	<a href="#">cir-weight</a>
Range	0 to 100
Introduced	16.0.R1
Platforms	All

## weight *number*

Synopsis	Relative weight of the scheduler to feed the queue
----------	--

Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos scheduler-policy overrides scheduler</b> <i>string</i> <b>parent weight</b> <i>number</i>
Tree	<b>weight</b>
Range	0 to 100
Introduced	16.0.R1
Platforms	All

**rate**

Synopsis	Enter the <b>rate</b> context
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos scheduler-policy overrides scheduler</b> <i>string</i> <b>rate</b>
Tree	<b>rate</b>
Introduced	16.0.R1
Platforms	All

**cir** (*number* | *keyword*)

Synopsis	CIR at which the queue it to operate
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos scheduler-policy overrides scheduler</b> <i>string</i> <b>rate cir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>cir</b>
Range	0 to 6400000000
Units	kilobps
Options	sum, max
Introduced	16.0.R1
Platforms	All

**pir** (*number* | *keyword*)

Synopsis	PIR at which the queue is to operate
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress qos scheduler-policy overrides scheduler</b> <i>string</i> <b>rate pir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>pir</b>
Range	1 to 6400000000
Units	kilobps

Options	max
Introduced	16.0.R1
Platforms	All

### **policy-name** *reference*

Synopsis	Scheduler policy name
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">egress qos scheduler-policy policy-name reference</a>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos scheduler-policy string</a>
Introduced	16.0.R1
Platforms	All

### **queue-group-redirect-list** *reference*

Synopsis	Assign queue-group redirect list
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">egress queue-group-redirect-list reference</a>
Tree	<a href="#">queue-group-redirect-list</a>
Reference	<b>configure</b> <a href="#">qos queue-group-redirect-list string</a>
Introduced	16.0.R1
Platforms	All

### **virtual-port**

Synopsis	Enter the <b>virtual-port</b> context
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">egress virtual-port</a>
Tree	<a href="#">virtual-port</a>
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **vport-name** *reference*

Synopsis	Virtual port assigned to the SAP
----------	----------------------------------

Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">virtual-port</a> <a href="#">vport-name</a> <i>reference</i>
Tree	<a href="#">vport-name</a>
Reference	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">access</a> <a href="#">egress</a> <a href="#">virtual-port</a> <i>string</i>
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## eth-cfm

Synopsis	Enter the <b>eth-cfm</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a>
Tree	<a href="#">eth-cfm</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## collect-lmm-fc-stats

Synopsis	Enter the <b>collect-lmm-fc-stats</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">collect-lmm-fc-stats</a>
Tree	<a href="#">collect-lmm-fc-stats</a>
Description	<p>Commands in this context configure per forwarding class (FC) LMM information collection.</p> <p>The commands <b>fc-in-profile</b> and <b>fc</b> in this context are mutually exclusive. The commands apply to either profile-aware or profile-unaware FCs respectively.</p> <p>This command and the <b>collect-lmm-stats</b> command are mutually exclusive when there is entity resource contention.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## fc keyword

Synopsis	Forwarding class name for profile-unaware counter
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">collect-lmm-fc-stats</a> <a href="#">fc</a> <i>keyword</i>
Tree	<a href="#">fc</a>

Description	<p>This command configures individual counters for the specified FCs without regard for profile. The system includes all countable packets that match a configured FC, regardless of profile, in this counter.</p> <p>An FC specified as part of this command and for this specific context cannot be specified as a profile-aware FC using the <b>fc-in-profile</b> command under the <b>collect-lmm-fc-stats</b> context.</p> <p>When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.</p>
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fc-in-profile** *keyword*

Synopsis	Forwarding class name for profile-aware counter
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm</b> <b>collect-lmm-fc-stats</b> <b>fc-in-profile</b> <i>keyword</i>
Tree	<b>fc-in-profile</b>
Description	<p>This command configures individual counters for the specified FCs with regard to profile. The system includes all countable packets that match a configured FC and that are deemed to be in-profile in this counter.</p> <p>An FC specified as part of this command and for this specific context cannot be specified as a profile-unaware FC using the <b>fc</b> command under the <b>collect-lmm-fc-stats</b> context.</p> <p>When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.</p>
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **collect-lmm-stats** *boolean*

Synopsis	Collect statistics for loss measurement message tests
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm</b> <b>collect-lmm-stats</b> <i>boolean</i>
Tree	<b>collect-lmm-stats</b>

Description	<p>When configured to <b>true</b>, the router instantiates the statistical counter to transmit and receive packets for the LAG facility MEP bindings.</p> <p>The <b>show eth-cfm collect-lmm-stats</b> command displays entities that have been enabled to collect transit and receive counters.</p> <p>When configured to <b>false</b>, the router does not instantiate the counter and the LMM PDU associated with the MEP does not populate the counters in the packet.</p>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mep** *md-admin-name reference ma-admin-name reference mep-id number*

Synopsis	Enter the <b>mep</b> list instance
Context	<b>configure</b> <i>service ies string interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number</i>
Tree	<i>mep</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **md-admin-name** *reference*

Synopsis	Maintenance Domain (MD) name
Context	<b>configure</b> <i>service ies string interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number</i>
Tree	<i>mep</i>
Reference	<b>configure</b> <i>eth-cfm domain string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ma-admin-name** *reference*

Synopsis	Maintenance Association (MA) name
Context	<b>configure</b> <i>service ies string interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number</i>
Tree	<i>mep</i>
Reference	<b>configure</b> <i>eth-cfm domain string association string</i>

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mep-id** *number*

Synopsis	Maintenance Endpoint (MEP) ID
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i>
Tree	<a href="#">mep</a>
Range	1 to 8191
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **admin-state** *keyword*

Synopsis	Administrative state of the MEP
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ais** *boolean*

Synopsis	Enable the generation and the reception of AIS messages
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">ais</a> <i>boolean</i>
Tree	<a href="#">ais</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## alarm-notification

Synopsis	Enter the <b>alarm-notification</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <b>alarm-notification</b>
Tree	<a href="#">alarm-notification</a>
Description	<p>Commands in this context configure the Fault Notification Generator (FNG) time values to raise an alarm or reset the CCM defect alarm.</p> <p>Use these timers for network management processes. The timers are not tied into delaying the notification to the fault management system on the network element and do not affect fault propagation mechanisms.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## fng-alarm-time *number*

Synopsis	Time that must expire before an FNG alarm is raised
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <b>alarm-notification</b> <b>fng-alarm-time</b> <i>number</i>
Tree	<a href="#">fng-alarm-time</a>
Range	250   500   1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## fng-reset-time *number*

Synopsis	Time that must expire before an FNG alarm is reset
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <b>alarm-notification</b> <b>fng-reset-time</b> <i>number</i>
Tree	<a href="#">fng-reset-time</a>
Range	250   500   1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**ccm boolean**

Synopsis	Generate CCM messages
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number</a> <b>ccm boolean</b>
Tree	<a href="#">ccm</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**ccm-ltm-priority number**

Synopsis	Priority of CCM and LTM messages transmitted by the MEP
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number</a> <b>ccm-ltm-priority number</b>
Tree	<a href="#">ccm-ltm-priority</a>
Range	0 to 7
Default	7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**ccm-padding-size number**

Synopsis	Number of octets of padding to insert in CCM packets
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number</a> <b>ccm-padding-size number</b>
Tree	<a href="#">ccm-padding-size</a>
Description	<p>This command sets the byte size of the optional Data TLV to be included in the ETH-CC PDU.</p> <p>This command increases the size of the ETH-CC PDU by the configured value. The base size of the ETH-CC PDU, including the Interface Status TLV and Port Status TLV, is 83 bytes not including the Layer 2 encapsulation. CCM padding is not supported when the CCM interval (configured through <b>configure eth-cfm domain association ccm-interval</b>) is less than 1 second.</p>
Range	3 to 1500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**csf**

Synopsis	Enable the <b>csf</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <b>csf</b>
Tree	<a href="#">csf</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**multiplier** *decimal-number*

Synopsis	Multiplication factor used to clear the CSF condition
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <b>csf</b> <a href="#">multiplier</a> <i>decimal-number</i>
Tree	<a href="#">multiplier</a>
Range	0.0   2.0 to 30.0
Default	3.5
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**eth-test**

Synopsis	Enable the <b>eth-test</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <b>eth-test</b>
Tree	<a href="#">eth-test</a>

Description	Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the <b>oam eth-cfm eth-test</b> command.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **bit-error-threshold** *number*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <b>eth-test</b> <b>bit-error-threshold</b> <i>number</i>
Tree	<a href="#">bit-error-threshold</a>
Range	0 to 11840
Units	bit errors
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **test-pattern**

Synopsis	Enter the <b>test-pattern</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <b>eth-test</b> <b>test-pattern</b>
Tree	<a href="#">test-pattern</a>
Description	Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **crc-tlv** *boolean*

Synopsis	Generate a CRC checksum
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <b>eth-test</b> <b>test-pattern</b> <b>crc-tlv</b> <i>boolean</i>
Tree	<a href="#">crc-tlv</a>
Default	false
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **pattern** *keyword*

Synopsis Test pattern for Ethernet Test frames

Context **configure** *service* *ies* *string* *interface* *string* *sap* *string* *eth-cfm* *mep* *md-admin-name* *reference* *ma-admin-name* *reference* *mep-id* *number* *eth-test* *test-pattern* *pattern* *keyword*

Tree [pattern](#)

Description This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.

Options all-zeros, all-ones

Default all-zeros

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fault-propagation** *keyword*

Synopsis Fault propagation for the MEP

Context **configure** *service* *ies* *string* *interface* *string* *sap* *string* *eth-cfm* *mep* *md-admin-name* *reference* *ma-admin-name* *reference* *mep-id* *number* *fault-propagation* *keyword*

Tree [fault-propagation](#)

Options use-if-status-tlv, suspend-ccm

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **grace**

Synopsis Enter the **grace** context

Context **configure** *service* *ies* *string* *interface* *string* *sap* *string* *eth-cfm* *mep* *md-admin-name* *reference* *ma-admin-name* *reference* *mep-id* *number* *grace*

Tree [grace](#)

Description Commands in this context configure the Nokia ETH-CFM Grace function and the ITU-T Y.1731 Ethernet Expected Default (ETH-ED) function.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**eth-ed**

Synopsis	Enter the <b>eth-ed</b> context
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string sap string</a> <a href="#">eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number</a> <a href="#">grace eth-ed</a>
Tree	<a href="#">eth-ed</a>
Description	Commands in this context configure the ITU-T Y.1731 ETH-ED function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**max-rx-defect-window number**

Synopsis	Maximum received ETH-ED expected defect window duration
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string sap string</a> <a href="#">eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number</a> <a href="#">grace eth-ed max-rx-defect-window number</a>
Tree	<a href="#">max-rx-defect-window</a>
Range	1 to 86400
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**priority number**

Synopsis	Transmission priority for ETH-ED PDUs
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string sap string</a> <a href="#">eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number</a> <a href="#">grace eth-ed priority number</a>
Tree	<a href="#">priority</a>
Range	0 to 7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**rx-eth-ed boolean**

Synopsis	Receive and process ETH-ED ITU-T Y.1731 PDUs on the MEP
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string sap string</a> <a href="#">eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number</a> <a href="#">grace eth-ed rx-eth-ed boolean</a>

Tree	<a href="#">rx-eth-ed</a>
Description	This command enables the reception and processing of the ITU-T Y.1731 ETH-ED PDU on the MEP.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **tx-eth-ed** *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">grace</a> <a href="#">eth-ed</a> <a href="#">tx-eth-ed</a> <i>boolean</i>
Tree	<a href="#">tx-eth-ed</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **eth-vsm-grace**

Synopsis	Enter the <b>eth-vsm-grace</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">grace</a> <a href="#">eth-vsm-grace</a>
Tree	<a href="#">eth-vsm-grace</a>
Description	Commands in this context configure the Nokia ETH-CFM Grace function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **rx-eth-vsm-grace** *boolean*

Synopsis	Receive and process Nokia ETH-CFM Grace PDU on the MEP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">grace</a> <a href="#">eth-vsm-grace</a> <a href="#">rx-eth-vsm-grace</a> <i>boolean</i>
Tree	<a href="#">rx-eth-vsm-grace</a>
Description	When configured to <b>true</b> , the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.

When configured to **false**, the router disables the Nokia Grace function.

Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **tx-eth-vsm-grace** *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">grace eth-vsm-grace tx-eth-vsm-grace</a> <i>boolean</i>
Tree	<a href="#">tx-eth-vsm-grace</a>
Description	<p>When configured to <b>true</b>, the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.</p> <p>The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.</p> <p>The operator must configure the <b>configure system eth-cfm grace</b> command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).</p> <p>When configured to <b>false</b>, the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.</p>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **low-priority-defect** *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">low-priority-defect</a> <i>keyword</i>
Tree	<a href="#">low-priority-defect</a>
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Default	mac-rem-err-xcon
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**one-way-delay-threshold** *number*

Synopsis	Threshold time limit for the one-way delay test
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name reference</a> <a href="#">ma-admin-name reference</a> <a href="#">mep-id</a> <i>number</i> <b>one-way-delay-threshold</b> <i>number</i>
Tree	<a href="#">one-way-delay-threshold</a>
Range	0 to 600
Units	seconds
Default	3
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**squelch-ingress-levels** *number*

Synopsis	Levels for which ETH-CFM packets are silently discarded
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <b>squelch-ingress-levels</b> <i>number</i>
Tree	<a href="#">squelch-ingress-levels</a>
Description	<p>This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.</p> <p>The list of levels must be a complete contiguous list from 0 up to the highest level that will be dropped.</p>
Range	0 to 7
Max.	8
Instances	
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**fwd-wholesale**

Synopsis	Enter the <b>fwd-wholesale</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <b>fwd-wholesale</b>
Tree	<a href="#">fwd-wholesale</a>
Introduced	16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **pppoe-service** *reference*

Synopsis PPPoE service name

Context **configure** [service](#) [ies](#) *string* [interface](#) *string* [sap](#) *string* [fwd-wholesale](#) [pppoe-service](#) *reference*

Tree [pppoe-service](#)

Reference **configure** [service](#) [epipe](#) *string*

**cir** (*number* | *keyword*)

Synopsis	CIR rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <a href="#">rate</a> <b>cir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cir</a>
Range	0 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**pir** (*number* | *keyword*)

Synopsis	PIR rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <a href="#">rate</a> <b>pir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">pir</a>
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**stat-mode** *keyword*

Synopsis	Mode of statistics collected by the policer
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <b>stat-mode</b> <i>keyword</i>
Tree	<a href="#">stat-mode</a>

Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-priority-no-cir, offered-profile-cir, offered-priority-cir, offered-limited-profile-cir, offered-profile-capped-cir, offered-limited-capped-cir
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **queue** [\[queue-id\]](#) *reference*

Synopsis	Enter the <b>queue</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i>
Tree	<a href="#">queue</a>
Introduced	16.0.R1
Platforms	All

### **[queue-id]** *reference*

Synopsis	Policer unique ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i>
Tree	<a href="#">queue</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">sap-ingress</a> <i>string</i> <a href="#">queue</a> <i>number</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **adaptation-rule**

Synopsis	Enter the <b>adaptation-rule</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i> <a href="#">adaptation-rule</a>
Tree	<a href="#">adaptation-rule</a>
Introduced	16.0.R1
Platforms	All

**cir keyword**

Synopsis	Constraint used when deriving the operational CIR value
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">adaptation-rule</a> <b>cir</b> <a href="#">keyword</a>
Tree	<a href="#">cir</a>
Options	max, min, closest
Introduced	16.0.R1
Platforms	All

**pir keyword**

Synopsis	Constraint used when deriving the operational PIR value
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">adaptation-rule</a> <b>pir</b> <a href="#">keyword</a>
Tree	<a href="#">pir</a>
Options	max, min, closest
Introduced	16.0.R1
Platforms	All

**cbs (number | keyword)**

Synopsis	CBS
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <b>cbs</b> <a href="#">(number   keyword)</a>
Tree	<a href="#">cbs</a>
Range	0 to 1048576
Units	kilobytes
Options	auto
Introduced	16.0.R1
Platforms	All

**drop-tail**

Synopsis	Enter the <b>drop-tail</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <b>drop-tail</b>

Tree	<a href="#">drop-tail</a>
Introduced	16.0.R1
Platforms	All

## low

Synopsis	Enter the <b>low</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">drop-tail</a> <a href="#">low</a>
Tree	<a href="#">low</a>
Introduced	16.0.R1
Platforms	All

## percent-reduction-from-mbs (*number* | *keyword*)

Synopsis	Percentage reduction from the MBS for a queue drop tail
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">drop-tail</a> <a href="#">low</a> <a href="#">percent-reduction-from-mbs</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">percent-reduction-from-mbs</a>
Range	0 to 100
Options	auto
Introduced	16.0.R1
Platforms	All

## mbs (*number* | *keyword*)

Synopsis	MBS
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">mbs</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">mbs</a>
Range	0 to 1073741824
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	All

## monitor-queue-depth

Synopsis	Enable the <b>monitor-queue-depth</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <b>monitor-queue-depth</b>
Tree	<a href="#">monitor-queue-depth</a>
Introduced	21.7.R1
Platforms	All

## fast-polling *boolean*

Synopsis	Enable fast polling of the queue depth
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">monitor-queue-depth</a> <b>fast-polling</b> <i>boolean</i>
Tree	<a href="#">fast-polling</a>
Default	false
Introduced	21.7.R1
Platforms	All

## parent

Synopsis	Enter the <b>parent</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <b>parent</b>
Tree	<a href="#">parent</a>
Introduced	16.0.R1
Platforms	All

## cir-weight *number*

Synopsis	CIR parameter that overrides parent for queue group
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">parent</a> <b>cir-weight</b> <i>number</i>
Tree	<a href="#">cir-weight</a>
Range	0 to 100
Introduced	16.0.R1

Platforms All

### **weight** *number*

Synopsis PIR parameter that overrides parent for queue group

Context **configure** [service](#) [ies](#) [string](#) [interface](#) [string](#) [sap](#) [string](#) [ingress](#) [qos](#) [sap-ingress](#) [overrides](#) [queue](#) [reference](#) [parent](#) **weight** [number](#)

Tree [weight](#)

Range 0 to 100

Introduced 16.0.R1

Platforms All

### **percent-rate**

Synopsis Enter the **percent-rate** context

Context **configure** [service](#) [ies](#) [string](#) [interface](#) [string](#) [sap](#) [string](#) [ingress](#) [qos](#) [sap-ingress](#) [overrides](#) [queue](#) [reference](#) **percent-rate**

Tree [percent-rate](#)

Notes The following elements are part of a choice: **percent-rate** or **rate**.

Introduced 16.0.R1

Platforms All

### **cir** *decimal-number*

Synopsis CIR percent rate

Context **configure** [service](#) [ies](#) [string](#) [interface](#) [string](#) [sap](#) [string](#) [ingress](#) [qos](#) [sap-ingress](#) [overrides](#) [queue](#) [reference](#) [percent-rate](#) **cir** [decimal-number](#)

Tree [cir](#)

Range 0.00 to 100.00

Introduced 16.0.R1

Platforms All

### **pir** *decimal-number*

Synopsis PIR percent rate

Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ingress qos sap-ingress overrides</b> <b>queue</b> <i>reference</i> <b>percent-rate pir</b> <i>decimal-number</i>
Tree	<a href="#">pir</a>
Range	0.01 to 100.00
Introduced	16.0.R1
Platforms	All

**rate**

Synopsis	Enter the <b>rate</b> context
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ingress qos sap-ingress overrides</b> <b>queue</b> <i>reference</i> <b>rate</b>
Tree	<a href="#">rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	All

**cir** (*number* | *keyword*)

Synopsis	CIR rate
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ingress qos sap-ingress overrides</b> <b>queue</b> <i>reference</i> <b>rate</b> <a href="#">cir</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cir</a>
Range	0 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	All

**pir** (*number* | *keyword*)

Synopsis	PIR rate
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ingress qos sap-ingress overrides</b> <b>queue</b> <i>reference</i> <b>rate</b> <a href="#">pir</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">pir</a>
Range	1 to 6400000000

Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	All

### **policy-name** *reference*

Synopsis	Policy ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">policy-name</a> <i>reference</i>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">sap-ingress</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **queuing-type** *keyword*

Synopsis	Queuing type
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">queuing-type</a> <i>keyword</i>
Tree	<a href="#">queuing-type</a>
Options	shared, multipoint-shared
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, VSR

### **scheduler-policy**

Synopsis	Enter the <b>scheduler-policy</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a>
Tree	<a href="#">scheduler-policy</a>
Introduced	16.0.R1
Platforms	All

### **overrides**

Synopsis	Enter the <b>overrides</b> context
----------	------------------------------------

Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ingress qos scheduler-policy overrides</b>
Tree	<b>overrides</b>
Introduced	16.0.R1
Platforms	All

### **scheduler** [**scheduler-name**] *string*

Synopsis	Enter the <b>scheduler</b> list instance
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ingress qos scheduler-policy overrides scheduler</b> <i>string</i>
Tree	<b>scheduler</b>
Introduced	16.0.R1
Platforms	All

### **[scheduler-name]** *string*

Synopsis	Scheduler name
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ingress qos scheduler-policy overrides scheduler</b> <i>string</i>
Tree	<b>scheduler</b>
Description	<p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context does not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context is not change.</p>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**parent**

Synopsis	Enter the <b>parent</b> context
Context	<b>configure service ies string interface string sap string ingress qos scheduler-policy overrides scheduler string parent</b>
Tree	<b>parent</b>
Introduced	16.0.R1
Platforms	All

**cir-weight number**

Synopsis	Weight used at the within-CIR port priority level
Context	<b>configure service ies string interface string sap string ingress qos scheduler-policy overrides scheduler string parent cir-weight number</b>
Tree	<b>cir-weight</b>
Range	0 to 100
Introduced	16.0.R1
Platforms	All

**weight number**

Synopsis	Relative weight of the scheduler to feed the queue
Context	<b>configure service ies string interface string sap string ingress qos scheduler-policy overrides scheduler string parent weight number</b>
Tree	<b>weight</b>
Range	0 to 100
Introduced	16.0.R1
Platforms	All

**rate**

Synopsis	Enter the <b>rate</b> context
Context	<b>configure service ies string interface string sap string ingress qos scheduler-policy overrides scheduler string rate</b>
Tree	<b>rate</b>
Introduced	16.0.R1

Platforms All

### **cir** (*number* | *keyword*)

Synopsis CIR at which the queue it to operate

Context **configure** [service](#) [ies](#) *string* [interface](#) *string* [sap](#) *string* [ingress](#) [qos](#) [scheduler-policy](#) [overrides](#) [scheduler](#) *string* **rate** **cir** (*number* | *keyword*)

Tree [cir](#)

Range 0 to 6400000000

Units kilobps

Options sum, max

Introduced 16.0.R1

Platforms All

### **pir** (*number* | *keyword*)

Synopsis PIR at which the queue is to operate

Context **configure** [service](#) [ies](#) *string* [interface](#) *string* [sap](#) *string* [ingress](#) [qos](#) [scheduler-policy](#) [overrides](#) [scheduler](#) *string* **rate** **pir** (*number* | *keyword*)

Tree [pir](#)

Range 1 to 6400000000

Units kilobps

Options max

Introduced 16.0.R1

Platforms All

### **policy-name** *reference*

Synopsis Scheduler policy name

Context **configure** [service](#) [ies](#) *string* [interface](#) *string* [sap](#) *string* [ingress](#) [qos](#) [scheduler-policy](#) [policy-name](#) *reference*

Tree [policy-name](#)

Reference **configure** [qos](#) [scheduler-policy](#) *string*

Introduced 16.0.R1

Platforms All

**queue-group-redirect-list** *reference*

Synopsis	Queue group redirect list
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">ingress queue-group-redirect-list reference</a>
Tree	<a href="#">queue-group-redirect-list</a>
Reference	<b>configure</b> <a href="#">qos queue-group-redirect-list string</a>
Introduced	16.0.R1
Platforms	All

**ip-tunnel** [[tunnel-name](#)] *string*

Synopsis	Enter the <b>ip-tunnel</b> list instance
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">ip-tunnel string</a>
Tree	<a href="#">ip-tunnel</a>
Description	Commands in this context configure an IP-GRE or IP-IP tunnel and associate it with a private tunnel SAP within an IES service.
Max. Instances	1
Introduced	16.0.R1
Platforms	All

**[tunnel-name]** *string*

Synopsis	IP tunnel name
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">ip-tunnel string</a>
Tree	<a href="#">ip-tunnel</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the IP tunnel
----------	---------------------------------------

Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

### **backup-remote-ip-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Backup remote IP address that is applied to this tunnel
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>backup-remote-ip-address</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>backup-remote-ip-address</b>
Introduced	16.0.R1
Platforms	All

### **clear-df-bit** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Clear the Do-not-Fragment bit
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>clear-df-bit</b> <i>boolean</i>
Tree	<b>clear-df-bit</b>
Description	When configured to <b>true</b> , the DF bit is cleared (set to 0) in all payload IP packets associated with the GRE or IPsec tunnel, before any potential fragmentation resulting from the ip-mtu command. This requires a modification of the header checksum. When configured to <b>false</b> , clearing of the DF bit is disabled.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**delivery-service** *string***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Service to originate and terminate GRE packets
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ip-tunnel</a> <i>string</i> <b>delivery-service</b> <i>string</i>
Tree	<a href="#">delivery-service</a>
Description	This command specifies the service used to originate and terminate the GRE encapsulated packets belonging to the GRE tunnel. The delivery service may be the same service that owns the private tunnel SAP associated with the GRE tunnel. The GRE tunnel does not come up until a valid delivery service is configured.
String Length	1 to 64
Introduced	16.0.R1
Platforms	All

**description** *string***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Text description
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ip-tunnel</a> <i>string</i> <b>description</b> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

**dest-ip** [[dest-ip-address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Add a list entry for <b>dest-ip</b>
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ip-tunnel</a> <i>string</i> <b>dest-ip</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">dest-ip</a>
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### [**dest-ip-address**] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis IP address of the remote IP tunnel endpoint

Context **configure service ies string interface string sap string ip-tunnel string dest-ip** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Tree **dest-ip**

Description This command configures the IP address of the remote IP tunnel endpoint. If the remote IP address is not within the subnet of the IP interface associated with the tunnel, the tunnel fails to come up.

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **dscp** keyword

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Differentiated Services Code Point (DSCP) name

Context **configure service ies string interface string sap string ip-tunnel string dscp** keyword

Tree **dscp**

Options be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **encapsulated-ip-mtu** number

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Maximum size of the encapsulated tunnel packet

Context	<b>configure service ies string interface string sap string ip-tunnel string encapsulated-ip-mtu number</b>
Tree	<b>encapsulated-ip-mtu</b>
Description	This command specifies the maximum size of the encapsulated tunnel packet for the IP tunnel. If the packet exceeds this value, the system fragments the packet.
Range	512 to 9000
Units	bytes
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## gre-header

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>gre-header</b> context
Context	<b>configure service ies string interface string sap string ip-tunnel string gre-header</b>
Tree	<b>gre-header</b>
Introduced	16.0.R1
Platforms	All

## admin-state *keyword*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of the GRE header in the tunnel
Context	<b>configure service ies string interface string sap string ip-tunnel string gre-header admin-state keyword</b>
Tree	<b>admin-state</b>
Options	enable, disable
Introduced	16.0.R1
Platforms	All

## key

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>key</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ip-tunnel</a> <i>string</i> <a href="#">gre-header</a> <a href="#">key</a>
Tree	<a href="#">key</a>
Introduced	16.0.R1
Platforms	All

## admin-state *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of the keys in the GRE header
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ip-tunnel</a> <i>string</i> <a href="#">gre-header</a> <a href="#">key</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

## receive *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Receive key of the GRE header
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ip-tunnel</a> <i>string</i> <a href="#">gre-header</a> <a href="#">key</a> <a href="#">receive</a> <i>number</i>
Tree	<a href="#">receive</a>
Max. Range	0 to 4294967295
Default	0

Introduced 16.0.R1  
 Platforms All

### send number

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Send key of the GRE header  
 Context **configure** [service ies string](#) [interface string](#) [sap string](#) [ip-tunnel string](#) [gre-header key](#)  
[send number](#)  
 Tree [send](#)  
 Max. Range 0 to 4294967295  
 Default 0  
 Introduced 16.0.R1  
 Platforms All

### icmp-generation

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enter the **icmp-generation** context  
 Context **configure** [service ies string](#) [interface string](#) [sap string](#) [ip-tunnel string](#) [icmp-generation](#)  
 Tree [icmp-generation](#)  
 Introduced 21.5.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### frag-required

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enter the **frag-required** context

Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>icmp-generation</b> <b>frag-required</b>
Tree	<b>frag-required</b>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of sending ICMP messages
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>icmp-generation</b> <b>frag-required</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Description	This command configures the administrative state of sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4) messages to the source if the received size of the IPv4 packet on the private side exceeds the private MTU size.
Options	enable, disable
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **interval** *number*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum interval that the ICMP messages can be sent
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>icmp-generation</b> <b>frag-required</b> <b>interval</b> <i>number</i>
Tree	<b>interval</b>
Description	This command configures the interval for sending ICMP Destination Unreachable "fragmentation needed, DF set" messages (type 3, code 4).
Range	1 to 60
Units	seconds
Default	10

Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### message-count *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of ICMP messages sent
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ip-tunnel</a> <a href="#">string</a> <a href="#">icmp-generation</a> <a href="#">frag-required</a> <a href="#">message-count</a> <i>number</i>
Tree	<a href="#">message-count</a>
Description	This command configures the maximum number of ICMP messages that can be sent during the period specified by the <b>interval</b> command.
Range	10 to 1000
Default	100
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### icmp6-generation

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>icmp6-generation</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ip-tunnel</a> <a href="#">string</a> <a href="#">icmp6-generation</a>
Tree	<a href="#">icmp6-generation</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### packet-too-big

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>packet-too-big</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ip-tunnel</a> <i>string</i> <a href="#">icmp6-generation</a> <a href="#">packet-too-big</a>
Tree	<a href="#">packet-too-big</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of sending Packet Too Big messages
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ip-tunnel</a> <i>string</i> <a href="#">icmp6-generation</a> <a href="#">packet-too-big</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **number** *number*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of PTB ICMPv6 messages that can be sent
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ip-tunnel</a> <i>string</i> <a href="#">icmp6-generation</a> <a href="#">packet-too-big</a> <a href="#">number</a> <i>number</i>
Tree	<a href="#">number</a>
Description	This command configures the maximum number of ICMPv6 messages that can be sent during the configured interval.
Range	10 to 1000
Default	100
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**seconds** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum interval when PTB messages can be sent
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>icmp6-generation</b> <b>packet-too-big</b> <b>seconds</b> <i>number</i>
Tree	<b>seconds</b>
Range	1 to 60
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**ip-mtu** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IP MTU for the interface
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>ip-mtu</b> <i>number</i>
Tree	<b>ip-mtu</b>
Description	This command specifies the IP MTU for the interface. If the DF bit is not set in the packet, IP packet fragmentation is performed, if necessary, based on this configured value.  When unconfigured, all IP packets, regardless of the packet size or DF bit setting, are allowed into the tunnel without fragmentation.
Range	512 to 9000
Units	bytes
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**ipsec-transport-mode-profile** *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPsec transport mode profile name
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ip-tunnel</a> <i>string</i> <a href="#">ipsec-transport-mode-profile</a> <i>reference</i>
Tree	<a href="#">ipsec-transport-mode-profile</a>
Reference	<b>configure</b> <a href="#">ipsec</a> <a href="#">ipsec-transport-mode-profile</a> <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**local-ip-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local IP address of this tunnel
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ip-tunnel</a> <i>string</i> <a href="#">local-ip-address</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">local-ip-address</a>
Description	This command specifies the local IP address to use for the IP tunnel. This configuration applies to the outer IP header of the encapsulated packets. The address must belong to one of the IP subnets associated with the public SAP interface of the tunnel group. The source IP address, the remote IP address, and the backup remote IP address of a tunnel must all belong to the same address family (IPv4 or IPv6).  When this command specifies an IPv6 address, it must be a global unicast address.
Introduced	16.0.R1
Platforms	All

**pmtu-discovery-aging** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time to age out the learned path MTU
----------	--------------------------------------

Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>pmtu-discovery-aging</b> <i>number</i>
Tree	<a href="#">pmtu-discovery-aging</a>
Description	This command configures the temporary public MTU expiration time. The temporary public MTU is used for MTU propagation.
Range	900 to 3600
Units	seconds
Default	900
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **private-tcp-mss-adjust** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	TCP Maximum Segment Size (MSS) on the private side
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>private-tcp-mss-adjust</b> <i>number</i>
Tree	<a href="#">private-tcp-mss-adjust</a>
Description	This command specifies the TCP MSS to adjust for tunnels on the private side. The value is used to adjust the TCP MSS option in the TCP SYN packet.
Range	512 to 9000
Units	bytes
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **propagate-pmtu-v4** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable propagation of the path MTU to IPv4 hosts
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ip-tunnel</b> <i>string</i> <b>propagate-pmtu-v4</b> <i>boolean</i>
Tree	<a href="#">propagate-pmtu-v4</a>

Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **propagate-pmtu-v6** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable propagation of path MTU to IPv6 hosts
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ip-tunnel</a> <i>string</i> <b>propagate-pmtu-v6</b> <i>boolean</i>
Tree	<a href="#">propagate-pmtu-v6</a>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **public-tcp-mss-adjust** (*number | keyword*)

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	TCP Maximum Segment Size (MSS) on the public side
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ip-tunnel</a> <i>string</i> <b>public-tcp-mss-adjust</b> ( <i>number   keyword</i> )
Tree	<a href="#">public-tcp-mss-adjust</a>
Description	This command specifies the TCP MSS for TCP traffic sent from the public network to the private network. The value is used to adjust the TCP MSS option in the TCP SYN packet.
Range	512 to 9000
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**reassemble** (*number* | *keyword*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum reassembly wait time
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ip-tunnel</a> <i>string</i> <a href="#">reassemble</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">reassemble</a>
Description	This command configures the maximum time to wait to receive all fragments of a particular IPsec or GRE packet for reassembly.
Range	1 to 5000
Units	milliseconds
Options	use-tunnel-group-setting, none
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**remote-ip-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Remote IP address of the tunnel
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ip-tunnel</a> <i>string</i> <a href="#">remote-ip-address</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">remote-ip-address</a>
Introduced	16.0.R1
Platforms	All

**ipsec-gateway** [[name](#)] *string*

Synopsis	Enter the <b>ipsec-gateway</b> list instance
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i>
Tree	<a href="#">ipsec-gateway</a>
Max. Instances	1

Introduced 16.0.R4  
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[name]** *string*

Synopsis IPsec gateway name  
 Context **configure** [service](#) [ies](#) *string* [interface](#) *string* [sap](#) *string* [ipsec-gateway](#) *string*  
 Tree [ipsec-gateway](#)  
 String Length 1 to 32  
 Notes This element is part of a list key.  
 Introduced 16.0.R4  
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis Administrative state of the IPsec gateway  
 Context **configure** [service](#) [ies](#) *string* [interface](#) *string* [sap](#) *string* [ipsec-gateway](#) *string* **admin-state** *keyword*  
 Tree [admin-state](#)  
 Options enable, disable  
 Default disable  
 Introduced 16.0.R4  
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **cert**

Synopsis Enter the **cert** context  
 Context **configure** [service](#) [ies](#) *string* [interface](#) *string* [sap](#) *string* [ipsec-gateway](#) *string* **cert**  
 Tree [cert](#)  
 Introduced 19.7.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **cert-profile** *reference*

Synopsis Certificate profile name

Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>cert</b> <b>cert-profile</b> <i>reference</i>
Tree	<a href="#">cert-profile</a>
Reference	<b>configure ipsec cert-profile</b> <i>string</i>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## status-verify

Synopsis	Enter the <b>status-verify</b> context
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>cert</b> <b>status-verify</b>
Tree	<a href="#">status-verify</a>
Description	Commands in this context configure certificate revocation status verification.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## default-result *keyword*

Synopsis	Default result of Certificate Status Verification (CSV)
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>cert</b> <b>status-verify</b> <b>default-result</b> <i>keyword</i>
Tree	<a href="#">default-result</a>
Description	This command specifies the default result when both the primary and secondary methods fail to provide an answer.
Options	revoked, good
Default	revoked
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## primary *keyword*

Synopsis	Primary method of CSV to verify the revocation status
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>cert</b> <b>status-verify</b> <b>primary</b> <i>keyword</i>
Tree	<a href="#">primary</a>

Options	crl, ocsp
Default	crl
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **secondary** *keyword*

Synopsis	Secondary method of CSV to verify the revocation status
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">cert status-verify</a> <b>secondary</b> <i>keyword</i>
Tree	<a href="#">secondary</a>
Options	none, crl, ocsp
Default	none
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **trust-anchor-profile** *reference*

Synopsis	Trust anchor profile name
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">cert trust-anchor-profile</a> <i>reference</i>
Tree	<a href="#">trust-anchor-profile</a>
Reference	<b>configure</b> <a href="#">ipsec</a> <a href="#">trust-anchor-profile</a> <i>string</i>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **client-db**

Synopsis	Enable the <b>client-db</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">client-db</a>
Tree	<a href="#">client-db</a>
Description	Commands in this context configure the IPsec client database. The client database is used to authenticate the IKEv2 dynamic LAN-to-LAN tunnel.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**fallback** *boolean*

Synopsis	Fall back to the default authentication policy
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string sap string ipsec-gateway string client-db fallback</a> <i>boolean</i>
Tree	<a href="#">fallback</a>
Description	When configured to <b>true</b> , this command specifies whether the IPsec gateway can fall back to the default authentication policy when the IPsec tunnel authentication request fails to match any clients in the IPsec database.  When configured to <b>false</b> and the client database lookup fails to return a matched result, the system fails the tunnel setup.
Default	true
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**name** *reference*

Synopsis	Client database name
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string sap string ipsec-gateway string client-db name</a> <i>reference</i>
Tree	<a href="#">name</a>
Reference	<b>configure ipsec client-db string</b>
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**default-secure-service**

Synopsis	Enable the <b>default-secure-service</b> context
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string sap string ipsec-gateway string default-secure-service</a>
Tree	<a href="#">default-secure-service</a>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**interface** *string***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Private IPsec tunnel interface name
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">default-secure-service interface</a> <i>string</i>
Tree	<a href="#">interface</a>
String Length	1 to 32
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**service-name** *string***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Default security service name
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">default-secure-service service-name</a> <i>string</i>
Tree	<a href="#">service-name</a>
String Length	1 to 64
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**default-tunnel-template** *reference*

Synopsis	Default tunnel policy template for the gateway
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">default-tunnel-template</a> <i>reference</i>
Tree	<a href="#">default-tunnel-template</a>
Reference	<b>configure</b> <a href="#">ipsec tunnel-template</a> <i>number</i>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## dhcp-address-assignment

Synopsis	Enter the <b>dhcp-address-assignment</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ipsec-gateway</a> <a href="#">string</a> <a href="#">dhcp-address-assignment</a>
Tree	<a href="#">dhcp-address-assignment</a>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## dhcpv4

Synopsis	Enable the <b>dhcpv4</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ipsec-gateway</a> <a href="#">string</a> <a href="#">dhcp-address-assignment</a> <a href="#">dhcpv4</a>
Tree	<a href="#">dhcpv4</a>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## admin-state *keyword*

Synopsis	Administrative state of the IPsec DHCPv4 server
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ipsec-gateway</a> <a href="#">string</a> <a href="#">dhcp-address-assignment</a> <a href="#">dhcpv4</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## gi-address *string*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Gateway IP address of DHCPv4 packets sent by the system
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ipsec-gateway</a> <a href="#">string</a> <a href="#">dhcp-address-assignment</a> <a href="#">dhcpv4</a> <a href="#">gi-address</a> <i>string</i>

Tree	<a href="#">gi-address</a>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **send-release** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Send DHCPv4 release message when IPsec tunnel removed
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">dhcp-address-assignment dhcpv4</a> <b>send-release</b> <i>boolean</i>
Tree	<a href="#">send-release</a>
Default	true
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **server**

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>server</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">dhcp-address-assignment dhcpv4</a> <b>server</b>
Tree	<a href="#">server</a>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **address** *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	DHCPv4 server addresses
----------	-------------------------

Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>dhcp-address-assignment dhcpv4 server address</b> <i>string</i>
Tree	<b>address</b>
Description	This command specifies DHCPv4 server addresses for the DHCPv4-based address assignment. If multiple server addresses are specified, the first advertised DHCPv4 address received is chosen.
Max. Instances	8
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **router-instance** *string*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Router instance used to reach the DHCPv4 server
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>dhcp-address-assignment dhcpv4 server router-instance</b> <i>string</i>
Tree	<b>router-instance</b>
String Length	1 to 64
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **dhcpv6**

Synopsis	Enable the <b>dhcpv6</b> context
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>dhcp-address-assignment dhcpv6</b>
Tree	<b>dhcpv6</b>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of the DHCPv6 server
----------	---

Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">dhcp-address-assignment dhcpv6</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **link-address** *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Link address of the relayed DHCPv6 packets
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">dhcp-address-assignment dhcpv6</a> <a href="#">link-address</a> <i>string</i>
Tree	<a href="#">link-address</a>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **send-release** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Send DHCPv6 release message when IPsec tunnel removed
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">dhcp-address-assignment dhcpv6</a> <a href="#">send-release</a> <i>boolean</i>
Tree	<a href="#">send-release</a>
Default	true
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## server

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>server</b> context
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>dhcp-address-assignment dhcpv6 server</b>
Tree	<b>server</b>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## address *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	DHCPv6 server addresses
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>dhcp-address-assignment dhcpv6 server address</b> <i>string</i>
Tree	<b>address</b>
Description	This command specifies DHCPv6 server addresses for the DHCPv6-based address assignment. If multiple server addresses are specified, the first advertised DHCPv6 address received is chosen.
Max. Instances	8
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## router-instance *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Router instance to reach the DHCPv6 server
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>dhcp-address-assignment dhcpv6 server router-instance</b> <i>string</i>

Tree	<a href="#">router-instance</a>
String Length	1 to 64
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ike-policy** *reference*

Synopsis	IKE policy ID
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">ike-policy</a> <i>reference</i>
Tree	<a href="#">ike-policy</a>
Reference	<b>configure</b> <a href="#">ipsec</a> <a href="#">ike-policy</a> <i>number</i>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **local**

Synopsis	Enter the <b>local</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">local</a>
Tree	<a href="#">local</a>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **address-assignment**

Synopsis	Enable the <b>address-assignment</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">local</a> <a href="#">address-assignment</a>
Tree	<a href="#">address-assignment</a>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of local address assignments
----------	---

Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">local address-assignment admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ipv4

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the <b>ipv4</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">local address-assignment</a> <a href="#">ipv4</a>
Tree	<a href="#">ipv4</a>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## dhcp-server *string*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local DHCPv4 server name
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">local address-assignment</a> <a href="#">ipv4</a> <a href="#">dhcp-server</a> <i>string</i>
Tree	<a href="#">dhcp-server</a>
String Length	1 to 32
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## pool *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Name of the pool defined in the specified DHCPv4 server
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">local address-assignment ipv4</a> <a href="#">pool</a> <i>string</i>
Tree	<a href="#">pool</a>
String Length	1 to 32
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## router-instance *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Router instance ID for the local DHCPv4 server
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">local address-assignment ipv4</a> <a href="#">router-instance</a> <i>string</i>
Tree	<a href="#">router-instance</a>
String Length	1 to 64
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## secondary-pool *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Name of the secondary pool defined in the DHCPv4 server
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">local address-assignment ipv4</a> <a href="#">secondary-pool</a> <i>string</i>

Tree	<a href="#">secondary-pool</a>
String Length	1 to 32
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ipv6

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the <b>ipv6</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">local address-assignment</a> <a href="#">ipv6</a>
Tree	<a href="#">ipv6</a>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## dhcp-server *string*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local DHCPv6 server name
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ipsec-gateway</a> <i>string</i> <a href="#">local address-assignment</a> <a href="#">ipv6</a> <a href="#">dhcp-server</a> <i>string</i>
Tree	<a href="#">dhcp-server</a>
String Length	1 to 32
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## pool string

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Secondary pool name defined in the DHCPv6 server
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">ipsec-gateway string</a> <a href="#">local address-assignment ipv6 pool string</a>
Tree	<a href="#">pool</a>
String Length	1 to 32
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## router-instance string

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Router instance ID hosting the DHCPv6 connection
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">ipsec-gateway string</a> <a href="#">local address-assignment ipv6 router-instance string</a>
Tree	<a href="#">router-instance</a>
String Length	1 to 64
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## gateway-address (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local gateway address of the IPsec gateway
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">ipsec-gateway string</a> <a href="#">local gateway-address</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )

Tree	<a href="#">gateway-address</a>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**id**

Synopsis	Enter the <b>id</b> context
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">ipsec-gateway string</a> <a href="#">local id</a>
Tree	<a href="#">id</a>
Description	Commands in this context specify the local ID used for the Identification Indicator (IDi) or Identification Responder (IDr) in the IKEv2 tunnel.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**auto****WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Select ID based on authentication method in IKE policy
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">ipsec-gateway string</a> <a href="#">local id auto</a>
Tree	<a href="#">auto</a>
Notes	The following elements are part of a choice: <b>auto</b> , <b>fqdn</b> , <b>ipv4</b> , or <b>ipv6</b> .
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**fqdn string****WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	FQDN as the local ID type
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">ipsec-gateway string</a> <a href="#">local id fqdn string</a>
Tree	<a href="#">fqdn</a>

String Length	1 to 255
Notes	The following elements are part of a choice: <b>auto</b> , <b>fqdn</b> , <b>ipv4</b> , or <b>ipv6</b> .
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### ipv4 string

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPv4 address as the local ID type
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">ipsec-gateway string</a> <a href="#">local id ipv4 string</a>
Tree	<a href="#">ipv4</a>
Notes	The following elements are part of a choice: <b>auto</b> , <b>fqdn</b> , <b>ipv4</b> , or <b>ipv6</b> .
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### ipv6 (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPv6 address as the local ID type
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">sap string</a> <a href="#">ipsec-gateway string</a> <a href="#">local id ipv6 (<i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i>)</a>
Tree	<a href="#">ipv6</a>
Notes	The following elements are part of a choice: <b>auto</b> , <b>fqdn</b> , <b>ipv4</b> , or <b>ipv6</b> .
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### max-history-key-records

Synopsis	Enter the <b>max-history-key-records</b> context
----------	--

Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>max-history-key-records</b>
Tree	<b>max-history-key-records</b>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**esp number**

Synopsis	Maximum number of recent records
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>max-history-key-records</b> <b>esp</b> <i>number</i>
Tree	<b>esp</b>
Range	1 to 48
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**ike number**

Synopsis	Maximum number of historical IKE keys recorded
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>max-history-key-records</b> <b>ike</b> <i>number</i>
Tree	<b>ike</b>
Range	1 to 3
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**pre-shared-key string**

Synopsis	Pre-shared key for the IPsec gateway
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>pre-shared-key</b> <i>string</i>
Tree	<b>pre-shared-key</b>
String Length	1 to 115
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## radius

Synopsis	Enter the <b>radius</b> context
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>radius</b>
Tree	<b>radius</b>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## accounting-policy *reference*

Synopsis	RADIUS accounting policy
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>radius</b> <b>accounting-policy</b> <i>reference</i>
Tree	<b>accounting-policy</b>
Reference	<b>configure ipsec radius</b> <b>accounting-policy</b> <i>string</i>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## authentication-policy *reference*

Synopsis	RADIUS authentication policy
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>radius</b> <b>authentication-policy</b> <i>reference</i>
Tree	<b>authentication-policy</b>
Reference	<b>configure ipsec radius</b> <b>authentication-policy</b> <i>string</i>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ts-list *reference*

Synopsis	TS list used for IKEv2 TS negotiation
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>ipsec-gateway</b> <i>string</i> <b>ts-list</b> <i>reference</i>
Tree	<b>ts-list</b>
Reference	<b>configure ipsec</b> <b>ts-list</b> <i>string</i>
Introduced	19.7.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## lag

Synopsis Enter the **lag** context

Context **configure** *service ies string interface string sap string lag*

Tree [lag](#)

Introduced 16.0.R1

Platforms All

## link-map-profile *number*

Synopsis LAG link map profile for a SAP or network interface

Context **configure** *service ies string interface string sap string lag link-map-profile number*

Tree [link-map-profile](#)

Description This command assigns a preconfigured LAG link map profile to a SAP or network interface configured on a LAG or a PW port that exists on a LAG. After an operator assigns a LAG link map profile, the system rehashes the SAP or network interface egress traffic over the LAG as required by the new configuration.

If the LAG link map profile for a SAP or network interface is deleted, the system reverts back to per-flow hashing.

Range 1 to 64

Introduced 16.0.R1

Platforms All

## per-link-hash

Synopsis Enter the **per-link-hash** context

Context **configure** *service ies string interface string sap string lag per-link-hash*

Tree [per-link-hash](#)

Introduced 16.0.R1

Platforms All

## class *number*

Synopsis Class used on LAG egress using weighted per-link-hash

Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>lag per-link-hash class</b> <i>number</i>
Tree	<b>class</b>
Range	1 to 3
Default	1
Introduced	16.0.R1
Platforms	All

### **weight** *number*

Synopsis	Weight used on LAG egress using weighted per-link-hash
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>lag per-link-hash weight</b> <i>number</i>
Tree	<b>weight</b>
Range	1 to 1024
Default	1
Introduced	16.0.R1
Platforms	All

### **multi-service-site** *reference*

Synopsis	Multi service site name
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>multi-service-site</b> <i>reference</i>
Tree	<b>multi-service-site</b>
Reference	<b>configure service customer</b> <i>string</i> <b>multi-service-site</b> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **static-host**

Synopsis	Enter the <b>static-host</b> context
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host</b>
Tree	<b>static-host</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**ipv4 [ip] string mac string**

Synopsis	Enter the <b>ipv4</b> list instance
Context	<b>configure service ies string interface string sap string static-host ipv4 string mac string</b>
Tree	<b>ipv4</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**[ip] string**

Synopsis	IP address
Context	<b>configure service ies string interface string sap string static-host ipv4 string mac string</b>
Tree	<b>ipv4</b>
MD-CLI Default	0.0.0.0
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**mac string**

Synopsis	MAC address
Context	<b>configure service ies string interface string sap string static-host ipv4 string mac string</b>
Tree	<b>ipv4</b>
MD-CLI Default	00:00:00:00:00:00
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**admin-state keyword**

Synopsis	Administrative state of the static host
Context	<b>configure service ies string interface string sap string static-host ipv4 string mac string admin-state keyword</b>
Tree	<b>admin-state</b>
Options	enable, disable

Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **anccp-string** *string*

Synopsis	ANCCP string
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">static-host</a> <a href="#">ipv4</a> <a href="#">string</a> <a href="#">mac</a> <a href="#">string</a> <b>anccp-string</b> <a href="#">string</a>
Tree	<a href="#">anccp-string</a>

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sub-profile** *reference*

Synopsis	Sub-profile name
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host ipv4</a> <i>string</i> <a href="#">mac</a> <i>string</i> <a href="#">sub-profile</a> <i>reference</i>
Tree	<a href="#">sub-profile</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">sub-profile</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **subscriber-id**

Synopsis	Enter the <b>subscriber-id</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host ipv4</a> <i>string</i> <a href="#">mac</a> <i>string</i> <a href="#">subscriber-id</a>
Tree	<a href="#">subscriber-id</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**string** *string*

Synopsis	Subscriber identification
Context	<b>configure</b> <i>service ies string interface string sap string static-host ipv4 string mac string subscriber-id string string</i>
Tree	<i>string</i>
String Length	1 to 64
Notes	The following elements are part of a choice: <b>string</b> or <b>use-sap-id</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**use-sap-id**

Synopsis	Use the SAP id as subscriber ID
Context	<b>configure</b> <i>service ies string interface string sap string static-host ipv4 string mac string subscriber-id use-sap-id</i>
Tree	<i>use-sap-id</i>
Notes	The following elements are part of a choice: <b>string</b> or <b>use-sap-id</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**transit-policy**

Synopsis	Enable the <b>transit-policy</b> context
Context	<b>configure</b> <i>service ies string interface string sap string transit-policy</i>
Tree	<i>transit-policy</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**ip** *reference***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IP transit policy ID
----------	----------------------

Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">transit-policy ip</a> <i>reference</i>
Tree	<a href="#">ip</a>
Reference	<b>configure</b> <a href="#">application-assurance group</a> <i>number</i> <a href="#">partition</a> <i>number</i> <a href="#">transit-ip-policy</a> <i>number</i>
Notes	The following elements are part of a mandatory choice: <b>ip</b> or <b>prefix</b> .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **prefix** *reference*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IP prefix policy ID
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">transit-policy prefix</a> <i>reference</i>
Tree	<a href="#">prefix</a>

Default ipv4

Introduced 21.2.R1

Platforms All

## **bfd-template reference**

Synopsis BFD template associated with the SDP binding

Context **configure service ies string interface string spoke-sdp string bfd bfd-template reference**

Tree [bfd-template](#)

Description This command configures a named BFD template to be used by VCCV BFD on PWs belonging to the VLL service. The template specifies parameters, such as the minimum

transmit and receive control packet timer intervals, used by the BFD session. Template parameters are configured under the **configure router bfd** context.

Reference	<b>configure bfd bfd-template</b> <i>string</i>
Introduced	21.2.R1
Platforms	All

### **failure-action** *keyword*

Synopsis	VCCV BFD action taken on the SDP binding
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>bfd failure-action</b> <i>keyword</i>
Tree	<b>failure-action</b>
Description	This command configures a named BFD template to be used by VCCV BFD on PWs belonging to the VLL service. The template specifies parameters, such as the minimum transmit and receive control packet timer intervals, used by the BFD session. Template parameters are configured under the <b>configure router bfd</b> context.
Options	none, down
Default	none
Introduced	21.2.R1
Platforms	All

### **wait-for-up-timer** *number*

Synopsis	Time waited for BFD up status
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>bfd wait-for-up-timer</b> <i>number</i>
Tree	<b>wait-for-up-timer</b>
Description	<p>This command configures the time interval that is used to wait for a BFD session to come up.</p> <p>This command is triggered when a spoke-SDP is first administratively enabled and a VCCV BFD session transitions from up to down. The command is required to allow time for BFD sessions to come up, and for BFD to settle before selecting the active spoke-SDP for use in a redundant set. In the case where a VCCV BFD session is bouncing, the timer prevents excessive flapping of the operational state of a spoke-SDP.</p>
Range	1 to 60
Units	seconds
Introduced	21.2.R1
Platforms	All

**collect-stats** *boolean*

Synopsis	Allow agent to collect accounting statistics
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <b>collect-stats</b> <i>boolean</i>
Tree	<a href="#">collect-stats</a>
Default	false
Introduced	16.0.R1
Platforms	All

**control-word** *boolean*

Synopsis	Use the control word as preferred
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <b>control-word</b> <i>boolean</i>
Tree	<a href="#">control-word</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**cpu-protection**

Synopsis	Enter the <b>cpu-protection</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <b>cpu-protection</b>
Tree	<a href="#">cpu-protection</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

**eth-cfm-monitoring**

Synopsis	Enable the <b>eth-cfm-monitoring</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">cpu-protection</a> <b>eth-cfm-monitoring</b>
Tree	<a href="#">eth-cfm-monitoring</a>
Notes	The following elements are part of a choice: <b>eth-cfm-monitoring</b> , <b>ip-src-monitoring</b> , or <b>mac-monitoring</b> .
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## aggregate

Synopsis Apply rate limit to the sum of the per peer packet rates

Context **configure** [service ies](#) *string* [interface](#) *string* [spoke-sdp](#) *string* [cpu-protection eth-cfm-monitoring aggregate](#)

Tree [aggregate](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## car

Synopsis Ignore Ethernet CFM packets when enforcing overall rate

Context **configure** [service ies](#) *string* [interface](#) *string* [spoke-sdp](#) *string* [cpu-protection eth-cfm-monitoring car](#)

 Tree [group-name](#)  
 Reference **configure** [qos queue-group-templates egress queue-group string](#)  
 Introduced 16.0.R1  
 Platforms All

### **instance** *number*

Synopsis Queue-group instance ID

Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>egress qos network port-redirect-group</b> <i>instance</i> <b>number</b>
Tree	<b>instance</b>
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

### **vc-label** *number*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Egress MPLS VC label to send packets to the far end
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>egress vc-label</b> <i>number</i>
Tree	<b>vc-label</b>
Range	16 to 1048575
Introduced	16.0.R1
Platforms	All

### **entropy-label**

Synopsis	Enable the use of entropy labels for spoke SDPs
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>entropy-label</b>
Tree	<b>entropy-label</b>
Notes	The following elements are part of a choice: <b>entropy-label</b> or <b>hash-label</b> .
Introduced	16.0.R1
Platforms	All

### **eth-cfm**

Synopsis	Enter the <b>eth-cfm</b> context
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm</b>
Tree	<b>eth-cfm</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**collect-lmm-fc-stats**

Synopsis	Enter the <b>collect-lmm-fc-stats</b> context
Context	<b>configure service ies string interface string spoke-sdp string eth-cfm collect-lmm-fc-stats</b>
Tree	<b>collect-lmm-fc-stats</b>
Description	<p>Commands in this context configure per forwarding class (FC) LMM information collection.</p> <p>The commands <b>fc-in-profile</b> and <b>fc</b> in this context are mutually exclusive. The commands apply to either profile-aware or profile-unaware FCs respectively.</p> <p>This command and the <b>collect-lmm-stats</b> command are mutually exclusive when there is entity resource contention.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**fc keyword**

Synopsis	Forwarding class name for profile-unaware counter
Context	<b>configure service ies string interface string spoke-sdp string eth-cfm collect-lmm-fc-stats fc keyword</b>
Tree	<b>fc</b>
Description	<p>This command configures individual counters for the specified FCs without regard for profile. The system includes all countable packets that match a configured FC, regardless of profile, in this counter.</p> <p>An FC specified as part of this command and for this specific context cannot be specified as a profile-aware FC using the <b>fc-in-profile</b> command under the <b>collect-lmm-fc-stats</b> context.</p> <p>When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.</p>
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**fc-in-profile keyword**

Synopsis	Forwarding class name for profile-aware counter
----------	---

Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm collect-lmm-fc-stats fc-in-profile</b> <i>keyword</i>
Tree	<b>fc-in-profile</b>
Description	<p>This command configures individual counters for the specified FCs with regard to profile. The system includes all countable packets that match a configured FC and that are deemed to be in-profile in this counter.</p> <p>An FC specified as part of this command and for this specific context cannot be specified as a profile-unaware FC using the <b>fc</b> command under the <b>collect-lmm-fc-stats</b> context.</p> <p>When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.</p>
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **collect-lmm-stats** *boolean*

Synopsis	Collect statistics for loss measurement message tests
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm collect-lmm-stats</b> <i>boolean</i>
Tree	<b>collect-lmm-stats</b>
Description	<p>When configured to <b>true</b>, the router instantiates the statistical counter to transmit and receive packets for the LAG facility MEP bindings.</p> <p>The <b>show eth-cfm collect-lmm-stats</b> command displays entities that have been enabled to collect transit and receive counters.</p> <p>When configured to <b>false</b>, the router does not instantiate the counter and the LMM PDU associated with the MEP does not populate the counters in the packet.</p>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mep** **md-admin-name** *reference* **ma-admin-name** *reference* **mep-id** *number*

Synopsis	Enter the <b>mep</b> list instance
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i>
Tree	<b>mep</b>

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **md-admin-name** *reference*

Synopsis	Maintenance Domain (MD) name
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">spoke-sdp string</a> <a href="#">eth-cfm mep md-admin-name reference</a> <a href="#">ma-admin-name reference</a> <a href="#">mep-id number</a>
Tree	<a href="#">mep</a>
Reference	<b>configure</b> <a href="#">eth-cfm domain string</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ma-admin-name** *reference*

Synopsis	Maintenance Association (MA) name
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">spoke-sdp string</a> <a href="#">eth-cfm mep md-admin-name reference</a> <a href="#">ma-admin-name reference</a> <a href="#">mep-id number</a>
Tree	<a href="#">mep</a>
Reference	<b>configure</b> <a href="#">eth-cfm domain string</a> <a href="#">association string</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mep-id** *number*

Synopsis	Maintenance Endpoint (MEP) ID
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">spoke-sdp string</a> <a href="#">eth-cfm mep md-admin-name reference</a> <a href="#">ma-admin-name reference</a> <a href="#">mep-id number</a>
Tree	<a href="#">mep</a>
Range	1 to 8191
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**admin-state** *keyword*

Synopsis	Administrative state of the MEP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">spoke-sdp</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <b>admin-state</b> <a href="#">keyword</a>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**ais** *boolean*

Synopsis	Enable the generation and the reception of AIS messages
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">spoke-sdp</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <b>ais</b> <a href="#">boolean</a>
Tree	<a href="#">ais</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**alarm-notification**

Synopsis	Enter the <b>alarm-notification</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">spoke-sdp</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <b>alarm-notification</b>
Tree	<a href="#">alarm-notification</a>
Description	<p>Commands in this context configure the Fault Notification Generator (FNG) time values to raise an alarm or reset the CCM defect alarm.</p> <p>Use these timers for network management processes. The timers are not tied into delaying the notification to the fault management system on the network element and do not affect fault propagation mechanisms.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**fng-alarm-time** *number*

Synopsis	Time that must expire before an FNG alarm is raised
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">alarm-notification</a> <b>fng-alarm-time</b> <i>number</i>
Tree	<a href="#">fng-alarm-time</a>
Range	250   500   1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**fng-reset-time** *number*

Synopsis	Time that must expire before an FNG alarm is reset
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">alarm-notification</a> <b>fng-reset-time</b> <i>number</i>
Tree	<a href="#">fng-reset-time</a>
Range	250   500   1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**ccm** *boolean*

Synopsis	Generate CCM messages
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>ccm</b> <i>boolean</i>
Tree	<a href="#">ccm</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**ccm-ltm-priority** *number*

Synopsis	Priority of CCM and LTM messages transmitted by the MEP
----------	---

Context	<b>configure</b> <i>service ies string interface string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm-ltm-priority number</i>
Tree	<a href="#">ccm-ltm-priority</a>
Range	0 to 7
Default	7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm-padding-size** *number*

Synopsis	Number of octets of padding to insert in CCM packets
Context	<b>configure</b> <i>service ies string interface string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm-padding-size number</i>
Tree	<a href="#">ccm-padding-size</a>
Description	This command sets the byte size of the optional Data TLV to be included in the ETH-CC PDU.  This command increases the size of the ETH-CC PDU by the configured value. The base size of the ETH-CC PDU, including the Interface Status TLV and Port Status TLV, is 83 bytes not including the Layer 2 encapsulation. CCM padding is not supported when the CCM interval (configured through <b>configure eth-cfm domain association ccm-interval</b> ) is less than 1 second.
Range	3 to 1500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **csf**

Synopsis	Enable the <b>csf</b> context
Context	<b>configure</b> <i>service ies string interface string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number csf</i>
Tree	<a href="#">csf</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **multiplier** *decimal-number*

Synopsis	Multiplication factor used to clear the CSF condition
----------	---

Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>csf multiplier</b> <i>decimal-number</i>
Tree	<a href="#">multiplier</a>
Range	0.0   2.0 to 30.0
Default	3.5
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **description** *string*

Synopsis	Text description
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>description</b> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **eth-test**

Synopsis	Enable the <b>eth-test</b> context
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>eth-test</b>
Tree	<a href="#">eth-test</a>
Description	Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the <b>oam eth-cfm eth-test</b> command.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **bit-error-threshold** *number*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>eth-test</b> <b>bit-error-threshold</b> <i>number</i>

Tree	<a href="#">bit-error-threshold</a>
Range	0 to 11840
Units	bit errors
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## test-pattern

Synopsis	Enter the <b>test-pattern</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">spoke-sdp</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">eth-test</a> <a href="#">test-pattern</a>
Tree	<a href="#">test-pattern</a>
Description	Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## crc-tlv *boolean*

Synopsis	Generate a CRC checksum
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">spoke-sdp</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">eth-test</a> <a href="#">test-pattern</a> <a href="#">crc-tlv</a> <a href="#">boolean</a>
Tree	<a href="#">crc-tlv</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## pattern *keyword*

Synopsis	Test pattern for Ethernet Test frames
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">spoke-sdp</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">eth-test</a> <a href="#">test-pattern</a> <a href="#">pattern</a> <a href="#">keyword</a>
Tree	<a href="#">pattern</a>

Description	This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.
Options	all-zeros, all-ones
Default	all-zeros
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fault-propagation** *keyword*

Synopsis	Fault propagation for the MEP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">spoke-sdp</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <b>fault-propagation</b> <i>keyword</i>
Tree	<a href="#">fault-propagation</a>
Options	use-if-status-tlv, suspend-ccm
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **grace**

Synopsis	Enter the <b>grace</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">spoke-sdp</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <b>grace</b>
Tree	<a href="#">grace</a>
Description	Commands in this context configure the Nokia ETH-CFM Grace function and the ITU-T Y.1731 Ethernet Expected Default (ETH-ED) function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **eth-ed**

Synopsis	Enter the <b>eth-ed</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">spoke-sdp</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">grace</a> <b>eth-ed</b>
Tree	<a href="#">eth-ed</a>
Description	Commands in this context configure the ITU-T Y.1731 ETH-ED function.
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **max-rx-defect-window** *number*

Synopsis Maximum received ETH-ED expected defect window duration

Context **configure** [service](#) [ies](#) *string* [interface](#) *string* [spoke-sdp](#) *string* [eth-cfm](#) [mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* [grace](#) [eth-ed](#) **max-rx-defect-window** *number*

Tree [max-rx-defect-window](#)

Range 1 to 86400

Units seconds

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **priority** *number*

Synopsis Transmission priority for ETH-ED PDUs

Context **configure** [service](#) [ies](#) *string* [interface](#) *string* [spoke-sdp](#) *string* [eth-cfm](#) [mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* [grace](#) [eth-ed](#) **priority** *number*

Tree [priority](#)

Range 0 to 7

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **rx-eth-ed** *boolean*

Synopsis Receive and process ETH-ED ITU-T Y.1731 PDUs on the MEP

Context **configure** [service](#) [ies](#) *string* [interface](#) *string* [spoke-sdp](#) *string* [eth-cfm](#) [mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* [grace](#) [eth-ed](#) **rx-eth-ed** *boolean*

Tree [rx-eth-ed](#)

Description This command enables the reception and processing of the ITU-T Y.1731 ETH-ED PDU on the MEP.

Default true

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**tx-eth-ed** *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">spoke-sdp</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">grace</a> <a href="#">eth-ed</a> <a href="#">tx-eth-ed</a> <a href="#">boolean</a>
Tree	<a href="#">tx-eth-ed</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**eth-vsm-grace**

Synopsis	Enter the <b>eth-vsm-grace</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">spoke-sdp</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">grace</a> <a href="#">eth-vsm-grace</a>
Tree	<a href="#">eth-vsm-grace</a>
Description	Commands in this context configure the Nokia ETH-CFM Grace function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**rx-eth-vsm-grace** *boolean*

Synopsis	Receive and process Nokia ETH-CFM Grace PDU on the MEP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">spoke-sdp</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">grace</a> <a href="#">eth-vsm-grace</a> <a href="#">rx-eth-vsm-grace</a> <a href="#">boolean</a>
Tree	<a href="#">rx-eth-vsm-grace</a>
Description	When configured to <b>true</b> , the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.  When configured to <b>false</b> , the router disables the Nokia Grace function.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**tx-eth-vsm-grace** *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">spoke-sdp</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">grace</a> <a href="#">eth-vsm-grace</a> <a href="#">tx-eth-vsm-grace</a> <i>boolean</i>
Tree	<a href="#">tx-eth-vsm-grace</a>
Description	<p>When configured to <b>true</b>, the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.</p> <p>The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.</p> <p>The operator must configure the <b>configure system eth-cfm grace</b> command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).</p> <p>When configured to <b>false</b>, the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.</p>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**low-priority-defect** *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">spoke-sdp</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">low-priority-defect</a> <i>keyword</i>
Tree	<a href="#">low-priority-defect</a>
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Default	mac-rem-err-xcon
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**one-way-delay-threshold** *number*

Synopsis	Threshold time limit for the one-way delay test
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">interface</a> <a href="#">string</a> <a href="#">spoke-sdp</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">one-way-delay-threshold</a> <i>number</i>
Tree	<a href="#">one-way-delay-threshold</a>

Range	0 to 600
Units	seconds
Default	3
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **squelch-ingress-levels** *number*

Synopsis	Levels for which ETH-CFM packets are silently discarded
Context	<b>configure</b> <i>service ies string interface string spoke-sdp string eth-cfm squelch-ingress-levels number</i>
Tree	<a href="#">squelch-ingress-levels</a>
Description	<p>This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.</p> <p>The list of levels must be a complete contiguous list from 0 up to the highest level that will be dropped.</p>
Range	0 to 7
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **hash-label**

Synopsis	Enable the <b>hash-label</b> context
Context	<b>configure</b> <i>service ies string interface string spoke-sdp string hash-label</i>
Tree	<a href="#">hash-label</a>
Description	<p>Commands in this context configure the use of hash labels for egress datapaths.</p> <p>For information about hash-label handling, see the "Hash labels" section of the <i>7450 ESS, 7750 SR, 7950 XRS, and VSR MPLS Guide</i>.</p>
Notes	The following elements are part of a choice: <b>entropy-label</b> or <b>hash-label</b> .
Introduced	16.0.R1
Platforms	All

## signal-capability

Synopsis	Signal hash label capability to the remote PE
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">hash-label</a> <a href="#">signal-capability</a>
Tree	<a href="#">signal-capability</a>
Description	When configured, this command enables the signaling and negotiating of the hash label between the local and remote PE nodes.  The signaling process outcome determines whether the local PE inserts the hash label on the user packets. This outcome can override the local PE configuration.
Introduced	16.0.R1
Platforms	All

## ingress

Synopsis	Enter the <b>ingress</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">ingress</a>
Tree	<a href="#">ingress</a>
Introduced	16.0.R1
Platforms	All

## filter

Synopsis	Enter the <b>filter</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">ingress</a> <a href="#">filter</a>
Tree	<a href="#">filter</a>
Introduced	16.0.R1
Platforms	All

## ip reference

Synopsis	IPv4 filter policy name
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">ingress</a> <a href="#">filter</a> <a href="#">ip reference</a>
Tree	<a href="#">ip</a>
Reference	<b>configure</b> <a href="#">filter ip-filter</a> <i>string</i>
Introduced	16.0.R1

Platforms All

### ipv6 reference

Synopsis IPv6 filter policy name

Reference	<b>configure</b> <a href="#">application-assurance</a> <a href="#">group</a> <i>number</i> <a href="#">partition</a> <i>number</i> <a href="#">transit-prefix-policy</a> <i>number</i>
Notes	The following elements are part of a mandatory choice: <b>ip</b> or <b>prefix</b> .
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **vc-type** *keyword*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Virtual circuit type associated with the SDP binding
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">vc-type</a> <i>keyword</i>
Tree	<a href="#">vc-type</a>
Options	ether, ipipe
Default	ether
Introduced	16.0.R1
Platforms	All

### **static-tunnel-redundant-nexthop** *string*

Synopsis	Address for the static ISA tunnel redundant next-hop
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">static-tunnel-redundant-nexthop</a> <i>string</i>
Tree	<a href="#">static-tunnel-redundant-nexthop</a>
Description	This command specifies the redundant next-hop address on public or private IPsec interfaces (with a public or private tunnel SAP) for the static IPsec tunnel. The next-hop address is resolved in the routing table of the corresponding service.
Notes	The following elements are part of a choice: <b>multi-chassis-shunting-profile</b> or ( <b>dynamic-tunnel-redundant-nexthop</b> and <b>static-tunnel-redundant-nexthop</b> ).
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**tos-marking-state** *keyword*

Synopsis	TOS marking state
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <b>tos-marking-state</b> <i>keyword</i>
Tree	<a href="#">tos-marking-state</a>
Options	trusted, untrusted
Default	untrusted
Introduced	16.0.R1
Platforms	All

**tunnel** *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Enable/disable tunnel interface
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <b>tunnel</b> <i>boolean</i>
Tree	<a href="#">tunnel</a>
Default	false
Introduced	16.0.R1
Platforms	All

**vas-if-type** *keyword*

Synopsis	VAS interface type
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <b>vas-if-type</b> <i>keyword</i>
Tree	<a href="#">vas-if-type</a>
Options	to-from-access, to-from-network, to-from-both
Introduced	16.0.R1
Platforms	All

**vpls** [[vpls-name](#)] *string*

Synopsis	Enter the <b>vpls</b> list instance
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <b>vpls</b> <i>string</i>
Tree	<a href="#">vpls</a>

Max. Instances	1
Introduced	16.0.R1
Platforms	All

### **[vpls-name]** *string*

Synopsis	VPLS service
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">vpls string</a>
Tree	<a href="#">vpls</a>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

### **egress**

Synopsis	Enter the <b>egress</b> context
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">vpls string</a> <a href="#">egress</a>
Tree	<a href="#">egress</a>
Introduced	16.0.R1
Platforms	All

### **reclassify-using-qos** *reference*

Synopsis	Egress QoS policy
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">interface string</a> <a href="#">vpls string</a> <a href="#">egress</a> <a href="#">reclassify-using-qos reference</a>
Tree	<a href="#">reclassify-using-qos</a>
Reference	<b>configure</b> <a href="#">qos sap-egress string</a>
Introduced	16.0.R1

Synopsis	Enter the <b>evpn</b> context
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>vpls</b> <i>string</i> <b>evpn</b>
Tree	<b>evpn</b>
Introduced	19.10.R1
Platforms	All

### arp

Synopsis	Enter the <b>arp</b> context
----------	------------------------------

Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>vpls</b> <i>string</i> <b>evpn arp</b>
Tree	<b>arp</b>
Introduced	19.10.R1
Platforms	All

### **advertise** [*route-type*] *keyword*

Synopsis	Enter the <b>advertise</b> list instance
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>vpls</b> <i>string</i> <b>evpn arp advertise</b> <i>keyword</i>
Tree	<b>advertise</b>
Description	Commands in this context specify the configuration to allow ARP or ND entries that are installed in the ARP or ND cache to be advertised in EVPN MAC/IP routes. The <b>learn-dynamic</b> command must be set to <b>false</b> when using this functionality.
Introduced	19.10.R1
Platforms	All

### [*route-type*] *keyword*

Synopsis	Type of ARP or ND entries that generate host routes
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>vpls</b> <i>string</i> <b>evpn arp advertise</b> <i>keyword</i>
Tree	<b>advertise</b>
Description	This command specifies the type of ARP or ND entries that are installed in the ARP or ND cache into EVPN MAC/IP routes.
Options	static, dynamic
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	All

### **route-tag** *number*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tag value used with the host route from an ARP/ND entry
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>vpls</b> <i>string</i> <b>evpn arp advertise</b> <i>keyword</i> <b>route-tag</b> <i>number</i>

Tree	<a href="#">route-tag</a>
Description	This command specifies the route tag that is added separately to dynamic or static ARP or ND entries that are advertised in EVPN MAC/IP routes. This tag can be matched on BGP vsi-export (in the R-VPLS) and BGP peer export policies.
Range	0 to 255
Introduced	19.10.R1
Platforms	All

### **flood-garp-and-unknown-req** *boolean*

Synopsis	Allow CPM originated ARP frames to flood R-VPLS service
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">vpls</a> <i>string</i> <a href="#">evpn arp</a> <b>flood-garp-and-unknown-req</b> <i>boolean</i>
Tree	<a href="#">flood-garp-and-unknown-req</a>
Description	When configured to <b>true</b> , the system allows CPM-originated ARP frames to be flooded in the R-VPLS service. Any frames that are data path flooded such as the ARP messages received on a SAP, are flooded irrespective of this command. When configured to <b>false</b> , CPM-originated ARP flooding is suppressed.
Default	true
Introduced	19.10.R1
Platforms	All

### **learn-dynamic** *boolean*

Synopsis	Process ARP or ND messages on EVPN tunnels
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">vpls</a> <i>string</i> <a href="#">evpn arp</a> <b>learn-dynamic</b> <i>boolean</i>
Tree	<a href="#">learn-dynamic</a>
Description	When configured to <b>true</b> , the system processes ARP or ND messages that arrive on EVPN tunnels. When configured to <b>false</b> , learning is disabled and table entries are not created for these messages.
Default	true
Introduced	19.10.R1
Platforms	All

**nd**

Synopsis	Enter the <b>nd</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">vpls</a> <i>string</i> <a href="#">evpn</a> <b>nd</b>
Tree	<a href="#">nd</a>
Introduced	20.5.R1
Platforms	All

**advertise** [[route-type](#)] *keyword*

Synopsis	Enter the <b>advertise</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">vpls</a> <i>string</i> <a href="#">evpn</a> <b>nd</b> <a href="#">advertise</a> <i>keyword</i>
Tree	<a href="#">advertise</a>
Description	Commands in this context specify the configuration to allow ARP or ND entries that are installed in the ARP or ND cache to be advertised in EVPN MAC/IP routes.  The <b>learn-dynamic</b> command must be set to <b>false</b> when using this functionality.
Introduced	20.5.R1
Platforms	All

**[[route-type](#)]** *keyword*

Synopsis	Type of ARP or ND entries that generate host routes
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">vpls</a> <i>string</i> <a href="#">evpn</a> <b>nd</b> <a href="#">advertise</a> <i>keyword</i>
Tree	<a href="#">advertise</a>
Description	This command specifies the type of ARP or ND entries that are installed in the ARP or ND cache into EVPN MAC/IP routes.
Options	static, dynamic
Notes	This element is part of a list key.
Introduced	20.5.R1
Platforms	All

**route-tag** *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Tag value used with the host route from an ARP/ND entry
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>vpls</b> <i>string</i> <b>evpn nd advertise</b> <i>keyword</i> <b>route-tag</b> <i>number</i>
Tree	<b>route-tag</b>
Description	This command specifies the route tag that is added separately to dynamic or static ARP or ND entries that are advertised in EVPN MAC/IP routes. This tag can be matched on BGP vsi-export (in the R-VPLS) and BGP peer export policies.
Range	0 to 255
Introduced	20.5.R1
Platforms	All

### **learn-dynamic** *boolean*

Synopsis	Process ARP or ND messages on EVPN tunnels
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>vpls</b> <i>string</i> <b>evpn nd learn-dynamic</b> <i>boolean</i>
Tree	<b>learn-dynamic</b>
Description	When configured to <b>true</b> , the system processes ARP or ND messages that arrive on EVPN tunnels.  When configured to <b>false</b> , learning is disabled and table entries are not created for these messages.
Default	true
Introduced	20.5.R1
Platforms	All

### **ingress**

Synopsis	Enter the <b>ingress</b> context
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>vpls</b> <i>string</i> <b>ingress</b>
Tree	<b>ingress</b>
Introduced	16.0.R1
Platforms	All

### **routed-override-filter**

Synopsis	Enter the <b>routed-override-filter</b> context
Context	<b>configure service ies</b> <i>string</i> <b>interface</b> <i>string</i> <b>vpls</b> <i>string</i> <b>ingress</b> <b>routed-override-filter</b>

Tree	<a href="#">routed-override-filter</a>
Introduced	16.0.R1
Platforms	All

**redundant-interface** [\[interface-name\]](#) *string*

Synopsis	Enter the <b>redundant-interface</b> list instance
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">redundant-interface</a> <i>string</i>
Tree	<a href="#">redundant-interface</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**[interface-name]** *string*

Synopsis	Interface name
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">redundant-interface</a> <i>string</i>

---

Tree	<a href="#">redundant-interface</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of the interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">redundant-interface</a> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">redundant-interface</a> <i>string</i> <b>description</b> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **hold-time**

Synopsis	Enter the <b>hold-time</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">redundant-interface</a> <i>string</i> <b>hold-time</b>
Tree	<a href="#">hold-time</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ipv4

Synopsis	Enter the <b>ipv4</b> context
Context	<b>configure service ies</b> <i>string</i> <b>redundant-interface</b> <i>string</i> <b>hold-time ipv4</b>
Tree	<b>ipv4</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## down

Synopsis	Enter the <b>down</b> context
Context	<b>configure service ies</b> <i>string</i> <b>redundant-interface</b> <i>string</i> <b>hold-time ipv4 down</b>
Tree	<b>down</b>
Description	Commands in this context configure the down hold timer, which specifies the delay before activating the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface up, unless an operator configures the <b>init-only</b> command.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## init-only *boolean*

Synopsis	Apply delay only at interface configuration or reboot
Context	<b>configure service ies</b> <i>string</i> <b>redundant-interface</b> <i>string</i> <b>hold-time ipv4 down init-only</b> <i>boolean</i>
Tree	<b>init-only</b>
Description	This command applies a delay only when the IP interface is first configured or after a system reboot.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## seconds *number*

Synopsis	Down hold time for the IP interface
Context	<b>configure service ies</b> <i>string</i> <b>redundant-interface</b> <i>string</i> <b>hold-time ipv4 down seconds</b> <i>number</i>
Tree	<b>seconds</b>

Range	1 to 1200
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## up

Synopsis	Enter the <b>up</b> context
Context	<b>configure service ies string redundant-interface string hold-time ipv4 up</b>
Tree	<b>up</b>
Description	Commands in this context configure the up hold timer, which specifies the delay before deactivation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface down.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## seconds *number*

Synopsis	Up hold time for the IP interface
Context	<b>configure service ies string redundant-interface string hold-time ipv4 up seconds number</b>
Tree	<b>seconds</b>
Range	1 to 1200
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ip-mtu *number*

Synopsis	IP MTU applied to outgoing packets
Context	<b>configure service ies string redundant-interface string ip-mtu number</b>
Tree	<b>ip-mtu</b>
Description	This command configures the IP maximum transmission unit (MTU) for the associated router IP interface.
Range	512 to 9786
Units	bytes

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ipv4

Synopsis	Enter the <b>ipv4</b> context
Context	<b>configure service ies string redundant-interface string ipv4</b>
Tree	<a href="#">ipv4</a>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## primary

Synopsis	Enable the <b>primary</b> context
Context	<b>configure service ies string redundant-interface string ipv4 primary</b>
Tree	<a href="#">primary</a>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## address *string*

Synopsis	IPv4 address to be assigned to the interface
Context	<b>configure service ies string redundant-interface string ipv4 primary address string</b>
Tree	<a href="#">address</a>
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## prefix-length *number*

Synopsis	IPv4 address prefix length
Context	<b>configure service ies string redundant-interface string ipv4 primary prefix-length number</b>
Tree	<a href="#">prefix-length</a>
Range	0 to 32
Notes	This element is mandatory.

Introduced 16.0.R4  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **remote-ip** *string*

Synopsis Remote IP address for the interface  
 Context **configure** [service ies](#) *string* [redundant-interface](#) *string* [ipv4](#) [primary](#) [remote-ip](#) *string*  
 Tree [remote-ip](#)  
 Introduced 16.0.R4  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **spoke-sdp** [[sdp-bind-id](#)] *string*

Synopsis Enter the **spoke-sdp** list instance  
 Context **configure** [service ies](#) *string* [redundant-interface](#) *string* [spoke-sdp](#) *string*  
 Tree [spoke-sdp](#)  
 Max. Instances 1  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[sdp-bind-id]** *string*

Synopsis SDP binding ID  
 Context **configure** [service ies](#) *string* [redundant-interface](#) *string* [spoke-sdp](#) *string*  
 Tree [spoke-sdp](#)  
 String Length 3 to 16  
 Notes This element is part of a list key.  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis Administrative state of the SDP binding to the service  
 Context **configure** [service ies](#) *string* [redundant-interface](#) *string* [spoke-sdp](#) *string* [admin-state](#) *keyword*

Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**control-word** *boolean*

Synopsis	Use the control word as preferred
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">redundant-interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <b>control-word</b> <i>boolean</i>
Tree	<a href="#">control-word</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">redundant-interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <b>description</b> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**egress**

Synopsis	Enter the <b>egress</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">redundant-interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <b>egress</b>
Tree	<a href="#">egress</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## filter

Synopsis	Enter the <b>filter</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">redundant-interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">egress</a> <a href="#">filter</a>
Tree	<a href="#">filter</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ip reference

Synopsis	IPv4 filter policy name
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">redundant-interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">egress</a> <a href="#">filter</a> <a href="#">ip</a> <a href="#">reference</a>
Tree	<a href="#">ip</a>
Reference	<b>configure</b> <a href="#">filter</a> <a href="#">ip-filter</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## vc-label *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Egress MPLS VC label to send packets to the far end
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">redundant-interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">egress</a> <a href="#">vc-label</a> <a href="#">number</a>
Tree	<a href="#">vc-label</a>
Range	16 to 1048575
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ingress

Synopsis	Enter the <b>ingress</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">redundant-interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">ingress</a>
Tree	<a href="#">ingress</a>

Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## filter

Synopsis Enter the **filter** context  
 Context **configure** [service ies](#) *string* [redundant-interface](#) *string* [spoke-sdp](#) *string* [ingress filter](#)  
 Tree [filter](#)  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ip reference

Synopsis IPv4 filter policy name  
 Context **configure** [service ies](#) *string* [redundant-interface](#) *string* [spoke-sdp](#) *string* [ingress filter ip reference](#)  
 Tree [ip](#)  
 Reference **configure** [filter ip-filter](#) *string*  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## vc-label number

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Ingress MPLS VC label to send packets to the far end  
 Context **configure** [service ies](#) *string* [redundant-interface](#) *string* [spoke-sdp](#) *string* [ingress vc-label number](#)  
 Tree [vc-label](#)  
 Range 1 to 1048575  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**service-id** *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Service ID
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">service-id</a> <i>number</i>
Tree	<a href="#">service-id</a>
Range	1 to 2147483647
Introduced	16.0.R1
Platforms	All

**subscriber-interface** [[interface-name](#)] *string*

Synopsis	Enter the <b>subscriber-interface</b> list instance
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i>
Tree	<a href="#">subscriber-interface</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**[interface-name]** *string*

Synopsis	Subscriber interface name
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i>
Tree	<a href="#">subscriber-interface</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**admin-state** *keyword*

Synopsis	Administrative state of the subscriber interface
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable

Default	enable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **fwd-service** *reference*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Forwarding service name
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">fwd-service</a> <i>reference</i>
Tree	<a href="#">fwd-service</a>
Reference	<b>configure</b> <a href="#">service vprn</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **fwd-subscriber-interface** *reference*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Forwarding subscriber interface name
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">fwd-subscriber-interface</a> <i>reference</i>
Tree	<a href="#">fwd-subscriber-interface</a>
Reference	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i>

Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **group-interface** [[group-interface-name](#)] *string*

Synopsis Enter the **group-interface** list instance  
 Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string*  
 Tree [group-interface](#)  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[group-interface-name]** *string*

Synopsis Group interface name  
 Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string*  
 Tree [group-interface](#)  
 String Length 1 to 32  
 Notes This element is part of a list key.  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis Administrative state of the interface  
 Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [admin-state](#) *keyword*  
 Tree [admin-state](#)  
 Options enable, disable  
 Default enable  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **bonding-parameters**

Synopsis Enter the **bonding-parameters** context

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>bonding-parameters</b>
Tree	<b>bonding-parameters</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of ESM connection bonding
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>bonding-parameters</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **connection** [**connection-index**] *number*

Synopsis	Enter the <b>connection</b> list instance
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>bonding-parameters</b> <b>connection</b> <i>number</i>
Tree	<b>connection</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[connection-index]** *number*

Synopsis	Bonding connection index
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>bonding-parameters</b> <b>connection</b> <i>number</i>
Tree	<b>connection</b>
Range	1 to 2
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**service string**

Synopsis	Connection service
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">bonding-parameters</a> <a href="#">connection</a> <a href="#">number</a> <a href="#">service</a> <a href="#">string</a>
Tree	<a href="#">service</a>
String Length	1 to 64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**fpe reference****WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	FPE that provisions bonding functionality
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">bonding-parameters</a> <a href="#">fpe</a> <a href="#">reference</a>
Tree	<a href="#">fpe</a>
Reference	<b>configure</b> <a href="#">fwd-path-ext</a> <a href="#">fpe</a> <a href="#">number</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**multicast**

Synopsis	Enter the <b>multicast</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">bonding-parameters</a> <a href="#">multicast</a>
Tree	<a href="#">multicast</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**connection** (*number* | *keyword*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Multicast connection
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">bonding-parameters</a> <a href="#">multicast</a> <b>connection</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">connection</a>
Range	1 to 2
Options	use-incoming
Default	use-incoming
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**brg**

Synopsis	Enter the <b>brg</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <b>brg</b>
Tree	<a href="#">brg</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**admin-state** *keyword*

Synopsis	Administrative state of BRG
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <b>brg</b> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**authenticated-brg-only** *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Allow BRGs that have been pre-authenticated
Context	<b>configure</b> <i>service ies string subscriber-interface string group-interface string</i> <b>brg</b> <b>authenticated-brg-only</b> <i>boolean</i>
Tree	<b>authenticated-brg-only</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**default-brg-profile** *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Default BRG profile for new BRGs
Context	<b>configure</b> <i>service ies string subscriber-interface string group-interface string</i> <b>brg</b> <b>default-brg-profile</b> <i>reference</i>
Tree	<b>default-brg-profile</b>
Reference	<b>configure</b> <i>subscriber-mgmt vrgw</i> <b>brg-profile</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**cflowd-parameters**

Synopsis	Enter the <b>cflowd-parameters</b> context
Context	<b>configure</b> <i>service ies string subscriber-interface string group-interface string</i> <b>cflowd-parameters</b>
Tree	<b>cflowd-parameters</b>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**sampling** [[sampling-type](#)] *keyword*

Synopsis	Enter the <b>sampling</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">cflowd-parameters</a> <a href="#">sampling</a> <i>keyword</i>
Tree	<a href="#">sampling</a>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**[sampling-type]** *keyword*

Synopsis	Traffic sampling type
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">cflowd-parameters</a> <a href="#">sampling</a> <i>keyword</i>
Tree	<a href="#">sampling</a>
Description	This command configures the type of traffic to be sampled on the associated IP interface.
Options	unicast, multicast, both
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**direction** *keyword*

Synopsis	Direction of traffic for cflowd sampling
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">cflowd-parameters</a> <a href="#">sampling</a> <i>keyword</i> <a href="#">direction</a> <i>keyword</i>
Tree	<a href="#">direction</a>
Description	This command configures the direction in which sampling occurs on the associated IP interfaces.
Options	ingress-only, egress-only, both
Default	ingress-only
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**sample-profile** (*keyword | number*)

Synopsis	Sample profile ID
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>cflowd-parameters</b> <b>sampling</b> <i>keyword</i> <b>sample-profile</b> ( <i>keyword   number</i> )
Tree	<b>sample-profile</b>
Description	This command defines the sampling rate profile associated with this interface.
Max. Range	0 to 4294967295
Options	1
Introduced	19.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**type** *keyword*

Synopsis	Type of cflowd analysis
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>cflowd-parameters</b> <b>sampling</b> <i>keyword</i> <b>type</b> <i>keyword</i>
Tree	<b>type</b>
Description	This command configures the cflowd sampling type on the associated IP interface.
Options	acl, interface
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**data-trigger**

Synopsis	Enter the <b>data-trigger</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>data-trigger</b>
Tree	<b>data-trigger</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**accept-ipv6-link-local-address** *boolean*

Synopsis	Enable IPv6 Link Local Address to start authentication
----------	--

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>data-trigger accept-ipv6-link-local-address</b> <i>boolean</i>
Tree	<a href="#">accept-ipv6-link-local-address</a>
Description	<p>When configured to <b>true</b>, the system triggers authentication of the subscriber based on an IPv6 packet with a source IP Link Local Address (LLA). The authentication trigger only occurs if the anti-spoof is type nh-mac. If the anti-spoof is not nh-mac, the packet with an IPv6 LLA is ignored.</p> <p>When configured to <b>false</b>, the system ignores all IPv6 packets with a LLA as a source IP address.</p>
Default	false
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of data-triggered host creation
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>data-trigger admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **description** *string*

Synopsis	Text description
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>description</b> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 255
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **dynamic-routes-track-srrp**

Synopsis	Enable the <b>dynamic-routes-track-srrp</b> context
----------	---

Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>dynamic-routes-track-srrp</i>
Tree	<a href="#">dynamic-routes-track-srrp</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **hold-time** *number*

Synopsis	Time before route state updated after SRRP transition
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>dynamic-routes-track-srrp hold-time number</i>
Tree	<a href="#">hold-time</a>
Range	1 to 50
Units	deciseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **gtp-parameters**

Synopsis	Enter the <b>gtp-parameters</b> context
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>gtp-parameters</i>
Tree	<a href="#">gtp-parameters</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of GTP access
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>gtp-parameters admin-state keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## fpe reference

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	PE that provisions the GTP user interface
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">gtp-parameters</a> <a href="#">fpe</a> <i>reference</i>
Tree	<a href="#">fpe</a>
Reference	<b>configure</b> <a href="#">fwd-path-ext</a> <a href="#">fpe</a> <i>number</i>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## gx-policy reference

Synopsis	Diameter application policy
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">gx-policy</a> <i>reference</i>
Tree	<a href="#">gx-policy</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">diameter-gx-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ingress

Synopsis	Enter the <b>ingress</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ingress</a>
Tree	<a href="#">ingress</a>
Introduced	19.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## policy-accounting reference

Synopsis	Ingress policy accounting template name
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ingress</a> <a href="#">policy-accounting</a> <i>reference</i>

Tree	<a href="#">policy-accounting</a>
Reference	<b>configure</b> <a href="#">routing-options</a> <a href="#">policy-accounting</a> <a href="#">policy-acct-template</a> <i>string</i>
Introduced	19.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s

### **ingress-stats** *boolean*

Synopsis	Collect ingress interface statistics
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <b>ingress-stats</b> <i>boolean</i>
Tree	<a href="#">ingress-stats</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ip-mtu** *number*

Synopsis	Interface IP MTU
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <b>ip-mtu</b> <i>number</i>
Tree	<a href="#">ip-mtu</a>
Range	512 to 9786
Units	bytes
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ipoe-linking**

Synopsis	Enter the <b>ipoe-linking</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <b>ipoe-linking</b>
Tree	<a href="#">ipoe-linking</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**admin-state** *keyword*

Synopsis	Administrative state of IPoE host linking
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">ipoe-linking</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**gratuitous-router-advertisement** *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Send unsolicited router advertisement after DHCP setup
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">ipoe-linking</a> <a href="#">gratuitous-router-advertisement</a> <i>boolean</i>
Tree	<a href="#">gratuitous-router-advertisement</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**shared-circuit-id** *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable circuit ID in DHCPv4 Option82 to validate DHCPv6
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">ipoe-linking</a> <a href="#">shared-circuit-id</a> <i>boolean</i>
Tree	<a href="#">shared-circuit-id</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ipoe-session

Synopsis	Enter the <b>ipoe-session</b> context
Context	<b>configure service ies string subscriber-interface string group-interface string ipoe-session</b>
Tree	<a href="#">ipoe-session</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## admin-state *keyword*

Synopsis	Administrative state of IPoE session management
Context	<b>configure service ies string subscriber-interface string group-interface string ipoe-session admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## description *string*

Synopsis	Text description
Context	<b>configure service ies string subscriber-interface string group-interface string ipoe-session description string</b>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## force-auth

Synopsis	Enter the <b>force-auth</b> context
Context	<b>configure service ies string subscriber-interface string group-interface string ipoe-session force-auth</b>
Tree	<a href="#">force-auth</a>
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **cid-change** *boolean*

Synopsis Ignore min-auth-interval when circuit ID changed

Context **configure** *service ies string subscriber-interface string group-interface string ipoe-session force-auth cid-change boolean*

Tree [cid-change](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **rid-change** *boolean*

Synopsis Ignore min-auth-interval when remote ID changed

Context **configure** *service ies string subscriber-interface string group-interface string ipoe-session force-auth rid-change boolean*

Tree [rid-change](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ipoe-session-policy** *reference*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis IPoE Session policy to be used for new sessions

Context **configure** *service ies string subscriber-interface string group-interface string ipoe-session ipoe-session-policy reference*

Tree [ipoe-session-policy](#)

Reference **configure** *subscriber-mgmt ipoe-session-policy string*

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **min-auth-interval** (*keyword | number*)

Synopsis Minimum time between two authentication attempts

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipoe-session min-auth-interval</b> ( <i>keyword</i>   <i>number</i> )
Tree	<b>min-auth-interval</b>
Range	1 to 32000000
Units	seconds
Options	infinite, always-reauthenticate
Default	infinite
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **radius-session-timeout** *keyword*

Synopsis	Session timeout attribute to be interpreted
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipoe-session radius-session-timeout</b> <i>keyword</i>
Tree	<b>radius-session-timeout</b>
Options	absolute, ignore, backwards-compatible
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sap-session-limit** *number*

Synopsis	Maximum number of sessions per SAP
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipoe-session sap-session-limit</b> <i>number</i>
Tree	<b>sap-session-limit</b>
Range	1 to 131071
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **session-limit** *number*

Synopsis	Maximum number of sessions on this group interface
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipoe-session session-limit</b> <i>number</i>
Tree	<b>session-limit</b>

Range	1 to 500000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **stateless-redundancy** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Remove IPoE sessions when the system becomes stand-by in a stateless multi-chassis redundancy setup
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipoe-session</a> <a href="#">stateless-redundancy</a> <i>boolean</i>
Tree	<a href="#">stateless-redundancy</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **user-db** *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local user database for IPoE session authentication
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipoe-session</a> <a href="#">user-db</a> <i>reference</i>
Tree	<a href="#">user-db</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">local-user-db</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ipv4**

Synopsis	Enter the <b>ipv4</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv4</a>
Tree	<a href="#">ipv4</a>

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## arp-host

Synopsis	Enter the <b>arp-host</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">arp-host</a>
Tree	<a href="#">arp-host</a>
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## admin-state *keyword*

Synopsis	Administrative state of ARP hosts
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">arp-host</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## host-limit *number*

Synopsis	Maximum number of ARP hosts
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">arp-host</a> <a href="#">host-limit</a> <i>number</i>
Tree	<a href="#">host-limit</a>
Range	1 to 524287
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## min-auth-interval *number*

Synopsis	Minimum authentication interval
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">arp-host</a> <a href="#">min-auth-interval</a> <i>number</i>

Tree	<a href="#">min-auth-interval</a>
Range	1 to 6000
Units	minutes
Default	15
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sap-host-limit** *number*

Synopsis	Maximum number of ARP hosts per SAP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">arp-host</a> <b>sap-host-limit</b> <i>number</i>
Tree	<a href="#">sap-host-limit</a>
Range	1 to 131071
Default	1
Introduced	16.0.R6
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **dhcp**

Synopsis	Enter the <b>dhcp</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv4</a> <b>dhcp</b>
Tree	<a href="#">dhcp</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of DHCP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv4</a> <b>dhcp</b> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## client-applications

Synopsis	Enter the <b>client-applications</b> context
Context	<b>configure service ies string subscriber-interface string group-interface string ipv4 dhcp client-applications</b>
Tree	<b>client-applications</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## dhcp boolean

Synopsis	Enable IPoE clients to use DHCP relay or proxy server
Context	<b>configure service ies string subscriber-interface string group-interface string ipv4 dhcp client-applications dhcp boolean</b>
Tree	<b>dhcp</b>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ppp boolean

Synopsis	Enable PPPoE clients to use DHCP relay or proxy server
Context	<b>configure service ies string subscriber-interface string group-interface string ipv4 dhcp client-applications ppp boolean</b>
Tree	<b>ppp</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## description string

Synopsis	Text description
Context	<b>configure service ies string subscriber-interface string group-interface string ipv4 dhcp description string</b>
Tree	<b>description</b>
String Length	1 to 80

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **filter reference**

Synopsis	DHCP filter ID for the group interface
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv4 dhcp filter reference</a>
Tree	<a href="#">filter</a>
Reference	<b>configure</b> <a href="#">filter dhcp-filter</a> <i>number</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **gi-address string**

Synopsis	GI address for the DHCP relay
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv4 dhcp gi-address</a> <i>string</i>
Tree	<a href="#">gi-address</a>
Description	<p>This command configures the GI address to distinguish between the different subscriber interfaces (and potentially group interfaces) defined when the router functions as a DHCP relay.</p> <p>By default, the GI address used in the relayed DHCP packet is the primary IP address of a normal IES interface. Specifying the GI address allows the user to choose a secondary address. For group interfaces, a GI address must be specified under the group interface DHCP context or subscriber interface DHCP context for DHCP to function.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **lease-populate**

Synopsis	Enter the <b>lease-populate</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv4 dhcp lease-populate</a>
Tree	<a href="#">lease-populate</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## I2-header

Synopsis	Enable the <b>I2-header</b> context
Context	<b>configure service ies string subscriber-interface string group-interface string ipv4 dhcp lease-populate I2-header</b>
Tree	<b>I2-header</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## mac string

Synopsis	IEEE address used in anti-spoofing entries for the SAP
Context	<b>configure service ies string subscriber-interface string group-interface string ipv4 dhcp lease-populate I2-header mac string</b>
Tree	<b>mac</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## max-leases number

Synopsis	Maximum number of DHCPv4 leases
Context	<b>configure service ies string subscriber-interface string group-interface string ipv4 dhcp lease-populate max-leases number</b>
Tree	<b>max-leases</b>
Range	1 to 511999
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## match-circuit-id boolean

Synopsis	Enable Option 82 circuit ID on relayed DHCP packets
Context	<b>configure service ies string subscriber-interface string group-interface string ipv4 dhcp match-circuit-id boolean</b>
Tree	<b>match-circuit-id</b>
Default	false
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## offer-selection

Synopsis Enter the **offer-selection** context

Context **configure service ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipv4 dhcp offer-selection**

Tree [offer-selection](#)

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## client-mac

Synopsis Enter the **client-mac** context

Context **configure service ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipv4 dhcp offer-selection client-mac**

Tree [client-mac](#)

Notes The following elements are part of a choice: **client-mac** or **server**.

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## discover-delay *number*

Synopsis Delay before sending DHCP Discover messages

Context **configure service ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipv4 dhcp offer-selection client-mac discover-delay** *number*

Tree [discover-delay](#)

Description This command configures the time to delay sending DHCP Discover messages from the specified MAC addresses.

Range 1 to 100

Units deciseconds

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**mac-address** *keyword*

Synopsis	Designated client MAC addresses for Offer selection
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>dhcp</b> <b>offer-selection</b> <b>client-mac</b> <b>mac-address</b> <i>keyword</i>
Tree	<b>mac-address</b>
Description	This command specifies the client MAC addresses for which the Discover delay applies.
Options	odd, even
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**discover-delay** *number*

Synopsis	Delay before sending DHCP Discover messages
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>dhcp</b> <b>offer-selection</b> <b>discover-delay</b> <i>number</i>
Tree	<b>discover-delay</b>
Description	This command configures the time to delay sending DHCP Discover messages. The delay is applied to all DHCP Discover messages for which no per DHCP server or per client MAC delay is configured.
Range	1 to 100
Units	deciseconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**server** [*ipv4-address*] *string*

Synopsis	Enter the <b>server</b> list instance
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>dhcp</b> <b>offer-selection</b> <b>server</b> <i>string</i>
Tree	<b>server</b>
Max. Instances	8
Notes	The following elements are part of a choice: <b>client-mac</b> or <b>server</b> .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**[ipv4-address] string**

Synopsis	IP address of the DHCP server
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">offer-selection</a> <a href="#">server</a> <a href="#">string</a>
Tree	<a href="#">server</a>
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**discover-delay number**

Synopsis	Delay before sending DHCP Discover messages
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">offer-selection</a> <a href="#">server</a> <a href="#">string</a> <a href="#">discover-delay</a> <a href="#">number</a>
Tree	<a href="#">discover-delay</a>
Description	This command configures the time to delay DHCP Discover messages sent to the server.
Range	1 to 100
Units	deciseconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**option-82**

Synopsis	Enter the <b>option-82</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a>
Tree	<a href="#">option-82</a>
Description	Commands in this context configure the processing required when the router receives a DHCP request that already has an Option 82 field in the packet.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**action keyword**

Synopsis	Action to take with received DHCP Option 82
----------	---

Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>ipv4 dhcp option-82 action keyword</i>
Tree	<a href="#">action</a>
Options	replace, drop, keep
Default	keep
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### circuit-id

Synopsis	Enter the <b>circuit-id</b> context
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>ipv4 dhcp option-82 circuit-id</i>
Tree	<a href="#">circuit-id</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### ascii-tuple

Synopsis	Use the ASCII-encoded tuple for the circuit ID
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>ipv4 dhcp option-82 circuit-id ascii-tuple</i>
Tree	<a href="#">ascii-tuple</a>
Notes	The following elements are part of a choice: <b>ascii-tuple</b> , <b>ifindex</b> , <b>none</b> , <b>sap-id</b> , or <b>vlan-ascii-tuple</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### ifindex

Synopsis	Use the interface index for the circuit ID
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>ipv4 dhcp option-82 circuit-id ifindex</i>
Tree	<a href="#">ifindex</a>
Notes	The following elements are part of a choice: <b>ascii-tuple</b> , <b>ifindex</b> , <b>none</b> , <b>sap-id</b> , or <b>vlan-ascii-tuple</b> .
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## none

Synopsis Do not include the circuit ID

Context **configure** *service ies string subscriber-interface string group-interface string ipv4 dhcp option-82 circuit-id none*

Tree *none*

Notes The following elements are part of a choice: **ascii-tuple**, **ifindex**, **none**, **sap-id**, or **vlan-ascii-tuple**.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## sap-id

Synopsis Use the SAP ID

Context **configure** *service ies string subscriber-interface string group-interface string ipv4 dhcp option-82 circuit-id sap-id*

Tree *sap-id*

Notes The following elements are part of a choice: **ascii-tuple**, **ifindex**, **none**, **sap-id**, or **vlan-ascii-tuple**.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## vlan-ascii-tuple

Synopsis Include the VLAN ID and dot1p bits in the ASCII tuple

Context **configure** *service ies string subscriber-interface string group-interface string ipv4 dhcp option-82 circuit-id vlan-ascii-tuple*

Tree *vlan-ascii-tuple*

Description When configured, the router includes the VLAN ID and dot1p bits with the ASCII-tuple information. This only occurs on dot1q and QinQ-encapsulated ports. When the Option 82 bits are stripped, dot1p bits are copied to the Ethernet header of the outgoing packet. When unconfigured, the router leaves the circuit ID sub-option of the DHCP packet empty.

Notes The following elements are part of a choice: **ascii-tuple**, **ifindex**, **none**, **sap-id**, or **vlan-ascii-tuple**.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## remote-id

Synopsis Enter the **remote-id** context

Context **configure service ies string subscriber-interface string group-interface string ipv4 dhcp option-82 remote-id**

Tree **remote-id**

Description Commands in this context configure the remote IP sub-option of the DHCP packet with the identity of the remote host end (typically the DHCP client).

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ascii-string string

Synopsis User-defined ASCII string for the remote ID

Context **configure service ies string subscriber-interface string group-interface string ipv4 dhcp option-82 remote-id ascii-string string**

Tree **ascii-string**

String Length 1 to 32

Notes The following elements are part of a choice: **ascii-string**, **mac**, or **none**.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## mac

Synopsis Use the MAC address for the remote ID

Context **configure service ies string subscriber-interface string group-interface string ipv4 dhcp option-82 remote-id mac**

Tree **mac**

Notes The following elements are part of a choice: **ascii-string**, **mac**, or **none**.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**none**

Synopsis	Do not include the remote ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a> <a href="#">remote-id</a> <b>none</b>
Tree	<a href="#">none</a>
Notes	The following elements are part of a choice: <b>ascii-string</b> , <b>mac</b> , or <b>none</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**vendor-specific-option**

Synopsis	Enter the <b>vendor-specific-option</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a> <a href="#">vendor-specific-option</a>
Tree	<a href="#">vendor-specific-option</a>
Description	Commands in this context configure the Nokia Vendor-Specific Option (VSO) of the DHCP packet.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**client-mac-address** *boolean*

Synopsis	Send the MAC address in the VSO
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a> <a href="#">vendor-specific-option</a> <a href="#">client-mac-address</a> <i>boolean</i>
Tree	<a href="#">client-mac-address</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**pool-name** *boolean*

Synopsis	Send the pool name in the VSO
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">option-82</a> <a href="#">vendor-specific-option</a> <a href="#">pool-name</a> <i>boolean</i>
Tree	<a href="#">pool-name</a>

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**sap-id** *boolean*

Synopsis	Send SAP ID in the sub-option of the DHCP relay packet
Context	<b>configure</b> <b>service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 dhcp option-82 vendor-specific-option sap-id</b> <i>boolean</i>
Tree	<a href="#">sap-id</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**service-id** *boolean*

Synopsis	Send the service ID in the Vendor Specific Option
Context	<b>configure</b> <b>service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 dhcp option-82 vendor-specific-option service-id</b> <i>boolean</i>
Tree	<a href="#">service-id</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**string** *string*

Synopsis	User-defined ASCII string for the VSO
Context	<b>configure</b> <b>service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 dhcp option-82 vendor-specific-option string</b> <i>string</i>
Tree	<a href="#">string</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**system-id** *boolean*

Synopsis	Send the system ID in the VSO
Context	<b>configure</b> <b>service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 dhcp option-82 vendor-specific-option system-id</b> <i>boolean</i>
Tree	<b>system-id</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**proxy-server**

Synopsis	Enter the <b>proxy-server</b> context
Context	<b>configure</b> <b>service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 dhcp proxy-server</b>
Tree	<b>proxy-server</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**admin-state** *keyword*

Synopsis	Administrative state of the DHCP proxy server
Context	<b>configure</b> <b>service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 dhcp proxy-server admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**emulated-server** *string*

Synopsis	IP address used as DHCP server address in SAP context
Context	<b>configure</b> <b>service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 dhcp proxy-server emulated-server</b> <i>string</i>
Tree	<b>emulated-server</b>
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## lease-time

Synopsis Enter the **lease-time** context

Context **configure service ies** *string* *subscriber-interface* *string* *group-interface* *string* *ipv4 dhcp proxy-server lease-time*

Tree [lease-time](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## radius-override *boolean*

Synopsis Use lease time information provided by RADIUS server

Context **configure service ies** *string* *subscriber-interface* *string* *group-interface* *string* *ipv4 dhcp proxy-server lease-time radius-override* *boolean*

Tree [radius-override](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## value *number*

Synopsis DHCP lease time

Context **configure service ies** *string* *subscriber-interface* *string* *group-interface* *string* *ipv4 dhcp proxy-server lease-time value* *number*

Tree [value](#)

Range 300 to 315446399

Units seconds

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## python-policy *reference*

Synopsis Python policy name

Context **configure service ies** *string* *subscriber-interface* *string* *group-interface* *string* *ipv4 dhcp python-policy* *reference*

---

Tree	<a href="#">python-policy</a>
Description	This command associates a Python policy name with the interface.
Reference	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## relay-proxy

Synopsis	Enable the <b>relay-proxy</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">relay-proxy</a>
Tree	<a href="#">relay-proxy</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## release-update-src-ip *boolean*

Synopsis	Update the source IP address of a DHCP RELEASE message
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">relay-proxy</a> <a href="#">release-update-src-ip</a> <i>boolean</i>
Tree	<a href="#">release-update-src-ip</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## siaddr-override *string*

Synopsis	DHCP server IP address for address hiding function
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">relay-proxy</a> <a href="#">siaddr-override</a> <i>string</i>
Tree	<a href="#">siaddr-override</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**release-include-gi-address** *boolean*

Synopsis	Include gateway IP address in DHCP Release messages
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>dhcp</b> <b>release-include-gi-address</b> <i>boolean</i>
Tree	<b>release-include-gi-address</b>
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**server** *string*

Synopsis	IP addresses for DHCP server requests
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>dhcp</b> <b>server</b> <i>string</i>
Tree	<b>server</b>
Description	This command configures a list of servers that this interface forwards requests to.  The operator can enter the list of servers as either IP addresses or fully qualified domain names. The operator must specify at least one server specified for DHCP relay to work. If there are multiple servers, the system forwards the request to all the servers in the list.
Max. Instances	8
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**src-ip-addr** *keyword*

Synopsis	Type of source address to use for DHCP relay
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>dhcp</b> <b>src-ip-addr</b> <i>keyword</i>
Tree	<b>src-ip-addr</b>
Options	auto, gi-address
Default	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**trusted boolean**

Synopsis	Relay untrusted packets
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv4 dhcp</a> <a href="#">trusted</a> <i>boolean</i>
Tree	<a href="#">trusted</a>
Description	<p>When configured to <b>true</b>, the router enables the trusted mode on the interface. When enabled, the relay agent changes the existing GI address (of the request) to the ingress interface, and forwards the request.</p> <p>A DHCP request that contains a GI address of 0.0.0.0 and an Option 82 field in the packet is discarded unless it arrives on a trusted circuit.</p> <p>This behavior only applies if the Relay Agent Information Option action is to keep the existing information. When the Option 82 field is replaced by the relay agent, the original Option 82 information is lost, and there is no reason to enable the trusted option.</p>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**user-db reference****WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local user database for authentication
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv4 dhcp</a> <a href="#">user-db</a> <i>reference</i>
Tree	<a href="#">user-db</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">local-user-db</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**icmp**

Synopsis	Enter the <b>icmp</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">icmp</a>
Tree	<a href="#">icmp</a>
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **mask-reply** *boolean*

Synopsis Allow responses to ICMP mask requests on the interface

Context **configure** **service ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipv4 icmp mask-reply** *boolean*

Tree [mask-reply](#)

Default true

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **param-problem**

Synopsis Enter the **param-problem** context

Context **configure** **service ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipv4 icmp param-problem**

Tree [param-problem](#)

Description Commands in this context specify the settings for ICMP Parameter Problem messages generated by the interface.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis Administrative state of sent Parameter Problem messages

Context **configure** **service ies** *string* **subscriber-interface** *string* **group-interface** *string* **ipv4 icmp param-problem admin-state** *keyword*

Tree [admin-state](#)

Options enable, disable

Default enable

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**number** *number*

Synopsis	Maximum number of Parameter Problem messages to send
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>icmp</b> <b>param-problem</b> <b>number</b> <i>number</i>
Tree	<b>number</b>
Range	10 to 1000
Default	100
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**seconds** *number*

Synopsis	Time used to limit number of Parameter Problem messages
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>icmp</b> <b>param-problem</b> <b>seconds</b> <i>number</i>
Tree	<b>seconds</b>
Range	1 to 60
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**redirects**

Synopsis	Enter the <b>redirects</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>icmp</b> <b>redirects</b>
Tree	<b>redirects</b>
Description	<p>Commands in this context configure the settings for ICMP redirect messages generated by the interface.</p> <p>The system sends ICMP redirect messages to alert the sending node that a more optimal route is available on another router on the same subnetwork.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**admin-state** *keyword*

Synopsis	Administrative state of sending ICMP redirect messages
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>icmp</b> <b>redirects</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**number** *number*

Synopsis	Maximum number of ICMP redirect messages to send
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>icmp</b> <b>redirects</b> <b>number</b> <i>number</i>
Tree	<b>number</b>
Range	10 to 1000
Default	100
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**seconds** *number*

Synopsis	Time used to limit the number of ICMP redirect messages
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>icmp</b> <b>redirects</b> <b>seconds</b> <i>number</i>
Tree	<b>seconds</b>
Range	1 to 60
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**ttl-expired**

Synopsis	Enter the <b>ttl-expired</b> context
----------	--------------------------------------

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 icmp ttl-expired</b>
Tree	<b>ttl-expired</b>
Description	Commands in this context configure the settings for ICMP TTL expired messages generated by the interface.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of sending TTL expired messages
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 icmp ttl-expired admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **number** *number*

Synopsis	Maximum number of TTL expired messages to send
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 icmp ttl-expired number</b> <i>number</i>
Tree	<b>number</b>
Range	10 to 2000
Default	100
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **seconds** *number*

Synopsis	Time used to limit the number of TTL expired messages
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 icmp ttl-expired seconds</b> <i>number</i>
Tree	<b>seconds</b>

Range	1 to 60
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **use-matching-address** *boolean*

Synopsis	Use the subscriber interface address as source address
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 icmp ttl-expired use-matching-address</b> <i>boolean</i>
Tree	<a href="#">use-matching-address</a>
Description	<p>When configured to <b>true</b>, the system uses a matching subscriber interface address as the source address of the ICMP TTL expired message.</p> <p>For matching to occur, the source address of the offending packet must be in the same subnet of the subscriber interface address.</p> <p>When configured to <b>false</b>, the system uses the first configured address.</p>
Default	false
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **unreachables**

Synopsis	Enter the <b>unreachables</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 icmp unreachables</b>
Tree	<a href="#">unreachables</a>
Description	Commands in this context specify the settings for ICMP host and network destination unreachable messages generated by the interface.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of sending unreachable messages
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4 icmp unreachables admin-state</b> <i>keyword</i>

Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **number** *number*

Synopsis	Maximum number of unreachable messages to send
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv4 icmp unreachable</a> <i>number</i> <i>number</i>
Tree	<a href="#">number</a>
Range	10 to 2000
Default	100
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **seconds** *number*

Synopsis	Time to limit the number of ICMP unreachable messages
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv4 icmp unreachable</a> <i>seconds</i> <i>number</i>
Tree	<a href="#">seconds</a>
Range	1 to 60
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ignore-df-bit** *boolean*

Synopsis	Ignore DF bit in the IPv4 header when fragmenting
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv4 ignore-df-bit</a> <i>boolean</i>
Tree	<a href="#">ignore-df-bit</a>

Description	When configured to <b>true</b> , fragmentation is applied according to the applicable egress MTU instead of the DF bit for frames egressing the WLAN-GW group. The DF bit is reset for frames that are fragmented.  When configured to <b>false</b> , the router fragments a packet larger than the MTU if the DF bit is set to 0 and drops the packet if the DF bit is set to 1.
Default	false
Introduced	20.5.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## neighbor-discovery

Synopsis	Enter the <b>neighbor-discovery</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>neighbor-discovery</b>
Tree	<b>neighbor-discovery</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## local-proxy-arp *boolean*

Synopsis	Enable local proxy ARP on interface
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>neighbor-discovery</b> <b>local-proxy-arp</b> <i>boolean</i>
Tree	<b>local-proxy-arp</b>
Description	When configured to <b>true</b> , the router enables local proxy ARP on the interface.  When configured to <b>false</b> , the router does not respond to ARP requests for addresses on the same subnet.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## populate *boolean*

Synopsis	Allow population of static and dynamic hosts
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv4</b> <b>neighbor-discovery</b> <b>populate</b> <i>boolean</i>
Tree	<b>populate</b>
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **proxy-arp-policy** *reference*

Synopsis Proxy ARP policy name

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [ipv4 neighbor-discovery proxy-arp-policy](#) *reference*

Tree [proxy-arp-policy](#)

Reference **configure** [policy-options policy-statement](#) *string*

Max. Instances 5

Notes This element is ordered by the user.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **remote-proxy-arp** *boolean*

Synopsis Enable remote proxy ARP on the interface

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [ipv4 neighbor-discovery remote-proxy-arp](#) *boolean*

Tree [remote-proxy-arp](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **timeout** *number*

Synopsis Timeout for an ARP entry learned on the interface

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [ipv4 neighbor-discovery timeout](#) *number*

Tree [timeout](#)

Range 0 to 65535

Units seconds

Default 14400

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **qos-route-lookup** *keyword*

Synopsis	QoS route lookup
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv4</a> <b>qos-route-lookup</b> <i>keyword</i>
Tree	<a href="#">qos-route-lookup</a>
Options	destination
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **urpf-check**

Synopsis	Enable the <b>urpf-check</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv4</a> <b>urpf-check</b>
Tree	<a href="#">urpf-check</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **mode** *keyword*

Synopsis	Unicast RPF check mode
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv4</a> <b>urpf-check</b> <i>mode</i> <i>keyword</i>
Tree	<a href="#">mode</a>
Options	strict, loose, strict-no-ecmp
Default	strict
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ipv6**

Synopsis	Enable the <b>ipv6</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv6</a>
Tree	<a href="#">ipv6</a>
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **allow-multiple-wan-addresses** *boolean*

Synopsis Allow multiple WAN addresses

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [ipv6 allow-multiple-wan-addresses](#) *boolean*

Tree [allow-multiple-wan-addresses](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **auto-reply**

Synopsis Enter the **auto-reply** context

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [ipv6 auto-reply](#)

Tree [auto-reply](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **neighbor-solicitation** *boolean*

Synopsis Enable auto-reply for NS

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [ipv6 auto-reply neighbor-solicitation](#) *boolean*

Tree [neighbor-solicitation](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **router-solicitation** *boolean*

Synopsis Enable auto-reply for RS

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [ipv6 auto-reply router-solicitation](#) *boolean*

Tree [router-solicitation](#)

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## dhcp6

Synopsis	Enter the <b>dhcp6</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv6 dhcp6</a>
Tree	<a href="#">dhcp6</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## allow-client-id-change *boolean*

Synopsis	Allow changes to the client ID
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv6 dhcp6</a> <a href="#">allow-client-id-change</a> <i>boolean</i>
Tree	<a href="#">allow-client-id-change</a>
Default	false
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## filter *reference*

Synopsis	DHCPv6 filter
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv6 dhcp6</a> <a href="#">filter</a> <i>reference</i>
Tree	<a href="#">filter</a>
Reference	<b>configure</b> <a href="#">filter dhcp6-filter</a> <i>number</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## option

Synopsis	Enter the <b>option</b> context
----------	---------------------------------

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6 option</b>
Tree	<b>option</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## interface-id

Synopsis	Enter the <b>interface-id</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6 option interface-id</b>
Tree	<b>interface-id</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ascii-tuple

Synopsis	Use ASCII-encoded concatenated tuple
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6 option interface-id ascii-tuple</b>
Tree	<b>ascii-tuple</b>
Notes	The following elements are part of a choice: <b>ascii-tuple</b> , <b>if-index</b> , <b>sap-id</b> , or <b>string</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## if-index

Synopsis	Use interface index in the DHCPv6 relay packet
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6 option interface-id if-index</b>
Tree	<b>if-index</b>
Notes	The following elements are part of a choice: <b>ascii-tuple</b> , <b>if-index</b> , <b>sap-id</b> , or <b>string</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**sap-id**

Synopsis	Use SAP ID in interface ID option in relay packet
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">ipv6 dhcp6 option interface-id</a> <a href="#">sap-id</a>
Tree	<a href="#">sap-id</a>
Notes	The following elements are part of a choice: <b>ascii-tuple</b> , <b>if-index</b> , <b>sap-id</b> , or <b>string</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**string** *string*

Synopsis	String for interface ID option in DHCPv6 relay packet
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">ipv6 dhcp6 option interface-id</a> <a href="#">string</a> <a href="#">string</a>
Tree	<a href="#">string</a>
String Length	1 to 80
Notes	The following elements are part of a choice: <b>ascii-tuple</b> , <b>if-index</b> , <b>sap-id</b> , or <b>string</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**remote-id** *boolean*

Synopsis	Send remote ID option in the DHCPv6 relay packet
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">ipv6 dhcp6 option remote-id</a> <a href="#">boolean</a>
Tree	<a href="#">remote-id</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**override-slaac** *boolean*

Synopsis	Allow WAN address offered by DHCP to overwrite the WAN address acquired from SLAAC
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">ipv6 dhcp6 override-slaac</a> <a href="#">boolean</a>

---

Tree	<a href="#">override-slaac</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## pd-managed-route

Synopsis	Enable the <b>pd-managed-route</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">dhcp6</a> <a href="#">pd-managed-route</a>
Tree	<a href="#">pd-managed-route</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## next-hop *keyword*

Synopsis	Next hop type
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">dhcp6</a> <a href="#">pd-managed-route</a> <a href="#">next-hop</a> <i>keyword</i>
Tree	<a href="#">next-hop</a>
Options	ipv4, ipv6
Default	ipv6
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## proxy-server

Synopsis	Enter the <b>proxy-server</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">dhcp6</a> <a href="#">proxy-server</a>
Tree	<a href="#">proxy-server</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**admin-state** *keyword*

Synopsis	Administrative state of the DHCPv6 proxy server
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>dhcp6</b> <b>proxy-server</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**client-applications**

Synopsis	Enter the <b>client-applications</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>dhcp6</b> <b>proxy-server</b> <b>client-applications</b>
Tree	<b>client-applications</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**dhcp** *boolean*

Synopsis	Enable IPoE clients to use DHCP relay or proxy server
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>dhcp6</b> <b>proxy-server</b> <b>client-applications</b> <b>dhcp</b> <i>boolean</i>
Tree	<b>dhcp</b>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**ppp** *boolean*

Synopsis	Allow PPPoE clients to use DHCP relay functionality
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>dhcp6</b> <b>proxy-server</b> <b>client-applications</b> <b>ppp</b> <i>boolean</i>
Tree	<b>ppp</b>
Default	false

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **preferred-lifetime** (*number* | *keyword*)

Synopsis	Time for prefix to remain preferred on this interface
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6 proxy-server preferred-lifetime</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">preferred-lifetime</a>
Range	300 to 4294967294
Units	seconds
Options	infinite
Default	3600
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **rebind-timer** *number*

Synopsis	Rebind timer (T2) for this interface
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6 proxy-server rebind-timer</b> <i>number</i>
Tree	<a href="#">rebind-timer</a>
Range	0 to 1209600
Units	seconds
Default	2880
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **renew-timer** *number*

Synopsis	Renew timer (T1)
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6 proxy-server renew-timer</b> <i>number</i>
Tree	<a href="#">renew-timer</a>
Range	0 to 604800
Units	seconds

Default	1800
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### server-id

Synopsis	Enter the <b>server-id</b> context
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>group-interface</i> <i>string</i> <i>ipv6 dhcp6 proxy-server server-id</i>
Tree	<a href="#">server-id</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### duid-en-ascii *string*

Synopsis	Vendor-assigned ID based on Enterprise Number (DUID-EN)
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>group-interface</i> <i>string</i> <i>ipv6 dhcp6 proxy-server server-id duid-en-ascii</i> <i>string</i>
Tree	<a href="#">duid-en-ascii</a>
String Length	1 to 58
Notes	The following elements are part of a choice: <b>duid-en-ascii</b> , <b>duid-en-hex</b> , or <b>duid-ll</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### duid-en-hex *string*

Synopsis	DUID system ID in hexadecimal format
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>group-interface</i> <i>string</i> <i>ipv6 dhcp6 proxy-server server-id duid-en-hex</i> <i>string</i>
Tree	<a href="#">duid-en-hex</a>
String Length	1 to 118
Notes	The following elements are part of a choice: <b>duid-en-ascii</b> , <b>duid-en-hex</b> , or <b>duid-ll</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## duid-ll

Synopsis	Use link-layer address (DUID-LL) as DUID
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv6 dhcp6 proxy-server server-id</a> <a href="#">duid-ll</a>
Tree	<a href="#">duid-ll</a>
Notes	The following elements are part of a choice: <b>duid-en-ascii</b> , <b>duid-en-hex</b> , or <b>duid-ll</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## valid-lifetime (*number* | *keyword*)

Synopsis	Time for prefix to remain valid on this interface
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv6 dhcp6 proxy-server</a> <a href="#">valid-lifetime</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">valid-lifetime</a>
Range	300 to 4294967294
Units	seconds
Options	infinite
Default	86400
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## python-policy *reference*

Synopsis	Python policy
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv6 dhcp6 python-policy</a> <i>reference</i>
Tree	<a href="#">python-policy</a>
Reference	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## relay

Synopsis	Enter the <b>relay</b> context
----------	--------------------------------

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6 relay</b>
Tree	<b>relay</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of DHCPv6 Relay
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6 relay admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **advertise-selection**

Synopsis	Enter the <b>advertise-selection</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6 relay advertise-selection</b>
Tree	<b>advertise-selection</b>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **client-mac**

Synopsis	Enter the <b>client-mac</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6 relay advertise-selection client-mac</b>
Tree	<b>client-mac</b>
Notes	The following elements are part of a choice: <b>client-mac</b> or <b>server</b> .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**mac-address** *keyword*

Synopsis	Designated client MAC addresses for Advertise selection
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>dhcp6</b> <b>relay</b> <b>advertise-selection</b> <b>client-mac</b> <b>mac-address</b> <i>keyword</i>
Tree	<a href="#">mac-address</a>
Options	odd, even
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**preference-option**

Synopsis	Enter the <b>preference-option</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>dhcp6</b> <b>relay</b> <b>advertise-selection</b> <b>client-mac</b> <b>preference-option</b>
Tree	<a href="#">preference-option</a>
Description	Commands in this context configure the DHCPv6 preference option that is inserted in the DHCPv6 Advertise message.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**value** *number*

Synopsis	Preference option value for DHCPv6 Advertise messages
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>dhcp6</b> <b>relay</b> <b>advertise-selection</b> <b>client-mac</b> <b>preference-option</b> <b>value</b> <i>number</i>
Tree	<a href="#">value</a>
Range	0 to 255
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**solicit-delay** *number*

Synopsis	Delay before sending DHCPv6 Solicit messages
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>dhcp6</b> <b>relay</b> <b>advertise-selection</b> <b>client-mac</b> <b>solicit-delay</b> <i>number</i>
Tree	<a href="#">solicit-delay</a>

Description	This command configures the time to delay DHCPv6 Solicit messages sent from the designated client MAC addresses.
Range	1 to 100
Units	deciseconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## preference-option

Synopsis	Enter the <b>preference-option</b> context
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>group-interface</i> <i>string</i> <i>ipv6 dhcp6 relay advertise-selection preference-option</i>
Tree	<a href="#">preference-option</a>
Description	Commands in this context configure the DHCPv6 preference option that is inserted in the DHCPv6 Advertise message.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## value *number*

Synopsis	Preference option value for DHCPv6 Advertise messages
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>group-interface</i> <i>string</i> <i>ipv6 dhcp6 relay advertise-selection preference-option value</i> <i>number</i>
Tree	<a href="#">value</a>
Range	0 to 255
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## server [*ipv6-address*] *string*

Synopsis	Enter the <b>server</b> list instance
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>group-interface</i> <i>string</i> <i>ipv6 dhcp6 relay advertise-selection server</i> <i>string</i>
Tree	<a href="#">server</a>
Max. Instances	8
Notes	The following elements are part of a choice: <b>client-mac</b> or <b>server</b> .

Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### [**ipv6-address**] *string*

Synopsis	IP address of the DHCPv6 server
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6</b> <b>relay</b> <b>advertise-selection</b> <b>server</b> <i>string</i>
Tree	<b>server</b>
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **preference-option**

Synopsis	Enter the <b>preference-option</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6</b> <b>relay</b> <b>advertise-selection</b> <b>server</b> <i>string</i> <b>preference-option</b>
Tree	<b>preference-option</b>
Description	Commands in this context configure the DHCPv6 preference option that is inserted in the DHCPv6 Advertise message.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **value** *number*

Synopsis	Preference option value for DHCPv6 Advertise messages
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6</b> <b>relay</b> <b>advertise-selection</b> <b>server</b> <i>string</i> <b>preference-option</b> <b>value</b> <i>number</i>
Tree	<b>value</b>
Range	0 to 255
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**solicit-delay** *number*

Synopsis	Delay before sending DHCPv6 Solicit messages
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6 relay advertise-selection server</b> <i>string</i> <b>solicit-delay</b> <i>number</i>
Tree	<b>solicit-delay</b>
Description	This command configures the time to delay DHCPv6 Solicit messages sent to the server.
Range	1 to 100
Units	deciseconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**solicit-delay** *number*

Synopsis	Delay before sending DHCPv6 Solicit messages
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6 relay advertise-selection</b> <b>solicit-delay</b> <i>number</i>
Tree	<b>solicit-delay</b>
Description	This command configures the time to delay DHCPv6 Solicit messages. The delay is applied to DHCPv6 Solicit messages for which no overriding value is configured in the <b>server</b> instance or the <b>client-mac</b> context.
Range	1 to 100
Units	deciseconds
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**client-applications**

Synopsis	Enter the <b>client-applications</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6 dhcp6 relay</b> <b>client-applications</b>
Tree	<b>client-applications</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**dhcp boolean**

Synopsis	Enable IPoE clients to use DHCP relay or proxy server
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>dhcp6</b> <b>relay</b> <b>client-applications</b> <b>dhcp</b> <b>boolean</b>
Tree	<b>dhcp</b>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**ppp boolean**

Synopsis	Allow PPPoE clients to use DHCP relay functionality
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>dhcp6</b> <b>relay</b> <b>client-applications</b> <b>ppp</b> <b>boolean</b>
Tree	<b>ppp</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**description string**

Synopsis	Text description
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>dhcp6</b> <b>relay</b> <b>description</b> <i>string</i>
Tree	<b>description</b>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**lease-split**

Synopsis	Enter the <b>lease-split</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>dhcp6</b> <b>relay</b> <b>lease-split</b>
Tree	<b>lease-split</b>
Description	Commands in this context configure DHCPv6 lease split.

DHCPv6 lease split is active when administratively enabled and for all IA\_NA and IA\_PD options in the transaction, the configured lease split valid lifetime (short lease time) is less than or equal to one of the following:

- the renew time T1 committed by the server (long renew time)
- half of the preferred lifetime committed by the server when T1 committed by the server equals zero

Introduced 21.2.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis Administrative state of DHCPv6 lease split

Context **configure** *service ies string subscriber-interface string group-interface string ipv6 dhcp6 relay lease-split admin-state keyword*

Tree [admin-state](#)

Options enable, disable

Default disable

Introduced 21.2.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **valid-lifetime** *number*

Synopsis DHCPv6 lease split valid lifetime (short lease time)

Context **configure** *service ies string subscriber-interface string group-interface string ipv6 dhcp6 relay lease-split valid-lifetime number*

Tree [valid-lifetime](#)

Range 300 to 315446399

Units seconds

Default 3600

Introduced 21.2.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **link-address** *string*

Synopsis Link address for the DHCPv6 relay messages

Context **configure** *service ies string subscriber-interface string group-interface string ipv6 dhcp6 relay link-address string*

Tree	<a href="#">link-address</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **server string**

Synopsis	DHCP6 servers to which the DHCP6 requests are forwarded
Context	<b>configure</b> <a href="#">service ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">ipv6 dhcp6 relay server</a> <a href="#">string</a>
Tree	<a href="#">server</a>
Max. Instances	8
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **source-address string**

Synopsis	Source IPv6 address for the DHCPv6 relay messages
Context	<b>configure</b> <a href="#">service ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">ipv6 dhcp6 relay source-address</a> <a href="#">string</a>
Tree	<a href="#">source-address</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **snooping**

Synopsis	Enter the <b>snooping</b> context
Context	<b>configure</b> <a href="#">service ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">ipv6 dhcp6 snooping</a>
Tree	<a href="#">snooping</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

**admin-state** *keyword*

Synopsis	Administrative state of DHCPv6 snooping
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv6 dhcp6 snooping</a> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

**user-db** *reference*

Synopsis	Local user database for authentication
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv6 dhcp6 user-db</a> <i>reference</i>
Tree	<a href="#">user-db</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">local-user-db</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**user-ident** *keyword*

Synopsis	DHCP6 user identification for this interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv6 dhcp6 user-ident</a> <i>keyword</i>
Tree	<a href="#">user-ident</a>
Options	mac, mac-interface-id
Default	mac
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**ipoe-bridged-mode** *boolean*

Synopsis	Enable IPv6 IPoE bridged mode
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv6 ipoe-bridged-mode</a> <i>boolean</i>

---

Tree	<a href="#">ipoe-bridged-mode</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## neighbor-discovery

Synopsis	Enter the <b>neighbor-discovery</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">neighbor-discovery</a>
Tree	<a href="#">neighbor-discovery</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## dad-snooping *boolean*

Synopsis	Populate table via duplicate address detection packets
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">neighbor-discovery</a> <a href="#">dad-snooping</a> <i>boolean</i>
Tree	<a href="#">dad-snooping</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## neighbor-limit *number*

Synopsis	Maximum neighbor entries learned per SLAAC host
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">neighbor-discovery</a> <a href="#">neighbor-limit</a> <i>number</i>
Tree	<a href="#">neighbor-limit</a>
Range	1 to 8
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**qos-route-lookup** *keyword*

Synopsis	QoS route lookup
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">qos-route-lookup</a> <i>keyword</i>
Tree	<a href="#">qos-route-lookup</a>
Options	destination
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

**router-advertisements**

Synopsis	Enter the <b>router-advertisements</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">router-advertisements</a>
Tree	<a href="#">router-advertisements</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**admin-state** *keyword*

Synopsis	Administrative state of router advertisements
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">router-advertisements</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**force-mcast** *keyword*

Synopsis	Protocol with forced multicast
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">router-advertisements</a> <a href="#">force-mcast</a> <i>keyword</i>
Tree	<a href="#">force-mcast</a>
Options	ip, ip-mac

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **max-advertisement-interval** *number*

Synopsis	Maximum advertisement interval
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">router-advertisements</a> <b>max-advertisement-interval</b> <i>number</i>
Tree	<a href="#">max-advertisement-interval</a>
Range	900 to 1800
Units	seconds
Default	1800
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **min-advertisement-interval** *number*

Synopsis	Minimum advertisement interval
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">router-advertisements</a> <b>min-advertisement-interval</b> <i>number</i>
Tree	<a href="#">min-advertisement-interval</a>
Range	900 to 1350
Units	seconds
Default	900
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **options**

Synopsis	Enter the <b>options</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">router-advertisements</a> <b>options</b>
Tree	<a href="#">options</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**current-hop-limit** *number*

Synopsis	Hop limit to be advertised
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">router-advertisements</a> <a href="#">options</a> <b>current-hop-limit</b> <i>number</i>
Tree	<a href="#">current-hop-limit</a>
Range	0 to 255
Default	64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**dns**

Synopsis	Enter the <b>dns</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">router-advertisements</a> <a href="#">options</a> <b>dns</b>
Tree	<a href="#">dns</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**include-rdnss** *boolean*

Synopsis	Include the RDNSS server option 25
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">router-advertisements</a> <a href="#">options</a> <a href="#">dns</a> <b>include-rdnss</b> <i>boolean</i>
Tree	<a href="#">include-rdnss</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**rdnss-lifetime** (*number* | *keyword*)

Synopsis	Maximum time for the RDNSS address to remain valid
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">ipv6</a> <a href="#">router-advertisements</a> <a href="#">options</a> <a href="#">dns</a> <b>rdnss-lifetime</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">rdnss-lifetime</a>

Range	900 to 3600
Units	seconds
Options	infinite
Default	3600
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **managed-configuration** *boolean*

Synopsis	Managed address configuration flag
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>router-advertisements</b> <b>options</b> <b>managed-configuration</b> <i>boolean</i>
Tree	<a href="#">managed-configuration</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **mtu** (*number* | *keyword*)

Synopsis	Advertised MTU value
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>router-advertisements</b> <b>options</b> <b>mtu</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">mtu</a>
Range	1280 to 9212
Units	bytes
Options	not-included
Default	not-included
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **other-stateful-configuration** *boolean*

Synopsis	Other stateful configuration flag
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>router-advertisements</b> <b>options</b> <b>other-stateful-configuration</b> <i>boolean</i>
Tree	<a href="#">other-stateful-configuration</a>

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **reachable-time** *number*

Synopsis	Reachable time for advertisements
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>router-advertisements</b> <b>options</b> <b>reachable-time</b> <i>number</i>
Tree	<a href="#">reachable-time</a>
Range	0 to 3600000
Units	milliseconds
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **retransmit-timer** *number*

Synopsis	Retransmit time in router advertisements from interface
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>router-advertisements</b> <b>options</b> <b>retransmit-timer</b> <i>number</i>
Tree	<a href="#">retransmit-timer</a>
Range	0 to 1800000
Units	seconds
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **router-lifetime** (*number* | *keyword*)

Synopsis	Router lifetime
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>router-advertisements</b> <b>options</b> <b>router-lifetime</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">router-lifetime</a>
Range	2700 to 9000
Units	seconds

Options	no-default-router
Default	4500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## prefix-options

Synopsis	Enter the <b>prefix-options</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>router-advertisements</b> <b>prefix-options</b>
Tree	<b>prefix-options</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## autonomous *boolean*

Synopsis	Value of the autonomous flag
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>router-advertisements</b> <b>prefix-options</b> <b>autonomous</b> <i>boolean</i>
Tree	<b>autonomous</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## on-link *boolean*

Synopsis	Assign the prefix to an interface on the specified link
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>router-advertisements</b> <b>prefix-options</b> <b>on-link</b> <i>boolean</i>
Tree	<b>on-link</b>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**preferred-lifetime** (*number* | *keyword*)

Synopsis	Time for a prefix to remain preferred
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>router-advertisements</b> <b>prefix-options</b> <b>preferred-lifetime</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">preferred-lifetime</a>
Range	0 to 4294967294
Units	seconds
Options	infinite
Default	3600
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**valid-lifetime** (*number* | *keyword*)

Synopsis	Time for a prefix to remain valid
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>router-advertisements</b> <b>prefix-options</b> <b>valid-lifetime</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">valid-lifetime</a>
Range	0 to 4294967294
Units	seconds
Options	infinite
Default	86400
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**router-solicit**

Synopsis	Enter the <b>router-solicit</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>router-solicit</b>
Tree	<a href="#">router-solicit</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**admin-state** *keyword*

Synopsis	Administrative state of router-solicit authentication
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>router-solicit</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**inactivity-timer** (*number* | *keyword*)

Synopsis	Time before an inactive host is removed
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>router-solicit</b> <b>inactivity-timer</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>inactivity-timer</b>
Range	1 to 31536000
Units	seconds
Options	infinite
Default	300
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**min-auth-interval** *number*

Synopsis	Minimum time between successive authentication attempts
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>ipv6</b> <b>router-solicit</b> <b>min-auth-interval</b> <i>number</i>
Tree	<b>min-auth-interval</b>
Range	1 to 360000
Units	seconds
Default	300
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**user-db** *reference*

Synopsis	Local user database used for authentication
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv6 router-solicit</a> <a href="#">user-db</a> <i>reference</i>
Tree	<a href="#">user-db</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt local-user-db</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**urpf-check**

Synopsis	Enable the <b>urpf-check</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv6 urpf-check</a>
Tree	<a href="#">urpf-check</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**mode** *keyword*

Synopsis	Unicast RPF check mode
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">ipv6 urpf-check mode</a> <i>keyword</i>
Tree	<a href="#">mode</a>
Options	strict, loose, strict-no-ecmp
Default	strict
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**local-address-assignment**

Synopsis	Enter the <b>local-address-assignment</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">local-address-assignment</a>
Tree	<a href="#">local-address-assignment</a>
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis Administrative state of Local Address Assignment

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [local-address-assignment](#) **admin-state** *keyword*

Tree [admin-state](#)

Options enable, disable

Default disable

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ipv4**

Synopsis Enter the **ipv4** context

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [local-address-assignment](#) **ipv4**

Tree [ipv4](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **client-applications**

Synopsis Enter the **client-applications** context

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [local-address-assignment](#) [ipv4](#) **client-applications**

Tree [client-applications](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ipoe** *boolean*

Synopsis Request local addresses for non-DHCP/managed IPoE hosts

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [local-address-assignment](#) [ipv4](#) [client-applications](#) **ipoe** *boolean*

Tree [ipoe](#)

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**ppp boolean**

Synopsis	Request local addresses for PPP IPCP hosts
Context	<b>configure</b> <a href="#">service ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">local-address-assignment</a> <a href="#">ipv4</a> <a href="#">client-applications</a> <a href="#">ppp</a> <a href="#">boolean</a>
Tree	<a href="#">ppp</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**default-pool string**

Synopsis	Default pools
Context	<b>configure</b> <a href="#">service ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">local-address-assignment</a> <a href="#">ipv4</a> <a href="#">default-pool</a> <a href="#">string</a>
Tree	<a href="#">default-pool</a>
String Length	1 to 32
Max. Instances	2
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**server reference**

Synopsis	Local DHCPv4 server for local pools management
Context	<b>configure</b> <a href="#">service ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">local-address-assignment</a> <a href="#">ipv4</a> <a href="#">server</a> <a href="#">reference</a>
Tree	<a href="#">server</a>
Reference	<b>configure</b> <a href="#">router</a> <a href="#">string</a> <a href="#">dhcp-server</a> <a href="#">dhcpv4</a> <a href="#">string</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**ipv6**

Synopsis	Enter the <b>ipv6</b> context
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>local-address-assignment ipv6</i>
Tree	<a href="#">ipv6</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**client-applications**

Synopsis	Enter the <b>client-applications</b> context
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>local-address-assignment ipv6 client-applications</i>
Tree	<a href="#">client-applications</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**ipoe-slaac** *boolean*

Synopsis	Request local addresses for IPoE SLAAC hosts
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>local-address-assignment ipv6 client-applications ipoe-slaac</i> <i>boolean</i>
Tree	<a href="#">ipoe-slaac</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**ipoe-wan** *boolean*

Synopsis	Request local addresses for IPoE IA NA hosts
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>local-address-assignment ipv6 client-applications ipoe-wan</i> <i>boolean</i>
Tree	<a href="#">ipoe-wan</a>
Default	false
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ppp-slaac** *boolean*

Synopsis Request local addresses for PPP SLAAC hosts

Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [local-address-assignment](#) [ipv6](#) [client-applications](#) [ppp-slaac](#) *boolean*

Tree [ppp-slaac](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **server** *reference*

Synopsis Local DHCPv6 server for local pools management

Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [local-address-assignment](#) [ipv6](#) [server](#) *reference*

Tree [server](#)

Reference **configure** [router](#) *string* [dhcp-server](#) [dhcpv6](#) *string*

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **mac** *string*

Synopsis MAC address for the interface

Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [mac](#) *string*

Tree [mac](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **nasreq-auth-policy** *reference*

Synopsis Diameter NASREQ application policy to use for authentication

Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [nasreq-auth-policy](#) *reference*

Tree [nasreq-auth-policy](#)

Reference	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">diameter-nasreq-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **oper-up-while-empty** *boolean*

Synopsis	Enable this group interface without any active SAPs
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <b>oper-up-while-empty</b> <i>boolean</i>
Tree	<a href="#">oper-up-while-empty</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **pppoe**

Synopsis	Enter the <b>pppoe</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <b>pppoe</b>
Tree	<a href="#">pppoe</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of PPPoE
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <b>pppoe</b> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **anti-spoof** *keyword*

Synopsis	PPPoE anti-spoof filtering
----------	----------------------------

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>pppoe anti-spoof</b> <i>keyword</i>
Tree	<b>anti-spoof</b>
Options	mac-sid, mac-sid-ip
Default	mac-sid
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **description** *string*

Synopsis	Text description
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>pppoe description</b> <i>string</i>
Tree	<b>description</b>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **dhcp-client**

Synopsis	Enter the <b>dhcp-client</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>pppoe dhcp-client</b>
Tree	<b>dhcp-client</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **client-id** *keyword*

Synopsis	Type of information that DHCP option 61 contains
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>pppoe dhcp-client client-id</b> <i>keyword</i>
Tree	<b>client-id</b>
Options	mac-pppoe-session-id
Introduced	16.0.R7
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**policy reference**

Synopsis	PPPoE policy
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">pppoe</a> <a href="#">policy reference</a>
Tree	<a href="#">policy</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">ppp-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**python-policy reference**

Synopsis	Python policy used to modify PPPoE packets
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">pppoe</a> <a href="#">python-policy reference</a>
Tree	<a href="#">python-policy</a>
Reference	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**sap-session-limit number**

Synopsis	Maximum PPPoE sessions per SAP
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">pppoe</a> <a href="#">sap-session-limit</a> <i>number</i>
Tree	<a href="#">sap-session-limit</a>
Range	1 to 131071
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**session-limit number**

Synopsis	Maximum PPPoE sessions
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">pppoe</a> <a href="#">session-limit</a> <i>number</i>

Tree	<a href="#">session-limit</a>
Range	1 to 333823
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **user-db** *reference*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local user database for authentication
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">pppoe</a> <a href="#">user-db</a> <i>reference</i>
Tree	<a href="#">user-db</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">local-user-db</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **radius-auth-policy** *reference*

Synopsis	RADIUS authentication policy
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">radius-auth-policy</a> <i>reference</i>
Tree	<a href="#">radius-auth-policy</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">radius-authentication-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **redundant-interface** *reference*

Synopsis	Redundant interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">redundant-interface</a> <i>reference</i>
Tree	<a href="#">redundant-interface</a>

Reference	<b>configure service ies string redundant-interface string</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sap [sap-id] string**

Synopsis	Enter the <b>sap</b> list instance
Context	<b>configure service ies string subscriber-interface string group-interface string sap string</b>
Tree	<b>sap</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **[sap-id] string**

Synopsis	SAP ID
Context	<b>configure service ies string subscriber-interface string group-interface string sap string</b>
Tree	<b>sap</b>
String Length	1 to 45
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **accounting-policy reference**

Synopsis	Accounting policy
Context	<b>configure service ies string subscriber-interface string group-interface string sap string accounting-policy reference</b>
Tree	<b>accounting-policy</b>
Reference	<b>configure log accounting-policy number</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state keyword**

Synopsis	Administrative state of the SAP
----------	---------------------------------

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **anti-spoof** *keyword*

Synopsis	Type of anti-spoof filtering
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>anti-spoof</b> <i>keyword</i>
Tree	<b>anti-spoof</b>
Options	source-ip-addr, source-ip-and-mac-addr, next-hop-ip-and-mac-addr
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **app-profile** *reference*

Synopsis	Application profile name
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>app-profile</b> <i>reference</i>
Tree	<b>app-profile</b>
Reference	<b>configure application-assurance</b> <i>group</i> <i>number</i> <b>partition</b> <i>number</i> <b>policy</b> <b>app-profile</b> <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **calling-station-id** *string*

Synopsis	Calling station ID
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>calling-station-id</b> <i>string</i>
Tree	<b>calling-station-id</b>
String Length	1 to 64
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **collect-stats** *boolean*

Synopsis Collect accounting statistics

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [sap](#) *string* **collect-stats** *boolean*

Tree [collect-stats](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **cpu-protection**

Synopsis Enter the **cpu-protection** context

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [sap](#) *string* **cpu-protection**

Tree [cpu-protection](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s

### **eth-cfm-monitoring**

Synopsis Enable the **eth-cfm-monitoring** context

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [sap](#) *string* [cpu-protection](#) **eth-cfm-monitoring**

Tree [eth-cfm-monitoring](#)

Notes The following elements are part of a choice: **eth-cfm-monitoring**, **ip-src-monitoring**, or **mac-monitoring**.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s

### **aggregate**

Synopsis Apply rate limit to the sum of the per peer packet rates

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [sap](#) *string* [cpu-protection](#) [eth-cfm-monitoring](#) **aggregate**

Tree	<a href="#">aggregate</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s

## car

Synopsis	Ignore Ethernet CFM packets when enforcing overall rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">cpu-protection</a> <a href="#">eth-cfm-monitoring</a> <a href="#">car</a>
Tree	<a href="#">car</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s

## ip-src-monitoring

Synopsis	Enable IP source monitoring for CPU protection
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">cpu-protection</a> <a href="#">ip-src-monitoring</a>
Tree	<a href="#">ip-src-monitoring</a>
Notes	The following elements are part of a choice: <b>eth-cfm-monitoring</b> , <b>ip-src-monitoring</b> , or <b>mac-monitoring</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s

## mac-monitoring

Synopsis	Monitor MAC for CPU protection
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">cpu-protection</a> <a href="#">mac-monitoring</a>
Tree	<a href="#">mac-monitoring</a>
Notes	The following elements are part of a choice: <b>eth-cfm-monitoring</b> , <b>ip-src-monitoring</b> , or <b>mac-monitoring</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s

**policy-id** *reference*

Synopsis	CPM protection policy
Context	<b>configure</b> <i>service ies string subscriber-interface string group-interface string sap string cpu-protection policy-id reference</i>
Tree	<i>policy-id</i>
Reference	<b>configure</b> <i>system security cpu-protection policy number</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s

**default-host**

Synopsis	Enter the <b>default-host</b> context
Context	<b>configure</b> <i>service ies string subscriber-interface string group-interface string sap string default-host</i>
Tree	<i>default-host</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

**ipv4** [*address*] *reference prefix-length number*

Synopsis	Enter the <b>ipv4</b> list instance
Context	<b>configure</b> <i>service ies string subscriber-interface string group-interface string sap string default-host ipv4 reference prefix-length number</i>
Tree	<i>ipv4</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

**[address]** *reference*

Synopsis	IPv4 default host address
Context	<b>configure</b> <i>service ies string subscriber-interface string group-interface string sap string default-host ipv4 reference prefix-length number</i>
Tree	<i>ipv4</i>
Reference	<b>configure</b> <i>service ies string subscriber-interface string ipv4 address string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **prefix-length** *number*

Synopsis IPv4 address prefix length

Context **configure** *service ies string subscriber-interface string group-interface string sap string default-host ipv4 reference prefix-length number*

Tree [ipv4](#)

Range 0 to 32

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **next-hop** *string*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Next hop IP address

Context **configure** *service ies string subscriber-interface string group-interface string sap string default-host ipv4 reference prefix-length number next-hop string*

Tree [next-hop](#)

Notes This element is mandatory.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **ipv6** [*address*] *string prefix-length number*

Synopsis Enter the **ipv6** list instance

Context **configure** *service ies string subscriber-interface string group-interface string sap string default-host ipv6 string prefix-length number*

Tree [ipv6](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

**[address]** *string*

Synopsis	IPv6 default host address
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>default-host</b> <b>ipv6</b> <i>string</i> <b>prefix-length</b> <i>number</i>
Tree	<b>ipv6</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

**prefix-length** *number*

Synopsis	IPv6 address prefix length
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>default-host</b> <b>ipv6</b> <i>string</i> <b>prefix-length</b> <i>number</i>
Tree	<b>ipv6</b>
Range	0 to 128
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

**next-hop** *string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Next hop IP address
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>default-host</b> <b>ipv6</b> <i>string</i> <b>prefix-length</b> <i>number</i> <b>next-hop</b> <i>string</i>
Tree	<b>next-hop</b>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

**description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 160
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**dist-cpu-protection** *reference*

Synopsis	Distributed CPU protection policy for SAP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">dist-cpu-protection</a> <i>reference</i>
Tree	<a href="#">dist-cpu-protection</a>
Reference	<b>configure</b> <a href="#">system</a> <a href="#">security</a> <a href="#">dist-cpu-protection</a> <i>policy</i> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**egress**

Synopsis	Enter the <b>egress</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a>
Tree	<a href="#">egress</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**agg-rate**

Synopsis	Enter the <b>agg-rate</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">agg-rate</a>
Tree	<a href="#">agg-rate</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**adaptation-rule** *keyword*

Synopsis	Adaptation rule to compute the operational PIR value when an aggregate shaper is used
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress</b> <b>agg-rate</b> <b>adaptation-rule</b> <i>keyword</i>
Tree	<b>adaptation-rule</b>
Options	max, min, closest
Default	closest
Introduced	22.10.R1
Platforms	7750 SR-1, 7750 SR-s

**burst-limit** (*number* | *keyword*)

Synopsis	Shaping burst size when an aggregate shaper is used
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress</b> <b>agg-rate</b> <b>burst-limit</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>burst-limit</b>
Range	1 to 14000000
Units	bytes
Options	auto
Default	auto
Introduced	22.10.R1
Platforms	7750 SR-1, 7750 SR-s

**limit-unused-bandwidth** *boolean*

Synopsis	Enable aggregate rate overrun protection
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>egress</b> <b>agg-rate</b> <b>limit-unused-bandwidth</b> <i>boolean</i>
Tree	<b>limit-unused-bandwidth</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**queue-frame-based-accounting** *boolean*

Synopsis	Enable frame based accounting on policers and queues
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">agg-rate</a> <a href="#">queue-frame-based-accounting</a> <i>boolean</i>
Tree	<a href="#">queue-frame-based-accounting</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**rate** *number*

Synopsis	Enforced aggregate rate for all queues
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">agg-rate</a> <a href="#">rate</a> <i>number</i>
Tree	<a href="#">rate</a>
Range	1 to 6400000000
Units	kilobps
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**filter**

Synopsis	Enter the <b>filter</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">filter</a>
Tree	<a href="#">filter</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**ip** *reference*

Synopsis	IPv4 filter policy name
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">filter</a> <a href="#">ip</a> <i>reference</i>
Tree	<a href="#">ip</a>
Reference	<b>configure</b> <a href="#">filter</a> <a href="#">ip-filter</a> <i>string</i>

Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ipv6** *reference*

Synopsis IPv6 filter policy name  
 Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [sap](#) *string* [egress filter](#) [ipv6](#) *reference*  
 Tree [ipv6](#)

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **policy-name** *reference*

Synopsis	Policy ID to associate with SAP for mirrored service
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos sap-egress policy-name</a> <i>reference</i>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## scheduler-policy

Synopsis	Enter the <b>scheduler-policy</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a>
Tree	<a href="#">scheduler-policy</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## policy-name *reference*

Synopsis	Scheduler policy name
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">policy-name</a> <i>reference</i>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">string</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## virtual-port

Synopsis	Enter the <b>virtual-port</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">virtual-port</a>
Tree	<a href="#">virtual-port</a>
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## vport-name *reference*

Synopsis	Virtual port assigned to the SAP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">virtual-port</a> <a href="#">vport-name</a> <i>reference</i>
Tree	<a href="#">vport-name</a>
Reference	<b>configure</b> <a href="#">port</a> <a href="#">string</a> <a href="#">ethernet</a> <a href="#">access</a> <a href="#">egress</a> <a href="#">virtual-port</a> <a href="#">string</a>
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**eth-cfm**

Synopsis	Enter the <b>eth-cfm</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a>
Tree	<a href="#">eth-cfm</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

**collect-lmm-fc-stats**

Synopsis	Enter the <b>collect-lmm-fc-stats</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">collect-lmm-fc-stats</a>
Tree	<a href="#">collect-lmm-fc-stats</a>
Description	<p>Commands in this context configure per forwarding class (FC) LMM information collection.</p> <p>The commands <b>fc-in-profile</b> and <b>fc</b> in this context are mutually exclusive. The commands apply to either profile-aware or profile-unaware FCs respectively.</p> <p>This command and the <b>collect-lmm-stats</b> command are mutually exclusive when there is entity resource contention.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

**fc keyword**

Synopsis	Forwarding class name for profile-unaware counter
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">collect-lmm-fc-stats</a> <a href="#">fc</a> <a href="#">keyword</a>
Tree	<a href="#">fc</a>
Description	<p>This command configures individual counters for the specified FCs without regard for profile. The system includes all countable packets that match a configured FC, regardless of profile, in this counter.</p> <p>An FC specified as part of this command and for this specific context cannot be specified as a profile-aware FC using the <b>fc-in-profile</b> command under the <b>collect-lmm-fc-stats</b> context.</p> <p>When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.</p>

Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **fc-in-profile** *keyword*

Synopsis	Forwarding class name for profile-aware counter
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">collect-lmm-fc-stats</a> <b>fc-in-profile</b> <i>keyword</i>
Tree	<a href="#">fc-in-profile</a>
Description	<p>This command configures individual counters for the specified FCs with regard to profile. The system includes all countable packets that match a configured FC and that are deemed to be in-profile in this counter.</p> <p>An FC specified as part of this command and for this specific context cannot be specified as a profile-unaware FC using the <b>fc</b> command under the <b>collect-lmm-fc-stats</b> context.</p> <p>When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.</p>
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **collect-lmm-stats** *boolean*

Synopsis	Collect statistics for loss measurement message tests
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">collect-lmm-stats</a> <i>boolean</i>
Tree	<a href="#">collect-lmm-stats</a>
Description	<p>When configured to <b>true</b>, the router instantiates the statistical counter to transmit and receive packets for the LAG facility MEP bindings.</p> <p>The <b>show eth-cfm collect-lmm-stats</b> command displays entities that have been enabled to collect transit and receive counters.</p> <p>When configured to <b>false</b>, the router does not instantiate the counter and the LMM PDU associated with the MEP does not populate the counters in the packet.</p>
Default	false

Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **mep** *md-admin-name reference* *ma-admin-name reference* *mep-id number*

Synopsis Enter the **mep** list instance  
 Context **configure** *service ies string subscriber-interface string group-interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number*  
 Tree **mep**  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **md-admin-name** *reference*

Synopsis Maintenance Domain (MD) name  
 Context **configure** *service ies string subscriber-interface string group-interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number*  
 Tree **mep**

 Notes This element is part of a list key.  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **ma-admin-name** *reference*

Synopsis Maintenance Association (MA) name  
 Context **configure** *service ies string subscriber-interface string group-interface string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number*  
 Tree **mep**  
 Reference **configure** *eth-cfm domain string association string*  
 Notes This element is part of a list key.  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

**mep-id number**

Synopsis	Maintenance Endpoint (MEP) ID
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm mep md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id number</a>
Tree	<a href="#">mep</a>
Range	1 to 8191
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

**admin-state keyword**

Synopsis	Administrative state of the MEP
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm mep md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id number</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

**ais boolean**

Synopsis	Enable the generation and the reception of AIS messages
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm mep md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id number</a> <a href="#">ais</a> <i>boolean</i>
Tree	<a href="#">ais</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

**alarm-notification**

Synopsis	Enter the <b>alarm-notification</b> context
----------	---

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>alarm-notification</b>
Tree	<b>alarm-notification</b>
Description	<p>Commands in this context configure the Fault Notification Generator (FNG) time values to raise an alarm or reset the CCM defect alarm.</p> <p>Use these timers for network management processes. The timers are not tied into delaying the notification to the fault management system on the network element and do not affect fault propagation mechanisms.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **fng-alarm-time** *number*

Synopsis	Time that must expire before an FNG alarm is raised
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>alarm-notification fng-alarm-time</b> <i>number</i>
Tree	<b>fng-alarm-time</b>
Range	250   500   1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **fng-reset-time** *number*

Synopsis	Time that must expire before an FNG alarm is reset
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>alarm-notification fng-reset-time</b> <i>number</i>
Tree	<b>fng-reset-time</b>
Range	250   500   1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

**ccm boolean**

Synopsis	Generate CCM messages
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">ccm</a> <a href="#">boolean</a>
Tree	<a href="#">ccm</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

**ccm-ltm-priority number**

Synopsis	Priority of CCM and LTM messages transmitted by the MEP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">ccm-ltm-priority</a> <a href="#">number</a>
Tree	<a href="#">ccm-ltm-priority</a>
Range	0 to 7
Default	7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

**ccm-padding-size number**

Synopsis	Number of octets of padding to insert in CCM packets
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">ccm-padding-size</a> <a href="#">number</a>
Tree	<a href="#">ccm-padding-size</a>
Description	This command sets the byte size of the optional Data TLV to be included in the ETH-CC PDU.  This command increases the size of the ETH-CC PDU by the configured value. The base size of the ETH-CC PDU, including the Interface Status TLV and Port Status TLV, is 83 bytes not including the Layer 2 encapsulation. CCM padding is not supported when the CCM interval (configured through <b>configure eth-cfm domain association ccm-interval</b> ) is less than 1 second.
Range	3 to 1500
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

## csf

Synopsis Enable the **csf** context

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **sap** *string* **eth-cfm** **mep** **md-admin-name** *reference* **ma-admin-name** *reference* **mep-id** *number* **csf**

Tree **csf**

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

## multiplier *decimal-number*

Synopsis Multiplication factor used to clear the CSF condition

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **sap** *string* **eth-cfm** **mep** **md-admin-name** *reference* **ma-admin-name** *reference* **mep-id** *number* **csf** **multiplier** *decimal-number*

Tree **multiplier**

Range 0.0 | 2.0 to 30.0

Default 3.5

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

## description *string*

Synopsis Text description

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **group-interface** *string* **sap** *string* **eth-cfm** **mep** **md-admin-name** *reference* **ma-admin-name** *reference* **mep-id** *number* **description** *string*

Tree **description**

String Length 1 to 80

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

## eth-test

Synopsis Enable the **eth-test** context

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>eth-test</b>
Tree	<b>eth-test</b>
Description	Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the <b>oam eth-cfm eth-test</b> command.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **bit-error-threshold** *number*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>eth-test bit-error-threshold</b> <i>number</i>
Tree	<b>bit-error-threshold</b>
Range	0 to 11840
Units	bit errors
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **test-pattern**

Synopsis	Enter the <b>test-pattern</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>eth-test test-pattern</b>
Tree	<b>test-pattern</b>
Description	Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **crc-tlv** *boolean*

Synopsis	Generate a CRC checksum
----------	-------------------------

Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">eth-test</a> <a href="#">test-pattern</a> <a href="#">crc-tlv</a> <a href="#">boolean</a>
Tree	<a href="#">crc-tlv</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **pattern** *keyword*

Synopsis	Test pattern for Ethernet Test frames
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">eth-test</a> <a href="#">test-pattern</a> <a href="#">pattern</a> <a href="#">keyword</a>
Tree	<a href="#">pattern</a>
Description	This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.
Options	all-zeros, all-ones
Default	all-zeros
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **fault-propagation** *keyword*

Synopsis	Fault propagation for the MEP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">fault-propagation</a> <a href="#">keyword</a>
Tree	<a href="#">fault-propagation</a>
Options	use-if-status-tlv, suspend-ccm
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **grace**

Synopsis	Enter the <b>grace</b> context
----------	--------------------------------

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>grace</b>
Tree	<b>grace</b>
Description	Commands in this context configure the Nokia ETH-CFM Grace function and the ITU-T Y.1731 Ethernet Expected Default (ETH-ED) function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

## eth-ed

Synopsis	Enter the <b>eth-ed</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>grace eth-ed</b>
Tree	<b>eth-ed</b>
Description	Commands in this context configure the ITU-T Y.1731 ETH-ED function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

## max-rx-defect-window *number*

Synopsis	Maximum received ETH-ED expected defect window duration
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>grace eth-ed max-rx-defect-window</b> <i>number</i>
Tree	<b>max-rx-defect-window</b>
Range	1 to 86400
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

## priority *number*

Synopsis	Transmission priority for ETH-ED PDUs
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>grace eth-ed priority</b> <i>number</i>

Tree	<a href="#">priority</a>
Range	0 to 7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **rx-eth-ed** *boolean*

Synopsis	Receive and process ETH-ED ITU-T Y.1731 PDUs on the MEP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">grace</a> <a href="#">eth-ed</a> <a href="#">rx-eth-ed</a> <i>boolean</i>
Tree	<a href="#">rx-eth-ed</a>
Description	This command enables the reception and processing of the ITU-T Y.1731 ETH-ED PDU on the MEP.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **tx-eth-ed** *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">grace</a> <a href="#">eth-ed</a> <a href="#">tx-eth-ed</a> <i>boolean</i>
Tree	<a href="#">tx-eth-ed</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **eth-vsm-grace**

Synopsis	Enter the <b>eth-vsm-grace</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">grace</a> <a href="#">eth-vsm-grace</a>
Tree	<a href="#">eth-vsm-grace</a>
Description	Commands in this context configure the Nokia ETH-CFM Grace function.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **rx-eth-vsm-grace** *boolean*

Synopsis	Receive and process Nokia ETH-CFM Grace PDU on the MEP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">grace</a> <a href="#">eth-vsm-grace</a> <a href="#">rx-eth-vsm-grace</a> <i>boolean</i>
Tree	<a href="#">rx-eth-vsm-grace</a>
Description	When configured to <b>true</b> , the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.  When configured to <b>false</b> , the router disables the Nokia Grace function.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

### **tx-eth-vsm-grace** *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">grace</a> <a href="#">eth-vsm-grace</a> <a href="#">tx-eth-vsm-grace</a> <i>boolean</i>
Tree	<a href="#">tx-eth-vsm-grace</a>
Description	When configured to <b>true</b> , the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.  The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.  The operator must configure the <b>configure system eth-cfm grace</b> command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).  When configured to <b>false</b> , the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

**low-priority-defect** *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm</b> <b>mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>low-priority-defect</b> <i>keyword</i>
Tree	<a href="#">low-priority-defect</a>
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Default	mac-rem-err-xcon
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

**one-way-delay-threshold** *number*

Synopsis	Threshold time limit for the one-way delay test
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm</b> <b>mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>one-way-delay-threshold</b> <i>number</i>
Tree	<a href="#">one-way-delay-threshold</a>
Range	0 to 600
Units	seconds
Default	3
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

**squelch-ingress-levels** *number*

Synopsis	Levels for which ETH-CFM packets are silently discarded
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm</b> <b>squelch-ingress-levels</b> <i>number</i>
Tree	<a href="#">squelch-ingress-levels</a>
Description	This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.

The list of levels must be a complete contiguous list from 0 up to the highest level that will be dropped.

Range	0 to 7
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s

## **fwd-wholesale**

Synopsis	Enter the <b>fwd-wholesale</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">fwd-wholesale</a>
Tree	<a href="#">fwd-wholesale</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **pppoe-service** *reference*

Synopsis	PPPoE service name
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">fwd-wholesale</a> <a href="#">pppoe-service</a> <i>reference</i>
Tree	<a href="#">pppoe-service</a>
Reference	<b>configure</b> <a href="#">service epipe</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **host-admin-state** *keyword*

Synopsis	Administrative state of the hosts
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">host-admin-state</a> <i>keyword</i>
Tree	<a href="#">host-admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **host-lockout-policy** *reference*

Synopsis Host lockout policy

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [sap](#) *string* [host-lockout-policy](#) *reference*

Tree [host-lockout-policy](#)

Reference **configure** [subscriber-mgmt](#) [host-lockout-policy](#) *string*

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **igmp-host-tracking**

Synopsis Enter the **igmp-host-tracking** context

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [sap](#) *string* [igmp-host-tracking](#)

Tree [igmp-host-tracking](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **expiry-time** *number*

Synopsis Time that the system continues to track inactive hosts

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [sap](#) *string* [igmp-host-tracking](#) [expiry-time](#) *number*

Tree [expiry-time](#)

Range 1 to 65535

Units seconds

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **import-policy** *reference*

Synopsis Import policy that filters IGMP packets

Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">igmp-host-tracking</a> <a href="#">import-policy</a> <i>reference</i>

## **lag**

Synopsis	Enter the <b>lag</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>lag</b>
Tree	<b>lag</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**link-map-profile** *number*

Synopsis	LAG link map profile for a SAP or network interface
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>lag</b> <b>link-map-profile</b> <i>number</i>
Tree	<b>link-map-profile</b>
Description	This command assigns a preconfigured LAG link map profile to a SAP or network interface configured on a LAG or a PW port that exists on a LAG. After an operator assigns a LAG link map profile, the system rehashes the SAP or network interface egress traffic over the LAG as required by the new configuration.  If the LAG link map profile for a SAP or network interface is deleted, the system reverts back to per-flow hashing.
Range	1 to 64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**per-link-hash**

Synopsis	Enter the <b>per-link-hash</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>lag</b> <b>per-link-hash</b>
Tree	<b>per-link-hash</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**class** *number*

Synopsis	Class used on LAG egress using weighted per-link-hash
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>lag</b> <b>per-link-hash</b> <b>class</b> <i>number</i>
Tree	<b>class</b>
Range	1 to 3
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**weight number**

Synopsis	Weight used on LAG egress using weighted per-link-hash
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">lag</a> <a href="#">per-link-hash</a> <a href="#">weight</a> <i>number</i>
Tree	<a href="#">weight</a>
Range	1 to 1024
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**monitor-oper-group reference**

Synopsis	Monitor operational group
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">monitor-oper-group</a> <i>reference</i>
Tree	<a href="#">monitor-oper-group</a>
Reference	<b>configure</b> <a href="#">service</a> <a href="#">oper-group</a> <i>string</i>
Notes	The following elements are part of a choice: <b>monitor-oper-group</b> or <b>oper-group</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**multi-service-site reference**

Synopsis	Multi service site name
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">multi-service-site</a> <i>reference</i>
Tree	<a href="#">multi-service-site</a>
Reference	<b>configure</b> <a href="#">service</a> <a href="#">customer</a> <i>string</i> <a href="#">multi-service-site</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**oper-group reference**

Synopsis	Operational group
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">oper-group</a> <i>reference</i>

Tree	<a href="#">oper-group</a>
Reference	<b>configure</b> <a href="#">service oper-group</a> <i>string</i>
Notes	The following elements are part of a choice: <b>monitor-oper-group</b> or <b>oper-group</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## static-host

Synopsis	Enter the <b>static-host</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host</a>
Tree	<a href="#">static-host</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ipv4 [[ip](#)] *string* [mac](#) *string*

Synopsis	Enter the <b>ipv4</b> list instance
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host</a> <a href="#">ipv4</a> <i>string</i> <a href="#">mac</a> <i>string</i>
Tree	<a href="#">ipv4</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## [[ip](#)] *string*

Synopsis	IPv4 address used by the static host
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host</a> <a href="#">ipv4</a> <i>string</i> <a href="#">mac</a> <i>string</i>
Tree	<a href="#">ipv4</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**mac string**

Synopsis	MAC address used by the static host
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">subscriber-interface string</a> <a href="#">group-interface string</a> <a href="#">sap string</a> <a href="#">static-host ipv4 string</a> <a href="#">mac string</a>
Tree	<a href="#">ipv4</a>
MD-CLI Default	00:00:00:00:00:00
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**admin-state keyword**

Synopsis	Administrative state of the static host
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">subscriber-interface string</a> <a href="#">group-interface string</a> <a href="#">sap string</a> <a href="#">static-host ipv4 string</a> <a href="#">mac string</a> <a href="#">admin-state keyword</a>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**ancc-string string**

Synopsis	ANCP string
Context	<b>configure</b> <a href="#">service ies string</a> <a href="#">subscriber-interface string</a> <a href="#">group-interface string</a> <a href="#">sap string</a> <a href="#">static-host ipv4 string</a> <a href="#">mac string</a> <a href="#">ancc-string string</a>
Tree	<a href="#">ancc-string</a>
String Length	1 to 63
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**app-profile**

Synopsis	Enter the <b>app-profile</b> context
----------	--------------------------------------

Context	<b>configure service ies</b> <i>string subscriber-interface string group-interface string sap string static-host ipv4 string mac string app-profile</i>
Tree	<a href="#">app-profile</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **profile** *reference*

Synopsis	Application profile used by the static host
Context	<b>configure service ies</b> <i>string subscriber-interface string group-interface string sap string static-host ipv4 string mac string app-profile profile reference</i>
Tree	<a href="#">profile</a>
Reference	<b>configure application-assurance group number partition number policy app-profile string</b>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **scope** *keyword*

Synopsis	Scope of the static host application profile
Context	<b>configure service ies</b> <i>string subscriber-interface string group-interface string sap string static-host ipv4 string mac string app-profile scope keyword</i>
Tree	<a href="#">scope</a>
Options	subscriber, mac
Default	subscriber
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **int-dest-id** *string*

Synopsis	Intermediate destination ID
Context	<b>configure service ies</b> <i>string subscriber-interface string group-interface string sap string static-host ipv4 string mac string int-dest-id string</i>
Tree	<a href="#">int-dest-id</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**managed-route** [[prefix](#)] *string*

Synopsis	Enter the <b>managed-route</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host</a> <a href="#">ipv4</a> <i>string</i> <a href="#">mac</a> <i>string</i> <b>managed-route</b> <i>string</i>
Tree	<a href="#">managed-route</a>
Description	Commands in this context configure managed route parameters.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**[prefix]** *string*

Synopsis	Managed route prefix associated with IPv4 static host
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host</a> <a href="#">ipv4</a> <i>string</i> <a href="#">mac</a> <i>string</i> <b>managed-route</b> <i>string</i>
Tree	<a href="#">managed-route</a>
Description	This command configures the managed route prefix. The prefix length must be in the range of 1 to 32.
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**cpe-check**

Synopsis	Enable the <b>cpe-check</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host</a> <a href="#">ipv4</a> <i>string</i> <a href="#">mac</a> <i>string</i> <a href="#">managed-route</a> <i>string</i> <b>cpe-check</b>
Tree	<a href="#">cpe-check</a>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**destination-ip-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IP address of the target CPE device
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host</b> <b>ipv4</b> <i>string</i> <b>mac</b> <i>string</i> <b>managed-route</b> <i>string</i> <b>cpe-check</b> <b>destination-ip-address</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<b>destination-ip-address</b>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **drop-count** *number*

Synopsis	Consecutive ping replies missed before CPE deemed down
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host</b> <b>ipv4</b> <i>string</i> <b>mac</b> <i>string</i> <b>managed-route</b> <i>string</i> <b>cpe-check</b> <b>drop-count</b> <i>number</i>
Tree	<b>drop-count</b>
Range	1 to 255
Default	3
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **failed-action**

Synopsis	Enter the <b>failed-action</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host</b> <b>ipv4</b> <i>string</i> <b>mac</b> <i>string</i> <b>managed-route</b> <i>string</i> <b>cpe-check</b> <b>failed-action</b>
Tree	<b>failed-action</b>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **metric** *number*

Synopsis	Metric associated with the provisioned managed route
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host</b> <b>ipv4</b> <i>string</i> <b>mac</b> <i>string</i> <b>managed-route</b> <i>string</i> <b>cpe-check</b> <b>failed-action</b> <b>metric</b> <i>number</i>
Tree	<b>metric</b>
Max. Range	0 to 4294967295
Default	0

Notes	The following elements are part of a choice: ( <b>metric</b> , <b>preference</b> , and <b>tag</b> ) or <b>withdraw</b> .
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **preference number**

Synopsis	Preference associated to the provisioned managed route
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host</b> <b>ipv4</b> <i>string</i> <b>mac</b> <i>string</i> <b>managed-route</b> <i>string</i> <b>cpe-check</b> <b>failed-action</b> <b>preference</b> <i>number</i>
Tree	<b>preference</b>
Range	0 to 255
Notes	The following elements are part of a choice: ( <b>metric</b> , <b>preference</b> , and <b>tag</b> ) or <b>withdraw</b> .
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **tag number**

Synopsis	Route tag used if CPE check fails
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host</b> <b>ipv4</b> <i>string</i> <b>mac</b> <i>string</i> <b>managed-route</b> <i>string</i> <b>cpe-check</b> <b>failed-action</b> <b>tag</b> <i>number</i>
Tree	<b>tag</b>
Max. Range	0 to 4294967295
Default	0
Notes	The following elements are part of a choice: ( <b>metric</b> , <b>preference</b> , and <b>tag</b> ) or <b>withdraw</b> .
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **withdraw boolean**

Synopsis	Withdraw the route when the CPE check fails
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host</b> <b>ipv4</b> <i>string</i> <b>mac</b> <i>string</i> <b>managed-route</b> <i>string</i> <b>cpe-check</b> <b>failed-action</b> <b>withdraw</b> <i>boolean</i>
Tree	<b>withdraw</b>
Default	false

Notes	The following elements are part of a choice: ( <b>metric</b> , <b>preference</b> , and <b>tag</b> ) or <b>withdraw</b> .
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **interval** *number*

Synopsis	Interval between ICMP pings to target CPE IP address
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host</b> <b>ipv4</b> <i>string</i> <b>mac</b> <i>string</i> <b>managed-route</b> <i>string</i> <b>cpe-check</b> <b>interval</b> <i>number</i>
Tree	<b>interval</b>
Range	1 to 255
Units	seconds
Default	1
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **log** *boolean*

Synopsis	Log CPE connectivity checks transitions
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host</b> <b>ipv4</b> <i>string</i> <b>mac</b> <i>string</i> <b>managed-route</b> <i>string</i> <b>cpe-check</b> <b>log</b> <i>boolean</i>
Tree	<b>log</b>
Default	false
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **padding-size** *number*

Synopsis	Padding size for CPE connectivity checks
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host</b> <b>ipv4</b> <i>string</i> <b>mac</b> <i>string</i> <b>managed-route</b> <i>string</i> <b>cpe-check</b> <b>padding-size</b> <i>number</i>
Tree	<b>padding-size</b>
Range	0 to 16384
Units	bytes
Default	56
Introduced	22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **source-ip-address** (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis Source IP address used in the ICMP messages

Context **configure** **service ies** *string* **subscriber-interface** *string* **group-interface** *string* **sap** *string* **static-host ipv4** *string* **mac** *string* **managed-route** *string* **cpe-check** **source-ip-address** (*ipv4-address-no-zone | ipv6-address-no-zone*)

Tree [source-ip-address](#)

Introduced 22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **timeout** *number*

Synopsis Time interval determining that a ping is missed

Context **configure** **service ies** *string* **subscriber-interface** *string* **group-interface** *string* **sap** *string* **static-host ipv4** *string* **mac** *string* **managed-route** *string* **cpe-check** **timeout** *number*

Tree [timeout](#)

Range 1 to 10

Units seconds

Default 1

Introduced 22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **metric** *number*

Synopsis Metric associated with the managed route

Context **configure** **service ies** *string* **subscriber-interface** *string* **group-interface** *string* **sap** *string* **static-host ipv4** *string* **mac** *string* **managed-route** *string* **metric** *number*

Tree [metric](#)

Max. Range 0 to 4294967295

Default 0

Introduced 22.2.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**preference number**

Synopsis	Preference associated with the managed route
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">static-host</a> <a href="#">ipv4</a> <a href="#">string</a> <a href="#">mac</a> <a href="#">string</a> <a href="#">managed-route</a> <a href="#">string</a> <a href="#">preference</a> <a href="#">number</a>
Tree	<a href="#">preference</a>
Range	0 to 255
Default	0
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**tag number**

Synopsis	Route tag associated with the managed route
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">static-host</a> <a href="#">ipv4</a> <a href="#">string</a> <a href="#">mac</a> <a href="#">string</a> <a href="#">managed-route</a> <a href="#">string</a> <a href="#">tag</a> <a href="#">number</a>
Tree	<a href="#">tag</a>
Max. Range	0 to 4294967295
Default	0
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**rip-policy reference**

Synopsis	RIP policy name
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">static-host</a> <a href="#">ipv4</a> <a href="#">string</a> <a href="#">mac</a> <a href="#">string</a> <a href="#">rip-policy</a> <a href="#">reference</a>
Tree	<a href="#">rip-policy</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">rip-policy</a> <a href="#">string</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**shcv**

Synopsis	Enter the <b>shcv</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">static-host</a> <a href="#">ipv4</a> <a href="#">string</a> <a href="#">mac</a> <a href="#">string</a> <a href="#">shcv</a>

Tree	<a href="#">shcv</a>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sla-profile** *reference*

Synopsis	SLA profile name
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host ipv4</a> <i>string</i> <a href="#">mac</a> <i>string</i> <a href="#">sla-profile</a> <i>reference</i>
Tree	<a href="#">sla-profile</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">sla-profile</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sub-profile** *reference*

Synopsis	Sub-profile name
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host ipv4</a> <i>string</i> <a href="#">mac</a> <i>string</i> <a href="#">sub-profile</a> <i>reference</i>
Tree	<a href="#">sub-profile</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">sub-profile</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **subscriber-id**

Synopsis	Enter the <b>subscriber-id</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host ipv4</a> <i>string</i> <a href="#">mac</a> <i>string</i> <a href="#">subscriber-id</a>
Tree	<a href="#">subscriber-id</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **string** *string*

Synopsis	Subscriber identification
----------	---------------------------

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host ipv4</b> <i>string</i> <b>mac</b> <i>string</i> <b>subscriber-id</b> <i>string</i> <i>string</i>
Tree	<i>string</i>
String Length	1 to 64
Notes	The following elements are part of a choice: <b>string</b> or <b>use-sap-id</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **use-sap-id**

Synopsis	Use the SAP id as subscriber ID
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host ipv4</b> <i>string</i> <b>mac</b> <i>string</i> <b>subscriber-id</b> <b>use-sap-id</b>
Tree	<i>use-sap-id</i>
Notes	The following elements are part of a choice: <b>string</b> or <b>use-sap-id</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ipv6** [**prefix**] *string* **mac** *string*

Synopsis	Enter the <b>ipv6</b> list instance
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host ipv6</b> <i>string</i> <b>mac</b> <i>string</i>
Tree	<i>ipv6</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### [**prefix**] *string*

Synopsis	IPv6 prefix
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host ipv6</b> <i>string</i> <b>mac</b> <i>string</i>
Tree	<i>ipv6</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**mac string**

Synopsis	MAC address
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host</a> <a href="#">ipv6</a> <i>string</i> <b>mac</b> <i>string</i>
Tree	<a href="#">ipv6</a>
MD-CLI Default	00:00:00:00:00:00
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**admin-state keyword**

Synopsis	Administrative state of the static host
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host</a> <a href="#">ipv6</a> <i>string</i> <b>mac</b> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**anccp-string string**

Synopsis	ANCP string
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host</a> <a href="#">ipv6</a> <i>string</i> <b>mac</b> <i>string</i> <b>anccp-string</b> <i>string</i>
Tree	<a href="#">anccp-string</a>
String Length	1 to 63
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**app-profile**

Synopsis	Enter the <b>app-profile</b> context
----------	--------------------------------------

Context	<b>configure service ies</b> <i>string subscriber-interface string group-interface string sap string static-host ipv6 string mac string app-profile</i>
Tree	<a href="#">app-profile</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **profile** *reference*

Synopsis	Application profile used by the static host
Context	<b>configure service ies</b> <i>string subscriber-interface string group-interface string sap string static-host ipv6 string mac string app-profile profile reference</i>
Tree	<a href="#">profile</a>
Reference	<b>configure application-assurance group number partition number policy app-profile string</b>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **scope** *keyword*

Synopsis	Scope of the static host application profile
Context	<b>configure service ies</b> <i>string subscriber-interface string group-interface string sap string static-host ipv6 string mac string app-profile scope keyword</i>
Tree	<a href="#">scope</a>
Options	subscriber, mac
Default	subscriber
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **int-dest-id** *string*

Synopsis	Intermediate destination ID
Context	<b>configure service ies</b> <i>string subscriber-interface string group-interface string sap string static-host ipv6 string mac string int-dest-id string</i>
Tree	<a href="#">int-dest-id</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**mac-linking** *string*

Synopsis	IPv6 host linked with IPv4 host via learned MAC address
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host</b> <b>ipv6</b> <i>string</i> <b>mac</b> <i>string</i> <b>mac-linking</b> <i>string</i>
Tree	<b>mac-linking</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**managed-route** [**ipv6-prefix**] *string*

Synopsis	Enter the <b>managed-route</b> list instance
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host</b> <b>ipv6</b> <i>string</i> <b>mac</b> <i>string</i> <b>managed-route</b> <i>string</i>
Tree	<b>managed-route</b>
Description	Commands in this context configure managed route parameters.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**[ipv6-prefix]** *string*

Synopsis	Managed route prefix associated with IPv6 static host
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host</b> <b>ipv6</b> <i>string</i> <b>mac</b> <i>string</i> <b>managed-route</b> <i>string</i>
Tree	<b>managed-route</b>
Description	This command configures the managed route prefix. The prefix length must be in the range of 1 to 128.
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**cpe-check**

Synopsis	Enable the <b>cpe-check</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host</b> <b>ipv6</b> <i>string</i> <b>mac</b> <i>string</i> <b>managed-route</b> <i>string</i> <b>cpe-check</b>

Tree	<a href="#">cpe-check</a>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **destination-ip-address** (*ipv4-address-no-zone | ipv6-address-no-zone*)

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IP address of the target CPE device
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host</a> <a href="#">ipv6</a> <i>string</i> <a href="#">mac</a> <i>string</i> <a href="#">managed-route</a> <i>string</i> <a href="#">cpe-check</a> <a href="#">destination-ip-address</a> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> )
Tree	<a href="#">destination-ip-address</a>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **drop-count** *number*

Synopsis	Consecutive ping replies missed before CPE deemed down
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host</a> <a href="#">ipv6</a> <i>string</i> <a href="#">mac</a> <i>string</i> <a href="#">managed-route</a> <i>string</i> <a href="#">cpe-check</a> <a href="#">drop-count</a> <i>number</i>
Tree	<a href="#">drop-count</a>
Range	1 to 255
Default	3
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **failed-action**

Synopsis	Enter the <b>failed-action</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host</a> <a href="#">ipv6</a> <i>string</i> <a href="#">mac</a> <i>string</i> <a href="#">managed-route</a> <i>string</i> <a href="#">cpe-check</a> <a href="#">failed-action</a>
Tree	<a href="#">failed-action</a>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**metric number**

Synopsis	Metric associated with the provisioned managed route
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host ipv6</a> <i>string</i> <a href="#">mac</a> <i>string</i> <a href="#">managed-route</a> <i>string</i> <a href="#">cpe-check</a> <a href="#">failed-action</a> <a href="#">metric number</a>
Tree	<a href="#">metric</a>
Max. Range	0 to 4294967295
Default	0
Notes	The following elements are part of a choice: ( <b>metric</b> , <b>preference</b> , and <b>tag</b> ) or <b>withdraw</b> .
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**preference number**

Synopsis	Preference associated to the provisioned managed route
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host ipv6</a> <i>string</i> <a href="#">mac</a> <i>string</i> <a href="#">managed-route</a> <i>string</i> <a href="#">cpe-check</a> <a href="#">failed-action</a> <a href="#">preference number</a>
Tree	<a href="#">preference</a>
Range	0 to 255
Notes	The following elements are part of a choice: ( <b>metric</b> , <b>preference</b> , and <b>tag</b> ) or <b>withdraw</b> .
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**tag number**

Synopsis	Route tag used if CPE check fails
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host ipv6</a> <i>string</i> <a href="#">mac</a> <i>string</i> <a href="#">managed-route</a> <i>string</i> <a href="#">cpe-check</a> <a href="#">failed-action</a> <a href="#">tag number</a>
Tree	<a href="#">tag</a>
Max. Range	0 to 4294967295
Default	0
Notes	The following elements are part of a choice: ( <b>metric</b> , <b>preference</b> , and <b>tag</b> ) or <b>withdraw</b> .
Introduced	22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **withdraw** *boolean*

Synopsis Withdraw the route when the CPE check fails

Context **configure** *service ies string subscriber-interface string group-interface string sap string static-host ipv6 string mac string managed-route string cpe-check failed-action withdraw boolean*

Tree [withdraw](#)

Default false

Notes The following elements are part of a choice: (**metric**, **preference**, and **tag**) or **withdraw**.

Introduced 22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **interval** *number*

Synopsis Interval between ICMP pings to target CPE IP address

Context **configure** *service ies string subscriber-interface string group-interface string sap string static-host ipv6 string mac string managed-route string cpe-check interval number*

Tree [interval](#)

Range 1 to 255

Units seconds

Default 1

Introduced 22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **log** *boolean*

Synopsis Log CPE connectivity checks transitions

Context **configure** *service ies string subscriber-interface string group-interface string sap string static-host ipv6 string mac string managed-route string cpe-check log boolean*

Tree [log](#)

Default false

Introduced 22.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**padding-size** *number*

Synopsis	Padding size for CPE connectivity checks
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host</a> <a href="#">ipv6</a> <i>string</i> <a href="#">mac</a> <i>string</i> <a href="#">managed-route</a> <i>string</i> <a href="#">cpe-check</a> <a href="#">padding-size</a> <i>number</i>
Tree	<a href="#">padding-size</a>
Range	0 to 16384
Units	bytes
Default	56
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**source-ip-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Source IP address used in the ICMP messages
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host</a> <a href="#">ipv6</a> <i>string</i> <a href="#">mac</a> <i>string</i> <a href="#">managed-route</a> <i>string</i> <a href="#">cpe-check</a> <a href="#">source-ip-address</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">source-ip-address</a>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**timeout** *number*

Synopsis	Time interval determining that a ping is missed
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">static-host</a> <a href="#">ipv6</a> <i>string</i> <a href="#">mac</a> <i>string</i> <a href="#">managed-route</a> <i>string</i> <a href="#">cpe-check</a> <a href="#">timeout</a> <i>number</i>
Tree	<a href="#">timeout</a>
Range	1 to 10
Units	seconds
Default	1
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**metric** *number*

Synopsis	Metric associated with the managed route
----------	--

Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host</b> <b>ipv6</b> <i>string</i> <b>mac</b> <i>string</i> <b>managed-route</b> <i>string</i> <b>metric</b> <i>number</i>
Tree	<b>metric</b>
Max. Range	0 to 4294967295
Default	0
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **preference** *number*

Synopsis	Preference associated with the managed route
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host</b> <b>ipv6</b> <i>string</i> <b>mac</b> <i>string</i> <b>managed-route</b> <i>string</i> <b>preference</b> <i>number</i>
Tree	<b>preference</b>
Range	0 to 255
Default	0
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **tag** *number*

Synopsis	Route tag associated with the managed route
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host</b> <b>ipv6</b> <i>string</i> <b>mac</b> <i>string</i> <b>managed-route</b> <i>string</i> <b>tag</b> <i>number</i>
Tree	<b>tag</b>
Max. Range	0 to 4294967295
Default	0
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **retail-svc-id** *number*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Retail service ID
----------	-------------------

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host ipv6</b> <i>string</i> <b>mac</b> <i>string</i> <b>retail-svc-id</b> <i>number</i>
Tree	<a href="#">retail-svc-id</a>
Range	1 to 2147483647
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## shcv

Synopsis	Enter the <b>shcv</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host ipv6</b> <i>string</i> <b>mac</b> <i>string</i> <b>shcv</b>
Tree	<a href="#">shcv</a>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## sla-profile *reference*

Synopsis	SLA profile name
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host ipv6</b> <i>string</i> <b>mac</b> <i>string</i> <b>sla-profile</b> <i>reference</i>
Tree	<a href="#">sla-profile</a>
Reference	<b>configure subscriber-mgmt sla-profile</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## sub-profile *reference*

Synopsis	Sub-profile name
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>static-host ipv6</b> <i>string</i> <b>mac</b> <i>string</i> <b>sub-profile</b> <i>reference</i>
Tree	<a href="#">sub-profile</a>
Reference	<b>configure subscriber-mgmt sub-profile</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## subscriber-id

Synopsis	Enter the <b>subscriber-id</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">static-host</a> <a href="#">ipv6</a> <a href="#">string</a> <a href="#">mac</a> <a href="#">string</a> <a href="#">subscriber-id</a>
Tree	<a href="#">subscriber-id</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## string *string*

Synopsis	Subscriber identification
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">static-host</a> <a href="#">ipv6</a> <a href="#">string</a> <a href="#">mac</a> <a href="#">string</a> <a href="#">subscriber-id</a> <a href="#">string</a> <a href="#">string</a>
Tree	<a href="#">string</a>
String Length	1 to 64
Notes	The following elements are part of a choice: <b>string</b> or <b>use-sap-id</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## use-sap-id

Synopsis	Use the SAP id as subscriber ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">static-host</a> <a href="#">ipv6</a> <a href="#">string</a> <a href="#">mac</a> <a href="#">string</a> <a href="#">subscriber-id</a> <a href="#">use-sap-id</a>
Tree	<a href="#">use-sap-id</a>
Notes	The following elements are part of a choice: <b>string</b> or <b>use-sap-id</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## mac-learning

Synopsis	Enter the <b>mac-learning</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">static-host</a> <a href="#">mac-learning</a>
Tree	<a href="#">mac-learning</a>

Introduced 16.0.R4  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **data-triggered** *boolean*

Synopsis Enable learning of MAC addresses from data packets  
 Context **configure** *service ies string subscriber-interface string group-interface string sap string static-host mac-learning data-triggered boolean*  
 Tree [data-triggered](#)  
 Default false  
 Introduced 16.0.R4  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **single-mac** *boolean*

Synopsis Enforce single MAC address and subscriber for the SAP  
 Context **configure** *service ies string subscriber-interface string group-interface string sap string static-host mac-learning single-mac boolean*  
 Tree [single-mac](#)  
 Default false  
 Introduced 16.0.R4  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sub-sla-mgmt**

Synopsis Enter the **sub-sla-mgmt** context  
 Context **configure** *service ies string subscriber-interface string group-interface string sap string sub-sla-mgmt*  
 Tree [sub-sla-mgmt](#)  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis Administrative state of SAP subscriber management  
 Context **configure** *service ies string subscriber-interface string group-interface string sap string sub-sla-mgmt admin-state keyword*

Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## defaults

Synopsis	Enter the <b>defaults</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">sub-sla-mgmt defaults</a>
Tree	<a href="#">defaults</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## app-profile *reference*

Synopsis	Default application profile name for this SAP
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">sub-sla-mgmt defaults app-profile</a> <i>reference</i>
Tree	<a href="#">app-profile</a>
Reference	<b>configure</b> <a href="#">application-assurance</a> <a href="#">group</a> <i>number</i> <a href="#">partition</a> <i>number</i> <a href="#">policy app-profile</a> <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## int-dest-id

Synopsis	Enter the <b>int-dest-id</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">sub-sla-mgmt defaults int-dest-id</a>
Tree	<a href="#">int-dest-id</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**string** *string*

Synopsis	Use the configured string
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">sub-sla-mgmt</a> <a href="#">defaults</a> <a href="#">int-dest-id</a> <a href="#">string</a> <a href="#">string</a>
Tree	<a href="#">string</a>
String Length	1 to 32
Notes	The following elements are part of a choice: <b>string</b> or <b>top-q-tag</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**top-q-tag**

Synopsis	Use the top Q-tag of this SAP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">sub-sla-mgmt</a> <a href="#">defaults</a> <a href="#">int-dest-id</a> <a href="#">top-q-tag</a>
Tree	<a href="#">top-q-tag</a>
Notes	The following elements are part of a choice: <b>string</b> or <b>top-q-tag</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**sla-profile** *reference*

Synopsis	Default SLA profile for hosts on this SAP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">sub-sla-mgmt</a> <a href="#">defaults</a> <a href="#">sla-profile</a> <a href="#">reference</a>
Tree	<a href="#">sla-profile</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">sla-profile</a> <a href="#">string</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**sub-profile** *reference*

Synopsis	Default subscriber profile for the SAP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">sub-sla-mgmt</a> <a href="#">defaults</a> <a href="#">sub-profile</a> <a href="#">reference</a>
Tree	<a href="#">sub-profile</a>

Reference	<b>configure subscriber-mgmt sub-profile</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## subscriber-id

Synopsis	Enter the <b>subscriber-id</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>sub-sla-mgmt defaults subscriber-id</b>
Tree	<b>subscriber-id</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## auto-id

Synopsis	Use auto-generated subscriber identification string
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>sub-sla-mgmt defaults subscriber-id auto-id</b>
Tree	<b>auto-id</b>
Notes	The following elements are part of a choice: <b>auto-id</b> , <b>sap-id</b> , or <b>string</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## sap-id

Synopsis	Use SAP ID as default subscriber identification string
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>sap</b> <i>string</i> <b>sub-sla-mgmt defaults subscriber-id sap-id</b>
Tree	<b>sap-id</b>
Notes	The following elements are part of a choice: <b>auto-id</b> , <b>sap-id</b> , or <b>string</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## string *string*

Synopsis	Default subscriber identification string for the SAP
----------	--

Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>sap string</i> <i>sub-sla-mgmt defaults subscriber-id string string</i>
Tree	<a href="#">string</a>
String Length	1 to 64
Notes	The following elements are part of a choice: <b>auto-id</b> , <b>sap-id</b> , or <b>string</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### single-sub-parameters

Synopsis	Enter the <b>single-sub-parameters</b> context
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>sap string</i> <i>sub-sla-mgmt single-sub-parameters</i>
Tree	<a href="#">single-sub-parameters</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### non-sub-traffic

Synopsis	Enable the <b>non-sub-traffic</b> context
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>sap string</i> <i>sub-sla-mgmt single-sub-parameters non-sub-traffic</i>
Tree	<a href="#">non-sub-traffic</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### app-profile *reference*

Synopsis	Application profile name for all non-subscriber traffic
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface string</i> <i>group-interface string</i> <i>sap string</i> <i>sub-sla-mgmt single-sub-parameters non-sub-traffic app-profile reference</i>
Tree	<a href="#">app-profile</a>
Reference	<b>configure application-assurance group</b> <i>number</i> <i>partition number</i> <i>policy app-profile string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**sla-profile** *reference*

Synopsis	SLA profile applicable for all non-subscriber traffic
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">sub-sla-mgmt</a> <a href="#">single-sub-parameters</a> <a href="#">non-sub-traffic</a> <a href="#">sla-profile</a> <i>reference</i>
Tree	<a href="#">sla-profile</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">sla-profile</a> <i>string</i>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**sub-profile** *reference*

Synopsis	Subscriber profile all non-subscriber traffic
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">sub-sla-mgmt</a> <a href="#">single-sub-parameters</a> <a href="#">non-sub-traffic</a> <a href="#">sub-profile</a> <i>reference</i>
Tree	<a href="#">sub-profile</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">sub-profile</a> <i>string</i>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**subscriber-id** *string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Subscriber ID applied for all non-subscriber traffic
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">sub-sla-mgmt</a> <a href="#">single-sub-parameters</a> <a href="#">non-sub-traffic</a> <a href="#">subscriber-id</a> <i>string</i>
Tree	<a href="#">subscriber-id</a>
String Length	1 to 64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**profiled-traffic-only** *boolean*

Synopsis	Include all traffic in subscriber profile
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">sub-sla-mgmt</a> <a href="#">single-sub-parameters</a> <a href="#">profiled-traffic-only</a> <i>boolean</i>
Tree	<a href="#">profiled-traffic-only</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**sub-ident-policy** *reference*

Synopsis	Subscriber identification policy used on this SAP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">sub-sla-mgmt</a> <a href="#">sub-ident-policy</a> <i>reference</i>
Tree	<a href="#">sub-ident-policy</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">sub-ident-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**subscriber-limit** (*keyword* | *number*)

Synopsis	Maximum number of subscribers on this SAP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">sub-sla-mgmt</a> <a href="#">subscriber-limit</a> ( <i>keyword</i>   <i>number</i> )
Tree	<a href="#">subscriber-limit</a>
Range	1 to 131071
Options	no-limit
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**sap-parameters**

Synopsis	Enter the <b>sap-parameters</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap-parameters</a>

Tree	<a href="#">sap-parameters</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **anti-spoof** *keyword*

Synopsis	Anti-spoof type of the SAP
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap-parameters</a> <b>anti-spoof</b> <i>keyword</i>
Tree	<a href="#">anti-spoof</a>
Options	ip-mac, nh-mac
Default	ip-mac
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap-parameters</a> <b>description</b> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sub-sla-mgmt**

Synopsis	Enter the <b>sub-sla-mgmt</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap-parameters</a> <b>sub-sla-mgmt</b>
Tree	<a href="#">sub-sla-mgmt</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**defaults**

Synopsis	Enter the <b>defaults</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap-parameters</a> <a href="#">sub-sla-mgmt</a> <a href="#">defaults</a>
Tree	<a href="#">defaults</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**app-profile** *reference*

Synopsis	Default application profile name
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap-parameters</a> <a href="#">sub-sla-mgmt</a> <a href="#">defaults</a> <a href="#">app-profile</a> <i>reference</i>
Tree	<a href="#">app-profile</a>
Reference	<b>configure</b> <a href="#">application-assurance</a> <a href="#">group</a> <a href="#">number</a> <a href="#">partition</a> <a href="#">number</a> <a href="#">policy</a> <a href="#">app-profile</a> <a href="#">string</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**sla-profile** *reference*

Synopsis	Default SLA profile
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap-parameters</a> <a href="#">sub-sla-mgmt</a> <a href="#">defaults</a> <a href="#">sla-profile</a> <i>reference</i>
Tree	<a href="#">sla-profile</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">sla-profile</a> <a href="#">string</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**sub-profile** *reference*

Synopsis	Default subscriber profile
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">sap-parameters</a> <a href="#">sub-sla-mgmt</a> <a href="#">defaults</a> <a href="#">sub-profile</a> <i>reference</i>
Tree	<a href="#">sub-profile</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">sub-profile</a> <a href="#">string</a>
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## subscriber-id

Synopsis Enter the **subscriber-id** context

Context **configure service ies** *string* *subscriber-interface string* *group-interface string* *sap-parameters sub-sla-mgmt defaults subscriber-id*

Tree [subscriber-id](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## auto-id

Synopsis Subscriber ID that is autogenerated

Context **configure service ies** *string* *subscriber-interface string* *group-interface string* *sap-parameters sub-sla-mgmt defaults subscriber-id auto-id*

Tree [auto-id](#)

Notes The following elements are part of a choice: **auto-id** or **string**.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## string *string*

Synopsis String to be used as default subscriber ID

Context **configure service ies** *string* *subscriber-interface string* *group-interface string* *sap-parameters sub-sla-mgmt defaults subscriber-id string string*

Tree [string](#)

String Length 1 to 64

Notes The following elements are part of a choice: **auto-id** or **string**.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## sub-ident-policy *reference*

Synopsis Subscriber identification policy

Context	<b>configure service ies</b> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap-parameters</a> <a href="#">sub-sla-mgmt</a> <a href="#">sub-ident-policy</a> <i>reference</i>
Tree	<a href="#">sub-ident-policy</a>
Reference	<b>configure subscriber-mgmt</b> <a href="#">sub-ident-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **shcv-policy** *reference*

Synopsis	SHCV policy for IPv4 and IPv6 subscriber hosts
Context	<b>configure service ies</b> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">shcv-policy</a> <i>reference</i>
Tree	<a href="#">shcv-policy</a>
Reference	<b>configure subscriber-mgmt</b> <a href="#">shcv-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **shcv-policy-ipv4** *reference*

Synopsis	SHCV for IPv4 subscriber hosts
Context	<b>configure service ies</b> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">shcv-policy-ipv4</a> <i>reference</i>
Tree	<a href="#">shcv-policy-ipv4</a>
Reference	<b>configure subscriber-mgmt</b> <a href="#">shcv-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **shcv-policy-ipv6** *reference*

Synopsis	SHCV for IPv6 subscriber hosts
Context	<b>configure service ies</b> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">shcv-policy-ipv6</a> <i>reference</i>
Tree	<a href="#">shcv-policy-ipv6</a>
Reference	<b>configure subscriber-mgmt</b> <a href="#">shcv-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**srrp** [**srrp-id**] *number*

Synopsis	Enter the <b>srrp</b> list instance
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>srrp</b> <i>number</i>
Tree	<b>srrp</b>
Max. Instances	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**[srrp-id]** *number*

Synopsis	SRRP instance ID
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>srrp</b> <i>number</i>
Tree	<b>srrp</b>
Range	1 to 4294967295
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**admin-state** *keyword*

Synopsis	Administrative state of SRRP
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>srrp</b> <i>number</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**bfd-liveness**

Synopsis	Enable the <b>bfd-liveness</b> context
----------	--

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>srrp</b> <i>number</i> <b>bfd-liveness</b>
Tree	<b>bfd-liveness</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**dest-ip** *string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Destination IPv4 prefix
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>srrp</b> <i>number</i> <b>bfd-liveness</b> <b>dest-ip</b> <i>string</i>
Tree	<b>dest-ip</b>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**interface-name** *string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Name of the interface running BFD
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>srrp</b> <i>number</i> <b>bfd-liveness</b> <b>interface-name</b> <i>string</i>
Tree	<b>interface-name</b>
String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**service-name** *string***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Administrative service name
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">srrp</a> <a href="#">number</a> <a href="#">bfd-liveness</a> <a href="#">service-name</a> <a href="#">string</a>
Tree	<a href="#">service-name</a>
String Length	1 to 64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">srrp</a> <a href="#">number</a> <a href="#">description</a> <a href="#">string</a>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**gw-mac** *string*

Synopsis	Gateway MAC address
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">srrp</a> <a href="#">number</a> <a href="#">gw-mac</a> <a href="#">string</a>
Tree	<a href="#">gw-mac</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**keep-alive-interval** *number*

Synopsis	Interval between SRRP advertisements
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">srrp</a> <a href="#">number</a> <a href="#">keep-alive-interval</a> <a href="#">number</a>

Tree	<a href="#">keep-alive-interval</a>
Range	1 to 100
Units	deciseconds
Default	10
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### message-path *reference*

#### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	SAP to use as the SRRP message path
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">srrp</a> <i>number</i> <a href="#">message-path</a> <i>reference</i>
Tree	<a href="#">message-path</a>
Reference	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### monitor-oper-group

Synopsis	Enter the <b>monitor-oper-group</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">srrp</a> <i>number</i> <a href="#">monitor-oper-group</a>
Tree	<a href="#">monitor-oper-group</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### group-name *reference*

Synopsis	Operational group name
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">srrp</a> <i>number</i> <a href="#">monitor-oper-group</a> <a href="#">group-name</a> <i>reference</i>
Tree	<a href="#">group-name</a>
Reference	<b>configure</b> <a href="#">service</a> <a href="#">oper-group</a> <i>string</i>

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **priority-step** *number*

Synopsis	Step value to change priority of SRRP instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">srrp</a> <a href="#">number</a> <a href="#">monitor-oper-group</a> <a href="#">priority-step</a> <a href="#">number</a>
Tree	<a href="#">priority-step</a>
Range	1 to 10
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **one-garp-per-sap** *boolean*

Synopsis	Send one gratuitous ARP to each SAP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">srrp</a> <a href="#">number</a> <a href="#">one-garp-per-sap</a> <a href="#">boolean</a>
Tree	<a href="#">one-garp-per-sap</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **policy** *reference*

Synopsis	VRRP priority control policy associated with the SRRP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">srrp</a> <a href="#">number</a> <a href="#">policy</a> <a href="#">reference</a>
Tree	<a href="#">policy</a>
Reference	<b>configure</b> <a href="#">vrrp</a> <a href="#">policy</a> <a href="#">number</a>
Max. Instances	2
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**preempt** *boolean*

Synopsis	Allow the SRRP instance to override an existing master
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">srrp</a> <i>number</i> <a href="#">preempt</a> <i>boolean</i>
Tree	<a href="#">preempt</a>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**priority** *number*

Synopsis	Priority for this interface at this level
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">srrp</a> <i>number</i> <a href="#">priority</a> <i>number</i>
Tree	<a href="#">priority</a>
Range	1 to 254
Default	100
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**send-fib-population-packets** *keyword*

Synopsis	Mode used to send FIB population packets on switchover
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">srrp</a> <i>number</i> <a href="#">send-fib-population-packets</a> <i>keyword</i>
Tree	<a href="#">send-fib-population-packets</a>
Options	all, outer-tag-only
Default	all
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**suppress-aa-sub** *boolean*

Synopsis	Enable application assurance suppression for ESM subscribers
----------	--

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>suppress-aa-sub</b> <i>boolean</i>
Tree	<b>suppress-aa-sub</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **tos-marking-state** *keyword*

Synopsis	TOS marking state
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>tos-marking-state</b> <i>keyword</i>
Tree	<b>tos-marking-state</b>
Options	trusted, untrusted
Default	untrusted
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **type** *keyword*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Group interface type
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>type</b> <i>keyword</i>
Tree	<b>type</b>
Options	plain, lns, wlan-gw, gtp, bonding
Default	plain
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **wlan-gw**

Synopsis	Enter the <b>wlan-gw</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b>

Tree	<a href="#">wlan-gw</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of WLAN Gateway
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **gateway-address** [[address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the <b>gateway-address</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <b>gateway-address</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">gateway-address</a>
Max. Instances	10
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[address]** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Gateway endpoint address of the WLAN Gateway tunnel
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <b>gateway-address</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">gateway-address</a>
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## purpose

Synopsis	Enter the <b>purpose</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw gateway-address</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>purpose</b>
Tree	<b>purpose</b>
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## xconnect *boolean*

Synopsis	Use tunnel IP address for crosse-connect traffic
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw gateway-address</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>purpose xconnect boolean</b>
Tree	<b>xconnect</b>
Default	false
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## gateway-router *string*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Routing instance the WLAN-GW endpoint resides in
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw gateway-router</b> <i>string</i>
Tree	<b>gateway-router</b>
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## group-encryption

Synopsis	Enter the <b>group-encryption</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw group-encryption</b>

Tree	<a href="#">group-encryption</a>
Introduced	21.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **encryption-keygroup-inbound** *reference*

Synopsis	Encryption keygroup for inbound traffic
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">group-encryption</a> <a href="#">encryption-keygroup-inbound</a> <i>reference</i>
Tree	<a href="#">encryption-keygroup-inbound</a>
Reference	<b>configure</b> <a href="#">group-encryption</a> <a href="#">encryption-keygroup</a> <i>number</i>
Introduced	21.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **encryption-keygroup-outbound** *reference*

Synopsis	Encryption keygroup for inbound traffic
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">group-encryption</a> <a href="#">encryption-keygroup-outbound</a> <i>reference</i>
Tree	<a href="#">encryption-keygroup-outbound</a>
Reference	<b>configure</b> <a href="#">group-encryption</a> <a href="#">encryption-keygroup</a> <i>number</i>
Introduced	21.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **l2-ap**

Synopsis	Enter the <b>l2-ap</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">l2-ap</a>
Tree	<a href="#">l2-ap</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **access-point** [[sap-id](#)] *string*

Synopsis	Enter the <b>access-point</b> list instance
----------	---

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw l2-ap access-point</b> <i>string</i>
Tree	<b>access-point</b>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**[sap-id]** *string*

Synopsis	SAP ID for the Layer 2 access point
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw l2-ap access-point</b> <i>string</i>
Tree	<b>access-point</b>
String Length	1 to 45
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**admin-state** *keyword*

Synopsis	Administrative state of the L2 access points
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw l2-ap access-point</b> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**encap-type** *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Service encapsulation type of this access point
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw l2-ap access-point</b> <i>string</i> <b>encap-type</b> <i>keyword</i>

Tree	<a href="#">encap-type</a>
Options	null, dot1q, qinq
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **epipe-sap-template** *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Parameters template for the L2 access point SAP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">l2-ap</a> <a href="#">access-point</a> <i>string</i> <a href="#">epipe-sap-template</a> <i>reference</i>
Tree	<a href="#">epipe-sap-template</a>
Reference	<b>configure</b> <a href="#">service</a> <a href="#">template</a> <a href="#">epipe-sap-template</a> <i>string</i>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **auto-sub-id-fmt** *keyword*

Synopsis	Format of the auto-generated subscriber ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">l2-ap</a> <a href="#">auto-sub-id-fmt</a> <i>keyword</i>
Tree	<a href="#">auto-sub-id-fmt</a>
Options	include-ap-tags, sap-only
Default	include-ap-tags
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **default-encap-type** *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Default encapsulation type for Layer 2 access points
----------	--

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw l2-ap default-encap-type</b> <i>keyword</i>
Tree	<b>default-encap-type</b>
Options	null, dot1q, qinq
Default	null
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## lanext

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the <b>lanext</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw lanext</b>
Tree	<b>lanext</b>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## max-bd *number*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of bridge domains
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw lanext max-bd</b> <i>number</i>
Tree	<b>max-bd</b>
Range	1 to 131071
Default	131071
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## learn-ap-mac

Synopsis	Enable the <b>learn-ap-mac</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">wlan-gw</a> <a href="#">learn-ap-mac</a>
Tree	<a href="#">learn-ap-mac</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## delay-auth *boolean*

Synopsis	Delay AP-MAC until after ARP/ND authentication response
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">wlan-gw</a> <a href="#">learn-ap-mac</a> <a href="#">delay-auth</a> <i>boolean</i>
Tree	<a href="#">delay-auth</a>
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## mcs-peer

Synopsis	Enable the <b>mcs-peer</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">wlan-gw</a> <a href="#">mcs-peer</a>
Tree	<a href="#">mcs-peer</a>
Description	Commands in this context configure a multi-chassis synchronization peer.
Introduced	23.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## address *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IP address of the MCS peer
Context	<b>configure</b> <b>service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>mcs-peer</b> <b>address</b> <i>reference</i>
Tree	<b>address</b>
Description	This command configures the IPv4 address or the global IPv6 unicast address for a multi-chassis synchronization peer.
Reference	<b>configure</b> <b>redundancy</b> <b>multi-chassis peer</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> )
Notes	This element is mandatory.
Introduced	23.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**sync-tag** *string***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Synchronization tag shared by MCS peers
Context	<b>configure</b> <b>service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>mcs-peer</b> <b>sync-tag</b> <i>string</i>
Tree	<b>sync-tag</b>
Description	This command configures the synchronization tag for synchronization of ESM and the tunnel state for ESM over soft-GRE with an MCS peer.
String Length	1 to 32
Notes	This element is mandatory.
Introduced	23.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## mobility

Synopsis	Enter the <b>mobility</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">wlan-gw</a> <a href="#">mobility</a>
Tree	<a href="#">mobility</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## hold-time *number*

Synopsis	Minimum time between two mobility events for single UE
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">wlan-gw</a> <a href="#">mobility</a> <a href="#">hold-time</a> <i>number</i>
Tree	<a href="#">hold-time</a>
Range	0 to 255
Units	seconds
Default	5
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## inter-tunnel-type *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable mobility between terminating tunnel types
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">wlan-gw</a> <a href="#">mobility</a> <a href="#">inter-tunnel-type</a> <i>boolean</i>
Tree	<a href="#">inter-tunnel-type</a>
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## inter-vlan *boolean*

Synopsis	Allow mobility within different VLANs of the same range
----------	---

Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface string group-interface string wlan-gw mobility inter-vlan boolean</i>
Tree	<a href="#">inter-vlan</a>
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## trigger

Synopsis	Enter the <b>trigger</b> context
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface string group-interface string wlan-gw mobility trigger</i>
Tree	<a href="#">trigger</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## control *boolean*

Synopsis	Use control traffic as a mobility trigger
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface string group-interface string wlan-gw mobility trigger control boolean</i>
Tree	<a href="#">control</a>
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## data *boolean*

Synopsis	Use data traffic as mobility trigger
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface string group-interface string wlan-gw mobility trigger data boolean</i>
Tree	<a href="#">data</a>
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**iapp** *boolean*

Synopsis	Use IAPP messages as a mobility trigger
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>mobility trigger</b> <b>iapp</b> <i>boolean</i>
Tree	<b>iapp</b>
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**oper-down-on-group-degrade** *boolean*

Synopsis	Bring interface down when the ISA WLAN Gateway degraded
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>oper-down-on-group-degrade</b> <i>boolean</i>
Tree	<b>oper-down-on-group-degrade</b>
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**promiscuous-mode** *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable promiscuous mode for this group interface
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>promiscuous-mode</b> <i>boolean</i>
Tree	<b>promiscuous-mode</b>
Description	When configured to <b>true</b> , the router accepts all traffic, including traffic that is not destined for a WLAN gateway group interface MAC or virtual MAC address for ESM processing.  When configured to <b>false</b> , the router only accepts traffic that is destined for a WLAN gateway group interface MAC or virtual MAC address for ESM processing.
Default	false
Introduced	23.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**tcp-mss-adjust** *number*

Synopsis	TCP Maximum Segment Size (MSS) adjustment for gateway
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">tcp-mss-adjust</a> <i>number</i>
Tree	<a href="#">tcp-mss-adjust</a>
Range	160 to 10240
Units	bytes
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**tunnel-egress-qos**

Synopsis	Enter the <b>tunnel-egress-qos</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">tunnel-egress-qos</a>
Tree	<a href="#">tunnel-egress-qos</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**admin-state** *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of egress QoS for WLAN-GW tunnels
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">tunnel-egress-qos</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**agg-rate-limit** (*number* | *keyword*)

Synopsis	HQoS aggregate rate limit
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>tunnel-egress-qos</b> <b>agg-rate-limit</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>agg-rate-limit</b>
Range	1 to 100000000
Options	max
Default	max
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**granularity** *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Granularity of the egress shaping for WLAN Gateway
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>tunnel-egress-qos</b> <b>granularity</b> <i>keyword</i>
Tree	<b>granularity</b>
Options	per-tunnel – Applied to each tunnel per-retailer – Applied to each retailer Mobile Network Operator's fraction of the tunnel payload
Default	per-tunnel
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**hold-time** (*number* | *keyword*)

Synopsis	Minimum time to hold egress shaping resources
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>tunnel-egress-qos</b> <b>hold-time</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>hold-time</b>
Range	1 to 86400
Units	seconds
Options	infinite

Introduced 16.0.R1  
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **multi-client-only** *boolean*

Synopsis Allow shaping for tunnel traffic for multiple UEs  
 Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [wlan-gw](#)  
[tunnel-egress-qos](#) **multi-client-only** *boolean*  
 Tree [multi-client-only](#)  
 Default false  
 Introduced 16.0.R1  
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **qos** *reference*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Egress QoS policy linked with each interface tunnel  
 Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [wlan-gw](#)  
[tunnel-egress-qos](#) **qos** *reference*  
 Tree [qos](#)  
 Reference **configure** [qos sap-egress](#) *string*  
 Introduced 16.0.R1  
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **scheduler-policy** *reference*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Egress scheduler policy linked with each tunnel  
 Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [wlan-gw](#)  
[tunnel-egress-qos](#) **scheduler-policy** *reference*  
 Tree [scheduler-policy](#)

Reference	<b>configure qos scheduler-policy</b> <i>string</i>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## tunnel-encaps

Synopsis	Enter the <b>tunnel-encaps</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw tunnel-encaps</b>
Tree	<b>tunnel-encaps</b>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## learn-l2tp-cookie (*keyword* | *hex-string*)

Synopsis	System that learns the cookie from L2TP tunnels terminating on this interface
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw tunnel-encaps learn-l2tp-cookie</b> ( <i>keyword</i>   <i>hex-string</i> )
Tree	<b>learn-l2tp-cookie</b>
String Length	6
Options	never – Never interpret the cookie always – Interpret cookie regardless of first two octets value
Default	never
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## vlan-range [*range*] *string*

Synopsis	Enter the <b>vlan-range</b> list instance
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw vlan-range</b> <i>string</i>
Tree	<b>vlan-range</b>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**[range] string**

Synopsis	IEEE 802.1q VLAN tag range
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <a href="#">string</a>
Tree	<a href="#">vlan-range</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**authentication**

Synopsis	Enter the <b>authentication</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <a href="#">string</a> <a href="#">authentication</a>
Tree	<a href="#">authentication</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**hold-time number**

Synopsis	Minimum time UE held down after failed authentication
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <a href="#">string</a> <a href="#">authentication</a> <a href="#">hold-time</a> <a href="#">number</a>
Tree	<a href="#">hold-time</a>
Range	0 to 3600
Units	seconds
Default	5
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**local**

Synopsis	Enable the <b>local</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <a href="#">string</a> <a href="#">authentication</a> <a href="#">local</a>
Tree	<a href="#">local</a>

Introduced 22.2.R1  
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **coa-policy** *reference*

Synopsis RADIUS ISA policy applied to CoA or disconnect messages  
 Context **configure** [service](#) [ies](#) [string](#) [subscriber-interface](#) [string](#) [group-interface](#) [string](#) [wlan-gw](#) [vlan-range](#) [string](#) [authentication](#) [local](#) [coa-policy](#) [reference](#)  
 Tree [coa-policy](#)  
 Reference **configure** [aaa](#) [radius](#) [isa-policy](#) [string](#)  
 Introduced 22.2.R1  
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **default-ue-state** *keyword*

Synopsis UE state accepted for immediate authentication  
 Context **configure** [service](#) [ies](#) [string](#) [subscriber-interface](#) [string](#) [group-interface](#) [string](#) [wlan-gw](#) [vlan-range](#) [string](#) [authentication](#) [local](#) [default-ue-state](#) [keyword](#)  
 Tree [default-ue-state](#)  
 Options portal – Portal redirect UE using the http-redirect-policy  
 dsm – DSM UE using DSM parameters  
 Notes This element is mandatory.  
 Introduced 22.2.R1  
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **on-control-plane** *boolean*

Synopsis Allow authentication on first control plane packet  
 Context **configure** [service](#) [ies](#) [string](#) [subscriber-interface](#) [string](#) [group-interface](#) [string](#) [wlan-gw](#) [vlan-range](#) [string](#) [authentication](#) [on-control-plane](#) [boolean](#)  
 Tree [on-control-plane](#)  
 Default false  
 Introduced 16.0.R1  
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**policy reference**

Synopsis	RADIUS policy for authentication
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <i>string</i> <a href="#">authentication</a> <a href="#">policy</a> <i>reference</i>
Tree	<a href="#">policy</a>
Reference	<b>configure</b> <a href="#">aaa</a> <a href="#">radius</a> <a href="#">isa-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**vlan-mismatch-timeout *number***

Synopsis	Timeout if packet received with a non-matching VLAN tag
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <i>string</i> <a href="#">authentication</a> <a href="#">vlan-mismatch-timeout</a> <i>number</i>
Tree	<a href="#">vlan-mismatch-timeout</a>
Range	5 to 60
Units	seconds
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**data-triggered-ue-creation**

Synopsis	Enter the <b>data-triggered-ue-creation</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <i>string</i> <a href="#">data-triggered-ue-creation</a>
Tree	<a href="#">data-triggered-ue-creation</a>
Description	Commands in this context configure data-triggered subscriber creation for Wi-Fi subscribers. Data-triggered UE creation only works upon receipt of TCP and UDP packets.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**admin-state *keyword***

Synopsis	Administrative state of data-triggered UE creation
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <i>string</i> <a href="#">data-triggered-ue-creation</a> <a href="#">admin-state</a> <i>keyword</i>

Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**arp** *boolean*

Synopsis	Authenticate ARP packets received from an unknown UE
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <i>string</i> <a href="#">data-triggered-ue-creation</a> <b>arp</b> <i>boolean</i>
Tree	<a href="#">arp</a>
Default	false
Introduced	22.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**create-proxy-cache-entry**

Synopsis	Enter the <b>create-proxy-cache-entry</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <i>string</i> <a href="#">data-triggered-ue-creation</a> <b>create-proxy-cache-entry</b>
Tree	<a href="#">create-proxy-cache-entry</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**mac-format** *string*

Synopsis	MAC address format
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <i>string</i> <a href="#">data-triggered-ue-creation</a> <a href="#">create-proxy-cache-entry</a> <b>mac-format</b> <i>string</i>
Tree	<a href="#">mac-format</a>
String Length	2 to 7
Default	aa:
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**proxy-server**

Synopsis	Enable the <b>proxy-server</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <a href="#">string</a> <a href="#">data-triggered-ue-creation</a> <a href="#">create-proxy-cache-entry</a> <a href="#">proxy-server</a>
Tree	<a href="#">proxy-server</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**name** *string*

Synopsis	RADIUS Proxy server name
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <a href="#">string</a> <a href="#">data-triggered-ue-creation</a> <a href="#">create-proxy-cache-entry</a> <a href="#">proxy-server</a> <a href="#">name</a> <a href="#">string</a>
Tree	<a href="#">name</a>
String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**router-instance** *string*

Synopsis	Router instance of the RADIUS proxy server
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <a href="#">string</a> <a href="#">data-triggered-ue-creation</a> <a href="#">create-proxy-cache-entry</a> <a href="#">proxy-server</a> <a href="#">router-instance</a> <a href="#">string</a>
Tree	<a href="#">router-instance</a>
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**ospf** *boolean*

Synopsis	Authenticate OSPF packets received from an unknown UE
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <a href="#">string</a> <a href="#">data-triggered-ue-creation</a> <a href="#">ospf</a> <a href="#">boolean</a>

Tree	<a href="#">ospf</a>
Description	When configured to <b>true</b> , the system triggers UE authentication based on OSPFv2 or OSPFv3 packets. These packets are used with the dynamic VPLS service.
Default	false
Introduced	23.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## dhcp4

Synopsis	Enter the <b>dhcp4</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <a href="#">string</a> <b>dhcp4</b>
Tree	<a href="#">dhcp4</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## admin-state *keyword*

Synopsis	Administrative state of DHCPv4
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <a href="#">string</a> <b>dhcp4</b> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## dns *string*

Synopsis	DNS servers signaled in DHCP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <a href="#">string</a> <b>dhcp4</b> <b>dns</b> <i>string</i>
Tree	<a href="#">dns</a>
Max. Instances	2
Notes	This element is ordered by the user.

Introduced 16.0.R1  
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **I2-aware-ip-address** (*ipv4-unicast-address* | *keyword*)

Synopsis L2-Aware NAT inside IP address  
 Context **configure** *service ies string subscriber-interface string group-interface string wlan-gw  
 vlan-range string dhcp4 I2-aware-ip-address (ipv4-unicast-address | keyword)*  
 Tree [I2-aware-ip-address](#)  
 Options from-pool – IP address allocated from a pool  
 Introduced 16.0.R1  
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **lease-time**

Synopsis Enter the **lease-time** context  
 Context **configure** *service ies string subscriber-interface string group-interface string wlan-gw  
 vlan-range string dhcp4 lease-time*  
 Tree [lease-time](#)  
 Introduced 16.0.R1  
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **active number**

Synopsis Lease time an authenticated user  
 Context **configure** *service ies string subscriber-interface string group-interface string wlan-gw  
 vlan-range string dhcp4 lease-time active number*  
 Tree [active](#)  
 Range 300 to 3600  
 Units seconds  
 Default 600  
 Introduced 16.0.R1  
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**initial number**

Synopsis	Lease time for migrant user (unauthenticated)
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <i>string</i> <a href="#">dhcp4</a> <a href="#">lease-time</a> <b>initial</b> <i>number</i>
Tree	<a href="#">initial</a>
Range	300 to 3600
Units	seconds
Default	600
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**nbns string**

Synopsis	NetBIOS servers signaled in DHCP
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <i>string</i> <a href="#">dhcp4</a> <b>nbns</b> <i>string</i>
Tree	<a href="#">nbns</a>
Max. Instances	2
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**dhcp6**

Synopsis	Enter the <b>dhcp6</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <i>string</i> <b>dhcp6</b>
Tree	<a href="#">dhcp6</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**admin-state keyword**

Synopsis	Administrative state of the protocol
----------	--------------------------------------

Context	<b>configure service ies</b> <i>string subscriber-interface string group-interface string wlan-gw vlan-range string dhcp6 admin-state keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### preferred-lifetime

Synopsis	Enter the <b>preferred-lifetime</b> context
Context	<b>configure service ies</b> <i>string subscriber-interface string group-interface string wlan-gw vlan-range string dhcp6 preferred-lifetime</i>
Tree	<a href="#">preferred-lifetime</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### active number

Synopsis	Preferred signaled lifetime after full authentication
Context	<b>configure service ies</b> <i>string subscriber-interface string group-interface string wlan-gw vlan-range string dhcp6 preferred-lifetime active number</i>
Tree	<a href="#">active</a>
Range	300 to 3600
Units	seconds
Default	600
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### initial number

Synopsis	Signaled preferred lifetime after full authentication
Context	<b>configure service ies</b> <i>string subscriber-interface string group-interface string wlan-gw vlan-range string dhcp6 preferred-lifetime initial number</i>
Tree	<a href="#">initial</a>
Range	300 to 3600

Units	seconds
Default	300
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **valid-lifetime**

Synopsis	Enter the <b>valid-lifetime</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <i>string</i> <a href="#">dhcp6</a> <b>valid-lifetime</b>
Tree	<a href="#">valid-lifetime</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **active number**

Synopsis	Signaled valid lifetime after full authentication
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <i>string</i> <a href="#">dhcp6</a> <a href="#">valid-lifetime</a> <b>active</b> <i>number</i>
Tree	<a href="#">active</a>
Range	300 to 3600
Units	seconds
Default	600
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **initial number**

Synopsis	Valid signaled lifetime UE is not fully authenticated
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <i>string</i> <a href="#">dhcp6</a> <a href="#">valid-lifetime</a> <b>initial</b> <i>number</i>
Tree	<a href="#">initial</a>
Range	300 to 3600
Units	seconds
Default	300
Introduced	16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## dsm

Synopsis Enter the **dsm** context

Context **configure** [service](#) [ies](#) [string](#) [subscriber-interface](#) [string](#) [group-interface](#) [string](#) [wlan-gw](#) [vlan-range](#) [string](#) **dsm**

Tree [dsm](#)

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## accounting-policy *reference*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis ISA Radius Policy for accounting

Context **configure** [service](#) [ies](#) [string](#) [subscriber-interface](#) [string](#) [group-interface](#) [string](#) [wlan-gw](#) [vlan-range](#) [string](#) [dsm](#) **accounting-policy** *reference*

Tree [accounting-policy](#)

Reference **configure** [aaa](#) [radius](#) [isa-policy](#) [string](#)

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## accounting-update

Synopsis Enable the **accounting-update** context

Context **configure** [service](#) [ies](#) [string](#) [subscriber-interface](#) [string](#) [group-interface](#) [string](#) [wlan-gw](#) [vlan-range](#) [string](#) [dsm](#) **accounting-update**

Tree [accounting-update](#)

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## interval *number*

Synopsis Interim accounting update messages interval

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>vlan-range</b> <i>string</i> <b>dsm</b> <b>accounting-update interval</b> <i>number</i>
Tree	<a href="#">interval</a>
Range	5 to 259200
Units	minutes
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of DSM
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>vlan-range</b> <i>string</i> <b>dsm</b> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **application-assurance**

Synopsis	Enter the <b>application-assurance</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>vlan-range</b> <i>string</i> <b>dsm</b> <b>application-assurance</b>
Tree	<a href="#">application-assurance</a>
Introduced	21.10.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **accounting-statistics** *boolean*

Synopsis	Collect AA statistics
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>vlan-range</b> <i>string</i> <b>dsm</b> <b>application-assurance</b> <b>accounting-statistics</b> <i>boolean</i>
Tree	<a href="#">accounting-statistics</a>
Default	false

Introduced 21.10.R1  
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **profile** *reference*

Synopsis AA application profile used for portal authentication  
 Context **configure** [service](#) [ies](#) [string](#) [subscriber-interface](#) [string](#) [group-interface](#) [string](#) [wlan-gw](#) [vlan-range](#) [string](#) [dsm](#) [application-assurance](#) [profile](#) [reference](#)  
 Tree [profile](#)  
 Reference **configure** [application-assurance](#) [group](#) [number](#) [partition](#) [number](#) [policy](#) [app-profile](#) [string](#)  
 Introduced 21.10.R1  
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **url-parameter** *string*

Synopsis AA URL parameter included for HTTP portal redirect  
 Context **configure** [service](#) [ies](#) [string](#) [subscriber-interface](#) [string](#) [group-interface](#) [string](#) [wlan-gw](#) [vlan-range](#) [string](#) [dsm](#) [application-assurance](#) [url-parameter](#) [string](#)  
 Tree [url-parameter](#)  
 String Length 1 to 247  
 Introduced 22.2.R1  
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **egress**

Synopsis Enter the **egress** context  
 Context **configure** [service](#) [ies](#) [string](#) [subscriber-interface](#) [string](#) [group-interface](#) [string](#) [wlan-gw](#) [vlan-range](#) [string](#) [dsm](#) [egress](#)  
 Tree [egress](#)  
 Introduced 16.0.R1  
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **policer** *reference*

Synopsis Policer for egress traffic

Context	<b>configure service ies</b> <i>string subscriber-interface string group-interface string wlan-gw vlan-range string dsm egress policer reference</i>
Tree	<a href="#">policer</a>
Reference	<b>configure subscriber-mgmt isa-policer</b> <i>string</i>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ingress

Synopsis	Enter the <b>ingress</b> context
Context	<b>configure service ies</b> <i>string subscriber-interface string group-interface string wlan-gw vlan-range string dsm ingress</i>
Tree	<a href="#">ingress</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ip-filter reference

Synopsis	Filter for ingress traffic
Context	<b>configure service ies</b> <i>string subscriber-interface string group-interface string wlan-gw vlan-range string dsm ingress ip-filter reference</i>
Tree	<a href="#">ip-filter</a>
Reference	<b>configure subscriber-mgmt isa-filter</b> <i>string</i>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## policer reference

Synopsis	Policer for ingress traffic
Context	<b>configure service ies</b> <i>string subscriber-interface string group-interface string wlan-gw vlan-range string dsm ingress policer reference</i>
Tree	<a href="#">policer</a>
Reference	<b>configure subscriber-mgmt isa-policer</b> <i>string</i>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**soft-quota-exhausted-filter** *reference*

Synopsis	Filter applied when soft volume quota is reached
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <i>string</i> <a href="#">dsm ingress</a> <a href="#">soft-quota-exhausted-filter</a> <i>reference</i>
Tree	<a href="#">soft-quota-exhausted-filter</a>
Description	This command applies a filter when a soft volume quota is reached. The filter replaces the currently applied filter (which can be preconfigured using the <b>ip-filter</b> command in the <b>configure service vprn subscriber-interface group-interface wlan-gw vlan-range dsm ingress ip-filter</b> context or be set using a RADIUS CoA message) for the UE upon quota exhaustion. If the quota is extended using a RADIUS CoA message, the filter is automatically reverted. Configuration changes apply only to new DSM UEs and not to existing UEs.
Reference	<b>configure</b> <a href="#">subscriber-mgmt isa-filter</a> <i>string</i>
Introduced	21.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**one-time-redirect**

Synopsis	Enter the <b>one-time-redirect</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <i>string</i> <a href="#">dsm one-time-redirect</a>
Tree	<a href="#">one-time-redirect</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**port** *number*

Synopsis	Destination port of packets for HTTP redirect
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <i>string</i> <a href="#">dsm one-time-redirect</a> <a href="#">port</a> <i>number</i>
Tree	<a href="#">port</a>
Range	1 to 65535
Default	80
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**url string**

Synopsis	URL for redirected HTTP protocol packets
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <a href="#">string</a> <a href="#">dsm</a> <a href="#">one-time-redirect</a> <a href="#">url</a> <a href="#">string</a>
Tree	<a href="#">url</a>
String Length	1 to 255
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**volume-quota-direction keyword**

Synopsis	Volume quota direction for WLAN GW
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <a href="#">string</a> <a href="#">dsm</a> <a href="#">volume-quota-direction</a> <a href="#">keyword</a>
Tree	<a href="#">volume-quota-direction</a>
Description	This command specifies the direction that volume quotas are applied. Configuration changes apply only to new DSM UEs and not to existing UEs.
Options	both – Both directions ingress – Ingress direction (upstream) egress – Egress direction (downstream)
Default	both
Introduced	21.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**dynamic-service boolean**

Synopsis	Dynamically assign WLAN-GW subscriber to a VPLS service
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <a href="#">string</a> <a href="#">dynamic-service</a> <a href="#">boolean</a>
Tree	<a href="#">dynamic-service</a>
Description	When configured to <b>true</b> , the WLAN-GW subscriber is dynamically assigned to a VPLS service, based on RADIUS authentication reply attributes. This feature is used in conjunction with the <b>configure service vpls wlan-gw wlan-gw-group</b> command.  See "Dynamic VPLS service" in the <i>7450 ESS, 7750 SR, and VSR Triple Play Service Delivery Architecture Guide</i> for more information about the dynamic VPLS service feature.
Default	false
Introduced	23.3.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **extension** [[extension-range](#)] *string*

Synopsis Add a list entry for **extension**

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [wlan-gw](#) [vlan-range](#) *string* **extension** *string*

Tree [extension](#)

Introduced 21.7.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[extension-range]** *string*

Synopsis VLAN tag range used for matching

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [wlan-gw](#) [vlan-range](#) *string* **extension** *string*

Tree [extension](#)

Description This command configures the additional VLAN range that is used for matching. Any traffic within the extension range is considered part of the same VLAN range for purposes of intra-SSID mobility.

Notes This element is part of a list key.

Introduced 21.7.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **http-redirect-policy** *reference*

Synopsis Default HTTP redirect policy for portal authentication

Context **configure** [service ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [wlan-gw](#) [vlan-range](#) *string* **http-redirect-policy** *reference*

Tree [http-redirect-policy](#)

Reference **configure** [subscriber-mgmt](#) **http-redirect-policy** *string*

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **idle-timeout-action** *keyword*

Synopsis Action to perform when the idle timeout expires

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>vlan-range</b> <i>string</i> <b>idle-timeout-action</b> <i>keyword</i>
Tree	<b>idle-timeout-action</b>
Options	remove, shcv
Default	remove
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## I2-service

Synopsis	Enable the <b>I2-service</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>vlan-range</b> <i>string</i> <b>I2-service</b>
Tree	<b>I2-service</b>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## admin-state *keyword*

Synopsis	Administrative state of Layer 2 service for VLAN range
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>vlan-range</b> <i>string</i> <b>I2-service</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## description *string*

Synopsis	Text description
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>vlan-range</b> <i>string</i> <b>I2-service</b> <b>description</b> <i>string</i>
Tree	<b>description</b>
String Length	1 to 80
Introduced	16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **service** *reference*

Synopsis Layer 2 service associated with the range

Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [wlan-gw](#) [vlan-range](#) *string* [l2-service](#) [service](#) *reference*

Tree [service](#)

Reference **configure** [service](#) [vpls](#) *string*

Notes This element is mandatory.

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **nat-policy** *reference*

Synopsis NAT policy for DSM and ISA portal authentication

Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [wlan-gw](#) [vlan-range](#) *string* [nat-policy](#) *reference*

Tree [nat-policy](#)

Reference **configure** [service](#) [nat](#) [nat-policy](#) *string*

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **retail-service** *string*

Synopsis Default retail service for new UEs in this range

Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [group-interface](#) *string* [wlan-gw](#) [vlan-range](#) *string* [retail-service](#) *string*

Tree [retail-service](#)

String Length 1 to 64

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **slaac**

Synopsis Enter the **slaac** context

Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>group-interface</i> <i>string</i> <i>wlan-gw</i> <i>vlan-range</i> <i>string</i> <i>slaac</i>
Tree	<a href="#">slaac</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of the protocol
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>group-interface</i> <i>string</i> <i>wlan-gw</i> <i>vlan-range</i> <i>string</i> <i>slaac</i> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **preferred-lifetime**

Synopsis	Enter the <b>preferred-lifetime</b> context
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>group-interface</i> <i>string</i> <i>wlan-gw</i> <i>vlan-range</i> <i>string</i> <i>slaac</i> <b>preferred-lifetime</b>
Tree	<a href="#">preferred-lifetime</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **active** *number*

Synopsis	Preferred signaled lifetime after full authentication
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>group-interface</i> <i>string</i> <i>wlan-gw</i> <i>vlan-range</i> <i>string</i> <i>slaac</i> <b>preferred-lifetime</b> <b>active</b> <i>number</i>
Tree	<a href="#">active</a>
Range	300 to 3600
Units	seconds
Default	600
Introduced	16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **initial number**

Synopsis Signaled preferred lifetime after full authentication

Context **configure service ies** *string* **subscriber-interface** *string* **group-interface** *string* **wlan-gw** **vlan-range** *string* **slaac preferred-lifetime initial number**

Tree **initial**

Range 300 to 3600

Units seconds

Default 300

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **valid-lifetime**

Synopsis Enter the **valid-lifetime** context

Context **configure service ies** *string* **subscriber-interface** *string* **group-interface** *string* **wlan-gw** **vlan-range** *string* **slaac valid-lifetime**

Tree **valid-lifetime**

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **active number**

Synopsis Signaled valid lifetime after full authentication

Context **configure service ies** *string* **subscriber-interface** *string* **group-interface** *string* **wlan-gw** **vlan-range** *string* **slaac valid-lifetime active number**

Tree **active**

Range 300 to 3600

Units seconds

Default 600

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**initial number**

Synopsis	Valid signaled lifetime UE is not fully authenticated
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>vlan-range</b> <i>string</i> <b>slaac</b> <b>valid-lifetime</b> <b>initial</b> <i>number</i>
Tree	<b>initial</b>
Range	300 to 3600
Units	seconds
Default	300
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**vrgw**

Synopsis	Enter the <b>vrgw</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>vlan-range</b> <i>string</i> <b>vrgw</b>
Tree	<b>vrgw</b>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**admin-state keyword**

Synopsis	Administrative state of vRGW
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>vlan-range</b> <i>string</i> <b>vrgw</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**brg**

Synopsis	Enter the <b>brg</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>vlan-range</b> <i>string</i> <b>vrgw</b> <b>brg</b>

Tree	<a href="#">brg</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **authenticated-brg-only** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Only allow hosts from BRGs pre-authenticated using the radius-proxy
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <i>string</i> <a href="#">vrgw</a> <a href="#">brg</a> <a href="#">authenticated-brg-only</a> <i>boolean</i>
Tree	<a href="#">authenticated-brg-only</a>
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **default-brg-profile** *reference*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Default BRG profile to use if the AAA server does not specify one
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <i>string</i> <a href="#">vrgw</a> <a href="#">brg</a> <a href="#">default-brg-profile</a> <i>reference</i>
Tree	<a href="#">default-brg-profile</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">vrgw</a> <a href="#">brg-profile</a> <i>string</i>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **lanext**

Synopsis	Enter the <b>lanext</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <i>string</i> <a href="#">vrgw</a> <a href="#">lanext</a>
Tree	<a href="#">lanext</a>

Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## access

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>access</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <i>string</i> <a href="#">vrgw lanext</a> <b>access</b>
Tree	<a href="#">access</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## max-mac number

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of allowed MAC entries on access side
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <i>string</i> <a href="#">vrgw lanext</a> <a href="#">access</a> <b>max-mac</b> <i>number</i>
Tree	<a href="#">max-mac</a>
Range	1 to 256
Default	20
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## multi-access *boolean*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Allow multiple access points
----------	------------------------------

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <i>string</i> <b>vlan-range</b> <i>string</i> <b>vrgw lanext access multi-access</b> <i>boolean</i>
Tree	<b>multi-access</b>
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **policer** *reference*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Policer for ingress home traffic
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <i>string</i> <b>vlan-range</b> <i>string</i> <b>vrgw lanext access policer</b> <i>reference</i>
Tree	<b>policer</b>
Reference	<b>configure subscriber-mgmt isa-policer</b> <i>string</i>
Introduced	19.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of HLE
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <i>string</i> <b>vlan-range</b> <i>string</i> <b>vrgw lanext admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **assistive-address-resolution** *boolean*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	ISA assists in address resolution
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>vlan-range</b> <i>string</i> <b>vrgw</b> <b>lanext</b> <b>assistive-address-resolution</b> <i>boolean</i>
Tree	<b>assistive-address-resolution</b>
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **bd-mac-prefix** *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Prefix of the HLE BD MAC address
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>vlan-range</b> <i>string</i> <b>vrgw</b> <b>lanext</b> <b>bd-mac-prefix</b> <i>string</i>
Tree	<b>bd-mac-prefix</b>
String Length	8
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **mac-translation** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Allow MAC address translation for HLE services
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>vlan-range</b> <i>string</i> <b>vrgw</b> <b>lanext</b> <b>mac-translation</b> <i>boolean</i>
Tree	<b>mac-translation</b>
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## network

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>network</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>vlan-range</b> <i>string</i> <b>vrgw lanext network</b>
Tree	<b>network</b>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## admin-state *keyword*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of the HLE network
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>vlan-range</b> <i>string</i> <b>vrgw lanext network admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## max-mac *number*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of allowed MAC entries on network side
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>vlan-range</b> <i>string</i> <b>vrgw lanext network max-mac</b> <i>number</i>
Tree	<b>max-mac</b>
Range	1 to 64

Default	20
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **policer** *reference*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Policer for ingress data center traffic
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <a href="#">string</a> <a href="#">vrgw</a> <a href="#">lanext</a> <a href="#">network</a> <a href="#">policer</a> <i>reference</i>
Tree	<a href="#">policer</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">isa-policer</a> <a href="#">string</a>
Introduced	19.7.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **xconnect**

Synopsis	Enter the <b>xconnect</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <a href="#">string</a> <a href="#">xconnect</a>
Tree	<a href="#">xconnect</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **accounting**

Synopsis	Enter the <b>accounting</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <a href="#">string</a> <a href="#">xconnect</a> <a href="#">accounting</a>
Tree	<a href="#">accounting</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**mobility-updates** *boolean*

Synopsis	Accounting updates triggered by mobility
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <a href="#">string</a> <a href="#">xconnect</a> <a href="#">accounting</a> <a href="#">mobility-updates</a> <a href="#">boolean</a>
Tree	<a href="#">mobility-updates</a>
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**policy** *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	ISA RADIUS accounting policy for cross-connected UEs
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <a href="#">string</a> <a href="#">xconnect</a> <a href="#">accounting</a> <a href="#">policy</a> <a href="#">reference</a>
Tree	<a href="#">policy</a>
Reference	<b>configure</b> <a href="#">aaa</a> <a href="#">radius</a> <a href="#">isa-policy</a> <a href="#">string</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**update-interval** *number*

Synopsis	Time between successive interim accounting updates
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">group-interface</a> <a href="#">string</a> <a href="#">wlan-gw</a> <a href="#">vlan-range</a> <a href="#">string</a> <a href="#">xconnect</a> <a href="#">accounting</a> <a href="#">update-interval</a> <a href="#">number</a>
Tree	<a href="#">update-interval</a>
Range	5 to 259200
Units	minutes
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**admin-state** *keyword*

Synopsis	Administrative state of the cross-connect
----------	---

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>vlan-range</b> <i>string</i> <b>xconnect admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### wlan-gw-group *reference*

#### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	ID of WLAN Gateway ISA group that gateway binds to
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wlan-gw</b> <b>wlan-gw-group</b> <i>reference</i>
Tree	<a href="#">wlan-gw-group</a>
Reference	<b>configure isa</b> <b>wlan-gw-group</b> <i>number</i>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### wpp

Synopsis	Enable the <b>wpp</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wpp</b>
Tree	<a href="#">wpp</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### admin-state *keyword*

Synopsis	Administrative state of WPP
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wpp</b> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable

Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## initial

Synopsis	Enter the <b>initial</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wpp initial</a>
Tree	<a href="#">initial</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## app-profile *reference*

Synopsis	Initial application profile name
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wpp initial</a> <a href="#">app-profile</a> <i>reference</i>
Tree	<a href="#">app-profile</a>
Reference	<b>configure</b> <a href="#">application-assurance</a> <i>group</i> <i>number</i> <a href="#">partition</a> <i>number</i> <a href="#">policy</a> <a href="#">app-profile</a> <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## sla-profile *reference*

Synopsis	Initial SLA profile
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wpp initial</a> <a href="#">sla-profile</a> <i>reference</i>
Tree	<a href="#">sla-profile</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">sla-profile</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## sub-profile *reference*

Synopsis	Initial subscriber profile
----------	----------------------------

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wpp initial sub-profile</b> <i>reference</i>
Tree	<b>sub-profile</b>
Reference	<b>configure subscriber-mgmt sub-profile</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### lease-time *number*

Synopsis	Lease time
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wpp lease-time</b> <i>number</i>
Tree	<b>lease-time</b>
Range	10 to 315446399
Units	seconds
Default	600
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### portal

Synopsis	Enter the <b>portal</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wpp portal</b>
Tree	<b>portal</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### name *string*

Synopsis	Web portal server name
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>group-interface</b> <i>string</i> <b>wpp portal name</b> <i>string</i>
Tree	<b>name</b>
String Length	1 to 32
Notes	The following elements are part of a choice: <b>portal-group</b> or ( <b>name</b> and <b>router-instance</b> ).

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **portal-group** *reference*

Synopsis	WPP portal group for this interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wpp</a> <a href="#">portal</a> <a href="#">portal-group</a> <i>reference</i>
Tree	<a href="#">portal-group</a>
Reference	<b>configure</b> <a href="#">aaa</a> <a href="#">wpp</a> <a href="#">portal-group</a> <i>string</i>
Notes	The following elements are part of a choice: <b>portal-group</b> or ( <b>name</b> and <b>router-instance</b> ).
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **router-instance** *string*

Synopsis	Virtual router instance of WPP portal for interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wpp</a> <a href="#">portal</a> <a href="#">router-instance</a> <i>string</i>
Tree	<a href="#">router-instance</a>
Notes	The following elements are part of a choice: <b>portal-group</b> or ( <b>name</b> and <b>router-instance</b> ).
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **restore-to-initial-on-disconnect** *boolean*

Synopsis	Restore initial profiles after a host has disconnected
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wpp</a> <a href="#">restore-to-initial-on-disconnect</a> <i>boolean</i>
Tree	<a href="#">restore-to-initial-on-disconnect</a>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**triggered-hosts** *boolean*

Synopsis	Enable/disable triggered hosts
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wpp</a> <a href="#">triggered-hosts</a> <i>boolean</i>
Tree	<a href="#">triggered-hosts</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**user-db** *reference*

Synopsis	User database
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">group-interface</a> <i>string</i> <a href="#">wpp</a> <a href="#">user-db</a> <i>reference</i>
Tree	<a href="#">user-db</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">local-user-db</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**hold-time**

Synopsis	Enter the <b>hold-time</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">hold-time</a>
Tree	<a href="#">hold-time</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**ipv4**

Synopsis	Enter the <b>ipv4</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">hold-time</a> <a href="#">ipv4</a>
Tree	<a href="#">ipv4</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## down

Synopsis	Enter the <b>down</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">hold-time</a> <a href="#">ipv4</a> <b>down</b>
Tree	<a href="#">down</a>
Description	Commands in this context configure the down hold timer, which specifies the delay before activating the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface up, unless an operator configures the <b>init-only</b> command.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## init-only *boolean*

Synopsis	Apply delay only at interface configuration or reboot
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">hold-time</a> <a href="#">ipv4</a> <b>down</b> <b>init-only</b> <i>boolean</i>
Tree	<a href="#">init-only</a>
Description	This command applies a delay only when the IP interface is first configured or after a system reboot.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## seconds *number*

Synopsis	Down hold time for the IP interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">hold-time</a> <a href="#">ipv4</a> <b>down</b> <b>seconds</b> <i>number</i>
Tree	<a href="#">seconds</a>
Range	1 to 1200
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## up

Synopsis	Enter the <b>up</b> context
----------	-----------------------------

Context	<b>configure service ies string subscriber-interface string hold-time ipv4 up</b>
Tree	<b>up</b>
Description	Commands in this context configure the up hold timer, which specifies the delay before deactivation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface down.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **seconds number**

Synopsis	Up hold time for the IP interface
Context	<b>configure service ies string subscriber-interface string hold-time ipv4 up seconds number</b>
Tree	<b>seconds</b>
Range	1 to 1200
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ipv6**

Synopsis	Enter the <b>ipv6</b> context
Context	<b>configure service ies string subscriber-interface string hold-time ipv6</b>
Tree	<b>ipv6</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **down**

Synopsis	Enter the <b>down</b> context
Context	<b>configure service ies string subscriber-interface string hold-time ipv6 down</b>
Tree	<b>down</b>
Description	Commands in this context configure the down hold timer, which specifies the delay before activation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface up, unless an operator configures the <b>init-only</b> command.
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **init-only** *boolean*

Synopsis Apply delay only at interface configuration or reboot

Context **configure** *service ies string subscriber-interface string hold-time ipv6 down init-only boolean*

Tree [init-only](#)

Description When configured to **true**, the system applies a delay only when the IP interface is first configured or after a system reboot.

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **seconds** *number*

Synopsis Down hold time for the IP interface

Context **configure** *service ies string subscriber-interface string hold-time ipv6 down seconds number*

Tree [seconds](#)

Range 1 to 1200

Units seconds

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **up**

Synopsis Enter the **up** context

Context **configure** *service ies string subscriber-interface string hold-time ipv6 up*

Tree [up](#)

Description Commands in this context configure the up hold timer, which specifies the delay before deactivation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface down.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **seconds** *number*

Synopsis	Up hold time for the IP interface
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">hold-time ipv6 up</a> <b>seconds</b> <i>number</i>
Tree	<a href="#">seconds</a>
Range	1 to 1200
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ipoe-linking**

Synopsis	Enter the <b>ipoe-linking</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipoe-linking</a>
Tree	<a href="#">ipoe-linking</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **gratuitous-router-advertisement** *boolean*

Synopsis	Send unsolicited router advertisement after DHCP setup
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipoe-linking</a> <a href="#">gratuitous-router-advertisement</a> <i>boolean</i>
Tree	<a href="#">gratuitous-router-advertisement</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ipoe-session**

Synopsis	Enter the <b>ipoe-session</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipoe-session</a>
Tree	<a href="#">ipoe-session</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**session-limit** *number*

Synopsis	Maximum number of sessions on this group interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipoe-session</a> <a href="#">session-limit</a> <i>number</i>
Tree	<a href="#">session-limit</a>
Range	1 to 500000
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**ipv4**

Synopsis	Enter the <b>ipv4</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv4</a>
Tree	<a href="#">ipv4</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**address** [[ipv4-address](#)] *string*

Synopsis	Enter the <b>address</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">address</a> <i>string</i>
Tree	<a href="#">address</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**[[ipv4-address](#)]** *string*

Synopsis	IP address associated with the subscriber subnet
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv4</a> <a href="#">address</a> <i>string</i>
Tree	<a href="#">address</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **gateway string**

Synopsis	Gateway IP address within the subnet for SRRP routing
Context	<b>configure service ies string subscriber-interface string ipv4 address string gateway string</b>
Tree	<a href="#">gateway</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **holdup-time number**

Synopsis	Wait time before accepting new state attribute
Context	<b>configure service ies string subscriber-interface string ipv4 address string holdup-time number</b>
Tree	<a href="#">holdup-time</a>
Range	100 to 5000
Units	milliseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **populate-host-routes boolean**

Synopsis	Populate subscriber host routes in local FIB
Context	<b>configure service ies string subscriber-interface string ipv4 address string populate-host-routes boolean</b>
Tree	<a href="#">populate-host-routes</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **prefix-length number**

Synopsis	IPv4 address prefix length
Context	<b>configure service ies string subscriber-interface string ipv4 address string prefix-length number</b>
Tree	<a href="#">prefix-length</a>
Range	0 to 32

Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **track-srrp** *number*

Synopsis	SRRP instance whose state is tracked on this IP address
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv4</b> <b>address</b> <i>string</i> <b>track-srrp</b> <i>number</i>
Tree	<a href="#">track-srrp</a>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **allow-unmatching-subnets** *boolean*

Synopsis	Allow subscriber hosts without a matching subnet
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv4</b> <b>allow-unmatching-subnets</b> <i>boolean</i>
Tree	<a href="#">allow-unmatching-subnets</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **default-dns** *string*

Synopsis	Default DNS server addresses
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv4</b> <b>default-dns</b> <i>string</i>
Tree	<a href="#">default-dns</a>
Max. Instances	2
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## dhcp

Synopsis	Enter the <b>dhcp</b> context
Context	<b>configure service ies string subscriber-interface string ipv4 dhcp</b>
Tree	<a href="#">dhcp</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## admin-state keyword

Synopsis	Administrative state of DHCP
Context	<b>configure service ies string subscriber-interface string ipv4 dhcp admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## client-applications

Synopsis	Enter the <b>client-applications</b> context
Context	<b>configure service ies string subscriber-interface string ipv4 dhcp client-applications</b>
Tree	<a href="#">client-applications</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## dhcp boolean

Synopsis	Enable IPoE clients to use DHCP relay or proxy server
Context	<b>configure service ies string subscriber-interface string ipv4 dhcp client-applications dhcp boolean</b>
Tree	<a href="#">dhcp</a>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**ppp boolean**

Synopsis	Enable PPPoE clients to use DHCP relay or proxy server
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv4 dhcp client-applications</a> <a href="#">ppp boolean</a>
Tree	<a href="#">ppp</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**description string**

Synopsis	Text description
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv4 dhcp description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**gi-address string**

Synopsis	GI address for the DHCP relay
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv4 dhcp gi-address</a> <i>string</i>
Tree	<a href="#">gi-address</a>
Description	<p>This command configures the GI address to distinguish between the different subscriber interfaces (and potentially group interfaces) defined when the router functions as a DHCP relay.</p> <p>By default, the GI address used in the relayed DHCP packet is the primary IP address of a normal IES interface. Specifying the GI address allows the user to choose a secondary address. For group interfaces, a GI address must be specified under the group interface DHCP context or subscriber interface DHCP context for DHCP to function.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**lease-populate**

Synopsis	Enter the <b>lease-populate</b> context
----------	---

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv4 dhcp lease-populate</b>
Tree	<a href="#">lease-populate</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **max-leases** *number*

Synopsis	Maximum number of DHCPv4 leases
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv4 dhcp lease-populate max-leases</b> <i>number</i>
Tree	<a href="#">max-leases</a>
Range	0 to 511999
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **option-82**

Synopsis	Enter the <b>option-82</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv4 dhcp option-82</b>
Tree	<a href="#">option-82</a>
Description	Commands in this context configure the processing required when the router receives a DHCP request that already has an Option 82 field in the packet.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **vendor-specific-option**

Synopsis	Enter the <b>vendor-specific-option</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv4 dhcp option-82 vendor-specific-option</b>
Tree	<a href="#">vendor-specific-option</a>
Description	Commands in this context configure the Nokia Vendor-Specific Option (VSO) of the DHCP packet.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**client-mac-address** *boolean*

Synopsis	Send the MAC address in the VSO
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv4</b> <b>dhcp</b> <b>option-82</b> <b>vendor-specific-option</b> <b>client-mac-address</b> <i>boolean</i>
Tree	<b>client-mac-address</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**sap-id** *boolean*

Synopsis	Send SAP ID in the sub-option of the DHCP relay packet
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv4</b> <b>dhcp</b> <b>option-82</b> <b>vendor-specific-option</b> <b>sap-id</b> <i>boolean</i>
Tree	<b>sap-id</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**service-id** *boolean*

Synopsis	Send the service ID in the Vendor Specific Option
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv4</b> <b>dhcp</b> <b>option-82</b> <b>vendor-specific-option</b> <b>service-id</b> <i>boolean</i>
Tree	<b>service-id</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**string** *string*

Synopsis	User-defined ASCII string for the VSO
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv4</b> <b>dhcp</b> <b>option-82</b> <b>vendor-specific-option</b> <b>string</b> <i>string</i>
Tree	<b>string</b>

String Length 1 to 32  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **system-id** *boolean*

Synopsis Send the system ID in the VSO  
 Context **configure** [service](#) [ies](#) [string](#) [subscriber-interface](#) [string](#) [ipv4](#) [dhcp](#) [option-82](#) [vendor-specific-option](#) [system-id](#) *boolean*  
 Tree [system-id](#)  
 Default false  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **proxy-server**

Synopsis Enter the **proxy-server** context  
 Context **configure** [service](#) [ies](#) [string](#) [subscriber-interface](#) [string](#) [ipv4](#) [dhcp](#) [proxy-server](#)  
 Tree [proxy-server](#)  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis Administrative state of the DHCP proxy server  
 Context **configure** [service](#) [ies](#) [string](#) [subscriber-interface](#) [string](#) [ipv4](#) [dhcp](#) [proxy-server](#) [admin-state](#) *keyword*  
 Tree [admin-state](#)  
 Options enable, disable  
 Default disable  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **emulated-server** *string*

Synopsis IP address used as DHCP server address in SAP context

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv4 dhcp proxy-server emulated-server</b> <i>string</i>
Tree	<b>emulated-server</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## lease-time

Synopsis	Enter the <b>lease-time</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv4 dhcp proxy-server lease-time</b>
Tree	<b>lease-time</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## radius-override *boolean*

Synopsis	Use lease time information provided by RADIUS server
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv4 dhcp proxy-server lease-time radius-override</b> <i>boolean</i>
Tree	<b>radius-override</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## value *number*

Synopsis	DHCP lease time
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv4 dhcp proxy-server lease-time value</b> <i>number</i>
Tree	<b>value</b>
Range	300 to 315446399
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **python-policy** *reference*

Synopsis	Python policy
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">python-policy</a> <a href="#">reference</a>
Tree	<a href="#">python-policy</a>
Reference	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <a href="#">string</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **relay-proxy**

Synopsis	Enable the <b>relay-proxy</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">relay-proxy</a>
Tree	<a href="#">relay-proxy</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **release-update-src-ip** *boolean*

Synopsis	Update the source IP address of a DHCP RELEASE message
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">relay-proxy</a> <a href="#">release-update-src-ip</a> <a href="#">boolean</a>
Tree	<a href="#">release-update-src-ip</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **siaddr-override** *string*

Synopsis	DHCP server IP address for address hiding function
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">subscriber-interface</a> <a href="#">string</a> <a href="#">ipv4</a> <a href="#">dhcp</a> <a href="#">relay-proxy</a> <a href="#">siaddr-override</a> <a href="#">string</a>
Tree	<a href="#">siaddr-override</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**release-include-gi-address** *boolean*

Synopsis	Include the GI address in DHCP relay messages
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv4 dhcp</a> <a href="#">release-include-gi-address</a> <i>boolean</i>
Tree	<a href="#">release-include-gi-address</a>
Default	false
Introduced	21.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**server** *string*

Synopsis	DHCP server IP addresses
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv4 dhcp</a> <a href="#">server</a> <i>string</i>
Tree	<a href="#">server</a>
Max. Instances	8
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**src-ip-addr** *keyword*

Synopsis	Type of source address to use for DHCP relay
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv4 dhcp</a> <a href="#">src-ip-addr</a> <i>keyword</i>
Tree	<a href="#">src-ip-addr</a>
Options	auto, gi-address
Default	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**virtual-subnet** *boolean*

Synopsis	Enable a virtual subnet for DHCPv4 hosts
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv4 dhcp</a> <a href="#">virtual-subnet</a> <i>boolean</i>
Tree	<a href="#">virtual-subnet</a>

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **export-host-routes** *boolean*

Synopsis	Allow export of subscriber management host routes
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv4</a> <b>export-host-routes</b> <i>boolean</i>
Tree	<a href="#">export-host-routes</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **unnumbered**

Synopsis	Enter the <b>unnumbered</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv4</a> <b>unnumbered</b>
Tree	<a href="#">unnumbered</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ip-address** *string*

Synopsis	IP address for the subscriber interface
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv4</a> <b>unnumbered</b> <b>ip-address</b> <i>string</i>
Tree	<a href="#">ip-address</a>
Notes	The following elements are part of a choice: <b>ip-address</b> or <b>ip-int-name</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ip-int-name** *string*

Synopsis	Interface name from which an IPv4 address is borrowed
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv4</a> <b>unnumbered</b> <b>ip-int-name</b> <i>string</i>

Tree	<a href="#">ip-int-name</a>
String Length	1 to 32
Notes	The following elements are part of a choice: <b>ip-address</b> or <b>ip-int-name</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ipv6

Synopsis	Enable the <b>ipv6</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv6</a>
Tree	<a href="#">ipv6</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## address [[ipv6-address](#)] *string*

Synopsis	Enter the <b>address</b> list instance
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">address</a> <i>string</i>
Tree	<a href="#">address</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## [[ipv6-address](#)] *string*

Synopsis	IPv6 address for the subscriber interface
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">address</a> <i>string</i>
Tree	<a href="#">address</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**host-type** *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Host type for subscriber interface prefixes
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6</b> <b>address</b> <i>string</i> <b>host-type</b> <i>keyword</i>
Tree	<b>host-type</b>
Options	pd – IPv6 ESM hosts for DHCPv6 prefix-delegation wan – ESM hosts for DHCPv6 addresses or by WAN interface pd-wan – Both prefix-delegation and ESM hosts
Default	pd
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**prefix-length** *number*

Synopsis	IPv6 address prefix length
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6</b> <b>address</b> <i>string</i> <b>prefix-length</b> <i>number</i>
Tree	<b>prefix-length</b>
Range	0 to 128
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**allow-multiple-wan-addresses** *boolean*

Synopsis	Allow multiple WAN addresses
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6</b> <b>allow-multiple-wan-addresses</b> <i>boolean</i>
Tree	<b>allow-multiple-wan-addresses</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**allow-unmatching-prefixes** *boolean*

Synopsis	Allow subscriber hosts without a matching prefix
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">allow-unmatching-prefixes</a> <i>boolean</i>
Tree	<a href="#">allow-unmatching-prefixes</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**default-dns** *string*

Synopsis	Default DNS server addresses
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">default-dns</a> <i>string</i>
Tree	<a href="#">default-dns</a>
Max. Instances	2
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**delegated-prefix-length** (*number* | *keyword*)

Synopsis	IPv6 delegated prefix length
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">delegated-prefix-length</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">delegated-prefix-length</a>
Range	48 to 64
Options	variable
Default	64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**dhcp6**

Synopsis	Enter the <b>dhcp6</b> context
----------	--------------------------------

---

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6 dhcp6</b>
Tree	<b>dhcp6</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **allow-client-id-change** *boolean*

Synopsis	Allow changes to the client ID
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6 dhcp6 allow-client-id-change</b> <i>boolean</i>
Tree	<b>allow-client-id-change</b>
Default	false
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **override-slaac** *boolean*

Synopsis	Allow WAN address offered by DHCP to overwrite the WAN address acquired from SLAAC
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6 dhcp6 override-slaac</b> <i>boolean</i>
Tree	<b>override-slaac</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **pd-managed-route**

Synopsis	Enable the <b>pd-managed-route</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6 dhcp6 pd-managed-route</b>
Tree	<b>pd-managed-route</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **next-hop** *keyword*

Synopsis	Next hop type
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6</b> <b>dhcp6</b> <b>pd-managed-route</b> <b>next-hop</b> <i>keyword</i>
Tree	<b>next-hop</b>
Options	ipv4, ipv6
Default	ipv6
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **proxy-server**

Synopsis	Enter the <b>proxy-server</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6</b> <b>dhcp6</b> <b>proxy-server</b>
Tree	<b>proxy-server</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of the DHCPv6 proxy server
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6</b> <b>dhcp6</b> <b>proxy-server</b> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **client-applications**

Synopsis	Enter the <b>client-applications</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6</b> <b>dhcp6</b> <b>proxy-server</b> <b>client-applications</b>
Tree	<b>client-applications</b>
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **dhcp boolean**

Synopsis Enable IPoE clients to use DHCP relay or proxy server

Context **configure** [service ies string subscriber-interface string ipv6 dhcp6 proxy-server client-applications dhcp boolean](#)

Tree [dhcp](#)

Default true

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ppp boolean**

Synopsis Allow PPPoE clients to use DHCP relay functionality

Context **configure** [service ies string subscriber-interface string ipv6 dhcp6 proxy-server client-applications ppp boolean](#)

Tree [ppp](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **preferred-lifetime (number | keyword)**

Synopsis Time for prefix to remain preferred on this interface

Context **configure** [service ies string subscriber-interface string ipv6 dhcp6 proxy-server preferred-lifetime \(number | keyword\)](#)

Tree [preferred-lifetime](#)

Range 300 to 4294967294

Units seconds

Options infinite

Default 3600

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**rebind-timer** *number*

Synopsis	Rebind timer (T2) for this interface
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6</b> <b>dhcp6</b> <b>proxy-server</b> <b>rebind-timer</b> <i>number</i>
Tree	<a href="#">rebind-timer</a>
Range	0 to 1209600
Units	seconds
Default	2880
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**renew-timer** *number*

Synopsis	Renew timer (T1)
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6</b> <b>dhcp6</b> <b>proxy-server</b> <b>renew-timer</b> <i>number</i>
Tree	<a href="#">renew-timer</a>
Range	0 to 604800
Units	seconds
Default	1800
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**server-id**

Synopsis	Enter the <b>server-id</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6</b> <b>dhcp6</b> <b>proxy-server</b> <b>server-id</b>
Tree	<a href="#">server-id</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**duid-en-ascii** *string*

Synopsis	Vendor-assigned ID based on Enterprise Number (DUID-EN)
----------	---

Context	<b>configure service ies string subscriber-interface string ipv6 dhcp6 proxy-server server-id duid-en-ascii string</b>
Tree	<a href="#">duid-en-ascii</a>
String Length	1 to 58
Notes	The following elements are part of a choice: <b>duid-en-ascii</b> , <b>duid-en-hex</b> , or <b>duid-ll</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **duid-en-hex string**

Synopsis	DUID system ID in hexadecimal format
Context	<b>configure service ies string subscriber-interface string ipv6 dhcp6 proxy-server server-id duid-en-hex string</b>
Tree	<a href="#">duid-en-hex</a>
String Length	1 to 118
Notes	The following elements are part of a choice: <b>duid-en-ascii</b> , <b>duid-en-hex</b> , or <b>duid-ll</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **duid-ll**

Synopsis	Use link-layer address (DUID-LL) as DUID
Context	<b>configure service ies string subscriber-interface string ipv6 dhcp6 proxy-server server-id duid-ll</b>
Tree	<a href="#">duid-ll</a>
Notes	The following elements are part of a choice: <b>duid-en-ascii</b> , <b>duid-en-hex</b> , or <b>duid-ll</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **valid-lifetime (number | keyword)**

Synopsis	Time for prefix to remain valid on this interface
Context	<b>configure service ies string subscriber-interface string ipv6 dhcp6 proxy-server valid-lifetime (number   keyword)</b>
Tree	<a href="#">valid-lifetime</a>
Range	300 to 4294967294

Units	seconds
Options	infinite
Default	86400
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **python-policy** *reference*

Synopsis	Python policy
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv6 dhcp6 python-policy</a> <i>reference</i>
Tree	<a href="#">python-policy</a>
Reference	<b>configure</b> <a href="#">python</a> <a href="#">python-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **relay**

Synopsis	Enter the <b>relay</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv6 dhcp6 relay</a>
Tree	<a href="#">relay</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of DHCPv6 Relay
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv6 dhcp6 relay admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## client-applications

Synopsis	Enter the <b>client-applications</b> context
Context	<b>configure service ies string subscriber-interface string ipv6 dhcp6 relay client-applications</b>
Tree	<a href="#">client-applications</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## dhcp boolean

Synopsis	Enable IPoE clients to use DHCP relay or proxy server
Context	<b>configure service ies string subscriber-interface string ipv6 dhcp6 relay client-applications dhcp boolean</b>
Tree	<a href="#">dhcp</a>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ppp boolean

Synopsis	Allow PPPoE clients to use DHCP relay functionality
Context	<b>configure service ies string subscriber-interface string ipv6 dhcp6 relay client-applications ppp boolean</b>
Tree	<a href="#">ppp</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## description string

Synopsis	Text description
Context	<b>configure service ies string subscriber-interface string ipv6 dhcp6 relay description string</b>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## lease-split

Synopsis Enter the **lease-split** context

Context **configure service ies string subscriber-interface string ipv6 dhcp6 relay lease-split**

Tree [lease-split](#)

Description Commands in this context configure DHCPv6 lease split.

DHCPv6 lease split is active when administratively enabled and for all IA\_NA and IA\_PD options in the transaction, the configured lease split valid lifetime (short lease time) is less than or equal to one of the following:

- the renew time T1 committed by the server (long renew time)
- half of the preferred lifetime committed by the server when T1 committed by the server equals zero

Introduced 21.2.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## admin-state *keyword*

Synopsis Administrative state of DHCPv6 lease split

Context **configure service ies string subscriber-interface string ipv6 dhcp6 relay lease-split admin-state keyword**

Tree [admin-state](#)

Options enable, disable

Default disable

Introduced 21.2.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## valid-lifetime *number*

Synopsis DHCPv6 lease split valid lifetime (short lease time)

Context **configure service ies string subscriber-interface string ipv6 dhcp6 relay lease-split valid-lifetime number**

Tree [valid-lifetime](#)

Range 300 to 315446399

Units seconds

Default 3600

Introduced 21.2.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **link-address** *string*

Synopsis Link address for the DHCPv6 relay messages  
 Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [ipv6](#) [dhcp6](#) [relay](#) [link-address](#) *string*  
 Tree [link-address](#)  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **server** *string*

Synopsis DHCP6 servers to which the DHCP6 requests are forwarded  
 Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [ipv6](#) [dhcp6](#) [relay](#) [server](#) *string*  
 Tree [server](#)  
 Max. Instances 8  
 Notes This element is ordered by the user.  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **source-address** *string*

Synopsis Source IPv6 address for the DHCPv6 relay messages  
 Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [ipv6](#) [dhcp6](#) [relay](#) [source-address](#) *string*  
 Tree [source-address](#)  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ipoe-bridged-mode** *boolean*

Synopsis Enable IPv6 IPoE bridged mode  
 Context **configure** [service](#) [ies](#) *string* [subscriber-interface](#) *string* [ipv6](#) [ipoe-bridged-mode](#) *boolean*

Tree	<a href="#">ipoe-bridged-mode</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## link-local-address

Synopsis	Enter the <b>link-local-address</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">link-local-address</a>
Tree	<a href="#">link-local-address</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## address *string*

Synopsis	IPv6 link local address
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">link-local-address</a> <a href="#">address</a> <i>string</i>
Tree	<a href="#">address</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## prefix [[ipv6-prefix](#)] *string*

Synopsis	Enter the <b>prefix</b> list instance
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">prefix</a> <i>string</i>
Tree	<a href="#">prefix</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## [[ipv6-prefix](#)] *string*

Synopsis	IPv6 address for a router interface
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">prefix</a> <i>string</i>
Tree	<a href="#">prefix</a>

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### holdup-time *number*

Synopsis	Time to wait before route accepts new state attribute
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6</b> <b>prefix</b> <i>string</i> <b>holdup-time</b> <i>number</i>
Tree	<b>holdup-time</b>
Range	100 to 5000
Units	milliseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### host-type *keyword*

#### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Host type for subscriber interface prefixes
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6</b> <b>prefix</b> <i>string</i> <b>host-type</b> <i>keyword</i>
Tree	<b>host-type</b>
Options	pd – IPv6 ESM hosts for DHCPv6 prefix-delegation wan – ESM hosts for DHCPv6 addresses or by WAN interface pd-wan – Both prefix-delegation and ESM hosts
Default	pd
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### track-srrp *number*

Synopsis	SRRP instance whose state is tracked on this IP address
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6</b> <b>prefix</b> <i>string</i> <b>track-srrp</b> <i>number</i>

---

Tree	<a href="#">track-srrp</a>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## router-advertisements

Synopsis	Enter the <b>router-advertisements</b> context
Context	<b>configure service ies</b> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">router-advertisements</a>
Tree	<a href="#">router-advertisements</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## admin-state *keyword*

Synopsis	Administrative state of router advertisements
Context	<b>configure service ies</b> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">router-advertisements</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## force-mcast *keyword*

Synopsis	Protocol with forced multicast
Context	<b>configure service ies</b> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">ipv6</a> <a href="#">router-advertisements</a> <a href="#">force-mcast</a> <i>keyword</i>
Tree	<a href="#">force-mcast</a>
Options	ip, ip-mac
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **max-advertisement-interval** *number*

Synopsis	Maximum advertisement interval
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6</b> <b>router-advertisements</b> <b>max-advertisement-interval</b> <i>number</i>
Tree	<b>max-advertisement-interval</b>
Range	900 to 1800
Units	seconds
Default	1800
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **min-advertisement-interval** *number*

Synopsis	Minimum advertisement interval
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6</b> <b>router-advertisements</b> <b>min-advertisement-interval</b> <i>number</i>
Tree	<b>min-advertisement-interval</b>
Range	900 to 1350
Units	seconds
Default	900
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **options**

Synopsis	Enter the <b>options</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6</b> <b>router-advertisements</b> <b>options</b>
Tree	<b>options</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **current-hop-limit** *number*

Synopsis	Hop limit to be advertised
----------	----------------------------

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6</b> <b>router-advertisements</b> <b>options</b> <b>current-hop-limit</b> <i>number</i>
Tree	<b>current-hop-limit</b>
Range	0 to 255
Default	64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## dns

Synopsis	Enter the <b>dns</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6</b> <b>router-advertisements</b> <b>options</b> <b>dns</b>
Tree	<b>dns</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## include-rdnss *boolean*

Synopsis	Include the RDNSS server option 25
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6</b> <b>router-advertisements</b> <b>options</b> <b>dns</b> <b>include-rdnss</b> <i>boolean</i>
Tree	<b>include-rdnss</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## rdnss-lifetime (*number* | *keyword*)

Synopsis	Maximum time for the RDNSS address to remain valid
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6</b> <b>router-advertisements</b> <b>options</b> <b>dns</b> <b>rdnss-lifetime</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>rdnss-lifetime</b>
Range	900 to 3600
Units	seconds
Options	infinite

Default	3600
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **managed-configuration** *boolean*

Synopsis	Managed address configuration flag
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6</b> <b>router-advertisements</b> <b>options</b> <b>managed-configuration</b> <i>boolean</i>
Tree	<a href="#">managed-configuration</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **mtu** (*number* | *keyword*)

Synopsis	Advertised MTU value
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6</b> <b>router-advertisements</b> <b>options</b> <b>mtu</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">mtu</a>
Range	1280 to 9212
Units	bytes
Options	not-included
Default	not-included
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **other-stateful-configuration** *boolean*

Synopsis	Other stateful configuration flag
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6</b> <b>router-advertisements</b> <b>options</b> <b>other-stateful-configuration</b> <i>boolean</i>
Tree	<a href="#">other-stateful-configuration</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**reachable-time** *number*

Synopsis	Reachable time for advertisements
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6</b> <b>router-advertisements</b> <b>options</b> <b>reachable-time</b> <i>number</i>
Tree	<b>reachable-time</b>
Range	0 to 3600000
Units	milliseconds
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**retransmit-timer** *number*

Synopsis	Retransmit time in router advertisements from interface
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6</b> <b>router-advertisements</b> <b>options</b> <b>retransmit-timer</b> <i>number</i>
Tree	<b>retransmit-timer</b>
Range	0 to 1800000
Units	seconds
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**router-lifetime** (*number* | *keyword*)

Synopsis	Router lifetime
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6</b> <b>router-advertisements</b> <b>options</b> <b>router-lifetime</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>router-lifetime</b>
Range	2700 to 9000
Units	seconds
Options	no-default-router
Default	4500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**prefix-options**

Synopsis	Enter the <b>prefix-options</b> context
Context	<b>configure service ies string subscriber-interface string ipv6 router-advertisements prefix-options</b>
Tree	<a href="#">prefix-options</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**autonomous *boolean***

Synopsis	Value of the autonomous flag
Context	<b>configure service ies string subscriber-interface string ipv6 router-advertisements prefix-options autonomous boolean</b>
Tree	<a href="#">autonomous</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**on-link *boolean***

Synopsis	Assign the prefix to an interface on the specified link
Context	<b>configure service ies string subscriber-interface string ipv6 router-advertisements prefix-options on-link boolean</b>
Tree	<a href="#">on-link</a>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**preferred-lifetime (*number* | *keyword*)**

Synopsis	Time for a prefix to remain preferred
Context	<b>configure service ies string subscriber-interface string ipv6 router-advertisements prefix-options preferred-lifetime (<i>number</i>   <i>keyword</i>)</b>
Tree	<a href="#">preferred-lifetime</a>
Range	0 to 4294967294

Units	seconds
Options	infinite
Default	3600
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **valid-lifetime** (*number* | *keyword*)

Synopsis	Time for a prefix to remain valid
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6</b> <b>router-advertisements</b> <b>prefix-options</b> <b>valid-lifetime</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>valid-lifetime</b>
Range	0 to 4294967294
Units	seconds
Options	infinite
Default	86400
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **router-solicit**

Synopsis	Enter the <b>router-solicit</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6</b> <b>router-solicit</b>
Tree	<b>router-solicit</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **inactivity-timer** (*number* | *keyword*)

Synopsis	Time before an inactive host is removed
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>ipv6</b> <b>router-solicit</b> <b>inactivity-timer</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>inactivity-timer</b>
Range	1 to 31536000
Units	seconds
Options	infinite

Default	300
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## local-address-assignment

Synopsis	Enter the <b>local-address-assignment</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">local-address-assignment</a>
Tree	<a href="#">local-address-assignment</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## admin-state *keyword*

Synopsis	Administrative state of Local Address Assignment
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">local-address-assignment</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ipv4

Synopsis	Enter the <b>ipv4</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">local-address-assignment</a> <a href="#">ipv4</a>
Tree	<a href="#">ipv4</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## client-applications

Synopsis	Enter the <b>client-applications</b> context
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">local-address-assignment</a> <a href="#">ipv4</a> <a href="#">client-applications</a>

Tree	<a href="#">client-applications</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**ppp boolean**

Synopsis	Request local addresses for PPP IPCP hosts
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">local-address-assignment</a> <a href="#">ipv4</a> <a href="#">client-applications</a> <a href="#">ppp</a> <i>boolean</i>
Tree	<a href="#">ppp</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**default-pool string**

Synopsis	Default pools
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">local-address-assignment</a> <a href="#">ipv4</a> <a href="#">default-pool</a> <i>string</i>
Tree	<a href="#">default-pool</a>
String Length	1 to 32
Max. Instances	2
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**server reference**

Synopsis	Local DHCPv4 server for local pools management
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">local-address-assignment</a> <a href="#">ipv4</a> <a href="#">server</a> <i>reference</i>
Tree	<a href="#">server</a>
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv4</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ipv6

Synopsis	Enter the <b>ipv6</b> context
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>local-address-assignment</i> <b>ipv6</b>
Tree	<b>ipv6</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## client-applications

Synopsis	Enter the <b>client-applications</b> context
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>local-address-assignment</i> <b>ipv6</b> <b>client-applications</b>
Tree	<b>client-applications</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ipoe-slaac *boolean*

Synopsis	Request local addresses for IPoE SLAAC hosts
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>local-address-assignment</i> <b>ipv6</b> <b>client-applications ipoe-slaac</b> <i>boolean</i>
Tree	<b>ipoe-slaac</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ipoe-wan *boolean*

Synopsis	Request local addresses for IPoE IA NA hosts
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>local-address-assignment</i> <b>ipv6</b> <b>client-applications ipoe-wan</b> <i>boolean</i>
Tree	<b>ipoe-wan</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**ppp-slaac** *boolean*

Synopsis	Request local addresses for PPP SLAAC hosts
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">local-address-assignment</a> <a href="#">ipv6</a> <a href="#">client-applications</a> <a href="#">ppp-slaac</a> <i>boolean</i>
Tree	<a href="#">ppp-slaac</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**server** *reference*

Synopsis	Local DHCPv6 server for local pools management
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">local-address-assignment</a> <a href="#">ipv6</a> <a href="#">server</a> <i>reference</i>
Tree	<a href="#">server</a>
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">dhcp-server</a> <a href="#">dhcpv6</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**pppoe**

Synopsis	Enter the <b>pppoe</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">pppoe</a>
Tree	<a href="#">pppoe</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">pppoe</a> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **session-limit** *number*

Synopsis Maximum PPPoE sessions  
 Context **configure service ies** *string subscriber-interface string pppoe session-limit number*  
 Tree [session-limit](#)  
 Range 1 to 333823  
 Default 1  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **wan-mode** *keyword*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Mode of operation for hosts with /128 WAN IPv6 address  
 Context **configure service ies** *string subscriber-interface string wan-mode keyword*  
 Tree [wan-mode](#)  
 Options mode64, mode128  
 Default mode64  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **wlan-gw**

Synopsis Enable the **wlan-gw** context  
 Context **configure service ies** *string subscriber-interface string wlan-gw*  
 Tree [wlan-gw](#)  
 Introduced 16.0.R1  
 Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## pool-manager

Synopsis	Enter the <b>pool-manager</b> context
Context	<b>configure service ies string subscriber-interface string wlan-gw pool-manager</b>
Tree	<a href="#">pool-manager</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## dhcp6-client

Synopsis	Enter the <b>dhcp6-client</b> context
Context	<b>configure service ies string subscriber-interface string wlan-gw pool-manager dhcp6-client</b>
Tree	<a href="#">dhcp6-client</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## dhcpv4-nat

Synopsis	Enter the <b>dhcpv4-nat</b> context
Context	<b>configure service ies string subscriber-interface string wlan-gw pool-manager dhcp6-client dhcpv4-nat</b>
Tree	<a href="#">dhcpv4-nat</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## admin-state *keyword*

Synopsis	Administrative state of the DHCPv6 client entity
Context	<b>configure service ies string subscriber-interface string wlan-gw pool-manager dhcp6-client dhcpv4-nat admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**link-address** *string*

Synopsis	IPv6 address in the link address field of relay header
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">pool-manager</a> <a href="#">dhcp6-client</a> <a href="#">dhcpv4-nat</a> <a href="#">link-address</a> <i>string</i>
Tree	<a href="#">link-address</a>
Default	::
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**pool-name** *string*

Synopsis	Pool name to be sent in the DHCPv6 messages
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">pool-manager</a> <a href="#">dhcp6-client</a> <a href="#">dhcpv4-nat</a> <a href="#">pool-name</a> <i>string</i>
Tree	<a href="#">pool-name</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**ia-na**

Synopsis	Enter the <b>ia-na</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">pool-manager</a> <a href="#">dhcp6-client</a> <a href="#">ia-na</a>
Tree	<a href="#">ia-na</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**admin-state** *keyword*

Synopsis	Administrative state of the DHCPv6 client entity
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <i>string</i> <a href="#">subscriber-interface</a> <i>string</i> <a href="#">wlan-gw</a> <a href="#">pool-manager</a> <a href="#">dhcp6-client</a> <a href="#">ia-na</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable

Default	disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **link-address** *string*

Synopsis	IPv6 address in the link address field of relay header
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>wlan-gw</b> <b>pool-manager</b> <b>dhcp6-client</b> <b>ia-na</b> <b>link-address</b> <i>string</i>
Tree	<a href="#">link-address</a>
Default	::
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **pool-name** *string*

Synopsis	Pool name to be sent in the DHCPv6 messages
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>wlan-gw</b> <b>pool-manager</b> <b>dhcp6-client</b> <b>ia-na</b> <b>pool-name</b> <i>string</i>
Tree	<a href="#">pool-name</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **lease-query**

Synopsis	Enable the <b>lease-query</b> context
Context	<b>configure</b> <b>service</b> <b>ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>wlan-gw</b> <b>pool-manager</b> <b>dhcp6-client</b> <b>lease-query</b>
Tree	<a href="#">lease-query</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **max-retries** *number*

Synopsis	Retries before lease query assumes no allocated subnets
----------	---

Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>wlan-gw pool-manager dhcp6-client lease-query max-retries</b> <i>number</i>
Tree	<a href="#">max-retries</a>
Range	0 to 10
Default	2
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **servers** *string*

Synopsis	DHCPv6 servers that are used for requesting addresses
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>wlan-gw pool-manager dhcp6-client servers</b> <i>string</i>
Tree	<a href="#">servers</a>
Max. Instances	8
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **slaac**

Synopsis	Enter the <b>slaac</b> context
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>wlan-gw pool-manager dhcp6-client slaac</b>
Tree	<a href="#">slaac</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of the DHCPv6 client entity
Context	<b>configure service ies</b> <i>string</i> <b>subscriber-interface</b> <i>string</i> <b>wlan-gw pool-manager dhcp6-client slaac admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **link-address** *string*

Synopsis IPv6 address in the link address field of relay header

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **wlan-gw** **pool-manager** **dhcp6-client** **slaac** **link-address** *string*

Tree [link-address](#)

Default ::

Introduced 16.0.R4

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **pool-name** *string*

Synopsis Pool name to be sent in the DHCPv6 messages

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **wlan-gw** **pool-manager** **dhcp6-client** **slaac** **pool-name** *string*

Tree [pool-name](#)

String Length 1 to 32

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **source-ip** (*keyword* | *ipv6-address*)

Synopsis Source IP address that is used by the DHCPv6 client

Context **configure** **service** **ies** *string* **subscriber-interface** *string* **wlan-gw** **pool-manager** **dhcp6-client** **source-ip** (*keyword* | *ipv6-address*)

Tree [source-ip](#)

Options use-interface-ip

Default use-interface-ip

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **watermarks**

Synopsis Enter the **watermarks** context

Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>wlan-gw pool-manager watermarks</i>
Tree	<a href="#">watermarks</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **high** *number*

Synopsis	High watermark when new prefix is allocated
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>wlan-gw pool-manager watermarks high number</i>
Tree	<a href="#">high</a>
Range	51 to 99
Default	95
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **low** *number*

Synopsis	Low watermark when unused prefix is released
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>wlan-gw pool-manager watermarks low number</i>
Tree	<a href="#">low</a>
Range	50 to 98
Default	90
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **wlan-gw-group** *reference*

Synopsis	ID of WLAN gateway group where prefixes are installed
Context	<b>configure service ies</b> <i>string</i> <i>subscriber-interface</i> <i>string</i> <i>wlan-gw pool-manager wlan-gw-group reference</i>
Tree	<a href="#">wlan-gw-group</a>
Reference	<b>configure isa</b> <i>wlan-gw-group number</i>
Introduced	16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## redundancy

Synopsis Enter the **redundancy** context

Context **configure service ies string subscriber-interface string wlan-gw redundancy**

Tree [redundancy](#)

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## admin-state keyword

Synopsis Administrative state of WLAN-GW redundancy

Context **configure service ies string subscriber-interface string wlan-gw redundancy admin-state keyword**

Tree [admin-state](#)

Options enable, disable

Default disable

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## export string

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Route to export to peer

Context **configure service ies string subscriber-interface string wlan-gw redundancy export string**

Tree [export](#)

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**monitor string****WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Peer route to monitor
Context	<b>configure service ies string subscriber-interface string wlan-gw redundancy monitor string</b>
Tree	<b>monitor</b>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**subscriber-mgmt**

Synopsis	Enter the <b>subscriber-mgmt</b> context
Context	<b>configure service ies string subscriber-mgmt</b>
Tree	<b>subscriber-mgmt</b>
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**multi-chassis-shunt-id number**

Synopsis	Shunt ID for a pair of resilient nodes
Context	<b>configure service ies string subscriber-mgmt multi-chassis-shunt-id number</b>
Tree	<b>multi-chassis-shunt-id</b>
Description	<p>This command configures the shunt ID that is used to shunt downstream traffic from a standby node to an active node. Because this ID identifies the traffic service on the standby node, the same ID must be configured per service on each node.</p> <p>This configuration is required for inter-BNG-UP resiliency shunting, but not for non-BNG-UP shunting. However, when configured, it is also used for shunting non-BNG-UP sessions in the same service.</p>
Range	1 to 8191
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## up-resiliency

Synopsis	Enter the <b>up-resiliency</b> context
Context	<b>configure service ies string subscriber-mgmt up-resiliency</b>
Tree	<a href="#">up-resiliency</a>
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## monitor-oper-group [[oper-group](#)] *reference*

Synopsis	Enter the <b>monitor-oper-group</b> list instance
Context	<b>configure service ies string subscriber-mgmt up-resiliency monitor-oper-group <i>reference</i></b>
Tree	<a href="#">monitor-oper-group</a>
Description	<p>Commands in this context define parameters to derive the service health based on monitored operational groups. The BNG UPF sends the health value to the BNG CPF. The BNG CPF uses the value to determine the need for a BNG UPF status change (active or standby).</p> <p><b>Note:</b> The following is only applicable for the <b>configure service vpls capture-sap</b> context. If the configured groups are not the same for all capture SAPs sharing the same underlying port or LAG, the configuration of a Layer 2 access ID alias is required, or else the system chooses arbitrarily one set of configured groups.</p>
Max. Instances	2
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## [[oper-group](#)] *reference*

Synopsis	Operational group name
Context	<b>configure service ies string subscriber-mgmt up-resiliency monitor-oper-group <i>reference</i></b>
Tree	<a href="#">monitor-oper-group</a>
Reference	<b>configure service oper-group string</b>
Notes	This element is part of a list key.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**health-drop** *number*

Synopsis	Number subtracted from the health value per failure
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">subscriber-mgmt up-resiliency monitor-oper-group reference</a> <a href="#">health-drop</a> <i>number</i>
Tree	<a href="#">health-drop</a>
Description	This command configures the drop in the health value for every operational group member failure. Every failure of an operational group member decreases the base health value to a possible minimum of 0.
Range	1 to 100
Default	1
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**video-interface** [[interface-name](#)] *string*

Synopsis	Enter the <b>video-interface</b> list instance
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">video-interface</a> <i>string</i>
Tree	<a href="#">video-interface</a>
Max. Instances	9
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

**[interface-name]** *string*

Synopsis	Video interface name
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">video-interface</a> <i>string</i>
Tree	<a href="#">video-interface</a>
String Length	1 to 29
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

**accounting-policy** *reference*

Synopsis	Accounting Policy
----------	-------------------

Context	<b>configure service ies</b> <i>string</i> <b>video-interface</b> <i>string</i> <b>accounting-policy</b> <i>reference</i>
Tree	<b>accounting-policy</b>
Reference	<b>configure log accounting-policy</b> <i>number</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

### **address** [**ip-address**] *string*

Synopsis	Add a list entry for <b>address</b>
Context	<b>configure service ies</b> <i>string</i> <b>video-interface</b> <i>string</i> <b>address</b> <i>string</i>
Tree	<b>address</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

### **[ip-address]** *string*

Synopsis	IPv4 address for the video interface within the service
Context	<b>configure service ies</b> <i>string</i> <b>video-interface</b> <i>string</i> <b>address</b> <i>string</i>
Tree	<b>address</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

### **admin-state** *keyword*

Synopsis	Administrative state of the video interface
Context	<b>configure service ies</b> <i>string</i> <b>video-interface</b> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

**channel** [*mcast-address*] *string source string*

Synopsis	Enter the <b>channel</b> list instance
Context	<b>configure service ies string video-interface string channel string source string</b>
Tree	<b>channel</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

**[mcast-address]** *string*

Synopsis	Multicast channel address
Context	<b>configure service ies string video-interface string channel string source string</b>
Tree	<b>channel</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

**source** *string*

Synopsis	Unicast source address
Context	<b>configure service ies string video-interface string channel string source string</b>
Tree	<b>channel</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

**channel-name** *string*

Synopsis	Channel name
Context	<b>configure service ies string video-interface string channel string source string channel-name string</b>
Tree	<b>channel-name</b>
String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

**description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">video-interface</a> <a href="#">string</a> <a href="#">channel</a> <a href="#">string</a> <a href="#">source</a> <a href="#">string</a> <a href="#">description</a> <a href="#">string</a>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

**scte35-action** *keyword*

Synopsis	Enable downstream forwarding of SCTE 35 cue avails
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">video-interface</a> <a href="#">string</a> <a href="#">channel</a> <a href="#">string</a> <a href="#">source</a> <a href="#">string</a> <a href="#">scte35-action</a> <a href="#">keyword</a>
Tree	<a href="#">scte35-action</a>
Options	forward, drop
Default	forward
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

**zone-channel** [[zone-mcast-address](#)] [string](#) [zone-source](#) [string](#)

Synopsis	Enter the <b>zone-channel</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">video-interface</a> <a href="#">string</a> <a href="#">channel</a> <a href="#">string</a> <a href="#">source</a> <a href="#">string</a> <a href="#">zone-channel</a> <a href="#">string</a> <a href="#">zone-source</a> <a href="#">string</a>
Tree	<a href="#">zone-channel</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

**[zone-mcast-address]** [string](#)

Synopsis	Multicast zone channel address
Context	<b>configure</b> <a href="#">service</a> <a href="#">ies</a> <a href="#">string</a> <a href="#">video-interface</a> <a href="#">string</a> <a href="#">channel</a> <a href="#">string</a> <a href="#">source</a> <a href="#">string</a> <a href="#">zone-channel</a> <a href="#">string</a> <a href="#">zone-source</a> <a href="#">string</a>
Tree	<a href="#">zone-channel</a>

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

### **zone-source** *string*

Synopsis	Unicast source address
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">video-interface</a> <i>string</i> <a href="#">channel</a> <i>string</i> <a href="#">source</a> <i>string</i> <a href="#">zone-channel</a> <i>string</i> <b>zone-source</b> <i>string</i>
Tree	<a href="#">zone-channel</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

### **adi-channel-name** *string*

Synopsis	Zone channel name
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">video-interface</a> <i>string</i> <a href="#">channel</a> <i>string</i> <a href="#">source</a> <i>string</i> <a href="#">zone-channel</a> <i>string</i> <a href="#">zone-source</a> <i>string</i> <b>adi-channel-name</b> <i>string</i>
Tree	<a href="#">adi-channel-name</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

### **cpu-protection** *reference*

Synopsis	CPU protection policy
Context	<b>configure</b> <a href="#">service ies</a> <i>string</i> <a href="#">video-interface</a> <i>string</i> <a href="#">cpu-protection</a> <i>reference</i>
Tree	<a href="#">cpu-protection</a>
Reference	<b>configure</b> <a href="#">system security</a> <a href="#">cpu-protection</a> <i>policy</i> <i>number</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s

### **description** *string*

Synopsis	Text description
----------	------------------

---

Context	<b>configure service ies</b> <i>string</i> <b>video-interface</b> <i>string</i> <b>description</b> <i>string</i>
Tree	<b>description</b>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

### **multicast-service** *number*

Synopsis	Associated multicast service ID
Context	<b>configure service ies</b> <i>string</i> <b>video-interface</b> <i>string</i> <b>multicast-service</b> <i>number</i>
Tree	<b>multicast-service</b>
Range	1 to 2147483647
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

### **output-format** *keyword*

Synopsis	Output format
Context	<b>configure service ies</b> <i>string</i> <b>video-interface</b> <i>string</i> <b>output-format</b> <i>keyword</i>
Tree	<b>output-format</b>
Options	udp, rtp-udp
Default	rtp-udp
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

### **video-sap**

Synopsis	Enable the <b>video-sap</b> context
Context	<b>configure service ies</b> <i>string</i> <b>video-interface</b> <i>string</i> <b>video-sap</b>
Tree	<b>video-sap</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

## egress

Synopsis	Enter the <b>egress</b> context
Context	<b>configure service ies string video-interface string video-sap egress</b>
Tree	<b>egress</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

## filter

Synopsis	Enter the <b>filter</b> context
Context	<b>configure service ies string video-interface string video-sap egress filter</b>
Tree	<b>filter</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

## ip reference

Synopsis	IPv4 filter policy name
Context	<b>configure service ies string video-interface string video-sap egress filter ip reference</b>
Tree	<b>ip</b>
Reference	<b>configure filter ip-filter string</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

## qos

Synopsis	Enter the <b>qos</b> context
Context	<b>configure service ies string video-interface string video-sap egress qos</b>
Tree	<b>qos</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

## policy-name reference

Synopsis	SAP egress QoS policy ID
----------	--------------------------

Context	<b>configure service ies</b> <i>string</i> <b>video-interface</b> <i>string</i> <b>video-sap egress qos policy-name</b> <i>reference</i>
Tree	<a href="#">policy-name</a>
Reference	<b>configure qos sap-egress</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

## ingress

Synopsis	Enter the <b>ingress</b> context
Context	<b>configure service ies</b> <i>string</i> <b>video-interface</b> <i>string</i> <b>video-sap ingress</b>
Tree	<a href="#">ingress</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

## filter

Synopsis	Enter the <b>filter</b> context
Context	<b>configure service ies</b> <i>string</i> <b>video-interface</b> <i>string</i> <b>video-sap ingress filter</b>
Tree	<a href="#">filter</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

## ip reference

Synopsis	IPv4 filter policy name
Context	<b>configure service ies</b> <i>string</i> <b>video-interface</b> <i>string</i> <b>video-sap ingress filter ip</b> <i>reference</i>
Tree	<a href="#">ip</a>
Reference	<b>configure filter ip-filter</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

## qos

Synopsis	Enter the <b>qos</b> context
----------	------------------------------

Context	<b>configure service ies string video-interface string video-sap ingress qos</b>
Tree	<b>qos</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

### **policy-name** *reference*

Synopsis	SAP ingress QoS policy ID
Context	<b>configure service ies string video-interface string video-sap ingress qos policy-name reference</b>
Tree	<b>policy-name</b>
Reference	<b>configure qos sap-ingress string</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

### **video-group-id** *reference*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Video group ID
Context	<b>configure service ies string video-interface string video-sap video-group-id reference</b>
Tree	<b>video-group-id</b>
Reference	<b>configure isa video-group number</b>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-1s, 7750 SR-2s, 7750 SR-7s, 7750 SR-14s

### **vpn-id** *number*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VPN identifier for the service
Context	<b>configure service ies string vpn-id number</b>

Tree	<a href="#">vpn-id</a>
Range	1 to 2147483647
Introduced	16.0.R1
Platforms	All

## ipfix

Synopsis	Enter the <b>ipfix</b> context
Context	<b>configure</b> <a href="#">service ipfix</a>
Tree	<a href="#">ipfix</a>
Introduced	16.0.R1
Platforms	All

## export-policy [[name](#)] *string*

Synopsis	Enter the <b>export-policy</b> list instance
Context	<b>configure</b> <a href="#">service ipfix export-policy</a> <i>string</i>
Tree	<a href="#">export-policy</a>
Introduced	16.0.R1
Platforms	All

## [[name](#)] *string*

Synopsis	IPFIX policy name
Context	<b>configure</b> <a href="#">service ipfix export-policy</a> <i>string</i>
Tree	<a href="#">export-policy</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## collector [router-instance](#) *string* [ip-address](#) *string*

Synopsis	Enter the <b>collector</b> list instance
----------	--

Context	<b>configure service ipfix export-policy</b> <i>string</i> collector router-instance <i>string</i> ip-address <i>string</i>
Tree	collector
Introduced	16.0.R1
Platforms	All

### **router-instance** *string*

Synopsis	Router where the collector is reached
Context	<b>configure service ipfix export-policy</b> <i>string</i> collector router-instance <i>string</i> ip-address <i>string</i>
Tree	collector
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

### **ip-address** *string*

Synopsis	IPv4 address of the external collector node
Context	<b>configure service ipfix export-policy</b> <i>string</i> collector router-instance <i>string</i> ip-address <i>string</i>
Tree	collector
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the collector
Context	<b>configure service ipfix export-policy</b> <i>string</i> collector router-instance <i>string</i> ip-address <i>string</i> admin-state <i>keyword</i>
Tree	admin-state
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

**mtu number****WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum Transmission Unit
Context	<b>configure</b> <a href="#">service ipfix export-policy</a> <i>string</i> <a href="#">collector router-instance</a> <i>string</i> <a href="#">ip-address</a> <i>string</i> <b>mtu</b> <i>number</i>
Tree	<a href="#">mtu</a>
Range	512 to 9212
Units	octets
Default	1500
Introduced	16.0.R1
Platforms	All

**refresh-timeout number****WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPFIX template refresh time
Context	<b>configure</b> <a href="#">service ipfix export-policy</a> <i>string</i> <a href="#">collector router-instance</a> <i>string</i> <a href="#">ip-address</a> <i>string</i> <b>refresh-timeout</b> <i>number</i>
Tree	<a href="#">refresh-timeout</a>
Range	240 to 86400
Units	seconds
Default	600
Introduced	16.0.R1
Platforms	All

**source-ip-address string****WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Source IP address from which UDP streams are sent
Context	<b>configure</b> <a href="#">service ipfix export-policy</a> <i>string</i> <a href="#">collector router-instance</a> <i>string</i> <a href="#">ip-address</a> <i>string</i> <a href="#">source-ip-address</a> <i>string</i>
Tree	<a href="#">source-ip-address</a>
Introduced	16.0.R1
Platforms	All

**description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service ipfix export-policy</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

**template-format** *keyword*

Synopsis	Template format used by this IPFIX export policy
Context	<b>configure</b> <a href="#">service ipfix export-policy</a> <i>string</i> <a href="#">template-format</a> <i>keyword</i>
Tree	<a href="#">template-format</a>
Options	format1, format2
Default	format1
Introduced	16.0.R1
Platforms	All

**ipipe** [[service-name](#)] *string*

Synopsis	Enter the <b>ipipe</b> list instance
Context	<b>configure</b> <a href="#">service ipipe</a> <i>string</i>
Tree	<a href="#">ipipe</a>
Introduced	20.10.R1
Platforms	All

**[service-name]** *string*

Synopsis	Administrative service name
Context	<b>configure service ipipe string</b>
Tree	<a href="#">ipipe</a>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the service
Context	<b>configure service ipipe string admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	20.10.R1
Platforms	All

**ce-address-discovery**

Synopsis	Enable the <b>ce-address-discovery</b> context
Context	<b>configure service ipipe string ce-address-discovery</b>
Tree	<a href="#">ce-address-discovery</a>
Introduced	20.10.R1
Platforms	All

**customer** *reference***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Service customer ID
Context	<b>configure service ipipe string customer reference</b>
Tree	<a href="#">customer</a>

---

Reference	<b>configure service customer</b> <i>string</i>
Notes	This element is mandatory.
Introduced	20.10.R1
Platforms	All

**description** *string*

Synopsis	Text description
Context	<b>configure service ipipe</b> <i>string description string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	20.10.R1
Platforms	All

**endpoint** [[name](#)] *string*

Synopsis	Enter the <b>endpoint</b> list instance
Context	<b>configure service ipipe</b> <i>string endpoint string</i>
Tree	<a href="#">endpoint</a>
Max. Instances	2
Introduced	20.10.R1
Platforms	All

**[name]** *string*

Synopsis	Service endpoint name
Context	<b>configure service ipipe</b> <i>string endpoint string</i>
Tree	<a href="#">endpoint</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	All

**description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <a href="#">string</a> <a href="#">endpoint</a> <a href="#">string</a> <a href="#">description</a> <a href="#">string</a>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	20.10.R1
Platforms	All

**hold-time-active** *number*

Synopsis	Time before entering standby when MC-LAG SAP goes down
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <a href="#">string</a> <a href="#">endpoint</a> <a href="#">string</a> <a href="#">hold-time-active</a> <a href="#">number</a>
Tree	<a href="#">hold-time-active</a>
Range	1 to 60
Units	deciseconds
Introduced	20.10.R1
Platforms	All

**revert-time** (*number* | *keyword*)

Synopsis	Time to wait before reverting to primary spoke SDP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <a href="#">string</a> <a href="#">endpoint</a> <a href="#">string</a> <a href="#">revert-time</a> ( <a href="#">number</a>   <a href="#">keyword</a> )
Tree	<a href="#">revert-time</a>
Range	1 to 600
Units	seconds
Options	never, immediate
Default	immediate
Introduced	20.10.R1
Platforms	All

**standby-signaling** *keyword*

Synopsis	Endpoint behavior for status of sending PW standby bit
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <a href="#">string</a> <a href="#">endpoint</a> <a href="#">string</a> <a href="#">standby-signaling</a> <a href="#">keyword</a>
Tree	<a href="#">standby-signaling</a>

Options	master
Introduced	20.10.R1
Platforms	All

**sap** [[sap-id](#)] *string*

Synopsis	Enter the <b>sap</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i>
Tree	<a href="#">sap</a>
Introduced	20.10.R1
Platforms	All

**[sap-id]** *string*

Synopsis	SAP ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i>
Tree	<a href="#">sap</a>
String Length	1 to 45
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	All

**accounting-policy** *reference*

Synopsis	Accounting policy
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">accounting-policy</a> <i>reference</i>
Tree	<a href="#">accounting-policy</a>
Reference	<b>configure</b> <a href="#">log</a> <a href="#">accounting-policy</a> <i>number</i>
Introduced	20.10.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the SAP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">admin-state</a> <i>keyword</i>

Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	20.10.R1
Platforms	All

### **app-profile** *reference*

Synopsis	Application profile name
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">app-profile</a> <i>reference</i>
Tree	<a href="#">app-profile</a>
Reference	<b>configure</b> <a href="#">application-assurance</a> <a href="#">group</a> <i>number</i> <a href="#">partition</a> <i>number</i> <a href="#">policy</a> <a href="#">app-profile</a> <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **bandwidth** *number*

Synopsis	SAP bandwidth
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">bandwidth</a> <i>number</i>
Tree	<a href="#">bandwidth</a>
Range	1 to 6400000000
Units	kilobps
Introduced	20.10.R1
Platforms	All

### **ce-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	IP address of the CE device
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ce-address</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">ce-address</a>
Introduced	20.10.R1
Platforms	All

**collect-stats** *boolean*

Synopsis	Collect accounting statistics
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">collect-stats</a> <i>boolean</i>
Tree	<a href="#">collect-stats</a>
Default	false
Introduced	20.10.R1
Platforms	All

**cpu-protection**

Synopsis	Enter the <b>cpu-protection</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">cpu-protection</a>
Tree	<a href="#">cpu-protection</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

**mac-monitoring**

Synopsis	Monitor MAC for CPU protection
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">cpu-protection</a> <a href="#">mac-monitoring</a>
Tree	<a href="#">mac-monitoring</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

**policy-id** *reference*

Synopsis	CPM protection policy
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">cpu-protection</a> <a href="#">policy-id</a> <i>reference</i>
Tree	<a href="#">policy-id</a>
Reference	<b>configure</b> <a href="#">system</a> <a href="#">security</a> <a href="#">cpu-protection</a> <a href="#">policy</a> <i>number</i>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 160
Introduced	20.10.R1
Platforms	All

### **dist-cpu-protection** *reference*

Synopsis	Distributed CPU protection policy for SAP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">dist-cpu-protection</a> <i>reference</i>
Tree	<a href="#">dist-cpu-protection</a>
Reference	<b>configure</b> <a href="#">system</a> <a href="#">security</a> <a href="#">dist-cpu-protection</a> <i>policy</i> <i>string</i>
Introduced	20.10.R1
Platforms	All

### **egress**

Synopsis	Enter the <b>egress</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a>
Tree	<a href="#">egress</a>
Introduced	20.10.R1
Platforms	All

### **agg-rate**

Synopsis	Enter the <b>agg-rate</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">agg-rate</a>
Tree	<a href="#">agg-rate</a>
Introduced	20.10.R1
Platforms	All

**adaptation-rule** *keyword*

Synopsis	Adaptation rule to compute the operational PIR value when an aggregate shaper is used
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">agg-rate</a> <a href="#">adaptation-rule</a> <i>keyword</i>
Tree	<a href="#">adaptation-rule</a>
Options	max, min, closest
Default	closest
Introduced	22.10.R1
Platforms	7750 SR-1, 7750 SR-s

**burst-limit** (*number* | *keyword*)

Synopsis	Shaping burst size when an aggregate shaper is used
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">agg-rate</a> <a href="#">burst-limit</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">burst-limit</a>
Range	1 to 14000000
Units	bytes
Options	auto
Default	auto
Introduced	22.10.R1
Platforms	7750 SR-1, 7750 SR-s

**limit-unused-bandwidth** *boolean*

Synopsis	Enable aggregate rate overrun protection
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">agg-rate</a> <a href="#">limit-unused-bandwidth</a> <i>boolean</i>
Tree	<a href="#">limit-unused-bandwidth</a>
Default	false
Introduced	20.10.R1
Platforms	All

**rate** *number*

Synopsis	Enforced aggregate rate for all queues
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">agg-rate</a> <a href="#">rate</a> <i>number</i>

Tree	<a href="#">rate</a>
Range	1 to 6400000000
Units	kilobps
Introduced	20.10.R1
Platforms	All

## filter

Synopsis	Enter the <b>filter</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">filter</a>
Tree	<a href="#">filter</a>
Introduced	20.10.R1
Platforms	All

## ip reference

Synopsis	MAC filter ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">filter</a> <a href="#">ip</a> <i>reference</i>
Tree	<a href="#">ip</a>
Reference	<b>configure</b> <a href="#">filter</a> <a href="#">ip-filter</a> <i>string</i>
Introduced	20.10.R1
Platforms	All

## ipv6 reference

Synopsis	IPv6 filter identifier
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">filter</a> <a href="#">ipv6</a> <i>reference</i>
Tree	<a href="#">ipv6</a>
Reference	<b>configure</b> <a href="#">filter</a> <a href="#">ipv6-filter</a> <i>string</i>
Introduced	20.10.R1
Platforms	All

## qos

Synopsis	Enter the <b>qos</b> context
----------	------------------------------

Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a>
Tree	<a href="#">qos</a>
Introduced	20.10.R1
Platforms	All

## **policer-control-policy**

Synopsis	Enter the <b>policer-control-policy</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a>
Tree	<a href="#">policer-control-policy</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## **overrides**

Synopsis	Enable the <b>overrides</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a>
Tree	<a href="#">overrides</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## **root**

Synopsis	Enter the <b>root</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a>
Tree	<a href="#">root</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## **max-rate** (*number* | *keyword*)

Synopsis	Maximum frame-based bandwidth limit
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a> <a href="#">max-rate</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">max-rate</a>
Range	1 to 6400000000

Options	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### priority-mbs-thresholds

Synopsis	Enter the <b>priority-mbs-thresholds</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a> <a href="#">priority-mbs-thresholds</a>
Tree	<a href="#">priority-mbs-thresholds</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### min-thresh-separation (*number* | *keyword*)

Synopsis	Minimum amount of separation buffer space
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a> <a href="#">priority-mbs-thresholds</a> <a href="#">min-thresh-separation</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">min-thresh-separation</a>
Range	0 to 16777216
Units	bytes
Options	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### priority [[priority-level](#)] *number*

Synopsis	Enter the <b>priority</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a> <a href="#">priority-mbs-thresholds</a> <a href="#">priority</a> <i>number</i>
Tree	<a href="#">priority</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**[priority-level]** *number*

Synopsis	Priority level
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a> <a href="#">priority-mbs-thresholds</a> <a href="#">priority</a> <i>number</i>
Tree	<a href="#">priority</a>
Range	1 to 8
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**mbs-contribution** (*number* | *keyword*)

Synopsis	Minimum amount of cumulative buffer space allowed
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a> <a href="#">priority-mbs-thresholds</a> <a href="#">priority</a> <i>number</i> <a href="#">mbs-contribution</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">mbs-contribution</a>
Range	0 to 16777216
Units	bytes
Options	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**policy-name** *reference*

Synopsis	Policer control policy name
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">policy-name</a> <i>reference</i>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">policer-control-policy</a> <i>string</i>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**qinq-mark-top-only** *boolean*

Synopsis	Mark top Q-tags
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">qinq-mark-top-only</a> <i>boolean</i>

Tree	<a href="#">qinq-mark-top-only</a>
Default	false
Introduced	20.10.R1
Platforms	All

## sap-egress

Synopsis	Enter the <b>sap-egress</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a>
Tree	<a href="#">sap-egress</a>
Introduced	20.10.R1
Platforms	All

## overrides

Synopsis	Enter the <b>overrides</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a>
Tree	<a href="#">overrides</a>
Introduced	20.10.R1
Platforms	All

## hs-secondary-shaper *string*

Synopsis	HS Secondary Shaper
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">hs-secondary-shaper</a> <i>string</i>
Tree	<a href="#">hs-secondary-shaper</a>
String Length	1 to 32
Introduced	20.10.R1
Platforms	7750 SR-7/12/12e

## hs-wrr-group [[group-id](#)] *reference*

Synopsis	Enter the <b>hs-wrr-group</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">hs-wrr-group</a> <i>reference</i>

Tree	<a href="#">hs-wrr-group</a>
Introduced	20.10.R1
Platforms	7750 SR-7/12/12e

### **[group-id]** *reference*

Synopsis	HS WRR group identifier
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">hs-wrr-group</a> <i>reference</i>
Tree	<a href="#">hs-wrr-group</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">sap-egress</a> <i>string</i> <a href="#">hs-wrr-group</a> <i>number</i>
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7750 SR-7/12/12e

### **hs-class-weight** *number*

Synopsis	Class weight override of the WRR group
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">hs-wrr-group</a> <i>reference</i> <a href="#">hs-class-weight</a> <i>number</i>
Tree	<a href="#">hs-class-weight</a>
Range	1   2   4   8
Introduced	20.10.R1
Platforms	7750 SR-7/12/12e

### **percent-rate** *decimal-number*

Synopsis	Percent rate override applied to the HS WRR group
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">hs-wrr-group</a> <i>reference</i> <a href="#">percent-rate</a> <i>decimal-number</i>
Tree	<a href="#">percent-rate</a>
Range	0.01 to 100.00
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	20.10.R1
Platforms	7750 SR-7/12/12e

**rate** (*number* | *keyword*)

Synopsis	Scheduling rate override applied to the HS WRR group
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">hs-wrr-group</a> <i>reference</i> <a href="#">rate</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">rate</a>
Range	1 to 2000000000
Units	kilobps
Options	max
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	20.10.R1
Platforms	7750 SR-7/12/12e

**policer** [[policer-id](#)] *reference*

Synopsis	Enter the <b>policer</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <i>reference</i>
Tree	<a href="#">policer</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**[policer-id]** *reference*

Synopsis	Policer unique ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <i>reference</i>
Tree	<a href="#">policer</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">sap-egress</a> <i>string</i> <a href="#">policer</a> <i>number</i>
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**cbs** (*number* | *keyword*)

Synopsis	CBS
----------	-----

Context	<b>configure service ipipe</b> <i>string sap string egress qos sap-egress overrides policer</i> <i>reference cbs (number   keyword)</i>
Tree	<a href="#">cbs</a>
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **mbs** (*number | keyword*)

Synopsis	MBS
Context	<b>configure service ipipe</b> <i>string sap string egress qos sap-egress overrides policer</i> <i>reference mbs (number   keyword)</i>
Tree	<a href="#">mbs</a>
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **packet-byte-offset** *number*

Synopsis	Packet size modification for policing information
Context	<b>configure service ipipe</b> <i>string sap string egress qos sap-egress overrides policer</i> <i>reference packet-byte-offset number</i>
Tree	<a href="#">packet-byte-offset</a>
Range	-64 to 31
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **percent-rate**

Synopsis	Enter the <b>percent-rate</b> context
Context	<b>configure service ipipe</b> <i>string sap string egress qos sap-egress overrides policer</i> <i>reference percent-rate</i>

Tree	<a href="#">percent-rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **cir** *decimal-number*

Synopsis	CIR percent rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <a href="#">percent-rate</a> <a href="#">cir</a> <i>decimal-number</i>
Tree	<a href="#">cir</a>
Range	0.00 to 100.00
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **pir** *decimal-number*

Synopsis	PIR percent rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <a href="#">percent-rate</a> <a href="#">pir</a> <i>decimal-number</i>
Tree	<a href="#">pir</a>
Range	0.01 to 100.00
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **rate**

Synopsis	Enter the <b>rate</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <a href="#">rate</a>
Tree	<a href="#">rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**cir** (*number* | *keyword*)

Synopsis	CIR rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <a href="#">rate</a> <b>cir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cir</a>
Range	0 to 6400000000
Units	kilobps
Options	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**pir** (*number* | *keyword*)

Synopsis	PIR rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <a href="#">rate</a> <b>pir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">pir</a>
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**stat-mode** *keyword*

Synopsis	Mode of statistics collected by the policer
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <a href="#">stat-mode</a> <i>keyword</i>
Tree	<a href="#">stat-mode</a>
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-profile-cir, offered-limited-capped-cir, offered-profile-capped-cir, offered-total-cir-exceed, offered-four-profile-no-cir, offered-total-cir-four-profile
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**queue** [[queue-id](#)] *reference*

Synopsis	Enter the <b>queue</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i>
Tree	<a href="#">queue</a>
Introduced	20.10.R1
Platforms	All

**[queue-id]** *reference*

Synopsis	Policer unique ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i>
Tree	<a href="#">queue</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">sap-egress</a> <i>string</i> <a href="#">queue</a> <i>number</i>
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	All

**adaptation-rule**

Synopsis	Enter the <b>adaptation-rule</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i> <a href="#">adaptation-rule</a>
Tree	<a href="#">adaptation-rule</a>
Introduced	20.10.R1
Platforms	All

**cir** *keyword*

Synopsis	Constraint used when deriving the operational CIR value
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i> <a href="#">adaptation-rule</a> <a href="#">cir</a> <i>keyword</i>
Tree	<a href="#">cir</a>
Options	max, min, closest
Introduced	20.10.R1

Platforms All

### **pir** *keyword*

Synopsis Constraint used when deriving the operational PIR value

Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#) [reference](#) [adaptation-rule](#) [pir](#) *keyword*

Tree [pir](#)

Options max, min, closest

Introduced 20.10.R1

Platforms All

### **avg-frame-overhead** *decimal-number*

Synopsis Average packet-to-frame encapsulation overhead

Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#) [reference](#) [avg-frame-overhead](#) *decimal-number*

Tree [avg-frame-overhead](#)

Range 0.00 to 100.00

Introduced 20.10.R1

Platforms All

### **burst-limit** (*number* | *keyword*)

Synopsis Explicit shaping burst size for the queue

Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#) [reference](#) [burst-limit](#) (*number* | *keyword*)

Tree [burst-limit](#)

Range 1 to 14000000

Units bytes

Options auto

Introduced 20.10.R1

Platforms All

**cbs** (*number* | *keyword*)

Synopsis	CBS
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">cbs</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cbs</a>
Range	0 to 1048576
Units	kilobytes
Options	auto
Introduced	20.10.R1
Platforms	All

**drop-tail**

Synopsis	Enter the <b>drop-tail</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">drop-tail</a>
Tree	<a href="#">drop-tail</a>
Introduced	20.10.R1
Platforms	All

**low**

Synopsis	Enter the <b>low</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">drop-tail</a> <a href="#">low</a>
Tree	<a href="#">low</a>
Introduced	20.10.R1
Platforms	All

**percent-reduction-from-mbs** (*number* | *keyword*)

Synopsis	Percentage reduction from the MBS for a queue drop tail
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">drop-tail</a> <a href="#">low</a> <a href="#">percent-reduction-from-mbs</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">percent-reduction-from-mbs</a>
Range	0 to 100

Options	auto
Introduced	20.10.R1
Platforms	All

### **hs-class-weight** *number*

Synopsis	Class weight override for the queue
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <b>hs-class-weight</b> <i>number</i>
Tree	<a href="#">hs-class-weight</a>
Range	1   2   4   8
Introduced	20.10.R1
Platforms	7750 SR-7/12/12e

### **hs-wred-queue**

Synopsis	Enter the <b>hs-wred-queue</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <b>hs-wred-queue</b>
Tree	<a href="#">hs-wred-queue</a>
Introduced	20.10.R1
Platforms	7750 SR-7/12/12e

### **policy** *reference*

Synopsis	Slope policy applied to the HSQ queue group queue
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <b>hs-wred-queue</b> <a href="#">policy</a> <i>reference</i>
Tree	<a href="#">policy</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">slope-policy</a> <i>string</i>
Introduced	20.10.R1
Platforms	7750 SR-7/12/12e

### **hs-wrr-weight** *number*

Synopsis	WRR weight to parent with the queue into the scheduler
----------	--

Context	<b>configure service ipipe</b> <i>string sap string egress qos sap-egress overrides queue reference</i> <b>hs-wrr-weight</b> <i>number</i>
Tree	<b>hs-wrr-weight</b>
Range	1 to 127
Default	1
Introduced	20.10.R1
Platforms	7750 SR-7/12/12e

### **mbs** (*number* | *keyword*)

Synopsis	MBS
Context	<b>configure service ipipe</b> <i>string sap string egress qos sap-egress overrides queue reference</i> <b>mbs</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>mbs</b>
Range	0 to 1073741824
Units	bytes
Options	auto
Introduced	20.10.R1
Platforms	All

### **monitor-queue-depth**

Synopsis	Enable the <b>monitor-queue-depth</b> context
Context	<b>configure service ipipe</b> <i>string sap string egress qos sap-egress overrides queue reference</i> <b>monitor-queue-depth</b>
Tree	<b>monitor-queue-depth</b>
Description	Commands in this context configure queue depth monitoring for the specified queue.
Introduced	20.10.R1
Platforms	All

### **fast-polling** *boolean*

Synopsis	Enable fast polling of the queue depth
Context	<b>configure service ipipe</b> <i>string sap string egress qos sap-egress overrides queue reference</i> <b>monitor-queue-depth fast-polling</b> <i>boolean</i>
Tree	<b>fast-polling</b>

Description	When configured to <b>true</b> , this command enables fast polling of the queue depth. Faster polling allows a more accurate view of the actual depth.
Default	false
Introduced	20.10.R1
Platforms	All

### **violation-threshold** *decimal-number*

Synopsis	Threshold for queue depth before violation is raised
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">monitor-queue-depth</a> <b>violation-threshold</b> <i>decimal-number</i>
Tree	<a href="#">violation-threshold</a>
Description	This command specifies the threshold for the queue MBS. When the queue depth exceeds the threshold value, a violation is registered.
Range	0.01 to 99.99
Introduced	20.10.R1
Platforms	All

### **parent**

Synopsis	Enter the <b>parent</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <b>parent</b>
Tree	<a href="#">parent</a>
Introduced	20.10.R1
Platforms	All

### **cir-weight** *number*

Synopsis	CIR parameter that overrides parent for queue group
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">parent</a> <b>cir-weight</b> <i>number</i>
Tree	<a href="#">cir-weight</a>
Range	0 to 100
Introduced	20.10.R1
Platforms	All

### **weight** *number*

Synopsis	PIR parameter that overrides parent for queue group
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">parent</a> <b>weight</b> <i>number</i>
Tree	<a href="#">weight</a>
Range	0 to 100
Introduced	20.10.R1
Platforms	All

### **percent-rate**

Synopsis	Enter the <b>percent-rate</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">percent-rate</a>
Tree	<a href="#">percent-rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	20.10.R1
Platforms	All

### **cir** *decimal-number*

Synopsis	CIR percent rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">percent-rate</a> <a href="#">cir</a> <i>decimal-number</i>
Tree	<a href="#">cir</a>
Range	0.00 to 100.00
Introduced	20.10.R1
Platforms	All

### **pir** *decimal-number*

Synopsis	PIR percent rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">percent-rate</a> <a href="#">pir</a> <i>decimal-number</i>
Tree	<a href="#">pir</a>

Range	0.01 to 100.00
Introduced	20.10.R1
Platforms	All

**rate**

Synopsis	Enter the <b>rate</b> context
Context	<b>configure service ipipe string sap string egress qos sap-egress overrides queue reference rate</b>
Tree	<a href="#">rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	20.10.R1
Platforms	All

**cir (number | keyword)**

Synopsis	CIR rate
Context	<b>configure service ipipe string sap string egress qos sap-egress overrides queue reference rate cir (number   keyword)</b>
Tree	<a href="#">cir</a>
Range	0 to 6400000000
Units	kilobps
Options	max
Introduced	20.10.R1
Platforms	All

**pir (number | keyword)**

Synopsis	PIR rate
Context	<b>configure service ipipe string sap string egress qos sap-egress overrides queue reference rate pir (number   keyword)</b>
Tree	<a href="#">pir</a>
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	20.10.R1

Platforms All

### **policy-name** *reference*

Synopsis Policy ID to associate with SAP for mirrored service

Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [policy-name](#) *reference*

Tree [policy-name](#)

Reference **configure** [qos](#) [sap-egress](#) *string*

Introduced 20.10.R1

### **instance** *number*

Synopsis Instance of port queue group

Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [sap-egress](#) [port-redirect-group](#) [instance](#) *number*

Tree [instance](#)

Range 1 to 65535

Introduced 20.10.R1  
 Platforms All

## **scheduler-policy**

Synopsis Enter the **scheduler-policy** context  
 Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [scheduler-policy](#)  
 Tree [scheduler-policy](#)  
 Introduced 20.10.R1  
 Platforms All

## **overrides**

Synopsis Enter the **overrides** context  
 Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [scheduler-policy](#) [overrides](#)  
 Tree [overrides](#)  
 Introduced 20.10.R1  
 Platforms All

## **scheduler** [[scheduler-name](#)] *string*

Synopsis Enter the **scheduler** list instance  
 Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [scheduler-policy](#) [overrides](#) [scheduler](#) *string*  
 Tree [scheduler](#)  
 Introduced 20.10.R1  
 Platforms All

## **[scheduler-name]** *string*

Synopsis Scheduler name  
 Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [egress](#) [qos](#) [scheduler-policy](#) [overrides](#) [scheduler](#) *string*  
 Tree [scheduler](#)  
 Description This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a

unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.

If the scheduler name exists within the policy on a different tier, an error occurs and the current context does not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.

If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context is not change.

String Length	1 to 32
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	All

## parent

Synopsis	Enter the <b>parent</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <i>string</i> <b>parent</b>
Tree	<a href="#">parent</a>
Introduced	20.10.R1
Platforms	All

## cir-weight *number*

Synopsis	Weight used at the within-CIR port priority level
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <i>string</i> <a href="#">parent</a> <b>cir-weight</b> <i>number</i>
Tree	<a href="#">cir-weight</a>
Range	0 to 100
Introduced	20.10.R1
Platforms	All

## weight *number*

Synopsis	Relative weight of the scheduler to feed the queue
----------	--

Context	<b>configure service ipipe</b> <i>string sap string egress qos scheduler-policy overrides scheduler string parent weight number</i>
Tree	<b>weight</b>
Range	0 to 100
Introduced	20.10.R1
Platforms	All

**rate**

Synopsis	Enter the <b>rate</b> context
Context	<b>configure service ipipe</b> <i>string sap string egress qos scheduler-policy overrides scheduler string rate</i>
Tree	<b>rate</b>
Introduced	20.10.R1
Platforms	All

**cir** (*number* | *keyword*)

Synopsis	CIR at which the queue it to operate
Context	<b>configure service ipipe</b> <i>string sap string egress qos scheduler-policy overrides scheduler string rate cir</i> ( <i>number</i>   <i>keyword</i> )
Tree	<b>cir</b>
Range	0 to 6400000000
Units	kilobps
Options	sum, max
Introduced	20.10.R1
Platforms	All

**pir** (*number* | *keyword*)

Synopsis	PIR at which the queue is to operate

## ipv6 reference

Synopsis	IPv6 filter policy name
Context	<b>configure service ipipe</b> <i>string sap string ingress filter ipv6 reference</i>
Tree	<a href="#">ipv6</a>

Reference	<b>configure</b> <a href="#">filter ipv6-filter</a> <i>string</i>
Introduced	20.10.R1
Platforms	All

## qos

Synopsis	Enter the <b>qos</b> context
Context	<b>configure</b> <a href="#">service ipipe</a> <i>string sap string ingress qos</i>
Tree	<a href="#">qos</a>
Introduced	20.10.R1
Platforms	All

## match-qinq-dot1p *keyword*

Synopsis	Ingress match QinQ Dot1p
Context	<b>configure</b> <a href="#">service ipipe</a> <i>string sap string ingress qos match-qinq-dot1p keyword</i>
Tree	<a href="#">match-qinq-dot1p</a>
Options	top, bottom
Introduced	20.10.R1
Platforms	All

## policer-control-policy

Synopsis	Enter the <b>policer-control-policy</b> context
Context	<b>configure</b> <a href="#">service ipipe</a> <i>string sap string ingress qos policer-control-policy</i>
Tree	<a href="#">policer-control-policy</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## overrides

Synopsis	Enable the <b>overrides</b> context
Context	<b>configure</b> <a href="#">service ipipe</a> <i>string sap string ingress qos policer-control-policy overrides</i>
Tree	<a href="#">overrides</a>
Introduced	20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## root

Synopsis Enter the **root** context

Context **configure service ipipe string sap string ingress qos policer-control-policy overrides root**

Tree **root**

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## max-rate (*number* | *keyword*)

Synopsis Maximum frame-based bandwidth limit

Context **configure service ipipe string sap string ingress qos policer-control-policy overrides root max-rate (*number* | *keyword*)**

Tree **max-rate**

Range 1 to 6400000000

Options max

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## priority-mbs-thresholds

Synopsis Enter the **priority-mbs-thresholds** context

Context **configure service ipipe string sap string ingress qos policer-control-policy overrides root priority-mbs-thresholds**

Tree **priority-mbs-thresholds**

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## min-thresh-separation (*number* | *keyword*)

Synopsis Minimum amount of separation buffer space

Context **configure service ipipe string sap string ingress qos policer-control-policy overrides root priority-mbs-thresholds min-thresh-separation (*number* | *keyword*)**

Tree **min-thresh-separation**

Range	0 to 16777216
Units	bytes
Options	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **priority** [[priority-level](#)] *number*

Synopsis	Enter the <b>priority</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a> <a href="#">priority-mbs-thresholds</a> <a href="#">priority</a> <i>number</i>
Tree	<a href="#">priority</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **[priority-level]** *number*

Synopsis	Priority level
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a> <a href="#">priority-mbs-thresholds</a> <a href="#">priority</a> <i>number</i>
Tree	<a href="#">priority</a>
Range	1 to 8
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **mbs-contribution** (*number* | *keyword*)

Synopsis	Minimum amount of cumulative buffer space allowed
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a> <a href="#">root</a> <a href="#">priority-mbs-thresholds</a> <a href="#">priority</a> <i>number</i> <a href="#">mbs-contribution</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">mbs-contribution</a>
Range	0 to 16777216
Units	bytes
Options	auto
Introduced	20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **policy-name** *reference*

Synopsis Policer control policy name

Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [ingress](#) [qos](#) [policer-control-policy](#) [policy-name](#) *reference*

Tree [policy-name](#)

Reference **configure** [qos](#) [policer-control-policy](#) *string*

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **sap-ingress**

Synopsis Enter the **sap-ingress** context

Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [ingress](#) [qos](#) [sap-ingress](#)

Tree [sap-ingress](#)

Introduced 20.10.R1

Platforms All

### **fp-redirect-group**

Synopsis Enter the **fp-redirect-group** context

Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [ingress](#) [qos](#) [sap-ingress](#) [fp-redirect-group](#)

Tree [fp-redirect-group](#)

Introduced 20.10.R1

Platforms All

### **group-name** *reference*

Synopsis Queue group template name created on forwarding plane

Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [ingress](#) [qos](#) [sap-ingress](#) [fp-redirect-group](#) [group-name](#) *reference*

Tree [group-name](#)

Reference **configure** [qos](#) [queue-group-templates](#) [ingress](#) [queue-group](#) *string*

Introduced 20.10.R1

Platforms All

### **instance** *number*

Synopsis Queue group instance

Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [ingress](#) [qos](#) [sap-ingress](#) [fp-redirect-group](#) [instance](#) *number*

Tree [instance](#)

Range 1 to 65535

Introduced 20.10.R1

Platforms All

### **overrides**

Synopsis Enter the **overrides** context

Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [ingress](#) [qos](#) [sap-ingress](#) [overrides](#)

Tree [overrides](#)

Introduced 20.10.R1

Platforms All

### **policer** [[policer-id](#)] *reference*

Synopsis Enter the **policer** list instance

Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [ingress](#) [qos](#) [sap-ingress](#) [overrides](#) [policer](#) *reference*

Tree [policer](#)

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **[policer-id]** *reference*

Synopsis Policer unique ID

Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [ingress](#) [qos](#) [sap-ingress](#) [overrides](#) [policer](#) *reference*

Tree [policer](#)

Reference **configure** [qos](#) [sap-ingress](#) *string* [policer](#) *number*

Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**cbs** (*number* | *keyword*)

Synopsis	CBS
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">policer</a> <i>reference</i> <a href="#">cbs</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cbs</a>
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**mbs** (*number* | *keyword*)

Synopsis	MBS
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">policer</a> <i>reference</i> <a href="#">mbs</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">mbs</a>
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**packet-byte-offset** *number*

Synopsis	Packet size modification for policing information
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">policer</a> <i>reference</i> <a href="#">packet-byte-offset</a> <i>number</i>
Tree	<a href="#">packet-byte-offset</a>
Range	-32 to 31
Introduced	20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## percent-rate

Synopsis Enter the **percent-rate** context

Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [ingress](#) [qos](#) [sap-ingress](#) [overrides](#) [policer](#)  
*reference* [percent-rate](#)

Tree [percent-rate](#)

Notes The following elements are part of a choice: **percent-rate** or **rate**.

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## cir decimal-number

Synopsis CIR percent rate

Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [ingress](#) [qos](#) [sap-ingress](#) [overrides](#) [policer](#)  
*reference* [percent-rate](#) [cir](#) *decimal-number*

Tree [cir](#)

Range 0.00 to 100.00

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## pir decimal-number

Synopsis PIR percent rate

Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [ingress](#) [qos](#) [sap-ingress](#) [overrides](#) [policer](#)  
*reference* [percent-rate](#) [pir](#) *decimal-number*

Tree [pir](#)

Range 0.01 to 100.00

Introduced 20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## rate

Synopsis Enter the **rate** context

Context	<b>configure service ipipe</b> <i>string sap string ingress qos sap-ingress overrides policer reference rate</i>
Tree	<a href="#">rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **cir** (*number* | *keyword*)

Synopsis	CIR rate
Context	<b>configure service ipipe</b> <i>string sap string ingress qos sap-ingress overrides policer reference rate cir</i> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cir</a>
Range	0 to 6400000000
Units	kilobps
Options	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **pir** (*number* | *keyword*)

Synopsis	PIR rate
Context	<b>configure service ipipe</b> <i>string sap string ingress qos sap-ingress overrides policer reference rate pir</i> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">pir</a>
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **stat-mode** *keyword*

Synopsis	Mode of statistics collected by the policer
Context	<b>configure service ipipe</b> <i>string sap string ingress qos sap-ingress overrides policer reference stat-mode</i> <i>keyword</i>

Tree	<a href="#">stat-mode</a>
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-priority-no-cir, offered-profile-cir, offered-priority-cir, offered-limited-profile-cir, offered-profile-capped-cir, offered-limited-capped-cir
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **queue** [[queue-id](#)] *reference*

Synopsis	Enter the <b>queue</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i>
Tree	<a href="#">queue</a>
Introduced	20.10.R1
Platforms	All

### **[queue-id]** *reference*

Synopsis	Policer unique ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i>
Tree	<a href="#">queue</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">sap-ingress</a> <i>string</i> <a href="#">queue</a> <i>number</i>
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	All

### **adaptation-rule**

Synopsis	Enter the <b>adaptation-rule</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i> <a href="#">adaptation-rule</a>
Tree	<a href="#">adaptation-rule</a>
Introduced	20.10.R1
Platforms	All

**cir keyword**

Synopsis	Constraint used when deriving the operational CIR value
Context	<b>configure service ipipe string sap string ingress qos sap-ingress overrides queue reference adaptation-rule cir keyword</b>
Tree	<a href="#">cir</a>
Options	max, min, closest
Introduced	20.10.R1
Platforms	All

**pir keyword**

Synopsis	Constraint used when deriving the operational PIR value
Context	<b>configure service ipipe string sap string ingress qos sap-ingress overrides queue reference adaptation-rule pir keyword</b>
Tree	<a href="#">pir</a>
Options	max, min, closest
Introduced	20.10.R1
Platforms	All

**cbs (number | keyword)**

Synopsis	CBS
Context	<b>configure service ipipe string sap string ingress qos sap-ingress overrides queue reference cbs (number   keyword)</b>
Tree	<a href="#">cbs</a>
Range	0 to 1048576
Units	kilobytes
Options	auto
Introduced	20.10.R1
Platforms	All

**drop-tail**

Synopsis	Enter the <b>drop-tail</b> context
Context	<b>configure service ipipe string sap string ingress qos sap-ingress overrides queue reference drop-tail</b>

Tree	<a href="#">drop-tail</a>
Introduced	20.10.R1
Platforms	All

**low**

Synopsis	Enter the <b>low</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i> <a href="#">drop-tail</a> <a href="#">low</a>
Tree	<a href="#">low</a>
Introduced	20.10.R1
Platforms	All

**percent-reduction-from-mbs** (*number* | *keyword*)

Synopsis	Percentage reduction from the MBS for a queue drop tail
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i> <a href="#">drop-tail</a> <a href="#">low</a> <a href="#">percent-reduction-from-mbs</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">percent-reduction-from-mbs</a>
Range	0 to 100
Options	auto
Introduced	20.10.R1
Platforms	All

**mbs** (*number* | *keyword*)

Synopsis	MBS
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i> <a href="#">mbs</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">mbs</a>
Range	0 to 1073741824
Units	bytes
Options	auto
Introduced	20.10.R1
Platforms	All

## monitor-queue-depth

Synopsis	Enable the <b>monitor-queue-depth</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">monitor-queue-depth</a>
Tree	<a href="#">monitor-queue-depth</a>
Introduced	21.7.R1
Platforms	All

## fast-polling *boolean*

Synopsis	Enable fast polling of the queue depth
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">monitor-queue-depth</a> <a href="#">fast-polling</a> <i>boolean</i>
Tree	<a href="#">fast-polling</a>
Default	false
Introduced	21.7.R1
Platforms	All

## parent

Synopsis	Enter the <b>parent</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">parent</a>
Tree	<a href="#">parent</a>
Introduced	20.10.R1
Platforms	All

## cir-weight *number*

Synopsis	CIR parameter that overrides parent for queue group
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">parent</a> <a href="#">cir-weight</a> <i>number</i>
Tree	<a href="#">cir-weight</a>
Range	0 to 100
Introduced	20.10.R1

Platforms All

### **weight** *number*

Synopsis PIR parameter that overrides parent for queue group

Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [ingress](#) [qos](#) [sap-ingress](#) [overrides](#) [queue](#)  
*reference* [parent](#) **weight** *number*

Tree [weight](#)

Range 0 to 100

Introduced 20.10.R1

Platforms All

### **percent-rate**

Synopsis Enter the **percent-rate** context

Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [ingress](#) [qos](#) [sap-ingress](#) [overrides](#) [queue](#)  
*reference* [percent-rate](#)

Tree [percent-rate](#)

Notes The following elements are part of a choice: **percent-rate** or **rate**.

Introduced 20.10.R1

Platforms All

### **cir** *decimal-number*

Synopsis CIR percent rate

Context **configure** [service](#) [ipipe](#) *string* [sap](#) *string* [ingress](#) [qos](#) [sap-ingress](#) [overrides](#) [queue](#)  
*reference* [percent-rate](#) [cir](#) *decimal-number*

Tree [cir](#)

Range 0.00 to 100.00

Introduced 20.10.R1

Platforms All

### **pir** *decimal-number*

Synopsis PIR percent rate

Context	<b>configure service ipipe</b> <i>string</i> <b>sap</b> <i>string</i> <b>ingress qos sap-ingress overrides queue reference percent-rate pir</b> <i>decimal-number</i>
Tree	<a href="#">pir</a>
Range	0.01 to 100.00
Introduced	20.10.R1
Platforms	All

**rate**

Synopsis	Enter the <b>rate</b> context
Context	<b>configure service ipipe</b> <i>string</i> <b>sap</b> <i>string</i> <b>ingress qos sap-ingress overrides queue reference rate</b>
Tree	<a href="#">rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	20.10.R1
Platforms	All

**cir** (*number* | *keyword*)

Synopsis	CIR rate
Context	<b>configure service ipipe</b> <i>string</i> <b>sap</b> <i>string</i> <b>ingress qos sap-ingress overrides queue reference rate cir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cir</a>
Range	0 to 6400000000
Units	kilobps
Options	max
Introduced	20.10.R1
Platforms	All

**pir** (*number* | *keyword*)

Synopsis	PIR rate
Context	<b>configure service ipipe</b> <i>string</i> <b>sap</b> <i>string</i> <b>ingress qos sap-ingress overrides queue reference rate pir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">pir</a>
Range	1 to 6400000000

Units	kilobps
Options	max
Introduced	20.10.R1
Platforms	All

### **policy-name** *reference*

Synopsis	Policy ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">policy-name</a> <i>reference</i>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">sap-ingress</a> <i>string</i>
Introduced	20.10.R1
Platforms	All

### **queuing-type** *keyword*

Synopsis	Queuing type
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">queuing-type</a> <i>keyword</i>
Tree	<a href="#">queuing-type</a>
Options	shared, multipoint-shared
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, VSR

### **scheduler-policy**

Synopsis	Enter the <b>scheduler-policy</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a>
Tree	<a href="#">scheduler-policy</a>
Introduced	20.10.R1
Platforms	All

### **overrides**

Synopsis	Enter the <b>overrides</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a>

Tree	<a href="#">overrides</a>
Introduced	20.10.R1
Platforms	All

### **scheduler** [[scheduler-name](#)] *string*

Synopsis	Enter the <b>scheduler</b> list instance
Context	<a href="#">configure</a> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <i>string</i>
Tree	<a href="#">scheduler</a>
Introduced	20.10.R1
Platforms	All

### **[scheduler-name]** *string*

Synopsis	Scheduler name
Context	<a href="#">configure</a> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <i>string</i>
Tree	<a href="#">scheduler</a>
Description	<p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (<a href="#">#</a>, <a href="#">\$</a>, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context does not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context is not change.</p>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	All

**parent**

Synopsis	Enter the <b>parent</b> context

Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**use-broadcast-mac** *boolean*

Synopsis	Allow broadcast MAC on SAP
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">use-broadcast-mac</a> <i>boolean</i>
Tree	<a href="#">use-broadcast-mac</a>

Default	false
Introduced	20.10.R1
Platforms	All

### **service-id** *number*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Service ID
Context	<b>configure service ipipe</b> <i>string service-id number</i>
Tree	<a href="#">service-id</a>
Range	1 to 2147483647
Introduced	20.10.R1
Platforms	All

### **service-mtu** *number*

Synopsis	MTU size
Context	<b>configure service ipipe</b> <i>string service-mtu number</i>
Tree	<a href="#">service-mtu</a>
Description	This command configures the Maximum Transmission Unit (MTU) value (payload) for the service. The system uses the value to validate the operational state of the SAP and SDP binding within the service. The value overrides the default MTU for the service type.

The service MTU and a SAP's service delineation encapsulation overhead (4 bytes for a dot1q tag) are used to derive the required MTU of the physical port or channel on which the SAP was created. If the required payload is larger than the port or channel MTU, the SAP is placed in an inoperative state. If the required MTU is equal to or less than the port or channel MTU, the SAP transitions to the operative state.

When binding an SDP to a service, the service MTU is compared to the path MTU associated with the SDP. The path MTU can be administratively defined in the context of the SDP. The default or administrative path MTU can be dynamically reduced due to the MTU capabilities discovered by the tunneling mechanism of the SDP or the egress interface MTU capabilities based on the next hop in the tunnel path. If the service MTU is larger than the path MTU, the SDP binding for the service is placed in an inoperative state. If the service MTU is equal to or less than the path MTU, the SDP binding is placed in an operational state.

If a service MTU, port or channel MTU, or path MTU is dynamically or administratively modified, all associated SAP and SDP binding operational states are automatically reevaluated.

Binding operational states are automatically reevaluated.

For I-VPLS and Epipe bound to a B-VPLS, the service MTU must be at least 18 bytes smaller than the B-VPLS service MTU to accommodate the PBB header.

Because this connects a Layer 2 to a Layer 3 service, adjust the service MTU under the Epipe service. The MTU that is advertised from the Epipe side is service MTU minus EtherHeaderSize.

In the **configure service epipe spoke-sdp** context, the **adv-service-mtu** command can be used to override the configured MTU value used in T-LDP signaling to the far-end of an Epipe spoke-sdp. The **adv-service-mtu** command is also used to validate the value signaled by the far-end PE.

Range	1 to 9194
Introduced	20.10.R1
Platforms	All

### **spoke-sdp** [**sdp-bind-id**] *string*

Synopsis	Enter the <b>spoke-sdp</b> list instance
Context	<b>configure service ipipe string spoke-sdp string</b>

## fp-redirect-group

Synopsis	Enter the <b>fp-redirect-group</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">network</a> <a href="#">fp-redirect-group</a>
Tree	<a href="#">fp-redirect-group</a>
Introduced	20.10.R1
Platforms	All

**group-name** *reference*

Synopsis	Name of the forwarding plane queue group template
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">ingress qos network</a> <a href="#">fp-redirect-group</a> <a href="#">group-name</a> <i>reference</i>
Tree	<a href="#">group-name</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">queue-group-templates</a> <a href="#">ingress</a> <a href="#">queue-group</a> <i>string</i>
Introduced	20.10.R1
Platforms	All

**instance** *number*

Synopsis	Instance of FP ingress queue group for the SDP binding
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">ingress qos network</a> <a href="#">fp-redirect-group</a> <a href="#">instance</a> <i>number</i>
Tree	<a href="#">instance</a>
Range	1 to 65535
Introduced	20.10.R1
Platforms	All

**policy-name** *reference*

Synopsis	Network policy ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">ingress qos network</a> <a href="#">policy-name</a> <i>reference</i>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos network</a> <i>string</i>
Introduced	20.10.R1
Platforms	All

**vc-label** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Ingress MPLS VC label to send packets to the far end
----------	--

Context	<b>configure service ipipe</b> <i>string spoke-sdp string ingress vc-label number</i>
Tree	<a href="#">vc-label</a>
Range	1 to 1048575
Introduced	20.10.R1
Platforms	All

## transit-policy

Synopsis	Enable the <b>transit-policy</b> context
Context	<b>configure service ipipe</b> <i>string spoke-sdp string transit-policy</i>
Tree	<a href="#">transit-policy</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## prefix *reference*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IP prefix policy ID
Context	<b>configure service ipipe</b> <i>string spoke-sdp string transit-policy prefix reference</i>
Tree	<a href="#">prefix</a>
Reference	<b>configure application-assurance group</b> <i>number partition number transit-prefix-policy number</i>
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## vc-switching *boolean*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Use PW switching signaling for spoke SDPs in service
Context	<b>configure service ipipe</b> <i>string vc-switching boolean</i>

Tree	<a href="#">vc-switching</a>
Default	false
Introduced	20.10.R1
Platforms	All

**vpn-id** *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VPN identifier for the service
Context	<b>configure</b> <a href="#">service</a> <a href="#">ipipe</a> <i>string</i> <a href="#">vpn-id</a> <i>number</i>
Tree	<a href="#">vpn-id</a>
Range	1 to 2147483647
Introduced	20.10.R1
Platforms	All

**mac-list** [[name](#)] *string*

Synopsis	Enter the <b>mac-list</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">mac-list</a> <i>string</i>
Tree	<a href="#">mac-list</a>
Description	Commands in this context specify the MAC addresses to be included in a MAC list to be used with the Auto-Learn MAC Protect (ALMP) functionality. The list is used to exclude certain MAC addresses from protection, for example, on SAPs or spoke SDPs configured with ALMP where certain MAC addresses (such as VRRP virtual MAC addresses) must be able to move to other objects.
Introduced	20.5.R1
Platforms	All

**[name]** *string*

Synopsis	MAC list name
Context	<b>configure</b> <a href="#">service</a> <a href="#">mac-list</a> <i>string</i>
Tree	<a href="#">mac-list</a>
String Length	1 to 32

---

Notes	This element is part of a list key.
Introduced	20.5.R1
Platforms	All

**description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service</a> <a href="#">mac-list</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	20.5.R1
Platforms	All

**mac** [[address](#)] *string*

Synopsis	Enter the <b>mac</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">mac-list</a> <i>string</i> <a href="#">mac</a> <i>string</i>
Tree	<a href="#">mac</a>
Introduced	20.5.R1
Platforms	All

**[address]** *string*

Synopsis	MAC address
Context	<b>configure</b> <a href="#">service</a> <a href="#">mac-list</a> <i>string</i> <a href="#">mac</a> <i>string</i>
Tree	<a href="#">mac</a>
Notes	This element is part of a list key.
Introduced	20.5.R1
Platforms	All

**mask** *string*

Synopsis	Mask for the MAC address
Context	<b>configure</b> <a href="#">service</a> <a href="#">mac-list</a> <i>string</i> <a href="#">mac</a> <i>string</i> <a href="#">mask</a> <i>string</i>
Tree	<a href="#">mask</a>

Default	ff:ff:ff:ff:ff
Introduced	20.5.R1
Platforms	All

## md-auto-id

Synopsis	Enter the <b>md-auto-id</b> context
Context	<b>configure service md-auto-id</b>
Tree	<a href="#">md-auto-id</a>
Introduced	16.0.R1
Platforms	All

## customer-id-range

Synopsis	Enable the <b>customer-id-range</b> context
Context	<b>configure service md-auto-id customer-id-range</b>
Tree	<a href="#">customer-id-range</a>
Introduced	16.0.R1
Platforms	All

## end *number*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Upper bound of the ID range
Context	<b>configure service md-auto-id customer-id-range end <i>number</i></b>
Tree	<a href="#">end</a>
Range	2 to 2147483647
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**start number****WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Lower bound of the ID range
Context	<b>configure service md-auto-id customer-id-range start number</b>
Tree	<a href="#">start</a>
Range	2 to 2147483647
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**pw-template-id-range**

Synopsis	Enable the <b>pw-template-id-range</b> context
Context	<b>configure service md-auto-id pw-template-id-range</b>
Tree	<a href="#">pw-template-id-range</a>
Introduced	16.0.R1
Platforms	All

**end number****WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Upper bound of the PW template ID range
Context	<b>configure service md-auto-id pw-template-id-range end number</b>
Tree	<a href="#">end</a>
Range	1 to 2147483647
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

## **start number**

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Lower bound of the PW template ID range
Context	<b>configure service md-auto-id pw-template-id-range start number</b>
Tree	<a href="#">start</a>
Range	1 to 2147483647
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

## **service-id-range**

Synopsis	Enable the <b>service-id-range</b> context
Context	<b>configure service md-auto-id service-id-range</b>
Tree	<a href="#">service-id-range</a>
Introduced	16.0.R1
Platforms	All

## **end number**

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Upper bound of the service ID range
Context	<b>configure service md-auto-id service-id-range end number</b>
Tree	<a href="#">end</a>
Range	1 to 2147483647
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**start number****WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Lower bound of the service ID range
Context	<b>configure service md-auto-id service-id-range start number</b>
Tree	<a href="#">start</a>
Range	1 to 2147483647
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**mrp**

Synopsis	Enter the <b>mrp</b> context
Context	<b>configure service mrp</b>
Tree	<a href="#">mrp</a>
Introduced	20.10.R1
Platforms	All

**policy [policy-name] string**

Synopsis	Enter the <b>policy</b> list instance
Context	<b>configure service mrp policy string</b>
Tree	<a href="#">policy</a>
Introduced	20.10.R1
Platforms	All

**[policy-name] string**

Synopsis	Specify the policy name associated with the MRP
Context	<b>configure service mrp policy string</b>
Tree	<a href="#">policy</a>
String Length	1 to 32

Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	All

### **default-action** *keyword*

Synopsis	Action for packets not matching any MRP policy entries
Context	<b>configure</b> <a href="#">service</a> <a href="#">mrp policy</a> <i>string</i> <b>default-action</b> <i>keyword</i>
Tree	<a href="#">default-action</a>
Options	block, allow
Default	allow
Introduced	20.10.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service</a> <a href="#">mrp policy</a> <i>string</i> <b>description</b> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	20.10.R1
Platforms	All

### **entry** [[entry-id](#)] *number*

Synopsis	Enter the <b>entry</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">mrp policy</a> <i>string</i> <b>entry</b> <i>number</i>
Tree	<a href="#">entry</a>
Introduced	20.10.R1
Platforms	All

### [[entry-id](#)] *number*

Synopsis	Specify an id for the MRP policy entry
Context	<b>configure</b> <a href="#">service</a> <a href="#">mrp policy</a> <i>string</i> <b>entry</b> <i>number</i>

---

Tree	<a href="#">entry</a>
Range	1 to 65535
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	All

### **action** *keyword*

Synopsis	Action applied for matching packets
Context	<b>configure</b> <a href="#">service</a> <a href="#">mrp</a> <a href="#">policy</a> <a href="#">string</a> <a href="#">entry</a> <a href="#">number</a> <a href="#">action</a> <i>keyword</i>
Tree	<a href="#">action</a>
Options	block, allow, end-station
Introduced	20.10.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service</a> <a href="#">mrp</a> <a href="#">policy</a> <a href="#">string</a> <a href="#">entry</a> <a href="#">number</a> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	20.10.R1
Platforms	All

### **match**

Synopsis	Enter the <b>match</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">mrp</a> <a href="#">policy</a> <a href="#">string</a> <a href="#">entry</a> <a href="#">number</a> <a href="#">match</a>
Tree	<a href="#">match</a>
Introduced	20.10.R1
Platforms	All

### **isid** [[value](#)] *number*

Synopsis	Enter the <b>isid</b> list instance
----------	-------------------------------------

Context	<b>configure service mrp policy</b> <i>string entry number match isid number</i>
Tree	<a href="#">isid</a>
Introduced	20.10.R1
Platforms	All

**[value]** *number*

Synopsis	Lowest service instance ID to match the entry
Context	<b>configure service mrp policy</b> <i>string entry number match isid number</i>
Tree	<a href="#">isid</a>
Range	0 to 16777215
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	All

**higher-value** *number*

Synopsis	Highest service instance ID to match the entry
Context	<b>configure service mrp policy</b> <i>string entry number match isid number higher-value number</i>
Tree	<a href="#">higher-value</a>
Range	0 to 16777215
Introduced	20.10.R1
Platforms	All

**scope** *keyword*

Synopsis	Specify the scope of the mrp-policy definition
Context	<b>configure service mrp policy</b> <i>string scope keyword</i>
Tree	<a href="#">scope</a>
Options	exclusive, template
Default	template
Introduced	20.10.R1
Platforms	All

## nat

Synopsis	Enter the <b>nat</b> context
Context	<b>configure service nat</b>
Tree	<a href="#">nat</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## classifier [[name](#)] *string*

Synopsis	Enter the <b>classifier</b> list instance
Context	<b>configure service nat classifier <i>string</i></b>
Tree	<a href="#">classifier</a>
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## [\[name\]](#) *string*

Synopsis	NAT classifier name
Context	<b>configure service nat classifier <i>string</i></b>
Tree	<a href="#">classifier</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## default

Synopsis	Enter the <b>default</b> context
Context	<b>configure service nat classifier <i>string</i> default</b>
Tree	<a href="#">default</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## action

Synopsis	Enter the <b>action</b> context
Context	<b>configure service nat classifier</b> <i>string</i> <b>default action</b>
Tree	<b>action</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## destination-nat

Synopsis	Enable the <b>destination-nat</b> context
Context	<b>configure service nat classifier</b> <i>string</i> <b>default action destination-nat</b>
Tree	<b>destination-nat</b>
Notes	The following elements are part of a choice: ( <b>destination-nat</b> , <b>dnat</b> , and <b>dnat-ip-address</b> ) or <b>forward</b> .
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ip-address *string*

Synopsis	Substitute destination IP address of matching packets
Context	<b>configure service nat classifier</b> <i>string</i> <b>default action destination-nat ip-address</b> <i>string</i>
Tree	<b>ip-address</b>
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## forward

### WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Forward mode of operation
Context	<b>configure service nat classifier</b> <i>string</i> <b>default action forward</b>
Tree	<b>forward</b>
Notes	The following elements are part of a choice: ( <b>destination-nat</b> , <b>dnat</b> , and <b>dnat-ip-address</b> ) or <b>forward</b> .

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **dnat-ip-address** *string*

**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Default destination IP address for matching entries with dNAT action
Context	<b>configure</b> <a href="#">service nat classifier</a> <i>string</i> <b>default dnat-ip-address</b> <i>string</i>
Tree	<a href="#">dnat-ip-address</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service nat classifier</a> <i>string</i> <b>description</b> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **entry** [*id*] *number*

Synopsis	Enter the <b>entry</b> list instance
Context	<b>configure</b> <a href="#">service nat classifier</a> <i>string</i> <b>entry</b> <i>number</i>
Tree	<a href="#">entry</a>
Max. Instances	32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[id]** *number*

Synopsis	Classifier rule entry ID
----------	--------------------------

Context	<b>configure service nat classifier</b> <i>string entry number</i>
Tree	<a href="#">entry</a>
Range	1 to 1000
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## action

Synopsis	Enter the <b>action</b> context
Context	<b>configure service nat classifier</b> <i>string entry number action</i>
Tree	<a href="#">action</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## destination-nat

Synopsis	Enable the <b>destination-nat</b> context
Context	<b>configure service nat classifier</b> <i>string entry number action destination-nat</i>
Tree	<a href="#">destination-nat</a>
Notes	The following elements are part of a choice: ( <b>destination-nat</b> , <b>dnat</b> , and <b>dnat-ip-address</b> ) or <b>forward</b> .
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ip-address *string*

Synopsis	Replacement destination IP address for packets
Context	<b>configure service nat classifier</b> <i>string entry number action destination-nat ip-address string</i>
Tree	<a href="#">ip-address</a>
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## forward

### WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Forward mode of operation
Context	<b>configure service nat classifier</b> <i>string entry number action forward</i>
Tree	<a href="#">forward</a>
Notes	The following elements are part of a choice: ( <b>destination-nat</b> , <b>dnat</b> , and <b>dnat-ip-address</b> ) or <b>forward</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## description *string*

Synopsis	Text description
Context	<b>configure service nat classifier</b> <i>string entry number description string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## match

Synopsis	Enter the <b>match</b> context
Context	<b>configure service nat classifier</b> <i>string entry number match</i>
Tree	<a href="#">match</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## dst-port-range

Synopsis	Enter the <b>dst-port-range</b> context
Context	<b>configure service nat classifier</b> <i>string entry number match dst-port-range</i>
Tree	<a href="#">dst-port-range</a>
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **end number**

**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis Upper bound of the port range  
 Context **configure service nat classifier string entry number match dst-port-range end number**  
 Tree **end**  
 Range 0 | 1 to 65535  
 Default 65535  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **start number**

**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis Lower bound of the port range  
 Context **configure service nat classifier string entry number match dst-port-range start number**  
 Tree **start**  
 Range 0 | 1 to 65535  
 Default 0  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **foreign-ip-address string**

**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis Foreign IP address as the match criterion  
 Context **configure service nat classifier string entry number match foreign-ip-address string**  
 Tree **foreign-ip-address**  
 Introduced 19.5.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **protocol** *keyword*

#### **WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis IP protocol to match  
 Context **configure** [service nat classifier](#) *string entry number match protocol keyword*  
 Tree [protocol](#)  
 Options tcp, udp  
 Default udp  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **deterministic-script**

Synopsis Enter the **deterministic-script** context  
 Context **configure** [service nat deterministic-script](#)  
 Tree [deterministic-script](#)  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **location** *string*

Synopsis Remote location where Python script is exported  
 Context **configure** [service nat deterministic-script location](#) *string*  
 Tree [location](#)  
 String Length 1 to 180  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **firewall-policy** [[name](#)] *string*

Synopsis Enter the **firewall-policy** list instance  
 Context **configure** [service nat firewall-policy](#) *string*

Tree	<a href="#">firewall-policy</a>
Description	Commands in this context configure the attributes of the firewall policy, for use in contexts where basic protection from outside attack vectors is required. Firewall policies cannot be deleted if they are in use.
Max. Instances	2048
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**[name]** *string*

Synopsis	Firewall policy name
Context	<b>configure</b> <a href="#">service nat firewall-policy</a> <i>string</i>
Tree	<a href="#">firewall-policy</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**alg**

Synopsis	Enter the <b>alg</b> context
Context	<b>configure</b> <a href="#">service nat firewall-policy</a> <i>string</i> <b>alg</b>
Tree	<a href="#">alg</a>
Description	Commands in this context configure the Application Layer Gateway (ALG) attributes of the policy.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**ftp** *boolean*

Synopsis	Use FTP ALG for the policy
Context	<b>configure</b> <a href="#">service nat firewall-policy</a> <i>string</i> <b>alg ftp</b> <i>boolean</i>
Tree	<a href="#">ftp</a>
Default	true
Introduced	16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **rtsp** *boolean*

Synopsis Use RTSP ALG for the policy

Context **configure** [service nat firewall-policy](#) *string alg rtsp boolean*

Tree [rtsp](#)

Description When configured to **true**, Real-Time Streaming Protocol (RTSP) ALG is used for the policy.

Default false

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **sip** *boolean*

Synopsis Use SIP ALG for the policy

Context **configure** [service nat firewall-policy](#) *string alg sip boolean*

Tree [sip](#)

Default false

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **description** *string*

Synopsis Text description

Context **configure** [service nat firewall-policy](#) *string description string*

Tree [description](#)

String Length 1 to 80

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **domain**

Synopsis Enter the **domain** context

Context **configure** [service nat firewall-policy](#) *string domain*

Tree	<a href="#">domain</a>
Description	Commands in this context configure the attributes of the domain for the firewall policy. All associated traffic must be part of the prefixes specified by this domain.
Notes	The following elements are part of a choice: <b>domain</b> or <b>I2-outside</b> .
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**name** *string*

Synopsis	Firewall domain name
Context	<b>configure</b> <a href="#">service nat firewall-policy</a> <i>string</i> <a href="#">domain name</a> <i>string</i>
Tree	<a href="#">name</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**router-instance** *string*

Synopsis	Router or VPRN service name
Context	<b>configure</b> <a href="#">service nat firewall-policy</a> <i>string</i> <a href="#">domain router-instance</a> <i>string</i>
Tree	<a href="#">router-instance</a>
Description	This command specifies the router instance or VPRN service for this domain. All associated traffic must be part of the prefixes specified by this domain.
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**filtering** *keyword*

Synopsis	Filtering method for inbound traffic for the policy
Context	<b>configure</b> <a href="#">service nat firewall-policy</a> <i>string</i> <a href="#">filtering</a> <i>keyword</i>
Tree	<a href="#">filtering</a>
Options	endpoint-independent, address-and-port-dependent
Default	endpoint-independent
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## I2-outside

Synopsis	Use Layer 2 outside service address location
Context	<b>configure</b> <a href="#">service nat firewall-policy</a> <i>string</i> <a href="#">I2-outside</a>
Tree	<a href="#">I2-outside</a>
Description	This command specifies Layer 2 outside service address location for the NAT policy instead of Layer 3 outside service.
Notes	The following elements are part of a choice: <b>domain</b> or <b>I2-outside</b> .
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## port-limits

Synopsis	Enter the <b>port-limits</b> context
Context	<b>configure</b> <a href="#">service nat firewall-policy</a> <i>string</i> <a href="#">port-limits</a>
Tree	<a href="#">port-limits</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## forwarding *number*

Synopsis	Maximum number of port forwarding entries
Context	<b>configure</b> <a href="#">service nat firewall-policy</a> <i>string</i> <a href="#">port-limits forwarding</a> <i>number</i>
Tree	<a href="#">forwarding</a>
Range	1 to 65535
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## priority-sessions

Synopsis	Enter the <b>priority-sessions</b> context
Context	<b>configure</b> <a href="#">service nat firewall-policy</a> <i>string</i> <a href="#">priority-sessions</a>
Tree	<a href="#">priority-sessions</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**fc**

Synopsis	Enter the <b>fc</b> context
Context	<b>configure service nat firewall-policy string priority-sessions fc</b>
Tree	<b>fc</b>
Description	Commands in this context specify which Forwarding Class (FC) options have prioritized sessions.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**af boolean**

Synopsis	Prioritize traffic from AF forwarding classes
Context	<b>configure service nat firewall-policy string priority-sessions fc af boolean</b>
Tree	<b>af</b>
Description	When configured to <b>true</b> , traffic from Assured Forwarding (AF) FC sessions is prioritized. When configured to <b>false</b> , AF traffic is not prioritized.
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**be boolean**

Synopsis	Prioritize traffic from BE forwarding classes
Context	<b>configure service nat firewall-policy string priority-sessions fc be boolean</b>
Tree	<b>be</b>
Description	When configured to <b>true</b> , traffic from Best Effort (BE) FC sessions is prioritized. When configured to <b>false</b> , BE traffic is not prioritized.
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**ef boolean**

Synopsis	Prioritize traffic from EF forwarding classes
Context	<b>configure service nat firewall-policy string priority-sessions fc ef boolean</b>

Tree	<a href="#">ef</a>
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**h1 boolean**

Synopsis	Prioritize traffic from H1 forwarding classes
Context	<b>configure</b> <a href="#">service nat firewall-policy</a> <i>string</i> <a href="#">priority-sessions</a> <a href="#">fc h1 boolean</a>
Tree	<a href="#">h1</a>
Description	When configured to <b>true</b> , traffic from H1 sessions is prioritized. When configured to false, H1 traffic is not prioritized.
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**h2 boolean**

Synopsis	Prioritize traffic from H2 forwarding classes
Context	<b>configure</b> <a href="#">service nat firewall-policy</a> <i>string</i> <a href="#">priority-sessions</a> <a href="#">fc h2 boolean</a>
Tree	<a href="#">h2</a>
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**l1 boolean**

Synopsis	Prioritize traffic from L1 forwarding classes
Context	<b>configure</b> <a href="#">service nat firewall-policy</a> <i>string</i> <a href="#">priority-sessions</a> <a href="#">fc l1 boolean</a>
Tree	<a href="#">l1</a>
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ***l2 boolean***

Synopsis	Prioritize traffic from L2 forwarding classes
Context	<b>configure service nat firewall-policy string priority-sessions fc l2 boolean</b>
Tree	<a href="#">l2</a>
Description	When configured to <b>true</b> , traffic from L2 sessions is prioritized. When configured to false, L2 traffic is not prioritized.
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ***nc boolean***

Synopsis	Prioritize traffic from NC forwarding classes
Context	<b>configure service nat firewall-policy string priority-sessions fc nc boolean</b>
Tree	<a href="#">nc</a>
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **session-limits**

Synopsis	Enter the <b>session-limits</b> context
Context	<b>configure service nat firewall-policy string session-limits</b>
Tree	<a href="#">session-limits</a>
Description	Commands in this context configure session-limit attributes for the policy.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ***max number***

Synopsis	Maximum number of sessions per subscriber
Context	<b>configure service nat firewall-policy string session-limits max number</b>
Tree	<a href="#">max</a>
Range	1 to 65535
Default	65535

Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **reserved** *number*

Synopsis	Number of sessions reserved for prioritized sessions
Context	<b>configure</b> <a href="#">service nat firewall-policy</a> <i>string</i> <a href="#">session-limits reserved</a> <i>number</i>
Tree	<a href="#">reserved</a>
Description	This command configures the number of sessions per block that are reserved for prioritized sessions.
Range	1 to 65534
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **watermarks**

Synopsis	Enable the <b>watermarks</b> context
Context	<b>configure</b> <a href="#">service nat firewall-policy</a> <i>string</i> <a href="#">session-limits watermarks</a>
Tree	<a href="#">watermarks</a>
Description	This command configures watermarks for NAT resources.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **high** *number*

Synopsis	High watermark percentage
Context	<b>configure</b> <a href="#">service nat firewall-policy</a> <i>string</i> <a href="#">session-limits watermarks high</a> <i>number</i>
Tree	<a href="#">high</a>
Description	This command configures the high threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **low number**

Synopsis	Low watermark percentage
Context	<b>configure service nat firewall-policy string session-limits watermarks low number</b>
Tree	<a href="#">low</a>
Description	This command configures the low threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **tcp**

Synopsis	Enter the <b>tcp</b> context
Context	<b>configure service nat firewall-policy string tcp</b>
Tree	<a href="#">tcp</a>
Description	Commands in this context configure the transmission control protocol (TCP) attributes of the policy.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **mss-adjust number**

Synopsis	TCP MSS adjustment value
Context	<b>configure service nat firewall-policy string tcp mss-adjust number</b>
Tree	<a href="#">mss-adjust</a>
Description	This command configures the value to use to adjust the TCP Maximum Segment Size (MSS) option, if not already present or the present value is higher.
Range	160 to 10240
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## timeouts

Synopsis	Enter the <b>timeouts</b> context
Context	<b>configure service nat firewall-policy string timeouts</b>
Tree	<a href="#">timeouts</a>
Description	Commands in this context configure the attributes of session idle timeouts for the policy.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## icmp6-query *number*

Synopsis	Timeout applied to an ICMPv6 Query session
Context	<b>configure service nat firewall-policy string timeouts icmp6-query number</b>
Tree	<a href="#">icmp6-query</a>
Range	60 to 240
Units	seconds
Default	60
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## sip *number*

Synopsis	SIP inactive media timeout
Context	<b>configure service nat firewall-policy string timeouts sip number</b>
Tree	<a href="#">sip</a>
Range	10 to 7200
Units	seconds
Default	120
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## tcp

Synopsis	Enter the <b>tcp</b> context
Context	<b>configure service nat firewall-policy string timeouts tcp</b>
Tree	<a href="#">tcp</a>

Description	Commands in this context configure TCP timeout attributes.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **established** *number*

Synopsis	Idle timeout for TCP session in established state
Context	<b>configure</b> <a href="#">service nat firewall-policy</a> <i>string</i> <a href="#">timeouts tcp established</a> <i>number</i>
Tree	<a href="#">established</a>
Range	60 to 86400
Units	seconds
Default	7440
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **rst** *number*

Synopsis	Suspend time for TCP connection ports closed by RST
Context	<b>configure</b> <a href="#">service nat firewall-policy</a> <i>string</i> <a href="#">timeouts tcp rst</a> <i>number</i>
Tree	<a href="#">rst</a>
Description	This command configures the suspend time for outside TCP ports that are used in translations for TCP connections, when they are closed by TCP Reset (RST). After the timer expires, the outside ports can be reused for new TCP translations.
Range	0 to 240
Units	seconds
Default	0
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **syn** *number*

Synopsis	TCP session timeout when synchronizing initial sequence
Context	<b>configure</b> <a href="#">service nat firewall-policy</a> <i>string</i> <a href="#">timeouts tcp syn</a> <i>number</i>
Tree	<a href="#">syn</a>
Range	6 to 86400

Units	seconds
Default	15
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **time-wait** *number*

Synopsis	Timeout applied to a TCP session in the time-wait state
Context	<b>configure</b> <a href="#">service nat firewall-policy</a> <i>string</i> <a href="#">timeouts tcp time-wait</a> <i>number</i>
Tree	<a href="#">time-wait</a>
Range	0 to 240
Units	seconds
Default	0
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **transitory** *number*

Synopsis	Idle timeout for TCP session in transitory state
Context	<b>configure</b> <a href="#">service nat firewall-policy</a> <i>string</i> <a href="#">timeouts tcp transitory</a> <i>number</i>
Tree	<a href="#">transitory</a>
Range	60 to 86400
Units	seconds
Default	240
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **udp**

Synopsis	Enter the <b>udp</b> context
Context	<b>configure</b> <a href="#">service nat firewall-policy</a> <i>string</i> <a href="#">timeouts udp</a>
Tree	<a href="#">udp</a>
Description	Commands in this context configure the User Datagram Protocol (UDP) mapping timeout attributes.
Introduced	16.0.R1

---

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **dns number**

Synopsis Timeout applied to UDP session with destination port 53

Context **configure service nat firewall-policy string timeouts udp dns number**

Tree **dns**

Range 15 to 86400

Units seconds

Default 15

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **initial number**

Synopsis UDP mapping timeout applied to new sessions

Context **configure service nat firewall-policy string timeouts udp initial number**

Tree **initial**

Range 10 to 300

Units seconds

Default 15

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **normal number**

Synopsis UDP mapping timeout

Context **configure service nat firewall-policy string timeouts udp normal number**

Tree **normal**

Range 60 to 86400

Units seconds

Default 300

Introduced 16.0.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**unknown-protocol** *number***WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Timeout for flows with an unknown protocol
Context	<b>configure</b> <a href="#">service nat firewall-policy</a> <i>string</i> <a href="#">timeouts unknown-protocol</a> <i>number</i>
Tree	<a href="#">unknown-protocol</a>
Range	60 to 86400
Units	seconds
Default	300
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**udp**

Synopsis	Enter the <b>udp</b> context
Context	<b>configure</b> <a href="#">service nat firewall-policy</a> <i>string</i> <a href="#">udp</a>
Tree	<a href="#">udp</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**inbound-refresh** *boolean*

Synopsis	Extend UDP session timeout on inbound traffic
Context	<b>configure</b> <a href="#">service nat firewall-policy</a> <i>string</i> <a href="#">udp inbound-refresh</a> <i>boolean</i>
Tree	<a href="#">inbound-refresh</a>
Description	When configured to <b>true</b> , this command extends the UDP session timeout on inbound traffic. When configured to <b>false</b> , the UDP session timeout is not extended.
Default	false
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## unknown-protocols

Synopsis	Enter the <b>unknown-protocols</b> context
Context	<b>configure</b> <a href="#">service nat firewall-policy string unknown-protocols</a>
Tree	<a href="#">unknown-protocols</a>
Description	Commands in this context configure the treatment of flows of unknown Layer 4 protocols that cannot be natively handled by the system.
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## all

Synopsis	Allow all protocols to create unknown flows
Context	<b>configure</b> <a href="#">service nat firewall-policy string unknown-protocols all</a>
Tree	<a href="#">all</a>
Description	This command specifies that all protocols are permitted to create unknown flows. Protocol or IPv6 extension header values that are explicitly supported by SR OS are not treated as unknown protocols.
Notes	The following elements are part of a choice: <b>all</b> or <b>protocol</b> .
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## protocol *number*

Synopsis	IANA number of protocol allowed to create unknown flow
Context	<b>configure</b> <a href="#">service nat firewall-policy string unknown-protocols protocol number</a>
Tree	<a href="#">protocol</a>
Description	This command specifies the Internet Assigned Numbers Authority (IANA) number of a protocol that is permitted to create unknown flows. Protocol or IPv6 extension header values that are explicitly supported by SR OS can be configured but are not treated as unknown protocols.
Range	0 to 255
Max. Instances	8
Notes	The following elements are part of a choice: <b>all</b> or <b>protocol</b> .
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

## map-t

Synopsis	Enter the <b>map-t</b> context
Context	<b>configure service nat map-t</b>
Tree	<a href="#">map-t</a>
Introduced	16.0.R4
Platforms	VSR

## domain [[name](#)] *string*

Synopsis	Enter the <b>domain</b> list instance
Context	<b>configure service nat map-t domain string</b>
Tree	<a href="#">domain</a>
Max. Instances	63
Introduced	16.0.R4
Platforms	VSR

## [\[name\]](#) *string*

Synopsis	MAP domain name
Context	<b>configure service nat map-t domain string</b>
Tree	<a href="#">domain</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	VSR

## admin-state *keyword*

Synopsis	Administrative state of the MAP domain
Context	<b>configure service nat map-t domain string admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable

Introduced 16.0.R4  
 Platforms VSR

### **description** *string*

Synopsis Text description  
 Context **configure** [service nat map-t domain](#) *string* [description](#) *string*  
 Tree [description](#)  
 String Length 1 to 80  
 Introduced 16.0.R4  
 Platforms VSR

### **dmr-prefix** *string*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis The Default Mapping Rule prefix  
 Context **configure** [service nat map-t domain](#) *string* [dmr-prefix](#) *string*  
 Tree [dmr-prefix](#)  
 Introduced 16.0.R4  
 Platforms VSR

### **ip-fragmentation**

Synopsis Enter the **ip-fragmentation** context  
 Context **configure** [service nat map-t domain](#) *string* [ip-fragmentation](#)  
 Tree [ip-fragmentation](#)  
 Introduced 16.0.R4  
 Platforms VSR

### **v6-frag-header** *boolean*

Synopsis Enable insertion of fragmentation header in IPv6 packet  
 Context **configure** [service nat map-t domain](#) *string* [ip-fragmentation](#) [v6-frag-header](#) *boolean*

Tree	<a href="#">v6-frag-header</a>
Default	false
Introduced	16.0.R4
Platforms	VSR

### **mapping-rule** [\[rule-name\]](#) *string*

Synopsis	Enter the <b>mapping-rule</b> list instance
Context	<b>configure</b> <a href="#">service nat map-t domain</a> <i>string</i> <a href="#">mapping-rule</a> <i>string</i>
Tree	<a href="#">mapping-rule</a>
Max. Instances	16383
Introduced	16.0.R4
Platforms	VSR

### **[rule-name]** *string*

Synopsis	The name that identifies this mapping rule
Context	<b>configure</b> <a href="#">service nat map-t domain</a> <i>string</i> <a href="#">mapping-rule</a> <i>string</i>
Tree	<a href="#">mapping-rule</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	VSR

### **admin-state** *keyword*

Synopsis	Administrative state of the MAP rule
Context	<b>configure</b> <a href="#">service nat map-t domain</a> <i>string</i> <a href="#">mapping-rule</a> <i>string</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R4
Platforms	VSR

**description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service nat map-t domain</a> <i>string</i> <a href="#">mapping-rule</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R4
Platforms	VSR

**ea-length** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	The length of the EA bits field in the End-user IPv6 prefix part of the IPv6 Map Address
Context	<b>configure</b> <a href="#">service nat map-t domain</a> <i>string</i> <a href="#">mapping-rule</a> <i>string</i> <a href="#">ea-length</a> <i>number</i>
Tree	<a href="#">ea-length</a>
Range	0 to 48
Default	0
Introduced	16.0.R4
Platforms	VSR

**ipv4-prefix** *string***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	The IPv4 prefix
Context	<b>configure</b> <a href="#">service nat map-t domain</a> <i>string</i> <a href="#">mapping-rule</a> <i>string</i> <a href="#">ipv4-prefix</a> <i>string</i>
Tree	<a href="#">ipv4-prefix</a>
Introduced	16.0.R4
Platforms	VSR

**psid-offset** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	The offset of the Port Set ID (PSID) within a 16 bits wide port space
Context	<b>configure</b> <a href="#">service nat map-t domain</a> <i>string</i> <a href="#">mapping-rule</a> <i>string</i> <a href="#">psid-offset</a> <i>number</i>
Tree	<a href="#">psid-offset</a>
Range	0 to 16
Default	6
Introduced	16.0.R4
Platforms	VSR

**rule-prefix** *string***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	The IPv6 prefix
Context	<b>configure</b> <a href="#">service nat map-t domain</a> <i>string</i> <a href="#">mapping-rule</a> <i>string</i> <a href="#">rule-prefix</a> <i>string</i>
Tree	<a href="#">rule-prefix</a>
Introduced	16.0.R4
Platforms	VSR

**mtu** *number*

Synopsis	Configure the MTU
Context	<b>configure</b> <a href="#">service nat map-t domain</a> <i>string</i> <a href="#">mtu</a> <i>number</i>
Tree	<a href="#">mtu</a>
Range	160 to 8686
Default	8686
Introduced	16.0.R4
Platforms	VSR

**tcp-mss-adjust** *number*

Synopsis	The value to adjust the TCP Maximum Segment Size (MSS) option
Context	<b>configure</b> <a href="#">service nat map-t domain</a> <i>string</i> <b>tcp-mss-adjust</b> <i>number</i>
Tree	<a href="#">tcp-mss-adjust</a>
Range	0   160 to 8626
Default	0
Introduced	16.0.R4
Platforms	VSR

**nat-policy** [*name*] *string*

Synopsis	Enter the <b>nat-policy</b> list instance
Context	<b>configure</b> <a href="#">service nat nat-policy</a> <i>string</i>
Tree	<a href="#">nat-policy</a>
Max. Instances	4096
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**[name]** *string*

Synopsis	NAT policy name
Context	<b>configure</b> <a href="#">service nat nat-policy</a> <i>string</i>
Tree	<a href="#">nat-policy</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**alg**

Synopsis	Enter the <b>alg</b> context
Context	<b>configure</b> <a href="#">service nat nat-policy</a> <i>string</i> <b>alg</b>
Tree	<a href="#">alg</a>

Description	Commands in this context configure the Application Layer Gateway (ALG) attributes of the policy.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**ftp boolean**

Synopsis	Use FTP ALG for the policy
Context	<b>configure</b> <a href="#">service nat nat-policy</a> <i>string alg ftp boolean</i>
Tree	<a href="#">ftp</a>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**pptp boolean**

Synopsis	Use PPTP ALG for the policy
Context	<b>configure</b> <a href="#">service nat nat-policy</a> <i>string alg pptp boolean</i>
Tree	<a href="#">pptp</a>
Description	<p>When configured to <b>true</b>, the policy uses Point-to-Point Tunneling Protocol (PPTP) ALG.</p> <p>PPTP sessions can only be initiated from NAT inside.</p> <p>GRE traffic is allowed through NAT only if the corresponding mapping exists.</p> <p>There can be seven calls (GRE tunnels) per control session.</p> <p>When configured to <b>false</b>, PPTP ALG is not used.</p>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**rtsp boolean**

Synopsis	Use RTSP ALG for the policy
Context	<b>configure</b> <a href="#">service nat nat-policy</a> <i>string alg rtsp boolean</i>
Tree	<a href="#">rtsp</a>
Description	When configured to <b>true</b> , Real-Time Streaming Protocol (RTSP) ALG is used for the policy.

Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**sip boolean**

Synopsis	Use SIP ALG for the policy
Context	<b>configure service nat nat-policy string alg sip boolean</b>
Tree	<b>sip</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**block-limit number**

Synopsis	Maximum number of port blocks per subscriber
Context	<b>configure service nat nat-policy string block-limit number</b>
Tree	<b>block-limit</b>
Range	1 to 40
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**description string**

Synopsis	Text description
Context	<b>configure service nat nat-policy string description string</b>
Tree	<b>description</b>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**dnat**

Synopsis	Enter the <b>dnat</b> context
----------	-------------------------------

Context	<b>configure service nat nat-policy</b> <i>string</i> <b>dnat</b>
Tree	<b>dnat</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## classifier reference

### WARNING:

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	NAT classifier
Context	<b>configure service nat nat-policy</b> <i>string</i> <b>dnat classifier</b> <i>reference</i>
Tree	<b>classifier</b>
Description	When configured within the NAT policy, this command references a NAT classifier that activates DNAT functionality. The configuration uses a filter-like approach to identify the traffic that is subjected to DNAT. It is required for translation of the destination IP address.
Reference	<b>configure service nat classifier</b> <i>string</i>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## dnat-only

Synopsis	Enable the <b>dnat-only</b> context
Context	<b>configure service nat nat-policy</b> <i>string</i> <b>dnat-only</b>
Tree	<b>dnat-only</b>
Description	Commands in this context configure the attributes of DNAT-only. When DNAT-only is configured, no source or port NAT (SNAPT) is performed. Only the destination IP address (going from inside to outside) is translated; the source IP address and port are not translated.
Notes	The following elements are part of a choice: <b>dnat-only</b> , <b>l2-outside</b> , or <b>pool</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## nat-group *reference*

**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	NAT group
Context	<b>configure</b> <a href="#">service nat nat-policy</a> <i>string</i> <a href="#">dnat-only nat-group</a> <i>reference</i>
Tree	<a href="#">nat-group</a>
Description	This command configures the NAT group in which DNAT translation takes place for the outside routing context.
Reference	<b>configure</b> <a href="#">isa nat-group</a> <i>number</i>
Notes	The following elements are part of a mandatory choice: <b>nat-group</b> or <b>wlan-gw-group</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## router-instance *string*

**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Router name or VPRN service name
Context	<b>configure</b> <a href="#">service nat nat-policy</a> <i>string</i> <a href="#">dnat-only router-instance</a> <i>string</i>
Tree	<a href="#">router-instance</a>
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## wlan-gw-group *reference*

**WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	WLAN GW group used for NAT
Context	<b>configure</b> <a href="#">service nat nat-policy</a> <i>string</i> <a href="#">dnat-only wlan-gw-group</a> <i>reference</i>
Tree	<a href="#">wlan-gw-group</a>
Description	This command configures the NAT WLAN Gateway (GW) group in which DNAT translation takes place for the outside routing context.
Reference	<b>configure</b> <a href="#">isa wlan-gw-group</a> <i>number</i>
Notes	The following elements are part of a mandatory choice: <b>nat-group</b> or <b>wlan-gw-group</b> .
Introduced	16.0.R4
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**filtering** *keyword*

Synopsis	Filtering method for inbound traffic for the policy
Context	<b>configure</b> <a href="#">service nat nat-policy</a> <i>string</i> <a href="#">filtering</a> <i>keyword</i>
Tree	<a href="#">filtering</a>
Options	endpoint-independent, address-and-port-dependent
Default	endpoint-independent
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**flow-log-policy**

Synopsis	Enter the <b>flow-log-policy</b> context
Context	<b>configure</b> <a href="#">service nat nat-policy</a> <i>string</i> <a href="#">flow-log-policy</a>
Tree	<a href="#">flow-log-policy</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**ipfix** *reference*

Synopsis	IPFIX export policy
Context	<b>configure</b> <a href="#">service nat nat-policy</a> <i>string</i> <a href="#">flow-log-policy ipfix</a> <i>reference</i>

Tree	<a href="#">ipfix</a>
Description	This command specifies an IP flow information export policy for the flow-log policy.
Reference	<b>configure service ipfix export-policy</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **syslog** *reference*

Synopsis	Syslog export policy name
Context	<b>configure service nat nat-policy</b> <i>string</i> <a href="#">flow-log-policy</a> <a href="#">syslog</a> <i>reference</i>
Tree	<a href="#">syslog</a>
Description	This command configures a syslog export policy with a set of transport parameters used to transmit NAT flow records in syslog format to an external collector node. The policy name is referenced from the NAT policy applied to an inside routing context.
Reference	<b>configure service nat syslog export-policy</b> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **I2-outside**

Synopsis	Use Layer 2 outside service address location
Context	<b>configure service nat nat-policy</b> <i>string</i> <a href="#">I2-outside</a>
Tree	<a href="#">I2-outside</a>
Description	This command specifies Layer 2 outside service address location for the NAT policy instead of Layer 3 outside service.
Notes	The following elements are part of a choice: <b>dnat-only</b> , <b>I2-outside</b> , or <b>pool</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **pool**

Synopsis	Enter the <b>pool</b> context
Context	<b>configure service nat nat-policy</b> <i>string</i> <a href="#">pool</a>
Tree	<a href="#">pool</a>
Notes	The following elements are part of a choice: <b>dnat-only</b> , <b>I2-outside</b> , or <b>pool</b> .

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**name** *string***WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	NAT pool name
Context	<b>configure</b> <b>service nat nat-policy</b> <i>string</i> <b>pool name</b> <i>string</i>
Tree	<b>name</b>
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**router-instance** *string***WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

Synopsis	Router or VPRN service name
Context	<b>configure</b> <b>service nat nat-policy</b> <i>string</i> <b>pool router-instance</b> <i>string</i>
Tree	<b>router-instance</b>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**port-forwarding-range-end** *number*

Synopsis	End of the port forwarding range
Context	<b>configure</b> <b>service nat nat-policy</b> <i>string</i> <b>port-forwarding-range-end</b> <i>number</i>
Tree	<b>port-forwarding-range-end</b>
Description	<p>This command specifies the end of the port range available for port forwarding. The start of the range is always equal to one.</p> <p>The number of ports that can be configured is half of the available block =&gt; <math>64512 / 2 = 32256</math>. In combination with the configured value for <b>port-forwarding-range-end</b>, the formulas are:</p> <p>max port-reservation blocks = <math>65535 - \text{port-forwarding-range-end}</math></p>

$\text{max port-reservation ports} = (65535 - \text{port-forwarding-range-end}) / 2$

If **port-reservation** is already configured, the following applies for the maximum port-forwarding-range-end:

$\text{max port-forwarding-range-end} = 65535 - \text{port-reservation blocks}$   
 $\text{max port-forwarding-range-end} = 65535 - (\text{port-reservation ports} * 2)$

Range	1023 to 65535
Default	1023
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### port-limits

Synopsis	Enter the <b>port-limits</b> context
Context	<b>configure service nat nat-policy</b> <i>string</i> <b>port-limits</b>
Tree	<a href="#">port-limits</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### dynamic-ports *number*

Synopsis	Maximum number of dynamic ports per subscriber
Context	<b>configure service nat nat-policy</b> <i>string</i> <b>port-limits dynamic-ports</b> <i>number</i>
Tree	<a href="#">dynamic-ports</a>
Description	This command limits the number of ports per protocol on an outside IP address for a subscriber regardless of the pool pairing mode. This command applies to LSN44 pools with flexible port allocation.
Range	1 to 65536
Default	65536
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### forwarding *number*

Synopsis	Maximum number of port forwarding entries
Context	<b>configure service nat nat-policy</b> <i>string</i> <b>port-limits forwarding</b> <i>number</i>
Tree	<a href="#">forwarding</a>

Range	1 to 65535
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **reserved number**

Synopsis	Number of ports reserved for prioritized sessions
Context	<b>configure service nat nat-policy</b> <i>string</i> <b>port-limits reserved number</b>
Tree	<a href="#">reserved</a>
Description	This command configures the number of ports per block that are reserved for prioritized sessions.
Range	1 to 65534
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **watermarks**

Synopsis	Enable the <b>watermarks</b> context
Context	<b>configure service nat nat-policy</b> <i>string</i> <b>port-limits watermarks</b>
Tree	<a href="#">watermarks</a>
Description	This command configures watermarks for NAT resources.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **high number**

Synopsis	High watermark percentage
Context	<b>configure service nat nat-policy</b> <i>string</i> <b>port-limits watermarks high number</b>
Tree	<a href="#">high</a>
Description	This command configures the high threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **low number**

Synopsis Low watermark percentage

Context **configure service nat nat-policy string port-limits watermarks low number**

Tree [low](#)

Description This command configures the low threshold value as a percentage of the total port-block space in a NAT pool.

Range 0 to 100

Units percent

Notes This element is mandatory.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **priority-sessions**

Synopsis Enter the **priority-sessions** context

Context **configure service nat nat-policy string priority-sessions**

Tree [priority-sessions](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **fc**

Synopsis Enter the **fc** context

Context **configure service nat nat-policy string priority-sessions fc**

Tree [fc](#)

Description Commands in this context specify which Forwarding Class (FC) options have prioritized sessions.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **af boolean**

Synopsis Prioritize traffic from AF forwarding classes

Context	<b>configure service nat nat-policy</b> <i>string</i> <b>priority-sessions fc af</b> <i>boolean</i>
Tree	<b>af</b>
Description	When configured to <b>true</b> , traffic from Assured Forwarding (AF) FC sessions is prioritized. When configured to <b>false</b> , AF traffic is not prioritized.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**be** *boolean*

Synopsis	Prioritize traffic from BE forwarding classes
Context	<b>configure service nat nat-policy</b> <i>string</i> <b>priority-sessions fc be</b> <i>boolean</i>
Tree	<b>be</b>
Description	When configured to <b>true</b> , traffic from Best Effort (BE) FC sessions is prioritized. When configured to <b>false</b> , BE traffic is not prioritized.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**ef** *boolean*

Synopsis	Prioritize traffic from EF forwarding classes
Context	<b>configure service nat nat-policy</b> <i>string</i> <b>priority-sessions fc ef</b> <i>boolean</i>
Tree	<b>ef</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**h1** *boolean*

Synopsis	Prioritize traffic from H1 forwarding classes
Context	<b>configure service nat nat-policy</b> <i>string</i> <b>priority-sessions fc h1</b> <i>boolean</i>
Tree	<b>h1</b>
Description	When configured to <b>true</b> , traffic from H1 sessions is prioritized. When configured to false, H1 traffic is not prioritized.
Default	false

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **h2** *boolean*

Synopsis	Prioritize traffic from H2 forwarding classes
Context	<b>configure service nat nat-policy</b> <i>string</i> <b>priority-sessions fc h2</b> <i>boolean</i>
Tree	<a href="#">h2</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **l1** *boolean*

Synopsis	Prioritize traffic from L1 forwarding classes
Context	<b>configure service nat nat-policy</b> <i>string</i> <b>priority-sessions fc l1</b> <i>boolean</i>
Tree	<a href="#">l1</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **l2** *boolean*

Synopsis	Prioritize traffic from L2 forwarding classes
Context	<b>configure service nat nat-policy</b> <i>string</i> <b>priority-sessions fc l2</b> <i>boolean</i>
Tree	<a href="#">l2</a>
Description	When configured to <b>true</b> , traffic from L2 sessions is prioritized. When configured to <b>false</b> , L2 traffic is not prioritized.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## **nc** *boolean*

Synopsis	Prioritize traffic from NC forwarding classes
----------	---

Context	<b>configure service nat nat-policy</b> <i>string</i> <b>priority-sessions fc nc</b> <i>boolean</i>
Tree	<b>nc</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## session-limits

Synopsis	Enter the <b>session-limits</b> context
Context	<b>configure service nat nat-policy</b> <i>string</i> <b>session-limits</b>
Tree	<b>session-limits</b>
Description	Commands in this context configure session-limit attributes for the policy.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## max number

Synopsis	Maximum number of sessions per subscriber
Context	<b>configure service nat nat-policy</b> <i>string</i> <b>session-limits max</b> <i>number</i>
Tree	<b>max</b>
Range	1 to 65535
Default	65535
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## reserved number

Synopsis	Number of sessions reserved for prioritized sessions
Context	<b>configure service nat nat-policy</b> <i>string</i> <b>session-limits reserved</b> <i>number</i>
Tree	<b>reserved</b>
Description	This command configures the number of sessions per block that are reserved for prioritized sessions.
Range	1 to 65534
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## watermarks

Synopsis	Enable the <b>watermarks</b> context
Context	<b>configure service nat nat-policy string session-limits watermarks</b>
Tree	<b>watermarks</b>
Description	This command configures watermarks for NAT resources.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## high number

Synopsis	High watermark percentage
Context	<b>configure service nat nat-policy string session-limits watermarks high number</b>
Tree	<b>high</b>
Description	This command configures the high threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## low number

Synopsis	Low watermark percentage
Context	<b>configure service nat nat-policy string session-limits watermarks low number</b>
Tree	<b>low</b>
Description	This command configures the low threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## tcp

Synopsis	Enter the <b>tcp</b> context
Context	<b>configure service nat nat-policy string tcp</b>
Tree	<b>tcp</b>
Description	Commands in this context configure the transmission control protocol (TCP) attributes of the policy.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## mss-adjust *number*

Synopsis	TCP MSS adjustment value
Context	<b>configure service nat nat-policy string tcp mss-adjust number</b>
Tree	<b>mss-adjust</b>
Description	This command configures the value to use to adjust the TCP Maximum Segment Size (MSS) option, if not already present or the present value is higher.
Range	160 to 10240
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## reset-unknown *boolean*

Synopsis	Generate TCP reset for packets from unknown flows
Context	<b>configure service nat nat-policy string tcp reset-unknown boolean</b>
Tree	<b>reset-unknown</b>
Description	When configured to <b>true</b> , TCP packets are dropped and a TCP reset is generated if the NAT inside receives a TCP packet without the SYN flag set for an unknown flow. When configured to <b>false</b> , no TCP reset is generated.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## timeouts

Synopsis	Enter the <b>timeouts</b> context
----------	-----------------------------------

---

Context	<b>configure service nat nat-policy string timeouts</b>
Tree	<a href="#">timeouts</a>
Description	Commands in this context configure the attributes of session idle timeouts for the policy.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **icmp-query number**

Synopsis	Timeout applied to an ICMP Query session
Context	<b>configure service nat nat-policy string timeouts icmp-query number</b>
Tree	<a href="#">icmp-query</a>
Range	60 to 240
Units	seconds
Default	60
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **sip number**

Synopsis	SIP inactive media timeout
Context	<b>configure service nat nat-policy string timeouts sip number</b>
Tree	<a href="#">sip</a>
Range	10 to 7200
Units	seconds
Default	120
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **subscriber-retention number**

Synopsis	IP address hold time after host and port blocks expire
Context	<b>configure service nat nat-policy string timeouts subscriber-retention number</b>
Tree	<a href="#">subscriber-retention</a>

Description	This command configures the time to keep a NAT subscriber and its associated IP address after all hosts and associated port blocks expire. If a NAT subscriber host appears before the retention timeout elapses, it is given the same outside IP address.
Range	0 to 1440
Units	minutes
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## tcp

Synopsis	Enter the <b>tcp</b> context
Context	<b>configure service nat nat-policy string timeouts tcp</b>
Tree	<a href="#">tcp</a>
Description	Commands in this context configure TCP timeout attributes.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## established *number*

Synopsis	Idle timeout for TCP session in established state
Context	<b>configure service nat nat-policy string timeouts tcp established number</b>
Tree	<a href="#">established</a>
Range	60 to 86400
Units	seconds
Default	7440
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## rst *number*

Synopsis	Suspend time for TCP connection ports closed by RST
Context	<b>configure service nat nat-policy string timeouts tcp rst number</b>
Tree	<a href="#">rst</a>

Description	This command configures the suspend time for outside TCP ports that are used in translations for TCP connections, when they are closed by TCP Reset (RST). After the timer expires, the outside ports can be reused for new TCP translations.
Range	0 to 240
Units	seconds
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**syn number**

Synopsis	TCP session timeout when synchronizing initial sequence
Context	<b>configure service nat nat-policy string timeouts tcp syn number</b>
Tree	<a href="#">syn</a>
Range	6 to 86400
Units	seconds
Default	15
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**time-wait number**

Synopsis	Timeout applied to a TCP session in the time-wait state
Context	<b>configure service nat nat-policy string timeouts tcp time-wait number</b>
Tree	<a href="#">time-wait</a>
Range	0 to 240
Units	seconds
Default	0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**transitory number**

Synopsis	Idle timeout for TCP session in transitory state
Context	<b>configure service nat nat-policy string timeouts tcp transitory number</b>

---

Tree	<a href="#">transitory</a>
Range	60 to 86400
Units	seconds
Default	240
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## udp

Synopsis	Enter the <b>udp</b> context
Context	<b>configure service nat nat-policy string timeouts udp</b>
Tree	<a href="#">udp</a>
Description	Commands in this context configure the User Datagram Protocol (UDP) mapping timeout attributes.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## dns number

Synopsis	Timeout applied to UDP session with destination port 53
Context	<b>configure service nat nat-policy string timeouts udp dns number</b>
Tree	<a href="#">dns</a>
Range	15 to 86400
Units	seconds
Default	15
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## initial number

Synopsis	UDP mapping timeout applied to new sessions
Context	<b>configure service nat nat-policy string timeouts udp initial number</b>
Tree	<a href="#">initial</a>
Range	10 to 300
Units	seconds

Default	15
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**normal** *number*

Synopsis	UDP mapping timeout
Context	<b>configure</b> <a href="#">service nat nat-policy</a> <i>string</i> <a href="#">timeouts udp normal</a> <i>number</i>
Tree	<a href="#">normal</a>
Range	60 to 86400
Units	seconds
Default	300
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**udp**

Synopsis	Enter the <b>udp</b> context
Context	<b>configure</b> <a href="#">service nat nat-policy</a> <i>string</i> <a href="#">udp</a>
Tree	<a href="#">udp</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**inbound-refresh** *boolean*

Synopsis	Extend UDP session timeout on inbound traffic
Context	<b>configure</b> <a href="#">service nat nat-policy</a> <i>string</i> <a href="#">udp inbound-refresh</a> <i>boolean</i>
Tree	<a href="#">inbound-refresh</a>
Description	When configured to <b>true</b> , this command extends the UDP session timeout on inbound traffic. When configured to <b>false</b> , the UDP session timeout is not extended.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**pcp-server-policy** [[name](#)] *string*

Synopsis	Enter the <b>pcp-server-policy</b> list instance
Context	<b>configure</b> <a href="#">service nat pcp-server-policy</a> <i>string</i>
Tree	<a href="#">pcp-server-policy</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**[name]** *string*

Synopsis	PCP server policy name
Context	<b>configure</b> <a href="#">service nat pcp-server-policy</a> <i>string</i>
Tree	<a href="#">pcp-server-policy</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service nat pcp-server-policy</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**lifetime**

Synopsis	Enter the <b>lifetime</b> context
Context	<b>configure</b> <a href="#">service nat pcp-server-policy</a> <i>string</i> <a href="#">lifetime</a>
Tree	<a href="#">lifetime</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**maximum number**

Synopsis	Maximum lifetime of explicit mappings made by the PCP servers
Context	<b>configure service nat pcp-server-policy</b> <i>string lifetime maximum number</i>
Tree	<a href="#">maximum</a>
Range	61 to 86400
Default	86400
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**minimum number**

Synopsis	Minimum lifetime of explicit mappings made by the PCP servers
Context	<b>configure service nat pcp-server-policy</b> <i>string lifetime minimum number</i>
Tree	<a href="#">minimum</a>
Range	60 to 86399
Default	120
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**max-description-size number**

Synopsis	Maximum length of mapping descriptions made by the PCP servers
Context	<b>configure service nat pcp-server-policy</b> <i>string max-description-size number</i>
Tree	<a href="#">max-description-size</a>
Range	1 to 64
Default	64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**opcode**

Synopsis	Enter the <b>opcode</b> context
Context	<b>configure service nat pcp-server-policy</b> <i>string opcode</i>
Tree	<a href="#">opcode</a>
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **announce** *boolean*

Synopsis Process the announce PCP requests  
Context **configure** [service nat pcp-server-policy](#) *string opcode announce boolean*  
Tree [announce](#)  
Default false  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **get** *boolean*

Synopsis Process the get PCP requests  
Context **configure** [service nat pcp-server-policy](#) *string opcode get boolean*  
Tree [get](#)  
Default false  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **map** *boolean*

Synopsis Process the map PCP requests  
Context **configure** [service nat pcp-server-policy](#) *string opcode map boolean*  
Tree [map](#)  
Default false  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **option**

Synopsis Enter the **option** context  
Context **configure** [service nat pcp-server-policy](#) *string option*  
Tree [option](#)  
Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **description** *boolean*

Synopsis Text description  
Context **configure** [service nat pcp-server-policy](#) *string option description* *boolean*  
Tree [description](#)  
Default false  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **next** *boolean*

Synopsis Process the PCP requests that contain the next option  
Context **configure** [service nat pcp-server-policy](#) *string option next* *boolean*  
Tree [next](#)  
Default false  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **port-reservation** *boolean*

Synopsis Process the PCP requests that contain the prefer failure option  
Context **configure** [service nat pcp-server-policy](#) *string option port-reservation* *boolean*  
Tree [port-reservation](#)  
Default false  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **port-set** *boolean*

Synopsis Support the PORT\_SET option in PCP MAP requests  
Context **configure** [service nat pcp-server-policy](#) *string option port-set* *boolean*  
Tree [port-set](#)

Description	When configured to <b>true</b> , the PCP MAP option optimizes PCP performance for applications that require multiple sets of port forwards. A range of consecutive port forwards can be requested by the PCP client with a single PCP request.  When configured to <b>false</b> , the default behavior is applied, where a plain MAP option is used to allocate a single port in a single request.
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **prefer-failure** *boolean*

Synopsis	Process the PCP requests that contain the port reservation option
Context	<b>configure</b> <a href="#">service nat pcp-server-policy</a> <i>string</i> <a href="#">option prefer-failure</a> <i>boolean</i>
Tree	<a href="#">prefer-failure</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **third-party** *boolean*

Synopsis	Process the PCP requests that contain the third party option
Context	<b>configure</b> <a href="#">service nat pcp-server-policy</a> <i>string</i> <a href="#">option third-party</a> <i>boolean</i>
Tree	<a href="#">third-party</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **reuse-external-ip-address** *boolean*

Synopsis	Reuse external IP address for NAT subscriber
Context	<b>configure</b> <a href="#">service nat pcp-server-policy</a> <i>string</i> <a href="#">reuse-external-ip-address</a> <i>boolean</i>
Tree	<a href="#">reuse-external-ip-address</a>
Description	When configured to <b>true</b> , the system reuses the external IP address assigned to a subscriber when the requested well-known port or external IP mapping is not available.  When configured to <b>false</b> , a request for a well-known port is allocated as requested on a different external IP address if the port is already allocated to another subscriber sharing

the same external IP address. The existing external IP address is initially allocated to the subscriber as a result of the initial traffic flow.

This configuration flag can be set dynamically but the flag affects only PCP port forwards that are created after the flag has been set.

Default	false
Introduced	19.10.R3
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## version

Synopsis	Enter the <b>version</b> context
Context	<b>configure service nat pcp-server-policy</b> <i>string</i> <b>version</b>
Tree	<b>version</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## maximum *number*

Synopsis	Maximum protocol version supported by the PCP servers
Context	<b>configure service nat pcp-server-policy</b> <i>string</i> <b>version</b> <b>maximum</b> <i>number</i>
Tree	<b>maximum</b>
Range	1 to 255
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## minimum *number*

Synopsis	Minimum protocol version supported by the PCP servers
Context	<b>configure service nat pcp-server-policy</b> <i>string</i> <b>version</b> <b>minimum</b> <i>number</i>
Tree	<b>minimum</b>
Range	1 to 255
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**prefix-list** [*name*] *string*

Synopsis	Enter the <b>prefix-list</b> list instance
Context	<b>configure service nat prefix-list</b> <i>string</i>
Tree	<a href="#">prefix-list</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**[name]** *string*

Synopsis	NAT prefix list name
Context	<b>configure service nat prefix-list</b> <i>string</i>
Tree	<a href="#">prefix-list</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**application** *keyword***WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Prefix list for the application
Context	<b>configure service nat prefix-list</b> <i>string application</i> <i>keyword</i>
Tree	<a href="#">application</a>
Options	l2-aware-dest-to-policy, dnat-only-subscribers
Default	l2-aware-dest-to-policy
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**prefix** [ip-prefix] *string*

Synopsis	Enter the <b>prefix</b> list instance
Context	<b>configure</b> <a href="#">service nat prefix-list</a> <i>string</i> <a href="#">prefix</a> <i>string</i>
Tree	<a href="#">prefix</a>
Max. Instances	1024
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**[ip-prefix]** *string*

Synopsis	NAT prefix
Context	<b>configure</b> <a href="#">service nat prefix-list</a> <i>string</i> <a href="#">prefix</a> <i>string</i>
Tree	<a href="#">prefix</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**nat-policy** *reference***WARNING:**

Modifying this element clears ISA state, such as flow state, for the new value to take effect.

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	NAT policy for LSN
Context	<b>configure</b> <a href="#">service nat prefix-list</a> <i>string</i> <a href="#">prefix</a> <i>string</i> <a href="#">nat-policy</a> <i>reference</i>
Tree	<a href="#">nat-policy</a>
Reference	<b>configure</b> <a href="#">service nat nat-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**syslog**

Synopsis	Enter the <b>syslog</b> context
Context	<b>configure service nat syslog</b>
Tree	<a href="#">syslog</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**export-policy** [[name](#)] *string*

Synopsis	Enter the <b>export-policy</b> list instance
Context	<b>configure service nat syslog export-policy</b> <i>string</i>
Tree	<a href="#">export-policy</a>
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**[name]** *string*

Synopsis	Syslog export policy name
Context	<b>configure service nat syslog export-policy</b> <i>string</i>
Tree	<a href="#">export-policy</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**collector** [router-instance](#) *string* [ip-address](#) *string*

Synopsis	Enter the <b>collector</b> list instance
Context	<b>configure service nat syslog export-policy</b> <i>string</i> <b>collector</b> <a href="#">router-instance</a> <i>string</i> <a href="#">ip-address</a> <i>string</i>
Tree	<a href="#">collector</a>
Max. Instances	2
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **router-instance** *string*

Synopsis Router instance

Context **configure** [service](#) [nat](#) [syslog](#) [export-policy](#) *string* [collector](#) [router-instance](#) *string* [ip-address](#) *string*

Tree [collector](#)

Notes This element is part of a list key.

Introduced 16.0.R4

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ip-address** *string*

Synopsis IPv4 address of the external collector node

Context **configure** [service](#) [nat](#) [syslog](#) [export-policy](#) *string* [collector](#) [router-instance](#) *string* [ip-address](#) *string*

Tree [collector](#)

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis Administrative state of the collector node

Context **configure** [service](#) [nat](#) [syslog](#) [export-policy](#) *string* [collector](#) [router-instance](#) *string* [ip-address](#) *string* [admin-state](#) *keyword*

Tree [admin-state](#)

Options enable, disable

Default disable

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**destination-port** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Destination port
Context	<b>configure</b> <a href="#">service nat syslog export-policy</a> <i>string</i> <a href="#">collector router-instance</a> <i>string</i> <a href="#">ip-address</a> <i>string</i> <b>destination-port</b> <i>number</i>
Tree	<a href="#">destination-port</a>
Range	1 to 65535
Default	514
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**ipv4-source-address** *string***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPv4 source address
Context	<b>configure</b> <a href="#">service nat syslog export-policy</a> <i>string</i> <a href="#">collector router-instance</a> <i>string</i> <a href="#">ip-address</a> <i>string</i> <b>ipv4-source-address</b> <i>string</i>
Tree	<a href="#">ipv4-source-address</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service nat syslog export-policy</a> <i>string</i> <b>description</b> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**facility** *keyword*

Synopsis	Facility number in the PRI part of the NAT SYSLOG messages
Context	<b>configure</b> <a href="#">service nat syslog export-policy</a> <i>string</i> <a href="#">facility</a> <i>keyword</i>
Tree	<a href="#">facility</a>
Options	kernel, user, mail, systemd, auth, syslogd, printer, netnews, uucp, cron, authpriv, ftp, ntp, logaudit, logalert, cron2, local0, local1, local2, local3, local4, local5, local6, local7
Default	local0
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**include**

Synopsis	Enter the <b>include</b> context
Context	<b>configure</b> <a href="#">service nat syslog export-policy</a> <i>string</i> <a href="#">include</a>
Tree	<a href="#">include</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**destination-ip** *boolean*

Synopsis	Include the translated destination IP address
Context	<b>configure</b> <a href="#">service nat syslog export-policy</a> <i>string</i> <a href="#">include destination-ip</a> <i>boolean</i>
Tree	<a href="#">destination-ip</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**foreign-ip** *boolean*

Synopsis	Include the original destination IPv4 address
Context	<b>configure</b> <a href="#">service nat syslog export-policy</a> <i>string</i> <a href="#">include foreign-ip</a> <i>boolean</i>
Tree	<a href="#">foreign-ip</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**foreign-port** *boolean*

Synopsis	Include the original destination port
Context	<b>configure</b> <a href="#">service nat syslog export-policy</a> <i>string</i> <a href="#">include foreign-port</a> <i>boolean</i>
Tree	<a href="#">foreign-port</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**nat-policy-name** *boolean*

Synopsis	Include the NAT policy name in the flow log
Context	<b>configure</b> <a href="#">service nat syslog export-policy</a> <i>string</i> <a href="#">include nat-policy-name</a> <i>boolean</i>
Tree	<a href="#">nat-policy-name</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**sub-id** *boolean*

Synopsis	Subscriber ID in subscriber aware NAT
Context	<b>configure</b> <a href="#">service nat syslog export-policy</a> <i>string</i> <a href="#">include sub-id</a> <i>boolean</i>
Tree	<a href="#">sub-id</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**log-prefix** *string*

Synopsis	Optional prefix text in the MSG part of the NAT syslog messages
Context	<b>configure</b> <a href="#">service nat syslog export-policy</a> <i>string</i> <a href="#">log-prefix</a> <i>string</i>
Tree	<a href="#">log-prefix</a>
String Length	1 to 32
Default	TMNX
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **max-tx-delay** *number*

Synopsis Maximum time a syslog message delays in the output buffer to aggregate multiple events

Context **configure** [service nat syslog export-policy](#) *string max-tx-delay number*

Tree [max-tx-delay](#)

Range 0 to 100

Units deciseconds

Default 3

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **mtu** *number*

Synopsis Maximum transmission unit

Context **configure** [service nat syslog export-policy](#) *string mtu number*

Tree [mtu](#)

Range 512 to 9000

Default 1500

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **rate-limit** *number*

Synopsis Frame limit

Context **configure** [service nat syslog export-policy](#) *string rate-limit number*

Tree [rate-limit](#)

Range 10 to 2147483647

Units packets per second

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**severity-level** *keyword*

Synopsis	Severity level in the PRI part of the syslog messages
Context	<b>configure service nat syslog export-policy</b> <i>string severity-level keyword</i>
Tree	<a href="#">severity-level</a>
Options	emergency, alert, critical, error, warning, notice, info, debug
Default	info
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**up-nat-policy** [[name](#)] *string*

Synopsis	Enter the <b>up-nat-policy</b> list instance
Context	<b>configure service nat up-nat-policy</b> <i>string</i>
Tree	<a href="#">up-nat-policy</a>
Max. Instances	32
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**[name]** *string*

Synopsis	UP NAT policy name
Context	<b>configure service nat up-nat-policy</b> <i>string</i>
Tree	<a href="#">up-nat-policy</a>
Description	This command specifies the UP NAT policy name. The name default has a special meaning representing the default UP NAT policy template. The system uses the default template when the BNG CPF does not receive a more specific name when the subscriber is instantiated.
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**alg**

Synopsis	Enter the <b>alg</b> context
----------	------------------------------

Context	<b>configure service nat up-nat-policy</b> <i>string alg</i>
Tree	<a href="#">alg</a>
Description	Commands in this context configure the Application Layer Gateway (ALG) attributes of the policy.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ftp** *boolean*

Synopsis	Use FTP ALG for the policy
Context	<b>configure service nat up-nat-policy</b> <i>string alg ftp boolean</i>
Tree	<a href="#">ftp</a>
Default	true
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **pptp** *boolean*

Synopsis	Use PPTP ALG for the policy
Context	<b>configure service nat up-nat-policy</b> <i>string alg pptp boolean</i>
Tree	<a href="#">pptp</a>
Description	<p>When configured to <b>true</b>, the policy uses Point-to-Point Tunneling Protocol (PPTP) ALG.</p> <p>PPTP sessions can only be initiated from NAT inside.</p> <p>GRE traffic is allowed through NAT only if the corresponding mapping exists.</p> <p>There can be seven calls (GRE tunnels) per control session.</p> <p>When configured to <b>false</b>, PPTP ALG is not used.</p>
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **rtsp** *boolean*

Synopsis	Use RTSP ALG for the policy
Context	<b>configure service nat up-nat-policy</b> <i>string alg rtsp boolean</i>
Tree	<a href="#">rtsp</a>

Description	When configured to <b>true</b> , Real-Time Streaming Protocol (RTSP) ALG is used for the policy.
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **sip boolean**

Synopsis	Use SIP ALG for the policy
Context	<b>configure service nat up-nat-policy</b> <i>string alg sip boolean</i>
Tree	<a href="#">sip</a>
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **block-limit number**

Synopsis	Maximum number of port blocks per NAT subscriber
Context	<b>configure service nat up-nat-policy</b> <i>string block-limit number</i>
Tree	<a href="#">block-limit</a>
Range	1 to 10
Default	1
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **default-host**

Synopsis	Enable the <b>default-host</b> context
Context	<b>configure service nat up-nat-policy</b> <i>string default-host</i>
Tree	<a href="#">default-host</a>
Description	<p>Commands in this context configure the default DMZ host options. A default DMZ host is a node on the inside to which all unknown traffic is redirected by changing the destination IPv4 address in the traffic header. During this operation, the checksums in the Layer 3 and Layer 4 header (UDP and TCP) are recalculated.</p> <p>Unknown traffic in NAT represent all unmatched traffic arriving from the outside (where there is no pinhole or a matching flow record created by traffic initiated from the inside).</p>

The purpose of the default DMZ host is to capture and analyze the unknown traffic as part of threat analysis.

The rate of redirected unknown traffic can be restricted by configuration.

Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **inside-router-instance** *string*

Synopsis	Router instance of the DMZ
Context	<b>configure</b> <a href="#">service nat up-nat-policy</a> <i>string</i> <a href="#">default-host inside-router-instance</a> <i>string</i>
Tree	<a href="#">inside-router-instance</a>
Description	This command configures the router instance on the inside where the default DMZ host resides.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ip-address** *string*

Synopsis	IP address of the default DMZ host
Context	<b>configure</b> <a href="#">service nat up-nat-policy</a> <i>string</i> <a href="#">default-host ip-address</a> <i>string</i>
Tree	<a href="#">ip-address</a>
Description	This command configures the IP address of the default DMZ host. Redirection to the default DMZ host is achieved by replacing the destination IP address in the traffic header in the unknown traffic initiated from the outside with the one of the default DMZ host.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **rate-limit** *number*

Synopsis	Rate limit for unknown traffic sent to default DMZ host
Context	<b>configure</b> <a href="#">service nat up-nat-policy</a> <i>string</i> <a href="#">default-host rate-limit</a> <i>number</i>
Tree	<a href="#">rate-limit</a>
Description	This command configures the rate limit of the unknown traffic sent to the default DMZ host.

Unknown traffic sent to the default DMZ host is rate limited by a configurable value expressed in mbps. The rate limit is configurable per NAT pool per ISA, vISA, or ESA-VM.

Range	1 to 10000
Units	megabps
Default	10
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service nat up-nat-policy</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **filtering** *keyword*

Synopsis	Filtering method for inbound traffic for the policy
Context	<b>configure</b> <a href="#">service nat up-nat-policy</a> <i>string</i> <a href="#">filtering</a> <i>keyword</i>
Tree	<a href="#">filtering</a>
Options	endpoint-independent, address-and-port-dependent
Default	endpoint-independent
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **flow-log-policy**

Synopsis	Enter the <b>flow-log-policy</b> context
Context	<b>configure</b> <a href="#">service nat up-nat-policy</a> <i>string</i> <a href="#">flow-log-policy</a>
Tree	<a href="#">flow-log-policy</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ipfix** *reference*

Synopsis	IPFIX export policy
Context	<b>configure</b> <a href="#">service nat up-nat-policy</a> <i>string</i> <a href="#">flow-log-policy ipfix reference</a>
Tree	<a href="#">ipfix</a>
Description	This command specifies an IP flow information export policy for the flow-log policy.
Reference	<b>configure</b> <a href="#">service ipfix export-policy</a> <i>string</i>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **icmp-echo-reply** *boolean*

Synopsis	Enable replies to ICMP Echo Request messages
Context	<b>configure</b> <a href="#">service nat up-nat-policy</a> <i>string</i> <a href="#">icmp-echo-reply boolean</a>
Tree	<a href="#">icmp-echo-reply</a>
Default	false
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **port-block-extension**

Synopsis	Enable the <b>port-block-extension</b> context
Context	<b>configure</b> <a href="#">service nat up-nat-policy</a> <i>string</i> <a href="#">port-block-extension</a>
Tree	<a href="#">port-block-extension</a>
Description	Commands in this context configure the attributes for dynamic allocation of NAT port-blocks beyond the initial port-blocks.
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ports** *number*

Synopsis	Number of ports per dynamic port block
Context	<b>configure</b> <a href="#">service nat up-nat-policy</a> <i>string</i> <a href="#">port-block-extension ports number</a>
Tree	<a href="#">ports</a>
Range	10 to 5000

Notes	This element is mandatory.
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## watermarks

Synopsis	Enable the <b>watermarks</b> context
Context	<b>configure service nat up-nat-policy</b> <i>string</i> <b>port-block-extension watermarks</b>
Tree	<b>watermarks</b>
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## high number

Synopsis	High watermark percentage
Context	<b>configure service nat up-nat-policy</b> <i>string</i> <b>port-block-extension watermarks high number</b>
Tree	<b>high</b>
Description	This command configures the high threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## low number

Synopsis	Low watermark percentage
Context	<b>configure service nat up-nat-policy</b> <i>string</i> <b>port-block-extension watermarks low number</b>
Tree	<b>low</b>
Description	This command configures the low threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.

Introduced	23.3.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## port-limits

Synopsis	Enter the <b>port-limits</b> context
Context	<b>configure</b> <a href="#">service nat up-nat-policy</a> <i>string</i> <b>port-limits</b>
Tree	<a href="#">port-limits</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## dynamic-ports *number*

Synopsis	Maximum number of dynamic ports per subscriber
Context	<b>configure</b> <a href="#">service nat up-nat-policy</a> <i>string</i> <a href="#">port-limits</a> <b>dynamic-ports</b> <i>number</i>
Tree	<a href="#">dynamic-ports</a>
Description	This command limits the number of ports per protocol on an outside IP address for a subscriber regardless of the pool pairing mode. This command applies to LSN44 pools with flexible port allocation.
Range	1 to 65536
Default	65536
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## reserved *number*

Synopsis	Number of ports reserved for prioritized sessions
Context	<b>configure</b> <a href="#">service nat up-nat-policy</a> <i>string</i> <a href="#">port-limits</a> <b>reserved</b> <i>number</i>
Tree	<a href="#">reserved</a>
Description	This command configures the number of ports per block that are reserved for prioritized sessions.
Range	1 to 65534
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## watermarks

Synopsis	Enable the <b>watermarks</b> context
Context	<b>configure service nat up-nat-policy string port-limits watermarks</b>
Tree	<a href="#">watermarks</a>
Description	This command configures watermarks for NAT resources.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## high number

Synopsis	High watermark percentage
Context	<b>configure service nat up-nat-policy string port-limits watermarks high number</b>
Tree	<a href="#">high</a>
Description	This command configures the high threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## low number

Synopsis	Low watermark percentage
Context	<b>configure service nat up-nat-policy string port-limits watermarks low number</b>
Tree	<a href="#">low</a>
Description	This command configures the low threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## priority-sessions

Synopsis	Enter the <b>priority-sessions</b> context
Context	<b>configure service nat up-nat-policy string priority-sessions</b>
Tree	<a href="#">priority-sessions</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## fc

Synopsis	Enter the <b>fc</b> context
Context	<b>configure service nat up-nat-policy string priority-sessions fc</b>
Tree	<a href="#">fc</a>
Description	Commands in this context specify which Forwarding Class (FC) options have prioritized sessions.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## af *boolean*

Synopsis	Prioritize traffic from AF forwarding classes
Context	<b>configure service nat up-nat-policy string priority-sessions fc af <i>boolean</i></b>
Tree	<a href="#">af</a>
Description	When configured to <b>true</b> , traffic from Assured Forwarding (AF) FC sessions is prioritized. When configured to <b>false</b> , AF traffic is not prioritized.
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## be *boolean*

Synopsis	Prioritize traffic from BE forwarding classes
Context	<b>configure service nat up-nat-policy string priority-sessions fc be <i>boolean</i></b>
Tree	<a href="#">be</a>
Description	When configured to <b>true</b> , traffic from Best Effort (BE) FC sessions is prioritized. When configured to <b>false</b> , BE traffic is not prioritized.

---

Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ef boolean**

Synopsis	Prioritize traffic from EF forwarding classes
Context	<b>configure service nat up-nat-policy</b> <i>string</i> <b>priority-sessions fc ef boolean</b>
Tree	<b>ef</b>
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **h1 boolean**

Synopsis	Prioritize traffic from H1 forwarding classes
Context	<b>configure service nat up-nat-policy</b> <i>string</i> <b>priority-sessions fc h1 boolean</b>
Tree	<b>h1</b>
Description	When configured to <b>true</b> , traffic from H1 sessions is prioritized. When configured to false, H1 traffic is not prioritized.
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **h2 boolean**

Synopsis	Prioritize traffic from H2 forwarding classes
Context	<b>configure service nat up-nat-policy</b> <i>string</i> <b>priority-sessions fc h2 boolean</b>
Tree	<b>h2</b>
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## I1 *boolean*

Synopsis	Prioritize traffic from L1 forwarding classes
Context	<b>configure</b> <a href="#">service nat up-nat-policy</a> <i>string</i> <a href="#">priority-sessions fc I1</a> <i>boolean</i>
Tree	<a href="#">I1</a>
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## I2 *boolean*

Synopsis	Prioritize traffic from L2 forwarding classes
Context	<b>configure</b> <a href="#">service nat up-nat-policy</a> <i>string</i> <a href="#">priority-sessions fc I2</a> <i>boolean</i>
Tree	<a href="#">I2</a>
Description	When configured to <b>true</b> , traffic from L2 sessions is prioritized. When configured to false, L2 traffic is not prioritized.
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## nc *boolean*

Synopsis	Prioritize traffic from NC forwarding classes
Context	<b>configure</b> <a href="#">service nat up-nat-policy</a> <i>string</i> <a href="#">priority-sessions fc nc</a> <i>boolean</i>
Tree	<a href="#">nc</a>
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## session-limits

Synopsis	Enter the <b>session-limits</b> context
Context	<b>configure</b> <a href="#">service nat up-nat-policy</a> <i>string</i> <a href="#">session-limits</a>
Tree	<a href="#">session-limits</a>
Description	Commands in this context configure session-limit attributes for the policy.
Introduced	20.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **max number**

Synopsis Maximum number of sessions per subscriber  
 Context **configure service nat up-nat-policy** *string session-limits max number*  
 Tree [max](#)  
 Range 1 to 65535  
 Default 65535  
 Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **reserved number**

Synopsis Number of sessions reserved for prioritized sessions  
 Context **configure service nat up-nat-policy** *string session-limits reserved number*  
 Tree [reserved](#)  
 Description This command configures the number of sessions per block that are reserved for prioritized sessions.  
 Range 1 to 65534  
 Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **watermarks**

Synopsis Enable the **watermarks** context  
 Context **configure service nat up-nat-policy** *string session-limits watermarks*  
 Tree [watermarks](#)  
 Description This command configures watermarks for NAT resources.  
 Introduced 20.10.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **high number**

Synopsis High watermark percentage

Context	<b>configure service nat up-nat-policy</b> <i>string session-limits watermarks high number</i>
Tree	<a href="#">high</a>
Description	This command configures the high threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **low number**

Synopsis	Low watermark percentage
Context	<b>configure service nat up-nat-policy</b> <i>string session-limits watermarks low number</i>
Tree	<a href="#">low</a>
Description	This command configures the low threshold value as a percentage of the total port-block space in a NAT pool.
Range	0 to 100
Units	percent
Notes	This element is mandatory.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **tcp**

Synopsis	Enter the <b>tcp</b> context
Context	<b>configure service nat up-nat-policy</b> <i>string tcp</i>
Tree	<a href="#">tcp</a>
Description	Commands in this context configure the transmission control protocol (TCP) attributes of the policy.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**mss-adjust** *number*

Synopsis	TCP MSS adjustment value
Context	<b>configure service nat up-nat-policy</b> <i>string tcp mss-adjust number</i>
Tree	<b>mss-adjust</b>
Description	This command configures the value to use to adjust the TCP Maximum Segment Size (MSS) option, if not already present or the present value is higher.
Range	160 to 10240
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**reset-unknown** *boolean*

Synopsis	Generate TCP reset for packets from unknown flows
Context	<b>configure service nat up-nat-policy</b> <i>string tcp reset-unknown boolean</i>
Tree	<b>reset-unknown</b>
Description	When configured to <b>true</b> , TCP packets are dropped and a TCP reset is generated if the NAT inside receives a TCP packet without the SYN flag set for an unknown flow. When configured to <b>false</b> , no TCP reset is generated.
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**timeouts**

Synopsis	Enter the <b>timeouts</b> context
Context	<b>configure service nat up-nat-policy</b> <i>string timeouts</i>
Tree	<b>timeouts</b>
Description	Commands in this context configure the attributes of session idle timeouts for the policy.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**icmp-query** *number*

Synopsis	Timeout applied to an ICMP Query session
Context	<b>configure service nat up-nat-policy</b> <i>string timeouts icmp-query number</i>

Tree	<a href="#">icmp-query</a>
Range	60 to 240
Units	seconds
Default	60
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **sip number**

Synopsis	SIP inactive media timeout
Context	<b>configure</b> <a href="#">service nat up-nat-policy</a> <i>string</i> <a href="#">timeouts sip number</a>
Tree	<a href="#">sip</a>
Range	10 to 7200
Units	seconds
Default	120
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **subscriber-retention number**

Synopsis	IP address hold time after host and port blocks expire
Context	<b>configure</b> <a href="#">service nat up-nat-policy</a> <i>string</i> <a href="#">timeouts subscriber-retention number</a>
Tree	<a href="#">subscriber-retention</a>
Description	This command configures the time to keep a NAT subscriber and its associated IP address after all hosts and associated port blocks expire. If a NAT subscriber host appears before the retention timeout elapses, it is given the same outside IP address.
Range	0 to 1440
Units	minutes
Default	0
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **tcp**

Synopsis	Enter the <b>tcp</b> context
----------	------------------------------

Context	<b>configure service nat up-nat-policy</b> <i>string</i> <b>timeouts tcp</b>
Tree	<b>tcp</b>
Description	Commands in this context configure TCP timeout attributes.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **established** *number*

Synopsis	Idle timeout for TCP session in established state
Context	<b>configure service nat up-nat-policy</b> <i>string</i> <b>timeouts tcp established</b> <i>number</i>
Tree	<b>established</b>
Range	60 to 86400
Units	seconds
Default	7440
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **rst** *number*

Synopsis	Suspend time for TCP connection ports closed by RST
Context	<b>configure service nat up-nat-policy</b> <i>string</i> <b>timeouts tcp rst</b> <i>number</i>
Tree	<b>rst</b>
Description	This command configures the suspend time for outside TCP ports that are used in translations for TCP connections, when they are closed by TCP Reset (RST). After the timer expires, the outside ports can be reused for new TCP translations.
Range	0 to 240
Units	seconds
Default	0
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **syn** *number*

Synopsis	TCP session timeout when synchronizing initial sequence
Context	<b>configure service nat up-nat-policy</b> <i>string</i> <b>timeouts tcp syn</b> <i>number</i>

Tree	<a href="#">syn</a>
Range	6 to 86400
Units	seconds
Default	15
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **time-wait** *number*

Synopsis	Timeout applied to a TCP session in the time-wait state
Context	<b>configure</b> <a href="#">service nat up-nat-policy</a> <i>string</i> <a href="#">timeouts tcp time-wait</a> <i>number</i>
Tree	<a href="#">time-wait</a>
Range	0 to 240
Units	seconds
Default	0
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **transitory** *number*

Synopsis	Idle timeout for TCP session in transitory state
Context	<b>configure</b> <a href="#">service nat up-nat-policy</a> <i>string</i> <a href="#">timeouts tcp transitory</a> <i>number</i>
Tree	<a href="#">transitory</a>
Range	60 to 86400
Units	seconds
Default	240
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **udp**

Synopsis	Enter the <b>udp</b> context
Context	<b>configure</b> <a href="#">service nat up-nat-policy</a> <i>string</i> <a href="#">timeouts udp</a>
Tree	<a href="#">udp</a>

---

Description	Commands in this context configure the User Datagram Protocol (UDP) mapping timeout attributes.
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **dns number**

Synopsis	Timeout applied to UDP session with destination port 53
Context	<b>configure service nat up-nat-policy string timeouts udp dns number</b>
Tree	<b>dns</b>
Range	15 to 86400
Units	seconds
Default	15
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **initial number**

Synopsis	UDP mapping timeout applied to new sessions
Context	<b>configure service nat up-nat-policy string timeouts udp initial number</b>
Tree	<b>initial</b>
Range	10 to 300
Units	seconds
Default	15
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **normal number**

Synopsis	UDP mapping timeout
Context	<b>configure service nat up-nat-policy string timeouts udp normal number</b>
Tree	<b>normal</b>
Range	60 to 86400
Units	seconds
Default	300

Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## udp

Synopsis	Enter the <b>udp</b> context
Context	<b>configure</b> <a href="#">service nat up-nat-policy</a> <i>string</i> <b>udp</b>
Tree	<a href="#">udp</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## inbound-refresh *boolean*

Synopsis	Extend UDP session timeout on inbound traffic
Context	<b>configure</b> <a href="#">service nat up-nat-policy</a> <i>string</i> <b>udp inbound-refresh</b> <i>boolean</i>
Tree	<a href="#">inbound-refresh</a>
Description	When configured to <b>true</b> , this command extends the UDP session timeout on inbound traffic. When configured to <b>false</b> , the UDP session timeout is not extended.
Default	false
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## oper-group [[name](#)] *string*

Synopsis	Enter the <b>oper-group</b> list instance
Context	<b>configure</b> <a href="#">service oper-group</a> <i>string</i>
Tree	<a href="#">oper-group</a>
Max. Instances	32768
Introduced	16.0.R1
Platforms	All

## [\[name\]](#) *string*

Synopsis	Operational group name
----------	------------------------

Context	<b>configure service oper-group</b> <i>string</i>
Tree	<a href="#">oper-group</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## bfd-liveness

Synopsis	Enable the <b>bfd-liveness</b> context
Context	<b>configure service oper-group</b> <i>string</i> <b>bfd-liveness</b>
Tree	<a href="#">bfd-liveness</a>
Introduced	16.0.R1
Platforms	All

## dest-ip *string*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Destination address for BFD
Context	<b>configure service oper-group</b> <i>string</i> <b>bfd-liveness</b> <b>dest-ip</b> <i>string</i>
Tree	<a href="#">dest-ip</a>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

## interface-name *string*

### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Source interface name
Context	<b>configure service oper-group</b> <i>string</i> <b>bfd-liveness</b> <b>interface-name</b> <i>string</i>

Tree	<a href="#">interface-name</a>
String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **router-instance** *string*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Routing context used for route lookup
Context	<b>configure</b> <a href="#">service</a> <a href="#">oper-group</a> <i>string</i> <a href="#">bfd-liveness</a> <b>router-instance</b> <i>string</i>
Tree	<a href="#">router-instance</a>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **hold-time**

Synopsis	Enter the <b>hold-time</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">oper-group</a> <i>string</i> <b>hold-time</b>
Tree	<a href="#">hold-time</a>
Introduced	16.0.R1
Platforms	All

### **down** *number*

Synopsis	Oper group hold down time
Context	<b>configure</b> <a href="#">service</a> <a href="#">oper-group</a> <i>string</i> <a href="#">hold-time</a> <b>down</b> <i>number</i>
Tree	<a href="#">down</a>
Range	1 to 3600
Units	seconds
Introduced	16.0.R3

Platforms All

### **up** *number*

Synopsis Oper group hold up time  
 Context **configure** *service oper-group string hold-time up number*  
 Tree *up*  
 Range 0 to 3600  
 Units seconds  
 Default 4  
 Introduced 16.0.R3  
 Platforms All

### **pbb**

Synopsis Enter the **pbb** context  
 Context **configure** *service pbb*  
 Tree *pbb*  
 Introduced 16.0.R1  
 Platforms All

### **mac** [*name*] *string*

Synopsis Enter the **mac** list instance  
 Context **configure** *service pbb mac string*  
 Tree *mac*  
 Introduced 16.0.R1  
 Platforms All

### [*name*] *string*

Synopsis MAC name for the MAC address  
 Context **configure** *service pbb mac string*  
 Tree *mac*  
 String Length 1 to 32

---

Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **address string**

Synopsis	IEEE address assigned to the MAC name
Context	<b>configure</b> <a href="#">service pbb mac string address string</a>
Tree	<a href="#">address</a>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **mac-notification**

Synopsis	Enter the <b>mac-notification</b> context
Context	<b>configure</b> <a href="#">service pbb mac-notification</a>
Tree	<a href="#">mac-notification</a>
Introduced	16.0.R1
Platforms	All

### **count number**

Synopsis	MAC notification messages count
Context	<b>configure</b> <a href="#">service pbb mac-notification count number</a>
Tree	<a href="#">count</a>
Range	1 to 10
Default	3
Introduced	16.0.R1
Platforms	All

### **interval number**

Synopsis	Interval for MAC-notification messages
Context	<b>configure</b> <a href="#">service pbb mac-notification interval number</a>

---

Tree	<a href="#">interval</a>
Range	1 to 100
Units	deciseconds
Default	1
Introduced	16.0.R1
Platforms	All

### **source-bmac**

Synopsis	Enter the <b>source-bmac</b> context
Context	<b>configure</b> <a href="#">service pbb source-bmac</a>
Tree	<a href="#">source-bmac</a>
Introduced	16.0.R1
Platforms	All

### **address *string***

Synopsis	Source B-VPLS MAC address to use with PBB
Context	<b>configure</b> <a href="#">service pbb source-bmac address <i>string</i></a>
Tree	<a href="#">address</a>
Introduced	16.0.R1
Platforms	All

### **evpn-etree-leaf-address *string***

Synopsis	Source Backbone VPLS MAC address to use with Provider Backbone Bridging (PBB)
Context	<b>configure</b> <a href="#">service pbb source-bmac evpn-etree-leaf-address <i>string</i></a>
Tree	<a href="#">evpn-etree-leaf-address</a>
Introduced	16.0.R1
Platforms	All

### **proxy-arp-nd**

Synopsis	Enter the <b>proxy-arp-nd</b> context
Context	<b>configure</b> <a href="#">service proxy-arp-nd</a>

---

Tree	<a href="#">proxy-arp-nd</a>
Introduced	16.0.R1
Platforms	All

## mac-list

Synopsis	Enter the <b>mac-list</b> context
Context	<b>configure</b> <a href="#">service proxy-arp-nd mac-list</a>
Tree	<a href="#">mac-list</a>
Introduced	16.0.R1
Platforms	All

## list [[list-name](#)] *string*

Synopsis	Enter the <b>list</b> list instance
Context	<b>configure</b> <a href="#">service proxy-arp-nd mac-list list</a> <i>string</i>
Tree	<a href="#">list</a>
Introduced	16.0.R1
Platforms	All

## [[list-name](#)] *string*

Synopsis	Specify name for mac list
Context	<b>configure</b> <a href="#">service proxy-arp-nd mac-list list</a> <i>string</i>
Tree	<a href="#">list</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## mac [[address](#)] *string*

Synopsis	Add a list entry for <b>mac</b>
Context	<b>configure</b> <a href="#">service proxy-arp-nd mac-list list</a> <i>string</i> <b>mac</b> <i>string</i>
Tree	<a href="#">mac</a>

Max. Instances	10
Introduced	16.0.R1
Platforms	All

**[address]** *string*

Synopsis	MAC address to be added to the list
Context	<b>configure</b> <a href="#">service proxy-arp-nd mac-list list</a> <i>string mac string</i>
Tree	<a href="#">mac</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**pw-template** [[pw-template-name](#)] *string*

Synopsis	Enter the <b>pw-template</b> list instance
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i>
Tree	<a href="#">pw-template</a>
Max. Instances	2048
Introduced	16.0.R1
Platforms	All

**[pw-template-name]** *string*

Synopsis	SDP template name
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i>
Tree	<a href="#">pw-template</a>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**accounting-policy** *number*

Synopsis	Accounting policy
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">accounting-policy</a> <i>number</i>
Tree	<a href="#">accounting-policy</a>
Range	1 to 99
Introduced	16.0.R1
Platforms	All

**allow-fragmentation** *boolean*

Synopsis	Allow packets to be sent without setting DF bit
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">allow-fragmentation</a> <i>boolean</i>
Tree	<a href="#">allow-fragmentation</a>
Default	false
Introduced	16.0.R1
Platforms	All

**auto-gre-sdp** *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Use a GRE tunnel to automatically create an SDP
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">auto-gre-sdp</a> <i>boolean</i>
Tree	<a href="#">auto-gre-sdp</a>
Default	false
Introduced	16.0.R1
Platforms	All

**block-on-peer-fault** *boolean*

Synopsis	Enable block traffic on peer fault
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">block-on-peer-fault</a> <i>boolean</i>
Tree	<a href="#">block-on-peer-fault</a>
Default	false

Introduced 16.0.R1  
Platforms All

### **collect-stats** *boolean*

Synopsis Collect statistics  
Context **configure** [service](#) [pw-template](#) *string* [collect-stats](#) *boolean*  
Tree [collect-stats](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **control-word** *boolean*

Synopsis Enable/Disable the use of ControlWord  
Context **configure** [service](#) [pw-template](#) *string* [control-word](#) *boolean*  
Tree [control-word](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **egress**

Synopsis Enter the **egress** context  
Context **configure** [service](#) [pw-template](#) *string* [egress](#)  
Tree [egress](#)  
Introduced 16.0.R1  
Platforms All

### **filter**

Synopsis Enter the **filter** context  
Context **configure** [service](#) [pw-template](#) *string* [egress](#) [filter](#)  
Tree [filter](#)  
Introduced 16.0.R1

Platforms All

### **ip string**

Synopsis IPv4 filter policy name  
Context **configure** [service pw-template string egress filter ip string](#)  
Tree [ip](#)  
String Length 1 to 64  
Introduced 16.0.R1  
Platforms All

### **ipv6 string**

Synopsis IPv6 filter policy name  
Context **configure** [service pw-template string egress filter ipv6 string](#)  
Tree [ipv6](#)  
String Length 1 to 64  
Introduced 16.0.R1  
Platforms All

### **mac string**

Synopsis MAC filter policy name  
Context **configure** [service pw-template string egress filter mac string](#)  
Tree [mac](#)  
String Length 1 to 64  
Introduced 16.0.R1  
Platforms All

### **mfib-allowed-mda-destinations**

Synopsis Enter the **mfib-allowed-mda-destinations** context  
Context **configure** [service pw-template string egress mfib-allowed-mda-destinations](#)  
Tree [mfib-allowed-mda-destinations](#)  
Introduced 16.0.R1

Platforms All

### **mda** [**mda-id**] *string*

Synopsis Add a list entry for **mda**

Context **configure** [service pw-template](#) *string* [egress mfib-allowed-mda-destinations](#) **mda** *string*

Tree [mda](#)

Introduced 16.0.R1

Platforms All

### **[mda-id]** *string*

Synopsis MFIB allowed MDA destination

Context **configure** [service pw-template](#) *string* [egress mfib-allowed-mda-destinations](#) **mda** *string*

Tree [mda](#)

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms All

### **qos**

Synopsis Enter the **qos** context

Context **configure** [service pw-template](#) *string* [egress qos](#)

Tree [qos](#)

Introduced 16.0.R1

Platforms All

### **network**

Synopsis Enter the **network** context

Context **configure** [service pw-template](#) *string* [egress qos network](#)

Tree [network](#)

Introduced 16.0.R1

Platforms All

**policy-name** *string*

Synopsis	Network policy ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">pw-template</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">network</a> <a href="#">policy-name</a> <i>string</i>
Tree	<a href="#">policy-name</a>
String Length	1 to 64
Introduced	16.0.R1
Platforms	All

**port-redirect-group**

Synopsis	Enter the <b>port-redirect-group</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">pw-template</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">network</a> <a href="#">port-redirect-group</a>
Tree	<a href="#">port-redirect-group</a>
Introduced	16.0.R1
Platforms	All

**group-name** *string*

Synopsis	Name of the egress port queue group template
Context	<b>configure</b> <a href="#">service</a> <a href="#">pw-template</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">network</a> <a href="#">port-redirect-group</a> <a href="#">group-name</a> <i>string</i>
Tree	<a href="#">group-name</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

**instance** *number*

Synopsis	Instance for FP ingress queue group
Context	<b>configure</b> <a href="#">service</a> <a href="#">pw-template</a> <i>string</i> <a href="#">egress</a> <a href="#">qos</a> <a href="#">network</a> <a href="#">port-redirect-group</a> <a href="#">instance</a> <i>number</i>
Tree	<a href="#">instance</a>
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

## encryption-keygroup

Synopsis	Enter the <b>encryption-keygroup</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">pw-template</a> <i>string</i> <a href="#">encryption-keygroup</a>
Tree	<a href="#">encryption-keygroup</a>
Introduced	19.10.R1
Platforms	VSR

## inbound *number*

Synopsis	Keygroup identifier in the inbound direction
Context	<b>configure</b> <a href="#">service</a> <a href="#">pw-template</a> <i>string</i> <a href="#">encryption-keygroup</a> <a href="#">inbound</a> <i>number</i>
Tree	<a href="#">inbound</a>
Range	1 to 127
Introduced	19.10.R1
Platforms	VSR

## outbound *number*

Synopsis	Keygroup identifier in the outbound direction
Context	<b>configure</b> <a href="#">service</a> <a href="#">pw-template</a> <i>string</i> <a href="#">encryption-keygroup</a> <a href="#">outbound</a> <i>number</i>
Tree	<a href="#">outbound</a>
Range	1 to 127
Introduced	19.10.R1
Platforms	VSR

## entropy-label

Synopsis	Enable the use of an entropy label
Context	<b>configure</b> <a href="#">service</a> <a href="#">pw-template</a> <i>string</i> <a href="#">entropy-label</a>
Tree	<a href="#">entropy-label</a>
Notes	The following elements are part of a choice: <b>entropy-label</b> or <b>hash-label</b> .
Introduced	16.0.R1
Platforms	All

## **fdb**

Synopsis	Enter the <b>fdb</b> context
Context	<b>configure</b> <a href="#">service pw-template string fdb</a>
Tree	<a href="#">fdb</a>
Introduced	16.0.R1
Platforms	All

## **auto-learn-mac-protect** *boolean*

Synopsis	Enable automatic update of MAC protect list
Context	<b>configure</b> <a href="#">service pw-template string fdb auto-learn-mac-protect boolean</a>
Tree	<a href="#">auto-learn-mac-protect</a>
Default	false
Introduced	16.0.R1
Platforms	All

## **auto-learn-mac-protect-exclude-list** *string*

Synopsis	Name of the MAC protect exclusion list
Context	<b>configure</b> <a href="#">service pw-template string fdb auto-learn-mac-protect-exclude-list string</a>
Tree	<a href="#">auto-learn-mac-protect-exclude-list</a>
Description	<p>This command configures the name of a MAC protect exclusion list.</p> <p>Dynamically-learned MAC Source Addresses (SA) are protected if they are learned on an object with ALMP configured and no exclusion list is associated with the object, or if the MAC SA does not match any entry in an associated exclusion list.</p> <p>An exclusion list can be used in multiple objects of a service. If a list is empty, ALMP does not exclude any learned MAC SAs from protection on the object.</p>
String Length	1 to 32
Introduced	20.5.R1
Platforms	All

## **discard-unknown-source** *boolean*

Synopsis	Discard frames with unknown source
Context	<b>configure</b> <a href="#">service pw-template string fdb discard-unknown-source boolean</a>

---

Tree	<a href="#">discard-unknown-source</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **limit-mac-move** *keyword*

Synopsis	MAC move limit
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">fdb limit-mac-move</a> <i>keyword</i>
Tree	<a href="#">limit-mac-move</a>
Options	blockable, non-blockable
Default	blockable
Introduced	16.0.R1
Platforms	All

### **mac-learning**

Synopsis	Enter the <b>mac-learning</b> context
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">fdb mac-learning</a>
Tree	<a href="#">mac-learning</a>
Introduced	16.0.R1
Platforms	All

### **aging** *boolean*

Synopsis	Enable aging of MAC addresses
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">fdb mac-learning aging</a> <i>boolean</i>
Tree	<a href="#">aging</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **learning** *boolean*

Synopsis	Enable learning of new MAC addresses
----------	--------------------------------------

Context	<b>configure service pw-template</b> <i>string</i> <b>fdb mac-learning learning</b> <i>boolean</i>
Tree	<b>learning</b>
Default	true
Introduced	16.0.R1
Platforms	All

### **mac-pinning** *boolean*

Synopsis	Enable MAC address pinning on this spoke SDP
Context	<b>configure service pw-template</b> <i>string</i> <b>fdb mac-pinning</b> <i>boolean</i>
Tree	<b>mac-pinning</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **maximum-mac-addresses** *number*

Synopsis	Maximum number of MAC address entries in the FDB
Context	<b>configure service pw-template</b> <i>string</i> <b>fdb maximum-mac-addresses</b> <i>number</i>
Tree	<b>maximum-mac-addresses</b>
Description	<p>This command specifies the maximum number of FDB entries for both learned and static MAC addresses for this PW template.</p> <p>When the configured limit is reached, no new addresses are learned from the SAP or spoke SDP until at least one FDB entry is aged out or cleared.</p> <p>When the configured limit is reached and the <b>configure service pw-template fdb discard-unknown-source</b> command is set to <b>true</b> for this PW template, packets with unknown source MAC addresses are discarded. If <b>discard-unknown-source</b> is set to <b>false</b>, the packets are forwarded if their destination MAC addresses are known, or flooded if their destination MAC addresses are unknown.</p> <p>However, if the <b>configure service vpls fdb discard-unknown</b> command is set to <b>true</b>, packets with unknown destination MAC addresses are discarded, even if the limit of FDB entries on the specific VPLS instance is not reached.</p> <p>When unconfigured, the PW template uses the global MAC learning limitations.</p>
Range	1 to 511999
Introduced	16.0.R1
Platforms	All

### **protected-src-mac-violation-action** *keyword*

Synopsis	Action for protected source MAC restriction
Context	<b>configure</b> <a href="#">service</a> <a href="#">pw-template</a> <i>string</i> <a href="#">fdb</a> <b>protected-src-mac-violation-action</b> <i>keyword</i>
Tree	<a href="#">protected-src-mac-violation-action</a>
Options	sdp-bind-oper-down, alarm-only, discard
Introduced	16.0.R1
Platforms	All

### **force-vc-forwarding** *keyword*

Synopsis	VC forwarding action
Context	<b>configure</b> <a href="#">service</a> <a href="#">pw-template</a> <i>string</i> <a href="#">force-vc-forwarding</a> <i>keyword</i>
Tree	<a href="#">force-vc-forwarding</a>
Options	vlan, qinq-c-tag-c-tag, qinq-s-tag-c-tag
Introduced	16.0.R1
Platforms	All

### **hash-label**

Synopsis	Enable the <b>hash-label</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">pw-template</a> <i>string</i> <a href="#">hash-label</a>
Tree	<a href="#">hash-label</a>
Description	Commands in this context configure the use of hash labels for egress datapaths. For information about hash-label handling, see the "Hash labels" section of the <i>7450 ESS, 7750 SR, 7950 XRS, and VSR MPLS Guide</i> .
Notes	The following elements are part of a choice: <b>entropy-label</b> or <b>hash-label</b> .
Introduced	16.0.R1
Platforms	All

### **signal-capability**

Synopsis	Signal hash label capability to the remote PE
Context	<b>configure</b> <a href="#">service</a> <a href="#">pw-template</a> <i>string</i> <a href="#">hash-label</a> <a href="#">signal-capability</a>
Tree	<a href="#">signal-capability</a>

Description	When configured, this command enables the signaling and negotiating of the hash label between the local and remote PE nodes.  The signaling process outcome determines whether the local PE inserts the hash label on the user packets. This outcome can override the local PE configuration. The node must withdraw the label it sent to its peer and send a new label mapping message with the new value of the F-bit in the flow label interface option sub-TLV of the pseudowire ID FEC element.
Introduced	16.0.R1
Platforms	All

## igmp-snooping

Synopsis	Enter the <b>igmp-snooping</b> context
Context	<b>configure</b> <a href="#">service pw-template string igmp-snooping</a>
Tree	<a href="#">igmp-snooping</a>
Introduced	16.0.R1
Platforms	All

## fast-leave *boolean*

Synopsis	Allow IGMP fast leave processing
Context	<b>configure</b> <a href="#">service pw-template string igmp-snooping fast-leave boolean</a>
Tree	<a href="#">fast-leave</a>
Default	false
Introduced	16.0.R1
Platforms	All

## import-policy *string*

Synopsis	Import policy that filters IGMP packets
Context	<b>configure</b> <a href="#">service pw-template string igmp-snooping import-policy string</a>
Tree	<a href="#">import-policy</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

**maximum-number-groups** *number*

Synopsis	Maximum multicast groups
Context	<b>configure</b> <a href="#">service</a> <a href="#">pw-template</a> <i>string</i> <a href="#">igmp-snooping</a> <a href="#">maximum-number-groups</a> <i>number</i>
Tree	<a href="#">maximum-number-groups</a>
Range	1 to 1000
Introduced	16.0.R1
Platforms	All

**query-interval** *number*

Synopsis	Time between two consecutive host-query messages
Context	<b>configure</b> <a href="#">service</a> <a href="#">pw-template</a> <i>string</i> <a href="#">igmp-snooping</a> <a href="#">query-interval</a> <i>number</i>
Tree	<a href="#">query-interval</a>
Range	2 to 1024
Units	seconds
Default	125
Introduced	16.0.R1
Platforms	All

**query-last-member-interval** *number*

Synopsis	Time between group-specific query messages
Context	<b>configure</b> <a href="#">service</a> <a href="#">pw-template</a> <i>string</i> <a href="#">igmp-snooping</a> <a href="#">query-last-member-interval</a> <i>number</i>
Tree	<a href="#">query-last-member-interval</a>
Range	1 to 50
Units	deciseconds
Default	10
Introduced	16.0.R1
Platforms	All

**query-response-interval** *number*

Synopsis	Time to wait for a response to the host-query messages
Context	<b>configure</b> <a href="#">service</a> <a href="#">pw-template</a> <i>string</i> <a href="#">igmp-snooping</a> <a href="#">query-response-interval</a> <i>number</i>

---

Tree	<a href="#">query-response-interval</a>
Range	1 to 1023
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	All

**robust-count** *number*

Synopsis	Number of retries after expected message loss
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">igmp-snooping robust-count</a> <i>number</i>
Tree	<a href="#">robust-count</a>
Range	2 to 7
Default	2
Introduced	16.0.R1
Platforms	All

**send-queries** *boolean*

Synopsis	Generate IGMP general queries
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">igmp-snooping send-queries</a> <i>boolean</i>
Tree	<a href="#">send-queries</a>
Default	false
Introduced	16.0.R1
Platforms	All

**version** *keyword*

Synopsis	IGMP version
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">igmp-snooping version</a> <i>keyword</i>
Tree	<a href="#">version</a>
Options	1, 2, 3
Default	3
Introduced	16.0.R1
Platforms	All

## ingress

Synopsis	Enter the <b>ingress</b> context
Context	<b>configure</b> <a href="#">service pw-template string ingress</a>
Tree	<a href="#">ingress</a>
Introduced	16.0.R1
Platforms	All

## filter

Synopsis	Enter the <b>filter</b> context
Context	<b>configure</b> <a href="#">service pw-template string ingress filter</a>
Tree	<a href="#">filter</a>
Introduced	16.0.R1
Platforms	All

## ip string

Synopsis	IPv4 filter policy name
Context	<b>configure</b> <a href="#">service pw-template string ingress filter ip string</a>
Tree	<a href="#">ip</a>
String Length	1 to 64
Introduced	16.0.R1
Platforms	All

## ipv6 string

Synopsis	IPv6 filter policy name
Context	<b>configure</b> <a href="#">service pw-template string ingress filter ipv6 string</a>
Tree	<a href="#">ipv6</a>
String Length	1 to 64
Introduced	16.0.R1
Platforms	All

## mac *string*

Synopsis	MAC filter policy name
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">ingress filter mac</a> <i>string</i>
Tree	<a href="#">mac</a>
String Length	1 to 64
Introduced	16.0.R1
Platforms	All

## qos

Synopsis	Enter the <b>qos</b> context
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">ingress qos</a>
Tree	<a href="#">qos</a>
Introduced	16.0.R1
Platforms	All

## network

Synopsis	Enter the <b>network</b> context
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">ingress qos network</a>
Tree	<a href="#">network</a>
Introduced	16.0.R1
Platforms	All

## fp-redirect-group

Synopsis	Enter the <b>fp-redirect-group</b> context
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">ingress qos network fp-redirect-group</a>
Tree	<a href="#">fp-redirect-group</a>
Introduced	16.0.R1
Platforms	All

## group-name *string*

Synopsis	Name of the forwarding plane queue group template
----------	---

Context	<b>configure service pw-template</b> <i>string</i> ingress qos network fp-redirect-group group-name <i>string</i>
Tree	<a href="#">group-name</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

### **instance** *number*

Synopsis	Instance for FP ingress queue group
Context	<b>configure service pw-template</b> <i>string</i> ingress qos network fp-redirect-group instance <i>number</i>
Tree	<a href="#">instance</a>
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

### **policy-name** *string*

Synopsis	Network policy ID
Context	<b>configure service pw-template</b> <i>string</i> ingress qos network policy-name <i>string</i>
Tree	<a href="#">policy-name</a>
String Length	1 to 64
Introduced	16.0.R1
Platforms	All

### **l2pt**

Synopsis	Enter the <b>l2pt</b> context
Context	<b>configure service pw-template</b> <i>string</i> l2pt
Tree	<a href="#">l2pt</a>
Introduced	16.0.R1
Platforms	All

## termination

Synopsis	Enable the <b>termination</b> context
Context	<b>configure service pw-template string l2pt termination</b>
Tree	<a href="#">termination</a>
Introduced	16.0.R1
Platforms	All

## protocols

Synopsis	Enter the <b>protocols</b> context
Context	<b>configure service pw-template string l2pt termination protocols</b>
Tree	<a href="#">protocols</a>
Introduced	16.0.R1
Platforms	All

## cdp boolean

Synopsis	Enable Cisco discovery protocol
Context	<b>configure service pw-template string l2pt termination protocols cdp boolean</b>
Tree	<a href="#">cdp</a>
Default	false
Introduced	16.0.R1
Platforms	All

## dtp boolean

Synopsis	Enable dynamic trunking protocol
Context	<b>configure service pw-template string l2pt termination protocols dtp boolean</b>
Tree	<a href="#">dtp</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **pagp** *boolean*

Synopsis	Enable port aggregation protocol
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">l2pt termination protocols</a> <a href="#">pagp</a> <i>boolean</i>
Tree	<a href="#">pagp</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **stp** *boolean*

Synopsis	Enable all spanning tree protocols
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">l2pt termination protocols</a> <a href="#">stp</a> <i>boolean</i>
Tree	<a href="#">stp</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **udld** *boolean*

Synopsis	Enable unidirectional link detection
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">l2pt termination protocols</a> <a href="#">udld</a> <i>boolean</i>
Tree	<a href="#">udld</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **vtp** *boolean*

Synopsis	Enable virtual trunk protocol
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">l2pt termination protocols</a> <a href="#">vtp</a> <i>boolean</i>
Tree	<a href="#">vtp</a>
Default	false
Introduced	16.0.R1
Platforms	All

**provisioned-sdp** *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Provisioned SDP type
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">provisioned-sdp</a> <i>keyword</i>
Tree	<a href="#">provisioned-sdp</a>
Options	use, prefer
Introduced	16.0.R1
Platforms	All

**pw-template-id** *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	PW Template Id
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">pw-template-id</a> <i>number</i>
Tree	<a href="#">pw-template-id</a>
Range	1 to 2147483647
Introduced	16.0.R1
Platforms	All

**sdp-exclude** [[group-name](#)] *reference*

Synopsis	Add a list entry for <b>sdp-exclude</b>
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">sdp-exclude</a> <i>reference</i>
Tree	<a href="#">sdp-exclude</a>
Introduced	16.0.R1
Platforms	All

**[group-name]** *reference*

Synopsis	SDP group name
----------	----------------

Context	<b>configure service pw-template string sdp-exclude reference</b>
Tree	<a href="#">sdp-exclude</a>
Reference	<b>configure service sdp-group group-name string</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **sdp-include** [[group-name](#)] *reference*

Synopsis	Add a list entry for <b>sdp-include</b>
Context	<b>configure service pw-template string sdp-include reference</b>
Tree	<a href="#">sdp-include</a>
Introduced	16.0.R1
Platforms	All

### **[group-name]** *reference*

Synopsis	SDP group name
Context	<b>configure service pw-template string sdp-include reference</b>
Tree	<a href="#">sdp-include</a>
Reference	<b>configure service sdp-group group-name string</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **split-horizon-group**

Synopsis	Enter the <b>split-horizon-group</b> context
Context	<b>configure service pw-template string split-horizon-group</b>
Tree	<a href="#">split-horizon-group</a>
Introduced	16.0.R1
Platforms	All

**description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">split-horizon-group</a> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

**fdb**

Synopsis	Enter the <b>fdb</b> context
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">split-horizon-group</a> <a href="#">fdb</a>
Tree	<a href="#">fdb</a>
Introduced	16.0.R1
Platforms	All

**saps**

Synopsis	Enter the <b>saps</b> context
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">split-horizon-group</a> <a href="#">fdb</a> <a href="#">saps</a>
Tree	<a href="#">saps</a>
Introduced	16.0.R1
Platforms	All

**auto-learn-mac-protect** *boolean*

Synopsis	Enable automatic update of MAC protect list
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">split-horizon-group</a> <a href="#">fdb</a> <a href="#">saps</a> <a href="#">auto-learn-mac-protect</a> <i>boolean</i>
Tree	<a href="#">auto-learn-mac-protect</a>
Default	false
Introduced	16.0.R1
Platforms	All

**discard-unprotected-dest-mac** *boolean*

Synopsis	Enable/disable unprotected dest MAC restriction
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">split-horizon-group fdb saps</a> <a href="#">discard-unprotected-dest-mac</a> <i>boolean</i>
Tree	<a href="#">discard-unprotected-dest-mac</a>
Default	false
Introduced	16.0.R1
Platforms	All

**protected-src-mac-violation-action** *keyword*

Synopsis	Action for protected source MAC restriction
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">split-horizon-group fdb saps</a> <a href="#">protected-src-mac-violation-action</a> <i>keyword</i>
Tree	<a href="#">protected-src-mac-violation-action</a>
Options	sap-oper-down, alarm-only, discard
Introduced	16.0.R1
Platforms	All

**name** *string*

Synopsis	Split horizon group name to which the SDP belongs
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">split-horizon-group name</a> <i>string</i>
Tree	<a href="#">name</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

**stp**

Synopsis	Enter the <b>stp</b> context
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <a href="#">stp</a>
Tree	<a href="#">stp</a>
Introduced	16.0.R4
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of STP
Context	<b>configure</b> <a href="#">service</a> <a href="#">pw-template</a> <i>string</i> <a href="#">stp</a> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Introduced	16.0.R4
Platforms	All

**auto-edge** *boolean*

Synopsis	Enable automatic detection of edge port characteristics
Context	<b>configure</b> <a href="#">service</a> <a href="#">pw-template</a> <i>string</i> <a href="#">stp</a> <b>auto-edge</b> <i>boolean</i>
Tree	<a href="#">auto-edge</a>
Default	true
Introduced	16.0.R4
Platforms	All

**edge-port** *boolean*

Synopsis	Designate SAP or SDP as an edge port
Context	<b>configure</b> <a href="#">service</a> <a href="#">pw-template</a> <i>string</i> <a href="#">stp</a> <b>edge-port</b> <i>boolean</i>
Tree	<a href="#">edge-port</a>
Default	false
Introduced	16.0.R4
Platforms	All

**link-type** *keyword*

Synopsis	Configure STP link-type
Context	<b>configure</b> <a href="#">service</a> <a href="#">pw-template</a> <i>string</i> <a href="#">stp</a> <b>link-type</b> <i>keyword</i>
Tree	<a href="#">link-type</a>
Options	pt-pt, shared
Default	pt-pt
Introduced	16.0.R4

Platforms All

### **path-cost** *number*

Synopsis Configure path-cost  
Context **configure** [service pw-template](#) *string* **stp path-cost** *number*  
Tree [path-cost](#)  
Range 1 to 200000000  
Default 10  
Introduced 16.0.R4  
Platforms All

### **priority** *number*

Synopsis Configure STP priority  
Context **configure** [service pw-template](#) *string* **stp priority** *number*  
Tree [priority](#)  
Range 0 to 255  
Default 128  
Introduced 16.0.R4  
Platforms All

### **root-guard** *boolean*

Synopsis Enable/disable STP root-guard  
Context **configure** [service pw-template](#) *string* **stp root-guard** *boolean*  
Tree [root-guard](#)  
Default false  
Introduced 16.0.R4  
Platforms All

### **vc-type** *keyword*

Synopsis Virtual circuit type associated with the SDP bind  
Context **configure** [service pw-template](#) *string* **vc-type** *keyword*

---

Tree	<a href="#">vc-type</a>
Options	ether, vlan
Default	ether
Introduced	16.0.R1
Platforms	All

### **vlan-vc-tag** *number*

Synopsis	VLAN VC tag
Context	<b>configure</b> <a href="#">service pw-template</a> <i>string</i> <b>vlan-vc-tag</b> <i>number</i>
Tree	<a href="#">vlan-vc-tag</a>
Range	0 to 4094
Introduced	16.0.R1
Platforms	All

### **sdp** [[sdp-id](#)] *number*

Synopsis	Enter the <b>sdp</b> list instance
Context	<b>configure</b> <a href="#">service sdp</a> <i>number</i>
Tree	<a href="#">sdp</a>
Introduced	16.0.R1
Platforms	All

### **[sdp-id]** *number*

Synopsis	Service Distribution Point (SDP) identifier
Context	<b>configure</b> <a href="#">service sdp</a> <i>number</i>
Tree	<a href="#">sdp</a>
Range	1 to 32767
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **accounting-policy** *reference*

Synopsis	Accounting policy associated with an SDP
Context	<b>configure</b> <a href="#">service sdp number</a> <a href="#">accounting-policy reference</a>
Tree	<a href="#">accounting-policy</a>
Description	This command associates an accounting policy with an SDP. When unconfigured, there is no accounting policy applied to the SDP.
Reference	<b>configure</b> <a href="#">log accounting-policy number</a>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the SDP
Context	<b>configure</b> <a href="#">service sdp number</a> <a href="#">admin-state keyword</a>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

### **adv-mtu-override** *boolean*

Synopsis	Override the advertised VC-type MTU using the SDP ID
Context	<b>configure</b> <a href="#">service sdp number</a> <a href="#">adv-mtu-override boolean</a>
Tree	<a href="#">adv-mtu-override</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **allow-fragmentation** *boolean*

Synopsis	Allow packets to be sent without setting DF bit
Context	<b>configure</b> <a href="#">service sdp number</a> <a href="#">allow-fragmentation boolean</a>
Tree	<a href="#">allow-fragmentation</a>
Default	false

---

Introduced	16.0.R1
Platforms	All

### **bgp-tunnel** *boolean*

Synopsis	Allow use of BGP route tunnels to reach far-end nodes
Context	<b>configure</b> <a href="#">service sdp</a> <i>number</i> <b>bgp-tunnel</b> <i>boolean</i>
Tree	<a href="#">bgp-tunnel</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **booking-factor** *number*

Synopsis	Percentage of SDP max available bandwidth for VLL CAC
Context	<b>configure</b> <a href="#">service sdp</a> <i>number</i> <b>booking-factor</b> <i>number</i>
Tree	<a href="#">booking-factor</a>
Range	0 to 1000
Default	100
Introduced	16.0.R1
Platforms	All

### **class-forwarding**

Synopsis	Enable the <b>class-forwarding</b> context
Context	<b>configure</b> <a href="#">service sdp</a> <i>number</i> <b>class-forwarding</b>
Tree	<a href="#">class-forwarding</a>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of class-based forwarding
Context	<b>configure</b> <a href="#">service sdp</a> <i>number</i> <b>class-forwarding</b> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>

Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

### **default-lsp** *reference*

Synopsis	Default LSP for class-based forwarding on the SDP
Context	<b>configure</b> <a href="#">service sdp number class-forwarding default-lsp reference</a>
Tree	<a href="#">default-lsp</a>
Reference	<b>configure</b> <a href="#">service sdp number lsp string</a>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **enforce-diffserv-lsp-fc** *boolean*

Synopsis	Enable RSVP validation of FC support by the LSP
Context	<b>configure</b> <a href="#">service sdp number class-forwarding enforce-diffserv-lsp-fc boolean</a>
Tree	<a href="#">enforce-diffserv-lsp-fc</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **fc** [[fc-name](#)] *keyword*

Synopsis	Enter the <b>fc</b> list instance
Context	<b>configure</b> <a href="#">service sdp number class-forwarding fc keyword</a>
Tree	<a href="#">fc</a>
Introduced	16.0.R1
Platforms	All

### **[fc-name]** *keyword*

Synopsis	Forwarding class to LSP mapping
----------	---------------------------------

Context	<b>configure service sdp number class-forwarding fc keyword</b>
Tree	<b>fc</b>
Options	be, l2, af, l1, h2, ef, h1, nc
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **lsp reference**

Synopsis	LSP name used to forward service packets
Context	<b>configure service sdp number class-forwarding fc keyword lsp reference</b>
Tree	<b>lsp</b>
Reference	<b>configure service sdp number lsp string</b>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **multicast-lsp reference**

Synopsis	LSP to forward all multicast traffic
Context	<b>configure service sdp number class-forwarding multicast-lsp reference</b>
Tree	<b>multicast-lsp</b>
Reference	<b>configure service sdp number lsp string</b>
Introduced	16.0.R1
Platforms	All

### **collect-stats boolean**

Synopsis	Collect accounting statistics for this SDP
Context	<b>configure service sdp number collect-stats boolean</b>
Tree	<b>collect-stats</b>
Default	false
Introduced	16.0.R1
Platforms	All

**delivery-type** *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Delivery type used by the SDP
Context	<b>configure</b> <a href="#">service sdp number delivery-type keyword</a>
Tree	<a href="#">delivery-type</a>
Options	gre, mpls, l2tpv3, gre-eth-bridged
Introduced	16.0.R1
Platforms	All

**description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service sdp number description string</a>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

**far-end**

Synopsis	Enter the <b>far-end</b> context
Context	<b>configure</b> <a href="#">service sdp number far-end</a>
Tree	<a href="#">far-end</a>
Introduced	16.0.R1
Platforms	All

**ip-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IP address of the far end destination router
----------	--

Context	<b>configure service sdp number far-end ip-address</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> )
Tree	<a href="#">ip-address</a>
Introduced	16.0.R3
Platforms	All

## keep-alive

Synopsis	Enter the <b>keep-alive</b> context
Context	<b>configure service sdp number keep-alive</b>
Tree	<a href="#">keep-alive</a>
Introduced	16.0.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of keepalive mechanism for the SDP
Context	<b>configure service sdp number keep-alive admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

## hello-time *number*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Time period between SDP keepalive messages
Context	<b>configure service sdp number keep-alive hello-time number</b>
Tree	<a href="#">hello-time</a>
Range	1 to 3600
Units	seconds
Default	10

---

Introduced	16.0.R1
Platforms	All

### **hold-down-time** *number*

Synopsis	Minimum time the SDP remains in the down state
Context	<b>configure</b> <a href="#">service sdp</a> <i>number</i> <a href="#">keep-alive</a> <a href="#">hold-down-time</a> <i>number</i>
Tree	<a href="#">hold-down-time</a>
Range	0 to 3600
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	All

### **maximum-drop-count** *number*

Synopsis	Maximum failed request attempts when SDP is down
Context	<b>configure</b> <a href="#">service sdp</a> <i>number</i> <a href="#">keep-alive</a> <a href="#">maximum-drop-count</a> <i>number</i>
Tree	<a href="#">maximum-drop-count</a>
Range	1 to 5
Default	3
Introduced	16.0.R1
Platforms	All

### **message-length** *number*

Synopsis	Length of the keepalive request messages transmitted
Context	<b>configure</b> <a href="#">service sdp</a> <i>number</i> <a href="#">keep-alive</a> <a href="#">message-length</a> <i>number</i>
Tree	<a href="#">message-length</a>
Range	40 to 9198
Introduced	16.0.R1
Platforms	All

**timeout** *number*

Synopsis	Time SDP waits before tearing down the session
Context	<b>configure</b> <a href="#">service sdp</a> <i>number</i> <a href="#">keep-alive</a> <i>timeout</i> <i>number</i>
Tree	<a href="#">timeout</a>
Range	1 to 10
Units	seconds
Default	5
Introduced	16.0.R1
Platforms	All

**ldp** *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable LDP-signaled LSPs
Context	<b>configure</b> <a href="#">service sdp</a> <i>number</i> <a href="#">ldp</a> <i>boolean</i>
Tree	<a href="#">ldp</a>
Default	false
Introduced	16.0.R1
Platforms	All

**local-end** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local end address of tunnel defined by the SDP
Context	<b>configure</b> <a href="#">service sdp</a> <i>number</i> <a href="#">local-end</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">local-end</a>
Introduced	16.0.R1
Platforms	All

**lsp** [*lsp-name*] *string*

Synopsis	Add a list entry for <b>lsp</b>
Context	<b>configure</b> <a href="#">service sdp</a> <i>number lsp string</i>
Tree	<a href="#">lsp</a>
Max. Instances	16
Introduced	16.0.R1
Platforms	All

**[lsp-name]** *string*

Synopsis	LSP name to associate with the SDP
Context	<b>configure</b> <a href="#">service sdp</a> <i>number lsp string</i>
Tree	<a href="#">lsp</a>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**metric** *number*

Synopsis	Metric used in tunnel table manager for decision making
Context	<b>configure</b> <a href="#">service sdp</a> <i>number metric number</i>
Tree	<a href="#">metric</a>
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

**mixed-lsp-mode**

Synopsis	Enable the <b>mixed-lsp-mode</b> context
Context	<b>configure</b> <a href="#">service sdp</a> <i>number mixed-lsp-mode</i>
Tree	<a href="#">mixed-lsp-mode</a>
Introduced	16.0.R1
Platforms	All

**revert-time** (*number* | *keyword*)

Synopsis	Delay before SDP can revert to higher priority LSP type
Context	<b>configure</b> <a href="#">service sdp</a> <i>number</i> <a href="#">mixed-lsp-mode revert-time</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">revert-time</a>
Range	1 to 600
Units	seconds
Options	never, immediate
Default	immediate
Introduced	16.0.R1
Platforms	All

**network-domain** *reference*

Synopsis	Network domain name associated with the SDP
Context	<b>configure</b> <a href="#">service sdp</a> <i>number</i> <a href="#">network-domain</a> <i>reference</i>
Tree	<a href="#">network-domain</a>
Reference	<b>configure</b> <a href="#">router</a> <i>string</i> <a href="#">network-domains</a> <a href="#">network-domain</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

**path-mtu** *number*

Synopsis	Maximum Transmission Unit (MTU) the SDP can transmit
Context	<b>configure</b> <a href="#">service sdp</a> <i>number</i> <a href="#">path-mtu</a> <i>number</i>
Tree	<a href="#">path-mtu</a>
Range	576 to 9782
Units	bytes
Introduced	16.0.R1
Platforms	All

**pbb-etype** *string*

Synopsis	Ethertype used for PBB
Context	<b>configure</b> <a href="#">service sdp</a> <i>number</i> <a href="#">pbb-etype</a> <i>string</i>

Tree	<a href="#">pbb-etype</a>
String Length	5 to 6
Default	0x88E7
Introduced	16.0.R1
Platforms	All

## **pw-port**

Synopsis	Enter the <b>pw-port</b> context
Context	<b>configure</b> <a href="#">service sdp number pw-port</a>
Tree	<a href="#">pw-port</a>
Introduced	16.0.R4
Platforms	All

## **binding-port** *string*

Synopsis	Binding port
Context	<b>configure</b> <a href="#">service sdp number pw-port binding-port string</a>
Tree	<a href="#">binding-port</a>
Introduced	16.0.R4
Platforms	All

## **sdp-group** [[group-name](#)] *reference*

Synopsis	Add a list entry for <b>sdp-group</b>
Context	<b>configure</b> <a href="#">service sdp number sdp-group reference</a>
Tree	<a href="#">sdp-group</a>
Introduced	16.0.R1
Platforms	All

## **[group-name]** *reference*

Synopsis	SDP administrative group name
Context	<b>configure</b> <a href="#">service sdp number sdp-group reference</a>
Tree	<a href="#">sdp-group</a>

Reference	<b>configure service sdp-group</b> <i>group-name string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## signaling *keyword*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Signaling protocol used to obtain pseudowire labels
Context	<b>configure service sdp</b> <i>number signaling keyword</i>
Tree	<a href="#">signaling</a>
Description	<p>This command specifies the signaling protocol used to obtain the ingress and egress pseudowire labels in frames transmitted and received on the SDP. The signaling value can only be changed while the administrative status of the SDP is down. Additionally, the signaling can only be changed on an SDP if the SDP is not in use by BGP-AD or BGP-VPLS. BGP signaling can only be enabled if the SDP does not already have pseudowires signaled over it. Also, BGP signaling is not supported with mixed mode LSP SDPs.</p> <p><b>Note:</b> If the <b>tldp</b> option is selected as the mechanism for exchanging service labels over an MPLS or GRE SDP and the T-LDP session is automatically established, an explicit T-LDP session that is subsequently configured takes precedence over the automatic T-LDP session. However, if the explicit, manually-configured session is then removed, the system does not revert to the automatic session and the automatic session is also deleted. To address this, recreate the T-LDP session by using the <b>admin-state</b> command to administratively disable and then enable the SDP.</p>
Options	off, tldp, bgp
Introduced	16.0.R1
Platforms	All

## source-bmac-lsb

Synopsis	Enter the <b>source-bmac-lsb</b> context
Context	<b>configure service sdp</b> <i>number source-bmac-lsb</i>
Tree	<a href="#">source-bmac-lsb</a>
Introduced	16.0.R1
Platforms	All

**control-pw-vc-id** *number*

Synopsis	VC ID of the control pseudowire
Context	<b>configure service sdp</b> <i>number</i> <b>source-bmac-lsb</b> <b>control-pw-vc-id</b> <i>number</i>
Tree	<b>control-pw-vc-id</b>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

**value** *string*

Synopsis	16 least significant bits of virtual backbone MAC
Context	<b>configure service sdp</b> <i>number</i> <b>source-bmac-lsb</b> <b>value</b> <i>string</i>
Tree	<b>value</b>
Introduced	16.0.R1
Platforms	All

**sr-isis** *boolean*

Synopsis	Enable Segment Routing for IS-IS
Context	<b>configure service sdp</b> <i>number</i> <b>sr-isis</b> <i>boolean</i>
Tree	<b>sr-isis</b>
Default	false
Introduced	16.0.R1
Platforms	All

**sr-ospf** *boolean*

Synopsis	Enable an MPLS SDP of LSP type OSPF Segment Routing
Context	<b>configure service sdp</b> <i>number</i> <b>sr-ospf</b> <i>boolean</i>
Tree	<b>sr-ospf</b>
Default	false
Introduced	16.0.R1
Platforms	All

**tunnel-far-end** (*ipv4-address-no-zone | ipv6-address-no-zone*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	System address of the far-end router for the SDP
Context	<b>configure service sdp number tunnel-far-end</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> )
Tree	<a href="#">tunnel-far-end</a>
Introduced	16.0.R1
Platforms	All

**vlan-vc-etype** *string*

Synopsis	VLAN VC Ethertype
Context	<b>configure service sdp number vlan-vc-etype</b> <i>string</i>
Tree	<a href="#">vlan-vc-etype</a>
String Length	5 to 6
Default	0x8100
Introduced	16.0.R1
Platforms	All

**weighted-ecmp** *boolean*

Synopsis	Allow weighted load-balancing on an SDP
Context	<b>configure service sdp number weighted-ecmp</b> <i>boolean</i>
Tree	<a href="#">weighted-ecmp</a>
Default	false
Introduced	16.0.R1
Platforms	All

**sdp-group**

Synopsis	Enter the <b>sdp-group</b> context
Context	<b>configure service sdp-group</b>

Tree	<a href="#">sdp-group</a>
Introduced	16.0.R1
Platforms	All

### **group-name** [[group-name](#)] *string*

Synopsis	Enter the <b>group-name</b> list instance
Context	<b>configure</b> <a href="#">service sdp-group group-name string</a>
Tree	<a href="#">group-name</a>
Introduced	16.0.R1
Platforms	All

### **[group-name]** *string*

Synopsis	SDP administrative group name
Context	<b>configure</b> <a href="#">service sdp-group group-name string</a>
Tree	<a href="#">group-name</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **value** *number*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Unique group value associated with the SDP admin group
Context	<b>configure</b> <a href="#">service sdp-group group-name string value number</a>
Tree	<a href="#">value</a>
Range	0 to 31
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

## system

Synopsis	Enter the <b>system</b> context
Context	<b>configure service system</b>
Tree	<a href="#">system</a>
Introduced	16.0.R1
Platforms	All

## bgp

Synopsis	Enter the <b>bgp</b> context
Context	<b>configure service system bgp</b>
Tree	<a href="#">bgp</a>
Introduced	16.0.R1
Platforms	All

## evpn

Synopsis	Enter the <b>evpn</b> context
Context	<b>configure service system bgp evpn</b>
Tree	<a href="#">evpn</a>
Introduced	16.0.R1
Platforms	All

## ad-per-es-route

Synopsis	Enter the <b>ad-per-es-route</b> context
Context	<b>configure service system bgp evpn ad-per-es-route</b>
Tree	<a href="#">ad-per-es-route</a>
Introduced	16.0.R1
Platforms	All

## extended-evi-range *boolean*

Synopsis	Reserve extended RD comm-values for AD per-ES routes
----------	--

Context	<b>configure service system bgp evpn ad-per-es-route extended-evi-range</b> <i>boolean</i>
Tree	<a href="#">extended-evi-range</a>
Description	When configured to <b>true</b> , the system reserves the Route Distinguisher (RD) comm-values 1 to 65535 out of the type 1 RD that is used for AD per-ES routes. If <b>ad-per-es-route route-target-type</b> is also configured to <b>evi-route-target-set</b> , the system can pack the maximum number of EVI route targets in the AD per-ES routes  When configured to <b>false</b> , this command only reserves comm-values 1 to 512.
Default	false
Introduced	21.10.R1
Platforms	All

### **route-distinguisher-ip-address** *string*

Synopsis	IP address for route distinguisher for EVPN AD-ES routes
Context	<b>configure service system bgp evpn ad-per-es-route route-distinguisher-ip-address</b> <i>string</i>
Tree	<a href="#">route-distinguisher-ip-address</a>
Introduced	16.0.R1
Platforms	All

### **route-target-type** *keyword*

Synopsis	Method for the AD per-ES routes advertisement
Context	<b>configure service system bgp evpn ad-per-es-route route-target-type</b> <i>keyword</i>
Tree	<a href="#">route-target-type</a>
Options	evi-route-target, evi-route-target-set
Default	evi-route-target
Introduced	16.0.R1
Platforms	All

### **ad-per-evi-routes**

Synopsis	Enter the <b>ad-per-evi-routes</b> context
Context	<b>configure service system bgp evpn ad-per-evi-routes</b>
Tree	<a href="#">ad-per-evi-routes</a>
Introduced	23.10.R1

Platforms All

### **attribute-propagation** *boolean*

Synopsis Enable propagation of BGP path attributes

Context **configure** [service](#) [system](#) [bgp](#) [evpn](#) [ad-per-evi-routes](#) [attribute-propagation](#) *boolean*

Tree [attribute-propagation](#)

Description When configured to **true**, the router propagates the attributes in multi-instance Epipe services.  
When configured to **false**, the router disables the propagation of the attributes, including D-PATH, even if the **domain-id** is configured in the service.

Default false

Introduced 23.10.R1

Platforms All

### **bgp-path-selection** *boolean*

Synopsis Enable BGP path selection

Context **configure** [service](#) [system](#) [bgp](#) [evpn](#) [ad-per-evi-routes](#) [bgp-path-selection](#) *boolean*

Tree [bgp-path-selection](#)

Description When configured to **true**, the router compares the received EVPN VPWS AD per-EVI routes based on the BGP path attributes.  
The **attribute-propagation** command must be configured to **true**.  
When configured to **false**, the router does not compare the routes.

Default false

Introduced 23.10.R1

Platforms All

### **d-path-ignore** *boolean*

Synopsis Ignore D-PATH for BGP path selection

Context **configure** [service](#) [system](#) [bgp](#) [evpn](#) [ad-per-evi-routes](#) [d-path-ignore](#) *boolean*

Tree [d-path-ignore](#)

Description When configured to **true**, the router ignores the Domain PATH attribute (D-PATH) when BGP computes the best path selection for received routes.  
When configured to **false**, the router considers the D-PATH length and value as a tiebreaker in determining the best-path selection. In accordance with *draft-sr-bess-evpn-*

*dpath*, the router compares the D-PATH attribute received in AD per-EVI routes with the same key (same or different RD) as follows:

- Routes with the shortest D-PATH are preferred; therefore, routes not tied for the shortest D-PATH are removed. Routes without D-PATH are considered zero-length D-PATH.
- Routes with the numerically lowest left-most Domain-ID are preferred; therefore, routes not tied for the numerically lowest left-most Domain-ID are removed from consideration.

Default	false
Introduced	23.10.R1
Platforms	All

### **ethernet-segment** [[ethernet-segment-name](#)] *string*

Synopsis	Enter the <b>ethernet-segment</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp evpn</a> <a href="#">ethernet-segment</a> <i>string</i>
Tree	<a href="#">ethernet-segment</a>
Max. Instances	4095
Introduced	16.0.R1
Platforms	All

### **[ethernet-segment-name]** *string*

Synopsis	Specify name for Ethernet segment
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp evpn</a> <a href="#">ethernet-segment</a> <i>string</i>
Tree	<a href="#">ethernet-segment</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **ac-df-capability** *keyword*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	AC-influenced DF election capability
Context	<b>configure service system bgp evpn ethernet-segment</b> <i>string ac-df-capability keyword</i>
Tree	<a href="#">ac-df-capability</a>
Description	<p>This command configures the Attachment Circuit-influenced (AC-influenced) designated forwarder (DF) election capability (AC-DF) into the DF election for the Ethernet Segment (ES).</p> <p>AC-DF supports EVPN Auto-Discovery per EVI/ES (AD per EVI/ES) routes for a specific PE, to ensure the PE is included in the candidate DF election list.</p> <p>When AC-DF is excluded on a specific ES, the presence or absence of the AD per EVI/ES routes from the ES peers does not modify the candidate DF election list for the ES. Excluding the AC-DF is recommended in ESs that use an operational group monitored by the access LAG to signal the standby LACP or to power-off.</p>
Options	include, exclude
Default	include
Introduced	21.5.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the Ethernet segment instance
Context	<b>configure service system bgp evpn ethernet-segment</b> <i>string admin-state keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

### **association**

Synopsis	Enter the <b>association</b> context
Context	<b>configure service system bgp evpn ethernet-segment</b> <i>string association</i>
Tree	<a href="#">association</a>
Introduced	16.0.R1
Platforms	All

**lag** [[lag-name](#)] *reference*

Synopsis	Enter the <b>lag</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp evpn ethernet-segment</a> <i>string</i> <a href="#">association</a> <a href="#">lag</a> <i>reference</i>
Tree	<a href="#">lag</a>
Max. Instances	1
Notes	The following elements are part of a choice: <b>lag</b> , <b>network-interconnect-vxlan</b> , <b>port</b> , <b>pw-port</b> , <b>sdp</b> , or <b>vprn-next-hop</b> .
Introduced	16.0.R1
Platforms	All

**[lag-name]** *reference*

Synopsis	LAG multi-homed with the Ethernet segment entry
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp evpn ethernet-segment</a> <i>string</i> <a href="#">association</a> <a href="#">lag</a> <i>reference</i>
Tree	<a href="#">lag</a>
Reference	<b>configure</b> <a href="#">lag</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	21.2.R1
Platforms	All

**virtual-ranges**

Synopsis	Enter the <b>virtual-ranges</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp evpn ethernet-segment</a> <i>string</i> <a href="#">association</a> <a href="#">lag</a> <i>reference</i> <a href="#">virtual-ranges</a>
Tree	<a href="#">virtual-ranges</a>
Introduced	16.0.R4
Platforms	All

**dot1q**

Synopsis	Enter the <b>dot1q</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp evpn ethernet-segment</a> <i>string</i> <a href="#">association</a> <a href="#">lag</a> <i>reference</i> <a href="#">virtual-ranges</a> <a href="#">dot1q</a>
Tree	<a href="#">dot1q</a>

Introduced 16.0.R4  
 Platforms All

### **q-tag** [[start](#)] (*number* | *keyword*)

Synopsis Enter the **q-tag** list instance  
 Context **configure** [service](#) [system](#) [bgp evpn ethernet-segment](#) *string* [association](#) [lag](#) [reference](#)  
[virtual-ranges](#) [dot1q](#) [q-tag](#) (*number* | *keyword*)  
 Tree [q-tag](#)

Synopsis	Control state of PW SAPs on PW port using EVPN
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp</a> <a href="#">evpn</a> <a href="#">ethernet-segment</a> <i>string</i> <a href="#">association</a> <a href="#">pw-port</a> <i>reference</i> <a href="#">pw-port-headend</a> <i>boolean</i>
Tree	<a href="#">pw-port-headend</a>

Description	When configured to <b>true</b> , this command allows EVPN and its multi-homing procedures to control the state of the PW SAPs on the PW port.  When configured to <b>false</b> , this command disallows EVPN and its multi-homing procedures to control the state of the PW SAPs on the PW port.
Default	false
Introduced	22.2.R1
Platforms	All

## virtual-ranges

Synopsis	Enter the <b>virtual-ranges</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp</a> <a href="#">evpn</a> <a href="#">ethernet-segment</a> <i>string</i> <a href="#">association</a> <a href="#">pw-port</a> <a href="#">reference</a> <b>virtual-ranges</b>
Tree	<a href="#">virtual-ranges</a>
Introduced	16.0.R4
Platforms	All

## dot1q

Synopsis	Enter the <b>dot1q</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp</a> <a href="#">evpn</a> <a href="#">ethernet-segment</a> <i>string</i> <a href="#">association</a> <a href="#">pw-port</a> <a href="#">reference</a> <a href="#">virtual-ranges</a> <b>dot1q</b>
Tree	<a href="#">dot1q</a>
Introduced	16.0.R4
Platforms	All

## q-tag [[start](#)] (*number* | *keyword*)

Synopsis	Enter the <b>q-tag</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp</a> <a href="#">evpn</a> <a href="#">ethernet-segment</a> <i>string</i> <a href="#">association</a> <a href="#">pw-port</a> <a href="#">reference</a> <a href="#">virtual-ranges</a> <a href="#">dot1q</a> <b>q-tag</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">q-tag</a>
Max. Instances	8
Introduced	16.0.R4
Platforms	All

**[start]** (*number* | *keyword*)

Synopsis	Lower bound of the q-tag VLAN ID range
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp</a> <a href="#">evpn</a> <a href="#">ethernet-segment</a> <i>string</i> <a href="#">association</a> <a href="#">pw-port</a> <a href="#">reference</a> <a href="#">virtual-ranges</a> <a href="#">dot1q</a> <a href="#">q-tag</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">q-tag</a>
Range	0 to 4094
Options	tag-*
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

**end** (*number* | *keyword*)

Synopsis	Upper bound of the q-tag VLAN ID range
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp</a> <a href="#">evpn</a> <a href="#">ethernet-segment</a> <i>string</i> <a href="#">association</a> <a href="#">pw-port</a> <a href="#">reference</a> <a href="#">virtual-ranges</a> <a href="#">dot1q</a> <a href="#">q-tag</a> ( <i>number</i>   <i>keyword</i> ) <b>end</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">end</a>
Range	0 to 4094
Options	tag-*
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

**qinq**

Synopsis	Enter the <b>qinq</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp</a> <a href="#">evpn</a> <a href="#">ethernet-segment</a> <i>string</i> <a href="#">association</a> <a href="#">pw-port</a> <a href="#">reference</a> <a href="#">virtual-ranges</a> <a href="#">qinq</a>
Tree	<a href="#">qinq</a>
Introduced	16.0.R4
Platforms	All

**s-tag** [**start**] (*number* | *keyword*)

Synopsis	Enter the <b>s-tag</b> list instance
----------	--------------------------------------

Context	<b>configure service system bgp evpn ethernet-segment</b> <i>string</i> <b>association pw-port reference virtual-ranges qinq s-tag</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>s-tag</b>
Max. Instances	8
Introduced	16.0.R4
Platforms	All

**[start]** (*number* | *keyword*)

Synopsis	Lower bound of the s-tag VLAN ID range

Platforms	All

## [\[start\]](#) *number*

Synopsis	Lower bound of the VC-ID range
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp</a> <a href="#">evpn</a> <a href="#">ethernet-segment</a> <a href="#">string</a> <a href="#">association</a> <a href="#">sdp</a> <a href="#">reference</a> <a href="#">virtual-ranges</a> <a href="#">vc-id</a> <i>number</i>
Tree	<a href="#">vc-id</a>
Range	1 to 4294967295
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

## **end** *number*

Synopsis	Upper bound of the VC-ID range
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp</a> <a href="#">evpn</a> <a href="#">ethernet-segment</a> <a href="#">string</a> <a href="#">association</a> <a href="#">sdp</a> <a href="#">reference</a> <a href="#">virtual-ranges</a> <a href="#">vc-id</a> <i>number</i> <b>end</b> <i>number</i>
Tree	<a href="#">end</a>

Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **vprn-next-hop** [[ip-address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the <b>vprn-next-hop</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp</a> <a href="#">evpn</a> <a href="#">ethernet-segment</a> <i>string</i> <a href="#">association</a> <a href="#">vprn-next-hop</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">vprn-next-hop</a>
Description	Commands in this list instance are used to associate an IPv4 or IPv6 address to an Ethernet segment. A virtual Ethernet segment using this VPRN next-hop association represents a Layer 3 Ethernet segment as described in <i>draft-sajassi-bess-evpn-ip-aliasing</i> . This IP address must be installed in the route table of the VPRN service identified by the EVI so that the Auto-Discovery per-ES or EVI routes for the ES are advertised. Only one VPRN next hop is supported per Ethernet segment.
Max. Instances	1
Notes	The following elements are part of a choice: <b>lag</b> , <b>network-interconnect-vxlan</b> , <b>port</b> , <b>pw-port</b> , <b>sdp</b> , or <b>vprn-next-hop</b> .
Introduced	22.10.R1
Platforms	All

### **[ip-address]** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	VPRN next-hop address
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp</a> <a href="#">evpn</a> <a href="#">ethernet-segment</a> <i>string</i> <a href="#">association</a> <a href="#">vprn-next-hop</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">vprn-next-hop</a>
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	All

### **virtual-ranges**

Synopsis	Enter the <b>virtual-ranges</b> context
----------	---

Context	<b>configure service system bgp evpn ethernet-segment</b> <i>string</i> <b>association vprn-next-hop</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>virtual-ranges</b>
Tree	<b>virtual-ranges</b>
Introduced	22.10.R1
Platforms	All

**evi** [**start**] *number*

Synopsis	Add a list entry for <b>evi</b>
Context	<b>configure service system bgp evpn ethernet-segment</b> <i>string</i> <b>association vprn-next-hop</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>virtual-ranges evi</b> <i>number</i>
Tree	<b>evi</b>
Max. Instances	1
Introduced	22.10.R1
Platforms	All

**[start]** *number*

Synopsis	EVI range start information
Context	<b>configure service system bgp evpn ethernet-segment</b> <i>string</i> <b>association vprn-next-hop</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> ) <b>virtual-ranges evi</b> <i>number</i>
Tree	<b>evi</b>
Range	1 to 16777215
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	All

**auto-esi** *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	EVPN Ethernet segment auto-ESI type
Context	<b>configure service system bgp evpn ethernet-segment</b> <i>string</i> <b>auto-esi</b> <i>keyword</i>
Tree	<b>auto-esi</b>

Description	This command configures the auto-ESI type to use in the Ethernet segment (ES).When <b>type-1</b> is configured, a manual ESI cannot be configured and the ESI is automatically derived in accordance with the RFC 7432 ESI type 1 definition.When configured to <b>none</b> , a manual ESI must be configured.
Options	none, type-1
Default	none
Introduced	21.5.R1
Platforms	All

## df-election

Synopsis	Enter the <b>df-election</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp</a> <a href="#">evpn</a> <a href="#">ethernet-segment</a> <i>string</i> <b>df-election</b>
Tree	<a href="#">df-election</a>
Introduced	16.0.R1
Platforms	All

## es-activation-timer *number*

Synopsis	Activation timer per Ethernet segment
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp</a> <a href="#">evpn</a> <a href="#">ethernet-segment</a> <i>string</i> <b>df-election</b> <b>es-activation-timer</b> <i>number</i>
Tree	<a href="#">es-activation-timer</a>
Range	0 to 100
Units	seconds
Introduced	16.0.R1
Platforms	All

## manual

Synopsis	Enter the <b>manual</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp</a> <a href="#">evpn</a> <a href="#">ethernet-segment</a> <i>string</i> <b>df-election</b> <b>manual</b>
Tree	<a href="#">manual</a>
Introduced	16.0.R1
Platforms	All

**evi** [**start**] *number*

Introduced	16.0.R1
Platforms	All

**service-carving-mode** *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Mode of service carving enabled per EVPN associated with this Ethernet segment entry
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp</a> <a href="#">evpn</a> <a href="#">ethernet-segment</a> <i>string</i> <a href="#">df-election</a> <a href="#">service-carving-mode</a> <i>keyword</i>
Tree	<a href="#">service-carving-mode</a>
Options	auto, manual, off
Default	auto

Introduced	16.0.R1
Platforms	All

**esi string****WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Ethernet segment identifier
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp</a> <a href="#">evpn</a> <a href="#">ethernet-segment</a> <i>string</i> <b>esi</b> <i>string</i>
Tree	<a href="#">esi</a>
Introduced	16.0.R1
Platforms	All

**multi-homing-mode keyword****WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Multihoming mode of the Ethernet segment
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp</a> <a href="#">evpn</a> <a href="#">ethernet-segment</a> <i>string</i> <b>multi-homing-mode</b> <i>keyword</i>
Tree	<a href="#">multi-homing-mode</a>
Description	<p>This command configures the multihoming mode for the Ethernet segment as defined in RFC 7432.</p> <p>By default, the use of ESI label is enabled for <b>all-active</b> and <b>single-active</b> as defined in RFC 7432 (for <b>single-active multi-homing</b>, the ESI label is used to avoid transient loops).</p> <p>When <b>single-active no-esi-label</b> or <b>all-active no-esi-label</b> is specified, the system does not allocate a label for the ESI; and therefore, advertises ESI label 0 to peers. Even if the ESI is configured not to send the ESI label, on reception of an ESI label from a peer, the PE always sends traffic to that peer using the received ESI label.</p>
Options	none, single-active, single-active-no-esi-label, all-active
Default	none
Introduced	16.0.R1
Platforms	All

**oper-group** *reference*

Synopsis	Operational group ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp</a> <a href="#">evpn</a> <a href="#">ethernet-segment</a> <i>string</i> <b>oper-group</b> <i>reference</i>
Tree	<a href="#">oper-group</a>
Reference	<b>configure</b> <a href="#">service</a> <a href="#">oper-group</a> <i>string</i>
Introduced	19.10.R1
Platforms	All

**orig-ip** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Originating IP address advertised in the ES route
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp</a> <a href="#">evpn</a> <a href="#">ethernet-segment</a> <i>string</i> <b>orig-ip</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">orig-ip</a>
Introduced	16.0.R4
Platforms	All

**pbb**

Synopsis	Enter the <b>pbb</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp</a> <a href="#">evpn</a> <a href="#">ethernet-segment</a> <i>string</i> <b>pbb</b>
Tree	<a href="#">pbb</a>
Introduced	16.0.R1
Platforms	All

**es-bmac-table-size** *number*

Synopsis	Size of virtual backbone mac table for this ethernet segment
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp</a> <a href="#">evpn</a> <a href="#">ethernet-segment</a> <i>string</i> <b>pbb</b> <b>es-bmac-table-size</b> <i>number</i>
Tree	<a href="#">es-bmac-table-size</a>

Range	1 to 511999
Default	8
Introduced	16.0.R1
Platforms	All

### source-bmac-lsb *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Least significant bytes of the B-MAC for packet source
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp evpn ethernet-segment</a> <i>string</i> <a href="#">pbb</a> <a href="#">source-bmac-lsb</a> <i>string</i>

Introduced	16.0.R1
Platforms	All

### route-next-hop (*ipv4-address-no-zone | ipv6-address-no-zone*)

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Next-hop IP address for ES and AD per ES routes
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp evpn ethernet-segment</a> <i>string</i> <a href="#">route-next-hop</a> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> )
Tree	<a href="#">route-next-hop</a>
Introduced	16.0.R4
Platforms	All

### type *keyword*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Ethernet Segment type
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp evpn ethernet-segment</a> <i>string</i> <a href="#">type</a> <i>keyword</i>

Tree	<a href="#">type</a>
Options	none, virtual
Default	none
Introduced	16.0.R1
Platforms	All

### **etree-leaf-label** *boolean*

Synopsis	Enable E-Tree leaf label for PE
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp</a> <a href="#">evpn</a> <a href="#">etree-leaf-label</a> <i>boolean</i>
Tree	<a href="#">etree-leaf-label</a>
Description	When configured to <b>true</b> , this command enables EVPN Ethernet-Tree (E-Tree) VPLS services on the router (not B-VPLS), allocates an E-Tree leaf label for the Provider Edge (PE) device, and configures the ILM entry. This command ensures that in-flight traffic can perform an ILM entry lookup at any time, and avoids discards when administratively enabling or disabling services, or reduces the timing window so that it does not occur during normal operation or configuration. The value for the E-Tree leaf label is set via the <b>etree-leaf-label-value</b> command.  When configured to <b>false</b> , PE leaf labels are not supported.
Default	false
Introduced	16.0.R1
Platforms	All

### **etree-leaf-label-value** (*number* | *keyword*)

Synopsis	Global E-tree leaf label for PE in EVPN E-Tree services
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp</a> <a href="#">evpn</a> <a href="#">etree-leaf-label-value</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">etree-leaf-label-value</a>
Range	32 to 524526
Options	dynamic
Default	dynamic
Introduced	21.7.R1
Platforms	All

### **ip-prefix-routes**

Synopsis	Enter the <b>ip-prefix-routes</b> context
----------	---

Context	<b>configure service system bgp evpn ip-prefix-routes</b>
Tree	<a href="#">ip-prefix-routes</a>
Introduced	21.2.R1
Platforms	All

### **d-path-length-ignore** *boolean*

Synopsis	Ignore D-PATH length for BGP path selection of EVPN-IFF
Context	<b>configure service system bgp evpn ip-prefix-routes d-path-length-ignore</b> <i>boolean</i>
Tree	<a href="#">d-path-length-ignore</a>
Default	false
Introduced	21.10.R1
Platforms	All

### **iff-attribute-uniform-propagation** *boolean*

Synopsis	Enable uniform propagation of BGP attributes
Context	<b>configure service system bgp evpn ip-prefix-routes iff-attribute-uniform-propagation</b> <i>boolean</i>
Tree	<a href="#">iff-attribute-uniform-propagation</a>
Description	<p>When configured to <b>true</b>, this command enables the uniform propagation of BGP attributes for EVPN-IFF (Interfaceful) routes. EVPN-IFF is used in R-VPLS services with <b>bgp-evpn ip-route-advertisement</b>. When enabled, the received EVPN-IFF routes for the R-VPLS can be propagated with the original BGP path attributes into EVPN-IFL, IPVPN, EVPN-IFF (in other R-VPLS services) or BGP IP routes advertised for the attached VPRN. The command also enables the attribute propagation in the opposite direction, for example, from EVPN-IFL/IPVPN/IP/EVPN-IFF routes into EVPN-IFF routes.</p> <p>The propagation follows the uniform mode defined in draft-ietf-bess-evpn-ipvpn-interworking.</p> <p>When configured to <b>false</b>, this command re-originates the BGP Path Attributes when propagating EVPN-IFF routes into other Inter-Subnet Forwarding families.</p>
Default	false
Introduced	21.2.R1
Platforms	All

**iff-bgp-path-selection** *boolean*

Synopsis	Enable BGP path selection for EVPN-IFF routes
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp</a> <a href="#">evpn</a> <a href="#">ip-prefix-routes</a> <a href="#">iff-bgp-path-selection</a> <i>boolean</i>
Tree	<a href="#">iff-bgp-path-selection</a>
Description	<p>When configured to <b>true</b>, this command enables the EVPN-IFF routes to be ordered and selected in a similar manner as IPVPN or EVPN-IFL routes, that is, based on the regular BGP path selection process.</p> <p>When configured to <b>false</b>, this command makes the system order EVPN-IFF routes based on their {RVPLS Iindex, RD, Ethernet Tag}. For example, if two EVPN-IFF routes are received for the same prefix on the same R-VPLS and with different RDs (Route Distinguishers), the route with the lowest RD is selected.</p>
Default	false
Introduced	21.2.R1
Platforms	All

**multicast-leave-sync-propagation** *number*

Synopsis	Multicast leave group synchronization delay
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp</a> <a href="#">evpn</a> <a href="#">multicast-leave-sync-propagation</a> <i>number</i>
Tree	<a href="#">multicast-leave-sync-propagation</a>
Description	<p>This command configures the additional amount of time that the system waits before removing a multicast state that was synchronized in an Ethernet Segment via Multicast Join or Leave Synch routes. This value represents a delta corresponding to the time it takes for a BGP advertisement to propagate to ES peers.</p> <p>The node triggering the route computes the maximum response time as the product of the locally configured values, Last Member Query Count and Last Member Query Interval, and adds the delta value to the maximum response time. The query count value is configured in the <b>configure services vrpn igmp robust-count</b> command. The query interval value is taken from the <b>configure service vpls sap igmp-snooping query-last-member-interval</b> or the <b>configure service vpls spoke-sdp igmp-snooping query-last-member-interval</b> configuration, depending on the Ethernet Segment.</p> <p>Increasing the maximum response time by this value can help minimize the churn of removing and recreating the state on the node.</p> <p>This value should be configured consistently in all ES peers.</p>
Range	0 to 300
Units	seconds
Default	5
Introduced	20.7.R1
Platforms	All

### **route-distinguisher** *string*

Synopsis	Route distinguisher for ES routes
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp evpn</a> <a href="#">route-distinguisher</a> <i>string</i>
Tree	<a href="#">route-distinguisher</a>
Introduced	16.0.R1
Platforms	All

### **bgp-auto-rd-range**

Synopsis	Enter the <b>bgp-auto-rd-range</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp-auto-rd-range</a>
Tree	<a href="#">bgp-auto-rd-range</a>
Introduced	16.0.R1
Platforms	All

### **community-value**

Synopsis	Enter the <b>community-value</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp-auto-rd-range</a> <a href="#">community-value</a>
Tree	<a href="#">community-value</a>
Introduced	16.0.R1
Platforms	All

### **end** *number*

Synopsis	Upper bound of BGP route distinguisher community range
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">bgp-auto-rd-range</a> <a href="#">community-value</a> <a href="#">end</a> <i>number</i>
Tree	<a href="#">end</a>
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

**start number**

Synopsis	Lower bound of BGP route distinguisher community range
Context	<b>configure service system bgp-auto-rd-range community-value start number</b>
Tree	<a href="#">start</a>
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

**ip-address string**

Synopsis	IP address used for selecting the route distinguisher
Context	<b>configure service system bgp-auto-rd-range ip-address string</b>
Tree	<a href="#">ip-address</a>
Introduced	16.0.R1
Platforms	All

**extended-default-qinq-sap-lookup boolean**

Synopsis	Control the forwarding of the packets
Context	<b>configure service system extended-default-qinq-sap-lookup boolean</b>
Tree	<a href="#">extended-default-qinq-sap-lookup</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-1, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, VSR

**fdb**

Synopsis	Enter the <b>fdb</b> context
Context	<b>configure service system fdb</b>
Tree	<a href="#">fdb</a>
Introduced	16.0.R1
Platforms	All

**table-size number**

Synopsis	Maximum FDB entries in the system
----------	-----------------------------------

Context	<b>configure service system fdb table-size</b> <i>number</i>
Tree	<a href="#">table-size</a>
Description	This command determines the maximum number of MAC entries in the forwarding database (FDB) for the system instance on this node.  Do not configure the <b>table-size</b> command. This command is automatically initialized by SR OS on boot up.
Range	4095 to 2047999
Introduced	16.0.R1
Platforms	All

### gre-eth-bridged

Synopsis	Enter the <b>gre-eth-bridged</b> context
Context	<b>configure service system gre-eth-bridged</b>
Tree	<a href="#">gre-eth-bridged</a>
Introduced	16.0.R1
Platforms	All

### tunnel-termination [[ip-address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Enter the <b>tunnel-termination</b> list instance
Context	<b>configure service system gre-eth-bridged tunnel-termination</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">tunnel-termination</a>
Introduced	16.0.R1
Platforms	All

### [[ip-address](#)] (*ipv4-address-no-zone* | *ipv6-address-no-zone*)

Synopsis	Tunnel end-point IP address in the SR OS node
Context	<b>configure service system gre-eth-bridged tunnel-termination</b> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">tunnel-termination</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## fpe-id reference

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	FPE ID
Context	<b>configure service system gre-eth-bridged tunnel-termination</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> ) <b>fpe-id reference</b>
Tree	<b>fpe-id</b>
Reference	<b>configure fwd-path-ext fpe number</b>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

## pw-port-list

Synopsis	Enter the <b>pw-port-list</b> context
Context	<b>configure service system pw-port-list</b>
Tree	<b>pw-port-list</b>
Introduced	16.0.R6
Platforms	VSR

## port [**port-id**] *string*

Synopsis	Add a list entry for <b>port</b>
Context	<b>configure service system pw-port-list port string</b>
Tree	<b>port</b>
Introduced	16.0.R6
Platforms	VSR

## [**port-id**] *string*

Synopsis	Port ID
Context	<b>configure service system pw-port-list port string</b>
Tree	<b>port</b>

Notes	This element is part of a list key.
Introduced	16.0.R6
Platforms	VSR

### **vpn-gre-source-ip** *string*

Synopsis	VPN GRE source ip-address
Context	<b>configure</b> <a href="#">service</a> <a href="#">system</a> <a href="#">vpn-gre-source-ip</a> <i>string</i>
Tree	<a href="#">vpn-gre-source-ip</a>
Introduced	16.0.R4

**[name]** *string*

Synopsis	UPnP policy name
Context	<b>configure service upnp policy</b> <i>string</i>
Tree	<i>policy</i>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**description** *string*

Synopsis	Text description
Context	<b>configure service upnp policy</b> <i>string description</i> <i>string</i>
Tree	<i>description</i>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**mapping-limit** *number*

Synopsis	Maximum number of UPnP mappings per subscriber
Context	<b>configure service upnp policy</b> <i>string mapping-limit</i> <i>number</i>
Tree	<i>mapping-limit</i>
Range	1 to 256
Default	256
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**port** *number*

Synopsis	HTTP TCP port to which the UPnP IGD listens
Context	<b>configure service upnp policy</b> <i>string port</i> <i>number</i>
Tree	<i>port</i>
Range	1 to 65535
Default	5000

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**strict-mode** *boolean*

Synopsis	Enable UPnP strict mode
Context	<b>configure</b> <a href="#">service upnp policy</a> <i>string</i> <b>strict-mode</b> <i>boolean</i>
Tree	<a href="#">strict-mode</a>
Description	When configured to <b>true</b> , this command enables UPnP strict mode, in which the system only allows changes to an existing UPnP mapping if the request comes from the same UPnP client.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**vpls** [[service-name](#)] *string*

Synopsis	Enter the <b>vpls</b> list instance
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i>
Tree	<a href="#">vpls</a>
Introduced	16.0.R1
Platforms	All

**[service-name]** *string*

Synopsis	Administrative service name
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i>
Tree	<a href="#">vpls</a>
String Length	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the service
----------	-------------------------------------

Context	<b>configure service vpls string admin-state keyword</b>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

### **bgp [bgp-instance] number**

Synopsis	Enter the <b>bgp</b> list instance
Context	<b>configure service vpls string bgp number</b>
Tree	<b>bgp</b>
Introduced	16.0.R1
Platforms	All

### **[bgp-instance] number**

Synopsis	BGP instance
Context	<b>configure service vpls string bgp number</b>
Tree	<b>bgp</b>
Range	1 to 2
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **adv-service-mtu number**

Synopsis	Advertised service MTU value
Context	<b>configure service vpls string bgp number adv-service-mtu number</b>
Tree	<b>adv-service-mtu</b>
Description	This command configures the MTU signaled value used in the BGP for the service. When configured, the router uses the value for signaling and for validation with the received MTU instead of the service MTU. However, the value does not affect the locally enforced value, which is still based on the service MTU.
Range	0 to 9782
Introduced	22.2.R1

Platforms All

### **pw-template-binding** [[pw-template-name](#)] *reference*

### **bfd-template** *reference*

Synopsis BFD template name for PW-Template binding

Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp number</a> <a href="#">pw-template-binding reference</a> <a href="#">bfd-template reference</a>
Tree	<a href="#">bfd-template</a>
Reference	<b>configure</b> <a href="#">bfd</a> <a href="#">bfd-template</a> <a href="#">string</a>
Introduced	16.0.R1
Platforms	All

### **import-rt** *string*

Synopsis	Import route-target communities
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp number</a> <a href="#">pw-template-binding reference</a> <a href="#">import-rt string</a>
Tree	<a href="#">import-rt</a>
String Length	10 to 28
Max. Instances	5
Introduced	16.0.R1
Platforms	All

### **monitor-oper-group** *reference*

Synopsis	Operational group to monitor
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp number</a> <a href="#">pw-template-binding reference</a> <a href="#">monitor-oper-group reference</a>
Tree	<a href="#">monitor-oper-group</a>
Reference	<b>configure</b> <a href="#">service oper-group</a> <a href="#">string</a>
Notes	The following elements are part of a choice: <b>monitor-oper-group</b> or <b>oper-group</b> .
Introduced	16.0.R1
Platforms	All

### **oper-group** *reference*

Synopsis	Operational group
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp number</a> <a href="#">pw-template-binding reference</a> <a href="#">oper-group reference</a>
Tree	<a href="#">oper-group</a>
Reference	<b>configure</b> <a href="#">service oper-group</a> <a href="#">string</a>

Notes	The following elements are part of a choice: <b>monitor-oper-group</b> or <b>oper-group</b> .
Introduced	16.0.R1
Platforms	All

### **split-horizon-group** *string*

Synopsis	Split horizon group
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp number</a> <a href="#">pw-template-binding reference</a> <a href="#">split-horizon-group string</a>
Tree	<a href="#">split-horizon-group</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

### **route-distinguisher** (*keyword* | *vpn-route-distinguisher*)

Synopsis	High-order 6 bytes that are used as string to compose VSI-ID for use in NLRI
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp number</a> <a href="#">route-distinguisher (keyword   vpn-route-distinguisher)</a>
Tree	<a href="#">route-distinguisher</a>
Options	auto-rd
Introduced	16.0.R1
Platforms	All

### **route-target**

Synopsis	Enter the <b>route-target</b> context
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp number</a> <a href="#">route-target</a>
Tree	<a href="#">route-target</a>
Introduced	16.0.R1
Platforms	All

### **export** *string*

Synopsis	Extended community name for default import policy
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp number</a> <a href="#">route-target</a> <a href="#">export string</a>

Tree	<a href="#">export</a>
String Length	10 to 28
Introduced	16.0.R1
Platforms	All

### **import string**

Synopsis	Extended community name for default import policy
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp number route-target import string</a>
Tree	<a href="#">import</a>
String Length	10 to 28
Introduced	16.0.R1
Platforms	All

### **vsi-export reference**

Synopsis	VSI export policies
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp number vsi-export reference</a>
Tree	<a href="#">vsi-export</a>
Reference	<b>configure</b> <a href="#">policy-options policy-statement string</a>
Max. Instances	5
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **vsi-import reference**

Synopsis	VSI import policies
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp number vsi-import reference</a>
Tree	<a href="#">vsi-import</a>
Reference	<b>configure</b> <a href="#">policy-options policy-statement string</a>
Max. Instances	5
Notes	This element is ordered by the user.

Introduced	16.0.R1
Platforms	All

## bgp-ad

Synopsis	Enable the <b>bgp-ad</b> context
Context	<b>configure service vpls string bgp-ad</b>
Tree	<a href="#">bgp-ad</a>
Introduced	16.0.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of BGP Auto-Discovery
Context	<b>configure service vpls string bgp-ad admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

## vpls-id *string*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	VPLS identifier as a 8-byte route distinguisher
Context	<b>configure service vpls string bgp-ad vpls-id string</b>
Tree	<a href="#">vpls-id</a>
Introduced	16.0.R1
Platforms	All

**vsi-id-prefix** *string***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	VSI prefix value
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-ad vsi-id-prefix string</a>
Tree	<a href="#">vsi-id-prefix</a>
Introduced	16.0.R1
Platforms	All

**bgp-evpn**

Synopsis	Enable the <b>bgp-evpn</b> context
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn</a>
Tree	<a href="#">bgp-evpn</a>
Introduced	16.0.R1
Platforms	All

**accept-ivpls-evpn-flush** *boolean*

Synopsis	Accept and process non-zero ethernet-tag MAC routes
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn accept-ivpls-evpn-flush boolean</a>
Tree	<a href="#">accept-ivpls-evpn-flush</a>
Default	false
Introduced	16.0.R1
Platforms	All

**evi** *number*

Synopsis	EVPN ID
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn evi number</a>
Tree	<a href="#">evi</a>
Description	This command configures a 2-byte EVPN instance (EVI) unique in the system. It is used for the service-carving algorithm for multi-homing and auto-deriving route target and route distinguishers.

If not specified, the EVPN ID value is zero and no route distinguisher or route targets are auto-derived from it.

If the EVI ID value is specified and no other **route-distinguisher** or **route-target** is configured in the service, the following rules apply:

- the route distinguisher is derived from <system\_ip>:evi
- the route target is derived from <autonomous-system>:evi

If VSI import and export policies are configured, the route target must be configured in the policies and those values take precedence over the auto-derived route targets. If **bgp-ad vpls-id** and **bgp-evpn evi** are both configured on the same service, the VPLS ID auto-derived route target or route distinguisher takes precedence over the values auto-derived from the EVI. Use the **show service id bgp** command to display the operational route target for a service.

Range	1 to 16777215
Introduced	16.0.R1
Platforms	All

### **ignore-mtu-mismatch** *boolean*

Synopsis	Ignore MTU mismatch
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn ignore-mtu-mismatch</a> <i>boolean</i>
Tree	<a href="#">ignore-mtu-mismatch</a>
Description	When configured to <b>true</b> , the system ignores the received Layer 2 MTU in the L2 Attributes extended community of the IMET route for a peer.  When configured to <b>false</b> , the system compares the local service MTU against the received Layer 2 MTU and if there is a mismatch, keeps the EVPN destination to the peer with operational state down.
Default	false
Introduced	23.3.R1
Platforms	All

### **incl-mcast-orig-ip** *string*

Synopsis	Originating IP address
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn incl-mcast-orig-ip</a> <i>string</i>
Tree	<a href="#">incl-mcast-orig-ip</a>
Introduced	16.0.R1
Platforms	All

**isid-route-target**

Synopsis	Enter the <b>isid-route-target</b> context
Context	<b>configure service vpls string bgp-evpn isid-route-target</b>
Tree	<a href="#">isid-route-target</a>
Introduced	16.0.R1
Platforms	All

**range [start] number**

Synopsis	Enter the <b>range</b> list instance
Context	<b>configure service vpls string bgp-evpn isid-route-target range number</b>
Tree	<a href="#">range</a>
Max. Instances	8192
Introduced	16.0.R1
Platforms	All

**[start] number**

Synopsis	Lower bound of the ISID range
Context	<b>configure service vpls string bgp-evpn isid-route-target range number</b>
Tree	<a href="#">range</a>
Range	1 to 16777215
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**end number**

Synopsis	Upper bound of the ISID range
Context	<b>configure service vpls string bgp-evpn isid-route-target range number end number</b>
Tree	<a href="#">end</a>
Range	1 to 16777215
Notes	This element is mandatory.
Introduced	16.0.R1

Platforms All

### route-target *string*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Route for the ISID range

Context **configure** [service vpls string](#) [bgp-evpn isid-route-target range number route-target string](#)

Tree [route-target](#)

String Length 10 to 28

Introduced 16.0.R1

Platforms All

### type *keyword*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis Method used to support the PBB-EVPN ISID-based route target advertisement

Context **configure** [service vpls string](#) [bgp-evpn isid-route-target range number type keyword](#)

Tree [type](#)

Options auto, configured

Default auto

Introduced 16.0.R1

Platforms All

### mac-duplication

Synopsis Enter the **mac-duplication** context

Context **configure** [service vpls string](#) [bgp-evpn mac-duplication](#)

Tree [mac-duplication](#)

Introduced 16.0.R1

Platforms All

**blackhole** *boolean*

Synopsis	Use duplicated MAC as a black-hole MAC
Context	<b>configure service vpls string</b> <a href="#">bgp-evpn mac-duplication blackhole</a> <i>boolean</i>
Tree	<a href="#">blackhole</a>
Default	false
Introduced	16.0.R1
Platforms	All

**detect**

Synopsis	Enter the <b>detect</b> context
Context	<b>configure service vpls string</b> <a href="#">bgp-evpn mac-duplication detect</a>
Tree	<a href="#">detect</a>
Description	Commands in this context monitor the number of moves of a MAC address for a period of time (window).
Introduced	16.0.R1
Platforms	All

**num-moves** *number*

Synopsis	BGP EVPN MAC duplication detection number of moves
Context	<b>configure service vpls string</b> <a href="#">bgp-evpn mac-duplication detect num-moves</a> <i>number</i>
Tree	<a href="#">num-moves</a>
Range	3 to 10
Default	5
Introduced	16.0.R1
Platforms	All

**trusted-mac-move-factor** *number*

Synopsis	Trusted MAC move factor
Context	<b>configure service vpls string</b> <a href="#">bgp-evpn mac-duplication detect trusted-mac-move-factor</a> <i>number</i>
Tree	<a href="#">trusted-mac-move-factor</a>

Description	This command configures the factor by which the number of moves is multiplied when detecting a MAC duplication event for trusted MACs. For example, if the number of moves is 5 and the trusted MAC move factor is 3, 5 moves, within the window, is enough to declare a non-trusted MAC as duplicate. However, 15 moves are needed to declare a trusted MAC as duplicate.  By default the factor for a trusted MAC is the same as for a non-trusted MAC. This provides a backwards compatible solution upon upgrade of the node.
Range	1 to 10
Default	1
Introduced	23.7.R1
Platforms	All

### **window** *number*

Synopsis	BGP EVPN MAC duplication detection window
Context	<b>configure</b> <i>service vpls string</i> <b>bgp-evpn mac-duplication detect window</b> <i>number</i>
Tree	<a href="#">window</a>
Range	1 to 15
Units	minutes
Default	3
Introduced	16.0.R1
Platforms	All

### **retry** (*number* | *keyword*)

Synopsis	BGP EVPN MAC duplication retry time
Context	<b>configure</b> <i>service vpls string</i> <b>bgp-evpn mac-duplication retry</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">retry</a>
Range	2 to 60
Units	minutes
Options	never
Default	9
Introduced	16.0.R1
Platforms	All

**trusted-mac-time** *number*

Synopsis	Trusted MAC time
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn mac-duplication trusted-mac-time</a> <i>number</i>
Tree	<a href="#">trusted-mac-time</a>
Description	This command configures how long a MAC address needs to stay in the FDB as type learned without being flushed or changed in its type so the MAC is declared as trusted for the MAC duplication procedures. If the MAC changes from SAP to SAP within the same VPLS service and node, the MAC does not reset its trusted MAC timer.
Range	1 to 15
Units	minutes
Default	5
Introduced	23.7.R1
Platforms	All

**mpls** [[bgp-instance](#)] *number*

Synopsis	Enter the <b>mpls</b> list instance
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn mpls</a> <i>number</i>
Tree	<a href="#">mpls</a>
Introduced	16.0.R1
Platforms	All

**[bgp-instance]** *number*

Synopsis	BGP instance
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn mpls</a> <i>number</i>
Tree	<a href="#">mpls</a>
Range	1 to 2
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of BGP EVPN MPLS
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn mpls</a> <i>number</i> <a href="#">admin-state</a> <i>keyword</i>

Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

### **auto-bind-tunnel**

Synopsis	Enter the <b>auto-bind-tunnel</b> context
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn mpls number</a> <b>auto-bind-tunnel</b>
Tree	<a href="#">auto-bind-tunnel</a>
Introduced	16.0.R1
Platforms	All

### **allow-flex-algo-fallback** *boolean*

Synopsis	Enable flexible algorithm fallback
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn mpls number</a> <b>auto-bind-tunnel</b> <b>allow-flex-algo-fallback</b> <i>boolean</i>
Tree	<a href="#">allow-flex-algo-fallback</a>
Description	When configured to <b>true</b> , a BGP router with a Flex-Algorithm action configured (via the <b>configure policy-options policy-statement entry action flex-algo</b> command) can resolve to a tunnel with algorithm 0 if no target Flex-Algorithm tunnel is available.  When configured to <b>false</b> , the BGP router can resolve only to the intended Flex-Algorithm tunnel, which may cause traffic loss if no corresponding Flex-Algorithm tunnel is available.
Default	false
Introduced	20.10.R1
Platforms	All

### **ecmp** *number*

Synopsis	Maximum ECMP routes information
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn mpls number</a> <b>auto-bind-tunnel</b> <b>ecmp</b> <i>number</i>
Tree	<a href="#">ecmp</a>
Range	1 to 32
Default	1

Introduced 19.10.R1  
 Platforms All

### **enforce-strict-tunnel-tagging** *boolean*

Synopsis Enable/disable enforcement of strict tunnel tagging  
 Context **configure** [service vpls string](#) [bgp-evpn mpls number](#) [auto-bind-tunnel enforce-strict-tunnel-tagging](#) *boolean*  
 Tree [enforce-strict-tunnel-tagging](#)  
 Default false  
 Introduced 16.0.R4  
 Platforms All

### **resolution** *keyword*

Synopsis Resolution method for tunnel selection  
 Context **configure** [service vpls string](#) [bgp-evpn mpls number](#) [auto-bind-tunnel resolution](#) *keyword*  
 Tree [resolution](#)  
 Options none, filter, any  
 Default none  
 Introduced 16.0.R1  
 Platforms All

### **resolution-filter**

Synopsis Enter the **resolution-filter** context  
 Context **configure** [service vpls string](#) [bgp-evpn mpls number](#) [auto-bind-tunnel resolution-filter](#)  
 Tree [resolution-filter](#)  
 Introduced 16.0.R1  
 Platforms All

### **bgp** *boolean*

Synopsis Use BGP tunneling for next-hop resolution

Context	<b>configure service vpls string</b> <a href="#">bgp-evpn mpls number auto-bind-tunnel resolution-filter</a> <a href="#">bgp boolean</a>
Tree	<a href="#">bgp</a>
Description	When configured to <b>true</b> , BGP searches the BGP LSP for the address of the BGP next hop. When configured to <b>false</b> , BGP tunneling is not used and inter-area or inter-as prefixes are not resolved.
Default	false
Introduced	16.0.R1
Platforms	All

### **ldp boolean**

Synopsis	Use LDP tunneling for next-hop resolution
Context	<b>configure service vpls string</b> <a href="#">bgp-evpn mpls number auto-bind-tunnel resolution-filter</a> <a href="#">ldp boolean</a>
Tree	<a href="#">ldp</a>
Description	When configured to <b>true</b> , BGP searches for an LDP LSP with a FEC prefix corresponding to the address of the BGP next hop. When configured to <b>false</b> , LDP tunneling is not used for next-hop resolution.
Default	false
Introduced	16.0.R1
Platforms	All

### **mpls-fwd-policy boolean**

Synopsis	Use MPLS forwarding policy for next-hop resolution
Context	<b>configure service vpls string</b> <a href="#">bgp-evpn mpls number auto-bind-tunnel resolution-filter</a> <a href="#">mpls-fwd-policy boolean</a>
Tree	<a href="#">mpls-fwd-policy</a>
Description	When configured to <b>true</b> , BGP uses the MPLS forwarding policy to determine the address of the BGP next hop. When configured to <b>false</b> , the MPLS forwarding policy is not used for next-hop resolution.
Default	false
Introduced	19.5.R1
Platforms	All

**rib-api boolean**

Synopsis	Use RIB API gRPC service for next-hop resolution
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn mpls number</a> <a href="#">auto-bind-tunnel</a> <a href="#">resolution-filter</a> <a href="#">rib-api boolean</a>
Tree	<a href="#">rib-api</a>
Description	When configured to <b>true</b> , BGP uses tunnels programmed using the RIB API gRPC service to resolve the next hops of routes imported into the EVPN service.  When configured to <b>false</b> , the RIB API service tunnels are not used for next-hop resolution.
Default	false
Introduced	19.5.R1
Platforms	All

**rsvp boolean**

Synopsis	Use RSVP tunneling for next-hop resolution
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn mpls number</a> <a href="#">auto-bind-tunnel</a> <a href="#">resolution-filter</a> <a href="#">rsvp boolean</a>
Tree	<a href="#">rsvp</a>
Description	When configured to <b>true</b> , BGP searches the best metric RSVP LSP to determine the address of the BGP next hop. This address can correspond to the system interface or to another loopback interface used by the BGP instance on the remote node. The LSP metric is provided by MPLS in the tunnel table. In the case of multiple RSVP LSPs with the same lowest metric, BGP selects the LSP with the lowest tunnel ID.  When configured to <b>false</b> , the RSVP LSP is not used for next-hop resolution.
Default	false
Introduced	16.0.R1
Platforms	All

**sr-isis boolean**

Synopsis	Use IS-IS SR tunneling for next-hop resolution
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn mpls number</a> <a href="#">auto-bind-tunnel</a> <a href="#">resolution-filter</a> <a href="#">sr-isis boolean</a>
Tree	<a href="#">sr-isis</a>
Description	When configured to <b>true</b> , BGP uses an IS-IS tunnel type to determine the address of the BGP next hop.

The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered IS-IS instance.

When configured to **false**, IS-IS tunneling is not used for next-hop resolution.

Default	false
Introduced	16.0.R1
Platforms	All

### **sr-ospf** *boolean*

Synopsis	Use OSPF SR tunneling for next-hop resolution
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn mpls number</a> <a href="#">auto-bind-tunnel resolution-filter sr-ospf</a> <i>boolean</i>
Tree	<a href="#">sr-ospf</a>
Description	When configured to <b>true</b> , BGP uses an OSPF tunnel type to determine the address of the BGP next hop.  The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered OSPF instance.  When configured to <b>false</b> , OSPF tunneling is not used for next-hop resolution.
Default	false
Introduced	16.0.R1
Platforms	All

### **sr-ospf3** *boolean*

Synopsis	Use OSPFv3 SR tunneling for next-hop resolution
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn mpls number</a> <a href="#">auto-bind-tunnel resolution-filter sr-ospf3</a> <i>boolean</i>
Tree	<a href="#">sr-ospf3</a>
Description	When configured to <b>true</b> , BGP uses an OSPF3 tunnel type to determine the address of the BGP next hop.  The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered OSPF3 instance.  When configured to <b>false</b> , OSPF3 tunneling is not used for next-hop resolution.
Default	false
Introduced	19.10.R1
Platforms	All

**sr-policy** *boolean*

Synopsis	Use SR policies for next-hop resolution
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn mpls number</a> <a href="#">auto-bind-tunnel</a> <a href="#">resolution-filter sr-policy</a> <i>boolean</i>
Tree	<a href="#">sr-policy</a>
Description	When configured to <b>true</b> , this command instructs BGP to use an SR policy to determine the address of the BGP next hop. The SR policy search criteria includes a non-null endpoint and color value that matches the BGP next hop and color extended community value, respectively, of the EVPN route.  When configured to <b>false</b> , SR policies are not used for next-hop resolution.
Default	false
Introduced	19.5.R1
Platforms	All

**sr-te** *boolean*

Synopsis	Use SR-TE tunneling for next-hop resolution
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn mpls number</a> <a href="#">auto-bind-tunnel</a> <a href="#">resolution-filter sr-te</a> <i>boolean</i>
Tree	<a href="#">sr-te</a>
Description	When configured to <b>true</b> , BGP uses an SR-TE tunnel type to determine the address of the BGP next hop.  The SR tunnel to the BGP next hop is selected in the TTM from the lowest-numbered tunnel ID.  When configured to <b>false</b> , SR-TE tunneling is not used for next-hop resolution.
Default	false
Introduced	16.0.R1
Platforms	All

**udp** *boolean*

Synopsis	Use MPLS over UDP tunneling for next-hop resolution
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn mpls number</a> <a href="#">auto-bind-tunnel</a> <a href="#">resolution-filter udp</a> <i>boolean</i>
Tree	<a href="#">udp</a>
Description	When configured to <b>true</b> , BGP uses an MPLS over UDP tunnel type to determine the address of the BGP next hop.

When configured to **false**, MPLS over UDP tunneling is not used for next-hop resolution.

Default	false
Introduced	16.0.R1
Platforms	All

### **weighted-ecmp** *boolean*

Synopsis	Allow weighted load balancing
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn mpls number</a> <a href="#">auto-bind-tunnel</a> <b>weighted-ecmp</b> <i>boolean</i>
Tree	<a href="#">weighted-ecmp</a>
Description	When configured to <b>true</b> , this router enables weighted ECMP for packets using tunnels that a VPLS or Epipe automatically binds to. Packets are sprayed across LSPs in the ECMP according to the outcome of the hash algorithm and the configured load balancing weight of each LSP.  When configured to <b>false</b> , this command disables weighted ECMP for next-hop tunnel selection.
Default	false
Introduced	22.7.R1
Platforms	All

### **control-word** *boolean*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable control word support
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn mpls number</a> <b>control-word</b> <i>boolean</i>
Tree	<a href="#">control-word</a>
Description	When configured to <b>true</b> , the router enables the transmission and reception of the control word for all EVPN-MPLS destinations at the same time.
Default	false
Introduced	16.0.R1
Platforms	All

**default-route-tag** *string***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Default route tag
Context	<b>configure</b> <i>service vpls string bgp-evpn mpls number default-route-tag string</i>
Tree	<i>default-route-tag</i>
Description	<p>This command configures a route tag that is used when sending a route to the BGP application (for the corresponding service and BGP instance). If the corresponding BGP instance is enabled, the command cannot be changed.</p> <p>When used for BGP EVPN contexts, only one route tag can be passed to BGP for matching on export policies. In case of a conflict with other route tags pushed by EVPN, the default route tag has the least priority.</p> <p>The following are examples of the conflict priority handling:</p> <ul style="list-style-type: none"> <li>• If a service is configured with both <b>default-route-tag</b> <i>X</i> and <b>proxy-arp evpn-route-tag</b> <i>Y</i>, the EVPN uses route tag <i>Y</i> when sending EVPN proxy-arp routes to the BGP RIB for advertisement.</li> <li>• If a given IP-prefix route is tagged in the route-table with tag <i>A</i> and the R-VPLS, in which the route is advertised, uses <i>B</i> as the <b>default-route-tag</b>, then EVPN keeps tag <i>A</i> when sending the route to the BGP RIB.</li> </ul> <p>The <b>default-route-tag</b> configuration is only supported on EVPN and IP-VPN service routes. The route tag for ES and AD per-ES routes is always zero.</p>
Introduced	16.0.R4
Platforms	All

**dynamic-egress-label-limit** *boolean*

Synopsis	Enables dynamic egress label limit
Context	<b>configure</b> <i>service vpls string bgp-evpn mpls number dynamic-egress-label-limit boolean</i>
Tree	<i>dynamic-egress-label-limit</i>
Description	<p>When configured to <b>true</b>, this command relaxes the egress MPLS label limit check when resolving BGP next hops in the tunnel table.</p> <p>For VPRN services, the OAM label is never computed and, therefore, one more egress label is allowed.</p> <p>For EVPN (Epipe and VPLS) services, the system only computes the control word and ESI label if they are used. For the control word, the system reduces the egress label limit by one label if the control word is configured in the service. When configured, the ESI label is not counted for Epipes or VPLS services without an ES.</p>

When configured to **false** this command, for EVPN, Epipe, and VPLS services, always accounts for the ESI label and control word.

Default	false
Introduced	22.2.R1
Platforms	All

### **ecmp number**

Synopsis	Maximum ECMP routes information
Context	<b>configure service vpls string bgp-evpn mpls number ecmp number</b>
Tree	<a href="#">ecmp</a>
Range	1 to 32
Default	1
Introduced	16.0.R1
Platforms	All

### **entropy-label boolean**

Synopsis	Allow use of entropy labels for spoke SDPs
Context	<b>configure service vpls string bgp-evpn mpls number entropy-label boolean</b>
Tree	<a href="#">entropy-label</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **evi-three-byte-auto-rt boolean**

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Auto-derive the BGP EVPN route target
Context	<b>configure service vpls string bgp-evpn mpls number evi-three-byte-auto-rt boolean</b>
Tree	<a href="#">evi-three-byte-auto-rt</a>
Description	When configured to <b>true</b> , the BGP-EVPN instance import and export route target is auto-derived as described in RFC 8365 (Global-Administrator:A/Type/D-ID/Service-ID). Where:

- Global Administrator – is the configured 2-octet AS number; if the configured ASN exceeds the 2 byte limit, the low order 16-bit value is taken
- A=0 (for auto-derivation)
- Type=4 (EVI-based route-target)
- D-ID= [1..2] – encodes the BGP instance, which allows the auto-derivation of different route-targets in multi-instance services; the value is inherited from the corresponding BGP instance
- Service ID=3-octet EVI

When configured to **false**, route target derivation is not allowed.

Default	false
Introduced	21.10.R1
Platforms	All

## **fdb**

Synopsis	Enter the <b>fdb</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">bgp-evpn</a> <a href="#">mpls</a> <i>number</i> <b>fdb</b>

**advertise-ingress-replication** *boolean*

Synopsis	BGP EVPN IMET-IR route advertisement
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn routes incl-mcast advertise-ingress-replication boolean</a>

Tree	<a href="#">advertise-ingress-replication</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **advertise-l2-attributes** *boolean*

Synopsis	Advertise Layer 2 attributes
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn routes incl-mcast</a> <b>advertise-l2-attributes</b> <i>boolean</i>
Tree	<a href="#">advertise-l2-attributes</a>

Description When configured to **true**, the router advertises the Layer 2 Attributes Extended Community including:

- the service MTU in the Layer 2 MTU field
- the F bit, which is set to 1 if the **hash-label** command is set to true (in the **configure service vpls bgp-evpn mpls** context); otherwise, the F bit is set to 0
- the C bit, which is set to 1 if the **control-word** command is set to true (in the **configure service vpls bgp-evpn mpls** context); otherwise, the C bit is set to 0

The router compares the received Layer 2 MTU from a peer with the local service MTU. If there is a mismatch, the operation state of the EVPN destination is set to down, except if the **configure service vpls bgp-evpn ignore-mtu-mismatch** command is set to **true**.

A mismatch between the received C bit and the local **control-word** setting (in the **configure service vpls bgp-evpn mpls** context) results in the operational state of the EVPN destination being set to down.

A mismatch between the received F bit and the local F bit (via the hash label configuration) results in the operational state of the EVPN destination being set to down.

When configured to **false**, the Layer 2 Attributes Extended Community is not advertised with the Inclusive Multicast Ethernet Tag route for the service.

Default	false
Introduced	23.3.R1
Platforms	All

### **ip-prefix**

### **domain-id** *string*

Synopsis Domain ID of received BGP route before readvertisement

Context **configure** [service vpls](#) [string](#) [bgp-evpn](#) [routes ip-prefix](#) [domain-id](#) *string*

Tree [domain-id](#)

Description This command specifies the domain ID. The domain ID identifies the network from which the BGP route was received before the RTM advertises it to a different neighbor. The domain ID is part of a domain, represented as domain-id:isf\_safi\_type in the D-PATH attribute, as described in *draft-ietf-bess-evpn-ipvpn-interworking*. Gateway routers modify the D-PATH attribute. A gateway is a PE where a VPRN is instantiated. The VPRN in this case advertises or receives routes from multiple BGP owners (for example, EVPN-IFL and BGP-IPVPN) or multiple instances of the same owner (for example, VPRN with two BGP-IPVPN instances).

Gateways use the D-PATH attribute to detect loops (for received routes where the D-PATH contains a local domain ID) and to make BGP best-path selection decisions based on the D-PATH length (shorter D-PATH is preferred).

In the following example, suppose a gateway receives prefix P in an EVPN-IFL instance with the following D-PATH from neighbor N:

```
Seg Len=1 / 65000:1:128
```

If the router imports the route in VPRN-1, BGP-EVPN SRv6 instance with domain 65000:2, it readvertises it to its BGP-IPVPN MPLS instance as follows:

```
Seg Len=2 / 65000:2:70 / 65000:1:128
```

That is, the gateway prepends the local domain ID and family to the D-PATH before readvertising the route into a different instance.

Introduced 21.10.R1

Options	discard
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## **force-vc-forwarding keyword**

Synopsis	Datapath forwarding to force vlan-vc-type
----------	---

Context	<b>configure service vpls string</b> <a href="#">bgp-evpn segment-routing-v6 number force-vc-forwarding keyword</a>
Tree	<a href="#">force-vc-forwarding</a>
Description	<p>This command allows the system to preserve the VLAN ID and 802.1p bits of the service-delimiting qtag in a new tag added in the customer frame before sending it to the EVPN destinations.</p> <p>This command may be used in conjunction with the <b>sap ingress vlan-translation</b> command. If so used, the configured translated VLAN ID is the VLAN ID sent to the EVPN destinations as opposed to the service-delimiting tag VLAN ID. If the ingress SAP/SDP binding is 'null'-encapsulated, the output VLAN ID and pbits is zero.</p>
Options	vlan, qinq-c-tag-c-tag, qinq-s-tag-c-tag
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **mh-mode** *keyword*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Multihoming mode
Context	<b>configure service vpls string</b> <a href="#">bgp-evpn segment-routing-v6 number mh-mode keyword</a>
Tree	<a href="#">mh-mode</a>
Options	access, network
Default	network
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### **oper-group** *reference*

Synopsis	Operational group
Context	<b>configure service vpls string</b> <a href="#">bgp-evpn segment-routing-v6 number oper-group reference</a>
Tree	<a href="#">oper-group</a>
Description	<p>This command adds the BGP EVPN SRv6 instance or an Ethernet Segment (ES) as a member of the operational group.</p> <p>When configured on a BGP EVPN instance, the operational group is up when it is either empty (meaning that the operational group has no members) or at least an EVPN destination is created under the EVPN instance added as member. When configured, no</p>

other SAP, SDP binding, or BGP EVPN instance can be added to the same operational group within the same or different service.

The operational group is down when it is applied on a BGP EVPN instance as well as:

- the service is administratively disabled
- the BGP EVPN MPLS and VXLAN is administratively disabled
- all the EVPN destinations in the instance are removed

When configured on an ES, the state of the operational group depends on the state of the SAPs contained in the ES. The operational group transitions to up if at least one SAP in the ES is up. The operational group goes down when all the associated SAPs are operationally down. Monitor the ES operational group on the LAG associated with the ES, along with single-active multihoming, so that the NDF state can be signaled to the CE by LAG standby signaling.

Reference	<b>configure service oper-group</b> <i>string</i>
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### resolution *keyword*

Synopsis	Resolution options for routes
Context	<b>configure service vpls</b> <i>string</i> <b>bgp-evpn segment-routing-v6</b> <i>number</i> <b>resolution</b> <i>keyword</i>
Tree	<b>resolution</b>
Options	route-table, tunnel-table, fallback-tunnel-to-route-table
Default	route-table
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### route-next-hop

Synopsis	Enter the <b>route-next-hop</b> context
Context	<b>configure service vpls</b> <i>string</i> <b>bgp-evpn segment-routing-v6</b> <i>number</i> <b>route-next-hop</b>
Tree	<b>route-next-hop</b>
Description	Commands in this context configure the next hop of the EVPN routes.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**ip-address** (*ipv4-address-no-zone* | *ipv6-address-no-zone*)**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IP address of the next-hop for the service EVPN route
Context	<b>configure service vpls string</b> <a href="#">bgp-evpn segment-routing-v6 number route-next-hop ip-address</a> ( <i>ipv4-address-no-zone</i>   <i>ipv6-address-no-zone</i> )
Tree	<a href="#">ip-address</a>
Notes	The following elements are part of a choice: <b>ip-address</b> , <b>system-ipv4</b> , or <b>system-ipv6</b> .
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**system-ipv4****WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	System IPv4 address for service EVPN route next hop
Context	<b>configure service vpls string</b> <a href="#">bgp-evpn segment-routing-v6 number route-next-hop system-ipv4</a>
Tree	<a href="#">system-ipv4</a>
Notes	The following elements are part of a choice: <b>ip-address</b> , <b>system-ipv4</b> , or <b>system-ipv6</b> .
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**system-ipv6****WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	System IPv6 address for service EVPN route next hop
Context	<b>configure service vpls string</b> <a href="#">bgp-evpn segment-routing-v6 number route-next-hop system-ipv6</a>
Tree	<a href="#">system-ipv6</a>
Notes	The following elements are part of a choice: <b>ip-address</b> , <b>system-ipv4</b> , or <b>system-ipv6</b> .

Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### source-address *string*

#### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Source IPv6 address
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">bgp-evpn segment-routing-v6</a> <i>number</i> <a href="#">source-address</a> <i>string</i>
Tree	<a href="#">source-address</a>
Description	<p>When configured, this command specifies the source IPv6 address used in the SA field of the outer IPv6 header of the SRv6 encapsulated packet.</p> <p>When not configured, the source IPv6 address is inherited from the configuration of the global default address in the <b>router "base" segment-routing segment-routing-v6 source-address</b> context.</p> <p>A source IPv6 address must be configured in this context or in the base router context. The system does not check if the address entered is a valid local address.</p>
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

### split-horizon-group *reference*

#### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Split horizon group
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">bgp-evpn segment-routing-v6</a> <i>number</i> <a href="#">split-horizon-group</a> <i>reference</i>
Tree	<a href="#">split-horizon-group</a>
Description	This command configures the value of split-horizon group for all BGP-EVPN segment routing v6 instances.
Reference	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">split-horizon-group</a> <i>string</i>
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**srv6**

Synopsis	Enter the <b>srv6</b> context
Context	<b>configure service vpls string bgp-evpn segment-routing-v6 number srv6</b>
Tree	<b>srv6</b>
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**default-locator string****WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Default route locator
Context	<b>configure service vpls string bgp-evpn segment-routing-v6 number srv6 default-locator string</b>
Tree	<b>default-locator</b>
Description	This command specifies the locator that exists in the SRv6 service instance and is used as the default locator for the service.
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**instance reference****WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Segment Routing SRv6 instance
Context	<b>configure service vpls string bgp-evpn segment-routing-v6 number srv6 instance reference</b>
Tree	<b>instance</b>
Reference	<b>configure service vpls string segment-routing-v6 number</b>
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**vxlan** [**bgp-instance**] *number*

Synopsis	Enter the <b>vxlan</b> list instance
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn vxlan number</a>
Tree	<a href="#">vxlan</a>
Introduced	16.0.R1
Platforms	All

**[bgp-instance]** *number*

Synopsis	BGP instance
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn vxlan number</a>
Tree	<a href="#">vxlan</a>
Range	1 to 2
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of VXLAN auto-bindings creation
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn vxlan number</a> <a href="#">admin-state keyword</a>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

**default-route-tag** *string***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Default route tag
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn vxlan number</a> <a href="#">default-route-tag string</a>
Tree	<a href="#">default-route-tag</a>

Description	<p>This command configures a route tag that is used when sending a route to the BGP application (for the corresponding service and BGP instance). If the corresponding BGP instance is enabled, the command cannot be changed.</p> <p>When used for BGP EVPN contexts, only one route tag can be passed to BGP for matching on export policies. In case of a conflict with other route tags pushed by EVPN, the default route tag has the least priority.</p> <p>The following are examples of the conflict priority handling:</p> <ul style="list-style-type: none"> <li>• If a service is configured with both <b>default-route-tag X</b> and <b>proxy-arp evpn-route-tag Y</b>, the EVPN uses route tag Y when sending EVPN proxy-arp routes to the BGP RIB for advertisement.</li> <li>• If a given IP-prefix route is tagged in the route-table with tag A and the R-VPLS, in which the route is advertised, uses B as the <b>default-route-tag</b>, then EVPN keeps tag A when sending the route to the BGP RIB.</li> </ul> <p>The <b>default-route-tag</b> configuration is only supported on EVPN and IP-VPN service routes. The route tag for ES and AD per-ES routes is always zero.</p>
Introduced	16.0.R4
Platforms	All

### **ecmp number**

Synopsis	Number of paths to reach a specified MAC address
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn vxlan number</a> <a href="#">ecmp number</a>
Tree	<a href="#">ecmp</a>
Range	1 to 32
Default	1
Introduced	19.5.R1
Platforms	All

### **evi-three-byte-auto-rt boolean**

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Auto-derive the BGP EVPN route target
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">bgp-evpn vxlan number</a> <a href="#">evi-three-byte-auto-rt boolean</a>
Tree	<a href="#">evi-three-byte-auto-rt</a>
Description	When configured to <b>true</b> , the BGP-EVPN instance import and export route target is auto-derived as described in RFC 8365 (Global-Administrator:A/Type/D-ID/Service-ID).

Where:

- Global Administrator – is the configured 2-octet AS number; if the configured ASN exceeds the 2 byte limit, the low order 16-bit value is taken
- A=0 (for auto-derivation)
- Type=4 (EVI-based route-target)
- D-ID= [1..2] – encodes the BGP instance, which allows the auto-derivation of different route-targets in multi-instance services; the value is inherited from the corresponding BGP instance
- Service ID=3-octet EVI

When configured to **false**, route target derivation is not allowed.

Default	false
Introduced	21.10.R1
Platforms	All

### **mh-mode** *keyword*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Multi-homing mode
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">bgp-evpn vxlan</a> <i>number</i> <a href="#">mh-mode</a> <i>keyword</i>
Tree	<a href="#">mh-mode</a>
Options	access, network
Default	access
Introduced	19.5.R1
Platforms	All

### **oper-group** *reference*

Synopsis	Operational group ID
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">bgp-evpn vxlan</a> <i>number</i> <a href="#">oper-group</a> <i>reference</i>
Tree	<a href="#">oper-group</a>
Reference	<b>configure</b> <a href="#">service oper-group</a> <i>string</i>
Introduced	19.10.R1
Platforms	All

**routes**

Reference	<b>configure</b> <a href="#">subscriber-mgmt local-user-db string</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **dhcp6**

Synopsis	Enter the <b>dhcp6</b> context
Context	<b>configure</b> <a href="#">service vpls string capture-sap string dhcp6</a>
Tree	<a href="#">dhcp6</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **python-policy** *reference*

Synopsis	Python policy
Context	<b>configure</b> <a href="#">service vpls string capture-sap string dhcp6 python-policy reference</a>
Tree	<a href="#">python-policy</a>
Reference	<b>configure</b> <a href="#">python python-policy string</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **user-db** *reference*

Synopsis	Local user database
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">capture-sap</a> <i>string</i> <a href="#">dhcp6 user-db</a> <i>reference</i>
Tree	<a href="#">user-db</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt local-user-db</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **dist-cpu-protection** *reference*

Synopsis	Distributed CPU protection policy for SAP
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">capture-sap</a> <i>string</i> <a href="#">dist-cpu-protection</a> <i>reference</i>
Tree	<a href="#">dist-cpu-protection</a>
Reference	<b>configure</b> <a href="#">system security dist-cpu-protection</a> <i>policy</i> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **host-lockout-policy** *reference*

Synopsis	Host lockout policy
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">capture-sap</a> <i>string</i> <a href="#">host-lockout-policy</a> <i>reference</i>
Tree	<a href="#">host-lockout-policy</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt host-lockout-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ingress**

Synopsis	Enter the <b>ingress</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">capture-sap</a> <i>string</i> <a href="#">ingress</a>
Tree	<a href="#">ingress</a>
Introduced	19.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## filter

Synopsis	Enter the <b>filter</b> context
Context	<b>configure service vpls string capture-sap string ingress filter</b>
Tree	<b>filter</b>
Introduced	19.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## mac reference

Synopsis	MAC filter policy name
Context	<b>configure service vpls string capture-sap string ingress filter mac reference</b>
Tree	<b>mac</b>
Reference	<b>configure filter mac-filter string</b>
Introduced	19.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## ipoe-session

Synopsis	Enter the <b>ipoe-session</b> context
Context	<b>configure service vpls string capture-sap string ipoe-session</b>
Tree	<b>ipoe-session</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## admin-state keyword

Synopsis	Administrative state of IPoE session management
Context	<b>configure service vpls string capture-sap string ipoe-session admin-state keyword</b>
Tree	<b>admin-state</b>
Options	enable, disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">capture-sap</a> <i>string</i> <a href="#">ipoe-session</a> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**ipoe-session-policy** *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	IPoE Session policy to be used for new sessions
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">capture-sap</a> <i>string</i> <a href="#">ipoe-session</a> <a href="#">ipoe-session-policy</a> <i>reference</i>
Tree	<a href="#">ipoe-session-policy</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">ipoe-session-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**user-db** *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Local user database for IPoE session authentication
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">capture-sap</a> <i>string</i> <a href="#">ipoe-session</a> <a href="#">user-db</a> <i>reference</i>
Tree	<a href="#">user-db</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">local-user-db</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## msap-defaults

Synopsis	Enter the <b>msap-defaults</b> context
Context	<b>configure service vpls string capture-sap string msap-defaults</b>
Tree	<a href="#">msap-defaults</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## group-interface *string*

Synopsis	Group interface
Context	<b>configure service vpls string capture-sap string msap-defaults group-interface string</b>
Tree	<a href="#">group-interface</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## policy *reference*

Synopsis	MSAP policy
Context	<b>configure service vpls string capture-sap string msap-defaults policy reference</b>
Tree	<a href="#">policy</a>
Reference	<b>configure subscriber-mgmt msap-policy string</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## service-name *string*

Synopsis	Administrative service name
Context	<b>configure service vpls string capture-sap string msap-defaults service-name string</b>
Tree	<a href="#">service-name</a>
String Length	1 to 64
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**nasreq-auth-policy** *reference*

Synopsis	Diameter NASREQ application policy to use for authentication
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">capture-sap</a> <i>string</i> <a href="#">nasreq-auth-policy</a> <i>reference</i>
Tree	<a href="#">nasreq-auth-policy</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">diameter-nasreq-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**pfcp**

Synopsis	Enter the <b>pfcp</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">capture-sap</a> <i>string</i> <a href="#">pfcp</a>
Tree	<a href="#">pfcp</a>
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**association** *reference*

Synopsis	Association used for PFCP messages on the capture SAP
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">capture-sap</a> <i>string</i> <a href="#">pfcp</a> <a href="#">association</a> <i>reference</i>
Tree	<a href="#">association</a>
Description	This command links the capture SAP to a PFCP association. This enables CUPS for the capture SAP and any trigger packets are forwarded to the BNG CUPS CPF.
Reference	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">pfcp</a> <a href="#">association</a> <i>string</i>
Introduced	20.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**I2-access-id-alias** *string*

Synopsis	String used as Layer 2 access ID for the capture SAP
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">capture-sap</a> <i>string</i> <a href="#">pfcp</a> <a href="#">I2-access-id-alias</a> <i>string</i>
Tree	<a href="#">I2-access-id-alias</a>
Description	This command defines a Layer 2 access ID alias for the capture SAP. It replaces the default underlying port-based or LAG-based Layer 2 access ID. Different capture SAPs on the same underlying port or LAG can have different Layer 2 access ID aliases.

String Length	1 to 32
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## up-resiliency

Synopsis	Enter the <b>up-resiliency</b> context
Context	<b>configure service vpls string capture-sap string pfc up-resiliency</b>
Tree	<a href="#">up-resiliency</a>
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## monitor-oper-group [[oper-group](#)] *reference*

Synopsis	Enter the <b>monitor-oper-group</b> list instance
Context	<b>configure service vpls string capture-sap string pfc up-resiliency monitor-oper-group <i>reference</i></b>
Tree	<a href="#">monitor-oper-group</a>
Description	<p>Commands in this context define parameters to derive the service health based on monitored operational groups. The BNG UPF sends the health value to the BNG CPF. The BNG CPF uses the value to determine the need for a BNG UPF status change (active or standby).</p> <p><b>Note:</b> The following is only applicable for the <b>configure service vpls capture-sap</b> context. If the configured groups are not the same for all capture SAPs sharing the same underlying port or LAG, the configuration of a Layer 2 access ID alias is required, or else the system chooses arbitrarily one set of configured groups.</p>
Max. Instances	2
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## [[oper-group](#)] *reference*

Synopsis	Operational group name
Context	<b>configure service vpls string capture-sap string pfc up-resiliency monitor-oper-group <i>reference</i></b>
Tree	<a href="#">monitor-oper-group</a>
Reference	<b>configure service oper-group string</b>

Notes	This element is part of a list key.
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **health-drop** *number*

Synopsis	Number subtracted from the health value per failure
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">capture-sap</a> <i>string</i> <a href="#">pfc</a> <a href="#">up-resiliency monitor-oper-group</a> <a href="#">reference</a> <b>health-drop</b> <i>number</i>
Tree	<a href="#">health-drop</a>
Description	This command configures the drop in the health value for every operational group member failure. Every failure of an operational group member decreases the base health value to a possible minimum of 0.
Range	1 to 100
Default	1
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **pppoe**

Synopsis	Enter the <b>pppoe</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">capture-sap</a> <i>string</i> <b>pppoe</b>
Tree	<a href="#">pppoe</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **policy** *reference*

Synopsis	PPP policy
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">capture-sap</a> <i>string</i> <a href="#">pppoe</a> <b>policy</b> <i>reference</i>
Tree	<a href="#">policy</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">ppp-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **python-policy** *reference*

Synopsis	Python policy
Context	<b>configure</b> <a href="#">service vpls string capture-sap string pppoe python-policy reference</a>
Tree	<a href="#">python-policy</a>
Reference	<b>configure</b> <a href="#">python python-policy string</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **user-db** *reference*

Synopsis	Local user database
Context	<b>configure</b> <a href="#">service vpls string capture-sap string pppoe user-db reference</a>
Tree	<a href="#">user-db</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt local-user-db string</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **radius-auth-policy** *reference*

Synopsis	RADIUS authentication policy
Context	<b>configure</b> <a href="#">service vpls string capture-sap string radius-auth-policy reference</a>
Tree	<a href="#">radius-auth-policy</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt radius-authentication-policy string</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **router-solicit**

Synopsis	Enter the <b>router-solicit</b> context
Context	<b>configure</b> <a href="#">service vpls string capture-sap string router-solicit</a>
Tree	<a href="#">router-solicit</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **user-db** *reference*

Synopsis	Local user database
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">capture-sap</a> <i>string</i> <a href="#">router-solicit</a> <a href="#">user-db</a> <i>reference</i>
Tree	<a href="#">user-db</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt</a> <a href="#">local-user-db</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **track-srrp** *number*

Synopsis	SRRP instance that this capture SAP tracks
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">capture-sap</a> <i>string</i> <a href="#">track-srrp</a> <i>number</i>
Tree	<a href="#">track-srrp</a>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **trigger-packet**

Synopsis	Enter the <b>trigger-packet</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">capture-sap</a> <i>string</i> <a href="#">trigger-packet</a>
Tree	<a href="#">trigger-packet</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **arp** *boolean*

Synopsis	ARP packet
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">capture-sap</a> <i>string</i> <a href="#">trigger-packet</a> <a href="#">arp</a> <i>boolean</i>
Tree	<a href="#">arp</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**data** *boolean*

Synopsis	Data packet
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">capture-sap</a> <i>string</i> <a href="#">trigger-packet</a> <a href="#">data</a> <i>boolean</i>
Tree	<a href="#">data</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**dhcp** *boolean*

Synopsis	DHCP packet
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">capture-sap</a> <i>string</i> <a href="#">trigger-packet</a> <a href="#">dhcp</a> <i>boolean</i>
Tree	<a href="#">dhcp</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**dhcp6** *boolean*

Synopsis	DHCP6 packet
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">capture-sap</a> <i>string</i> <a href="#">trigger-packet</a> <a href="#">dhcp6</a> <i>boolean</i>
Tree	<a href="#">dhcp6</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**pppoe** *boolean*

Synopsis	PPPoE packet
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">capture-sap</a> <i>string</i> <a href="#">trigger-packet</a> <a href="#">pppoe</a> <i>boolean</i>
Tree	<a href="#">pppoe</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**rtr-solicit** *boolean*

Synopsis	Router-solicit packet
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">capture-sap</a> <i>string</i> <a href="#">trigger-packet</a> <b>rtr-solicit</b> <i>boolean</i>
Tree	<a href="#">rtr-solicit</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**customer** *reference***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Service customer ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">customer</a> <i>reference</i>
Tree	<a href="#">customer</a>
Reference	<b>configure</b> <a href="#">service</a> <a href="#">customer</a> <i>string</i>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

**endpoint** [[name](#)] *string*

Synopsis	Enter the <b>endpoint</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">endpoint</a> <i>string</i>

Tree	<a href="#">endpoint</a>
Max. Instances	10
Introduced	16.0.R1
Platforms	All

**[name]** *string*

Synopsis	Service endpoint name
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">endpoint</a> <i>string</i>
Tree	<a href="#">endpoint</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**block-on-mesh-failure** *boolean*

Synopsis	Enable blocking after the endpoints are in a down state
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">endpoint</a> <i>string</i> <b>block-on-mesh-failure</b> <i>boolean</i>
Tree	<a href="#">block-on-mesh-failure</a>
Default	false
Introduced	16.0.R1
Platforms	All

**description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">endpoint</a> <i>string</i> <b>description</b> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

**fdb**

Synopsis	Enter the <b>fdb</b> context
Context	<b>configure service vpls string endpoint string fdb</b>
Tree	<b>fdb</b>
Introduced	16.0.R1
Platforms	All

**auto-learn-mac-protect boolean**

Synopsis	Populate automatically MAC protect list with MAC addresses learned on SDP with this endpoint
Context	<b>configure service vpls string endpoint string fdb auto-learn-mac-protect boolean</b>
Tree	<b>auto-learn-mac-protect</b>
Default	false
Introduced	16.0.R1
Platforms	All

**mac-pinning boolean**

Synopsis	Activate MAC address pinning on this endpoint
Context	<b>configure service vpls string endpoint string fdb mac-pinning boolean</b>
Tree	<b>mac-pinning</b>
Default	false
Introduced	16.0.R1
Platforms	All

**maximum-mac-addresses number**

Synopsis	Maximum number of MAC address entries in the FDB
Context	<b>configure service vpls string endpoint string fdb maximum-mac-addresses number</b>
Tree	<b>maximum-mac-addresses</b>
Description	This command specifies the maximum number of FDB entries for both learned and static MAC addresses for this endpoint.

When the configured limit is reached, no new addresses are learned from the SAP or spoke SDP until at least one FDB entry is aged out or cleared. Packets with unknown source MAC addresses are still forwarded if their destination MAC addresses are known, or flooded if their destination MAC addresses are unknown.

However, if the **configure service vpls fdb discard-unknown** command is set to **true**, packets with unknown destination MAC addresses are discarded, even if the limit of FDB entries on the specific VPLS instance is not reached.

When unconfigured, the endpoint uses the global MAC learning limitations.

Range	1 to 511999
Introduced	16.0.R1
Platforms	All

### **protected-src-mac-violation-action** *keyword*

Synopsis	Action when a relearn request for a protected MAC is received on the SDP
Context	<b>configure service vpls string endpoint string fdb protected-src-mac-violation-action keyword</b>
Tree	<a href="#">protected-src-mac-violation-action</a>
Options	sdp-bind-oper-down, alarm-only, discard
Introduced	16.0.R1
Platforms	All

### **ignore-standby-signaling** *boolean*

Synopsis	Ignore standby-bit received from TLDP peers when performing internal tasks
Context	<b>configure service vpls string endpoint string ignore-standby-signaling boolean</b>
Tree	<a href="#">ignore-standby-signaling</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **mc-endpoint** [[mc-ep-id](#)] *number*

Synopsis	Enter the <b>mc-endpoint</b> list instance
Context	<b>configure service vpls string endpoint string mc-endpoint number</b>
Tree	<a href="#">mc-endpoint</a>
Max. Instances	1
Introduced	22.10.R1
Platforms	All

**[mc-ep-id]** *number*

Synopsis	MC-EP ID
Context	<b>configure service vpls string endpoint string mc-endpoint number</b>
Tree	<b>mc-endpoint</b>
Description	This command configures the identifier associated with the MC-EP. The ID must be the same on both MC-EP peers.
Range	1 to 4294967295
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	All

**mc-ep-peer**

Synopsis	Enter the <b>mc-ep-peer</b> context
Context	<b>configure service vpls string endpoint string mc-endpoint number mc-ep-peer</b>
Tree	<b>mc-ep-peer</b>
Introduced	22.10.R1
Platforms	All

**name** *string*

Synopsis	Name of the MC-EP peer
Context	<b>configure service vpls string endpoint string mc-endpoint number mc-ep-peer name string</b>
Tree	<b>name</b>
String Length	1 to 32
Notes	The following elements are part of a choice: <b>name</b> or <b>peer-address</b> .
Introduced	22.10.R1
Platforms	All

**peer-address** *reference*

Synopsis	IP address of the MC-EP peer
Context	<b>configure service vpls string endpoint string mc-endpoint number mc-ep-peer peer-address reference</b>

Tree	<a href="#">peer-address</a>
Reference	<b>configure</b> <a href="#">redundancy multi-chassis peer</a> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> )
Notes	The following elements are part of a choice: <b>name</b> or <b>peer-address</b> .
Introduced	22.10.R1
Platforms	All

### **revert-time** (*number | keyword*)

Synopsis	Time to wait before reverting to primary spoke SDP
Context	<b>configure</b> <a href="#">service vpls string endpoint string revert-time</a> ( <i>number   keyword</i> )
Tree	<a href="#">revert-time</a>
Range	1 to 600
Units	seconds
Options	never, immediate
Default	immediate
Introduced	16.0.R1
Platforms	All

### **suppress-standby-signaling** *boolean*

Synopsis	Do not send pseudowire standby bit to TLDP peer when specified spoke SDP is selected as standby
Context	<b>configure</b> <a href="#">service vpls string endpoint string suppress-standby-signaling</a> <i>boolean</i>
Tree	<a href="#">suppress-standby-signaling</a>

### **mep-id** *number*

Synopsis Maintenance Endpoint (MEP) ID

Context	<b>configure service vpls string eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference mep-id number</i>
Tree	<a href="#">mep</a>
Range	1 to 8191
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **admin-state** *keyword*

Synopsis	Administrative state of the MEP
Context	<b>configure service vpls string eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference mep-id number admin-state keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **alarm-notification**

Synopsis	Enter the <b>alarm-notification</b> context
Context	<b>configure service vpls string eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference mep-id number alarm-notification</i>
Tree	<a href="#">alarm-notification</a>
Description	Commands in this context configure the Fault Notification Generator (FNG) time values to raise an alarm or reset the CCM defect alarm.  Use these timers for network management processes. The timers are not tied into delaying the notification to the fault management system on the network element and do not affect fault propagation mechanisms.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fng-alarm-time** *number*

Synopsis	Time that must expire before an FNG alarm is raised
----------	---

Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">alarm-notification</a> <a href="#">fng-alarm-time</a> <a href="#">number</a>
Tree	<a href="#">fng-alarm-time</a>
Range	250   500   1000
Units	centiseconds
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fng-reset-time** *number*

Synopsis	Time that must expire before an FNG alarm is reset
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">alarm-notification</a> <a href="#">fng-reset-time</a> <a href="#">number</a>
Tree	<a href="#">fng-reset-time</a>
Range	250   500   1000
Units	centiseconds
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm** *boolean*

Synopsis	Generate CCM messages
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">ccm</a> <a href="#">boolean</a>
Tree	<a href="#">ccm</a>
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm-ltm-priority** *number*

Synopsis	Priority of CCM and LTM messages transmitted by the MEP
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">ccm-ltm-priority</a> <a href="#">number</a>
Tree	<a href="#">ccm-ltm-priority</a>
Range	0 to 7

Default	7
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm-padding-size** *number*

Synopsis	Number of octets of padding to insert in CCM packets
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">eth-cfm mep md-admin-name reference</a> <a href="#">ma-admin-name reference mep-id number</a> <b>ccm-padding-size</b> <i>number</i>
Tree	<a href="#">ccm-padding-size</a>
Description	This command sets the byte size of the optional Data TLV to be included in the ETH-CC PDU.  This command increases the size of the ETH-CC PDU by the configured value. The base size of the ETH-CC PDU, including the Interface Status TLV and Port Status TLV, is 83 bytes not including the Layer 2 encapsulation. CCM padding is not supported when the CCM interval (configured through <b>configure eth-cfm domain association ccm-interval</b> ) is less than 1 second.
Range	3 to 1500
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **cfm-vlan-tag** *string*

Synopsis	VLAN tags to apply to CFM PDUs for egress processing
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">eth-cfm mep md-admin-name reference</a> <a href="#">ma-admin-name reference mep-id number</a> <b>cfm-vlan-tag</b> <i>string</i>
Tree	<a href="#">cfm-vlan-tag</a>
Description	This command allows the CFM function to include additional VLAN tags to the CFM packet that are carried to the egress and treated as service delimited. Typically, this function is used to influence the VLAN carried over a binding that uses the <b>vc-type vlan</b> or the binding forces the use of one or more VLAN tag that results in a mismatch between the service data arriving at the binding and the locally generated ETH-CFM PDUs arriving at the same egress. When this command is included under the MEP or MIP configuration, the tags used as part of the configuration typically match the SAP service delimited configuration.
String Length	1 to 9
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">description</a> <a href="#">string</a>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**eth-test**

Synopsis	Enable the <b>eth-test</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">eth-test</a>
Tree	<a href="#">eth-test</a>
Description	Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the <b>oam eth-cfm eth-test</b> command.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**bit-error-threshold** *number*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">eth-test</a> <a href="#">bit-error-threshold</a> <a href="#">number</a>
Tree	<a href="#">bit-error-threshold</a>
Range	0 to 11840
Units	bit errors
Default	1
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**test-pattern**

Synopsis	Enter the <b>test-pattern</b> context
----------	---------------------------------------

Context	<b>configure</b> <a href="#">service vpls string eth-cfm mep md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id number eth-test test-pattern</a>
Tree	<a href="#">test-pattern</a>
Description	Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **crc-tlv** *boolean*

Synopsis	Generate a CRC checksum
Context	<b>configure</b> <a href="#">service vpls string eth-cfm mep md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id number eth-test test-pattern</a> <b>crc-tlv</b> <i>boolean</i>
Tree	<a href="#">crc-tlv</a>
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **pattern** *keyword*

Synopsis	Test pattern for Ethernet Test frames
Context	<b>configure</b> <a href="#">service vpls string eth-cfm mep md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id number eth-test test-pattern</a> <b>pattern</b> <i>keyword</i>
Tree	<a href="#">pattern</a>
Description	This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.
Options	all-zeros, all-ones
Default	all-zeros
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **grace**

Synopsis	Enter the <b>grace</b> context
Context	<b>configure</b> <a href="#">service vpls string eth-cfm mep md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id number</a> <b>grace</b>
Tree	<a href="#">grace</a>

Description	Commands in this context configure the Nokia ETH-CFM Grace function and the ITU-T Y.1731 Ethernet Expected Default (ETH-ED) function.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## eth-ed

Synopsis	Enter the <b>eth-ed</b> context
Context	<b>configure</b> <a href="#">service vpls string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed</a>
Tree	<a href="#">eth-ed</a>
Description	Commands in this context configure the ITU-T Y.1731 ETH-ED function.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## max-rx-defect-window *number*

Synopsis	Maximum received ETH-ED expected defect window duration
Context	<b>configure</b> <a href="#">service vpls string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed max-rx-defect-window number</a>
Tree	<a href="#">max-rx-defect-window</a>
Range	1 to 86400
Units	seconds
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## priority *number*

Synopsis	Transmission priority for ETH-ED PDUs
Context	<b>configure</b> <a href="#">service vpls string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed priority number</a>
Tree	<a href="#">priority</a>
Range	0 to 7
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**rx-eth-ed boolean**

Synopsis	Receive and process ETH-ED ITU-T Y.1731 PDUs on the MEP
Context	<b>configure</b> <a href="#">service vpls string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed rx-eth-ed boolean</a>
Tree	<a href="#">rx-eth-ed</a>
Description	This command enables the reception and processing of the ITU-T Y.1731 ETH-ED PDU on the MEP.
Default	true
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**tx-eth-ed boolean**

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	<b>configure</b> <a href="#">service vpls string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed tx-eth-ed boolean</a>
Tree	<a href="#">tx-eth-ed</a>
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**eth-vsm-grace**

Synopsis	Enter the <b>eth-vsm-grace</b> context
Context	<b>configure</b> <a href="#">service vpls string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace</a>
Tree	<a href="#">eth-vsm-grace</a>
Description	Commands in this context configure the Nokia ETH-CFM Grace function.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**rx-eth-vsm-grace boolean**

Synopsis	Receive and process Nokia ETH-CFM Grace PDU on the MEP
----------	--

Context	<b>configure service vpls string eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id number grace eth-vsm-grace rx-eth-vsm-grace</b> <i>boolean</i>
Tree	<a href="#">rx-eth-vsm-grace</a>
Description	When configured to <b>true</b> , the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect. When configured to <b>false</b> , the router disables the Nokia Grace function.
Default	true
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **tx-eth-vsm-grace** *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	<b>configure service vpls string eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id number grace eth-vsm-grace tx-eth-vsm-grace</b> <i>boolean</i>
Tree	<a href="#">tx-eth-vsm-grace</a>
Description	When configured to <b>true</b> , the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards. The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect. The operator must configure the <b>configure system eth-cfm grace</b> command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED). When configured to <b>false</b> , the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.
Default	true
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **low-priority-defect** *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	<b>configure service vpls string eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id number low-priority-defect</b> <i>keyword</i>
Tree	<a href="#">low-priority-defect</a>
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon

Default	mac-rem-err-xcon
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mac-address** *string*

Synopsis	MAC address of the MEP
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">eth-cfm mep md-admin-name reference</a> <a href="#">ma-admin-name reference</a> <a href="#">mep-id number</a> <b>mac-address</b> <i>string</i>
Tree	<a href="#">mac-address</a>
Description	This command specifies the MAC address of the MEP. When unconfigured, the MAC address of the port (if the MEP is on a SAP) or the MAC address of a bridge (if the MEP is on a spoke) is used.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **one-way-delay-threshold** *number*

Synopsis	Threshold time limit for the one-way delay test
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">eth-cfm mep md-admin-name reference</a> <a href="#">ma-admin-name reference</a> <a href="#">mep-id number</a> <b>one-way-delay-threshold</b> <i>number</i>
Tree	<a href="#">one-way-delay-threshold</a>
Range	0 to 600
Units	seconds
Default	3
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **etree** *boolean*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Use VPLS service as an E-Tree VPLS
Context	<b>configure</b> <a href="#">service vpls string</a> <b>etree</b> <i>boolean</i>
Tree	<a href="#">etree</a>

Tree	<a href="#">learning</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **local-age-time** *number*

Synopsis	Aging time for locally learned MAC addresses
Context	<b>configure service vpls string fdb mac-learning local-age-time number</b>
Tree	<a href="#">local-age-time</a>
Description	<p>This command configures the aging time for locally learned MAC addresses in the forwarding database (FDB) for the Virtual Private LAN Service (VPLS) instance. In a VPLS service, MAC addresses are associated with a Service Access Point (SAP) or a Service Distribution Point (SDP). MACs associated with a SAP are classified as local MACs, and MACs associated with an SDP are remote MACs. In each VPLS service instance, there are independent aging timers for locally learned MAC and remotely learned MAC entries in the FDB.</p> <p>As in a Layer 2 switch, learned MACs can be aged out if no packets are sourced from the MAC address for a period of time (the aging time).</p>
Range	60 to 86400
Default	300
Introduced	16.0.R1
Platforms	All

### **remote-age-time** *number*

Synopsis	Aging time for remotely learned MAC addresses
Context	<b>configure service vpls string fdb mac-learning remote-age-time number</b>
Tree	<a href="#">remote-age-time</a>
Description	<p>This command configures the aging time for remotely learned MAC addresses in the forwarding database (FDB) for the Virtual Private LAN Service (VPLS) instance. In a</p>

VPLS service, MAC addresses are associated with a Service Access Point (SAP) or a Service Distribution Point (SDP). MACs associated with a SAP are classified as local MACs, and MACs associated with an SDP are remote MACs. In each VPLS service instance, there are independent aging timers for locally learned MAC and remotely learned MAC entries in the FDB.

As in a Layer 2 switch, learned MACs can be aged out if no packets are sourced from the MAC address for a period of time (the aging time). To reduce the amount of signaling required between switches, configure this time larger than the **local-age-time** command.

Range	60 to 86400
Default	900
Introduced	16.0.R1
Platforms	All

### mac-move

### **retry-count** (*number* | *keyword*)

Synopsis	Number of retries for re-enabling the SAP or SDP
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">fdb mac-move</a> <a href="#">retry-count</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">retry-count</a>
Range	1 to 255
Options	unlimited
Default	3
Introduced	16.0.R1

Platforms All

### **sap** [[sap-id](#)] *reference*

Synopsis Enter the **sap** list instance

Context **configure** [service vpls string fdb mac-move sap reference](#)

Tree [sap](#)

Introduced 19.7.R1

Platforms All

### **[sap-id]** *reference*

Synopsis SAP identifier

Context **configure** [service vpls string fdb mac-move sap reference](#)

Tree [sap](#)

Reference **configure** [service vpls string sap string](#)

Notes This element is part of a list key.

Introduced 19.7.R1

Platforms All

### **level** *keyword*

Synopsis Primary or secondary port level

Context **configure** [service vpls string fdb mac-move sap reference level keyword](#)

Tree [level](#)

Options primary, secondary

Notes This element is mandatory.

Introduced 19.7.R1

Platforms All

### **secondary-cumulative-factor** *number*

Synopsis Number of periods to measure mac-relearn rate

Context **configure** [service vpls string fdb mac-move secondary-cumulative-factor number](#)

Tree [secondary-cumulative-factor](#)

Range	2 to 9
Default	2
Introduced	19.7.R1
Platforms	All

### **spoke-sdp** [[sdp-bind-id](#)] *reference*

Synopsis	Enter the <b>spoke-sdp</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">fdb</a> <a href="#">mac-move</a> <a href="#">spoke-sdp</a> <i>reference</i>
Tree	<a href="#">spoke-sdp</a>
Introduced	19.7.R1
Platforms	All

### **[sdp-bind-id]** *reference*

Synopsis	SDP binding ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">fdb</a> <a href="#">mac-move</a> <a href="#">spoke-sdp</a> <i>reference</i>
Tree	<a href="#">spoke-sdp</a>
Reference	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	19.7.R1
Platforms	All

### **level** *keyword*

Synopsis	Primary or secondary port level
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">fdb</a> <a href="#">mac-move</a> <a href="#">spoke-sdp</a> <i>reference</i> <a href="#">level</a> <i>keyword</i>
Tree	<a href="#">level</a>
Options	primary, secondary
Notes	This element is mandatory.
Introduced	19.7.R1
Platforms	All

**mac-subnet-length** *number*

Synopsis	Number of bits performing MAC learning or MAC switching
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">fdb mac-subnet-length</a> <i>number</i>
Tree	<a href="#">mac-subnet-length</a>
Range	24 to 48
Default	48
Introduced	16.0.R1
Platforms	All

**selective-learning** *boolean*

Synopsis	Allocate FDB entries on selectively learned line cards
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">fdb selective-learning</a> <i>boolean</i>
Tree	<a href="#">selective-learning</a>
Default	false
Introduced	16.0.R1
Platforms	All

**static-mac**

Synopsis	Enter the <b>static-mac</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">fdb static-mac</a>
Tree	<a href="#">static-mac</a>
Introduced	16.0.R1
Platforms	All

**mac** [[mac-address](#)] *string*

Synopsis	Enter the <b>mac</b> list instance
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">fdb static-mac</a> <a href="#">mac</a> <i>string</i>
Tree	<a href="#">mac</a>
Introduced	16.0.R1
Platforms	All

**[mac-address] string**

Synopsis	Static MAC address to SAP/SDP-binding or black-hole
Context	<b>configure service vpls string fdb static-mac mac string</b>
Tree	<b>mac</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**blackhole****WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Create a static FDB entry for the MAC address to black-hole traffic
Context	<b>configure service vpls string fdb static-mac mac string blackhole</b>
Tree	<b>blackhole</b>
Notes	The following elements are part of a mandatory choice: <b>blackhole</b> , <b>endpoint</b> , <b>mesh-sdp</b> , <b>sap</b> , or <b>spoke-sdp</b> .
Introduced	16.0.R1
Platforms	All

**endpoint reference****WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Endpoint associated with the MAC
Context	<b>configure service vpls string fdb static-mac mac string endpoint reference</b>
Tree	<b>endpoint</b>
Reference	<b>configure service vpls string endpoint string</b>
Notes	The following elements are part of a mandatory choice: <b>blackhole</b> , <b>endpoint</b> , <b>mesh-sdp</b> , <b>sap</b> , or <b>spoke-sdp</b> .
Introduced	16.0.R1
Platforms	All

## mesh-sdp *reference*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Mesh SDP bind associated with this MAC
Context	<b>configure service vpls string fdb static-mac mac string mesh-sdp reference</b>
Tree	<b>mesh-sdp</b>
Reference	<b>configure service vpls string mesh-sdp string</b>
Notes	The following elements are part of a mandatory choice: <b>blackhole</b> , <b>endpoint</b> , <b>mesh-sdp</b> , <b>sap</b> , or <b>spoke-sdp</b> .
Introduced	16.0.R1
Platforms	All

## monitor *keyword*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Entity to be monitored to decide whether this entry can be installed in the FDB
Context	<b>configure service vpls string fdb static-mac mac string monitor keyword</b>
Tree	<b>monitor</b>
Options	none, forward-status
Default	none
Introduced	16.0.R1
Platforms	All

## sap *reference*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	SAP associated with this MAC
Context	<b>configure service vpls string fdb static-mac mac string sap reference</b>

Tree	<a href="#">sap</a>
Reference	<b>configure service vpls string sap string</b>
Notes	The following elements are part of a mandatory choice: <b>blackhole</b> , <b>endpoint</b> , <b>mesh-sdp</b> , <b>sap</b> , or <b>spoke-sdp</b> .
Introduced	16.0.R1
Platforms	All

### **spoke-sdp** *reference*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Spoke SDP bind associated with this MAC
Context	<b>configure service vpls string fdb static-mac mac string spoke-sdp reference</b>
Tree	<a href="#">spoke-sdp</a>
Reference	<b>configure service vpls string spoke-sdp string</b>
Notes	The following elements are part of a mandatory choice: <b>blackhole</b> , <b>endpoint</b> , <b>mesh-sdp</b> , <b>sap</b> , or <b>spoke-sdp</b> .
Introduced	16.0.R1
Platforms	All

### **table**

Synopsis	Enter the <b>table</b> context
Context	<b>configure service vpls string fdb table</b>
Tree	<a href="#">table</a>
Introduced	16.0.R1
Platforms	All

### **high-wmark** *number*

Synopsis	High watermark for the FDB table
Context	<b>configure service vpls string fdb table high-wmark number</b>
Tree	<a href="#">high-wmark</a>
Range	0 to 100

---

Default	95
Introduced	16.0.R1
Platforms	All

### **low-wmark** *number*

Synopsis	Low watermark for the FDB table
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">fdb table</a> <b>low-wmark</b> <i>number</i>
Tree	<a href="#">low-wmark</a>
Range	0 to 100
Default	90
Introduced	16.0.R1
Platforms	All

### **size** *number*

Synopsis	Maximum MAC entries in the FDB
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">fdb table</a> <b>size</b> <i>number</i>
Tree	<a href="#">size</a>
Range	1 to 511999
Default	250
Introduced	16.0.R1
Platforms	All

### **gsmp**

Synopsis	Enter the <b>gsmp</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <b>gsmp</b>
Tree	<a href="#">gsmp</a>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of GSMP
----------	------------------------------

Context	<b>configure service vpls string gsmp admin-state keyword</b>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

### **group [name] string**

Synopsis	Enter the <b>group</b> list instance
Context	<b>configure service vpls string gsmp group string</b>
Tree	<b>group</b>
Max. Instances	1024
Introduced	16.0.R1
Platforms	All

### **[name] string**

Synopsis	GSMP group name
Context	<b>configure service vpls string gsmp group string</b>
Tree	<b>group</b>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **admin-state keyword**

Synopsis	Administrative state of the GSMP group
Context	<b>configure service vpls string gsmp group string admin-state keyword</b>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1

Platforms All

## ancp

Synopsis Enter the **ancp** context  
 Context **configure** [service vpls string](#) [gsmp group string](#) [ancp](#)  
 Tree [ancp](#)  
 Introduced 16.0.R1  
 Platforms All

## dynamic-topology-discovery *boolean*

Synopsis Enable the ANCP dynamic topology discovery capability  
 Context **configure** [service vpls string](#) [gsmp group string](#) [ancp dynamic-topology-discovery](#) [boolean](#)  
 Tree [dynamic-topology-discovery](#)  
 Default true  
 Introduced 16.0.R1  
 Platforms All

## oam *boolean*

Synopsis Enable GSMP ANCP OAM capability at startup of GSMP connection  
 Context **configure** [service vpls string](#) [gsmp group string](#) [ancp oam](#) [boolean](#)  
 Tree [oam](#)  
 Default false  
 Introduced 16.0.R1  
 Platforms All

## description *string*

Synopsis Text description  
 Context **configure** [service vpls string](#) [gsmp group string](#) [description](#) [string](#)  
 Tree [description](#)  
 String Length 1 to 80  
 Introduced 16.0.R1

Platforms All

### **hold-multiplier** *number*

Synopsis Hold-multiplier for the GSMP connections in this group  
Context **configure** [service vpls](#) *string* [gsmp group](#) *string* **hold-multiplier** *number*  
Tree [hold-multiplier](#)  
Range 1 to 100  
Default 3  
Introduced 16.0.R1  
Platforms All

### **idle-filter** *boolean*

Synopsis Filter ANCP messages from IDLE DSL lines  
Context **configure** [service vpls](#) *string* [gsmp group](#) *string* **idle-filter** *boolean*  
Tree [idle-filter](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **keepalive** *number*

Synopsis Keepalive value for the GSMP connections in this group  
Context **configure** [service vpls](#) *string* [gsmp group](#) *string* **keepalive** *number*  
Tree [keepalive](#)  
Range 1 to 25  
Units seconds  
Default 10  
Introduced 16.0.R1  
Platforms All

### **neighbor** [[remote-address](#)] *string*

Synopsis Enter the **neighbor** list instance

Context	<b>configure service vpls string gsmp group string neighbor string</b>
Tree	<b>neighbor</b>
Introduced	16.0.R1
Platforms	All

**[remote-address] string**

Synopsis	GSMP neighbor remote IP address
Context	<b>configure service vpls string gsmp group string neighbor string</b>
Tree	<b>neighbor</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**admin-state keyword**

Synopsis	Administrative state of the GSMP neighbor
Context	<b>configure service vpls string gsmp group string neighbor string admin-state keyword</b>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

**description string**

Synopsis	Text description
Context	<b>configure service vpls string gsmp group string neighbor string description string</b>
Tree	<b>description</b>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

## local-address *string*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Restrict connections to this local address only within the service running ANCP
Context	<b>configure</b> <i>service vpls string</i> <i>gsmg group string</i> <i>neighbor string</i> <b>local-address</b> <i>string</i>
Tree	<b>local-address</b>
Introduced	16.0.R1
Platforms	All

## priority-marking

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>priority-marking</b> context
Context	<b>configure</b> <i>service vpls string</i> <i>gsmg group string</i> <i>neighbor string</i> <b>priority-marking</b>
Tree	<b>priority-marking</b>
Introduced	16.0.R1
Platforms	All

## dscp *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	DSCP that is used while remarking the in profile packets
Context	<b>configure</b> <i>service vpls string</i> <i>gsmg group string</i> <i>neighbor string</i> <b>priority-marking</b> <b>dscp</b> <i>keyword</i>
Tree	<b>dscp</b>
Options	be, cp1, cp2, cp3, cp4, cp5, cp6, cp7, cs1, cp9, af11, cp11, af12, cp13, af13, cp15, cs2, cp17, af21, cp19, af22, cp21, af23, cp23, cs3, cp25, af31, cp27, af32, cp29, af33, cp31, cs4, cp33, af41, cp35, af42, cp37, af43, cp39, cs5, cp41, cp42, cp43, cp44, cp45, ef, cp47, nc1, cp49, cp50, cp51, cp52, cp53, cp54, cp55, nc2, cp57, cp58, cp59, cp60, cp61, cp62, cp63
Notes	The following elements are part of a choice: <b>dscp</b> or <b>prec</b> .

Introduced	16.0.R1
Platforms	All

### **prec** *number*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Precedence priority marking
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">gsmg group</a> <i>string</i> <a href="#">neighbor</a> <i>string</i> <a href="#">priority-marking</a> <b>prec</b> <i>number</i>
Tree	<a href="#">prec</a>
Range	0 to 7
Notes	The following elements are part of a choice: <b>dscp</b> or <b>prec</b> .
Introduced	16.0.R1
Platforms	All

### **persistence** *boolean*

Synopsis	Store DSL line information when the GSMP connection terminates
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">gsmg group</a> <i>string</i> <a href="#">persistence</a> <i>boolean</i>
Tree	<a href="#">persistence</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **igmp-host-tracking**

Synopsis	Enter the <b>igmp-host-tracking</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">igmp-host-tracking</a>
Tree	<a href="#">igmp-host-tracking</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**admin-state** *keyword*

Synopsis	Administrative state of IGMP host tracking
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">igmp-host-tracking</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**expiry-time** *number*

Synopsis	Time that the system continues to track inactive hosts
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">igmp-host-tracking</a> <a href="#">expiry-time</a> <i>number</i>
Tree	<a href="#">expiry-time</a>
Range	1 to 65535
Units	seconds
Default	260
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**igmp-snooping**

Synopsis	Enter the <b>igmp-snooping</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">igmp-snooping</a>
Tree	<a href="#">igmp-snooping</a>
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of snooping
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">igmp-snooping</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable

Introduced 16.0.R1  
Platforms All

## evpn-proxy

Synopsis Enter the **evpn-proxy** context  
Context **configure service vpls string igmp-snooping evpn-proxy**  
Tree [evpn-proxy](#)  
Introduced 20.10.R1  
Platforms All

## admin-state *keyword*

Synopsis Administrative state of EVPN proxy  
Context **configure service vpls string igmp-snooping evpn-proxy admin-state keyword**  
Tree [admin-state](#)  
Options enable, disable  
Default disable  
Introduced 20.10.R1  
Platforms All

## mvr

Synopsis Enter the **mvr** context  
Context **configure service vpls string igmp-snooping mvr**  
Tree [mvr](#)  
Introduced 16.0.R1  
Platforms All

## admin-state *keyword*

Synopsis Administrative state of MVR  
Context **configure service vpls string igmp-snooping mvr admin-state keyword**  
Tree [admin-state](#)  
Options enable, disable

---

Default	disable
Introduced	16.0.R1
Platforms	All

**description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">igmp-snooping mvr description string</a>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

**group-policy** *string*

Synopsis	Policy that applies MVR
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">igmp-snooping mvr group-policy string</a>
Tree	<a href="#">group-policy</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

**query-interval** *number*

Synopsis	Time between two consecutive host-query messages
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">igmp-snooping query-interval number</a>
Tree	<a href="#">query-interval</a>
Range	1 to 65535
Units	seconds
Default	125
Introduced	16.0.R1
Platforms	All

**query-source-address** (*keyword* | *ipv4-address*)

Synopsis	Source address for IGMP queries
Context	<b>configure service vpls string igmp-snooping query-source-address</b> ( <i>keyword</i>   <i>ipv4-address</i> )
Tree	<a href="#">query-source-address</a>
Options	system
Default	system
Introduced	16.0.R1
Platforms	All

**report-source-address** *string*

Synopsis	Source IP address used when generating IGMP reports
Context	<b>configure service vpls string igmp-snooping report-source-address</b> <i>string</i>
Tree	<a href="#">report-source-address</a>
Introduced	16.0.R1
Platforms	All

**robust-count** *number*

Synopsis	Number of retries after expected message loss
Context	<b>configure service vpls string igmp-snooping robust-count</b> <i>number</i>
Tree	<a href="#">robust-count</a>
Range	1 to 255
Default	2
Introduced	16.0.R1
Platforms	All

**ignore-l2vpn-mtu-mismatch** *boolean*

Synopsis	Ignore the L2 VPN MTU mismatch with local service MTU
Context	<b>configure service vpls string ignore-l2vpn-mtu-mismatch</b> <i>boolean</i>
Tree	<a href="#">ignore-l2vpn-mtu-mismatch</a>
Description	When configured to <b>true</b> , the router does not check the value of the Layer 2 MTU in the Layer2 Info Extended Community received in a BGP update message against the local

service MTU or locally signaled MTU. It may, therefore, bring up the BGP VPLS service regardless of any MTU mismatch.

When configured to **false**, an MTU mismatch prevents the system from bringing up a BGP-VPLS service.

Default	false
Introduced	22.2.R1
Platforms	All

### **interface** [[interface-name](#)] *string*

Synopsis	Enter the <b>interface</b> list instance
Context	<b>configure service vpls string interface string</b>
Tree	<a href="#">interface</a>
Introduced	16.0.R1
Platforms	All

### **[interface-name]** *string*

Synopsis	IP interface name
Context	<b>configure service vpls string interface string</b>
Tree	<a href="#">interface</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the interface
Context	<b>configure service vpls string interface string admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">interface string</a> <a href="#">description string</a>
Tree	<a href="#">description</a>
String Length	1 to 255
Introduced	16.0.R1
Platforms	All

### **hold-time**

Synopsis	Enter the <b>hold-time</b> context
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">interface string</a> <a href="#">hold-time</a>
Tree	<a href="#">hold-time</a>
Introduced	16.0.R1
Platforms	All

### **ipv4**

Synopsis	Enter the <b>ipv4</b> context
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">interface string</a> <a href="#">hold-time</a> <a href="#">ipv4</a>
Tree	<a href="#">ipv4</a>
Introduced	16.0.R1
Platforms	All

### **down**

Synopsis	Enter the <b>down</b> context
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">interface string</a> <a href="#">hold-time</a> <a href="#">ipv4</a> <a href="#">down</a>
Tree	<a href="#">down</a>
Description	Commands in this context configure the down hold timer, which specifies the delay before activating the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface up, unless an operator configures the <b>init-only</b> command.
Introduced	16.0.R1
Platforms	All

**init-only** *boolean*

Synopsis	Apply delay only at interface configuration or reboot
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">hold-time</a> <a href="#">ipv4</a> <a href="#">down</a> <a href="#">init-only</a> <i>boolean</i>
Tree	<a href="#">init-only</a>
Description	This command applies a delay only when the IP interface is first configured or after a system reboot.
Default	false
Introduced	16.0.R1
Platforms	All

**seconds** *number*

Synopsis	Down hold time for the IP interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">hold-time</a> <a href="#">ipv4</a> <a href="#">down</a> <a href="#">seconds</a> <i>number</i>
Tree	<a href="#">seconds</a>
Range	1 to 1200
Units	seconds
Introduced	16.0.R1
Platforms	All

**up**

Synopsis	Enter the <b>up</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">hold-time</a> <a href="#">ipv4</a> <a href="#">up</a>
Tree	<a href="#">up</a>
Description	Commands in this context configure the up hold timer, which specifies the delay before deactivation of the associated interface. The delay is invoked whenever the system attempts to bring the associated IP interface down.
Introduced	16.0.R1
Platforms	All

**seconds** *number*

Synopsis	Up hold time for the IP interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">interface</a> <i>string</i> <a href="#">hold-time</a> <a href="#">ipv4</a> <a href="#">up</a> <a href="#">seconds</a> <i>number</i>

Tree	<a href="#">seconds</a>
Range	1 to 1200
Units	seconds
Introduced	16.0.R1
Platforms	All

## ipv4

Synopsis	Enter the <b>ipv4</b> context
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">interface string</a> <a href="#">ipv4</a>
Tree	<a href="#">ipv4</a>
Introduced	16.0.R1
Platforms	All

## neighbor-discovery

Synopsis	Enter the <b>neighbor-discovery</b> context
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">interface string</a> <a href="#">ipv4 neighbor-discovery</a>
Tree	<a href="#">neighbor-discovery</a>
Introduced	16.0.R1
Platforms	All

## static-neighbor [[ipv4-address](#)] *string*

Synopsis	Enter the <b>static-neighbor</b> list instance
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">interface string</a> <a href="#">ipv4 neighbor-discovery</a> <a href="#">static-neighbor string</a>
Tree	<a href="#">static-neighbor</a>
Introduced	16.0.R1
Platforms	All

## [\[ipv4-address\]](#) *string*

Synopsis	IPv4 address that corresponds to the physical address
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">interface string</a> <a href="#">ipv4 neighbor-discovery</a> <a href="#">static-neighbor string</a>

Tree	<a href="#">static-neighbor</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **mac-address** *string*

Synopsis	MAC address for the static neighbor
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">interface string ipv4 neighbor-discovery static-neighbor string mac-address string</a>
Tree	<a href="#">mac-address</a>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **timeout** *number*

Synopsis	ARP timeout value to determine how long an ARP entry remains in the ARP cache
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">interface string ipv4 neighbor-discovery timeout number</a>
Tree	<a href="#">timeout</a>
Range	0 to 65535
Units	seconds
Default	14400
Introduced	16.0.R1
Platforms	All

### **primary**

Synopsis	Enable the <b>primary</b> context
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">interface string ipv4 primary</a>
Tree	<a href="#">primary</a>
Introduced	16.0.R1
Platforms	All

### **address** *string*

Synopsis	IP address of the interface
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">interface string ipv4 primary address string</a>
Tree	<a href="#">address</a>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **prefix-length** *number*

Synopsis	IPv4 address prefix length
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">interface string ipv4 primary prefix-length number</a>
Tree	<a href="#">prefix-length</a>
Range	0 to 31
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **mac** *string*

Synopsis	MAC address for the interface
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">interface string mac string</a>
Tree	<a href="#">mac</a>
Introduced	16.0.R1
Platforms	All

### **isid-policy**

Synopsis	Enter the <b>isid-policy</b> context
Context	<b>configure</b> <a href="#">service vpls string isid-policy</a>
Tree	<a href="#">isid-policy</a>
Introduced	19.10.R1
Platforms	All

**entry** [*range-entry-id*] *number*

Synopsis	Enter the <b>entry</b> list instance
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">isid-policy entry</a> <i>number</i>
Tree	<a href="#">entry</a>
Introduced	19.10.R1
Platforms	All

**[range-entry-id]** *number*

Synopsis	ISID policy entry ID
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">isid-policy entry</a> <i>number</i>
Tree	<a href="#">entry</a>
Range	1 to 8191
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	All

**advertise-local** *boolean*

Synopsis	Advertise locally-defined I-VPLS ISIDs or static ISIDs
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">isid-policy entry</a> <i>number</i> <a href="#">advertise-local</a> <i>boolean</i>
Tree	<a href="#">advertise-local</a>
Default	true
Introduced	19.10.R1
Platforms	All

**range**

Synopsis	Enter the <b>range</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">isid-policy entry</a> <i>number</i> <a href="#">range</a>
Tree	<a href="#">range</a>
Introduced	19.10.R1
Platforms	All

### **end number**

Synopsis	Upper bound of the ISID range
Context	<b>configure service vpls string isid-policy entry number range end number</b>
Tree	<b>end</b>
Range	1 to 16777215
Introduced	19.10.R1
Platforms	All

### **start number**

Synopsis	Lower bound of the ISID range
Context	<b>configure service vpls string isid-policy entry number range start number</b>
Tree	<b>start</b>
Range	1 to 16777215
Introduced	19.10.R1
Platforms	All

### **use-def-mcast boolean**

Synopsis	Use default multicast tree to propagate ISIS range
Context	<b>configure service vpls string isid-policy entry number use-def-mcast boolean</b>
Tree	<b>use-def-mcast</b>
Default	false
Introduced	19.10.R1
Platforms	All

### **load-balancing**

Synopsis	Enter the <b>load-balancing</b> context
Context	<b>configure service vpls string load-balancing</b>
Tree	<b>load-balancing</b>
Introduced	16.0.R1
Platforms	All

**lbl-eth-or-ip-l4-teid** *boolean*

Synopsis	Enable hashing of MPLS ethernet and IP packets on SAPs
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">load-balancing</a> <a href="#">lbl-eth-or-ip-l4-teid</a> <i>boolean</i>
Tree	<a href="#">lbl-eth-or-ip-l4-teid</a>
Description	When configured to <b>true</b> , this command enables hashing of MPLS Ethernet and MPLS IP packets received on the Epipe and VPLS service SAP using the MPLS labels, the inner IP addresses, the port numbers, and the GTP TEID field, if read by the system. This capability is supported on line cards that are FP4-based and later.
Default	false
Introduced	22.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**per-service-hashing** *boolean*

Synopsis	Enable per-service hashing for Ethernet services
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">load-balancing</a> <a href="#">per-service-hashing</a> <i>boolean</i>
Tree	<a href="#">per-service-hashing</a>
Default	false
Introduced	16.0.R1
Platforms	All

**spi-load-balancing** *boolean*

Synopsis	Allow use of SPI (Security Parameter Index) in hashing for ESP/AH encrypted IPv4/IPv6 traffic
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">load-balancing</a> <a href="#">spi-load-balancing</a> <i>boolean</i>
Tree	<a href="#">spi-load-balancing</a>
Default	false
Introduced	16.0.R1
Platforms	All

**teid-load-balancing** *boolean*

Synopsis	Include TEID in hashing algorithm for GTP-U/C encapsulated traffic
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">load-balancing</a> <a href="#">teid-load-balancing</a> <i>boolean</i>
Tree	<a href="#">teid-load-balancing</a>

Default	false
Introduced	16.0.R1
Platforms	All

### **m-vpls** *boolean*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Specify whether this is a management VPLS
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <b>m-vpls</b> <i>boolean</i>
Tree	<a href="#">m-vpls</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **mac-flush**

Synopsis	Enter the <b>mac-flush</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <b>mac-flush</b>
Tree	<a href="#">mac-flush</a>
Introduced	16.0.R1
Platforms	All

### **tldp**

Synopsis	Enter the <b>tldp</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <b>mac-flush</b> <b>tldp</b>
Tree	<a href="#">tldp</a>
Introduced	16.0.R1
Platforms	All

### **propagate** *boolean*

Synopsis	Propagate MAC flush messages received from the T-LDP
----------	--

Context	<b>configure service vpls string mac-flush tldp propagate boolean</b>
Tree	<a href="#">propagate</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **send-on-failure boolean**

Synopsis	Send MAC withdraw message on SAP/Spoke-SDP failure
Context	<b>configure service vpls string mac-flush tldp send-on-failure boolean</b>
Tree	<a href="#">send-on-failure</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **mac-protect**

Synopsis	Enter the <b>mac-protect</b> context
Context	<b>configure service vpls string mac-protect</b>
Tree	<a href="#">mac-protect</a>
Introduced	19.10.R1
Platforms	All

### **mac [mac-address] string**

Synopsis	Add a list entry for <b>mac</b>
Context	<b>configure service vpls string mac-protect mac string</b>
Tree	<a href="#">mac</a>
Introduced	19.10.R1
Platforms	All

### **[mac-address] string**

Synopsis	Protected MAC address
Context	<b>configure service vpls string mac-protect mac string</b>

Tree	<a href="#">mac</a>
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	All

### **mcast-ipv6-snooping-scope** *keyword*

Synopsis	IPv6 multicast snooping scope
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <b>mcast-ipv6-snooping-scope</b> <i>keyword</i>
Tree	<a href="#">mcast-ipv6-snooping-scope</a>
Options	sg-based, mac-based
Default	mac-based
Introduced	16.0.R1
Platforms	All

### **mcr-default-gtw**

Synopsis	Enter the <b>mcr-default-gtw</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <b>mcr-default-gtw</b>
Tree	<a href="#">mcr-default-gtw</a>
Introduced	16.0.R1
Platforms	All

### **ip** *string*

Synopsis	Multi-chassis ring default gateway IP address
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <b>mcr-default-gtw</b> <b>ip</b> <i>string</i>
Tree	<a href="#">ip</a>
Introduced	16.0.R1
Platforms	All

### **mac** *string*

Synopsis	Multi-chassis ring default gateway MAC address
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <b>mcr-default-gtw</b> <b>mac</b> <i>string</i>

Tree	<a href="#">mac</a>
Default	00:00:00:00:00:00
Introduced	16.0.R1
Platforms	All

### **mesh-sdp** [[sdp-bind-id](#)] *string*

Synopsis	Enter the <b>mesh-sdp</b> list instance
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <b>mesh-sdp</b> <i>string</i>
Tree	<a href="#">mesh-sdp</a>
Introduced	16.0.R1
Platforms	All

### **[sdp-bind-id]** *string*

Synopsis	SDP binding ID
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <b>mesh-sdp</b> <i>string</i>
Tree	<a href="#">mesh-sdp</a>
String Length	3 to 16
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **accounting-policy** *reference*

Synopsis	Policy to collect accounting statistics
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <b>mesh-sdp</b> <i>string</i> <b>accounting-policy</b> <i>reference</i>
Tree	<a href="#">accounting-policy</a>
Reference	<b>configure</b> <a href="#">log</a> <b>accounting-policy</b> <i>number</i>
Introduced	16.0.R1
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the SDP binding to the service
----------	--

---

Context	<b>configure service vpls string mesh-sdp string admin-state keyword</b>
Tree	<b>admin-state</b>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

## **bfd**

Synopsis	Enter the <b>bfd</b> context
Context	<b>configure service vpls string mesh-sdp string bfd</b>
Tree	<b>bfd</b>
Introduced	21.2.R1
Platforms	All

## **bfd-liveness**

Synopsis	Enable the <b>bfd-liveness</b> context
Context	<b>configure service vpls string mesh-sdp string bfd bfd-liveness</b>
Tree	<b>bfd-liveness</b>
Introduced	21.2.R1
Platforms	All

## **encap keyword**

Synopsis	BFD encapsulation used on the SDP binding
Context	<b>configure service vpls string mesh-sdp string bfd bfd-liveness encap keyword</b>
Tree	<b>encap</b>
Options	ipv4
Default	ipv4
Introduced	21.2.R1
Platforms	All

**bfd-template** *reference*

Synopsis	BFD template associated with the SDP binding
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">bfd bfd-template</a> <i>reference</i>
Tree	<a href="#">bfd-template</a>
Description	This command configures a named BFD template to be used by VCCV BFD on PWs belonging to the VLL service. The template specifies parameters, such as the minimum transmit and receive control packet timer intervals, used by the BFD session. Template parameters are configured under the <b>configure router bfd</b> context.
Reference	<b>configure</b> <a href="#">bfd bfd-template</a> <i>string</i>
Introduced	21.2.R1
Platforms	All

**collect-stats** *boolean*

Synopsis	Allow agent to collect accounting statistics
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">collect-stats</a> <i>boolean</i>
Tree	<a href="#">collect-stats</a>
Default	false
Introduced	16.0.R1
Platforms	All

**control-word** *boolean*

Synopsis	Use the control word as preferred
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">control-word</a> <i>boolean</i>
Tree	<a href="#">control-word</a>
Default	false
Introduced	16.0.R1
Platforms	All

**cpu-protection**

Synopsis	Enter the <b>cpu-protection</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">cpu-protection</a>
Tree	<a href="#">cpu-protection</a>
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## eth-cfm-monitoring

Synopsis Enable the **eth-cfm-monitoring** context

Context **configure service vpls string mesh-sdp string cpu-protection eth-cfm-monitoring**

Tree [eth-cfm-monitoring](#)

Notes The following elements are part of a choice: **eth-cfm-monitoring** or **mac-monitoring**.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## aggregate

Synopsis Apply rate limit to the sum of the per peer packet rates

Context **configure service vpls string mesh-sdp string cpu-protection eth-cfm-monitoring aggregate**

Tree [aggregate](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## car

Synopsis Ignore Ethernet CFM packets when enforcing overall rate

Context **configure service vpls string mesh-sdp string cpu-protection eth-cfm-monitoring car**

Tree [car](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## mac-monitoring

Synopsis Monitor MAC for CPU protection

Context **configure service vpls string mesh-sdp string cpu-protection mac-monitoring**

Tree [mac-monitoring](#)

Notes The following elements are part of a choice: **eth-cfm-monitoring** or **mac-monitoring**.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

### **policy-id** *reference*

Synopsis CPM protection policy  
 Context **configure** [service vpls](#) *string* [mesh-sdp](#) *string* [cpu-protection](#) [policy-id](#) *reference*

Introduced	16.0.R4
Platforms	All

### mda [[mda-id](#)] *string*

Synopsis	Add a list entry for <b>mda</b>
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">mesh-sdp string</a> <a href="#">egress mfib-allowed-mda-destinations</a> <a href="#">mda string</a>
Tree	<a href="#">mda</a>
Introduced	16.0.R4
Platforms	All

**[mda-id] string**

Synopsis	MFIB allowed MDA destination
Context	<b>configure service vpls string mesh-sdp string egress mfib-allowed-mda-destinations mda string</b>
Tree	<b>mda</b>
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

**qos**

Synopsis	Enter the <b>qos</b> context
Context	<b>configure service vpls string mesh-sdp string egress qos</b>
Tree	<b>qos</b>
Introduced	16.0.R1
Platforms	All

**network**

Synopsis	Enter the <b>network</b> context
Context	<b>configure service vpls string mesh-sdp string egress qos network</b>
Tree	<b>network</b>
Introduced	16.0.R1
Platforms	All

**policy-name reference**

Synopsis	Network policy ID
Context	<b>configure service vpls string mesh-sdp string egress qos network policy-name reference</b>
Tree	<b>policy-name</b>
Reference	<b>configure qos network string</b>
Introduced	16.0.R1
Platforms	All

## port-redirect-group

Synopsis	Enter the <b>port-redirect-group</b> context
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">mesh-sdp string</a> <a href="#">egress qos network</a> <a href="#">port-redirect-group</a>
Tree	<a href="#">port-redirect-group</a>
Introduced	16.0.R1
Platforms	All

## group-name *reference*

Synopsis	Name of the egress port queue group
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">mesh-sdp string</a> <a href="#">egress qos network</a> <a href="#">port-redirect-group</a> <a href="#">group-name reference</a>
Tree	<a href="#">group-name</a>
Reference	<b>configure</b> <a href="#">qos queue-group-templates</a> <a href="#">egress queue-group string</a>
Introduced	16.0.R1
Platforms	All

## instance *number*

Synopsis	Queue-group instance ID
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">mesh-sdp string</a> <a href="#">egress qos network</a> <a href="#">port-redirect-group</a> <a href="#">instance number</a>
Tree	<a href="#">instance</a>
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

## vc-label *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Egress MPLS VC label to send packets to the far end
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">mesh-sdp string</a> <a href="#">egress</a> <a href="#">vc-label number</a>
Tree	<a href="#">vc-label</a>

Range	16 to 1048575
Introduced	16.0.R1
Platforms	All

## entropy-label

Synopsis	Enable the use of entropy labels for spoke SDPs
Context	<b>configure</b> <a href="#">service vpls string mesh-sdp string entropy-label</a>
Tree	<a href="#">entropy-label</a>
Notes	The following elements are part of a choice: <b>entropy-label</b> or <b>hash-label</b> .
Introduced	16.0.R1
Platforms	All

## eth-cfm

Synopsis	Enter the <b>eth-cfm</b> context
Context	<b>configure</b> <a href="#">service vpls string mesh-sdp string eth-cfm</a>
Tree	<a href="#">eth-cfm</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## collect-lmm-fc-stats

Synopsis	Enter the <b>collect-lmm-fc-stats</b> context
Context	<b>configure</b> <a href="#">service vpls string mesh-sdp string eth-cfm collect-lmm-fc-stats</a>
Tree	<a href="#">collect-lmm-fc-stats</a>
Description	<p>Commands in this context configure per forwarding class (FC) LMM information collection.</p> <p>The commands <b>fc-in-profile</b> and <b>fc</b> in this context are mutually exclusive. The commands apply to either profile-aware or profile-unaware FCs respectively.</p> <p>This command and the <b>collect-lmm-stats</b> command are mutually exclusive when there is entity resource contention.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**fc keyword**

Synopsis	Forwarding class name for profile-unaware counter
Context	<b>configure service vpls string mesh-sdp string eth-cfm collect-lmm-fc-stats fc keyword</b>
Tree	<b>fc</b>
Description	<p>This command configures individual counters for the specified FCs without regard for profile. The system includes all countable packets that match a configured FC, regardless of profile, in this counter.</p> <p>An FC specified as part of this command and for this specific context cannot be specified as a profile-aware FC using the <b>fc-in-profile</b> command under the <b>collect-lmm-fc-stats</b> context.</p> <p>When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.</p>
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**fc-in-profile keyword**

Synopsis	Forwarding class name for profile-aware counter
Context	<b>configure service vpls string mesh-sdp string eth-cfm collect-lmm-fc-stats fc-in-profile keyword</b>
Tree	<b>fc-in-profile</b>
Description	<p>This command configures individual counters for the specified FCs with regard to profile. The system includes all countable packets that match a configured FC and that are deemed to be in-profile in this counter.</p> <p>An FC specified as part of this command and for this specific context cannot be specified as a profile-unaware FC using the <b>fc</b> command under the <b>collect-lmm-fc-stats</b> context.</p> <p>When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.</p>
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**collect-lmm-stats** *boolean*

Synopsis	Collect statistics for loss measurement message tests
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">collect-lmm-stats</a> <i>boolean</i>
Tree	<a href="#">collect-lmm-stats</a>
Description	<p>When configured to <b>true</b>, the router instantiates the statistical counter to transmit and receive packets for the LAG facility MEP bindings.</p> <p>The <b>show eth-cfm collect-lmm-stats</b> command displays entities that have been enabled to collect transit and receive counters.</p> <p>When configured to <b>false</b>, the router does not instantiate the counter and the LMM PDU associated with the MEP does not populate the counters in the packet.</p>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**mep** [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number*

Synopsis	Enter the <b>mep</b> list instance
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i>
Tree	<a href="#">mep</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**md-admin-name** *reference*

Synopsis	Maintenance Domain (MD) name
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i>
Tree	<a href="#">mep</a>
Reference	<b>configure</b> <a href="#">eth-cfm</a> <a href="#">domain</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**ma-admin-name** *reference*

Synopsis	Maintenance Association (MA) name
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i>
Tree	<a href="#">mep</a>
Reference	<b>configure</b> <a href="#">eth-cfm domain</a> <i>string</i> <a href="#">association</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**mep-id** *number*

Synopsis	Maintenance Endpoint (MEP) ID
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i>
Tree	<a href="#">mep</a>
Range	1 to 8191
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**admin-state** *keyword*

Synopsis	Administrative state of the MEP
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**ais**

Synopsis	Enable the <b>ais</b> context
----------	-------------------------------

Context	<b>configure service vpls</b> <i>string</i> <b>mesh-sdp</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>ais</b>
Tree	<b>ais</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **client-meg-level** *number*

Synopsis	Client MEG level for AIS message generation
Context	<b>configure service vpls</b> <i>string</i> <b>mesh-sdp</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>ais client-meg-level</b> <i>number</i>
Tree	<b>client-meg-level</b>
Range	1 to 7
Max. Instances	7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **interface-support** *boolean*

Synopsis	Enable generation of AIS PDUs based on endpoint state
Context	<b>configure service vpls</b> <i>string</i> <b>mesh-sdp</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>ais interface-support</b> <i>boolean</i>
Tree	<b>interface-support</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **interval** *number*

Synopsis	Transmission interval for AIS messages
Context	<b>configure service vpls</b> <i>string</i> <b>mesh-sdp</b> <i>string</i> <b>eth-cfm mep md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>ais interval</b> <i>number</i>
Tree	<b>interval</b>
Range	1   60
Units	seconds
Default	1

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **low-priority-defect** *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">eth-cfm mep md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>ais</b> <b>low-priority-defect</b> <i>keyword</i>
Tree	<a href="#">low-priority-defect</a>
Options	all-def, mac-rem-err-xcon
Default	all-def
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **priority** *number*

Synopsis	Priority of the AIS messages generated by the node
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">eth-cfm mep md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>ais</b> <b>priority</b> <i>number</i>
Tree	<a href="#">priority</a>
Range	0 to 7
Default	7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **alarm-notification**

Synopsis	Enter the <b>alarm-notification</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">eth-cfm mep md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>alarm-notification</b>
Tree	<a href="#">alarm-notification</a>
Description	<p>Commands in this context configure the Fault Notification Generator (FNG) time values to raise an alarm or reset the CCM defect alarm.</p> <p>Use these timers for network management processes. The timers are not tied into delaying the notification to the fault management system on the network element and do not affect fault propagation mechanisms.</p>
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fng-alarm-time** *number*

Synopsis Time that must expire before an FNG alarm is raised

Context **configure** [service vpls](#) *string* [mesh-sdp](#) *string* [eth-cfm mep md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* [alarm-notification fng-alarm-time](#) *number*

Tree [fng-alarm-time](#)

Range 250 | 500 | 1000

Units centiseconds

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fng-reset-time** *number*

Synopsis Time that must expire before an FNG alarm is reset

Context **configure** [service vpls](#) *string* [mesh-sdp](#) *string* [eth-cfm mep md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* [alarm-notification fng-reset-time](#) *number*

Tree [fng-reset-time](#)

Range 250 | 500 | 1000

Units centiseconds

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm** *boolean*

Synopsis Generate CCM messages

Context **configure** [service vpls](#) *string* [mesh-sdp](#) *string* [eth-cfm mep md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* [ccm](#) *boolean*

Tree [ccm](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**ccm-ltm-priority** *number*

Synopsis	Priority of CCM and LTM messages transmitted by the MEP
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>ccm-ltm-priority</b> <i>number</i>
Tree	<a href="#">ccm-ltm-priority</a>
Range	0 to 7
Default	7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**ccm-padding-size** *number*

Synopsis	Number of octets of padding to insert in CCM packets
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>ccm-padding-size</b> <i>number</i>
Tree	<a href="#">ccm-padding-size</a>
Description	This command sets the byte size of the optional Data TLV to be included in the ETH-CC PDU.  This command increases the size of the ETH-CC PDU by the configured value. The base size of the ETH-CC PDU, including the Interface Status TLV and Port Status TLV, is 83 bytes not including the Layer 2 encapsulation. CCM padding is not supported when the CCM interval (configured through <b>configure eth-cfm domain association ccm-interval</b> ) is less than 1 second.
Range	3 to 1500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**cfm-vlan-tag** *string*

Synopsis	VLAN tags to apply to CFM PDUs for egress processing
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>cfm-vlan-tag</b> <i>string</i>
Tree	<a href="#">cfm-vlan-tag</a>
Description	This command allows the CFM function to include additional VLAN tags to the CFM packet that are carried to the egress and treated as service delimited. Typically, this function is used to influence the VLAN carried over a binding that uses the <b>vc-type vlan</b> or the binding forces the use of one or more VLAN tag that results in a mismatch between the service data arriving at the binding and the locally generated ETH-CFM PDUs arriving at the same egress. When this command is included under the MEP or

MIP configuration, the tags used as part of the configuration typically match the SAP service delimited configuration.

String Length	1 to 9
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## csf

Synopsis	Enable the <b>csf</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">mesh-sdp</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <b>csf</b>
Tree	<a href="#">csf</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## multiplier *decimal-number*

Synopsis	Multiplication factor used to clear the CSF condition
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">mesh-sdp</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <b>csf</b> <b>multiplier</b> <i>decimal-number</i>
Tree	<a href="#">multiplier</a>
Range	0.0   2.0 to 30.0
Default	3.5
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## description *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">mesh-sdp</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <b>description</b> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**direction** *keyword***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Direction the MEP faces
Context	<b>configure</b> <b>service</b> <b>vpls</b> <i>string</i> <b>mesh-sdp</b> <i>string</i> <b>eth-cfm</b> <b>mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>direction</b> <i>keyword</i>
Tree	<b>direction</b>
Options	down, up
Default	down
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**eth-test**

Synopsis	Enable the <b>eth-test</b> context
Context	<b>configure</b> <b>service</b> <b>vpls</b> <i>string</i> <b>mesh-sdp</b> <i>string</i> <b>eth-cfm</b> <b>mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>eth-test</b>
Tree	<b>eth-test</b>
Description	Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the <b>oam eth-cfm eth-test</b> command.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**bit-error-threshold** *number*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	<b>configure</b> <b>service</b> <b>vpls</b> <i>string</i> <b>mesh-sdp</b> <i>string</i> <b>eth-cfm</b> <b>mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>eth-test</b> <b>bit-error-threshold</b> <i>number</i>
Tree	<b>bit-error-threshold</b>
Range	0 to 11840
Units	bit errors
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**test-pattern**

Synopsis	Enter the <b>test-pattern</b> context
Context	<b>configure</b> <a href="#">service vpls string mesh-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test test-pattern</a>
Tree	<a href="#">test-pattern</a>
Description	Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**crc-tlv boolean**

Synopsis	Generate a CRC checksum
Context	<b>configure</b> <a href="#">service vpls string mesh-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test test-pattern crc-tlv boolean</a>
Tree	<a href="#">crc-tlv</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**pattern keyword**

Synopsis	Test pattern for Ethernet Test frames
Context	<b>configure</b> <a href="#">service vpls string mesh-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test test-pattern pattern keyword</a>
Tree	<a href="#">pattern</a>
Description	This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.
Options	all-zeros, all-ones
Default	all-zeros
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**fault-propagation** *keyword*

Synopsis	Fault propagation for the MEP
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>fault-propagation</b> <i>keyword</i>
Tree	<a href="#">fault-propagation</a>
Options	use-if-status-tlv, suspend-ccm
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**grace**

Synopsis	Enter the <b>grace</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>grace</b>
Tree	<a href="#">grace</a>
Description	Commands in this context configure the Nokia ETH-CFM Grace function and the ITU-T Y.1731 Ethernet Expected Default (ETH-ED) function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**eth-ed**

Synopsis	Enter the <b>eth-ed</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">grace</a> <b>eth-ed</b>
Tree	<a href="#">eth-ed</a>
Description	Commands in this context configure the ITU-T Y.1731 ETH-ED function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**max-rx-defect-window** *number*

Synopsis	Maximum received ETH-ED expected defect window duration
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">grace</a> <a href="#">eth-ed</a> <b>max-rx-defect-window</b> <i>number</i>
Tree	<a href="#">max-rx-defect-window</a>

Range	1 to 86400
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **priority number**

Synopsis	Transmission priority for ETH-ED PDUs
Context	<b>configure service vpls string mesh-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed priority number</b>
Tree	<a href="#">priority</a>
Range	0 to 7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **rx-eth-ed boolean**

Synopsis	Receive and process ETH-ED ITU-T Y.1731 PDUs on the MEP
Context	<b>configure service vpls string mesh-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed rx-eth-ed boolean</b>
Tree	<a href="#">rx-eth-ed</a>
Description	This command enables the reception and processing of the ITU-T Y.1731 ETH-ED PDU on the MEP.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **tx-eth-ed boolean**

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	<b>configure service vpls string mesh-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-ed tx-eth-ed boolean</b>
Tree	<a href="#">tx-eth-ed</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## eth-vsm-grace

Synopsis	Enter the <b>eth-vsm-grace</b> context
Context	<b>configure</b> <a href="#">service vpls string mesh-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace</a>
Tree	<a href="#">eth-vsm-grace</a>
Description	Commands in this context configure the Nokia ETH-CFM Grace function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## rx-eth-vsm-grace *boolean*

Synopsis	Receive and process Nokia ETH-CFM Grace PDU on the MEP
Context	<b>configure</b> <a href="#">service vpls string mesh-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace rx-eth-vsm-grace boolean</a>
Tree	<a href="#">rx-eth-vsm-grace</a>
Description	When configured to <b>true</b> , the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.  When configured to <b>false</b> , the router disables the Nokia Grace function.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## tx-eth-vsm-grace *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	<b>configure</b> <a href="#">service vpls string mesh-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace tx-eth-vsm-grace boolean</a>
Tree	<a href="#">tx-eth-vsm-grace</a>
Description	When configured to <b>true</b> , the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.  The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.  The operator must configure the <b>configure system eth-cfm grace</b> command to instruct the system that the node is capable of transmitting expected-defect windows to peers.

The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).

When configured to **false**, the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.

Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **lbm-svc-act-responder** *boolean*

Synopsis	Process service activation streams in ETH-CFM LBM
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">mesh-sdp string</a> <a href="#">eth-cfm mep md-admin-name reference</a> <a href="#">ma-admin-name reference</a> <a href="#">mep-id number</a> <b>lbm-svc-act-responder</b> <i>boolean</i>
Tree	<a href="#">lbm-svc-act-responder</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **low-priority-defect** *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">mesh-sdp string</a> <a href="#">eth-cfm mep md-admin-name reference</a> <a href="#">ma-admin-name reference</a> <a href="#">mep-id number</a> <b>low-priority-defect</b> <i>keyword</i>
Tree	<a href="#">low-priority-defect</a>
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Default	mac-rem-err-xcon
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mac-address** *string*

Synopsis	MAC address of the MEP
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">mesh-sdp string</a> <a href="#">eth-cfm mep md-admin-name reference</a> <a href="#">ma-admin-name reference</a> <a href="#">mep-id number</a> <b>mac-address</b> <i>string</i>
Tree	<a href="#">mac-address</a>
Description	This command specifies the MAC address of the MEP. When unconfigured, the MAC address of the port (if the MEP is on a SAP) or the MAC address of a bridge (if the MEP is on a spoke) is used.

Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **one-way-delay-threshold** *number*

Synopsis Threshold time limit for the one-way delay test  
 Context **configure** [service vpls string mesh-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number one-way-delay-threshold number](#)  
 Tree [one-way-delay-threshold](#)  
 Range 0 to 600  
 Units seconds  
 Default 3  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **primary-vlan** *boolean*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis MEP provisioned using MA primary VLAN ID  
 Context **configure** [service vpls string mesh-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number primary-vlan boolean](#)  
 Tree [primary-vlan](#)  
 Default false  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mip** [primary-vlan](#) (*number* | *keyword*)

Synopsis Enter the **mip** list instance  
 Context **configure** [service vpls string mesh-sdp string eth-cfm mip primary-vlan \(number | keyword\)](#)  
 Tree [mip](#)  
 Introduced 21.5.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**primary-vlan** (*number* | *keyword*)

Synopsis	VLAN ID to which the MIP is attached
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">eth-cfm mip</a> <a href="#">primary-vlan</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">mip</a>
Description	This command provides an option for linking a MIP with a Primary VLAN number or none. When the <b>none</b> option is provided, the MIP does not include the primary vlan.
Range	1 to 4094
Options	none
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**cfm-vlan-tag** *string*

Synopsis	VLAN tags to apply to CFM PDUs for egress processing
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">eth-cfm mip</a> <a href="#">primary-vlan</a> ( <i>number</i>   <i>keyword</i> ) <a href="#">cfm-vlan-tag</a> <i>string</i>
Tree	<a href="#">cfm-vlan-tag</a>
Description	This command allows the CFM function to include additional VLAN tags to the CFM packet that are carried to the egress and treated as service delimited. Typically, this function is used to influence the VLAN carried over a binding that uses the vc-type vlan or the binding forces the use of one or more VLAN tag that results in a mismatch between the service data arriving at the binding and the locally generated ETH-CFM PDUs arriving at the same egress. When this command is included under the MEP or MIP configuration, the tags used as part of the configuration typically match the SAP service delimited configuration.
String Length	1 to 9
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**mac-address** *string*

Synopsis	MAC address of the MIP
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">eth-cfm mip</a> <a href="#">primary-vlan</a> ( <i>number</i>   <i>keyword</i> ) <a href="#">mac-address</a> <i>string</i>
Tree	<a href="#">mac-address</a>

Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **snelch- ingress-ctag-levels *number***

Synopsis	Snelch levels using additional VLAN C-Tag space
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">snelch- ingress-ctag-levels</a> <i>number</i>
Tree	<a href="#">snelch- ingress-ctag-levels</a>
Description	<p>This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding plus an additional VLAN, up to a maximum tag length of two tags. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.</p> <p>The list of levels must be a complete contiguous list from 0 up to the highest level to be dropped.</p>
Range	0 to 7
Max. Instances	8
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **snelch- ingress-levels *number***

Synopsis	Levels for which ETH-CFM packets are silently discarded
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">snelch- ingress-levels</a> <i>number</i>
Tree	<a href="#">snelch- ingress-levels</a>
Description	<p>This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.</p> <p>The list of levels must be a complete contiguous list from 0 up to the highest level that will be dropped.</p>
Range	0 to 7
Max. Instances	8

Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **vmep-filter** *boolean*

Synopsis Suppress eth-cfm PDUs based on level lower than or equal to configured Virtual MEP  
 Context **configure** [service vpls](#) *string* [mesh-sdp](#) *string* [eth-cfm vmep-filter](#) *boolean*

**auto-learn-mac-protect-exclude-list** *reference*

Synopsis	Referenced MAC protect exclusion list name
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <b>fdb</b> <a href="#">auto-learn-mac-protect-exclude-list</a> <i>reference</i>
Tree	<a href="#">auto-learn-mac-protect-exclude-list</a>
Description	This command references the name of a MAC protect exclusion list.  Dynamically-learned MAC Source Addresses (SA) are protected if they are learned on an object with ALMP configured and no exclusion list is associated with the object, or if the MAC SA does not match any entry in an associated exclusion list.  An exclusion list can be used in multiple objects of a service. If a list is empty, ALMP does not exclude any learned MAC SAs from protection on the object.
Reference	<b>configure</b> <a href="#">service</a> <a href="#">mac-list</a> <i>string</i>
Introduced	20.5.R1
Platforms	All

**mac-pinning** *boolean*

Synopsis	MAC address pinning in active status
----------	--------------------------------------

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Ingress MPLS VC label to send packets to the far end
Context	<b>configure</b> service vpls <i>string</i> mesh-sdp <i>string</i> ingress vc-label <i>number</i>
Tree	<a href="#">vc-label</a>
Range	1 to 1048575
Introduced	16.0.R1
Platforms	All

**mld-snooping**

Synopsis	Enter the <b>mld-snooping</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">mld-snooping</a>
Tree	<a href="#">mld-snooping</a>
Introduced	16.0.R1
Platforms	All

**fast-leave** *boolean*

Synopsis	Allow IGMP fast leave processing
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">mld-snooping</a> <a href="#">fast-leave</a> <i>boolean</i>
Tree	<a href="#">fast-leave</a>
Default	false
Introduced	16.0.R1
Platforms	All

**import-policy** *reference*

Synopsis	Import policy that filters IGMP packets
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">mld-snooping</a> <a href="#">import-policy</a> <i>reference</i>
Tree	<a href="#">import-policy</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

**maximum-number-groups** *number*

Synopsis	Maximum groups allowed
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">mesh-sdp</a> <i>string</i> <a href="#">mld-snooping</a> <a href="#">maximum-number-groups</a> <i>number</i>
Tree	<a href="#">maximum-number-groups</a>
Range	1 to 16000
Introduced	16.0.R1
Platforms	All

**mrouter-port** *boolean*

Synopsis	Operate port as a multicast router port
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">mesh-sdp</a> <a href="#">string</a> <a href="#">mld-snooping</a> <a href="#">mrouter-port</a> <i>boolean</i>
Tree	<a href="#">mrouter-port</a>
Default	false
Introduced	16.0.R1
Platforms	All

**query-interval** *number*

Synopsis	Time between two consecutive host-query messages
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">mesh-sdp</a> <a href="#">string</a> <a href="#">mld-snooping</a> <a href="#">query-interval</a> <i>number</i>
Tree	<a href="#">query-interval</a>
Range	2 to 1024
Units	seconds
Default	125
Introduced	16.0.R1
Platforms	All

**query-last-member-interval** *number*

Synopsis	Time between group-specific query messages
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">mesh-sdp</a> <a href="#">string</a> <a href="#">mld-snooping</a> <a href="#">query-last-member-interval</a> <i>number</i>
Tree	<a href="#">query-last-member-interval</a>
Range	1 to 50
Units	deciseconds
Default	10
Introduced	16.0.R1
Platforms	All

**query-response-interval** *number*

Synopsis	Time to wait for a response to the host-query messages
----------	--

Context	<b>configure service vpls string mesh-sdp string mld-snooping query-response-interval number</b>
Tree	<a href="#">query-response-interval</a>
Range	1 to 1023
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	All

**robust-count** *number*

Synopsis	Number of retries after expected message loss
Context	<b>configure service vpls string mesh-sdp string mld-snooping robust-count number</b>
Tree	<a href="#">robust-count</a>
Range	2 to 7
Default	2
Introduced	16.0.R1
Platforms	All

**router-alert-check** *boolean*

Synopsis	Enable IP router alert check option
Context	<b>configure service vpls string mesh-sdp string mld-snooping router-alert-check boolean</b>
Tree	<a href="#">router-alert-check</a>
Default	true
Introduced	16.0.R1
Platforms	All

**send-queries** *boolean*

Synopsis	Generate IGMP general queries
Context	<b>configure service vpls string mesh-sdp string mld-snooping send-queries boolean</b>
Tree	<a href="#">send-queries</a>
Default	false
Introduced	16.0.R1

Platforms All

## static

Synopsis Enter the **static** context

Context **configure service vpls string mesh-sdp string mld-snooping static**

Tree **static**

Introduced 16.0.R1

Platforms All

## group [group-address] string

Synopsis Enter the **group** list instance

Context **configure service vpls string mesh-sdp string mld-snooping static group string**

Tree **group**

Introduced 16.0.R1

Platforms All

## [group-address] string

Synopsis Group address of multicast channel

Context **configure service vpls string mesh-sdp string mld-snooping static group string**

Tree **group**

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms All

## source [source-address] string

Synopsis Add a list entry for **source**

Context **configure service vpls string mesh-sdp string mld-snooping static group string source string**

Tree **source**

Notes The following elements are part of a mandatory choice: **source** or **starg**.

Introduced 16.0.R1

Platforms All

### **[source-address]** *string*

Synopsis Source IP address

Context **configure service vpls string mesh-sdp string mld-snooping static group string source string**

Tree [source](#)

Notes This element is part of a list key.

Introduced 16.0.R2

Platforms All

### **starg**

Synopsis any source address (\*,G)

Context **configure service vpls string mesh-sdp string mld-snooping static group string starg**

Tree [starg](#)

Notes The following elements are part of a mandatory choice: **source** or **starg**.

Introduced 16.0.R2

Platforms All

### **version** *keyword*

Synopsis Version of MLD running on the SAP or SDP

Context **configure service vpls string mesh-sdp string mld-snooping version keyword**

Tree [version](#)

Options 1, 2

Default 2

Introduced 16.0.R1

Platforms All

### **mrp**

Synopsis Enter the **mrp** context

Context **configure service vpls string mesh-sdp string mrp**

Tree	<a href="#">mrp</a>
Introduced	20.10.R1
Platforms	All

### **join-time** *number*

Synopsis	Maximum rate for attribute join messages sent on SDP
Context	<b>configure</b> <a href="#">service vpls string mesh-sdp string mrp join-time number</a>
Tree	<a href="#">join-time</a>
Range	1 to 10
Units	deciseconds
Default	2
Introduced	20.10.R1
Platforms	All

### **leave-all-time** *number*

Synopsis	Frequency of LeaveAll PDUs by LeaveAll state machine
Context	<b>configure</b> <a href="#">service vpls string mesh-sdp string mrp leave-all-time number</a>
Tree	<a href="#">leave-all-time</a>
Range	60 to 300
Units	deciseconds
Default	100
Introduced	20.10.R1
Platforms	All

### **leave-time** *number*

Synopsis	Time in LV state before transition to MT state
Context	<b>configure</b> <a href="#">service vpls string mesh-sdp string mrp leave-time number</a>
Tree	<a href="#">leave-time</a>
Range	30 to 60
Units	deciseconds
Default	30
Introduced	20.10.R1

Platforms All

### **periodic-time** *number*

Synopsis Frequency of periodic events generated by state machine  
 Context **configure** [service vpls](#) *string* [mesh-sdp](#) *string* [mrp](#) **periodic-time** *number*  
 Tree [periodic-time](#)  
 Range 10 to 100  
 Units deciseconds  
 Default 10  
 Introduced 20.10.R1  
 Platforms All

### **periodic-timer** *boolean*

Synopsis Enable the Periodic Transmission Timer  
 Context **configure** [service vpls](#) *string* [mesh-sdp](#) *string* [mrp](#) **periodic-timer** *boolean*  
 Tree [periodic-timer](#)  
 Default false  
 Introduced 20.10.R1  
 Platforms All

### **policy** *reference*

Synopsis MRP policy to control Group B-MAC attributes  
 Context **configure** [service vpls](#) *string* [mesh-sdp](#) *string* [mrp](#) **policy** *reference*  
 Tree [policy](#)  
 Reference **configure** [service mrp](#) **policy** *string*  
 Introduced 20.10.R1  
 Platforms All

### **pbb**

Synopsis Enter the **pbb** context  
 Context **configure** [service vpls](#) *string* [mesh-sdp](#) *string* **pbb**

Tree	<a href="#">pbb</a>
Introduced	20.10.R1
Platforms	All

## fault-propagation

Synopsis	Enter the <b>fault-propagation</b> context
Context	<b>configure</b> <a href="#">service vpls string mesh-sdp string pbb</a> <b>fault-propagation</b>
Tree	<a href="#">fault-propagation</a>
Introduced	20.10.R1
Platforms	All

## backbone-mac-address [[address](#)] *string*

Synopsis	Add a list entry for <b>backbone-mac-address</b>
Context	<b>configure</b> <a href="#">service vpls string mesh-sdp string pbb</a> <b>fault-propagation backbone-mac-address</b> <i>string</i>
Tree	<a href="#">backbone-mac-address</a>
Introduced	20.10.R1
Platforms	All

## [\[address\]](#) *string*

Synopsis	Backbone MAC address
Context	<b>configure</b> <a href="#">service vpls string mesh-sdp string pbb</a> <b>fault-propagation backbone-mac-address</b> <i>string</i>
Tree	<a href="#">backbone-mac-address</a>
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	All

## backbone-mac-name [[name](#)] *reference*

Synopsis	Add a list entry for <b>backbone-mac-name</b>
Context	<b>configure</b> <a href="#">service vpls string mesh-sdp string pbb</a> <b>fault-propagation backbone-mac-name</b> <i>reference</i>

Tree	<a href="#">backbone-mac-name</a>
Introduced	20.10.R1
Platforms	All

**[name]** *reference*

Synopsis	Backbone MAC address name
Context	<b>configure</b> <a href="#">service vpls string mesh-sdp string pbb fault-propagation backbone-mac-name reference</a>
Tree	<a href="#">backbone-mac-name</a>
Reference	<b>configure</b> <a href="#">service pbb mac string</a>
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	All

**vc-type** *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Type of virtual circuit (VC) associated with the SDP binding; VPLS not supported
Context	<b>configure</b> <a href="#">service vpls string mesh-sdp string vc-type keyword</a>
Tree	<a href="#">vc-type</a>
Options	ether, vlan
Default	ether
Introduced	16.0.R1
Platforms	All

**vlan-vc-tag** *number*

Synopsis	SDP bind VC tag
Context	<b>configure</b> <a href="#">service vpls string mesh-sdp string vlan-vc-tag number</a>
Tree	<a href="#">vlan-vc-tag</a>
Range	0 to 4094
Introduced	16.0.R1

Platforms All

## **mfib**

Synopsis Enter the **mfib** context  
Context **configure service vpls string mfib**  
Tree **mfib**  
Introduced 16.0.R1  
Platforms All

## **table**

Synopsis Enter the **table** context  
Context **configure service vpls string mfib table**  
Tree **table**  
Introduced 16.0.R1  
Platforms All

## **high-wmark** *number*

Synopsis High watermark for the MFIB table  
Context **configure service vpls string mfib table high-wmark number**  
Tree **high-wmark**  
Range 0 to 100  
Default 95  
Introduced 16.0.R1  
Platforms All

## **low-wmark** *number*

Synopsis Low watermark for the MFIB table  
Context **configure service vpls string mfib table low-wmark number**  
Tree **low-wmark**  
Range 0 to 100  
Default 90

---

Introduced	16.0.R1
Platforms	All

### **size number**

Synopsis	Maximum SG entries in the MFIB
Context	<b>configure service vpls string mfib table size number</b>
Tree	<a href="#">size</a>
Range	1 to 40959
Introduced	16.0.R1
Platforms	All

### **mld-snooping**

Synopsis	Enter the <b>mld-snooping</b> context
Context	<b>configure service vpls string mld-snooping</b>
Tree	<a href="#">mld-snooping</a>
Introduced	16.0.R1
Platforms	All

### **admin-state keyword**

Synopsis	Administrative state of snooping
Context	<b>configure service vpls string mld-snooping admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

### **evpn-proxy**

Synopsis	Enter the <b>evpn-proxy</b> context
Context	<b>configure service vpls string mld-snooping evpn-proxy</b>
Tree	<a href="#">evpn-proxy</a>

Introduced	20.10.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of EVPN proxy
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">mld-snooping</a> <a href="#">evpn-proxy</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	20.10.R1
Platforms	All

**mvr**

Synopsis	Enter the <b>mvr</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">mld-snooping</a> <a href="#">mvr</a>
Tree	<a href="#">mvr</a>
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of MVR
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">mld-snooping</a> <a href="#">mvr</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

**description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">mld-snooping</a> <a href="#">mvr</a> <a href="#">description</a> <i>string</i>

---

Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **group-policy** *string*

Synopsis	Policy that applies MVR
Context	<b>configure</b> <a href="#">service vpls string mld-snooping mvr group-policy string</a>
Tree	<a href="#">group-policy</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

### **query-interval** *number*

Synopsis	Time between two consecutive host-query messages
Context	<b>configure</b> <a href="#">service vpls string mld-snooping query-interval number</a>
Tree	<a href="#">query-interval</a>
Range	1 to 65535
Units	seconds
Default	125
Introduced	16.0.R1
Platforms	All

### **query-source-address** (*keyword* | *ipv6-address*)

Synopsis	Source IP address used in MLD queries
Context	<b>configure</b> <a href="#">service vpls string mld-snooping query-source-address (keyword   ipv6-address)</a>
Tree	<a href="#">query-source-address</a>
Options	system
Default	system
Introduced	16.0.R1
Platforms	All

**report-source-address** *string*

Synopsis	Source IP address used when generating MLD reports
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mld-snooping</a> <a href="#">report-source-address</a> <i>string</i>
Tree	<a href="#">report-source-address</a>
Introduced	16.0.R1
Platforms	All

**robust-count** *number*

Synopsis	Number of retries after expected message loss
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mld-snooping</a> <a href="#">robust-count</a> <i>number</i>
Tree	<a href="#">robust-count</a>
Range	1 to 255
Default	2
Introduced	16.0.R1
Platforms	All

**mrp**

Synopsis	Enter the <b>mrp</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mrp</a>
Tree	<a href="#">mrp</a>
Introduced	20.10.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of MRP
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mrp</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	20.10.R1
Platforms	All

## **mmp**

Synopsis	Enter the <b>mmp</b> context
Context	<b>configure service vpls string mmp mmp</b>
Tree	<b>mmp</b>
Introduced	20.10.R1
Platforms	All

## **admin-state keyword**

Synopsis	Administrative state of MMRP
Context	<b>configure service vpls string mmp mmp admin-state keyword</b>
Tree	<b>admin-state</b>
Options	enable, disable
Introduced	20.10.R1
Platforms	All

## **attribute-table**

Synopsis	Enter the <b>attribute-table</b> context
Context	<b>configure service vpls string mmp mmp attribute-table</b>
Tree	<b>attribute-table</b>
Introduced	20.10.R1
Platforms	All

## **high-wmark number**

Synopsis	High watermark for the MMRP attribute table
Context	<b>configure service vpls string mmp mmp attribute-table high-wmark number</b>
Tree	<b>high-wmark</b>
Range	0 to 100
Default	95
Introduced	20.10.R1
Platforms	All

**low-wmark** *number*

Synopsis	Low watermark for the MMRP attribute table
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mrp mmp attribute-table</a> <a href="#">low-wmark</a> <i>number</i>
Tree	<a href="#">low-wmark</a>
Range	0 to 100
Default	90
Introduced	20.10.R1
Platforms	All

**size** *number*

Synopsis	Maximum number of attributes accepted by B-VPLS
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mrp mmp attribute-table</a> <a href="#">size</a> <i>number</i>
Tree	<a href="#">size</a>
Range	1 to 8192
Default	2048
Introduced	20.10.R1
Platforms	All

**end-station-only** *boolean*

Synopsis	Prevent generation or processing of MMRP messages
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mrp mmp end-station-only</a> <i>boolean</i>
Tree	<a href="#">end-station-only</a>
Default	false
Introduced	20.10.R1
Platforms	All

**flood-time** *number*

Synopsis	Time when traffic is flooded after status change
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">mrp mmp flood-time</a> <i>number</i>
Tree	<a href="#">flood-time</a>
Range	3 to 600

Introduced 20.10.R1  
 Platforms All

### **multicast-info-policy** *reference*

Synopsis Multicast information policy  
 Context **configure** [service vpls string multicast-info-policy reference](#)  
 Tree [multicast-info-policy](#)  
 Reference **configure** [multicast-management multicast-info-policy string](#)  
 Introduced 16.0.R1  
 Platforms All

### **pbb**

Synopsis Enter the **pbb** context  
 Context **configure** [service vpls string pbb](#)  
 Tree [pbb](#)  
 Introduced 16.0.R1  
 Platforms All

### **backbone-vpls** [[backbone-vpls-service-name](#)] *reference*

Synopsis Enter the **backbone-vpls** list instance  
 Context **configure** [service vpls string pbb backbone-vpls reference](#)  
 Tree [backbone-vpls](#)  
 Max. Instances 1  
 Introduced 16.0.R1  
 Platforms All

### **[backbone-vpls-service-name]** *reference*

Synopsis Service name  
 Context **configure** [service vpls string pbb backbone-vpls reference](#)  
 Tree [backbone-vpls](#)

---

Reference	<b>configure service vpls string</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## **fdb**

Synopsis	Enter the <b>fdb</b> context
Context	<b>configure service vpls string pbb backbone-vpls reference fdb</b>
Tree	<a href="#">fdb</a>
Introduced	20.2.R1
Platforms	All

## **protected-src-mac-violation-action keyword**

Synopsis	Action taken upon a relearn request for protected MAC
Context	<b>configure service vpls string pbb backbone-vpls reference fdb protected-src-mac-violation-action keyword</b>
Tree	<a href="#">protected-src-mac-violation-action</a>
Options	discard
Introduced	20.5.R1
Platforms	All

## **igmp-snooping**

Synopsis	Enter the <b>igmp-snooping</b> context
Context	<b>configure service vpls string pbb backbone-vpls reference igmp-snooping</b>
Tree	<a href="#">igmp-snooping</a>
Introduced	16.0.R1
Platforms	All

## **mrouter-destination [mac-reference] reference**

Synopsis	Add a list entry for <b>mrouter-destination</b>
Context	<b>configure service vpls string pbb backbone-vpls reference igmp-snooping mrouter-destination reference</b>

Tree	<a href="#">mrouter-destination</a>
Introduced	16.0.R1
Platforms	All

### [**mac-reference**] *reference*

Synopsis	Mac name reference
Context	<b>configure</b> <a href="#">service vpls string pbb backbone-vpls reference igmp-snooping mrouter-destination reference</a>
Tree	<a href="#">mrouter-destination</a>
Reference	<b>configure</b> <a href="#">service pbb mac string</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **isid** *number*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Backbone VPLS ISID
Context	<b>configure</b> <a href="#">service vpls string pbb backbone-vpls reference isid number</a>
Tree	<a href="#">isid</a>
Range	0 to 16777215
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **mesh-sdp** [[sdp-bind-id](#)] *reference*

Synopsis	Enter the <b>mesh-sdp</b> list instance
Context	<b>configure</b> <a href="#">service vpls string pbb backbone-vpls reference mesh-sdp reference</a>
Tree	<a href="#">mesh-sdp</a>
Introduced	16.0.R1
Platforms	All

**[sdp-bind-id] reference**

Synopsis	Backbone VPLS SDP Binding ID
Context	<b>configure</b> <a href="#">service vpls string pbb backbone-vpls reference mesh-sdp reference</a>

## selective

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>selective</b> context
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">provider-tunnel selective</a>
Tree	<a href="#">selective</a>
Introduced	23.3.R1
Platforms	All

## admin-state *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Administrative state of the selective provider tunnel
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">provider-tunnel selective</a> <a href="#">admin-state keyword</a>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	23.3.R1

Platforms All

## data-delay-interval *number*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis S-PMSI data delay timer

Context **configure** *service vpls string provider-tunnel selective data-delay-interval number*

Tree [data-delay-interval](#)

Description This command configures the S-PMSI data delay timer.

The data delay interval determines the time the router takes to switch over the traffic from the Ingress Replication binds to the wildcard S-PMSI or from the wildcard S-PMSI to the S-PMSI, after the S-PMSI is created. This time should account for the time it takes for BGP to propagate the S-PMSI A-D route to the downstream PEs and the time it takes the downstream PEs to join the tree all the way up to the root.

Range 3 to 180

Units seconds

Default 3

Introduced 23.3.R1

Platforms All

## data-threshold

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enter the **data-threshold** context

Context **configure** *service vpls string provider-tunnel selective data-threshold*

Tree [data-threshold](#)

Description Commands in this context specify the data rate threshold that triggers the switch from the inclusive provider tunnel to the selective provider tunnel for (C-S, C-G) within the group range.

Optionally, PE thresholds to create or delete ng-MVPN S-PMSI may also be specified. Omitting the PE thresholds preserves the currently set value (or defaults if never set). Multiple statements (one per a unique group) are allowed in the configuration.

This command is not applicable to multistream S-PMSI.

This command for S-PMSI trees can also be used in EVPN services. The command options are used in the same way as in MVPN when applied to EVPN, in particular the rate and PE thresholds.

Introduced 23.3.R1

Platforms All

### **group-prefix** [[ip-group-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis Enter the **group-prefix** list instance

Context **configure service vpls string provider-tunnel selective data-threshold group-prefix** (*ipv4-prefix* | *ipv6-prefix*)

Tree [group-prefix](#)

Introduced 23.3.R1

Platforms All

### **[ip-group-prefix]** (*ipv4-prefix* | *ipv6-prefix*)

Synopsis Multicast group prefix

Context **configure service vpls string provider-tunnel selective data-threshold group-prefix** (*ipv4-prefix* | *ipv6-prefix*)

Tree [group-prefix](#)

Notes This element is part of a list key.

Introduced 23.3.R1

Platforms All

### **pe-threshold-add** *number*

Synopsis Number of receiver PEs for S-PMSI tunnel creation

Context **configure service vpls string provider-tunnel selective data-threshold group-prefix** (*ipv4-prefix* | *ipv6-prefix*) **pe-threshold-add** *number*

Tree [pe-threshold-add](#)

Description This command specifies the number of Receiver PEs for creating S-PMSI.

A S-PMSI is created when the following apply:

- The number of receiver PEs for a multicast group is non-zero.
- The number of receiver PEs is below the threshold.
- The BW threshold is satisfied.

Range 1 to 65535

Default	65535
Introduced	23.3.R1
Platforms	All

### **pe-threshold-delete** *number*

Synopsis	Number of receiver PEs for S-PMSI tunnel deletion
Context	<b>configure service vpls</b> <i>string</i> <b>provider-tunnel selective data-threshold group-prefix</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>pe-threshold-delete</b> <i>number</i>
Tree	<b>pe-threshold-delete</b>
Description	This command specifies the number of Receiver PEs to delete S-PMSI. When the number of receiver PEs for a multicast group configuration is above the threshold, S-PMSI is deleted and the multicast group is moved to IR or a wildcard S-PMSI. Nokia recommends that the delete threshold be configured to be significantly larger than the add threshold to avoid re-signaling of S-PMSI as the Receiver PE count fluctuates
Range	2 to 65535
Default	65535
Introduced	23.3.R1
Platforms	All

### **threshold** *number*

Synopsis	Threshold rate for a group prefix
Context	<b>configure service vpls</b> <i>string</i> <b>provider-tunnel selective data-threshold group-prefix</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>threshold</b> <i>number</i>
Tree	<b>threshold</b>
Description	This command specifies the threshold rate for a group prefix. If the rate for a (C-S, C-G) within the specified group range exceeds the threshold, traffic for the (C-S, C-G) is switched to the selective provider tunnel.
Range	0 to 4294967294
Units	kilobps
Notes	This element is mandatory.
Introduced	23.3.R1
Platforms	All

**maximum-p2mp-spmsi** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Maximum number of P2MP S-PMSI tunnels
Context	<b>configure</b> <i>service vpls string provider-tunnel selective maximum-p2mp-spmsi number</i>
Tree	<a href="#">maximum-p2mp-spmsi</a>
Description	This command specifies the maximum number of S-PMSI tunnels for the EVPN service. When the limit is reached, no more RSVP P2MP S-PMSI or LDP P2MP S-PMSI are created and traffic over the data threshold value stays on I-PMSI
Range	1 to 4000
Default	10
Introduced	23.3.R1
Platforms	All

**mldp** *boolean***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable MLDP
Context	<b>configure</b> <i>service vpls string provider-tunnel selective mldp boolean</i>
Tree	<a href="#">mldp</a>
Description	When configured to <b>true</b> , this command enables the use of MLDP as a protocol for an LDP P2MP LSP that is used for forwarding Broadcast, Unicast unknown, and Multicast (BUM) packets of a VPLS or B-VPLS instance. This command is also used for forwarding IP multicast packets of an EVPN VPLS or R-VPLS service.  When configured to <b>false</b> , this command disables the use of MLDP as a protocol to set up the P2MP LSP.
Default	false
Introduced	23.3.R1
Platforms	All

**owner keyword****WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Provider-tunnel selective owner
Context	<b>configure service vpls string provider-tunnel selective owner keyword</b>
Tree	<b>owner</b>
Description	This command selects the owner protocol of the S-PMSI tunnel in the service. The owner must be explicitly set before the provider tunnel can be enabled.
Options	bgp-evpn-mpls
Introduced	23.3.R1
Platforms	All

**wildcard-spmsi boolean****WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable wildcard S-PMSI support
Context	<b>configure service vpls string provider-tunnel selective wildcard-spmsi boolean</b>
Tree	<b>wildcard-spmsi</b>
Description	When configured to <b>true</b> , the system enables RFC 6625 (C-*, C-*) S-PMSI functionality for EVPN VPLS or R-VPLS services. When enabled, (C-*, C-*) S-PMSI is used instead of I-PMSI for this EVPN VPLS or RVPLS service.  The <b>configure service vprn pim rp auto-rp-discovery</b> command and this command are mutually exclusive.  When configured to <b>false</b> , the system disables the (C-*, C-*) S-PMSI functionality.
Default	false
Introduced	23.3.R1
Platforms	All

**proxy-arp**

Synopsis	Enable the <b>proxy-arp</b> context
Context	<b>configure service vpls string proxy-arp</b>

---

Tree	<a href="#">proxy-arp</a>

### **resolve-retry-time** *number*

Synopsis Frequency at which the resolve messages are sent  
 Context **configure** [service](#) [vpls](#) *string* [proxy-arp](#) [dynamic-arp](#) [ip-address](#) *string* **resolve-retry-time** *number*  
 Tree [resolve-retry-time](#)  
 Range 1 to 60  
 Units minutes  
 Default 5  
 Introduced 16.0.R1  
 Platforms All

**dynamic-populate** *boolean*

Synopsis	Populate proxy ARP entries from snooped GARP/ARP/ND messages on SAPs/SDP-bindings
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">proxy-arp dynamic-populate</a> <i>boolean</i>
Tree	<a href="#">dynamic-populate</a>
Default	false
Introduced	16.0.R1
Platforms	All

**evpn**

Synopsis	Enter the <b>evpn</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">proxy-arp evpn</a>
Tree	<a href="#">evpn</a>
Introduced	16.0.R1
Platforms	All

**flood**

Synopsis	Enter the <b>flood</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">proxy-arp evpn flood</a>
Tree	<a href="#">flood</a>
Introduced	16.0.R1
Platforms	All

**gratuitous-arp** *boolean*

Synopsis	Flood GARP-requests/GARP-replies to the EVPN
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">proxy-arp evpn flood gratuitous-arp</a> <i>boolean</i>
Tree	<a href="#">gratuitous-arp</a>
Default	true
Introduced	16.0.R1
Platforms	All

**unknown-arp-req** *boolean*

Synopsis	Flood ARP-requests (with source squelching) if there is no active proxy-ARP entry for requested IP
Context	<b>configure</b> <a href="#">service vpls string proxy-arp evpn flood unknown-arp-req</a> <i>boolean</i>
Tree	<a href="#">unknown-arp-req</a>
Default	true
Introduced	16.0.R1
Platforms	All

**route-tag** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Route tag used on export policies to match MAC/IP routes generated by proxy-ARP or proxy-ND module
Context	<b>configure</b> <a href="#">service vpls string proxy-arp evpn route-tag</a> <i>number</i>
Tree	<a href="#">route-tag</a>
Range	0   1 to 255
Default	0
Introduced	16.0.R1
Platforms	All

**process-arp-probes** *boolean*

Synopsis	Enable replies to DAD ARP probes
Context	<b>configure</b> <a href="#">service vpls string proxy-arp process-arp-probes</a> <i>boolean</i>
Tree	<a href="#">process-arp-probes</a>
Default	true
Introduced	22.7.R1
Platforms	All

**send-refresh** (*number* | *keyword*)

Synopsis	Time at which to send a refresh message
----------	---

Context	<b>configure service vpls string proxy-arp send-refresh</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">send-refresh</a>
Range	120 to 86400
Options	never
Default	never
Introduced	16.0.R1
Platforms	All

### **static-arp**

Synopsis	Enter the <b>static-arp</b> context
Context	<b>configure service vpls string proxy-arp static-arp</b>
Tree	<a href="#">static-arp</a>
Introduced	16.0.R1
Platforms	All

### **ip-address** [[ipv4-address](#)] *string*

Synopsis	Enter the <b>ip-address</b> list instance
Context	<b>configure service vpls string proxy-arp static-arp ip-address string</b>
Tree	<a href="#">ip-address</a>
Introduced	16.0.R1
Platforms	All

### **[ipv4-address]** *string*

Synopsis	Proxy ARP IPv4 address
Context	<b>configure service vpls string proxy-arp static-arp ip-address string</b>
Tree	<a href="#">ip-address</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**mac string**

Synopsis	Proxy ARP MAC address for static entry
Context	<b>configure</b> <a href="#">service vpls string proxy-arp static-arp ip-address string mac string</a>
Tree	<a href="#">mac</a>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

**table-size number**

Synopsis	Maximum number of learned and static entries allowed in the proxy table of this service
Context	<b>configure</b> <a href="#">service vpls string proxy-arp table-size number</a>
Tree	<a href="#">table-size</a>
Range	1 to 16383
Default	250
Introduced	16.0.R1
Platforms	All

**proxy-nd**

Synopsis	Enable the <b>proxy-nd</b> context
Context	<b>configure</b> <a href="#">service vpls string proxy-nd</a>
Tree	<a href="#">proxy-nd</a>
Introduced	16.0.R1
Platforms	All

**admin-state keyword**

Synopsis	Administrative state of the proxy
Context	<b>configure</b> <a href="#">service vpls string proxy-nd admin-state keyword</a>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

**age-time** (*number* | *keyword*)

Synopsis	Aging timer for proxy entries, where entries are flushed upon timer expiry
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">proxy-nd age-time</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">age-time</a>
Range	60 to 86400
Units	seconds
Options	never
Default	never
Introduced	16.0.R1
Platforms	All

**duplicate-detect**

Synopsis	Enter the <b>duplicate-detect</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">proxy-nd duplicate-detect</a>
Tree	<a href="#">duplicate-detect</a>
Introduced	16.0.R1
Platforms	All

**anti-spoof-mac** *string***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	MAC address to replace the proxy-ARP/ND offending entry's MAC
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">proxy-nd duplicate-detect anti-spoof-mac</a> <i>string</i>
Tree	<a href="#">anti-spoof-mac</a>
Introduced	16.0.R1
Platforms	All

**hold-down-time** (*number* | *keyword*)

Synopsis	Hold down time for a duplicate entry
----------	--------------------------------------

Context	<b>configure service vpls string proxy-nd duplicate-detect hold-down-time</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">hold-down-time</a>
Range	2 to 60
Units	minutes
Options	max
Default	9
Introduced	16.0.R1
Platforms	All

### **num-moves** *number*

Synopsis	Number of moves required to declare a duplicate entry
Context	<b>configure service vpls string proxy-nd duplicate-detect num-moves</b> <i>number</i>
Tree	<a href="#">num-moves</a>
Range	3 to 10
Default	5
Introduced	16.0.R1
Platforms	All

### **static-blackhole** *boolean*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Consider anti-spoof MAC as black-hole static MAC in FDB
Context	<b>configure service vpls string proxy-nd duplicate-detect static-blackhole</b> <i>boolean</i>
Tree	<a href="#">static-blackhole</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **window** *number*

Synopsis	Time to monitor the MAC address in the anti-spoofing mechanism
----------	--

Context	<b>configure service vpls string proxy-nd duplicate-detect window number</b>
Tree	<b>window</b>
Range	1 to 15
Units	minutes
Default	3
Introduced	16.0.R1
Platforms	All

## dynamic-neighbor

Synopsis	Enter the <b>dynamic-neighbor</b> context
Context	<b>configure service vpls string proxy-nd dynamic-neighbor</b>
Tree	<b>dynamic-neighbor</b>
Introduced	16.0.R1
Platforms	All

## ip-address [ipv6-address] string

Synopsis	Enter the <b>ip-address</b> list instance
Context	<b>configure service vpls string proxy-nd dynamic-neighbor ip-address string</b>
Tree	<b>ip-address</b>
Introduced	16.0.R1
Platforms	All

## [ipv6-address] string

Synopsis	Proxy ND IPv6 address
Context	<b>configure service vpls string proxy-nd dynamic-neighbor ip-address string</b>
Tree	<b>ip-address</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## mac-list *reference*

Synopsis	MAC list for the dynamic entry
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">proxy-nd dynamic-neighbor ip-address</a> <i>string</i> <a href="#">mac-list reference</a>
Tree	<a href="#">mac-list</a>
Reference	<b>configure</b> <a href="#">service proxy-arp-nd mac-list list</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

## resolve-retry-time *number*

Synopsis	Frequency at which the resolve messages are sent
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">proxy-nd dynamic-neighbor ip-address</a> <i>string</i> <a href="#">resolve-retry-time number</a>
Tree	<a href="#">resolve-retry-time</a>
Range	1 to 60
Units	minutes
Default	5
Introduced	16.0.R1
Platforms	All

## dynamic-populate *boolean*

Synopsis	Populate proxy ARP entries from snooped GARP/ARP/ND messages on SAPs/SDP-bindings
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">proxy-nd dynamic-populate boolean</a>
Tree	<a href="#">dynamic-populate</a>
Default	false
Introduced	16.0.R1
Platforms	All

## evpn

Synopsis	Enter the <b>evpn</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">proxy-nd evpn</a>
Tree	<a href="#">evpn</a>

Introduced	16.0.R1
Platforms	All

### **advertise-neighbor-type** *keyword*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Advertisement type of static or dynamic entries in EVPN
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">proxy-nd evpn</a> <b>advertise-neighbor-type</b> <i>keyword</i>
Tree	<a href="#">advertise-neighbor-type</a>
Description	<p>This command enables the advertisement of static or dynamic entries that are learned as host, router, or host and router (only one option is possible in a specified service). It also determines the R flag (host or router) when sending Neighbor Advertisement (NA) messages for existing EVPN entries in the proxy-ND table.</p> <p>The <b>router-host</b> command option is only possible when the ARP/ND extended community is advertised along with the MAC/IP routes. It determines that both host and router (dynamic and static) entries are advertised in MAC/IP routes, with an indication whether the entry is host or router in the R flag. These EVPN entries are installed as host or router entries depending on the R flag of the route, and NA messages for them are sent with the proper host or router indication.</p>
Options	router, host, router-host
Default	router
Introduced	16.0.R1
Platforms	All

### **flood**

Synopsis	Enter the <b>flood</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">proxy-nd evpn</a> <b>flood</b>
Tree	<a href="#">flood</a>
Introduced	16.0.R1
Platforms	All

### **unknown-neighbor-advertise-host** *boolean*

Synopsis	Flood host unsolicited Neighbor Advertisement (NA) replies to EVPN
----------	--

Context	<b>configure service vpls string proxy-nd evpn flood unknown-neighbor-advertise-host</b> <i>boolean</i>
Tree	<a href="#">unknown-neighbor-advertise-host</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **unknown-neighbor-advertise-router** *boolean*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Flood router unsolicited Neighbor Advertisement (NA) replies to EVPN
Context	<b>configure service vpls string proxy-nd evpn flood unknown-neighbor-advertise-router</b> <i>boolean</i>
Tree	<a href="#">unknown-neighbor-advertise-router</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **unknown-neighbor-solicitation** *boolean*

Synopsis	Flood unsolicited Neighbor Solicitation messages (with source squelching) into EVPN network
Context	<b>configure service vpls string proxy-nd evpn flood unknown-neighbor-solicitation</b> <i>boolean</i>
Tree	<a href="#">unknown-neighbor-solicitation</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **route-tag** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Route tag used on export policies to match MAC/IP routes generated by proxy-ARP or proxy-ND module
Context	<b>configure</b> <b>service vpls</b> <i>string</i> <b>proxy-nd evpn route-tag</b> <i>number</i>
Tree	<b>route-tag</b>
Range	0   1 to 255
Default	0
Introduced	16.0.R1
Platforms	All

### **process-dad-neighbor-solicitations** *boolean*

Synopsis	Enable replies to DAD neighbor solicitations
Context	<b>configure</b> <b>service vpls</b> <i>string</i> <b>proxy-nd process-dad-neighbor-solicitations</b> <i>boolean</i>
Tree	<b>process-dad-neighbor-solicitations</b>
Default	true
Introduced	22.7.R1
Platforms	All

### **send-refresh** (*number* | *keyword*)

Synopsis	Time at which to send a refresh message
Context	<b>configure</b> <b>service vpls</b> <i>string</i> <b>proxy-nd send-refresh</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>send-refresh</b>
Range	120 to 86400
Options	never
Default	never
Introduced	16.0.R1
Platforms	All

### **static-neighbor**

Synopsis	Enter the <b>static-neighbor</b> context
Context	<b>configure</b> <b>service vpls</b> <i>string</i> <b>proxy-nd static-neighbor</b>
Tree	<b>static-neighbor</b>
Introduced	16.0.R1

Platforms All

### **ip-address** [[ipv6-address](#)] *string*

Synopsis Enter the **ip-address** list instance

Context **configure** [service vpls](#) *string* [proxy-nd static-neighbor ip-address](#) *string*

Tree [ip-address](#)

Introduced 16.0.R1

Platforms All

### **[ipv6-address]** *string*

Synopsis Proxy ND IPv6 address

Context **configure** [service vpls](#) *string* [proxy-nd static-neighbor ip-address](#) *string*

Tree [ip-address](#)

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms All

### **mac** *string*

Synopsis Proxy ARP MAC address for static entry

Context **configure** [service vpls](#) *string* [proxy-nd static-neighbor ip-address](#) *string* **mac** *string*

Tree [mac](#)

Notes This element is mandatory.

Introduced 16.0.R1

Platforms All

### **type** *keyword*

Synopsis Entry type

Context **configure** [service vpls](#) *string* [proxy-nd static-neighbor ip-address](#) *string* **type** *keyword*

Tree [type](#)

Options host, router

Default router

Introduced	16.0.R1
Platforms	All

### **table-size** *number*

Synopsis	Maximum number of learned and static entries allowed in the proxy table of this service
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">proxy-nd</a> <b>table-size</b> <i>number</i>
Tree	<a href="#">table-size</a>
Range	1 to 16383
Default	250
Introduced	16.0.R1
Platforms	All

### **routed-vpls**

Synopsis	Enable the <b>routed-vpls</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">routed-vpls</a>
Tree	<a href="#">routed-vpls</a>
Introduced	16.0.R1
Platforms	All

### **evpn-mpls-ecmp** *boolean*

Synopsis	Enable ECMP behavior on R-VPLS services
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">routed-vpls</a> <b>evpn-mpls-ecmp</b> <i>boolean</i>
Tree	<a href="#">evpn-mpls-ecmp</a>
Default	false
Introduced	19.10.R1
Platforms	All

### **multicast**

Synopsis	Enter the <b>multicast</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">routed-vpls</a> <b>multicast</b>
Tree	<a href="#">multicast</a>

Introduced	16.0.R1
Platforms	All

## evpn-gateway

Synopsis	Enable the <b>evpn-gateway</b> context
Context	<b>configure</b> <a href="#">service vpls string routed-vpls multicast evpn-gateway</a>
Tree	<a href="#">evpn-gateway</a>
Introduced	21.10.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of the multicast EVPN gateway
Context	<b>configure</b> <a href="#">service vpls string routed-vpls multicast evpn-gateway admin-state keyword</a>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	All

## advertise *keyword*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Type of the multicast EVPN gateway
Context	<b>configure</b> <a href="#">service vpls string routed-vpls multicast evpn-gateway advertise keyword</a>
Tree	<a href="#">advertise</a>
Description	This command configures EVPN OISM to advertise the type of OISM gateway function in the Inclusive Multicast Ethernet Tag routes.
Options	mvpn-pim, mvpn-only, pim-only
Default	mvpn-pim
Introduced	21.10.R1
Platforms	All

**dr-activation-timer** *number***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	DR activation timer for the EVPN gateway
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">routed-vpls multicast evpn-gateway dr-activation-timer</a> <i>number</i>
Tree	<a href="#">dr-activation-timer</a>
Description	This command configures the the designated router (DR) activation timer for the EVPN gateway.  After the DR activation timer expires, each provider edge router (PE) runs the MEG or PEG DR election. The timer allows the PE to collect Inclusive Multicast Ethernet Tag routes from other MEG or PEG gateways and avoids running the DR election multiple times.
Range	0 to 100
Units	seconds
Default	3
Introduced	21.10.R1
Platforms	All

**non-dr-attract-traffic** *keyword***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Multicast traffic attraction option on non-DR router GW
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">routed-vpls multicast evpn-gateway non-dr-attract-traffic</a> <i>keyword</i>
Tree	<a href="#">non-dr-attract-traffic</a>
Options	none, from-evpn, from-pim-mvpn, from-evpn-pim-mvpn
Default	from-pim-mvpn
Introduced	21.10.R1
Platforms	All

### **ip-multicast-ecmp** *boolean*

Synopsis	ECMP behaviour for multicast traffic on bgp-evpn mpls and vxlan
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">routed-vpls</a> <a href="#">multicast</a> <a href="#">ip-multicast-ecmp</a> <i>boolean</i>
Tree	<a href="#">ip-multicast-ecmp</a>
Default	false
Introduced	19.10.R1
Platforms	All

### **ipv4**

Synopsis	Enter the <b>ipv4</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">routed-vpls</a> <a href="#">multicast</a> <a href="#">ipv4</a>
Tree	<a href="#">ipv4</a>
Introduced	16.0.R1
Platforms	All

### **forward-to-ip-interface** *boolean*

Synopsis	Forward IPv4 multicast from RVPLS to L3 interface
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">routed-vpls</a> <a href="#">multicast</a> <a href="#">ipv4</a> <a href="#">forward-to-ip-interface</a> <i>boolean</i>
Tree	<a href="#">forward-to-ip-interface</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **igmp-snooping**

Synopsis	Enter the <b>igmp-snooping</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">routed-vpls</a> <a href="#">multicast</a> <a href="#">ipv4</a> <a href="#">igmp-snooping</a>
Tree	<a href="#">igmp-snooping</a>
Introduced	16.0.R1
Platforms	All

### **mrouter-port** *boolean*

Synopsis	Operate VPLS L3 interface as a multicast router port
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">routed-vpls</a> <a href="#">multicast</a> <a href="#">ipv4</a> <a href="#">igmp-snooping</a> <a href="#">mrouter-port</a> <i>boolean</i>
Tree	<a href="#">mrouter-port</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **ipv6**

Synopsis	Enter the <b>ipv6</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">routed-vpls</a> <a href="#">multicast</a> <a href="#">ipv6</a>
Tree	<a href="#">ipv6</a>
Introduced	16.0.R1
Platforms	All

### **forward-to-ip-interface** *boolean*

Synopsis	Forward IPv6 multicast from RVPLS to L3 interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">routed-vpls</a> <a href="#">multicast</a> <a href="#">ipv6</a> <a href="#">forward-to-ip-interface</a> <i>boolean</i>
Tree	<a href="#">forward-to-ip-interface</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **mld-snooping**

Synopsis	Enter the <b>mld-snooping</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">routed-vpls</a> <a href="#">multicast</a> <a href="#">ipv6</a> <a href="#">mld-snooping</a>
Tree	<a href="#">mld-snooping</a>
Introduced	16.0.R1
Platforms	All

**mrouter-port** *boolean*

Synopsis	Operate VPLS L3 interface as a multicast router port
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">routed-vpls</a> <a href="#">multicast</a> <a href="#">ipv6</a> <a href="#">mld-snooping</a> <b>mrouter-port</b> <i>boolean</i>
Tree	<a href="#">mrouter-port</a>
Default	false
Introduced	16.0.R1
Platforms	All

**vxlan-ipv4-tep-ecmp** *boolean*

Synopsis	Use ECMP on VXLAN IPv4 destinations for R-VPLS services
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">routed-vpls</a> <b>vxlan-ipv4-tep-ecmp</b> <i>boolean</i>
Tree	<a href="#">vxlan-ipv4-tep-ecmp</a>
Default	false
Introduced	16.0.R1
Platforms	All

**sap** [[sap-id](#)] *string*

Synopsis	Enter the <b>sap</b> list instance
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <b>sap</b> <i>string</i>
Tree	<a href="#">sap</a>
Introduced	16.0.R1
Platforms	All

**[sap-id]** *string*

Synopsis	SAP identifier
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <b>sap</b> <i>string</i>
Tree	<a href="#">sap</a>
String Length	1 to 45
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**accounting-policy** *reference*

Synopsis	Accounting policy
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">accounting-policy</a> <i>reference</i>
Tree	<a href="#">accounting-policy</a>
Reference	<b>configure</b> <a href="#">log</a> <a href="#">accounting-policy</a> <i>number</i>
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the SAP
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

**anti-spoof** *keyword*

Synopsis	Type of anti-spoof filtering
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">anti-spoof</a> <i>keyword</i>
Tree	<a href="#">anti-spoof</a>
Options	source-ip-addr, source-mac-addr, source-ip-and-mac-addr, next-hop-ip-and-mac-addr
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**app-profile** *reference*

Synopsis	Application profile name
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">app-profile</a> <i>reference</i>
Tree	<a href="#">app-profile</a>
Reference	<b>configure</b> <a href="#">application-assurance</a> <a href="#">group</a> <i>number</i> <a href="#">partition</a> <i>number</i> <a href="#">policy</a> <a href="#">app-profile</a> <i>string</i>
Introduced	16.0.R2

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## arp-host

Synopsis Enter the **arp-host** context

Context **configure service vpls string sap string arp-host**

Tree [arp-host](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## admin-state *keyword*

Synopsis Administrative state of ARP hosts

Context **configure service vpls string sap string arp-host admin-state keyword**

Tree [admin-state](#)

Options enable, disable

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## host-limit *number*

Synopsis Maximum number of ARP triggered hosts

Context **configure service vpls string sap string arp-host host-limit number**

Tree [host-limit](#)

Range 1 to 131071

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## min-auth-interval *number*

Synopsis Minimum authentication interval

Context **configure service vpls string sap string arp-host min-auth-interval number**

Tree [min-auth-interval](#)

Range 1 to 6000

Units minutes

Default	15
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **arp-reply-agent** *keyword*

Synopsis	Enable arp-reply-agent function
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">arp-reply-agent</a> <i>keyword</i>
Tree	<a href="#">arp-reply-agent</a>
Options	true, with-subscr-ident
Introduced	16.0.R1
Platforms	All

### **bandwidth** *number*

Synopsis	SAP bandwidth
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">bandwidth</a> <i>number</i>
Tree	<a href="#">bandwidth</a>
Range	1 to 6400000000
Units	kilobps
Introduced	16.0.R1
Platforms	All

### **bgp-vpls-mh-veid** *number*

Synopsis	BGP-VPLS multi-homing VE-ID
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">bgp-vpls-mh-veid</a> <i>number</i>
Tree	<a href="#">bgp-vpls-mh-veid</a>
Description	<p>This command specifies a VE ID that is configured on SAPs that are part of an EVPN single-active Ethernet Segment. The configuration of this command allows the advertisement of L2VPN routes that indicate the state of multi-homed SAPs to the remote BGP-VPLS PEs, which can trigger a MAC flush operation on the service to avoid traffic from being blackholed when a failure occurs in the active PE.</p> <p>When unconfigured from the SAP, L2VPN routes are withdrawn, which causes MAC flush processing on the remote BGP-VPLS.</p>
Range	1 to 65535
Introduced	20.5.R1

Platforms All

### **bpdu-translation** *keyword*

Synopsis Bpdu translation on this SAP  
Context **configure** [service vpls string sap string bpdu-translation keyword](#)  
Tree [bpdu-translation](#)  
Options auto, pvst, stp, pvst-rw, auto-rw  
Introduced 16.0.R1  
Platforms All

### **calling-station-id** *string*

Synopsis Calling station ID  
Context **configure** [service vpls string sap string calling-station-id string](#)  
Tree [calling-station-id](#)  
String Length 1 to 64  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **cflowd** *boolean*

Synopsis Enable Cflowd collection and analysis on this SAP  
Context **configure** [service vpls string sap string cflowd boolean](#)  
Tree [cflowd](#)  
Default false  
Introduced 16.0.R1  
Platforms All

### **collect-stats** *boolean*

Synopsis Collect accounting statistics  
Context **configure** [service vpls string sap string collect-stats boolean](#)  
Tree [collect-stats](#)  
Default false

Introduced 16.0.R1  
Platforms All

## cpu-protection

Synopsis Enter the **cpu-protection** context  
Context **configure** [service vpls string sap string cpu-protection](#)  
Tree [cpu-protection](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## eth-cfm-monitoring

Synopsis Enable the **eth-cfm-monitoring** context  
Context **configure** [service vpls string sap string cpu-protection eth-cfm-monitoring](#)  
Tree [eth-cfm-monitoring](#)  
Notes The following elements are part of a choice: **eth-cfm-monitoring** or **mac-monitoring**.  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## aggregate

Synopsis Apply rate limit to the sum of the per peer packet rates  
Context **configure** [service vpls string sap string cpu-protection eth-cfm-monitoring aggregate](#)  
Tree [aggregate](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## car

Synopsis Ignore Ethernet CFM packets when enforcing overall rate  
Context **configure** [service vpls string sap string cpu-protection eth-cfm-monitoring car](#)  
Tree [car](#)  
Introduced 16.0.R1  
Platforms 7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## mac-monitoring

Synopsis	Monitor MAC for CPU protection
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">cpu-protection</a> <a href="#">mac-monitoring</a>
Tree	<a href="#">mac-monitoring</a>
Notes	The following elements are part of a choice: <b>eth-cfm-monitoring</b> or <b>mac-monitoring</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## policy-id *reference*

Synopsis	CPM protection policy
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">cpu-protection</a> <a href="#">policy-id</a> <i>reference</i>
Tree	<a href="#">policy-id</a>
Reference	<b>configure</b> <a href="#">system security</a> <a href="#">cpu-protection</a> <a href="#">policy</a> <i>number</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-7s, 7750 SR-14s, 7950 XRS

## description *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">description</a> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 160
Introduced	16.0.R1
Platforms	All

## dhcp

Synopsis	Enter the <b>dhcp</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">dhcp</a>
Tree	<a href="#">dhcp</a>
Introduced	16.0.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of DHCP
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">dhcp</a> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Introduced	16.0.R1
Platforms	All

**description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">dhcp</a> <b>description</b> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

**lease-populate**

Synopsis	Enter the <b>lease-populate</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">dhcp</a> <b>lease-populate</b>
Tree	<a href="#">lease-populate</a>
Introduced	16.0.R1
Platforms	All

**max-leases** *number*

Synopsis	Maximum number of DHCPv4 leases
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">dhcp</a> <a href="#">lease-populate</a> <b>max-leases</b> <i>number</i>
Tree	<a href="#">max-leases</a>
Range	0 to 131071
Introduced	16.0.R1
Platforms	All

## option-82

Synopsis	Enter the <b>option-82</b> context
Context	<b>configure service vpls string sap string dhcp option-82</b>
Tree	<a href="#">option-82</a>
Description	Commands in this context configure the processing required when the router receives a DHCP request that already has an Option 82 field in the packet.
Introduced	16.0.R1
Platforms	All

## action keyword

Synopsis	Action to take with received DHCP Option 82
Context	<b>configure service vpls string sap string dhcp option-82 action keyword</b>
Tree	<a href="#">action</a>
Options	replace, drop, keep
Default	keep
Introduced	16.0.R1
Platforms	All

## circuit-id

Synopsis	Enter the <b>circuit-id</b> context
Context	<b>configure service vpls string sap string dhcp option-82 circuit-id</b>
Tree	<a href="#">circuit-id</a>
Introduced	16.0.R1
Platforms	All

## ascii-tuple

Synopsis	Use the ASCII-encoded tuple for the circuit ID
Context	<b>configure service vpls string sap string dhcp option-82 circuit-id ascii-tuple</b>
Tree	<a href="#">ascii-tuple</a>
Notes	The following elements are part of a choice: <b>ascii-tuple</b> , <b>hex-string</b> , <b>none</b> , or <b>vlan-ascii-tuple</b> .

Introduced	16.0.R1
Platforms	All

### **hex-string** *string*

Synopsis	User-defined hexadecimal value of the option
Context	<b>configure</b> <a href="#">service vpls string sap string dhcp option-82 circuit-id hex-string string</a>
Tree	<a href="#">hex-string</a>
String Length	1 to 66
Notes	The following elements are part of a choice: <b>ascii-tuple</b> , <b>hex-string</b> , <b>none</b> , or <b>vlan-ascii-tuple</b> .
Introduced	16.0.R1
Platforms	All

### **none**

Synopsis	Do not include the circuit ID
Context	<b>configure</b> <a href="#">service vpls string sap string dhcp option-82 circuit-id none</a>
Tree	<a href="#">none</a>
Notes	The following elements are part of a choice: <b>ascii-tuple</b> , <b>hex-string</b> , <b>none</b> , or <b>vlan-ascii-tuple</b> .
Introduced	16.0.R1
Platforms	All

### **vlan-ascii-tuple**

Synopsis	Include the VLAN ID and dot1p bits in the ASCII tuple
Context	<b>configure</b> <a href="#">service vpls string sap string dhcp option-82 circuit-id vlan-ascii-tuple</a>
Tree	<a href="#">vlan-ascii-tuple</a>
Description	When configured, the router includes the VLAN ID and dot1p bits with the ASCII-tuple information. This only occurs on dot1q and QinQ-encapsulated ports. When the Option 82 bits are stripped, dot1p bits are copied to the Ethernet header of the outgoing packet. When unconfigured, the router leaves the circuit ID sub-option of the DHCP packet empty.
Notes	The following elements are part of a choice: <b>ascii-tuple</b> , <b>hex-string</b> , <b>none</b> , or <b>vlan-ascii-tuple</b> .
Introduced	16.0.R1

Platforms All

## remote-id

Synopsis Enter the **remote-id** context

Context **configure service vpls string sap string dhcp option-82 remote-id**

Tree [remote-id](#)

Description Commands in this context configure the remote IP sub-option of the DHCP packet with the identity of the remote host end (typically the DHCP client).

Introduced 16.0.R1

Platforms All

## ascii-string *string*

Synopsis User-defined ASCII string for the remote ID

Context **configure service vpls string sap string dhcp option-82 remote-id ascii-string string**

Tree [ascii-string](#)

String Length 1 to 32

Notes The following elements are part of a choice: **ascii-string**, **hex-string**, **mac**, or **none**.

Introduced 16.0.R1

Platforms All

## hex-string *string*

Synopsis Option as a hexadecimal string

Context **configure service vpls string sap string dhcp option-82 remote-id hex-string string**

Tree [hex-string](#)

String Length 1 to 66

Notes The following elements are part of a choice: **ascii-string**, **hex-string**, **mac**, or **none**.

Introduced 16.0.R1

Platforms All

## mac

Synopsis Use the MAC address for the remote ID

Context	<b>configure service vpls string sap string dhcp option-82 remote-id mac</b>
Tree	<a href="#">mac</a>
Notes	The following elements are part of a choice: <b>ascii-string</b> , <b>hex-string</b> , <b>mac</b> , or <b>none</b> .
Introduced	16.0.R1
Platforms	All

### none

Synopsis	Do not include the remote ID
Context	<b>configure service vpls string sap string dhcp option-82 remote-id none</b>
Tree	<a href="#">none</a>
Notes	The following elements are part of a choice: <b>ascii-string</b> , <b>hex-string</b> , <b>mac</b> , or <b>none</b> .
Introduced	16.0.R1
Platforms	All

### vendor-specific-option

Synopsis	Enter the <b>vendor-specific-option</b> context
Context	<b>configure service vpls string sap string dhcp option-82 vendor-specific-option</b>
Tree	<a href="#">vendor-specific-option</a>
Description	Commands in this context configure the Nokia Vendor-Specific Option (VSO) of the DHCP packet.
Introduced	16.0.R1
Platforms	All

### client-mac-address *boolean*

Synopsis	Send the MAC address in the VSO
Context	<b>configure service vpls string sap string dhcp option-82 vendor-specific-option client-mac-address <i>boolean</i></b>
Tree	<a href="#">client-mac-address</a>
Default	false
Introduced	16.0.R1
Platforms	All

**sap-id** *boolean*

Synopsis	Send SAP ID in the sub-option of the DHCP relay packet
Context	<b>configure</b> <a href="#">service vpls</a> <a href="#">string sap</a> <a href="#">string dhcp option-82 vendor-specific-option sap-id</a> <i>boolean</i>
Tree	<a href="#">sap-id</a>
Default	false
Introduced	16.0.R1
Platforms	All

**service-id** *boolean*

Synopsis	Send the service ID in the Vendor Specific Option
Context	<b>configure</b> <a href="#">service vpls</a> <a href="#">string sap</a> <a href="#">string dhcp option-82 vendor-specific-option service-id</a> <i>boolean</i>
Tree	<a href="#">service-id</a>
Default	false
Introduced	16.0.R1
Platforms	All

**string** *string*

Synopsis	User-defined ASCII string for the VSO
Context	<b>configure</b> <a href="#">service vpls</a> <a href="#">string sap</a> <a href="#">string dhcp option-82 vendor-specific-option string</a> <i>string</i>
Tree	<a href="#">string</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

**system-id** *boolean*

Synopsis	Send the system ID in the VSO
Context	<b>configure</b> <a href="#">service vpls</a> <a href="#">string sap</a> <a href="#">string dhcp option-82 vendor-specific-option system-id</a> <i>boolean</i>
Tree	<a href="#">system-id</a>
Default	false

Introduced	16.0.R1
Platforms	All

## proxy-server

Synopsis	Enter the <b>proxy-server</b> context
Context	<b>configure</b> <a href="#">service vpls string sap string dhcp proxy-server</a>
Tree	<a href="#">proxy-server</a>
Introduced	16.0.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of the DHCP proxy server
Context	<b>configure</b> <a href="#">service vpls string sap string dhcp proxy-server admin-state keyword</a>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

## emulated-server *string*

Synopsis	IP address used as DHCP server address in SAP context
Context	<b>configure</b> <a href="#">service vpls string sap string dhcp proxy-server emulated-server string</a>
Tree	<a href="#">emulated-server</a>
Introduced	16.0.R1
Platforms	All

## lease-time

Synopsis	Enter the <b>lease-time</b> context
Context	<b>configure</b> <a href="#">service vpls string sap string dhcp proxy-server lease-time</a>
Tree	<a href="#">lease-time</a>
Introduced	16.0.R1

Platforms All

### **radius-override** *boolean*

Synopsis Use lease time information provided by RADIUS server

Context **configure service vpls string sap string dhcp proxy-server lease-time radius-override boolean**

Tree [radius-override](#)

Default false

Introduced 16.0.R1

Platforms All

### **value** *number*

Synopsis DHCP lease time

Context **configure service vpls string sap string dhcp proxy-server lease-time value number**

Tree [value](#)

Range 300 to 315446399

Units seconds

Introduced 16.0.R1

Platforms All

### **snoop** *boolean*

Synopsis Enable DHCP snooping on the SAP

Context **configure service vpls string sap string dhcp snoop boolean**

Tree [snoop](#)

Default false

Introduced 16.0.R1

Platforms All

### **dhcp6**

Synopsis Enter the **dhcp6** context

Context **configure service vpls string sap string dhcp6**

Tree [dhcp6](#)

Introduced	23.10.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">dhcp6</a> <a href="#">description</a> <a href="#">string</a>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	23.10.R1
Platforms	All

### **ldra**

Synopsis	Enable the <b>ldra</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">dhcp6</a> <a href="#">ldra</a>
Tree	<a href="#">ldra</a>
Introduced	23.10.R1
Platforms	All

### **interface-type** *keyword*

Synopsis	LDRA interface type
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">dhcp6</a> <a href="#">ldra</a> <a href="#">interface-type</a> <a href="#">keyword</a>
Tree	<a href="#">interface-type</a>
Description	<p>This command specifies the LDRA interface type.</p> <p><b>client-facing</b> - configure the SAP as an untrusted client-facing interface. Only DHCPv6 client messages are accepted and encapsulated in a Relay-Forward message. It is mandatory to configure an interface ID for client-facing SAPs. Relay-Forward, Relay-Reply, and DHCPv6 server messages are silently dropped when received on a client-facing SAP.</p> <p><b>network-facing</b> - configure the SAP as a network-facing interface. Only Relay-Reply messages are accepted: the server message is extracted from the Relay-Reply message and forwarded in the VPLS. All other DHCPv6 message types are silently dropped when received on a network-facing SAP.</p>
Options	client-facing, network-facing
Notes	This element is mandatory.

---

Introduced	23.10.R1
Platforms	All

## options

Synopsis	Enter the <b>options</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">dhcp6</a> <a href="#">ldra</a> <a href="#">options</a>
Tree	<a href="#">options</a>
Introduced	23.10.R1
Platforms	All

## interface-id

Synopsis	Enable the <b>interface-id</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">dhcp6</a> <a href="#">ldra</a> <a href="#">options</a> <a href="#">interface-id</a>
Tree	<a href="#">interface-id</a>
Introduced	23.10.R1
Platforms	All

## ascii-tuple

Synopsis	Use an ASCII-encoded concatenated tuple
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">dhcp6</a> <a href="#">ldra</a> <a href="#">options</a> <a href="#">interface-id</a> <a href="#">ascii-tuple</a>
Tree	<a href="#">ascii-tuple</a>
Description	This command specifies the use of the ASCII-encoded concatenated tuple, which consists of the system name, service ID, and SAP ID separated by " ".
Notes	The following elements are part of a mandatory choice: <b>ascii-tuple</b> or <b>vlan-ascii-tuple</b> .
Introduced	23.10.R1
Platforms	All

## vlan-ascii-tuple

Synopsis	Use an enhanced ASCII-encoded concatenated tuple
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">dhcp6</a> <a href="#">ldra</a> <a href="#">options</a> <a href="#">interface-id</a> <a href="#">vlan-ascii-tuple</a>
Tree	<a href="#">vlan-ascii-tuple</a>

Description	This command specifies the use of the ASCII-encoded concatenated tuple enhanced with VLAN ID and dot1p bits, consisting of the system name, service ID, SAP ID, dot1p inner VLAN, and inner VLAN ID separated by " ".
Notes	The following elements are part of a mandatory choice: <b>ascii-tuple</b> or <b>vlan-ascii-tuple</b> .
Introduced	23.10.R1
Platforms	All

## remote-id

Synopsis	Enter the <b>remote-id</b> context
Context	<b>configure service vpls string sap string dhcp6 ldra options remote-id</b>
Tree	<a href="#">remote-id</a>
Description	Commands in this context configure the Relay-Agent remote ID contents inserted by the LDRA.
Introduced	23.10.R1
Platforms	All

## mac

Synopsis	Use the DHCPv6 client source MAC address
Context	<b>configure service vpls string sap string dhcp6 ldra options remote-id mac</b>
Tree	<a href="#">mac</a>
Description	This command sets the enterprise number field of the Relay Agent remote ID to 6527 and configures the DHCPv6 client source MAC address as six hexadecimal numbers.
Notes	The following elements are part of a choice: <b>mac</b> or <b>string</b> .
Introduced	23.10.R1
Platforms	All

## string string

Synopsis	User-defined ASCII string
Context	<b>configure service vpls string sap string dhcp6 ldra options remote-id string string</b>
Tree	<a href="#">string</a>
Description	This command sets the enterprise number field of the Relay-Agent remote ID to 6527 and configures the ASCII-encoded string.
String Length	1 to 32

---

Notes	The following elements are part of a choice: <b>mac</b> or <b>string</b> .
Introduced	23.10.R1
Platforms	All

### **dist-cpu-protection** *reference*

Synopsis	Distributed CPU protection policy for SAP
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">dist-cpu-protection</a> <i>reference</i>
Tree	<a href="#">dist-cpu-protection</a>

### policer-control-policy

Synopsis	Enter the <b>policer-control-policy</b> context
Context	<b>configure</b> <a href="#">service vpls string sap string egress qos policer-control-policy</a>
Tree	<a href="#">policer-control-policy</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## overrides

Synopsis	Enable the <b>overrides</b> context
Context	<b>configure service vpls string sap string egress qos policer-control-policy overrides</b>
Tree	<b>overrides</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## root

Synopsis	Enter the <b>root</b> context
Context	<b>configure service vpls string sap string egress qos policer-control-policy overrides root</b>
Tree	<b>root</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## max-rate (*number* | *keyword*)

Synopsis	Maximum frame-based bandwidth limit
Context	<b>configure service vpls string sap string egress qos policer-control-policy overrides root max-rate (<i>number</i>   <i>keyword</i>)</b>
Tree	<b>max-rate</b>
Range	1 to 6400000000
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## priority-mbs-thresholds

Synopsis	Enter the <b>priority-mbs-thresholds</b> context
Context	<b>configure service vpls string sap string egress qos policer-control-policy overrides root priority-mbs-thresholds</b>
Tree	<b>priority-mbs-thresholds</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**min-thresh-separation** (*number* | *keyword*)

Synopsis	Minimum amount of separation buffer space
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos</a> <a href="#">policer-control-policy overrides</a> <a href="#">root</a> <a href="#">priority-mbs-thresholds</a> <b>min-thresh-separation</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">min-thresh-separation</a>
Range	0 to 16777216
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**priority** [[priority-level](#)] *number*

Synopsis	Enter the <b>priority</b> list instance
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos</a> <a href="#">policer-control-policy overrides</a> <a href="#">root</a> <a href="#">priority-mbs-thresholds</a> <b>priority</b> <i>number</i>
Tree	<a href="#">priority</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**[priority-level]** *number*

Synopsis	Priority level
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos</a> <a href="#">policer-control-policy overrides</a> <a href="#">root</a> <a href="#">priority-mbs-thresholds</a> <b>priority</b> <i>number</i>
Tree	<a href="#">priority</a>
Range	1 to 8
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**mbs-contribution** (*number* | *keyword*)

Synopsis	Minimum amount of cumulative buffer space allowed
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos</a> <a href="#">policer-control-policy overrides</a> <a href="#">root</a> <a href="#">priority-mbs-thresholds</a> <b>priority</b> <i>number</i> <b>mbs-contribution</b> ( <i>number</i>   <i>keyword</i> )

Tree	<a href="#">mbs-contribution</a>
Range	0 to 16777216
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **policy-name** *reference*

Synopsis	Policer control policy name
Context	<b>configure</b> <a href="#">service vpls string sap string egress qos policer-control-policy policy-name reference</a>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos policer-control-policy string</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **qinq-mark-top-only** *boolean*

Synopsis	Mark top Q-tags
Context	<b>configure</b> <a href="#">service vpls string sap string egress qos qinq-mark-top-only boolean</a>
Tree	<a href="#">qinq-mark-top-only</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **sap-egress**

Synopsis	Enter the <b>sap-egress</b> context
Context	<b>configure</b> <a href="#">service vpls string sap string egress qos sap-egress</a>
Tree	<a href="#">sap-egress</a>
Introduced	16.0.R1
Platforms	All

**overrides**

Synopsis	Enter the <b>overrides</b> context
Context	<b>configure service vpls string sap string egress qos sap-egress overrides</b>
Tree	<a href="#">overrides</a>
Introduced	16.0.R1
Platforms	All

**hs-secondary-shaper string**

Synopsis	HS Secondary Shaper
Context	<b>configure service vpls string sap string egress qos sap-egress overrides hs-secondary-shaper string</b>
Tree	<a href="#">hs-secondary-shaper</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

**hs-wrr-group [group-id] reference**

Synopsis	Enter the <b>hs-wrr-group</b> list instance
Context	<b>configure service vpls string sap string egress qos sap-egress overrides hs-wrr-group reference</b>
Tree	<a href="#">hs-wrr-group</a>
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

**[group-id] reference**

Synopsis	HS WRR group identifier
Context	<b>configure service vpls string sap string egress qos sap-egress overrides hs-wrr-group reference</b>
Tree	<a href="#">hs-wrr-group</a>
Reference	<b>configure qos sap-egress string hs-wrr-group number</b>
Notes	This element is part of a list key.
Introduced	16.0.R1

Platforms 7750 SR-7/12/12e

### **hs-class-weight** *number*

Synopsis Class weight override of the WRR group

Context **configure service vpls string sap string egress qos sap-egress overrides hs-wrr-group**  
*reference hs-class-weight number*

Tree [hs-class-weight](#)

Range 1 | 2 | 4 | 8

Introduced 16.0.R1

Platforms 7750 SR-7/12/12e

### **percent-rate** *decimal-number*

Synopsis Percent rate override applied to the HS WRR group

Context **configure service vpls string sap string egress qos sap-egress overrides hs-wrr-group**  
*reference percent-rate decimal-number*

Tree [percent-rate](#)

Range 0.01 to 100.00

Notes The following elements are part of a choice: **percent-rate** or **rate**.

Introduced 16.0.R1

Platforms 7750 SR-7/12/12e

### **rate** (*number* | *keyword*)

Synopsis Scheduling rate override applied to the HS WRR group

Context **configure service vpls string sap string egress qos sap-egress overrides hs-wrr-group**  
*reference rate (number | keyword)*

Tree [rate](#)

Range 1 to 2000000000

Units kilobps

Options max

Notes The following elements are part of a choice: **percent-rate** or **rate**.

Introduced 16.0.R1

Platforms 7750 SR-7/12/12e

**policer** [[policer-id](#)] *reference*

Synopsis	Enter the <b>policer</b> list instance
Context	<b>configure</b> <a href="#">service vpls string sap string egress qos sap-egress overrides policer reference</a>
Tree	<a href="#">policer</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**[policer-id]** *reference*

Synopsis	Policer unique ID
Context	<b>configure</b> <a href="#">service vpls string sap string egress qos sap-egress overrides policer reference</a>
Tree	<a href="#">policer</a>
Reference	<b>configure</b> <a href="#">qos sap-egress string policer number</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**cbs** (*number* | *keyword*)

Synopsis	CBS
Context	<b>configure</b> <a href="#">service vpls string sap string egress qos sap-egress overrides policer reference cbs (number   keyword)</a>
Tree	<a href="#">cbs</a>
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**mbs** (*number* | *keyword*)

Synopsis	MBS
----------	-----

Context	<b>configure service vpls string sap string egress qos sap-egress overrides policer reference mbs</b> ( <i>number   keyword</i> )
Tree	<a href="#">mbs</a>
Range	0 to 268435456
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **packet-byte-offset** *number*

Synopsis	Packet size modification for policing information
Context	<b>configure service vpls string sap string egress qos sap-egress overrides policer reference packet-byte-offset</b> <i>number</i>
Tree	<a href="#">packet-byte-offset</a>
Range	-64 to 31
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **percent-rate**

Synopsis	Enter the <b>percent-rate</b> context
Context	<b>configure service vpls string sap string egress qos sap-egress overrides policer reference percent-rate</b>
Tree	<a href="#">percent-rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **cir** *decimal-number*

Synopsis	CIR percent rate
Context	<b>configure service vpls string sap string egress qos sap-egress overrides policer reference percent-rate cir</b> <i>decimal-number</i>
Tree	<a href="#">cir</a>
Range	0.00 to 100.00

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **pir** *decimal-number*

Synopsis	PIR percent rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <a href="#">percent-rate</a> <b>pir</b> <i>decimal-number</i>
Tree	<a href="#">pir</a>
Range	0.01 to 100.00
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **rate**

Synopsis	Enter the <b>rate</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <b>rate</b>
Tree	<a href="#">rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **cir** (*number* | *keyword*)

Synopsis	CIR rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">policer</a> <a href="#">reference</a> <a href="#">rate</a> <b>cir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cir</a>
Range	0 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**pir** (*number* | *keyword*)

Synopsis	PIR rate
Context	<b>configure</b> <a href="#">service vpls string sap string egress qos sap-egress overrides policer reference rate pir</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">pir</a>
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**stat-mode** *keyword*

Synopsis	Mode of statistics collected by the policer
Context	<b>configure</b> <a href="#">service vpls string sap string egress qos sap-egress overrides policer reference stat-mode keyword</a>
Tree	<a href="#">stat-mode</a>
Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-profile-cir, offered-limited-capped-cir, offered-profile-capped-cir, offered-total-cir-exceed, offered-four-profile-no-cir, offered-total-cir-four-profile
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**queue** [[queue-id](#)] *reference*

Synopsis	Enter the <b>queue</b> list instance
Context	<b>configure</b> <a href="#">service vpls string sap string egress qos sap-egress overrides queue reference</a>
Tree	<a href="#">queue</a>
Introduced	16.0.R1
Platforms	All

**[queue-id]** *reference*

Synopsis	Policer unique ID
Context	<b>configure</b> <a href="#">service vpls string sap string egress qos sap-egress overrides queue reference</a>

Tree	<a href="#">queue</a>
Reference	<b>configure</b> <a href="#">qos sap-egress</a> <i>string</i> <a href="#">queue</a> <i>number</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## adaptation-rule

Synopsis	Enter the <b>adaptation-rule</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos sap-egress overrides</a> <a href="#">queue</a> <i>reference</i> <a href="#">adaptation-rule</a>
Tree	<a href="#">adaptation-rule</a>
Introduced	16.0.R1
Platforms	All

## cir keyword

Synopsis	Constraint used when deriving the operational CIR value
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos sap-egress overrides</a> <a href="#">queue</a> <i>reference</i> <a href="#">adaptation-rule</a> <a href="#">cir</a> <i>keyword</i>
Tree	<a href="#">cir</a>
Options	max, min, closest
Introduced	16.0.R1
Platforms	All

## pir keyword

Synopsis	Constraint used when deriving the operational PIR value
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos sap-egress overrides</a> <a href="#">queue</a> <i>reference</i> <a href="#">adaptation-rule</a> <a href="#">pir</a> <i>keyword</i>
Tree	<a href="#">pir</a>
Options	max, min, closest
Introduced	16.0.R1
Platforms	All

**avg-frame-overhead** *decimal-number*

Synopsis	Average packet-to-frame encapsulation overhead
Context	<b>configure</b> <a href="#">service vpls string sap string egress qos sap-egress overrides queue reference avg-frame-overhead decimal-number</a>
Tree	<a href="#">avg-frame-overhead</a>
Range	0.00 to 100.00
Introduced	16.0.R1
Platforms	All

**burst-limit** (*number | keyword*)

Synopsis	Explicit shaping burst size for the queue
Context	<b>configure</b> <a href="#">service vpls string sap string egress qos sap-egress overrides queue reference burst-limit (number   keyword)</a>
Tree	<a href="#">burst-limit</a>
Range	1 to 14000000
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	All

**cbs** (*number | keyword*)

Synopsis	CBS
Context	<b>configure</b> <a href="#">service vpls string sap string egress qos sap-egress overrides queue reference cbs (number   keyword)</a>
Tree	<a href="#">cbs</a>
Range	0 to 1048576
Units	kilobytes
Options	auto
Introduced	16.0.R1
Platforms	All

**drop-tail**

Synopsis	Enter the <b>drop-tail</b> context
----------	------------------------------------

Context	<b>configure service vpls string sap string egress qos sap-egress overrides queue reference drop-tail</b>
Tree	<a href="#">drop-tail</a>
Introduced	16.0.R1
Platforms	All

**low**

Synopsis	Enter the <b>low</b> context
Context	<b>configure service vpls string sap string egress qos sap-egress overrides queue reference drop-tail low</b>
Tree	<a href="#">low</a>
Introduced	16.0.R1
Platforms	All

**percent-reduction-from-mbs** (*number | keyword*)

Synopsis	Percentage reduction from the MBS for a queue drop tail
Context	<b>configure service vpls string sap string egress qos sap-egress overrides queue reference drop-tail low percent-reduction-from-mbs</b> ( <i>number   keyword</i> )
Tree	<a href="#">percent-reduction-from-mbs</a>
Range	0 to 100
Options	auto
Introduced	16.0.R1
Platforms	All

**hs-class-weight** *number*

Synopsis	Class weight override for the queue
Context	<b>configure service vpls string sap string egress qos sap-egress overrides queue reference hs-class-weight</b> <i>number</i>
Tree	<a href="#">hs-class-weight</a>
Range	1   2   4   8
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

**hs-wred-queue**

Synopsis	Enter the <b>hs-wred-queue</b> context
Context	<b>configure service vpls string sap string egress qos sap-egress overrides queue reference hs-wred-queue</b>
Tree	<a href="#">hs-wred-queue</a>
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

**policy reference**

Synopsis	Slope policy applied to the HSQ queue group queue
Context	<b>configure service vpls string sap string egress qos sap-egress overrides queue reference hs-wred-queue policy reference</b>
Tree	<a href="#">policy</a>
Reference	<b>configure qos slope-policy string</b>
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

**hs-wrr-weight number**

Synopsis	WRR weight to parent with the queue into the scheduler
Context	<b>configure service vpls string sap string egress qos sap-egress overrides queue reference hs-wrr-weight number</b>
Tree	<a href="#">hs-wrr-weight</a>
Range	1 to 127
Default	1
Introduced	16.0.R1
Platforms	7750 SR-7/12/12e

**mbs (number | keyword)**

Synopsis	MBS
Context	<b>configure service vpls string sap string egress qos sap-egress overrides queue reference mbs (number   keyword)</b>
Tree	<a href="#">mbs</a>
Range	0 to 1073741824

Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	All

## monitor-queue-depth

Synopsis	Enable the <b>monitor-queue-depth</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <b>monitor-queue-depth</b>
Tree	<a href="#">monitor-queue-depth</a>
Description	Commands in this context configure queue depth monitoring for the specified queue.
Introduced	20.10.R1
Platforms	All

## fast-polling *boolean*

Synopsis	Enable fast polling of the queue depth
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">monitor-queue-depth</a> <b>fast-polling</b> <i>boolean</i>
Tree	<a href="#">fast-polling</a>
Description	When configured to <b>true</b> , this command enables fast polling of the queue depth. Faster polling allows a more accurate view of the actual depth.
Default	false
Introduced	20.10.R1
Platforms	All

## violation-threshold *decimal-number*

Synopsis	Threshold for queue depth before violation is raised
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">monitor-queue-depth</a> <b>violation-threshold</b> <i>decimal-number</i>
Tree	<a href="#">violation-threshold</a>
Description	This command specifies the threshold for the queue MBS. When the queue depth exceeds the threshold value, a violation is registered.
Range	0.01 to 99.99

Introduced 20.10.R1  
 Platforms All

## parent

Synopsis Enter the **parent** context  
 Context **configure** [service](#) [vpls](#) [string](#) [sap](#) [string](#) [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#) [reference](#) **parent**  
 Tree [parent](#)  
 Introduced 16.0.R1  
 Platforms All

## cir-weight *number*

Synopsis CIR parameter that overrides parent for queue group  
 Context **configure** [service](#) [vpls](#) [string](#) [sap](#) [string](#) [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#) [reference](#) **parent** **cir-weight** *number*  
 Tree [cir-weight](#)  
 Range 0 to 100  
 Introduced 16.0.R1  
 Platforms All

## weight *number*

Synopsis PIR parameter that overrides parent for queue group  
 Context **configure** [service](#) [vpls](#) [string](#) [sap](#) [string](#) [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#) [reference](#) **parent** **weight** *number*  
 Tree [weight](#)  
 Range 0 to 100  
 Introduced 16.0.R1  
 Platforms All

## percent-rate

Synopsis Enter the **percent-rate** context  
 Context **configure** [service](#) [vpls](#) [string](#) [sap](#) [string](#) [egress](#) [qos](#) [sap-egress](#) [overrides](#) [queue](#) [reference](#) **percent-rate**

Tree	<a href="#">percent-rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	All

### **cir** *decimal-number*

Synopsis	CIR percent rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">percent-rate</a> <a href="#">cir</a> <i>decimal-number</i>
Tree	<a href="#">cir</a>
Range	0.00 to 100.00
Introduced	16.0.R1
Platforms	All

### **pir** *decimal-number*

Synopsis	PIR percent rate
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">percent-rate</a> <a href="#">pir</a> <i>decimal-number</i>
Tree	<a href="#">pir</a>
Range	0.01 to 100.00
Introduced	16.0.R1
Platforms	All

### **rate**

Synopsis	Enter the <b>rate</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">sap-egress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">rate</a>
Tree	<a href="#">rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	All

**cir** (*number* | *keyword*)

Synopsis	CIR rate
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos sap-egress overrides</a> <a href="#">queue reference</a> <a href="#">rate</a> <b>cir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cir</a>
Range	0 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	All

**pir** (*number* | *keyword*)

Synopsis	PIR rate
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos sap-egress overrides</a> <a href="#">queue reference</a> <a href="#">rate</a> <b>pir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">pir</a>
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	All

**policy-name** *reference*

Synopsis	Policy ID to associate with SAP for mirrored service
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">egress qos sap-egress</a> <a href="#">policy-name</a> <i>reference</i>
Tree	<a href="#">policy-name</a>

Introduced	16.0.R1
Platforms	All

**port-redirect-group**

Synopsis	Enter the <b>port-redirect-group</b> context
----------	--

Context	<b>configure service vpls string sap string egress qos sap-egress port-redirect-group</b>
Tree	<a href="#">port-redirect-group</a>
Introduced	16.0.R1
Platforms	All

### **group-name** *reference*

Synopsis	Name of the queue group redirect list policy
Context	<b>configure service vpls string sap string egress qos sap-egress port-redirect-group group-name reference</b>
Tree	<a href="#">group-name</a>
Reference	<b>configure qos queue-group-templates egress queue-group string</b>
Introduced	16.0.R1
Platforms	All

### **instance** *number*

Synopsis	Instance of port queue group
Context	<b>configure service vpls string sap string egress qos sap-egress port-redirect-group instance number</b>
Tree	<a href="#">instance</a>
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

### **scheduler-policy**

Synopsis	Enter the <b>scheduler-policy</b> context
Context	<b>configure service vpls string sap string egress qos scheduler-policy</b>
Tree	<a href="#">scheduler-policy</a>
Introduced	16.0.R1
Platforms	All

### **overrides**

Synopsis	Enter the <b>overrides</b> context
----------	------------------------------------

Context	<b>configure service vpls string sap string egress qos scheduler-policy overrides</b>
Tree	<b>overrides</b>
Introduced	16.0.R1
Platforms	All

### **scheduler** [**scheduler-name**] *string*

Synopsis	Enter the <b>scheduler</b> list instance
Context	<b>configure service vpls string sap string egress qos scheduler-policy overrides scheduler string</b>
Tree	<b>scheduler</b>
Introduced	16.0.R1
Platforms	All

### **[scheduler-name]** *string*

Synopsis	Scheduler name
Context	<b>configure service vpls string sap string egress qos scheduler-policy overrides scheduler string</b>
Tree	<b>scheduler</b>
Description	<p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (#, \$, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context does not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context is not change.</p>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**parent**

Synopsis	Enter the <b>parent</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">egress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <a href="#">string</a> <b>parent</b>
Tree	<a href="#">parent</a>
Introduced	16.0.R1

Reference	<b>configure</b> <a href="#">port</a> <i>string</i> <a href="#">ethernet</a> <a href="#">access</a> <a href="#">egress</a> <a href="#">virtual-port</a> <i>string</i>
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## eth-cfm

Synopsis	Enter the <b>eth-cfm</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a>
Tree	<a href="#">eth-cfm</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## collect-lmm-fc-stats

Synopsis	Enter the <b>collect-lmm-fc-stats</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">collect-lmm-fc-stats</a>
Tree	<a href="#">collect-lmm-fc-stats</a>
Description	<p>Commands in this context configure per forwarding class (FC) LMM information collection.</p> <p>The commands <b>fc-in-profile</b> and <b>fc</b> in this context are mutually exclusive. The commands apply to either profile-aware or profile-unaware FCs respectively.</p> <p>This command and the <b>collect-lmm-stats</b> command are mutually exclusive when there is entity resource contention.</p>
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fc** keyword

Synopsis Forwarding class name for profile-unaware counter

Context **configure** [service](#) [vpls](#) *string* [sap](#) *string* [eth-cfm](#) [collect-lmm-fc-stats](#) [fc](#) *keyword*

Tree [fc](#)

Description This command configures individual counters for the specified FCs without regard for profile. The system includes all countable packets that match a configured FC, regardless of profile, in this counter.

An FC specified as part of this command and for this specific context cannot be specified as a profile-aware FC using the **fc-in-profile** command under the **collect-lmm-fc-stats** context.

When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.

Options be, l2, af, l1, h2, ef, h1, nc

Max. Instances 8

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fc-in-profile** keyword

Synopsis Forwarding class name for profile-aware counter

Context **configure** [service](#) [vpls](#) *string* [sap](#) *string* [eth-cfm](#) [collect-lmm-fc-stats](#) [fc-in-profile](#) *keyword*

Tree [fc-in-profile](#)

Description This command configures individual counters for the specified FCs with regard to profile. The system includes all countable packets that match a configured FC and that are deemed to be in-profile in this counter.

An FC specified as part of this command and for this specific context cannot be specified as a profile-unaware FC using the **fc** command under the **collect-lmm-fc-stats** context.

When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.

Options be, l2, af, l1, h2, ef, h1, nc

Max. Instances 8

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**collect-lmm-stats** *boolean*

Synopsis	Collect statistics for loss measurement message tests
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <b>collect-lmm-stats</b> <i>boolean</i>
Tree	<a href="#">collect-lmm-stats</a>
Description	<p>When configured to <b>true</b>, this command enables the collection of statistics on the facility MEPs. (Facility is at a different level of the hierarchy than the collection of LMM statistics for service SAPs and MPLS SDP bindings.)The collection of LMM statistics must be enabled if a MEP is launching or responding to ETH-LMM packets.</p> <p>This command is mutually exclusive with the <b>collect-lmm-fc-stats</b> command when there is entity resource contention.</p> <p>When configured to <b>false</b>, this command disables the collection of statistics on the facility MEPs. If LMM statistics collection is disabled, the counters in the LMM and LMR PDU do not represent accurate measurements and all measurements should be ignored.</p>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**mep** [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number*

Synopsis	Enter the <b>mep</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <b>mep</b> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i>
Tree	<a href="#">mep</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**md-admin-name** *reference*

Synopsis	Maintenance Domain (MD) name
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <b>mep</b> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i>
Tree	<a href="#">mep</a>
Reference	<b>configure</b> <a href="#">eth-cfm</a> <a href="#">domain</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	16.0.R1

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**interval number**

Synopsis	Transmission interval for AIS messages
Context	<b>configure service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ais interval number</b>
Tree	<a href="#">interval</a>

Range	1   60
Units	seconds
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **low-priority-defect** *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">ais low-priority-defect</a> <i>keyword</i>
Tree	<a href="#">low-priority-defect</a>
Options	all-def, mac-rem-err-xcon
Default	all-def
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **priority** *number*

Synopsis	Priority of the AIS messages generated by the node
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">ais priority</a> <i>number</i>
Tree	<a href="#">priority</a>
Range	0 to 7
Default	7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **alarm-notification**

Synopsis	Enter the <b>alarm-notification</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">alarm-notification</a>
Tree	<a href="#">alarm-notification</a>
Description	Commands in this context configure the Fault Notification Generator (FNG) time values to raise an alarm or reset the CCM defect alarm.

Use these timers for network management processes. The timers are not tied into delaying the notification to the fault management system on the network element and do not affect fault propagation mechanisms.

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fng-alarm-time** *number*

Synopsis	Time that must expire before an FNG alarm is raised
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">alarm-notification</a> <a href="#">fng-alarm-time</a> <i>number</i>
Tree	<a href="#">fng-alarm-time</a>
Range	250   500   1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fng-reset-time** *number*

Synopsis	Time that must expire before an FNG alarm is reset
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">alarm-notification</a> <a href="#">fng-reset-time</a> <i>number</i>

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm** *boolean*

Synopsis	Generate CCM messages
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">ccm</a> <i>boolean</i>
Tree	<a href="#">ccm</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**ccm-ltm-priority** *number*

Synopsis	Priority of CCM and LTM messages transmitted by the MEP
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>ccm-ltm-priority</b> <i>number</i>
Tree	<a href="#">ccm-ltm-priority</a>
Range	0 to 7
Default	7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**ccm-padding-size** *number*

Synopsis	Number of octets of padding to insert in CCM packets
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>ccm-padding-size</b> <i>number</i>
Tree	<a href="#">ccm-padding-size</a>
Description	This command sets the byte size of the optional Data TLV to be included in the ETH-CC PDU.  This command increases the size of the ETH-CC PDU by the configured value. The base size of the ETH-CC PDU, including the Interface Status TLV and Port Status TLV, is 83 bytes not including the Layer 2 encapsulation. CCM padding is not supported when the CCM interval (configured through <b>configure eth-cfm domain association ccm-interval</b> ) is less than 1 second.
Range	3 to 1500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**cfm-vlan-tag** *string*

Synopsis	VLAN tags to apply to CFM PDUs for egress processing
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <b>cfm-vlan-tag</b> <i>string</i>
Tree	<a href="#">cfm-vlan-tag</a>
Description	This command allows the CFM function to include additional VLAN tags to the CFM packet that are carried to the egress and treated as service delimited. Typically, this function is used to influence the VLAN carried over a binding that uses the <b>vc-type vlan</b> or the binding forces the use of one or more VLAN tag that results in a mismatch between the service data arriving at the binding and the locally generated ETH-CFM

PDU's arriving at the same egress. When this command is included under the MEP or MIP configuration, the tags used as part of the configuration typically match the SAP service delimited configuration.

String Length	1 to 9
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## csf

Synopsis	Enable the <b>csf</b> context
Context	<b>configure service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number csf</b>
Tree	<b>csf</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## multiplier *decimal-number*

Synopsis	Multiplication factor used to clear the CSF condition

**eth-test**

Synopsis	Enable the <b>eth-test</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">eth-test</a>
Tree	<a href="#">eth-test</a>
Description	Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the <b>oam eth-cfm eth-test</b> command.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**bit-error-threshold** *number*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">mep</a> <a href="#">md-admin-name</a> <a href="#">reference</a> <a href="#">ma-admin-name</a> <a href="#">reference</a> <a href="#">mep-id</a> <a href="#">number</a> <a href="#">eth-test</a> <a href="#">bit-error-threshold</a> <i>number</i>
Tree	<a href="#">bit-error-threshold</a>
Range	0 to 11840
Units	bit errors
Default	1
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## test-pattern

Synopsis Enter the **test-pattern** context

Context **configure** [service](#) [vpls](#) [string](#) [sap](#) [string](#) [eth-cfm](#) [mep](#) [md-admin-name](#) [reference](#) [ma-admin-name](#) [reference](#) [mep-id](#) [number](#) [eth-test](#) **test-pattern**

Tree [test-pattern](#)

Description Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## crc-tlv *boolean*

Synopsis Generate a CRC checksum

Context **configure** [service](#) [vpls](#) [string](#) [sap](#) [string](#) [eth-cfm](#) [mep](#) [md-admin-name](#) [reference](#) [ma-admin-name](#) [reference](#) [mep-id](#) [number](#) [eth-test](#) **test-pattern** **crc-tlv** *boolean*

Tree [crc-tlv](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## pattern *keyword*

Synopsis Test pattern for Ethernet Test frames

Context **configure** [service](#) [vpls](#) [string](#) [sap](#) [string](#) [eth-cfm](#) [mep](#) [md-admin-name](#) [reference](#) [ma-admin-name](#) [reference](#) [mep-id](#) [number](#) [eth-test](#) **test-pattern** **pattern** *keyword*

Tree [pattern](#)

Description This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.

Options all-zeros, all-ones

Default all-zeros

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**fault-propagation** *keyword*

Synopsis	Fault propagation for the MEP
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">fault-propagation</a> <i>keyword</i>
Tree	<a href="#">fault-propagation</a>
Options	use-if-status-tlv, suspend-ccm
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**grace**

Synopsis	Enter the <b>grace</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">grace</a>
Tree	<a href="#">grace</a>
Description	Commands in this context configure the Nokia ETH-CFM Grace function and the ITU-T Y.1731 Ethernet Expected Default (ETH-ED) function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**eth-ed**

Synopsis	Enter the <b>eth-ed</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">grace</a> <a href="#">eth-ed</a>
Tree	<a href="#">eth-ed</a>
Description	Commands in this context configure the ITU-T Y.1731 ETH-ED function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**max-rx-defect-window** *number*

Synopsis	Maximum received ETH-ED expected defect window duration
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">grace</a> <a href="#">eth-ed</a> <a href="#">max-rx-defect-window</a> <i>number</i>
Tree	<a href="#">max-rx-defect-window</a>

Range	1 to 86400
Units	seconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **priority number**

Synopsis	Transmission priority for ETH-ED PDUs
Context	<b>configure service vpls string sap string eth-cfm mep md-admin-name</b> <i>reference ma-admin-name reference mep-id number grace eth-ed priority number</i>
Tree	<a href="#">priority</a>
Range	0 to 7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **rx-eth-ed boolean**

Synopsis	Receive and process ETH-ED ITU-T Y.1731 PDUs on the MEP
Context	<b>configure service vpls string sap string eth-cfm mep md-admin-name</b> <i>reference ma-admin-name reference mep-id number grace eth-ed rx-eth-ed boolean</i>
Tree	<a href="#">rx-eth-ed</a>
Description	This command enables the reception and processing of the ITU-T Y.1731 ETH-ED PDU on the MEP.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **tx-eth-ed boolean**

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	<b>configure service vpls string sap string eth-cfm mep md-admin-name</b> <i>reference ma-admin-name reference mep-id number grace eth-ed tx-eth-ed boolean</i>
Tree	<a href="#">tx-eth-ed</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## eth-vsm-grace

Synopsis	Enter the <b>eth-vsm-grace</b> context
Context	<b>configure</b> <a href="#">service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace</a>
Tree	<a href="#">eth-vsm-grace</a>
Description	Commands in this context configure the Nokia ETH-CFM Grace function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## rx-eth-vsm-grace *boolean*

Synopsis	Receive and process Nokia ETH-CFM Grace PDU on the MEP
Context	<b>configure</b> <a href="#">service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace rx-eth-vsm-grace boolean</a>
Tree	<a href="#">rx-eth-vsm-grace</a>
Description	When configured to <b>true</b> , the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.  When configured to <b>false</b> , the router disables the Nokia Grace function.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## tx-eth-vsm-grace *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	<b>configure</b> <a href="#">service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace tx-eth-vsm-grace boolean</a>
Tree	<a href="#">tx-eth-vsm-grace</a>
Description	When configured to <b>true</b> , the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.  The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.  The operator must configure the <b>configure system eth-cfm grace</b> command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).

When configured to **false**, the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.

Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **lbm-svc-act-responder** *boolean*

Synopsis	Process service activation streams in ETH-CFM LBM
Context	<b>configure</b> <a href="#">service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number lbm-svc-act-responder boolean</a>
Tree	<a href="#">lbm-svc-act-responder</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **low-priority-defect** *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	<b>configure</b> <a href="#">service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number low-priority-defect keyword</a>
Tree	<a href="#">low-priority-defect</a>
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Default	mac-rem-err-xcon
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mac-address** *string*

Synopsis	MAC address of the MEP
Context	<b>configure</b> <a href="#">service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number mac-address string</a>
Tree	<a href="#">mac-address</a>
Description	This command specifies the MAC address of the MEP.  When unconfigured, the MAC address of the port (if the MEP is on a SAP) or the MAC address of a bridge (if the MEP is on a spoke) is used.
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### one-way-delay-threshold *number*

Synopsis Threshold time limit for the one-way delay test

Context **configure service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number one-way-delay-threshold number**

Tree [one-way-delay-threshold](#)

Range 0 to 600

Units seconds

Default 3

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### primary-vlan *boolean*

#### WARNING:

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis MEP provisioned using MA primary VLAN ID

Context **configure service vpls string sap string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number primary-vlan boolean**

Tree [primary-vlan](#)

Default false

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### mip primary-vlan (*number* | *keyword*)

Synopsis Enter the **mip** list instance

Context **configure service vpls string sap string eth-cfm mip primary-vlan (number | keyword)**

Tree [mip](#)

Introduced 21.5.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**primary-vlan** (*number* | *keyword*)

Synopsis	VLAN ID to which the MIP is attached
Context	<b>configure</b> <b>service vpls</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm mip primary-vlan</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>mip</b>
Description	This command provides an option for linking a MIP with a Primary VLAN number or none. When the <b>none</b> option is provided, the MIP does not include the primary vlan.
Range	1 to 4094
Options	none
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**cfm-vlan-tag** *string*

Synopsis	VLAN tags to apply to CFM PDUs for egress processing
Context	<b>configure</b> <b>service vpls</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm mip primary-vlan</b> ( <i>number</i>   <i>keyword</i> ) <b>cfm-vlan-tag</b> <i>string</i>
Tree	<b>cfm-vlan-tag</b>
Description	This command allows the CFM function to include additional VLAN tags to the CFM packet that are carried to the egress and treated as service delimited. Typically, this function is used to influence the VLAN carried over a binding that uses the vc-type vlan or the binding forces the use of one or more VLAN tag that results in a mismatch between the service data arriving at the binding and the locally generated ETH-CFM PDUs arriving at the same egress. When this command is included under the MEP or MIP configuration, the tags used as part of the configuration typically match the SAP service delimited configuration.
String Length	1 to 9
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**mac-address** *string*

Synopsis	MAC address of the MIP
Context	<b>configure</b> <b>service vpls</b> <i>string</i> <b>sap</b> <i>string</i> <b>eth-cfm mip primary-vlan</b> ( <i>number</i>   <i>keyword</i> ) <b>mac-address</b> <i>string</i>
Tree	<b>mac-address</b>
Introduced	21.5.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **snelch- ingress-ctag-levels *number***

**Synopsis** Snelch levels using additional VLAN C-Tag space

**Context** **configure service vpls string sap string eth-cfm snelch- ingress-ctag-levels *number***

**Tree** [snelch- ingress-ctag-levels](#)

**Description** This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding plus an additional VLAN, up to a maximum tag length of two tags. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.

The list of levels must be a complete contiguous list from 0 up to the highest level to be dropped.

**Range** 0 to 7

**Max.** 8

**Instances**

**Introduced** 21.2.R1

**Platforms** 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **snelch- ingress-levels *number***

**Synopsis** Levels for which ETH-CFM packets are silently discarded

**Context** **configure service vpls string sap string eth-cfm snelch- ingress-levels *number***

**Tree** [snelch- ingress-levels](#)

**Description** This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.

The list of levels must be a complete contiguous list from 0 up to the highest level that will be dropped.

**Range** 0 to 7

**Max.** 8

**Instances**

**Introduced** 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**router-alert-check** *boolean*

Synopsis	Enable IGMP router alert check option
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">igmp-host-tracking</a> <a href="#">router-alert-check</a> <i>boolean</i>
Tree	<a href="#">router-alert-check</a>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**igmp-snooping**

Synopsis	Enter the <b>igmp-snooping</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">igmp-snooping</a>
Tree	<a href="#">igmp-snooping</a>
Introduced	16.0.R1
Platforms	All

**fast-leave** *boolean*

Synopsis	Allow IGMP fast leave processing
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">igmp-snooping</a> <a href="#">fast-leave</a> <i>boolean</i>
Tree	<a href="#">fast-leave</a>
Default	false
Introduced	16.0.R1
Platforms	All

**import-policy** *reference*

Synopsis	Import policy that filters IGMP packets
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">igmp-snooping</a> <a href="#">import-policy</a> <i>reference</i>
Tree	<a href="#">import-policy</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

**maximum-number-group-sources** *number*

Synopsis	Maximum group source combinations
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">igmp-snooping</a> <a href="#">maximum-number-group-sources</a> <i>number</i>
Tree	<a href="#">maximum-number-group-sources</a>
Range	1 to 32000
Introduced	16.0.R1
Platforms	All

**maximum-number-groups** *number*

Synopsis	Maximum groups allowed
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">igmp-snooping</a> <a href="#">maximum-number-groups</a> <i>number</i>
Tree	<a href="#">maximum-number-groups</a>
Range	1 to 16000
Introduced	16.0.R1
Platforms	All

**maximum-number-sources** *number*

Synopsis	Maximum sources that are allowed per group
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">igmp-snooping</a> <a href="#">maximum-number-sources</a> <i>number</i>
Tree	<a href="#">maximum-number-sources</a>
Range	1 to 1000
Introduced	16.0.R1
Platforms	All

**mcac**

Synopsis	Enter the <b>mcac</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">igmp-snooping</a> <b>mcac</b>
Tree	<a href="#">mcac</a>
Introduced	16.0.R1
Platforms	All

**bandwidth**

Synopsis	Enter the <b>bandwidth</b> context
Context	<b>configure service vpls string sap string igmp-snooping mcac bandwidth</b>
Tree	<b>bandwidth</b>
Introduced	16.0.R1
Platforms	All

**mandatory** (*number* | *keyword*)

Synopsis	Pre-reserved bandwidth for all mandatory channels
Context	<b>configure service vpls string sap string igmp-snooping mcac bandwidth mandatory</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>mandatory</b>
Range	0 to 2147483647
Options	unlimited
Default	unlimited
Introduced	16.0.R1
Platforms	All

**total** (*number* | *keyword*)

Synopsis	Maximum allowed bandwidth
Context	<b>configure service vpls string sap string igmp-snooping mcac bandwidth total</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>total</b>
Range	0 to 2147483647
Options	unlimited
Default	unlimited
Introduced	16.0.R1
Platforms	All

**interface-policy** *reference*

Synopsis	Name of multicast CAC interface policy
Context	<b>configure service vpls string sap string igmp-snooping mcac interface-policy</b> <i>reference</i>

Tree	<a href="#">interface-policy</a>
Reference	<b>configure mcac interface-policy</b> <i>string</i>
Introduced	16.0.R1
Platforms	All

## mc-constraints

Synopsis	Enter the <b>mc-constraints</b> context
Context	<b>configure service vpls</b> <i>string sap string igmp-snooping mcac mc-constraints</i>
Tree	<a href="#">mc-constraints</a>
Introduced	16.0.R1
Platforms	All

## level [[level-id](#)] *number*

Synopsis	Enter the <b>level</b> list instance
Context	<b>configure service vpls</b> <i>string sap string igmp-snooping mcac mc-constraints level number</i>
Tree	<a href="#">level</a>
Introduced	16.0.R1
Platforms	All

## [[level-id](#)] *number*

Synopsis	Bandwidth level ID for an MCAC constraint
Context	<b>configure service vpls</b> <i>string sap string igmp-snooping mcac mc-constraints level number</i>
Tree	<a href="#">level</a>
Range	1 to 8
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## bandwidth *number*

Synopsis	Bandwidth available for this level
----------	------------------------------------

Context	<b>configure service vpls string sap string igmp-snooping mcac mc-constraints level number bandwidth number</b>
Tree	<a href="#">bandwidth</a>
Range	0 to 2147483647
Units	kilobps
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **number-down** [[number-lag-port-down](#)] *number*

Synopsis	Enter the <b>number-down</b> list instance
Context	<b>configure service vpls string sap string igmp-snooping mcac mc-constraints number-down number</b>
Tree	<a href="#">number-down</a>
Introduced	16.0.R1
Platforms	All

### **[number-lag-port-down]** *number*

Synopsis	Number of ports that are down in this LAG link
Context	<b>configure service vpls string sap string igmp-snooping mcac mc-constraints number-down number</b>
Tree	<a href="#">number-down</a>
Range	1 to 64
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **level** *number*

Synopsis	Level ID to associate with number of down LAG ports
Context	<b>configure service vpls string sap string igmp-snooping mcac mc-constraints number-down number level number</b>
Tree	<a href="#">level</a>

Description	This command specifies the bandwidth for a given level. Level 1 has the highest priority and level 8 has the lowest priority.
Range	1 to 8
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **use-lag-port-weight** *boolean*

Synopsis	Use LAG port weight in calculating MCAC constraints
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">igmp-snooping mcac mc-constraints use-lag-port-weight</a> <i>boolean</i>
Tree	<a href="#">use-lag-port-weight</a>
Description	When configured to <b>true</b> , port weight is used when determining available bandwidth per level when LAG ports go down or come up. This command is required for proper operation on mixed port-speed LAGs and can also be used for unmixed port-speed LAGs.
Default	false
Introduced	16.0.R1
Platforms	All

### **policy** *reference*

Synopsis	Multicast CAC policy name
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">igmp-snooping mcac policy</a> <i>reference</i>
Tree	<a href="#">policy</a>
Description	<p>This command configures the name of the global channel bandwidth definition policy that is used for (H)MCAC and HQoS adjustment.</p> <p>Within the scope of HQoS adjustment, the channel definition policy under the group interface is used if redirection is unconfigured. In this case, the HQoS adjustment can be applied to IPoE subscribers in per-SAP replication mode.</p> <p>If redirection is configured, the channel bandwidth definition policy applied under the Layer 3 redirected interface is in effect.</p> <p>Hierarchical MCAC (HMCAC) is supported on two levels simultaneously:</p> <ul style="list-style-type: none"> <li>• subscriber level and redirected interface when redirection is configured</li> <li>• subscriber level and group-interface level when redirection is unconfigured</li> </ul> <p>In HMCAC, the subscriber is checked against its bandwidth limits first, then against the bandwidth limits of the redirected or group interface. If redirection is configured but the</p>

policy is referenced only under the group interface, no admission control is executed (HMCAC or MCAC).

Reference	<b>configure mcac policy</b> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **mrouter-port** *boolean*

Synopsis	Operate port as a multicast router port
Context	<b>configure service vpls</b> <i>string</i> <b>sap</b> <i>string</i> <b>igmp-snooping mrouter-port</b> <i>boolean</i>
Tree	<b>mrouter-port</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **mvr**

Synopsis	Enter the <b>mvr</b> context
Context	<b>configure service vpls</b> <i>string</i> <b>sap</b> <i>string</i> <b>igmp-snooping mvr</b>
Tree	<b>mvr</b>
Introduced	16.0.R1
Platforms	All

### **from-vpls** *reference*

Synopsis	MVR VPLS from which the multicast channels are taken
Context	<b>configure service vpls</b> <i>string</i> <b>sap</b> <i>string</i> <b>igmp-snooping mvr from-vpls</b> <i>reference</i>
Tree	<b>from-vpls</b>
Reference	<b>configure service vpls</b> <i>string</i>
Introduced	16.0.R1
Platforms	All

### **to-sap** *string*

Synopsis	Multicast channels copied to SAP
----------	----------------------------------

Context	<b>configure service vpls string sap string igmp-snooping mvr to-sap string</b>
Tree	<b>to-sap</b>
String Length	1 to 45
Introduced	16.0.R1
Platforms	All

### **query-interval** *number*

Synopsis	Time between two consecutive host-query messages
Context	<b>configure service vpls string sap string igmp-snooping query-interval number</b>
Tree	<b>query-interval</b>
Range	2 to 1024
Units	seconds
Default	125
Introduced	16.0.R1
Platforms	All

### **query-last-member-interval** *number*

Synopsis	Time between group-specific query messages
Context	<b>configure service vpls string sap string igmp-snooping query-last-member-interval number</b>
Tree	<b>query-last-member-interval</b>
Range	1 to 50
Units	deciseconds
Default	10
Introduced	16.0.R1
Platforms	All

### **query-response-interval** *number*

Synopsis	Time to wait for a response to the host-query messages
Context	<b>configure service vpls string sap string igmp-snooping query-response-interval number</b>
Tree	<b>query-response-interval</b>
Range	1 to 1023

Units	seconds
Default	10
Introduced	16.0.R1
Platforms	All

**robust-count** *number*

Synopsis	Number of retries after expected message loss
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">igmp-snooping</a> <b>robust-count</b> <i>number</i>
Tree	<a href="#">robust-count</a>
Range	2 to 7
Default	2
Introduced	16.0.R1
Platforms	All

**router-alert-check** *boolean*

Synopsis	Enable IP router alert check option
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">igmp-snooping</a> <b>router-alert-check</b> <i>boolean</i>
Tree	<a href="#">router-alert-check</a>
Default	true
Introduced	16.0.R1
Platforms	All

**send-queries** *boolean*

Synopsis	Generate IGMP general queries
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">igmp-snooping</a> <b>send-queries</b> <i>boolean</i>
Tree	<a href="#">send-queries</a>
Default	false
Introduced	16.0.R1
Platforms	All

**static**

Synopsis	Enter the <b>static</b> context
Context	<b>configure service vpls string sap string igmp-snooping static</b>
Tree	<b>static</b>
Introduced	16.0.R1
Platforms	All

**group [group-address] string**

Synopsis	Enter the <b>group</b> list instance
Context	<b>configure service vpls string sap string igmp-snooping static group string</b>
Tree	<b>group</b>
Introduced	16.0.R1
Platforms	All

**[group-address] string**

Synopsis	Group address of static IGMP multicast channel
Context	<b>configure service vpls string sap string igmp-snooping static group string</b>
Tree	<b>group</b>
Description	This command configures an address that receives data on an interface. The IP address must be unique for each static group.
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**source [source-address] string**

Synopsis	Add a list entry for <b>source</b>
Context	<b>configure service vpls string sap string igmp-snooping static group string source string</b>
Tree	<b>source</b>
Notes	The following elements are part of a mandatory choice: <b>source</b> or <b>starg</b> .
Introduced	16.0.R1
Platforms	All

**[source-address]** *string*

Synopsis	Source IP address of multicast channel sending data
Context	<b>configure</b> <a href="#">service vpls string sap string igmp-snooping static group string source string</a>
Tree	<a href="#">source</a>
Notes	This element is part of a list key.
Introduced	16.0.R2
Platforms	All

**starg**

Synopsis	any source address (*,G)
Context	<b>configure</b> <a href="#">service vpls string sap string igmp-snooping static group string starg</a>
Tree	<a href="#">starg</a>
Notes	The following elements are part of a mandatory choice: <b>source</b> or <b>starg</b> .
Introduced	16.0.R2
Platforms	All

**version** *keyword*

Synopsis	IGMP protocol version
Context	<b>configure</b> <a href="#">service vpls string sap string igmp-snooping version keyword</a>
Tree	<a href="#">version</a>
Options	1, 2, 3
Default	3
Introduced	16.0.R1
Platforms	All

**ingress**

Synopsis	Enter the <b>ingress</b> context
Context	<b>configure</b> <a href="#">service vpls string sap string ingress</a>
Tree	<a href="#">ingress</a>
Introduced	16.0.R1
Platforms	All

## filter

Synopsis	Enter the <b>filter</b> context

Reference	<b>configure</b> <a href="#">filter</a> <a href="#">ipv6-filter</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

## mac reference

Synopsis	MAC filter policy name
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">filter</a> <a href="#">mac</a> <i>reference</i>
Tree	<a href="#">mac</a>
Reference	<b>configure</b> <a href="#">filter</a> <a href="#">mac-filter</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

## qos

Synopsis	Enter the <b>qos</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a>
Tree	<a href="#">qos</a>
Introduced	16.0.R1
Platforms	All

## match-qinq-dot1p *keyword*

Synopsis	Ingress match QinQ Dot1p
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">match-qinq-dot1p</a> <i>keyword</i>
Tree	<a href="#">match-qinq-dot1p</a>
Options	top, bottom
Introduced	16.0.R1
Platforms	All

## policer-control-policy

Synopsis	Enter the <b>policer-control-policy</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a>
Tree	<a href="#">policer-control-policy</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## overrides

Synopsis	Enable the <b>overrides</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">policer-control-policy</a> <a href="#">overrides</a>
Tree	<a href="#">overrides</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**root**

Synopsis	Enter the <b>root</b> context
Context	<b>configure service vpls string sap string ingress qos policer-control-policy overrides root</b>
Tree	<b>root</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**max-rate** (*number* | *keyword*)

Synopsis	Maximum frame-based bandwidth limit
Context	<b>configure service vpls string sap string ingress qos policer-control-policy overrides root max-rate</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>max-rate</b>
Range	1 to 6400000000
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**priority-mbs-thresholds**

Synopsis	Enter the <b>priority-mbs-thresholds</b> context
Context	<b>configure service vpls string sap string ingress qos policer-control-policy overrides root priority-mbs-thresholds</b>
Tree	<b>priority-mbs-thresholds</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**min-thresh-separation** (*number* | *keyword*)

Synopsis	Minimum amount of separation buffer space
Context	<b>configure service vpls string sap string ingress qos policer-control-policy overrides root priority-mbs-thresholds min-thresh-separation</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>min-thresh-separation</b>
Range	0 to 16777216
Units	bytes
Options	auto

Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **priority** [[priority-level](#)] *number*

Synopsis Enter the **priority** list instance

Reference	<b>configure</b> <a href="#">qos</a> <a href="#">policer-control-policy</a> <i>string</i>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **sap-ingress**

Synopsis	Enter the <b>sap-ingress</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a>
Tree	<a href="#">sap-ingress</a>
Introduced	16.0.R1
Platforms	All

### **fp-redirect-group**

Synopsis	Enter the <b>fp-redirect-group</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">fp-redirect-group</a>
Tree	<a href="#">fp-redirect-group</a>
Introduced	16.0.R1
Platforms	All

### **group-name** *reference*

Synopsis	Queue group template name created on forwarding plane
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">fp-redirect-group</a> <a href="#">group-name</a> <i>reference</i>
Tree	<a href="#">group-name</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">queue-group-templates</a> <a href="#">ingress</a> <a href="#">queue-group</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

**instance *number***

Synopsis	Queue group instance
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress qos sap-ingress fp-redirect-group</a> <a href="#">instance</a> <i>number</i>
Tree	<a href="#">instance</a>
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

**overrides**

Synopsis	Enter the <b>overrides</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress qos sap-ingress overrides</a>
Tree	<a href="#">overrides</a>
Introduced	16.0.R1
Platforms	All

**ip-criteria**

Synopsis	Enter the <b>ip-criteria</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress qos sap-ingress overrides ip-criteria</a>
Tree	<a href="#">ip-criteria</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**activate-entry-tag *number***

Synopsis	Tag ID activated for IPv4 criteria
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress qos sap-ingress overrides ip-criteria</a> <a href="#">activate-entry-tag</a> <i>number</i>
Tree	<a href="#">activate-entry-tag</a>
Range	1 to 255
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**ipv6-criteria**

Synopsis	Enter the <b>ipv6-criteria</b> context
Context	<b>configure service vpls string sap string ingress qos sap-ingress overrides ipv6-criteria</b>
Tree	<a href="#">ipv6-criteria</a>
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**activate-entry-tag number**

Synopsis	Tag ID activated for IPv6 criteria
Context	<b>configure service vpls string sap string ingress qos sap-ingress overrides ipv6-criteria activate-entry-tag number</b>
Tree	<a href="#">activate-entry-tag</a>
Range	1 to 255
Introduced	20.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**policer [policer-id] reference**

Synopsis	Enter the <b>policer</b> list instance
Context	<b>configure service vpls string sap string ingress qos sap-ingress overrides policer reference</b>
Tree	<a href="#">policer</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**[policer-id] reference**

Synopsis	Policer unique ID
Context	<b>configure service vpls string sap string ingress qos sap-ingress overrides policer reference</b>
Tree	<a href="#">policer</a>
Reference	<b>configure qos sap-ingress string policer number</b>
Notes	This element is part of a list key.
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **cbs** (*number* | *keyword*)

Synopsis CBS

Context **configure service vpls string sap string ingress qos sap-ingress overrides policer reference cbs** (*number* | *keyword*)

Tree [cbs](#)

Range 0 to 268435456

Units bytes

Options auto

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **mbs** (*number* | *keyword*)

Synopsis MBS

Context **configure service vpls string sap string ingress qos sap-ingress overrides policer reference mbs** (*number* | *keyword*)

Tree [mbs](#)

Range 0 to 268435456

Units bytes

Options auto

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **packet-byte-offset** *number*

Synopsis Packet size modification for policing information

Context **configure service vpls string sap string ingress qos sap-ingress overrides policer reference packet-byte-offset** *number*

Tree [packet-byte-offset](#)

Range -32 to 31

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## percent-rate

Synopsis	Enter the <b>percent-rate</b> context
Context	<b>configure</b> <a href="#">service vpls string sap string ingress qos sap-ingress overrides policer reference percent-rate</a>
Tree	<a href="#">percent-rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## cir decimal-number

Synopsis	CIR percent rate
Context	<b>configure</b> <a href="#">service vpls string sap string ingress qos sap-ingress overrides policer reference percent-rate cir decimal-number</a>
Tree	<a href="#">cir</a>
Range	0.00 to 100.00
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## pir decimal-number

Synopsis	PIR percent rate
Context	<b>configure</b> <a href="#">service vpls string sap string ingress qos sap-ingress overrides policer reference percent-rate pir decimal-number</a>
Tree	<a href="#">pir</a>
Range	0.01 to 100.00
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## rate

Synopsis	Enter the <b>rate</b> context
Context	<b>configure</b> <a href="#">service vpls string sap string ingress qos sap-ingress overrides policer reference rate</a>
Tree	<a href="#">rate</a>

Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**cir** (*number* | *keyword*)

Synopsis	CIR rate
Context	<b>configure</b> <a href="#">service vpls string sap string ingress qos sap-ingress overrides policer reference rate cir</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cir</a>
Range	0 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**pir** (*number* | *keyword*)

Synopsis	PIR rate
Context	<b>configure</b> <a href="#">service vpls string sap string ingress qos sap-ingress overrides policer reference rate pir</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">pir</a>
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**stat-mode** *keyword*

Synopsis	Mode of statistics collected by the policer
Context	<b>configure</b> <a href="#">service vpls string sap string ingress qos sap-ingress overrides policer reference stat-mode keyword</a>
Tree	<a href="#">stat-mode</a>

Options	no-stats, minimal, offered-profile-no-cir, offered-total-cir, offered-priority-no-cir, offered-profile-cir, offered-priority-cir, offered-limited-profile-cir, offered-profile-capped-cir, offered-limited-capped-cir
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

### **queue** [\[queue-id\]](#) *reference*

Synopsis	Enter the <b>queue</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i>
Tree	<a href="#">queue</a>
Introduced	16.0.R1
Platforms	All

### **[queue-id]** *reference*

Synopsis	Policer unique ID
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i>
Tree	<a href="#">queue</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">sap-ingress</a> <i>string</i> <a href="#">queue</a> <i>number</i>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **adaptation-rule**

Synopsis	Enter the <b>adaptation-rule</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <i>reference</i> <a href="#">adaptation-rule</a>
Tree	<a href="#">adaptation-rule</a>
Introduced	16.0.R1
Platforms	All

### **cir** keyword

Synopsis	Constraint used when deriving the operational CIR value
Context	<b>configure</b> <a href="#">service vpls string sap string ingress qos sap-ingress overrides queue reference adaptation-rule cir keyword</a>
Tree	<a href="#">cir</a>
Options	max, min, closest
Introduced	16.0.R1
Platforms	All

### **pir** keyword

Synopsis	Constraint used when deriving the operational PIR value
Context	<b>configure</b> <a href="#">service vpls string sap string ingress qos sap-ingress overrides queue reference adaptation-rule pir keyword</a>
Tree	<a href="#">pir</a>
Options	max, min, closest
Introduced	16.0.R1
Platforms	All

### **cbs** (*number* | *keyword*)

Synopsis	CBS
Context	<b>configure</b> <a href="#">service vpls string sap string ingress qos sap-ingress overrides queue reference cbs (number   keyword)</a>
Tree	<a href="#">cbs</a>
Range	0 to 1048576
Units	kilobytes
Options	auto
Introduced	16.0.R1
Platforms	All

### **drop-tail**

Synopsis	Enter the <b>drop-tail</b> context
Context	<b>configure</b> <a href="#">service vpls string sap string ingress qos sap-ingress overrides queue reference drop-tail</a>

Tree	<a href="#">drop-tail</a>
Introduced	16.0.R1
Platforms	All

**low**

Synopsis	Enter the <b>low</b> context
Context	<b>configure</b> <a href="#">service vpls string sap string ingress qos sap-ingress overrides queue reference drop-tail low</a>
Tree	<a href="#">low</a>
Introduced	16.0.R1
Platforms	All

**percent-reduction-from-mbs** (*number* | *keyword*)

Synopsis	Percentage reduction from the MBS for a queue drop tail
Context	<b>configure</b> <a href="#">service vpls string sap string ingress qos sap-ingress overrides queue reference drop-tail low percent-reduction-from-mbs (number   keyword)</a>
Tree	<a href="#">percent-reduction-from-mbs</a>
Range	0 to 100
Options	auto
Introduced	16.0.R1
Platforms	All

**mbs** (*number* | *keyword*)

Synopsis	MBS
Context	<b>configure</b> <a href="#">service vpls string sap string ingress qos sap-ingress overrides queue reference mbs (number   keyword)</a>
Tree	<a href="#">mbs</a>
Range	0 to 1073741824
Units	bytes
Options	auto
Introduced	16.0.R1
Platforms	All

## monitor-queue-depth

Synopsis	Enable the <b>monitor-queue-depth</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">monitor-queue-depth</a>
Tree	<a href="#">monitor-queue-depth</a>
Introduced	21.7.R1
Platforms	All

## fast-polling *boolean*

Synopsis	Enable fast polling of the queue depth
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">monitor-queue-depth</a> <a href="#">fast-polling</a> <i>boolean</i>
Tree	<a href="#">fast-polling</a>
Default	false
Introduced	21.7.R1
Platforms	All

## parent

Synopsis	Enter the <b>parent</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">parent</a>
Tree	<a href="#">parent</a>
Introduced	16.0.R1
Platforms	All

## cir-weight *number*

Synopsis	CIR parameter that overrides parent for queue group
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a> <a href="#">queue</a> <a href="#">reference</a> <a href="#">parent</a> <a href="#">cir-weight</a> <i>number</i>
Tree	<a href="#">cir-weight</a>
Range	0 to 100
Introduced	16.0.R1

Platforms All

### **weight** *number*

Synopsis PIR parameter that overrides parent for queue group

Context **configure** [service vpls string sap string ingress qos sap-ingress overrides queue reference](#) [parent weight number](#)

Tree [weight](#)

Range 0 to 100

Introduced 16.0.R1

Platforms All

### **percent-rate**

Synopsis Enter the **percent-rate** context

Context **configure** [service vpls string sap string ingress qos sap-ingress overrides queue reference](#) [percent-rate](#)

Tree [percent-rate](#)

Notes The following elements are part of a choice: **percent-rate** or **rate**.

Introduced 16.0.R1

Platforms All

### **cir** *decimal-number*

Synopsis CIR percent rate

Context **configure** [service vpls string sap string ingress qos sap-ingress overrides queue reference](#) [percent-rate cir decimal-number](#)

Tree [cir](#)

Range 0.00 to 100.00

Introduced 16.0.R1

Platforms All

### **pir** *decimal-number*

Synopsis PIR percent rate

Context	<b>configure service vpls string sap string ingress qos sap-ingress overrides queue reference percent-rate pir decimal-number</b>
Tree	<a href="#">pir</a>
Range	0.01 to 100.00
Introduced	16.0.R1
Platforms	All

**rate**

Synopsis	Enter the <b>rate</b> context
Context	<b>configure service vpls string sap string ingress qos sap-ingress overrides queue reference rate</b>
Tree	<a href="#">rate</a>
Notes	The following elements are part of a choice: <b>percent-rate</b> or <b>rate</b> .
Introduced	16.0.R1
Platforms	All

**cir (number | keyword)**

Synopsis	CIR rate
Context	<b>configure service vpls string sap string ingress qos sap-ingress overrides queue reference rate cir (number   keyword)</b>
Tree	<a href="#">cir</a>
Range	0 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	All

**pir (number | keyword)**

Synopsis	PIR rate
Context	<b>configure service vpls string sap string ingress qos sap-ingress overrides queue reference rate pir (number   keyword)</b>
Tree	<a href="#">pir</a>
Range	1 to 6400000000

Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	All

### **policy-name** *reference*

Synopsis	Policy ID
Context	<b>configure</b> <a href="#">service vpls string sap string ingress qos sap-ingress policy-name reference</a>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos sap-ingress string</a>
Introduced	16.0.R1
Platforms	All

### **queuing-type** *keyword*

Synopsis	Queuing type
Context	<b>configure</b> <a href="#">service vpls string sap string ingress qos sap-ingress queuing-type keyword</a>
Tree	<a href="#">queuing-type</a>
Options	shared, multipoint-shared
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR-7/12/12e, 7750 SR-a, 7750 SR-e, VSR

### **scheduler-policy**

Synopsis	Enter the <b>scheduler-policy</b> context
Context	<b>configure</b> <a href="#">service vpls string sap string ingress qos scheduler-policy</a>
Tree	<a href="#">scheduler-policy</a>
Introduced	16.0.R1
Platforms	All

### **overrides**

Synopsis	Enter the <b>overrides</b> context
Context	<b>configure</b> <a href="#">service vpls string sap string ingress qos scheduler-policy overrides</a>

Tree	<a href="#">overrides</a>
Introduced	16.0.R1
Platforms	All

### **scheduler** [[scheduler-name](#)] *string*

Synopsis	Enter the <b>scheduler</b> list instance
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <i>string</i>
Tree	<a href="#">scheduler</a>
Introduced	16.0.R1
Platforms	All

### **[scheduler-name]** *string*

Synopsis	Scheduler name
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <i>string</i>
Tree	<a href="#">scheduler</a>
Description	<p>This command specifies the scheduler name which is composed of printable 7-bit ASCII characters. If the string contains special characters (<b>#</b>, <b>\$</b>, spaces, and so on), the entire string must be enclosed within double quotes. Each scheduler must have a unique name within the context of the scheduler policy. However, the same name can be reused in multiple scheduler policies. If the scheduler name already exists within the policy tier level, the context changes to that scheduler name for the purpose of editing the scheduler commands.</p> <p>If the scheduler name exists within the policy on a different tier, an error occurs and the current context does not change. If the scheduler name does not exist in this or another tier within the scheduler policy, it is assumed that an attempt is being made to create a scheduler of that name.</p> <p>If the provided scheduler name is invalid, a name syntax error occurs, the command does not execute, and the context is not change.</p>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**parent**

Synopsis	Enter the <b>parent</b> context
Context	<b>configure service vpls string sap string ingress qos scheduler-policy overrides scheduler string parent</b>
Tree	<b>parent</b>
Introduced	16.0.R1
Platforms	All

**cir-weight number**

Synopsis	Weight used at the within-CIR port priority level
Context	<b>configure service vpls string sap string ingress qos scheduler-policy overrides scheduler string parent cir-weight number</b>
Tree	<b>cir-weight</b>
Range	0 to 100
Introduced	16.0.R1
Platforms	All

**weight number**

Synopsis	Relative weight of the scheduler to feed the queue
Context	<b>configure service vpls string sap string ingress qos scheduler-policy overrides scheduler string parent weight number</b>
Tree	<b>weight</b>
Range	0 to 100
Introduced	16.0.R1
Platforms	All

**rate**

Synopsis	Enter the <b>rate</b> context
Context	<b>configure service vpls string sap string ingress qos scheduler-policy overrides scheduler string rate</b>
Tree	<b>rate</b>
Introduced	16.0.R1
Platforms	All

**cir** (*number* | *keyword*)

Synopsis	CIR at which the queue it to operate
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <a href="#">string</a> <a href="#">rate</a> <b>cir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">cir</a>
Range	0 to 6400000000
Units	kilobps
Options	sum, max
Introduced	16.0.R1
Platforms	All

**pir** (*number* | *keyword*)

Synopsis	PIR at which the queue is to operate
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">overrides</a> <a href="#">scheduler</a> <a href="#">string</a> <a href="#">rate</a> <b>pir</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">pir</a>
Range	1 to 6400000000
Units	kilobps
Options	max
Introduced	16.0.R1
Platforms	All

**policy-name** *reference*

Synopsis	Scheduler policy name
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">ingress</a> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">policy-name</a> <a href="#">reference</a>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos</a> <a href="#">scheduler-policy</a> <a href="#">string</a>
Introduced	16.0.R1
Platforms	All

## qtag-manipulation

Synopsis	Enter the <b>qtag-manipulation</b> context
Context	<b>configure</b> <a href="#">service vpls string sap string ingress qtag-manipulation</a>
Tree	<a href="#">qtag-manipulation</a>
Introduced	16.0.R1
Platforms	All

## c-tag (*number* | *keyword*)

Synopsis	Inner ingress vlan translation for two service delimiting vlan values
Context	<b>configure</b> <a href="#">service vpls string sap string ingress qtag-manipulation c-tag (<i>number</i>   <i>keyword</i>)</a>
Tree	<a href="#">c-tag</a>
Range	0 to 4094
Options	tag-*
Notes	The following elements are part of a choice: <b>push-dot1q-vlan</b> or ( <b>c-tag</b> and <b>s-tag</b> ).
Introduced	22.10.R1
Platforms	All

## push-dot1q-vlan (*number* | *keyword*)

Synopsis	VLAN translation information
Context	<b>configure</b> <a href="#">service vpls string sap string ingress qtag-manipulation push-dot1q-vlan (<i>number</i>   <i>keyword</i>)</a>
Tree	<a href="#">push-dot1q-vlan</a>
Range	0 to 4094
Options	use-sap-svlan
Notes	The following elements are part of a choice: <b>push-dot1q-vlan</b> or ( <b>c-tag</b> and <b>s-tag</b> ).
Introduced	16.0.R1
Platforms	All

## s-tag *number*

Synopsis	Outer ingress VLAN translation for two service delimiting VLAN values
Context	<b>configure</b> <a href="#">service vpls string sap string ingress qtag-manipulation s-tag number</a>

Tree	<a href="#">s-tag</a>
Range	0 to 4094
Notes	The following elements are part of a choice: <b>push-dot1q-vlan</b> or ( <b>c-tag</b> and <b>s-tag</b> ).
Introduced	22.10.R1
Platforms	All

## I2pt

Synopsis	Enter the <b>I2pt</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">I2pt</a>
Tree	<a href="#">I2pt</a>
Introduced	16.0.R1
Platforms	All

## force-boundary

Synopsis	Enable the <b>force-boundary</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">I2pt</a> <a href="#">force-boundary</a>
Tree	<a href="#">force-boundary</a>
Introduced	16.0.R1
Platforms	All

## protocols

Synopsis	Enter the <b>protocols</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">I2pt</a> <a href="#">force-boundary</a> <a href="#">protocols</a>
Tree	<a href="#">protocols</a>
Introduced	16.0.R1
Platforms	All

## cdp *boolean*

Synopsis	Enable Cisco discovery protocol
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">I2pt</a> <a href="#">force-boundary</a> <a href="#">protocols</a> <a href="#">cdp</a> <i>boolean</i>
Tree	<a href="#">cdp</a>

---

Default	false
Introduced	16.0.R1
Platforms	All

### **ntp boolean**

Synopsis	Enable dynamic trunking protocol
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">l2pt</a> <a href="#">force-boundary</a> <a href="#">protocols</a> <a href="#">ntp</a> <a href="#">boolean</a>
Tree	<a href="#">ntp</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **pagp boolean**

Synopsis	Enable port aggregation protocol
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">l2pt</a> <a href="#">force-boundary</a> <a href="#">protocols</a> <a href="#">pagp</a> <a href="#">boolean</a>
Tree	<a href="#">pagp</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **stp boolean**

Synopsis	Enable all spanning tree protocols
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">l2pt</a> <a href="#">force-boundary</a> <a href="#">protocols</a> <a href="#">stp</a> <a href="#">boolean</a>
Tree	<a href="#">stp</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **udld boolean**

Synopsis	Enable unidirectional link detection
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">sap</a> <a href="#">string</a> <a href="#">l2pt</a> <a href="#">force-boundary</a> <a href="#">protocols</a> <a href="#">udld</a> <a href="#">boolean</a>

---

Tree	<a href="#">udld</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **vtp *boolean***

Synopsis	Enable virtual trunk protocol
Context	<b>configure</b> <a href="#">service vpls</a> <a href="#">string sap</a> <a href="#">string l2pt</a> <a href="#">force-boundary protocols vtp</a> <a href="#">boolean</a>
Tree	<a href="#">vtp</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **termination**

Synopsis	Enable the <b>termination</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <a href="#">string sap</a> <a href="#">string l2pt</a> <a href="#">termination</a>
Tree	<a href="#">termination</a>
Introduced	16.0.R1
Platforms	All

### **protocols**

Synopsis	Enter the <b>protocols</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <a href="#">string sap</a> <a href="#">string l2pt</a> <a href="#">termination protocols</a>
Tree	<a href="#">protocols</a>
Introduced	16.0.R1
Platforms	All

### **cdp *boolean***

Synopsis	Enable Cisco discovery protocol
Context	<b>configure</b> <a href="#">service vpls</a> <a href="#">string sap</a> <a href="#">string l2pt</a> <a href="#">termination protocols cdp</a> <a href="#">boolean</a>
Tree	<a href="#">cdp</a>

Default	false
Introduced	16.0.R1
Platforms	All

**ntp boolean**

Synopsis	Enable dynamic trunking protocol
Context	<b>configure</b> <a href="#">service vpls string sap string l2pt termination protocols ntp boolean</a>
Tree	<a href="#">ntp</a>
Default	false
Introduced	16.0.R1
Platforms	All

**pagp boolean**

Synopsis	Enable port aggregation protocol
Context	<b>configure</b> <a href="#">service vpls string sap string l2pt termination protocols pagp boolean</a>
Tree	<a href="#">pagp</a>
Default	false
Introduced	16.0.R1
Platforms	All

**stp boolean**

Synopsis	Enable all spanning tree protocols
Context	<b>configure</b> <a href="#">service vpls string sap string l2pt termination protocols stp boolean</a>
Tree	<a href="#">stp</a>
Default	true
Introduced	16.0.R1
Platforms	All

**udld boolean**

Synopsis	Enable unidirectional link detection
Context	<b>configure</b> <a href="#">service vpls string sap string l2pt termination protocols udld boolean</a>

---

Tree	<a href="#">udld</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **vtp** *boolean*

Synopsis	Enable virtual trunk protocol
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">l2tp termination protocols vtp</a> <i>boolean</i>
Tree	<a href="#">vtp</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **l2tpv3-session**

Synopsis	Enable the <b>l2tpv3-session</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">l2tpv3-session</a>
Tree	<a href="#">l2tpv3-session</a>
Introduced	16.0.R4
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the session for the service
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">l2tpv3-session</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R4
Platforms	All

## pseudo-wire

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enter the <b>pseudo-wire</b> context
Context	<b>configure service vpls string sap string l2tpv3-session pseudo-wire</b>
Tree	<a href="#">pseudo-wire</a>
Introduced	16.0.R4
Platforms	All

## ethernet

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Enable the Ethernet PW-type for the L2TPv3 session
Context	<b>configure service vpls string sap string l2tpv3-session pseudo-wire ethernet</b>
Tree	<a href="#">ethernet</a>
Notes	The following elements are part of a choice: <b>ethernet</b> or <b>ethernet-vlan-id</b> .
Introduced	16.0.R4
Platforms	All

## ethernet-vlan-id *number*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Ethernet-VLAN PW-type ID for the L2TPv3 session
Context	<b>configure service vpls string sap string l2tpv3-session pseudo-wire ethernet-vlan-id number</b>
Tree	<a href="#">ethernet-vlan-id</a>
Range	0 to 4095
Notes	The following elements are part of a choice: <b>ethernet</b> or <b>ethernet-vlan-id</b> .
Introduced	16.0.R4

Platforms All

## router

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Enter the **router** context

Context **configure service vpls string sap string l2tpv3-session router**

Tree **router**

Introduced 16.0.R4

Platforms All

## group *string*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Tunnel group name

Context **configure service vpls string sap string l2tpv3-session router group string**

Tree **group**

String Length 1 to 32

Introduced 16.0.R4

Platforms All

## router-instance *string*

### WARNING:

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis Router name used to identify the router instance

Context **configure service vpls string sap string l2tpv3-session router router-instance string**

Tree **router-instance**

String Length 1 to 64

Introduced 16.0.R4

Platforms All

### **vc-id** *number*

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis VC ID for the L2TPv3 session

Context **configure service vpls string sap string l2tpv3-session vc-id number**

Tree [vc-id](#)

Range 1 to 4294967295

Introduced 16.0.R4

Platforms All

### **lag**

Synopsis Enter the **lag** context

Context **configure service vpls string sap string lag**

Tree [lag](#)

Introduced 16.0.R1

Platforms All

### **link-map-profile** *number*

Synopsis LAG link map profile for a SAP or network interface

Context **configure service vpls string sap string lag link-map-profile number**

Tree [link-map-profile](#)

Description This command assigns a preconfigured LAG link map profile to a SAP or network interface configured on a LAG or a PW port that exists on a LAG. After an operator assigns a LAG link map profile, the system rehashes the SAP or network interface egress traffic over the LAG as required by the new configuration.

If the LAG link map profile for a SAP or network interface is deleted, the system reverts back to per-flow hashing.

Range 1 to 64

Introduced 16.0.R1

Platforms All

## per-link-hash

Synopsis	Enter the <b>per-link-hash</b> context
Context	<b>configure service vpls string sap string lag per-link-hash</b>
Tree	<a href="#">per-link-hash</a>
Introduced	16.0.R1
Platforms	All

## class number

Synopsis	Class used on LAG egress using weighted per-link-hash
Context	<b>configure service vpls string sap string lag per-link-hash class number</b>
Tree	<a href="#">class</a>
Range	1 to 3
Default	1
Introduced	16.0.R1
Platforms	All

## weight number

Synopsis	Weight used on LAG egress using weighted per-link-hash
Context	<b>configure service vpls string sap string lag per-link-hash weight number</b>
Tree	<a href="#">weight</a>
Range	1 to 1024
Default	1
Introduced	16.0.R1
Platforms	All

## managed-vlan-list

Synopsis	Enter the <b>managed-vlan-list</b> context
Context	<b>configure service vpls string sap string managed-vlan-list</b>
Tree	<a href="#">managed-vlan-list</a>
Introduced	19.10.R1
Platforms	All

**range** [vlan-range] *string*

Synopsis	Add a list entry for <b>range</b>
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">managed-vlan-list</a> <a href="#">range</a> <i>string</i>
Tree	<a href="#">range</a>
Introduced	19.10.R1
Platforms	All

**[vlan-range]** *string*

Synopsis	Range of VLANs associated with the M-VPLS SAP
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">managed-vlan-list</a> <a href="#">range</a> <i>string</i>
Tree	<a href="#">range</a>
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	All

**mc-ring**

Synopsis	Enable the <b>mc-ring</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">mc-ring</a>
Tree	<a href="#">mc-ring</a>
Introduced	16.0.R1
Platforms	All

**ring-node** *string*

Synopsis	Name for the ring node associated with this SAP
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">mc-ring</a> <a href="#">ring-node</a> <i>string</i>
Tree	<a href="#">ring-node</a>
String Length	1 to 32
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

## mld-snooping

Synopsis	Enter the <b>mld-snooping</b> context
Context	<b>configure</b> <a href="#">service vpls string sap string mld-snooping</a>
Tree	<a href="#">mld-snooping</a>
Introduced	16.0.R1
Platforms	All

## fast-leave *boolean*

Synopsis	Allow IGMP fast leave processing
Context	<b>configure</b> <a href="#">service vpls string sap string mld-snooping fast-leave boolean</a>
Tree	<a href="#">fast-leave</a>
Default	false
Introduced	16.0.R1
Platforms	All

## import-policy *reference*

Synopsis	Import policy that filters IGMP packets
Context	<b>configure</b> <a href="#">service vpls string sap string mld-snooping import-policy reference</a>
Tree	<a href="#">import-policy</a>
Reference	<b>configure</b> <a href="#">policy-options policy-statement string</a>
Introduced	16.0.R1
Platforms	All

## maximum-number-groups *number*

Synopsis	Maximum groups allowed
Context	<b>configure</b> <a href="#">service vpls string sap string mld-snooping maximum-number-groups number</a>
Tree	<a href="#">maximum-number-groups</a>
Range	1 to 16000
Introduced	16.0.R1
Platforms	All

**mrouter-port** *boolean*

Synopsis	Operate port as a multicast router port
Context	<b>configure</b> <a href="#">service vpls string sap string mld-snooping mrouter-port</a> <i>boolean</i>
Tree	<a href="#">mrouter-port</a>
Default	false
Introduced	16.0.R1
Platforms	All

**mvr**

Synopsis	Enter the <b>mvr</b> context
Context	<b>configure</b> <a href="#">service vpls string sap string mld-snooping mvr</a>
Tree	<a href="#">mvr</a>
Introduced	16.0.R1
Platforms	All

**from-vpls** *reference*

Synopsis	MVR VPLS from which the multicast channels are taken
Context	<b>configure</b> <a href="#">service vpls string sap string mld-snooping mvr from-vpls</a> <i>reference</i>
Tree	<a href="#">from-vpls</a>
Reference	<b>configure</b> <a href="#">service vpls string</a>
Introduced	16.0.R1
Platforms	All

**to-sap** *string*

Synopsis	SAP to which the multicast channels are copied
Context	<b>configure</b> <a href="#">service vpls string sap string mld-snooping mvr to-sap</a> <i>string</i>
Tree	<a href="#">to-sap</a>
String Length	1 to 45
Introduced	16.0.R1
Platforms	All

**query-interval** *number*

Synopsis	Time between two consecutive host-query messages
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">mld-snooping</a> <a href="#">query-interval</a> <i>number</i>
Tree	<a href="#">query-interval</a>
Range	2 to 1024
Units	seconds
Default	125
Introduced	16.0.R1
Platforms	All

**query-last-member-interval** *number*

Synopsis	Time between group-specific query messages
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">mld-snooping</a> <a href="#">query-last-member-interval</a> <i>number</i>
Tree	<a href="#">query-last-member-interval</a>
Range	1 to 50
Units	deciseconds
Default	10
Introduced	16.0.R1
Platforms	All

**query-response-interval** *number*

Synopsis	Time to wait for a response to the host-query messages
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">mld-snooping</a> <a href="#">query-response-interval</a> <i>number</i>
Tree	<a href="#">query-response-interval</a>
Range	1 to 1023
Units	seconds
Default	10
Introduced	16.0.R1
Platforms	All

**robust-count** *number*

Synopsis	Number of retries after expected message loss
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">mld-snooping</a> <a href="#">robust-count</a> <i>number</i>
Tree	<a href="#">robust-count</a>
Range	2 to 7
Default	2
Introduced	16.0.R1
Platforms	All

**router-alert-check** *boolean*

Synopsis	Enable IP router alert check option
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">mld-snooping</a> <a href="#">router-alert-check</a> <i>boolean</i>
Tree	<a href="#">router-alert-check</a>
Default	true
Introduced	16.0.R1
Platforms	All

**send-queries** *boolean*

Synopsis	Generate IGMP general queries
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">mld-snooping</a> <a href="#">send-queries</a> <i>boolean</i>
Tree	<a href="#">send-queries</a>
Default	false
Introduced	16.0.R1
Platforms	All

**static**

Synopsis	Enter the <b>static</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">mld-snooping</a> <a href="#">static</a>
Tree	<a href="#">static</a>
Introduced	16.0.R1
Platforms	All

**group** [[group-address](#)] *string*

Synopsis	Enter the <b>group</b> list instance
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">sap string</a> <a href="#">mld-snooping static group string</a>
Tree	<a href="#">group</a>
Introduced	16.0.R1
Platforms	All

**[group-address]** *string*

Synopsis	Group address of multicast channel
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">sap string</a> <a href="#">mld-snooping static group string</a>
Tree	<a href="#">group</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**source** [[source-address](#)] *string*

Synopsis	Add a list entry for <b>source</b>
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">sap string</a> <a href="#">mld-snooping static group string</a> <a href="#">source string</a>
Tree	<a href="#">source</a>
Notes	The following elements are part of a mandatory choice: <b>source</b> or <b>starg</b> .
Introduced	16.0.R1
Platforms	All

**[source-address]** *string*

Synopsis	Source IP address
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">sap string</a> <a href="#">mld-snooping static group string</a> <a href="#">source string</a>
Tree	<a href="#">source</a>
Notes	This element is part of a list key.
Introduced	16.0.R2
Platforms	All

**starg**

Synopsis	any source address (*,G)
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">mld-snooping</a> <a href="#">static</a> <a href="#">group</a> <i>string</i> <b>starg</b>
Tree	<a href="#">starg</a>
Notes	The following elements are part of a mandatory choice: <b>source</b> or <b>starg</b> .
Introduced	16.0.R2
Platforms	All

**version** *keyword*

Synopsis	Version of MLD running on the SAP or SDP
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">mld-snooping</a> <a href="#">version</a> <i>keyword</i>
Tree	<a href="#">version</a>
Options	1, 2
Default	2
Introduced	16.0.R1
Platforms	All

**monitor-oper-group** *reference*

Synopsis	Monitor operational group
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">monitor-oper-group</a> <i>reference</i>
Tree	<a href="#">monitor-oper-group</a>
Reference	<b>configure</b> <a href="#">service</a> <a href="#">oper-group</a> <i>string</i>
Notes	The following elements are part of a choice: <b>monitor-oper-group</b> or <b>oper-group</b> .
Introduced	16.0.R1
Platforms	All

**mrp**

Synopsis	Enter the <b>mrp</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <b>mrp</b>
Tree	<a href="#">mrp</a>
Introduced	20.10.R1

Platforms All

### **join-time** *number*

Synopsis Interval between transmit opportunities  
 Context **configure** [service vpls string sap string mrp join-time number](#)  
 Tree [join-time](#)  
 Range 1 to 10  
 Default 2  
 Introduced 20.10.R1  
 Platforms All

### **leave-all-time** *number*

Synopsis Frequency that LeaveAll PDUs are generated  
 Context **configure** [service vpls string sap string mrp leave-all-time number](#)  
 Tree [leave-all-time](#)  
 Range 60 to 300  
 Default 100  
 Introduced 20.10.R1  
 Platforms All

### **leave-time** *number*

Synopsis Time in leave state before transitioning to MT state  
 Context **configure** [service vpls string sap string mrp leave-time number](#)  
 Tree [leave-time](#)  
 Range 30 to 60  
 Default 30  
 Introduced 20.10.R1  
 Platforms All

### **periodic-time** *number*

Synopsis Frequency of periodic events generation

Context	<b>configure service vpls string sap string mrp periodic-time number</b>
Tree	<a href="#">periodic-time</a>
Range	10 to 100
Default	10
Introduced	20.10.R1
Platforms	All

### **periodic-timer** *boolean*

Synopsis	Enable the periodic transmission timer
Context	<b>configure service vpls string sap string mrp periodic-timer boolean</b>
Tree	<a href="#">periodic-timer</a>
Default	false
Introduced	20.10.R1
Platforms	All

### **policy** *reference*

Synopsis	MMRP policy name
Context	<b>configure service vpls string sap string mrp policy reference</b>
Tree	<a href="#">policy</a>
Reference	<b>configure service mrp policy string</b>
Introduced	20.10.R1
Platforms	All

### **multi-service-site** *reference*

Synopsis	Multi service site name
Context	<b>configure service vpls string sap string multi-service-site reference</b>
Tree	<a href="#">multi-service-site</a>
Reference	<b>configure service customer string multi-service-site string</b>
Introduced	16.0.R1
Platforms	All

## **oper-group** *reference*

Synopsis	Operational group
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">oper-group</a> <i>reference</i>
Tree	<a href="#">oper-group</a>
Reference	<b>configure</b> <a href="#">service</a> <a href="#">oper-group</a> <i>string</i>
Notes	The following elements are part of a choice: <b>monitor-oper-group</b> or <b>oper-group</b> .
Introduced	16.0.R1
Platforms	All

## **pbb**

Synopsis	Enter the <b>pbb</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">pbb</a>
Tree	<a href="#">pbb</a>
Introduced	20.10.R1
Platforms	All

## **fault-propagation**

Synopsis	Enter the <b>fault-propagation</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">pbb</a> <a href="#">fault-propagation</a>
Tree	<a href="#">fault-propagation</a>
Introduced	20.10.R1
Platforms	All

## **backbone-mac-address** [[address](#)] *string*

Synopsis	Add a list entry for <b>backbone-mac-address</b>
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">pbb</a> <a href="#">fault-propagation</a> <a href="#">backbone-mac-address</a> <i>string</i>
Tree	<a href="#">backbone-mac-address</a>
Introduced	20.10.R1
Platforms	All

**[address]** *string*

Synopsis	Backbone MAC address
Context	<b>configure</b> <a href="#">service vpls string sap string pbb fault-propagation backbone-mac-address string</a>
Tree	<a href="#">backbone-mac-address</a>
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	All

**backbone-mac-name** [[name](#)] *reference*

Synopsis	Add a list entry for <b>backbone-mac-name</b>
Context	<b>configure</b> <a href="#">service vpls string sap string pbb fault-propagation backbone-mac-name reference</a>
Tree	<a href="#">backbone-mac-name</a>
Introduced	20.10.R1
Platforms	All

**[name]** *reference*

Synopsis	Backbone MAC address name
Context	<b>configure</b> <a href="#">service vpls string sap string pbb fault-propagation backbone-mac-name reference</a>
Tree	<a href="#">backbone-mac-name</a>
Reference	<b>configure</b> <a href="#">service pbb mac string</a>
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	All

**pim-snooping**

Synopsis	Enter the <b>pim-snooping</b> context
Context	<b>configure</b> <a href="#">service vpls string sap string pim-snooping</a>
Tree	<a href="#">pim-snooping</a>
Introduced	16.0.R1

Platforms All

### **maximum-number-groups** *number*

Synopsis Maximum groups for this interface

Context **configure** [service vpls](#) *string* [sap](#) *string* [pim-snooping](#) **maximum-number-groups** *number*

Tree [maximum-number-groups](#)

Range 1 to 16000

Introduced 16.0.R1

Platforms All

### **process-cpm-traffic-on-sap-down** *boolean*

Synopsis Process CPM traffic on SAP down event

Context **configure** [service vpls](#) *string* [sap](#) *string* **process-cpm-traffic-on-sap-down** *boolean*

Tree [process-cpm-traffic-on-sap-down](#)

Default false

Introduced 16.0.R1

Platforms All

### **radius-auth-policy** *reference*

Synopsis RADIUS authentication policy

Context **configure** [service vpls](#) *string* [sap](#) *string* **radius-auth-policy** *reference*

Tree [radius-auth-policy](#)

Reference **configure** [subscriber-mgmt](#) **radius-authentication-policy** *string*

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **shcv-policy-ipv4** *reference*

Synopsis Subscriber host connectivity verification policy for IPv4

Context **configure** [service vpls](#) *string* [sap](#) *string* **shcv-policy-ipv4** *reference*

Tree [shcv-policy-ipv4](#)

Reference **configure** [subscriber-mgmt](#) **shcv-policy** *string*

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## **spb**

Synopsis	Enable the <b>spb</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">spb</a>
Tree	<a href="#">spb</a>
Introduced	21.10.R1
Platforms	All

## **admin-state** *keyword*

Synopsis	Admin state
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">spb</a> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	All

## **level** [*id*] *number*

Synopsis	Enter the <b>level</b> list instance
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">spb</a> <b>level</b> <i>number</i>
Tree	<a href="#">level</a>
Introduced	21.10.R1
Platforms	All

## **[id]** *number*

Synopsis	Level identifier
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">spb</a> <b>level</b> <i>number</i>
Tree	<a href="#">level</a>
Range	1

---

Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	All

### **hello-interval** *number*

Synopsis	Hello interval
Context	<b>configure</b> <a href="#">service vpls</a> <i>string sap string spb level number</i> <b>hello-interval</b> <i>number</i>
Tree	<a href="#">hello-interval</a>
Range	1 to 20000
Units	seconds
Default	9
Introduced	21.10.R1
Platforms	All

### **hello-multiplier** *number*

Synopsis	Hello multiplier
Context	<b>configure</b> <a href="#">service vpls</a> <i>string sap string spb level number</i> <b>hello-multiplier</b> <i>number</i>
Tree	<a href="#">hello-multiplier</a>
Range	2 to 100
Default	3
Introduced	21.10.R1
Platforms	All

### **metric** *number*

Synopsis	Metric
Context	<b>configure</b> <a href="#">service vpls</a> <i>string sap string spb level number</i> <b>metric</b> <i>number</i>
Tree	<a href="#">metric</a>
Range	0 to 16777215
Default	0
Introduced	21.10.R1
Platforms	All

**lsp-pacing-interval** *number*

Synopsis	Lsp pacing interval
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">spb</a> <a href="#">lsp-pacing-interval</a> <i>number</i>
Tree	<a href="#">lsp-pacing-interval</a>
Range	0 to 65535
Units	milliseconds
Default	100
Introduced	21.10.R1
Platforms	All

**retransmit-interval** *number*

Synopsis	Retransmit interval
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">spb</a> <a href="#">retransmit-interval</a> <i>number</i>
Tree	<a href="#">retransmit-interval</a>
Range	1 to 65535
Units	seconds
Default	5
Introduced	21.10.R1
Platforms	All

**split-horizon-group** *reference***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Split horizon group
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">split-horizon-group</a> <i>reference</i>
Tree	<a href="#">split-horizon-group</a>
Reference	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">split-horizon-group</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

**static-host**

Synopsis	Enter the <b>static-host</b> context
Context	<b>configure</b> <a href="#">service vpls string sap string static-host</a>
Tree	<a href="#">static-host</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**ipv4 [ip] string mac string**

Synopsis	Enter the <b>ipv4</b> list instance
Context	<b>configure</b> <a href="#">service vpls string sap string static-host ipv4 string mac string</a>
Tree	<a href="#">ipv4</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**[ip] string**

Synopsis	IP address
Context	<b>configure</b> <a href="#">service vpls string sap string static-host ipv4 string mac string</a>
Tree	<a href="#">ipv4</a>
MD-CLI Default	0.0.0.0
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**mac string**

Synopsis	MAC address
Context	<b>configure</b> <a href="#">service vpls string sap string static-host ipv4 string mac string</a>
Tree	<a href="#">ipv4</a>
MD-CLI Default	00:00:00:00:00:00
Notes	This element is part of a list key.
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis Administrative state of the static host

Context **configure** [service](#) [vpls](#) [string](#) [sap](#) [string](#) [static-host](#) [ipv4](#) [string](#) [mac](#) [string](#) **admin-state** *keyword*

Tree [admin-state](#)

Options enable, disable

Default disable

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **ancp-string** *string*

Synopsis ANCP string

Context **configure** [service](#) [vpls](#) [string](#) [sap](#) [string](#) [static-host](#) [ipv4](#) [string](#) [mac](#) [string](#) **ancp-string** *string*

Tree [ancp-string](#)

String Length 1 to 63

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **app-profile**

Synopsis Enter the **app-profile** context

Context **configure** [service](#) [vpls](#) [string](#) [sap](#) [string](#) [static-host](#) [ipv4](#) [string](#) [mac](#) [string](#) **app-profile**

Tree [app-profile](#)

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **profile** *reference*

Synopsis Application profile used by the static host

Context **configure** [service](#) [vpls](#) [string](#) [sap](#) [string](#) [static-host](#) [ipv4](#) [string](#) [mac](#) [string](#) **app-profile** *profile reference*

Tree	<a href="#">profile</a>
Reference	<b>configure</b> <a href="#">application-assurance group number partition number policy app-profile string</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **int-dest-id** *string*

Synopsis	Intermediate destination ID
Context	<b>configure</b> <a href="#">service vpls string sap string static-host ipv4 string mac string int-dest-id string</a>
Tree	<a href="#">int-dest-id</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **shcv**

Synopsis	Enter the <b>shcv</b> context
Context	<b>configure</b> <a href="#">service vpls string sap string static-host ipv4 string mac string shcv</a>
Tree	<a href="#">shcv</a>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sla-profile** *reference*

Synopsis	SLA profile name
Context	<b>configure</b> <a href="#">service vpls string sap string static-host ipv4 string mac string sla-profile reference</a>
Tree	<a href="#">sla-profile</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt sla-profile string</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sub-profile** *reference*

Synopsis	Sub-profile name
----------	------------------

Context	<b>configure service vpls string sap string static-host ipv4 string mac string sub-profile reference</b>
Tree	<a href="#">sub-profile</a>
Reference	<b>configure subscriber-mgmt sub-profile string</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## subscriber-id

Synopsis	Enter the <b>subscriber-id</b> context
Context	<b>configure service vpls string sap string static-host ipv4 string mac string subscriber-id</b>
Tree	<a href="#">subscriber-id</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## string string

Synopsis	Subscriber identification
Context	<b>configure service vpls string sap string static-host ipv4 string mac string subscriber-id string string</b>
Tree	<a href="#">string</a>
String Length	1 to 64
Notes	The following elements are part of a choice: <b>string</b> or <b>use-sap-id</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## use-sap-id

Synopsis	Use the SAP id as subscriber ID
Context	<b>configure service vpls string sap string static-host ipv4 string mac string subscriber-id use-sap-id</b>
Tree	<a href="#">use-sap-id</a>
Notes	The following elements are part of a choice: <b>string</b> or <b>use-sap-id</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**static-isid**

Synopsis	Enter the <b>static-isid</b> context
Context	<b>configure service vpls string sap string static-isid</b>
Tree	<b>static-isid</b>
Introduced	19.10.R1
Platforms	All

**range [range-id] number**

Synopsis	Enter the <b>range</b> list instance
Context	<b>configure service vpls string sap string static-isid range number</b>
Tree	<b>range</b>
Introduced	19.10.R1
Platforms	All

**[range-id] number**

Synopsis	Range ID for static ISID
Context	<b>configure service vpls string sap string static-isid range number</b>
Tree	<b>range</b>
Range	1 to 8191
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	All

**end number**

Synopsis	Upper bound of the ISID range
Context	<b>configure service vpls string sap string static-isid range number end number</b>
Tree	<b>end</b>
Range	1 to 16777215
Introduced	19.10.R1
Platforms	All

**start number**

Synopsis	Lower bound of the ISID range
Context	<b>configure service vpls string sap string static-isid range number start number</b>
Tree	<b>start</b>
Range	1 to 16777215
Introduced	19.10.R1
Platforms	All

**stp**

Synopsis	Enter the <b>stp</b> context
Context	<b>configure service vpls string sap string stp</b>
Tree	<b>stp</b>
Introduced	16.0.R4
Platforms	All

**admin-state keyword**

Synopsis	Administrative state of STP
Context	<b>configure service vpls string sap string stp admin-state keyword</b>
Tree	<b>admin-state</b>
Options	enable, disable
Introduced	16.0.R4
Platforms	All

**auto-edge boolean**

Synopsis	Enable automatic detection of edge port characteristics
Context	<b>configure service vpls string sap string stp auto-edge boolean</b>
Tree	<b>auto-edge</b>
Default	true
Introduced	16.0.R4
Platforms	All

**edge-port** *boolean*

Synopsis	Designate SAP or SDP as an edge port
Context	<b>configure</b> <a href="#">service vpls</a> <i>string sap string stp edge-port boolean</i>
Tree	<a href="#">edge-port</a>
Default	false
Introduced	16.0.R4
Platforms	All

**link-type** *keyword*

Synopsis	Configure STP link-type
Context	<b>configure</b> <a href="#">service vpls</a> <i>string sap string stp link-type keyword</i>
Tree	<a href="#">link-type</a>
Options	pt-pt, shared
Default	pt-pt
Introduced	16.0.R4
Platforms	All

**mst-instance** [[mst-inst-number](#)] *number*

Synopsis	Enter the <b>mst-instance</b> list instance
Context	<b>configure</b> <a href="#">service vpls</a> <i>string sap string stp mst-instance number</i>
Tree	<a href="#">mst-instance</a>
Introduced	19.10.R1
Platforms	All

**[mst-inst-number]** *number*

Synopsis	Multiple Spanning Tree Instance number
Context	<b>configure</b> <a href="#">service vpls</a> <i>string sap string stp mst-instance number</i>
Tree	<a href="#">mst-instance</a>
Range	1 to 4094
Notes	This element is part of a list key.
Introduced	19.10.R1

Platforms All

### **mst-path-cost** *number*

Synopsis MSTI path cost  
 Context **configure** [service vpls](#) *string* [sap](#) *string* [stp](#) [mst-instance](#) *number* **mst-path-cost** *number*  
 Tree [mst-path-cost](#)  
 Range 1 to 200000000  
 Default 10  
 Introduced 19.10.R1  
 Platforms All

### **mst-port-priority** *number*

Synopsis MSTI port priority  
 Context **configure** [service vpls](#) *string* [sap](#) *string* [stp](#) [mst-instance](#) *number* **mst-port-priority** *number*  
 Tree [mst-port-priority](#)  
 Range 0 | 16 | 32 | 48 | 64 | 80 | 96 | 112 | 128 | 144 | 160 | 176 | 192 | 208 | 224 | 240  
 Default 128  
 Introduced 19.10.R1  
 Platforms All

### **path-cost** *number*

Synopsis Configure path-cost  
 Context **configure** [service vpls](#) *string* [sap](#) *string* [stp](#) **path-cost** *number*  
 Tree [path-cost](#)  
 Range 1 to 200000000  
 Default 10  
 Introduced 16.0.R4  
 Platforms All

### **port-num** *number*

Synopsis Configure virtual port number

Context	<b>configure service vpls string sap string stp port-num number</b>
Tree	<b>port-num</b>
Range	1 to 2047
Introduced	16.0.R4
Platforms	All

### **priority number**

Synopsis	Configure STP priority
Context	<b>configure service vpls string sap string stp priority number</b>
Tree	<b>priority</b>
Range	0 to 255
Default	128
Introduced	16.0.R4
Platforms	All

### **root-guard boolean**

Synopsis	Enable/disable STP root-guard
Context	<b>configure service vpls string sap string stp root-guard boolean</b>
Tree	<b>root-guard</b>
Default	false
Introduced	16.0.R4
Platforms	All

### **sub-sla-mgmt**

Synopsis	Enter the <b>sub-sla-mgmt</b> context
Context	<b>configure service vpls string sap string sub-sla-mgmt</b>
Tree	<b>sub-sla-mgmt</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**admin-state** *keyword*

Synopsis	Administrative state of SAP subscriber management
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">sub-sla-mgmt</a> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**defaults**

Synopsis	Enter the <b>defaults</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">sub-sla-mgmt</a> <a href="#">defaults</a>
Tree	<a href="#">defaults</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**app-profile** *reference*

Synopsis	Default application profile name for this SAP
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">sub-sla-mgmt</a> <a href="#">defaults</a> <a href="#">app-profile</a> <i>reference</i>
Tree	<a href="#">app-profile</a>
Reference	<b>configure</b> <a href="#">application-assurance</a> <a href="#">group</a> <i>number</i> <a href="#">partition</a> <i>number</i> <a href="#">policy</a> <a href="#">app-profile</a> <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**int-dest-id**

Synopsis	Enter the <b>int-dest-id</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">sub-sla-mgmt</a> <a href="#">defaults</a> <a href="#">int-dest-id</a>
Tree	<a href="#">int-dest-id</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**string** *string*

Synopsis	Use the configured string
Context	<b>configure</b> <a href="#">service vpls</a> <a href="#">string sap</a> <a href="#">string sub-sla-mgmt defaults int-dest-id</a> <a href="#">string string</a>
Tree	<a href="#">string</a>
String Length	1 to 32
Notes	The following elements are part of a choice: <b>string</b> or <b>top-q-tag</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**top-q-tag**

Synopsis	Use the top Q-tag of this SAP
Context	<b>configure</b> <a href="#">service vpls</a> <a href="#">string sap</a> <a href="#">string sub-sla-mgmt defaults int-dest-id</a> <a href="#">top-q-tag</a>
Tree	<a href="#">top-q-tag</a>
Notes	The following elements are part of a choice: <b>string</b> or <b>top-q-tag</b> .
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**sla-profile** *reference*

Synopsis	Default SLA profile for hosts on this SAP
Context	<b>configure</b> <a href="#">service vpls</a> <a href="#">string sap</a> <a href="#">string sub-sla-mgmt defaults sla-profile</a> <a href="#">reference</a>
Tree	<a href="#">sla-profile</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt sla-profile</a> <a href="#">string</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

**sub-profile** *reference*

Synopsis	Default subscriber profile for the SAP
Context	<b>configure</b> <a href="#">service vpls</a> <a href="#">string sap</a> <a href="#">string sub-sla-mgmt defaults sub-profile</a> <a href="#">reference</a>
Tree	<a href="#">sub-profile</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt sub-profile</a> <a href="#">string</a>
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## subscriber-id

Synopsis Enter the **subscriber-id** context

Context **configure service vpls string sap string sub-sla-mgmt defaults subscriber-id**

Tree [subscriber-id](#)

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## auto-id

Synopsis Use auto-generated subscriber identification string

Context **configure service vpls string sap string sub-sla-mgmt defaults subscriber-id auto-id**

Tree [auto-id](#)

Notes The following elements are part of a choice: **auto-id**, **sap-id**, or **string**.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## sap-id

Synopsis Use SAP ID as default subscriber identification string

Context **configure service vpls string sap string sub-sla-mgmt defaults subscriber-id sap-id**

Tree [sap-id](#)

Notes The following elements are part of a choice: **auto-id**, **sap-id**, or **string**.

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

## string string

Synopsis Default subscriber identification string for the SAP

Context **configure service vpls string sap string sub-sla-mgmt defaults subscriber-id string string**

Tree [string](#)

String Length 1 to 64

Notes The following elements are part of a choice: **auto-id**, **sap-id**, or **string**.

Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **mac-da-hashing** *boolean*

Synopsis Use destination MAC address instead of subscriber ID to select egress LAG link  
 Context **configure** [service vpls string sap string sub-sla-mgmt mac-da-hashing boolean](#)  
 Tree [mac-da-hashing](#)  
 Default false  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **single-sub-parameters**

Synopsis Enter the **single-sub-parameters** context  
 Context **configure** [service vpls string sap string sub-sla-mgmt single-sub-parameters](#)  
 Tree [single-sub-parameters](#)  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **non-sub-traffic**

Synopsis Enable the **non-sub-traffic** context  
 Context **configure** [service vpls string sap string sub-sla-mgmt single-sub-parameters non-sub-traffic](#)  
 Tree [non-sub-traffic](#)  
 Introduced 16.0.R1  
 Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **app-profile** *reference*

Synopsis Application profile name for all non-subscriber traffic  
 Context **configure** [service vpls string sap string sub-sla-mgmt single-sub-parameters non-sub-traffic app-profile reference](#)  
 Tree [app-profile](#)  
 Reference **configure** [application-assurance group number partition number policy app-profile string](#)

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **sla-profile** *reference*

Synopsis	SLA profile applicable for all non-subscriber traffic
Context	<b>configure</b> <a href="#">service vpls string sap string sub-sla-mgmt single-sub-parameters non-sub-traffic sla-profile reference</a>
Tree	<a href="#">sla-profile</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt sla-profile string</a>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sub-profile** *reference*

Synopsis	Subscriber profile all non-subscriber traffic
Context	<b>configure</b> <a href="#">service vpls string sap string sub-sla-mgmt single-sub-parameters non-sub-traffic sub-profile reference</a>
Tree	<a href="#">sub-profile</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt sub-profile string</a>
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **subscriber-id** *string*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Subscriber ID applied for all non-subscriber traffic
Context	<b>configure</b> <a href="#">service vpls string sap string sub-sla-mgmt single-sub-parameters non-sub-traffic subscriber-id string</a>
Tree	<a href="#">subscriber-id</a>
String Length	1 to 64

Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **profiled-traffic-only** *boolean*

Synopsis	Include all traffic in subscriber profile
Context	<b>configure</b> <a href="#">service vpls string sap string sub-sla-mgmt single-sub-parameters profiled-traffic-only boolean</a>
Tree	<a href="#">profiled-traffic-only</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **sub-ident-policy** *reference*

Synopsis	Subscriber identification policy used on this SAP
Context	<b>configure</b> <a href="#">service vpls string sap string sub-sla-mgmt sub-ident-policy reference</a>
Tree	<a href="#">sub-ident-policy</a>
Reference	<b>configure</b> <a href="#">subscriber-mgmt sub-ident-policy string</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, VSR

### **subscriber-limit** (*keyword | number*)

Synopsis	Maximum number of subscribers on this SAP
Context	<b>configure</b> <a href="#">service vpls string sap string sub-sla-mgmt subscriber-limit (keyword   number)</a>
Tree	<a href="#">subscriber-limit</a>
Range	1 to 131071
Options	no-limit

## value *number*

Synopsis	SRv6 function value
Context	<b>configure service vpls</b> <i>string</i> <a href="#">segment-routing-v6</a> <i>number</i> <i>locator</i> <i>reference</i> <a href="#">function</a> <a href="#">end-dt2m</a> <i>value</i> <i>number</i>
Tree	<a href="#">value</a>
Description	This command assigns the optional static function value for the routes in the VPRN, VPLS, or Epipe instance.  When unconfigured, the system allocates a value dynamically.
Range	1 to 1048575
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**end-dt2u**

Synopsis	Enable the <b>end-dt2u</b> context
Context	<b>configure service vpls string segment-routing-v6 number locator reference function end-dt2u</b>
Tree	<b>end-dt2u</b>
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**value number**

Synopsis	SRv6 function value
Context	<b>configure service vpls string segment-routing-v6 number locator reference function end-dt2u value number</b>
Tree	<b>value</b>
Description	This command assigns the optional static function value for the routes in the VPRN, VPLS, or Epipe instance.  When unconfigured, the system allocates a value dynamically.
Range	1 to 1048575
Introduced	22.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**micro-segment-locator [locator-name] reference**

Synopsis	Enter the <b>micro-segment-locator</b> list instance
Context	<b>configure service vpls string segment-routing-v6 number micro-segment-locator reference</b>
Tree	<b>micro-segment-locator</b>
Max. Instances	1
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**[locator-name] reference**

Synopsis	Micro-segment SRv6 locator name
Context	<b>configure service vpls string segment-routing-v6 number micro-segment-locator reference</b>

Tree	<a href="#">micro-segment-locator</a>
Description	This command associates a pre-defined micro-segment SRv6 locator (defined in the <b>configure router segment-routing segment-routing-v6</b> context) with the SRv6 instance in the service. The same micro-segment locator can be referenced in multiple BGP instances used by IPVPN or EVPN.
Reference	<b>configure router</b> <i>string</i> <a href="#">segment-routing</a> <a href="#">segment-routing-v6</a> <a href="#">micro-segment-locator</a> <i>string</i>
Notes	This element is part of a list key.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## function

Synopsis	Enter the <b>function</b> context
Context	<b>configure service vpls</b> <i>string</i> <a href="#">segment-routing-v6</a> <i>number</i> <a href="#">micro-segment-locator</a> <i>reference</i> <a href="#">function</a>
Tree	<a href="#">function</a>
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## udt2m

Synopsis	Enable the <b>udt2m</b> context
Context	<b>configure service vpls</b> <i>string</i> <a href="#">segment-routing-v6</a> <i>number</i> <a href="#">micro-segment-locator</a> <i>reference</i> <a href="#">function</a> <a href="#">udt2m</a>
Tree	<a href="#">udt2m</a>
Description	Commands in this context configure the SRv6 uDT2M behavior and the function value that is associated to the SRv6 instance in the service. When configured, decapsulation and table lookup for IPv6 prefixes occurs in the VPLS service.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## value number

Synopsis	SRv6 function value
Context	<b>configure service vpls</b> <i>string</i> <a href="#">segment-routing-v6</a> <i>number</i> <a href="#">micro-segment-locator</a> <i>reference</i> <a href="#">function</a> <a href="#">udt2m</a> <i>value</i> <i>number</i>

Tree	<a href="#">value</a>
Description	This command assigns the optional static function value for the routes in the VPRN, VPLS, or Epipe instance. When unconfigured, the system allocates a value dynamically.
Range	1 to 1048575
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## udt2u

Synopsis	Enable the <b>udt2u</b> context
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">segment-routing-v6 number</a> <a href="#">micro-segment-locator reference</a> <a href="#">function udt2u</a>
Tree	<a href="#">udt2u</a>
Description	Commands in this context configure the SRv6 uDT2U behavior and the function value that is associated to the SRv6 instance in the service. When configured, decapsulation and table lookup for IPv6 prefixes occurs in the VPLS service.
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

## value number

Synopsis	SRv6 function value
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">segment-routing-v6 number</a> <a href="#">micro-segment-locator reference</a> <a href="#">function udt2u value</a> <i>number</i>
Tree	<a href="#">value</a>
Description	This command assigns the optional static function value for the routes in the VPRN, VPLS, or Epipe instance. When unconfigured, the system allocates a value dynamically.
Range	1 to 1048575
Introduced	22.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-s, 7950 XRS, VSR

**service-id** *number***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Service ID
Context	<b>configure</b> <i>service vpls string</i> <b>service-id</b> <i>number</i>
Tree	<b>service-id</b>
Range	1 to 2147483647
Introduced	16.0.R1
Platforms	All

**service-mtu** *number*

Synopsis	MTU size
Context	<b>configure</b> <i>service vpls string</i> <b>service-mtu</b> <i>number</i>
Tree	<b>service-mtu</b>
Description	This command configures the Maximum Transmission Unit (MTU) value (payload) for the service. The system uses the value to validate the operational state of the SAP and SDP binding within the service. The value overrides the default MTU for the service type.

The service MTU and a SAP's service delineation encapsulation overhead (4 bytes for a dot1q tag) are used to derive the required MTU of the physical port or channel on which the SAP was created. If the required payload is larger than the port or channel MTU, the SAP is placed in an inoperative state. If the required MTU is equal to or less than the port or channel MTU, the SAP transitions to the operative state.

When binding an SDP to a service, the service MTU is compared to the path MTU associated with the SDP. The path MTU can be administratively defined in the context of the SDP. The default or administrative path MTU can be dynamically reduced due to the MTU capabilities discovered by the tunneling mechanism of the SDP or the egress interface MTU capabilities based on the next hop in the tunnel path. If the service MTU is larger than the path MTU, the SDP binding for the service is placed in an inoperative state. If the service MTU is equal to or less than the path MTU, the SDP binding is placed in an operational state.

If a service MTU, port or channel MTU, or path MTU is dynamically or administratively modified, all associated SAP and SDP binding operational states are automatically reevaluated.

Binding operational states are automatically reevaluated.

For I-VPLS and Epipes bound to a B-VPLS, the service MTU must be at least 18 bytes smaller than the B-VPLS service MTU to accommodate the PBB header.

Because this connects a Layer 2 to a Layer 3 service, adjust the service MTU under the Epipe service. The MTU that is advertised from the Epipe side is service MTU minus EtherHeaderSize.

In the **configure service epipe spoke-sdp** context, the **adv-service-mtu** command can be used to override the configured MTU value used in T-LDP signaling to the far-end of an Epipe spoke-sdp. The **adv-service-mtu** command is also used to validate the value signaled by the far-end PE.

## auto-learn-mac-protect-exclude-list *reference*

Synopsis Referenced MAC protect exclusion list name

Context **configure service vpls string split-horizon-group string fdb saps auto-learn-mac-protect-exclude-list *reference***

Tree [auto-learn-mac-protect-exclude-list](#)

Description This command references the name of a MAC protect exclusion list.

Dynamically-learned MAC Source Addresses (SA) are protected if they are learned on an object with ALMP configured and no exclusion list is associated with the object, or if the MAC SA does not match any entry in an associated exclusion list.

An exclusion list can be used in multiple objects of a service. If a list is empty, ALMP does not exclude any learned MAC SAs from protection on the object.

Reference **configure service mac-list string**

Introduced 20.5.R1

Tree	<a href="#">bfd-liveness</a>
Introduced	21.2.R1
Platforms	All

**encap** *keyword*

Synopsis	BFD encapsulation used on the SDP binding
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">bfd</a> <a href="#">bfd-liveness</a> <a href="#">encap</a> <i>keyword</i>
Tree	<a href="#">encap</a>
Options	ipv4
Default	ipv4
Introduced	21.2.R1
Platforms	All

**bfd-template** *reference*

Synopsis	BFD template associated with the SDP binding
Context	<b>configure</b> <a href="#">service vpls string spoke-sdp string bfd bfd-template reference</a>
Tree	<a href="#">bfd-template</a>
Description	This command configures a named BFD template to be used by VCCV BFD on PWs belonging to the VLL service. The template specifies parameters, such as the minimum transmit and receive control packet timer intervals, used by the BFD session. Template parameters are configured under the <b>configure router bfd</b> context.
Reference	<b>configure</b> <a href="#">bfd bfd-template string</a>
Introduced	21.2.R1
Platforms	All

**failure-action** *keyword*

Synopsis	VCCV BFD action taken on the SDP binding
Context	<b>configure</b> <a href="#">service vpls string spoke-sdp string bfd failure-action keyword</a>
Tree	<a href="#">failure-action</a>
Description	This command configures a named BFD template to be used by VCCV BFD on PWs belonging to the VLL service. The template specifies parameters, such as the minimum transmit and receive control packet timer intervals, used by the BFD session. Template parameters are configured under the <b>configure router bfd</b> context.
Options	none, down
Default	none
Introduced	21.2.R1
Platforms	All

**wait-for-up-timer** *number*

Synopsis	Time waited for BFD up status
Context	<b>configure</b> <a href="#">service vpls string spoke-sdp string bfd wait-for-up-timer number</a>
Tree	<a href="#">wait-for-up-timer</a>
Description	<p>This command configures the time interval that is used to wait for a BFD session to come up.</p> <p>This command is triggered when a spoke-SDP is first administratively enabled and a VCCV BFD session transitions from up to down. The command is required to allow time for BFD sessions to come up, and for BFD to settle before selecting the active spoke-SDP for use in a redundant set. In the case where a VCCV BFD session is bouncing, the timer prevents excessive flapping of the operational state of a spoke-SDP.</p>

---

Range	1 to 60
Units	seconds
Introduced	21.2.R1
Platforms	All

### **block-on-mesh-failure** *boolean*

Synopsis	Enable blocking after all SDPs are operationally down
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">block-on-mesh-failure</a> <i>boolean</i>
Tree	<a href="#">block-on-mesh-failure</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **bpdu-translation** *keyword*

Synopsis	BPDU format
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">bpdu-translation</a> <i>keyword</i>
Tree	<a href="#">bpdu-translation</a>
Options	auto, pvst, stp, pvst-rw, auto-rw
Introduced	16.0.R1
Platforms	All

### **collect-stats** *boolean*

Synopsis	Allow agent to collect accounting statistics
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">collect-stats</a> <i>boolean</i>
Tree	<a href="#">collect-stats</a>

Tree	<a href="#">collect-lmm-fc-stats</a>
Description	<p>Commands in this context configure per forwarding class (FC) LMM information collection.</p> <p>The commands <b>fc-in-profile</b> and <b>fc</b> in this context are mutually exclusive. The commands apply to either profile-aware or profile-unaware FCs respectively.</p> <p>This command and the <b>collect-lmm-stats</b> command are mutually exclusive when there is entity resource contention.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fc** keyword

Synopsis	Forwarding class name for profile-unaware counter
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">spoke-sdp</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">collect-lmm-fc-stats</a> <a href="#">fc</a> <a href="#">keyword</a>
Tree	<a href="#">fc</a>
Description	<p>This command configures individual counters for the specified FCs without regard for profile. The system includes all countable packets that match a configured FC, regardless of profile, in this counter.</p> <p>An FC specified as part of this command and for this specific context cannot be specified as a profile-aware FC using the <b>fc-in-profile</b> command under the <b>collect-lmm-fc-stats</b> context.</p> <p>When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.</p>
Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fc-in-profile** keyword

Synopsis	Forwarding class name for profile-aware counter
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <a href="#">string</a> <a href="#">spoke-sdp</a> <a href="#">string</a> <a href="#">eth-cfm</a> <a href="#">collect-lmm-fc-stats</a> <a href="#">fc-in-profile</a> <a href="#">keyword</a>
Tree	<a href="#">fc-in-profile</a>
Description	<p>This command configures individual counters for the specified FCs with regard to profile. The system includes all countable packets that match a configured FC and that are deemed to be in-profile in this counter.</p>

An FC specified as part of this command and for this specific context cannot be specified as a profile-unaware FC using the **fc** command under the **collect-lmm-fc-stats** context.

When this command is reentered, a differential is performed. Omitted FCs stop counting, newly added FCs start counting, and unchanged FCs continue to count.

Options	be, l2, af, l1, h2, ef, h1, nc
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **collect-lmm-stats** *boolean*

Synopsis	Collect statistics for loss measurement message tests
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm</a> <b>collect-lmm-stats</b> <i>boolean</i>
Tree	<a href="#">collect-lmm-stats</a>
Description	When configured to <b>true</b> , the router instantiates the statistical counter to transmit and receive packets for the LAG facility MEP bindings.  The <b>show eth-cfm collect-lmm-stats</b> command displays entities that have been enabled to collect transit and receive counters.  When configured to <b>false</b> , the router does not instantiate the counter and the LMM PDU associated with the MEP does not populate the counters in the packet.
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mep** [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number*

Synopsis	Enter the <b>mep</b> list instance

Context	<b>configure service vpls</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number alarm-notification</i>
Tree	<a href="#">alarm-notification</a>
Description	<p>Commands in this context configure the Fault Notification Generator (FNG) time values to raise an alarm or reset the CCM defect alarm.</p> <p>Use these timers for network management processes. The timers are not tied into delaying the notification to the fault management system on the network element and do not affect fault propagation mechanisms.</p>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fng-alarm-time** *number*

Synopsis	Time that must expire before an FNG alarm is raised
Context	<b>configure service vpls</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number alarm-notification fng-alarm-time number</i>
Tree	<a href="#">fng-alarm-time</a>
Range	250   500   1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **fng-reset-time** *number*

Synopsis	Time that must expire before an FNG alarm is reset
Context	<b>configure service vpls</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number alarm-notification fng-reset-time number</i>
Tree	<a href="#">fng-reset-time</a>
Range	250   500   1000
Units	centiseconds
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm** *boolean*

Synopsis	Generate CCM messages
----------	-----------------------

Context	<b>configure service vpls string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm boolean</b>
Tree	<a href="#">ccm</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm-ltm-priority number**

Synopsis	Priority of CCM and LTM messages transmitted by the MEP
Context	<b>configure service vpls string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm-ltm-priority number</b>
Tree	<a href="#">ccm-ltm-priority</a>
Range	0 to 7
Default	7
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **ccm-padding-size number**

Synopsis	Number of octets of padding to insert in CCM packets
Context	<b>configure service vpls string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number ccm-padding-size number</b>
Tree	<a href="#">ccm-padding-size</a>
Description	<p>This command sets the byte size of the optional Data TLV to be included in the ETH-CC PDU.</p> <p>This command increases the size of the ETH-CC PDU by the configured value. The base size of the ETH-CC PDU, including the Interface Status TLV and Port Status TLV, is 83 bytes not including the Layer 2 encapsulation. CCM padding is not supported when the CCM interval (configured through <b>configure eth-cfm domain association ccm-interval</b>) is less than 1 second.</p>
Range	3 to 1500
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **cfm-vlan-tag string**

Synopsis	VLAN tags to apply to CFM PDUs for egress processing
----------	--

Context	<b>configure service vpls</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number cfm-vlan-tag string</i>
Tree	<a href="#">cfm-vlan-tag</a>
Description	This command allows the CFM function to include additional VLAN tags to the CFM packet that are carried to the egress and treated as service delimited. Typically, this function is used to influence the VLAN carried over a binding that uses the <b>vc-type vlan</b> or the binding forces the use of one or more VLAN tag that results in a mismatch between the service data arriving at the binding and the locally generated ETH-CFM PDUs arriving at the same egress. When this command is included under the MEP or MIP configuration, the tags used as part of the configuration typically match the SAP service delimited configuration.
String Length	1 to 9
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## csf

Synopsis	Enable the <b>csf</b> context
Context	<b>configure service vpls</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number csf</i>
Tree	<a href="#">csf</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## multiplier *decimal-number*

Synopsis	Multiplication factor used to clear the CSF condition
Context	<b>configure service vpls</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number csf multiplier decimal-number</i>
Tree	<a href="#">multiplier</a>
Range	0.0   2.0 to 30.0
Default	3.5
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

## description *string*

Synopsis	Text description
----------	------------------

Context	<b>configure service vpls</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number description string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **direction** *keyword*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Direction the MEP faces
Context	<b>configure service vpls</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number direction keyword</i>
Tree	<a href="#">direction</a>
Options	down, up
Default	down
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **eth-test**

Synopsis	Enable the <b>eth-test</b> context
Context	<b>configure service vpls</b> <i>string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test</i>
Tree	<a href="#">eth-test</a>
Description	Commands in this context configure information used by the Ethernet Test (ETH-TST) packet. The commands must be configured on both the sender and the receiver nodes. The test packets are used with the <b>oam eth-cfm eth-test</b> command.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **bit-error-threshold** *number*

Synopsis	Lowest priority defect allowed to generate fault alarm
----------	--

Context	<b>configure service vpls string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test bit-error-threshold number</b>
Tree	<a href="#">bit-error-threshold</a>
Range	0 to 11840
Units	bit errors
Default	1
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### test-pattern

Synopsis	Enter the <b>test-pattern</b> context
Context	<b>configure service vpls string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test test-pattern</b>
Tree	<a href="#">test-pattern</a>
Description	Commands in this context specify the test pattern for the ETH-TST frames. The pattern does not have to be the same on the sender and the receiver.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### crc-tlv *boolean*

Synopsis	Generate a CRC checksum
Context	<b>configure service vpls string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test test-pattern crc-tlv boolean</b>
Tree	<a href="#">crc-tlv</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### pattern *keyword*

Synopsis	Test pattern for Ethernet Test frames
Context	<b>configure service vpls string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number eth-test test-pattern pattern keyword</b>
Tree	<a href="#">pattern</a>

Description	This command specifies the test pattern of the Ethernet Test (ETH-TST) frames. This does not have to be configured the same on the sender and the receiver.
Options	all-zeros, all-ones
Default	all-zeros
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### fault-propagation *keyword*

Synopsis	Fault propagation for the MEP
Context	<b>configure</b> <a href="#">service vpls</a> <a href="#">string spoke-sdp</a> <a href="#">string eth-cfm mep</a> <a href="#">md-admin-name</a> <a href="#">reference ma-admin-name</a> <a href="#">reference mep-id</a> <a href="#">number</a> <b>fault-propagation</b> <i>keyword</i>
Tree	<a href="#">fault-propagation</a>
Options	use-if-status-tlv, suspend-ccm
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### grace

Synopsis	Enter the <b>grace</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <a href="#">string spoke-sdp</a> <a href="#">string eth-cfm mep</a> <a href="#">md-admin-name</a> <a href="#">reference ma-admin-name</a> <a href="#">reference mep-id</a> <a href="#">number</a> <b>grace</b>
Tree	<a href="#">grace</a>
Description	Commands in this context configure the Nokia ETH-CFM Grace function and the ITU-T Y.1731 Ethernet Expected Default (ETH-ED) function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### eth-ed

Synopsis	Enter the <b>eth-ed</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <a href="#">string spoke-sdp</a> <a href="#">string eth-cfm mep</a> <a href="#">md-admin-name</a> <a href="#">reference ma-admin-name</a> <a href="#">reference mep-id</a> <a href="#">number</a> <a href="#">grace</a> <b>eth-ed</b>
Tree	<a href="#">eth-ed</a>
Description	Commands in this context configure the ITU-T Y.1731 ETH-ED function.
Introduced	16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **max-rx-defect-window** *number*

Synopsis Maximum received ETH-ED expected defect window duration

Context **configure** [service vpls](#) *string* [spoke-sdp](#) *string* [eth-cfm mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* [grace eth-ed max-rx-defect-window](#) *number*

Tree [max-rx-defect-window](#)

Range 1 to 86400

Units seconds

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **priority** *number*

Synopsis Transmission priority for ETH-ED PDUs

Context **configure** [service vpls](#) *string* [spoke-sdp](#) *string* [eth-cfm mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* [grace eth-ed priority](#) *number*

Tree [priority](#)

Range 0 to 7

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **rx-eth-ed** *boolean*

Synopsis Receive and process ETH-ED ITU-T Y.1731 PDUs on the MEP

Context **configure** [service vpls](#) *string* [spoke-sdp](#) *string* [eth-cfm mep](#) [md-admin-name](#) *reference* [ma-admin-name](#) *reference* [mep-id](#) *number* [grace eth-ed rx-eth-ed](#) *boolean*

Tree [rx-eth-ed](#)

Description This command enables the reception and processing of the ITU-T Y.1731 ETH-ED PDU on the MEP.

Default true

Introduced 16.0.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**tx-eth-ed** *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">grace eth-ed tx-eth-ed</a> <i>boolean</i>
Tree	<a href="#">tx-eth-ed</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**eth-vsm-grace**

Synopsis	Enter the <b>eth-vsm-grace</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">grace eth-vsm-grace</a>
Tree	<a href="#">eth-vsm-grace</a>
Description	Commands in this context configure the Nokia ETH-CFM Grace function.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**rx-eth-vsm-grace** *boolean*

Synopsis	Receive and process Nokia ETH-CFM Grace PDU on the MEP
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm mep</a> <a href="#">md-admin-name</a> <i>reference</i> <a href="#">ma-admin-name</a> <i>reference</i> <a href="#">mep-id</a> <i>number</i> <a href="#">grace eth-vsm-grace rx-eth-vsm-grace</a> <i>boolean</i>
Tree	<a href="#">rx-eth-vsm-grace</a>
Description	When configured to <b>true</b> , the router enables the Nokia Grace function, which is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect. When configured to <b>false</b> , the router disables the Nokia Grace function.
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**tx-eth-vsm-grace** *boolean*

Synopsis	Transmit ETH-ED PDUs from the MEP
----------	-----------------------------------

Context	<b>configure service vpls string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number grace eth-vsm-grace tx-eth-vsm-grace boolean</b>
Tree	<a href="#">tx-eth-vsm-grace</a>
Description	<p>When configured to <b>true</b>, the router can transmit the Nokia ETH-CFM Grace PDU from the MEP when a system soft reset notification is received for one or more cards.</p> <p>The Nokia Grace function is a vendor-specific PDU that informs MEP peers that the local node may be entering a period of expected defect.</p> <p>The operator must configure the <b>configure system eth-cfm grace</b> command to instruct the system that the node is capable of transmitting expected-defect windows to peers. The system can only transmit one form of ETH-CFM grace (Nokia ETH-CFM Grace or ITU-T Y.1731 ETH-ED).</p> <p>When configured to <b>false</b>, the router disables the transmission of the Nokia ETH-CFM Grace PDU from the MEP.</p>
Default	true
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **lbm-svc-act-responder** *boolean*

Synopsis	Process service activation streams in ETH-CFM LBM
Context	<b>configure service vpls string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number lbm-svc-act-responder boolean</b>
Tree	<a href="#">lbm-svc-act-responder</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **low-priority-defect** *keyword*

Synopsis	Lowest priority defect allowed to generate fault alarm
Context	<b>configure service vpls string spoke-sdp string eth-cfm mep md-admin-name reference ma-admin-name reference mep-id number low-priority-defect keyword</b>
Tree	<a href="#">low-priority-defect</a>
Options	all-def, mac-rem-err-xcon, rem-err-xcon, err-xcon, xcon, no-xcon
Default	mac-rem-err-xcon
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**mac-address** *string*

Synopsis	MAC address of the MEP
Context	<b>configure</b> <b>service vpls</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>mac-address</b> <i>string</i>
Tree	<b>mac-address</b>
Description	This command specifies the MAC address of the MEP.  When unconfigured, the MAC address of the port (if the MEP is on a SAP) or the MAC address of a bridge (if the MEP is on a spoke) is used.
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**one-way-delay-threshold** *number*

Synopsis	Threshold time limit for the one-way delay test
Context	<b>configure</b> <b>service vpls</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>one-way-delay-threshold</b> <i>number</i>
Tree	<b>one-way-delay-threshold</b>
Range	0 to 600
Units	seconds
Default	3
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**primary-vlan** *boolean***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	MEP provisioned using MA primary VLAN ID
Context	<b>configure</b> <b>service vpls</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm mep</b> <b>md-admin-name</b> <i>reference</i> <b>ma-admin-name</b> <i>reference</i> <b>mep-id</b> <i>number</i> <b>primary-vlan</b> <i>boolean</i>
Tree	<b>primary-vlan</b>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**mip primary-vlan** (*number* | *keyword*)

Synopsis	Enter the <b>mip</b> list instance
Context	<b>configure</b> <b>service vpls</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm mip primary-vlan</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>mip</b>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**primary-vlan** (*number* | *keyword*)

Synopsis	VLAN ID to which the MIP is attached
Context	<b>configure</b> <b>service vpls</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm mip primary-vlan</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>mip</b>
Description	This command provides an option for linking a MIP with a Primary VLAN number or none. When the <b>none</b> option is provided, the MIP does not include the primary vlan.
Range	1 to 4094
Options	none
Notes	This element is part of a list key.
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**cfm-vlan-tag** *string*

Synopsis	VLAN tags to apply to CFM PDUs for egress processing
Context	<b>configure</b> <b>service vpls</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>eth-cfm mip primary-vlan</b> ( <i>number</i>   <i>keyword</i> ) <b>cfm-vlan-tag</b> <i>string</i>
Tree	<b>cfm-vlan-tag</b>
Description	This command allows the CFM function to include additional VLAN tags to the CFM packet that are carried to the egress and treated as service delimited. Typically, this function is used to influence the VLAN carried over a binding that uses the vc-type vlan or the binding forces the use of one or more VLAN tag that results in a mismatch between the service data arriving at the binding and the locally generated ETH-CFM PDUs arriving at the same egress. When this command is included under the MEP or MIP configuration, the tags used as part of the configuration typically match the SAP service delimited configuration.
String Length	1 to 9

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mac-address** *string*

Synopsis	MAC address of the MIP
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">spoke-sdp string</a> <a href="#">eth-cfm mip primary-vlan (number   keyword)</a> <a href="#">mac-address string</a>
Tree	<a href="#">mac-address</a>
Introduced	21.5.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **squelch-ingress-ctag-levels** *number*

Synopsis	Squelch levels using additional VLAN C-Tag space
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">spoke-sdp string</a> <a href="#">eth-cfm squelch-ingress-ctag-levels number</a>
Tree	<a href="#">squelch-ingress-ctag-levels</a>
Description	<p>This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding plus an additional VLAN, up to a maximum tag length of two tags. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.</p> <p>The list of levels must be a complete contiguous list from 0 up to the highest level to be dropped.</p>
Range	0 to 7
Max. Instances	8
Introduced	21.2.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **squelch-ingress-levels** *number*

Synopsis	Levels for which ETH-CFM packets are silently discarded
Context	<b>configure</b> <a href="#">service vpls string</a> <a href="#">spoke-sdp string</a> <a href="#">eth-cfm squelch-ingress-levels number</a>
Tree	<a href="#">squelch-ingress-levels</a>

Description	This command defines the levels of the ETH-CFM packets that are silently discarded on ingress into the SAP or SDP binding from the wire that matches the service delineation of the SAP or SDP binding. All ETH-CFM packets inbound to the SAP or SDP binding that match the configured levels are dropped without regard for any other ETH-CFM criteria. No statistical information or drop count is available for any ETH-CFM packet that is silently discarded by this option.  The list of levels must be a complete contiguous list from 0 up to the highest level that will be dropped.
Range	0 to 7
Max. Instances	8
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **vmep-filter** *boolean*

Synopsis	Suppress eth-cfm PDUs based on level lower than or equal to configured Virtual MEP
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">eth-cfm vmep-filter</a> <i>boolean</i>
Tree	<a href="#">vmep-filter</a>
Default	false
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **etree-leaf** *boolean*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Enable etree leaf access-circuit status

Synopsis	Enter the <b>fdb</b> context
Context	<b>configure</b> <a href="#">service vpls string spoke-sdp string fdb</a>
Tree	<a href="#">fdb</a>
Introduced	16.0.R1
Platforms	All

**auto-learn-mac-protect** *boolean*

Synopsis	Populate automatically MAC protect list with source MAC addresses learned on SDP
Context	<b>configure</b> <a href="#">service vpls string spoke-sdp string auto-learn-mac-protect boolean</a>
Tree	<a href="#">auto-learn-mac-protect</a>
Default	false
Introduced	16.0.R1
Platforms	All

**auto-learn-mac-protect-exclude-list** *reference*

Synopsis	Referenced MAC protect exclusion list name
Context	<b>configure</b> <a href="#">service vpls string spoke-sdp string auto-learn-mac-protect-exclude-list reference</a>
Tree	<a href="#">auto-learn-mac-protect-exclude-list</a>
Description	This command references the name of a MAC protect exclusion list.

Dynamically-learned MAC Source Addresses (SA) are protected if they are learned on an object with ALMP configured and no exclusion list is associated with the object, or if the MAC SA does not match any entry in an associated exclusion list.

An exclusion list can be used in multiple objects of a service. If a list is empty, ALMP does not exclude any learned MAC SAs from protection on the object.

Reference	<b>configure service mac-list string</b>
Introduced	20.5.R1
Platforms	All

### **discard-unknown-source** *boolean*

Synopsis	Discard packets with unknown destination MAC addresses
Context	<b>configure service vpls string spoke-sdp string fdb discard-unknown-source boolean</b>
Tree	<a href="#">discard-unknown-source</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **limit-mac-move** *keyword*

Synopsis	MAC move
Context	<b>configure service vpls string spoke-sdp string fdb limit-mac-move keyword</b>
Tree	<a href="#">limit-mac-move</a>
Options	blockable, non-blockable
Default	blockable
Introduced	16.0.R1
Platforms	All

### **mac-learning**

Synopsis	Enter the <b>mac-learning</b> context
Context	<b>configure service vpls string spoke-sdp string fdb mac-learning</b>
Tree	<a href="#">mac-learning</a>
Introduced	16.0.R1
Platforms	All

**aging** *boolean*

Synopsis	Enable aging of MAC addresses
Context	<b>configure</b> <a href="#">service vpls string spoke-sdp string fdb mac-learning aging</a> <i>boolean</i>
Tree	<a href="#">aging</a>
Default	true
Introduced	16.0.R1
Platforms	All

**learning** *boolean*

Synopsis	Enable learning of new MAC addresses
Context	<b>configure</b> <a href="#">service vpls string spoke-sdp string fdb mac-learning learning</a> <i>boolean</i>
Tree	<a href="#">learning</a>
Default	true
Introduced	16.0.R1
Platforms	All

**mac-pinning** *boolean*

Synopsis	MAC address pinning in active status
Context	<b>configure</b> <a href="#">service vpls string spoke-sdp string fdb mac-pinning</a> <i>boolean</i>
Tree	<a href="#">mac-pinning</a>
Default	false
Introduced	16.0.R1
Platforms	All

**maximum-mac-addresses** *number*

Synopsis	Maximum number of MAC address entries in the FDB
Context	<b>configure</b> <a href="#">service vpls string spoke-sdp string fdb maximum-mac-addresses</a> <i>number</i>
Tree	<a href="#">maximum-mac-addresses</a>
Description	<p>This command specifies the maximum number of FDB entries for both learned and static MAC addresses for this spoke SDP.</p> <p>When the configured limit is reached, no new addresses are learned from the SAP or spoke SDP until at least one FDB entry is aged out or cleared.</p>

When the configured limit is reached and the **configure service spoke-sdp fdb discard-unknown-source** command is set to **true** for this spoke SDP, packets with unknown source MAC addresses are discarded. If **discard-unknown-source** is set to **false**, the packets are forwarded if their destination MAC addresses are known, or flooded if their destination MAC addresses are unknown.

However, if the **configure service vpls fdb discard-unknown** command is set to **true**, packets with unknown destination MAC addresses are discarded, even if the limit of FDB entries on the specific VPLS instance is not reached.

When unconfigured, the spoke SDP uses the global MAC learning limitations.

Range	1 to 511999
Introduced	16.0.R1
Platforms	All

### **protected-src-mac-violation-action** *keyword*

Synopsis	Action when a relearn request for a protected MAC is received on the SDP
Context	<b>configure service vpls string spoke-sdp string fdb protected-src-mac-violation-action keyword</b>
Tree	<a href="#">protected-src-mac-violation-action</a>
Options	sdp-bind-oper-down, alarm-only, discard
Introduced	16.0.R1
Platforms	All

### **force-vc-forwarding** *keyword*

Synopsis	VC forwarding action
Context	<b>configure service vpls string spoke-sdp string force-vc-forwarding keyword</b>
Tree	<a href="#">force-vc-forwarding</a>
Options	vlan, qinq-c-tag-c-tag, qinq-s-tag-c-tag
Introduced	16.0.R1
Platforms	All

### **hash-label**

Synopsis	Enable the <b>hash-label</b> context
Context	<b>configure service vpls string spoke-sdp string hash-label</b>
Tree	<a href="#">hash-label</a>

Description	Commands in this context configure the use of hash labels for egress datapaths. For information about hash-label handling, see the "Hash labels" section of the <i>7450 ESS, 7750 SR, 7950 XRS, and VSR MPLS Guide</i> .
Notes	The following elements are part of a choice: <b>entropy-label</b> or <b>hash-label</b> .
Introduced	16.0.R1
Platforms	All

## signal-capability

Synopsis	Signal hash label capability to the remote PE
Context	<b>configure</b> <a href="#">service vpls</a> <a href="#">string spoke-sdp</a> <a href="#">string hash-label</a> <a href="#">signal-capability</a>
Tree	<a href="#">signal-capability</a>
Description	When configured, this command enables the signaling and negotiating of the hash label between the local and remote PE nodes.  The signaling process outcome determines whether the local PE inserts the hash label on the user packets. This outcome can override the local PE configuration.
Introduced	16.0.R1
Platforms	All

## i-vpls-mac-flush

Synopsis	Enter the <b>i-vpls-mac-flush</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <a href="#">string spoke-sdp</a> <a href="#">string i-vpls-mac-flush</a>
Tree	<a href="#">i-vpls-mac-flush</a>

Tree	<a href="#">robust-count</a>
Range	2 to 7
Default	2
Introduced	16.0.R1
Platforms	All

### **router-alert-check** *boolean*

Synopsis	Enable IP router alert check option
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">mld-snooping</a> <a href="#">router-alert-check</a> <i>boolean</i>
Tree	<a href="#">router-alert-check</a>
Default	true
Introduced	16.0.R1

Platforms All

### **send-queries** *boolean*

Synopsis Generate IGMP general queries

Context **configure** [service vpls](#) *string* [spoke-sdp](#) *string* [mld-snooping](#) [send-queries](#) *boolean*

Tree [send-queries](#)

Default false

Introduced 16.0.R1

Platforms All

### **static**

Synopsis Enter the **static** context

Context **configure** [service vpls](#) *string* [spoke-sdp](#) *string* [mld-snooping](#) [static](#)

Tree [static](#)

Introduced 16.0.R1

Platforms All

### **group** [[group-address](#)] *string*

Synopsis Enter the **group** list instance

Context **configure** [service vpls](#) *string* [spoke-sdp](#) *string* [mld-snooping](#) [static](#) [group](#) *string*

Tree [group](#)

Introduced 16.0.R1

Platforms All

### **[group-address]** *string*

Synopsis Group address of multicast channel

Context **configure** [service vpls](#) *string* [spoke-sdp](#) *string* [mld-snooping](#) [static](#) [group](#) *string*

Tree [group](#)

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms All

**source** [[source-address](#)] *string*

Synopsis	Add a list entry for <b>source</b>
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">mld-snooping</a> <a href="#">static</a> <a href="#">group</a> <i>string</i> <b>source</b> <i>string</i>
Tree	<a href="#">source</a>
Notes	The following elements are part of a mandatory choice: <b>source</b> or <b>starg</b> .
Introduced	16.0.R1
Platforms	All

**[source-address]** *string*

Synopsis	Source IP address
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">mld-snooping</a> <a href="#">static</a> <a href="#">group</a> <i>string</i> <b>source</b> <i>string</i>
Tree	<a href="#">source</a>
Notes	This element is part of a list key.
Introduced	16.0.R2
Platforms	All

**starg**

Synopsis	any source address (*,G)
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">mld-snooping</a> <a href="#">static</a> <a href="#">group</a> <i>string</i> <b>starg</b>
Tree	<a href="#">starg</a>
Notes	The following elements are part of a mandatory choice: <b>source</b> or <b>starg</b> .
Introduced	16.0.R2
Platforms	All

**version** *keyword*

Synopsis	Version of MLD running on the SAP or SDP
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">mld-snooping</a> <b>version</b> <i>keyword</i>
Tree	<a href="#">version</a>
Options	1, 2

---

Default	2
Introduced	16.0.R1
Platforms	All

### **monitor-oper-group** *reference*

Synopsis	Operational group that affects state of the SDP bind
Context	<b>configure</b> <a href="#">service vpls string spoke-sdp string</a> <b>monitor-oper-group</b> <i>reference</i>
Tree	<a href="#">monitor-oper-group</a>
Reference	<b>configure</b> <a href="#">service oper-group string</a>
Notes	The following elements are part of a choice: <b>monitor-oper-group</b> or <b>oper-group</b> .
Introduced	16.0.R1
Platforms	All

### **mrp**

Synopsis	Enter the <b>mrp</b> context
Context	<b>configure</b> <a href="#">service vpls string spoke-sdp string</a> <b>mrp</b>
Tree	<a href="#">mrp</a>
Introduced	20.10.R1
Platforms	All

### **join-time** *number*

Synopsis	Maximum rate for attribute join messages sent on SDP
Context	<b>configure</b> <a href="#">service vpls string spoke-sdp string</a> <b>mrp</b> <b>join-time</b> <i>number</i>
Tree	<a href="#">join-time</a>
Range	1 to 10
Units	deciseconds
Default	2
Introduced	20.10.R1
Platforms	All

**leave-all-time** *number*

Synopsis	Frequency of LeaveAll PDUs by LeaveAll state machine
Context	<b>configure</b> <b>service vpls</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>mrp</b> <b>leave-all-time</b> <i>number</i>
Tree	<a href="#">leave-all-time</a>
Range	60 to 300
Units	deciseconds
Default	100
Introduced	20.10.R1
Platforms	All

**leave-time** *number*

Synopsis	Time in LV state before transition to MT state
Context	<b>configure</b> <b>service vpls</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>mrp</b> <b>leave-time</b> <i>number</i>
Tree	<a href="#">leave-time</a>
Range	30 to 60
Units	deciseconds
Default	30
Introduced	20.10.R1
Platforms	All

**periodic-time** *number*

Synopsis	Frequency of periodic events generated by state machine
Context	<b>configure</b> <b>service vpls</b> <i>string</i> <b>spoke-sdp</b> <i>string</i> <b>mrp</b> <b>periodic-time</b> <i>number</i>
Tree	<a href="#">periodic-time</a>
Range	10 to 100
Units	deciseconds
Default	10
Introduced	20.10.R1
Platforms	All

**periodic-timer** *boolean*

Synopsis	Enable the Periodic Transmission Timer
----------	--

Context	<b>configure service vpls string spoke-sdp string mrp periodic-timer boolean</b>
Tree	<a href="#">periodic-timer</a>
Default	false
Introduced	20.10.R1
Platforms	All

### **policy reference**

Synopsis	MRP policy to control Group B-MAC attributes
Context	<b>configure service vpls string spoke-sdp string mrp policy reference</b>
Tree	<a href="#">policy</a>
Reference	<b>configure service mrp policy string</b>
Introduced	20.10.R1
Platforms	All

### **oper-group reference**

Synopsis	Operational group identifier
Context	<b>configure service vpls string spoke-sdp string oper-group reference</b>
Tree	<a href="#">oper-group</a>
Reference	<b>configure service oper-group string</b>
Notes	The following elements are part of a choice: <b>monitor-oper-group</b> or <b>oper-group</b> .
Introduced	16.0.R1
Platforms	All

### **pbb**

Synopsis	Enter the <b>pbb</b> context
Context	<b>configure service vpls string spoke-sdp string pbb</b>
Tree	<a href="#">pbb</a>
Introduced	20.10.R1
Platforms	All

## fault-propagation

Synopsis	Enter the <b>fault-propagation</b> context
Context	<b>configure</b> <a href="#">service vpls string spoke-sdp string pbb</a> <b>fault-propagation</b>
Tree	<a href="#">fault-propagation</a>
Introduced	20.10.R1
Platforms	All

## backbone-mac-address [[address](#)] *string*

Synopsis	Add a list entry for <b>backbone-mac-address</b>
Context	<b>configure</b> <a href="#">service vpls string spoke-sdp string pbb</a> <b>fault-propagation backbone-mac-address string</b>
Tree	<a href="#">backbone-mac-address</a>
Introduced	20.10.R1
Platforms	All

## [\[address\]](#) *string*

Synopsis	Backbone MAC address
Context	<b>configure</b> <a href="#">service vpls string spoke-sdp string pbb</a> <b>fault-propagation backbone-mac-address string</b>
Tree	<a href="#">backbone-mac-address</a>
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	All

## backbone-mac-name [[name](#)] *reference*

Synopsis	Add a list entry for <b>backbone-mac-name</b>
Context	<b>configure</b> <a href="#">service vpls string spoke-sdp string pbb</a> <b>fault-propagation backbone-mac-name reference</b>
Tree	<a href="#">backbone-mac-name</a>
Introduced	20.10.R1
Platforms	All

**[name] reference**

Synopsis	Backbone MAC address name
Context	<b>configure</b> <a href="#">service vpls string spoke-sdp string pbb fault-propagation backbone-mac-name reference</a>
Tree	<a href="#">backbone-mac-name</a>
Reference	<b>configure</b> <a href="#">service pbb mac string</a>
Notes	This element is part of a list key.
Introduced	20.10.R1
Platforms	All

**pim-snooping**

Synopsis	Enter the <b>pim-snooping</b> context
Context	<b>configure</b> <a href="#">service vpls string spoke-sdp string pim-snooping</a>
Tree	<a href="#">pim-snooping</a>
Introduced	16.0.R1
Platforms	All

**maximum-number-groups number**

Synopsis	Maximum groups for this interface
Context	<b>configure</b> <a href="#">service vpls string spoke-sdp string pim-snooping maximum-number-groups number</a>
Tree	<a href="#">maximum-number-groups</a>
Range	1 to 16000
Introduced	16.0.R1
Platforms	All

**pw-status**

Synopsis	Enter the <b>pw-status</b> context
Context	<b>configure</b> <a href="#">service vpls string spoke-sdp string pw-status</a>
Tree	<a href="#">pw-status</a>
Introduced	16.0.R1
Platforms	All

**signaling** *boolean*

Synopsis	Enable the use of pseudowire status signaling
Context	<b>configure</b> <a href="#">service vpls string spoke-sdp string pw-status signaling boolean</a>
Tree	<a href="#">signaling</a>
Default	true
Introduced	16.0.R1
Platforms	All

**spb**

Synopsis	Enable the <b>spb</b> context
Context	<b>configure</b> <a href="#">service vpls string spoke-sdp string spb</a>
Tree	<a href="#">spb</a>
Introduced	21.10.R1
Platforms	All

**admin-state** *keyword*

Synopsis	Admin state
Context	<b>configure</b> <a href="#">service vpls string spoke-sdp string spb admin-state keyword</a>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	21.10.R1
Platforms	All

**level** [*id*] *number*

Synopsis	Enter the <b>level</b> list instance
Context	<b>configure</b> <a href="#">service vpls string spoke-sdp string spb level number</a>
Tree	<a href="#">level</a>
Introduced	21.10.R1
Platforms	All

**[id] number**

Synopsis	Level identifier
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">spb level</a> <i>number</i>
Tree	<a href="#">level</a>
Range	1
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	All

**hello-interval number**

Synopsis	Hello interval
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">spb level</a> <i>number</i> <a href="#">hello-interval</a> <i>number</i>
Tree	<a href="#">hello-interval</a>
Range	1 to 20000
Units	seconds
Default	9
Introduced	21.10.R1
Platforms	All

**hello-multiplier number**

Synopsis	Hello multiplier
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">spb level</a> <i>number</i> <a href="#">hello-multiplier</a> <i>number</i>
Tree	<a href="#">hello-multiplier</a>
Range	2 to 100
Default	3
Introduced	21.10.R1
Platforms	All

**metric number**

Synopsis	Metric
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">spb level</a> <i>number</i> <a href="#">metric</a> <i>number</i>

Tree	<a href="#">metric</a>
Range	0 to 16777215
Default	0
Introduced	21.10.R1
Platforms	All

### **lsp-pacing-interval** *number*

Synopsis	Lsp pacing interval
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">spb</a> <a href="#">lsp-pacing-interval</a> <i>number</i>
Tree	<a href="#">lsp-pacing-interval</a>
Range	0 to 65535
Units	milliseconds
Default	100
Introduced	21.10.R1
Platforms	All

### **retransmit-interval** *number*

Synopsis	Retransmit interval
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">spb</a> <a href="#">retransmit-interval</a> <i>number</i>
Tree	<a href="#">retransmit-interval</a>
Range	1 to 65535
Units	seconds
Default	5
Introduced	21.10.R1
Platforms	All

### **split-horizon-group** *reference*

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Name of the split horizon group where the spoke SDP bind belongs to
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">split-horizon-group</a> <i>reference</i>

Tree	<a href="#">split-horizon-group</a>
Reference	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">split-horizon-group</a> <i>string</i>
Introduced	16.0.R1
Platforms	All

## **static-isid**

Synopsis	Enter the <b>static-isid</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">static-isid</a>
Tree	<a href="#">static-isid</a>
Introduced	19.10.R1
Platforms	All

## **range** [[range-id](#)] *number*

Synopsis	Enter the <b>range</b> list instance
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">static-isid</a> <a href="#">range</a> <i>number</i>
Tree	<a href="#">range</a>
Introduced	19.10.R1
Platforms	All

## **[range-id]** *number*

Synopsis	Range ID for static ISID
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">static-isid</a> <a href="#">range</a> <i>number</i>
Tree	<a href="#">range</a>
Range	1 to 8191
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	All

## **end** *number*

Synopsis	Upper bound of the ISID range
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">static-isid</a> <a href="#">range</a> <i>number</i> <a href="#">end</a> <i>number</i>

---

Tree	<a href="#">end</a>
Range	1 to 16777215
Introduced	19.10.R1
Platforms	All

### **start number**

Synopsis	Lower bound of the ISID range
Context	<b>configure</b> <a href="#">service vpls string spoke-sdp string static-isid range number start number</a>
Tree	<a href="#">start</a>
Range	1 to 16777215
Introduced	19.10.R1
Platforms	All

### **stp**

Synopsis	Enter the <b>stp</b> context
Context	<b>configure</b> <a href="#">service vpls string spoke-sdp string stp</a>
Tree	<a href="#">stp</a>
Introduced	16.0.R4
Platforms	All

### **admin-state keyword**

Synopsis	Administrative state of STP
Context	<b>configure</b> <a href="#">service vpls string spoke-sdp string stp admin-state keyword</a>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Introduced	16.0.R4
Platforms	All

### **auto-edge boolean**

Synopsis	Enable automatic detection of edge port characteristics
Context	<b>configure</b> <a href="#">service vpls string spoke-sdp string stp auto-edge boolean</a>

Tree	<a href="#">auto-edge</a>
Default	true
Introduced	16.0.R4
Platforms	All

### **edge-port** *boolean*

Synopsis	Designate SAP or SDP as an edge port
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">stp edge-port</a> <i>boolean</i>
Tree	<a href="#">edge-port</a>
Default	false
Introduced	16.0.R4
Platforms	All

### **link-type** *keyword*

Synopsis	Configure STP link-type
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">stp link-type</a> <i>keyword</i>
Tree	<a href="#">link-type</a>
Options	pt-pt, shared
Default	pt-pt
Introduced	16.0.R4
Platforms	All

### **path-cost** *number*

Synopsis	Configure path-cost
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">stp path-cost</a> <i>number</i>
Tree	<a href="#">path-cost</a>
Range	1 to 200000000
Default	10
Introduced	16.0.R4
Platforms	All

**port-num** *number*

Synopsis	Virtual port number
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">stp</a> <a href="#">port-num</a> <i>number</i>
Tree	<a href="#">port-num</a>
Range	1 to 2047
Introduced	16.0.R4
Platforms	All

**priority** *number*

Synopsis	Configure STP priority
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">stp</a> <a href="#">priority</a> <i>number</i>
Tree	<a href="#">priority</a>
Range	0 to 255
Default	128
Introduced	16.0.R4
Platforms	All

**root-guard** *boolean*

Synopsis	Enable/disable STP root-guard
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">stp</a> <a href="#">root-guard</a> <i>boolean</i>
Tree	<a href="#">root-guard</a>
Default	false
Introduced	16.0.R4
Platforms	All

**transit-policy**

Synopsis	Enable the <b>transit-policy</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">transit-policy</a>
Tree	<a href="#">transit-policy</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## prefix reference

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	IP prefix policy ID
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">transit-policy</a> <a href="#">prefix</a> <i>reference</i>
Tree	<a href="#">prefix</a>
Reference	<b>configure</b> <a href="#">application-assurance</a> <i>group</i> <i>number</i> <a href="#">partition</a> <i>number</i> <a href="#">transit-prefix-policy</a> <i>number</i>
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## vc-type keyword

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Type of virtual circuit (VC) associated with the SDP binding; VPLS not supported
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">vc-type</a> <i>keyword</i>
Tree	<a href="#">vc-type</a>
Options	ether, vlan
Default	ether
Introduced	16.0.R1
Platforms	All

## vlan-vc-tag number

Synopsis	SDP bind VC tag
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">vlan-vc-tag</a> <i>number</i>
Tree	<a href="#">vlan-vc-tag</a>
Range	0 to 4094
Introduced	16.0.R1

Platforms All

## stp

Synopsis Enter the **stp** context  
Context **configure service vpls string stp**  
Tree **stp**  
Introduced 16.0.R4  
Platforms All

## admin-state *keyword*

Synopsis Administrative state of STP  
Context **configure service vpls string stp admin-state keyword**  
Tree **admin-state**  
Options enable, disable  
Default disable  
Introduced 16.0.R4  
Platforms All

## forward-delay *number*

Synopsis Configure forward-delay  
Context **configure service vpls string stp forward-delay number**  
Tree **forward-delay**  
Range 4 to 30  
Default 15  
Introduced 16.0.R4  
Platforms All

## hello-time *number*

Synopsis Configure hello-time  
Context **configure service vpls string stp hello-time number**  
Tree **hello-time**

---

Range	1 to 10
Default	2
Introduced	16.0.R4
Platforms	All

### **hold-count** *number*

Synopsis	Configure BPDU transmit hold count
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <b>stp</b> <b>hold-count</b> <i>number</i>
Tree	<a href="#">hold-count</a>
Range	1 to 20
Default	6
Introduced	16.0.R4
Platforms	All

### **maximum-age** *number*

Synopsis	Configure maximum STP information age
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <b>stp</b> <b>maximum-age</b> <i>number</i>
Tree	<a href="#">maximum-age</a>
Range	6 to 40
Default	20
Introduced	16.0.R4
Platforms	All

### **mode** *keyword*

Synopsis	Configure protocol version
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <b>stp</b> <b>mode</b> <i>keyword</i>
Tree	<a href="#">mode</a>
Options	rstp, comp-dot1w, dot1w, mstp, pmstp
Default	rstp
Introduced	16.0.R4
Platforms	All

**mst-instance** [*mst-inst-number*] *number*

Synopsis	Enter the <b>mst-instance</b> list instance
Context	<b>configure</b> <i>service vpls string stp mst-instance number</i>
Tree	<i>mst-instance</i>
Introduced	19.10.R1
Platforms	All

**[mst-inst-number]** *number*

Synopsis	Multiple Spanning Tree Instance number
Context	<b>configure</b> <i>service vpls string stp mst-instance number</i>
Tree	<i>mst-instance</i>
Range	1 to 4094
Notes	This element is part of a list key.
Introduced	19.10.R1
Platforms	All

**mst-priority** *number*

Synopsis	Priority of multiple spanning tree instance
Context	<b>configure</b> <i>service vpls string stp mst-instance number mst-priority number</i>
Tree	<i>mst-priority</i>
Range	0   4096   8192   12288   16384   20480   24576   28672   32768   36864   40960   45056   49152   53248   57344   61440
Default	32768
Introduced	19.10.R1
Platforms	All

**vlan-range** [*range*] *string*

Synopsis	Add a list entry for <b>vlan-range</b>
Context	<b>configure</b> <i>service vpls string stp mst-instance number vlan-range string</i>
Tree	<i>vlan-range</i>
Introduced	19.10.R1

Platforms All

### **[range]** *string*

Synopsis Range of VLANs associated with the M-VPLS SAP  
 Context **configure service vpls string stp mst-instance number vlan-range string**  
 Tree [vlan-range](#)  
 Notes This element is part of a list key.  
 Introduced 19.10.R1  
 Platforms All

### **mst-maximum-hops** *number*

Synopsis Maximum number of hops in an MSTP region  
 Context **configure service vpls string stp mst-maximum-hops number**  
 Tree [mst-maximum-hops](#)  
 Range 1 to 40  
 Default 20  
 Introduced 19.10.R1  
 Platforms All

### **mst-name** *string*

Synopsis MST region name  
 Context **configure service vpls string stp mst-name string**  
 Tree [mst-name](#)  
 String Length 1 to 32  
 Introduced 19.10.R1  
 Platforms All

### **mst-revision** *number*

Synopsis MST configuration revision  
 Context **configure service vpls string stp mst-revision number**  
 Tree [mst-revision](#)

---

Range	0 to 65535
Introduced	19.10.R1
Platforms	All

### **priority** *number*

Synopsis	STP bridge priority
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <b>stp</b> <i>priority number</i>
Tree	<a href="#">priority</a>
Range	0 to 65535
Default	32768
Introduced	16.0.R4
Platforms	All

### **temp-flooding** *number*

Synopsis	Temporary flooding
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <b>temp-flooding</b> <i>number</i>
Tree	<a href="#">temp-flooding</a>
Range	3 to 600
Units	seconds
Introduced	16.0.R1
Platforms	All

### **tunnel-elmi** *boolean*

Synopsis	Allow E-LMI tunneling
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <b>tunnel-elmi</b> <i>boolean</i>
Tree	<a href="#">tunnel-elmi</a>
Description	<p>When configured to <b>true</b>, the router allows E-LMI packets in a VPLS service to be tunneled. The following must also be the case for this command to function:</p> <ul style="list-style-type: none"><li>• the <b>configure port ethernet elmi mode uni-n</b> command is not configured</li><li>• the E-LMI packets map to that VPLS service</li></ul> <p>When configured to <b>false</b>, tunneling of the E-LMI packets for a VPLS service is disabled.</p>
Default	false

Introduced	23.7.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **vpn-id** *number*

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VPN identifier for the service
Context	<b>configure</b> <a href="#">service vpls</a> <i>string vpn-id number</i>
Tree	<a href="#">vpn-id</a>
Range	1 to 2147483647
Introduced	16.0.R1
Platforms	All

### **vxlan**

Synopsis	Enter the <b>vxlan</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string vxlan</i>
Tree	<a href="#">vxlan</a>
Introduced	16.0.R1
Platforms	All

### **instance** [[vxlan-instance](#)] *number*

Synopsis	Enter the <b>instance</b> list instance
Context	<b>configure</b> <a href="#">service vpls</a> <i>string vxlan instance number</i>
Tree	<a href="#">instance</a>
Introduced	16.0.R1
Platforms	All

### **[vxlan-instance]** *number*

Synopsis	VXLAN instance
Context	<b>configure</b> <a href="#">service vpls</a> <i>string vxlan instance number</i>

Tree	<a href="#">instance</a>
Range	1 to 2
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## assisted-replication

Synopsis	Enter the <b>assisted-replication</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string vxlan instance number</i> <a href="#">assisted-replication</a>
Tree	<a href="#">assisted-replication</a>
Introduced	16.0.R1
Platforms	All

## leaf

Synopsis	Enable the <b>leaf</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string vxlan instance number</i> <a href="#">assisted-replication</a> <a href="#">leaf</a>
Tree	<a href="#">leaf</a>
Notes	The following elements are part of a choice: <b>leaf</b> or <b>replicator</b> .
Introduced	16.0.R1
Platforms	All

## acttime *number*

Synopsis	Time for the leaf to wait before sending traffic to a new replicator
Context	<b>configure</b> <a href="#">service vpls</a> <i>string vxlan instance number</i> <a href="#">assisted-replication</a> <a href="#">leaf</a> <a href="#">acttime</a> <i>number</i>
Tree	<a href="#">acttime</a>
Range	1 to 255
Units	seconds
Introduced	16.0.R1
Platforms	All

**replicator**

Synopsis	AR role as replicator
Context	<b>configure</b> <a href="#">service vpls</a> <i>string vxlan instance number</i> <a href="#">assisted-replication replicator</a>
Tree	<a href="#">replicator</a>
Notes	The following elements are part of a choice: <b>leaf</b> or <b>replicator</b> .
Introduced	16.0.R1
Platforms	All

**egress-vtep** [[ip-address](#)] (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Add a list entry for <b>egress-vtep</b>
Context	<b>configure</b> <a href="#">service vpls</a> <i>string vxlan instance number</i> <a href="#">egress-vtep</a> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> )
Tree	<a href="#">egress-vtep</a>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**[ip-address]** (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	VTEP IP address used when originating VXLAN packets
Context	<b>configure</b> <a href="#">service vpls</a> <i>string vxlan instance number</i> <a href="#">egress-vtep</a> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> )
Tree	<a href="#">egress-vtep</a>
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**fdb**

Synopsis	Enter the <b>fdb</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string vxlan instance number</i> <a href="#">fdb</a>
Tree	<a href="#">fdb</a>
Introduced	16.0.R1
Platforms	All

### **discard-unknown-source** *boolean*

Synopsis	Discard frames with unknown source
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">vxlan</a> <i>instance</i> <i>number</i> <a href="#">fdb</a> <a href="#">discard-unknown-source</a> <i>boolean</i>
Tree	<a href="#">discard-unknown-source</a>
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **mac-learning**

Synopsis	Enter the <b>mac-learning</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">vxlan</a> <i>instance</i> <i>number</i> <a href="#">fdb</a> <a href="#">mac-learning</a>
Tree	<a href="#">mac-learning</a>
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **aging** *boolean*

Synopsis	Enable/disable aging of MAC addresses
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">vxlan</a> <i>instance</i> <i>number</i> <a href="#">fdb</a> <a href="#">mac-learning</a> <a href="#">aging</a> <i>boolean</i>
Tree	<a href="#">aging</a>
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **learning** *boolean*

Synopsis	Enable learning of new MAC addresses
Context	<b>configure</b> <a href="#">service vpls</a> <i>string</i> <a href="#">vxlan</a> <i>instance</i> <i>number</i> <a href="#">fdb</a> <a href="#">mac-learning</a> <a href="#">learning</a> <i>boolean</i>
Tree	<a href="#">learning</a>
Default	false
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**maximum-mac-addresses** *number*

Synopsis	Maximum number of MAC entries in the FDB from this vxlan instance
Context	<b>configure</b> <a href="#">service vpls string vxlan instance number fdb maximum-mac-addresses number</a>
Tree	<a href="#">maximum-mac-addresses</a>
Range	1 to 511999
Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

**protected-src-mac-violation-action** *keyword*

Synopsis	Action for a relearn request for a protected MAC
Context	<b>configure</b> <a href="#">service vpls string vxlan instance number fdb protected-src-mac-violation-action keyword</a>
Tree	<a href="#">protected-src-mac-violation-action</a>
Options	discard
Introduced	16.0.R1
Platforms	All

**igmp-snooping**

Synopsis	Enter the <b>igmp-snooping</b> context
Context	<b>configure</b> <a href="#">service vpls string vxlan instance number igmp-snooping</a>
Tree	<a href="#">igmp-snooping</a>
Introduced	16.0.R5
Platforms	All

**mrouter-port** *boolean*

Synopsis	Enable VXLAN binds as multicast router ports
Context	<b>configure</b> <a href="#">service vpls string vxlan instance number igmp-snooping mrouter-port boolean</a>
Tree	<a href="#">mrouter-port</a>
Default	false
Introduced	16.0.R5
Platforms	All

## mld-snooping

Synopsis	Enter the <b>mld-snooping</b> context
Context	<b>configure service vpls string vxlan instance number mld-snooping</b>
Tree	<b>mld-snooping</b>
Introduced	16.0.R5
Platforms	All

## mrouter-port *boolean*

Synopsis	Enable VXLAN binds as multicast router ports
Context	<b>configure service vpls string vxlan instance number mld-snooping mrouter-port boolean</b>
Tree	<b>mrouter-port</b>
Default	false
Introduced	16.0.R5
Platforms	All

## network

Synopsis	Enter the <b>network</b> context
Context	<b>configure service vpls string vxlan instance number network</b>
Tree	<b>network</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

## ingress

Synopsis	Enter the <b>ingress</b> context
Context	<b>configure service vpls string vxlan instance number network ingress</b>
Tree	<b>ingress</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**qos**

Synopsis	Enter the <b>qos</b> context
Context	<b>configure</b> <a href="#">service vpls string vxlan instance number network ingress qos</a>
Tree	<a href="#">qos</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**network**

Synopsis	Enter the <b>network</b> context
Context	<b>configure</b> <a href="#">service vpls string vxlan instance number network ingress qos network</a>
Tree	<a href="#">network</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**fp-redirect-group**

Synopsis	Enter the <b>fp-redirect-group</b> context
Context	<b>configure</b> <a href="#">service vpls string vxlan instance number network ingress qos network fp-redirect-group</a>
Tree	<a href="#">fp-redirect-group</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**group-name** *reference*

Synopsis	Name of the forwarding plane queue group template
Context	<b>configure</b> <a href="#">service vpls string vxlan instance number network ingress qos network fp-redirect-group group-name reference</a>
Tree	<a href="#">group-name</a>
Reference	<b>configure</b> <a href="#">qos queue-group-templates ingress queue-group string</a>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**instance number**

Synopsis	Instance of the forwarding-plane ingress Queue Group for this SDP binding
Context	<b>configure service vpls string vxlan instance number network ingress qos network fp-redirect-group instance number</b>
Tree	<a href="#">instance</a>
Range	1 to 65535
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**policy-name reference**

Synopsis	Ingress network policy name applied to this SDP binding
Context	<b>configure service vpls string vxlan instance number network ingress qos network policy-name reference</b>
Tree	<a href="#">policy-name</a>
Reference	<b>configure qos network string</b>
Introduced	16.0.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, 7950 XRS, VSR

**rx-discard-on-ndf keyword**

Synopsis	Received multicast traffic type discarded on NDF
Context	<b>configure service vpls string vxlan instance number rx-discard-on-ndf keyword</b>
Tree	<a href="#">rx-discard-on-ndf</a>
Options	bm, bum, none
Default	bm
Introduced	16.0.R4
Platforms	All

**source-vtep-security boolean**

Synopsis	Enable/disable source vtep security
Context	<b>configure service vpls string vxlan instance number source-vtep-security boolean</b>
Tree	<a href="#">source-vtep-security</a>
Default	false

Introduced	16.0.R4
Platforms	7450 ESS, 7750 SR, 7750 SR-a, 7750 SR-e, 7750 SR-s, 7950 XRS

### **vni number**

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	VNI of the VXLAN
Context	<b>configure</b> <a href="#">service vpls</a> <i>string vxlan instance number vni number</i>
Tree	<a href="#">vni</a>
Range	1 to 16777215
Notes	This element is mandatory.
Introduced	16.0.R1
Platforms	All

### **source-vtep** (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	Vxlan source virtual tunnel endpoint information
Context	<b>configure</b> <a href="#">service vpls</a> <i>string vxlan source-vtep (ipv4-address-no-zone   ipv6-address-no-zone)</i>
Tree	<a href="#">source-vtep</a>
Introduced	16.0.R1
Platforms	All

### **wlan-gw**

Synopsis	Enter the <b>wlan-gw</b> context
Context	<b>configure</b> <a href="#">service vpls</a> <i>string wlan-gw</i>
Tree	<a href="#">wlan-gw</a>
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**admin-state** *keyword*

Synopsis	Administrative state of WLAN-GW
Context	<b>configure service vpls string wlan-gw admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**description** *string*

Synopsis	Text description
Context	<b>configure service vpls string wlan-gw description string</b>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	7750 SR, 7750 SR-e, 7750 SR-s, VSR

**wlan-gw-group** *reference***WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	WLAN-GW endpoint within the VPLS service
Context	<b>configure service vpls string wlan-gw wlan-gw-group reference</b>
Tree	<a href="#">wlan-gw-group</a>
Description	<p>This command specifies a WLAN-GW group to be used as an endpoint within the VPLS. This feature is used in conjunction with the <b>configure service vprn subscriber-interface group-interface wlan-gw vlan-range dynamic-service</b> command for a VPRN service and the <b>configure service ies subscriber-interface group-interface wlan-gw vlan-range dynamic-service</b> command for an IES service.</p> <p>See "Dynamic VPLS service" in the <i>7450 ESS, 7750 SR, and VSR Triple Play Service Delivery Architecture Guide</i> for more information about the dynamic VPLS service feature.</p>
Reference	<b>configure isa wlan-gw-group number</b>
Introduced	23.3.R1

Platforms 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **vprn** [*service-name*] *string*

Synopsis Enter the **vprn** list instance  
Context **configure service vprn string**  
Tree **vprn**  
Introduced 16.0.R1  
Platforms All

### **[service-name]** *string*

Synopsis Administrative service name  
Context **configure service vprn string**  
Tree **vprn**  
String Length 1 to 64  
Notes This element is part of a list key.  
Introduced 16.0.R1  
Platforms All

### **aa-interface** [*interface-name*] *string*

Synopsis Enter the **aa-interface** list instance  
Context **configure service vprn string aa-interface string**  
Tree **aa-interface**  
Introduced 21.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[interface-name]** *string*

Synopsis Interface name  
Context **configure service vprn string aa-interface string**  
Tree **aa-interface**  
String Length 1 to 32  
Notes This element is part of a list key.

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of the interface
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">aa-interface</a> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">aa-interface</a> <i>string</i> <b>description</b> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 255
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ip-mtu** *number*

Synopsis	IP MTU applied to outgoing packets
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">aa-interface</a> <i>string</i> <b>ip-mtu</b> <i>number</i>
Tree	<a href="#">ip-mtu</a>
Description	This command configures the IP maximum transmission unit (MTU) for the associated router IP interface.
Range	512 to 9786
Units	bytes
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ipv4

Synopsis	Enter the <b>ipv4</b> context
Context	<b>configure service vprn string aa-interface string ipv4</b>
Tree	<a href="#">ipv4</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## primary

Synopsis	Enable the <b>primary</b> context
Context	<b>configure service vprn string aa-interface string ipv4 primary</b>
Tree	<a href="#">primary</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## address *string*

Synopsis	Primary IPv4 address assigned to the interface
Context	<b>configure service vprn string aa-interface string ipv4 primary address string</b>
Tree	<a href="#">address</a>
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## prefix-length *number*

Synopsis	IPv4 address prefix length
Context	<b>configure service vprn string aa-interface string ipv4 primary prefix-length number</b>
Tree	<a href="#">prefix-length</a>
Range	0 to 32
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**sap** [*sap-id*] *string*

Synopsis	Enter the <b>sap</b> list instance
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">aa-interface</a> <i>string</i> <b>sap</b> <i>string</i>
Tree	<a href="#">sap</a>
Max. Instances	1
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**[sap-id]** *string*

Synopsis	SAP ID
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">aa-interface</a> <i>string</i> <b>sap</b> <i>string</i>
Tree	<a href="#">sap</a>
String Length	1 to 45
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**admin-state** *keyword*

Synopsis	Administrative state of the SAP
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">aa-interface</a> <i>string</i> <b>sap</b> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">aa-interface</a> <i>string</i> <b>sap</b> <i>string</i> <b>description</b> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 160

Introduced 21.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## egress

Synopsis Enter the **egress** context  
Context **configure service vprn string aa-interface string sap string egress**  
Tree **egress**  
Introduced 21.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## filter

Synopsis Enter the **filter** context  
Context **configure service vprn string aa-interface string sap string egress filter**  
Tree **filter**  
Introduced 21.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ip reference

Synopsis IPv4 filter policy name  
Context **configure service vprn string aa-interface string sap string egress filter ip reference**  
Tree **ip**  
Reference **configure filter ip-filter string**  
Introduced 21.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## qos

Synopsis Enter the **qos** context  
Context **configure service vprn string aa-interface string sap string egress qos**  
Tree **qos**  
Introduced 21.10.R1  
Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**sap-egress**

Synopsis	Enter the <b>sap-egress</b> context
Context	<b>configure</b> <a href="#">service vprn string aa-interface string sap string egress qos sap-egress</a>
Tree	<a href="#">sap-egress</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**policy-name reference**

Synopsis	Policy ID to associate with SAP for mirrored service
Context	<b>configure</b> <a href="#">service vprn string aa-interface string sap string egress qos sap-egress policy-name reference</a>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos sap-egress string</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**virtual-port**

Synopsis	Enter the <b>virtual-port</b> context
Context	<b>configure</b> <a href="#">service vprn string aa-interface string sap string egress virtual-port</a>
Tree	<a href="#">virtual-port</a>
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**vport-name reference**

Synopsis	Virtual port assigned to the SAP
Context	<b>configure</b> <a href="#">service vprn string aa-interface string sap string egress virtual-port vport-name reference</a>
Tree	<a href="#">vport-name</a>
Reference	<b>configure</b> <a href="#">port string ethernet access egress virtual-port string</a>
Introduced	23.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## fwd-wholesale

Synopsis	Enter the <b>fwd-wholesale</b> context
Context	<b>configure service vprn</b> <i>string aa-interface string sap string fwd-wholesale</i>
Tree	<a href="#">fwd-wholesale</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## pppoe-service *reference*

Synopsis	PPPoE service name
Context	<b>configure service vprn</b> <i>string aa-interface string sap string fwd-wholesale pppoe-service reference</i>
Tree	<a href="#">pppoe-service</a>
Reference	<b>configure service epipe</b> <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ingress

Synopsis	Enter the <b>ingress</b> context
Context	<b>configure service vprn</b> <i>string aa-interface string sap string ingress</i>
Tree	<a href="#">ingress</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## qos

Synopsis	Enter the <b>qos</b> context
Context	<b>configure service vprn</b> <i>string aa-interface string sap string ingress qos</i>
Tree	<a href="#">qos</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## sap-ingress

Synopsis	Enter the <b>sap-ingress</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">aa-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress qos</a> <a href="#">sap-ingress</a>
Tree	<a href="#">sap-ingress</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## overrides

Synopsis	Enter the <b>overrides</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">aa-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress qos</a> <a href="#">sap-ingress</a> <a href="#">overrides</a>
Tree	<a href="#">overrides</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## policy-name *reference*

Synopsis	Policy ID
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">aa-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">ingress qos</a> <a href="#">sap-ingress</a> <a href="#">policy-name</a> <i>reference</i>
Tree	<a href="#">policy-name</a>
Reference	<b>configure</b> <a href="#">qos sap-ingress</a> <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## lag

Synopsis	Enter the <b>lag</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">aa-interface</a> <i>string</i> <a href="#">sap</a> <i>string</i> <a href="#">lag</a>
Tree	<a href="#">lag</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## aaa

Synopsis	Enter the <b>aaa</b> context
Context	<b>configure service vprn string aaa</b>
Tree	<a href="#">aaa</a>
Introduced	16.0.R4
Platforms	All

## remote-servers

Synopsis	Enter the <b>remote-servers</b> context
Context	<b>configure service vprn string aaa remote-servers</b>
Tree	<a href="#">remote-servers</a>
Introduced	16.0.R4
Platforms	All

## radius

Synopsis	Enable the <b>radius</b> context
Context	<b>configure service vprn string aaa remote-servers radius</b>
Tree	<a href="#">radius</a>
Introduced	16.0.R4
Platforms	All

## access-algorithm *keyword*

Synopsis	Algorithm used to access the set of RADIUS servers
Context	<b>configure service vprn string aaa remote-servers radius access-algorithm keyword</b>
Tree	<a href="#">access-algorithm</a>
Options	direct, round-robin
Default	direct
Introduced	16.0.R4
Platforms	All

**accounting** *boolean*

Synopsis	Enable RADIUS command accounting
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">aaa remote-servers radius accounting</a> <i>boolean</i>
Tree	<a href="#">accounting</a>
Default	false
Introduced	16.0.R4
Platforms	All

**accounting-port** *number*

Synopsis	Port number on RADIUS server for accounting requests
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">aaa remote-servers radius accounting-port</a> <i>number</i>
Tree	<a href="#">accounting-port</a>
Range	1 to 65535
Default	1813
Introduced	16.0.R4
Platforms	All

**admin-state** *keyword*

Synopsis	Administrative state of the authentication server
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">aaa remote-servers radius admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R4
Platforms	All

**authorization** *boolean*

Synopsis	Enable RADIUS authorization
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">aaa remote-servers radius authorization</a> <i>boolean</i>
Tree	<a href="#">authorization</a>
Default	false
Introduced	16.0.R4

Platforms All

### **interactive-authentication** *boolean*

Synopsis Enable RADIUS interactive authentication

Context **configure service vprn** *string* **aaa remote-servers radius interactive-authentication** *boolean*

Tree [interactive-authentication](#)

Default false

Introduced 16.0.R4

Platforms All

### **port** *number*

Synopsis UDP port number on which to contact RADIUS server

Context **configure service vprn** *string* **aaa remote-servers radius port** *number*

Tree [port](#)

Range 1 to 65535

Default 1812

Introduced 16.0.R4

Platforms All

### **server** [[index](#)] *number*

Synopsis Enter the **server** list instance

Context **configure service vprn** *string* **aaa remote-servers radius server** *number*

Tree [server](#)

Max. Instances 5

Introduced 16.0.R4

Platforms All

### [[index](#)] *number*

Synopsis RADIUS server ID

Context **configure service vprn** *string* **aaa remote-servers radius server** *number*

Tree	<a href="#">server</a>
Range	1 to 5
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

### **address** (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	IP address of the RADIUS server
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">aaa remote-servers radius server number</a> <b>address</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> )
Tree	<a href="#">address</a>
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

### **authenticator** *keyword*

Synopsis	Authenticator hash algorithm for the RADIUS server
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">aaa remote-servers radius server number</a> <b>authenticator</b> <i>keyword</i>
Tree	<a href="#">authenticator</a>
Description	This command specifies the hash algorithm used to authenticate RADIUS Access-Request, Access-Accept, Access-Reject, Access-Challenge, Accounting-Request, and Accounting-Response packets.
Options	md5, sm3
Default	md5
Introduced	22.10.R1
Platforms	All

### **secret** *string*

Synopsis	Secret key to access the RADIUS server
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">aaa remote-servers radius server number</a> <b>secret</b> <i>string</i>
Tree	<a href="#">secret</a>
String Length	1 to 115

---

Introduced	16.0.R4
Platforms	All

### **tls-client-profile** *reference*

Synopsis	TLS client profile for the RADIUS server
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">aaa remote-servers radius server</a> <i>number</i> <a href="#">tls-client-profile reference</a>
Tree	<a href="#">tls-client-profile</a>
Description	This command specifies the TLS client profile used to encrypt RADIUS communication. When configured, RADIUS messages are sent using TLS.
Reference	<b>configure</b> <a href="#">system security tls client-tls-profile</a> <i>string</i>
Introduced	21.10.R1
Platforms	All

### **server-retry** *number*

Synopsis	Number of attempts to retry contacting RADIUS server
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">aaa remote-servers radius server-retry</a> <i>number</i>
Tree	<a href="#">server-retry</a>
Range	1 to 10
Default	3
Introduced	16.0.R4
Platforms	All

### **server-timeout** *number*

Synopsis	Time to wait for a response from the RADIUS server
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">aaa remote-servers radius server-timeout</a> <i>number</i>
Tree	<a href="#">server-timeout</a>
Range	1 to 90
Units	seconds
Default	3
Introduced	16.0.R4
Platforms	All

**use-default-template** *boolean*

Synopsis	Apply the RADIUS default user template to RADIUS user
Context	<b>configure service vprn</b> <i>string</i> <b>aaa remote-servers radius use-default-template</b> <i>boolean</i>
Tree	<a href="#">use-default-template</a>
Default	false
Introduced	16.0.R4
Platforms	All

**tacplus**

Synopsis	Enable the <b>tacplus</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>aaa remote-servers tacplus</b>
Tree	<a href="#">tacplus</a>
Introduced	16.0.R4
Platforms	All

**accounting**

Synopsis	Enable the <b>accounting</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>aaa remote-servers tacplus accounting</b>
Tree	<a href="#">accounting</a>
Introduced	16.0.R4
Platforms	All

**record-type** *keyword*

Synopsis	Type of accounting record packet sent to TACACS+ server
Context	<b>configure service vprn</b> <i>string</i> <b>aaa remote-servers tacplus accounting record-type</b> <i>keyword</i>
Tree	<a href="#">record-type</a>
Options	start-stop, stop-only
Default	stop-only
Introduced	16.0.R4
Platforms	All

### **admin-state** *keyword*

Synopsis	Administrative state of the TACACS+ protocol
Context	<b>configure service vprn string aaa remote-servers tacplus admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R4
Platforms	All

### **authorization**

Synopsis	Enable the <b>authorization</b> context
Context	<b>configure service vprn string aaa remote-servers tacplus authorization</b>
Tree	<a href="#">authorization</a>
Introduced	16.0.R4
Platforms	All

### **request-format**

Synopsis	Enter the <b>request-format</b> context
Context	<b>configure service vprn string aaa remote-servers tacplus authorization request-format</b>
Tree	<a href="#">request-format</a>
Description	Commands in this context configure access operations that are sent to the TACACS+ server during authorization.
Introduced	21.10.R3
Platforms	All

### **access-operation-cmd** *keyword*

Synopsis	Access operations sent in authorization requests
Context	<b>configure service vprn string aaa remote-servers tacplus authorization request-format access-operation-cmd keyword</b>
Tree	<a href="#">access-operation-cmd</a>
Description	This command sends an operation argument in authorization requests.

In model-driven interfaces, this command configures the system to send the operation in the `cmd` argument, and the path in the `cmd-args` argument, in TACACS+ authorization requests. This command does not apply to authorization requests in classic interfaces.

Options	delete
Max. Instances	1
Introduced	21.10.R3
Platforms	All

### **use-priv-lvl** *boolean*

Synopsis	Allow privilege level mapping
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">aaa remote-servers tacplus authorization use-priv-lvl</a> <i>boolean</i>
Tree	<a href="#">use-priv-lvl</a>
Description	<p>When configured to <b>true</b>, this command automatically performs a single authorization request to the TACACS+ server for <code>cmd*</code> (all commands) immediately after login, and then uses the local profile associated (via the <b>priv-lvl-map</b>) with the <code>priv-lvl</code> returned by the TACACS+ server for all subsequent authorization (except <b>enable-admin</b>). After the initial authorization for <code>cmd*</code>, no further authorization requests are sent to the TACACS+ server (except <b>enable-admin</b>).</p> <p>When configured to <b>false</b>, each command is sent to the TACACS+ server for authorization (this is true regardless of whether the <b>tacplus use-default-template</b> setting is enabled).</p>
Default	false
Introduced	16.0.R4
Platforms	All

### **interactive-authentication** *boolean*

Synopsis	Allows TACACS+ interactive authentication
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">aaa remote-servers tacplus interactive-authentication</a> <i>boolean</i>
Tree	<a href="#">interactive-authentication</a>
Default	false
Introduced	16.0.R4
Platforms	All

## priv-lvl-map

Synopsis	Enter the <b>priv-lvl-map</b> context
Context	<b>configure service vprn string aaa remote-servers tacplus priv-lvl-map</b>
Tree	<a href="#">priv-lvl-map</a>
Introduced	16.0.R4
Platforms	All

## priv-lvl [[level](#)] *number*

Synopsis	Enter the <b>priv-lvl</b> list instance
Context	<b>configure service vprn string aaa remote-servers tacplus priv-lvl-map priv-lvl number</b>
Tree	<a href="#">priv-lvl</a>
Introduced	16.0.R4
Platforms	All

## [\[level\]](#) *number*

Synopsis	Privilege level for the mapping
Context	<b>configure service vprn string aaa remote-servers tacplus priv-lvl-map priv-lvl number</b>
Tree	<a href="#">priv-lvl</a>
Range	0 to 15
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

## user-profile-name *reference*

Synopsis	User profile for the mapping
Context	<b>configure service vprn string aaa remote-servers tacplus priv-lvl-map priv-lvl number user-profile-name reference</b>
Tree	<a href="#">user-profile-name</a>
Reference	<b>configure system security aaa local-profiles profile string</b>
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

**server** [[index](#)] *number*

Synopsis	Enter the <b>server</b> list instance
Context	<b>configure service vprn string aaa remote-servers tacplus server number</b>
Tree	<a href="#">server</a>
Max. Instances	5
Introduced	16.0.R4
Platforms	All

**[index]** *number*

Synopsis	TACACS+ server ID
Context	<b>configure service vprn string aaa remote-servers tacplus server number</b>
Tree	<a href="#">server</a>
Range	1 to 5
Notes	This element is part of a list key.
Introduced	16.0.R4
Platforms	All

**address** (*ipv4-address-no-zone | ipv6-address-no-zone*)

Synopsis	IP address of the TACACS+ server
Context	<b>configure service vprn string aaa remote-servers tacplus server number address (ipv4-address-no-zone   ipv6-address-no-zone)</b>
Tree	<a href="#">address</a>
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

**port** *number*

Synopsis	TCP port ID on which to contact TACACS+ server
Context	<b>configure service vprn string aaa remote-servers tacplus server number port number</b>
Tree	<a href="#">port</a>

Range	0   1 to 65535
Default	49
Introduced	16.0.R4
Platforms	All

**secret** *string*

Synopsis	Secret key to access the TACACS+ server
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">aaa remote-servers tacplus server</a> <i>number</i> <b>secret</b> <i>string</i>
Tree	<a href="#">secret</a>
String Length	1 to 199
Notes	This element is mandatory.
Introduced	16.0.R4
Platforms	All

**server-timeout** *number*

Synopsis	Time to wait for a response from the TACACS+ server
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">aaa remote-servers tacplus server-timeout</a> <i>number</i>
Tree	<a href="#">server-timeout</a>
Range	1 to 90
Units	seconds
Default	3
Introduced	16.0.R4
Platforms	All

**use-default-template** *boolean*

Synopsis	Apply TACACS+ default user-template to TACACS+ user
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">aaa remote-servers tacplus use-default-template</a> <i>boolean</i>
Tree	<a href="#">use-default-template</a>
Default	true
Introduced	16.0.R4
Platforms	All

**aarp-interface** [[interface-name](#)] *string*

Synopsis	Enter the <b>aarp-interface</b> list instance
Context	<b>configure service vprn</b> <i>string aarp-interface string</i>
Tree	<a href="#">aarp-interface</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**[interface-name]** *string*

Synopsis	Interface name
Context	<b>configure service vprn</b> <i>string aarp-interface string</i>
Tree	<a href="#">aarp-interface</a>
String Length	1 to 32
Notes	This element is part of a list key.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**admin-state** *keyword*

Synopsis	Administrative state of the interface
Context	<b>configure service vprn</b> <i>string aarp-interface string admin-state keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**description** *string*

Synopsis	Text description
Context	<b>configure service vprn</b> <i>string aarp-interface string description string</i>
Tree	<a href="#">description</a>
String Length	1 to 255
Introduced	21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ip-mtu** *number*

Synopsis IP MTU applied to outgoing packets

Context **configure** *service vprn string aarp-interface string ip-mtu number*

Tree [ip-mtu](#)

Description This command configures the IP maximum transmission unit (MTU) for the associated router IP interface.

Range 512 to 9786

Units bytes

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **spoke-sdp** [[sdp-bind-id](#)] *string*

Synopsis Enter the **spoke-sdp** list instance

Context **configure** *service vprn string aarp-interface string spoke-sdp string*

Tree [spoke-sdp](#)

Max. Instances 1

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **[sdp-bind-id]** *string*

Synopsis SDP binding ID

Context **configure** *service vprn string aarp-interface string spoke-sdp string*

Tree [spoke-sdp](#)

String Length 3 to 16

Notes This element is part of a list key.

Introduced 21.10.R1

Platforms 7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## aarp

Synopsis	Enable the <b>aarp</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">aarp-interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">aarp</a>
Tree	<a href="#">aarp</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## id reference

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	AARP instance ID
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">aarp-interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">aarp id reference</a>
Tree	<a href="#">id</a>
Reference	<b>configure</b> <a href="#">application-assurance aarp</a> <i>number</i>
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## type keyword

**WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Role of the spoke SDP referenced by the AARP
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">aarp-interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">aarp type keyword</a>
Tree	<a href="#">type</a>
Options	subscriber-side-shunt, network-side-shunt
Notes	This element is mandatory.
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**admin-state** *keyword*

Synopsis	Administrative state of this service SDP binding
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">aarp-interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <b>admin-state</b> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">aarp-interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <b>description</b> <i>string</i>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**egress**

Synopsis	Enter the <b>egress</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">aarp-interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <b>egress</b>
Tree	<a href="#">egress</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

**filter**

Synopsis	Enter the <b>filter</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">aarp-interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">egress</a> <b>filter</b>
Tree	<a href="#">filter</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ip reference

Synopsis	IP filter identifier
Context	<b>configure service vprn</b> <i>string aarp-interface string spoke-sdp string egress filter ip reference</i>
Tree	<a href="#">ip</a>
Reference	<b>configure filter ip-filter</b> <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## vc-label number

**WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	Static MPLS VC label to send packets to far-end device
Context	<b>configure service vprn</b> <i>string aarp-interface string spoke-sdp string egress vc-label number</i>
Tree	<a href="#">vc-label</a>
Range	16 to 1048575
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## ingress

Synopsis	Enter the <b>ingress</b> context
Context	<b>configure service vprn</b> <i>string aarp-interface string spoke-sdp string ingress</i>
Tree	<a href="#">ingress</a>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

## filter

Synopsis	Enter the <b>filter</b> context
Context	<b>configure service vprn</b> <i>string aarp-interface string spoke-sdp string ingress filter</i>
Tree	<a href="#">filter</a>

Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **ip** *reference*

Synopsis	IP filter ID
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">aarp-interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">ingress filter ip</a> <i>reference</i>
Tree	<a href="#">ip</a>
Reference	<b>configure</b> <a href="#">filter ip-filter</a> <i>string</i>
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **vc-label** *number*

#### **WARNING:**

Modifying this element toggles the **admin-state** of the parent element automatically for the new value to take effect.

Synopsis	VC ingress value that indicates a specific connection
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">aarp-interface</a> <i>string</i> <a href="#">spoke-sdp</a> <i>string</i> <a href="#">ingress vc-label</a> <i>number</i>
Tree	<a href="#">vc-label</a>
Range	1 to 1048575
Introduced	21.10.R1
Platforms	7450 ESS, 7750 SR, 7750 SR-e, 7750 SR-s, VSR

### **admin-state** *keyword*

Synopsis	Administrative state of the service
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

## aggregates

Synopsis	Enter the <b>aggregates</b> context
Context	<b>configure service vprn string aggregates</b>
Tree	<a href="#">aggregates</a>
Introduced	16.0.R1
Platforms	All

## aggregate [[ip-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Enter the <b>aggregate</b> list instance
Context	<b>configure service vprn string aggregates aggregate</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
Tree	<a href="#">aggregate</a>
Introduced	16.0.R1
Platforms	All

## [[ip-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Destination IP address prefix of the aggregate route
Context	<b>configure service vprn string aggregates aggregate</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
Tree	<a href="#">aggregate</a>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

## aggregator

Synopsis	Enter the <b>aggregator</b> context
Context	<b>configure service vprn string aggregates aggregate</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>aggregator</b>
Tree	<a href="#">aggregator</a>
Introduced	16.0.R1
Platforms	All

**address string**

Synopsis	Aggregator IP address
Context	<b>configure service vprn string aggregates aggregate (ipv4-prefix   ipv6-prefix) aggregator address string</b>
Tree	<b>address</b>
Introduced	16.0.R1
Platforms	All

**as-number number**

Synopsis	Aggregator AS number
Context	<b>configure service vprn string aggregates aggregate (ipv4-prefix   ipv6-prefix) aggregator as-number number</b>
Tree	<b>as-number</b>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

**as-set boolean**

Synopsis	Use AS_SET path segment type for the aggregate route
Context	<b>configure service vprn string aggregates aggregate (ipv4-prefix   ipv6-prefix) as-set boolean</b>
Tree	<b>as-set</b>
Description	<p>When configured to <b>true</b>, the AS_PATH attribute of the aggregate contains an AS_SET containing all AS numbers from the contributing routes. This can increase the amount of churn due to best-path changes.</p> <p>When configured to <b>false</b>, the AS_PATH attribute contains no AS_SET and will be originated by the ESR.</p>
Default	false
Introduced	16.0.R1
Platforms	All

**blackhole**

Synopsis	Enable the <b>blackhole</b> context
Context	<b>configure service vprn string aggregates aggregate (ipv4-prefix   ipv6-prefix) blackhole</b>

Tree	<a href="#">blackhole</a>
Notes	The following elements are part of a choice: <b>blackhole</b> or <b>indirect</b> .
Introduced	16.0.R1
Platforms	All

### **generate-icmp** *boolean*

Synopsis	Send ICMP unreachable messages for aggregate routes
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">aggregates</a> <a href="#">aggregate</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">blackhole</a> <a href="#">generate-icmp</a> <i>boolean</i>
Tree	<a href="#">generate-icmp</a>
Description	When configured to <b>true</b> , ICMP unreachable messages are sent when packets match an aggregate route in the FIB with a black-hole next-hop. When configured to <b>false</b> , ICMP unreachable messages are not generated.
Default	false
Introduced	16.0.R2
Platforms	All

### **community** *string*

Synopsis	Community name that is added to the aggregate route
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">aggregates</a> <a href="#">aggregate</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">community</a> <i>string</i>
Tree	<a href="#">community</a>
Description	This command associates a BGP community with the aggregate route. The community name can be matched in route policies and is automatically added to BGP routes exported from the aggregate route.
String Length	1 to 72
Max. Instances	12
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **description** *string*

Synopsis	Text description
----------	------------------

Context	<b>configure service vprn string aggregates aggregate</b> ( <i>ipv4-prefix   ipv6-prefix</i> ) <b>description string</b>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **discard-component-communities** *boolean*

Synopsis	Advertise aggregate with aggregate route community set
Context	<b>configure service vprn string aggregates aggregate</b> ( <i>ipv4-prefix   ipv6-prefix</i> ) <b>discard-component-communities boolean</b>
Tree	<a href="#">discard-component-communities</a>
Default	false
Introduced	19.7.R1
Platforms	All

### **indirect** (*ipv4-address-no-zone | ipv6-address-no-zone*)

#### **WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Address of the indirect next hop
Context	<b>configure service vprn string aggregates aggregate</b> ( <i>ipv4-prefix   ipv6-prefix</i> ) <b>indirect</b> ( <i>ipv4-address-no-zone   ipv6-address-no-zone</i> )
Tree	<a href="#">indirect</a>
Description	This command programs aggregate routes into the forwarding table with an indirect next hop. If a packet matches the aggregate route but not a contributing route, it is forwarded toward the indirect next hop rather than being discarded.
Notes	The following elements are part of a choice: <b>blackhole</b> or <b>indirect</b> .
Introduced	16.0.R1
Platforms	All

### **local-preference** *number*

Synopsis	Local preference used when aggregate route is exported
----------	--

Context	<b>configure service vprn string aggregates aggregate</b> ( <i>ipv4-prefix   ipv6-prefix</i> ) <b>local-preference number</b>
Tree	<b>local-preference</b>
Description	This command configures the local preference value to use when the aggregate route is exported rather than using any of the local preference values assigned for any of the contributing routes.
Range	0 to 4294967295
Introduced	16.0.R1
Platforms	All

### **policy reference**

Synopsis	Policy name for the aggregated route
Context	<b>configure service vprn string aggregates aggregate</b> ( <i>ipv4-prefix   ipv6-prefix</i> ) <b>policy reference</b>
Tree	<b>policy</b>
Description	<p>This command associates an aggregate route with a policy reference. The aggregated route is activated only when there is at least one eligible active route in the sub-trees below it that is accepted by the policy evaluation. There is no evaluation into any sub-tree that starts with another active aggregate route. Eligible routes exclude host routes and LDP shortcut routes.</p> <p>If an aggregate route has no policy, or the reference is to an empty policy, this configuration is treated as equivalent to a policy with one rule that accepts all routes.</p>
Reference	<b>configure policy-options policy-statement string</b>
Introduced	20.10.R1
Platforms	All

### **summary-only boolean**

Synopsis	Advertise the aggregate route only
Context	<b>configure service vprn string aggregates aggregate</b> ( <i>ipv4-prefix   ipv6-prefix</i> ) <b>summary-only boolean</b>
Tree	<b>summary-only</b>
Description	<p>When configured to <b>true</b>, the router suppresses the advertisement of more specific component routes for the aggregate.</p> <p>When configured to <b>false</b>, the router advertises both the aggregate route and its contributing routes.</p>
Default	false

Introduced	16.0.R1
Platforms	All

### **tunnel-group** *number*

Synopsis	Tunnel group from which to associate the MC IPsec state
Context	<b>configure</b> <b>service vpn</b> <i>string</i> <b>aggregates aggregate</b> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>tunnel-group</b> <i>number</i>
Tree	<b>tunnel-group</b>
Description	This command adds the MC-IPsec state of the specific tunnel-group to the aggregate route.
Range	1 to 64
Introduced	20.7.R1
Platforms	All

### **allow-export-bgp-vpn** *boolean*

Synopsis	Include BGP-VPN routes for export
Context	<b>configure</b> <b>service vpn</b> <i>string</i> <b>allow-export-bgp-vpn</b> <i>boolean</i>
Tree	<b>allow-export-bgp-vpn</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **autonomous-system** *number*

Synopsis	AS number advertised to peers for this router
Context	<b>configure</b> <b>service vpn</b> <i>string</i> <b>autonomous-system</b> <i>number</i>
Tree	<b>autonomous-system</b>
Description	This command configures the autonomous system (AS) number for the router. This value must be set before BGP can be activated.  If the AS number is changed on a router with an active BGP instance, the new AS number is not used until the BGP instance is restarted.
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

## bgp

Synopsis	Enable the <b>bgp</b> context
Context	<b>configure service vprn string bgp</b>
Tree	<a href="#">bgp</a>
Introduced	16.0.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of the BGP instance
Context	<b>configure service vprn string bgp admin-state keyword</b>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R1
Platforms	All

## advertise-inactive *boolean*

Synopsis	Advertise inactive BGP routes to peers
Context	<b>configure service vprn string bgp advertise-inactive boolean</b>
Tree	<a href="#">advertise-inactive</a>
Description	When configured to <b>true</b> , this command allows any inactive BGP route to be advertised, even though it is not the used route.  When configured to <b>false</b> , the advertisement of inactive BGP routes to other BGP peers is disabled.
Default	false
Introduced	16.0.R1
Platforms	All

## advertise-ipv6-next-hops

Synopsis	Enter the <b>advertise-ipv6-next-hops</b> context
Context	<b>configure service vprn string bgp advertise-ipv6-next-hops</b>
Tree	<a href="#">advertise-ipv6-next-hops</a>

Introduced	19.5.R1
Platforms	All

### **ipv4** *boolean*

Synopsis	Enable IPv4 routes to be advertised
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp advertise-ipv6-next-hops ipv4</a> <i>boolean</i>
Tree	<a href="#">ipv4</a>
Default	false
Introduced	19.5.R1
Platforms	All

### **aggregator-id-zero** *boolean*

Synopsis	Set router ID in the BGP AGGREGATOR attribute to 0
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp aggregator-id-zero</a> <i>boolean</i>
Tree	<a href="#">aggregator-id-zero</a>
Description	When configured to <b>true</b> , the router ID in the BGP AGGREGATOR path attribute is set to 0 when BGP aggregates routes. This prevents different routers within an AS from creating aggregate routes for the same prefix with different path attributes.  When configured to <b>false</b> , the AS number and router ID are added to the AGGREGATOR path attribute.
Default	false
Introduced	16.0.R1
Platforms	All

### **asn-4-byte** *boolean*

Synopsis	Advertise support for 4-byte ASNs
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp asn-4-byte</a> <i>boolean</i>
Tree	<a href="#">asn-4-byte</a>
Default	true
Introduced	16.0.R1
Platforms	All

**attribute-set**

Synopsis	Enter the <b>attribute-set</b> context
Context	<b>configure service vprn string bgp attribute-set</b>
Tree	<b>attribute-set</b>
Description	<p>Commands in this context configure the handling of attribute set (ATTR_SET) attributes in BGP routes received from PE-CE peers of the VPRN.</p> <p>ATTR_SET is an optional transitive BGP path attribute standardized by RFC 6368 that is added to BGP L3 VPN routes to provide logical separation between the BGP domain of a customer and the BGP domain of a service provider.</p>
Introduced	23.10.R1
Platforms	All

**remove boolean**

Synopsis	Remove ATTR_SET in received BGP routes from PE-CE peers
Context	<b>configure service vprn string bgp attribute-set remove boolean</b>
Tree	<b>remove</b>
Description	<p>When configured to <b>true</b>, BGP ignores and silently discards ATTR_SETs in BGP routes received from PE-CE peers of the VPRN. The discarded ATTR_SETs do not affect BGP best path selection in the VPRN, and they do not appear in the VPN-IP routes that result from the VRF export of the BGP routes. Nokia recommends configuring this command to <b>true</b> in most deployments.</p> <p>When configured to <b>false</b>, BGP ignores ATTR_SETs in BGP routes received from PE-CE peers of the VPRN, but does not discard them. This allows the ATTR_SETs to propagate between CE devices connected to the VPRN and to other PE devices when the BGP routes are exported as VPN-IP routes.</p> <p><b>Note:</b> If the configuration of this command is changed, ROUTE_REFRESH messages are sent to all PE-CE peers of the VPRN.</p>
Default	false
Introduced	23.10.R1
Platforms	All

**authentication-key string**

Synopsis	BGP authentication key for all peers
Context	<b>configure service vprn string bgp authentication-key string</b>
Tree	<b>authentication-key</b>

Description	This command configures the authentication key used to protect all sessions. The stored format of the authentication key is based on the <b>configure system security hash-control management-interface md-cli hash-algorithm</b> setting.
String Length	1 to 370
Introduced	16.0.R1
Platforms	All

### authentication-keychain *reference*

Synopsis	TCP authentication keychain for the session
Context	<b>configure service vprn string bgp authentication-keychain reference</b>
Tree	<a href="#">authentication-keychain</a>
Description	This command associates the keychain to be used to authenticate the BGP session. The keychain allows the rollover of authentication keys during the lifetime of a session.
Reference	<b>configure system security keychains keychain string</b>
Introduced	16.0.R3
Platforms	All

### backup-path

Synopsis	Enter the <b>backup-path</b> context
Context	<b>configure service vprn string bgp backup-path</b>
Tree	<a href="#">backup-path</a>
Description	<p>Commands in this context enable the use of a backup path for specified BGP-learned prefixes belonging to the base router. Multiple paths must be received for a prefix in order to take advantage of this feature. When a prefix has a backup path and its primary paths fail, the affected traffic is rapidly diverted to the backup path without waiting for control plane re-convergence to occur. When many prefixes share the same primary paths and in some cases, the same backup path, the time to divert failover traffic to the backup path is independent of the number of prefixes.</p> <p>By default, IPv4 and IPv6 prefixes do not have a backup path installed in the IOM.</p>
Introduced	16.0.R1
Platforms	All

### ipv4 *boolean*

Synopsis	Enable support for unlabeled unicast IPv4 routes
Context	<b>configure service vprn string bgp backup-path ipv4 boolean</b>

---

Tree	<a href="#">ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **ipv6** *boolean*

Synopsis	Enable support for unlabeled unicast IPv6 routes
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp backup-path ipv6</a> <i>boolean</i>
Tree	<a href="#">ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **label-ipv4** *boolean*

Synopsis	Enable support for labeled-unicast IPv4 routes
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp backup-path label-ipv4</a> <i>boolean</i>
Tree	<a href="#">label-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **label-ipv6** *boolean*

Synopsis	Enable support for labeled unicast IPv6 routes
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp backup-path label-ipv6</a> <i>boolean</i>
Tree	<a href="#">label-ipv6</a>
Default	false
Introduced	22.2.R1
Platforms	All

### **best-path-selection**

Synopsis	Enter the <b>best-path-selection</b> context
----------	--

Context	<b>configure service vprn string bgp best-path-selection</b>
Tree	<a href="#">best-path-selection</a>
Introduced	16.0.R1
Platforms	All

### **always-compare-med**

Synopsis	Enter the <b>always-compare-med</b> context
Context	<b>configure service vprn string bgp best-path-selection always-compare-med</b>
Tree	<a href="#">always-compare-med</a>
Description	Commands in this context determine how the BGP decision process is affected by the MED path attribute.
Introduced	16.0.R1
Platforms	All

### **med-value** *keyword*

Synopsis	Action for a missing MED attribute
Context	<b>configure service vprn string bgp best-path-selection always-compare-med med-value keyword</b>
Tree	<a href="#">med-value</a>
Options	off, missing-med-zero, missing-med-infinity, on
Default	off
Introduced	16.0.R1
Platforms	All

### **strict-as** *boolean*

Synopsis	Compare MED only for routes from same neighbor AS
Context	<b>configure service vprn string bgp best-path-selection always-compare-med strict-as boolean</b>
Tree	<a href="#">strict-as</a>
Description	<p>When configured to <b>true</b>, the route selection process can compare the MED path attribute between routes only if they come from the same neighbor AS.</p> <p>When configured to <b>false</b>, the route selection process can compare the MED path attribute between routes even if they come from different neighbor ASs.</p>

Default	true
Introduced	16.0.R1
Platforms	All

### **as-path-ignore**

Synopsis	Enter the <b>as-path-ignore</b> context
Context	<b>configure service vprn string bgp best-path-selection as-path-ignore</b>
Tree	<a href="#">as-path-ignore</a>
Description	Commands in this context determine whether the AS path length is considered in the selection process for routes of the specified address families.
Introduced	16.0.R1
Platforms	All

### **ipv4 boolean**

Synopsis	Ignore AS path length for unlabeled unicast IPv4 routes
Context	<b>configure service vprn string bgp best-path-selection as-path-ignore ipv4 boolean</b>
Tree	<a href="#">ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **ipv6 boolean**

Synopsis	Ignore AS path length for unlabeled unicast IPv6 routes
Context	<b>configure service vprn string bgp best-path-selection as-path-ignore ipv6 boolean</b>
Tree	<a href="#">ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **label-ipv4 boolean**

Synopsis	Ignore AS path length for labeled-unicast IPv4 routes
----------	---

Context	<b>configure service vprn</b> <i>string</i> <b>bgp best-path-selection as-path-ignore label-ipv4</b> <i>boolean</i>
Tree	<a href="#">label-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **label-ipv6** *boolean*

Synopsis	Ignore AS path length for labeled unicast IPv6 routes
Context	<b>configure service vprn</b> <i>string</i> <b>bgp best-path-selection as-path-ignore label-ipv6</b> <i>boolean</i>
Tree	<a href="#">label-ipv6</a>
Default	false
Introduced	22.2.R1
Platforms	All

### **compare-origin-validation-state** *boolean*

Synopsis	Allow comparison of origin validation states
Context	<b>configure service vprn</b> <i>string</i> <b>bgp best-path-selection compare-origin-validation-state</b> <i>boolean</i>
Tree	<a href="#">compare-origin-validation-state</a>
Default	false
Introduced	19.7.R1
Platforms	All

### **d-path-length-ignore** *boolean*

Synopsis	Enable D-PATH length ignore
Context	<b>configure service vprn</b> <i>string</i> <b>bgp best-path-selection d-path-length-ignore</b> <i>boolean</i>
Tree	<a href="#">d-path-length-ignore</a>
Description	<p>When configured to <b>true</b>, this command, enables the router to ignore the D-PATH domain segment length during best-path selection.</p> <p>At the base router level (or VPRN BGP level for PE-CE routers), this command allows BGP to ignore the D-PATH domain segment length for best-path selection purposes. BGP ignores the D-PATH length when comparing two VPN routes or two IFL routes within the same RD. However, these VPN/IFL routes are processed in the main-BGP instance.</p>

At the VPRN router level, this command allows the VPRN RTM to ignore the D-PATH domain segment length for best-path selection purposes (for routes in VPRN). The user can control whether the RTM considers the D-PATH length when comparing two VPN routes with different RDs.

Best-path selection for EVPN-IFF routes against other owners (for example, EVPN-IFL or IPVPN) still relies on RTM preference. When EVPN-IFF RTM preference matches the RTM preference of another BGP owner, the existing RTM selection applies and D-PATH is not considered, irrespective of the **d-path-length-ignore** configuration.

When configured to **false**, this command disables the ability to ignore the D-PATH domain segment length.

Default	false
Introduced	21.10.R1
Platforms	All

### **deterministic-med** *boolean*

Synopsis	Group paths based on AS before MED attribute comparison
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp best-path-selection deterministic-med</a> <i>boolean</i>
Tree	<a href="#">deterministic-med</a>
Description	When configured to <b>true</b> , BGP groups paths from the same AS that are equal up to the MED attribute comparison and then compares the best path from each group to select the overall best path. This process ensures that the best-path selection process is deterministic in all cases.  When configured to <b>false</b> , paths are not grouped and the overall best-path selection can depend on the order of route arrival.
Default	false
Introduced	16.0.R1
Platforms	All

### **ebgp-ibgp-equal**

Synopsis	Enter the <b>ebgp-ibgp-equal</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp best-path-selection ebgp-ibgp-equal</a>
Tree	<a href="#">ebgp-ibgp-equal</a>
Description	Commands in this context allow BGP to ignore the difference between EBGp and IBGP routes in selecting the best path and eligible multipaths (if multipath and ECMP are enabled) for the specified address families. The result is a form of EIBGP load-balancing in a multipath scenario. This behavior can be applied selectively to certain address families.

By default, the BGP decision process prefers an EBGP learned route over an IBGP learned route.

Introduced 16.0.R1  
 Platforms All

### **ipv4 boolean**

Synopsis Consider EBGP and IBGP IPv4 routes equal  
 Context **configure service vprn string bgp best-path-selection ebgp-ibgp-equal ipv4 boolean**  
 Tree [ipv4](#)  
 Default false  
 Introduced 16.0.R1  
 Platforms All

### **ipv6 boolean**

Synopsis Consider EBGP and IBGP IPv6 routes equal  
 Context **configure service vprn string bgp best-path-selection ebgp-ibgp-equal ipv6 boolean**  
 Tree [ipv6](#)  
 Default false  
 Introduced 16.0.R1  
 Platforms All

### **label-ipv4 boolean**

Synopsis Consider EBGP and IBGP label-IPv4 routes equal  
 Context **configure service vprn string bgp best-path-selection ebgp-ibgp-equal label-ipv4 boolean**  
 Tree [label-ipv4](#)  
 Default false  
 Introduced 16.0.R1  
 Platforms All

### **label-ipv6 boolean**

Synopsis Consider EBGP and IBGP label-IPv6 routes equal

Context	<b>configure service vprn string bgp best-path-selection ebgp-ibgp-equal label-ipv6 boolean</b>
Tree	<a href="#">label-ipv6</a>
Default	false
Introduced	22.2.R1
Platforms	All

### **ignore-nh-metric boolean**

Synopsis	Ignore next-hop distance in best path selection
Context	<b>configure service vprn string bgp best-path-selection ignore-nh-metric boolean</b>
Tree	<a href="#">ignore-nh-metric</a>
Description	<p>When configured to <b>true</b>, BGP ignores the resolved distance to the BGP next hop in its route selection process.</p> <p>When configured to <b>false</b>, BGP factors the distance to the next hop into its decision process when it compares two BGP routes with the same NLRI learned from base router BGP peers (in the <b>router</b> context) or IP prefix learned from VPRN BGP peers (in the <b>vprn</b> context).</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **ignore-router-id**

Synopsis	Enable the <b>ignore-router-id</b> context
Context	<b>configure service vprn string bgp best-path-selection ignore-router-id</b>
Tree	<a href="#">ignore-router-id</a>
Description	<p>Commands in this context determine whether the BGP selection process ignores the BGP identifier (router ID) comparison of two EBGP paths from different EBGP peers when determining the best path for the specified address families.</p> <p>By default, BGP selects the path with the lower router ID when it compares two paths from EBGP peers.</p>
Introduced	16.0.R1
Platforms	All

**origin-invalid-unusable** *boolean*

Synopsis	Ignore routes with invalid origin validation state
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp best-path-selection origin-invalid-unusable</a> <i>boolean</i>
Tree	<a href="#">origin-invalid-unusable</a>
Default	false
Introduced	19.7.R1
Platforms	All

**bfd-liveness** *boolean*

Synopsis	Enable BFD
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp bfd-liveness</a> <i>boolean</i>
Tree	<a href="#">bfd-liveness</a>
Description	When configured to <b>true</b> , BFD is enabled on all BGP sessions, subject to the association of those BGP sessions with IP interfaces that have BFD configurations. When configured to <b>false</b> , BFD is not enabled globally for all BGP sessions.
Default	false
Introduced	16.0.R1
Platforms	All

**bfd-strict-mode**

Synopsis	Enter the <b>bfd-strict-mode</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp bfd-strict-mode</a>
Tree	<a href="#">bfd-strict-mode</a>
Introduced	23.7.R1
Platforms	All

**advertise**

Synopsis	Enable the <b>advertise</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp bfd-strict-mode advertise</a>
Tree	<a href="#">advertise</a>
Description	Commands in this context configure BGP to advertise the Strict-BFD capability to peers that are within scope of this command and meet the following requirements:

- The inherited or configured value for the **bfd-liveness** command that applies to the peer is **true**.
- The interface associated with the peer has a valid BFD configuration.

When the preceding conditions are satisfied and two peers attempting to form a session both advertise the Strict-BFD capability, the BGP finite state machine in each router transitions the session state to established after the BFD session with the peer enters the up state.

When unconfigured, BGP does not advertise the Strict-BFD capability to peers.

Introduced	23.7.R1
Platforms	All

### **holdtime** *number*

Synopsis	Maximum time BGP waits for the BFD session to come up
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>bgp</b> <b>bfd-strict-mode</b> <b>advertise</b> <b>holdtime</b> <i>number</i>
Tree	<b>holdtime</b>
Description	This command configures the maximum time BGP waits for the BFD session to come up, provided that the Strict-BFD procedures apply to a session, and the negotiated BGP hold time is zero (no keepalives). If the negotiated BGP hold time is greater than zero, the advertised hold time is not considered.
Range	1 to 65535
Units	seconds
Default	30
Introduced	23.7.R1
Platforms	All

### **next-hop-reachability** *boolean*

Synopsis	Consider next hop unreachable if BFD session is down
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>bgp</b> <b>bfd-strict-mode</b> <b>next-hop-reachability</b> <i>boolean</i>
Tree	<b>next-hop-reachability</b>
Description	When configured to <b>true</b> , the router considers next-hop self routes belonging to specific address families received from a peer within scope of this command as having an unresolved next hop, provided that the following requirements are met: <ul style="list-style-type: none"> <li>• The BFD session to the peer is in a down state.</li> <li>• There is a valid interface BFD configuration that applies to the peer.</li> <li>• There is a valid BFD liveness configuration that applies to the peer.</li> </ul>

The unresolved state is maintained until the BFD session state changes to up or administratively down, even if there is a resolving route or tunnel that matches the BGP next-hop address.

Routes received from one peer with a BGP next-hop address equal to the address of another peer are not affected by the BFD session to the other peer.

The behavior of the router when this command is **true** does not depend on whether Strict-BFD is used, as both features are independent.

Configuring this command to **true** only affects routes belonging to the following address families:

- IPv4
- IPv6
- IPv4 VPN
- IPv6 VPN
- labeled unicast IPv4
- labeled unicast IPv6
- EVPN
- IPv4 multicast
- IPv6 multicast
- IPv4 VPN multicast
- IPv6 VPN multicast

When configured to **false**, the router does not consider next-hop self routes belonging to the preceding address families as having an unresolved next hop if the BFD session goes down.

Default	false
Introduced	23.7.R1
Platforms	All

### **client-reflect** *boolean*

Synopsis	Allow client reflection of routes by route reflector
Context	<b>configure</b> <i>service vpn</i> <i>string</i> <b>bgp</b> <b>client-reflect</b> <i>boolean</i>
Tree	<b>client-reflect</b>
Description	When configured to <b>true</b> , routes received from neighbors considered to be RR clients are reflected to other peers as expected.  When configured to <b>false</b> , routes received from neighbors considered to be RR clients are not reflected to other clients.
Default	true
Introduced	16.0.R1

Platforms All

## cluster

Synopsis Enter the **cluster** context  
 Context **configure service vprn string bgp cluster**

**damp-peer-oscillations**

Synopsis	Enable the <b>damp-peer-oscillations</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp damp-peer-oscillations</a>
Tree	<a href="#">damp-peer-oscillations</a>
Description	<p>Commands in this context support the DampPeerOscillations FSM behavior described in section 8.1 of RFC 4271, <i>A Border Gateway Protocol 4 (BGP-4)</i>.</p> <p>When unconfigured, the router does not perform peer oscillation damping and immediately transitions out of the idle state after every reset.</p>
Introduced	16.0.R1
Platforms	All

**error-interval** *number*

Synopsis	Time after a reset that the session must be error-free
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp damp-peer-oscillations error-interval</a> <i>number</i>
Tree	<a href="#">error-interval</a>
Description	This command sets the interval of time after a reset, during which the session must be error-free in order to reset the penalty counter and return the idle hold time to the initial wait time.
Range	0 to 2048
Default	30
Introduced	16.0.R1
Platforms	All

## idle-hold-time

Synopsis	Enter the <b>idle-hold-time</b> context
Context	<b>configure service vprn string bgp damp-peer-oscillations idle-hold-time</b>
Tree	<a href="#">idle-hold-time</a>
Description	<p>Commands in this context configure how long a BGP peer session remains in the idle state after some type of error causes the session to reset.</p> <p>In the idle state, BGP does not initiate or respond to attempts to establish a new session. Repeated errors that occur in a short time period after each session reset cause longer and longer hold times in the idle state.</p>
Introduced	16.0.R1
Platforms	All

## initial-wait *number*

Synopsis	Time session remains in idle state after stabilization
Context	<b>configure service vprn string bgp damp-peer-oscillations idle-hold-time initial-wait number</b>
Tree	<a href="#">initial-wait</a>
Range	0 to 2048
Default	0
Introduced	16.0.R1
Platforms	All

## max-wait *number*

Synopsis	Maximum session idle time after repeated instability
Context	<b>configure service vprn string bgp damp-peer-oscillations idle-hold-time max-wait number</b>
Tree	<a href="#">max-wait</a>
Range	1 to 2048
Default	60
Introduced	16.0.R1
Platforms	All

**second-wait** *number*

Synopsis	Time that doubles after each session failure
Context	<b>configure</b> <a href="#">service vprn string bgp damp-peer-oscillations idle-hold-time second-wait number</a>
Tree	<a href="#">second-wait</a>
Description	This command defines the hold time that doubles after each repeated session failure that occurs in a short span of time.
Range	1 to 2048
Default	5
Introduced	16.0.R1
Platforms	All

**damping** *boolean*

Synopsis	Use BGP route damping to reduce route flap
Context	<b>configure</b> <a href="#">service vprn string bgp damping boolean</a>
Tree	<a href="#">damping</a>
Description	<p>When configured to <b>true</b>, this command enables route damping to reduce the number of update messages sent between BGP peers and reduce the load on peers without affecting the route convergence time for stable routes.</p> <p>Route damping is controlled by profiles set in route policies. If no profile is specified in the route policy, the default damping profile is used with the following parameters:</p> <ul style="list-style-type: none"> <li>• Half-life: 15 minutes</li> <li>• Max-suppress: 60 minutes</li> <li>• Suppress-threshold: 3000</li> <li>• Reuse-threshold: 750</li> </ul> <p>When configured to <b>false</b>, BGP route damping for learned routes is disabled.</p>
Default	false
Introduced	16.0.R1
Platforms	All

**default-label-preference**

Synopsis	Enter the <b>default-label-preference</b> context
Context	<b>configure</b> <a href="#">service vprn string bgp default-label-preference</a>
Tree	<a href="#">default-label-preference</a>

---

Introduced	19.5.R1
Platforms	All

### **ebgp number**

Synopsis	Default preference for EBGP
Context	<b>configure service vprn string bgp default-label-preference ebgp number</b>
Tree	<a href="#">ebgp</a>
Range	0 to 255
Default	0
Introduced	19.5.R1
Platforms	All

### **ibgp number**

Synopsis	Default preference for IBGP
Context	<b>configure service vprn string bgp default-label-preference ibgp number</b>
Tree	<a href="#">ibgp</a>
Range	0 to 255
Default	0
Introduced	19.5.R1
Platforms	All

### **default-preference**

Synopsis	Enter the <b>default-preference</b> context
Context	<b>configure service vprn string bgp default-preference</b>
Tree	<a href="#">default-preference</a>
Introduced	19.5.R1
Platforms	All

### **ebgp number**

Synopsis	Default preference for EBGP
Context	<b>configure service vprn string bgp default-preference ebgp number</b>

Tree	<a href="#">ebgp</a>
Range	0 to 255
Default	0
Introduced	19.5.R1
Platforms	All

### **ibgp number**

Synopsis	Default preference for IBGP
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">bgp default-preference ibgp number</a>
Tree	<a href="#">ibgp</a>
Range	0 to 255
Default	0
Introduced	19.5.R1
Platforms	All

### **description string**

Synopsis	Text description
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">bgp description string</a>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **domain-id string**

Synopsis	Domain ID of received BGP route before readvertisement
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">bgp domain-id string</a>
Tree	<a href="#">domain-id</a>
Description	This command specifies the domain ID. The domain ID identifies the network from which the BGP route was received before the RTM advertises it to a different neighbor. The domain ID is part of a domain, represented as domain-id:isf_safi_type in the D-PATH attribute, as described in <i>draft-ietf-bess-evpn-ipvpn-interworking</i> . Gateway routers modify the D-PATH attribute. A gateway is a PE where a VPRN is instantiated. The VPRN in this case advertises or receives routes from multiple BGP owners (for example,

EVPN-IFL and BGP-IPVPN) or multiple instances of the same owner (for example, VPRN with two BGP-IPVPN instances).

Gateways use the D-PATH attribute to detect loops (for received routes where the D-PATH contains a local domain ID) and to make BGP best-path selection decisions based on the D-PATH length (shorter D-PATH is preferred).

In the following example, suppose a gateway receives prefix P in an EVPN-IFL instance with the following D-PATH from neighbor N:

Seg Len=1 / 65000:1:128

If the router imports the route in VPRN-1, BGP-EVPN SRv6 instance with domain 65000:2, it readvertises it to its BGP-IPVPN MPLS instance as follows:

Seg Len=2 / 65000:2:70 / 65000:1:128

That is, the gateway prepends the local domain ID and family to the D-PATH before readvertising the route into a different instance.

Introduced	21.10.R1
Platforms	All

### **dynamic-neighbor-limit** *number*

Synopsis	Max dynamic BGP sessions to accept from remote peers
Context	<b>configure service vprn string bgp dynamic-neighbor-limit number</b>
Tree	<a href="#">dynamic-neighbor-limit</a>
Description	This command configures the maximum number of dynamic BGP sessions to accept from remote peers associated with the entire BGP instance. If accepting a new dynamic session causes the instance limit to be exceeded, the new session attempt is rejected and a Notification message is sent back to the remote peer.
Range	1 to 8192
Introduced	16.0.R1
Platforms	All

### **ebgp-default-reject-policy**

Synopsis	Enter the <b>ebgp-default-reject-policy</b> context
Context	<b>configure service vprn string bgp ebgp-default-reject-policy</b>
Tree	<a href="#">ebgp-default-reject-policy</a>
Introduced	19.5.R1
Platforms	All

**export** *boolean*

Synopsis	Enable default reject export policy for external peers
Context	<b>configure</b> <a href="#">service vpn</a> <i>string</i> <a href="#">bgp ebgp-default-reject-policy</a> <a href="#">export</a> <i>boolean</i>
Tree	<a href="#">export</a>
Default	true
Introduced	19.5.R1
Platforms	All

**import** *boolean*

Synopsis	Enable default reject import policy for external peers
Context	<b>configure</b> <a href="#">service vpn</a> <i>string</i> <a href="#">bgp ebgp-default-reject-policy</a> <a href="#">import</a> <i>boolean</i>
Tree	<a href="#">import</a>
Default	true
Introduced	19.5.R1
Platforms	All

**eibgp-loadbalance** *boolean*

Synopsis	Use ECMP over BGP VPN and BGP routes
Context	<b>configure</b> <a href="#">service vpn</a> <i>string</i> <a href="#">bgp eibgp-loadbalance</a> <i>boolean</i>
Tree	<a href="#">eibgp-loadbalance</a>
Default	false
Introduced	16.0.R1
Platforms	All

**enforce-first-as** *boolean*

Synopsis	Enforce the configured peer AS value in received routes
Context	<b>configure</b> <a href="#">service vpn</a> <i>string</i> <a href="#">bgp enforce-first-as</a> <i>boolean</i>
Tree	<a href="#">enforce-first-as</a>
Description	When configured to <b>true</b> for an EBGp session, all routes received from an EBGp peer are checked to ensure that the most recent ASN in the AS_PATH attribute of each route matches the configured AS of the session. If there is not a match, the session is reset (if the <b>update-fault-tolerance</b> command in the <b>error-handling</b> context is set to <b>false</b> ) or the session is left up but the route is treated as withdrawn (if <b>update-fault-tolerance</b> is set to <b>true</b> ).

This command does not flap an established session because it applies only to routes received after the command is issued.

When configured to **false**, received routes are not checked for compliance with the rule.

Default	false
Introduced	16.0.R1
Platforms	All

## error-handling

Synopsis	Enter the <b>error-handling</b> context
Context	<b>configure service vprn string bgp error-handling</b>
Tree	<a href="#">error-handling</a>
Introduced	16.0.R1
Platforms	All

## update-fault-tolerance *boolean*

Synopsis	Tolerate non-critical errors in UPDATE messages
Context	<b>configure service vprn string bgp error-handling update-fault-tolerance boolean</b>
Tree	<a href="#">update-fault-tolerance</a>
Description	When configured to <b>true</b> , non-critical errors are handled with treat-as-withdraw, attribute-discard, and other non-disruptive approaches that do not cause a session reset. Critical errors still trigger a session reset.  When configured to <b>false</b> , most errors trigger a session reset.
Default	false
Introduced	16.0.R1
Platforms	All

## export

Synopsis	Enable the <b>export</b> context
Context	<b>configure service vprn string bgp export</b>
Tree	<a href="#">export</a>
Introduced	16.0.R1
Platforms	All

**policy** (*policy-expr-string* | *string*)

Synopsis	Export policy name

Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp family flow-ipv4</a> <i>boolean</i>
Tree	<a href="#">flow-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **flow-ipv6** *boolean*

Synopsis	Advertise support for the flowspec-IPv6 address family
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp family flow-ipv6</a> <i>boolean</i>
Tree	<a href="#">flow-ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **ipv4** *boolean*

Synopsis	Advertise MP-BGP support for the IPv4 address family
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp family ipv4</a> <i>boolean</i>
Tree	<a href="#">ipv4</a>
Default	true
Introduced	16.0.R1
Platforms	All

### **ipv6** *boolean*

Synopsis	Advertise MP-BGP support for the IPv6 address family
----------	--

---

Context	<b>configure service vprn</b> <i>string</i> <b>bgp family ipv6</b> <i>boolean</i>
Tree	<a href="#">ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **label-ipv4** *boolean*

Synopsis	Advertise support for the label-IPv4 address family
Context	<b>configure service vprn</b> <i>string</i> <b>bgp family label-ipv4</b> <i>boolean</i>
Tree	<a href="#">label-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **mcast-ipv4** *boolean*

Synopsis	Advertise support for the MCAST-IPv4 address family
Context	<b>configure service vprn</b> <i>string</i> <b>bgp family mcast-ipv4</b> <i>boolean</i>
Tree	<a href="#">mcast-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **mcast-ipv6** *boolean*

Synopsis	Advertise support for the MCAST-IPv6 address family
Context	<b>configure service vprn</b> <i>string</i> <b>bgp family mcast-ipv6</b> <i>boolean</i>
Tree	<a href="#">mcast-ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

**fast-external-failover** *boolean*

Synopsis	Drop external BGP session immediately when link fails
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp fast-external-failover</a> <i>boolean</i>
Tree	<a href="#">fast-external-failover</a>
Description	When configured to <b>true</b> , the router drops an external BGP session to a single-hop neighbor immediately when the local interface goes down. When configured to <b>false</b> , the BGP session remains up until the hold time expires.
Default	true
Introduced	16.0.R1
Platforms	All

**flowspec**

Synopsis	Enter the <b>flowspec</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp flowspec</a>
Tree	<a href="#">flowspec</a>
Introduced	16.0.R1
Platforms	All

**validate-dest-prefix** *boolean*

Synopsis	Validate destination prefix in FlowSpec-IPv4/IPv6 route
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp flowspec validate-dest-prefix</a> <i>boolean</i>
Tree	<a href="#">validate-dest-prefix</a>
Description	When configured to <b>true</b> , this command enables validation of received IPv4 and IPv6 FlowSpec routes that contain a destination-prefix subcomponent. A FlowSpec route with a destination-prefix subcomponent is considered invalid if both of the following are true: <ul style="list-style-type: none"> <li>• it was originated outside the local AS of the receiving BGP router</li> <li>• the neighbor AS of the FlowSpec route does not match the neighbor AS of the best match BGP (unicast) route for the destination prefix or the neighbor AS of any longer match BGP (unicast) route for the destination prefix</li> </ul> An invalid route is retained in the BGP but it is not used for filtering traffic or propagated to other BGP routers. When configured to <b>false</b> , destination-prefix validation is disabled.
Default	false
Introduced	16.0.R1

Platforms All

### **validate-redirect-ip** *boolean*

Synopsis Validate the redirect-to-IPv4 action in FlowSpec route

Context **configure** [service vprn](#) *string* [bgp flowspec](#) **validate-redirect-ip** *boolean*

Tree [validate-redirect-ip](#)

Description When configured to **true**, this command enables procedures to validate the redirect-to-IPv4 action attached to FlowSpec-IPv4 routes that are received by the BGP instance.

A FlowSpec-IPv4 route is considered invalid and is not installed as a filter rule if the FlowSpec-IPv4 route is deemed to have originated from a different AS than the IP route that resolves the redirection IPv4 address. The originating AS of a FlowSpec route is determined from its AS path.

When configured to **false**, the validation check is disabled.

Default false

Introduced 16.0.R1

Platforms All

### **graceful-restart**

Synopsis Enable the **graceful-restart** context

Context **configure** [service vprn](#) *string* [bgp](#) **graceful-restart**

Tree [graceful-restart](#)

Introduced 16.0.R1

Platforms All

### **gr-notification** *boolean*

Synopsis Perform Graceful Restart procedures

Context **configure** [service vprn](#) *string* [bgp graceful-restart](#) **gr-notification** *boolean*

Tree [gr-notification](#)

Description When configured to **true**, the Graceful Restart capability sent by the router indicates support for NOTIFICATION messages. If the peer also supports this capability, the session is restarted gracefully (while preserving forwarding) if either peer sends a NOTIFICATION message due to some type of event or error.

When configured to **false**, NOTIFICATION messages are not supported.

Default false

Introduced	16.0.R1
Platforms	All

## long-lived

Synopsis	Enable the <b>long-lived</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp graceful-restart long-lived</a>

Platforms	All

**helper-override-stale-time** *number*

Synopsis	Locally-configured stale routes override time
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">bgp</a> <a href="#">graceful-restart</a> <a href="#">long-lived</a> <a href="#">family</a> <i>keyword</i> <a href="#">helper-override-stale-time</a> <i>number</i>
Tree	<a href="#">helper-override-stale-time</a>
Range	0 to 16777215
Introduced	16.0.R1
Platforms	All

**forwarding-bits-set** *keyword*

Synopsis	BGP LLGR forwarding-bit behavior for address family
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">bgp</a> <a href="#">graceful-restart</a> <a href="#">long-lived</a> <b>forwarding-bits-set</b> <i>keyword</i>
Tree	<a href="#">forwarding-bits-set</a>
Description	<p>This command determines the setting of the F bit in the GR and LLGR capabilities advertised by the router. When the F bit is set for an address family, it indicates that the advertising router is able to preserve forwarding state for the routes of that address family across the last restart. When the session is re-established after a restart and the F bit is not set, all stale routes from the peer are immediately removed for the corresponding address family.</p> <p>This command allows the F bit to be set for all address families or only for non-forwarding address families (L2-VPN, route target, flow-IPv4, and flow-IPv6).</p>
Options	none, all, non-fw
Default	none
Introduced	16.0.R1
Platforms	All

**helper-override-restart-time** *number*

Synopsis	Locally-configured override for restart time
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">bgp</a> <a href="#">graceful-restart</a> <a href="#">long-lived</a> <b>helper-override-restart-time</b> <i>number</i>
Tree	<a href="#">helper-override-restart-time</a>
Description	<p>This command overrides the restart time advertised by a peer (in its GR capability) with a locally-configured value. This override applies only to AFI/SAFI that were included in the GR capability of the peer. The restart-time is always zero for AFI/SAFI not included in the GR capability. This command is useful if the local router wants to force the LLGR phase to begin after a set time for all protected AFI/SAFI.</p>
Range	0 to 4095
Introduced	16.0.R1
Platforms	All

**helper-override-stale-time** *number*

Synopsis	Locally-configured stale routes override time
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">bgp</a> <a href="#">graceful-restart</a> <a href="#">long-lived</a> <b>helper-override-stale-time</b> <i>number</i>
Tree	<a href="#">helper-override-stale-time</a>

Description	This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability.  This command applies to all AFI/SAFI in the advertised LLGR capability except for any AFI/SAFI with a family-specific override.
Range	0 to 16777215
Introduced	16.0.R1
Platforms	All

### **without-no-export** *boolean*

Synopsis	Advertise LLGR stale routes to non-LLGR peers
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp graceful-restart long-lived without-no-export</a> <i>boolean</i>
Tree	<a href="#">without-no-export</a>
Description	When configured to <b>true</b> , LLGR stale routes can be advertised to any peer (EBGP or IBGP) that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0.  When configured to <b>false</b> , LLGR stale routes are not advertised to any EBGP peer that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0 and a NO_EXPORT standard community is automatically added to the routes.
Default	false
Introduced	16.0.R1
Platforms	All

### **restart-time** *number*

Synopsis	Restart time advertised by GR capability
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp graceful-restart restart-time</a> <i>number</i>
Tree	<a href="#">restart-time</a>
Range	0 to 4095
Default	120
Introduced	16.0.R1

Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	enable
Introduced	16.0.R1

Platforms All

### **advertise-inactive** *boolean*

Synopsis Advertise an inactive BGP route to peers

Context **configure** *service vprn string bgp group string advertise-inactive boolean*

Tree [advertise-inactive](#)

Description When configured to **true**, this command allows an inactive BGP route to be advertised, even though it is not the most preferred route. The effect of the command on advertised unlabeled, labeled, and multicast IPv4 and IPv6 routes depends on several factors.

- If the active route for the IP prefix is a BGP route, that route is advertised.
- If the active route is a non-BGP route and there are valid inactive BGP routes to the same destination, the best valid inactive route is advertised unless the active non-BGP route is matched and accepted by an export policy applied to the session.
- If the active route is a non-BGP route and there are no valid BGP routes to the same destination, no route is advertised unless the active non-BGP route is matched and accepted by an export policy applied to the session.

When unconfigured, the command inherits the value of the global-level setting (**true** or **false**). The command cannot be explicitly configured to **false**.

When this command inherits a value of **false**, the advertisement of inactive BGP routes to other BGP peers is disabled.

Introduced 16.0.R1

Platforms All

### **advertise-ipv6-next-hops**

Synopsis Enable the **advertise-ipv6-next-hops** context

Context **configure** *service vprn string bgp group string advertise-ipv6-next-hops*

Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <b>as-override</b> <i>boolean</i>
Tree	<a href="#">as-override</a>
Description	<p>When configured to <b>true</b>, the advertising router's local AS replaces all occurrences of the peer AS in the AS_PATH attribute.</p> <p>This command should be used with caution, as it breaks BGP's loop detection mechanism.</p> <p>When configured to <b>false</b>, no AS override is performed.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **asn-4-byte** *boolean*

Synopsis	Advertise the use of 4-byte ASNs
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <b>asn-4-byte</b> <i>boolean</i>
Tree	<a href="#">asn-4-byte</a>
Description	<p>When this command inherits a value of <b>true</b>, the use of 4-byte ASNs is supported.</p> <p>When unconfigured, the command inherits the value of the global-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>true</b>.</p> <p>When configured to <b>false</b>, this command disables the use of 4-byte ASNs.</p>
Introduced	16.0.R1
Platforms	All

**authentication-key string**

Synopsis	BGP authentication key for peers in the group
Context	<b>configure service vpn string bgp group string authentication-key string</b>
Tree	<a href="#">authentication-key</a>
Description	This command configures the authentication key that must be configured on both peers. The stored format of the authentication key is based on the <b>configure system security hash-control management-interface md-cli hash-algorithm</b> setting.
String Length	1 to 370
Introduced	16.0.R1
Platforms	All

**authentication-keychain reference**

Synopsis	TCP authentication keychain for the session
Context	<b>configure service vpn string bgp group string authentication-keychain reference</b>
Tree	<a href="#">authentication-keychain</a>
Description	This command associates the keychain to be used to authenticate the BGP session. The keychain allows the rollover of authentication keys during the lifetime of a session.
Reference	<b>configure system security keychains keychain string</b>
Introduced	16.0.R3
Platforms	All

**bfd-liveness boolean**

Synopsis	Enable BFD
Context	<b>configure service vpn string bgp group string bfd-liveness boolean</b>
Tree	<a href="#">bfd-liveness</a>
Description	<p>When configured to <b>true</b>, BFD is enabled on a given protocol interface where the state of the protocol interface is tied to the state of the BFD session between the local node and the remote node.</p> <p>When unconfigured, the command inherits the value of the global-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>false</b>.</p> <p>When this command inherits a value of <b>false</b>, BFD is removed from the associated protocol adjacency.</p>
Introduced	16.0.R1
Platforms	All

**bfd-strict-mode**

Synopsis	Enter the <b>bfd-strict-mode</b> context
Context	<b>configure service vprn string bgp group string bfd-strict-mode</b>
Tree	<a href="#">bfd-strict-mode</a>
Introduced	23.7.R1
Platforms	All

**advertise**

Synopsis	Enable the <b>advertise</b> context
Context	<b>configure service vprn string bgp group string bfd-strict-mode advertise</b>
Tree	<a href="#">advertise</a>
Description	<p>Commands in this context configure BGP to advertise the Strict-BFD capability to peers that are within scope of this command and meet the following requirements:</p> <ul style="list-style-type: none"> <li>• The inherited or configured value for the <b>bfd-liveness</b> command that applies to the peer is <b>true</b>.</li> <li>• The interface associated with the peer has a valid BFD configuration.</li> </ul> <p>When the preceding conditions are satisfied and two peers attempting to form a session both advertise the Strict-BFD capability, the BGP finite state machine in each router transitions the session state to established after the BFD session with the peer enters the up state.</p> <p>When unconfigured, BGP does not advertise the Strict-BFD capability to peers.</p>
Introduced	23.7.R1
Platforms	All

**holdtime *number***

Synopsis	Maximum time BGP waits for the BFD session to come up
Context	<b>configure service vprn string bgp group string bfd-strict-mode advertise holdtime <i>number</i></b>
Tree	<a href="#">holdtime</a>
Description	This command configures the maximum time BGP waits for the BFD session to come up, provided that the Strict-BFD procedures apply to a session, and the negotiated BGP hold time is zero (no keepalives). If the negotiated BGP hold time is greater than zero, the advertised hold time is not considered.
Range	1 to 65535
Units	seconds

Default	30
Introduced	23.7.R1
Platforms	All

### **next-hop-reachability** *boolean*

Synopsis	Consider next hop unreachable if BFD session is down
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>bgp</b> <b>group</b> <i>string</i> <b>bfd-strict-mode</b> <b>next-hop-reachability</b> <i>boolean</i>
Tree	<b>next-hop-reachability</b>
Description	<p>When configured to <b>true</b>, the router considers next-hop self routes belonging to specific address families received from a peer within scope of this command as having an unresolved next hop, provided that the following requirements are met:</p> <ul style="list-style-type: none"> <li>• The BFD session to the peer is in a down state.</li> <li>• There is a valid interface BFD configuration that applies to the peer.</li> <li>• There is a valid BFD liveness configuration that applies to the peer.</li> </ul> <p>The unresolved state is maintained until the BFD session state changes to up or administratively down, even if there is a resolving route or tunnel that matches the BGP next-hop address.</p> <p>Routes received from one peer with a BGP next-hop address equal to the address of another peer are not affected by the BFD session to the other peer.</p> <p>The behavior of the router when this command is <b>true</b> does not depend on whether Strict-BFD is used, as both features are independent.</p> <p>Configuring this command to <b>true</b> only affects routes belonging to the following address families:</p> <ul style="list-style-type: none"> <li>• IPv4</li> <li>• IPv6</li> <li>• IPv4 VPN</li> <li>• IPv6 VPN</li> <li>• labeled unicast IPv4</li> <li>• labeled unicast IPv6</li> <li>• EVPN</li> <li>• IPv4 multicast</li> <li>• IPv6 multicast</li> <li>• IPv4 VPN multicast</li> <li>• IPv6 VPN multicast</li> </ul> <p>When configured to <b>false</b>, the router does not consider next-hop self routes belonging to the preceding address families as having an unresolved next hop if the BFD session goes down.</p>

Introduced 23.7.R1  
 Platforms All

### **capability-negotiation** *boolean*

Synopsis Enable capability negotiation  
 Context **configure** *service vprn string bgp group string capability-negotiation boolean*  
 Tree [capability-negotiation](#)  
 Description When configured to **true**, this command enables the exchange of capabilities.  
 When configured to **false** and the peering is flapped, new capabilities are not negotiated and strictly IPv4 exchanges are supported with the peer.  
 Default true  
 Introduced 16.0.R1  
 Platforms All

### **client-reflect** *boolean*

Synopsis Allow cluster RR to advertise routes to its clients  
 Context **configure** *service vprn string bgp group string client-reflect boolean*  
 Tree [client-reflect](#)  
 Description When unconfigured, this command inherits the value of the global-level setting (**true** or **false**). The command cannot be explicitly configured to **true**.  
 When the command inherits a value of **true**, client reflection of routes is enabled.  
 When configured to **false**, this command disables client reflection of routes.  
 Introduced 16.0.R1  
 Platforms All

### **cluster**

Synopsis Enter the **cluster** context  
 Context **configure** *service vprn string bgp group string cluster*  
 Tree [cluster](#)  
 Introduced 16.0.R1  
 Platforms All

**cluster-id** *string*

Synopsis	Route reflector cluster ID
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">bgp group string</a> <a href="#">cluster cluster-id string</a>
Tree	<a href="#">cluster-id</a>
Introduced	16.0.R1
Platforms	All

**connect-retry** *number*

Synopsis	BGP connect retry timer value
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">bgp group string</a> <a href="#">connect-retry number</a>
Tree	<a href="#">connect-retry</a>
Range	1 to 65535
Introduced	16.0.R1
Platforms	All

**damp-peer-oscillations**

Synopsis	Enable the <b>damp-peer-oscillations</b> context
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">bgp group string</a> <a href="#">damp-peer-oscillations</a>
Tree	<a href="#">damp-peer-oscillations</a>
Description	<p>Commands in this context specify how long a BGP peer session remains in the idle state after an error causes the session to reset. In the idle state, BGP does not initiate or respond to attempts to establish a new session. Repeated errors that occur a short time after each session reset cause longer and longer hold times in the idle state.</p> <p>When unconfigured, command settings are inherited from the global-level configuration.</p>
Introduced	16.0.R1
Platforms	All

**error-interval** *number*

Synopsis	Time after a reset that the session must be error-free
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">bgp group string</a> <a href="#">damp-peer-oscillations error-interval number</a>
Tree	<a href="#">error-interval</a>

Description	This command sets the interval of time after a reset, during which the session must be error-free in order to reset the penalty counter and return the idle hold time to the initial wait time.
Range	0 to 2048
Default	30
Introduced	16.0.R1
Platforms	All

### **idle-hold-time**

Synopsis	Enter the <b>idle-hold-time</b> context
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">bgp group string</a> <a href="#">damp-peer-oscillations</a> <a href="#">idle-hold-time</a>
Tree	<a href="#">idle-hold-time</a>
Introduced	16.0.R1
Platforms	All

### **initial-wait number**

Synopsis	Time session remains in idle state after stabilization
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">bgp group string</a> <a href="#">damp-peer-oscillations</a> <a href="#">idle-hold-time</a> <a href="#">initial-wait number</a>
Tree	<a href="#">initial-wait</a>
Range	0 to 2048
Default	0
Introduced	16.0.R1
Platforms	All

### **max-wait number**

Synopsis	Maximum session idle time after repeated instability
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">bgp group string</a> <a href="#">damp-peer-oscillations</a> <a href="#">idle-hold-time</a> <a href="#">max-wait number</a>
Tree	<a href="#">max-wait</a>
Range	1 to 2048
Default	60
Introduced	16.0.R1

Platforms All

### **second-wait** *number*

Synopsis Time that doubles after each repeated session failure

Context **configure** [service vprn](#) *string* [bgp group](#) *string* [damp-peer-oscillations](#) [idle-hold-time](#) [second-wait](#) *number*

Tree [second-wait](#)

Description This command defines the hold time that doubles after each repeated session failure that occurs in a short span of time.

Range 1 to 2048

Default 5

Introduced 16.0.R1

Platforms All

### **damping** *boolean*

Synopsis Use BGP route damping to reduce route flap

Context **configure** [service vprn](#) *string* [bgp group](#) *string* [damping](#) *boolean*

Tree [damping](#)

Introduced 16.0.R1

Platforms All

### **default-label-preference**

Synopsis Enter the **default-label-preference** context

Context **configure** [service vprn](#) *string* [bgp group](#) *string* [default-label-preference](#)

Tree [default-label-preference](#)

Introduced 19.5.R1

Platforms All

### **ebgp** *number*

Synopsis Default preference for EBGp

Context **configure** [service vprn](#) *string* [bgp group](#) *string* [default-label-preference](#) [ebgp](#) *number*

Tree [ebgp](#)

Range	0 to 255
Introduced	19.5.R1
Platforms	All

**ibgp number**

Synopsis	Default preference for IBGP
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">bgp group string</a> <a href="#">default-label-preference</a> <a href="#">ibgp number</a>
Tree	<a href="#">ibgp</a>
Range	0 to 255
Introduced	19.5.R1
Platforms	All

**default-preference**

Synopsis	Enter the <b>default-preference</b> context
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">bgp group string</a> <a href="#">default-preference</a>
Tree	<a href="#">default-preference</a>
Introduced	19.5.R1
Platforms	All

**ebgp number**

Synopsis	Default preference for EBGP
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">bgp group string</a> <a href="#">default-preference</a> <a href="#">ebgp number</a>
Tree	<a href="#">ebgp</a>
Range	0 to 255
Introduced	19.5.R1
Platforms	All

**ibgp number**

Synopsis	Default preference for IBGP
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">bgp group string</a> <a href="#">default-preference</a> <a href="#">ibgp number</a>
Tree	<a href="#">ibgp</a>

Range	0 to 255
Introduced	19.5.R1
Platforms	All

### **description** *string*

Synopsis	Text description
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">bgp group string</a> <a href="#">description string</a>
Tree	<a href="#">description</a>
String Length	1 to 80
Introduced	16.0.R1
Platforms	All

### **dynamic-neighbor**

Synopsis	Enter the <b>dynamic-neighbor</b> context
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">bgp group string</a> <a href="#">dynamic-neighbor</a>
Tree	<a href="#">dynamic-neighbor</a>
Description	Commands in this context configure dynamic BGP sessions for a peer group.
Introduced	16.0.R1
Platforms	All

### **interface** [[interface-name](#)] *reference*

Synopsis	Enter the <b>interface</b> list instance
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">bgp group string</a> <a href="#">dynamic-neighbor interface reference</a>
Tree	<a href="#">interface</a>
Description	Commands in this context configure an unnumbered VPRN access IP interface for dynamic neighbors.

If this interface connects to a network with other BGP routers, sessions with the other routers can be set up automatically without explicitly configuring them as BGP neighbors. The interface must be IPv6 enabled, but because the interface is considered unnumbered, it does not require an IPv4 address or a global-unicast IPv6 address. The sessions are set up using IPv6 link-local addresses.

The BGP unnumbered feature supports all address families that allow IPv6 link-local BGP next-hop addresses. This includes IPv4 with the use of RFC 8950 extensions.

When an interface is added to the list of dynamic-neighbor interfaces, an outgoing connection attempt is initiated toward any directly connected router on the interface that announces itself using an ICMPv6 router advertisement message. The session attempt is unsuccessful if the peer type is not EBGP, the reported AS number of the peer does not match one of the allowed values, or the maximum session limit of the interface would be exceeded.

Introduced 22.10.R1  
 Platforms All

### **[interface-name]** *reference*

Synopsis Name of the dynamic neighbor interface  
 Context **configure** [service vprn string](#) [bgp group string](#) [dynamic-neighbor interface reference](#)  
 Tree [interface](#)  
 Reference **configure** [service vprn string](#) [interface string](#)  
 Notes This element is part of a list key.  
 Introduced 22.10.R1  
 Platforms All

### **allowed-peer-as** *string*

Synopsis Allowed peer AS value or range of acceptable values  
 Context **configure** [service vprn string](#) [bgp group string](#) [dynamic-neighbor interface reference](#) [allowed-peer-as string](#)  
 Tree [allowed-peer-as](#)  
 Description This command specifies a singular allowed peer AS value or a range of acceptable values in the format *n1..n2*.  
 All values greater than or equal to *n1* and less than or equal to *n2* are acceptable. For example, if the acceptable peer AS numbers are 65001 to 65005 (range) and 62100 (singular value), configure this command to use a value of [65001..65005 62100].  
 Max. Instances 32  
 Notes This element is ordered by the user.  
 Introduced 22.10.R1  
 Platforms All

**max-sessions** *number*

Synopsis	Maximum number of dynamic sessions allowed
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">dynamic-neighbor interface</a> <i>reference</i> <a href="#">max-sessions</a> <i>number</i>
Tree	<a href="#">max-sessions</a>
Description	This command specifies the maximum number of dynamic sessions that are allowed to be set up on the interface as a result of accepting sessions from link-local addresses or initiating sessions by receiving IPv6 router advertisements.
Range	1 to 255
Default	1
Introduced	22.10.R1
Platforms	All

**match**

Synopsis	Enter the <b>match</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">dynamic-neighbor</a> <a href="#">match</a>
Tree	<a href="#">match</a>
Introduced	19.5.R1
Platforms	All

**prefix** [[ip-prefix](#)] (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Enter the <b>prefix</b> list instance
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">dynamic-neighbor</a> <a href="#">match</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
Tree	<a href="#">prefix</a>
Introduced	19.5.R1
Platforms	All

**[ip-prefix]** (*ipv4-prefix* | *ipv6-prefix*)

Synopsis	Dynamic peer prefix for the group
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">dynamic-neighbor</a> <a href="#">match</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
Tree	<a href="#">prefix</a>

Notes	This element is part of a list key.
Introduced	19.5.R1
Platforms	All

### **allowed-peer-as** *string*

Synopsis	Allowed peer AS value or range of acceptable values
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">dynamic-neighbor match prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <b>allowed-peer-as</b> <i>string</i>
Tree	<a href="#">allowed-peer-as</a>
Description	This command specifies a singular allowed peer AS value or a range of acceptable values in the format <i>n1..n2</i> .  All values greater than or equal to <i>n1</i> and less than or equal to <i>n2</i> are acceptable. For example, if the acceptable peer AS numbers are 65001 to 65005 (range) and 62100 (singular value), configure this command to use a value of [65001..65005 62100].
Max. Instances	32
Notes	This element is ordered by the user.
Introduced	19.5.R1
Platforms	All

### **dynamic-neighbor-limit** *number*

Synopsis	Maximum dynamic BGP sessions to accept from remote peer
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <b>dynamic-neighbor-limit</b> <i>number</i>
Tree	<a href="#">dynamic-neighbor-limit</a>
Description	This command configures the maximum number of dynamic BGP sessions that are accepted from remote peers associated with a specific peer group. If accepting a new dynamic session causes the group limit to be exceeded, the new session attempt is rejected and a Notification message is sent back to the remote peer.  When unconfigured, the setting is inherited from the BGP global-level configuration.
Range	1 to 8192
Introduced	16.0.R1
Platforms	All

## **ebgp-default-reject-policy**

Synopsis	Enable the <b>ebgp-default-reject-policy</b> context
Context	<b>configure</b> <a href="#">service vprn string bgp group string ebgp-default-reject-policy</a>
Tree	<a href="#">ebgp-default-reject-policy</a>
Introduced	19.5.R1
Platforms	All

## **export** *boolean*

Synopsis	Enable default reject export policy for external peers
Context	<b>configure</b> <a href="#">service vprn string bgp group string ebgp-default-reject-policy export boolean</a>
Tree	<a href="#">export</a>
Default	true
Introduced	19.5.R1
Platforms	All

## **import** *boolean*

Synopsis	Enable default reject import policy for external peers
Context	<b>configure</b> <a href="#">service vprn string bgp group string ebgp-default-reject-policy import boolean</a>
Tree	<a href="#">import</a>
Default	true
Introduced	19.5.R1
Platforms	All

## **enforce-first-as** *boolean*

Synopsis	Enforce the configured peer AS value in received routes
Context	<b>configure</b> <a href="#">service vprn string bgp group string enforce-first-as boolean</a>
Tree	<a href="#">enforce-first-as</a>
Introduced	16.0.R1
Platforms	All

## error-handling

Synopsis	Enter the <b>error-handling</b> context
Context	<b>configure service vprn string bgp group string error-handling</b>
Tree	<a href="#">error-handling</a>
Introduced	16.0.R1
Platforms	All

## update-fault-tolerance *boolean*

Synopsis	Tolerate non-critical errors in UPDATE messages
Context	<b>configure service vprn string bgp group string error-handling update-fault-tolerance boolean</b>
Tree	<a href="#">update-fault-tolerance</a>
Description	<p>When configured to <b>true</b>, non-critical errors are handled with treat-as-withdraw, attribute-discard, and other non-disruptive approaches that do not cause a session reset. Critical errors still trigger a session reset.</p> <p>When unconfigured, the command inherits the value of the global-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>false</b>.</p> <p>When this command inherits a value of <b>false</b>, all errors trigger a session reset.</p>
Introduced	16.0.R1
Platforms	All

## evpn-link-bandwidth

Synopsis	Enter the <b>evpn-link-bandwidth</b> context
Context	<b>configure service vprn string bgp group string evpn-link-bandwidth</b>
Tree	<a href="#">evpn-link-bandwidth</a>
Introduced	22.7.R1
Platforms	All

## add-to-received-bgp *number*

Synopsis	Weight added to received PE-CE BGP routes
Context	<b>configure service vprn string bgp group string evpn-link-bandwidth add-to-received-bgp number</b>
Tree	<a href="#">add-to-received-bgp</a>

Description	This command configures the weight value added to all BGP PE-CE routes for the purpose of weighted ECMP if EVPN-IFL and BGP PE-CE routes are combined into the same ECMP set.  For the load-balancing between EVPN-IFL and BGP PE-CE routes the <b>configure service vprn bgp eibgp-loadbalance</b> command must already be configured in the system.
Range	1 to 128
Introduced	22.7.R1
Platforms	All

## export

Synopsis	Enable the <b>export</b> context
Context	<b>configure service vprn string bgp group string export</b>
Tree	<a href="#">export</a>
Introduced	16.0.R1
Platforms	All

## policy (*policy-expr-string* | *string*)

Synopsis	Export policy name
Context	<b>configure service vprn string bgp group string export policy (<i>policy-expr-string</i>   <i>string</i>)</b>
Tree	<a href="#">policy</a>
String Length	1 to 255
Max. Instances	15
Min. Instances	1
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

## extended-nh-encoding

Synopsis	Enable the <b>extended-nh-encoding</b> context
Context	<b>configure service vprn string bgp group string extended-nh-encoding</b>
Tree	<a href="#">extended-nh-encoding</a>

Introduced 19.5.R1  
Platforms All

### **ipv4** *boolean*

Synopsis Enable/disable family type ipv4.  
Context **configure** [service vprn](#) *string* [bgp group](#) *string* [extended-nh-encoding](#) [ipv4](#) *boolean*  
Tree [ipv4](#)  
Default false  
Introduced 19.5.R1  
Platforms All

### **family**

Synopsis Enable the **family** context  
Context **configure** [service vprn](#) *string* [bgp group](#) *string* [family](#)  
Tree [family](#)  
Introduced 16.0.R1  
Platforms All

Context **configure** [service vprn](#) *string* [bgp group](#) *string* [family mcast-ipv4](#) *boolean*  
Tree [mcast-ipv4](#)

Default	false
Introduced	16.0.R1
Platforms	All

### **mcast-ipv6** *boolean*

Synopsis	Advertise support for the MCAST-IPv6 address family
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">family mcast-ipv6</a> <i>boolean</i>
Tree	<a href="#">mcast-ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **fast-external-failover** *boolean*

Synopsis	Drop external BGP session immediately when link fails
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">fast-external-failover</a> <i>boolean</i>
Tree	<a href="#">fast-external-failover</a>
Description	<p>When this command inherits a value of <b>true</b>, the router drops an external BGP session on a single-hop route immediately when the local interface goes down.</p> <p>When unconfigured, the command inherits the value of the global-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>true</b>.</p> <p>When configured to <b>false</b>, the BGP session remains up until the hold time expires.</p>
Introduced	16.0.R1
Platforms	All

### **graceful-restart**

Synopsis	Enable the <b>graceful-restart</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">graceful-restart</a>
Tree	<a href="#">graceful-restart</a>
Introduced	16.0.R1
Platforms	All

**gr-notification** *boolean*

Synopsis	Perform graceful restart procedures after NOTIFICATION
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">graceful-restart</a> <a href="#">gr-notification</a> <i>boolean</i>
Tree	<a href="#">gr-notification</a>
Description	When configured to <b>true</b> , the Graceful Restart capability sent by the router indicates support for NOTIFICATION messages. If the peer also supports this capability, the session is restarted gracefully (while preserving forwarding) if either peer sends a NOTIFICATION message due to some type of event or error.  When configured to <b>false</b> , NOTIFICATION messages are not supported.
Default	false
Introduced	16.0.R1
Platforms	All

**long-lived**

Synopsis	Enable the <b>long-lived</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">graceful-restart</a> <a href="#">long-lived</a>
Tree	<a href="#">long-lived</a>
Introduced	16.0.R1
Platforms	All

**advertise-stale-to-all-neighbors** *boolean*

Synopsis	Advertise stale routes to all BGP peers
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">graceful-restart</a> <a href="#">long-lived</a> <a href="#">advertise-stale-to-all-neighbors</a> <i>boolean</i>
Tree	<a href="#">advertise-stale-to-all-neighbors</a>
Default	false
Introduced	16.0.R1
Platforms	All

**advertised-stale-time** *number*

Synopsis	Advertised long-lived stale time for LLGR routes
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">graceful-restart</a> <a href="#">long-lived</a> <a href="#">advertised-stale-time</a> <i>number</i>

Tree	<a href="#">advertised-stale-time</a>
Range	0 to 16777215
Default	86400
Introduced	16.0.R1
Platforms	All

### **family** [[family-type](#)] *keyword*

Synopsis	Enter the <b>family</b> list instance
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">bgp group string</a> <a href="#">graceful-restart</a> <a href="#">long-lived</a> <a href="#">family</a> <i>keyword</i>
Tree	<a href="#">family</a>
Introduced	16.0.R1
Platforms	All

### **[family-type]** *keyword*

Synopsis	Address family type for LLGR
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">bgp group string</a> <a href="#">graceful-restart</a> <a href="#">long-lived</a> <a href="#">family</a> <i>keyword</i>
Tree	<a href="#">family</a>
Options	ipv4, ipv6, flow-ipv4, flow-ipv6, label-ipv4
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **advertised-stale-time** *number*

Synopsis	LLGR stale routes time for family override
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">bgp group string</a> <a href="#">graceful-restart</a> <a href="#">long-lived</a> <a href="#">family</a> <i>keyword</i> <a href="#">advertised-stale-time</a> <i>number</i>
Tree	<a href="#">advertised-stale-time</a>
Description	This command configures the long-lived stale routes time that is advertised by the router in its LLGR capability.  This command applies to all AFI/SAFI in the advertised LLGR capability with a family-specific override.
Range	0 to 16777215
Default	86400

Introduced	16.0.R1
Platforms	All

### **helper-override-stale-time** *number*

Synopsis	Locally-configured stale routes override time
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">bgp</a> <a href="#">group</a> <i>string</i> <a href="#">graceful-restart</a> <a href="#">long-lived</a> <a href="#">family</a> <i>keyword</i> <a href="#">helper-override-stale-time</a> <i>number</i>
Tree	<a href="#">helper-override-stale-time</a>
Description	This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability. This is a family-specific override value.
Range	0 to 16777216
Default	16777216
Introduced	16.0.R1
Platforms	All

### **forwarding-bits-set** *keyword*

Synopsis	BGP LLGR forwarding-bit behavior for address family
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">bgp</a> <a href="#">group</a> <i>string</i> <a href="#">graceful-restart</a> <a href="#">long-lived</a> <a href="#">forwarding-bits-set</a> <i>keyword</i>
Tree	<a href="#">forwarding-bits-set</a>
Description	<p>This command determines the setting of the F bit in the GR and LLGR capabilities advertised by the router. When the F bit is set for an address family, it indicates that the advertising router is able to preserve forwarding state for the routes of that address family across the last restart. When the session is re-established after a restart and the F bit is not set, all stale routes from the peer are immediately removed for the corresponding address family.</p> <p>This command allows the F bit to be set for all address families or only for non-forwarding address families (L2-VPN, route target, flow-IPv4, and flow-IPv6).</p>
Options	none, all, non-fw
Default	none
Introduced	16.0.R1
Platforms	All

**helper-override-restart-time** *number*

Synopsis	Locally-configured override for restart time
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">bgp group string</a> <a href="#">graceful-restart long-lived</a> <a href="#">helper-override-restart-time number</a>
Tree	<a href="#">helper-override-restart-time</a>
Description	This command overrides the restart time advertised by a peer (in its GR capability) with a locally-configured value. This override applies only to AFI/SAFI that were included in the GR capability of the peer. The restart-time is always zero for AFI/SAFI not included in the GR capability. This command is useful if the local router wants to force the LLGR phase to begin after a set time for all protected AFI/SAFI.
Range	0 to 4095
Introduced	16.0.R1
Platforms	All

**helper-override-stale-time** *number*

Synopsis	Locally-configured stale routes override time
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">bgp group string</a> <a href="#">graceful-restart long-lived</a> <a href="#">helper-override-stale-time number</a>
Tree	<a href="#">helper-override-stale-time</a>
Description	This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability.  This command applies to all AFI/SAFI in the advertised LLGR capability except for any AFI/SAFI with a family-specific override.
Range	0 to 16777215
Introduced	16.0.R1
Platforms	All

**without-no-export** *boolean*

Synopsis	Advertise LLGR stale routes to non-LLGR peers
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">bgp group string</a> <a href="#">graceful-restart long-lived</a> <a href="#">without-no-export boolean</a>
Tree	<a href="#">without-no-export</a>
Description	When configured to <b>true</b> , LLGR stale routes can be advertised to any peer (EBGP or IBGP) that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0.

When configured to **false**, LLGR stale routes are not advertised to any EBGP peer that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0 and a NO\_EXPORT standard community is automatically added to the routes.

Default	false
Introduced	16.0.R1
Platforms	All

### **restart-time** *number*

Synopsis	Restart time advertised by GR capability
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">bgp group string</a> <a href="#">graceful-restart restart-time number</a>
Tree	<a href="#">restart-time</a>
Range	0 to 4095
Default	300
Introduced	16.0.R1
Platforms	All

### **stale-routes-time** *number*

Synopsis	Maximum time to maintain routes after graceful restart
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">bgp group string</a> <a href="#">graceful-restart stale-routes-time number</a>
Tree	<a href="#">stale-routes-time</a>
Range	1 to 3600
Default	360
Introduced	16.0.R1
Platforms	All

### **hold-time**

Synopsis	Enter the <b>hold-time</b> context
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">bgp group string</a> <a href="#">hold-time</a>
Tree	<a href="#">hold-time</a>
Introduced	16.0.R1
Platforms	All

**minimum-hold-time** *number*

Synopsis	Minimum hold time between successive messages
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>hold-time</b> <b>minimum-hold-time</b> <i>number</i>
Tree	<b>minimum-hold-time</b>
Description	This command specifies the minimum hold time that is accepted for the session. If a peer proposes a hold time lower than this value, the session attempt is rejected. When unconfigured, the command value is inherited from the BGP global-level setting.
Range	0   3 to 65536
Default	0
Introduced	16.0.R1
Platforms	All

**seconds** *number*

Synopsis	Maximum time BGP waits between successive messages
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>hold-time</b> <b>seconds</b> <i>number</i>
Tree	<b>seconds</b>
Description	This command configures the maximum time BGP waits between successive messages (either keepalive or update) from its peer before closing the connection. Although the implementation allows setting the keepalive timer at the BGP group level times separately, the configured keepalive timer is overridden by this value under the following circumstances. <ul style="list-style-type: none"> <li>• If the specified hold time is less than the configured keepalive time, the operational keepalive time is set to a third of the hold-time; the configured keepalive time is not changed.</li> <li>• If the hold time is set to zero, the operational value of the keepalive time is set to zero; the configured keepalive time is not changed. The connection with the peer is up permanently and no keepalive packets are sent to the peer.</li> </ul> When unconfigured, the command setting is inherited from the BGP global-level configuration.
Range	0   3 to 65535
Introduced	16.0.R1
Platforms	All

**import**

Synopsis	Enable the <b>import</b> context
----------	----------------------------------

Context	<b>configure service vprn string bgp group string import</b>
Tree	<b>import</b>
Introduced	16.0.R1
Platforms	All

### **policy** (*policy-expr-string | string*)

Synopsis	Route policy name
Context	<b>configure service vprn string bgp group string import policy</b> ( <i>policy-expr-string   string</i> )
Tree	<b>policy</b>
String Length	1 to 255
Max. Instances	15
Min. Instances	1
Notes	This element is ordered by the user.
Introduced	16.0.R1
Platforms	All

### **initial-send-delay-zero** *boolean*

Synopsis	Send BGP updates as soon as the session comes up
Context	<b>configure service vprn string bgp group string initial-send-delay-zero</b> <i>boolean</i>
Tree	<b>initial-send-delay-zero</b>
Description	<p>When configured to <b>true</b>, BGP updates are sent as soon as the session comes up.</p> <p>When unconfigured, the command inherits the value of the global-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>false</b>.</p> <p>When this command inherits a value of <b>false</b>, BGP waits to send UPDATE messages for the minimum route advertisement time after a session is established.</p>
Introduced	16.0.R1
Platforms	All

### **keepalive** *number*

Synopsis	Time after which the BGP KEEPALIVE message is sent
Context	<b>configure service vprn string bgp group string keepalive</b> <i>number</i>

Tree	<a href="#">keepalive</a>
Description	<p>This command configures the BGP keepalive timer value. A keepalive message is sent every time this timer expires.</p> <p>This value is generally one-third of the hold time interval configured in the <b>hold-time seconds</b> context. Although the implementation allows this keepalive value and the hold time interval to be independently set, under the following circumstances, the configured keepalive value is overridden by the hold time interval value:</p> <ul style="list-style-type: none"> <li>• If the specified keepalive value is greater than the configured hold time, the specified keepalive value is ignored and the timer value is set to one third of the current hold time value.</li> <li>• If the specified hold time interval is less than the configured keepalive value, the keepalive value is reset to one third of the specified hold time interval.</li> <li>• If the hold time interval is set to zero, the configured keepalive value is ignored. This means that the connection with the peer is up permanently and no keepalive packets are sent to the peer.</li> </ul> <p>When unconfigured, the command inherits the BGP global-level setting.</p>
Range	0 to 21845
Introduced	16.0.R1
Platforms	All

### label-preference *number*

Synopsis	Route preference for routes from labeled-unicast peers
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">label-preference</a> <i>number</i>
Tree	<a href="#">label-preference</a>
Range	1 to 255
Introduced	16.0.R1
Platforms	All

### link-bandwidth

Synopsis	Enter the <b>link-bandwidth</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">link-bandwidth</a>
Tree	<a href="#">link-bandwidth</a>
Description	<p>Commands in this context specify the handling of the Link Bandwidth Extended Community attached to specific BGP routes.</p> <p>When all used multipaths of an IP prefix correspond to BGP routes with a Link Bandwidth EC, the datapath is programmed to use weighted ECMP across the BGP next hops in proportion to the bandwidth values.</p>

Introduced	16.0.R3
Platforms	All

### **accept-from-ebgp**

Synopsis	Enter the <b>accept-from-ebgp</b> context
Context	<b>configure service vprn string bgp group string link-bandwidth accept-from-ebgp</b>
Tree	<a href="#">accept-from-ebgp</a>
Introduced	16.0.R4
Platforms	All

### **ipv4 boolean**

Synopsis	Support Link Bandwidth EC in IPv4 routes
Context	<b>configure service vprn string bgp group string link-bandwidth accept-from-ebgp ipv4 boolean</b>
Tree	<a href="#">ipv4</a>
Default	false
Introduced	16.0.R4
Platforms	All

### **ipv6 boolean**

Synopsis	Support Link Bandwidth EC in IPv6 routes
Context	<b>configure service vprn string bgp group string link-bandwidth accept-from-ebgp ipv6 boolean</b>
Tree	<a href="#">ipv6</a>
Default	false
Introduced	16.0.R4
Platforms	All

### **label-ipv4 boolean**

Synopsis	Support Link Bandwidth EC in label-IPv4 routes
Context	<b>configure service vprn string bgp group string link-bandwidth accept-from-ebgp label-ipv4 boolean</b>

Tree	<a href="#">label-ipv4</a>
Default	false
Introduced	16.0.R4
Platforms	All

### **add-to-received-ebgp**

Synopsis	Enter the <b>add-to-received-ebgp</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">link-bandwidth</a> <a href="#">add-to-received-ebgp</a>
Tree	<a href="#">add-to-received-ebgp</a>
Introduced	16.0.R3
Platforms	All

### **ipv4** *boolean*

Synopsis	Support Link Bandwidth EC in IPv4 routes
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">link-bandwidth</a> <a href="#">add-to-received-ebgp</a> <a href="#">ipv4</a> <i>boolean</i>
Tree	<a href="#">ipv4</a>
Default	false
Introduced	16.0.R3
Platforms	All

### **ipv6** *boolean*

Synopsis	Support Link Bandwidth EC in IPv6 routes
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">link-bandwidth</a> <a href="#">add-to-received-ebgp</a> <a href="#">ipv6</a> <i>boolean</i>
Tree	<a href="#">ipv6</a>
Default	false
Introduced	16.0.R3
Platforms	All

### **label-ipv4** *boolean*

Synopsis	Support Link Bandwidth EC in label-IPv4 routes
----------	--

Context	<b>configure service vprn</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>link-bandwidth add-to-received-ebgp label-ipv4</b> <i>boolean</i>
Tree	<a href="#">label-ipv4</a>
Default	false
Introduced	16.0.R3
Platforms	All

### aggregate-used-paths

Synopsis	Enter the <b>aggregate-used-paths</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>link-bandwidth aggregate-used-paths</b>
Tree	<a href="#">aggregate-used-paths</a>
Introduced	16.0.R4
Platforms	All

### ipv4 *boolean*

Synopsis	Support Link Bandwidth EC in IPv4 routes
Context	<b>configure service vprn</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>link-bandwidth aggregate-used-paths ipv4</b> <i>boolean</i>
Tree	<a href="#">ipv4</a>
Default	false
Introduced	16.0.R4
Platforms	All

### ipv6 *boolean*

Synopsis	Support Link Bandwidth EC in IPv6 routes
Context	<b>configure service vprn</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>link-bandwidth aggregate-used-paths ipv6</b> <i>boolean</i>
Tree	<a href="#">ipv6</a>
Default	false
Introduced	16.0.R4
Platforms	All

**label-ipv4** *boolean*

Synopsis	Support Link Bandwidth EC in label-IPv4 routes
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">link-bandwidth aggregate-used-paths</a> <a href="#">label-ipv4</a> <i>boolean</i>
Tree	<a href="#">label-ipv4</a>
Default	false
Introduced	16.0.R4
Platforms	All

**send-to-ebgp**

Synopsis	Enter the <b>send-to-ebgp</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">link-bandwidth</a> <a href="#">send-to-ebgp</a>
Tree	<a href="#">send-to-ebgp</a>
Introduced	16.0.R4
Platforms	All

**ipv4** *boolean*

Synopsis	Support Link Bandwidth EC in IPv4 routes
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">link-bandwidth</a> <a href="#">send-to-ebgp</a> <a href="#">ipv4</a> <i>boolean</i>
Tree	<a href="#">ipv4</a>
Default	false
Introduced	16.0.R4
Platforms	All

**ipv6** *boolean*

Synopsis	Support Link Bandwidth EC in IPv6 routes
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">link-bandwidth</a> <a href="#">send-to-ebgp</a> <a href="#">ipv6</a> <i>boolean</i>
Tree	<a href="#">ipv6</a>
Default	false
Introduced	16.0.R4
Platforms	All

**label-ipv4** *boolean*

Synopsis	Support Link Bandwidth EC in label-IPv4 routes
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">bgp</a> <a href="#">group</a> <i>string</i> <a href="#">link-bandwidth</a> <a href="#">send-to-ebgp</a> <a href="#">label-ipv4</a> <i>boolean</i>
Tree	<a href="#">label-ipv4</a>
Default	false
Introduced	16.0.R4
Platforms	All

**local-address** (*ipv4-address-no-zone | ipv6-address-no-zone | interface-name*)

Synopsis	Local IP address used when communicating with BGP peers
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">bgp</a> <a href="#">group</a> <i>string</i> <a href="#">local-address</a> ( <i>ipv4-address-no-zone   ipv6-address-no-zone   interface-name</i> )
Tree	<a href="#">local-address</a>
String Length	1 to 32
Introduced	16.0.R1
Platforms	All

**local-as**

Synopsis	Enter the <b>local-as</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">bgp</a> <a href="#">group</a> <i>string</i> <a href="#">local-as</a>
Tree	<a href="#">local-as</a>
Introduced	16.0.R1
Platforms	All

**as-number** *number*

Synopsis	Local (or virtual) BGP AS number
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">bgp</a> <a href="#">group</a> <i>string</i> <a href="#">local-as</a> <a href="#">as-number</a> <i>number</i>
Tree	<a href="#">as-number</a>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

**prepend-global-as** *boolean*

Synopsis	Prepend global ASN when advertising routes to BGP peer
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">local-as</a> <a href="#">prepend-global-as</a> <i>boolean</i>
Tree	<a href="#">prepend-global-as</a>
Description	When configured to <b>true</b> , the global ASN is added to the AS_PATH attribute in outbound routes sent to the peer. When configured to <b>false</b> , the global ASN is not included in the AS_PATH attribute.
Default	true
Introduced	16.0.R1
Platforms	All

**private** *boolean*

Synopsis	Hide the local ASN in sent paths learned from peering
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">local-as</a> <a href="#">private</a> <i>boolean</i>
Tree	<a href="#">private</a>
Description	When configured to <b>true</b> , the local AS number is only advertised to peers that use the local ASN for establishing BGP peering sessions. When configured to <b>false</b> , the local ASN is advertised to all peers, including those that can use the global ASN for establishing BGP peering sessions.
Default	false
Introduced	16.0.R1
Platforms	All

**local-preference** *number*

Synopsis	Default local preference if not in incoming routes
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">local-preference</a> <i>number</i>
Tree	<a href="#">local-preference</a>
Range	0 to 4294967295
Introduced	16.0.R1
Platforms	All

**loop-detect** *keyword*

Synopsis	Strategy for loop detection in the AS path
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">loop-detect</a> <i>keyword</i>
Tree	<a href="#">loop-detect</a>
Options	drop-peer, ignore-loop, off, discard-route
Introduced	16.0.R1
Platforms	All

**loop-detect-threshold** *number*

Synopsis	Threshold for the global ASN in a received AS path
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">loop-detect-threshold</a> <i>number</i>
Tree	<a href="#">loop-detect-threshold</a>
Range	0 to 15
Introduced	16.0.R6
Platforms	All

**med-out** (*number* | *keyword*)

Synopsis	Default MED attribute value to advertise to peers
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">med-out</a> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">med-out</a>
Max. Range	0 to 4294967295
Options	igp-cost
Introduced	16.0.R1
Platforms	All

**min-route-advertisement** *number*

Synopsis	Minimum time before a prefix can be advertised to peer
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">min-route-advertisement</a> <i>number</i>
Tree	<a href="#">min-route-advertisement</a>
Range	1 to 255
Introduced	16.0.R1
Platforms	All

## monitor

Synopsis	Enable the <b>monitor</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">bgp</a> <a href="#">group</a> <i>string</i> <b>monitor</b>
Tree	<a href="#">monitor</a>
Introduced	16.0.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of BMP monitoring
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">bgp</a> <a href="#">group</a> <i>string</i> <b>monitor</b> <a href="#">admin-state</a> <i>keyword</i>
Tree	<a href="#">admin-state</a>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

## all-stations *boolean*

Synopsis	Send BMP messages to all configured stations
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">bgp</a> <a href="#">group</a> <i>string</i> <b>monitor</b> <a href="#">all-stations</a> <i>boolean</i>
Tree	<a href="#">all-stations</a>
Description	<p>When configured to <b>true</b>, this command specifies that BMP messages are to be sent to all configured BMP monitoring stations.</p> <p>When configured to <b>false</b>, the command is not used to indicate the stations which can receive BMP messages. The <b>station</b> command (at the same context level) identifies the BMP stations for which BMP messages are to be sent.</p>
Default	false
Introduced	16.0.R1
Platforms	All

## route-monitoring

Synopsis	Enter the <b>route-monitoring</b> context
Context	<b>configure</b> <a href="#">service</a> <a href="#">vpn</a> <i>string</i> <a href="#">bgp</a> <a href="#">group</a> <i>string</i> <b>monitor</b> <a href="#">route-monitoring</a>

Tree	<a href="#">route-monitoring</a>
Introduced	16.0.R1
Platforms	All

### **post-policy** *boolean*

Synopsis	Allow post-policy route-monitoring messages to be sent
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">bgp</a> <a href="#">group</a> <i>string</i> <a href="#">monitor</a> <a href="#">route-monitoring</a> <a href="#">post-policy</a> <i>boolean</i>
Tree	<a href="#">post-policy</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **pre-policy** *boolean*

Synopsis	Allow pre-policy route-monitoring messages to be sent
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">bgp</a> <a href="#">group</a> <i>string</i> <a href="#">monitor</a> <a href="#">route-monitoring</a> <a href="#">pre-policy</a> <i>boolean</i>
Tree	<a href="#">pre-policy</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **station** [[station-name](#)] *reference*

Synopsis	Add a list entry for <b>station</b>
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">bgp</a> <a href="#">group</a> <i>string</i> <a href="#">monitor</a> <a href="#">station</a> <i>reference</i>

## origin-validation

Synopsis Enter the **origin-validation** context

Context **configure service vprn string bgp group string origin-validation**

Tree [origin-validation](#)

Introduced 19.7.R1

Platforms All

## ipv4 boolean

Synopsis Enable support for unlabeled unicast IPv4 routes

Context **configure service vprn string bgp group string origin-validation ipv4 boolean**

Tree [ipv4](#)

Default false

Introduced 19.7.R1

Platforms All

## ipv6 boolean

Synopsis Enable support for unlabeled unicast IPv6 routes

Context **configure service vprn string bgp group string origin-validation ipv6 boolean**

Tree [ipv6](#)

Default false

Introduced 19.7.R1

Platforms All

## label-ipv4 boolean

Synopsis Enable support for labeled-unicast IPv4 routes

Context **configure service vprn string bgp group string origin-validation label-ipv4 boolean**

Tree [label-ipv4](#)

Default false

Introduced 19.7.R1

Platforms All

### **passive** *boolean*

Synopsis Enable passive mode for BGP communication

Context **configure** *service vprn string bgp group string passive boolean*

Tree [passive](#)

Default false

Introduced 16.0.R1

Platforms All

### **path-mtu-discovery** *boolean*

Synopsis Enable Path MTU Discovery

Context **configure** *service vprn string bgp group string path-mtu-discovery boolean*

Tree [path-mtu-discovery](#)

Description When configured to **true**, Path MTU Discovery (PMTUD) is enabled for the associated TCP connections.

When set to **true**, PMTUD is activated toward an IPv4 BGP neighbor and the Don't Fragment (DF) bit is set in the IP header of all IPv4 packets sent to the peer. If any device along the path toward the peer cannot forward the packet because the IP MTU of the interface is smaller than the IP packet size, this device drops the packet and sends an ICMP or ICMPv6 error message encoding the interface MTU. When the router receives the ICMP or ICMPv6 message, it lowers the TCP maximum segment size limit from the previous value so that the IP MTU constraint can be accommodated.

When configured to **false** and there is no TCP MSS configuration that can be associated with a BGP neighbor (in either the BGP configuration or the first hop IP interface configuration), the router advertises a value of only 1024 bytes as the TCP MSS option value, limiting received TCP segments to that size.

Introduced 16.0.R1

Platforms All

### **peer-as** *number*

Synopsis Peer AS number

Context **configure** *service vprn string bgp group string peer-as number*

Tree [peer-as](#)

Range 1 to 4294967295

Introduced	16.0.R1
Platforms	All

### **peer-ip-tracking** *boolean*

Synopsis	Enable BGP peer tracking
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <b>peer-ip-tracking</b> <i>boolean</i>
Tree	<a href="#">peer-ip-tracking</a>
Description	<p>When configured to <b>true</b>, this command enables BGP peer tracking.</p> <p>Peer tracking should be used with caution. Peer tracking can tear a session down even if the loss of connectivity turns out to be short-lived (for example, while the IGP protocol is re-converging). Next-hop tracking, which is always enabled, handles temporary connectivity issues more effectively.</p> <p>When unconfigured, the command inherits the value of the global-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>false</b>.</p> <p>When this command inherits a value of <b>false</b>, peer tracking is disabled.</p>
Introduced	16.0.R1
Platforms	All

### **preference** *number*

Synopsis	Route preference for routes learned from all peers
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <b>preference</b> <i>number</i>
Tree	<a href="#">preference</a>
Range	1 to 255
Introduced	16.0.R1
Platforms	All

### **prefix-limit** [[family](#)] *keyword*

Synopsis	Enter the <b>prefix-limit</b> list instance
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <b>prefix-limit</b> <i>keyword</i>
Tree	<a href="#">prefix-limit</a>
Description	Commands in this context limit the number of BGP routes per address family received from a BGP peer and define the actions when crossing the configured maximum.
Introduced	16.0.R1

Platforms All

### **[family]** *keyword*

Synopsis Address family to which the limit applies

Context **configure** *service vprn string bgp group string prefix-limit keyword*

Tree [prefix-limit](#)

Options ipv4, ipv6, mcast-ipv4, flow-ipv4, flow-ipv6, mcast-ipv6, label-ipv4

Notes This element is part of a list key.

Introduced 16.0.R1

Platforms All

### **hold-excess** *number*

Synopsis Percentage of maximum routes to install in route table

Context **configure** *service vprn string bgp group string prefix-limit keyword hold-excess number*

Tree [hold-excess](#)

Description This command specifies the percentage of maximum routes that are allowed to be installed in the route table for the configured address family. If a peer within scope of the configuration exceeds the limit, the overflow routes are held in the BGP RIB as inactive routes and are ineligible for forwarding and advertisement to other peers. If the **post-import** command is configured to **true**, only routes not rejected by import policies count toward the limit.

A BGP route in an overflow state is reconsidered for activation and reinstallation when an UPDATE message is received for the route.

This command is mutually exclusive with the **idle-timeout** and **log-only** commands.

Range 1 to 100

Introduced 23.7.R1

Platforms All

### **idle-timeout** *number*

Synopsis Time BGP peering remains idle before reconnecting

Context **configure** *service vprn string bgp group string prefix-limit keyword idle-timeout number*

Tree [idle-timeout](#)

Description This command configures the time in minutes before a BGP peer is automatically re-established after reaching the prefix limit.

When unconfigured, the BGP peer stays down until the operator performs a reset. This command and **log-only** cannot be configured simultaneously.

Range	1 to 1024
Introduced	16.0.R1
Platforms	All

### **log-only** *boolean*

Synopsis	Send warning message at threshold instead of take-down
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">prefix-limit</a> <i>keyword</i> <a href="#">log-only</a> <i>boolean</i>
Tree	<a href="#">log-only</a>
Description	<p>When configured to <b>true</b>, the router disables the BGP session from being taken down upon reaching the prefix limit. Instead, only a warning message is sent when the limit is reached. A warning message is also sent when the configured threshold percentage of the limit is reached.</p> <p>This command and <b>idle-timeout</b> cannot be configured simultaneously.</p> <p>When configured to <b>false</b>, the router generates a log event and takes the BGP session down upon reaching the prefix limit.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **maximum** *number*

Synopsis	Maximum number of routes to be learned from a peer
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">prefix-limit</a> <i>keyword</i> <a href="#">maximum</a> <i>number</i>
Tree	<a href="#">maximum</a>
Description	<p>This command configures the maximum number of BGP routes of the specified address family that can be received from a peer before administrative action is taken.</p> <p>When <b>log-only</b> is unconfigured, the BGP session is taken down whenever the limit of any family is exceeded even if the limits of the other family has not been exceeded.</p>
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	16.0.R2
Platforms	All

**post-import** *boolean*

Synopsis	Apply limit only to routes accepted by import policies
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">prefix-limit</a> <i>keyword</i> <a href="#">post-import</a> <i>boolean</i>
Tree	<a href="#">post-import</a>
Description	When configured to <b>true</b> , the system limits the number of routes that are accepted by import policies. Routes rejected by import policies are not counted against the configured limit.  When configured to <b>false</b> , the system limits the number of routes to all routes received from the peer.
Default	false
Introduced	16.0.R1
Platforms	All

**threshold** *number*

Synopsis	Percentage threshold that triggers a warning message
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">prefix-limit</a> <i>keyword</i> <a href="#">threshold</a> <i>number</i>
Tree	<a href="#">threshold</a>
Range	1 to 100
Default	90
Introduced	16.0.R1
Platforms	All

**remove-private**

Synopsis	Enable the <b>remove-private</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">remove-private</a>
Tree	<a href="#">remove-private</a>
Introduced	16.0.R1
Platforms	All

**limited** *boolean*

Synopsis	Remove private ASNs up to first public ASN encountered
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">remove-private</a> <a href="#">limited</a> <i>boolean</i>
Tree	<a href="#">limited</a>

---

Default	false
Introduced	16.0.R1
Platforms	All

### **replace** *boolean*

Synopsis	Replace private ASN with global ASN before advertising
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">remove-private</a> <b>replace</b> <i>boolean</i>
Tree	<a href="#">replace</a>
Default	false
Introduced	19.10.R1
Platforms	All

### **skip-peer-as** *boolean*

Synopsis	Keep private ASN if it is the same as the BGP peer ASN
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">remove-private</a> <b>skip-peer-as</b> <i>boolean</i>
Tree	<a href="#">skip-peer-as</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **send-communities**

Synopsis	Enter the <b>send-communities</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <b>send-communities</b>
Tree	<a href="#">send-communities</a>
Introduced	16.0.R1
Platforms	All

### **extended** *boolean*

Synopsis	Advertise the Extended Communities attribute to peers
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">send-communities</a> <b>extended</b> <i>boolean</i>
Tree	<a href="#">extended</a>

Description	<p>When unconfigured, this command inherits the value of the global-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>true</b>.</p> <p>When this command inherits a value of <b>true</b>, BGP extended communities are sent to peers in the Extended Communities attribute.</p> <p>When configured to <b>false</b>, all extended communities are removed from all routes advertised to BGP peers.</p>
Introduced	16.0.R1
Platforms	All

### **large** *boolean*

Synopsis	Advertise the Large Communities attribute to peers
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">send-communities large</a> <i>boolean</i>
Tree	<a href="#">large</a>
Description	<p>When unconfigured, this command inherits the value of the global-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>true</b>.</p> <p>When this command inherits a value of <b>true</b>, BGP large communities are sent to peers in the Large Communities attribute.</p> <p>When configured to <b>false</b>, all large communities are removed from all routes advertised to BGP peers.</p>
Introduced	16.0.R1
Platforms	All

### **standard** *boolean*

Synopsis	Advertise the Communities attribute to peers
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">send-communities standard</a> <i>boolean</i>
Tree	<a href="#">standard</a>
Description	<p>When unconfigured, this command inherits the value of the global-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>true</b>.</p> <p>When this command inherits a value of <b>true</b>, BGP standard communities are sent to peers in the Communities attribute.</p> <p>When configured to <b>false</b>, all standard communities are removed from all routes advertised to BGP peers.</p>
Introduced	16.0.R1
Platforms	All

## send-default

Synopsis	Enable the <b>send-default</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">send-default</a>
Tree	<a href="#">send-default</a>
Introduced	19.7.R1
Platforms	All

## export-policy *reference*

Synopsis	Export policy name
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">send-default</a> <a href="#">export-policy</a> <i>reference</i>
Tree	<a href="#">export-policy</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Introduced	19.7.R1
Platforms	All

## ipv4 *boolean*

Synopsis	Generate and advertise an IPv4 default route (0/0)
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">send-default</a> <a href="#">ipv4</a> <i>boolean</i>
Tree	<a href="#">ipv4</a>
Default	false
Introduced	19.7.R1
Platforms	All

## ipv6 *boolean*

Synopsis	Generate and advertise an IPv6 default route (::/0)
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <a href="#">send-default</a> <a href="#">ipv6</a> <i>boolean</i>
Tree	<a href="#">ipv6</a>
Default	false
Introduced	19.7.R1
Platforms	All

**split-horizon** *boolean*

Synopsis	Prevent routes being reflected back to best-route peer
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>split-horizon</b> <i>boolean</i>
Tree	<b>split-horizon</b>
Description	<p>When configured to <b>true</b>, this command enables the use of split-horizon.</p> <p>This command prevents routes from being reflected back to a peer that sends the best route. It applies to routes of all address families and to any type of sending peer; confed-EBGP, EBGP and IBGP.</p> <p>Enabling the split-horizon functionality may have a detrimental impact on peer and route scaling and should only be used when absolutely necessary.</p> <p>When unconfigured, the command inherits the value of the global-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>false</b>.</p> <p>When this command inherits a value of <b>false</b>, the use of split-horizon is disabled.</p>
Introduced	16.0.R1
Platforms	All

**static-group** *boolean*

Synopsis	Use group for static peers
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>static-group</b> <i>boolean</i>
Tree	<b>static-group</b>
Default	true
Introduced	16.0.R1
Platforms	All

**tcp-mss** (*number* | *keyword*)

Synopsis	TCP maximum segment size override
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>bgp group</b> <i>string</i> <b>tcp-mss</b> ( <i>number</i>   <i>keyword</i> )
Tree	<b>tcp-mss</b>
Description	<p>This command configures an override for the TCP maximum segment size to use with a specific peer or set of peers (depending on the scope of the command).</p> <p>The configured value controls two properties of the TCP connection as follows:</p> <p>TCP MSS option - The router advertises the TCP MSS option value in the TCP SYN packet it sends as part of the 3-way handshake. The advertised value may be lower than the configured value, depending on the IP MTU of the first hop IP interface. The peers must abide by this value when sending TCP segments to the local router.</p>

TCP maximum segment size - The actual transmitted size may be lower than the configured value, depending on the TCP MSS option value signaled by the peers, the effect of path MTU discovery, or other factors.

Range	384 to 9746
Options	ip-stack
Introduced	21.2.R1
Platforms	All

### **third-party-nexthop** *boolean*

Synopsis	Apply third-party next-hop processing to EBGP peers
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <b>third-party-nexthop</b> <i>boolean</i>
Tree	<a href="#">third-party-nexthop</a>
Description	<p>When configured to <b>true</b>, this command enables the router to send third-party next hop to EBGP peers in the same subnet as the source peer. The address family of the transport must match the address family of the route.</p> <p>When an IPv4 or IPv6 route is received from one EBGP peer and advertised to another EBGP peer in the same IP subnet, the BGP next hop is left unchanged.</p> <p>When unconfigured, the command inherits the value of the global-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>false</b>.</p> <p>When this command inherits a value of <b>false</b>, third-party next-hop processing is disabled and the next hop carries the IP address of the interface used to establish the TCP connection to the peer.</p>
Introduced	16.0.R1
Platforms	All

### **ttl-security** *number*

Synopsis	Minimum TTL value for an incoming BGP packet
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp group</a> <i>string</i> <b>ttl-security</b> <i>number</i>
Tree	<a href="#">ttl-security</a>
Description	This command configures the minimum TTL value that BGP accepts from an incoming packet. A packet with a TTL value less than the minimum configured TTL value is discarded.
Range	1 to 255
Introduced	16.0.R1
Platforms	All

**type** *keyword*

Synopsis	BGP peer type
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">bgp group string</a> <a href="#">type keyword</a>
Tree	<a href="#">type</a>
Options	no-type, internal, external
Default	no-type
Introduced	16.0.R1
Platforms	All

**hold-time**

Synopsis	Enter the <b>hold-time</b> context
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">bgp hold-time</a>
Tree	<a href="#">hold-time</a>
Introduced	16.0.R1
Platforms	All

**minimum-hold-time** *number*

Synopsis	Minimum hold time between successive messages
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">bgp hold-time minimum-hold-time number</a>
Tree	<a href="#">minimum-hold-time</a>
Description	This command specifies the minimum hold time that is accepted for the session. If a peer proposes a hold time lower than this value, the session attempt is rejected.
Range	0   3 to 65535
Default	0
Introduced	16.0.R1
Platforms	All

**seconds** *number*

Synopsis	Maximum time BGP waits between successive messages
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">bgp hold-time seconds number</a>
Tree	<a href="#">seconds</a>

Description	<p>This command configures the maximum time BGP waits between successive messages (either keepalive or update) from its peer before closing the connection.</p> <p>Although the implementation allows setting the keepalive timer at the BGP global level times separately, the configured keepalive timer is overridden by this value under the following circumstances.</p> <ul style="list-style-type: none"> <li>• If the specified hold time is less than the configured keepalive time, the operational keepalive time is set to a third of the hold-time; the configured keepalive time is not changed.</li> <li>• If the hold time is set to zero, the operational value of the keepalive time is set to zero; the configured keepalive time is not changed. The connection with the peer is up permanently and no keepalive packets are sent to the peer.</li> </ul>
Range	0   3 to 65535
Default	90
Introduced	16.0.R1
Platforms	All

### **ibgp-multipath** *boolean*

Synopsis	Enable IBGP multipath load balancing
Context	<b>configure</b> <a href="#">service vprn string bgp ibgp-multipath boolean</a>
Tree	<a href="#">ibgp-multipath</a>
Description	<p>When configured to <b>true</b>, this command enables IBGP multipath load balancing when adding BGP routes to the route table if the route resolving the BGP next hop offers multiple next hops.</p> <p>When configured to <b>false</b>, this command disables IBGP multipath load balancing.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **import**

**label-preference** *number*

Synopsis	Route preference for routes from labeled-unicast peers
----------	--

Context	<b>configure service vprn string bgp label-preference number</b>
Tree	<a href="#">label-preference</a>
Range	1 to 255
Default	170
Introduced	16.0.R1
Platforms	All

## local-as

Synopsis	Enter the <b>local-as</b> context
Context	<b>configure service vprn string bgp local-as</b>
Tree	<a href="#">local-as</a>
Introduced	16.0.R1
Platforms	All

## as-number *number*

Synopsis	Local (or virtual) BGP AS number
Context	<b>configure service vprn string bgp local-as as-number number</b>
Tree	<a href="#">as-number</a>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

## prepend-global-as *boolean*

Synopsis	Prepend global AS when advertising routes to BGP peer
Context	<b>configure service vprn string bgp local-as prepend-global-as boolean</b>
Tree	<a href="#">prepend-global-as</a>
Description	When configured to <b>true</b> , the global ASN is added to the AS_PATH attribute in outbound routes sent to the peer. When configured to <b>false</b> , the global ASN is hidden in paths announced to the EBGp peer.
Default	true
Introduced	16.0.R1

Platforms All

### **private** *boolean*

Synopsis Hide the local ASN in sent paths learned from peering

Context **configure service vprn** *string* **bgp local-as private** *boolean*

Tree [private](#)

Description When configured to **true**, the local ASN is hidden in paths learned from the peering.  
When configured to **false**, the local ASN is advertised to all peers, including those that can use the global ASN for establishing BGP peering sessions.

Default false

Introduced 16.0.R1

Platforms All

### **local-preference** *number*

Synopsis Default local preference if not in incoming routes

Context **configure service vprn** *string* **bgp local-preference** *number*

Tree [local-preference](#)

Max. Range 0 to 4294967295

Default 100

Introduced 16.0.R1

Platforms All

### **loop-detect** *keyword*

Synopsis Strategy for loop detection in the AS path

Context **configure service vprn** *string* **bgp loop-detect** *keyword*

Tree [loop-detect](#)

Options drop-peer, ignore-loop, off, discard-route

Default ignore-loop

Introduced 16.0.R1

Platforms All

### **loop-detect-threshold** *number*

Synopsis	Threshold for the global ASN in a received AS path
Context	<b>configure service vprn string bgp loop-detect-threshold number</b>
Tree	<a href="#">loop-detect-threshold</a>
Range	0 to 15
Default	0
Introduced	16.0.R6
Platforms	All

### **med-out** (*number* | *keyword*)

Synopsis	Default MED attribute value to advertise to peers
Context	<b>configure service vprn string bgp med-out (number   keyword)</b>
Tree	<a href="#">med-out</a>
Max. Range	0 to 4294967295
Options	igp-cost
Introduced	16.0.R1
Platforms	All

### **min-route-advertisement** *number*

Synopsis	Minimum time before a prefix can be advertised to peer
Context	<b>configure service vprn string bgp min-route-advertisement number</b>
Tree	<a href="#">min-route-advertisement</a>
Range	1 to 255
Default	30
Introduced	16.0.R1
Platforms	All

### **monitor**

Synopsis	Enable the <b>monitor</b> context
Context	<b>configure service vprn string bgp monitor</b>
Tree	<a href="#">monitor</a>
Introduced	16.0.R1

Platforms All

### **admin-state** *keyword*

Synopsis Administrative state of BMP monitoring

Context **configure service vprn string bgp monitor admin-state keyword**

Tree [admin-state](#)

Options enable, disable

Default disable

Introduced 16.0.R1

Platforms All

### **all-stations** *boolean*

Synopsis Send BMP messages to all configured stations

Context **configure service vprn string bgp monitor all-stations boolean**

Tree [all-stations](#)

Description When configured to **true**, this command specifies that BMP messages are to be sent to all configured BMP monitoring stations.

When configured to **false**, the command is not used to indicate the stations which can receive BMP messages. The **station** command (at the same context level) identifies the BMP stations for which BMP messages are to be sent.

Default false

Introduced 16.0.R1

Platforms All

### **route-monitoring**

Synopsis Enter the **route-monitoring** context

### **family** [*family-type*] *keyword*

Synopsis Enter the **family** list instance

Context **configure service vprn string bgp multipath family keyword**

Tree [family](#)

Description	<p>Commands in this context set ECMP multipath parameters that apply only to the specified label unicast address family.</p> <p>When multipath is enabled, traffic to the destination is load-shared across a set of paths (BGP routes) that the BGP decision process considers equal to the best path. The distribution of traffic over the multiple paths may or may not be equal. The distribution is based on weights derived from the Link Bandwidth Extended Community.</p> <p>For more information about the criteria a non-best route must meet to qualify as a multipath, see “BGP route installation in the route table” in the <i>7450 ESS 7750 SR 7950 XRS VSR Unicast Routing Protocols User Guide</i>.</p>
Introduced	19.5.R1
Platforms	All

### **[family-type]** *keyword*

Synopsis	Address family type for the multipath selection
Context	<b>configure</b> <i>service vprn string bgp multipath family keyword</i>
Tree	<i>family</i>
Options	ipv4, ipv6, label-ipv4, label-ipv6
Notes	This element is part of a list key.
Introduced	19.5.R1
Platforms	All

### **ebgp** *number*

Synopsis	Maximum multipaths when best path is EBGp learned route
Context	<b>configure</b> <i>service vprn string bgp multipath family keyword ebgp number</i>
Tree	<i>ebgp</i>
Description	This command configures the maximum number of multipaths per prefix or NLRI when the best path is an EBGp learned route. The limit configured using this command overrides the limit configured in the <b>max-paths</b> command. If the best path is an EBGp learned route, and this command is set to 1, multipaths are disabled.
Range	1 to 64
Introduced	19.5.R1
Platforms	All

### **ibgp** *number*

Synopsis	Maximum multipaths when best path is IBGP learned route
----------	---

Context	<b>configure service vprn string bgp multipath family keyword ibgp number</b>
Tree	<a href="#">ibgp</a>
Description	This command configures the maximum number of multipaths per prefix or NLRI when the best path is an IBGP learned route. The limit configured using this command overrides the limit configured in the <b>max-paths</b> command. If the best path is an IBGP learned route and this command is set to 1, multipaths are disabled.
Range	1 to 64
Introduced	19.5.R1
Platforms	All

### **max-paths number**

Synopsis	Maximum number of multipaths per prefix or NLRI
Context	<b>configure service vprn string bgp multipath family keyword max-paths number</b>
Tree	<a href="#">max-paths</a>
Description	This command configures the maximum number of multipaths per prefix or NLRI for the IP family option specified using the <b>family</b> command. Consider the following when configuring this command: <ul style="list-style-type: none"> <li>• If the best path is an EBGP-learned route and the <b>ebgp</b> command is configured, the limit configured in the <b>ebgp</b> command overrides the limit configured in this command.</li> <li>• If the best path is an IBGP-learned route and the <b>ibgp</b> command is configured, the limit configured in the <b>ibgp</b> command overrides the limit configured in this command.</li> <li>• If the best path is an EBGP-learned route and the <b>ebgp</b> command is not configured, and this command is configured to 1, multipaths are disabled.</li> <li>• If the best path is an IBGP-learned route and the <b>ibgp</b> command is not configured, and this command is configured to 1, multipaths are disabled.</li> </ul>
Range	1 to 64
Introduced	19.5.R1
Platforms	All

### **restrict keyword**

Synopsis	AS path restriction for the non-best path
Context	<b>configure service vprn string bgp multipath family keyword restrict keyword</b>
Tree	<a href="#">restrict</a>
Options	same-as-path-length, same-neighbor-as, exact-as-path
Default	same-as-path-length

---

Introduced	19.5.R1
Platforms	All

### **unequal-cost** *boolean*

Synopsis	Ignore differences in the next-hop cost for multipath
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp multipath family</a> <i>keyword</i> <b>unequal-cost</b> <i>boolean</i>
Tree	<a href="#">unequal-cost</a>
Description	When configured to <b>true</b> , BGP ignores differences in the next-hop cost when determining eligible multipaths.
Default	false
Introduced	19.5.R1
Platforms	All

### **ibgp** *number*

Synopsis	Maximum multipaths per prefix for IBGP learned routes

Tree [admin-state](#)

Options enable, disable

Default enable

Introduced 16.0.R1

Platforms All

### **advertise-inactive** *boolean*

Synopsis Advertise an inactive BGP route to peers

Context **configure service vprn** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **advertise-inactive** *boolean*

Tree [advertise-inactive](#)

Description When configured to **true**, this command allows an inactive BGP route to be advertised, even though it is not the most preferred route. The effect of the command on advertised unlabeled, labeled, and multicast IPv4 and IPv6 routes depends on several factors.

- If the active route for the IP prefix is a BGP route, that route is advertised.
- If the active route is a non-BGP route and there are valid inactive BGP routes to the same destination, the best valid inactive route is advertised unless the active non-BGP route is matched and accepted by an export policy applied to the session.
- If the active route is a non-BGP route and there are no valid BGP routes to the same destination, no route is advertised unless the active non-BGP route is matched and accepted by an export policy applied to the session.

When unconfigured, the command inherits the value of the global-level setting (**true** or **false**). The command cannot be explicitly configured to **false**.

When this command inherits a value of **false**, the advertisement of inactive BGP routes to other BGP peers is disabled.

Introduced 16.0.R1

Platforms All

## advertise-ipv6-next-hops

Synopsis	Enable the <b>advertise-ipv6-next-hops</b> context
Context	<b>configure service vprn string bgp neighbor</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>advertise-ipv6-next-hops</b>
Tree	<a href="#">advertise-ipv6-next-hops</a>
Introduced	19.5.R1
Platforms	All

## ipv4 *boolean*

Synopsis	Enable IPv4 routes to be advertised
Context	<b>configure service vprn string bgp neighbor</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>advertise-ipv6-next-hops ipv4 boolean</b>

Context	<b>configure service vprn string bgp neighbor</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>aggregator-id-zero boolean</b>
Tree	<a href="#">aggregator-id-zero</a>
Introduced	16.0.R1
Platforms	All

## as-override *boolean*

Synopsis	Replace the peer ASN with the local ASN in AS Path
Context	<b>configure service vprn string bgp neighbor</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>as-override boolean</b>
Tree	<a href="#">as-override</a>
Description	<p>When configured to <b>true</b>, the advertising router's local AS replaces all occurrences of the peer AS in the AS_PATH attribute.</p> <p>This command should be used with caution, as it breaks BGP's loop detection mechanism.</p>

When unconfigured, the command inherits the value of the group-level setting (**true** or **false**). This command cannot be explicitly configured to **false**.

When the command inherits a value of **false**, no AS override is performed.

Introduced	16.0.R1
Platforms	All

### **asn-4-byte** *boolean*

Synopsis	Advertise the use of 4-byte ASNs
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">bgp neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">asn-4-byte</a> <i>boolean</i>

**advertise**

Synopsis	Enable the <b>advertise</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">bfd-strict-mode</a> <a href="#">advertise</a>
Tree	<a href="#">advertise</a>
Description	<p>Commands in this context configure BGP to advertise the Strict-BFD capability to peers that are within scope of this command and meet the following requirements:</p> <ul style="list-style-type: none"> <li>• The inherited or configured value for the <b>bfd-liveness</b> command that applies to the peer is <b>true</b>.</li> <li>• The interface associated with the peer has a valid BFD configuration.</li> </ul> <p>When the preceding conditions are satisfied and two peers attempting to form a session both advertise the Strict-BFD capability, the BGP finite state machine in each router</p>

transitions the session state to established after the BFD session with the peer enters the up state.

When unconfigured, BGP does not advertise the Strict-BFD capability to peers.

Introduced 23.7.R1

Platforms All

### **holdtime** *number*

Synopsis Maximum time BGP waits for the BFD session to come up

Context **configure service vprn string bgp neighbor** (*ipv4-address-with-zone | ipv6-address-with-zone*) **bfd-strict-mode advertise holdtime number**

Tree **holdtime**

Description This command configures the maximum time BGP waits for the BFD session to come up, provided that the Strict-BFD procedures apply to a session, and the negotiated BGP hold time is zero (no keepalives). If the negotiated BGP hold time is greater than zero, the advertised hold time is not considered.

Range 1 to 65535

Units seconds

Default 30

Introduced 23.7.R1

Platforms All

### **next-hop-reachability** *boolean*

Synopsis Consider next hop unreachable if BFD session is down

Context **configure service vprn string bgp neighbor** (*ipv4-address-with-zone | ipv6-address-with-zone*) **bfd-strict-mode next-hop-reachability boolean**

Tree **next-hop-reachability**

Description When configured to **true**, the router considers next-hop self routes belonging to specific address families received from a peer within scope of this command as having an unresolved next hop, provided that the following requirements are met:

- The BFD session to the peer is in a down state.
- There is a valid interface BFD configuration that applies to the peer.
- There is a valid BFD liveness configuration that applies to the peer.

The unresolved state is maintained until the BFD session state changes to up or administratively down, even if there is a resolving route or tunnel that matches the BGP next-hop address.

Routes received from one peer with a BGP next-hop address equal to the address of another peer are not affected by the BFD session to the other peer. The behavior of the

router when this command is **true** does not depend on whether Strict-BFD is used, as both features are independent.

Configuring this command to **true** only affects routes belonging to the following address families:

- IPv4
- IPv6
- IPv4 VPN
- IPv6 VPN
- labeled unicast IPv4
- labeled unicast IPv6
- EVPN
- IPv4 multicast
- IPv6 multicast
- IPv4 VPN multicast
- IPv6 VPN multicast

When configured to **false**, the router does not consider next-hop self routes belonging to the preceding address families as having an unresolved next hop if the BFD session goes down.

Introduced 23.7.R1

Platforms All

### **capability-negotiation** *boolean*

### **enforce-first-as** *boolean*

Synopsis Enforce the configured peer AS value in received routes

Context **configure service vprn** *string* **bgp neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **enforce-first-as** *boolean*

Tree [enforce-first-as](#)

Description When configured to **true** for an EBGp session, all routes received from an EBGp peer are checked to ensure that the most recent ASN in the AS\_PATH attribute of each route matches the configured AS of the session. If there is not a match, the session is reset (if the **update-fault-tolerance** command in the **error-handling** context is set to **false**) or the session is left up but the route is treated as withdrawn (if **update-fault-tolerance** is set to **true**).

This command does not flap an established session because it applies only to routes received after the command is issued.

When unconfigured, the command inherits the value of the group-level setting (**true** or **false**). The command cannot be explicitly configured to **false**.

When this command inherits a value of **false**, received routes are not checked for compliance with the rule.

Introduced	16.0.R1
Platforms	All

Context	<b>configure service vprn string bgp neighbor (ipv4-address-with-zone   ipv6-address-with-zone) error-handling update-fault-tolerance boolean</b>
Tree	<a href="#">update-fault-tolerance</a>
Description	<p>When configured to <b>true</b>, non-critical errors are handled with treat-as-withdraw, attribute-discard, and other non-disruptive approaches that do not cause a session reset. Critical errors still trigger a session reset.</p> <p>When unconfigured, the command inherits the value of the group-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>false</b>.</p> <p>When this command inherits a value of <b>false</b>, all errors trigger a session reset.</p>
Introduced	16.0.R1
Platforms	All

## evpn-link-bandwidth

Synopsis	Enter the <b>evpn-link-bandwidth</b> context
Context	<b>configure service vprn string bgp neighbor (ipv4-address-with-zone   ipv6-address-with-zone) evpn-link-bandwidth</b>
Tree	<a href="#">evpn-link-bandwidth</a>
Introduced	22.7.R1
Platforms	All

**add-to-received-bgp** *number*

Synopsis	Weight added to received PE-CE BGP routes
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>evpn-link-bandwidth add-to-received-bgp</b> <i>number</i>
Tree	<a href="#">add-to-received-bgp</a>
Description	This command configures the weight value added to all BGP PE-CE routes for the purpose of weighted ECMP if EVPN-IFL and BGP PE-CE routes are combined into the same ECMP set.  For the load-balancing between EVPN-IFL and BGP PE-CE routes the <b>configure service vprn bgp eibgp-loadbalance</b> command must already be configured in the system.
Range	1 to 128
Introduced	22.7.R1
Platforms	All

**export**

Synopsis	Enable the <b>export</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>export</b>
Tree	<a href="#">export</a>
Introduced	16.0.R1
Platforms	All

**policy** (*policy-expr-string* | *string*)

Synopsis	Export policy name
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>export policy</b> ( <i>policy-expr-string</i>   <i>string</i> )
Tree	<a href="#">policy</a>
String Length	1 to 255
Max. Instances	15
Min. Instances	1
Notes	This element is ordered by the user.
Introduced	16.0.R1

Introduced 16.0.R1  
Platforms All

### **label-ipv4** *boolean*

Synopsis Advertise support for the label-IPv4 address family

Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>family label-ipv4</b> <i>boolean</i>
Tree	<a href="#">label-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **mcast-ipv4** *boolean*

Synopsis	Advertise support for the MCAST-IPv4 address family
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>family mcast-ipv4</b> <i>boolean</i>
Tree	<a href="#">mcast-ipv4</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **mcast-ipv6** *boolean*

Synopsis	Advertise support for the MCAST-IPv6 address family
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>family mcast-ipv6</b> <i>boolean</i>
Tree	<a href="#">mcast-ipv6</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **fast-external-failover** *boolean*

Synopsis	Drop external BGP session immediately when link fails
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>fast-external-failover</b> <i>boolean</i>
Tree	<a href="#">fast-external-failover</a>
Description	<p>When this command inherits a value of <b>true</b>, the router drops an external BGP session on a single-hop route immediately when the local interface goes down.</p> <p>When unconfigured, the command inherits the value of the group-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>true</b>.</p>

When configured to **false**, the BGP session remains up until the hold time expires.

Introduced 16.0.R1  
 Platforms All

## graceful-restart

Synopsis Enable the **graceful-restart** context  
 Context **configure service vprn string bgp neighbor (ipv4-address-with-zone | ipv6-address-with-zone) graceful-restart**  
 Tree [graceful-restart](#)  
 Introduced 16.0.R1  
 Platforms All

## gr-notification *boolean*

Synopsis Perform graceful restart procedures after NOTIFICATION  
 Context **configure service vprn string bgp neighbor (ipv4-address-with-zone | ipv6-address-with-zone) graceful-restart gr-notification *boolean***  
 Tree [gr-notification](#)  
 Description When configured to **true**, the Graceful Restart capability sent by the router indicates support for NOTIFICATION messages. If the peer also supports this capability, the session is restarted gracefully (while preserving forwarding) if either peer sends a NOTIFICATION message due to some type of event or error.  
 When configured to **false**, NOTIFICATION messages are not supported.  
 Default false  
 Introduced 16.0.R1  
 Platforms All

## long-lived

Synopsis Enable the **long-lived** context  
 Context **configure service vprn string bgp neighbor (ipv4-address-with-zone | ipv6-address-with-zone) graceful-restart long-lived**  
 Tree [long-lived](#)  
 Introduced 16.0.R1  
 Platforms All

**advertise-stale-to-all-neighbors** *boolean*

Synopsis	Advertise stale routes to all BGP peers
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">graceful-restart</a> <a href="#">long-lived</a> <a href="#">advertise-stale-to-all-neighbors</a> <i>boolean</i>

Tree	<a href="#">family</a>

Options	ipv4, ipv6, flow-ipv4, flow-ipv6, label-ipv4
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

### **advertised-stale-time** *number*

Synopsis	LLGR stale routes time for family override
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>graceful-restart long-lived family</b> <i>keyword</i> <b>advertised-stale-time</b> <i>number</i>
Tree	<a href="#">advertised-stale-time</a>
Description	This command configures the long-lived stale routes time that is advertised by the router in its LLGR capability.  This command applies to all AFI/SAFI in the advertised LLGR capability with a family-specific override.
Range	0 to 16777215
Default	86400
Introduced	16.0.R1
Platforms	All

### **helper-override-stale-time** *number*

Synopsis	Locally-configured stale routes override time
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>graceful-restart long-lived family</b> <i>keyword</i> <b>helper-override-stale-time</b> <i>number</i>
Tree	<a href="#">helper-override-stale-time</a>
Description	This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability. This is a family-specific override value.
Range	0 to 16777216
Default	16777216
Introduced	16.0.R1
Platforms	All

### **forwarding-bits-set** *keyword*

Synopsis	BGP LLGR forwarding-bit behavior for address family
----------	---

Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>graceful-restart long-lived forwarding-bits-set</b> <i>keyword</i>
Tree	<a href="#">forwarding-bits-set</a>
Description	<p>This command determines the setting of the F bit in the GR and LLGR capabilities advertised by the router. When the F bit is set for an address family, it indicates that the advertising router is able to preserve forwarding state for the routes of that address family across the last restart. When the session is re-established after a restart and the F bit is not set, all stale routes from the peer are immediately removed for the corresponding address family.</p> <p>This command allows the F bit to be set for all address families or only for non-forwarding address families (L2-VPN, route target, flow-IPv4, and flow-IPv6).</p>
Options	none, all, non-fwd
Default	none
Introduced	16.0.R1
Platforms	All

### **helper-override-restart-time** *number*

Synopsis	Locally-configured override for restart time
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>graceful-restart long-lived helper-override-restart-time</b> <i>number</i>
Tree	<a href="#">helper-override-restart-time</a>
Description	<p>This command overrides the restart time advertised by a peer (in its GR capability) with a locally-configured value. This override applies only to AFI/SAFI that were included in the GR capability of the peer. The restart-time is always zero for AFI/SAFI not included in the GR capability. This command is useful if the local router wants to force the LLGR phase to begin after a set time for all protected AFI/SAFI.</p>
Range	0 to 4095
Introduced	16.0.R1
Platforms	All

### **helper-override-stale-time** *number*

Synopsis	Locally-configured stale routes override time
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>graceful-restart long-lived helper-override-stale-time</b> <i>number</i>
Tree	<a href="#">helper-override-stale-time</a>
Description	<p>This command configures a locally-imposed LLGR stale time that overrides the long-lived stale routes time that is advertised by the router in its LLGR capability.</p>

This command applies to all AFI/SAFI in the advertised LLGR capability except for any AFI/SAFI with a family-specific override.

Range	0 to 16777215
Introduced	16.0.R1
Platforms	All

### **without-no-export** *boolean*

Synopsis	Advertise LLGR stale routes to non-LLGR peers
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>graceful-restart long-lived</b> <b>without-no-export</b> <i>boolean</i>
Tree	<a href="#">without-no-export</a>
Description	<p>When configured to <b>true</b>, LLGR stale routes can be advertised to any peer (EBGP or IBGP) that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0.</p> <p>When configured to <b>false</b>, LLGR stale routes are not advertised to any EBGP peer that did not signal the LLGR capability. For IBGP and confederation-EBGP peers that did not advertise the LLGR capability, the local preference attribute in the advertised stale routes is automatically set to 0 and a NO_EXPORT standard community is automatically added to the routes.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **restart-time** *number*

Synopsis	Restart time advertised by GR capability
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>graceful-restart</b> <b>restart-time</b> <i>number</i>
Tree	<a href="#">restart-time</a>
Range	0 to 4095
Default	300
Introduced	16.0.R1
Platforms	All

**stale-routes-time** *number*

Synopsis	Maximum time to maintain routes after graceful restart
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>graceful-restart stale-routes-time</b> <i>number</i>
Tree	<b>stale-routes-time</b>
Range	1 to 3600
Default	360
Introduced	16.0.R1
Platforms	All

**group** *reference***WARNING:**

Modifying this element recreates the parent element automatically for the new value to take effect.

Synopsis	Neighbor to group
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>group</b> <i>reference</i>
Tree	<b>group</b>

Introduced	16.0.R1
Platforms	All

**minimum-hold-time** *number*

Synopsis	Minimum time BGP waits between successive messages
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>hold-time</b> <b>minimum-hold-time</b> <i>number</i>
Tree	<b>minimum-hold-time</b>
Range	0   3 to 65536
Default	0
Introduced	16.0.R1
Platforms	All

**seconds** *number*

Synopsis	Maximum hold time between successive messages
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>hold-time</b> <b>seconds</b> <i>number</i>
Tree	<b>seconds</b>
Description	<p>The BGP hold time specifies the maximum time BGP waits between successive messages (either keepalive or update) from its peer, before closing the connection.</p> <p>Even though the implementation allows setting the keepalive timer at the BGP neighbor level times separately, the configured keepalive timer is overridden by this value under the following circumstances:</p> <ul style="list-style-type: none"> <li>• If the specified hold time is less than the configured keepalive time, then the operational keepalive time is set to a third of the hold-time; the configured keepalive time is not changed.</li> <li>• If the hold time is set to zero, the operational value of the keepalive time is set to zero; the configured keepalive time is not changed. This means that the connection with the peer is up permanently and no keepalive packets are sent to the peer.</li> </ul> <p>When unconfigured, the command setting is inherited from the BGP group-level configuration.</p>
Range	0   3 to 65535
Introduced	16.0.R1
Platforms	All

**import**

Synopsis	Enable the <b>import</b> context

## ipv6 boolean

Synopsis	Support Link Bandwidth EC in IPv6 routes
Context	<b>configure service vprn string bgp neighbor</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>link-bandwidth send-to-ebgp ipv6 boolean</b>
Tree	<a href="#">ipv6</a>
Default	false
Introduced	16.0.R4
Platforms	All

## label-ipv4 boolean

Synopsis	Support Link Bandwidth EC in label-IPv4 routes
Context	<b>configure service vprn string bgp neighbor</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>link-bandwidth send-to-ebgp label-ipv4 boolean</b>
Tree	<a href="#">label-ipv4</a>
Default	false
Introduced	16.0.R4

Platforms All

### **local-address** (*ipv4-address-no-zone | ipv6-address-no-zone | interface-name*)

Synopsis Local IP address used when communicating with BGP peers

Context **configure service vprn string bgp neighbor** (*ipv4-address-with-zone | ipv6-address-with-zone*) **local-address** (*ipv4-address-no-zone | ipv6-address-no-zone | interface-name*)

Tree [local-address](#)

String Length 1 to 32

Introduced 16.0.R1

Platforms All

### **local-as**

Synopsis Enter the **local-as** context

Context **configure service vprn string bgp neighbor** (*ipv4-address-with-zone | ipv6-address-with-zone*) **local-as**

Tree [local-as](#)

Introduced 16.0.R1

Platforms All

### **as-number** *number*

Synopsis Local (or virtual) BGP AS number

Context **configure service vprn string bgp neighbor** (*ipv4-address-with-zone | ipv6-address-with-zone*) **local-as as-number** *number*

Tree [as-number](#)

Range 1 to 4294967295

Introduced 16.0.R1

Platforms All

### **prepend-global-as** *boolean*

Synopsis Prepend global ASN when advertising routes to BGP peer

Context **configure service vprn string bgp neighbor** (*ipv4-address-with-zone | ipv6-address-with-zone*) **local-as prepend-global-as** *boolean*

Tree [prepend-global-as](#)

Description	When configured to <b>true</b> , the global ASN is added to the AS_PATH attribute in outbound routes sent to the peer. When configured to <b>false</b> , the global ASN is not included in the AS_PATH attribute.
Default	true
Introduced	16.0.R1
Platforms	All

### **private** *boolean*

Synopsis	Hide the local ASN in sent paths learned from peering
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>local-as private</b> <i>boolean</i>
Tree	<a href="#">private</a>
Description	When configured to <b>true</b> , the local AS number is only advertised to peers that use the local ASN for establishing BGP peering sessions. When configured to <b>false</b> , the local ASN is advertised to all peers, including those that can use the global ASN for establishing BGP peering sessions.
Default	false
Introduced	16.0.R1
Platforms	All

### **local-preference** *number*

Synopsis	Default local preference if not in incoming routes
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>local-preference</b> <i>number</i>
Tree	<a href="#">local-preference</a>
Range	0 to 4294967295
Introduced	16.0.R1
Platforms	All

### **loop-detect** *keyword*

Synopsis	Strategy for loop detection in the AS path
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>loop-detect</b> <i>keyword</i>
Tree	<a href="#">loop-detect</a>

Options	drop-peer, ignore-loop, off, discard-route
Introduced	16.0.R1
Platforms	All

### **loop-detect-threshold** *number*

Synopsis	Threshold for the global ASN in a received AS path
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>loop-detect-threshold</b> <i>number</i>
Tree	<a href="#">loop-detect-threshold</a>
Range	0 to 15
Introduced	16.0.R6
Platforms	All

### **med-out** (*number* | *keyword*)

Synopsis	Default MED attribute value to advertise to peers
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>med-out</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">med-out</a>
Max. Range	0 to 4294967295
Options	igp-cost
Introduced	16.0.R1
Platforms	All

### **min-route-advertisement** *number*

Synopsis	Minimum interval between successive prefix updates
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>min-route-advertisement</b> <i>number</i>
Tree	<a href="#">min-route-advertisement</a>
Range	1 to 255
Introduced	16.0.R1
Platforms	All

## monitor

Synopsis	Enable the <b>monitor</b> context
Context	<b>configure service vprn string bgp neighbor</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>monitor</b>
Tree	<b>monitor</b>
Introduced	16.0.R1
Platforms	All

## admin-state *keyword*

Synopsis	Administrative state of BMP monitoring
Context	<b>configure service vprn string bgp neighbor</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>monitor admin-state keyword</b>
Tree	<b>admin-state</b>
Options	enable, disable
Default	disable
Introduced	16.0.R1
Platforms	All

## all-stations *boolean*

Synopsis	Send BMP messages to all configured stations
Context	<b>configure service vprn string bgp neighbor</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>monitor all-stations boolean</b>
Tree	<b>all-stations</b>
Description	<p>When configured to <b>true</b>, this command specifies that BMP messages are to be sent to all configured BMP monitoring stations.</p> <p>When configured to <b>false</b>, the command is not used to indicate the stations which can receive BMP messages. The <b>station</b> command (at the same context level) identifies the BMP stations for which BMP messages are to be sent.</p>
Default	false
Introduced	16.0.R1
Platforms	All

## route-monitoring

Synopsis	Enter the <b>route-monitoring</b> context
----------	---

Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>monitor route-monitoring</b>
Tree	<a href="#">route-monitoring</a>
Introduced	16.0.R1
Platforms	All

### **post-policy** *boolean*

Synopsis	Allow post-policy route-monitoring messages to be sent
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>monitor route-monitoring post-policy</b> <i>boolean</i>
Tree	<a href="#">post-policy</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **pre-policy** *boolean*

Synopsis	Allow pre-policy route-monitoring messages to be sent
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>monitor route-monitoring pre-policy</b> <i>boolean</i>
Tree	<a href="#">pre-policy</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **station** [[station-name](#)] *reference*

Synopsis	Add a list entry for <b>station</b>
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>monitor station</b> <i>reference</i>
Tree	<a href="#">station</a>
Max. Instances	8
Introduced	16.0.R1
Platforms	All

**[station-name] reference**

Synopsis	BMP monitoring station
Context	<b>configure service vprn string bgp neighbor</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>monitor station reference</b>
Tree	<b>station</b>
Reference	<b>configure bmp station string</b>
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**multihop number**

Synopsis	TTL in IP packet headers for EBGp peers multi-hops away
Context	<b>configure service vprn string bgp neighbor</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>multihop number</b>
Tree	<b>multihop</b>
Range	1 to 255
Introduced	16.0.R1
Platforms	All

**multipath-eligible boolean**

Synopsis	Allow routes from this peer in multipath eligibility
Context	<b>configure service vprn string bgp neighbor</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>multipath-eligible boolean</b>
Tree	<b>multipath-eligible</b>
Introduced	19.5.R1
Platforms	All

**next-hop-self boolean**

Synopsis	Advertise routes with local address as next-hop address
Context	<b>configure service vprn string bgp neighbor</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>next-hop-self boolean</b>
Tree	<b>next-hop-self</b>

Description	<p>When configured to <b>true</b>, this command configures BGP to advertise routes to members of a group using a local address of the BGP instance as the BGP next-hop address.</p> <p>Note that this command is set without exception, regardless of the route source (EBGP or IBGP) or its family. When used with VPN-IPv4 and VPN-IPv6 routes, the <b>configure router bgp rr-vpn-forwarding</b> command should also be configured.</p> <p>When unconfigured, the command inherits the value of the group-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>false</b>.</p> <p>When this command inherits a value of <b>false</b>, protocol standard behavior is applied to determine whether to set <b>next-hop-self</b> in advertised routes.</p>
Introduced	16.0.R1
Platforms	All

## origin-validation

Synopsis	Enable the <b>origin-validation</b> context
Context	<b>configure service vpn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>origin-validation</b>
Tree	<a href="#">origin-validation</a>
Introduced	19.7.R1
Platforms	All

## ipv4 boolean

Synopsis	Enable support for unlabeled unicast IPv4 routes
Context	<b>configure service vpn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>origin-validation</b> <b>ipv4 boolean</b>
Tree	<a href="#">ipv4</a>
Default	false
Introduced	19.7.R1
Platforms	All

## ipv6 boolean

Synopsis	Enable support for unlabeled unicast IPv6 routes
Context	<b>configure service vpn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>origin-validation</b> <b>ipv6 boolean</b>
Tree	<a href="#">ipv6</a>
Default	false

Introduced	19.7.R1
Platforms	All

### **label-ipv4** *boolean*

Synopsis	Enable support for labeled-unicast IPv4 routes
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>origin-validation</b> <b>label-ipv4</b> <i>boolean</i>
Tree	<a href="#">label-ipv4</a>
Default	false
Introduced	19.7.R1
Platforms	All

### **passive** *boolean*

Synopsis	Use passive mode for BGP communication
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>passive</b> <i>boolean</i>
Tree	<a href="#">passive</a>
Introduced	16.0.R1
Platforms	All

### **path-mtu-discovery** *boolean*

Synopsis	Enable path MTU discovery
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>path-mtu-discovery</b> <i>boolean</i>
Tree	<a href="#">path-mtu-discovery</a>
Description	<p>When configured to <b>true</b>, Path MTU Discovery (PMTUD) is enabled for the associated TCP connections.</p> <p>When set to <b>true</b>, PMTUD is activated toward an IPv4 BGP neighbor and the Don't Fragment (DF) bit is set in the IP header of all IPv4 packets sent to the peer. If any device along the path toward the peer cannot forward the packet because the IP MTU of the interface is smaller than the IP packet size, this device drops the packet and sends an ICMP or ICMPv6 error message encoding the interface MTU. When the router receives the ICMP or ICMPv6 message, it lowers the TCP maximum segment size limit from the previous value so that the IP MTU constraint can be accommodated.</p> <p>When PMTUD is configured to <b>false</b> and there is no TCP MSS configuration that can be associated with a BGP neighbor (in either the BGP configuration or the first hop IP</p>

interface configuration), the router advertises a value of only 1024 bytes as the TCP MSS option value, limiting received TCP segments to that size.

Introduced	16.0.R1
Platforms	All

### **peer-as** *number*

Synopsis	Peer AS number
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>peer-as</b> <i>number</i>
Tree	<a href="#">peer-as</a>
Description	<p>This command configures the autonomous system number for the peer. The peer AS number must be configured for each configured peer.</p> <p>For EBGP peers, the peer AS number configured must be different from the autonomous system number configured for this router under the global level since the peer will be in a different autonomous system than this router.</p> <p>For IBGP peers, the peer AS number must be the same as the autonomous system number of this router configured under the global level.</p>
Range	1 to 4294967295
Introduced	16.0.R1
Platforms	All

### **peer-creation-type** *keyword*

Synopsis	Peer creation type
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>peer-creation-type</b> <i>keyword</i>
Tree	<a href="#">peer-creation-type</a>
Options	static, dynamic, dynamic-if-remote, dynamic-if-local
Default	static
Introduced	16.0.R1
Platforms	All

### **peer-ip-tracking** *boolean*

Synopsis	Enable BGP peer tracking
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>peer-ip-tracking</b> <i>boolean</i>

Tree	<a href="#">peer-ip-tracking</a>
Description	<p>When configured to <b>true</b>, this command enables BGP peer tracking.</p> <p>Peer tracking should be used with caution. Peer tracking can tear a session down even if the loss of connectivity turns out to be short-lived (for example, while the IGP protocol is re-converging). Next-hop tracking, which is always enabled, handles temporary connectivity issues more effectively.</p> <p>When unconfigured, the command inherits the value of the group-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>false</b>.</p> <p>When this command inherits a value of <b>false</b>, peer tracking is disabled.</p>
Introduced	16.0.R1
Platforms	All

### **preference number**

Synopsis	Route preference for routes learned from all peers
Context	<b>configure service vprn string bgp neighbor</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>preference number</b>
Tree	<a href="#">preference</a>
Description	<p>This command configures the route preference for routes learned from the configured peers.</p> <p>The lower the preference value, the higher the chance of the route being the active route. The router assigns BGP routes the highest default preference as compared to routes that are direct, static or learned via MPLS or OSPF.</p> <p>When unconfigured, the command setting is inherited from the group-level configuration.</p>
Range	1 to 255
Introduced	16.0.R1
Platforms	All

### **prefix-limit [family] keyword**

Synopsis	Enter the <b>prefix-limit</b> list instance
Context	<b>configure service vprn string bgp neighbor</b> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <b>prefix-limit keyword</b>
Tree	<a href="#">prefix-limit</a>
Introduced	16.0.R1
Platforms	All

**[family]** *keyword*

Synopsis	Address family to which the limit applies
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>prefix-limit</b> <i>keyword</i>
Tree	<b>prefix-limit</b>
Options	ipv4, ipv6, mcast-ipv4, flow-ipv4, flow-ipv6, mcast-ipv6, label-ipv4
Notes	This element is part of a list key.
Introduced	16.0.R1
Platforms	All

**hold-excess** *number*

Synopsis	Percentage of maximum routes to install in route table
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>prefix-limit</b> <i>keyword</i> <b>hold-excess</b> <i>number</i>
Tree	<b>hold-excess</b>
Description	<p>This command specifies the percentage of maximum routes that are allowed to be installed in the route table for the configured address family. If a peer within scope of the configuration exceeds the limit, the overflow routes are held in the BGP RIB as inactive routes and are ineligible for forwarding and advertisement to other peers. If the <b>post-import</b> command is configured to <b>true</b>, only routes not rejected by import policies count toward the limit.</p> <p>A BGP route in an overflow state is reconsidered for activation and reinstallation when an UPDATE message is received for the route.</p> <p>This command is mutually exclusive with the <b>idle-timeout</b> and <b>log-only</b> commands.</p>
Range	1 to 100
Introduced	23.7.R1
Platforms	All

**idle-timeout** *number*

Synopsis	Time which BGP peering remains idle before reconnecting
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>prefix-limit</b> <i>keyword</i> <b>idle-timeout</b> <i>number</i>
Tree	<b>idle-timeout</b>
Description	<p>This command defines the idle time after an administrative take-down before BGP re-establishes a session and reconnects to a peer.</p> <p>When unconfigured, the command inherits the value from the group-level configuration.</p>

Range	1 to 1024
Introduced	16.0.R1
Platforms	All

### **log-only** *boolean*

Synopsis	Send warning message at threshold instead of take-down
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>prefix-limit</b> <b>keyword</b> <b>log-only</b> <i>boolean</i>
Tree	<b>log-only</b>
Default	false
Introduced	16.0.R1
Platforms	All

### **maximum** *number*

Synopsis	Maximum number of routes to be learned from a peer
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>prefix-limit</b> <b>keyword</b> <b>maximum</b> <i>number</i>
Tree	<b>maximum</b>
Description	This command configures the maximum number of BGP routes than can be received from a peer before administrative action is taken.
Range	1 to 4294967295
Notes	This element is mandatory.
Introduced	16.0.R2
Platforms	All

### **post-import** *boolean*

Synopsis	Apply limit only to routes accepted by import policies
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>prefix-limit</b> <b>keyword</b> <b>post-import</b> <i>boolean</i>
Tree	<b>post-import</b>
Default	false
Introduced	16.0.R1
Platforms	All

**threshold** *number*

Synopsis	Percentage threshold that triggers a warning message
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>prefix-limit</b> <i>keyword</i> <b>threshold</b> <i>number</i>
Tree	<b>threshold</b>
Range	1 to 100
Default	90
Introduced	16.0.R1
Platforms	All

**remove-private**

Synopsis	Enable the <b>remove-private</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>remove-private</b>
Tree	<b>remove-private</b>
Introduced	16.0.R1
Platforms	All

**limited** *boolean*

Synopsis	Remove private ASNs up to first public ASN encountered
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>remove-private limited</b> <i>boolean</i>
Tree	<b>limited</b>
Default	false
Introduced	16.0.R1
Platforms	All

**replace** *boolean*

Synopsis	Replace private ASN with global ASN before advertising
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>remove-private replace</b> <i>boolean</i>
Tree	<b>replace</b>

Default	false
Introduced	19.10.R1
Platforms	All

### **skip-peer-as** *boolean*

Synopsis	Keep private ASN if it is the same as the BGP peer ASN
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>remove-private skip-peer-as</b> <i>boolean</i>
Tree	<a href="#">skip-peer-as</a>
Default	false
Introduced	16.0.R1
Platforms	All

### **send-communities**

Synopsis	Enter the <b>send-communities</b> context
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>send-communities</b>
Tree	<a href="#">send-communities</a>
Introduced	16.0.R1
Platforms	All

### **extended** *boolean*

Synopsis	Advertise the Extended Communities attribute to peers
Context	<b>configure service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>send-communities extended</b> <i>boolean</i>
Tree	<a href="#">extended</a>
Description	<p>When unconfigured, this command inherits the value of the group-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>true</b>.</p> <p>When this command inherits a value of <b>true</b>, BGP extended communities are sent to peers in the Extended Communities attribute.</p> <p>When configured to <b>false</b>, all extended communities are removed from all routes advertised to BGP peers.</p>
Introduced	16.0.R1
Platforms	All

## large *boolean*

Synopsis	Advertise the Large Communities attribute to peers
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>send-communities large</b> <i>boolean</i>
Tree	<b>large</b>
Description	<p>When unconfigured, this command inherits the value of the group-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>true</b>.</p> <p>When this command inherits a value of <b>true</b>, BGP large communities are sent to peers in the Large Communities attribute.</p> <p>When configured to <b>false</b>, all large communities are removed from all routes advertised to BGP peers.</p>
Introduced	16.0.R1
Platforms	All

## standard *boolean*

Synopsis	Advertise the Communities attribute to peers
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>send-communities standard</b> <i>boolean</i>
Tree	<b>standard</b>
Description	<p>When unconfigured, this command inherits the value of the group-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>true</b>.</p> <p>When this command inherits a value of <b>true</b>, BGP standard communities are sent to peers in the Communities attribute.</p> <p>When configured to <b>false</b>, all standard communities are removed from all routes advertised to BGP peers.</p>
Introduced	16.0.R1
Platforms	All

## send-default

Synopsis	Enable the <b>send-default</b> context
Context	<b>configure</b> <b>service vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>send-default</b>
Tree	<b>send-default</b>
Introduced	19.7.R1
Platforms	All

### **export-policy** *reference*

Synopsis	Export policy name
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">bgp neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">send-default</a> <a href="#">export-policy</a> <i>reference</i>
Tree	<a href="#">export-policy</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Introduced	19.7.R1
Platforms	All

### **ipv4** *boolean*

Synopsis	Enable IPv4 family type
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">bgp neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">send-default</a> <a href="#">ipv4</a> <i>boolean</i>
Tree	<a href="#">ipv4</a>
Default	false
Introduced	19.7.R1
Platforms	All

### **ipv6** *boolean*

Synopsis	Enable IPv6 family type
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">bgp neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">send-default</a> <a href="#">ipv6</a> <i>boolean</i>
Tree	<a href="#">ipv6</a>
Default	false
Introduced	19.7.R1
Platforms	All

### **split-horizon** *boolean*

Synopsis	Prevent routes being reflected back to best-route peer
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">bgp neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">split-horizon</a> <i>boolean</i>
Tree	<a href="#">split-horizon</a>

Description	<p>When configured to <b>true</b>, this command enables the use of split-horizon.</p> <p>This command prevents routes from being reflected back to a peer that sends the best route. It applies to routes of all address families and to any type of sending peer; confed-EBGP, EBGP and IBGP.</p> <p>Enabling the split-horizon functionality may have a detrimental impact on peer and route scaling and should only be used when absolutely necessary.</p> <p>When unconfigured, the command inherits the value of the group-level setting (<b>true</b> or <b>false</b>). The command cannot be explicitly configured to <b>false</b>.</p> <p>When this command inherits a value of <b>false</b>, the use of split-horizon is disabled.</p>
Introduced	16.0.R1
Platforms	All

### **tcp-mss** (*number* | *keyword*)

Synopsis	TCP maximum segment size override
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>tcp-mss</b> ( <i>number</i>   <i>keyword</i> )
Tree	<a href="#">tcp-mss</a>
Description	<p>This command configures an override for the TCP maximum segment size to use with a specific peer or set of peers (depending on the scope of the command).</p> <p>The configured value controls two properties of the TCP connection as follows:</p> <p>TCP MSS option - The router advertises the TCP MSS option value in the TCP SYN packet it sends as part of the 3-way handshake. The advertised value may be lower than the configured value, depending on the IP MTU of the first hop IP interface. The peers must abide by this value when sending TCP segments to the local router.</p> <p>TCP maximum segment size - The actual transmitted size may be lower than the configured value, depending on the TCP MSS option value signaled by the peers, the effect of path MTU discovery, or other factors.</p>
Range	384 to 9746
Options	ip-stack
Introduced	21.2.R1
Platforms	All

### **third-party-nexthop** *boolean*

Synopsis	Apply third-party next-hop processing to EBGP peers
Context	<b>configure</b> <b>service</b> <b>vprn</b> <i>string</i> <b>bgp neighbor</b> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>third-party-nexthop</b> <i>boolean</i>
Tree	<a href="#">third-party-nexthop</a>

Introduced	16.0.R1
Platforms	All

### **ttl-security** *number*

Synopsis	Minimum TTL value for an incoming BGP packet
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>ttl-security</b> <i>number</i>
Tree	<a href="#">ttl-security</a>
Description	This command configures the minimum TTL value that BGP will accept from an incoming packet. A packet with a TTL value less than the minimum configured TTL value is discarded.  When unconfigured, the command inherits the value of the group-level setting.
Range	1 to 255
Introduced	16.0.R1
Platforms	All

### **type** *keyword*

Synopsis	BGP peer type
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <b>type</b> <i>keyword</i>
Tree	<a href="#">type</a>
Options	no-type, internal, external
Introduced	16.0.R1
Platforms	All

### **next-hop-resolution**

Synopsis	Enter the <b>next-hop-resolution</b> context
Context	<b>configure</b> <a href="#">service vprn</a> <i>string</i> <a href="#">bgp next-hop-resolution</a>
Tree	<a href="#">next-hop-resolution</a>
Introduced	16.0.R1
Platforms	All

**policy reference**

Synopsis	Policy that filters routes for BGP next-hop resolution
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">bgp next-hop-resolution</a> <a href="#">policy reference</a>
Tree	<a href="#">policy</a>
Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <a href="#">string</a>
Introduced	16.0.R1
Platforms	All

**use-bgp-routes boolean**

Synopsis	Use BGP routes to resolve BGP next hops
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">bgp next-hop-resolution</a> <a href="#">use-bgp-routes boolean</a>
Tree	<a href="#">use-bgp-routes</a>
Description	<p>When configured to <b>true</b>, BGP routes resolve BGP next hops. When this command is enabled, any unlabeled IPv4 or IPv6 BGP route received from a VPRN BGP peer becomes resolvable by up to four other BGP routes in order to resolve the route to a VPRN IP interface. A VPRN BGP route is not resolvable by another VPRN BGP route or by a BGP-VPN route.</p> <p>This command also allows unlabeled IPv4 or IPv6 BGP routes leaked from the GRT with unresolved next hops (in the GRT) to be resolvable by BGP-VPN routes (of the VPRN).</p> <p>When configured to <b>false</b>, BGP next hops are not resolved.</p>
Default	false
Introduced	19.10.R1
Platforms	All

**use-leaked-routes**

Synopsis	Enter the <b>use-leaked-routes</b> context
Context	<b>configure</b> <a href="#">service vprn string</a> <a href="#">bgp next-hop-resolution</a> <a href="#">use-leaked-routes</a>
Tree	<a href="#">use-leaked-routes</a>
Introduced	23.7.R1
Platforms	All

**static boolean**

Synopsis	Use leaked static routes to resolve BGP next hop
----------	--

Context	<b>configure service vprn string</b> <i>bgp next-hop-resolution use-leaked-routes static boolean</i>
Tree	<a href="#">static</a>
Description	<p>When configured to <b>true</b>, the router allows any non-leaked unlabeled unicast IPv4 or IPv6 route in the BGP RIB to be resolved by a leaked static route with direct next hops. A BGP route resolved this way cannot resolve other routes (including BGP routes) and cannot be redistributed into non-BGP protocols, such as IGP.</p> <p>When configured to <b>false</b>, the router prevents the use of leaked static routes to resolve BGP routes.</p>
Default	false
Introduced	23.7.R1
Platforms	All

### **path-mtu-discovery boolean**

Synopsis	Enable Path MTU Discovery
Context	<b>configure service vprn string</b> <i>bgp path-mtu-discovery boolean</i>
Tree	<a href="#">path-mtu-discovery</a>
Description	<p>When configured to <b>true</b>, Path MTU Discovery (PMTUD) is activated toward an IPv4 BGP neighbor. The Don't Fragment (DF) bit is set in the IP header of all IPv4 packets sent to the peer. If any device along the path toward the peer cannot forward the packet because the IP MTU of the interface is smaller than the IP packet size, the device drops the packet and sends an ICMP or ICMPv6 error message encoding the interface MTU. When the router receives the ICMP or ICMPv6 message, it lowers the TCP maximum segment size limit from the previous value to accommodate the IP MTU constraint.</p> <p>When configured to <b>false</b>, PMTUD is disabled and there is no TCP MSS configuration to associate with a BGP neighbor (in either the BGP configuration or the first-hop IP interface configuration). The router advertises a TCP MSS option of only 1024 bytes, limiting the received TCP segments to that size.</p>
Default	false
Introduced	16.0.R1
Platforms	All

### **peer-ip-tracking boolean**

Synopsis	Enable BGP peer tracking
Context	<b>configure service vprn string</b> <i>bgp peer-ip-tracking boolean</i>
Tree	<a href="#">peer-ip-tracking</a>
Default	false
Introduced	16.0.R1

Platforms All

### **peer-tracking-policy** *reference*

Synopsis Policy for BGP peer tracking on router instance

Context **configure** [service vprn string bgp peer-tracking-policy reference](#)

Tree [peer-tracking-policy](#)

Description This command specifies the name of a policy statement to use with the BGP peer-tracking function on BGP sessions where peer tracking is enabled.

When unconfigured, the default peer-tracking policy allows any type of route to match the neighbor IP address except aggregate routes and LDP shortcut routes.

Peer tracking should be used with caution. The peer-tracking policy should only permit one of direct-interface or direct routes to be advertised to a BGP peer. Advertising both routes causes the best route to oscillate.

Reference **configure** [policy-options policy-statement string](#)

Introduced 16.0.R1

Platforms All

### **preference** *number*

Synopsis Route preference for routes learned from all peers

Context **configure** [service vprn string bgp preference number](#)

Tree [preference](#)

Description This command configures the route preference for routes learned from the configured peers.

The lower the preference value, the higher the chance of the route being the active route. The router assigns BGP routes the highest default preference as compared to routes that are direct, static or learned via MPLS or OSPF.

Range 1 to 255

Default 170

Introduced 16.0.R1

Platforms All

### **rapid-withdrawal** *boolean*

Synopsis Send BGP withdrawal UPDATE messages immediately

Context **configure** [service vprn string bgp rapid-withdrawal boolean](#)

Tree	<a href="#">rapid-withdrawal</a>
Description	When configured to <b>true</b> , UPDATE messages containing withdrawn NLRI are sent immediately to a peer without waiting for the MRAI timer to expire. UPDATE messages containing reachable NLRI continue to wait for the MRAI timer to expire, or for a rapid update trigger.  When configured to <b>false</b> , withdrawal processing continues with the normal behavior.
Default	false
Introduced	16.0.R1
Platforms	All

### **remove-private**

Synopsis	Enable the <b>remove-private</b> context
Context	<b>configure service vprn string bgp remove-private</b>
Tree	<a href="#">remove-private</a>
Introduced	16.0.R1
Platforms	All

### **limited *boolean***

Synopsis	Remove private ASNs up to first public ASN encountered

**policy-name** *reference*

Synopsis	Name of policy that controls route importation into RIB
Context	<b>configure</b> <a href="#">service</a> <a href="#">vprn</a> <i>string</i> <a href="#">bgp</a> <a href="#">rib-management</a> <a href="#">ipv4</a> <a href="#">route-table-import</a> <a href="#">policy-name</a> <i>reference</i>
Tree	<a href="#">policy-name</a>
Description	This command specifies the name of a policy that controls the importation of active routes from the IP route table into one of the BGP RIBs.  When this command is configured, routes dropped or rejected by the policy are not installed in the associated RIB. Rejected routes cannot be advertised to BGP peers associated with the RIB, but they can still be used to resolve BGP next hops of routes in that RIB. If the active route for a prefix is rejected by the policy, the best BGP route for that prefix in the BGP RIB can be advertised to peers as though it is used.

Aggregate routes are always imported into each RIB, independent of the specified policy.

Route modifications specified in the actions of the policy are ignored and have no effect on the imported routes.

When unconfigured, or if the command refers to an empty policy, all non-BGP routes from the IP route table are imported into the applicable RIB.

Reference	<b>configure</b> <a href="#">policy-options</a> <a href="#">policy-statement</a> <i>string</i>
Introduced	16.0.R1
